Spring. 4 credits. Prerequisite: ENGRD 2700.
Database and statistical techniques for data mining, graphical display, and predictive analysis in the context of industrial systems (manufacturing and distribution). Database techniques include structured query language (SQL), procedural event-based programming (Visual Basic), and geographical information systems. Statistical techniques include multiple linear regression, classification, logistic regression, and time series forecasting. Industrial systems analysis includes factory scheduling and simulation, materials planning, cost estimation, inventory planning, and quality engineering.

ORIE 3150 Financial and Managerial Accounting
Fall, spring, summer, and winter. 4 credits. Covers principles of accounting, financial reports, financial-transactions analysis, financial-statements analysis, budgeting, job-order and process-cost systems, standard costing and variance analysis, and economic analysis of short-term decisions.

ORIE 3300 Optimization I
Fall and summer. 4 credits. Prerequisite: grade of C– or better in MATH 2210 or 2940.
Formulation of linear programming problems and solutions by the simplex method. Related topics such as sensitivity analysis, duality, and network programming. Applications include such models as resource allocation and production planning. Introduction to interior-point methods for linear programming.

ORIE 3310 Optimization II
Spring and summer. 4 credits. Prerequisite: grade of C– or better in ORIE 3300 or permission of instructor.
A variety of optimization methods stressing extensions of linear programming and its applications but also including topics drawn from integer programming, dynamic programming, and network optimization. Formulation and modeling are stressed as well as numerous applications.

ORIE 3500 Engineering Probability and Statistics I
Fall and summer. 4 credits. Prerequisite: grade of C– or better in ENGRD 2700 or equivalent.
A rigorous foundation in theory combined with the methods for modeling, analyzing, and controlling randomness in engineering problems. Probabilistic ideas are used to construct models for engineering problems, and statistical methods are used to test and estimate parameters for these models. Specific topics include random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, hypothesis testing, confidence intervals, and point estimation using maximum likelihood and the method of moments.

ORIE 3510 Introductory Engineering Stochastic Processes I
Spring and summer. 4 credits. Prerequisite: grade of C– or better in ORIE 3500 or equivalent.
Uses basic concepts and techniques of random processes to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing, and reliability.

ORIE 3800 Information Systems and Analysis
Spring. 4 credits.
A systematic and hierarchical approach to the development of information systems, featuring business case justification, requirements analysis, use case analysis, functional analysis, structural design, object-oriented modeling, database design, verification and validation, and project schedule estimation. Graphical tools of analysis (e.g., the Unified Modeling Language) are emphasized. Examples are drawn from business and industrial processes. An integrative design project resulting in a detailed information system design specification (but not necessarily implementation) is required.

ORIE 4150 Economic Analysis of Engineering Systems
Spring. 4 credits. Prerequisites: ORIE 3300 and 3510.
Topics include financial planning, including cash-flow analysis and inventory flow models; engineering economic analysis, including discounted cash flows and taxation effects; application of optimization techniques, as in equipment replacement or capacity expansion models, and issues in designing manufacturing systems. Includes a student group project.

ORIE 4152 Entrepreneurship for Engineers (also MAE/ENGRG 4610)
Fall. 3 credits. Prerequisite: upper-level engineers or permission of instructor.
For description see MAE 4610.

ORIE 4154 Revenue Management
Fall. 3 credits. Prerequisites: ORIE 3300 and 3500, or permission of instructor.
The course covers pricing, capacity control, and assortment offering problems. Both static approximations and dynamic programming formulations are emphasized. The optimality of protection-level and bid-price policies in limited settings is illustrated, and these policies are used to find good solutions in more general settings. A structured framework for overbooking decisions is presented. Examples from a variety of industries, such as airline, hospitality, restaurant, and broadcasting, are used to illustrate the concepts.

ORIE 4300 Optimization Modeling
Emphasizes modeling complicated decision problems as linear programs, integer programs, or highly structured nonlinear programs. Besides modeling, students are required to assimilate articles from the professional literature and to master relevant software.

[ORIE 4300 Optimization Modeling]

[ORIE 4330 Discrete Models] Fall. 4 credits. Prerequisites: ORIE 3300 and CS 2110 or permission of instructor. Next offered 2011–2012. Covers basic concepts of graphs, networks, and discrete optimization. Fundamental models and applications, and algorithmic techniques for their analysis. Specific optimization models studied include flows in networks, the traveling salesman problem, and network design.

[ORIE 4350 Introduction to Game Theory] Spring. 4 credits. Prerequisite: ORIE 3300. Broad survey of the mathematical theory of games, including such topics as two-person matrix games; minimax; cooperative and noncooperative n-person games; and games in extensive, normal, and characteristic function form. Economic market games. Applications to weighted voting and cost allocation.

[ORIE 4360 A Mathematical Examination of Fair Representation] Spring. 3 credits. Prerequisite: MATH 2210 or 2940 or permission of instructor. Next offered 2011–2012. Covers the mathematical aspects of the political problem of fair apportionment. The most recognized formula (in the United States) of apportionment is the determination of the number of seats in the U.S. House of Representatives awarded to each state. The constitution indicates that the apportionment should reflect the relative populations, but it does not prescribe a specific method. Indivisibility of seats leads us to interesting mathematical questions and a long, rich, and fractious political history involving many famous figures. The basic ideas extend beyond apportionment of legislatures (in both federal systems and proportional representation systems) to other realms where indivisible resources are to be allocated among competing constituencies.

[ORIE 4540 Extreme Value Analysis with Applications to Finance and Data Communication] Spring. 3 credits. Prerequisites: undergraduate and M.Eng. students; stochastic processes course at level of ORIE 3510; statistics course. Next offered 2010–2011. Covers the basic models of extreme events used in hydrology, finance, insurance, environmental science (pollution controls), reliability, risk management. The course material intersects the related field of heavy tailed modeling and the implications of heavy tails in insurance and data networks.

[ORIE 4580 Simulation Modeling and Analysis] Fall. 4 credits. Prerequisite: ORIE 3500 (may be taken concurrently) and CS/ENGRD 2110. Introduction to Monte Carlo simulation and discrete-event simulation. Emphasizes tools and techniques needed in practice. Random variate, vector, and process generation modeling using a discrete-event simulation language; input and output analysis, modeling.

[ORIE 4600 Introduction to Financial Engineering] Fall. 3 credits. Prerequisites: ORIE 3500 and 3510. Next offered 2010–2011. This is an introduction to the most important notions and ideas in modern financial engineering, such as arbitrage, pricing, derivatives, options, interest rate models, risk measures, equivalent martingale measures, complete and incomplete markets, etc. Most of the time the course deals with discrete time models. This course can serve as a preparation for a course on continuous time financial models such as ORIE 5600.

[ORIE 4630 Operations Research Tools for Financial Engineering] Fall. 3 credits. Prerequisites: engineering math through MATH 2940 and ENGRD 2700 and ORIE 3500. No previous knowledge of finance required. Introduction to the applications of OR techniques, e.g., probability, statistics, and optimization, to finance and financial engineering. First reviews probability and statistics and then surveys assets returns, ARIMA time series models, portfolio selection, regression, CAPM, option pricing, GARCH models, fixed-income securities, resampling techniques, and behavioral finance. Also covers the use of MATLAB, MINITAB, and SAS for computation.

[ORIE 4712 Regression] Spring. 3 credits. Prerequisites: ORIE 3500 and MATH 2940 or equivalent; programming experience. Exposure to multiple linear regression and logistic regression. Good regression strongly recommended. Examines the statistical aspects of data mining, the effective analysis of large datasets. The first half of the course covers the process of building and interpreting statistical models in a variety of settings including multiple regression and logistic regression. The second half connects these ideas to techniques being developed to handle the large datasets that are now routinely encountered in scientific and business applications. Assignments are done using one or more statistical computing packages.

[ORIE 4800 Information Technology] Spring. 4 credits. Prerequisite: ORIE 3500 or ENGRD 2110, plus either ORIE 3800 or 3120. This course covers a variety of fundamental aspects of information technology. Topics may include information transmission, storage, encryption and security; the value of information and the economics of information goods; databases, the Internet, World Wide Web, wireless and cellular networks, and peer-to-peer networks.

[ORIE 4810 Delivering OR Solutions with Information Technology] Spring. 3 credits. Prerequisite: ORIE 4800. Next offered 2010–2011. Study of ways information technology is used to deliver operations research methodology in real applications, including decision support systems, embedded operations research techniques, packaged software, and web-based techniques. Several actual applications are investigated. Labs introduce Visual Basic for Applications (VBA) for decision support.

[ORIE 4820 Spreadsheet-Based Modeling and Data Analysis] Spring. 3 credits. Prerequisites: ENGRD 2700, ORIE 3500 or equivalent. Students develop and implement practical spreadsheet models to analyze data and evaluate decision problems in a hands-on learning environment. Microsoft Excel is heavily used. A wide variety of application areas are covered that incorporate concepts from probability, statistics, and constrained optimization.
ORIE 4850 Applications of Operations Research and Game Theory to Information Technology
Fall. 3 credits. Prerequisites: ORIE 3510, 3515, or permission of instructor.
Courses in operations research and game theoretic problems arising in information technology. Examples include web searching, network routing and congestion control, online auctions, and trust and reputations in electronic interactions.

ORIE 4990 Teaching in ORIE
Fall, spring. Variable credit. Prerequisite: permission of instructor.
Involves teaching in an ORIE course. The instructor assigns credits (the guideline is 1 credit per four hours per week of work with a limit of 3 credits).

ORIE 4999 ORIE Project
Fall, spring. Variable credit. Prerequisite: permission of instructor.
Project-type work, under faculty supervision, on a real problem existing in some firm or institution. Opportunities in the course may be discussed with the associate director.

ORIE 5100 Design of Manufacturing Systems
Fall. 4 credits. Prerequisite: ORIE seniors and graduate students in engineering and business school; permission of instructor.
Next offered 2010–2011. Project course in which students, working in teams, design a manufacturing logistics system and conduct capacity, material flow, and cost analysis of their design. Meetings between project teams and faculty advisors are substituted for some lectures. Analytical methods for controlling inventories, planning production, and evaluating system performance are presented in lectures.

ORIE 5110 Case Studies
Fall. 1 credit. Prerequisite: M.Eng. students in ORIE.
Presents students with an unstructured problem that resembles a real-world situation. Students work in project groups to formulate mathematical models, perform computer analyses of the data and models, and present oral and written reports.

ORIE 5120 Production Planning and Scheduling Theory and Practice
Topics include production planning, including MRP, linear programming, and related concepts. Scheduling and sequencing work in manufacturing systems. Job release strategies and control of work in process inventories. Focus is on setup time as a determinant of plans and schedules.

ORIE 5122 Inventory Management
Fall. 3 credits. Prerequisite: ORIE 3510, 3515, or permission of instructor. Next offered 2010–2011.
The first portion of this course is devoted to the analysis of several deterministic and probabilistic models for the control of single and multiple items at one of many locations. The second portion is presented in an experiential learning format. The focus is on analyzing and designing an integrated production and distribution system for a global company. Applications are stressed throughout.

ORIE 5126 Supply Chain Management
Fall. 3 credits. Prerequisites: ORIE 3510, 3515, and one of the following: ORIE 3120, 5100, or 5122.
A supply chain is the scope of activities that convert raw materials (e.g., wheat) to finished products delivered to the end consumer (e.g., a box of cereal at the local store), usually spanning several corporations. Supply chain management focuses on the flow of products, services, and information, and money through the supply chain. An overview of issues, opportunities, tools, and approaches. Emphasis is on business processes, systems dynamics, control, design, re-engineering. Covers the relationship between the supply chain and the company’s strategic position relative to its clients and its competition. Considers dimensions of intercorporate relationships with partners, including decision-making, incentives, and risk.

ORIE 5127 Supply Chain Management for M.B.A. Students
Spring. 3 credits. Prerequisites: good standing in M.B.A. program; students not required to complete the math-based homework assignments.
For description, see ORIE 5126.

ORIE 5130 Service System Modeling and Design
Spring. 3 credits. Corequisites: ORIE 3510 or 5311 and ORIE 3510; ability to program simple algorithms in some appropriate environment (e.g., VisualBasic or MATLAB). Next offered 2011–2012.
Today’s economy is dominated by service industries. These systems differ from manufacturing industries in many ways, but primarily in the level of interaction with the customer. Examples of service systems include contact centers (aka call centers), airlines, and hospitals. This course covers various techniques that are useful in the analysis and design of such systems. It is structured around a number of cases that drive the need for the theory. The emphasis is on modeling and solving the models. Both operational and strategic decisions are covered through appropriate examples.

ORIE 5140 Applied Systems Engineering
(also CEE/CIS 5040, ECE 5120, MAE 5910)
Fall. 3 credits. Prerequisite: permission of instructor.
For description, see SYSEN 5100.

ORIE 5142 Systems Analysis Architecture, Behavior, and
Optimization (also CEE/CIS 5050, ECE 5130, MAE 5920)
Spring. 3 credits. Prerequisite: CEE/CIS 5040, ECE 5120, ORIE 5140, or MAE 5910.
For description, see SYSEN 5200.

ORIE 5150 Economic Analysis of Engineering Systems
Spring. 4 credits. Prerequisites: ORIE 3500 and 3515. Lectures concurrent with ORIE 4150.
For description, see ORIE 4150.

ORIE 5190–5191 Selected Topics in Applied Operations Research
Fall, spring. Variable credit. Prerequisite: permission of instructor.
Current topics dealing with applications of operations research.

ORIE 5300 Operations Research I: Optimization
Spring. 1 credit. Prerequisite: graduate standing or CS/ENGRD 2110, 3510 or CEE/ENGRD 3200 or permission of instructor. For description, see CEE 5290.

ORIE 5310 Optimization II
Spring. 1 credit. Prerequisite: M.Eng. students in ORIE; ORIE 5300. Not open to students who have already taken ORIE 5310 or 5315.
Extension of ORIE 5300 that deals with applications and methodologies of dynamic programming, integer programming, and large-scale linear programming.

ORIE 5340 Heuristic Methods for Optimization (also CEE 5290, CIS 5720)
Fall. 3 or 4 credits. Prerequisite: graduate standing or CS/ENGRD 2110, 3510 or CEE/ENGRD 3200 or permission of instructor. For description, see CEE 5290.

ORIE 5500 Engineering Probability and Statistics II
Fall. 3 credits. Prerequisite: ORIE 5310.
For description, see ORIE 5500.

ORIE 5510 Operations Research II: Introduction to Stochastic Processes I
Fall. 3 credits. Prerequisite: ORIE 5310.
For description, see ORIE 5510.

ORIE 5520 Introductory Engineering Stochastic Processes II
Spring. 4 credits. Prerequisite: ORIE 3510 or equivalent. Next offered 2010–2011.
Lectures concurrent with ORIE 4520. For description, see ORIE 4520.

ORIE 5540 Extreme Value Analysis with Applications to Finance and Data Communications
Spring. 3 credits.
For description, see ORIE 4540.

ORIE 5550 Applied Time-Series Analysis
Fall. 3 credits. Prerequisites: ORIE 3510 and ENGRD 2700 or permission of instructor. Next offered 2010–2011.
The first part of this course treats regression methods to model seasonal and nonseasonal data. After that, Box-Jenkins models, which are versatile, widely used, and applicable to nonstationary and seasonal time series, are covered in detail. The various stages of model identification, estimation, diagnostic checking, and forecasting are treated. Analysis of real data is carried out. Assignments require computer work with a time-series package.

ORIE 5560 Queueing Systems: Theory and Applications
Fall. 3 credits. Prerequisite: ORIE 3510 or permission of instructor. Next offered 2011–2012.
Covers basic queueing models: delay and loss systems; finite source, finite capacity, blocking, reneging; systems in series and in parallel; FCFS versus LCFS; busy period problems; output, design and control problems; priority systems; queueing networks; the product formula; time sharing, server vacations; and applications to equipment maintenance, computer operations and flexible manufacturing systems.

ORIE 5570 Applied Time-Series Analysis
Fall. 3 credits.
For description, see ORIE 3510.

ORIE 5580 Information Technology
Fall. 3 credits. Prerequisites: ORIE 3310, 5100, or permission of instructor. Next offered 2010–2011.
Covers a variety of operations research and computer operations and flexible manufacturing systems.
gamma hedging, Value at Risk, and portfolio. Other computational topics such as delta and options, path-dependent options, and bonds.

This course covers computational techniques in incomplete markets. Topics include model calibration and quasi random number, discretization, and sensitivity. Applications to derivative pricing and risk management.

ORIE 5600 Financial Engineering with Stochastic Calculus I

Fall, 4 credits. Prerequisite: knowledge of probability at level of ORIE 3500. Introduction to continuous-time models of financial engineering and the mathematical tools required to use them, starting with the Black-Scholes model. Driven by the problem of derivative security pricing and hedging in this model, the course develops a practical knowledge of stochastic calculus from an elementary standpoint. Covering topics including Brownian motion, martingales, the Ito formula, the Feynman-Kac formula, and Girsanov transformations.

ORIE 5610 Financial Engineering with Stochastic Calculus II

Spring, 4 credits. Prerequisite: ORIE 5600. Building on the foundation established in ORIE 5600, this course presents no-arbitrage theories of complete markets, including models for equities, foreign exchange, and fixed-income securities, in relation to the main problems of financial engineering: pricing and hedging of derivative securities, portfolio optimization, and risk management. Other topics include model calibration and incomplete markets.

ORIE 5620 Credit Risk: Modeling, Valuation, and Management

Spring, 4 credits. Prerequisite: ORIE 3510 and 5600. Credit risk refers to losses due to changes in the credit quality of a counterparty in a financial contract. This course is an introduction to the modeling and valuation of credit risks. Emphasis is on credit derivative instruments used for hedging credit risks, including credit swaps, spread options, and collateralized debt obligations.

ORIE 5630 Computational Methods in Finance

Fall, 4 credits. Prerequisite: financial engineering M.Eng. students in Manhattan. This course covers computational techniques such as binomial trees, solution of PDEs, and Monte Carlo simulation for pricing financial instruments such as European and American options, path-dependent options, and bonds. Other computational topics such as delta and gamma hedging, Value at Risk, and portfolio problems will also be covered. The emphasis will be on implementation.

ORIE 5640 Statistics for Financial Engineering

Spring, 4 credits. Prerequisites: ORIE 3500/5500 and at least one of ORIE 4600, 4630, or 5600. Regression, ARIMA, GARCH, stochastic volatility, and factor models. Calibration of financial engineering models. Estimation of diffusion models. Estimation of risk measures. Multivariate models and copulas. Bayesian statistics. Students will be instructed in the use of R software; prior knowledge of R is helpful but not required. This course is intended for M.Eng. students in financial engineering and assumes some familiarity with finance and financial engineering. Students not in the financial engineering program are welcome if they have a suitable background. Students with no background in finance should consider taking ORIE 4630 instead.

ORIE 5650 Quantitative Methods of Financial Risk Management

Spring, 3 credits. Prerequisite: ORIE 3500. Next offered 2010–2011. A historical perspective of market risk measurement including the Markowitz, CAPM and APT models, a description of the value-at-risk approach and an overview of VaR variants and extensions such as delta-VaR, CVaR etc. The course will survey other methods for evaluating risk and consider multivariate methods for evaluating portfolios requiring copula tools which have become popular. Topics in credit risk: methods for determining default probabilities and company ratings based on financial ratios (logit, probit and discriminant analysis, decision trees, etc.), and approaches to measuring credit risk which can be roughly divided into structural models and reduced-form models.

ORIE 5660 Bond Mathematics and Mortgage-Backed Securities

Fall, 3 credits. Prerequisite: financial engineering M.Eng. students in Manhattan. A transaction-oriented course covering US Bond markets. The course covers valuation, trading strategies, and risk profiles of bonds, with a special emphasis on mortgage-backed securities.

ORIE 5770 Quality Control

Fall, 3 credits. Prerequisites: ENGRD 2110. Next offered 2010–2011. Covers concepts and methods for process and acceptance control; control charts for variables and attributes; process capability analysis; acceptance sampling; continuous sampling plans; life tests; and use of experimental design and Taguchi methods for off-line control.

ORIE 5910 Master of Engineering Manufacturing Project

Fall, R grade only; spring, 5 credits. Prerequisite: M.Eng. students enrolled in manufacturing option. Project course coordinated by Center for Manufacturing Enterprise.

ORIE 5912–5913–5914 Special Topics in Financial Engineering

Fall, 1–8 credits. Prerequisite: financial engineering M.Eng. students in Manhattan. Module-based courses focusing on topics relevant to current financial markets. Practitioner-led segments will cover a wide range of quantitative and qualitative topics in the securities industry.

ORIE 5940 Systems Engineering Project

Fall, R grade only; spring, 8 credits. Prerequisite: M.Eng. students enrolled in systems engineering option. Substantial, group-based design project that has a strong systems design component. The project must be approved by an ASE 1 instructor before the student enrolls in the course. (The following projects are pre-approved: FSAE, HEV, Robocup, Brain.) A formal report is required.

ORIE 5960 Applied Financial Engineering

Fall and spring, 5 credits. Prerequisites: ORIE and M.Eng. students concentrating in financial engineering. Project course satisfying the engineering design project requirement for financial engineering M.Eng. students.

ORIE 5961 Applied Financial Engineering

Fall, 5 credits. Prerequisite: financial engineering M.Eng. students in Manhattan. Project course in Manhattan satisfying the engineering design project requirement for the M.Eng. degree.

ORIE 5980 Project

Fall, R grade only; spring, 5 credits. Prerequisite: M.Eng. students. Identification, analysis, design, and evaluation of feasible solutions to some applied problem in the ORIE field. A formal report and oral defense of the approach and solution are required.

ORIE 6122 Advanced Production and Inventory Planning

Spring, 3 credits. Next offered 2011–2012. Introduction to a variety of production and inventory control planning problems, the development of mathematical models corresponding to these problems, and a study of approaches for finding solutions.

ORIE 6127 Computational Issues in Large Scale Data-Driven Models

Fall, 3 credits. Pre- or corequisites: ORIE 6300, 6500 and 6700. Next offered 2010–2011. Availability of massive datasets such as web logs and point-of-sale transactions raises new modeling and computational issues. This course provides an introduction to this emerging research area. Topics include data-driven models in operation management, asymptotic statistics, uniform convergence of empirical process, and efficient computational methods. There is discussion of applications in engineering, economics, and marketing, along with current open research problems.

ORIE 6140 Mathematical Modeling of Operational Systems

Fall, 2 credits. Prerequisites: ORIE 6300, 6500, or equivalent. Next offered 2011–2012. The art and science of developing, using and explicating mathematical models, presented in a studio/workshop environment. Structuring of a variety of operational “situations” so they can be reasonably represented by a mathematical model. Extensive class discussion and out-of-class investigation of potential mathematical approaches to each situation. Incorporation of data analysis.

ORIE 6300 Mathematical Programming

Fall, 4 credits. Prerequisites: advanced calculus and elementary linear algebra. Rigorous treatment of the theory and computational techniques of linear programming and its extensions, including
formulation, duality theory, algorithms; sensitivity analysis; network flow problems and algorithms; theory of polyhedral convex sets, systems of linear equations and inequalities, Farkas’ Lemma; and exploiting special structure in the simplex method and computational implementation.

**ORIE 6310 Mathematical Programming II**
Spring. 4 credits. Prerequisite: ORIE 6300. Continuation of ORIE 6300. Introduces nonlinear programming, interior-point methods for linear programming, complexity theory, and integer programming. Includes some discussion of dynamic programming and elementary polyhedral theory.

**ORIE 6320 Nonlinear Programming**
Spring. 3 credits. Prerequisite: ORIE 6300. Necessary and sufficient conditions for unconstrained and constrained optima. Topics include the duality theory, computational methods for unconstrained problems (e.g., quasi-Newton algorithms), linearly constrained problems (e.g., active set methods), and nonlinearly constrained problems (e.g., successive quadratic programming, penalty, and barrier methods).

**ORIE 6325 Interior-Point Methods for Mathematical Programming**
Fall. 3 credits. Prerequisites: MATH 4110 and ORIE 6300, or permission of instructor. Next offered 2011–2012. Interior-point methods for linear, quadratic, and semidefinite programming and, more generally, for convex programming. Discusses the basic ingredients—barrier functions, central paths, and potential functions—that go into the construction of polynomial-time algorithms and various ways of combining them. Emphasizes recent mathematical theory and the most modern viewpoints.

**ORIE 6327 Semidefinite Programming**
Spring. 3 credits. Pre- or corequisite: ORIE 6325. Next offered 2010–2011. Covers linear optimization over the cone of positive semidefinite matrices, applications to control theory, eigenvalue optimization, and strong relaxations of combinatorial optimization problems; duality; computational methods, particularly interior-point algorithms.

**ORIE 6328 Convex Analysis**

**ORIE 6330 Graph Theory and Network Flows**
Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2010–2011. Topics include directed and undirected graphs; bipartite graphs; Hamilton cycles and Euler tours; connectedness, matching, and coloring; flows in capacity-constrained networks; and maximum flow and minimum cost flow problems.

**ORIE 6334 Combinatorial Optimization**
Fall. 3 credits. Topics in combinatorics, graphs, and networks, including matching, matroids, polyhedral combinatorics, and optimization algorithms.

**ORIE 6335 Scheduling Theory**
Spring. 3 credits. Next offered 2011–2012. Scheduling and sequencing problems, including single-machine problems, parallel-machine scheduling, and shop scheduling. The emphasis is on the design and analysis of polynomial time optimization and approximation algorithms and on related complexity issues.

**ORIE 6336 Integer Programming**
Fall. 3 credits. Prerequisite: ORIE 6300. Next offered 2010–2011. Topics include discrete optimization; linear programming in which the variables must assume integral values; theory, algorithms, and applications; and cutting-plane and enumerative methods, with additional topics drawn from recent research in this area.

**ORIE 6350 Foundations of Game Theory and Mechanism Design for Engineering Applications**
Fall. 3 credits. Prerequisite: basic knowledge of operations research at level of ORIE 6300 and 6500. No prior knowledge of game theory or computer networks assumed. Next offered 2010–2011. Provides a rigorous foundation for the applications of game theory and mechanism design to problems in operations research and computer science. The goal is to develop a deep understanding of the fundamental issues that are important in many applications while presenting many current open research problems.

**ORIE 6500 Applied Stochastic Processes**
Fall. 4 credits. Prerequisite: one-semester calculus-based probability course. Introduction to stochastic processes that present the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, and point processes.

**ORIE 6510 Probability**
Spring. 4 credits. Prerequisite: real analysis at level of MATH 4130; one-semester calculus-based probability course. Covers standard measure theory, conditional probability, probability measures, set induction, independence, random variables, expectation, review of important distributions and transformation techniques, convergence concepts, laws of large numbers and asymptotic normality, and conditioning.

**ORIE 6540 Advanced Stochastic Processes**
Fall. 3 credits. Prerequisite: ORIE 6510 or equivalent. Next offered 2010–2011. Topics include Brownian motion, martingales, Markov processes, and topics selected from: diffusions, stationary processes, point processes, weak convergence for stochastic processes and applications to diffusion approximations, Lévy processes, regenerative phenomena, random walks, and stochastic integrals.

**ORIE 6570 Queues and Control of Queues: The Dynamic Programming Approach**
Fall. 3 credits. Next offered 2010–2011. We will cover basic queueing theory followed by an introduction to Markov decision processes (MDPs). The second part of the class will cover the use of MDPs to develop control policies in a variety of queueing settings.

**ORIE 6580 Simulation**
Spring. 3 credits. Prerequisite: computing experience and ORIE 6500 or equivalent, or permission of instructor. Next offered 2010–2011. Introduction to Monte Carlo and discrete-event simulation. Emphasizes underlying theory. Random variate generation, input and output analysis, variance reduction, selection of current research topics.

**ORIE 6600 Mathematical Finance I**

**ORIE 6610 Mathematical Finance II**
Spring. 3 credits. Prerequisites: ORIE 6500, ORIE 6510, and ORIE 6600. Introduction to stochastic calculus, stochastic differential equations, and applications to continuous-time finance such as the Black-Scholes formula, local and stochastic volatility models, and term structure models for interest rates of volatilities. Corresponding mathematical foundations such as martingale theory, Itô integration, and Girsanov’s theorem are also provided.

**ORIE 6630 Empirical and Computational Issues in Finance**
Spring. 3 credits. Prerequisites: stochastic processes course at level of ORIE 6500; statistics course at level of ORIE 6700, or permission of instructor. Next offered 2010–2011. Designed to introduce students to existing empirical work in finance and to demonstrate the use of statistical, econometric, and numerical methods in the analysis of financial data. Topics include linear and nonlinear time series analysis, high-frequency data and market microstructure, continuous-time models, extreme values and quantile estimation, volatility models, and MCMC methods. Numerous applications using market data are presented. MATLAB programming skills are useful.

**ORIE 6700 Statistical Principles**
Fall. 4 credits. Corequisite: ORIE 6500 or equivalent. Topics include review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson, t, and F; introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation; maximum likelihood and Bayes estimation; basic principles of hypothesis testing, including Neyman-Pearson Lemma and likelihood ratio principle; confidence interval construction; and introduction to linear models.

**ORIE 6710 Intermediate Applied Statistics**
Spring. 3 credits. Prerequisite: ORIE 6700 or equivalent. Next offered 2011–2012. Topics include statistical inference based on the general linear model, least-squares estimators and their optimality properties;
E N G I N E E R I N G  -  2 0 0 9 – 2 0 1 0

**ORIE 7900 Operations Research Graduate Colloquium**

Fall, spring. 1 credit.
Weekly one and one-half hour meeting devoted to presentations by distinguished visitors, by faculty members, and by advanced graduate students on topics of current research in the field of operations research.

**ORIE 9100–9101 Enterprise Engineering Colloquium (also MAE 5940)**

9100, fall; 9101, spring. 1 credit each semester. S–U grades.
Weekly meeting for members of engineering students and industry leaders on the uses of engineering in the economic design, manufacturing, marketing, and distribution of goods and services.

**ORIE 9110 M.Eng. Professional Review**

Fall. 1 credit. Limited to ORIE M.Eng. students in their second or third semester. S–U grades only.
An interactive course in which students present findings and share lessons from their summer internship experiences.

**ORIE 9160 Seminar in Financial Engineering**

Fall 1 credit. Prerequisites: Limited to Financial Engineering M.Eng. students in Manhattan.
Weekly roundtable meeting for students concentrating in financial engineering. Current market events, practices, and research will be discussed with faculty and financial industry partners.

**ORIE 9999 Thesis Research**

Fall, spring. Credit TBA.
For individuals doing thesis research for master's or doctoral degrees.

**SYSEN 5100 Applied Systems Engineering (also CEE/CS 5040, ECE/ORIE 5120, MAE 5910)**

Fall. 3 credits. Prerequisites: senior or graduate standing in an engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor. M. Peck, A. R. George, and P. Jackson. Fundamental ideas of systems engineering, and their application to design and development of various types of engineered systems. Defining system requirements, creating effective project teams, and choosing the mathematical tools for system analysis and control, testing and evaluation, economic considerations, and the system life cycle. Students majoring in Systems Engineering enroll in SYSEN 5100. Students taking the minor in Systems Engineering enroll in CEE/CIS 5040, ECE/ORIE 5120, or MAE 5910. Students in distance-learning programs enroll in SYSEN 5110. Course is identical for all versions.

**SYSEN 5200 Systems Architecture, Behavior, and Optimization (also MAE 5920, CEE/CIS 5050, ECE 5130, ORIE 5142)**

Spring. 3 credits. Prerequisite: Applied Systems Engineering MAE 5910, CEE/CIS 5040, ECE/ORIE 5120, SYSEN 5100 or 5110, or permission of instructor. Students majoring in Systems Engineering enroll in SYSEN 5200. Students taking the minor in Systems Engineering enroll in MAE 5920, CEE 5252, CIS 5050, ECE 5130, or ORIE 5142. Students in distance learning programs enroll in SYSEN 5210. Course is identical for all versions. H. Topaloglu.
This is an advanced course in the application of the systems engineering process to the architecture design and operation of complex systems. Topics include techniques for design, simulation, optimization, and control of complex systems. Case studies and system simulations in diverse areas provide context for the application of these techniques.

**SYSEN 5210 Systems Architecture, Behavior, and Optimization**

Spring. 3 credits. Intended for off-campus students. Prerequisites: Applied Systems Engineering or permission of instructor. Staff.
For description, see SYSEN 5200.

**SYSEN 5300 Systems Engineering for the Design and Operation of Reliable Systems (also MAE 5932)**

Fall. 3–4 credits. Prerequisite: SYSEN 5100 and either ENGRD 2700 or CEE 3040 or permission of instructors. H. O. Gao.
Develops skills in the design, operation, and control of systems for reliability and performance. Focuses on four key themes: risk analysis (with a particular emphasis on risk assessment and risk characterization), modeling system reliability (including the development of statistical models based on accelerated life testing), quality control techniques and the
optimization of system design for reliability. Students in distance-learning programs enroll in SYSEN 5310. Lectures are identical for all versions.

**SYSEN 5310 Systems Engineering for the Design and Operation of Reliable Systems**

Fall. 3–4 credits. Prerequisites: SYSEN 5100 and either ENGRD 2700 or CEE 3040 or permission of instructor. H. O. Gao. Intended for off-campus students. For description, see SYSEN 5300.

**SYSEN 5700 Special Topics in Systems Engineering**

Offered on demand, 1–4 credits. Staff. Supervised study by individuals or small groups of one or more specialized topics not covered in regular courses.

**SYSEN 5710 Practicum in Systems Engineering**

Offered on demand, 1–4 credits. Staff. Supervised study by individuals or small groups of one or more specialized topics not covered in regular courses.

**SYSEN 5750 Independent Study in Systems Engineering**

Offered on demand, 1.5–6 credits. Staff. Supervised study by individuals or small groups of one or more specialized topics not covered in regular courses.

**SYSEN 5760 Systems Engineering—Project—Track I**

Offered on demand, 1.5–6 credits. A design project that incorporates the principles of systems engineering for a complex system. Projects are performed by teams of students working together to meet the requirements of the project.

**SYSEN 5770 Systems Engineering Project—Track II**

Offered on demand, 1.5–6 credits. Prerequisite: permission of instructor. Staff. A design project that incorporates the principles of systems engineering for a complex system. Projects are performed by teams of students working together to meet the requirements of the project.

**SYSEN 5900 Systems Engineering Design Project**

1–9 credits. Prerequisite: permission of instructor. Staff. A design project that incorporates the principles of systems engineering for a complex system. Projects are performed by teams of students working together to meet the requirements of the project.

**SYSEN 5920 Systems Engineering Management for Virtual Teams**

Summer. 1 credit. Prerequisites: matriculation in Systems Engineering Master of Engineering distance learning degree program. P. L. Jackson and F. J. Wayno. First of two one-week intensive experiential courses (35 hours) in systems engineering management. Emphasis on understanding individual creativity and organizational innovation and on developing the required systems engineering leadership skills to foster both.

**SYSEN 5940 Creativity and Innovation Within Systems Engineering**

Summer. 1 credit. Prerequisites: matriculation in M.Eng. (Systems Engineering) distance learning degree program; CEE 6910 Principles of Project Leadership; SYSEN 5920. P. L. Jackson and F. J. Wayno. Second of two one-week intensive courses (35 hours) in systems engineering management with emphasis on understanding individual creativity and organizational innovation and on developing the required systems engineering leadership skills to foster both.

**SYSEN 5960 Systems Engineering Design Project for Virtual Teams**

Fall, spring, summer. Variable credit. Prerequisites: matriculation in Systems Engineering M.Eng. distance learning degree program; SYSEN 5100, SYSEN 5920, SYSEN 5940, and SYSEN 6910, or permission of instructor. Staff. Systems engineering project for geographically dispersed teams. Fulfills M.Eng. degree requirement for project, subject to credit hour minimum.

**SYSEN 6800 Topics in Systems Engineering Research**

Spring. 1.5 credits. Staff. Advanced topics in systems engineering research.

**THEORETICAL AND APPLIED MECHANICS**

**Basics in Engineering Mechanics**

**TAM 2020 Mechanics of Solids (also ENGRD 2020)**

Fall, spring. 4 credits Prerequisite: PHYS 1112, co-registration in MATH 1920, or permission of instructor. For description, see ENGRD 2020.

**TAM 2030 Dynamics (also ENGRD 2030)**

Fall, spring. 3 credits. Prerequisite: TAM 2020, co-registration in MATH 2950, or permission of instructor. For description, see ENGRD 2030.

**Engineering Mathematics**

**TAM 3100 Introduction to Applied Mathematics I**

Fall, spring. 3 credits. Prerequisites: MATH 2930 and 2940. Covers initial value, boundary value, and eigenvalue problems in linear ordinary differential equations. Also covers special functions, linear partial differential equations. This is an introduction to probability and statistics. Use of computers to solve problems is emphasized.

**TAM 6110 Methods of Applied Mathematics II**

Spring. 3 credits. Prerequisite: TAM 6100 or equivalent. Emphasis is on applications. Course covers partial differential equations, transform techniques, tensor analysis, and calculus of variations.

**TAM 6120 Methods of Applied Mathematics III**

Spring. 3 credits. Prerequisite: TAM 6100 and 6110 or equivalent. Next offered 2010–2011. Topics include integral transform, methods, Wiener-Hopf technique, solutions of integral equations and partial differential equations.

**TAM 6130 Asymptotics and Perturbation Methods**

Fall. 3 credits. Prerequisites: TAM 6100 and 6110 or equivalent. Topics include asymptotic behavior of solutions of linear and nonlinear ODE (e.g., the WKB boundary layer and multiple-scale methods) and asymptotic expansion of integrals (method of steepest descent, stationary phase, and Laplace methods). Also covers regular and singular perturbation methods for PDE (e.g., method of composite expansions). Other topics (depending on instructor) may include conformal mappings, H"{o}lder-Schmidt reductors, and Stokes phenomenon. The course may also include computer exercises at the option of the instructor.

**TAM 6170 Advanced Mathematical Modeling—Biological and Fluid Dynamics**

Spring. 3 credits. Covers the fundamentals of fluid dynamics that rises in biological fluid dynamics such as the motion of the microscope cells in low Reynolds number flows and unsteady aerodynamics of flapping flight and free falling objects. The topics in fluid dynamics include Stokes flow, propulsion of a beating flagellum and swimming sheets, potential flow, unsteady airfoil theory, reduced model of unsteady forces on a fluttering and tumbling object, and computational methods. The current research in biofluids will be discussed in some depth.

**TAM 7180 Topics in Bifurcation Theory**

Spring. 3 credits. Offered every third year.

Provides a basic, rigorous introduction to certain aspects of nonlinear analysis, with an emphasis on techniques based on differential calculus. Applications to nonlinear elasticity and nonlinear oscillations of mechanical systems (including Liapunov Center Theorem, Hopf Bifurcation, and Hamiltonian-Hopf bifurcation) will be presented throughout. The course is intended for students in the physical and mathematical sciences. The minimal prerequisites are linear algebra, advanced calculus, differential equations, and eigenvalue problems. Exposure to nonlinear problems of engineering science or mathematical physics and some background in basic functional analysis is helpful but not required.
Continuum Mechanics

TAM 4550 Introduction to Composite Materials (also CEE 4770, MAE 4550, MSE 5550)
Fall. 3 credits. Prerequisite: ENGRD 2020.
Topics include introduction to composite materials; varieties and properties of fiber reinforcements and matrix materials; micromechanics of stiffness and stress transfer in discontinuous fiber/matrix arrays; orthotropic elasticity as applied to parallel fibers in a matrix and lamina; theory of stiffness (tension, bending, torsion) and failure of laminates and composite plates, including computer software for design; and manufacturing methods and applications for composites. There is a group component design and manufacturing paper required, and a group laboratory on laminated component fabrication.

TAM 5910 Master of Engineering Design Project I
Fall. 3–12 credits. variable. M.Eng. (mechanics) project related to the master of engineering in mechanics.

TAM 5920 Master of Engineering Design Project II
Spring. 3–12 credits. variable. M.Eng. (mechanics) project related to the master of engineering in mechanics.

TAM 6550 Advanced Composite Materials (also CEE 6760, MAE/MSE 6550)
Spring. 4 credits. TAM 4550/5550 not a prerequisite but excellent background. Topics center around micromechanical and statistical (reliability) aspects of the strength and fatigue of fibrous composites. Topics include Hagedorn shear-lag models of stress transfer around arrays of fiber breaks; statistical theories of composite failure to forecast reliability; stress distributions around holes and cuts in composite laminates; and compressive strength of composites.

TAM 6630 Solid Mechanics I
Fall. 4 credits.
Rigorous introduction to solid mechanics emphasizing linear elasticity; tensors; deformations, strains, and stresses; balance principles; stress; small-strain theory; linear elasticity, anisotropic and isotropic; basic theorems of elastostatics; and boundary-value problems, e.g., plates, St. Venant’s solutions.

TAM 6640 Solid Mechanics II
Spring. 4 credits. Prerequisites: MATH 6110 and TAM 6630 or equivalent.
Preparation for advanced courses in solid mechanics. Topics include singular solutions in linear elasticity; plane stress, plane strain, anti-plane shear, aary stress functions; linear viscoelasticity; cracks and dislocations; classical plasticity; thermoelasticity; and three-dimensional elasticity.

TAM 7510 Continuum Mechanics and Thermodynamics
Spring. 3 credits. Prerequisites: TAM 6100 and 6110, and 6630 and 6640 or equivalents.
Course topics include kinematics; conservation laws; the entropy inequality; constitutive relations: frame indiffernce, material symmetry; and finite elasticity, rate-dependent materials, and materials with internal state variables.

TAM 7520 Nonlinear Elasticity
Spring. 3 credits. Prerequisites: TAM 6100, 6110, and 7510 or equivalents. Next offered 2010-2011.
Review of governing equations. Topics include linearization and stability; constitutive inequalities; exact solution of special problems.

TAM 7530 Fracture
Spring. 3 credits. Prerequisites: TAM 6100 or 6110; and 6630 and 6640 or equivalents. Next offered 2010-2011.
Also covers nonlinear rate-independent, small-scale deformation fracture mechanics: plastic fracture, J-integrals.

TAM 7570 Inelasticity
Fall. 3 credits.
Plasticity: dislocations and slip system; early experimental observations; torsion and bending of bars; inflation of thick cylinders and spheres; general equations governing yielding, flow and work hardening; solution of general boundary value problems; numerical solutions radial return and the consistent tangent operator. Linear viscoelasticity: simple rheological models; correspondence principle; hereditary integral approach; torsion and bending of bars; inflation of thick cylinders and spheres; solution of general quasi-static boundary value problems; thermoviscoelasticity; wave propagation.

TAM 7590 Boundary Element Methods
Spring. 4 credits. Next offered 2010-2011. Topics include a variety of applications of the boundary element method. Examples are: potential theory, linear elasticity, elastoplasticity, micro and nano-electro-mechanical systems, meshfree boundary methods.

Dynamics and Space Mechanics

TAM 5700 Intermediate Dynamics
Fall. 3 credits.
Topics include Newtonian mechanics; motion in rotating coordinate systems; introduction to analytical mechanics; virtual work, Lagrangian mechanics; Hamilton’s principle; small vibration and stability theory. Newtonian-Eulerian mechanics; discrete and continuous systems: chaos, strange attractors, fractals, iterated mappings, period doubling, renormalization.

TAM 5780 Nonlinear Dynamics and Chaos
Spring. 3 credits. Prerequisite: MATH 2930 or equivalent.
Introduction to nonlinear dynamics, with applications to physics, engineering, biology, and chemistry. Emphasizes analytical methods, concrete examples, and geometric thinking. Topics include one-dimensional systems; bifurcations; phase plane; nonlinear oscillators; and Lorenz equations; strange attractors, fractals, iterated mappings, period doubling, renormalization.

TAM 6680 Elastic Waves in Solids with Applications
Fall. 3 credits.
Waves in one-dimensional elastic solids; two-dimensional systems; waves in infinite media, plates and rods; significant emphasis on measurements and applications.

TAM 6710 Hamiltonian Dynamics
Spring. 3 credits. Prerequisite: TAM 5700 or equivalent. Next offered 2010-2011.
Course topics include review of Lagrangian mechanics, Kanes equations, Hamilton’s principle, Hamilton’s canonical equations, Lie transforms, Hamilton-Jacobi theory; KAM theory; and Melnikov’s method.

TAM 6720 Celestial Mechanics (also ASTRO 6570)
Spring. 3 credits. Next offered 2010-2011. Course topics include description of orbits; Hill curves, libration points; oscillating orbital elements, perturbation equations; effects of forces on satellite orbits; mechanics of planetary rings.

TAM 6730 Mechanics of the Solar System (also ASTRO 6571)
Spring. 3 credits. Prerequisite: advanced undergraduate course in dynamics. Next offered 2010-2011.
Topics include gravitational potentials, planetary gravity fields; free and forced rotations; Chandler wobble, polar wander, and damping of nutation.

TAM 6750 Nonlinear Vibrations
Spring. 3 credits. Prerequisite: TAM 5780 or equivalent.
Dynamics of nonlinear oscillators, including free and forced vibrations of both conservative and limit cycle oscillators, parametric excitation, systems of two, and N-coupled oscillators. Mathematical techniques include perturbation methods, center manifold reduction, and differential-delay equations.

TAM 7760 Applied Dynamical Systems (also MATH 7170)
Spring. 4 credits. For description, see MATH 7170.

TAM 7960 Mechanics of Terrestrial Locomotion
Spring. 3 credits. Prerequisite: TAM 5700 or equivalent, or A+ level understanding of any sophomore (or above) mechanics course.
The energetics and stability of people, other legged animals and robots are studied by mechanical analysis of simple mechanics-based models. Students will derive equations, do analytic and computer calculations, and write up their results. Advanced students may do original research as part of their course work. (A Nature paper was based on research started as course work in this class one year.)

Special Courses, Projects, and Thesis Research

TAM 4130 Introduction to Nuclear Science and Engineering (also AEP/CHEME/ECE/NSE 4130, MAE 4580)
Fall. 3 credits. K. B. Cady.
For seniors and M.Eng. students interested in nuclear energy. Topics are presented at the level of the course text: Lamarsh and Baratta, Introduction to Nuclear Engineering, 3rd ed. and includes the fundamentals of nuclear science and engineering: nuclear structure, radioactivity, and reactions; interaction of radiation with matter; radiation protection and shielding; the neutron chain reaction and its control; light water reactors, isotope separation, fuel reprocessing, and waste disposal; heat transfer, accidents, atmospheric dispersion, and reactor licensing and safety.

TAM 4140 Nuclear Reactor Physics (also AEP/CHEME/NSE 4140)
Spring. 3 credits.
The physics of the neutron chain reaction for seniors, M.Eng., and graduate students interested in nuclear energy. Topics are
Apsel, Alyssa B., Ph.D., Stanford U. Marjorie L. Hart ’50 Professor of Engineering, Chemical and Biomolecular Engineering
Axe, William, Ph.D., U. of Sussex (U.K.).
Prof., Computer Science
Ast, Dieter G., Ph.D., Cornell U. Prof., Materials Science and Engineering
Avérous, C., Thomas, Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
Avestimehr, A. Salman, Ph.D., U. of California, Berkeley. Asst. Prof., Electrical and Computer Engineering
Baumann, Anthony, Ph.D., U. of Stuttgart (Germany). Prof., Biological and Environmental Engineering
Bailey, Graeme, Ph.D., U. of Birmingham (U.K.). Prof., Computer Science
Baker, Shelly, Ph.D., Stanford U. Assoc. Prof., Materials Science and Engineering
Balz, Kavita, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Computer Science
Barzangi, Marwia, Ph.D., Columbia U. Prof.
Barker, John F., Ph.D., Cornell U. Prof., Electrical and Computer Engineering
Bart, Donald L., Ph.D., U. of Iowa. Graduate School Prof. (Emeritus), Mechanical and Aerospace Engineering and Biomedical Engineering
Bartsh, James A., Ph.D., Purdue U. Assoc. Prof., Biological and Environmental Engineering
Bassett, William A., Ph.D., Columbia U. Prof., Civil and Environmental Engineering
Blakey, John M., Ph.D., Cornell U. Prof., Electrical and Computer Engineering
Bindel, David, Ph.D., U. of California, Berkeley. Asst. Prof., Computer Science
Bird, John M., Ph.D., Rensselaer Polytechnic Inst. Prof. (Emeritus), Earth and Atmospheric Sciences
Birman, Kenneth P., Ph.D., U. of California, Berkeley. N. Rama Rao Professor of Computer Science
Bisogni, James J., Ph.D., Cornell U. Assoc. Prof., Civil and Environmental Engineering
Blakey, John M., Ph.D., Glasgow U. (U.K.). Prof., Herbert Fisk Johnson Professor of Engineering, Materials Science and Engineering
Bland, Robert G., Ph.D., Cornell U. Prof., Operations Research and Information Engineering
Bloom, Arthur L., Ph.D., Yale U. Prof. (Emeritus), Earth and Atmospheric Sciences
Bojczynk, Adam W., Ph.D., U. of Warsaw (Poland). Assoc. Prof., Electrical and Computer Engineering
Bonassar, Lawrence J., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Biomedical Engineering and Mechanical and Aerospace Engineering
Booker, John F., Ph.D., Cornell U. Graduate School Prof. (Emeritus), Mechanical and Aerospace Engineering
Brock, Joel D., Ph.D., Massachusetts Inst. of Technology. Prof., Applied and Engineering Physics
Brown, Larry D., Ph.D., Cornell U. Prof., Earth and Atmospheric Sciences
Bruns, John P., Ph.D., Cornell U. Irving Porter Church Professor of Engineering, Theoretical and Applied Mechanics; Astronomy
Butcher, Jonathan, T., Ph.D., Georgia Inst. of Technology. Asst. Prof., Biomedical Engineering
Cady, K. Bingham, Ph.D., Massachusetts Inst. of Technology. Prof., Theoretical and Applied Mechanics; Nuclear Science and Engineering
Callister, John R., Ph.D., Cornell U. Kinzelberg Director of Entrepreneurship in Engineering, Mechanical and Aerospace Engineering
Campbell, Mark E., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Mechanical and Aerospace Engineering
Cardie, Claire T., Ph.D. U. of Massachusetts, Amherst. Prof., Computer Science
Carr, Paul G., Ph.D., Virginia Polytechnic Institute. Adj. Assoc. Prof., Civil and Environmental Engineering
Cathles, Lawrence M. III, Ph.D., Princeton U. Prof., Earth and Atmospheric Sciences
Caughey, David A., Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
Chen, Thomas, Ph.D., Cornell U. Prof.
Chiang, Hisao-Dong, Ph.D., U. of California, Berkeley. Prof., Electrical and Computer Engineering
Cisne, John L., Ph.D., U. of Chicago. Prof., Earth and Atmospheric Sciences
Clancy, Paulette, Ph.D., Oxford U. (U.K.). Prof., Chemical and Biomolecular Engineering
Cohen, Claude, Ph.D., Princeton U. Prof., Chemical and Biomolecular Engineering
Collins, Lance R., Ph.D., U. of Pennsylvania. Prof., Mechanical and Aerospace Engineering
Colucci, Stephen J., Ph.D., SUNY Albany. Prof., Earth and Atmospheric Sciences
Constable, Robert L., Ph.D., U. of Wisconsin. Prof., Computer Engineering
Cook, J. Robert, Ph.D., North Carolina State U. Prof. (Emeritus), Biological and Environmental Engineering
Cool, Terrill A., Ph.D., California Inst. of Technology. Prof., Applied and Engineering Physics
Cowan, E. A., Ph.D., Stanford U. Assoc. Prof., Civil and Environmental Engineering
Craighead, Harold G., Ph.D., Cornell U. Charles W. Lake Jr. Prof. of Engineering, Applied and Engineering Physics
Cranch, Edmund T., Ph.D., Cornell U. Prof. (Emeritus), Theoretical and Applied Mechanics
Daniel, Susan Ph.D., Lehigh U. Asst. Prof., Chemical and Biomolecular Engineering
Datta, Ashim K., Ph.D., U. of Florida. Prof., Biological and Environmental Engineering
Dawson, Paul R., Ph.D., Colorado State U. Prof., Mechanical and Aerospace Engineering
DeBoer, P. C. Tobias, Ph.D., U. of Maryland. Graduate School Prof. (Emeritus), Mechanical and Aerospace Engineering
DeGaetano, Arthur T., Ph.D., Rutgers U. Prof., Earth and Atmospheric Science
Delchamps, David F., Ph.D., Harvard U. Assoc. Prof., Electrical and Computer Engineering
DeLisa, Matthew, Ph.D., U. of Maryland. Asst. Prof., Chemical and Biomolecular Engineering
Derry, Louis, Ph.D., Harvard U. Assoc. Prof., Earth and Atmospheric Sciences
Diamessis, Peter, Ph.D., U. of California, San Diego. Asst. Prof., Civil and Environmental Engineering
Dick, Richard I., Ph.D., U. of Illinois. Prof. (Emeritus), Civil and Environmental Engineering

FACULTY ROSTER
Kulhawy, Fred H., Ph.D., U. of California, Berkeley. Prof., Civil and Environmental Engineering
Kusse, Bruce R., Ph.D., Massachusetts Inst. of Technology. Prof., Applied and Engineering Physics
Lal, Amit, Ph.D., U. of California, Berkeley. Assoc. Prof., Electrical and Computer Engineering
Lance, R. H., Ph.D., Brown U. (Emeritus), Theoretical and Applied Mechanics

Zipfel, Warren, Ph.D., Cornell U. Assoc. Prof., Biomedical Engineering
requirements for admission

A successful applicant to the Graduate School must:

1. hold a baccalaureate degree or its equivalent granted by a faculty or university of recognized standing;
2. have adequate preparation for graduate work in the chosen field of study;
3. have fluent command of the English language;
4. present evidence of promise in advanced study and research; and
5. take the Graduate Record Examinations (GRE) General Test or other specific examinations required by the various fields of study.

Additionally, international applicants whose native language is not English must provide proof of competency in English as part of the admissions process. Proof can be:

1. the following minimum scores on the Test of English as a Foreign Language (TOEFL): writing, 20; listening, 15; reading, 20; and speaking, 22. Individual fields of study may set higher minimums.
2. evidence of at least two years of study in a college or university in a country where English is both the native language and the language of instruction.

Information about the TOEFL exam and the GRE—including examination times, dates, locations, and application forms—is available online from the Educational Testing Service (www.ets.org) or by postal mail at ETS, Princeton, NJ 08541, U.S.A.

deadlines

Each graduate field of study has specific deadlines for fall and spring admission. The earliest deadline is December 1; many deadlines fall in mid-January. Applications should be received no later than those published dates, which are available online at catalog.gradschool.cornell.edu.

inquiries

Applicants should contact the fields of study for answers to specific questions about admission to their graduate programs. Contacts in the fields of study also can answer questions about facilities for advanced study and research, special requirements, and opportunities for fellowships and assistantships. Phone numbers, e-mail addresses, and other contact information are available online at catalog.gradschool.cornell.edu.
ADMINISTRATION

Michael D. Johnson, dean, E. M. Statler Professor
Steven A. Carvell, associate dean for academic affairs
David Strong, associate dean for business affairs
Jon Denison, associate dean for external affairs
Judi Brownell, dean of students
Joe Strodel, director of corporate affairs
Tom Ward, director of the Leland C. and Mary M. Pillsbury Institute for Hospitality Entrepreneurship
Timothy Hinkin, Richard J. and Monene P. Bradley Director for Graduate Studies
Lisa M. Shaffer, director of student services
Brad Walp, director of enrollment management and international programs
Molly deRoos, associate director of career management
Meg Keilbach, interim director of alumni management
Emily Franco, director of Hotel School/Carnival Institute of America Alliance
Timothy J. Durnford, director of information technologies
Dina Krirstof, registrar

DEGREE PROGRAMS

Hotel Administration

Degree
B.S. M.M.H. M.S. Ph.D.

FACILITIES

Statler Hall Statler Hall is a unique building designed explicitly to meet the needs of the faculty and students of the School of Hotel Administration. The building serves both practical and theoretical instruction, among its classrooms, lecture rooms, laboratories, library, computer center, beverage management center, newly refurbished auditorium, and the Statler Hotel and J. Willard Marriott Executive Education Center. Statler Hall and the Statler Hotel were designed explicitly for the school’s academic and executive education programs, providing students with training and work experience in facilities similar to those in which they will work after graduation. In the fall of 2004, the school opened the Robert A. and Jan M. Beck Center, a $35,000-square-foot addition to Statler Hall. This $16.2 million expansion provides state-of-the-art classroom and meeting spaces, a computer laboratory, and teaching technologies that facilitate an interactive teaching style.

The School of Hotel Administration’s Nestlé Library The Nestlé Library has one of the best collections of hospitality-related materials in the United States. The collection contains approximately 37,000 books, 1,500 videotapes, and more than 600 journal, magazine, newsletter, and newspaper subscriptions. Materials on lodging, foodservice, travel and tourism, real estate, and general hospitality business topics comprise the core of the library’s collections. Among the library’s special features are numerous electronic information resources, including Business Source Premier, Proquest, Hotel Outlook, Mintel Marketing Intelligence, and the Hospitality and Tourism Complete, a unique index of hospitality articles. Information resources and services for the hospitality industry are available for a fee through the library’s HOSTLINE service. More detailed information about the Nestlé Library can be found at www.nestlelib.cornell.edu. In addition to offering an excellent collection of materials and access to extensive electronic resources, the Hotel School library provides instruction and research support to every student.

Statler Hotel and J. Willard Marriott Executive Education Center The Statler Hotel comprises 153 guest rooms; an executive education center; a signature restaurant, Taverna Banfi; two quick-service food outlets; a lounge; and the university’s faculty and staff club. The Statler Hotel is an independent, self-sustaining teaching unit that provides quality food and beverage, meeting, and lodging services to the local community and to campus visitors, such as parents and those who visit Cornell as part of the application process. The Statler Hotel provides a unique brand of hospitality that integrates the management theory taught at the Cornell Hotel School with practical expertise of the hotel’s professional and student staff. The hotel offers part-time jobs to approximately 200 students each semester with priority given to students in the Hotel School. A select group of students participate in the Statler Leadership Development program and earn supervisory and management positions in the hotel.

UNDERGRADUATE CURRICULUM

The School of Hotel Administration offers education in the numerous disciplines required for the rapidly changing and global hospitality industry. Included in the core curriculum are courses in operations, management and organizational behavior, human resource management, finance, accounting, real estate development, food and beverage management, marketing, tourism, strategy, facilities management planning and design, communication, information systems, and law. Students also are encouraged to pursue a broad range of elective courses among the humanities, social sciences, and natural sciences as preparation for assuming leadership positions in the business and local community. For more complete information about undergraduate program requirements, see the Hotel School’s Student Handbook (available in the Office of Student Services, 180 Statler Hall).

Requirements for Graduation

Regularly enrolled undergraduate students in the School of Hotel Administration are candidates for the degree of bachelor of science. The requirements for that degree are:

1. completion of eight semesters in residence for those who entered as freshmen; semesters of residence for transfer students are determined by the amount of transfer credit awarded;
2. completion, with a minimum cumulative grade point average (GPA) of 2.0 (including a GPA of 2.0 in a full-time schedule of courses on campus in the final semester), of 120 required and elective credits (note: 120 credits does not include PE courses), as set forth in the table on the following page;
3. qualification in one language other than English. This requirement may be met by any one of the following: (a) three years of high school study of one foreign language; (b) score of 560 on Cornell Placement Test; (c) passing language course level 1210 and 1220 (8 credits) or the equivalent, and attaining a minimum grade of at least C- or “Satisfactory” in each (G or above for transfer credit from other institutions); or (d) passing language course level 1250 or the equivalent;
4. completion of two units of practice credit; and
5. completion of the university requirement in physical education (including the swim test).

Suggested course programs appear on the following pages. The core courses account for 69 of the 120 credits needed for graduation, the Hotel School electives account for 12 credits, and 18 credits are allotted for distributive electives. The remaining 21 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met.

Students in the School of Hotel Administration who plan to attend summer school at Cornell or any other four-year college or university, with the expectation that the credit earned will be counted toward the Cornell degree in hotel administration, must obtain the approval from the school in advance. Without advance approval, such credit may not count toward the degree. Credit earned in military science, aerospace studies, or naval science courses may be counted in the 21-credit group of free electives.
Transfer Credit Policy
Transfer students are required to complete all degree requirements with at least 60 credits at Cornell University. In the core, transfer credit may be allowed against basic courses only (e.g., HADM 1121, 1106). The communication courses (HADM 1165 and 3365) are tailored to the School of Hotel Administration and, thus, communication courses taken elsewhere generally are not a replacement for core courses.

Hotel elective courses may not be transferred, except from the Culinary Institute of America. Eighteen credits in distributive electives may be transferred, and 21 credits in free electives may be transferred.

Minor in Real Estate
The minor in Real Estate is designed to prepare students for careers in the commercial real estate industry. Both the U.S. and international capital markets are undergoing fundamental changes, as is the nature of real estate ownership. This minor focuses on careers as a real estate investor, in real estate finance, real estate consulting, structured finance, and in real estate transaction support. Cornell University’s Hotel School is at the forefront of knowledge in this field and will help students prepare for a rewarding career. The minor is fulfilled with a minimum of six courses. Four courses are required and two or more electives complete the minor. A minimum of 18 credit hours is required to complete the minor. Any undergraduate student in the university may enroll in the minor in Real Estate; the minor is designed to integrate with the requirements of several majors including AEM in CALS, ORIE in Engineering, Industrial and Labor Relations, and Economics in Arts and Sciences.

Requirements for students in the School of Hotel Administration are different from requirements for students in other undergraduate units. Students who wish to pursue a minor in Real Estate must complete and submit an application. Applications are available in the home of the minor in Real Estate, 465 Statler Hall, on the school’s web site, or by e-mailing cu_re_minor@cornell.edu.

Minors
Students in the School of Hotel Administration may pursue minors offered by units in any college or division. A unit that offers a minor may place restrictions on who can pursue that minor (usually because of limited resources), and a major may place restrictions on the minors that its students can take (usually because the major and minor areas are too similar).

Completion of a minor will be audited by the unit that offers it. The minor will be recorded on students’ official transcripts by their home colleges after receiving verification by the unit offering the minor, usually during the summer after graduation. Students should inquire with the offering units for application procedures and requirements.

Concentration
While completing the Hotel School elective courses, undergraduates in the school may select a concentration.

Before selecting a field of concentration, students should consult the coordinator of instruction in that area during their sophomore year to plan the sequence of courses that will best fit their program. Upon completion, the concentration will be noted on the transcript, provided a cumulative GPA of 3.0 in the concentration was attained.

Foreign Languages
Mastery of a foreign language is particularly desirable for students who are planning careers in the hospitality industry and, hence, there is a second-language requirement for graduation. Further information on foreign language courses at Cornell, and placement in language courses, may be found under “Modern Languages, Literature, and Linguistics” and under “Advanced Placement for Freshmen” in the College of Arts and Sciences section of this catalog.

Independent Study and Research
Students may conduct independent studies or research projects in any academic area of the school under the direction of a resident faculty member. Credit is arranged on an individual basis. To enroll in an independent study or research project, students must obtain written permission from the school before the add deadline. See HADM 4497, 4498, 4499, 6698, or 6699 for more details.

Practice Credit Requirement
As part of the degree requirements, undergraduates enrolled in the School of Hotel Administration must fulfill the practice credit requirement and submit verification thereof. Further details are set forth in the Student Handbook for Undergraduates in the School of Hotel Administration (available in the Office of Student Services, 180 Statler Hall).

Management-Intern Program
Hotel school juniors and seniors have a unique opportunity to gain invaluable knowledge and experience in the hospitality industry through the Management-Intern Program (MIP). Students receive 12 free elective credits and 1 practice credit. While on the internship, tuition is reduced, and students may receive a salary from the sponsoring organization. Positions are available in the United States and internationally. Application should be completed one semester in advance. Information meetings are held at the beginning of each semester and are open to all students. See HADM 4483, 4494, and the student handbook for more details about the Management-Intern Program (available in the Office of Student Services, 180 Statler Hall).

Study Abroad
All students planning to study abroad must apply through Cornell Abroad, please see the Cornell Abroad program description in the introductory section of this catalog. The Hotel School represents the international aspects of the hospitality industry in many ways—from the large number of international students in its program to career opportunities throughout the world. To prepare for the global nature of the industry, students are encouraged to consider studying abroad in either the fall or spring semesters of their junior year (or, in some cases, both). While abroad, students have the opportunity to learn about other cultures, to become more proficient in a second (or perhaps third) language and, in those programs where internships are offered, to work in an international environment.

Students should start the investigation process early, including a consultation with the Hotel School study abroad advisor, 180 Statler Hall, as well as with the staff in the Cornell Abroad office, 300 Caldwell Hall. Requirements for college approval include a GPA of 3.0 or higher, good academic standing, registered full-time student status, and not being one’s final semester. Credits earned abroad are considered transfer credits, and, as such, they count against the maximum of 60 transfer credits allowed. A maximum of 15 credits may be transferred from study abroad programs, and students should plan on taking no less than 15 credits while abroad. Courses typically transfer into distributive and free electives.

Credit for study abroad programs will be awarded only after successful completion (marks equivalent to a Cornell grade of C or higher) of the semester abroad and receipt of the official transcript by the college.

For further details on the application process and deadlines, see the "Cornell Abroad" section of this catalog or view the Cornell Abroad web site at www.cuabroad.cornell.edu.

Culinary Institute of America Alliance
The School of Hotel Administration has an alliance with the Culinary Institute of America (CIA), which is located in Hyde Park, N.Y. Hotel School juniors and seniors can both earn their B.S. from Cornell and complete the requirements for an Associates in Occupational Studies (A.O.S.) degree in Culinary Arts from the CIA during the course of their four-year program at Cornell. Most students apply to the program during their sophomore year, so planning should start early to be sure all program requirements are met.

Students study approximately nine months on-site at the CIA, working and learning daily in the finest training kitchens in the world. Students are required to have completed HADM 2236 Culinary Theory and Practice and HADM 3505 Restaurant Management from the Hotel School core curriculum before attending the full program at the CIA. In addition to the core curriculum, Hotel School students are required to take four specific courses to complete the degree requirement:

- HADM 4403 Specialty Food and Beverage Operations: Guest Chefs (offered spring only)
- HADM 4404 Catering and Special Events Management (offered fall only)
- HADM 4430 Introduction to Wines
- HADM 4452 Contemporary Healthy Foods (offered fall only)

More information about the CIA is available at www.ciachef.edu. Frequently asked questions are available at www.hoteleschool.cornell.edu/academics/special/cia/ciaasha.html. For additional collaborative degree program questions or to obtain applications, contact CIA_Alliance@cornell.edu.

Part-Time Study
Generally, part-time study is not allowed. Exceptions may be made for employee...
degree candidates, students who have medical reasons for a reduced schedule, or in other very extenuating circumstances. In no event shall a student be allowed to enroll on a part-time basis during the last semester of study. Further details on part-time study may be found in the school’s student handbook (available in the Office of Student Services, 180 Statler Hall).

**Grading System**

Letter grades ranging from A+ to F are given to indicate academic performance in each course. These letter grades are assigned a numerical value for each semester average as follows: A is equivalent to 4.0; B to 3.0; C to 2.0; D to 1.0; and F to 0. For good standing, a student must maintain a minimum average of 2.0. A maximum of 4 credits each semester may be taken on a “satisfactory–unsatisfactory” (S–U) basis. Students should be aware that a satisfactory grade is equivalent to a C– or above and an unsatisfactory grade is equivalent to a D+ or lower.

Students whose semester averages are at least 3.3 and who have taken at least 12 credits of letter grades with no unsatisfactory or incomplete grades are honored by being placed on the Dean’s List.

**ORGANIZATIONAL MANAGEMENT, COMMUNICATION, AND LAW**

**Management and Organizational Behavior**

HADM 1110 Distinguished Lectures in Hospitality Management

Fall. 1 credit. Elective. Those wishing to enroll have until Friday, Sept. 4, 2009, to add it. Dean M. Johnson.

The Dean’s Distinguished Lecture Series is a long-standing Hot School tradition that provides a unique opportunity for successful industry leaders to share their experiences with Cornell students. In its 40-year history, the Dean’s Distinguished Lecture Series has hosted the most influential and accomplished leaders from every segment of the hospitality industry. Speakers share their views about successful management styles, possible career paths, critical industry-related issues, and qualities conducive to successful business leadership. Students have an unparalleled opportunity to learn and question how hospitality leaders view the current and future status of the industry.
HADM 1115 Organizational Behavior and Interpersonal Skills
Fall and spring. 3 credits. Required. T. Hinkin, K. Walsh, J. Brownell, and T. Simons.
This course focuses on how to manage people in the workplace. Students develop theoretic lenses for understanding people and organizations, as well as practical tools for accomplishing personal and organizational goals. Topics include: individual differences, conflict management, problem-solving, power and influence, motivation, leadership, coaching and counseling, and group process. Students learn through the use of case studies, self-assessments, experiential exercises, readings, discussions, papers, and group activities.

HADM 2217 Statler Leadership Development Program
Fall. 1 credit. Elective. Prerequisite: one semester (200 hours) of employment at the Statler Hotel. The SLDP is a partnership among Hotel School faculty and Statler Hotel management, who together teach and guide students how to become tomorrow’s leaders. The program enables students to have unique experience in negotiation in the hospitality industry trends, challenges, and opportunities. Through the use of role-play exercises, readings, discussions, papers, and group activities, students develop into tough negotiators with whom executives view the current and future status of the industry.

HADM 4410 Hospitality Management Seminar
Fall. 1 credit. Elective. Limited to 30 Hotel seniors. Corequisite: HADM 1110. Preregistered students or students wishing to add course who do not attend first class and who fail to notify secretary in 146 Statler Hall of their absence before first class automatically will be moved to instructor’s waiting list. Students permitted to take seminar only until Sept. 5, 2010, to add it. Failure to do so will result in their being dropped from course. Dean M. Johnson.
HADM 4410 complements HADM 1110 by giving students the opportunity to interact with guest speakers and to participate in roundtable discussions on issues relating to the hospitality industry. Students will have the opportunity to gain a better understanding of industry trends, challenges, and opportunities.

HADM 4411 Negotiations in the Hospitality Industry
Spring. 3 credits. Elective. Required to attract, select, develop, and retain quality employees. Students learn about the successful skill sets, temperaments, and leadership styles needed to be an effective and valuable executive. They also focus on critical negotiation issues.

HADM 4415 Managerial Leadership in the 21st Century
Spring. 1 credit. Elective. Due to popularity of class, priority is given in following order: seniors/second-semester seniors, juniors/first-semester seniors, nonemployees, extramural students, sophomores, freshmen, and Cornell employees. Space permitting, class may be added up until first day, but absolute deadline for dropping course is 12 noon F, Feb. 26. F, Mar. 5 (4–6 p.m.), S, Mar. 6 (9 A.M.–6 p.m.), Sun. Mar. 7 (9 A.M.–4:30 P.M.), 2010, in Statler Auditorium. Attendance mandatory for credit. Fee for required notebook (charged to student’s bursar bill; notebook distributed on first day of class) $45. K. Blanchard.
Managerial Leadership in the 21st Century helps students become participant observers in their own lives through studying the field of applied behavioral science. Students will not be able to use what they learn about human beings and how they function best in groups and organizations on a day-to-day basis to develop high-quality relationships between themselves and the people they support and depend upon (their boss, staff, peers/associates, and customers). When quality relationships exist, organizations tend to be characterized by high levels of integrity, customer satisfaction, employee empowerment, and organizational effectiveness.

HADM 4417 Hospitality Leadership
Spring, second seven weeks of semester. 2 credits. Limited to Hotel seniors: Hotel juniors by permission. Prerequisite: HADM 1115 or similar course. Being an effective leader is one of the fundamental responsibilities of almost all hospitality managers and also plays a critical role in managing organizational change. In this course, you will learn about your leadership style, explore a range of effective and ineffective leaders, and understand the importance of both formal and informal leadership, and develop your leadership skills. Instructional techniques will include self-assessment, lecture and discussion, case analyses, and experiential exercises. Course is strongly recommended for SLDP seniors.

HADM 5511 Survey of International Management
Fall. 3 credits. Elective. J. Katz.
This course provides an overview of management in the international environment, focusing on multinational corporations and in domestic corporations based outside of the United States. The goal is to teach students how to be more effective when working in global contexts: how to analyze and respond to behavioral differences across countries; methods to communicate effectively in cross-cultural and multicultural settings; leading international teams, etc. The course is taught with a combination of lectures, cases, and in-class exercises.

HADM 6610 M.M.H. Discussion Forums in Hospitality Management
Fall. 1 credit. Required. M.M.H. students only. M. Johnson.
HADM 6610 is a required master-level course that provides a unique opportunity for success in the hospitality industry. As a student in HADM 6610, you will have an unparalleled opportunity to learn how hospitality executives view the current and future status of the industry.

HADM 6611 Negotiations in the Hospitality Industry
Spring. 3 credits. Elective. Limited to 30 students. Prerequisite: graduate standing. Undergraduates to enroll in HADM 4411.
T. Hinkin.
Negotiation is a critical factor in business success. This course provides hands-on experience in negotiations in a hospitality context. Through the use of role-plays, discussions, and writing exercises, students develop into tough negotiators with whom people will want to continue doing business. Students become more comfortable with negotiations and develop their own personal negotiating style. Students also learn how to adjust their negotiating style to respond appropriately to others’ personalities and negotiation tactics.

HADM 7711 Organizational Behavior
Fall. 5 credits. M.M.H. requirement. Prerequisite: M.M.H. students or written permission of instructor in advance of preenrollment. T. Hinkin.
Organizational Behavior teaches how individuals, groups, and organizations interact within a complex, globalized service environment. Students develop interpersonal skills and gain a greater awareness of how their personal styles influence leadership and decision-making. They learn to motivate others, negotiate ethical decisions, manage teams, and lead organizations through change.

Human Resource Management
HADM 2210 The Management of Human Resources
Fall. 3 credits. Elective. Prerequisite: non-Hotel students. Not open to freshmen. S. Way.
Students engage in a practically oriented examination of the role of human resources management (HRM), starting with an introduction to the HR function and an analysis of the social, legal, international, and competitive factors influencing HRM. The course examines recruitment, selection, training, motivation, development, compensation, performance appraisal, and labor relations. The course assumes a managerial perspective and emphasizes class discussion and case analysis.

HADM 2211 Human Resource Management
Fall. Spring. 3 credits. Required. Limited to 70 students per lec. Not open to freshmen or graduate students. Prerequisite: HADM 1115. B. Tracey, S. Way, and M. Sturman.
This course facilitates an understanding of the policies, procedures, and systems required to attract, select, develop, and retain quality employees. Students learn about the major environmental factors that affect the
HR function, including legislation, economics, and demographics. The course emphasizes human resource issues in the hospitality industry. Instruction is based on lecture and discussion as well as case analysis and project work.

HADM 3313 Training and Development
Fall. 3 credits. Elective. Not open to freshmen. B. Tracey.
Training is one of the fundamental responsibilities of almost all hospitality managers, and this HR function plays an instrumental role in managing organizational change. In this course, students will learn how to design, implement, and evaluate both formal and informal training programs. In addition, we will examine factors beyond design and implementation that may influence training effectiveness. A variety of instructional techniques will be used throughout the course, including experiential activities that will enliven the learning process. The course will also include the opportunity to formulate a “live case study” of one or more training problems with a real hospitality firm.

HADM 5512 Managing Compensation
Spring. 3 credits. Elective. Prerequisite: HADM 2211, HADM 7712, ILR 2600, ILRHR 5000 (can be repeated for credit). M. Sturman.
This course is designed to give students a practical understanding of the methods and implications of compensation, including hands-on experience designing compensation systems for firms in the service industry. The course is designed to provide material that is distinct from that provided in ILRHR 6690 Managing Compensation. Students will learn how to design a pay plan, including base pay and pay-for-performance plans. By the completion of the course, participants will know how to design pay ranges and grades for organizations where most jobs can be benchmarked with market data. The course will also devote considerable time to the design of incentive plans, including merit pay, bonuses, gainsharing, profit sharing, piece-rate, tipping, and commission systems. The course is designed to be useful for those desiring employment as an entry-level compensation specialist, a human resources generalist, those starting and running their own business, or those who want a better understanding of how human resource practices are actually managed. For students with a particular interest in compensation, the course can be taken in addition to the ILRHR 6690 course; for those interested in compensation in the services industry, this course can be taken as a standalone course.

HADM 5513 Strategic Human-Resource Management in Hospitality
Spring. 3 credits. Elective. Prerequisite: HADM 2211 or equivalent. B. Tracey.
Over the past several years, the HR function has taken on a broader role in helping organizations to create and sustain a competitive advantage. The primary focus of this course is to examine the ways in which HR policies, practices, and systems can enhance the competitive capabilities of hospitality organizations. This seminar-style course will be conducted using hospitality case studies and current business problems as a basis for learning. The course will also include the opportunity to conduct a “live case study” of one or more strategic HRM problems with a real hospitality firm.

HADM 7712 Human-Resource Management
Spring. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or written permission of instructor in advance of preenrollment. M. Sturman.
This graduate-level course covers the strategies that enable companies to attract, develop, and retain high-quality employees, which include selection, compensation, performance appraisal, and career management. In each of these areas, the focus is on the return on the human-resource investment.

Managerial Communication

HADM 1165 Managerial Communication I
Fall, spring. 3 credits. Required. Limited to 18 students perlec. (Students who are required to take this course generally may not delay it. If extenuating circumstances exist, students may request to drop course by end of first week of classes. Course must be taken within first two semesters in the Hotel School, including any semester in International Transfer Division (ITD). Add/drop and section exchange must be approved by chairperson.) Priority given to Hotel students. D. Jameson, A. Newman, and C. Snow.
This course provides an introduction to the role and importance of effective communication in managerial work, especially in the hospitality industry. Students develop abilities in analytical thinking and clear expression. Students will engage in the process of planning, preparing, and executing professional communications with an emphasis on written documents. Students write a series of business documents and give oral presentations.

HADM 3364 Corporate Communication
Spring. 3 credits. Elective. Limited to 30 students perlec; priority given to Hotel students. Prerequisite: junior, senior, or graduate standing or written permission of instructor; for Hotel undergraduates, HADM 1165 or written permission of HADM 1165 instructors; for non-Hotel undergraduates, completion of their college’s writing requirement. A. Newman.
How you communicate as a leader will determine your ability to convey ideas, manage teams, and get promoted within an organization. In this course, we’ll analyze how companies handle crisis communication, work with the media, manage change, and inspire employees. With an emphasis on current events, we’ll study both traditional communication methods and new communication technologies, such as blogging, intranets, e-mail, web meetings, and instant messaging. Expect written assignments and highly interactive presentations to build your communication skills.

HADM 3365 Managerial Communication II
Fall, spring. 3 credits. Required. Limited to 24 students perlec; priority given to Hotel students. Prerequisites: junior or senior standing; for undergraduates, HADM 1165 and 1115. D. Lennox and A. Newman.
This course develops the knowledge and skills hospitality managers need to face an array of persuasive communication challenges. HADM 3365 builds on the principles of effective managerial communication presented in HADM 1165 as well as the concepts of organizational behavior and interpersonal skills covered in HADM 1115. The course introduces the theory and principles of persuasion and focuses on their application in a range of management and leadership contexts.

HADM 4462 Intercultural Communication in the Hospitality Industry
Spring. 3 credits. Elective. Priority given to Hotel students. D. Lennox.
This course is designed to help managers develop proficiency when communicating among and between people who do not share similar cultural assumptions. Students can expect to learn communication variables that differ among cultural groups, including the use of eye contact, body language, personal space, hierarchy, and time. Additional topics include persuasion and negotiation across cultures and the ethics of communication in international business. Students learn the use of a blend of theory and practice. Activities include lectures, guided discussions, group projects, student and guest speaker presentations, and analysis of specific cross-cultural managerial challenges, with an emphasis on the service industry.

HADM 7761 M.M.H. Managerial Communication
Fall. 3 credits. Required. Limited to 40 M.M.H. students per sec. D. Lennox.
Managers use communication strategies that involve written and oral messages to solve problems and to accomplish professional goals within the workplace. The chief goal of this course is to help students become more competent, confident, and versatile communicators. Each student prepares clear and powerful messages—reports, oral presentations, letters, and memos—and learns to approach problems analytically and make thoughtful communication choices, some of which are situation-specific.

Law

HADM 3385 Business Law I
Fall, spring. 3 credits. Elective. Open to Hotel School juniors, seniors, and graduate students and non–Hotel students. P. Wagner.
Provides students with a presentation of three substantive areas of business law: employment law, franchising, and business organizations. Students read judicial opinions; learn to identify issues; and analyze the issues by applying legal principles.

HADM 3387 Business and Hospitality Law
Fall. 3 credits. Required. Prerequisite: junior, senior, or graduate standing. D. Sherwyn.
This course provides students with an integrated presentation of employment discrimination, tort, and contract concepts as they apply to the legal aspects of hospitality management. Students examine relevant federal and state cases and statutes. The overall objective is to enable students to recognize, analyze, and evaluate legal issues for the purpose of making and articulating appropriate decisions in the workplace.

HADM 4481 Labor Relations in the Hospitality Industry (also ILR 4060)
This course will focus on the critical labor relations issues facing the hospitality industry. All students will participate in simulated organizing campaigns and contract negotiations. Representatives of management and unions will address the class on key contemporary labor developments.

HADM 4485 Employment Discrimination Law and Union–Management Relations
Spring. 3 credits. Elective. Prerequisites: junior, senior, or graduate standing; HADM 3387 or permission of instructor. Next offered 2010–2011. D. Sherwyn. This course provides students with an understanding of discrimination laws, a framework for complying with laws, and a method for using the laws to maintain positive employment relations.

HADM 4487 Real Estate Law
Fall, spring. 3 credits. Elective. Prerequisite: junior, senior, or graduate standing. Recommended: completion of HADM 3387. A. Klausner. This course provides students with an understanding of the legal issues surrounding the ownership, transfer, and use and development of real estate. Students will learn to recognize and evaluate legal issues in order to inform the decision-making process with respect to real estate, whether as a business executive, an entrepreneur, or in personal life.

HADM 4489 The Law of the Internet and e-Commerce
Fall. 3 credits. Elective. Prerequisite: junior, senior, or graduate standing. A. Klausner. The computer industry and the Internet have fundamentally changed the world in swift, dramatic fashion. The emergence of global digital networks and digital technologies offer to nearly anyone the ability to access, store, mine, manipulate, and transmit vast amounts of information. At the same time, this revolution in the use of information raises new and often complex legal disputes in areas such as copyright, trademark, privacy, speech, contract formation, jurisdiction, information security, etc. Moreover, the rapidly growing maze of laws directed at the Internet is another normative obstacle for persons and companies doing business on the web. The purpose of this course is to acquaint students with the legal topics and principles applicable to the Internet, and to help students identify and understand the rapid developments of the law of the Internet by exploring specific problems.

HOSPITALITY FACILITIES AND OPERATIONS

Food and Beverage Management
HADM 2236 Culinary Theory and Practice
Fall, spring. 4 credits. Required. Prerequisite: HADM 1106. Because this course is laboratory-based, students may not drop after first full week of classes; during first week of class, students may drop only with permission of instructor and/or academic dean. Failure to attend first lab may result in administrative drop. R. Spies.

This course introduces the student to food and beverage operations through three major components: fundamental food composition and properties, food products and preparation, and food safety. Students prepare recipes, menus, and production schedules. Students develop the ability to recognize properly prepared foods by preparing, tasting, and evaluating them. They also are involved in a project in which they create menus, develop and standardize recipes, and complete a plan for a dining event. Completion of a five-hour practicum experience in the Statler Hotel back-of-the-house is a required course activity.

HADM 2290 Introduction to Culinary Arts
Fall, spring. 2 credits. Elective. Limited to 28 non–Hotel students; priority given to seniors and graduate students. Preregistered students who do not attend first class are automatically dropped from instructor’s records. These students must drop the course officially with their own college. Because of high demand for this course and limited drop deadline is F of first week of classes. Fee (includes cost of uniform and uniform cleaning): $75. G. Norkus. This course focuses on the food groups and their methods of preparation, cooking, and presentation. The course is designed specifically for non–Hotel students who are interested in learning the professional approach to food preparation and service with hands-on practice. Students are involved in food product identification, preparation and service methods, and learning the professional language of food and cooking.

HADM 4430 Introduction to Wines
Fall, spring. 2 credits. Elective. Prerequisite: Hotel juniors and seniors; seniors and graduate students in all other colleges. Hotel students strongly encouraged to enroll in fall semester. Students are exempt from 21-year-old age requirement under Section 65 of New York State law. Preregistered students who do not attend first class and who fail to notify secretary in 274 Statler Hall of their absence before first class are automatically dropped from instructor’s records. These students must drop the course officially with their own college. Because of high demand for this course and consumption of a product, the absolute drop deadline in fall for all students is F, Sept. 11, 2009, and drop deadline in spring is F, Jan. 29, 2010. Fee (includes cost of wine glasses and tasting kit): $30. No auditors. S. Mutkoski. Students will be introduced to the major wine-producing regions of the world and what consumers need to know to purchase wine at retail outlets and in a restaurant setting. Lecture topics include flavor components in wine; pairing wine and food; responsible drinking; selecting quality and value wine; and wine etiquette. Samples from a variety of countries, regions, and vineyards are evaluated.

HADM 4431 Wine and Food Pairing Principles and Promotion
Fall. 2 credits. Elective. Limited to 20 Hotel juniors and seniors; seniors and graduate students only. Prerequisite: HADM 4430. G. Pezzotti. This course focuses on the pairing and creative marketing of wine and food. Students develop an understanding of regional and varietal wine styles, how food flavors can change a wine’s flavor, and the promotion of wine and food. Topics include wine and food pairing principles, cuisines and their flavor components, food trends in restaurants and in the home, special event planning, and wine-list development. Students design and present wine and food tastings to industry guests.

HADM 4432 Contemporary Healthy Foods
Fall. 3 credits. Priority given to 20 seniors and graduate students; others may enroll, space permitting. Prerequisite: HADM 3365 or equivalent. Cost of required field trip: $75. M. Tabacchi. This course is designed to build a greater awareness and understanding among nutrition and foodservice professionals of the origins and manifestations of today’s health-conscious and educated foodservice patron. Students gain an understanding of the marriage of nutrition and the imaginative, flavorful cuisine demanded by today’s consumer. Emphasis is on the use of fresh produce, lean meats, and lack of fabricated diet foods. Creativity and nutrient density of foods served are very important components of menu design in this course. Key topics include the preparation, marketing, merchandising, and selling of healthy menus in the Statler Hotel.

HADM 4435 Selection, Procurement, and Supply Management
Spring, first seven weeks of semester. 2 credits. Elective. Limited to 20 Hotel juniors, seniors, and graduate students or permission of instructor. Add/drop deadline Sept. 5, 2009. R. Spies. This course deals with contemporary management issues related to procurement activities within the hospitality industry. Focus is on both the food distribution industry and the hospitality industry so that students understand the role the distributor plays in the movement of food and supplies from the producer to the hospitality operator and how the creation of distribution partnerships serves to improve efficiency and reduce costs. Topics include distribution channels and intermediaries in the supply chain; food distributor financial statement analysis; evaluation and selection of suppliers; development of buying strategies; purchase timing and inventory management; the emerging role of the Internet; and e-procurement service providers.

HADM 4436 Beverage Management
Spring. 3 credits. Elective. Prerequisite: Hotel junior, senior, or graduate standing; HADM 4430 (co-registration not allowed). S. Mutkoski. This course is designed for students who intend to pursue a career in food and beverage management. Course work deals specifically with the management of beverage operations. Lectures include dram shop liability; staff training and responsible customer service; beverage pricing; food and wine pairings; wine list development; purchasing, storage, and service; wine regions; cost controls and loss prevention; and creative beverage merchandising. Guest lectures highlight industry trends and outlooks.
industry that affect the growth and development of multi-unit restaurant companies. In addition to the weekly scheduled seminar time, students are required to attend two receptions to honor the roundtable speakers. In class, students critically evaluate selected research papers related to multi-unit business management to serve as the basis for class discussion and the fostering of a broader understanding of leadership and growth strategies in the multi-unit restaurant business.

**Operations**

**HADM 1101 Hotel Operations Management: Tactics for Profitability**

Summer. 3 credits. R. McCarthy and M. McCarthy.

In this Summer College program you will develop your business, management, and leadership skills while refining your computer, communication, and analytical skills. You will have the opportunity to explore the hospitality industry at the world-renowned School of Hotel Administration.

This course is designed to provide not only an elemental understanding of the hospitality industry but a realistic exposure to the work, decisions, and competitive forces that have an impact on all of those who take a professional stake, either directly in the industry or within one of its supporting industries. You will be responsible for coming up with a business plan and operating a 250-room simulated CHESS Hotel. Through careful analysis of your hotel's financial information you will see the multiple impacts of the decisions you make and the issues that need to be taken into consideration and balanced in order to operate a profitable business. Your interpretation of your analysis will be presented in a concise, professional, and well-organized fashion in the form of a business report. You will learn how to use the Microsoft Office 2007 suite of products to support your analysis and to effectively communicate your findings. Your business report will provide demonstration of the knowledge that you have gained during the program.

**HADM 1105 Introduction to Hotel Operations**

Fall, spring, seven weeks. 2 credits.

Required. Prerequisite: Hotel or ITD students. Corequisite: HADM 1106. Students enrolled in Lec 1 of HADM 1105 take Lec 2 of HADM 1106 in same semester, and vice versa. R. McCarthy.

This course is designed to introduce students to the scope of the hotel industry and the organizational structure and operational mechanics of how the departments within the rooms division of an individual hotel operate. Understanding the scope of the industry involves understanding who the major players are and what market segments their brands serve. Students gain an understanding of how work is performed and how activities are coordinated within the rooms division and among other hotel departments. Completion of a front desk and housekeeping practicum at the Statler Hotel is a required course activity.

**HADM 1106 Introduction to Food Service Operations**

Fall, spring, seven weeks. 2 credits.

Required. Prerequisite: Hotel or ITD students. Corequisite: HADM 1105. Students enrolled in Lec 1 of HADM 1106 take Lec 2 of HADM 1105 in same semester, and vice versa. S. Lipinski and R. Spies.

Students are introduced to the principles of foodservice operations, beginning with an overview of the foodservice industry at large. Attention is initially focused on major industry segments, business practices, and trends. Subsequently, detailed consideration is given to the components of the foodservice system: marketing, menu planning, production, service, controls, and quality assurance. Product and systems differentiation in various industry segments are emphasized throughout the course. Completion of a work experience in the Statler Hotel is a required course activity.

**HADM 2201 Hospitality Quantitative Analysis**

Fall, spring. 3 credits. Required. Prerequisite: Hotel or ITD students. R. Lloyd.

This introductory statistics course is taught from the perspective of solving problems and making decisions within the hospitality industry. Students learn introductory probability, as well as how to gather data; evaluate the quality of data; graphically represent data; and apply some fundamental statistical methodology. Statistical methods covered include estimation and hypothesis testing relating to one- and two-sample problems of means, simple linear regression, and multiple regression. Problems involving multiple means (one-way ANOVA) are covered as a special case of multiple regression, time allowing. Minitab is used as the statistical computing software.

**HADM 3301 Service Operations Management**

Fall, spring. 3 credits. Required. Limited to 70 Hotel students per lecture. C. Anderson and R. Verma.

Students are introduced to statistical and operations research methods that are appropriate for the hospitality industry. The goal of the course is to provide students with the skills and understanding necessary for making decisions using quantitative data. Students use computer spreadsheet software extensively. A key requirement of the course is an ability to communicate the results of analyses in a clear manner. Topics include probability; decision analysis; modeling; forecasting; quality management; process design; waiting lines; and project management.

**HADM 3303 Club Management**

Fall, second seven weeks; spring, first seven weeks. 2 credits. Elective. Deadline to drop course is midpoint of course. Limited to 35 Hotel juniors and seniors only in fall, no freshmen; open to non-Hotel students only in spring; Hotel students only by permission only. R. James.

Students study private membership clubs and the leadership role in club administration. The application of current management principles in a not-for-profit environment is discussed, and club management is compared to other areas of the hospitality industry and other not-for-profit organizations. Topics
include tournament, facility, and recreation management; legal, financial, and legislative issues; human relations and human resource considerations; and marketing, pricing policies, and quality standards.

HADM 3305 Restaurant Management
Fall, spring. 4 credits. Required. Limited to 27 Hotel students per lab. Prerequisite: HADM 2236 and Bar Code and Serv-Safe certified. Cost of lab manual, certification for alcohol service, utensils for front- and back-of-house: approx. $85. Because of group work for this course, absolute deadlines for the course in fall is Sept. 4, 2009, and in spring is Feb. 5, 2010. A. Susskind.

This course offers the opportunity to synthesize the skills, concepts, and theories students have learned in other classes and apply them practically in an actual restaurant setting. Lecture topics cover pertinent issues and principles relevant to the industry at large and then are incorporated as a class into actions that occur in the student-run operation.

HADM 4401 Restaurant Entrepreneurship
Fall, spring. 3 credits. Elective. Limited to 20 Hotel students. Prerequisite: written permission of instructor. Max. cost of five required field trips: $350. G. Pezzotti.

This course is designed for students who have a strong interest in food and beverage operations and who may be considering a career as an entrepreneur. Under the supervision of the instructor and using student-developed case studies, students visit and analyze various independently owned and corporate restaurant operations. Analysis covers, but is not limited to the restaurant’s concept (market), organization, ownership, management, physical structure, staff, front-of-the-house operations, back-of-the-house operations, and fiscal integrity. Readings about current topics in the restaurant industry are required. Classes alternate weekly between field trips (2:30 P.M. through dinner hour) and seminars/case presentations.

HADM 4402 Contract Foodservice Management
Spring. 3 credits. Elective. Prerequisites: HADM 1106 and HADM 2236. Faculty.

The course focuses on outsourcing foodservice operations management in venues such as business and industry, education, sports and entertainment, and lodging. It is particularly relevant since the service segment of business has been focusing on outsourcing all kinds of operational components. Students gain a broader perspective of hospitality foodservice operations management for just restaurants and hotels. They also explore operational parameters appropriate for different types of foodservice venues, as well as evaluating RFPs and contracts.

HADM 4403 Specialty Food and Beverage Operations: Guest Chefs
Spring. 3 credits. Elective. Limited to 20 students. Prerequisite: Hotel juniors, seniors, and graduate students; HADM 3305; permission of instructor. G. Pezzotti.

This course is designed for students having a strong food and beverage orientation. Students considering a career in the hotel or restaurant food and beverage environment or those who anticipate interacting with present-day culinary trends find the course especially beneficial. Over the course of the semester, the class, working in groups, will be responsible for the marketing, organization, planning, production, service, financial analysis, and accounting relative to three guest-chef specialty production nights. The chef will be in charge of the evening’s menu reflecting his or her culinary background and work with the class in producing the meal for the Cornell community using the Hotel School’s facilities. A required final project analyzes the relative degree of success experienced during each guest-chef event. The analysis considers consumer reactions as well as proper application of food and beverage management principles.

HADM 4404 Catering and Special Events Management
Fall. 3 credits. Elective. Limited to 30 students. Prerequisites: HADM 2236 or permission of instructor. Cost of required field trip to New York City: approx. $250. R. Spies.

The catering and special events industries are among the fastest-growing segments within the hospitality industry. This course focuses on off-premise catering and on-premise catering for social and business functions and the management of large-scale independent events, such as sporting events, artistic performances, and product launches. Topics include organizational structure; legal aspects of catering and special events management; product and service development; marketing and sales; catered function and special event planning and execution; staff recruitment and training; post-event analysis; financial success of catering; and special events businesses.

HADM 4408 Introduction to Casino Operations
Fall. 2 credits. Elective. Limited to Hotel students, others by permission of instructor. Drop deadline for course is end of week three. Cost of required field trip to Atlantic City: approximately $300. R. McCarthy.

A vital part of the hospitality industry, casino gaming is one of the most exciting and fastest-growing industries. This course focuses primarily on the operation and ownership of commercial casinos and the hotels attached to them. It is designed to introduce students to the internal and external casino environment. It looks at the historical development of gambling in America to understand how the industry has evolved to its present form. Students learn the organizational structure of a casino hotel, how it operates, and how it makes money. Students also gain an understanding of the different companies that own casino hotels and the current issues facing these companies. Topics include casino marketing strategies and player rating systems; the social and economic impact of gaming and the various regulatory environments within which casinos operate; and how common casino games are played and the mathematics of the various games. Students build on their food and beverage and hotel knowledge to better understand the specific challenges facing casino hotel operators.

HADM 5502 Advanced Hospitality Quantitative Analysis
Spring. 3 credits. Elective. Prerequisite: HADM 2201 or permission of instructor. R. Lloyd.

The course introduces students to topics in statistics that can be utilized by corporate or business leaders to aid in decision making. It builds upon the statistical knowledge gained from HADM 2201, including in-depth statistical techniques that may not be mainstream within the hospitality industry today, but which are growing in importance. Topics include more multiple regression; simple and multiple logistic regression; one- and two-factor ANOVA, with multiple comparison procedures; chi-squared tests of independence of categorical factors; tests of proportions; and predicting and forecasting with artificial neural networks. Computational programs include MINITAB (used in HADM 2201) and Alyuda NeuroIntelligence.

HADM 6600 Advanced Revenue Management
Spring. second seven weeks. 2 credits. Elective. Hotel graduate students only, others by permission of instructor. This course is taught via a virtual conference with CNI–Singapore. S. Kimes.

In this course, students will work in virtual teams and learn how to apply revenue management solutions to nontraditional applications such as golf, spa, function space, and retail.

HADM 6602 Spa and Spa Hotel and Resort Development and Management
Fall, spring. 3 credits. Elective. Limited to 35 Hotel School seniors and graduate students; others by permission of instructor. Required. Limited to 315 Hotel students per lab. Prerequisite: equivalents. C. Anderson.

This course emphasizes the development, management, and marketing of free-standing spas, spas in hotels and resorts, and spa restaurants. Day spas, resort spas, and destination spas are studied in depth. The feasibility of success for new spas and the marketing research necessary to establish new spas are discussed. The design of menus, mental and physical fitness programs, stress management, spa medical treatments, complementary medical treatments, and other spa programs are all considered. Required personnel, safety, legal, and ethical issues regarding spas are an important part of the course. The integration of nutritious menu items into restaurant menus and their marketing and merchandising is studied. Guest speakers from spas are an integral part of the course.

HADM 6603 Quality and Process Improvement
Spring. 3 credits. Elective. Prerequisite: graduate students only. Next offered 2010–2011. R. Verma.

The foundation of this course is on the emergence of quality management as a strategic focus in firms seeking excellence and a competitive edge. Topics include defining quality in service industries; techniques for designing high-quality services; process analysis; problem identification techniques; statistical process control techniques; process capability analysis; and robust design of service processes.

HADM 6605 Yield Management
Fall, spring. 3 credits. Elective. Limited to 30 students. Prerequisite: senior or graduate standing; HADM 3301 or 7703 or equivalent. C. Anderson.
This course helps students learn how to apply the principles of revenue management effectively. Focus is placed on the integration of yield management techniques with information technology, internal management issues, and external marketing concerns.

Topics include yield management techniques, forecasting, overbooking, group decisions, and management and marketing issues.

**HADM 6606 Restaurant Revenue Management**

Fall. 3 credits. Elective. Limited to 40 students. Prerequisites: HADM 7703; graduate standing or permission of instructor. G. Thompson.

Revenue management is a method for managing capacity profitably. The objective of this course is to help students learn how to apply the principles of revenue management to maximize profitability in the restaurant industry. The course focuses on methods of managing duration and price with the intent of maximizing revenue per available seat-hour. Topics include forecasting, overbooking, reservations systems, information technology, process design, pricing, and management and marketing issues.

**HADM 6609 Airline Service Management**

Spring. 3 credits elective. Priority given to 30 seniors and graduate students; others may enroll, space permitting. Cost of field trip: approx. $75. M. Tabacchi.

This course is a must for those interested in a career in the airlines industry. The impact of 9/11 upon the industry is investigated. Airline service and on-board services are used as competitive advantages by airline carriers. In fact, names such as Singapore Airlines and Virgin Atlantic have become synonymous with service excellence in the service economy. The strategies of developing competitive advantages and superior service in today’s erratic economic climate are a major part of class discussion. Guest speakers from American Airlines, Singapore Airlines, US Airways, Delta, Continental Airlines, Virgin Atlantic, and SkyChefs are featured. In addition to service strategies both on the ground and in the air, students study the challenge of serving meals on international flights. Strategies, planning, and forecasting by these executives are examined. Case studies based on national and international airline business are an integral part of the course. A field trip to an airline’s hub city enables students to observe first-hand the industry and its personnel in action.

**HADM 7703 Operations Management**

Summer. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. G. Thompson.

Based on principles of scientific management, the course gives students the skills and understanding necessary for decision-making using quantitative and qualitative data. Students use computer spreadsheet software extensively for “number-crunching” analyses and learn to communicate the results of their analyses in a clear manner. Students are provided with a “tool kit” of sophisticated Excel models for solving service-operations problems.

**Facilities Management, Planning, and Design**

**HADM 2255 Hospitality Development and Planning**

Fall, spring. 3 credits. Required. Not open to freshmen. S. Robson.

Students are introduced to the issues and opportunities inherent in the development and planning of hospitality facilities, specifically hotels and restaurants. Course components include the project development sequence; conceptual and space planning; architectural design criteria; construction management; and the interpretation of architectural design and consultant drawings. There is an emphasis on setting appropriate facilities requirements, understanding industry practice, and implementing properties decisions within a balanced design, operations, and financial framework.

**HADM 3351 Hospitality Facilities Design**

Fall. 4 credits. Elective. Limited to 36 students. Prerequisite: HADM 2255 or permission of instructor. R. Penner.

This intensive studio course provides the graphic skills important for design and experience in applying these skills in hospitality planning and design situations. Students prepare projects using both hand drafting and computer-aided design (CAD) software. These assignments cover basic graphic skills and layouts for typical hotel spaces including guest room suite, lobby and lobby bar, and full-service restaurant or specialty coffee retail outlet.

**HADM 3355 Hospitality Facilities Management**

Fall, spring. 3 credits. Required. Prerequisite: HADM 2255, C. A. Fisher.

This course provides an overview of the operation of hospitality facilities, including operating costs for various types of facilities, types and characteristics of major building systems, and the responsibilities of the engineering maintenance department. The renovation needs of hospitality facilities are examined, and key managerial aspects of renovations are considered.

**HADM 4451 Restaurant Development**

Fall. 3 credits. Prerequisites: Hotel seniors or graduate students; juniors by permission of instructor; for undergraduates: HADM 3305. Students who wish to develop design skills for restaurant concepts are encouraged to enroll in HADM 4453 in the following spring. Next offered 2010–2011. S. Robson.

Students are exposed to the process, challenges, and rewards of developing a restaurant concept from the idea to the construction of the first unit. The course includes readings, discussions with industry leaders, and cases and culminates with students formulating a detailed restaurant concept and development plan.

**HADM 4452 Sustainable Development and the Global Hospitality Industry**

Fall. 3 credits. Elective. Prerequisite: junior, senior, or graduate standing. Cost of required overnight field trip. approx. $150. Staff.

This multidimensional course introduces the global sustainability and environmental movements, their impact on the hospitality industry, and responses to and opportunities associated with sustainability. Readings will be drawn from the environmental, sustainability, and hospitality literature. Students should be prepared to encounter conflicting views in the readings and in classroom discussions. The course attempts to portray a variety of viewpoints regarding issues of contemporary interest to society and the business community. Discussion of these issues is a key component of the course. An overnight field trip may be a required course activity.

**HADM 4453 Foodservice Facilities Design**

Spring. 3 credits. Elective. Limited to 12 students per sec. Pre- or corequisites: HADM 3351, 3305, and 4351 or permission of instructor; Hotel seniors; juniors by permission of instructor. G. Thompson should have commercial food production experience. Next offered 2010–2011. S. Robson.

This course provides an introduction to the basics concepts of foodservice design and planning with an emphasis on restaurants. All documentation is produced on CAD, which is taught as part of the weekly studio. Students also use studio time for planning, designing, and writing specifications for a medium-size restaurant kitchen.

**HADM 4457 Hotel Development**

Fall. 3 credits. Elective. Prerequisite: senior or graduate standing; juniors by permission of instructor. Cost of required overnight field trip. approx. $150. Staff.

This multidimensional course introduces the global sustainability and environmental movements, their impact on the hospitality industry, and responses to and opportunities associated with sustainability. Readings will be drawn from the environmental, sustainability, and hospitality literature. Students should be prepared to encounter conflicting views in the readings and in classroom discussions. The course attempts to portray a variety of viewpoints regarding issues of contemporary interest to society and the business community. Discussion of these issues is a key component of the course. An overnight field trip may be a required course activity.

**HADM 4459 International Hotel Development**

Spring. 3 credits. Elective. Limited to 36 seniors, and graduate students. Staff.

The seminar course includes discussion of corporate expansion strategies, the international development process, viewpoints of different stakeholders, and development challenges such as technology, infrastructure, environmental concerns, and public policy issues. Students research a variety of international destinations and the strategies of emerging management companies. Guest lecturers will present and discuss new projects in Europe, the Middle East, South America, and Asia, and contrast these opportunities to development in the United States.

**HADM 7751 Properties Development and Planning**

Fall. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. R. Penner.

This course serves as an overview of hospitality project development and planning from the perspective of an owner and
The course deals with relationships between the franchisor and the franchisee, advantages and disadvantages of franchising, structure of and services offered by franchisors. Case studies of leading lodging and restaurant companies currently offering franchises will be discussed. There will be guest speakers from the franchising industry.

**HADM 3343 Marketing Research for Decision Makers**

Fall. 3 credits. Elective. Prerequisite: HADM 2245 and a statistics course. M. D. Giebelhausen.

This course helps students become better consumers of marketing research. Topics include issues involved in designing, conducting, and interpreting focus groups, depth interviews, surveys, experiments, and choice models. Special emphasis is placed on what each method should and should not be used for and why.

**HADM 3347 Consumer Behavior**

Fall, spring. 3 credits. Elective. Limited to 200 students. Prerequisite: junior or senior standing; HADM 2243 or equivalent introductory course. Mark S. Scarpello.

This course helps students become better at understanding, predicting, and influencing consumer behavior. Topics include motivation, perception, learning, decision making, attitudes, nonverbal communication, persuasion, compliance, geodemographics, and psychographics. The practical implications of psychological principles are emphasized. Specific applications involve such areas as guest frequency programs, menu design, promotional strategy, personal selling, sales and marketing training, and marketing research. Class time is used for discussions and application exercises as well as for the presentation of relevant information.

**HADM 4441 Strategic Management**

Fall, spring. 3 credits. Required. Prerequisite: senior standing; at least one course in accounting, finance, marketing, operations, economics, and information systems. Because students work in groups, absolute drop deadline is two weeks after first day of class. C. Enz, A. Kalnins, and R. Kosovetz.

Strategic management integrates all of your previous courses including marketing, finance, accounting, operations, etc., and introduces you to new strategic management concepts. The course examines the total enterprise, the industry, and the competitive environment in which it operates. Our goal is to develop a mastery of the analytical tools to perform analyses of the industry and competitors. We focus on how firms formulate, implement, and evaluate strategies. The emphasis of this course is on critical thinking and decision-making to maintain competitive advantage in a hypercompetitive and maturing industry using a case-based approach.

**HADM 4443 Innovation and Dynamic Management (also AEM 3280)**

Spring. 3 credits. Elective. Limited to 50 seniors and graduate students. C. Enz.

This is a unique course that investigates the innovation process, how firms develop innovations, and how to manage change. Innovation involves taking new knowledge and turning it into new products or services. How successful an organization is in doing so depends on its ability to change and maintain simultaneously. Innovative firms are studied via case analyses. A project gives students hands-on exposure to innovation creation. Emphasis is placed on examining how businesses and managers can build profitable organizations through a process of creative rethinking, re-evaluating, and discarding existing practices. The class will operate as a seminar.

**HADM 4444 Introductory Hospitality Entrepreneurship Business Plan**

Fall, spring. First seven weeks of semester. 3 credits. Elective. Prerequisite: HADM 2243 or equivalent. First preference to Hotel students, others by permission only. May not take HADM 4445 concurrently. J. Quest.

An introductory course for the study of the discipline of entrepreneurship. Introduces students to the process of starting a business from the ground up and the qualities that are associated with successful entrepreneurs. Students will learn to recognize a good/great business idea and how to evaluate it in terms of market opportunity; superiority of product or service; target audience; competitive landscape; and application of market research. This course will focus on: (a) identifying the business opportunity, (b) developing the concept, and (c) defining and constructing a business model. This course can be described as a business startup feasibility course that uses the construction of a business plan prototype as the format for the class learning experience. The subject matter will be energized with the natural enthusiasm that comes from the day-to-day experiences of starting your own business.

**HADM 4445 Developing the Hospitality Entrepreneurship Business Plan**

Fall, spring. 3 credits. Elective. Prerequisite: HADM 2243 or equivalent. First preference to Hotel students, others by permission only. May not take HADM 4444 concurrently. J. Quest.

This is a course for students who wish to learn the disciplines involved in developing a business plan for a startup concept in the hospitality industry. The course will concentrate on the construction of business plans for new business concepts, focusing on all elements of the entrepreneurship discipline: identifying and validating a new business opportunity, and then organizing, constructing, and writing a sound, clear, concise business plan that will include the feasibility phases as well as determining the required resources, acquiring the necessary resources, structure for implementation and management, and strategy for harvesting the venture. Students will be introduced to actual business plans associated with successful capital raising, as well as a review of real-life examples of the process of raising money, furnished by the instructor and other sources. During the course, attention will be given to the disciplines of setting priorities; establishing operational budgets; and developing financial projections resulting from these budgets. This will include a projection for capital needed for startup. Upon completion of the construction of the business plans, the teams will present them to a panel of successful entrepreneurs and professional investors at the close of the course.
HADM 4446 Hospitality Pricing and Analysis  
Spring, first seven weeks. 2 credits. 
Prerequisite: HADM 1141 and HADM 2243, others by permission of instructor. W. Castell. 
The development and application of pricing strategies in the hospitality industry are presented. Marketing, economic, and financial-pricing principles are applied in the context of the hospitality industry. Students are exposed to both theory and the practical application of pricing tools and analytical processes. Major trends and issues in hospitality pricing are examined and discussed, including the emerging role of the channel management and dynamic travel packaging. Readings, lectures, discussions, cases, exercises, and presentations by industry experts are used to acquaint the student with the complexity and the methods of executing tactical and strategic hospitality pricing actions.

HADM 4447 Managing Hospitality Distribution Strategies  
Fall, second seven weeks. 3 credits. Elective. Prerequisites: HADM 1141 and 2243. B. Carey. 
This course provides a framework for managing marketing distribution strategies. Emphasis is placed on presenting and analyzing the structure and interrelationships among distribution channels within the travel and hospitality industry. Theories of marketing distribution management and analysis are evaluated and applied within the context of that system. Topics include dimensions of hospitality marketing distribution; economics of the major hospitality distribution segments; managing hospitality distribution strategies; and the role of convention and visitors bureaus, national tourist organizations, and associations in distribution management.

HADM 5540 Brand Management  
Fall. 3 credits. Elective. C. Dev. 
This course explores the impact of brands on consumer behavior, product management, and value creation. Through presentations, cases, exercises, and projects, we will examine the theories behind branding, the challenges of implementation, and current trends in branding. The traditional brand management model is redefined in the context of the consumer packaged goods industry. In this course, we will evaluate its applicability to the service industry, in general, and the hospitality industry more specifically. We will discuss the evolving responsibilities of brand managers in these organizations—from brand introduction to brand extension to brand repositioning. Our ultimate goal is to help students understand the opportunities and challenges facing today’s service organizations in creating, growing, managing, and evaluating brand equity.

HADM 5541 International Marketing  
Spring. 3 credits. Elective. Prerequisite: core marketing class or permission of instructor. J. Katz. 
The goal of the course is to teach students how to create an international expansion plan for products and services. The course progression follows the creation of such a plan; students submit four papers that reflect the content, and the final submission should look like a real international business plan. To that end, students learn how to identify internationally transferable competitive advantages and define their product/service based on that; perform quantitative analyses of all potential markets; complete more detailed qualitative and quantitative analyses of two target markets (of their choice); and develop a marketing entry strategy.

HADM 6640 Franchising in the Hospitality Industry  
Spring, second seven weeks of semester. 2 credits. Elective. Note: deadline to drop course is point of course. Undergrad students should enroll in HADM 3440. J. Lavin. 
The course deals with relationships between the franchisor and the franchisee, advantages and disadvantages of franchising, structure of and services offered by franchisors. Case studies of leading lodging and restaurant companies currently offering franchises will be discussed. There also will be guest speakers from the franchising industry.

HADM 6641 International Business Strategy  
Fall. Elective. 3 credits. Limited to advanced undergraduates and graduate students. R. Kosova. 
This course will provide theoretical and analytical framework for understanding various aspects of international business environment and its implications for corporate-level strategy. It will also derive some implications for the global operations in the hospitality industry. After reviewing the basic concepts of international business strategy and current globalization trends, the course focuses on the detailed analysis of the global business environment, including: assessment of economic and political risks; impacts of cultural differences, international trade and commercial policy, exchange rates exposure, regional integration, role of global institutions as well as issues related to protection of property and intellectual property rights. Afterwards, the course analyzes how firms decide about market entry, pros and cons of various modes of entry including foreign direct investment (FDI) and debates political economy issues of FDI. At the end of the course, students have the opportunity to practice the learnt concepts in the in-class game, which simulates the negotiations between multinationals, local companies, and governments during firm global expansion.

HADM 6645 Services Marketing and Customer Experience Management  
Fall. 3 credits. Elective. Prerequisite: graduate standing; marketing course or permission of instructor. R. Kwontrin. 
Students will develop critical analytic skills and knowledge for implementing service strategies to create and manage the customer experience. Topics include services consumer behavior and decision processes; services research methods; service quality analysis; customer-relationship management and service recovery; service experience design (analysis of “service as theater,” service blueprinting” and the “servicescape”); and integrated marketing communication strategies for services. Students learn through discussion of current services theories and research, experiential exercises, case analyses, and industry guest speakers. A main focus of the course is a team consulting project involving a services-marketing audit of a “live” organization.

HADM 6647 Consumer Behavior (also NBA 6260)  
Fall. 3 credits. Elective. Limited to 25 graduate students. M. Lynn. 
This course helps students become better at understanding, predicting, and influencing consumer behavior. Topics include motivation, perception, learning, decision-making, attitudes, nonverbal communication, persuasion, compliance, geodemographics, and psychographics. The practical implications of psychological principles will be emphasized. Specific applications will involve such areas as guest frequency programs, menu design, promotional strategy, personal selling, sales and marketing, service and product design, and planning, and marketing research. Class time is used for discussions and application exercises as well as for the presentation of relevant information.

HADM 6649 Integrated Marketing Communications (also NBA 6210)  
Fall. 3 credits. Prerequisite: for non-Hotel students permission of instructor. 
This course is designed to provide students with the framework and skills required to design, manage, and evaluate integrated marketing communication programs. The course will focus on exploring these tools within the hospitality industry, but the lessons learned can be applied broadly to any service or service-oriented industry. Over the past decade, the number of communication options available to consumers, and hence to organizations, has grown exponentially. With so many different avenues for communication to, from, and among consumers, the organizations must approach the communication task with the objective of creating a unified message that is consistent, coherent, and effective across all media—an integrated marketing communications program. Through class exercises, case studies, advertising critiques, online observation and participation, and teamwork on a simulated campaign, students will master the skills necessary for marketing campaign management.

HADM 7743 Marketing Management for Services  
Summer. 3 credits. M.M.H. requirement. 
Prerequisite: M.M.H. students or permission of instructor. M. Lynn. 
This course covers the fundamental concepts of marketing management and the techniques, analyses, and frameworks for solving marketing-management problems. Students explore theories and conceptual frameworks that draw on customer, competitor, and core-capability analyses in marketing planning and implementation. Students develop decision-making capabilities in product/service development, pricing, advertising and promotion, and distribution policies. The capstone of the course is team development of a marketing plan for a new hospitality business.

HADM 7444 Competitive Strategies for the Hospitality Industry  
Spring. 3 credits. M.M.H. requirement. 
Prerequisite: M.M.H. students or permission of instructor. A. Kalnins. 
The course examines competitive strategies, cooperative strategies, and growth strategies within the hospitality industries and beyond. Our goal is to develop a framework for strategic issues facing hospitality as well as important new qualitative tools to perform analyses. We use a case-based approach that
This focuses not only on hospitality but other industries as well, allowing thinking "outside the box" and developing novel solutions not possible but studying only hospitality. The course integrates knowledge from all of previous M.M.H. courses including marketing, finance, organizational behavior, and human resources.

**Information Systems**

**HADM 1174 Business Computing**
- Fall, spring. 3 credits. Required. Limited to 40 students per sec. Fall, Hotel freshmen and transfer students; spring, open enrollment. M. Talbert.
- This course provides a foundation in information technology (IT) and how it relates to everyday business computing. Students learn IT concepts during lectures; and these concepts are reinforced in practical lab sessions using current standards of business computing. Topics include fundamental IT concepts; proficiency in Microsoft Office; understanding the issues of tool selection, standardization, and efficiency; integration of applications; and recognizing the importance of good computer management.

**HADM 2274 Business Computing**
- This course provides a foundation in information technology (IT) and how it relates to everyday business computing. Students learn IT concepts during lectures; and these concepts are reinforced in practical lab sessions using current standards of business computing. Topics include fundamental IT concepts; proficiency in Microsoft Office; understanding the issues of tool selection, standardization, and efficiency; integration of applications; and recognizing the importance of good computer management.

**HADM 2275 Introduction to Information Systems Management**
- Fall, spring. 3 credits. Required. Prerequisite: Hotel students; HADM 1174. P. Clark.
- Goals for the course are to learn about information systems; understand and be able to clearly articulate the difference between information technology and information systems; link concepts and technical jargon to the real-world uses of information systems; and learn the information-systems fundamentals needed throughout hospitality careers. The course is designed for students who will work within hospitality organizations as end users, user-managers, leaders, and information-systems professionals. This is not a course for technologists but rather for the general-management student. Students are provided with the essential information that all hospitality management professionals should know about information systems.

**HADM 4476 Visual Basic for Applications: End-user Programming**
- Fall, spring 3 credits. Elective. Limited to 30 students per lec. Due to capacity restraints in Birkenkop lab, attendance at first class is mandatory; no-show students are dropped to make room for stand-by students; students may not drop course after second week of class. M. Talbert.

This is an introductory programming course for end-users (e.g., business managers and consultants). Students develop fluency in the popular Visual Basic for Applications (VBA) language. Using VBA, students learn how to customize and extend the Microsoft Office Suite, with an emphasis on Excel. They also develop custom information systems using Microsoft Office applications as programmable building blocks. Secondary objectives of the course are to cover fundamental design and programming principles. The course is entirely lab-based.

**HADM 4477 Advanced Business Modeling**
- Fall, spring. Lec 1 is first seven weeks of semester, Lec 2 is second seven weeks. 2 credits. Limited to 21 seniors and graduate students. Priority given to M.M.H. students. Prerequisite: HADM 1174. Note: Deadline to drop course is midpoint of course. M. Talbert, M. McCarthy.

This course focuses on organizational systems, planning, and decision process and how information is used for decision support in organizations. Students are provided with practical skills in developing spreadsheet computer models using Microsoft Excel. Topics include business planning and forecasting, numerical methods, advanced formulas and functions, user-interface design, data protection and validation, importing external data, and output presentation.

**HADM 7772 Information Systems Management**
- Spring. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or written permission of instructor. Faculty.

Information technologies (IT)-based decision and design processes and how information is used for decision support in organizations. They become familiar with all aspects of information systems decision-making, including systems analysis and design, system selection and purchasing, and the risks of IT investments. They become familiar with the systems found in hospitality operations. The course is not overly technical, but students are expected to be comfortable researching and discussing information technologies.

**FINANCE, ACCOUNTING, AND REAL ESTATE**

**Finance/Accounting**

**HADM 1120 Personal Financial Management**
- Fall, spring. 2 credits. Elective. Limited to 120 non–Hotel students. L. Hensley and E. Cornell.

Students are provided with an overview of personal financial planning including money management, use of credit, insurance, investing, retirement planning, and estate planning.

**HADM 1121 Financial Accounting**
- Fall, spring. 3 credits. Required. Prerequisite: Hotel undergraduates. D. Dittman.

This course is an introduction to financial accounting that studies transaction analysis, the balance sheet, income statement, statement of cash flows, and the statement of stockholder’s equity. Accounting for investments, bonds, receivables, inventories, tangible and intangible assets, capital stock, transactions, as well as the direct and indirect methods for cash flow are analyzed. Basic financial ratios are introduced and interpreted.

**HADM 2221 Managerial Accounting**
- Fall, spring. 3 credits. Required. Prerequisites: Hotel undergraduates; HADM 1121 or equivalent. G. Potter and J. Hesford.

This course focuses on the use of accounting information for management decision making and control. Topics include product costing, budgeting, management decision making, and control systems. There will be one common final exam at the end of the semester.

**HADM 2222 Finance**
- Fall and spring. 3 credits. Required. Prerequisite: Hotel students or permission of instructors. C. Chang and Q. Ma.

The course will provide students with a broad understanding of managerial finance. The overall objective is to develop skills in using accounting and cash flow information for financial planning, capital structure decisions, capital budgeting evaluation, and long-term financial decision-making. Topics will include valuation of investments, capital budgeting decisions, risk analysis for capital budgeting, capital structure, long-term financing, cost of capital, debt capacity, and raising capital in the public markets. When appropriate, specific examples relating to important issues in the hospitality industry will be discussed.

**HADM 2223 Financial Accounting Principles**
- Fall, spring. 3 credits. Elective. Prerequisite: non–Hotel undergraduates. N. Geller and P. Strebil.

This course serves as an in-depth introduction to the principles of financial accounting, involving financial analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner’s equity.

**HADM 2225 Finance**
- Fall, spring. 3 credits. Elective. Limited to non–Hotel undergraduates. J. Wellman.

Students are exposed to a wide variety of corporate finance topics, including time value of money, risk and return, valuation models, cost of capital, capital budgeting, capital structure, and dividend policy.

**HADM 3321 Hospitality Financial Management**
- Fall, spring. 3 credits. Required. Prerequisites: HADM 1121, 2221, and 2222, or permission of instructor. J. deRoos.

This course focuses on owners of hospitality assets and on equity investors in those assets. The course develops an appreciation of the strategic role of real estate in the hotel and restaurant industries and the role of unit-level financial analysis in making investment decisions. That appreciation forms the essence of financial management in hospitality real estate. The course builds competence in using the quantitative tools of financial economics. Topics include property rights, hotel and restaurant investment analysis, valuation of the
assets and the owner's equity, the drives of unit level revenues and value, an introduction to the fundamentals of hotel and restaurant financing, and an overview of the management contracts and franchise agreements used in hotels and restaurants.

**HADM 3325 Financial Planning and Wealth Management**
Fall, Spring. 3 credits. Elective. Prerequisite: junior or senior standing. P. Strebel.

Students are exposed to the many facets of wealth management: creating a coordinated financial plan, the dynamics of working with clients, the challenges of running a financial planning practice, and the attributes and skills required to be a successful financial advisor. This course is geared toward students interested in working in an advisory capacity with clients in fields such as investment banking, brokerage, insurance industry, accounting and tax, consulting, law, social work, banks, credit unions, lending institutions, securities, and investments.

**HADM 4422 Taxation and Management Decisions**
Fall. 3 credits. Elective. Limited to 75 students. Prerequisite: senior, or graduate standing. L. Hensley.

This course introduces students to the tax advantages and disadvantages of the various organizational structures, including corporations, partnerships, and subchapter "S" corporations. Other topics include financial information reporting to tax authorities and to shareholders and how these reports differ; the use of depreciation methods to achieve tax reductions; and syndication techniques and the role tax laws play in promoting private investments and development.

**HADM 4425 Securitization and Structured Financial Products**
Fall. 3 credits. Elective. Limited to 30 students. Prerequisite: HADM 2222 or equivalent. P. Liu and D. Lebret.

This course introduces students to the structure and analysis of securitized financial products with an emphasis on residential and commercial mortgage-backed securities (MBS). The course is intended for those who wish to acquire a working knowledge of the analysis of such securities (e.g., collateralized mortgage obligations, commercial MBS, auto loans, and credit card-backed securities) and an understanding of the securitization process. The course's subject matter necessitates a highly analytic and quantitative approach, and students are required to have a strong background in finance and economics. Students who have questions about preparation or background should see the instructor.

**HADM 4426 Advanced Corporate Finance**
Spring. 3 credits. Elective. Prerequisite: HADM 3321; graduate standing. Undergraduates should enroll in HADM 4426. Q. Ma.

This introduction to decision-making and control, covers: cost behavior, cost classification, cost-volume-profit analysis, product costing, budgeting, variance analysis, cost estimation, cost allocations, customer-profitability analysis, managerial control systems, and performance measurement.

**HADM 6625 Securitization and Structured Financial Products**
Fall, spring. 3 credits. Elective. Limited to 40 seniors or graduate students; others by permission of instructor. Prerequisite: HADM 2222 or equivalent; junior or senior standing. D. Quan and D. Lebret.

This course deals with the structure and analysis of securitized financial products with an emphasis on residential and commercial mortgage-backed securities (MBS). The course is intended for those who wish to acquire a working knowledge of the analysis of such securities (e.g., collateralized mortgage obligations, commercial MBS, retail loans, and credit card-backed securities) and an understanding of the securitization process. The course's subject matter necessitates a highly analytic and quantitative approach, and students are required to have a strong background in finance and economics. Students who have questions about preparation or background should see the instructor.

**HADM 6626 Advanced Corporate Finance**
Spring. 3 credits. Elective. Prerequisite: HADM 3321; graduate standing. Undergraduates should enroll in HADM 4426. Q. Ma.

This course covers the fundamentals of hotel and restaurant finance. The framework and applications will be useful to those who will work for corporations, those who will serve as outside consultants to corporations on appropriate financial policies, and those who will work as external financial analysts. Those whose primary focus is on understanding and evaluating the financial decisions made by corporate management.

**HADM 4429 Investment Analysis and Portfolio Management**
Fall. 3 credits. Elective. Prerequisites: introduction to corporate finance, financial accounting, introduction to statistics, and beginner knowledge of Excel or permission of instructor.

Graduate students should enroll in HADM 6629. C. Chang.

The course is an exploration of the three major investment vehicles: bonds, equity, and derivatives. In each case, students discuss what they are, how they are valued, and what risks they entail. The intimate relationship between return/value and risk is explored. At the focus of these discussions lies the idea that optimal investing is chiefly about balancing risk with reward; extracting maximum gains with minimum exposure; and creating portfolios with "good trade-offs." A study of theories develops a toolkit of skills, and a detailed look at practical application, including pricing anomalies, trading "programs," and a hands-on portfolio simulation, hopes to illuminate this investigation.

**HADM 6624 Reporting and Analysis of Financial Statements**
Fall. 3 credits. Elective. Limited to 40 students. Prerequisite: junior, senior, or graduate standing. G. Potter.

This course is designed to provide an understanding of the basic accounting model and the accounting rules for the measurement of assets, liabilities, and owners' equity. Emphasis is placed on understanding the economic substance of the transactions and the implications of using alternate accounting rules on the resulting numbers, especially in assessing the "earnings quality" of hospitality firms. Focus is from an outsider's view of the company, and students should be able to evaluate and interpret published financial information, specifically in the context of valuation, debt and compensation contracts, and credit assessment.

**HADM 6629 Investment Analysis and Portfolio Management**
Fall. 3 credits. Elective. Prerequisites: introduction to corporate finance, financial accounting, introduction to statistics, and beginner knowledge of Excel or permission of instructor.

Graduate students should enroll in HADM 4429. C. Chang.

For description, see HADM 4429.

**HADM 7723 Corporate Finance**
Summer. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. L. Canina.

This course builds on the prerequisite courses of financial accounting and financial reporting. Topics include applications of discounting techniques; evaluation of capital expenditures; estimation of cost of capital; bond and stock valuation; portfolio theory; asset-pricing models; and capital-structure decisions. The course emphasizes valuation skills as a means to bringing together the cost of capital, financing, and operating issues faced by a firm. Students come to understand the financial impact of managerial decisions; know how to differentiate decisions that increase the value of a firm, and know how to properly evaluate investment, financing, and payout decisions. They also learn standard techniques of financial analysis, such as discounted cash-flow valuation, capital budgeting, risk analysis, and estimation of the cost of debt and equity.

**HADM 7724 Managerial Accounting**
Summer. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. J. Hesford.

This introduction to managerial accounting, which is the use of accounting information for decision-making and control, covers: cost behavior, cost classification, cost-volume-profit analysis, product costing, budgeting, variance analysis, cost estimation, cost allocations, customer-profitability analysis, managerial control systems, and performance measurement.

**Real Estate Development**

**HADM 4420 Principles of Real Estate**
Fall, Spring. 3 credits. Elective. Limited to 50 students. Prerequisites: HADM 2222 or equivalent; junior or senior standing. P. Liu.

This course serves as an introduction to real estate finance and investment. The emphasis of Real Estate Principles is on developing valuation and decision-making skills. It introduces students to the business of real estate, both residential and commercial real estate, including roles, activities and players, terminology, and how the tools, concepts, and models in real estate are used in decision-making. The objectives of this course are twofold: (1) to help students develop an understanding of real estate fundamentals; and (2) to introduce students to the quantitative aspects of real estate—
investment decision-making, valuation under uncertainty, and debt financing.

**HADM 4423 Hospitality Real Estate Finance**
Below is the image of one page of a document, as well as some raw textual content that was previously extracted for it. Just return the plain text representation of this document as if you were reading it naturally.

Fall. 3 credits. Elective. Prerequisite: HADM 3321 or equivalent; junior or senior standing. Graduate students must enroll in HADM 6621. D. Quan.

This course focuses on real estate financing for hospitality-oriented projects. Lectures address the following topics: methods of measuring rates of return; feasibility and appraisal processes; equity and debt financing vehicles to include joint ventures, limited partnerships, construction mortgages, and participating, convertible, and seller-financed mortgages; forms of operating agreements to include management contracts, leases, and franchises; and trends in international hotel franchising. Presentations by hospitality industry real estate practitioners tie course material to current industry practices.

**HADM 4428 Real Estate Finance and Investments**
Fall, spring. 3 credits. Elective. Limited to Program in Real Estate and Hotel undergraduate students; others by permission of instructor. Prerequisites: HADM 3323 or 6621, HADM 4420 or 6620. D. Lebret.

This course provides an introduction to sound real estate investment and finance decision-making, the use of advanced theory, and techniques in financial economics. Real estate investment decisions are made through applications of an extended version of the after-tax discounted cash flow model and other valuation models, including option pricing and regression models. Financing decisions are made using the techniques of modern financial analysis. A wide array of financing options are considered including participating and accrual mortgages. Securitization of equity and debt claims to real estate also are covered extensively. All types of residential and nonresidential real estate are analyzed, including hospitality properties.

**HADM 6620 Principles of Real Estate**
Fall, spring. 3 credits. Elective. Prerequisite: Hotel M.M.H. and Program in Real Estate students or permission of instructor. P. Liu.

The course is designed to facilitate student learning of real estate fundamentals. This will include both residential and commercial real estate, and develop a thorough understanding of residential mortgage finance and commercial real estate investments. The major objectives of this course are twofold: (1) to help you to develop an understanding of real estate; its practice, its institutions, and its players; and (2) to introduce you to the quality of real estate; investment decision making, valuation, and debt financing.

**HADM 6621 Hospitality Real Estate Finance**
Fall. 3 credits. Elective. Prerequisite: graduate standing. D. Quan.

This course focuses on real estate financing for hospitality-oriented projects. The following topics are addressed: methods of measuring rates of return; feasibility and appraisal processes; equity and debt financing vehicles to include joint ventures, limited partnerships, construction mortgages, participating, convertible and seller-financed mortgages; forms of operating agreements to include management contracts, leases, and franchises, and trends in international hotel franchising. Presentation of hospitality industry real estate practitioners will tie course material to current industry practices.

**HADM 6622 Hospitality Asset Management**
Spring, second seven weeks. 2 credits. Elective. Prerequisite: for undergraduates, HADM 3321 and completion of HADM 4420 highly recommended; for graduate students, HADM 7723 and completion of HADM 6620 highly recommended. J. deRoos.

Investment management is the fiduciary responsibility of managing the hospitality investment to meet the specific objectives of ownership. The asset manager’s role in building value is analyzed at both the portfolio and property levels. Lectures, assignments, cases, and guest speakers introduce the latest techniques in asset management and provide insights into the current lodging market and operational challenges. Topics include management contracts; managing the manager; benchmarking property performance; and the capital improvements decision.

**HADM 6628 Real Estate Finance and Investments**
Spring. 3 credits. Elective. Limited to Program in Real Estate and Hotel grad students; others by permission of instructor. Prerequisites: HADM 3323 or 6621, HADM 4420 or 6620. Software fee: approx. $50. J. Congel.

This course promotes sound real estate investment and finance decision-making, the use of advanced theory, and techniques in financial economics. Real estate investment decisions are made through applications of an extended version of the after-tax discounted cash flow model and other valuation models, including option pricing and regression models. Financing decisions are made using the techniques of modern financial analysis. A wide array of financing options are considered including participating and accrual mortgages. Securitization of equity and debt claims to real estate also are covered extensively. All types of residential and nonresidential real estate are analyzed, including hospitality properties.

**HADM 6667 Advanced Revenue Management**
Fall, spring. 3 credits. Elective. By application only. Application closing dates are well in advance of registration. Prerequisites include HADM 4428 or HADM 6628 or equivalent course work and securities investment experience. Students manage a real-world portfolio of publicly traded hotel securities and unlisted real estate fund interest. Investment management of the portfolio involves fundamental research in property and securities markets, making initial investments in real estate companies and funds, executing trades in positions held in the portfolio, developing/testing trading strategies, and managing risk. The objective of the course is to sound real estate investment decision-making. Students will be exposed to a broad literature on real estate securities, fund investing, trading strategies, and hedging. They will be provided opportunities to practice advanced methods of investment management and securities trading with special applications to real estate, such as taking simultaneous long/short positions to hedge systemic risk, using newly created derivative real estate securities to directly hedge long positions, and running portfolio optimizers to manage unsystematic risk. All types of residential and commercial real estate securities are analyzed, including those of hospitality firms.

**HADM 4491 Hotel Ezra Cornell (H.E.C.)**
Fall and spring. Variable credit. 2–3 in fall and 3–4 in spring. Elective. Prerequisite: Hotel juniors, seniors, and second-year M.M.H. students; others by permission of instructor. Cost of required field trip to November hotel show in NYC. approx. $200. R. McCarthy.

The HEC Board of Directors is responsible for planning, organizing, staffing, directing, and controlling the weekend-long HEC conference to be held on April 8–11, 2010. HEC’s mission is to “Showcase Hospitality Education Through Student Leadership.” For 80-plus years, HEC has been an essential part of the Cornell Hotel School, allowing students the opportunity to put their real world experience while taking on the leadership responsibility for this student-run hospitality showcase. Board members receive credit for their participation in HEC. 3 Hotel Elective credits in the fall and 3 Free Elective credits in the spring.

Students who are interested in running for board positions in the spring must be in good academic standing with a minimum GPA of 2.5. Eligibility requirements for specific board positions can be obtained from the HEC Office (G72 Statler Hall) and will be distributed to the student body. If you are interested in a board position you are encouraged to discuss your intention with the HEC course instructor.

**HADM 4493 Management Intern Program I—Operations**
Fall, spring. 6 credits. Elective. Prerequisites: Hotel core and sophomore core courses. Highly recommended: HADM 3321, 3305, 3355, and 3365. Additional course work may be required for applicants considering specialized internships. Students must submit detailed plan for completion of all remaining academic requirements before acceptance into course. Faculty: Limited to juniors and seniors in the Hotel School with approval of the Management Intern Program (MIP) faculty committee. The application process begins the semester before the planned internship. An MIP information meeting is held at the beginning of each semester. Students accepted to MIP will enroll in both HADM 4493 and 4494. Students who are enrolled in HADM 4493 receive academic credit in free electives as well as practical experience in the hospitality field. Six performance evaluations are used to determine this grade. Students must be in good academic standing and have a GPA of at least 2.5 in the preceding semester. Further information is available in the Office of Student Services, 180 Statler Hall.
HADM 4494 Management Intern Program II—Academic
Fall, spring. 6 credits. Elective. Prerequisite: junior or senior standing in Hotel School; permission of Management Intern Program (MIP) faculty committee; Faculty. The application process begins the semester before the planned internship. An MIP information meeting is held at the beginning of each semester to discuss the purpose and objectives of the program. The written report must be produced and submitted to the Office of Student Services, 180 Statler Hall. Staff.

HADM 4497 Undergraduate Research
Fall, spring. Variable credit. Elective. Limited to juniors and seniors with a cumulative GPA of at least 3.3. Faculty. Outstanding students may conduct independent research under faculty supervision. Each student is expected to review pertinent literature, develop a project outline, conduct the research, and prepare a written report. Students may make two presentations coordinated by the Center for Hospitality Research (CHR) one at a preliminary stage and one at project completion. Students submit the completed report to the CHR, which will be available online through the CHR web site. Faculty.

HADM 4498 Undergraduate Independent Study
Fall, spring. Variable credit. Elective. Faculty. This course can be taken only by students conducting independent studies in one semester. For more details, see HADM 4499. Faculty.

HADM 4499 Undergraduate Independent Study
Fall, spring. Variable credit. Elective. Faculty. Students have the option of conducting an independent study project in any academic area. The number of credits for which students may register is arranged on an individual basis. Note: Students commit themselves to a certain number of credits of independent academic work per week per credit hour if they choose to do an independent study project, and the work must be performed in the semester for which the student is enrolled in the independent study. The usual add/drop policy applies, and retroactive credit for work commenced after an academic semester has ended is not allowed. Projects are conducted under the direction of a faculty member, and regular, frequent consultation is mandatory. Also, a written report must be produced and made available to all faculty members and students of the school after its submission to the supervising faculty member. Credit for independent study projects may not count toward the hotel school elective requirement, but, rather, toward free elective. Students cannot earn academic credit for independent study when the equivalent material is offered in a regular course, and credit is not earned for teaching a course. Students should consider all aspects of their situation before committing themselves to an independent study project. Enrollment forms are available in the Office of Student Services, 180 Statler Hall.

HADM 5590 Derrida and the Philosophy of Hospitality (also GOVT 4646/6675, FREN 4646/6690)
Fall. 4 credits. D. Rubenstein and L. Shaffer. Beginning with an examination of hospitality in Plato, Xenophon, Kant, Levitas, and the Bible, we focus on the writings of Jacques Derrida on hospitality from the 1990s until his death. We also consider contemporary readers of hospitality and cosmopolitanism such as Tracy McNulty, Pierre Bourdieu, Seyla Benhabib, Bonnie Honig, James Davidson, Andrew Sandoval, and Wayne Koestenbaum. These theoretical texts would be put in tension with practitioners such as Danny Meyers, E. M. Statler, films (Frears, Loach), novels (Kirin Desai), and labor manifestos (Ehrenreich, Levinson.) Faculty.

HADM 6698 Graduate Independent Research
Fall, spring. Elective. Staff. Each student must have in mind a project and obtain agreement from an individual faculty member to oversee and direct the study. Written permission is required before course enrollment. Permission forms are available in the Office of Student Services, 180 Statler Hall.

HADM 6699 Graduate Independent Research
Spring. 2 credits. Elective. Staff. Each student must have in mind a project and obtain agreement from an individual faculty member to oversee and direct the study. Written permission is required before course enrollment. Permission forms are available in the Office of Student Services, 180 Statler Hall.

HADM 7795 Master of Management in Hospitality Master Class
Spring, three-day immersion seminar taught by industry leaders at their establishment during Jan. winter break. 1 credit. Elective. Prerequisite: M.M.H. students or permission of instructor. Faculty. Students solve problems based on real-life scenarios and present their solutions to industry leaders and the Hotel School faculty members who accompany them. A final paper is due in the spring semester immediately following the seminar. Faculty.

HADM 7796 M.M.H. Charette
Fall. 1 credit. Required. Prerequisite: M.M.H. students. Staff. Held during fall break. The M.M.H. Charette is one of several professional and leadership development elements in the required M.M.H. program curriculum. The M.M.H. Charette provides students with a group dynamics laboratory experience, an opportunity to practice group process solving, prepare a group presentation, and receive group feedback. The Charette is conducted over an intensive weekend with faculty and a firm in the hospitality industry. Students, working in groups on a problem defined by the firm, present the results of their work to a panel of faculty and firm representatives 48 hours after receiving instructions.

HADM 7797 Hospitality Industry Leadership Development Program
Summer. 1 credit. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. Faculty. A dozen or more senior executives from the hospitality industry visit the campus to evaluate students as individuals and as part of a team. They assess how well the students are able to lead, take direction, work with others, present ideas, and lead other ideas. At the end of the class, one or more of the industry "coaches" meet with students individually, and in teams, to evaluate performance. This centerpiece of the orientation process is designed to outline some of the personal and career goals students will want to work toward in the coming year.

HADM 8890 M.S. Thesis Research
Fall, spring. Required. Faculty.

HADM 9990 Ph.D. Thesis Research
Fall, spring. Required.

FACULTY ROSTER
Anderson, Chris, Ph.D., U. of Western Ontario. Asst. Prof.
Brownell, Judith, Ph.D., Syracuse U. Prof., Dean of Students
Canina, Linda, Ph.D., New York U. Assoc. Prof., Editor, Cornell Quarterly

COLLEGE FOCUS
The College of Human Ecology anticipates and responds to human needs in the areas of nutrition and health, economic and social well-being, environmental design and technology, as well as human development through education, basic and applied research, and the extension of knowledge. The college is distinctively characterized by the quality of its research in the natural and social sciences and the design arts, a global perspective in academic programs, a preventive approach to contemporary societal problems, multidisciplinary departments and programs, development of leadership in students and citizens, and a commitment to diverse populations. Faculty and students examine individuals in relation to their family, neighborhood, workplace, and community, seeking a balance between theory and practice that will improve the quality of everyday life.

FACILITIES
The college is housed in Martha Van Rensselaer (MVR), Savage, Kinzelberg as well as the Biotechnology Building and Weill Hall. The buildings include administrative and faculty offices, classrooms, auditoriums, galleries, and lecture halls; wet chemistry and biochemistry laboratories; design studios and computer-aided design laboratories, woodworking shops; human factors and infant research facilities; and classrooms for distance learning. Also included are learning resource centers for career planning, a historical costume collection, a human metabolic research unit, an animal research facility, cold rooms, a constant temperature and humidity laboratory; and an early childhood research and care program
Specialized equipment for teaching and research includes biochemical and chemical instruments for spectroscopy, chromatography, radioisotope analysis, electrophoresis, microscopy, and ultracentrifugation; physical testing equipment; and cameras, videotape, and sound recording equipment.

DEGREE PROGRAMS
Human Ecology programs lead to the degrees of bachelor of science (B.S.), master of arts (M.A.), master of science (M.S.), master of professional studies in human ecology (M.P.S.), master of health administration (M.H.A.), and doctor of philosophy (Ph.D.).

ASSOCIATE DEGREES
Bachelor of science (B.S.) degrees are offered in the following areas:
- Biology and society
- Design and environmental analysis
- Fiber science & apparel design
- Human biology, health, and society
- Human development
- Nutritional sciences
- Policy analysis and management

UNDERGRADUATE AFFAIRS
Persons interested in undergraduate study in human ecology should contact the admissions office, 170 MVR (255-5471). Those interested in graduate study should contact the graduate field representative identified among the faculty of each department. Department faculty members are listed at the beginning of the course descriptions for each department.

Counselors in the Office of Admission, Student, and Career Development (170–172 MVR) can help prospective students understand college programs and requirements, as well as college and university resources and services. They provide a broad range of career services and personal support for all matriculated undergraduates. The college registrar and degree auditor (146 MVR) assists undergraduates with questions about academic credit and graduation requirements.

The Student Body
The College of Human Ecology undergraduate enrollment is 1,200. Roughly 400 students graduate each year; last year 275 freshmen and 115 transfer students matriculated. Ninety faculty members serve as advisors to undergraduates.

Mature Students
The college recognizes that students who interrupted their formal education and are returning to school have needs different from those of younger undergraduates. To facilitate the education of mature students, defined as those 24 years old or older at first matriculation, the college has adopted certain procedures specifically for that group. Counselors in the Office of Student and Career Development (172 MVR) can provide information of interest to mature students.

Special Students
Students eligible for special status are those visiting from other institutions and interested in particular programs in the college; those with a bachelor's degree who are preparing for graduate study or jobs and careers in human ecology–related fields, or those who have interrupted their education and are considering completing degree programs.
Students accepted in the nondegree status of special student may enroll for a maximum of two semesters. During the second semester of attendance, a special student must either apply for admission as a transfer student or plan to terminate studies in the college at the end of the semester. Special students are expected to take a minimum of 12 credits each semester and to take one-half to two-thirds of their work in the statutory divisions of the university. Courses taken while a person is classified as a special student may be counted toward the requirements of the bachelor's degree. Those interested in becoming special students should make appointments to discuss admissions procedures in the Office of Admission (170 MVR, 255-5471).

Empire State Students
Occasionally a student who is completing requirements for a degree through the Empire State College Program is interested in taking a human ecology course. This can be done by registering through the Division of Summer Session, Extramural Study, and Related Programs (B20 Day Hall, 255–4987). All rules
of the extramural division apply, and registrations will be accepted only on a space-available basis and with the written approval of the course instructor. At the time of registration, Empire State College students must provide the extramural division with a completed copy of Empire State College’s notification of cross-registration (form number SA-22, F-031) to verify enrollment in Empire State College. Such students will be charged 25 percent of the standard extramural tuition per credit.

**Transfer Students**

Students may be considered transfer students once they complete 12 college credits after high school graduation. An external transfer student is one who transfers to Human Ecology from an institution outside of Cornell University. Liberal arts credits from other institutions transfer readily, but students must earn a minimum of 60 Cornell credits to graduate. Internal transfer students are admitted to Human Ecology from one of Cornell's other six undergraduate units. Students transferring internally should take special care to learn the policies of Human Ecology. In contrast, at the various Cornell colleges often differ. Before admission, both internal and external transfer candidates should contact the Office of Admission (170 MVR, 255-5471) to discuss credit transfer. Upon matriculation, admitted transfer students should attend the orientation and contact the Human Ecology registrar's office (146 MVR, 255-2235) to discuss how transfer credits will apply to their specific degree program.

**MAJORS**

The college requires students to fulfill requirements for a major to graduate. Students must declare a major by the end of the sophomore year. It is common for students to change interests during their undergraduate careers. Counselors in the Office of Student and Career Development (172 MVR), academic advisors, and directors of undergraduate study in each of the academic departments can help students to consider their options and engage in academic planning. All changes of major require submission of the change of major form and are processed through the college registrar's office. 146 MVR. Change of major will trigger re-evaluation of all academic credit and assignment of a new faculty advisor.

**DESIGN AND ENVIRONMENTAL ANALYSIS**

The Department of Design and Environmental Analysis (DEA) is concerned with planning, designing, and managing the built environment and its effects on human behavior, experience, and the environment itself. The processes for creating, managing, and maintaining the built environment, and the implications for how we live our lives face enormous challenges. These include frequent social and organizational change, technological advances, new building methods, and new resources. The program in DEA is dedicated to preparing graduates who can help individuals, groups, and organizations meet these challenges.

Diverse faculty backgrounds and teaching approaches help students to develop multidisciplinary problem-solving and creative abilities, aesthetic judgment, and analytical thinking. Students explore innovative concepts for the design and management of interior environments through laboratory, shop, studio, and computer facilities. The relationship between people and their physical surroundings is explored through a combination of academic courses, field experience, and applied research. Examples of student class projects and faculty work are frequently on display in the MVR gallery. The DEA resource center includes books, journals, newsletters, and material samples for student use.

**Options**

The department offers undergraduate education in three areas: interior design, facility planning and management, and human factors and ergonomics. The interior design option is nationally accredited by the Council for Interior Design Accreditation (CIDA). The Facility Planning and Management Program at Cornell is an IFMA recognized program. This means that Cornell meets the standards for recognition of programs established by the International Facility Management Association. To take full advantage of the course sequences and electives, it is important to select an option as early as possible. This is particularly true for the interior design option. Transfer students in the interior design option should plan on a minimum of six semesters at Cornell to complete the program.

**Option I: Interior Design**

This option prepares students for professional careers in interior design. The program emphasizes a design process in which innovative solutions are based on research-derived knowledge of human behavior, values, and attitudes. Students develop an understanding of design theory and methods, design history, behaviorally based programming, and post-occupancy evaluation. They learn about design communication, building systems, furnishings, materials and finishes, and professional practice. Students may use their elective courses to develop a specialization in areas such as design history, historic preservation, theory and criticism, design leadership, interactive multimedia, design sustainability, and behavior-based design. This program also serves as an excellent preparation for graduate study in interior design, facility management, architecture, and industrial design.

**Option II: Facility Planning and Management**

This option prepares students for professional careers in facility management. The program focuses on the planning, design, and management of facilities for large, complex organizations. It meets the standards set by the American Society of Association Executives, the American Society for Public Administration, the American Society for Healthcare Administration, the American Society for Healthcare Engineering, and the American Society for Engineering Management. Facility planning and management is a basic management function that coordinates and integrates information and expertise from areas such as planning and design, real estate, and business administration with human factors, ergonomics, environmental psychology, telecommunications, and building operations for the purpose of developing and managing facilities that support individual and organizational effectiveness.

Excellent career opportunities exist in the facility management divisions of private companies, institutions, the health care industry, and with private consulting firms offering facility management services. The program is also a good preparation for graduate study in business, planning, or one of the design disciplines and for advanced study in facility planning and management.

**Option III: Human Factors and Ergonomics**

This option focuses on the interaction between people, technology, and their physical surroundings. The program seeks to expand our understanding of how technology and the environment affects human perception, cognition, motivation, performance, health, safety, and social behavior. This knowledge is then used to help architects, planners, interior and product designers, and facility managers to plan, design, and manage safe and effective environments. This knowledge is also applied to human-computer interaction usability issues. The effect of human capabilities or characteristics such as family structure, lifestyle, social class, and stage-in-life cycle on environmental needs and desires is also a focus of the program. Career opportunities are available in software firms, high-technology companies, design firms, and in urban planning and other public agencies as well as in the facility management and product design division of private companies. Human factors and ergonomics is good preparation for graduate study leading to a Ph.D. degree in the social sciences and a career in academic or research-oriented settings in either the public or private sector. It can also serve as the basis for graduate study in an environmental planning or design discipline such as architecture, facility planning and management, interior design, landscape architecture, or city and regional planning. Electives in the social sciences and in research methods and statistics are encouraged.

**Academic Advising**

All DEA majors are matched with a faculty advisor during their first semester by the director of undergraduate studies. Consultation with faculty advisors about future goals, departmental requirements, sequences of courses, and electives inside or outside the college helps students develop their programs. Students majoring in interior design, especially, must begin early to plan and collect materials for a portfolio of their work, which is necessary for many positions and for application to graduate schools. Faculty advisors can make recommendations on what to include. Students are free to change advisors. Although advisors should be consulted about students' schedules during course enrollment each semester, it is the student's responsibility to keep track of his or her courses and to make sure that they meet graduation requirements for their major and college.

**Ownership and Exhibition of Student Work**

All design work done in studios as part of an academic program is the property of the department until it has been released by the instructor. The department is not responsible for loss or theft of student work.
FIBER SCIENCE & APPAREL DESIGN

The Fiber Science & Apparel Design (FSAD) major is unique in the Ivy League, combining a strong liberal arts foundation with excellent training in apparel and textiles. FSAD offers a broad range of courses, from the art of designing clothing and accessories, to the business of manufacturing and marketing them internationally, to the science of textiles and fibers. All FSAD students receive an introductory exposure to the basics of textiles and design. Students then choose one of three options that emphasize the application of design principles, management and marketing, or the physical and material sciences. Students may combine courses from more than one option if they choose.

Academic course work is further enhanced by field and international experiences, and significant opportunities to do independent projects for credit with individual faculty members. Gallery space provides the setting to display design work. In addition, the Cornell University Costume Collection, housed in the department, provides a valuable resource; items from the collection are made available to students for classroom and special study use.

Academic Advising

All FSAD majors are matched with a faculty advisor by the director of undergraduate studies, Professor Charlotte Jirousek. Students are strongly urged to discuss their goals, course selection and sequence, electives, and career plans with their faculty advisor. Students in apparel design must begin working with their advisors early to develop a professional portfolio of their work. Students are free to change advisors; changes must be recorded with the director of undergraduate studies. Although advisors oversee course selection for the following semester, it is the student’s responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for his or her major and college.

Student Work

All apparel design work done as part of the academic program will be held by the department until it has been released by the instructor. Certain exceptional work may be used by the department to exhibit for academic purposes. The department is not responsible for the loss or theft of student work.

Course Fees

No grade will be given in a course unless the course fee has been paid and equipment returned by the last week of classes.

Options

Students may select options in apparel design, apparel/textile management, or fiber science. Most transfer students will need at least one extra semester to fulfill the requirements of the major. Transfers in the design option should plan on two additional semesters.

Option I: Apparel Design

The Apparel Design option relates the human need for fashion and functional clothing and accessories to design principles and to the physical properties of textiles. Students take a sequence of studio courses, focusing on the manipulation by hand, eye, and computer of form, color, and fabric, as well as courses in the social, economic, historical, and cultural aspects of design. Many students participate in design competitions sponsored by the fashion industry.

Option II: Apparel/Textile Management

The Apparel and Textile Management option applies management and marketing principles to the apparel and textile sector, in independent and government-sponsored research, and in community organizations. In addition, the program prepares students for professional study in apparel design, apparel or textile marketing, business and management, or fiber/polymer science. Some students continue professional study in law or medical school.

Apparel students design for influential fashion houses and under their own labels. Graduates also do specialized design in fields such as military, athletics, and public safety; create innovative clothing for special populations such as children, senior citizens, and the physically challenged; and use their creativity in public-relations firms, theater, publishing, and promotion.

Graduates of the Apparel and Textile Management program are attractive candidates for leadership positions in fashion and other industries. Students who go on to graduate work are well prepared for advanced programs in fields such as business administration, marketing, economics, law, textiles, communication arts, and education.

Recent graduates of the Fiber Science program have begun careers in the fiber and textile industries as well as with government agencies developing and exploiting new products. Conducting research, providing technical services, helping to ensure product safety, and coordinating consumer information programs.

HUMAN BIOLOGY, HEALTH, AND SOCIETY

The human biology, health, and society (HBHS) program permits students to combine their interests in the biological sciences while exploring human health issues from the perspectives of both the biological and behavioral sciences. HBHS majors select the issues they want to explore in depth from Human Ecology courses that address health and the broad range of factors that influence human well-being. Issues that can be explored include biology and behavior; metabolism, genetics, and health; biology, growth, and development; and food and health policy and health promotion. Most students in this program will proceed to programs of advanced study to pursue careers related to health. This major is offered by faculty in the Division of Nutritional Sciences. More information about this program can be found in a separate section of the catalog that describes the division’s programs.

HUMAN DEVELOPMENT

The field of human development covers the entire life span and has benefited from the contributions of many disciplines. Human development majors explore the psychological, social, cultural, and biological development of people from conception to old age, focusing on the processes and mechanisms of growth and change over the life course. An important emphasis is the role that social institutions such as schools, workplaces, and neighborhoods play in human development, as well as the influence that developing people have on their environments. The human development major provides an excellent foundation for many professional careers, such as law, medicine (pediatrics, geriatrics, and psychiatry), clinical psychology and other mental health professions, education, social work, other health-related professions, business, nonprofit management, and advocacy. Many human development graduates attend graduate school in the fields of human development, psychology, and sociology.

Classes in human development cover a wide range of issues and approaches, and are organized into six different areas: social and personality development; cognitive development; human developmental behavioral neuroscience; aging and health; law, psychology and human development; and group disparities in development. The faculty in the Department of Human Development come from multiple disciplines, including developmental psychology, neuroscience, clinical psychology, education, and sociology. The research of the department faculty is extensive and world renowned and includes issues such as the neurobiological basis of personality, the role of childhood attachments in the development of adult romantic relationships, the acquisition of language in infants, the effects of environmental stressors on children's cognitive development, interventions to prevent and mitigate the impacts of child maltreatment, risk-taking during adolescence, risk and resilience factors affecting reactivity to stress across the life course, the epidemiology of elder mistreatment, memory and the legal system, health care decision making among older
people, and strategies to prevent social isolation and promote social integration among older people.

**Curriculum**

Human development is one of the most diverse majors in the College of Human Ecology. While all students learn the fundamentals of human development, students also focus on one or more areas of particular interest (e.g., social and personality development, aging and health, law, psychology, and human development). The major is flexible enough to give students ample opportunity to meet the requirements for admission to professional degree programs, including medical, dental, law, public health, social work, and business schools. Requirements specified by the College of Human Ecology make up part of each student’s curriculum, and include classes in the social and natural sciences, humanities, and writing. To fulfill department and college requirements, Human Development majors must take at least one biology course with lab (two biology courses with lab are strongly recommended), and statistics.

**Special Opportunities**

Beyond the required formal course work, students in human development have many other opportunities that involve ongoing individual work with Cornell faculty or other professionals. Academic credit can be earned through all of them, up to the limit specified by the college (with some restrictions noted below).

**Laboratory courses.** Human development students may earn credit toward the major by taking formal courses designed to teach laboratory and other research techniques, including study design, data collection, and data analysis. Students may count one of these courses toward the credits required for the Human Development major. Additional elective credits can be earned toward graduation by enrolling in individual faculty research programs, as described below.

**Faculty research.** Many human development students work for several semesters as research assistants on faculty projects. On these projects, students get further training in research techniques, such as laboratory experiments, surveys, and scientific behavioral observation. Participation in faculty research provides the type of experience that many graduate and professional schools expect from their top applicants. Recent projects involving students have included (1) language acquisition among infants in bilingual households or settings; (2) experimental acquisition among infants in bilingual households or settings; (2) experimental acquisition among infants in bilingual households or settings; (3) the impact of poverty on stress responses in children and teens. Participation in faculty research for credit counts as elective credits toward graduation in the College of Human Ecology (up to the limit specified by the college).

**Independent research.** Under faculty supervision, some advanced students complete an honors thesis. Applications to enter the honors program are due in the first semester of the junior year. Honors theses typically involve research related to faculty research, and all applicants must have experience working on research projects, as well as meet other program requirements. Seniors in the honors program register for an honors seminar and for honors thesis credits. The seminar and honors thesis credits count as elective credits toward graduation in the college (up to limit specified by the college).

**Field Placements.** Human development majors can arrange internships with Urban Semester in New York City, Cornell in Washington, and Cornell Abroad. Students may also arrange internships during the fall and spring semesters in the Ithaca area. All such field placements are required to be under the supervision of a human development faculty member. In recent years, Human Development students have participated in projects with the Tompkins County Office on Aging, the Tompkins County Human Service Coalition, Kendal of Ithaca, local schools, the Tompkins County Youth Bureau, and the Law Guardian’s Office of Tompkins County. Summer internship credit is not allowed in Human Development unless the student is enrolled for Cornell University credit over the summer. Field Placement credits count as elective credits toward graduation (up to the limit specified by the college).

**Undergraduate Teaching Assistant.** Advanced students can serve as undergraduate teaching assistants. The teaching assistantship requires work with the professor teaching the course as well as contact with students. Undergraduate teaching assistantships are for credit only. Teaching assistantship credits count as elective credits toward graduation (up to the limit specified by the college).

**Teaching Certification.** A cooperative education program exists between the Department of Human Development and Wells College. This program requires careful planning and course scheduling. It enables students to graduate with a Cornell bachelor's degree and New York State Certification to teach nursery school through sixth grade. This certification is honored by most other states.

The program requires a minimum of a three-semester commitment. Cornell HD students take four courses at Wells College and student teach their last semester at Cornell. Although there is van transportation between Cornell and Wells College, it is important for students to have access to a car, especially while student teaching. Students will be registered at Cornell during the entire undergraduate program and usually maintain Ithaca housing. Wells College courses count as Cornell courses and are used as electives but are not included in a student's GPA. The one-semester student teaching experience is typically based in the Ithaca area, though not necessarily within the city of Ithaca.

This program is open to HD majors only. Students must have at least a 3.0 Cornell cumulative GPA upon application and must maintain a 3.0 GPA to qualify for student teaching and to complete the program. For more information, contact Judith Ross-Bernstein in G56 MVR at 255-0826.

**Exercise Science Minor**

Students can complete the Applied Exercise Science Concentration at Ithaca College, which includes courses in kinesiology, exercise physiology, and biomechanics of human movement. Nutrition courses of special interest relate to growth and development, regulation of body weight, and community nutrition and health. For information about the Applied Exercise Science Concentration, contact the DNS academic affairs office, B21 Savage Hall, 255-4410.

**NUTRITIONAL SCIENCES**

A major in nutritional sciences (NS) focuses on the complex interrelationships of food patterns, nutritional status, and health. This field draws upon chemistry, biology, and the social sciences to understand questions such as: How are nutrients used by the body? What factors influence human food choice? What nutrients and dietary patterns are recommended to promote growth, maintain health, or reduce the risk of chronic disease? Students in this program may also fulfill the courses required for didactic training in dietetics toward registration as a dietitian (R.D.), which will enable them to be employed as nutrition counselors, clinical nutritionists, sports nutritionists, or administrators of food and nutrition services. Students also may prepare for medical school and other types of advanced degree programs through this major. The requirements for this program are outlined in the “Nutritional Sciences” section of this catalog.

**Special Opportunities**

**Dietetics and Clinical Nutrition**

Students who wish to work in the areas of clinical nutrition, nutrition counseling, sports nutrition, community nutrition, or food and nutrition management should complete the academic requirements for The American Dietetic Association (ADA). The Didactic Program in Dietetics is accredited by the Commission on Accreditation of Dietetic Education and provides students with the coursework necessary for application to an Accredited Didactic Internship or the Approved Pre-professional Practice (AP-P) program. Students successfully completing didactic program requirements at Cornell are issued a Verification Statement. A one time fee is involved to cover the cost of program materials and transcript evaluation. The Didactic Program in Dietetics policy and procedure for issuing verification statements can be found at nutrition.cornell.edu/dns7_dietetic.html. Upon completion of a Didactic Internship or AP-P program, students are eligible to take the Registered Examination of the Commission on Dietetic Registration, and become a Registered Dietitian (RD).

Courses in foods, nutrition and disease, microbiology, management, statistics, and nutritional care are added to the courses required for the nutrition program. Additional information about meeting ADA requirements, contact the DNS academic affairs office, B21 Savage Hall, 255-2628.

**POLICY ANALYSIS AND MANAGEMENT**

The policy analysis and management (PAM) major produces graduates skilled in policy analysis and management skills applicable to the public, nonprofit, and private sector. The PAM graduate will have concentrated knowledge in policy areas such as family/social welfare, health, or market regulation. Graduates are well-qualified for a wide variety of public, not-for-profit, and private sector employment emphasizing either policy
The PAM major combines theoretical underpinnings from economics, sociology, psychology, demography, and government to critique and analyze U.S. domestic policies and programs. It provides students with knowledge to build management skills for use in the public, not-for-profit, and for-profit sectors of the economy. Ideas of social justice, equity, and economic efficiency will be studied. Research methods, statistics, and multivariate statistics will be taught and applied to program evaluation, policy analysis, and management.

In addition to learning basic policy analysis and management skills, the student will be expected to apply these skills within particular areas of policy focus. Upper-level family/social welfare courses cover a panoply of governmental and private sector income maintenance, social, and human service delivery programs and policies that range from child adoption, neglect, and abuse policies and antipoverty programs to policies and programs that impinge on or regulate marriage, divorce, and fertility. Upper-level health policy courses cover programs and issues such as health care access, the Medicare and Medicaid programs, long-term care, managed care, public health issues such as obesity, and substance abuse policies. Upper-level market regulation courses cover programs and policies governing the regulation of advertising, the regulations of financial institutions, risk and insurance markets, food and drug safety, and public utility markets. They also deal with issues such as privacy, the Internet, and television.

In addition to meeting college requirements, all PAM majors are expected to take the following core courses: Introductory and Intermediate Policy Analysis, Demography and Family Policy, Multivariate Statistics, Intermediate Microeconomics, and Public Sector Economics. Multivariate Statistics and Intermediate Microeconomics must be completed by the second semester of the sophomore year.

**PAM Honors Program**

The honors program, which leads to a B.S. degree with honors in Policy Analysis and Management, gives official recognition to students who have demonstrated excellence in their academic work and their capacity for independent research. In addition to fulfilling the requirements for the major, students in the honors program will participate in an honors seminar and prepare an honors thesis. Honors students work with a research mentor in preparing for their thesis. Interested students should obtain a PAM Honors Program application form from the PAM Undergraduate Office (122 MVR). For more information, students should contact the PAM director of undergraduate studies.

**INTERDEPARTMENTAL MAJOR IN BIOLOGY AND SOCIETY**

Biology and society is a multidisciplinary program for students with special interests in such problems as genetic engineering, environmental quality, food and population, the right to medical care, and the relation between biology, society, and ethics and/or public policy. It is also designed for students who plan postgraduate study in management, health, medicine, law, or other related fields.

Because the biology and society major is multidisciplinary, students must attain a basic understanding of each of the several disciplines it comprises, by including courses in the fields of biology, humanities, social sciences, and mathematics. In addition, majors take core courses in biology and society, a set of electives, and a special senior seminar.

Course work in the College of Human Ecology may be selected from concentrations in human development, health, or social policy and human services. The other basic requirement of the program must also be met. Programs incorporating those required courses are designed in consultation with a faculty advisor to accommodate each student’s individual goals and interests. For further information on the major, including courses of related interest, specific course requirements, and application procedures, see Nancy Breen, director of undergraduate studies, in 205 MVR.

**SPECIAL OPPORTUNITIES**

**Study Abroad**

Each year over 75 Human Ecology students spend a semester or more off campus in places spanning the globe, such as Australia and Zaire. There they supplement their Cornell studies with a wide range of cross-cultural and academic experiences. Study abroad opportunities are available through Cornell-sponsored programs and other U.S. college-sponsored programs as well as by direct enrollment at foreign universities.

**Residency Requirements**

All study abroad students must meet college study abroad requirements and remain registered at Cornell during the overseas study. Credits earned count toward the 60 Cornell credits required for graduation (in unusual circumstances some credits earned abroad may be considered as transfer credit).

**Requirements for College Approval**

1. GPA of 3.0 or higher, good academic standing, and well-articulated goals for students’ study abroad semester.
2. Completion of the Cornell application; applications from individual programs also must be submitted to Cornell.
3. Completion of the equivalent of 15 semester credits per semester while abroad.
4. Courses taken for a letter grade (unless course is offered with only an S–U option).
5. Submission of a petition by second-semester seniors going abroad.

**Application Process**

Typically, students considering study abroad begin their planning at least a year before the semester abroad. Students should carefully consider what they hope to get out of a study abroad experience (academically and culturally) when investigating program options. Resources can be found in the Cornell Abroad office (300 Caldwell Hall), through the Human Ecology study abroad advisor (170 MVR), or in the Human Ecology Career Development Center (162 MVR). Completed applications must be submitted to the Human Ecology registrar’s office by the following dates:

- Fall and year deadlines: February 1
- Spring deadline: September 15

Some programs will be filled by these dates. Use of the early deadlines is strongly recommended. These are:

- Fall and year deadlines: December 15
- Spring deadline: May 1

Approved applications will be signed and forwarded to the respective programs through the Cornell Abroad office.

**Credits Abroad and Transfer of Credit**

Most study abroad courses are transferred to the Cornell degree program as electives or liberal arts distribution credit. Study abroad credit awarded toward one’s major is much less common and must be approved via signature of the student’s department advising coordinator on the Cornell application. Credit for study abroad will be awarded only after successful completion of the semester abroad (marks equivalent to a Cornell grade of C or higher) and receipt of the official transcript by the college. Official transcripts should be sent to the Cornell Abroad office, which will process and forward them to the Human Ecology registrar.

Courses must be pre-approved before the student’s departure. Any variances must be cleared with Human Ecology. Students must include a foreign language course in the country’s native language if studying in a country where English is not the native language. All courses taken abroad and grades received will appear on the Cornell transcript. Grades earned do not, however, become part of the Cornell GPA. Students should save all written work from all classes until courses are officially transferred.

**Independent Research**

Research opportunities for undergraduates are extensive and valued as an important part of the learning experience. The opportunity to engage in substantive research with some of the leading scientists in their fields is so compelling that approximately half of the college’s undergraduates conduct research projects. Students may become involved in research with the guidance of faculty members by conducting research assigned in a class, joining a faculty member’s research group, completing an independent study research project, or carrying out an honors program project.

For further information, students should contact individual faculty members or the director of undergraduate studies (DUS) in their department.
Honors Programs
Students interested in college honors programs that lead to the degree "bachelor of science with honors" usually apply to the appropriate honors committee no later than the end of the first semester of their junior year. A minimum GPA of 3.5 and demonstrated potential for honors-level research is required. Students take approved courses in research methodology and evaluation, attend honors seminars, complete a written thesis, and defend it in an oral examination.

In addition to the college honors program, special programs are offered by the Department of Design and Environmental Analysis, the Department of Fiber Science & Apparel Design, the Department of Human Development, the Department of Policy Analysis and Management, and the Division of Nutritional Sciences.

Students who are interested in the honors program should contact the director of undergraduate studies (DUS) in their department or division for information and guidelines.

Field Study and Internships
Field study and internships provide experiential learning opportunities in real-life circumstances where classroom knowledge is tested and applied. Students are able to master new skills, develop and implement plans of action, solve problems, interact in multicultural situations, and build networks for future job opportunities. By applying techniques of research methods, critical thinking, and self-directed learning, students learn to think conceptually while becoming agents of change.

Check with the director of undergraduate studies for major specific information. The Career Development Center (162 MVR) and career counselors in 172 MVR also can provide resources and assistance in finding internships and other experiential opportunities.

Concentration/Certificate in Gerontology
For students interested in pursuing study related to aging, the College of Human Ecology, under the auspices of the Bronfrenbrenner Life Course Center, offers the option of completing an undergraduate concentration in gerontology. This program is designed to develop an understanding of and competence in dealing with the processes and issues of aging. Study in gerontology enriches the practical experience of students and prepares them for professional work in this area. The program draws on the resources of several departments and colleges at Cornell and Ithaca College to shape a curriculum suited to each student's professional goals and interests.

The concentration is available in combination with any major offered by the university. Twelve credit hours of course work must be completed, with 9 of these taken in the College of Human Ecology. The courses explore aging through biology, psychology, social work, economics, and design.

Experiential learning opportunities are strongly recommended as a complement to classroom work. With faculty sponsorship, students can participate in experiences in the Ithaca area, the Urban Semester in New York City, Cornell in Washington, the Capital Semester, or in a placement arranged more individually.

Both Cornell and Ithaca College offer courses that incorporate a service-learning component into their gerontology course. Environments for Elders (DEA 4720) involves service in local agencies (e.g., local nursing homes, Office of Aging, assisted-living facilities), where students gain valuable experience. Students may also join the "Elderly Partnership" through the Cornell Public Service Center to participate in local visits to elders. There also are opportunities for undergraduates to become involved in research projects examining topics such as residential changes and adjustments in the later years, nutrition and elders, social security, and design for people with dementia. In addition, senior students can apply to work as a teaching assistant for a gerontology course.

Departments and programs have designated academic advisors for the gerontology concentration who will help students plan the sequences of courses and electives needed to complete both a major and the gerontology concentration. Because many gerontology courses have prerequisites, early and careful planning is essential.

Specific program requirements may be obtained in the Human Ecology registrar's office (146 MVR, 255-2255) or from Nancy Wells, Bronfrenbrenner Life Course Center (E220 MVR, 254-6530).

Concentrations
The College of Human Ecology formally recognizes as concentrations computer information sciences and international relations (both administered by the College of Arts and Sciences) and the previously described concentration in gerontology (administered by the College of Human Ecology). Students interested in pursuing these concentrations should inquire with the college department offering them. If successfully completed before graduation, these concentrations will be posted as part of the student's official transcript.

Students may develop an unofficial concentration in additional fields taught at Cornell by taking 12 credits in an approved area. African studies, communications, and business are just a few examples of concentrations that are possible. While these unofficial concentrations are not part of a student's transcript, students may choose to publicize these concentrations on their personal résumés.

Minors
A student may pursue a minor in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the student's major. Completed minors will appear on the student's transcript. Not all departments offer minors. Consult the appropriate section in this catalog or contact the appropriate department for information on minors offered and how to pursue a minor.

Private and public schools—Beginning with Children, Banana Kelly High School, East Harlem School at Exodus House, The Hetrick Martin Institute, Nuestros Niños, Theodore Roosevelt High School, The Choir Academy of Harlem, El Puente, Genesis RKF Center, River East School, MS 118, Mott Haven Village

Other Off-Campus Programs

Capital Semester

Richard Canfield, Ph.D., director

Combine a full semester of 15 Cornell credits with a paid internship and a reduction in tuition. Students intern directly for a New York State legislator (Senate or Assembly) in Albany to explore their policy interests in greater depth. Interns attend hearings and legislative sessions, meet with lobbyists and constituents, write reports for legislation and possible publication, and generally help conduct the work of their legislator. All Cornell students, regardless of major, are encouraged to apply. The program is available during the spring semester only, and it is open to sophomores, juniors, and seniors. Interns benefit greatly when subsequently applying for future employment, law school, graduate school, or business school. Information is available from the Career Development Center (162 MVR), and applications and further information can be obtained from Richard Canfield (B09 Savage Hall, RLC@cornell.edu).

Cornell in Washington

Students take courses from Cornell faculty, conduct individual research projects, and work as externs while taking advantage of the rich resources of the nation’s capital. For more information, visit the program office (M101 McGraw Hall).

Courses at Ithaca College and Wells College

Full-time undergraduate students at Cornell may petition to enroll in courses at Ithaca or Wells College. Students pay regular full tuition to Cornell and only special fees to either Ithaca or Wells where applicable. Students are allowed to register for one course per semester and a maximum of 12 credits in four years. Exceptions will be granted to Cornell students enrolled in methods and practice teaching courses at Ithaca and Wells, and those students pursuing a concentration in exercise science through a specially arranged program with Ithaca College.

Cornell students are eligible to register only for Ithaca and Wells College courses that are relevant to their program and that do not duplicate Cornell courses. Ithaca and Wells College credit counts as Cornell credit but not as Human Ecology credit. Students are accepted on a space-available basis. Participation in this program is not guaranteed, and both Ithaca and Wells have the right to accept or reject students for any reason deemed appropriate. The program is available only during the fall and spring semesters. For further information, contact the college registrar (146 MVR, 255-2235).

Double-Registration Programs

Cornell undergraduates from PAM and other fields across the college and campus are eligible to apply to the Sloan Program in their junior year for a five-year accelerated B.S./M.H.A. degree in health administration. In their senior year, these students will take the first-year Sloan courses, which will be counted twice to satisfy both undergraduate as well as graduate requirements. At the end of their senior year, students will graduate with a B.S. degree. Students whose grades are competitive will be notified during the spring semester of their senior year that they are invited to continue for the final year of Sloan as a graduate student. Those students accepted for the five-year program will participate in a health care administrative internship during the summer after earning their B.S. degree and following the first year of Sloan academic course work. The following graduate year they will complete the second year of required Sloan courses and electives and will earn a master in professional studies, with Cornell certifying completion of the requirements for a graduate degree in health administration. Students applying to the accelerated B.S./M.H.A. program need to complete the initial application to the Sloan five-year program through PAM in their junior year. In general, at the time of application, their undergraduate requirements will have been met. This application must include the GRE general test score, along with recommendations from the faculty advisor and at least one other source, as well as transcripts and the statement of purpose. During their final senior undergraduate year they also will have to submit a formal application to the graduate school. A sample schedule of the two-year curriculum for Sloan can be viewed at www.human.cornell.edu/pam/sloan/current_students/Academics.cfm.

Double-Registration Program for Law

A small number of highly qualified applicants may be admitted to the Cornell Law School after only three years of undergraduate education. The requirements for admission under these circumstances are more stringent than for acceptance into the four years of undergraduate study. Applicants must present outstanding qualifications and strong professional motivation. The junior year applicant follows the ordinary application procedures for Cornell Law School admission. Interested students should contact the Law School director of admissions (Myron Taylor Hall, 255-5141) to discuss the admissions criteria. Because students accepted to this program will be spending their senior year away from Human Ecology, they need to plan ahead to ensure that distribution and major requirements for the B.S. degree will be met. Successful applicants need the approval of the college registrar in Human Ecology.

ACADEMIC ADVISING AND STUDENT SERVICES

Faculty Advisors

Students are assigned a faculty advisor in the department of their major. Students may change advisors by working with the director of undergraduate studies (DUS) in their major. Faculty advisors are available to discuss course requirements and sequences, useful electives inside or outside the college, as well as future goals and career opportunities. It is the student's responsibility to make sure that his or her course selections meet graduation requirements for the major, the college, and the university. Directors of undergraduate studies in each department are available to answer questions about the advising system and the undergraduate major. Students who are exploring alternative majors should work closely with college counselors in the Office of Admission, Student, and Career Development.

Office of Admission, Student, and Career Development

The Office of Admission, Student, and Career Development (ASCD) (170–172 MVR) is a center for undergraduate freshman and transfer admission activities; student orientation activities; academic, personal, and career advising; study abroad; and multicultural student programs.

Personal counseling, including exploration of problems or concerns of a personal nature, is available to all students. These ASCD counselors, however, are not psychiatrists or therapists; they are available to help students understand and navigate the Cornell system, and to offer advice, support, assistance, and referral. Discussions are completely confidential. Appointments may be made through the receptionist in ASCD or by calling 255-2552.

In addition, ASCD provides advising support for several student organizations, including Human Ecology Ambassadors, the Nature Students Association, the Association for Students of Color, the Pre-professional Association toward Careers in Health, the Pre-law Undergraduate Society, and the Orientation Committee. Primary responsibilities of the office are listed below:

Academic advisement. This service is provided to all students as an adjunct to faculty advising. Counselors assist in course scheduling, academic planning, selection of a major, graduation requirements, and related issues.

Undeclared majors. Students who have not yet declared a major work closely with counselors in the Office of Student and Career Development, 172 MVR. We encourage students to explore interests by taking courses in several Human Ecology departments.
If you have general ideas about what you would like to study, or what you would like to do after college, then you have probably already narrowed your choice of majors. If you have, then choosing one of those majors as a tentative first home in the college makes a lot of sense.

- You will be assigned a faculty advisor by your department.
- You will receive departmental invitations and communications.
- You may change your major at any time.

**Career counseling.** Career counseling is designed to help students clarify the relationship between personal skills, abilities, and career goals. Services are offered on an individual or group basis. Counselors assist in identifying career outcomes of the majors, developing networking skills, suggesting course work appropriate to various career goals, and assisting students in their general internship and job searches.

**Post-graduate advisement.** Material and advice pertaining to graduate and professional schools, graduate entrance examinations, courses of study, and career outcomes is readily available.

**Students with disabilities.** The College of Human Ecology is committed to assisting students with disabilities; accommodations are available to students who have registered with the Office of Student Disability Services (420 CCC). You are encouraged to contact SDS before your arrival on campus in order to arrange services in time for your first semester. Support within the college is available through the Office of Student and Career Development, 172 MVR.

**Financial aid.** Students who encounter financial difficulty or anticipate running short of funds may discuss their needs with a counselor. Complete information is available from the Office of Financial Aid, 203 Day Hall.

### The Human Ecology Alumni Association

**Student Grants.** Students in the college can apply for these competitive grants to further their academic interests through independent research, community outreach, conference travel, and limited summer study related to career preparation/professional development. Applications are available on the college web site.

**Office of the Registrar**

The Office of the University Registrar (B7 Day Hall) maintains the official academic records for the university and provides students with their official university transcripts. Additional information is available on the university registrar's web site: http://registrar.sas.cornell.edu. The college registrar (146 MVR) maintains students' official academic records, including the audit of progress toward the degree. The college registrar also provides services such as adding and dropping courses, correcting student records, and approving the transfer of credit from other institutions. Additional information is available on the HE registrar's web site: www.human.cornell.edu/cho/Academics/undergraduate/Student_Services/Registrar/.

### Multicultural Programs

The College of Human Ecology at Cornell University believes that a diverse community enriches the educational process for all members of the college community. Consequently, the college focuses particular efforts on a broad range of services for students of color. This includes not only recruitment but also services for students already on campus. Additionally, the college collaborates with university and New York State programs to assure that Human Ecology students have access to the vast array of services available here.

The professional staff of Human Ecology's Office of Admission, Student, and Career Development includes a director of multicultural programs who assists in the recruitment, admission, and enrollment of the most qualified and appropriate EOP (a program for New York State residents), African American, Native American, Hispanic American, and Asian American students to the college. All accepted EOP students are invited to a special university-wide pre-freshman summer program that introduces accepted students to the Cornell campus and its classrooms. Services for current students include EOP/CONEP, academic, career, and personal counseling; recommendation letters for employment or graduate schools; and advising and support for student activities and programs.

**Human Ecology Peer Partnership Program** helps incoming students of color transition to the college and university. Small groups of freshmen, usually about six to eight students, are paired with faculty and upper-class students. They meet weekly for discussions, guidance, and explorations of the Cornell campus and the Ithaca community. For more information, contact Verdense Lee in the Office of Student and Career Development (172 MVR, 255-2532); or Gary Evans (ES 006 MVR, 255-4775); or Loraine Maxwell (E 10 MVR, 255-19588), both in the Department of Design and Environmental Analysis.

**ASC (Association for Students of Color).** With the motto "Yesterday's vision, today's reality, and tomorrow's hope," the ASC was created to bring together Human Ecology students to provide a supportive foundation for enrollment, retention, graduation, and career placement for students of color. The goals of the ASC are to increase communication between students of color, administration, and faculty; assist in increasing enrollment of students of color in Human Ecology; and assist in increasing the retention of students of color in Human Ecology and in their selected majors. ASC's two committees are recruitment/retention and career development. For more information, contact Verdense Lee (172 MVR, 255-2532).

**CSTEP** The Collegiate Science and Technology Entry Program is the New York State program that provides enrichment activities for pre-med and pre-law New York State residents. Services are targeted at populations who are historically underrepresented in scientific, technical, health-related, or licensed professions and/or who are economically disadvantaged and who demonstrate interest in, and potential for, a CSTEP-targeted profession. For more information, contact Verdense Lee in the Office of Student and Career Development (172 MVR, 255-2532).

### Multicultural Education

Multicultural education broadens understanding of the world's many different societies as well as the various cultures of this country. Students take courses in the Cornell programs listed below that may be used to meet degree requirements. The college encourages students to incorporate courses from these cultural programs and from study abroad experiences in their degree programs. See information on study abroad opportunities.

- Africana Studies and Research Center
- American Indian Program
- Asian American Studies Program
- East Asia Program
- Feminist, Gender, and Sexuality Studies Program
- Gender and Global Change
- Institute for European Studies
- Languages and Linguistics
- Latin American Studies Program
- Latino Studies Program
- Peace Studies Program
- Program for Contemporary Near Eastern Studies
- Program in Jewish Studies
- Religious Studies
- South Asia Program
- Southeast Asia Program

### International Students

The International Students and Scholars Office (ISSO, B50 Caldwell Hall, 255-5243) provides a broad range of services to international students. All international students should maintain contact with the ISSO. Counselors in ASCD are also available for assistance. International students in the College of Human Ecology are encouraged to meet with the college registrar to discuss any questions or concerns that they have about their academic record.

### Career Planning, Graduate and Professional School, and Job Search Services

**Counseling.** The Office of Student and Career Development (172 MVR, 255-2532) provides career counseling and resources to help students explore career options through employment and internship opportunities and professional and graduate school advising.

**Group programming.** Individual assistance is available as well as group programming, workshops, and panels. Career development is strongly encouraged and supported, including skill development in résumé writing, networking, and interviewing. Students also are instructed in the use and protocol of online résumé submissions and on-campus recruiting. The office works in conjunction with Cornell Career Services (103
Barnes Hall, 255-5221) to facilitate access to university-wide programs.

The Career Development Center (CDC, 162 MVR) is a starting point for students looking for career information. Selected resources about career planning and job search techniques, general directories to begin job or graduate school search, and information for alumni networking are housed there. Also available are Cornell Career Services handouts and registration forms, graduate and professional school testing booklets and registration materials, as well as Urban and Capital Semester program materials. Computers provide access to web-based information regarding internship and employment opportunities, as well as graduate/professional schools.

The CDC is open weekdays during the academic semester. Student career assistants are available to provide résumé and cover letter critiques, conduct mock interviews on video, and help navigate the library resources. Final critiques can be provided by a career counselor once the student review has been completed.

To provide assistance to interested students, former Urban Semester Program participants comprise a portion of the CDC student staff and are available daily to answer questions about the program and its application process. Selected services are listed below. Exploring such services will help students investigate their interests, skills, and values as they relate to career options, provide useful information and tips for a successful summer or full-time job search, and provide access to employment opportunities. In addition, please refer to the college’s career development web site: www.human.cornell.edu/che/Academics/Career-Services/index.cfm.

Pre-law or Pre-med. Students who consider themselves pre-law or pre-med are encouraged to join a student group affiliated with the American Bar Association or a medical student organization. These groups provide information and opportunities for students interested in pursuing a legal education or a medical career. They also provide opportunities for students to explore various careers in medicine and health care.

Fresh Program. This service is similar to the Extern Program but is available to freshmen only. Students interested in pursuing a legal education can join PLUS (PreLaw Undergraduate Society), which provides information on applying to law school, preparing for the LSAT, and examining career opportunities in law. Students interested in pursuing a career in medicine can join Peds/Peds (Professional Association of Medical Students), which provides opportunities for students interested in the medical field.

Internship and Employer Files. The CDC keeps files on internships and hundreds of potential employers for student review.

Alumni Career Presentations. Alumni from the college come back to campus throughout the year to discuss their postgraduate or professional experiences. These meetings are ideal for exploring career outcomes of specific majors.

AlumNet. Students have access to Human Ecology alumni who can provide information on their careers and offer suggestions on a job search in their particular field or location. Students can query alumni on a host of variables and review selected alumni résumés to learn more about careers. AlumNet is also an excellent networking tool.

Job Search Workshops. The college hosts several workshops every semester. These workshops are designed to help students market themselves for either summer or full-time job opportunities. Students learn how to conduct effective job searches, write résumés and cover letters, and interview successfully.

CornellCareerNet. Exclusively for Cornell students, CornellCareerNet provides access to many important services offered by Cornell Career Services. These services include a listing of job opportunities, summer opportunities, alumni networking databases, access to on-campus recruiting, employer showcases, and more.

CornellCareerNet On-Campus Recruiting (OCR). This service provides access to on-campus interviews with employers interested in recruiting specifically to Cornell students. Interviews occur primarily in banking and financial services, retail sales and management, facilities planning and management, and consulting. Please note that on-campus recruiting is only one component of a successful job search. Approximately 70 percent of Cornellians get their jobs through other resources.

New York Recruiting Consortium. Available exclusively to Human Ecology and Arts and Sciences students, the New York Recruiting Consortium is held in New York City over winter break. It offers interviews for full-time employment with employers involved in banking and financial services, retail sales and management, advertising, law, health care, and consulting.

NFP in New York City and NFP in Washington, D.C. Speak with representatives from dozens of New York City or Washington, D.C., not-for-profit/public service agencies about work or internship opportunities in health, education, advocacy, government, and more (held only during the spring semester).

Communications Consortium. Interview with organizations in advertising, public relations, film and radio, and print media. National organizations come to Syracuse, N.Y., to meet with students for individual appointments. During the spring semester, a job fair is held the evening before.

GRADUATION REQUIREMENTS AND POLICIES

It is important for students to track their graduation progress by comparing their current transcript with an appropriate curriculum sheet. Official transcripts may be obtained at the Office of the University Registrar (B07 Day Hall). Curriculum sheets are available in the Human Ecology registrar's office (146 MVR). Students are responsible for planning course selections to ensure that graduation requirements are fulfilled in eight semesters. Transfer students are allowed fewer semesters based on the number of transferable credits granted at admission. Students requiring additional semesters to fulfill their graduation requirements must meet with a Human Ecology counselor (172 MVR) and request to petition for an extension.

Grade Point Average (GPA) Requirement for Graduation

- Students must earn a minimum cumulative GPA of 2.0 (C) or better to graduate.

Cornell Credit Requirements

- To graduate, a student must earn a minimum of 120 academic credits. Physical education credits and “00” courses do not count toward the 120 required credits.

- Of the 120 credits required to graduate, at least 60 credits must be earned at Cornell University (applicable to transfer students).

- As of fall 2003, students who matriculate as freshmen may apply a maximum of 15 non-Cornell credits earned before matriculation (including AP, IB, and college credits) toward the 120 credits required for graduation. For all students, an additional pre-approved 15 in absence credits earned after matriculation may be applied. AP, IB, and transfer courses may be applied toward fulfillment of specific requirements regardless of whether the credit is transferred (i.e., required courses may be waived). Refer to “Advanced Placement Credit” for full details.

- No college credit earned before matriculation and used to meet Cornell’s minimum admission requirements may be counted in the 120 credits required for graduation. This policy does not apply to transfer students.

- Courses taught by a college in the high school setting or counted toward high school graduation are not allowed to count for either credits or fulfillment of requirements (i.e., Syracuse Project Advance).

- Cornell extramural credit (defined below) is limited to 15 credits toward the 120 required.

- Strict limitations exist on the number of credits that can be applied toward the 120-credit minimum for special studies courses (4000, 4010, 4020), for 4030 courses, and for courses taken with an optional S–I grade. Details follow.

Human Ecology Credit Requirements

- The college divides the 120 minimum required academic credits into four general categories. (Students should refer to curriculum sheets for their major for specific details on course selections. These sheets are available in the Office of the Registrar (146 MVR) and in the Office of Admission, Student, and Career Development (172 MVR) as well as on the college web site at www.human.cornell.edu.)
a. Category I—College distribution requirements
   Natural sciences
   Social sciences
   First-year writing seminars
   Humanities
   Quantitative and analytical courses (math and statistics)
b. Category II—Requirements for a major
c. Category III—Elective credits
d. Category IV—Physical education

These categories are detailed below.

- **Students must complete 43 Human Ecology (HE) credits from Categories I, II, and III**. Additional course-specific rules are listed below.
  - S–U grading rules for this requirement are as follows:
    1. If a course is a requirement in Category I or II, the course may not be taken for an S–U grade (unless it is the only grade option offered for the course).
    2. Courses used to count toward Category III (electives) that are taken for an S–U grade may also count toward the 43-credit requirement.
    3. Students should refer to the section on S–U grading rules for full S–U grading details.

- **Students must complete 9 Human Ecology (HE) credits from outside their major department from Categories I, II, or III**. Note: Biology and society majors are exempt from this requirement. A maximum of 3 credits from the 4000–4020 special studies series may be applied to this requirement. Other course-specific rules for this requirement are listed below.
  - S–U grading rules for this requirement are as follows:
    1. If a course counting toward the 9-credit outside-the-major requirement is also a requirement in Category I or II, the course may not be taken for an S–U grade unless it is the only grade option offered for the course.
    2. Courses used to count toward Category III (electives) that are taken for an S–U grade may also count toward the 9-credit requirement.
    3. Students should refer to the section on S–U grading rules for full S–U grading details.

**Course-specific rules that apply to both the 43 Human Ecology credit requirement and the 9 Human Ecology credit outside-the-major requirement**:

1. Effective fall 2004, Human Ecology (prefix “HE”) courses below the 3000 level (e.g., HE 1100 and 1200) do not count toward either the 43-credit requirement or the 9-credit outside-the-major requirement. These HE-prefix courses that are below 3000 level may be used as elective credit.
2. ECON 1110 and 1120 are considered Human Ecology credit courses and may be used to fulfill Human Ecology’s 43- and 9-credit outside-the-major requirements. If either or both courses are taken to fulfill a Category I or II requirement, they must be taken for a letter grade.
3. BSOC courses do not count as Human Ecology credit.
4. Experiential credit is applied to Human Ecology’s 40- and 9-credit outside-the-major requirements as follows:
   - a. Urban Semester (HE 4700, 4800, 4900/4950). Effective fall 2005, students in all Human Ecology majors earn:
      - 15 Human Ecology credits and 8 credits toward the 9-credit outside-the-major requirement.
   - b. Capital Semester (HE 3920). Effective spring 2007, all students earn:
      - 15 Human Ecology credits and 8 credits toward the 9-credit outside-the-major requirement.
   - c. Cornell in Washington (PAM 4060). For this entire semester, PAM majors earn:
      - 8 credits toward the 43-credit requirement, which also count as 8 PAM credits.
      - Non-PAM majors earn:
      - 8 credits toward the 43-credit requirement, which also count as 8 credits toward the 9-credit outside-the-major requirement. The remainder of the credits counts as elective credit.

**Elective Credits**

Students have individual objectives in choosing courses beyond the minimum requirements of the major. The university is diverse; the departments, centers, and special programs numerous; the fields of study almost unlimited. Counselors and faculty advisors are available to discuss which courses may interest students and best round out their education.

Students should consult the index in this catalog to learn where different subjects are taught in the university. Some subjects are taught in more than one division.

Elective credits can be earned in the endowed and statutory colleges of Cornell.

An unlimited number of credits may be taken in the statutory colleges of Cornell.

**Physical Education Requirements for Graduation**

1. Students must earn 2 credits of physical education within their first two semesters. These 2 credits do not count as part of the 60 Cornell credits, or as part of the 120 total credits required for a degree, or toward full-time status. Students who matriculate at Cornell with 12 or more credits must complete only 1 credit of physical education. Students who transfer more than 25 credits (excluding AP credits) are not required to take physical education at Cornell, regardless of whether they took physical education at their previous college.
2. Students must pass the university’s swim test. Students who transfer more than 25 credits (excluding AP credits) are exempt. Refer to “University Requirements for Graduation—Physical Education—Swim Test” in this catalog for specifics.

**Minimum Semester Requirements**

1. Students enrolling in the college as freshmen must complete at least 12 credits of Human Ecology courses by the end of the fourth semester, and at least 5 credits of Human Ecology courses must be taken in the freshman and 7 credits in the sophomore years (ECON 1110 and 1120 may be used to fulfill this requirement).
2. Students must carry 12 credits each semester, excluding physical education, to be matriculated as full-time students. Mature students must carry a minimum of 6 credits each semester (see “Mature Student Guidelines” for details).
3. In special cases, a student may petition to carry between 8 and 12 credits. Forms for petitioning this exception and advice on how to proceed are available in the Office of Admissions, Student, and Career Development (172 MVR).

**Special Studies**

- Students may use only 12 credits of 4000, 4010, 4020, or 4050 courses toward graduation.
- Additional credits of 4000, 4010, 4020, or 4050 courses can be taken but will not be applied toward graduation.

**“00” Courses**

- “00” courses do not count toward graduation requirements but do count toward full-time semester status.

**Requirements for Majors**

- Students must fulfill the requirements specified for a major that are in effect at the time of their matriculation or thereafter. The requirements are detailed in curriculum sheets that are maintained for each academic year.

**S–U Grade Options**

- The S–U grading option may not be used for courses in category I or required courses in category II unless it is the only grade option offered for those courses. S–U grades may be used for the 9 credits of Human Ecology course work outside of one’s major and for electives in category III.
- Students may apply no more than 12 credits of S–U toward the 120 credits required for graduation. If a required course is offered only S–U, it will not count toward this limit. Also, Honors Research 4990 taken S–U does not count against the 12 maximum limit. Students may take more S–Us if they choose, but the additional credit may not be applied toward graduation.

**First-Year Writing Seminars**

In each of their first two semesters of matriculation at the College of Human Ecology, students are required to take a Knight Program First-Year Writing Seminar. This policy also applies to transfer students. One or more of the seminars may be waived for transfer students if the college registrar grants credit for equivalent coursework taken before matriculation at Cornell.
Those who do not fulfill this requirement on time will be referred to the Committee on Academic Status. Refer to “Criteria for Good Standing” for specific warnings as to the implications if the committee applies to students who do not complete this requirement.

First-year writing seminars must be taken at Cornell and may not be taken in absentia. Students who receive a score of 5 on either the English Literature and Composition or English Language and Composition Advanced Placement (AP) exams can be exempt from one semester of their first-year writing seminar requirements. No other AP scores will allow a student this exemption (even if a lower score allows the student to use the course as elective credit toward graduation.) Students should be aware that the add/drop period for first-year writing seminars may be shorter in duration than the add/drop period for most Cornell classes.

Wells, Ithaca College, and Study Abroad Credits

Any credits earned with the Wells or Ithaca College exchange program are considered Cornell credits for the purpose of fulfilling the 60 Cornell credit graduation requirement. They may not be used for Human Ecology credit. Study abroad courses may also count as Cornell credit (but not for Human Ecology credit). Refer to “Cornell Credit Requirements” for details on how many advanced placement (AP) credits can be applied toward the 120 credits needed for graduation.

Advanced Placement Credit

Students can earn advanced placement credit from one of the following:

1. The requisite score on a departmental examination at Cornell (usually given during orientation week) or on a College Entrance Examination Board (CEEB) achievement test. The requisite score for the CEEB exams are determined by the relevant department at Cornell, vary by subject, and are listed in the beginning of this catalog. College-specific rules apply toward many AP courses such as biology, English literature, English composition, and statistics.

2. A regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments have delegated the review of courses to college staff according to guidelines they have formulated. Some departments review each request individually. Some departments accept credit from virtually all accredited colleges; some do not.

3. Credit from the International Baccalaureate (IB) is evaluated individually.

4. To “Cornell Credit Requirements” for details on how many Advanced Placement (AP) credits can be applied toward the 120 credits needed for graduation.

Note: Cornell does not accept credit for courses sponsored by colleges but taught in high schools to high school students, at colleges if enrollment is targeted at high school students, or if the course was used toward high school credit. This is true even if the college provides a transcript of such work. These courses also may not be used to fulfill college requirements.

Students who have taken such courses may, however, take the appropriate CEEB test to qualify for credit as in paragraph 1 above. For further information and limitations on Advanced Placement credit, see the front pages of this catalog.

Foreign Language Study and Placement

Students who studied a foreign language before coming to Cornell and who want to continue must take either the CEEB test in that language or a Cornell departmental language placement test. The latter is given during orientation week in September and again in December, January, and May. Human Ecology students who plan to work with non-English–speaking people in this country or abroad often find it necessary to be proficient in another language. Many study abroad programs in non–English-speaking countries require the equivalent of two years of college-level language study.

Extramural Credit

Extramural credit is administered by the Office of Continuing Education and Summer Sessions (B20 Day Hall, 255-4987). Extramural credit is charged by the credit hour at the endowed tuition rate. Students may count only 15 credits of extramural credit toward their degree requirements. A student may enroll for extramural credit during the fall or spring semester only if he or she is not registered in the College of Human Ecology. For example, some students enroll for extramural credit before matriculating at Cornell. An exception to this rule is credit earned in the Ithaca College or Wells College exchange programs. Students enrolled in these programs simultaneously maintain their status as students registered in the College of Human Ecology.

Humanities

Only certain classes will count for Category I, Humanities. To determine eligibility the college uses the following definition: The humanities include the study of literature, history (including art and design history), philosophy, religion, and archaeology. Critical, historical, and theoretical studies of the arts and design are considered humanities. Languages and creative or performing arts such as the writing of fiction or poetry, painting, sculpting, designing, composing or performing music, acting, directing, and dance are not considered humanities. Additionally, social science courses such as sociology, government, anthropology, and psychology are not considered humanities.

Specifically, courses in the following list will count as humanities:

- Africana Studies (literature and history)
- Archaeology
- Asian American Studies
- Asian and Near Eastern Studies (literature and history)
- Classics (literature and history)
- Comparative Literature
- Development Sociology 1750, 3180
- English (literature only)
- Fiber Science & Apparel Design 1250
- History
- History of Art/History of Architecture
- Landscape Architecture 2820
- Music and Theatre Arts (theory, literature, and history only)
- Natural Resources 3320
- Philosophy
- Policy Analysis and Management 5310, 5340, 5520
- Religious Studies
- Science and Technology Studies 2050, 2060, 2350, 2500, 2810, 2820, 2860, 2920, 3580, 3600, 3890, 4330, 4440, 4470, 4720, 4810, 4900

Math Requirement

Students may meet the college level requirement in one of the following ways.

Any CORNELL math course except MATH 1000 (BTRY 1150 may be used)

OR

Any CORNELL statistics course

OR

Score of 3 or higher on the AP Calculus BC exam. (Other AP math credit could be used toward graduation credit but not used to meet the math requirement)

Notes:

- Departments may impose additional requirements for majors or specify courses within this requirement.
- Students entering as transfers may apply to have their stats or math courses approved, but pre-calculus courses would not longer meet this requirement or receive graduation credit.

PROCEDURES

Registration and Course Enrollment

Registration Requirements

University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear
communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must complete course enrollment according to individual college requirements; settle all financial accounts including current semester tuition; satisfy New York State health requirements; and have no holds from the college, the Office of the Judicial Administrator, Gannett Health Center, or the Bursar's office.

Individuals must become registered students by the end of the third week of the semester. Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises.

Verification of Registration

Many insurance companies or scholarship funds require verification of full-time registration at Cornell. Should students need such verification, they should use the official university verification service at http://certification.cornell.edu or request an official letter from the Office of the University Registrar (B-7 Day Hall). Students who need letters of good standing should contact the Human Ecology registrar's office (146 MVR).

Bursar Bill

A bursar bill is sent to each student over the summer and winter breaks; it summarizes what is owed to the university. The bursar bill can also be viewed through Student Center: Any questions regarding the bursar bill can be directed to the bursar's office (260 Day Hall, 255-2336). Initial New York State residency eligibility is determined during the admissions process, but the bursar's office will handle any request for a status change after matriculation.

Late University Registration

A student clearing his or her financial obligations after the deadline date on the bursar's bill is considered late. Late registrants are assessed a finance charge on the bursar's bill starting from the date the bill is due. According to university policy, all students must be registered before the end of the third week of classes. If for any reason a student registers after that time, the Bursar's office will charge a late fee. Students who fail to register by the third week of the semester may be withdrawn from the university. Human Ecology students who do not arrange payment agreements satisfactory to the university bursar by the last day of classes for a semester will be withdrawn from the university.

Furthermore, credit for any classes attended for the semester will not be awarded regardless of the letter grade received for a class. Should withdrawn students wish to return, they must reapply through the college admissions office.

Proration of Tuition

Except for mature students, it is seldom possible to have tuition prorated if a student carries fewer than 12 credits during a semester. See the college registrar (146 MVR) for more information. Students of mature status may carry 6 to 11 credits but must request that their tuition be prorated. Prorated tuition will be considered only for requests of between 3 and 10 credits. All requests should be made to the college registrar (146 MVR) by the end of the pre-enrollment period in the semester before the term in which proration is requested.

Course Enrollment

Initiating the Process

"CourseEnroll" selections are only "requests" for seats in classes. Between the end of the course enrollment period and the beginning of the next semester, course requests are evaluated by the offering college department. Students can determine if their requests have been successful when final schedules are published before the add/drop period. Students are expected to make course requests for the subsequent semester during a specified time in the current semester. Those dates are advertised publicly and are available on the university registrar's web site (http://registrar.sas.cornell.edu). "CourseEnroll" takes place electronically, using software available through StudentCenter. During this time, each student must meet with his or her faculty advisor to discuss academic plans.

Information on courses is readily available in this catalog and in the Course and Time Roster for each semester. Both of these publications can be accessed on the web through CUInfo.

Incoming students will receive tentative schedules upon their arrival to campus, and will meet with faculty advisors during the orientation period.

Course Loads

Full-time matriculated students must carry at least 12 credits (exclusive of physical education courses) to maintain full-time status. Refer to the preceding section, "Minimum Semester Requirements," for details. The normal course load in the college ranges from 12 to 18 credits, although there is no limit to the number of credits a student may take each semester. Nonetheless, students should avoid planning excessive workloads; the time required to keep abreast of courses tends to increase as the semester progresses. Students may not receive credit for courses after the seventh week of classes without petitioning and by substantiating extenuating circumstances. Students should avoid the need to drop courses by taking on a reasonable workload and using the drop period to make changes in their program.

Late Course Enrollment

Students who do not complete course enrollment during the CourseEnroll period usually must wait until the beginning of the next semester's add/drop period to enroll. Extensions are rarely granted and usually only for documented illness.

Students who do not meet the deadline for any reason should see the college registrar in 146 MVR as soon as possible. The college registrar can explain available options and course enrollment procedures under such circumstances.

Note: Students can review their course schedule via computer using Student Center. Students are responsible for checking their course schedule for accuracy of course numbers, credit hours, grade options, and other data. Errors must be corrected immediately. Procedures for correcting enrollment errors as well as for making any other changes are described in the following section.

Course Enrollment Changes

It is to the student's advantage to make any necessary course enrollment changes as early in the semester as possible. Adding new courses early makes it easier for the student to keep up with course work. Dropping a course early makes room for other students who may need it for their academic programs.

Ideally, students evaluate their course load carefully at the beginning of the semester. If, in the first week or two, the instructors do not discuss the amount of material to be covered and the extent of student assignments, students need to ask about course requirements.

Deadlines for Add/Drop and Grade Option Changes

Note: Brief add/drop periods exist for first-year writing seminars and half-semester courses.

1. During the first three weeks of the semester, courses may be added, dropped, or the grade option changed. Special status courses (4000, 4010, 4020) may be added through the seventh week of classes. 4050 Teaching Apprentice courses must be added during the first three weeks of the semester.

2. From the fourth through the seventh week of the semester, courses may be dropped. Grade option changes may not be made at this point regardless of instructor's permission.

3. After the seventh week of the semester, any requests for course changes must be made through the petition process. Students should request an appointment with an Admission, Career and Student Development counselor in 172 MVR to initiate the process.

4. After the seventh week of the semester, any student granted permission to drop a course after petitioning will automatically receive a grade of W (Withdrawn), and the course and grade will remain on the official transcript even if repeated in a later semester. The deadline to petition to drop a course with a "W" is the end of the 12th week.

Deadlines for Half-Semester Courses

Students may drop half-semester courses within the first three-and-one-half weeks of the course. Students may add a course after the first week of classes only with the permission of the instructor. After the first three-and-one-half weeks, students must petition to drop the course.

Time and Place for Add/Drop and Grade Option Changes

All students may adjust their schedules and grading options during the first three weeks of each semester. To make course changes after the seventh week of the semester, a student must file a general petition form (see "Petition Process.") Students are expected to attend classes and to do assigned work...
notifying the instructor that unavoidable
may be dropped from the course list. Students
instructors are responsible for determining the
waiting list maintained by the professor or the
students are generally assigned on the basis of
limited. When a course is overenrolled,
Oversubscribed Courses
will experience some delay in submitting their
day that pre-enrollment begins; thus, students
and Time Roster
requests to the college registrar. The
ask the faculty advisor to submit the course
for the student's faculty advisor for approval; the
form that the student then files with that
school's registrar in Sage Hall.
Course Enrollment while Studying Abroad
Students who plan to study abroad have
several options available to enroll for their
returning semester at Cornell. Students can consult with their advisor before departure to consider the schedule of classes that they will take upon their return to campus. Once abroad, the student can use the web to access Courses of Study and the Course and Time Roster for the coming semester. The roster is available on the web in approximately the first week of October and the first week of March. Using these resources, the student can e-mail the course requests to the student's faculty advisor for approval; the faculty advisor can then e-mail them to the college registrar. A student who does not have access to the Internet while abroad can wait for the Course and Time Roster to arrive via airmail from the Cornell Abroad office. The student can then e-mail, fax, or mail the course requests to their faculty advisor and ask the faculty advisor to submit the course requests to the college registrar. The Course and Time Roster becomes available only the day that pre-enrollment begins; thus, students who depend on receiving the mailed copy will experience some delay in submitting their course requests. Requests must be submitted within the published deadlines.
Oversubscribed Courses
Enrollment in many human ecology courses is limited. When a course is overenrolled, students are generally assigned on the basis of seniority or by criteria defined for each course as listed in this book. Students' professional goals may be considered. Those students who are not admitted to a course may be placed on a waiting list maintained by the professor or the department offering the course. Course instructors are responsible for determining the criteria to fill their classes from waiting lists. Waiting lists are maintained only for the first three weeks of each semester.
Limited-Enrollment Classes
Students who do not attend the first two class sessions of courses with limited enrollment may be dropped from the course list. Students can avoid being dropped from a class by notifying the instructor that unavoidable circumstances have prevented their attendance.

Cross-Listed Courses
To apply a cross-listed course to graduation requirements, students must enroll in the department for which they need the credits. If changes in department designations need to be made, this must be done during the official course add period for the semester. To do so, students must complete a special form, which can be obtained in the registrar's office in 146 MVR.

Courses with Duplicate Content
Students should scrutinize course descriptions for details about other Cornell courses with duplicate content that would preclude a student from receiving full credit for duplicate courses. For example, students may not receive 6 credits toward graduation requirements if they take DSOC 1010 and SOC 1101. Because both are introduction to sociology courses, only 3 credits would be allowed. To aid students in this evaluation, the college maintains a partial list (those that are commonly required in Human Ecology curricula) of Cornell courses that have duplicate content.

Special Studies Courses
Each department in the College of Human Ecology (DEA, FSAD, HD, NS, and PAM) offers special studies courses that provide opportunities for students to do independent work not available in regular courses. One of those courses, designated 3000 Special Studies for Undergraduates, is intended primarily for students who have transferred from another institution and need to make up certain course work.
The other special studies courses are 4000 Directed Readings; 4010 Empirical Research; and 4020 Supervised Fieldwork. Juniors and seniors normally take those courses, and a faculty member in the department in which the course is offered supervises work on an individual basis. It is important for students to use the appropriate course number (3000, 4000, 4010, or 4020) for a special project.
To register for a special studies course, a student obtains a special studies form from the departmental office where he or she plans to take the course. The student discusses the proposed course work with the faculty member under whose supervision the study would be done and then prepares a plan of work. If the faculty member agrees to supervise the study, the student completes a special studies form and obtains signatures from the instructor, faculty advisor, and department chair before submitting the form to the college registrar's office (146 MVR). Special studies forms are available in 146 MVR or in departmental offices.
Semester credits for special studies courses are determined by the number of contact hours for the course. The student has with the supervising faculty member (or a person designated by the faculty member). To earn 1 credit, a student must have the equivalent of three to four hours of contact time per week for 15 weeks (a total of 45 contact hours). For additional credit, multiply the number of credits to be earned by 1.5 to determine the number of contact hours needed for that course. Strict limitations exist on the number of special studies credits that can apply toward graduation and how these credits may be applied toward Category II requirements in the major. Refer to "Human Ecology Credit Requirements" for details. To register in a special studies course taught in a department outside the college, follow the procedures established by that department.

Changes in Status
General Petition Process
The petition process permits students to request exceptions to existing regulations. Petitions are considered individually, weighing the unique situation of the petitioning student with the intent of college and university regulations. In most cases, extenuating circumstances are needed for a petition to be approved if it involves waiving a deadline. These are situations beyond a student's control, such as a documented medical emergency.
Students can avoid the necessity to petition by carefully observing the deadlines that affect their academic program. See “Course Enrollment Changes” above for some of the important deadlines. If unaware of a deadline, check with a counselor in the Office of Student and Career Development (172 MVR) or with the student's academic program office.

In Absentia Study
Under certain conditions, credit toward a Cornell degree may be given for in absentia study, that is, study done at an accredited institution away from Cornell after the student matriculates in the College of Human Ecology. In absentia study can be done during any semester: fall, winter, spring, or summer. First-year writing seminars may not be taken in absentia.
To be eligible for in absentia study, a student must be in good academic standing and must
receive permission in advance from the college registrar. A student not in good standing may study in absentia but will not receive transcript credit until the Committee on Academic Status has returned the student to good standing. Students not in good academic standing or who wish to finish their degree in absentia must seek pre-approval from the college's Committee on Academic Status via the general petition process. In some cases, students may petition for in absentia credit after the work has been completed, but there is no guarantee that such credit will be awarded without advance approval.

In absentia petition forms are available in the Human Ecology registrar's office (146 MVR) or on the web at http://www.human.cornell.edu/che/Academics/Undergraduate/Student_Services/Registrar/Forms-and-Petitions.cfm. The student submits the form to the Human Ecology registrar's office (146 MVR). In absentia study during the fall or spring semester carries a nominal administrative fee. (Contact the Bursars office, 260 Day Hall, for the current amount.) Students will receive a letter in their college mail folder from the college registrar notifying them of the petition decision.

Note: Students seeking pre-approval for in absentia course work should do so well in advance as turnaround time for the approval process can be variable.

A student may take up to 15 credits in absentia as long as the courses do not duplicate courses already taken and the in absentia courses are applicable to the requirements of the college. Students who study abroad during the summer or winter term are limited to a maximum of 9 in absentia credits. Study abroad during the fall or spring semester must be done through the Study Abroad office and is not considered in absentia study. Students studying while on a leave of absence during the spring or fall semesters may not receive credit for nondomestic course work.

On the following rare occasions a student's petition for more than 15 credits in absentia may be allowed: (1) the work taken represents a special educational opportunity not available at Cornell; (2) it relates to the student's particular pre-collegiate goals; and (3) those goals are consistent with the focus of the college. The in absentia petition form is used to request more than 15 credits in absentia. Wells and Ithaca College credit are not considered in absentia credit and are not included in the 15-credit limit.

The college registrar requests approval from the appropriate department if a student wants to apply in absentia credit to requirements in his or her major. Students seeking in absentia credit for a modern foreign language in which they have done work must obtain the approval of the appropriate language department (College of Arts and Sciences). The department will recommend the number of credits the student should receive and may require the student to take a placement test after returning to Cornell.

The student is responsible for having the registrar of the institution where in absentia study is done send transcripts of grades directly to the Human Ecology registrar's office (146 MVR). Only then will credit be officially assessed and applied to the Cornell degree. Credit for in absentia study will be granted only for those courses with grades of C- or better. Courses may not be taken for S–U grades unless it is the only grade option offered. In absentia courses appear on the Cornell University transcript, but the grades are not calculated in the student's GPA.

A student who holds a Regents' or Children of Deceased or Disabled Veterans Scholarship may claim that scholarship for study in absentia if the study is done in a college in New York State and if it is for a maximum of 15 credits acceptable to the College of Human Ecology. The rules regarding study in absentia apply to transfer students as well. In absentia study during the first seven weeks of the semester or for a leave of absence during the fall or spring semester must be done through the Study Abroad office and is not considered in absentia study. Students studying while on leave of absence may not receive credit until the Committee on Academic Status has returned the student to good academic standing.

In absentia petition forms are available in the Human Ecology registrar's office (146 MVR) or on the web at http://www.human.cornell.edu/che/Academics/Undergraduate/Student_Services/Registrar/Forms-and-Petitions.cfm. The student submits the form to the Human Ecology registrar's office (146 MVR). In absentia study during the fall or spring semester carries a nominal administrative fee. (Contact the Bursars office, 260 Day Hall, for the current amount.) Students will receive a letter in their college mail folder from the college registrar notifying them of the petition decision.

Note: Students seeking pre-approval for in absentia course work should do so well in advance as turnaround time for the approval process can be variable.

A student may take up to 15 credits in absentia as long as the courses do not duplicate courses already taken and the in absentia courses are applicable to the requirements of the college. Students who study abroad during the summer or winter term are limited to a maximum of 9 in absentia credits. Study abroad during the fall or spring semester must be done through the Study Abroad office and is not considered in absentia study. Students studying while on a leave of absence during the spring or fall semesters may not receive credit for nondomestic course work.

On the following rare occasions a student's petition for more than 15 credits in absentia may be allowed: (1) the work taken represents a special educational opportunity not available at Cornell; (2) it relates to the student's particular pre-collegiate goals; and (3) those goals are consistent with the focus of the college. The in absentia petition form is used to request more than 15 credits in absentia. Wells and Ithaca College credit are not considered in absentia credit and are not included in the 15-credit limit.

The college registrar requests approval from the appropriate department if a student wants to apply in absentia credit to requirements in his or her major. Students seeking in absentia credit for a modern foreign language in which they have done work must obtain the approval of the appropriate language department (College of Arts and Sciences). The department will recommend the number of credits the student should receive and may require the student to take a placement test after returning to Cornell.

The student is responsible for having the registrar of the institution where in absentia study is done send transcripts of grades directly to the Human Ecology registrar's office (146 MVR). Only then will credit be officially assessed and applied to the Cornell
To compute a semester grade point average (GPA), first add up the products (credit hours X grade quality points) and divide by the total credit hours taken. Grades of INC, R, S, SX, U, UX, and W should not be included in any GPA calculations. A grade of F has no quality points, but the credits are counted, thereby lowering the average. A cumulative GPA is simply the sum of all semester products divided by all credits taken. Refer to “Repeating Courses” for details on how GPA is affected if a student repeats a course. For further help on calculating a GPA ask at the college registrar's office (146 MVR).

These are the quality point equivalents:

Repeating Courses

Students are allowed to register a second time for a course they have already passed or in which they received an F. If a student has previously passed a course he or she is taking a second time, the second registration will not count toward the degree requirements, and the grade received will not be included in the cumulative GPA.

If a student enrolls in a course in which he or she has previously received an F, the credits from the second registration will count toward the graduation requirements and the grade will be included in the cumulative GPA. The F will also remain on the record and will be included in the GPA.

S–U Grades

Some courses in the college and in other academic units at Cornell are offered on an S–U basis (see course descriptions in this book and on the Cornell web site). Courses listed as SX–UX are available only on an S–U basis and may not be taken for a letter grade.

University regulations concerning the S–U system require that a grade of S be given for work equaled or better, for work below that level, a U must be given. No grade point assignment is given to a grade of S, and S or U grades are not included in the computation of semester or cumulative averages. A course in which a student receives a grade of S is, however, counted for credit. No credit is received for a U. Both the S and U grades appear on a student's record. A student who is attempting to qualify for the semester's Dean's List must take at least 12 credits of course work graded non–S–U. See “Awards and Honors” for more details about the Dean's List.

No more than 12 S–U credits will count toward a student's 120-credit graduation requirement. However, a student may take more than one S–U course in any one semester. S–U courses may be taken only as electives or in the 9 credits required in the college outside the major unless the requirements for the major indicate otherwise.

Freshmen enrolled in ENGL 1370 and 1380 (offered for S–U grades only) are permitted to apply those courses to the first-year writing seminar requirement. If a required course is offered only S–U, it will not count toward the 12-credit limit.

To take a course for an S–U grade, a student must check the course description to make sure that the course is offered on the S–U basis; then either sign up for S–U credit during course enrollment, or obtain and file an add/drop form in the Human Ecology registrar's office before the end of the third week of the semester. After the third week of the semester, students cannot change grade options.

Grades of Incomplete

A grade of incomplete is given when a student does not complete the work for a course on time but when, in the instructor's judgment, there was a valid reason. A student with such a reason should discuss the matter with the instructor and request a grade of incomplete. Students are at risk of going under the minimum semester requirement if an INC grade in a course puts the total number of credit hours under 12 for the semester. For more information, refer to “Minimum Semester Requirements.”

A grade of incomplete may remain on a student's official transcript for a maximum of two semesters and one summer after the grade is given, or until the awarding of a degree, whichever is the shorter period of time. The instructor has the option of setting a shorter time limit for completing the course work. If the work is completed within the designated time period, the grade of incomplete will be changed to a regular grade on the student's official transcript. If the work is not completed within the designated time period, the grade of incomplete automatically will be converted to an F.

When a student wants to receive a grade of incomplete, the student should arrange a conference with the instructor (preferably before classes end and the study period begins) to work out the agreement. A form, called Explanation for Reporting a Final Grade of F or Incomplete, which must be signed by both the instructor and the student, needs to be submitted by the instructor to the Human Ecology registrar's office. This form is submitted with the final grade sheets whenever a grade of incomplete is given. This form is for the student's protection, particularly in the event that a faculty member with whom a course is being completed leaves campus without leaving a record of the work completed in the course. If circumstances prevent a student from being present to consult the instructor, the instructor may, if requested by the student, initiate the process by filling out and signing the form without the student's signature and turning the form in to the Human Ecology registrar's office. This form is submitted with the final grade sheets whenever a grade of incomplete is given. This form is for the student's protection, particularly in the event that a faculty member with whom a course is being completed leaves campus without leaving a record of the work completed in the course. If circumstances prevent a student from being present to consult the instructor, the instructor may, if requested by the student, initiate the process by filling out and signing the form without the student's signature and turning the form in to the Human Ecology registrar's office. This form is submitted with the final grade sheets whenever a grade of incomplete is given. This form is for the student's protection, particularly in the event that a faculty member with whom a course is being completed leaves campus without leaving a record of the work completed in the course.

Students who find themselves in disagreement with an instructor over grades have several options.

1. Meet with the instructor and try to resolve the dispute.
2. Meet with the chair of the department in which the instructor has his or her appointment.
3. Meet with the associate dean for undergraduate studies of the college in which the course was taught.

A student may also seek advice from his or her faculty advisor or with the faculty counselor in the Office of Admission, Student, and Career Development (172 MVR).

Examinations

Both the preliminary and final examination schedules are available on the university registrar's web page at http://registrar.sas.cornell.edu.

Final Examinations

The following is quoted from the Cornell University Faculty Handbook, 1990, pages 66–67:

"Although not specifically prohibited, it is University policy to discourage more than two examinations for a student in one 24-hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a makeup for other valid reasons, e.g., illness, death in the family, etc.

Legislation of the University Faculty governing study period and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the Registrar's Office without prior written permission of the Dean of the Faculty.
2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.
3. Permission will be given by the Dean of the Faculty to reschedule examinations during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time that the examination was originally scheduled. The faculty member requesting
such a change will be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the Registrar’s Office.

4. No tests are allowed during the last week of scheduled classes unless such tests are part of a regular week-by-week course program and are followed by an examination (or the equivalent) in the final examination period.

5. Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period completing them.

6. Faculty can require students to submit papers during the week preceding the study period.

7. Take-home examinations should be given to classes well before the end of the regular semester and should not be required to be submitted during study period but rather well into the examination period.

Students have a right to examine their corrected exams, papers, and the like, in order to be able to question their grading. They do not, however, have an absolute right to the return thereof. Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester preferably until the end of the following semester to afford students such right of review."

**Preliminary Examinations**

The following is quoted from the *Cornell University Faculty Handbook* (1990), pages 65–66.

"Preliminary examinations are those given at intermediate times during a course. It is common to have three of these in a semester to encourage review and integration of major segments of the course, to provide students with feedback on how well or poorly they are progressing, and to contribute to the overall basis for a subsequent final grade.

The most convenient times and places for "prelims" are the normal class times and classrooms. But many courses, particularly large ones with multiple sections, choose to examine all the sections together at one time and to design an examination that takes more than one class period to complete. In such cases the only alternative is to hold the prelim in the evening. This practice creates conflicts with other student activities, with evening classes and laboratories, and among the various courses that might choose the same nights.

To eliminate direct conflicts, departments offering large multisection courses with evening prelims send representatives annually to meet with the dean of the University Faculty to lay out the evening prelim schedule a year in advance. Instructors of smaller courses work out their own evening prelim schedules, consulting their students to find a time when all can attend. Room assignments are obtained by the faculty member through the contact person in his or her college or the Central Reservations Coordinator.

The policy governing evening examinations is as follows:

1. Evening examinations may be scheduled only on Tuesday and Thursday evenings and only after 7:30 P.M. without prior permission from the Office of the University Faculty.
   a. Such prior permission is not, however, required for examinations or makeup examinations involving small numbers of students (generally 30 or fewer) provided that the scheduled time is acceptable to the students involved and that an alternate examination time is provided for those students who have academic, athletic, or employment conflicts at the time scheduled.

2. Permission from the Office of the University Faculty to schedule on evenings other than Tuesdays and Thursdays or at a time before 7:30 P.M. will be granted only on the following conditions:
   a. Conditions such as the nature of the examination, room availability, large number of conflicts, etc., justify such scheduling.
   b. An alternate time to take the exam must be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.

3. If there is a conflict between an examination listed on the schedule developed at the annual evening prelim scheduling meeting and an examination not on the schedule, the examination on the schedule shall have a priority, and the course not on the schedule must provide an alternate time to take the examination for those students faced with the conflict.

4. If there is a conflict between examinations, both of which are on the schedule developed at the annual evening prelim scheduling meeting or both of which are not on the schedule, the instructors of the courses involved must consult and agree on how to resolve the conflict. Both instructors must approach this resolution process with a willingness to provide an alternative or earlier examination.

5. Courses using evening examinations are strongly urged to indicate this in the course description listed in Courses and must notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed."

**ACADEMIC STANDING**

**Criteria for Good Standing**

The College of Human Ecology has established a set of minimum academic standards that all students must meet or exceed each semester. These standards are as follows:

1. A student must maintain a semester and cumulative grade point average of 2.0 or higher.

2. A student must successfully complete at least 12 credits per semester, excluding physical education courses. Mature students must carry at least 6 credits each semester, also excluding physical education.

3. Students enrolling in the college as freshmen must complete at least 12 credits of Human Ecology courses by the end of the fourth semester such that at least 5 credits must be taken by the end of the second semester (ECON 1110 and 1120 may be used to fulfill this requirement). Transfer students must complete 12 Human Ecology credits by the end of their second semester at Cornell.

4. A student must be making "satisfactory progress" toward a Human Ecology bachelor’s degree.

5. All students must complete their requirements for first-year writing seminars (FWS) during their first two semesters at Cornell. Students who do not take a required first-year writing seminar in the first semester they matriculate at the College of Human Ecology will be placed on a warning status.

Students who have completed the second or subsequent semesters of matriculation at the college who have not taken both of the required writing seminars will be placed on a severe warning with danger of being withdrawn status. In these cases, if the student has not pre-enrolled for an FWS for the upcoming semester, a hold will be placed on the student’s semester registration status until he or she is actually enrolled in an FWS. If this requirement is not completed by the end of that semester, the student will be withdrawn from the college.

At the end of each semester, the Committee on Academic Status (CAS) reviews each student’s academic record to ensure that the minimum academic standards listed above are met. The committee then takes appropriate action for students whose academic achievement is considered unsatisfactory as defined by these criteria. CAS considers each case individually before deciding on a course of action. In an effort to support every student’s success, the committee may take any of the following actions:

1. Place a hold on a student’s university registration status for the current or upcoming semester.

2. Withdraw the student permanently from the college and Cornell University.

3. Require the student to take a leave of absence for one or more semesters.

4. Issue a warning to the student at one of the following levels:
   a. Severe warning with danger of being withdrawn
   b. Severe warning
   c. Warning

These imply that if the student does not show considerable improvement during the semester, the committee may withdraw the student.

5. Add the student’s name to a review list; students with this status are monitored by the committee throughout the semester.

6. Return the student to good standing.

Students placed on a required leave must appeal to CAS to return. This appeal occurs at the end of the required leave period. Students
who have been withdrawn may appeal the decision before the committee during the pre-
semester appeals meeting. Students who have been placed on a warning status owing to
incomplete or missing grades may request that
their status be reviewed for possible updating
to good standing once the grade records
reflect the updates or corrections. These
requests should be made using the general
petition process and submitted to the college
registrar.

All students with an academic warning status
automatically will be reviewed for specific
criteria at the end of the subsequent semester.
In most cases, students put on warning, severe
warning, or severe warning with danger of
being withdrawn status will be informed of
conditions that they are expected to fulfill
to return to good standing. In general, these
conditions are that a student must earn a
minimum semester GPA of 2.0, complete 12
credits (exclusive of physical education), and
not have any incomplete, missing, F, or U
grades on his or her most recent semester
record.

h. In any manner violates the principle of
absolute integrity.
The college's Academic Integrity Hearing
Board, which consists of a chairperson, three
faculty members, and three students, hears
appeals from students who have breached the
code. It also deals with cases brought directly
to it by members of the faculty.

Academic Records
Students may obtain their Cornell academic
record in several ways. The Cornell
transcript, which is the official record of the
courses, credits, and grades that a student has
carried can be ordered with no charge at the
Office of the University Registrar (B7 Day
Hall) or online at http://transcript.cornell.edu.
For more information, call 255-4232. Students
may also access their grades and course
schedules electronically using Student Center.

Students should be in the habit of
checking Student Center by the second
week of every semester to confirm that
their schedule and grade options are
correct. Adjustments must be made before
published enrollment deadlines.

The college also maintains a graduation
progress worksheet for each student
showing progress toward the degree. At
the beginning of fall semester continuing
students should check their updated worksheet on the
Registrar tab at www.human.cornell.edu. It is
important to check this document and bring
any errors to the attention of the staff in the
college registrar's office (146 MVR).

Disclaimers: These worksheets are unofficial
tally tools used by the college registrar and in
no way substitute for a student's responsibility
for tracking the progress toward completing
degree requirements as outlined in the
curriculum sheet for each major.

Access to Records
The Family Educational Rights and Privacy Act
of 1974 assures students of privacy of their
records. The law also assures students' access
to their records. Information concerning
a student's relationship with the university is
considered restricted and may be released
only at the student's specific written request.
Restricted information includes the courses
elected; grades earned; class rank; academic
and disciplinary actions by appropriate faculty,
student, or administrative committees; and
financial arrangements between the student
and the university. Letters of recommendation
are restricted information unless the student
has specifically waived right of access.

Students who want additional information on
access to their records may contact the Office of
the College Registrar (146 MVR) or
the Office of the University Registrar (B7 Day
Hall). An inventory of those student records
maintained by Cornell University offices in
Ithaca, their location, and cognizant officer are
available in the Office of the Dean of Students
(401 Willard Straight Hall).

For specific information, refer to the
university's policy "Access to Student Information" at www.univc.cornell.edu/
policy/ASI.html, or talk with the college
registrar.

ACADEMIC HONORS AND AWARDS
The college encourages high academic
achievement and recognizes outstanding
students in several ways.

Honors
Dean's List. Excellence in academic
achievement is recognized each semester by
placing on the Dean's List the names of
students who have completed satisfactorily at
least 12 credits of letter grades and who have
a semester GPA of 3.7 or above. No student
who has received an F or U in an academic
course will be eligible.

Kappa Omicron Nu seeks to promote
graduate study and research and to stimulate
scholarship and leadership toward the well-
being of individuals and families. As a chapter
of a national honor society in the New York
State College of Human Ecology, it stimulates
and encourages scholarly inquiry and action
on significant problems of living—here, in
the community, and throughout the world.

Students are eligible for membership if they have
attained junior status and have a
cumulative average of B or higher. Transfer
students are eligible after completing one year
in this institution with a B average.

Current members of Kappa Omicron Nu elect
new members. No more than 10 percent of
the junior class may be elected to membership
and no more than 20 percent of the senior
class may be elected. Graduate students
nominated by faculty members may be
elected. The president of Kappa Omicron
Nus the honor of serving as First Degree
Marshall for the college during May
commencement.

Bachelor of science with honors
recognizes outstanding scholastic achievement
in an academic field. Programs leading to a
degree with honors are offered to selected
students. Information about admission to the
programs and their requirements may be
obtained from the appropriate department or
division. Students in other departments who
wish to qualify for honors should contact the
Office of Admission, Student, and Career
Development (172 MVR) during their
freshman year or the first semester of their
junior year. Honors candidates must have a
minimum GPA of 3.4 and have demonstrated
potential for honors-level research. To
graduate with honors a student must take
approved courses in research methodology
and evaluation, attend honors seminars,
complete a written thesis, and successfully
defend it in front of a committee.

Bachelor of science with distinction
recognizes outstanding scholastic achievement.
Distinction is awarded to students in the top
10 percent of the graduating class based on
the last 60 credits earned at Cornell. The
graduating class includes students who will
complete requirements for bachelor of science
degrees in January or May of the same
academic year or the prior August. Names of
seniors who meet these requirements are
presented to the faculty of the college for
approval.

The primary objectives of the honor society,
Phi Kappa Phi, are to promote the pursuit of
excellence in higher education and to
recognize outstanding achievement by
students, faculty, and others through election
to membership. Phi Kappa Phi is unique in
the academic work he or she submits, such as
papers, examinations, or reports and (2) a
student applying for readmission should discuss his or her situation with a counselor in the
Office of Admission, Student and Career
Development. The student also should also
talk with others who may be able to help—
faculty advisors, instructors, or a member of
the university medical staff. Any information
given to the committee is held in the strictest
certainty.

Academic Integrity
Academic integrity is a critical issue for all
students and professors in the academic
community. The University Code of Academic
Integrity states that (1) a student assumes
responsibility for the content and integrity of
the academic work he or she submits, such as
papers, examinations, or reports and (2) a
student shall be guilty of violating the code
and subject to proceedings under it if he or
she:

a. Knowingly represents the work of others
as his or her own.
b. Uses or obtains unauthorized assistance in
any academic work.
c. Gives fraudulent assistance to another
student.
d. Fabricates data in support of laboratory
or field work.
e. Forges a signature to certify completion or
approval of a course assignment.
f. Uses an assignment for more than one
course without the permission of the
instructor involved.
g. Uses computer hardware and/or software
to abuse privacy, ownership, or user
rights of others.
that it recognizes scholarship in all academic disciplines. To be eligible for membership students must rank in the top 10 percent of the senior class, or in the top 5 percent of the junior class. Provisions also exist for the election of faculty members and graduate students whose work merits recognition.

Awards
The Elsie Van Buren Rice Public Speaking Contest awards prizes totaling $2,500 for speeches related to published research by Human Ecology faculty members. The contest is held early each year in March.

The Flora Rose Prize is given to a Cornell Human Ecology junior or senior whom, in the words of the donor, “shall demonstrate the greatest promise for contributing to the growth and self-fulfillment of future generations.” The recipient receives a cash prize of $750.

The Florence Halpern Award is named for the noted psychologist, Dr. Florence Halpern, in recognition of her lifelong interest in “innovative human service, which better the quality of life.” In that spirit the award is presented to an undergraduate in the College of Human Ecology who has demonstrated, through supervised fieldwork or community service, creativity in the search for solutions to human problems. The award carries a $750 cash prize.

The Human Ecology Mature Students Association is an organization of students who are 24 years of age or older at the time of matriculation. Mature students need to balance family, work, and other concerns with their academic efforts. The Mature Students Association strives to help by providing a forum for resource exchange and referral, support, socializing, and special projects depending upon expressed interest. These goals are pursued through seminars and informational meetings, the mature students listserv, supplemental orientation activities, liaison with other university offices, and the encouragement of informal networking. For more information, contact Patti Papapietro in the Office of Admission, Student, and Career Development (172 MVR).

Students interested in the relationship between the physical environment and human behavior may join the Human–Environment Relations Students Association (HERSA). For more information, contact the Department of Design and Environmental Analysis.

The Association of Students of Color (ASC) unites Human Ecology students of color to provide a supportive foundation for their enrollment, retention, graduation, and career placement. ASC members work toward these goals by:

1. participating in admissions hosting programs and conducting high school visits.
2. sponsoring presentations on career and graduate school outcomes of a Human Ecology education.
3. providing volunteer services to the Cornell and Ithaca communities.
4. attending regular meetings and hosting annual fall and spring forums.

For more information, contact the President of the Association.

The PreLaw Undergraduate Society (PLUS) is sponsored by Human Ecology and is open to students with the College of Human Ecology. The committee is particularly active at the beginning of each semester. More information may be obtained from a student’s perspective, assist with on-campus programs for high school students and potential transfer students, and help with prospective student phonathons and letter writing. In addition, ambassadors attend regular meetings and serve as coordinators for activities in the Office of Admission.

For information, contact the Office of Student and Career Development (172 MVR, 255-5471).

The Preprofessional Association Toward Careers in Health (PATCH) provides support, advising, and up-to-date information to students pursuing careers in health care. Programs include academic advising, guest speakers from allopathic and alternative medicine, information on graduate school admissions, exposure to complementary health care career options, MCAT preparation tips, information on research and internship opportunities, and a visit to a local medical school. This student-run organization is sponsored by Human Ecology and is open to the Cornell community. For more information, contact Paula Jacobs in the Office of Admission, Student, and Career Development (172 MVR, 255-2532).

The Orientation Committee consists of students and advisors interested in planning and implementing programs to acquaint new students with the College of Human Ecology. The committee is particularly active at the beginning of each semester. More information may be obtained from a student’s perspective, assist with on-campus programs for high school students and potential transfer students, and help with prospective student phonathons and letter writing. In addition, ambassadors attend regular meetings and serve as coordinators for activities in the Office of Admission.

For information, contact the Office of Student and Career Development (172 MVR, 255-5471).
Teaching or Professional Service handles the nomination and selection process for this prestigious yearly award. The committee consists of three teaching faculty members, one professional staff member, and three undergraduate members.

The Human Ecology Alumni Association Board of Directors includes two student board members—one junior and one senior. One student is selected each spring to begin a two-year term as student representative. The two students co-chair the board’s Student Activities Committee, which works to increase the visibility of the Alumni Association among the student body by funding a variety of activities. The student members also bring an important perspective to board deliberations about programming and annual goals.

The Committee on Academic Status does not include student representation but does have a faculty representative from each department. This committee is responsible for upholding the academic standards of the college and takes action when appropriate. The committee also hears appeals regarding student petitions and requests to be readmitted to the college.

INTERDEPARTMENTAL COURSES

HE 1100 Critical Reading and Thinking
Fall, spring, or summer. 2 credits (credit toward graduation depends on individual college). Limited enrollment. Prerequisite: Freshman or sophomore standing; juniors and seniors by permission of instructor. Letter or S–U grades. Staff. Enables students to increase critical reading and thinking abilities. Examines theory and research associated with a wide range of reading, thinking, and learning skills. Emphasis is placed on developing and applying analytical and evaluative skills.

HE 1110 College Achievement Seminar
Summer, six-week session. 2 credits (credit toward graduation depends on individual college). Prerequisite: Pre-freshman Summer Program students. Letter or S–U grades. Staff. Improves the study and learning skills of incoming freshmen. Emphasis is placed on acquisition of skills necessary to achieve academic success. Topics include time management, note-taking, mapping, textbook comprehension, exam preparation, and exam strategies. The application of theory to the demands of Cornell course work is stressed. In addition, students are introduced to library and computing resources through hands-on

HE 170 Leadership in the Nonprofit Environment
Fall. 3 credits. Limited to 30 students. Letter grades only. B. Bricker. The nonprofit sector contributes nearly 10 percent of U.S. GNP and employs 11 to 12 percent of citizens. This economic sector touches all our lives—as volunteers, donors, receivers of service, employees, or board members. This course provides an opportunity to explore the challenges and opportunities of the nonprofit sector. After becoming familiar with the issues and complications of strategic charitable giving, students will consider actual grant applications from community organizations and make decisions to award $10,000 in grant aid. HE 4070 is made possible by a generous gift of $10,000 from the Sunshine Lady Foundation. Students learn to read, evaluate, and write effective grant proposals. They create a Request for Proposal (RFP) to invite community nonprofits to apply for funding. They study organizational missions, the strengths and challenges of private, not-for-profit organizations, the motivation for giving time and money, and many related themes.

HE 4991/4992 Biology & Society Honors Project I and II
Fall and spring (yearlong). Credit TBA. Students who are admitted to the honors program are required to complete two semesters of honors project research and to write an honors thesis. The project must include substantial research, and the completed work should be of wider scope and greater originality than is normal for an upper-level course. The student must find a project supervisor and a second faculty member willing to act as faculty reader; at least one of these must be a member of the Biology and Society faculty. Minimally, an honors thesis outline and bibliography should be completed during the first semester. In consultation with the director of undergraduate studies, the student must show that the student can continue working on an honors project. Students should note that these courses are to be taken in addition to those courses that meet the regular major requirements.

THE URBAN SEMESTER PROGRAM IN MULTICULTURAL DYNAMICS IN URBAN AFFAIRS

Cornell in New York City provides students with many study options that focus on multicultural dynamics in urban affairs. The options available include internships, individual and group community-service projects, research, independent study, collaborative learning, and mentorships. Students must enroll concurrently in the three courses HE 4050, HE 4060, and HE 4070. Students learn through reflection and action. Program options are available throughout the academic year, during winter break, and in the summer.

Courses of study enable students to seek out the relationship between theory and practice, apply theory to practice, identify and acquire professional practice skills, and learn about the impact of diversity on New York City. By applying ethnographic research techniques and methods, students learn to think conceptually, reflect on their actions, and be agents of change.

HE 4060 Fieldwork in Diversity and Professional Practice: The Culture of Medicine and Public Health
Summer, eight-week session. Variable credit. S. Beck. This course is part of the Urban Semester Program in New York City. Students learn through a cycle of experience and reflection. Over the course of eight weeks, students learn how to implement experience-based learning techniques and perspectives to enhance their competencies as initiates of professional practice. Students spend four days each week in an internship of their own choosing. One day each week, students and professionals with representatives of the New York City economy. This exposure enables students to explore the variety of urban professional perspectives and practices. Students participate in reflections seminars with the director of the program to explore student internship experiences and learning.

HE 4700 Multicultural Issues in Urban Affairs
Fall and spring. 3 credits. Students must take course during semester they participate in Urban Semester Program. Staff. Uses New York City as a classroom. The landscapes, built environments, and people in them are the texts. In the beginning, students study the formation of this multicultural city through a cycle of experience and reflection. This course is part of the Urban Semester Program in New York City. Students learn through a cycle of experience and reflection. Over the course of eight weeks, students learn how to implement experience-based learning techniques and perspectives to enhance their competencies as initiates of professional practice. Students spend four days each week in an internship of their own choosing. One day each week, students and professionals with representatives of the New York City economy. This exposure enables students to explore the variety of urban professional perspectives and practices. Students participate in reflections seminars with the director of the program to explore student internship experiences and learning.

HE 4080 Fieldwork in Diversity and Professional Practice: Community and Public Service
Summer, eight-week session. Variable credit. M. Cocchini. This course is part of the Urban Semester Program in New York City. Students learn through a cycle of experience and reflection. The course includes two student co-chairs the board’s Student Internship Committee, which works to increase the visibility of the Alumni Association among the student body by funding a variety of activities. The student members also bring an important perspective to board deliberations about programming and annual goals.

The Committee on Academic Status does not include student representation but does have a faculty representative from each department. This committee is responsible for upholding the academic standards of the college and takes action when appropriate. The committee also hears appeals regarding student petitions and requests to be readmitted to the college.

THE URBAN SEMESTER PROGRAM IN MULTICULTURAL DYNAMICS IN URBAN AFFAIRS

Cornell in New York City provides students with many study options that focus on multicultural dynamics in urban affairs. The options available include internships, individual and group community-service projects, research, independent study, collaborative learning, and mentorships. Students must enroll concurrently in the three courses HE 4050, HE 4060, and HE 4070. Students learn through reflection and action. Program options are available throughout the academic year, during winter break, and in the summer.

Courses of study enable students to seek out the relationship between theory and practice, apply theory to practice, identify and acquire professional practice skills, and learn about the impact of diversity on New York City. By applying ethnographic research techniques and methods, students learn to think conceptually, reflect on their actions, and be agents of change.

HE 4060 Fieldwork in Diversity and Professional Practice: The Culture of Medicine and Public Health
Summer, eight-week session. Variable credit. S. Beck. This course is part of the Urban Semester Program in New York City. Students learn through a cycle of experience and reflection. Over the course of eight weeks, students learn how to implement experience-based learning techniques and perspectives to enhance their competencies as initiates of professional practice. Students spend four days each week in an internship of their own choosing. One day each week, students and professionals with representatives of the New York City economy. This exposure enables students to explore the variety of urban professional perspectives and practices. Students participate in reflections seminars with the director of the program to explore student internship experiences and learning.

HE 4700 Multicultural Issues in Urban Affairs
Fall and spring. 3 credits. Students must take course during semester they participate in Urban Semester Program. Staff. Uses New York City as a classroom. The landscapes, built environments, and people in them are the texts. In the beginning, students study the formation of this multicultural city through a cycle of experience and reflection. This course is part of the Urban Semester Program in New York City. Students learn through a cycle of experience and reflection. Over the course of eight weeks, students learn how to implement experience-based learning techniques and perspectives to enhance their competencies as initiates of professional practice. Students spend four days each week in an internship of their own choosing. One day each week, students and professionals with representatives of the New York City economy. This exposure enables students to explore the variety of urban professional perspectives and practices. Students participate in reflections seminars with the director of the program to explore student internship experiences and learning.
HE 4800 Communities in Multicultural Practice
Fall and spring. 6 credits. Students must take course during semester they participate in Urban Semester Program. Staff.
Concerns urban children and youth in communities of color. Each week of the semester, students participate one day in the school lives of children pre-K through eighth grade in selected neighborhoods in New York City. Students keep journals of their reflections on their experiences and observations.

HE 4900 Multicultural Practice
Fall and spring. 6 credits. Students must take either HE 4900 or 4950 during semester they participate in Urban Semester Program; which is appropriate depends on student's placement and is determined by Urban Semester director. Staff.
Students explore the intersection of organizational culture with issues of diversity. They investigate the nature of organizational culture and how it engages and includes or does not include diversity. Students report back in seminars their understanding and analysis of their internship organizations and their industry's role in creating conditions and environments of inclusion or exclusion. The course explores the conditions and processes that have brought about inclusion or exclusion.

HE 4950 Culture, Medicine, and Professional Practice in a Diverse World
Fall and spring. 6 credits. Students must take either HE 4900 or 4950 during semester they participate in Urban Semester, which is appropriate depends on student's placement and is determined by Urban Semester director. Staff.
Students participate in several experiential learning environments related to medicine over the course of the semester. Students rotate in a four-week unit, supported by Pastoral Care and ER, as well as several other choices through the semester. Medical and health-related practitioners make presentations throughout the semester.

DEA 1150 Design Graphics and Visualization
Spring. 3 credits. Limited to 18 students. Prerequisite: Option I DEA majors only; DEA 1101 with grade of B– or higher. Corequisite: DEA 1102. Better in DEA 1150 required to take DEA 2201. Must complete incomplete grade in this course before taking DEA 2201. Minimum cost of materials: $200, technology fee: $10. K. Gibson.
Introductory graphics course for interior designers. Emphasizes orthographic and perspective drawing, formal and conceptual presentation methods. Reinforces concepts through projects, readings, and field trips.

DEA 1500 Introduction to Human-Environment Relations (also COGST 1500)
Spring. 3 credits. Limited to 15 students per sec (20 sec). Lect, disc. G. Evans.
Human–Environment Relations is an interdisciplinary field concerned with how the physical environment and human behavior interrelate. Most of our attention will be focused on how residential environments and urban and natural settings affect human health and well-being. We also examine at how human attitudes and behaviors affect environmental quality. Hands-on projects plus exams. Lecture and discussion sections Writing in Major option also available.

DEA 2030 Digital Communications
Spring. 2 credits. Limited to 45 students. Priority given to DEA majors. Lab fee: $10. J. Elliott.
Digital information technologies for designers of the built environment. Students explore issues in relation to text and image through analysis and composition of form and content. Through a series of projects the students work toward the development of a professional web-based portfolio of self-promotional materials. The primary objective is to reinforce principles of visual communications while learning the rudiments of vector, raster, and html graphic software. Visit http://courses. cit.cornell.edu/dea2030.

DEA 2040 Introduction to Building Technology
Spring. 2 credits. Y. Hua.
This course is an introduction to a wide range of building technology. The goal is to develop basic understanding of building systems, their implications for the planning, design, and operation processes of buildings, as well as the impact of their performance on building occupants and the environment. Topics include site and climate, structural systems, building envelope, passive strategies for building conditioning, HVAC systems, interior systems, lighting systems, acoustics, electrical systems, construction process and building maintenance, and principles of building systems integration for occupant comfort and environmental sustainability.

DEA 2150 Digital Graphics
Fall, first seven weeks of semester. 1 credit. Prerequisites: DEA majors or permission of instructor, DEA 1101. Letter grades only. S. Curtis.
This course will be an investigation into use of computer graphic software programs for the purpose of design, visualization, and presentation. The course will investigate the inherent differences between raster and vector graphics and how to use a variety of computer graphics programs such as Adobe
DEA 2201 Interior Design Studio III  
Fall. 4 credits. Limited to 18 students.  
Prerequisites: Option I DEA students; DEA 1101, 1102, 1110, 1150, and 1500 (minimum grades of B-); B- or higher required to take DEA 2202. Must complete incomplete in 2201 before taking 2202. Corequisites: DEA 2510, DEA 2150, DEA 4600. Minimum cost of materials: $150; lab fee: $40; required field trip: J. Jennings.  
Third semester in the studio sequence of eight semesters. The theme and objectives focus on design as critical thinking, introducing means by which students can think, draw, write, and build their way critically through design.  
Taken concurrently with DEA 2510, the course applies historical theory to contemporary design projects. Also includes a collaborative project with a professor and students from another design discipline.

DEA 2202 Interior Design Studio IV  
Spring. 4 credits. Prerequisites: Option I DEA students; DEA 2201 and 2530. Pre- or corequisite: DEA 2040. Must complete incomplete grade in this course before registering for DEA 3501. Minimum cost of materials: $120; field trip fee: R. Gilmore.  
Based on programmatic criteria from real clients, students learn how to design several types of interior environments, from health-care facilities to local nonprofit agencies. Emphasis is on space planning, lighting design, construction of custom light fixtures, and service learning, where students use design to transform the facilities of social service agencies in the community.

DEA 2410 Introduction to Computer-Aided Design (CAD)  
Spring, first seven weeks of semester. 1 credit. Prerequisites: DEA majors or permission of instructor; DEA 1101. Letter grades only. Minimum cost of materials: $50. S. Curtis.  
This course provides an understanding of, and experience with, drafting software on the computer. It includes a basic understanding of the features, limitations, and considerations associated with the operation of the AutoCAD. By the end of the course, the student will be proficient enough with the AutoCAD software to draw and plot most projects required by their course of study as they relate to architecture and interior design.

DEA 2420 Advanced Computer-Aided Design (CAD)  
Spring, second seven weeks of semester. 1 credit. Prerequisites: DEA majors or permission of instructor; DEA 1101. Letter grades only. Minimum cost of materials: $50. S. Curtis.  
This course provides a thorough understanding of the 2-D features, limitations, and considerations associated with the operation of AutoCAD. This course builds on knowledge gained in DEA 2410 and requires DEA 2410 as a prerequisite. Commands and concepts such as multi-sheet plotting, xref drawing, blocks, and written and written images, user coordinate systems, and customization of AutoCAD are covered. This course will give the student a high level of proficiency with the AutoCAD software as they relate to architecture and interior design.

DEA 2500 The Environment and Social Behavior  
Fall. 3 credits. Limited to 16 students.  
Priority order: DEA seniors, juniors, sophomores, freshmen. Prerequisite: DEA 1500 and written permission of instructor.  
This course is about architecture and human behavior. It is centered on two key principles: 1. the complex interplay of social and personal factors with the physical environment largely determines how the built environment influences human well-being; 2. aesthetics is not sufficient in judging design—we must also consider how the built environment affects health, interpersonal relations, and performance along with preference. Two major projects, one in collaboration with a design studio and a real community client.  
DEA 2510 History and Theory of the Interior  
Fall. 3 credits. Limited to 35 students.  
Priority given to DEA majors. J. Jennings. A historic study of interior architecture and design with an emphasis on the concepts of design theory. Overarching themes encompass several time periods of the 20th century and obsolete cultural patterns, spatial ideas, dialectics, design elements, and theorists. Reading, discussion, analytical exercises, essays, and a field trip are included. Visit http://courses.cit.cornell.edu/dea2510.

DEA 2550 Introduction to Facility Planning and Management  
Fall. 2 credits. Letter grades only. F. Becker.  
Introduction to the field of facility planning and management. Focuses on how the planning, design, and management of an organization’s physical facilities can help it meet its business objectives. Topics include the history of the field, strategic planning, space planning and design, project management, building operations, workplace change management, real estate, and computer-aided facility management systems.

DEA 3000 Special Studies for Undergraduates  
Fall or spring. Credit TBA. DEA faculty.  
Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare and submit a description to the instructor for approval. The course may be taken for a final grade. The instructor will review the student’s course for approval.  
Prerequisite: DEA 3301 and DEA 3030 or approval of instructor.  
Field trip fee: approx. $10. P. Eshelman.

DEA 3030 Interior Materials and Sustainable Elements  
Fall. 3 credits. Limited to 45 students.  
Prerequisite: interior design, hospitality, or architectural studio or permission of instructor. Approx. cost of materials: $10. R. Gilmore.  
A sustainable approach to the evaluation and selection of materials, finishes, and furnishings for the built environment. Students research how to select products that have the potential to protect our planet. This course provides an introduction to sustainable sources and asks students to manipulate materials, understand performance testing, use building codes, create a life-cycle cost analysis, and complete interior specifications. Field trips provide an overview of the manufacturing process, and group projects culminate in the presentation of research on current “green” products and resources.

DEA 3040 Introduction to Professional Practice of Interior Design  
Spring. 1 credit. Limited to 15 students.  
Prerequisite: Option I DEA students. DEA faculty.  
Introduction to organizational and management principles for delivery of interior design and facility management services. Covers basic organizational structures and basic management functions within interior design and facility management organizations. Work flow and scheduling, business practices, legal and ethical responsibilities and concerns, contracts, basic contract documents such as working drawings and specifications, supervision of construction and installation, and cost estimation.

DEA 3201 Construction Documents and Detailing  
Fall. 2 credits. Prerequisites: DEA 3301 and 3030 or permission of instructor.  
A continuous dialogue between the idea for an interior space and the reality of its final built form is contained within construction documents, also known as working drawings and specifications. Students study the history of architectural documentation, the organization of construction drawings, schedules, and specifications, and the detailing of interior elements and construction methods by touring a local millwork shop. Each student completes a comprehensive set of construction documents.

DEA 3250 Human Factors: Ergonomics-Anthropometrics  
Fall. 3 credits. Recommended: DEA 1500. Undergraduate sec of DEA 6510 has additional readings and projects. A. Hedge.  
Implications of human physical and physiological characteristics and limitations on the design of settings, products, and tasks. An introduction to engineering anthropometry, biomechanics, control/display design, work physiology, and motor performance. Includes practical exercises and field project work. Visit http://ergo.human.cornell.edu.

DEA 3301 Interior Design Studio V  
Fall. 5 credits. Prerequisites: DEA 1110, 1500, 2201, 2202, 2300, 2410. Corequisites: DEA 3030 and 4590. Must complete incomplete grade in this course before registering for DEA 3502. Minimum cost of materials: $150; shop fee: $10; optional field trip: approx. $10. P. Eshelman.  
This intermediate-level interior design studio focuses on design for a special population inclusive of young children, older adults, and people of any age living with a congenital or hereditary condition, injury, or disease. The course is organized around a semester-long project broken into four phases: pre-design, design, full-scale model construction, and design documentation and presentation. Collaboration with students in DEA 2500/6600 provides experience in the application of evidence-based information in the design process.

DEA 3302 Interior Design Studio VI  
Spring. 5 credits. Limited to 18 students.  
Prerequisites: DEA 3501 and 3030 or permission of instructor.  
Corequisite: DEA 3050. Must complete incomplete grade in this course before registering for DEA 4401. Minimum cost of materials: $200; shop fee: $10; field trip fee: $20. K. Gibson.
Sixth semester in the studio sequence of eight semesters. Emphasizes use of the microcomputer as a creative tool in the design process. Explores social, cultural, and physical factors related to the interior environment through assignments, readings, and a field trip. Design and problem-solving skills are reinforced according to project type.

DEA 3500 Human Factors: The Ambient Environment
Spring. 3 credits. Recommended: DEA 1500. Undergraduate sec of DEA 6520; shares lec but meets for an additional hour. DEA 6520 has additional readings and projects. A. Hedge.
Introduces human-factor considerations in lighting, acoustics, noise control, indoor air quality and ventilation, and the thermal environment. Views the ambient environment as a support system that should promote human efficiency, productivity, health, and safety. Emphasizes the implications for planning, design, and management of settings and facilities. Visit http://ergo.human.cornell.edu.

DEA 3540 Facility Planning and Management Studio
Spring. 4 credits. Prerequisite: DEA 4590 or permission of instructor. Letter grades only. Minimum cost of materials: $200. Y. Hua.
For advanced undergraduates interested in facility planning and management. Purpose is to provide basic tools, techniques, and concepts useful in planning, designing, and managing facilities for large, complex organizations. Covers strategic and tactical planning for facilities, organizing to deliver facility management services, project management, space forecasting, space allocation policies, programming, relocation analysis, site selection, building assessment, space planning and design, furniture specifications, and moves. Considers sociopsychological, organizational, financial, architectural, and legal factors.

DEA 4000–4010–4020–4030 Special Studies for Undergraduates
Fall or spring. Credit TBA. S–U or letter grades. DEA faculty.
For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field course that is provided through course work in the department or elsewhere at the university. Students prepare a multiplicity description of the study they want to undertake on a form available from the department office. This form must be signed by the instructor directing the study and the director of undergraduate studies and filed at course registration or within the change-of-registration period in the college registrar's office. 1½ MVR, along with an add/drop slip. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department head is necessary. Students, in consultation with their advisors and the instructor should register for one of the following subdivisions of independent study.

DEA 4000 Directed Readings
For study that predominantly involves library research and independent reading.

DEA 4010 Empirical Research
For study that predominantly involves data collection and analysis or laboratory or studio projects.

DEA 4020 Supervised Fieldwork
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

DEA 4030 Teaching Apprenticeship
For study that includes teaching methods in the field and assisting faculty with instruction. Students must have demonstrated a high level of performance to be taught and in the overall academic program.

DEA 4100 Facility Planning and Design in a Diverse Society
Spring. 3 credits. Prerequisites: DEA 1500, 1110, 2500, 6530, or permission of instructor. Letter grades only. L. Maxwell.
This is an upper-level undergraduate course appropriate for undergraduate and graduate students in facility planning and management, human environment relations and interior design students in DEA as well as students outside of DEA who are interested in how the built environment should respond to a diverse society. The course will examine facility planning and design issues in a diverse society. Specifically, the role of culture, gender, stage in the life cycle, and disability in planning facilities of various types will be studied. This course will examine the issues of diversity from two perspectives. One, how are the implicit and explicit assumptions about the user expressed in various aspects of the built environment in our society; and two, how do we purposely plan facilities in a diverse society.

DEA 4150 Strategic Facility Planning for Social Institutions
Spring. 3 credits. Prerequisites: DEA 1500, 2500, 4590, or permission of instructor. Letter grades only. L. Maxwell.
This is an upper-level undergraduate course appropriate for undergraduate and graduate students in facility planning and management, the Sloan program, urban planning, and design/architecture students interested in facility planning and design issues for health care institutions. The course will examine the facility planning and management issues that affect the healthcare industries. The course will specifically look at how these facilities respond to changes in (1) the needs of their target population, (2) technology and communications, (3) sustainability, (4) healthcare delivery practices, and (5) regulatory and policy issues related to the healthcare industry. The course will specifically examine all of these issues in the long-term care industry.

DEA 4220 Ecological Literacy and Design
Fall or ARCH 4501
Spring. 3 credits. Prerequisite: junior or senior standing. Letter grades only. Cost of field trips: approx. $25. J. Elliott.
Lecture/seminar course for advanced undergraduate and graduate students studying about the effects of designing the built environment on the biophysical world. Course objectives are to develop sensitivities to environmental issues, construct conceptual frameworks for analysis, and demonstrate how ecological knowledge can be applied to the practice of design through researching the use of the LEED building certification process for real world clients and stakeholders. Visit http://courses.cit.cornell.edu/dea/4220.

DEA 4230 Restaurant Design Charrette
This intensive weekend-long course pushes the boundaries of current restaurant design by developing a concept plan for an innovative restaurant in a non-traditional setting. Students work in teams to develop design solutions and prepare design presentations for review by course instructors and visiting design professionals.

DEA 4300 Furniture as a Social Art
Spring. 3 credits. Limited to 15 students. Prerequisite: permission of instructor. Cost of materials: $150. (Additional shop hours are made available.) P. Eshelman.
The focus is on how innovation in furniture design is inspired. Four sources of inspiration explored are: user needs; aesthetic interpretation; material and manufacturing technologies; and environmental impact. The interplay among these four sources of inspiration will be examined with emphasis on the first, user needs. Assignments involve both analyzing furniture products currently on the market and designing and constructing a furniture piece for a special population inclusive of young children, older adults, and people of any age living with a congenital or hereditary condition, injury, or disease.

DEA 4401 Interior Design Studio VII
Fall. 5 credits. Prerequisites: DEA 3302, 3030, 3040, and 3050. Must complete incomplete grade in this course before registering for DEA 4402. Minimum cost of materials: $150. field trip: $50. R. Gilmore. Comprehensive historic preservation design studio in which students complete each phase of the adaptive reuse of a historic structure. After site visit and historic research, students conduct demographic research, complete a building assessment, and design a new use for a viable, yet older structure. Lecture topics range from professional practice strategies, to the history of renovation, to the Secretary of the Interior’s Standards for Rehabilitation. Components of the work include program documents, code compliance, concept development, schematic and design development presentations, and construction documents.

DEA 4402 Interior Design Studio VIII
Spring. 5 credits. Prerequisites: DEA 3301, 3302, 3030, and 3040. Minimum cost of materials: $150. S. Danko.
Completion of advanced interior design problems broken into five phases: programming; schematic design and evaluation; design development, including material and finish selection; design detailing; and in-process documentation and the preparation of a professional-quality design presentation.

DEA 4530 Planning and Managing the Workplace
Fall. 3 credits. Prerequisite: junior or senior standing. F. Becker.
Through lectures, readings, and a field studies project, this course explores how the
 planning, design, and management of health care facilities affects the experience of patients and care-giving staff; and the relationship of these outcomes to healthcare quality.

**DEA 4540 Computer-Aided Facilities Management**

Fall, second seven weeks of semester. 1 credit. Prerequisites: none. Letter grades only. S. Curtis.

This course will be an investigation into the use of computer-aided facilities management software in facilities management. Emphasis will be placed initially on understanding how FM CAD systems work. Topics such as Building a Space Inventory Database, Adding Occupancy Data, AutoCAD commands, Reports, Asset Management, and Strategic Planning and Stacking will be learned and discussed.

**DEA 4550 Research Methods in Human-Environment Relations**

Fall. 3 credits. Prerequisite: DEA majors or permission of instructor; statistics course.

Develops students' understanding and competence in the use of research and analytical tools to study the relationship between the physical environment and human behavior. Emphasizes evaluation of internal and external validity as well as measurement reliability and validity. Topics include research design, unobtrusive and obtrusive data-collecting tools, the processing of data, and effective communication of empirical research findings.

**DEA 4590 Programming Methods in Design**

Fall. 3 credits. Letter grades only. Minimum cost of materials: $100. L. Maxwell.

Introduction to facility programming. Emphasizes formulation of building requirements based on user characteristics and potential constraints. The course presents diverse methods for determining characteristics that will enable a particular environmental setting to support desired behaviors of users. The course also emphasizes selection of appropriate methods to suit the specific user/client needs. Students will work with an actual client to prepare a program document.

**DEA 4600 Design City**

Fall. 1 credit; may be repeated for credit. Prerequisite: DEA majors; permission of instructors. Not open to freshmen for credit. Students are required to take this course in order to participate in field study trip to a major city. Field trip fee covers cost of hotel and chartered bus; trip fee will be billed to student's bursar account. S-U grades only. Next offered 2010–2011. G. Gibson and J. Jennings.

Field study of historic and contemporary interiors with guided tours to architectural and interior design firms, installations, exhibits, and showrooms in New York City, Toronto, or other major cities. Topics and themes change yearly.

**DEA 4700 Applied Ergonomic Methods**

Spring. 3 credits. Prerequisite: DEA 3250. Undergraduate sec of DEA 6700; shares lec but meets for an additional hour. DEA 6700 has additional readings and projects. A. Hedge.

Covers physical and cognitive ergonomics methods and techniques and their application to the design of modern work environments. Emphasizes understanding key concepts.

**DEA 4720 Environments for Elders: Housing and Design for an Aging Population**

Spring. 3 credits. Field trip fee: $20. N. Wells.

Through seminars, lectures, field trips, and service learning opportunities, students examine the relationship between older adults and the physical environment. Students gain understanding of the relevance of design characteristics to the well-being of older people; an appreciation of late-life social cognitive, and physiological changes; as well as familiarity with a variety of housing options for late life. Visit http://courses.cit.cornell.edu/dea4720.

**DEA 4990 Senior Honors Thesis**

Fall or spring. Variable credit. Prerequisite: permission of thesis advisor and DEA director of undergraduate studies. Letter grades only. DEA faculty.

Opportunity for DEA majors to undertake original research and scholarly work leading to the preparation of a thesis. Students work closely with their thesis advisor on a topic of interest.

**DEA 6000-6030 Special Problems for Graduate Students**

Fall or spring. Credit TBA. S-U or letter grades. DEA faculty.

Independent advanced work by graduate students recommended by their special committee chair and approved by the head of the department and instructor.

**DEA 6000 Special Problems**

For study of special problems in the areas of interior design, human environment relations, or facilities planning and management.

**DEA 6010 Directed Readings**

For study that predominantly involves library research and independent study.

**DEA 6020 Graduate Empirical Research**

For study that predominantly involves collection and analysis of research data.

**DEA 6030 Graduate Practicum**

For study that predominantly involves field experiences in community settings.

**DEA 6450 Dancing Mind/Thinking Heart: Creative Problem-Solving Theory and Practice**

Spring. 3 credits. Limited to 24 students. Prerequisite: graduate or advanced undergraduate standing; undergraduates must have permission of instructor. S. Danko.

Focuses on thinking processes and techniques that support creative problem solving. Examines theories of creative behavior and critical thinking. The course is highly participatory and experiential by design. Weekly discussions include hands-on applications of theories on short problems tailored to the backgrounds of the students. The primary goal is to demonstrate perceptual, emotional, intellectual, cultural, and environmental blocks to creative thinking and expand the student's repertoire of creative problem solving strategies for use in day-to-day professional practice. Case studies of creative individuals and organizations from a variety of fields are presented.

**DEA 6480 Virtual Design, Analysis, and Representation**

Fall. Variable credit; max. 4. Limited to 15 students. Prerequisite: graduate or advanced undergraduate standing; for undergraduates, DEA 3502 or permission of instructor. Minimum cost of materials: $150; lab fee: $35. Next offered 2010–2011. K. Gibson.

Advanced use of computer technology to create and analyze interior environments. Emphasizes the use of 3-D modeling, animation, photorealistic rendering, and emerging technologies to investigate dynamic design issues.

**DEA 6500 Programming Methods in Design**

Fall. 4 credits. L. Maxwell.

This course is intended for graduate students in cooperation with DEA 4590. Each student is required to attend DEA 4590 lectures, complete all required readings and assignments, and meet with the instructor and with other graduate students. An additional programming project will be required for all graduate students.

**DEA 6510 Human Factors: Ergonomics–Anthropometrics**

Fall. 4 credits. Recommended: DEA 1500 and 3-credit statistics course. A. Hedge.

Intended for graduate students who want a more thorough grounding in human factors than is provided by DEA 3250. Each student is required to attend DEA 3250 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For more detail, see DEA 3250.

**DEA 6520 Human Factors: The Ambient Environment**

Spring. 4 credits. Recommended: DEA 1500. A. Hedge.

Intended for graduate students who want a more thorough grounding in human factors considerations than is provided by DEA 3500. Each student is required to attend DEA 3500 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For detailed description, see DEA 3500.

**DEA 6530 Planning and Managing the Workplace**

Fall. 4 credits. Prerequisite: graduate standing. Letter grades only. F. Becker.

Through lectures, readings, and a field studies project, this course explores how the planning, design, and management of health care facilities affects the experience of patients and care-giving staff; and the relationship of these outcomes to healthcare quality.

**DEA 6540 Facility Planning and Management Studio**

Spring. 4 credits. Prerequisite: DEA 4590/6590 or permission of instructor. Letter grades only. Minimum cost of materials: $200. Y. Hua.

For graduate students interested in facility planning and management. For description, see DEA 3540.
contemporary design. The other approach understands historical theory and to assess the design thinking: theoretical and critical.

DEA 6550 Research Methods in Human-Environment Relations
Fall. 4 credits. Prerequisite: DEA majors or permission of instructor; statistics course. Next offered 2010–2011. N. Wells. Intended for graduate students who want a more thorough understanding of the use of research to study the relationship between physical environment and human behavior than is provided by DEA 4550. Each student is required to attend DEA 4550 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For more detail, see DEA 4550.

DEA 6590 Introduction to Facility Planning and Management
Fall. 1 credit. For graduate students interested in careers in facility planning and management. Letter grades only. F. Becker. Introduction to the field of facility planning and management. Focuses on how the planning, design, and management of an organization’s physical facilities can help it meet its business objectives. Topics include the history of the field, strategic planning, space planning and design, project management, building operations, workplace change management, real estate, and computer-aided facility management systems.

DEA 6600 The Environment and Social Behavior
Fall. 4 credits. Prerequisite: DEA 1500 and written permission of instructor. Field trip fee: $65. G. Evans. This course is about architecture and human behavior. It is centered on two key principles: 1. the complex interplay of social and personal factors with the physical environment largely determines how the built environment influences human well-being; 2. aesthetics is not sufficient in judging design—we must also consider how the built environment affects health, interpersonal relationships, and performance along with preference. Two major projects, one in collaboration with a design studio and a real community client.

DEA 6610 Environments and Health
Spring. 3 credits. N. Wells. Examines the impact of the physical environment on human health and well-being through the life course. Environmental factors examined include characteristics of the built and natural environment, housing, and neighborhood as well as sprawl, the dominance of the automobile, and patterns of American landscape development. Health outcomes include physical health, obesity, mental health, and cognitive functioning. Working within the life course perspective, the course focuses extensively on environmental factors that may act as either protective mechanisms fostering the long-term resilience of individuals or risk factors contributing to long-term vulnerability.

DEA 6680 Design Theory and Criticism Seminar
Spring. 4 credits. Limited to 15 students. Letter grades only. J. Jennings. For advanced undergraduate and graduate students. The seminar explores two methods of design thinking: theoretical and critical. One method focuses on a desire to understand historical theory and to assess the relevance of theory as an intellectual basis for contemporary design. The other approach involves learning to write critically. Within this construct is the notion that every design is an argument a designer makes.

DEA 6700 Applied Ergonomics Methods
Spring. 4 credits. Limited to 20 students. Prerequisite: DEA 6510. A. Hedge. Intended for graduate students who want a more thorough understanding of applied ergonomics. Topics include: motion/energy, equipment, work design, and user characteristics. Emphasis is on human factors/ergonomics perspective and outlining environmental design decisions that accommodate individuals that vary by factors such as age, gender, and ability. Universal design concepts and principles are discussed throughout one’s life course. Students participate in evaluating the built environment from a universal design perspective.

DEA 6990 Master’s Thesis and Research
Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S–U or letter grades. DEA graduate faculty.

DEA 9990 Master’s Thesis and Research
Fall or spring. Credit TBA. Prerequisite: permission of doctoral thesis committee chair and instructor. S–U or letter grades. DEA graduate faculty.

FIBER SCIENCE & APPAREL DESIGN
A. Lemley, chair (209 MVR, 255-3151); M. Frey, director of graduate studies; C. Jirosek, director of undergraduate studies; S. Ashdown, N. Breen, C. C. Chu, C. Coffman, J. Hinestroza, V. D. Lewis, F. Mete, A. Netravali, S. K. Obendorf, A. Racine

FSAD 1140 Introduction to Computer-Aided Design
Fall. 3 credits. Limited to 14 students per sec. Priority given to FSAD students and those in transfer process to FSAD. S–U or letter grades. Minimum cost of materials: $100. A. Racine. Explores the creative potential of microcomputers for fashion design. Uses AutoCAD software program as a design tool for drawing 2-D images. Introduces basic Photoshop software functions to enhance original drawings. Projects include creating full-scale engineered designs on fabric for digital printing in the studio, and a team-based fashion magazine.

FSAD 1170 Fashion Graphics
Spring. 3 credits. Limited to 21 students. Priority given to apparel design students. Prerequisite: basic drawing course. Letter grades only. Minimum cost of supplies: $200; lab fee: $30. V. D. Lewis. Students develop both familiar and unfamiliar methods that enable them to visualize the fashionable body and ancillary expressions of fashion. Fashion graphics is explored as a communicative strategy essential in most aspects of fashion development.

FSAD 1250 Art, Design, and Visual Thinking
Fall. 3 credits. S–U or letter grades. C. Jirosek. Introduction to the visual arts and design that explores aesthetic and cross-cultural dimensions of visual experience. Augmented by slide presentations, textures, video, and an Internet-based electronic textbook, lectures emphasize the varieties of visual expression seen in works of art and design. Discusses social, cultural, and historic interpretations of visual expression.

FSAD 1350 Fibers, Fabrics, and Finishes
Spring. 3 credits. FSAD majors must also enroll in FSAD 1360. S–U or letter grades. A. Netravali. Introduction to fibers, fibrous materials, and dyes and finishes. Gives special emphasis to the use of fibrous materials in apparel, residential, and contract interiors, and industrial applications. Topics include fiber properties, fabric structure, coloration of fibrous materials, dimensional stability, flammability, product specifications, and performance standards.

FSAD 1360 Fiber and Yarn Analysis Laboratory
Spring. 1 credit. Corequisite: FSAD 1350. Letter grades only. A. Netravali. Consists of 14 laboratory sessions, in which students learn techniques to identify and test fibers and yarns. A midterm and final exam are given on the methods learned to identify an unknown fiber (midterm) and an unknown bi-component yarn (final).

FSAD 1450 Introduction to Fashion Design
Spring. 4 credits. Limited to 30 students; 15 per lab. Priority given to FSAD students and students transferring into FSAD. Prerequisite: FSAD 1140. Corequisites: FSAD 1350 and 1360. Letter grades only. Apparel design majors should take course during first year. Minimum cost of materials: $200. A. Racine. Intensive study of principles and processes of flat-pattern design with emphasis on creative expression in upscale children’s fashions. Through studio projects, students develop an understanding of the techniques needed to produce apparel from technical sketches, flat pattern design processes, and garment assembly.

FSAD 2370 Structural Fabric Design
Fall. 3 credits. Prerequisite: FSAD 1350. Recommended: college algebra. S–U or letter grades. M. Frey. Covers the elements of technical fabric design with an emphasis on woven and knitted fabrics. Topics include structure of woven and knitted fabrics, openness, manufacturability, equivalence, and color effects.

FSAD 2640 Draping
Fall. 4 credits. Limited to 30 students; 15 per lab. Prerequisites: FSAD 1250 and 1450. Recommended: drawing course. Letter grades only; 4700 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For further detail, see DEA 4700.

Students develop both familiar and unfamiliar methods that enable them to visualize the fashionable body and ancillary expressions of fashion. Fashion graphics is explored as a communicative strategy essential in most aspects of fashion development.

FSAD 1250 Art, Design, and Visual Thinking
Fall. 3 credits. S–U or letter grades. C. Jirosek. Introduction to the visual arts and design that explores aesthetic and cross-cultural dimensions of visual experience. Augmented by slide presentations, textures, video, and an Internet-based electronic textbook, lectures emphasize the varieties of visual expression seen in works of art and design. Discusses social, cultural, and historic interpretations of visual expression.

FSAD 1350 Fibers, Fabrics, and Finishes
Spring. 3 credits. FSAD majors must also enroll in FSAD 1360. S–U or letter grades. A. Netravali. Introduction to fibers, fibrous materials, and dyes and finishes. Gives special emphasis to the use of fibrous materials in apparel, residential, and contract interiors, and industrial applications. Topics include fiber properties, fabric structure, coloration of fibrous materials, dimensional stability, flammability, product specifications, and performance standards.

FSAD 1360 Fiber and Yarn Analysis Laboratory
Spring. 1 credit. Corequisite: FSAD 1350. Letter grades only. A. Netravali. Consists of 14 laboratory sessions, in which students learn techniques to identify and test fibers and yarns. A midterm and final exam are based on the methods learned to identify an unknown fiber (midterm) and an unknown bi-component yarn (final).

FSAD 1450 Introduction to Fashion Design
Spring. 4 credits. Limited to 30 students; 15 per lab. Priority given to FSAD students and students transferring into FSAD. Prerequisite: FSAD 1140. Corequisites: FSAD 1350 and 1360. Letter grades only. Apparel design majors should take course during first year. Minimum cost of materials: $200. A. Racine. Intensive study of principles and processes of flat-pattern design with emphasis on creative expression in upscale children’s fashions. Through studio projects, students develop an understanding of the techniques needed to produce apparel from technical sketches, flat pattern design processes, and garment assembly.

FSAD 2370 Structural Fabric Design
Fall. 3 credits. Prerequisite: FSAD 1350. Recommended: college algebra. S–U or letter grades. M. Frey. Covers the elements of technical fabric design with an emphasis on woven and knitted fabrics. Topics include structure of woven and knitted fabrics, openness, manufacturability, equivalence, and color effects.

FSAD 2640 Draping
Fall. 4 credits. Limited to 30 students; 15 per lab. Prerequisites: FSAD 1250 and 1450. Recommended: drawing course. Letter grades only; 4700 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For further detail, see DEA 4700.

Students develop both familiar and unfamiliar methods that enable them to visualize the fashionable body and ancillary expressions of fashion. Fashion graphics is explored as a communicative strategy essential in most aspects of fashion development.
two-dimensional fabric. The principles and processes of draping, advanced flat pattern making, and fitting are studied through projects. Drawing exercises focus on the communication of three-dimensional garments in two-dimensional sketches. Assigned problems require students to make judgments regarding the design process, the nature of materials, body structure, function, and fashion.

**FSAD 2650 Patternmaking for Fashion Design**

The goal of this apparel studio course is to expand student competencies in flat pattern design, technical sketching, and fitting. Students generate original design concepts using fashion sources from historic to contemporary times. Advanced garment assembly and detailing techniques for fashion apparel with Sonobond Technology are introduced.

**FSAD 2660 Apparel Design: Product Development**
Spring. 3 credits. Prerequisites: FSAD 1140 and 1450. Recommended: drawing course. Letter grades only. Minimum cost of materials: $150; lab fee: $10. S. Ashdown.

Project-based course in which students explore the relationship between technology and design, and the impact of production issues on manufactured clothing. Students learn computer-aided patternmaking, grading, manufacturing technologies, communication of technical details, flats, specifications, and costing of garments. Designs are developed to various stages from conceptual work to full specification of the product and its production details, with a concentration on the iterative design process.

**FSAD 3000 Special Studies for Undergraduates**
Fall or spring. Credit TBA. Staff. Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Requires a detailed, objective multipage description of the study they want to undertake on a form available from the college registrar's office. The form, signed by both the instructor directing the study and the department chair, is filed at course registration or during the change-of-registration period.

**FSAD 3250 Color and Surface Design of Textiles**
Fall. 4 credits. Limited to 18 students. Priority given to FSAD apparel design majors. Recommended: FSAD 1140 and 1350. Letter grades only. Minimum cost of materials: $100; lab fee: $100. C. Jirousek.

Studio experience in the surface design of textiles combined with exercises in color theory. Textile projects use techniques such as block printing, screen printing, batik, silk painting, silk screen, and stitchery to produce a portfolio of textile designs. Studio work is augmented by lectures on pattern and color theory illustrated by slides and textile examples.

**FSAD 3350 Fiber Science**
Fall. 3 credits. Limited to 20 students. Prerequisites: college chemistry and physics. S–U or letter grades. A. Netravali.

Covers fibers commonly used in various engineering, medical, and apparel applications. Topics include the nature of polymer molecules, the chemical structure of organic fibers, inorganic fibers, micro- and macrostructure of fibers, fiber dimensions, environmental effects, and mechanical, optical, thermal, and frictional properties of fibers. The following fiber uses are discussed: composites in aerospace and other structural components, circuit boards, bulletproof vests, sutures, artificial arteries, geotextiles, sporting goods, and others.

**FSAD 3460 Design Process**
Fall. 4 credits. Limited to 30 students. Prerequisites: FSAD 1350, 1450, 2640, and 2650. Letter grades only. Minimum cost of materials: $250; lab fee: $10. V. D. Lewis.

The course exposes students to dilemmas and methods used by creative Fashion designers. Course ambitions are to develop personal design handwriting, unite a provocative design issue with the requirement of the market and functionality while emphasizing quality and creativity in realizing design ideas.

**FSAD 3690 Style, Fashion, and the Apparel Industry**
Fall. 2 credits. Limited to 30 students. Not open to freshmen. Prerequisites: FSAD 1250, 1350, and 2370. Students should not take FSAD 3690 and FSAD 3460 in the same semester. Letter grades only. A. Racine.

Illustrated lectures focus on changes in the U.S. apparel industry and fashion cycles from the 19th century to the present day resulting from social forces, technological developments, and shifting demographics. The Cornell Costume Collection is used for discussion. Students write an original research paper on topics relating to changes in fashion over time.

**FSAD 4000-4010-4020-4030 Special Independent Studies for Undergraduates**
Fall, summer, or spring. Credit TBA. S–U or letter grades. Staff.

For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of FSAD not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multipage description of the study they want to undertake on a form available from the department office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period.

**FSAD 4030: Teaching Apprenticeships**
Fall or spring. 2–4 credits. Prerequisites: upper-class standing, demonstrated high level of performance in subject to be taught and in overall academic program, and permission of instructor and department chair. S–U or letter grades. Staff. Apprenticeship includes both a study of teaching methods in the field and assisting the faculty with instruction.

**FSAD 4200 History of Color and Design in Textiles**
Spring. 3 credits. Prerequisite: FSAD 1250 or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. C. Jirousek.

History of textile design; color theory, trends and measurement; design use of pigments and dyes. Students complete hands-on exercises, two exams and a paper.

**FSAD 4310 Apparel Production and Management**
Spring. 3 credits. Limited to 40 students. Prerequisites: ECON 1110 and 1120 and upper-division course in either apparel or textiles. S–U or letter grades. F. Mete.

Introduction to the global textile and apparel industry, particularly the technical and economic aspects of apparel production and strategic management. Includes analysis of specific apparel manufacturing and management issues such as international sourcing, strategies, Fast Fashion, Quick Response, mass customization, production and information technology, labor, and logistics. Students will analyze and discuss case studies of creative individuals and organizations from a variety of fields that apply to the textile and apparel industry.

**FSAD 4320 Product Quality Assessment**
Spring. 3 credits. Limited to 36 students inlec, 18 per lab. Prerequisites: FSAD 1350 and statistics course. S–U or letter grades. Lab fee: $20. N. Breen.

Covers evaluation of fibers, yarns, fabrics, and garments, with emphases on the meaning of standards, testing philosophy, quality control, and statistical analysis. Discusses day-to-day tests done in the textile and apparel industry. Laboratory sections introduce students to various test methods, data generation for analyses, and evaluation.

**FSAD 4360 Fiber Chemistry**
Spring. 3 credits. Prerequisite: senior or first-year graduate standing. S–U or letter grades. Offered alternate years. C. C. Chu.

Discusses the chemical and physical structure of several commercially important fibers, such as cotton, wool, silk, polyester, acrylics, polyurethanes, and spandex, and their polymerization processes. Gives the general chemical and physical properties of each. Discusses degradation reactions for certain fibers such as polyurethanes and acrylics.

**FSAD 4390 Biomedical Materials and Devices for Human Body Repair (also BME 5390)**
Spring. 2–3 credits. Prerequisites: junior or senior standing; college natural science requirement (chemistry or biology). S–U grades only for 2 credits; letter grades only for 3 credits. C. C. Chu.

Surveys materials and devices for repair of injured, diseased, or aged human tissues/ organs. Includes properties of synthetic and through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.
FSAD 4440 Apparel/Textile Retailing and Distribution
Fall. 3 credits. Prerequisites: sophomore standing. FSAD 1550 and marketing course. S–U or letter grades. N. Breen. Overview of the business of design, production, distribution, marketing, and merchandising of apparel and related products from a management perspective. Includes the organization and structure of both domestic and international retailers along with pricing strategies, merchandise planning, inventory management, and sales promotion. New uses of computer systems and information technologies are emphasized throughout.

FSAD 4660 Textiles, Apparel, and Innovation
Fall. 3 credits. Prerequisite: FSAD 2370. Recommended: FSAD 4320. S–U or letter grades. Cost of field trip: $100. J. Hinestroza. Designed for students in all FSAD options. Explores the relationship between materials and design with a concentration on the use of innovative textiles in apparel. Both aesthetic and functional issues are addressed. The course consists of a combination of lecture, discussion of readings, oral reports, a research paper, and project work. There is a one-day field trip to New York City.

FSAD 4700 Fashion Presentation: Portfolio Development
Fall. 3 credits. Limited to 25 students. Prerequisites: FSAD 1170, 2460, and 4600. Minimum cost of materials: $250. V. D. Lewis. Students are expected to discover their personal philosophy of fashion and to develop and adopt current presentation techniques. Students gain an understanding of presentation methods currently used in Fashion design, garment construction, and editorial illustration. Skills covered include fashion illustration, image manipulation, and photographic image, layout, and presentation.

FSAD 4990 Honors Thesis Research
Fall and spring. 4 credits each in fall and spring semesters of senior year. Prerequisites: minimum GPA of 3.3 and submission of application in junior year. S–U or letter grades. Staff. Student will prepare a thesis, based on independent research, including a research statement, background, approach, results (which could be a description of a creative work), and discussion. The student may also produce creative work. Student will have an open presentation of work, either a seminar or an exhibition, and an oral defense with the committee. Interested students should obtain a FSAD Honors Program application form from the FSAD undergraduate office (207 MVR), and submit the application to the department before the end of the fall semester of junior year. For more information students should contact the director of undergraduate studies.

FSAD 6000 Special Problems for Graduate Students
Fall or spring. Credit TBA. S–U or letter grades. Staff. Independent advanced work by graduate students recommended by their chair and approved by the department chair and instructor.

FSAD 6160 Rheology of Solids: Dynamic Mechanical Analysis of Fibers and Polymers
Fall. 3 credits. S–U or letter grades. Offered alternate years. J. Hinestroza. This course will introduce students to Dynamic Mechanical Analysis (DMA) and its relevance in the characterization of polymer fibers and films. DMA is a materials characterization technique that supplies information about major transitions as well as secondary and tertiary transitions not readily identifiable by other methods. It also characterizes the bulk properties directly affecting material performance. DMA can also be used to predict the behavior of polymeric materials as a function of time and their exposure to liquids and gases over a wide range of temperatures.

FSAD 6200 Physical Properties of Fiber-Forming Polymers and Fibers
Spring. 3 credits. Prerequisite: permission of instructor. Offered alternate years; next offered 2010–2011. A. Nattrass. Covers formation and properties of fiber-forming polymers, their states and interconnection. Discusses relationship between chemical structure and morphology of fibers on their properties and testing methods.

FSAD 6250 The Chemistry of Textile Finishes and Dyeing
Spring. 3 credits. Prerequisites: organic chemistry course or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. C. C. Chu. Studies industrially important textile chemicals used for dyeing and enhancing fiber and fabric properties, such as durable press, anti-soiling, water repellency.

FSAD 6370 Research Seminars in Apparel Design
Fall and spring. 1 credit; repeat of course each semester encouraged for all apparel design graduate students. Prerequisites: permission of individual instructor for advanced undergraduates. S–U grades only. Apparel Design faculty.

FSAD 6390 Mechanics of Fibrous Assemblies
Spring. 3 credits. Prerequisite: solid mechanics course or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. J. Hinestroza. Studies the mechanics of fiber assemblies: bending and buckling; and the mechanical behavior of nonwoven textile materials.

FSAD 6640 Human Factors: Anthropometry and Apparel
Spring. 3 credits. Open to advanced undergraduates. Prerequisites: statistics course and permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. S. Ashdown. Seminar course focusing on anthropometrics and human variation, development of sizing systems for clothing, and the impact of new technologies such as the 3D body scanner on apparel design and distribution.

FSAD 6660 Fiber Formation: Theory and Practice
Spring. 3 credits. Prerequisites: polymer chemistry, college physics, FSAD 4300, 6200, or permission of instructor. S–U or letter grades. Offered alternate years. M. Frey. Covers the practical and theoretical analysis of the chemical and physical principles of the methods of converting bulk polymer to fiber; rheology; melt, dry, and wet polymer spinning; fiber drawing; heat setting; and general theory applied to unit processes.

FSAD 6700 Fashion Theory
Spring. 3 credits. Limited to 25 students. Prerequisite: FSAD 3460 for undergraduates or similar course for graduates. Letter grades only. Offered alternate years. Minimum cost of materials: $250. V. D. Lewis. Provides students with theoretical insights that will enable them to conduct innovative and challenging projects. The course considers a topical dilemma that students must respond to using conceptual foundations and methodologies that are bound in studio practice, criticism, education, management, and the cultural context of fashion design.

FSAD 6720 Creative Problem-Solving in Apparel Design
FSAD 6750 Aesthetics and Meaning in World Dress
Spring. 3 credits. Prerequisites: FSAD 1250 or course in history of art, costume history, or other history. S–U or letter grades. Offered alternate years. C. Jirousek. Examines the aesthetic and social/psychological relationship between body and clothing in the context of various cultures. Students develop a research topic to be presented orally and in a term paper, and participate in the development of an exhibition.

FSAD 8990 Master's Thesis and Research
Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S–U or letter grades. Staff.

FSAD 9990 Doctoral Thesis and Research
Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S–U or letter grades. Staff.

HUMAN DEVELOPMENT

HD 1150 Human Development: Infancy and Childhood
Fall or summer. 3 credits. S–U or letter grades. C. Schelhas-Miller. Introduces students to the basic concepts, theories, and research in human development as they explain prenatal development and development in infancy and childhood. The
focus is on individual development from an interdisciplinary perspective with an emphasis on psychological development, but also from the fields of sociology, history, biology, anthropology, and education.

HD 1160 Section for Infancy and Childhood
Fall or summer. 1 credit. Enrollment in fall limited to HD majors. Enrollment in fall and summer limited to students enrolled in HD 1150. Letter grades only. C. Schelhas-Miller. Provides an opportunity to discuss material in more depth in a small group. Students learn to read and critique empirical research articles and discuss the application and policy implications of course topics.

HD 1170 Human Development; Adolescence and Emerging Adulthood
Spring. 3 credits. S–U or letter grades. C. Schelhas-Miller. Broad overview of theories, research, and issues in the study of human development during adolescence and emerging adulthood. Focuses on the major biological, cognitive, and social changes during adolescence; the psychosocial issues of adolescence, including identity, autonomy, intimacy, sexuality, achievement, and problems; and the contexts in which adolescent development occurs, particularly families, peer groups, schools, work, and popular culture. Discusses empirical research, theories, case studies of the lives of real adolescents, and, to a lesser degree, public policies.

HD 1710 The Black Family and the Socialization of Black Children (also ASRC 1600)
Fall. 3 credits. Letter grades only. T. Gosa. For description, see ASRC 1160.

HD 2180 Human Development: Adulthood and Aging
Spring. 3 credits. Prerequisite: HD 1150. S–U or letter grades. C. Loeckenhoff. General introduction to theories and research in adult development and aging. Discusses psychological, social, and biological changes from youth through late adulthood. Emphasizes both individual development within generations and differences among generations.

HD 2200 The Human Brain and Mind: Biological Issues in Human Development (also COGST 2200)
Fall. 3 credits. Prerequisite: HD 1150 or PSYCH 1101. T. Kushnir. Surveys current theory and research on various aspects of cognitive development across the life span, with emphasis on infancy and early childhood. Topics include perception, representation and concepts, reasoning and problem solving, social cognition, memory, metacognition, language, and thought, and academic skills. Students develop a broad understanding of the mechanisms, processes, and conflicts in cognitive development and learn to critically assess developmental research. The course is a combination of lecture, seminar, and fieldwork.

HD 2380 Thinking and Reasoning (also COGST 2380)
Fall. 3 credits. Prerequisite: HD 1150 or PSYCH 1101. B. Koslowski. Examines problem solving, transfer, and creativity; pre-causal and causal reasoning; models of good thinking based on formal logic, pragmatic syllogisms, and probability theory; expert-novice differences; cognition and attitudes; extra-rational and magical beliefs; and putative racial and social class differences in intelligence. Two general themes run through the course: (1) the extent to which children and adults approximate the sorts of reasoning that are described by various psychological models; (2) the extent to which various models accurately describe the kind of thinking that actually is required by the problems and issues that arise and must be dealt with in the real world.

HD 2510 Social Gerontology: Aging and the Life Course (also SOC 2510)
Spring. 3 credits. Prerequisites: HD 1150, SOC 1101, DSOC 1101, or PSYCH 1101. S–U or letter grades. E. Wethington. Analyzes the social aspects of aging in contemporary American society from a life course perspective. Topics include (1) an introduction to the field of gerontology, its history, theories, and research methods; (2) a brief overview of the physiological and psychological changes that accompany aging; (3) an analysis of the contexts (e.g., family, friends, social support, employment, volunteer work) in which individual aging occurs, including differences of gender, ethnicity, and social class; and (4) the influences of society on the aging individual.

HD 2610 The Development of Social Behavior
Fall. 3 credits. Highly recommended: HD 1150 or PSYCH 1290. J. Mikels. Examines issues in the development of social behavior from the perspective of theory and research. Likely topics include bases of social behavior across the life span, the role of parents, siblings, and peers, the development of prosocial and aggressive behavior, the development and functioning of attitude and value systems, moral development, emotional development, and the function and limits of experimental research in the study of social development.

HD 2820 Community Outreach (also PSYCH 2820)
Fall. 2 credits. Prerequisites: HD 1150 or PSYCH 1101. Students may not register concurrently with HD 3270/PSYCH 3270 or PSYCH 3280. Letter grades only. H. Segal. For description, see PSYCH 2820.

HD 3110 Educational Psychology (also EDUC 3110)
Fall. 4 credits. S–U or letter grades. D. Schrader. For description, see EDUC 3110.

HD 3190 Memory and the Law
Fall. 3 credits. Prerequisites: HD 1150 or PSYCH 1101 or HD 2250 or PSYCH 2250. Letter grades only. C. Braimer. This course will focus on how the scientific study of human memory interfaces with the theory and practice of law. Students will study relevant areas of memory research (e.g., storage, retrieval, false memory, memory deficits in impaired populations) and memory theory. Students will also study specific areas of legal practice in which the reliability of evidence is critically dependent on human memory (e.g., eyewitness identification, recovery of repressed traumatic memories, confessions, elderly witnesses, child witnesses). Readings will come from leading textbooks on these topics and also from primary sources.

HD 3200 Human Developmental Neuropsychology
HD 3270 Field Practicum I (also PSYCH 3270)
Fall. 3 credits. Limited to 30 students. Students must commit to taking HD 3280 in spring semester. Prerequisites: HD 3700 or PSYCH 3250 and permission of instructor. Letter grades only. H. Segal. For description, see PSYCH 3270.

HD 3280 Field Practicum II (also PSYCH 3280)
Spring. 3 credits. Limited to 30 students. Prerequisites: HD 3270/PSYCH 3270 taken previous semester, PSYCH 3250 or HD 3700 and permission of instructor. Letter grades only. H. Segal. For description, see PSYCH 3280.

HD 3330 Children and the Law
Fall. 3 credits. Prerequisites: HD 1150 and introductory statistics course. S. Ceci. Examines psychological data and theories that shed light on the practical issues that arise when children enter the legal arena. Attempts to integrate theories, research, and methodology from several areas of psychology, including developmental, cognitive, social, and clinical. Also attempts to examine the degree to which basic research can (and should) be used to solve applied issues. Selected topics include memory development, suggestibility, theory of mind, childhood amnesia, expectancy formation, symbolic representational ability, and finally, what can (or should) an expert witness tell the court. Several actual cases involving child witnesses are presented to illustrate the application of scientific data to the courtroom. Because of the heavy use of case materials and video and textual coverage of actual trials, it is expected that students will devote more than the usual number of hours to this course.
ONE of the following placement options: M W (8–11 or 9–12), M F (9–11 or 9–12), T R (8–11 or 9–12), M F (11–2), T R (11–2). A few late-afternoon placements are available M F (2:30–5:30), T R (2:30–5:30).

**HD 3430 Social Worlds of Childhood**
Spring. 4 credits. Limited to 25 students.
Prerequisite: HD 1150. S–U or letter grades.
J. Ross-Bernstein
This course explores the nature, quality, and impact of relationships of school-age children (ages 5–11) in multiple contexts (e.g. school, home, community). Course work is grounded in ecological theories that include (1) who and what play critical roles in children’s diverse lives, (2) how are these relationships relevant to school-age children’s socialization, and (3) what are the processes by which individuals acquire the knowledge, skills, and character traits that enable them to participate as effective members of groups and society. Study of systems and relationships that impact the child will be organized according to topics, context, and outcome. Students are required to participate 4 hours per week in a setting with school-age (5–11) children.

**HD 3440 Infant Behavior and Development**
Fall. 3 credits. Limited to 60 students. Not open to freshmen. Prerequisites: HD 1150, biology course, and statistics course.
S. Robertson.
Examines behavior and development from conception through the first two years of life in traditional areas (e.g., perception, cognition, sociosemantic theory, language, motor function). Strongly emphasizes the fundamental interconnectedness of these aspects of development as well as their relation to the biology of fetal and infant development. Emphasizes topics with implications for general theories of development (e.g., the functional significance of early behavior, the nature of continuity and change, and the role of the environment in development). Also describes conditions that put infants at risk for poor development (e.g., premature birth, exposure to environmental toxins, maternal depression) and topics with current social, ethical, or political implications (e.g., infant day care, fetal rights). Research methodology in the study of early behavior and development is emphasized throughout the course.

**HD 3460 The Role and Meaning of Play**
Fall. 3 credits. Limited to 45 students.
Prerequisite: junior or senior standing; HD 1150. J. Ross-Bernstein.
Examines the play of children ages three through seven. Through seminar discussions, workshops, video, and individualized research students explore the meaning and validity of play in the lives of young children, the different ways that children play and the value of each, and the effect of the environment in enhancing and supporting play.

**HD 3470 Human Growth and Development: Biological and Behavioral Interactions (also BSOC 3471, NS 3470)**
Spring. 3 credits. Limited to 150 students.
Prerequisites: BIOG 1101 or 1102 or equivalent, and HD 1150 or PSYCH 1101. Offered alternate years; next offered 2010–2011. S. Robertson and J. Haas.
Concerned with the interrelationships of physical and psychological growth and development in humans during infancy. Considers intrinsic and extrinsic causes of variations in growth, including various forms of stimulation. Also examines the consequences of early growth and its variations for current and subsequent behavioral, psychological, and physical development. The interaction between physical and behavioral or psychological factors is emphasized throughout the course.

**HD 3490 Positive Psychology**
Fall. 3 credits. Limited to 120 students.
Prerequisites: HD 1150 or PSYCH 1010 and HD 2600/PSYCH 2750 or HD 2610 or PSYCH 2800. S–U or letter grades. A. Ong.
This course will take a comprehensive look at current research and theory in the emerging field of Positive Psychology. Students will become familiar with theories, methods, and empirical research pertaining to the psychology of human strengths, virtues, abilities, and talents.

**HD 3530 Risk and Opportunity Factors in Childhood and Adolescence**
Fall. 3 credits. Limited to 100 students.
Prerequisites: HD 1150 or 1170. S–U or letter grades.
J. Whitlock.
Explores the meaning of risk and opportunity in the lives of children and youth. Begins with a brief history of the social construction of childhood and adolescence and moves into identification of the core concepts associated with risk accumulation and resilience. Uses case studies, large and small group discussion, and policy debates to explore central concepts as they relate to social policy, professional practice, and community development. Assignments include integrative reflection papers on course material, quizzes, and participation in a simulated public policy debate.

**HD 3570 Social Inequalities in Physical and Mental Health (also SOC 3670)**
Fall. 3 credits. Limited to 120 students.
This course is an introduction to physical and mental health inequalities in the United States, the causes of these inequalities, and their impact on individual development across the life course. Lectures will focus on the relationship between socioeconomic status and rates of physical and mental illness in social groups, exposure to psychosocial stress across the life course, and the protective role of social integration.

**HD 3620 Human Bonding**
Spring. 3 credits. Limited to 600 students.
Recommended: introductory psychology or human development course. S–U or letter grades.
C. Hazan.
Covers the science of interpersonal relationships. Examines the basic nature of human affectional bonds, including their functions and dynamics, and topics as interpersonal attraction and mate selection, intimacy and commitment, love and sex, jealousy and loneliness, the neurobiology of affiliation and attachment, and the role of relationships in physical and psychological health.
Office of Undergraduate Education. After the faculty advisor and submitted to G77 MVR, the instructor directing the study and the student's availability from the department office in G77 provides through course work in the students in a field of HD not otherwise available for study with a group of individual student or for study with a group of personal students. The major focus on advanced independent study by an independent study. Students design and conduct one descriptive methodology and gain firsthand experience in using statistical software to supplement readings and lectures. There is an emphasis on social contexts and the development of social emotions, including social bonding and social rejection. The manner in which emotional stress influences learning and memory, with implications for PTSD, concludes the course.

**HD 3700  Adult Psychopathology (also PSYCH 3250)**
Spring. 3 credits. Prerequisites: sophomore, junior, or senior standing, any course in psychology or human development. H. Segal.

For description see PSYCH 3250.

**HD 3820  Research Methods in Human Development**
Spring. 3 credits. Prerequisite: HD 1150. Highly recommended background in statistics. Letter grades only. M. Casasola.

Students learn about a variety of research methodologies and gain firsthand experience in conducting all aspects of a research project. Students design and conduct one descriptive and one experimental study. They also gain experience in using statistical software to analyze data.

**HD 3840  Gender and Sexual Minorities (also FGSS 3850)**
Fall. 3 credits. Prerequisite: social science course, sophomore, junior, or senior standing. K. Cohen.

Introduces students to theories, empirical scholarship, and current controversies regarding lesbian, gay, bisexual, transgender, sexually questioning, and other gender and sexual minority populations. The major focus is on sexual development, lifestyles, and communities with additional coverage of ethnic, racial, and gender issues. Videos supplement readings and lectures.

**HD 4000-4010-4020-4030  Special Studies for Undergraduates**
Fall or spring. Credit 10A, 1-4.

Prerequisite: permission of instructor. S-U or letter grades. For advanced independent study by an individual student or for study with a group of students in a field of HD not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multiplicity description of the study they want to undertake, on a form available from the department office in G77 MVR. This form must be signed by the instructor directing the study and the student's faculty advisor and submitted to G77 MVR, the Office of Undergraduate Education. After the form is approved, the student takes it to the college registrar's office, 146 MVR. To ensure review before the close of the periods, early submission of the special studies form to the Office of Undergraduate Education is necessary. Students, in consultation with their supervisor, should submit forms for one of the following subdivisions of independent study.

**4000: Directed Readings.** Prerequisite: permission of instructor. For study that predominantly involves library research and independent study.

**4010: Empirical Research.** Prerequisite: permission of instructor. For study that predominantly involves data collection and analysis, or laboratory or studio projects.

**4020: Supervised Fieldwork.** Prerequisite: permission of instructor. For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

**4030: Teaching Assistantship.** Prerequisites: permission of instructor; juniors and seniors with minimum 3.0 GPA; either HD 1150, or PSYCH 1101, and two intermediate-level HD courses, or equivalents in psycholgy or sociology. Students must have taken course and received B+ or higher. For study that includes assisting faculty with instruction.

**[HD 4140  Social and Psychological Aspects of the Death Penalty Spring. 3 credits. Limited to 20 students. Prerequisites: HD 1150 or PSYCH 2650 or PSYCH 2800. S–U or letter grades. V. Reyna.](#)**

This course will offer a hands-on introduction to research and laboratory techniques that address topics in risk and rational decision making in human development from multiple disciplinary perspectives. The course will include activities such as scientific presentations, collaborative work, peer review, and designing research on topics in decision-making under risk and uncertainty, as well as discussion of scientific methods and interpretation of data. Topics in decision-making may include war, terrorism, cancer control and prevention (e.g., screening tests), personal behaviors that involve risk (e.g., HIV-prevention), and other public health risks (e.g., vaccinations), law enforcement (e.g., use of a weapon) and legal decision-making (e.g., jury deliberations).

**[HD 4170  Midlife Development Spring. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing and HD 1150 and HD 2350 or PSYCH 2650 or PSYCH 2800. S–U or letter grades. A. Org.](#)**

This seminar-style course examines the burgeoning research literature on adult development during midlife. Focuses on research on midlife and theory examining psychological changes during middle adulthood such as relativistic and dialectical thinking, personality, identity, and sense of control. Also considers the social and physical changes that occur at this time of life especially regarding issues such as empty nest anxieties, divorce, career transitions, menopause, and cardiovascular disease. Oral presentations, class participation, and an integrative paper are required.

**[HD 4200  Risk and Rational Decision Making Spring. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing and HD 1150 and HD 2350 or PSYCH 2650 or PSYCH 2800. S–U or letter grades. V. Reyna.](#)**

This course will offer a hands-on introduction to research and laboratory techniques that address topics in risk and rational decision making in human development from multiple disciplinary perspectives. The course will include activities such as scientific presentations, collaborative work, peer review, and designing research on topics in decision-making under risk and uncertainty, as well as discussion of scientific methods and interpretation of data. Topics in decision-making may include war, terrorism, cancer control and prevention (e.g., screening tests), personal behaviors that involve risk (e.g., HIV-prevention), and other public health risks (e.g., vaccinations), law enforcement (e.g., use of a weapon) and legal decision-making (e.g., jury deliberations).

**[HD 4220  Research in Emotion and Cognition Fall. 4 credits. Limited to 20 students. Prerequisites: HD 1150 or PSYCH 1101 AND HD 2610 or HD 2600; permission of instructor. J. Mikels.](#)**

The course focuses on age-related changes in emotion and cognition. Research indicates that while cognitive processing declines as emotional processes remain intact in later life. Moreover, evidence indicates that the goals of older adults differ from those of younger adults, which have critical implications for changes in cognitive and emotional processes with age. The ongoing research in the Emotion and Cognition Laboratory examines these relationships. In this research course, undergraduate students attend a weekly lab meeting for 1.25 hours per week, write pertinent papers, work with lab colleagues, and each student will present their completed research to the class. Students will be expected to contribute to the class discussions and complete various tasks for 10.75 hours.

**[HD 4230  Research in Children's Testimony: Exploring Social and Cognitive Mechanisms Fall. 4 credits. Limited to 20 students. Prerequisites: HD 1150 or PSYCH 1101 AND an introductory course in statistics, and permission of instructor. Next offered 2010–2011. S. Ceci.](#)**

HD 4230 is a laboratory-based research that exposes students to the research process in the area of children's testimonial competence.

---

**Notes:**
- Prerequisite: permission of instructor.
- Next offered alternate years; next offered 2010–2011.
- Prerequisite: sophomore, junior, or senior standing.
- Prerequisite: junior or senior standing.
- Prerequisite: HD 1150 or HD 2330 or PSYCH 2650.
- Prerequisite: HD 2200 or PSYCH 2230/4600 or BIONB 2220. Letter grades only. Offered alternate years; next offered 2010–2011.
- Prerequisite: permission of instructor and received B+ or higher. For study that includes assisting faculty with instruction.
- Prerequisite: HD 1150 and HD 2330 or PSYCH 2650.
This means going from theory to empirical reports and participating in the generation of new hypotheses and methods of falsifying them. Theoretical arguments, grounded in empirical findings, suggest children are vulnerable to a host of reliability risks when they are interviewed or give testimony. Various social (e.g., stereotypes, reinforcement, parental attachment, peer pressure) and cognitive (trace strength, source misattributions) mechanisms are responsible for these risks, and students will have a ringside seat at their examination. In this course, up to 20 undergraduate students will attend a weekly lab meeting for 1.25 hours per week to read research articles, post questions on Blackboard that can lead to follow-up studies, and work 10.5 hours per week in the laboratory completing tasks that contribute to ongoing research studies conducted by the professor and his graduate students.

**HD 4240 Stress, Emotions, and Health**  
Fall. 4 credits. Limited to 20 students.  
Prerequisites: HD 1150 or PSYCH 1101 AND HD 2610 or HD 2600 and permission of instructor. A. Ong.  
The course will review theory and research on stress, emotions, and health. This course will offer opportunities for students to develop new ways to integrate theory and research on stress and health with the advances in the science of affect and emotion. In this course, undergraduate students attend a weekly lab meeting for 1.25 hours per week, read pertinent papers, write reaction responses, and work 10.25 hours per week in the laboratory completing tasks that contribute to ongoing research studies.

**HD 4250 Translational Research on Decision Making**  
Fall. 4 credits. Limited to 20 students.  
Prerequisites: HD 1150 or PSYCH 1101 AND HD 2610 or HD 2600. V. Reyna.  
A laboratory-based course focusing on basic foundations in translational research on decision making across the lifespan. The course will introduce students to hands-on applications of research skills in the context of development on decision making, spanning basic and applied research in law, medicine, behavioral economics, and policy. This introductory course will focus on such topics as human subjects protection, working with populations across the life span (e.g., children; seniors), database development, working with external partners and stakeholders (e.g., schools; hospitals), and basic concepts and techniques in decision research. Students in this basic course will participate in weekly laboratory meetings in small teams focused on specific projects as well as monthly meetings in which all teams participate. During laboratory meetings, we discuss ongoing research, plans for new studies, and interpretations of empirical findings from studies that are in progress or have been recently completed. New students work closely with experienced students eventually working more independently. In order to fully grasp how the research projects fit into the broader field, students will read relevant papers weekly and write reaction responses. Because several projects are ongoing at all times, students have the opportunity to be involved in more than one study and will be assigned multiple tasks such as piloting research paradigms, subject recruitment, ongoing research, data analysis, and data entry. Students attend a weekly lab meeting for 1.5 hours per week, read pertinent papers, write reaction responses, and work 10.5 hours per week in the laboratory completing tasks that contribute to ongoing research studies.

**HD 4260 Translational Research on Memory and Neurosciences**  
Spring. 4 credits. Limited to 20 students.  
Prerequisites: HD 1150 or PSYCH 1101 AND HD 2610 or HD 2600. C. Brainerd.  
HD 4260 is a laboratory-based course focusing on basic foundations in translational research on the neuroscience of human memory and cognitive development. The course will introduce students to hands-on applications of research skills in the context of research on memory and neurosciences, spanning basic and applied research in law and medicine. In this course, undergraduate students attend a weekly lab meeting for 1.75 hours per week, read pertinent papers, write reaction responses, and work 10.25 hours per week in the laboratory completing tasks that contribute to ongoing research studies.

**HD 4210 Mind, Self, and Emotion: Research Seminar**  
Spring. 3 credits. Limited to 20 students.  
Prerequisites: upper-class undergraduate or graduate standing; HD 1150 or PSYCH 1101 1010. Letter grades only. Offered alternate years. Q. Wang.  
This research seminar is offered to students who are currently conducting research or planning to do research in the near future on one of the three topics—memory, self, or emotion. We examine current data and theories concerning the topics from a variety of perspectives and at multiple levels of analysis, particularly focusing on the interconnections among these fields of inquiry. The “scale of observation” is viewed as occurring within the person (brain mechanisms, including genetics), at the level of the person (content-goals, beliefs, desires, etc.), and between persons (relationships and group interaction—including culture).

**HD 4320 Cognitive, Social, and Developmental Aspects of Scientific Reasoning (also COGST 4320)**  
Spring. 3 credits. Limited to 20 students (14 HD 4320, 6 COGST 4320). Prerequisites: junior or senior standing, HD 1150 or PSYCH 1101 or permission of instructor. S–U or letter grades. Next offered 2010–2011. B. Koslowsky.  
The basic premise of this course is that scientific reasoning is not restricted to scientists but is continuous with good reasoning in general. We will examine not only how people reason, but also the extent to which their reasoning is either flawed or appropriate. The course will discuss issues related to how we identify the causes of phenomena, especially in situations in which we cannot conduct an experiment; the limits of covariation data and how it interacts with information about theory; generating, evaluating, and deciding between competing explanations; dealing with anomalous or inconsistent data; confirmation bias and disconfirmation bias; theory and culturally available information in generating and evaluating alternative hypotheses; and whether age and cultural differences in reasoning result from different reasoning strategies or from differences in the sorts of background information that are available and the different explanations that are treated as legitimate.

**HD 4330 Developmental Cognitive Neuroscience**  
Spring. 3 credits. Limited to 20 students.  
Prerequisites: junior or senior standing; HD 2200 or PSYCH 2230, BION 2220. S–U or letter grades. Offered alternate years; next offered 2010–2011. Staff.  
What are the brain mechanisms underlying human behavior and cognition? How do those underlying brain mechanisms develop? These are the questions that developmental cognitive neuroscience tries to address and those explored in this course. The course explores methods used in the field (including brain imaging techniques), recent findings on the development of brain mechanisms underlying human behaviors such as language, attention, and memory; as well as the brain mechanisms that may underlie various developmental disorders such as developmental dyslexia, autism, and attention deficit (hyperactive) disorder (AD/HD). Emphasis is on reading primary research literature and acquiring the skills to understand, critique, discuss, and write about primary research. The format includes lecture and discussion.

**HD 4340 Current Topics in Cognitive Development**  
Spring. 3 credits. Limited to 20 students.  
This course will supplement survey course HD/COGST 3340 with additional discussion of current research in the area of cognitive development. Selected current papers that debate issues discussed in HD/COGST 3340 will be read and discussed in parallel with the HD/COGST 3340 survey course. Modern interpretations and challenges to Piaget's theory will be evaluated in light of current literature in the field. A small-group format will be adopted to encourage discussion.

**HD 4370 Lab Course: Language Development (also COGST/LING 4500, PSYCH 4370)**  
Fall. 4 credits. Limited to 20 students.  
Optional supplement to the survey course Language Development (COGST/HD/LING/PSYCH 3370). The lab course provides students with a hands-on introduction to scientific research, including design and methods, in the area of first-language acquisition.

**HD 4440 Internship in Educational Settings for Children**  
Fall or spring. S–U credits. Prerequisites: HD 1150, 3420 or 3430, 3480; or permission of instructor. Recommended: HD 3460. S–U or letter grades. J. Ross-Bernstein.  
Offers an opportunity to integrate theory with practice at an advanced level and to further develop understanding of children ages 2 to 10 and their families. Interns function as assistants in curriculum planning, evaluation, staff meetings, home visits, parent conferences, and parent meetings. Supervision by head teacher and instructor. Students are expected to define their own goals and to assess their progress, to do assigned and self-directed readings, and to keep a critical incident journal.

differences in pathology.

HD 4520  Culture and Human
Spring. 3 credits. Limited to 20 students.
Prerequisite: HD 1150 or PSYCH 1010.
Open to undergraduate and graduate
students. Letter grades only. Offered alternate years. Q. Wang.
This seminar takes an interdisciplinary
approach to address the central role of culture in
human development. It draws on diverse
theoretical perspectives, including psychology,
anthropology, education, ethnography, and
linguistics, to understand human difference,
experience, and complexity. It takes empirical
reifications upon major developmental topics
such as cultural aspects of physical growth and
development; culture and cognition;
culture and language; culture, self, and
personality; cultural construction of emotion;
culture issues of sex and gender; and
cultural differences in pathology.

HD 4570  Health and Social Behavior
Fall. 3 credits. Limited to 20 students.
Prerequisites: junior or senior standing;
statistics course and one of the following:
HD 2500, SOC/DSOC 1101, or HD/SOC
2530. Letter grades only. Offered alternate years. E. Wethington.
Critically examines theories and empirical
research on the relationships among social
group membership, social status, and physical
and mental health. Lectures focus on social
stress, social support, and socioeconomic
status, all of which are associated with
variations in physical health, mental health,
and health maintenance behaviors. Students
are expected to attend one current
literature in medical sociology, health
psychology, public health, and epidemiology.

HD 4590  Transitions Across the Life
Fall. 3 credits. Prerequisites: Senior or
Junior standing, HD 3180, HD 2510, or
instructor permission. Enrollment limited to
20 students. C. Loeckenhoff.
This seminar-style class will focus on some of
the major normative and non-normative
transitions that people encounter from late
adolescence to advanced old age. Based on
the contemporary research literature, we will
identify common factors including personality
traits, coping strategies, social support, and
environmental context that influence
successful mastery of such transitions.

HD 4640  Adolescent Sexuality (also
Fall. 3 credits. Limited to 20 students.
Prerequisite: HD 3660 and permission of
grades only. R. Depue.
This course has a seminar format and
is oriented to students planning to enter either a
Ph.D. program in biological aspects of
psychology or an M.D. program. It relies on
basic research literature that requires detailed
studying. The development of neurobehavioral
systems as a means of adapting to critical
stimuli has formed the basis of emotional
systems in humans, and individual differences
in these systems form the basis of
temperament and personality. The nature of
temperament and personality is explored from
psychometric, experiential, genetic, and
neurobiological points of view. There is a
focus on the general role played by the
biogenic amines (dopamine, norepinephrine,
and serotonin), neurotransmitters (corticotropin
releasing hormone, opiate, oxytocin), genetic
polymorphisms in these neurotransmitters,
and early experiences in determining individual
differences in temperament and personality.
The manner in which these biological factors
influence the encoding of experience is
explored as the basis of stability in personality
traits.)

HD 4680  Stress in Childhood and
Adolescence
Spring. 3 credits. Limited to 20 students.
Prerequisite: junior or senior standing.
Recommended: HD 1150 and a statistics
course. Letter grades only. J. Eckenrode.
Advanced seminar that reviews research
related to the nature and consequences of
stressful experiences in childhood and
adolescence, particularly those arising in the
family. Topics represent common stressors in
the lives of children (e.g., divorce of parents)
that have potentially damaging consequences
for development. Also covers topics in which
Cornell faculty members have conducted
significant research (e.g., child abuse and
neglect). In addition to considering the
negative effect of stress on development, also
considers issues of individual differences in
stress reactivity, including the concepts of
coping and resilience. These topics lead
naturally into discussions of practice and
policy.

HD 4740  Autism and the Development
of Social Cognition
Fall. 3 credits. Limited to 20 seniors and
juniors. Prerequisites: one statistics course
AND either BIONB 2220 OR one course in
neuroscience numbered 3400 or above
(e.g., HD 3660 or PSYCH 3320 or 4250).
S–U or letter grades. M. Belmonte.
What drives the development of social
cognitive skills such as language, theory of
mind, and empathy? Can different adults do these
capacities constitute isolable "modules," or
how might they emerge from more elementary
neural properties? How can understanding
what goes wrong during autistic development
lead us to understand how normal
development, and about how neural and
the brain that underlies cognitive development?
This seminar covers current psychological and
neurobiological theories of autism,
emphasizing written analysis and critical
review of the primary research literature.
Specific topics will be selected to match
students' interests, and each student will
develop and orally defend a research proposal
on an open question in the neuroscience of
autism or related developmental disorders.

HD 4780  Attention Deficit/Hyperactivity
Disorder in Children
Spring. 3 credits. Limited to 15 students.
Prerequisites: HD 1150 or equivalent,
introductory biology, statistics course. S–U
or letter grades. S. Robertson.
This seminar examines in detail the
nature, diagnosis, epidemiology, causes, and treatment
of ADHD through a critical evaluation of the
recent scientific and medical literature. Also
considers implications for families, schools,
and society.

HD 4980  Senior Honors Seminar
Fall and spring. 1 credit. Requirement for
limited to seniors in HD honors program. S–U
grades only. M. Casasola.
In this weekly seminar, students are guided
through the process of completing an honors
thesis in human development. The course
focuses on developing students' writing
abilities, reviewing statistics and how to
present research findings in a manuscript,
and receiving feedback on drafts of their thesis,
as well as practice presenting the results of their
thesis in poster and oral presentations.

HD 4980  Senior Honors Thesis
Fall or spring. Credit TBD. Prerequisite: permission of thesis advisor and
coordinator of honors program. S–U
or letter grades. HD faculty.
The Graduate Program
HD graduate courses are open to
undergraduates only upon permission of
instructor.

General Courses
HD 6020  Research in Risk and Rational
Decision Making
Spring. 3 credits. Limited to 5 students.
Corequisite: HD 4200. S–U or letter grades.
V. Reyna.
This hands-on laboratory course will incorporate
research skills in the context of risk and rational
decision making (e.g., scoring tests), personal behaviors that
involve risk (e.g., HIV—prevention), and other
public health risks (e.g., vaccinations), law
enforcement (e.g., use of a weapon), and legal
decision-making (e.g., juvenile delinquency).
Students will read the research literature, and
discuss the latest empirical findings and
scientific theories of risk and rationality,
engaging in group work and peer review to
hone their skills. Students will then design
research projects based on that 6520
Translational Research on Aging material as
well as additional references tailored to their
interests.

HD 6110  Psychology of Emotion
Spring. 3 credits. J. Mikels and A. Ong.
This course will take a comprehensive look at
current research and theory in the field of
emotion. Students will become familiar with
theories, methods, and empirical research
tauing to the psychology of emotions. Topics
covered will include—but are not
limited to— theoretical models of emotion, emotion antecedents, emotional responses (facial, subjective, and physiological), functions of emotion, emotion regulation, individual differences, and health implications. 

**[HD 6140 Social and Psychological Aspects of the Death Penalty]**

This course will focus on how the field of human development contributes to death penalty cases through the creation of social history reports on death-qualified defendants and will provide training in how to prepare such reports. Students will study relevant areas of death penalty law (e.g., Wiggins v. Smith, mitigation law, pre- vs. post-conviction) and design relevant research. Students will also study specific areas of human development research that figure centrally in social history reports (e.g., intelligence testing, educational disability, mental illness and the DSM-IV, social and family environment, prediction of future dangerousness, anti-social personality.)

**[HD 6190 Memory and the Law]**
Fall. 3 credits. Limited to 5 doctoral students. S–U or letter grades. C. Brainard.

This course will focus on how the scientific study of human memory interfaces with the theory and practice of law. Students will study relevant areas of memory research (e.g., storage, retrieval, false memory, memory deficits in impaired populations) and memory theory. Students will also study specific areas of legal practice in which the reliability of evidence is critically dependent on human memory (e.g., eyewitness identification, recovery of repressed traumatic memories, confessions, elderly witnesses, child witnesses). Readings will come from primary library sources.

**[HD 6200 First-Year Proseminar in Human Development]**
Yearlong. 1 credit. Prerequisite: first-year HD graduate students. S–U grades only. B. Koslowski.

Designed as an orientation to the department and the university. Activities include audience at research presentations, visits to departmental research laboratories, relevant informational sessions (e.g., University Committee on Human Subjects, College Grants), and guidance in preparing a public research presentation to be made at the end of the spring semester.

**[HD 6210 Seminar on Autobiographical Memory]**
Fall. 3 credits. Prerequisites: graduate standing; seniors by permission of instructor. Letter grades only. Next offered 2010–2011. Q. Wang.

This graduate seminar is designed to give an overview as well as in-depth analysis of topics related to autobiographical memory and its development. Readings focus heavily on current theories and empirical research on a wide range of topics including childhood amnesia, reminiscence bump, emotion and memory, memory accuracy, development and disruption, neurological perspectives, memory functions, and memory across cultures.

**[HD 6310 Proseminar on Cognitive Development]**

**[HD 6320 Cognitive Neuroscience Seminar: Applications of Brain Science to Behavioral Research]**

**[HD 6330 Language Acquisition Seminar (also COGST/LING 6330)]**
Fall. 1–4 credits. Prerequisite: 3370 or equivalent or permission of instructor. S–U or letter grades. B. Lust.

This seminar reviews and critiques current theoretical and experimental studies of first language acquisition, with a concentration on insights gained by cross-linguistic study of this area. Attention is given to the development of research proposals.

**[HD 6340 Judgment, Decision Making, and Scientific Reasoning]**

**[HD 6360 Connecting Social, Cognitive, and Emotional Development]**

Opportunity for graduate students to explore several areas of research from both a cognitive and a social-emotional perspective. Although the traditional approach to the study of development has centered on studying cognitive development as separate from social and emotional development, the current course focuses on how cognitive and socio-emotional development are integrated and how each influences the development of the other. Thus the course is intended to provide a more integrated view of development. As one example, language acquisition, which traditionally has been viewed as a cognitive achievement, depends not only on social interactions but also on achievement in social understanding and awareness. Likewise, acquiring language that describes emotional states plays an important role in developing children’s understanding of others’ emotional states. Topics are determined by the interests of the graduate students who enroll.

**[HD 6370 First-Language Acquisition]**

**[HD 6400 Infancy]**
Spring. 3 credits. S. Robertson.

Examines development in infancy through a critical review of research and theory in selected aspects of neurobehavior, perception, cognition, language, emotion, and social relationships. Theoretical issues considered include the role of experiences in early development, sensitive periods, continuity and discontinuity in development, and the functional significance of early behavior. Some of the conditions that put infants at risk for poor development are also considered, such as premature birth, perinatal medical complications, and exposure to environmental toxins. Combines perspectives from developmental psychology and psychobiology.

**[HD 6510 Interdisciplinary Community-Based Scientific Research in Health Disparities]**
Spring. 2 credits. Prerequisite: for Cornell graduate students, two semesters of graduate-level statistics. S–U or letter grades. E. Wethington.

This course will provide B. doctoral students to the principles and practices of community-based participatory research (CBPR) on health disparities. The course consists of a series of expert presentations from researchers and practitioners involved in community-based research projects in New York City. Individual seminar topics will range from theoretical models of different models of CBPR and other types of translational research models, methodological education, ethical issues in community-based research, specific community research projects, and funding and publication issues. A primary emphasis is on exposure to interdisciplinary activities, diverse perspectives, and values provided by researcher and community-practice presenters.

**[HD 6520 Translational Research on Aging Research Seminar]**
Fall and Spring. 1 credit. Pr. D. students or permission of instructor. S–U or letter grades. K. Piller, M. S. Lachs, E. Wethington, and M. C. Reid.

This course introduces Ph.D. students to multidisciplinary research, proposal development, and journal article development in the area of aging and health. The course is organized as a work-in-progress seminar, video-conferenced between the Ithaca campus and Weill Cornell Medical College. At each monthly video-conference, participants discuss two or three works in progress, including grant proposals, funding opportunities, and papers about to be submitted. Participants are expected to have read the papers and proposals beforehand and each attendee is required to comment on each work.

**[HD 6600 Social Development]**

**[HD 6740 Autism Spectrum Conditions]**

**[HD 6750 Applied Behavioral Analysis]**

**[HD 6760 Social Development Seminar: Applications of Brain Science to Behavioral Research]**

**[HD 6770 Issues in Professional Development]**

**[HD 6850 Graduate Seminar in Research Methods]**
POLICY ANALYSIS AND MANAGEMENT

R. Avery, chair (119A MVR, 255-2578).
T. Evans, director of undergraduate studies.
D. Kenkel, director of graduate studies.
W. White, director of Sloan Program.
B. Hollis, executive director of Sloan Program.

PAM 2000 Intermediate Microeconomics
Fall or spring. 4 credits. Prerequisite: ECON 1110 or equivalent. Students must enroll in a sec. J. Cawley, T. Evans, and staff. Topics include theory of demand and consumer behavior including classical and indifference curve analyses; theories of production and cost; models for the following markets—competitive, monopoly, monopolistic competition, oligopoly; and inputs; general equilibrium; welfare economics; public goods; and risk.

PAM 2030 Population and Public Policy
Fall. 3 credits. D. Lichter.
Examines from a demographic perspective family policies that concern children and adults. Toward this end, it considers the relationships between family policies and demographic behavior. It also addresses the effects of family policies and demographic behavior on the well-being of children. Although this course focuses on the United States, it considers U.S. trends against the backdrop of changes in other industrialized countries.

PAM 2040 Economics of the Public Sector
Fall or spring. 3 credits. Prerequisite: PAM 2000. S–U or letter grades. E. Owens, J. Lewis, and staff.
The public sector now spends nearly two out of every five dollars generated as income in the U.S. economy. A thorough knowledge and understanding of this important sector is an essential part of training in policy analysis and management. This course provides an overview of the public sector of the U.S. economy, the major categories of public expenditures, and the main methods used to finance these expenditures. The principles of tax analysis and cost-benefit analysis are presented with a focus on the role of public policy in improving economic efficiency, promoting the goals of equity and social justice, and stabilizing the economy by altering the distribution of wealth and income.

PAM 2100 Introduction to Statistics
Fall or spring. 4 credits. J. Lewis, T. Evans, and staff.
Introduces students to descriptive and inferential statistics. Topics include hypothesis testing, analysis of variance, and multiple regression. To illustrate these topics, this course examines applications of these methods in studies of children and family policy.

PAM 2150 Research Design, Practice, and Policy (also SOC 2130)
Spring. 3 credits. Prerequisite: PAM 2100 or equivalent. R. Musick.
This course examines systematic approaches for addressing questions about poverty, family life, racial inequality, and a range of other issues central to public policy. It emphasizes the logic and methods of social science research, including the measurement of social phenomena, generalizing results to groups of interest, establishing cause and effect, social experiments, survey research, and qualitative methods. It develops skills to critically evaluate the research of others and provides hands-on experience applying research methods to policy-related problems.

PAM 2220 Controversies about Inequality (also PHIL 1920, DSOC/GOVT/ILROB/SOC 2220)

PAM 2300 Introduction to Policy Analysis
Fall or spring. 4 credits. Fall: R. Avery; spring: J. Gerner.
Policy analysis is an interdisciplinary field that uses theories, concepts, and methods from disciplines such as economics, sociology, and political science to address substantive issues in the public policy arena. Students are introduced to the functions of and interactions between the major institutions (public and private) at the national, state, and local level involved in the policy making process. The course focuses on public policy analysis in the family/social welfare, health, and market regulatory areas and also includes an introduction to the technical skills required to undertake policy analysis.

PAM 2350 The U.S. Health Care System
Spring. 3 credits. S. Nicholson.
Introduction to the U.S. health care system. Covers the interrelatedness of health services, the financing of health care, and the key stakeholders in health care delivery, including regulators, physicians, hospitals, health plans, employers, the pharmaceutical/biotech and medical device industries, and consumers. Describes the history and organization of health care, behavioral models of utilization, issues of health care reform, and current trends. Provides an overview of key policy issues, including the uninsured, the rising cost of medical care, the value of health care, and inadequate or variable quality of care.

PAM 3100 Multiple Regression Analysis
Fall and spring. 4 credits. Prerequisites: PAM 2100, AEM/ILRST 2100 or equivalent. Sec meets once a week. M. Lovenheim and staff.
Introduces basic econometric principles and the use of statistical procedures in empirical studies of economic models. Discusses assumptions, properties, and problems encountered in the use of multiple regression procedures. Students are required to specify, estimate, and report the results of an empirical model.

PAM 3240 Risk Management and Policy
Fall. 3 credits. Prerequisite: ECON 1110 and statistics course. S. Tennyson.
Provides students with a broad understanding of risk management problems and solutions, a greater appreciation of the importance of risk and risk regulation in our society, an increased comprehension of the complexities of making decisions about risk. Topics include alternative ways to define and measure risk, the importance of risk-tradeoffs, and models of decision making under risk. With this background, alternative approaches to risk management are analyzed. The impact on risk management of the legal liability system and government programs, laws, and policies is also considered.
PAM 3300 Intermediate Policy Analysis  
Fall or spring. 3 credits. Prerequisites: PAM 2300, PAM 2100, PAM 3100. J. Matsudaira and staff.  
This course examines evaluation methods used to judge whether public policies and programs are effective in achieving their goals. Policy makers are barraged with information about the likely effects of various policy changes, and need to be adept at identifying credible evidence. Building on concepts covered in introductory courses in policy analysis, economics, and statistics, this course will aid students in becoming critical consumers of policy research and evaluations. Examples from a variety of policy areas, including education, welfare, and economic development will be explored.

PAM 3340 Corporations, Shareholders, and Policy  

PAM 3350 Families, Poverty, and Public Policy  
Spring. 3 credits. S. Sassler.  
This course examines the social institution of the family, challenges to the institution’s well-being and stability, and the role of public policy in these transformations. Topics include family structure and responsibilities; marriage as a traditional building block of the family and challenges to the institution of marriage, including divorce, nonmarital childbearing, cohabitation, and same-sex unions; children and the impact of family change on their well-being, including the effects of child poverty, maternal employment, and paternal involvement. The role of public policy in managing and shaping these developments will be discussed.

PAM 3360 Evolving Families: Challenges to Public Policy (also SOC 3360)  
Spring. 3 credits. S. Sassler.  
This course examines the social institution of the family, challenges to the institution’s well-being and stability, and the role of public policy in these transformations. Topics include family structure and responsibilities; marriage as a traditional building block of the family and challenges to the institution of marriage, including divorce, nonmarital childbearing, cohabitation, and same-sex unions; children and the impact of family change on their well-being, including the effects of child poverty, maternal employment, and paternal involvement. The role of public policy in managing and shaping these developments will be discussed.

PAM 3370 Race and Public Policy (also SOC 3370)  
Spring. 3 credits. S. Sassler.  
This course provides an overview of perspectives used in sociological studies of race and ethnicity. We will read classic and contemporary research on racial and ethnic relations in the United States. The first part of the course covers a variety of theories on race/ethnic relations and addresses issues related to the social construction of race, racial identities, and the impact of immigration on racial dynamics. We next examine racial and ethnic inequality in social and demographic outcomes. The course concludes with readings that explore interracial contact and multiracial populations.

PAM 3400 The Economics of Consumer Policy  
Fall. 4 credits. Prerequisite: PAM 2000 or equivalent or permission of instructor. S. Tennyson.  
Familiarizes students with the economic analysis of consumer policy issues. Uses the tools of microeconomic analysis to investigate the interaction between government and the marketplace, with an emphasis on how that interaction affects consumers. Examines the rationale for and effects of regulation of industry. Considers alternative theories of regulation, including the capture, economic, and public interest theories. Applies these theories to specific issues of regulation, including economic regulation of specific industries (e.g., telecommunications, electricity, trucking, railroads, postal services) as well as to broader social regulation (e.g., health, safety, environmental). The effects of regulatory reform in numerous industries are also examined. An attempt is made to examine current topics relating to consumer policy.

PAM 3410 Economics of Consumer Law and Protection (also ECON 4410)  
Spring. 3 credits. Prerequisite: PAM 2000 or equivalent. S–U or letter grades. J. Germer. Economic analysis of the roles played by the courts and by federal and state regulatory legislation in altering consumer behavior, consumer behavior, and consumer welfare. Topics include economic analyses of contract law, product liability, accident law and antitrust law, and the activities of such agencies as the Federal Trade Commission, the Food and Drug Administration, and the Consumer Product Safety Commission.

PAM 3500 Contemporary Issues in Women’s Health (also FGSS 3500)  
Spring. 3–5 credits. A. Parrot.  
Deals with the history of women in medicine and the historical and cultural treatment of women’s health problems. Also addresses health care research and the exclusion of women from research trials and protocols. Reproductive issues, alternative approaches to treatment, medical problems, ethical issues, cancers, factors that contribute to post-traumatic stress disorders, health promotion behaviors, political issues, and routine medical recommendations are also discussed in depth. Students may take the course for a fifth credit, which requires attending a discussion session every other week and observing 12 facilities (e.g., birthing center, mammogram, and ultrasound center, wellness center, hospital labor and delivery unit, La Maze class, women’s self-defense class) that provide a variety of women’s health care. Some of these visits will be virtual visits available through the course web site, others will require in-person attendance.

PAM 3800 Human Sexuality  
Spring. 4 credits. Limited to 150 students. Prerequisite: introductory course in human development and family studies, psychology, or sociology (or equivalent social science course). Focuses on human sexuality of biology course. Two 75-minute lectures and one 90-minute lab per week. A. Parrot.  
Provides students with an understanding of the interactions and interrelationships of human behavior that influence sexual development and behavior. Focuses on the evolution of sexual norms, cross-cultural customs, legislation within changing sociopolitical systems, and delivery of services related to sexual identities, needs, and/or problems. Addresses future trends in sexuality.

PAM 4000–4010–4020–4030 Special Studies for Undergraduates  
Fall and spring. Credit TBA. S–U or letter grades. Staff.

PAM 4040–4060–4080 Politics and Policy: Theory, Research, and Practice (also GOVT/ALS/AMST 4998)  
Fall, spring. Taught in Washington, D.C. For description, see GOVT 4998.

PAM 4330 Topics in Corporations and Policy  

PAM 4340 Economics of the Criminal Justice Policy  
Fall. 3 credits. Prerequisite: PAM 2000 or equivalent, PAM 3100. S–U or letter grades. E. Owens.  
Why do governments attempt to regulate our behavior? What determines which actions are considered criminal? Why do some people, in spite of legal institutions, choose to engage in illicit activity? How do governments attempt to reduce criminal behavior, and how effective are those attempts? This class is intended to introduce you to both theoretical and empirical ways to answer these questions. The content of the class will span economic theory, criminology, and statistics: effective policy makers should be able to understand all three. By the end of the semester, students will be able to think about crime and criminal justice, an intrinsically controversial and emotional topic, from an objective economic perspective.

PAM 4360 Drugs and Gangs  
Spring. 3 credits. Prerequisite: PAM 3330, PAM 3100, or permission of the instructor. S–U or letter grades. E. Owens.  
Examines the development and growth of illegal markets and criminal gangs in the United States, and evaluates government attempts to limit the size and scope of these activities. We will study the evolution of street gangs, prison gangs, and organized crime from the 19th century to the present, focusing on their role in the drug markets. Students will use economic theory and data to analyze how drug markets respond to government policy.
PAM 4370 Economics of Health Policy (also ECON 4370)
Fall. 3 credits. Prerequisite: PAM 2000, 3100, or equivalent. S–U or letter grades.
K. Simon.
Uses the economic tools of policy analysis to understand the health care system and critically evaluate current policy debates. In the past decade, some of the most controversial policies considered by state and federal governments have involved issues that have been studied by health economists and health services researchers. Uses the United States as its main institutional framework but also pays attention to health care topics of international concern, such as the AIDS epidemic.

PAM 4380 Economics of Public Health (also ECON 4380)
Fall. 3 credits. Prerequisites: ECON 1110, PAM 2000, 3100, or equivalent. S–U or letter grades. Next offered 2010–2011.
D. Kenkel.

PAM 4440 Violence against Women: Policy Implications and Global Perspectives (also FGGS 4480)
A. Parrot.

PAM 4450 regulating Financial Institutions
Spring, weeks 7 through 14, meeting time TBD. 3 credits. Prerequisites: ECON 1110, PAM 2000, PAM 3100, PAM 3400 or equivalent. S–U or letter grades.
S. Tennyson.
Examines financial institutions and the way that these institutions are regulated in the United States and in other countries. The course provides a history and overview of regulatory institutions, considers the intent of regulatory policies, and evaluates regulatory outcomes. An important focus of the course will be on current public policy issues relating to financial institutions regulation.

PAM 4460 Economics of Social Security (also ECON 4460)
Fall. 3 credits. Prerequisite: PAM 2000 or equivalent. S–U or letter grades.
R. Buehrer.
Provides students with an "economic tool-kit" for evaluating social policies. Economic analysis is used to predict the behavioral and distributional consequences of such policies. Students learn to use computer software on data from the Current Population Survey to estimate the economic well-being of both older people with disabilities, show how sensitive your results are to the methods used, and stimulate the effects of alternative policies on these outcomes.

PAM 4470 Families and Social Inequality (also SOC 4470)
Fall. 3 credits. Prerequisite: PAM 2030, PAM 2220, SOC 2208, or equivalent social science course. S–U or letter grades.
K. Musick.
Disparities in family life are widening in the U.S., with important implications for the well-being of family members and the reproduction of inequality from one generation to the next. Using tools of demographic analysis, this course explores growing education and income differences in family patterns (e.g., marriage, divorce, childbearing, and parenthood), analyzing the forces behind these changes and the potential consequences for children's life chances.

PAM 4570 Innovation and Entrepreneurship in the Health Care Industry
Fall. 3 credits. Prerequisite: PAM 4350 or permission of instructor. Next offered 2010–2011. J. Kuder.

PAM 4760 Economic Evaluations in Health Care

PAM 4770 Child Policy
Fall. 3 credits. Prerequisites: PAM 2000, PAM 4100, and 4100, grades. J. Germer.
Topics in public policy dealing with children, with a special emphasis on the impacts of policy on child outcomes. Topics include policy affecting education attendance, high stakes testing and its impact on performance, policy impacts on family composition and change, and the effects of these on child outcomes.

PAM 4980 Honors Seminar
Fall. 3 credits. Prerequisites: PAM 2100, 2150, and 3100. Letter grades only. S. Sasser.
Designed to help guide students through the development of their honors thesis. The objective of the course is to help students frame a research question that is appropriate for an honors thesis, identify an appropriate methodology to use in answering this question, identify data that can be used to answer this question, and identify literature appropriate to this question. Students will also work collaboratively during research questions and techniques to be used. Students will meet in a seminar-style class each week and will also meet with the students individually and with their research mentor throughout the semester as they work on their thesis question and methods. Students who wish to participate in the PAM Honors Program must enroll in this course during their senior year. Students must receive a grade of B or better to continue in the Honors Program.

PAM 4990 Honors Program
Fall or spring. Credit TBD. Prerequisite: PAM 4980. Letter grades only. PAM faculty.
Provides students with the opportunity to undertake basic or applied research that will be preparation of a thesis representing original work of publishable quality. Intended for students who desire the opportunity to extend their interests and efforts beyond the current course offerings in the department. Furthermore, the program is designed to offer the student the opportunity to work closely with a professor on a topic of interest. The number of hours of thesis credit is determined by the student's research mentor. See the director of undergraduate studies for more details.

PAM 5310 Ethics, Public Policy in American Society
Fall. 3 credits. Prerequisite: senior or graduate standing. J. Ziegler.
Explores current issues of ethics and public policy against a background of theories of ethical behavior. Examines questions of how public officials and managers of public and nonprofit agencies and private enterprises act. How do standards of ethical behavior in the professions get established? How are public policy issues with ethical implications resolved? Readings are drawn from political philosophy, contemporary social science, and imaginative writing. Class participation is essential.

PAM 5320 The Intergovernmental System: Analysis of Current Policy Issues
Fall. 3 credits. Prerequisite: graduate students or seniors who have had course in American government. Next offered 2010–2011. J. Ziegler.

PAM 5470 Microeconomics for Management and Policy
Spring. 4 credits. S–U or letter grades. Sloan students only. W. White.
Introduces microeconomic theory and its application to decision making in the management and policy arenas. Places special emphasis on the economic environment of health care organizations and the problems faced by managers in this environment.

PAM 5520 Health Care Services: Consumer and Ethical Perspectives
Fall. 3–4 credits; 4-credit option may be used as Biology and Society senior seminar option. Limited to 30 students. Prerequisite: undergraduates by permission of instructor.
A. Parrot.
Focuses on consumer and ethical issues faced by professionals in the health care field today. Broad topics discussed include ethical standards and guidelines, health care costs and accessibility of services, government role in health care delivery, health care as a right or privilege, private industry role in health care services, services for the medically indigent and elderly, practitioner burnout and training, ethics of transplant surgery and funding, reproductive technology, AIDS research and funding, animals in medical research, right to die, and baby and granny Doe cases.

PAM 5540 Legal Aspects of Health Care
Spring. 3 credits. Prerequisites: PAM 5570 or permission of instructor. Offered alternate years.
H. Allen.
Introduces principles of the law that specifically are applicable to health-service delivery. Topics include the liability of hospitals and their staff and personnel for injuries to patients; medical records and disclosure of information; consent to medical and surgical procedures; responsibility for patients' personal property; collection of bills; medical staff privileges; and confidential communications.

PAM 5560 Managed Health Delivery Systems: Primary-Ambulatory Care
Fall. 3 credits. Prerequisite: PAM 5570 or permission of instructor. Next offered 2010–2011. J. Kuder.

PAM 5570 Health Care Organization
Fall. 3 credits. Limited to 30 students. Prerequisite: Sloan students or permission of instructor.
J. Kuder.
Graduate-level introduction to the organization of health providers in the United States, the interrelationships of health services and the major sources and methods of paying for care. Describes how health services are structured in the United States and how these different services interrelate along the continuum of care. Describes and analyzes organization, delivery, and financing issues from a variety of perspectives using specific performance criteria (e.g., equity, quality, efficiency). Also presents innovations by the public and private
sectors in the delivery and reimbursement of health care.

PAM 5620 Finance (also AEM 3240) Spring. 3 credits. Staff. For description, see AEM 3240.

PAM 5620 Health Care Financial Management II Fall. 3 credits. Prerequisite: PAM 5620 or other financial management course. S. Nicholson.

Focuses on the financial analyses that managers in the health care industry use to make strategic and operating decisions. Begins by examining how health insurers design and price their products and manage enrollees’ medical expenditures. Next reviews two different methods of valuing a medical product/service, and two methods of estimating the value of a company. The four valuation methods covered are: net present value of free cash flows, decision tree analysis/real options, multiples, and the venture capital method. Seven cases allow students to apply these skills to examine decisions/situations such as: determining why a Medicare HMO is losing money and recommending a redesigned benefit and reimbursement structure; estimating a health system’s profitability by product line; valuing a drug that is being developed; valuing a pharmacy including its drug stock; and valuing a drug using decision-free analysis in determining whether a medical device company should go public and how it should price its products.

PAM 5640 Health Care Resource Management and Quality Improvement Fall. 3 credits. Prerequisite: strong basic computer skills. S–U or letter grades. S. Nicholson.

Exposes students to the opportunities and challenges of using information technologies (IT), such as computerized physician order entry systems, electronic medical records, medical decision support systems, handheld devices for physicians, and remote patient monitoring devices, to improve the quality of medical care and/or reduce costs. Focuses on the manager’s role in the application of IT to assess and improve the quality of medical care. Students will develop a business plan for a computer system that uses IT to improve the quality of medical care in the U.S. health care system.

PAM 5660 Strategic Management and Organizational Design of Health Care Systems Spring. 3 credits. Staff.

Examines strategy and design issues faced by health care organizations. Topics include analysis of market conditions, organizational culture issues, development of an organizational mission and management strategy, the management of professionals, and the importance of roles, structure, and inter- and intra-institutional relationships within organizations. Taught via a case study approach.

PAM 5670 Health Policy Fall. 3 credits. Prerequisite: Sloan M.H.A. students, Ph.D. students, or permission of instructor. K. Simon.

Addresses major health policy issues and the critical processes that influence them. Focuses primarily on the United States, with some coverage of health policy in other countries. Topics include: Medicare, the uninsured, public health, the effect of welfare policy on health care, managed care development and regulation, state and federal health care reform, and many others. The course analyzes the politics of health policy in terms of legislative and executive processes; the forces involved including economic, social, ethical, and political factors, and key players in health policy such as special interest groups, public agencies, and elected officials.

PAM 5690 Regression Analysis and Managerial Forecasting Fall. 3 credits. Prerequisite: at least one statistics course; T. Evans.

Teaches various statistical methods for managerial decision making with a particular emphasis on regression and forecasting. Other topics include ANOVA, correlation, confounding, interaction, and statistical process control. Emphasizes applications to health care organizations.

PAM 5700 Health Care Accounting Fall. 4 credits. Core course for Sloan M.H.A. students. W. Schlesinger.

Introduces the basic concepts of financial and managerial accounting with emphasis on health care applications. Explains the measurement systems of business operations, business valuation, financial reporting, budgeting, cost allocation, service and product costing, and special reports for managerial use. Ethical and international issues are integrated throughout the course materials with real world applications. At the conclusion of the course, students should be able to read, understand, and analyze the annual financial reports of an organization. Collaborative learning, cases, discussions, readings, researches, presentation, speakers, problem solving, videotapes, and lectures are used as teaching pedagogy.

PAM 5710 Organizational Development/ Human Resource Management in Health Care Organization Fall. 3 credits. Sloan students only. N. Fabrizio.

Explores (1) the theoretical foundation of organizational theory, research, and human resource management with an emphasis on implementation; (2) real-world problems while analyzing, exploring, and discussing varied interpretations of selected cases; (3) the building blocks of managerial activity; internal organizational issues, and organization issues related to organization design; and strategic issues. Key organizational change and development concepts enhance student’s perspectives on how the theories, strategies, and practices relate to today’s organizations. The course serves as a framework to establish the theory and both the conceptual and competency foundations necessary for applying interventions.

PAM 5740 Short Course in Fundamentals of Health Facility Planning for Managers Spring. 1 credit. B. Hollis.

Provides MHA and other students who may be interested in careers in health care management with a basic familiarity regarding some of the terminology related to health facility planning projects. The course will touch on areas that a manager might encounter, including working with designers, the relationship between strategic planning issues and facility planning, basic cost estimating techniques, simplified plan interpretation, and use of architectural and engineering scales. The course will have two primary components. One portion will be lectures and hands-on demonstrations on plan reading/measurements and an overview of the process of project planning. We anticipate a tour of an active or recently completed project at either Cornell or Cayuga Medical Center as time allows. The other will involve live or videoconference presentations from invited practitioners and researchers in the health facilities area.

PAM 5760 Long-Term Care and Lifestyle Alternatives for the Older Adult Spring. 1 credit. M. Weidner.

Provides students exposure to, and fosters critical thinking about, policy and operational issues related to health care and lifestyle alternatives for the well, near frail, and frail older adult. Preliminary readings will introduce the student to societal issues of the aging, clinical issues facing the older adult, and management operations for nursing homes, independent living communities, assisted living, and home care. Emphasis will be placed on student interaction with instructors and other seminar participants regarding society and management issues. Case studies will be used to enhance student interaction and participation.

PAM 5770 Marketing for Health Care Managers Fall. 3 credits. Prerequisites: microeconomics and permission of instructor. D. Perosio.

Introduces students to the substantive and procedural aspects of marketing strategy and management. The course is designed to convey the key concepts of marketing and how they fit into the larger context of overall management strategy and decisions. Both the practical “how” and the fundamental “why” of marketing activities will be explored. Course examples rely heavily on actual situations and experiences in the health care industry. Students will apply their knowledge of marketing and health care management to the development of a marketing plan.

PAM 5810 Measuring and Evaluating Health Program Performance and Quality Spring. 3 credits. Prerequisites: PAM 5570 and a basic multivariate statistics course or permission of instructor. S–U or letter grades. J. Kuder.

This course is designed for policy makers, health systems managers, and beginning health services researchers that want an applied introduction to using health system evaluation tools and literature to enhance system and program performance and improve quality.

PAM 5900 Special Topics in Health Administration and Finance Fall or spring. 1–3 credits. Adjunct faculty.

A special topics course specifically designed for students in the Sloan Program in Health Administration. Possible multiple offerings using adjunct faculty teaching in areas of expertise not covered in depth in the Sloan core curriculum and relevant to students preparing for careers in health management. Format ranges from intensive courses offered over several full days to longer courses meeting on a weekly basis.

PAM 5951/2 Field Studies in Health Administration and Planning Fall or spring. 5951, fall. 1 credit; 5952, spring. 3 credits; 4 total credits. Capstone course for second-year Sloan students. J. Kuder.
Students interested in developing administrative and program-planning research skills are given an opportunity to evaluate an ongoing phase of health care agency activity in the light of sound administrative practice and principles of good medical care. In planning and carrying out the research, students work closely with a skilled practicing administrator and with members of the faculty.

PAM 5990 Challenges and Trends in the Health Services Industry
Fall and spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S–U. W. White. Provides students with information and exposure to current and emerging issues in the health services industry. Topics may include financial management of health care facilities, human resource management, information systems, cost-effective clinical decision making, quality measurement and outcomes, public health, and entrepreneurship in the health services industry.

PAM 6000 Special Problems for Graduate Students
Fall and spring. Credit TBA. S–U or letter grades. Staff. Independent advanced work by graduate students recommended by their chair and approved by the department chair and the instructor.

PAM 6030 Experimental, Quasi-Experimental, and Economic Evaluation Methods
Spring. 3 credits. Highly recommended: background in statistics (e.g., AEM 7100 or equivalent) and microeconomics (e.g., PAM 200 or ECON 6390). Next offered 2010–2011. E. Peters.

PAM 6040 Qualitative, Survey, and Mixed-Method Approaches to Policy Research

PAM 6060 Demographic Techniques (also DSOC 6080)
Spring. 3 credits. S–U or letter grades. D. Gurak and D. Lichter. This course provides an introduction to various demographic data sources (e.g., decennial census and vital registration data), measures of demographic processes and population structure (e.g., fertility rates and segregation indices), and standard demographic techniques (e.g., life tables, rate standardization, and population forecasting) used in social demography. The course emphasizes the application of demographic tools and interpretation.

PAM 6090 Empirical Strategies for Policy Analysis
Fall. 3 credits. Prerequisite: graduate course in econometrics (e.g., IIRLE 7480–7490 or AEM 7100). J. Matsudaira. This course focuses on empirical strategies to identify the causal effects of public policies and programs. The course will use problem sets based on real-world examples and data to examine techniques for analyzing non-experimental data including control function approaches, matching methods, panel-data methods, selection models, instrumental variables, and regression-discontinuity methods. The emphasis throughout, however, will be on the critical role of research design in facilitating credible causal inference. The course will aid students in both learning to implement a variety of statistical tools using large data sets, and in learning to select which tools are best suited to a given research project.

PAM 6250 Economics of Family Policy
Fall. 3 credits. Prerequisite: PAM 6390 or ECON 6090 or permission of instructor. S–U or letter grades. E. Peters. This course uses an economic framework to study family policy. Both single-agent and multip-agent (e.g., game theoretic and bargaining) frameworks are used to understand the impact of family policy on outcomes and behavior. Theoretical models of fertility decisions, household production, time allocation, investments in children, marriage markets, household formation and dissolution decisions, bargaining over resource allocation within the household, and inter- and intra-generational transfers across households are developed. The theoretical models are applied to family policies such as child care subsidies, family leave, divorce laws and child support, welfare reform, family planning, government subsidies to education, and social security. Empirical applications are presented for both developed and developing countries.

PAM 6260 Family Demography (also SOC 6280)
Spring. 3 credits. S–U or letter grades. K. Musick. This graduate seminar explores changes in family behaviors and household relationships from a demographic perspective. It focuses centrally on contemporary trends in the U.S., considering (often competing) interpretations of the causes and consequences of family change and variation. Emphasis will be placed on critically evaluating research in this area, including assessments of data quality, research design, and causal inference. Topics include cohabitation and marriage, divorce, fertility, family structure, and the intersection of work and family.

PAM 6320 Seminar in Pharmaceutical Policy Issues

PAM 6350 Consumers, Information, and Regulatory Policy
Fall. 3 credits. Prerequisites: PAM 6390 or calculus and intermediate microeconomics. Next offered 2010–2011. S. Tennyson.

PAM 6410 Health Economics I (also ECON 6410)
Fall. 3 credits. First course in Ph.D.-level health economics sequence. Prerequisites: Ph.D.-level courses in microeconomic theory and econometrics. J. Cawley and staff. Comprehensive course covering microeconomic theory and its application to health and health care markets. Topics include consumer decision making, the theory of the firm, welfare economics, monopolies and oligopolies, and market imperfections. Applications in health economics include the demand for health, rationing and addiction, the industrial organization of health care, cost-effectiveness analysis, price discrimination by health care providers, how consumers respond to information about health care, adverse selection in health insurance, and the moral hazard created by physician compensation strategies. Each student writes a research paper, testing predictions from microeconomic theory by acquiring suitable data and estimating the appropriate econometric model, and presents his or her findings in a research seminar.

PAM 6420 Health Economics II
Spring. 3 credits. Prerequisites: Ph.D.-level courses in microeconomic theory and econometrics. Staff. Covers microeconomic theory and its applications to health and health care markets. Topics include consumer demand for health and health behaviors, the supply side of health promotion, the industrial organization of health care, and cost-benefit and cost-effectiveness analysis of health interventions. Second course in Ph.D.-level health economics sequence, but the courses may be taken in any order.

PAM 6900 Professional Seminar in Public Policy
Fall. 2 credits. Prerequisite: Enrollment limited to Ph.D. and M.S. students in PAM (as well as Ph.D. students funded by PAM). S–U or letter grades. R. Dunifon. This pre-seminar introduces new graduate students to the field of PAM. Students will read and discuss research papers by PAM faculty as well as other readings that provide an overview of the field of Policy Analysis and Management and offer important tools and skills that can be used throughout the graduate career.

PAM 9990 Doctoral Thesis and Research
Fall and spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S–U or letter grades.

FACULTY ROSTER
Ashdown, Susan, Ph.D., U. of Minnesota. Assoc. Prof., Fiber Science & Apparel Design
Avery, Rosemary J., Ph.D., Ohio State U. Prof. and Chair, Policy Analysis and Management

M.P.S.
M.S.
Ph.D.

THE SCHOOL
The School of Industrial and Labor Relations at Cornell (ILR) is a small school within a large university. It tries to maintain the small-college atmosphere expected of an institution that has about 800 undergraduates and approximately 200 graduate students, even as ILR students participate fully in the activities of the larger Cornell community.

ILR students study in modern, technologically advanced lecture halls, seminar rooms, and libraries. Students enrolled in the School of Industrial and Labor Relations at Cornell may take a substantial number of courses in the other six undergraduate colleges and schools of the university, including the College of Arts and Sciences. Cornell students have access to all of the libraries and other services of the university.

The school operates in four areas: (1) resident instruction, (2) extension and outreach, (3) research, and (4) publications. It provides instruction to undergraduates and graduate students who are preparing for careers in industrial and labor relations, as well as to men and women already engaged in industrial relations activities and the general public through its Extension and Outreach.

The school’s Conference Center, part of the extension division, initiates and hosts conferences covering the full scope of industrial and labor relations. The center provides continuing education and information to practitioners and scholars.

The Research Division develops materials for resident and extension teaching and originates studies in industrial and labor relations. The Publications Division publishes and distributes the research results.

GRADUATE DEGREES
More than 150 students on the Cornell campus are enrolled in graduate study in industrial and labor relations, one of the largest graduate fields in the university. Students may work toward the degrees of master of industrial and labor relations, master of professional studies, master of science, and doctor of philosophy. For further information on graduate programs, contact the Graduate Office, School of Industrial and Labor Relations, Cornell University, 214 Ives Hall, Ithaca, NY 14853–5901.

DEPARTMENTS OF INSTRUCTION
Courses in the school are organized into six departments:

Collective Bargaining, Labor Law, and Labor History

The Department of Collective Bargaining, Labor Law, and Labor History brings together a diverse group of faculty members, all of whom are involved in researching and teaching about workers, employers, and the government policies that affect them. Our courses explore ILR issues in American society within a global framework using methods drawn from the social sciences, the humanities, and the legal professions.

Human Resource Studies

The Department of Human Resource Studies consists of world-class faculty members engaged in research, teaching, and practice. These faculty members play integral roles in the administration of the Center for Advanced Human Resource Studies (CAHRS), an ILR-based research center funded by over 50 corporations, and the ILR Executive Education Program, which offers advanced training to HR practitioners. The goal in teaching is to balance a rigorous academic research approach with a real-world practice orientation. In this way students are provided with state-of-the-art knowledge relevant to managing human resources in organizations.

Social Statistics

Faculty members in the Department of Social Statistics conduct research in the field of economic and social statistics. In applying their research results to their teaching, they provide their students with cutting-edge training on the principles of statistical reasoning, statistical methods, and the application of statistical tools of analysis. A full list of required and elective courses is available from the Office of Student Services, 101 Ives Hall.

International and Comparative Labor

The Department of International and Comparative Labor is concerned with industrial relations, unions, human-resource studies, and labor markets throughout the world. World-renowned faculty members are authorities on issues related to labor in Latin America, Europe, Asia, and Africa, as well as North America, and bring this knowledge to bear on the courses they teach to prepare students to understand the global marketplace.

Labor Economics

The Department of Labor Economics deals with labor markets, that is, the institutional arrangements, terms, and conditions under which workers supply their labor and under which firms demand their labor. Faculty members are especially concerned with understanding the workings of labor markets and the effects of various public policies. The topics dealt with in courses and research include analysis of the labor force, emigration, immigration, occupational wages and related terms of employment, income distribution, income security programs, health and safety in industry, retirement, pensions and social security, economic aspects of collective bargaining, and economic demography.

Organizational Behavior

The psychologists and sociologists in the Department of Organizational Behavior use discipline-based theoretical perspectives to examine an array of empirical workplace phenomena. Their teaching and research focus on the impact of environmental, technological, and interpersonal relationships on work group and organizational dynamics.

Social Statistics

Faculty members in the Department of Social Statistics conduct research in the field of economic and social statistics. In applying their research results to their teaching, they provide their students with cutting-edge training on the principles of statistical reasoning, statistical methods, and the application of statistical tools of analysis. A full list of required and elective courses is available from the Office of Student Services, 101 Ives Hall.

RESIDENT INSTRUCTION

This division conducts the on-campus programs leading to the degrees of bachelor of science, master of industrial and labor relations, master of professional studies, master of science, and doctor of philosophy from Cornell.

Office of Student Services

Staff members from the Office of Student Services, 101 Ives Hall, work closely with faculty members and faculty committees to administer degree programs for the school and many of the school’s support services. The office’s responsibilities include admitting and orienting new students, maintaining students’ personal and academic records, providing information on special study opportunities such as study abroad, and counseling students on personal and academic
Concerns. The office also works closely with seniors who are planning graduate study.

Counseling and Advising

New students are advised on orientation, academic procedures, and course registration by counselors in the Office of Student Services.

Each of the school’s academic departments names faculty members to serve as advisors for students who wish to consult with them regarding career possibilities in the field, research opportunities, postgraduate programs, or similar matters. Questions or issues related to graduation requirements, course registration, and related academic procedures should be directed to counselors in the Office of Student Services.

Multicultural Programs

The School of Industrial and Labor Relations values diversity and is responsive to the unique social, academic and cultural contributions and needs of multicultural students. The School is committed to providing students with support that will enhance academic achievement, career development, and personal growth. The assistant director for multicultural affairs in the Office of Student Services works in conjunction with many university programs to provide services that ensure academic success and an enjoyable quality of life for ILR students. For more information, see the Multicultural Affairs web site: www.ilr.cornell.edu/studentservices/advising/multicultural.

STUDY OPTIONS

Several study options are open to ILR undergraduates, making it possible to tailor a program to fit special circumstances.

Some students elect to spend a semester in New York City, Albany, or Washington, D.C., with a chance to observe actual labor problemsolving as interns in congressional offices, labor organizations, personnel offices, and state and federal agencies. For more information, see “Special Academic Programs” below.

Study abroad opportunities are available in numerous countries and foreign universities. Qualified students may spend a semester or a full year studying abroad.

A number of ILR courses deal directly with today’s workplace issues and involve fieldwork in the Ithaca area and elsewhere in the country.

With early planning, some students may apply for and earn the M.S. degree in the fifth year.

Minors

Students may pursue minors in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the students’ major. Completed minors will appear on the student’s transcript. Not all departments offer minors. Consult the appropriate section in this catalog or contact the appropriate department for information on minors offered and how to pursue a minor.

---

**Study in Absentia**

Registration in absentia enables a student to seek admission to another American institution for a semester or a year and transfer credit toward completion of the Cornell degree. This study option requires the development of a plan of study, a statement of appropriate reasons for study away from the university (e.g., availability of courses not offered at Cornell), good academic standing, approval of the plan by the director of student services, and payment of a special in absentia registration fee.

**Leave of Absence or Withdrawal**

Students who desire to withdraw or take a personal leave of absence from the university should schedule an interview with a counselor in the Office of Student Services. Counselors will assist students in contacting the appropriate offices or departments of the university, if necessary. All health leaves are handled by Gannett Health Center (www,gannett.cornell.edu).

**Requirements for Graduation**

To earn the Cornell bachelor of science degree in industrial and labor relations, a student must successfully complete 120 credits. This requires eight semesters of full-time study (30 credits a year on average), including work done while on an approved credit internship or study abroad program. Those who enter the school as transfer students will be required to complete 4 to 6 semesters in full-time residence, depending on the number of full-time semesters completed at another institution. Exceptions may be made by petitioning the ILR Academic Standards and Scholarships Committee. Those enrolled in the employee degree program, who typically study on a part-time basis, will be exempt from this requirement.

New Curriculum Effective Fall 2008

First Year

**FALL**

First-year writing seminar* 3
ILR colloquium (introduction to ILR School, ILRCD 1500)** 1
Introduction to Organizational Behavior (ILROB 1220)** 3
History of American Labor (ILRCB 1100)** 3
Introductory Microeconomics (ECON 1110)* 3
Elective 3
PE (university requirement)

**SPRING**

First-year writing seminar* 3
Introductory Macroeconomics (ECON 1120)* 3
Electives 9
PE (university requirement)

Sophomore Year

**FALL**

Statistical Reasoning (ILRST 2100)** 4
Labor and Employment Law (ILRCB 2010)** 3
Human Resource Management (ILHR 2000)** 3

Advanced Writing† 3

**SPRING**

Collective Bargaining (ILRCB 2050)** 3
Economics of Wages and Employment (ILRLE 2400)** 3
Western Intellectual Tradition† 3
Cultural Perspectives† 3
Science and Technology† 3
Junior and Senior Years

ILR Elective courses—40 credits 40

• Must include at least one course from an approved list in each of the following three areas: International and Comparative elective, Labor History elective, and Economic Policy elective

• Minimum of 24 credits of ILR course work, including 4950 Honors, 4990 Independent Study—with a maximum of 16 credits for non-ILR courses at Cornell as approved in ILR departments

• Maximum of 12 credits from foreign language or advanced math

• May include up to 9 credits for one semester abroad or 15 credits for a full year abroad

• Maximum of 16 credits in a credit internship program

Additional general elective credits (in addition to distribution requirements) 12

Minimum total credits required for graduation 120

*Required courses usually taken in the College of Arts and Sciences

†Required courses taken in the ILR School

Distribution credits (courses you choose that satisfy requirements in certain categories)

Physical Education credit does not count toward the 120 credits

**ILR Math Requirement

A student who took AP calculus in high school and scored a 3 or better on the AB exam or subscore of BC exam has fulfilled the ILR math requirement. If AP calculus wasn’t completed, or if the scores noted above were not achieved, the student is expected to and pass the ILR Math Assessment before registering for required courses in Statistics and Labor Economics.

The ILR Math Assessment is scheduled in August, January, and May. Those who do not pass in the first attempt are expected to register in an appropriate math course and pass the assessment before the beginning of their third semester in the school. Any student who cannot meet the requirement by the beginning of the third semester is enrolled for a terminal semester and is expected to leave the school thereafter.

Transfer students are expected to meet the same standards in math: either present the score required by Cornell University for AP calculus (AB or BC) credit or pass the ILR Math Assessment before being permitted to register in required courses in statistics or labor economics, with a terminal semester
possible after failing the assessment given at the beginning of a third semester as an ILR student.

SCHEDULING AND ATTENDANCE

Schedule Changes
Occasionally it may be necessary for a student to request changes in his or her course schedule either before a semester begins or during the semester. Such requests must be directed to the Office of Student Services to avoid possible loss of academic credit.

Class Attendance
It is each student’s responsibility to attend all scheduled classes unless excuses have been approved by the faculty members. In some courses an instructor may permit a maximum number of class absences without a grade penalty or recommend withdrawal from the course. An explanation for absence from class may occasionally be secured from the Office of Student Services in advance of the expected absence. An approved absence may be warranted by:

1. participation in authorized university activities such as athletic events, dramatic productions, or debates;
2. medical problems supported by a record of treatment at Gannett Health Center or by another physician;
3. serious illness or death in the immediate family;
4. other circumstances beyond the student’s control.

A request for explanation of an absence should, when possible, be made to the Office of Student Services before the date of expected absence. A reported and explained absence does not relieve a student from fulfillment of academic requirements during the period of absence. The course instructor has the authority to determine what work must be completed. The office can only confirm the explanation for absence. Students should inform the Office of Student Services of any problems they have meeting course requirements.

STANDING AND GRADES

Academic Integrity
In 1987 the faculty of the School of Industrial and Labor Relations approved a revised code of academic integrity. This code, while based on the Cornell University code, varies somewhat.

Absolute integrity is expected of all Cornell students in all academic undertakings. They must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student’s failure to maintain academic integrity.

The code specifically prohibits:

1. knowingly representing the work of others as one’s own;
2. using or obtaining unauthorized assistance in any academic work;
3. fabricating data in laboratory or field work;
4. giving fraudulent assistance to others;
5. fabricating data in support of laboratory or field work.

Full details on the applications of those prohibitions to course work, term papers, examinations, and other situations are listed in the code (cunfo.cornell.edu/Academic/AIC.html).

Dean’s List
A Dean’s List is compiled for each of the four undergraduate classes each semester following receipt of final grades from the registrar. Eligibility for the Dean’s List is determined by applying all of the following criteria:

1. achievement of a semester average for freshmen of 3.3 or better; for sophomores of 3.4 or better; and for juniors and seniors of 3.6 or better;
2. a minimum course load for the semester of 12 letter-graded credits;
3. completion of all courses registered for at the beginning of the semester;
4. satisfaction of all good-standing requirements.

Academic Standing
Good standing requires that all of the following criteria be met at the end of each semester:

1. an average of C (2.0) for the semester’s work, including a minimum of 8 completed and letter-graded credits;
2. no failing grades in any course, including physical education;
3. a cumulative average of C (2.0) for all completed semesters.

If at the end of any semester a student fails to maintain good standing, or if overall academic performance is so marginal as to endanger the possibility of meeting school and university degree requirements, his or her record is reviewed by the Committee on Academic Standards and Scholarships. The committee may issue a written warning to the student at that time. If a student who does not improve after the written warning, he or she may be placed on a required leave of absence for one or two semesters.

Involuntary Separation from the School for Academic Reasons
A student may be placed on a required leave of absence at the end of any semester when he or she has failed:

1. to establish good standing after a semester on warning;
2. to maintain an average of 2.0 in any semester after a previous record of warning;
3. to achieve good standing after being on warning any two previous semesters;
4. two or more classes in one semester or has a semester average of 1.0 or below.

The Academic Standards and Scholarships Committee may decide to permit a student to remain on warning more than one semester if there has been significant improvement even though the cumulative average is still below 2.0.

S–U Grading Policy
An undergraduate may register to receive a final grade of S (Satisfactory) or U (Unsatisfactory) in courses that offer this option—either in the school or in other divisions of the university—subject to the following conditions:

1. the S–U option may be used in ILR and in out-of-college course electives only; not in directed studies;
2. students are limited to registering in two S–U courses a semester;
3. S–U registration is limited to 4 credits for each course;
4. students registering for S–U grades must be in good standing;
5. students must fulfill the graduation requirement of 105 letter-graded credits.

ILR faculty members assign a grade of U for any grade below C– and a grade of S for any grade of C– or better. A grade of U is considered equal to an F in determining a student’s academic standing, although it is not included in the cumulative average. No change of grading (from letter to S–U or from S–U to letter) may be made after the first three weeks of class. There are no exceptions to this restriction, and appeals will not be accepted.

Grades of Incomplete
A grade of incomplete (INC) is assigned when a course has not been completed for reasons that are acceptable to the instructor. It is understood that the work will be completed later and credit given. Instructors may grant a grade of incomplete for a limited number of clearly valid reasons, but only to students with substantial equity in a course. A firm and definite agreement on the conditions under which the work may be made up must be made with the instructor. The school’s policy allows a maximum of two full semesters of residence for removal of a grade of incomplete. If it is not made up within this time, the grade automatically becomes an F.

SPECIAL ACADEMIC PROGRAMS

To meet the special academic objectives of some students, the school’s faculty has established several special academic programs. For additional information, students should contact a counselor in the Office of Student Services. Counselors will explore the program with students to help them decide if it suits their interests.

Five-Year Master of Science Degree Program
With early planning it is possible to earn the M.S. degree in a fifth year of study. This program is designed specifically for those who wish concentrated study in an area of specialization in the school for a master of science degree. Students considering this program should consult a counselor in the Office of Student Services after their freshman year.

Credit Internship Program
The ILR Credit Internship Program affords our advanced undergraduates (juniors and seniors) opportunities to enhance their understanding of the field of industrial and labor relations by
working for a semester (approximately 15 weeks) in one of the professional careers it encompasses. The Credit Internship Program operates both domestically and internationally, from Washington, D.C., New York City, and Los Angeles to Geneva, London, Kuala Lumpur, and Beijing, among many other locations. For more information, please visit ILR's Off-Campus Programs office in 381 Ives East and the ILR Credit Internship web site: www.ilr.cornell.edu/creditinternships. You are also welcome to send e-mail to Bridig Beacher, assistant director of off-campus credit programs, at bk30@cornell.edu.

Summer Internships

What is a summer internship? During the summer, a student who works in a job that is related to industrial and labor relations may find that the employer refers to that job as an internship. Their terminology differs from that used by ILR and Cornell to refer to credit-bearing internships. Academic credits earned: ILR considers an internship to be a learning experience engaged in during the academic year, for which students earn academic credit, are supervised by a faculty member, are evaluated, have a grade recorded, and pay tuition. With very few exceptions (the Clem Miller Scholarship, Saul Wallen internships, Chaim and Ida Miller Scholarship, all of which are summer support provided to selected ILR students) summer employment has little in common with the semester credit internship program. Approval is required in advance.

Some companies tell students that they cannot be employed unless they receive academic credit for a summer internship. Cornell does not grant credit unless a student is registered, pays tuition, has a faculty supervisor, and is in a position approved for internship credit.

Programs in Washington

Interns work a minimum of 30 hours per week for the 15 weeks of the semester with approved organizations addressing issues of work and workplace relations. Students are also required to complete a comprehensive research project, related to their internship, that is graded by their ILR faculty supervisor. Students will also be required to take a 4-credit public policy course for ILR credit. Interns will receive a total of 16 ILR elective credits.

ILR/UCD Semester in Dublin Program

The ILR/UCD Semester in Dublin Program is the educational centerpiece of a comprehensive collaboration between the ILR School at Cornell University and the Quinn School of Business at University College Dublin. The program's purpose is to afford eligible ILR undergraduate students (juniors and seniors) opportunities to enhance their understanding of various international dimensions of the field of industrial and labor relations through courses taught by leading scholars at one of Europe's most vibrant and dynamic cities. The curriculum consists of three required courses: European Industrial Relations and Human Resource Management, Multinationals in the Global Economy, and Irish History and Culture. In addition, students will select one elective course related to the ILR field. Students will receive 12 ILR elective credits for the three ILR-related courses and three transfer credits for the Irish History and Culture course, for a total of 15 credits. For more information, please visit our web site: www.ilr.cornell.edu/dublin, or contact Bridig Beacher, assistant director of off-campus credit programs, at bk30@cornell.edu.

Honors Program

Undergraduates who are ranked in the top 20 percent of their class at the end of the junior year may propose a research project, an honors thesis, for review by the Committee on Academic Standards and Scholarships. When approved, the candidate for graduation with honors works for two semesters (for 4 credits each semester) to research, write, and then defend the thesis.

Study Abroad

ILR students who plan to study in another country most often do so in the junior year, occasionally in the senior year. They may study in one of the programs sponsored by Cornell, in one sponsored by another institution and endorsed by Cornell, or in an approved externally sponsored program. Information about study abroad is available in the Cornell or the Cornell Abroad office (300 Caldwell Hall). Students are expected to register for a full course load, the equivalent of 15 credit hours in a semester or 30 hours in a year, when they study abroad. Some courses will be the equivalent of general elective credit or distribution credit, but others may be accepted as ILR elective credit if evaluated and approved by the relevant ILR department chairs. A student may satisfy up to 9 hours of the ILR elective credit in a single semester abroad and up to 15 hours in a year of foreign study.

Application for foreign study requires that the student meet the Cornell deadlines as well as those specified by the program(s) of interest. Applications include tentative class schedules, recommendations from faculty members, approval of the application by an ILR faculty committee, essays, and transcripts. After being approved in ILR, the application is sent to the Cornell Abroad office and then to the program for which the student is applying. For more information, contact Kevin Harris, associate director of student services, 101 Ives Hall, 255-2225, Kfh4@cornell.edu, or the Cornell Abroad office, 300 Caldwell Hall, 255-6224, Cornell Abroad@cornell.edu, www.cuabroad.cornell.edu.

COLLECTIVE BARGAINING, LABOR LAW, AND LABOR HISTORY

ILR/UCD 1100 Introduction to U.S. Labor History

Fall and spring. 3 credits. R. Applegate, J. Berger, J. Cowie, C. Daniel, I. DeVault, and N. Salvatore. Introductory survey covering the major changes in the nature of work, the workplace, and the institutions involved in industrial relations from the late 19th century to the present.

ILR/UCD 1200 Introduction to Disability Studies

Fall. 2 credits. M. Gold.

A survey of the facts and issues that affect individuals with disabilities. Topics may include history of the treatment of disabilities; disability in literature; models of disability; disability in education, employment, health care, and the media; mental health and disability; accessible designs; and technologies for the disabled.

ILR/UCD 2010 Labor and Employment Law

Fall and spring. 5 credits. J. Gross, K. Griffith, and R. Lieberwitz.

Survey and analysis of the law governing labor relations and employee rights in the workplace. The first half of the course examines the legal framework in which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The second half surveys the laws against discrimination based on race, religion, sex, national origin, age, and disability. Also serves as an introduction to judicial and administrative systems.

ILR/UCD 2050 Collective Bargaining

Comprehensive introduction to industrial relations and collective bargaining in the United States; the negotiation, scope, and day-to-day administration of contracts; the major substantive issues in bargaining, including their implication for public policy; industrial conflict; the major challenges facing unions and employers today; U.S. industrial relations in international and comparative perspective.

ILR/UCD 2060 Writing Seminar in Law

Fall or spring. 3 credits. Limited to 15 students. Fulfills sophomore writing requirement. L. Adler, M. Gold, J. Gross, K. Griffith, and R. Lieberwitz.

Topics change depending on semester and instructor.

ILR/UCD 2061 Citizenship, Race, and Class in 20th-Century America

Fall. 3 credits. Fulfills sophomore writing requirement. J. Berger.

Explores the ways Americans have defined what it means to be a citizen of the United States. How have understandings of race and ethnicity influenced immigration policy and determined who can or cannot become a citizen? Why do some members of minority groups argue they historically have had only second-class citizenship? What types of benefits and rights should citizenship entail?

ILR/UCD 2063 Body, Mind, and Soul

Fall. 3 credits. Fulfills sophomore writing requirement. J. Cowie.

Bruce Springsteen once said that Elvis Presley freed our bodies and Bob Dylan freed our minds. Ever since then, Springsteen has been working on our souls. This sophomore writing seminar will hone our analytical and writing skills by examining the historical context and artistic expressions of these three icons of the 1950s, 1960s, and 1970s respectively. We will explore the roots of each artist’s work in relationship to history, race, gender, class, postwar culture, politics, as well as each other. This writing seminar will require an intensive amount of reading, writing, and re-writing in
order to penetrate the complexities of these artists’ contributions to American culture.

ILRCB 2070 Writing Seminar in History

Topics change depending on semester and instructor.

ILRCB 2080 Writing Seminar in Collective Bargaining
Fall or spring. 3 credits. Limited to 15 students. Fulfills sophomore writing requirement. K. Bronfenbrenner, A. Colvin, R. Givan, J. Gross, R. Hurd, H. Katz, and D. Lipsky.

Topics change depending on semester and instructor.

ILRCB 2090 Work and Labor in the Global Economy
Spring. 3 credits. Limited to 20 students. Fulfills sophomore writing requirement. K. Bronfenbrenner.

Examines the evolution of American workplace in the past 20 years in the context of the global economy. Through a combination of nonfiction, fiction, workplace site visits, worker interviews, guest speakers, and weekly short writing assignments, students explore the changing nature of corporate structure, the workplace, the work process, and workers’ lives in a range of occupations in five different sectors of the economy: IT, manufacturing, public sector, health care, and casual labor. Guest speakers include workers, union leaders, and employers from companies in the target sectors and site visits are made to both union and nonunion facilities. Particular emphasis is placed on exploring how work, workers, and communities have been impacted by globalization.

ILRCB 3010 Labor Union Administration
Fall. 4 credits. R. Hurd.

Study and analysis of the structure and operations of American unions, including the complicated internal life of the organizations; the varied environments in which unions develop and function; the relationship of national unions, local unions, and members in the context of internal union government; the ways in which unions are set up to handle bargaining, collective bargaining, contract administration, and political activity; and the widespread movement toward merger and consolidation of unions. Examines the role of union leaders and the strategic choices they make. Attention is given to current developments in the labor movement and to the eternal problems of attaining union democracy.

ILRCB 3020 Strangers and Citizens: Immigration and Labor in U.S. History
Fall or spring. 4 credits. I. DeVault.

Explores immigrant workers’ experiences in the 19th and 20th centuries from different perspectives. Students examine what it meant to the immigrants themselves to arrive as strangers in the United States while also examining the ways in which preexisting American groups defined these immigrants as “strangers.” Similarly, students look at U.S. citizens in their roles as greeters of immigrants, detractors of immigrants, and as models for the aspirations of immigrants. The main examples are taken from the industrial and union realms.

ILRCB 3030 Working-Class America in Mass Media and Popular Culture
Spring. 4 credits. J. Cowie.

Examines a variety of representations of working people found in commercial popular culture throughout the 20th century as a means to explore the way in which history, memory, and politics are shaped through popular discourse. Uses sources as diverse as popular music, Hollywood movies, the mainstream press, and television sitcoms to understand the historical and political influences on our pre-conceptions of workers, and how those forces influence our notions of authenticity, the historical experience, and the politics of social class.

ILRCB 3040 Special Topics: Labor History
Fall or spring. 4 credits. Prerequisite: permission of instructor. R. Applegate, J. Cowie, C. Daniel, I. DeVault, and N. Salvatore.

Undergraduate seminar whose topic changes depending on semester and instructor.

ILRCB 3042 Varieties of American Dissent, 1880-1990 (also AMST/HIST 3240)
Spring. 4 credits. N. Salvatore.

The idea of dissent in American society raises a variety of images. Civil rights activists, striking workers, and student radicals of the 1960s are familiar enough symbols of dissent. But might we understand a Pentecostal believer, filled with the spirit of his or her God in criticizing contemporary society, as an example of American dissent? This course examines the varieties of economic, political, and cultural dissent in American history between the 1880s and 1990, and examines how understanding dissent in its specific historical context illuminates major aspects of American life and culture.

ILRCB 3060 Recent History of American Workers: From the ’60s through the ’90s
Fall. 4 credits. J. Cowie.

Focuses on the social history of American workers and the role of organized labor in American life since the 1960s. Course themes often center on the complexities of social class in the United States. Topics include the transformations of liberalism, the civil rights and black power movements, the Vietnam War, the rise and fall of the New Left, industrial restructuring, the rise of neocorporatism, changes in civic identity, and sources of cultural conflict. Course ends with an examination of globalization, changes in the major political parties, the future of work, and prospects for social change.

ILRCB 3070 U.S. Business History: The Changing American Corporation
Spring. 4 credits. R. Applegate.

Surveys the changing organization of business firms in the United States since the Civil War, with a central focus on the historically dominant form of American business organization: the large industrial corporation. Course work covers the distinctive features and historical significance of the corporations known as “big business” by investigating the circumstances of their creation, successive phases of their organizational restructuring, the expanding reach of their managerial controls from firms to industries and markets, and the enduring contest over their governance.

ILRCB 3071 Governing Economic Development: The U.S. Experience
Fall. 4 credits. R. Applegate.

Surveys the history of U.S. economic development from the perspective of the governance structures created to organize and control economic activity, emphasizing the changing regulatory roles of public and private institutions. Course work covers successive periods of economic development: a comparison of the “old liberal” governance regimes of the 19th century with the “new liberal” regimes created in the 20th century is followed by an investigation of the post-1970s contest between “neoliberal” and “neoprogressive” forms of economic regulation.

ILRCB 3072 Union Advocacy for Equality and Social Justice
Fall or spring. 2 credits. R. Hurd.

An exploration of the U.S. labor movement’s relatively recent embrace of immigrant rights and support for the campaigns of lesbian, gay, bisexual, and transgender workers. Also a review of labor’s longer-term involvement in the women’s rights and civil rights movements. Attention to the role of labor constituency groups including the Coalition of Labor Union Women, Asian Pacific American Labor Alliance, A. Phillip Randolph Institute, Coalition of Black Trade Unionists, Labor Council for Latin American Advancement, and Pride at Work. Also individual union political advocacy and targeted bargaining innovations related to equality and social justice.

ILRCB 3080 Workers’ Rights as Human Rights
Fall or spring. 4 credits. J. Gross.

Examines U.S. domestic labor law and policy using internationally accepted human rights principles as standards for judgment. Considers the idea of human rights, its philosophical and moral origins, and introduces the legal and social obligations of both governments and nonstate action to respect the human rights of workers. Topics include the Universal Declaration on Human Rights, ILO International Labor Standards, the Declaration on Fundamental Principles and Rights at Work, workers’ associations and the right to organize and collectively bargain, occupational health and safety, discrimination, forced labor, child labor, migrant labor, labor rights defined in international trade agreements, the value judgments underlying labor policy choices, and the struggle for enforcement of human rights standards nationally and internationally. The course examines these topics in an internationally comparative context and includes presentations and discussions from international experts on various human rights issues.

ILRCB 3085 African American Social History, 1865 to 1910: The Rural and Urban Experience
Fall. 4 credits. N. Salvatore.

Examines the experience of black Americans from Emancipation through the experience of the first generation born after slavery. Topics include the changing nature of work, political organization and the movement for Jim Crow protest, accommodation, and separatism; and the continued evolution of black social and cultural expression after slavery.
ILRCB 3860 African American Social History, 1910 to the Present: Race, Work, and the City
Spring. 4 credits. N. Salvatore.
Examines the experience of black Americans from the study of the Great Migration just before World War I. Topics include the effects of migration on work experiences and unionization patterns, the impact of depression and two world wars on black social structure and economic status, the growth of the Civil Rights movement, and the impact of migration and urbanization on a variety of social and cultural institutions.

ILRCB 3880 Unfree Labor: Servants, Slaves, and Wives
Spring. 4 credits. J. DeVault.
Examines various forms of unfree labor, mostly in the antebellum (pre–Civil War) era in the United States. Will look at the situation of indentured servants and apprentices, African slaves, and wives of all social classes, reaching both ethnographical and historical studies. Will also discuss the contrasts and interrelationships among these different groups of early American workers.

ILRCB 4000 Union Organizing
Spring. 4 credits. Prerequisites: ILRCB 2010/5010, 2050/5000. K. Bronfenbrenner.
Examines the theory, practice, and strategy of organizing in a global economy. Addresses current challenges facing unions organizing in both the public and private sector, in certification elections and card check campaigns. Topics include review of organizing theory, the social and political context of current organizing, the debate on organizing policy and labor law reform, worker attitudes toward organizing, changing employer strategies and tactics, staffing and financing organizing campaigns, strategic targeting, organizing styles and tactics, changing demographics of newly organized workers, organizing outside the labor board process, and the limits and possibilities of organizing on a global scale.

ILRCB 4020 Migrant Workers (also HIST/LATA/LSP 4310)
Spring. 3 credits. R. Craib.
For description, see LSP 4310.

ILRCB 4030 The Economics of Collective Bargaining in Sports
Fall or spring. 4 credits. L. Kahn.
Surveys economic and industrial issues in the sports industry. Topics include salary determination, including free agency, salary caps, salary arbitration; competitive balance and financial health of sports leagues; antitrust issues in sports; labor disputes, union history, and contract administration issues in sports leagues; discrimination in sports; and performance incentives.

ILRCB 4040 Contract Administration
Fall. 4 credits. Prerequisites: ILRCB 2010/5010, 2050/5000. K. Bronfenbrenner.
Focuses on the practice, nature, and challenges of union representation under collective bargaining agreements. Working with union contracts, constitutions, and by-laws from a diversity of national and local public and private sector agreements, the course examines how U.S. unions represent their members in different industries and different collective bargaining environments. Issues addressed include union representative/steward rights and responsibilities, contract enforcement structures and practice, access to information, new work systems, hours of work and scheduling, contingent staffing arrangements, workplace discrimination, health and safety, promotional opportunities, downsizing, leadership development, membership involvement and commitment, internal organizing, coalition building, and decertification campaigns. Students practice hands-on work in interpreting contract language and preparing and presenting grievances and unfair labor practices.

ILRCB 4050 Employment Law I
Fall. 4 credits. Prerequisites: ILRCB 2010, 5010, or permission of instructor.
Attendance and participation mandatory. May be taken either before or after ILRCB 4051. L. Adler.
Takes a similar approach to ILRCB 4051, but the subject matter differs. Topics include employment at will and its exceptions; the role of the Constitution in the U.S. workplace; the law of electronic and traditional privacy at work; and the rights of contingent workers in the old and new economies. One study reviews primarily federal and state court decisions and focuses upon the ways that employees’ rights are advanced or restricted by law. There are considerable reading responsibilities.

ILRCB 4051 Employment Law II
Spring. 4 credits. Prerequisites: ILRCB 2010, 5010, or permission of instructor.
Attendance and class participation mandatory. May be taken either before or after ILRCB 4050. L. Adler.
Takes a similar approach to ILRCB 4050, but the subject matter differs. Topics include the meaning and validity of preemployment arbitration agreements; the critical distinctions in the status and thus the rights of employees, independent contractors, and contingent workers; what rights the working poor, the homeless, and workforce individuals have on the “job,” and the origin and application of the workers’ compensation laws that apply when people are injured or contract disease from their work. One study reviews primarily federal and state court decisions and focuses upon the ways employees’ rights are advanced or restricted by the law. There are considerable reading responsibilities.

ILRCB 4060 Hospitality Industry Labor Relations (also HADM 4481)
Spring. 4 credits. R. Hurd and D. Sherwyn.
Critical labor relations issues facing the hospitality industry. The impact of the structure and performance of the industry on the collective bargaining environment. Labor relations strategy of UNITE-HERE, the key union representing hospitality industry workers. Labor relations strategies of selected hospitality industry corporations. Leadership, management partnerships. Neutrality, union organizing, and the expanding reach of hospitality industry labor relations. All students will participate in simulated organizing campaigns and contract negotiations. Representatives of management and unions will address the class on key contemporary developments.

ILRCB 4070 Contemporary Trade Union Movement
Spring. 4 credits. Prerequisites: undergraduates, ILRCB 1100; graduate students, ILRCB 5020. R. Hurd.
Examination of contemporary trade union issues, including union power; political action, collective bargaining approaches, and organizing efforts. Covers structural, functional, and strategic aspects of contemporary unions. Speakers from the union movement address the class.

ILRCB 4820 Ethics at Work
Fall or spring. 4 credits. Prerequisite: junior or senior standing or permission of instructor. M. Gold.
Examines major theories of ethics, then applies them to issues in the employment relationship such as genetic screening of job applicants, random drug testing of employees, affirmative action, discipline for off-duty conduct, whistle-blowing, worker safety and cost/benefit analysis, comparable worth, strikes by employees providing crucial services, and crossing a picket line.

ILRCB 4860 Collective Bargaining in Public Sector
Fall or spring. 4 credits. Prerequisites: ILRCB 2010 and 2050/5000. L. Adler.
Examines the history of public employees’ collective bargaining and other workplace rights. Emphasis is placed on the current trade-offs between municipal and state governments and their unionized employees in New York City and state, although trends in other states, the federal sector, and in certain EU countries are also examined. Topics include representation rights, public sector workers ability to leverage their power, unfair labor practices, impasse procedures, the scope of collective bargaining, and a limited treatment of the U.S. constitution in the public workplace. Examination of the development, practice, and extent of collective bargaining between federal, state, and local governments and their employees. Throughout, we are mindful of how the exercise of public employee rights impacts municipal state, and federal public policy; labor market considerations. There are several prominent guest speakers.

ILRCB 4880 Liberty and Justice for All
Fall or spring. 4 credits. Prerequisite: junior or senior standing or permission of instructor. M. Gold.
Examines major theories of ethics, then applies them to contemporary issues such as affirmative action and reverse discrimination, the right to life (from abortion to capital punishment), comparable worth, and constitutional rights such as freedom of speech.

ILRCB 4950 Honors Program
Fall and spring (yearlong). 4 credits each semester. Students are eligible for ILR senior honors program if they (1) are in upper 20 percent of their class at end of junior year; (2) propose an honors project, entailing research leading to completion of a thesis, to an ILR faculty member who agrees to act as thesis supervisor; and (3) submit project, endorsed by proposed faculty sponsor, to Committee on Academic Standards and Scholarships. Accepted students embark on a two-semester sequence. The first semester consists of determining a research design, familiarization with germane scholarly literature, and preliminary data collection. The second semester involves completion of the data collection and preparation of the honors thesis. At the end of the second semester, the candidate is examined orally on the completed thesis by a committee consisting of the thesis supervisor, a second faculty member designated by the appropriate department.
I N D U S T R I A L  A N D  L A B O R  R E L A T I O N S  -  2 0 0 9 – 2 0 1 0

chair, and a representative of the Academic Standards and Scholarship Committee:

ILRCB 4970–4980 Field Research,
Internship
Fall and spring. 4970, 4 credits; 4980, 8 credits. Staff.
All requests for permission to register for an internship must be approved by the faculty member who will supervise the project and the chairman of the faculty member's academic department before submission for approval by the director of off-campus credit programs. Upon approval of the internship, the Office of Student Services will register each student for 4970, for 4 credits graded A+ to F for individual research, and for 4980, for 8 credits graded S–U, for completion of a professionally appropriate learning experience, which is graded by the faculty counselor.

ILRCB 4990 Directed Studies
Fall and spring. 4 credits. Staff.
For individual or group research projects conducted under the direction of a member of the ILR faculty, in a special area of labor relations not covered by regular course offerings. Sophomores, juniors, and seniors with a preceding semester of 3.0 semester average are eligible to submit projects for approval by the Academic Standards Committee. Students should consult with a counselor in the Office of Student Services at the time of CoursEnroll to arrange for formal submission of their directed study.

ILRCB 5000 Collective Bargaining
Fall. 3 credits. Prerequisite: graduate standing. Recommended: previous or concurrent enrollment in ILRCB 5010. A. Colvin, H. Katz, and S. Kuruvilla.
Comprehensive introduction to the industrial relations system of the United States. Covers the negotiation, scope, and day-to-day administration of contracts; union and employer bargaining structures; implications of industrial relations issues for U.S. competitiveness and public policy; industrial conflict; and U.S. industrial relations in international and comparative perspective.

ILRCB 5005 Employee Benefits: Law,
Policy, and Practice
Fall, seven-week course, 2 credits. L. Compa.
Offers a general overview of the basics of ERISA, retirement plans, and health insurance, with some additional treatment of other employee benefits such as sick leave, parental leave, and child care. We will examine these issues in (1) a policy context, since health insurance and pension protection will be at the top of the national policy agenda with a new administration and congress in Washington; and (2) a collective bargaining context, since bargaining over employee benefits present sharp challenges to employer and union negotiators.

ILRCB 5010 Labor and Employment Law
Fall. 3 credits. Prerequisite: graduate standing. A. Colvin, L. Compa, M. Gold, K. Griffith, and R. Lieberman.
Survey and analysis of the law governing labor relations and employee rights in the workplace. The first half of the course examines the legal framework in which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The second half surveys additional issues of rights in employment, including such topics as employment discrimination, the development of "unjust dismissal," and union democracy. Also serves as an introduction to judicial and administrative systems.

ILRCB 5020 History of Industrial
Relations in the United States since 1865
Fall or spring. 3 credits. Prerequisite: graduate standing. J. Cowie, C. Daniel, I. DeVault, and N. Salvatore.
Introductory survey emphasizing historical developments in the 20th century. Special studies include labor union struggles over organizational alternatives and such other topics as industrial conflicts, working-class lifestyles, radicalism, welfare capitalism, union democracy, and the expanding authority of the federal government.

ILRCB 5040 The U.S. Industrial Relations System
4 credits. Offered only in New York City for M.P.S. program. Staff.
Examines the development, operation, and outcomes of the U.S. industrial relations system in a comparative context. Specifically, the course contrasts the American experience with industrial relations institutions and outcomes with the experience of several other countries in Europe and Asia. Students look at the process of union formation, the practice of collective bargaining at different levels, the methods of dispute resolution, and the legal regime germane to industrial relations. The course also focuses on both processes and outcomes of different country systems, focusing on the degree of collaboration or conflict, wage levels and wage inequality, and practices in different industries and firms. Finally, the role played by industrial relations and human resource policy in economic and social development in these nations is addressed.

ILRCB 6000 Special Topics: Labor Law
Fall or spring. 4 credits. Prerequisite: permission of instructor. Open to graduate students and upper-division undergraduates. Sem. A. Colvin, L. Compa, M. Gold, K. Griffith, and R. Lieberman.
Topic changes depending on semester and instructor.

ILRCB 6011 Negotiation: Theory and
Practice
Fall or spring. 4 credits. Prerequisites: background in economics and social sciences, or permission of instructor. D. Lipsky and R. Seeber.
Deals with negotiation and bargaining, focusing on process, practice, and procedures. Concentrates on the use of negotiation and bargaining to resolve conflicts and disputes between organizations and groups. Discusses various theories of bargaining such as conventional, "positional" bargaining, interest-based bargaining, the use of power in negotiation, and game theoretic approaches to bargaining. For example, markets, and the use of various models to illustrate this point. This course is a general course and thus does not deal with labor markets or does not focus on any particular type of negotiation. Rather, it examines negotiation and bargaining generally, using examples from different contexts, including employment relations, environmental disputes, and real estate transactions, and other settings.

ILRCB 6012 Managing and Resolving
Conflict
Fall or spring. 4 credits. Prerequisite: background in economics and social sciences or permission of instructor. A. Colvin, D. Lipsky, and R. Seeber.
Deals with managing and resolving workplace conflicts and examines dispute resolution and conflict management in both union and nonunion settings. The course covers two related topics: (1) Third-party dispute resolution, including alternative dispute resolution (ADR). This part focuses primarily on the use of mediation and arbitration but also deals with other dispute resolution techniques, such as fact-finding, facilitation, peer review, and the ombuds function; (2) Conflict management in organizations, including the recent development of conflict management systems. The course reviews the factors that have caused the growth of ADR and conflict management systems, and it provides instruction on the design, implementation, and evaluation of such systems.

ILRCB 6014 Industrial Relations in
Transition
Spring. 4 credits. Prerequisite: senior or graduate standing. H. Katz.
Considers whether recent developments such as concession bargaining, worker participation programs, and the growth of nonunion firms represent a fundamental transformation in industrial relations practice. Reviews recent research and new theories arguing that such a transformation is occurring, including the work of Piore and Sabel, Bluestone and Harrison, and Kochan, McKersie, and Katz. Also reviews the counterarguments and evidence put forth by those who believe no such transformation is under way. Course material focuses on industrial relations practice in the private sector in the United States, although some attention is paid to developments in Western Europe, the United Kingdom, and Japan.

ILRCB 6018 Current Issues in Collective
Bargaining: Theory and Practice
Spring. 4 credits. K. Bird. A. Colvin.
Examines the theory and practice of the collective bargaining process in the past three decades. This will be achieved both through a review of recent literature on bargaining theory and through the analysis and evaluation of a series of collective bargaining campaigns from a variety of industries, unions, strategic models, and outcomes both in the United States and around the world, starting with the Phelps Dodge Strike in 1982 and ending with recent contract campaigns with large transnational firms, which students will research and write about as their final paper. Subjects addressed will include changing bargaining climate, bargaining theory, variations in bargaining structures and practices, union and company power analysis, role of membership in bargaining, interest-based bargaining, bargaining with transnational firms, comprehensive and cross-border campaigns, strikes and lockouts, community labor coalitions, bargaining in an era of global economic crisis, and bankruptcy and bargaining.

ILRCB 6019 Dispute Resolution
Practicum
Spring. 2 credits. Limited to 20 students. D. Lipsky, R. Seeber, and R. Scanza.
Purpose is to link classroom discussion and analysis of arbitration and mediation with opportunities for students to observe actual arbitration and mediation cases. The course is designed to be an advanced seminar for graduate and undergraduate students who have a serious interest in pursuing a career in arbitration or mediation. Classroom discussions and readings will focus on both labor arbitration and mediation (i.e., the use of arbitration and mediation in unionized settings) and employment arbitration and mediation (i.e., the use of arbitration and mediation in cases involving nonunion employees).

ILRCB 6020 Arbitration
Fall and spring. 4 credits. Limited to 21 students. Prerequisites: ILRCB 2010, 2050, 5000, and 5010. A. Colvin, J. Gross, and R. Lieberwitz. Study of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of a mock arbitration hearing, and the preparation of arbitration opinions and post-hearing briefs.

ILRCB 6040 Theories of Equality and Their Application in the Workplace
Spring. 4 credits. R. Lieberwitz. An examination of the various aspects of equality in the workplace, focusing most closely on issues of race, gender, and national origin and the ways in which societal discrimination on these bases are institutionalized in the workplace. Theories attempting to define "equality" and specific workplace issues are studied, including the means for achieving equality at the workplace. The course entails research and writing assignments and a high level of student participation in class discussions.

ILRCB 6060 Theories of Industrial Relations Systems
Fall or spring. 4 credits. Prerequisite: senior or graduate standing. ILRCB 1100, 2050, 5000. H. Katzen. Traces the evolution of theory and research on industrial relations. Topics include theories of the labor movement; institutional models and evidence regarding what unions do; the origins of national labor markets and their relationship with unionization; models of strikes; empirical assessments of arbitration; research on union decline; and empirical evidence of the impacts of new technology.

ILRCB 6070 Values in Law, Economics, and Industrial Relations
Fall and spring. 4 credits. Limited to 21 students. Prerequisites: ILRCB 2010, 2050, 5000, 5010. J. Gross. Examination of the open and hidden values and assumptions that underlie the contemporary U.S. systems of employment law, work and business, and industrial relations. Classroom discussions and student research projects use novels and short stories (as well as the literature of industrial and labor relations) to focus on serious issues such as discrimination, law, economics, and the state; work and business; power, conflict, and protest; and rights and justice.

ILRCB 6079 Low-wage Workers and the Law
Spring. 4 credits. Prerequisite: ILRCB 2010 or permission of instructor. K. Griffith. Examines labor and employment law as it affects low-wage (including documented and undocumented immigrant) workers. It will cover traditional labor and employment law statutes as well as new developments in labor and employment law that affect low-wage workers. Much of the course will be dedicated to federal legislation and case law related to the above. The course will also cover the overlap between labor and employment law and low-wage and immigrant worker organizing efforts.

ILRCB 6080 Special Topics in CB, LL, and L History
Fall or spring. 4 credits. Staff. Topics change depending on semester and instructor.

ILRCB 6081 Public Policy and Public Sector Employment Relations
Fall. 4 credits. Prerequisites: ILRCB 2010/5010 or permission of instructor. L. Adler. Examine legal and other public employment conflicts created by taxation, education, fiscal failings, and labor-management problems. Our understanding will be informed by assessing the conflict resolution, litigation, interest-based bargaining, traditional collective bargaining and alternative dispute resolution mechanisms. Journal review, legal cases, and policy readings related to current, critical challenges to the public employment relationship will comprise our traditional study. As important will be field trip work with dispute resolution professionals, litigators, and collective bargaining practitioners. In addition to assigned readings, class participation, and an encouraged modest externship, there will be one examination and one or more significant writing assignments.

ILRCB 6082 Collective Bargaining Simulation
Fall. 4 credits. Limited to 18 students. Prerequisite: junior, senior, or graduate standing. Recommended: previous or concurrent enrollment in collective bargaining theory and labor law course. Attendance at first class mandatory. Up to two required extended bargaining sessions. H. Kramer. Students prepare for and participate in a simulated negotiation between a hypothetical corporation and a hypothetical union in a typical big company with mid-size single site bargaining unit context. Students are assigned, usually in line with preferences, to either a management or union bargaining team. The course stresses the negotiation process over settlement or substantive outcomes. Negotiation problems are as real life as possible, constrained by student time needs and with attention given to dynamic legal, political, economic, and communications concerns as well as power, information, and time factors. Participants plan for negotiations, reach agreements in principle and negotiate language, bargain wages, pensions, health care and noneconomic items in the context of a company and a union with an established contract, policies, and culture. This is a hands-on program with active participation essential.

ILRCB 6083 Research Seminar in the History of Industrial Relations
Fall or spring. 4 credits. Prerequisites: ILRCB 1100, 5020. J. Cowie, C. Daniel, I. DeVault, N. Salpeter. Areas of study are determined each semester by the instructor offering the seminar.

ILRCB 6840 Employment Discrimination and the Law
Fall or spring. 4 credits. Prerequisite: ILRCB 2010/5010 or equivalent. M. Gold, K. Griffith, and R. Lieberwitz. Examines the laws against employment discrimination based on race, color, religion, sex, national origin, age, and disability.

ILRCB 6870 Introduction to Labor Research
Spring. 4 credits. Limited to 20 students. K. Bronfenbrenner. Designed to provide students interested in the labor field with the skills necessary to understand and use social science research as it relates to the labor movement. The course's four major goals are to (1) develop the skills to critically evaluate a wide variety of research relating to unions and the workplace; (2) introduce a number of both quantitative and qualitative research techniques used by unions and those who study the labor movement; (3) familiarize students with the broad range of library and computer resources that can be used for labor and corporate research; and (4) provide students with an opportunity to design and conduct a research project for a national or local union.
inequality) are also evaluated. The effect of technology, corporate structures, and public policy on union bargaining power is outlined, and a number of case studies of collective bargaining in the private sector are reviewed. A term paper is required.

ILRRCB 7070 Seminar on Conflict and Dispute Resolution
Fall. 3 credits. A. Colvin.
Examines past and present research on conflict and dispute resolution. This seminar will cover a variety of perspectives on conflict and its resolution. Readings will include a mixture of classic works on conflict and dispute resolution in work and employment relations, as well as recent conceptual and empirical studies in this area.

ILRRCB 7080 Negotiations in Practice
Fall. 3 credits. S. Kuruvilla.
Provides opportunities for students to develop their negotiating abilities for use in organizational and other settings. The course is premised on the assumption that negotiating concepts are best learned through practice that is grounded in rigorous analysis and reflection. While theoretical principles and concepts from a variety of perspectives (e.g., social psychology, sociology, and economics) are presented through lectures and readings, this course focuses primarily on improving practical skills. Participants learn not only to enhance their individual abilities in dyadic and group situations but also to analyze contexts for the most effective application of these skills.

ILRRCB 7081 Seminar in American Labor History (also HIST 6830)
Fall on offer. Prerequisite: graduate standing and permission of instructor. J. Cowie, I. De Vault, and N. Salvatore.
Topics change depending on semester and instructor.

ILRRCB 7900 ILR M.P.S. Program
Fall and spring. 1–9 credits. Staff.
Supervised research only for those enrolled in the ILR M.P.S. program.

ILRRCB 7980 Internship
Fall and spring. 1–3 credits.
Designed to grant credit for individual research under direction of a faculty member by graduate students who have been selected for an internship. All requests for permission to register for ILRRCB 7980 must be approved by the faculty member who will supervise the project.

ILRRCB 7990 Directed Studies
Fall and spring. Credit TBA.
For individual research conducted under the direction of a member of the faculty.

ILRRCB 8800 Workshop in Collective Bargaining, Labor Law, and Labor History
Fall and spring. 2 credits. Prerequisite: M.S. and Ph.D. candidates in department. 3–5 grades only. Staff.
Provides a forum for the presentation of current research being undertaken by faculty members and graduate students in the Department of Collective Bargaining, Labor Law, and Labor History, and by invited guests. All M.S. and Ph.D. candidates in the department who are at work on their theses are strongly urged to enroll. Each student is expected to make at least one presentation during the year, focusing on the formulation, design, execution, and results of his or her thesis research.

HUMAN RESOURCE STUDIES

L. Dyer, chair (387 Ives Hall, 255-8805);
R. Batt, B. Bell, J. Bishop, D. Burton,
D. Cohen, C. Collins, L. Dragoni, L. Gasser,
J. Grasso, K. Hallock, J. Hausknecht,
R. Hewerston, C. Homrighouse, R. Kehoe,
B. Livingston, L. Nishi, C. Thrarp, C. Warzinski,
W. Wasmuth, P. Wright.

ILRHR 2600 Human Resource Management
Fall and spring. 3 credits. Prerequisite: ILR students or permission of instructor. Staff.
Intended to introduce students to the field of human resource management (HRM). Students learn theories and applications involved in effectively managing people in organizations. In addition, this course covers current topics in HRM that have resulted from environmental and organizational challenges, e.g., technology, globalization, legislation, restructuring, worklife balance, changing labor markets, and so on. Emphasis is placed on developing relevant problem solving and critical thinking skills, as the basic concepts of HRM and the skills developed in this course are applicable to all types of organizations and jobs in which students will eventually work.

ILRHR 2650 Essential Desktop Applications
Fall, spring, and summer. 2 credits. Limited enrollment. C. Homrighouse.
Provides skills in the use of personal computers that run the Windows operating system. Covers the basics and time-saving techniques for Windows, Lexis Nexis, and Microsoft Excel, Access, and PowerPoint. Emphasizes hands-on experience and development of PC-based solutions by using examples that address human resource and other practical real-world issues. The skills developed in this course are useful for several elective courses in human resource management and essentially in the 21st-century workplace.

ILRHR 2680 Job Loss
Fall. 3 credits. Sophomore writing course. Limited to 15 students. K. Hallock.
Students will gain an understanding of the effects of layoffs on firms, from an interdisciplinary perspective. By the end of the course you should know quite a bit about the who, what, where, when, and why of layoffs and you should understand the effects of the layoffs on firms. Readings from economics, sociology, political science, psychology, finance, industrial relations, and human-resource management. Will include discussion of recent theory and research. However, the strong focus of the course will be on applications and on writing. Issues we will consider include: federal and state legislation and public policy, how layoffs actually occur—the procedures used by human resource managers in implementing layoffs, reasons for Layoffs of workers involved in layoffs, timing of layoffs, layoffs and managerial outcomes (such as compensation and managerial turnover), layoffs and firm performance in the short run, layoffs and firm performance in the future, and suggestions for policy. Occasional speakers will join the class: for example, Louis Uchitel from the New York Times has agreed to speak about writing and his work on layoffs.

ILRHR 2690 Cross-Cultural Perspectives on Work
Spring. 4 credits. Writing course. Prerequisite: ILRHR 2600 or equivalent. L. Nishi.
Most management theories have been developed and tested by Western scholars, based on Western cultural assumptions regarding the bases of human cognition, motivation, and emotion. Yet the vast majority of the world's population is non-Western and lives accordingly, based on different cultural assumptions. Students will begin by learning about theories of cultural variation, then will learn about the implications of these cross-cultural differences for basic HR and OB concepts.

ILRHR 3600 Human Resource Economics and Public Policy
Spring. 4 credits. Prerequisite: sophomore, junior, or senior standing. J. Bishop.
State and local efforts to improve K–12 education are employing a variety of (sometimes contradictory) reform strategies. This course critically examines the case that is made for (and against) each of the major reform proposals and review studies that provide objective evidence on their effectiveness. The education reform strategies examined include vouchers, charter schools, small schools, career academies, extending the school day and year, better preparation and selection of new teachers, better professional development, ending tenure, merit pay, state standards and school accountability, ending social promotion, and externally set end-of-course examinations.

ILRHR 3620 Career Development: Theory and Practice
Fall, spring, seven weeks. 2 credits. Limited to 30 students. S–U grades only. L. Gasser.
Covers the components of career management, individual factors, and organizational realities in the development of both career consultants and those concerned with career management. Two complementary learning tasks are required: information-gathering for career decision making based on self-assessment activities, and comprehension of organizational circumstances and practices encountered as careers develop. Grades are based on short writing assignments and a research paper.

ILRHR 3650 Organizational Consulting: Process and Results
Fall. 4 credits. Prerequisite: ILRHR 2600 or equivalent. R. B. Hewerston.
Provides students with the insights and tools they need to work successfully as human resource generalists who consult with operating managers to improve organizational effectiveness. The consulting process is examined from both an interpersonal and systems perspective. This includes the knowledge and skills required to build trust and influence, contract with clients, and maintain good working relationships with clients. It also includes developing a clear comprehension of the consulting process from diagnosis, through action planning, to implementation and completion. While attention is given to theory and practice, the focus is on gaining hands-on experience dealing with real-world issues. As a final project, students design and present consulting plans based on actual case
situations (e.g., implementing a new HR program, effectuating a new organizational culture, and enhancing project team operations).

ILRHR 3670 Employee Training and Development
Fall. 4 credits. Prerequisite: ILRHR 2600; undergraduate standing. B. Bell and L. Dragoni.
Faced with increasing competition, globalization, technological complexities, and dynamic labor markets, firms increasingly are struggling to determine the best approaches to training and developing their workforces. This course introduces the issues, concepts, and processes with which firms are wrestling, as well as specifics on planning, designing, implementing, and evaluating training and development programs. After completing this course, participants should be able to conduct a needs assessment, evaluate employee readiness, evaluate the strengths and weaknesses of various training and development techniques, solve transfer of learning problems, and design evaluation procedures.

ILRHR 4600 International Human Resource Management
Fall. 4 credits. Prerequisite: ILRHR 2600 or equivalent. L. Nishii.
Illustrates how cultural context affects the structure and implementation of HR practices. The first part focuses on comparative human resource management or the study of how HRM differs across cultures, with a primary emphasis on comparing American HRM practices with those in East Asia and a secondary focus on Western European HRM practices. Class readings and discussions are grounded in theories of cultural variation. The second part focuses on IHRM, or the HRM issues facing multinational corporations. Topics include expatriation and repatriation, global leadership, compensation, and training.

ILRHR 4610 Working in the New Economy: The Sociology of Work
Spring. 4 credits. Prerequisite: undergraduate standing. R. Batt.
Seminar that draws on qualitative studies of the workplace in the United States and abroad to examine how workers and managers are affected by changes in globalization, technology, business strategies, labor markets, and other factors. What dilemmas and conflicts emerge, how are they managed, and what are their outcomes? Readings cover firsthand accounts of people’s experiences in a wide range of occupations and industries, including professional, service, and factory workers.

ILRHR 4620 Staffing Organizations
Spring. 4 credits. Prerequisite: undergraduate standing. C. Collins, J. Hausknecht, and B. Livingston.
Seminar designed to provide an overview of the processes by which organizations staff positions with both internal and external applicants. Through a combination of lectures, cases, and projects, the course covers theory, research, and legal foundations that inform organizational staffing actions. Topics include staffing strategy and context, measurement of staffing effectiveness, job/competency analysis, human resource planning, recruitment and job choice, retention, and internal and external selection practices.

ILRHR 4631 Managing Compensation
Spring. 4 credits. Prerequisite: ILRHR 2600 or equivalent; undergraduate standing. C. Tharp.
Compensation, including direct wages, indirect payments, and benefits, is studied from the points of view of theory and practice. Upon completion of the course, students should be able to analyze wage surveys, evaluate jobs, create salary structures, and administer compensation programs within the context of sound economic and motivational theory, and to align rewards with business strategy. Topics include strategic perspectives on pay, internal equity and alignment, external competitiveness, pay for performance; compensating special groups (including unionized employees, executives, and boards of directors); international compensation; employee benefits; and compensation administration (costing, taxation, regulation, etc.).

ILRHR 4632 Finance for Human Resources
Fall. 4 credits. J. Grasso.
Provides students with basic concepts of financial management and analysis, with an emphasis on human resource applications. The course begins with understanding financial statements; the financial structure of the firm; evaluation of financial performance; cash flow; and time value of money. It then focuses on investment management and performance with a broad overview of debt, equity, and alternative investments and a review of capital markets. The case-study method is used to evaluate several financial market disruptions in the past decade. The HR portion of the course focuses on valuing pension obligations; stock options and executive pay; costing labor agreements; costing health care and other benefits; preparing a compensation budget; and understanding IRS Form 5500; etc. The course also reviews corporate proxies; governance; social responsibility and corporate transparency; ethics and fraud; and SEC, FASB, IRS, and Sarbanes-Oxley requirements. Students are required to follow one company stock, industry, or topic throughout the course; write a paper; and work in groups on small projects.

ILRHR 4640 Business Strategy
Fall. 4 credits. Prerequisite: undergraduate standing. D. Cohen.
Integrative course focusing on strategic management. The main purpose is to provide an opportunity for students to study and analyze issues associated with strategic thinking in complex business situations, top management decision making, and the functions of corporations as a whole. Allows students to bring together all of the functional skills they have learned in other business-related classes (e.g., marketing, accounting, finance, human resources) and to apply this knowledge to business problems faced by top management in existing organizations. Class format includes lectures and case studies.

Fall. 4 credits. Prerequisite: ILRHR 2600 or equivalent. R. Keheo.
Explores ways in which the effective use of human capital maximizes organizational success. Specifically, it provides insights into and practice using the processes firms employ to attain and maintain alignment among the three key elements involved in this endeavor: business strategies, organizational designs, and human resource strategies. Lectures and discussion are used to promote a clear understanding of the theory, research, and experience that underlie the role of human capital in organizations, as well as the design and alignment of business strategies, organizational designs, and human resource strategies. Case studies are employed to provide hands-on experience in analyzing and working with these concepts in actual situations.

ILRHR 4650 Globalization at Work
Spring. 4 credits. Prerequisite: undergraduate standing. R. Batt.
Examines how firms are responding to globalization and compares the strategies and outcomes of restructuring in manufacturing and service enterprises. While globalization has been a continuing phenomenon in manufacturing, recent changes in multilateral agreements, advances in information technology, and market deregulation have led to a process of globalization in service activities as well. Outcomes for firms, employees, consumers, and unions are examined.

ILRHR 4660 Entrepreneurship and Small Business
Fall. 4 credits. Prerequisite: undergraduate standing. D. Cohen.
Broadly addresses strategic issues in the startup phase and management of entrepreneurial firms and small businesses. Topics include opportunity recognition, satisfying real market needs, strategy, performance, financial planning, growth, and innovation. The course consists of a mix of lectures, case studies, guest speakers, and a final group project.

ILRHR 4662 Human Resource Analytics
Fall. 4 credits. J. Hausknecht.
Addresses the growing need for data-driven, analytical approaches to managing talent. Introduces students to the fundamental logic, metrics, analysis, and interpretation needed to link human resource practices to broader indicators of organizational performance. Students will be capable of gathering, integrating, analyzing, and interpreting relevant HR metrics to make better decisions about managing people in organizations.

ILRHR 4670 Leadership Development
Spring. 4 credits. Prerequisite: ILRHR 2600 or equivalent. L. Dragoni.
Focuses on leadership development at the organizational level. Specifically, it covers the structure, methods, and approaches that firms use to identify and develop high potential talent. Topics include: techniques for identifying development needs, on- and off-the-job approaches to development, and methods of program evaluation. The course combines traditional lectures and discussions with experiential learning techniques designed to provide practice with the concepts being learned.

ILRHR 4680 Human Resources Management Simulation
Fall, seven weeks. 2 credits. Limited to 30 students. Prerequisite: undergraduate or equivalent standing. ILRHR 2600 or equivalent. Regular attendance mandatory. W. Wasnuth.
Uses a simulation model and an open-systems approach as means to enhance students’ skills in strategic planning and managerial decision making.
making. Attention is given to the implications and efforts of strategic human resource managerial and supervisory decisions as measured by 10 organizational performance indicators, including quality of work life, employee productivity, customer satisfaction, employee turnover, absenteeism, external recruitment, retention, internal control, and the bottom line. Each student is assigned to a group (team) of five members and must be committed to the work of that group. An individual research paper is also required.

ILRHR 4950 Honors Program
Fall and spring (yearlong). 4 credits each semester.
For description, see “Collective Bargaining, Labor Law, and Labor History.”

ILRHR 4970-4980 Field Research, Internship
Fall and spring, 4 and 8 credits.
For description, see “Collective Bargaining, Labor Law, and Labor History.”

ILRHR 4990 Directed Studies
For description, see “Collective Bargaining, Labor Law, and Labor History.”

ILRHR 5600 Human Resource Management
Fall and spring. 3 credits. Prerequisite: graduate standing. Staff.
Survey course designed to provide an introduction to concepts and topics in human resource management. Consideration is given to theories and applications involved in effectively managing people in organizations. Topics include recruitment, staffing, training, performance management, retention, compensation, international human resource management, and the legal environment. Emphasis is placed on exploring these issues from both strategic and tactical levels to increase organizational effectiveness.

ILRHR 5640 Human Resources Management in Effective Organizations
Fall or spring. 4 credits. Offered only in New York City for M.P.S. program. Staff.
Offers students the opportunity to become better prepared to make effective decisions about human resources. Successful organizations depend on people, their human resources. The first module examines strategic human resource management and the effects of HR decisions on organization success and fair treatment of people. The second module focuses on alternative systems used to staff and develop people. The third module focuses on compensating and rewarding people. The final module includes employee relations and alternative work systems. Case and field studies are used throughout the course.

ILRHR 6590 HR Challenge: Balancing, Ethics, Economics, and Social Responsibility
Fall. 4 credits. Limited to 15 students. Prerequisite: ILRHR 2600/5600; M.I.L.R. graduates; seniors by permission of instructor. Letter grades only. P. Wright.
Examines the challenges of synthesizing personal/professional ethics with professional responsibilities and synthesizing organizational economic demands with social responsibility, particularly focusing on how these issues impact HR professionals. These concerns are examined from both ends of the political spectrum. The course is taught in a seminar format in which students are expected to participate in and lead class discussions.

ILRHR 6600 HR Leadership: Views from the Top
Fall. 4 credits. Limited to 30 students. Prerequisites: ILRHR 2600/5600 or equivalent, senior or graduate standing, and permission of instructor. L. Dyer.
Hands-on course offering students a unique opportunity to learn about strategic business and human resource issues from the perspectives of senior HR executives. Five chief human resource officers (CHROs) from major corporations meet with the class for lively give-and-take sessions on subjects of strategic and topical interest to their organizations. Before their visits, teams prepare background for the speakers, their companies, and their topics. Students discuss these papers before the visits to assure readiness to address the issues at hand when the CHROs arrive. During the visits the teams host the CHROs and usually have an opportunity to interact informally with them. After the visits, the teams revise their background papers into white papers that reflect insights from their research and discussions. Subsequently, all five white papers are assembled in a book that is shared with the CHROs and others.

ILRHR 6601 Research on Education Reform and Human Resource Policy
Fall and spring. 4 credits. J. Bishop. State and local efforts to improve K–12 education are employing a variety of (sometimes contradictory) reform strategies. This research seminar critically examines the case that is made for (and against) each of the major reform proposals and review studies that provide objective evidence on their effectiveness. The education reform strategies examined include vouchers, charter schools, small schools, career academies, extending the school day and year, better preparation and selection of new teachers, better professional development, ending tenure, merit pay, state standards and school accountability, ending social promotion, and externally set end-of-course examinations.

ILRHR 6602 Introduction to HR Information Systems
Fall. seven weeks. 1 credit. Prerequisite: ILRHR 2600 or equivalent. L. Dragoni.
Focuses on understanding how and why human resource information systems are developed, maintained, and managed. A database is designed from the ground up, beginning with the instruction on the need for and how to create a relational database. Once the initial design is in place, the data are manipulated to create reports, forms, and queries to assist in human resource decisions. The course emphasizes ways to make databases efficient and consistent. Production database systems such as PeopleSoft are also reviewed and used. All instruction is hands-on and supplemented with assigned readings and guest lectures.

ILRHR 6604 Global Field Study in Strategic HR
Spring. 4 credits. Prerequisite: seniors by permission of instructor. Limited to 25 students. J. Haggery.
This unique course provides students with in-depth understanding of strategic HRM in a selected region of the world. We will study the development of selected businesses, the history, role and current efforts of government in the workplace, and local cultural nuances as they affect the world of work. Students will travel to the region studied and visit a variety of workplaces and institutions during spring break. Student presentations and a final paper will compare and contrast significant aspects of the dominant U.S. strategic HR model with strategic HR model(s) found in the studied region.

ILRHR 6605 Nonprofit Finance and Management
Spring. 4 credits. J. Grasso.
Provides students with a practitioner’s focus on financial and managerial issues in the nonprofit sector, including universities, hospitals, government agencies, and foundations. The course will include an overview of nonprofit financial statements, debt issuance, endowment management, credit analysis, organizational governance issues, strategic planning, industry trends, executive compensation, and philanthropy. Students will gain a comprehensive overview of all critical aspects of nonprofit management. A research paper will allow students to focus on a particular nonprofit sector (e.g., environmental organizations, trade unions, private foundations) or to focus on a functional area (e.g., endowment management, philanthropy, organizational governance).

ILRHR 6606 Developing Leadership: Personally and in Organizations
Fall. 4 credits. Prerequisite: ILRHR 2600 or equivalent. L. Dragoni.
Focuses on two aspects of developing leadership. At the personal level, students’ leadership skills are assessed and a plan for skill development is created. At the organizational level, students are exposed to the structure, methods, and approaches that organizations use to identify and develop high potential talent. In both aspects, the course combines traditional lectures and discussions with experiential learning techniques designed to provide practice with the concepts being learned.

ILRHR 6607 Executive Compensation
Fall. 4 credits. Prerequisite: ILRHR 5600 or equivalent. C. Tharp.
Provides students with an in-depth understanding of the structure and governance of executive compensation programs and practices. Course material draws upon theory and research in executive compensation and explores current legislative and shareholder reform initiatives affecting executive pay. The topic is approached from a multi-stakeholder perspective taking into account the interests of shareholders, institutional investors, advocacy groups, social activists, governmental regulators, employees, and executives. Also examined are the linkages between executive compensation and business strategy; issues surrounding compliance with securities laws, tax regulations, accounting standards, and principles of good corporate governance; various types of executive pay programs, including equity-based incentives, perquisites, and executive benefits; the roles of corporate compensation committees and independent compensation consultants; and current trends and best practices.

ILRHR 6608 Comparative Institutional Perspectives on Human Resource Management
Fall. 4 credits. R. Batt.
The globalization of product, labor, and capital markets has led to profound changes
in competitive environment in which firms operate. Yet these global economic forces are filtered through national institutions that offer unique sets of opportunities and constraints for multinational corporations doing business in different countries. Regional governance systems, such as the European Union, add another layer of complexity to the institutional environment in which firms operate; while governments at many levels are creating new regulations and rules in response to recent financial crises. Examines how corporations respond to these environmental complexities, why they adopt different approaches to business and HR management, and whether alternative strategies affect important outcomes for firms, employees, and other stakeholders.

ILRHR 6610 Seminar on Entrepreneurs and Entrepreneurial Organizations
Spring. 4 credits. D. Burton.
Entrepreneurs are modern-day heroes. We are increasingly captivated by the stories of people from humble origins who, with only a good idea and a bit of luck, build respected, high-profile organizations. In this seminar we will examine the myths and realities of entrepreneurship and the entrepreneurial process in the United States. Through case studies and readings, we will critically evaluate the received wisdom about building successful new ventures. Intended for students who are interested in learning more about entrepreneurship. It is not a "how to" course, but rather a conceptual overview of the field with particular emphasis on labor market and employment-related topics. Through readings and case studies, students will learn about topics such as opportunity assessment, organization growth and management, and entrepreneurial careers. We will examine different types of entrepreneurship including self-employment, franchising, small and family businesses, and externally financed new ventures. A seminar-style course where students will be expected to actively engage with the material. Requires coming to class having read the assigned material and being prepared to discuss and debate the ideas.

ILRHR 6620 Agility and Complexity in Organizations
Spring. 4 credits. Prerequisites: ILRHR 5600 or equivalent and permission of instructor. L. Dyer.
The need to compete in increasingly tumultuous environments is leading many companies to search for new ways of enhancing their adaptability, nimbleness, resilience, or agility. Most are focusing on flexing their basic bureaucracies and the first part of the course explores these efforts. A few, though, are tentatively exploring the desirability/feasibility of using basic tenets from complexity science to create new organizational forms that are capable of driving continuous innovation in the marketplace without having to go through internal change. The rest of the course focuses on these efforts and, at this point, the pedagogy shifts from traditional to experiential. Participants are provided opportunities to not only experiment with these new organizational forms, but also feel first-hand what life in them is like. The overall purpose of the course is to assist students in becoming knowledgeable forces for organizational transformation in the 21st century.

ILRHR 6640 HR Online Research and Reporting Methods for Executive Decision-Making
Spring. 4 credits. Limited to 18 students. Prerequisite: ILRHR 5600/2600 or equivalent and permission of instructor. Designed to develop key HR competencies and skills for researching and presenting information necessary for executive decision-making. Includes a comprehensive overview of primarily web-based resources available to HR executives. Emphasizes hands-on training in the best techniques and methods for extracting conceptual frameworks, checklists, best practices, company intelligence, legal information, statistical data, and academic research on topics of current interest to industry. Interviewing skills, report writing and presentation methods are imparted. Following five weeks of intense information instruction and hands-on experience, students act as consultants in a combined classroom and workplace setting as they work on special projects and topics posed by HR executives of primarily Fortune 500 companies. These team-based assignments give students exposure to different companies, their cultures, and executives while providing real work experience.

ILRHR 6650 Business Strategy and Human Resources
Fall. 4 credits. Limited enrollment. Prerequisite: ILRHR 2600/5600; three other courses in human resource studies; permission of instructor. D. Burton.
In this capstone course in HR studies, students integrate the theories and practices learned in other courses, to explore the linkages between business strategy and HRM. Extensive fieldwork is involved. The field projects are designed to make students explore and understand business strategy and draw upon and integrate their course work in HR staffing, training and development, compensation and rewards, and new work systems.

ILRHR 6660 Strategic HR Metrics
Spring. 4 credits. Prerequisites: ILRHR 2600/5600 or equivalent, one statistics course or elective in HR studies. L. Nishii.
The search for the ideal strategic HR metrics misses the larger issue of taking a more analytical approach toward HR decision making. Analyzing the process through which knowledge is gained, and then applying the tools and techniques to gather and analyze the right kind of data relevant to the question at hand. This course covers topics such as philosophy of science, theory development, research methodology, data analysis and interpretation as well as data and practices commonly used to assess the effectiveness of HR activities. Consequently, the class simultaneously addresses the types of information needed for HR decision making, as well as the processes and techniques necessary to gather, integrate, and analyze the data.

ILRHR 6680 Staffing Organizations
Spring. 4 credits. Prerequisites: ILRHR 2600/5600 or equivalent and permission of instructor. A. Collins and J. Hausknecht.
Seminar providing an overview of the processes by which organizations staff positions with both internal and external candidates. Because staffing is one of the primary human resource activities, it is critical for human resource professionals to understand how theory, research, and legal foundations can inform staffing decisions. Therefore, this course focuses on theories, research, policies, and practices concerning job recruitment and selection. Topics include staffing strategy and compensation, the measurement of staffing effectiveness, job/competency analysis, human resource planning, recruitment and job choice, and internal and external selection practices.

ILRHR 6690 Managing Compensation
Spring. 4 credits. Limited to 30 students. Prerequisites: ILRHR 2600/5600 and statistics course. Staff.
Helps students gain an understanding of how to make decisions about compensation. The strong focus is on applications and includes some discussion of recent theory and research. By the end of the course, you should be able to design your own compensation system from scratch. Issues we consider include how compensation fits with an overall HR strategy and, secondarily, how human resource compensation fits on the firm (including alignment, job analysis, and job evaluation). Making pay competitive with the outside market (including designing pay levels, types of plans, etc.). Considering individual contributions (by examining performance appraisals, pay-for-performance, and stock options), benefits (such as pensions, child care, and health care), management (including government regulation and managing budgets), and dealing with international issues in setting pay plans. A substantial section focuses on executive compensation and also examines how a consultant might estimate the damages to an employee in the case of wrongful termination.

ILRHR 6690 International Comparative Human Resource Management
Fall. 4 credits. Prerequisite: ILRHR 2600/5600 or permission of instructor. L. Nishii.
Provides students with an understanding of the complexities associated with international human resource management. The central theme of the course is to identify whether and in what ways HRM practices in one country should be adapted across cultures to be effective. Course material reflects a focus on comparing American HRM practices with those in East Asia and Western Europe. In addition, the major topic areas of concern to HRM managers are covered, including the selection, training, compensation, and performance management of international managers (expatriates), coordination across subsidiaries of a company, the development and tracking of global leaders, and cross-cultural communication and negotiation.

ILRHR 6910 Finance for Human Resources
Fall. 4 credits. K. Hallock.
Helps students understand some basic ideas in finance from the perspective of human resource management. Broadly considers certain topics that include: overview of financial markets, how firms issue securities, history and pitfalls in investing, the time value of money, investment criteria such as net present value, risk versus return and the opportunity cost of capital, capital asset pricing, capital budgeting and risk, market efficiency and predictability, measuring firm financial performance and reading financial statements, event studies in finance and...
economics, mergers, ESOPs and stock options, executive compensation, the relationship between job loss and firm outcomes, and other forms of organizational form such as nonprofits. Covers theoretical ideas and has many empirical, policy, and practitioner-relevant applications.

ILRHR 6930 Training and Development in Organizations
Spring. 4 credits. Prerequisite: ILRHR 5600 or permission of instructor. B. Bell. Acquaints students with aspects of learning in organizations. Begins by discussing organizational learning and then focuses more narrowly on specific ways in which learning is achieved through the training and development functions. Topics include how learning is linked to organizational strategy, how to determine that training is needed, issues regarding the design of training programs, current training techniques, evaluation strategies, and management development practices.

ILRHR 6940 Service Management in Global Perspective
Spring. 4 credits. Prerequisites: ILRHR 5600 or equivalent; permission of instructor. R. Batt. This case-based course examines the fundamentals of service management in the context of globalization, with attention to the interaction among strategy, marketing, operations, and human resource management. Topics include: service process design, quality, and productivity improvement; customer relationship management; outsourcing and offshoring strategies, managing supplier and vendor relations; and implications for customers, employees, and firm competitiveness. Student projects focus on particular companies and industries and their international strategies.

ILRHR 6950 Education, Technology, and Productivity
Fall. 4 credits. J. Bishop. This seminar investigates the nexus between the education and training in schools and at the workplace and the technological progressiveness, productivity, and competitiveness of firms, individuals, and nations. Students investigate how technological progress is changing the nature of work and the implications for reform of education and training. How education and training contribute to growth and competitiveness; why educational achievement has declined; and how the responsibility for education and training should be apportioned among individuals, firms, private nonprofit organizations, and government.

ILRHR 6970 Special Topics in Resource Studies
Fall or spring. 4 credits. Staff. Areas of study are determined each semester by the instructor offering the seminar.

ILRHR 6990 Advanced Desktop Applications
Spring. 1 credit. Prerequisite: ILRHR 2660 or significant experience (two to four years) using office applications. Letter grades only. C. Hominghose. Explores advanced topics for common desktop applications including Windows, Word, Excel, Access, and PowerPoint. The course is designed based on student input and instructor recommendations, covering those subjects that the student feels would be most useful and relevant in the job market.

Examples of areas include working with tables, columns, or sections in Word, pivot tables in Excel; taking a PowerPoint presentation “on the road”; and using join tables to create relationships in Access.

ILRHR 7560 Organizational Consulting
Fall. 3 credits. Prerequisite: ILRHR 5600. C. Collins. Provides students with the insights and tools they need to work successfully as human resource management consultants, both as HR managers operating within the firm to improve organizational effectiveness and as external consultants who support an internal HR organization. The consulting process is examined primarily from a systems perspective. This includes the knowledge and skills required to build trust and influence, to contract with clients, and to maintain good working relationships with clients. It also includes developing a clear comprehension of the consulting process from diagnosis, through action planning, to implementation and completion. Whether offered to theory and practice, the focus is on gaining hands-on experience dealing with real-world issues. As a final project, students will work in teams on a live case providing consulting services to an organization with an existing HR issue (i.e., implementing a new HR program, effectuating a new organizational culture, and enhancing project team operations).

ILRHR 7600 Seminar in Human Resource Studies
Fall or spring. 3 credits. Prerequisites: ILRHR 5600, ILRST 5110, and ILRHR 6690 and permission of instructor. Staff. “Floating” seminar designed to give faculty and students an opportunity to pursue specific topics in detail, with an emphasis on theory and research. Topics vary from semester to semester. Interested students should consult current course announcements for details.

ILRHR 7630 Interdisciplinary Perspectives on the Organization of Work
Fall or spring. 4 credits. R. Batt. Ph.D. seminar examining the theoretical and empirical literature on the organization of work. Topics include studies of group effectiveness, teams, social capital, and recent critical and interdisciplinary research. Draws on alternative perspectives from psychology, sociology, engineering, organization studies, economics, and industrial relations.

ILRHR 7640 Comparative International Perspectives on Work and Human Resource Systems
Fall or spring. 3 credits. R. Batt. Research seminar focusing on comparative international research on work and human resource systems. It draws on institutional theories and empirical research across several disciplines to examine the intersection between institutions and organizations. What is the relative importance of markets, technology, management strategies, and the institutional environment in shaping work and employment systems? It considers how and why firms adopt alternative approaches to work and how variation in these choices shapes outcomes of interest to firms, employees, and other key stakeholder groups. The seminar is designed to help students formulate theoretically driven research questions of critical importance to the field and to develop appropriate qualitative and quantitative research methodologies.

ILRHR 7900 ILR M.P.S. Program
Fall and spring. 1–9 credits. Supervised research only for those enrolled in the ILR M.P.S. program.

ILRHR 7980 Internship
For description, see “Collective Bargaining, Labor Law, and Labor History.”

ILRHR 7990 Directed Studies
For description, see “Collective Bargaining, Labor Law, and Labor History.”

ILRHR 9600 Workshop in Human Resource Studies
Fall and spring. 2 credits. Prerequisite: M.S. and Ph.D. candidates; S–U grades only. Staff. Provides a forum for the presentation and critical discussion of current research being undertaken by graduate students, faculty members, and invited guests in the field of human resource studies. All M.S. and Ph.D. candidates in the Department of Human Resource Studies are urged to enroll; candidates in other departments are cordially invited. Each participant has an opportunity to benefit from the collective wisdom of the others in the formulation, design, and execution of his or her research, as well as to become current on the latest developments in the field.

ILRHR 9610 Doctoral Research Seminar in Human Resource Management (Micro)
Fall or spring. 3 credits. Prerequisite: Ph.D. candidates. Staff. Aimed at reading, understanding, and conducting research in HRM. Students should obtain thorough understanding of the current research in traditional areas of HRM such as validation, job analysis, EEO, selection, performance appraisal, compensation, and training and should develop the skills necessary to evaluate, critique, and contribute to the literature on HRM.

ILRHR 9620 Doctoral Research Seminar in Strategic Human Resource Management (Macro)
Fall or spring. 3 credits. Prerequisite: Ph.D. candidates. Staff. Aimed at reading, understanding, and conducting research in SHRM. The course should enable students to obtain a thorough understanding of the current research in SHRM and to develop the skills necessary to evaluate, critique, and contribute to the literature on SHRM.

ILRHR 9630 Research Methods in HRM/Strategic Human Resource Management
Fall and spring. 3 credits. Prerequisite: Ph.D. candidates. Staff. Designed to build social science research skills, particularly in the area of human resource studies (HRS). Topics include measurement reliability, construct validity, design of studies, external validity, meta-analysis, critiquing/reviewing HRS research, publishing HRS research, and applications of statistical models of HRS issues.

ILRHR 9640 Doctoral Research Seminar: Special Topics
Fall. 3 credits. M.S. and Ph.D. candidates only. Staff. Advanced doctoral seminar that covers selected topics in human resource management. Topics vary across semesters depending on student and faculty interests. The course is designed to allow students and
faculty to pursue scholarly topics that further the scientific study of human research management issues.

INTERNATIONAL AND COMPARATIVE LABOR

ILRIC 2301 Migrants and Migration
Fall. 3 credits. Sophomore writing course. M. Cook.

Focuses on the international migration experience through the perspective of migrants themselves, drawing upon first-person accounts, letters and interviews, fiction, and nonfiction. Looks at local and regional migration processes and at national policies that shape migration.

ILRIC 2350 Work, Labor, and Capital in the Global Economy
Fall and spring. 3 credits. Open to ILR freshmen and sophomores; juniors and seniors must obtain prior permission from instructors, R. Applegate, R. Batt, M. Cook, K. Griffith, and S. Kuruvilla. Guest lecturers via videoconferencing.

Provides an introduction to how globalization is changing the nature of work, labor, and capital. It examines both contemporary and historical debates about globalization, but also considers a number of interrelated issues, including the regulation of labor standards, the mobility of capital, the rise of global production systems, and international labor migration. Lectures and discussion for the topics mentioned above will be grounded in the experiences of different countries, firms, workplaces, industrial sectors, and individuals.

ILRIC 2360 Revitalizing the Labor Movement: A Comparative Perspective
Spring. 4 credits. Sophomore writing course. L. Turner.

Writing seminar that examines contemporary efforts in the United States and Europe to revitalize unions in both public, social, economic and workplace contexts.

ILRIC 3340 Perspectives on Work and Welfare
Spring. 4 credits. R. Givan.

Examines the relationship between work and welfare from a variety of perspectives. Examples will be drawn from advanced industrial countries, and international comparisons will be emphasized. Key topics will include: welfare state foundation and development; social citizenship, constructions of the deserving and undeserving poor; welfare reform; the relationship between low wage work and welfare; competing notions of entitlement and universality; the male breadwinner model; firms and welfare.

[ILRIC 3390 The Political Economy of Mexico

ILRIC 4330 Politics of the Global North (also GOVT 3303)
Fall. 4 credits. L. Turner.

With an emphasis on current events and world affairs, this course examines global governance and economic policy debates. We consider conflicts around markets, democracy, and global justice, including efforts aimed at economic recovery and the reform of national and global economic policy and institutions. We also look at distinctive types of political and economic organization, especially in Europe and the United States, and the capacities of these societies to meet current economic, political, and social challenges, both domestic and international.

ILRIC 4990 Directed Studies
For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRIC 6010 Crossing Borders: Migrations in Comparative Perspective
Spring. 4 credits. M. Cook.

Provides an introduction to the challenges posed by the movement of people across borders. Examines the links between globalization and migration, and explores the implications of contemporary migrations for national immigration and integration policies, labor markets, human rights, asylum, security, and politics. Regional and national cases will be drawn from Europe, North America, and Australia, among others.

ILRIC 6011 Comparative Education and Development
Spring, seven-week course. 2 credits. J. Bishop.

Comparative study of educational institutions in Western Europe, North America, Latin America, and Asia (with special emphasis on math and science education) and of the effects of these institutions on economic development, growth, and equality of opportunity. The institutions studied include primary and secondary schools, apprenticeship, and higher education. Data on the consequences of policies are presented and an effort made to understand how human resources policies and educational institutions have contributed to rapid growth in both poor and rich countries. Another focus is understanding the causes of the differences in achievement levels across nations.

ILRIC 6012 Comparative Labor and Employment Law
Spring. 4 credits. A. Colvin.

Examines the laws governing employment and labor relations in comparative perspective. It covers examples of employment and labor law systems of countries from a number of different regions of the world including Europe, the Americas, Africa, Asia, and Australia. It also examines insights from comparative perspectives on major contemporary employment and labor law issues. The course assumes some existing knowledge of American employment and labor law, but will also consider American employment and labor law in comparative perspective.

ILRIC 6020 Corporate Social Responsibility: Human Rights, Labor, and the Environment
Spring. 4 credits. L. Compa.

Covers recent and current developments in the field of corporate social responsibility (CSR) and socially responsible investment (SRI) in a context of economic globalization. First classes set a foundation on the role of the multinational company in the global economy and international standards on human rights, labor rights, and the environment. Classes then move to topical studies of CSR/SRI initiatives and controversies. A consistent underlying theme of the course is the tension (and how to resolve it) between voluntary corporate self-regulation and mandatory government and intergovernmental regulation of corporate activity.

ILRIC 6310 Comparative Labor Movements in Latin America
Fall. 4 credits. M. Cook.

Examines the historical development of labor movements in Latin America, their role in national political and economic development, and the impact of economic liberalization, authoritarianism, and democratization on contemporary labor organizations in the region. Countries examined include, but are not limited to, Mexico, Brazil, Argentina, Chile, Peru, and Guatemala.

ILRIC 6330 Global Debates and Comparative Political Economy
Fall and spring. 4 credits. Prerequisite: ILRLE 3330 or ILRLE 5400 or ECON 3130. Next offered 2010–2011. G. Fields.

For description, see ILRIC 4330. The subject matter is similar (and students are encouraged to attend the lectures for 4330), but this course is pitched at graduate students in a seminar format emphasizing particular weekly themes and active student participation.

ILRIC 6331 Special Topics
Fall. 4 credits.

Devoted to new topics in the field. The specific content and emphasis vary depending upon the interests of the faculty member teaching the course.

ILRIC 6340 International Labor Law
Fall or spring. 4 credits. Prerequisites: undergraduates, ILRCB 2010; graduate students, ILRCB 5010. L. Compa.

Examines labor rights and labor standards in a world economy regulated by bilateral and multilateral trade agreements, in a context of sharp competition among countries and firms. Readings and discussions focus on the intersections of labor, human rights, and international trade law and policy in this new global economic context. A prior course in a related topic may be helpful but is not required—the first classes are meant to establish a foundation in each area. While labor law is a unifying theme, the course is more policy-oriented than legalistic. After the introductory classes on labor rights, human rights, and trade, the focus turns to a series of topics that reflect the links between labor rights and trade.

Spring. 4 credits. Prerequisite: ILRL 2400 or ILRL 5400 or ECON 3130. Next offered 2010–2011. G. Fields.

The first half of the course is on distribution and development: theory and evidence. The second half is on labor markets in a globalized world.]

ILRIC 6360 Comparative History of Women and Work (also FGSS 6360)
Spring. 4 credits. Prerequisite: permission of instructor. I. DeVault.

Explores the similarities and differences between different cultures’ assumptions about the work of women as well as women’s experiences in varying work circumstances throughout history. Beginning with theoretical pieces and overviews of the history of women and work, most of the course consists of in-depth examinations of specific work.
situations or occupations across time and geography. Comparative examples are taken from the United States, Europe, and the Third World.

**ILRIC 6370 Labor Relations in Asia**  
Fall. 4 credits. Limited enrollment; open to graduate students, seniors, and juniors. S. Kuruvilla.  
Serves as an introduction to industrial relations in Asia. The emphasis is on highlighting the variation in industrial relations systems in Asia and will focus more on the systems of Japan, China, India, South Korea, and Singapore.

For students writing theses or dissertations on economic aspects of labor markets in comparative perspective. Presentations and written papers required.

**ILRIC 7300 Research Seminar on Labor Markets in Comparative Perspective**  
Fall and spring. 3 credits. Prerequisite: M.S. and Ph.D. students. Next offered 2010–2011. G. Fields.  
For students writing theses or dissertations on economic aspects of labor markets in comparative perspective. Presentations and written papers required.

**ILRIC 7310 Industrial Relations in Latin America**  
Examines and compares changes in contemporary industrial relations throughout Latin America, with some comparative references to other regions of the Global South. The aim is to introduce students to the main issues in industrial relations of key Latin American countries, and through individual research papers, to enable students to become familiar with a specific country or sector/theme in two or more countries of the region.

**ILRHR 4650 The Globalization at Work**  
Spring. R. Batt.  
For description, see "Human Resource Studies."

**ILRHR 6900 Comparative Human Resource Management**  
Fall. L. Nishii.  
For description, see "Human Resource Studies."

**ILHR 6890 International Human Resource Policies and Institutions**  
Spring. J. Bishop.  
For description, see "Human Resource Studies."

**ILRLE 4440 The Evolution of Social Policy in Britain and America (also ECON 4440)**  
Fall. Spring. G. Boyer.  
For description, see "Labor Economics."

**ILRLE 4480 Topics in 20th-Century Economic History: The Economics of Depression and the Rise of the Managed Economy (also ECON 4580)**  
Fall. G. Boyer.  
For description, see "Labor Economics."

**ILRLE 6420 Economic Analysis of the Welfare State (also ECON 4600)**  
Fall. 4 credits. R. Hutchens.  
For description, see "Labor Economics."

**INTERDEPARTMENTAL COURSES**

**ILRID 1500 Freshman Colloquium**  
Fall. 1 credit. Prerequisite: ILR freshmen. S-U grades only. Staff.  
Acquaints first-year students with issues and disciplines in the field of industrial and labor relations and to establish acquaintanceship among members of the ILR faculty and small, randomly assigned groups of students. Includes a plant visit and several meetings early in the semester designed to introduce issues encountered in studying the employment relationship.

**ILRLE 5660 Public Policy**  
Spring. 4 credits. Offered only in New York City for M.P.S. program. Staff.  
The government's influence on the workplace and the role of public policy in the use and preparation of the nation's human resources for employment is assessed. Areas of study include the government's historical role in the labor market and the effect of efficiency, price stability and economic growth, equity, and immigration policy and its market implications.

**ILRLE 5990 Cross-Cultural Work Experience**  
Fall. 1 credit. S-U grades only. W. Sonnestuhl.  
Open to MILR students who will be working in the summer of 2008 in a country other than that of their citizenship or past work experience. This option is only available for students who have been enrolled for one academic year by the time the Internship begins. Enrollment occurs in regular pre-enrollment period, with a grade posted in the fall after the requirements are satisfied. Prior to registering for the course, students must obtain a summer internship offer and international students MUST report to the ISSO (B50 Caldwell Hall) for their work authorization forms.

**ILRHR 4610 Working in the New Economy: The Sociology of Work**  
Spring. R. Batt.  
For description, see "Human Resource Studies."

**ILRLE 6420 Economic Analysis of the Welfare State (also ECON 4600)**  
Fall. 4 credits. R. Hutchens.  
For description, see "Labor Economics."

**ILRLE 7900 ILR M.P.S. Program**  
Fall and spring. 1–9 credits. Supervised research only for those enrolled in the ILR M.P.S. program.

**LABOR ECONOMICS**

**ILRLE 2400 Economics of Wages and Employment**  
Fall and spring. 3 credits. Prerequisites: ECON 1110–1120 or permission of instructor; ILR students may substitute ILRLE 4400 if they have calculus.  
Applies the theory and elementary tools of economics to the characteristics and problems of the labor market. Considers both the demand (employer) and supply (employee) sides of the market to gain a deeper understanding of the effects of various government programs and private decisions targeted at the labor market. Topics include employment demand, basic compensation determination, education and training, benefits and the structure of compensation, labor-force participation and its relation to household production, occupational choice, migration, labor-market discrimination, and the effects of unions.

**ILRLE 3440 Development of Economic Thought and Institutions (also ECON 3440)**  
Fall. 4 credits. Prerequisite: ECON 1110–1120 or equivalent. G. Boyer.  
Examines the historical roots of the economic institutions currently dominant in Western Europe and the United States, and the evolution of economics as a discipline, from pre-industrial mercantilist thought through the economics of John Maynard Keynes. Readings focus on the relationship between economic development and the evolution of economic thought, and in particular on policies relating to labor and the relief of poverty.

**ILRLE 4400 Labor Market Analysis (also ECON 3410)**  
Spring. 4 credits. Prerequisites: ECON 3130 and calculus; ILR students who have taken ILRLE 2400 cannot receive credit for this course.  
For description, see ILRLE 2400. Designed for ECON majors with calculus.

**ILRLE 4410 Income Distribution (also ECON 4550)**  
Spring. 4 credits. Prerequisite: ILRLE 2400 or ECON 3410. Students who have taken PAM 370 may not receive credit for 441. R. Hutchens.  
Explores income distribution in the United States and the world. Topics include functional and size distributions of income, wage structure, income-generating functions and theories, discrimination, poverty, public policy and income distribution, and changing income distribution and growth.

**ILRLE 4420 The Economics of Employee Benefits (also ECON 4560)**  
Fall. 4 credits. Prerequisite: ILR 2400 or equivalent. Staff.  
In-depth treatment of the economics and financial management and administration of all employee benefits: health care, insurance,
ILRLE 4450 Women in the Economy (also ECON 4570, FGSS 4460)

Fall or spring. 4 credits. Prerequisite: ILRLE 2400 or equivalent. Staf.

Examines the changing economic roles of women and men in the labor market and in the family. Topics include a historical overview of changing gender roles; the determinants of the gender division of labor in the family; trends in female and male labor force participation; gender differences in occupations and earnings; the consequences of women’s employment for the family; and a consideration of women’s status in other countries.

ILRLE 4470 Social and Economic Data (also ILRLE 7400, INFO 4470)

Spring. 4 credits. Prerequisites: one semester of calculus, IS statistics requirement, at least one upper-level social science course, or permission of instructor. J. Abowd.

For description, see INFO 4470.

ILRLE 4480 Topics in 20th-Century Economic History: The Economics of Depression and the Rise of the Welfare State (also ECON 4580)

Spring. 4 credits. Prerequisite: ILRLE 2400 or ECON 3140. G. Boyer.

Examines the anatomy of the Great Depression through the experiences of the two most important economies of the time: the United States and Great Britain. Also examines the development of macroeconomic policy in the United States and Britain in the 1920s and 1930s and its evolution in the postwar world, culminating with the decline of Keynesian-style demand management policy under Reagan and Thatcher.

ILRLE 4950 Honors Program

Fall and spring (yearlong). 4 credits each semester.

For description, see “Collective Bargaining, Labor Law, and Labor History.”

ILRLE 4970-4980 Field Research, Internship

Fall and spring. 4 and 8 credits. For description, see “Collective Bargaining, Labor Law, and Labor History.”

ILRLE 4990 Directed Studies

For description, see “Collective Bargaining, Labor Law, and Labor History.”

ILRLE 5400 Labor Economics

Fall. 3 credits. Requirement for M.I.L.R. candidates. Prerequisites: ECON 1110–1120 or equivalent. Not open to students who have taken NBA 5440. G. Fields.

A course in labor market economics for prospective managers in the corporate, union, and governmental sectors. It begins with demand and supply in labor markets, presenting market-level analysis and the decision tools for workers and firms. It then goes on to consider various topics for managers including: education and training investments; the interdependence of capital market and labor market decisions; pay and productivity; attracting and retaining talent; workplace metrics; and pensions and retirement. The final section of the course covers public policy issues including policy evaluation methods, unemployment, poverty and inequality, and discrimination.

ILRLE 5440 Labor Market and Personnel Economics

4 credits. Taught only in New York City for M.P.S. program. Staff.

Four-module course in which the first module covers the basic elements of supply and demand in the labor market, the second and third modules cover “personnel economics” (emphasizing economic issues in a firm that relate to selecting, training, assigning, motivating, and compensating workers), and the final module covers key institutions and economic security issues (including unemployment, pensions, disability, discrimination, and unions). The goals of this course are for students to learn to analyze both business and public policy problems, taking into account both basic principles of economic theory and the relevant institutional environments.

ILRLE 6420 Economic Analysis of the Welfare State (also ECON 4600)

Fall. 4 credits. R. Hutchens.

Uses the tools of public economics to analyze modern welfare states. Although examples are drawn from several countries, the course focuses on the United States, Canada, and Sweden. What are the rationales for the level of government intervention in these states, and how do these rationales square with notions of market failure? What are the economic costs and benefits of taxes, transfers, and regulations in these states? Can voting models explain the growth and operation of welfare states? The possible answers to these questions are discussed.

ILRLE 6470 Economics of Education (also ECON 3470)

Spring. 4 credits. Prerequisite: ILRLE 2400 or intermediate microeconomics and statistics through multivariate linear models. R. Ehrenberg.

A survey of the econometric literature on a wide variety of educational issues, dealing with elementary, secondary, and higher education. The course begins with an introduction to experimental and quasi-experimental design and the implementation of these designs in multivariate regression models. Much of the course involves reading and discussing recent research, and students conduct their own empirical research projects.

ILRLE 6480 Economic Analysis of the University (also ECON 3420)

Fall. 4 credits. Staff.

Seeks to illustrate the complexity of decision making in a nonprofit organization and to show how microeconomic analysis in general, and labor market analysis in particular, can be usefully applied to analyze resource allocation decisions at universities. Topics include financial aid, tuition, admissions policies, endowment policies, faculty salary determination, the tenure system, mandatory retirement policies, merit pay, affirmative action, comparable worth, collective bargaining, resource allocation across and within departments, undergraduate versus graduate education, research costs, libraries, athletics, and “socially responsible” policies. Lectures and discussions of the extensive readings are supplemented by presentations by Cornell administrators and outside speakers who have been engaged in university resource allocation decisions or have done research on the subject.

ILRLE 7400 Social and Economic Data (GR RDC) (also INFO 7470, ECON 7400)

Spring. 4 credits. J. Abowd.

Teaches the basics required to acquire and transform raw information into social and economic data. Graduate materials emphasize methods for creating and certifying laboratories in which data privacy and confidentiality concerns can be controlled and audited. Legal, statistical, computing, and social science aspects of the data “manufacturing” process are treated. The formal U.S. Eurostat, OECD, and UN statistical infrastructure are covered as are major private data sources. Topics include basic statistical principles of populations and sampling frames; acquiring data via samples, censuses, administrative records, and transaction logging; the law, economics, and statistics of data privacy and confidentiality protection; data linking and integration techniques (probabilistic record linking, multivariate statistical matching); analytic methods in the social sciences. Graduate students are assumed to be interested in applying these techniques to original research in an area of specialization, and are required to do individual projects. This class may be taught to students at Cornell and other universities whose emphasis is placed on U.S. Census Bureau procedures.

ILRLE 7410 Applied Econometrics I (also ECON 7480)

Fall. 4 credits. Prerequisite: graduate Ph.D.-level sequence in econometrics or permission of instructor. S–U or letter grades. G. Jakubson.
ILRLE 7420 Applied Econometrics II (also ECON 7419)
Spring. 4 credits. Prerequisite: ILRLE 7410 or permission of instructor. Letter or S–U grades.
G. Jakubson.
Continues from ILRLE 7410 and covers topics not covered in ILRLE 7410–7420, including the links between behavioral theories in the social sciences and the specification of the statistical model.

ILRLE 7430 Applied Econometrics III
Spring. 4 credits. Prerequisites: ILRLE 7410–7420 or permission of instructor. ILRLE 7410, 7420, and 7430 constitute Ph.D.-level sequence in applied microeconometrics. Letter grades only. G. Jakubson.
Covers topics not covered in ILRLE 7410–7420, including further development of duration analysis, panel data methods for nonlinear models, quantile regression and related techniques, and an introduction to nonparametric and semiparametric methods. Additional topics as suggested by their use in applied areas of social science. Covers not only the statistical issues but also the links between behavioral theories in the social sciences and the specification of the statistical model. Also develops a general framework for the techniques covered in the ILRLE 7410–7420–7430 sequence.

ILRLE 7450 Seminar in Labor Economics I (also ECON 7420)
Fall. 4 credits. Note: ILRLE 7450 and 7460 constitute Ph.D.-level sequence in labor economics.
Includes reading and discussion of selected topics in labor economics. Stresses applications of economic theory and econometrics to the labor market and human resource areas.

ILRLE 7460 Seminar in Labor Economics II (also ECON 7430)
Spring. 4 credits. Note: ILRLE 7450 and 7460 constitute Ph.D.-level sequence in labor economics.
Includes reading and discussion of selected topics in labor economics. Stresses applications of economic theory and econometrics to the labor market and human resource areas.

ILRLE 7470 Economics of Education I (also ECON 7470)
Spring. 4 credits. Limited to economics and labor economics Ph.D. students or by permission of instructor. R. Ehrenberg.
Survey of the econometric research on a wide variety of higher education issues. Topics include public and private funding, financial aid and tuition policies, faculty labor markets, and Ph.D. production.

ILRLE 7471 Economics of Education II
Fall. 4 credits. K. Jackson.
Survey of the econometric research and theory on a wide variety of education issues at the elementary and secondary level. Topics include school finance policies, peer effects, accountability, incentives, class size debate, and teacher labor markets. The two-semester sequence in the Economics of Education can be taken in any order.

ILRLE 7490 Economics of Development (also ECON 7720)
Fall. 4 credits. Prerequisites: first-year graduate economic theory and econometrics. G. Fields.
Takes analytical approaches to the economic problems of developing nations. Topics include old and new directions in development economics thinking; the welfare economics of poverty and inequality; empirical evidence on who benefits from economic development; labor market models; project analysis with application to the economics of education; and development policy.

ILRLE 7900 ILR M.P.S. Program
Fall and spring. 1–9 credits. Supervised research only for those enrolled in the ILR M.P.S. program.

ILRLE 7980 Internship
For description, see “Collective Bargaining, Labor Law, and Labor History.”

ILRLE 7990 Directed Studies
For description, see “Collective Bargaining, Labor Law, and Labor History.”

ILRLE 9400 Workshop in Labor Economics
Fall and spring. 3 credits. Intended for Ph.D. students who have started to write their dissertations. Presentations of completed papers and work in progress by faculty members, advanced graduate students, and speakers from other universities. Focuses on the formulation, design, and execution of dissertations.

ORGANIZATIONAL BEHAVIOR
Deals with how and when people become committed to groups and organizations. Such commitments are an important source of social order, solidarity, altruism, and citizenship behavior in small groups and large organizations. Emphasizes sociological and social psychological theories of commitment, solidarity, and order, including in particular those dealing with the role of power, legitimacy, trust, affect, and social identity. Taught in a seminar format and involves frequent writing assignments and a major paper.
ILROB 3290 Organizational Cultures
Fall or spring. 4 credits. Prerequisite: one or more courses in OB and/or sociology.
W. Sonnenstuhl.
Reviews the concept of culture as it has evolved in sociology and anthropology, applying it to formal organizations in workplaces such as corporations and unions. The course first examines the nature of ideologies as sense-making definitions of behavior, concentrating on the cultural forms that carry these cultural messages, rituals, symbols, myths, sagas, legends, and organizational stories. Considerable attention is given to rites and ceremonies as a cultural form in organizational life that consolidates many of these expressive forms into one. The course examines types of ceremonial behavior such as rites of passage, rites of enhancement, and rites of degradation, including the role of language gestures, physical settings, and artifacts in ceremonial behavior. The presence of subcultures and countercultures in organizational behavior also receive attention, especially the part played by occupational subcultures in formal organizations.

ILROB 3700 The Study of Work Behavior
Fall. 4 credits. Prerequisite: junior or senior standing. T. Hammer.
Designed to acquaint students with the basic concepts and theories of human motivation with implications for job design and organizational effectiveness. Focuses on theories of worker motivation and on research approaches and results as they apply to the performance of individuals and groups in formal organizations. Readings are predominantly from the field of organizational psychology, supplemented by relevant contributions from experimental and social psychology. Each student designs, executes, and analyzes a research study of his or her own.

ILROB 4220 Organizations and Deviance
Fall or spring. 4 credits. Limited to 60 students. W. Sonnenstuhl.
Focuses on the deviant actions of organizations, including such behaviors as price fixing, environmental pollution, illegal campaign contributions, and discrimination in hiring and promotion. Examines the origins of such behaviors in organizations, the processes by which they become institutionalized, and the processes by which they become defined as deviant organizational actions. Within this context, the course examines such contemporary cases as Exxon’s Valdez oil spill, Iran-Contra, drug testing, and the federal savings and loan scandal. These events raise troubling questions about what it means to live and work in an organizational society, and they cannot be dismissed as instances of a few individuals gone bad.

ILROB 4230 Leadership in Organizations
Fall or spring. 4 credits. T. Hammer. Covers basic leadership theories with an emphasis on how they are used, analyzes leadership cases, and examines current leadership surveys and training materials. We also study leadership philosophies and management practices in countries outside of the United States. In addition, you learn to evaluate and use leadership “best-sellers,” that is, the kind of books that sell in airports.

ILROB 4240 Social Influence and Persuasion
Fall. 4 credits. Prerequisites: junior or senior standing. J. Goncalo.
Many of the most admired organizations are adept at using social influence to achieve their strategic objectives. This course reviews basic theories of social influence such as conformity, group polarization, and social facilitation to understand how social influence tactics can be used to make organizations more efficient and productive. The course also considers how these tactics can backfire when excessive agreement gives rise to groupthink and poor decisions. We conclude by exploring strategies for managing social influence processes to encourage creativity and innovation in organizations.

ILROB 4250 Seminar in Organizational Culture
Spring. 4 credits. Limited to 20 students. Prerequisite: ILROB 3290 and permission of instructor. W. Sonnenstuhl.
Expands on the theoretical ideas developed in the earlier course through more focused reading, intensive fieldwork, and paper writing. Students are accepted into the seminar based on their research projects for ILROB 3290 and work with the professor to develop a more detailed reading list and more focused data collection strategy for expanding upon their earlier projects. The seminar also is taught as an intensive writing experience.

ILROB 4260 Managing Creativity
Fall. 4 credits. J. Goncalo.
Although most people can agree that creativity is an important concept, there is often very little agreement about what creativity is and how we can achieve it. This course surveys basic theories of creativity with the goal of applying this knowledge to the management of creativity in organizations. It focuses primarily on (1) cognitive theories about creative thought, (2) personality theories about exceptionally creative individuals (3) social-psychological theories about creative groups, and (4) the points at which these approaches interact. The course concludes by questioning whether, given the diversity, anyone would willingly follow the path of a creative individual or implement the practices of the most innovative firms.

ILROB 4270 The Professions: Organization and Control
Fall. 4 credits. Prerequisite: permission of instructor. P. Tolbert.
Focuses on the sources of power and control exercised by professional groups in contemporary society. A number of issues are examined in this context, including the role of professions in society, processes through which an occupational group becomes defined as a profession, sources of control that professional associations have over their members, relations between professionals and nonprofessionals in organizations, and the relationship between unionization and professionalization of occupations.

ILROB 4280 Blue-Collar Work in America
Spring. 4 credits. Prerequisites: ILROB 1220. S. Bacharach and W. Sonnenstuhl.
Although America is often described as a post-industrial society in which service jobs predominate, the term “blue collar” remains relevant for understanding workplace relationship and their consequences. This course examines the nature of blue-collar work in the 21st century. It takes an in-depth look at a number of blue-collar occupations to understand workers experiences. Special attention is paid to the manner in which management exercises control over blue-collar workers, the strategies workers use to gain greater discretion over their work, and the social and psychological consequences that follow from this struggle. This course uses lectures, readings, and interviews/discussions with blue-collar workers to illuminate workers’ experiences. It uses long-distance learning technology to bring New York city-based blue-collar workers into the Ithaca classroom.

ILROB 4290 Organizational Politics and Institutional Change
Spring, seven weeks. 2 credits. Prerequisite: junior or senior standing; permission of instructor. Students should see instructor before first class. S. Bacharach.
Examines the market, cultural, political, and structural forces that change the organizational “rules of the game,” how those changes affect individuals and organizations, and the distortions that occur as individuals and organizations attempt to adjust to a new unstable order. Issues examined include power, corruption, deal-making, rationality, uncertainty, and conflict. Prerequisites include completing a major research paper and leading a class discussion.

ILROB 4700 Group Processes
Fall. 4 credits. Prerequisites: ILROB 1220 or equivalent; junior or senior standing. E. Lawler.
A review of theoretical approaches and selected research on group phenomena, including the formation of groups, the structure of group relations, and group performance. Specific topics include conformity and obedience, status and power relations, social identity, emotions and emotion management, group solidarity and commitment, and groups within larger organizations.

ILROB 4710 Organizations and Negotiation
Spring. 4 credits. If you have completed ILRBC 6011 you are NOT eligible to take this course. Course fee: $31, which includes cases for in-class negotiation simulations, online Negotiation Style Survey, and individualized assessment report. M. Williams.
This introductory course provides understanding of the theory and the processes of negotiations as practiced in a variety of organizational settings. It is designed for relevance to the broad spectrum of bargaining problems faced by team members, managers, and professionals. It allows students the opportunity to develop negotiation skills experientially and to understand negotiation by using analytical frameworks. General topics include: distributive bargaining, integrative negotiations, psychological biases, and multiparty negotiations. Advanced topics include: sources of power, dispute resolution, emotionally intelligent negotiations, team on team negotiations (e.g., union management). Simulations, exercises, role-playing, and cases are emphasized.

ILROB 4720 Applied Organizational Behavior
Fall. 4 credits. Prerequisite: ILROB 1220. S. Bacharach.
Introduces students to intermediate theory of organizational behavior. Concentrates specifically on teaching students to use...
The course draws on theory and research from sociology and related disciplines. Course material also includes case studies and interactive exercises.

ILROB 5250 Organizational Behavior Fall, spring. 4 credits. Offered only in New York City for M.P.S. program. Staff. Applies theories and methods from the behavioral sciences to the analysis of behavior in organizations. Areas of study include classical and modern theories of organization and their underlying assumptions of human nature, the relationship between organizations and individuals, the role of power, politics, and decision-making in organizations, industrial history, and leadership culture.

ILROB 5790 Negotiation and Conflict Resolution Fall. 4 credits. Course fee: $31, which includes cases for in-class simulations, online Negotiation Style Survey, and individualized assessment report. M. Williams. Provides understanding of the theory and the processes of negotiation as practiced in a variety of organizational settings. The course is designed for relevance to the broad spectrum of bargaining problems faced by the manager and the professional. It allows students the opportunity to develop negotiation skills experientially and to understand negotiation by using analytical frameworks. General topics include: distributive bargaining, integrative negotiations, psychological biases, sources of power, and multi-party negotiations. Advanced topics include: dispute resolution, emotionally intelligent negotiations, team on team negotiations (e.g., union-management mergers). Simulations, exercises, role-playing, and cases are emphasized.

ILROB 6202 Political Leadership and Managerial Competence in Organizations Fall, seven-week course. 2 credits. S. Bacharach. The capacity to lead politically is a talent often not made explicit. All too often we’re not clear where politics ends and management begins and vice versa. This course will try to clarify these issues. Will focus on key political skills that are necessary in getting agendas put in place in organizations. Making use of a variety of theoretical explanations of social interaction, status, and other resources to individuals. A classical and modern theories to understand the foundations of political skills. Students will be required to write a paper on one political leader and evaluate his or her political skills based on the material presented in the course. Among the leaders to be discussed will be Lincoln, Gandhi, FDR, LBJ, etc. Readings will include Machiavelli’s The Prince, as well as on leadership. Taught via distance video technology.

ILROB 6221 Dialogues on Diversity: Learning to Work Cross-Culturally Spring. seven-week course. 2 credits. Prerequisite: instructor. W. Sonnenstuhl. Consists of a series of dialogues between ILR and ESCP-EAP faculty members about diversity-related issues and learning to work with one another in diverse groups. Each session will be organized as a dialogue between two faculty members. The dialogue will highlight the similarities and differences between American and European ideas and provide students with opportunities to examine how those may be applied to work organizations. Some topics to be discussed are: What does diversity mean in the United States and Europe? How do people work in diverse international teams? What are the roles of human resource managers in implementing diversity in the United States and Europe? How does immigration impact diversity in the United States and Europe? How do we negotiate across cultures? What does leadership mean in an international workplace? Students will work as part of a U.S.-European team on projects.

ILROB 6250 Conflict, Power, and Negotiation Fall. 4 credits. Limited enrollment. Prerequisite: senior or graduate standing; permission of instructor. E. Lawler. Theoretical seminar that explores power perspective on bargaining and conflict resolution. Examines how power relations and power processes affect tactics in bargaining and also when power relations inhibit or promote conflict resolution. This course is viewed in the course as a capability, embedded in a social structure, and tactics are the action based on or using such power. The seminar gives an overview of several theoretical approaches to conflict and bargaining (e.g., rational choice, cognitive, social exchange) and places the power perspective in this context.

ILROB 6251 Building Commitment to Groups and Organizations Fall. 4 credits. Prerequisite: ILROB 5200 and permission of instructor. E. Lawler. Graduate seminar intended for Masters in Industrial and Labor Relations (MILR) students. Uses sociological and social psychological theories to understand the foundations of commitment, cohesion, and solidarity in and among groups and organizations. Topics include the role of rational choice, social dilemmas, trust, social exchange, norms, affect, and social identity. Students read and discuss theoretical/conceptual material in the first half of the course; during the second half, they present papers that apply one or more of the theories to a case of their choosing.

ILROB 6260 Organizations and Social Inequality Spring. 4 credits. P. Tolbert. Examines the central role that organizations in industrial societies play in allocating income, status, and other resources to individuals. A variety of theoretical explanations of social inequality are examined, and the social policy implications of each are considered.

ILROB 6270 Leadership in Organizations Spring. 4 credits. Prerequisite: graduate standing; seniors by permission of instructor. T. Hammer. Examination of theories and research findings from the behavioral sciences that are relevant to leadership and the influence process in groups and organizations. Discusses personality, situational factors, intergroup processes, interpersonal perception as well as the motivation to both lead and follow. Explores the implications for leadership training, organization development, and action research.

ILROB 6710 Work, Health, and Health Care Spring. 4 credits. Prerequisite: permission of instructor. W. Sonnenstuhl. The health care industry is the fastest growing segment of the U.S. economy. Examines the
interplay between business organizations, which fund employee health insurance, and health. The first half of the course will focus on U.S. organizations with topics ranging from corporate culture and power to the structure of work in health care organizations. For instance, we examine how power and corporate culture influence the definition of health, employee attention to safety, and employee willingness to use wellness programs. The second half of the course will shift to an international comparative analysis of work, health, and health care in countries with differing institutional environments, including Canada, the United Kingdom, Germany, and Korea.

ILROB 6790 Methods of Observation and Analysis of Behavior
Fall or spring. 4 credits. Limited to 25 students. Prerequisite: permission of instructor. W. Sonnenstuhl.
Focuses on qualitative methods and emphasizes doing. Examines different approaches to the collection and analysis of data. Students learn a variety of data collection techniques for understanding individual and collective behavior, including participant observation, in-depth interviews, and working with archival materials. The course also emphasizes the constant comparative method as a basic technique for data analysis. This technique is the basis of such qualitative computer programs as Ethnograph and Nudist. Students conduct their own research projects. Students who wish to use qualitative methods either for a senior honors thesis, master's thesis, or doctoral dissertation are encouraged to take this course.

ILROB 7210 Advanced Micro Organizational Behavior
Spring. 3 credits. Staff.
Examines the historical development of psychological theories of organizational behavior and contemporary issues in micro organizational research. Emphasizes reading and analysis of primary source material.

ILROB 7220 Advanced Macro Organizational Behavior
Fall. 3 credits. Prerequisite: ILROB 5200.
Staff.
Examines the historical development of sociological theories of organizations and contemporary issues in macro organizational research. Emphasizes reading and analysis of primary source material.

ILROB 7240 Managing Social Influence
Fall. 3 credits. J. Goncalo.
Survey of basic theories of social influence and how they are applied (and sometimes misapplied) to managing people in organizations. Theories covered include social facilitation, social norms, group polarization, conformity and minority influence. Emphasizes the evaluation of certain popular management techniques in light of social influence processes.

ILROB 7250 Analysis of Published Research in Organizational Behavior
Fall. 3 credits. Prerequisites: ILROB 5200 and one year of statistics. Staff.
Adventures in the methods course that critically examines published research papers in the field of organizational behavior in terms of research design and method as well as theory.

ILROB 7260 Selected Topics in Organizational Behavior
Fall. 3 credits. Prerequisites: ILROB 5200 and permission of instructor. Staff.
Advanced proseminar that seeks to develop an interdisciplinary perspective on selected topics in organizational behavior. The topics themselves change from year to year depending on participants’ interests. Course is designed to allow students and the instructor to jointly pursue significant scholarly inquiry into one or more arenas of organizational theory. Emphasis is placed on exploring the relevance of tradition in related disciplines (e.g., anthropology, linguistics, philosophy, sociology) that may enrich our understanding of organizational life.

ILROB 7270 Leadership in Organizations
Fall or spring. 3 credits. Open to MLIR graduates. T. Hammer.
Covers basic leadership theories with an emphasis on how they are used, analyzes leadership cases, and examines current leadership surveys and training material. To allow you to gain additional information of practical use, you also have at the end of the semester a collection of essays on two practical topics: how to read and use leadership “best-sellers” (the kind of book that sells in airports), and leadership philosophies and management practices in foreign countries.

ILROB 7280 Theories of Motivation and Leadership
Spring. 4 credits. Prerequisite: ILROB 5200. T. Hammer.
Introduction to basic concepts of human motivation in general, with particular emphasis on the theories that explain and predict work motivation. Students examine the empirical research that tests the validity of the theories and shows how and under what conditions different motivation models can be used for practice in work organizations. Several current microtheories of leadership and power and related research are examined. The disciplinary perspective employed is social organizational psychology, and the level of analysis emphasized is action and experience of individuals in groups.

ILROB 7290 Organizational Change and Intervention
Fall. 3 credits. Prerequisite: graduate standing.
Seminar concerned with planned and unplanned change in organizations. It is designed to analyze theory in practice. Particular attention is paid to the role of internal and external change agents. Students are encouraged to analyze contemporary changes such as mergers and acquisitions and workforce reductions. Participants submit weekly workforce journals.

ILROB 7780 Solidarity in Groups (also SOC 7780)
Fall. 3 credits. Prerequisite: M.S. and Ph.D. candidates in department. All M.S. and Ph.D. candidates in department at work on their theses are strongly urged to enroll. S-U grades only. E. Lawler.
It analyzes contemporary theories of group solidarity. Particular attention is given to the comparison of rational choice, social exchange, and norm perspective explanations for the development and maintenance of social solidarity at both the micro (group) and macro (organizational) level. Trust, emotion, social identities also are analyzed in the context of these approaches. Most of the theoretical work covered in the course falls within the sociological tradition.

ILROB 7900 ILR M.P.S. Program
Fall and spring. 1–9 credits. Supervised research only for those enrolled in the ILR M.P.S. program.

ILROB 7980 Internship
For description, see “Collective Bargaining, Labor Law, and Labor History.”

ILROB 7990 Directed Studies
For description, see “Collective Bargaining, Labor Law, and Labor History.”

ILROB 9200 Organizational Behavior Workshop
Fall. 2 credits. Prerequisite: M.S. and Ph.D. candidates in department. All M.S. and Ph.D. candidates in department at work on their theses are strongly urged to enroll. S-U grades only. Staff.
This workshop is designed to provide a forum for the presentation of current research undertaken by faculty members and graduate students in the Department of Organizational Behavior and by invited guests. Each student is expected to make at least one presentation during the year, focusing on the formulation, design, execution, and results of his or her thesis research.

SOCIAL STATISTICS
J. Bunge, chair (358 Ives Hall, 255-8643); T. DiCiccio, M. L. Karns, P. Velleman, and M. Wells

ILRST 2100 Introductory Statistics (also STSCI 2100)
Fall, spring, and summer. 4 credits. Prerequisite: introductory algebra. L. Karns, P. Velleman, and M. Wells.
Statistics is about understanding the world through data. We are surrounded by data, so there is a lot to understand. Covers data exploration and display, data gathering methods, probability, and statistical inference methods through contingency tables and linear regression. The emphasis is on thinking scientifically, understanding what is commonly done with data (and doing some of it for yourself), and laying a foundation for further study. You will learn to use statistical software, and to use simulation tools to discover fundamental results. Will use computers regularly; the test includes both multimedia materials and a software package. This course does not focus on data from any particular discipline, but will use real-world examples from a wide variety of disciplines and current events.

ILRST 2130 Research Strategies and Regression Analysis
Fall. 3 credits. Limited to 20 students. Prerequisite: ILRST 2100 or equivalent. L. Korns.
Builds on the introduction to statistics course by considering multivariate regression methods. Application of the methods is explored through the analysis of data found by each student. Topics include: regression inference, indicator variables, analysis of outliers, interaction terms, interpretation, and presentation. Analysis process and interpretation will be emphasized rather than
specific research results. Students will present their final models in class.

ILRST 2200 - Occupational Epidemiology
Fall. 3 credits. Prerequisite: ILRST 2100 or equivalent. L. Karns.

Occupational epidemiology is the investigation of workplace health issues requiring knowledge of medicine, organizational structures, industrial hygiene, and human behavior. An introduction to occupational epidemiology through exploration of research design (cohort, case-control, and cross-sectional), exposure assessment, and statistical evaluation of the health issue. Students will use odds ratios, relative risk, and logistic regression models to measure the relationship between exposure and outcome. All students will select a topic area of interest, summarize current knowledge, and develop a research design protocol for future implementation.

ILRST 3100 - Statistical Sampling (also BTRY 3100)
Fall. 4 credits. Prerequisite: two semesters of statistical methods. Theory and application of statistical sampling, especially in regard to sample design, cost, estimation of population quantities, and error estimation. Assessment of nonsampling errors. Discussion of applications to social and biological sciences and to business problems. Includes an applied project.

ILRST 3120 - Applied Regression Methods
Fall. 4 credits. Prerequisite: ILRST 2100 or equivalent. P. Velleman.

Reviews matrix algebra necessary to analyze regression models. Covers multiple linear regression, analysis of variance, nonlinear regression, and linear logistic regression models. For these models, least squares and regression, and linear logistic regression models. For these models, least squares and regression, and linear logistic regression models. Students are expected to learn how to thoroughly analyze real-life data sets using computer-packaged programs. Topics include multivariate normal distribution, sample geometry and multivariate distances, inference about a mean vector, comparison of several multivariate means, variances, and covariances; detection of multivariate outliers, principal component analysis; factor analysis; canonical correlation analysis; discriminant analysis; and multivariate multiple regression.

ILRST 4110 - Statistical Analysis of Qualitative Data (also BTRY 6030)
Spring. 4 credits. Prerequisite: two statistics courses or permission of instructor. Next offered 2010–2011. T. DiCiccio.

Advanced undergraduate and beginning graduate course. Includes treatment of association between qualitative variables; contingency tables, log-linear models, binary ordinal and multinomial regression models; and limit dependent variables.

ILRST 4140 - Statistical Methods: Applied Design (also BTRY 6040)
Fall. 3 credits. Prerequisites: ILRST 2100, 2130, or ILRST 5100, 5110, or equivalent. Next offered 2010–2011. T. DiCiccio.

For description, see “Collective Bargaining, Labor Law, and Labor History.”

ILRST 5100 - Statistical Methods for the Social Sciences I
Fall. 3 credits. T. DiCiccio.

A first course in statistics for graduate students in the social sciences. Descriptive statistics, probability and sampling distributions, estimation, hypothesis testing, simple linear regression, and correlation. Students are instructed on the use of a statistics computer package at the beginning of the term and use it for weekly assignments.

ILRST 5110 - Statistical Methods for the Social Sciences II
Fall and spring. 3 credits. Prerequisite: ILRST 5100 or equivalent introductory statistics course. T. DiCiccio.

Second course in statistics that emphasizes applications to the social sciences. Topics include simple linear regression; multiple linear regression (theory, model building, and model diagnostics); and the analysis of variance. Computer packages are used extensively.

ILRST 5150 - Statistical Research Methods
Fall or spring. 4 credits. Offered only in New York City for M.P.S. program. Staff. Students learn basic skills for conducting qualitative and survey research. They work through an introductory review course at home prior to the course. After passing an exam, they attend a two-week immersion course in Ithaca taught by the on-campus faculty in July. Topics include the introduction to surveys and discrete analysis, basic regression, and integration of qualitative and quantitative research methods.

ILRST 6140 - Structural Equations with Latent Variables
Fall. 3 credits. Prerequisites: ILRST 2100/5100/5110 or equivalent. M. Wells.

Provides a comprehensive introduction to the general structural equation modeling system, commonly known as the “LISREL model.” One purpose of the course is to demonstrate the generality of this model. Rather than treating path analysis, recursive and nonrecursive models, classical econometrics, and confirmatory factor analysis as distinct and unique, we will treat them as special cases of a common model. Another goal of the course is to emphasize the application of these techniques.

ILRST 6190 - Special Topics in Social Statistics
Spring. 3 credits. Prerequisite: ORIE 6700 or equivalent. A. Vidyashankar.

In most statistical models, exact distribution theory for testing hypotheses or constructing confidence intervals is either unavailable or computationally cumbersome. Inferences are routinely performed by using large-sample approximations to the distributions of test statistics. This course provides a survey of some recent higher-order asymptotic approximations for likelihood-based methods of inference.

ILRST 7150 - Likelihood Interference
Fall. 3 credits. Prerequisite: graduate courses equivalent to ORIE 6700. Next offered 2010–2011. T. DiCiccio.

In most statistical models, exact distribution theory for testing hypotheses or constructing confidence intervals is either unavailable or computationally cumbersome. Inferences are routinely performed by using large-sample approximations to the distributions of test statistics. This course provides a survey of some recent higher-order asymptotic approximations for likelihood-based methods of inference.

ILRST 7170 - Analysis of Longitudinal Data
Spring. 3 credits. Prerequisites: extensive knowledge of SAS; advanced linear models; probability and statistics (at level of text by Casella and Berger). Next offered 2010–2011. A. Vidyashankar.

Comprehensive introduction to analysis of longitudinal data. Involves modeling, analysis, and a diagnostic components. Modeling and methodology for analysis of missing data are also incorporated.

ILRST 7990 - Directed Studies
For description, see “Collective Bargaining, Labor Law, and Labor History.”

FACULTY ROSTER
Abowd, John M., Ph.D., U. of Chicago.
Edmund Ezra Day Prof. of Industrial and Labor Relations, Labor Economics.

APPLEGATE, Ronald, Ph.D., SUNY Binghamton.

BACHARACH, Samuel, Ph.D., U. of Wisconsin.
Jean Mckelvey-Alice Grant Prof. of Labor Management Relations, Organizational Behavior.

Lec., Human Resource Studies.

BATT, Rosemary, Ph.D., Massachusetts Inst. of Technology. Alice Cook Professorship in Women and Work; Assoc. Prof., Human Resource Studies.

BESHAROV, Marya, Ph.D., Harvard U. Asst. Prof., Organizational Behavior.

BLAU, Francine D., Ph.D., Harvard U. Francis Perkins Prof. of Industrial and Labor Relations, Labor Economics.

BOYER, George R., Ph.D., U. of Wisconsin.
Prof., Labor Economics.

Kerwin-Michael Smith, college registrar

The Johnson Graduate School of Management prepares men and women for managerial careers in business. The school offers course work in many disciplines to provide potential managers with an understanding of the complexities of the professional world in which they operate and of the organizations of which they will become a part.

A bachelor’s degree or its equivalent is required for admission to the two-year program leading to the master of business administration (M.B.A.) degree. Nearly half of the students have a background of undergraduate studies in arts and sciences, and about one-quarter in engineering. Five percent of the students begin their graduate training immediately after receiving their bachelor’s degrees and the remaining 95 percent following work experience.

Combined degree programs allow highly qualified Cornell students to co-register in the school during their senior year, thereby earning a master’s degree in less than the usual time.

The doctoral program, administered through the Graduate School, provides an advanced level of education in business for those who seek careers in teaching and research at leading universities.

More detailed information about these programs is available from the Office of Admissions and Student Affairs, Johnson Graduate School of Management, 111 Sage Hall.

Students in other graduate programs and undergraduate students registered with the university are welcome in most classes.

UNDERGRADUATE ONLY

NBA 3000 Entrepreneurship and Private Equity
Fall, spring. 3 credits. Prerequisite: non-Johnson School undergraduate students only. Johnson School and graduate students, see NBA 5640. D. BenDaniel. This course uses lectures, live case studies, and business plans written by student teams to address entrepreneurial management in start-up ventures and private equity investments. Topics include financing, valuation, growth management, and buying and selling businesses. Guest lecturers speak on specialized topics such as leveraged buyouts, distressed businesses, advice from experienced board members, and private equity deals. The course attempts to integrate marketing, finance, operations, and human resource topics in the context of high-growth business ventures and private equity.

COURSES FOR NON-JOHN SON SCHOOL STUDENTS

NBA 5070 Entrepreneurship for Scientists and Engineers
Fall, spring. 3 credits. Prerequisite: M.Eng., Ph.D., and M.S. students; priority given to seniors as undergraduates. G. Schneider. Specifically designed for mentored independent study, this course is customized using streaming video, guest speakers, distance learning, and special lectures/tutorial sessions. Work is focused on a single project: students form a start-up team and follow a technical business idea of their own choosing through the process of developing and founding a business that can attract venture investors. Learn how high-technology ideas are converted into world-class businesses in venture-backed start-up companies as well as in new business development in existing companies. Tutorial sessions with professors apply lessons to the team business plan.

NBA 5150 Leadership Theory and Practice
Fall, spring. 3 credits. M. Hostetler. This course will focus on the challenges of effective leadership in a complex world. The course has four significant parts: (1) Exploring historical and contemporary theories and models of leadership through the required text and selected articles; (2) Examining and applying the Johnson School’s Leadership Model; (3) Analyzing the practical challenges of leadership through case studies, executive speakers, and company visits; (4) Developing self-awareness of the student’s leadership strengths and weaknesses through the use of behavioral instruments and group exercises and creating a personal action plan for improvement. A critical element of this course will be the coaching and feedback students will receive on their own leadership styles and behaviors from their peers and instructor.

NBA 5530 Accounting and Financial Decision Making
Spring. 3 credits. Prerequisite: non-Johnson School students. J. D’Souza, M. Shackell-Dowell. Focuses on basic financial and managerial accounting and the economic and financial concepts that have a bearing on managerial decisions. The goals are to (1) give students a working knowledge of the accounting process and the value and limitations of the data that come out of the accounting information system; (2) familiarize students with key concepts in managerial accounting and the application of cost information to pricing and operating decisions; (3) promote an understanding of the use of economic theory in the evaluation of capital investment projects. The teaching methods consist of lectures and cases. Students are evaluated on the basis of exams.

NCC 5500 Financial Accounting
Fall, spring. 3 credits. Prerequisite: non-Johnson School students. Similar in content to M.B.A. core course NCC 5000. Staff. Introductory accounting course that examines the subject from the viewpoint of users external to the organization. Topics include transaction analysis; the accounting cycle; financial-statement preparation, use, and analysis; revenue recognition and cost measurement; present value; and problems in financial-accounting disclosure.

NCC 5530 Marketing Management
Fall, spring. 3 credits. Prerequisite: non-Johnson School students. Similar in content to M.B.A. core course NCC 5360. Staff. Addresses controllable and uncontrollable marketing variables that managers in multiproduct firms face in today’s business environment. Topics include customer behavior, product planning, distribution, advertising and promotion, pricing, and competitive strategy.

NCC 5540 Management and Leading in Organizations
Spring. 3 credits. Staff. Ultimately, the goal of managers and leaders is to get things done in organizations. Most of that work is accomplished by effectively managing other people. Using text-based cases, video cases, audio cases, exercises, and readings, we will focus on the skills managers need to be successful in their firms and in their careers. An important course goal is to help you hone your critical thinking and problem-solving skills. To this end, our case analyses will require you to take problems apart into their component parts, to uncover their root causes, and to develop workable solutions. I will introduce frameworks and models that will help you analyze organizational problems and generate appropriate solutions. Major content themes focus on motivating employees, understanding
organizational design and organizational culture, persuading and influencing others, and managing change. The course is particularly relevant for students who (1) plan to work in corporations; or (2) intend to manage and lead firms; or (3) plan to work in the consulting industry; or (4) think about founding and/or owning start-up companies.

**NCC 5560 Managerial Finance**
Fall, spring. 3 credits. Prerequisite: non-Johnson School students. Similar in content to M.B.A. core course NCC 5060. Letter grades only. Staff. Introduces business finance through theory and case studies. Topics include stock and bond valuation, the capital budgeting decision, portfolio theory, the asset-pricing models, raising capital, capital structure, mergers and acquisitions, costs of capital, option pricing, and risk management. International applications are considered within each topic area. Grading is based on an exam, group case reports, homework, and class participation.

**NCC 5580 Managing Operations**
Spring, 3 credits. Staff. Operations Management is the design and management of the processes that transform inputs into finished goods or services. This course provides a foundation for understanding the operations of a firm. Our objective by the end of the course is to provide you with the basic skills necessary to critically analyze a firm’s operating performance and practices. We will focus on how the “physics” of material, work and information flows, and the design and management of a firm’s processes interact to determine a firm’s cost structure and its ability to compete effectively in terms of noncost measures such as quality, variety, and speed.

**NCC 5590 Strategy**
Spring, 3 credits. Staff. Among the critical tasks facing any senior manager are the creation, implementation, and evaluation of a business unit’s strategy. This course seeks to provide the management student with the tools and frameworks essential to carrying out these tasks. Many of these tools and frameworks will be based on recent advances in game theory, industrial organization, and organization theory, although the course will also draw from the older business policy tradition. Students who successfully complete this course will be able to analyze industries, identify areas of strategy advantage and disadvantage, and devise strategies that exploit advantages and remedy disadvantages.

**IMMERSIONS**
Only the Johnson School offers learning immersion courses in strategic operations, managerial finance, investment banking, brand management, and entrepreneurship. Immersions offer a semester of continuous focus, real-world problem solving, and site visits to dozens of companies.

**MFI—Managerial Finance Immersion**
Prerequisite: NCC 5060 with grade of B or better. Specifically designed for students planning to pursue finance careers. Some students interested in nonfinance careers (including consulting) may wish to consider this course, but they should recognize that it is not specifically designed for this purpose. A major objective is to help students make more informed choices about how to launch their finance careers.

**NBA 5020 Managerial Cost Accounting**
3 credits

**NBA 5060 Financial Statement Analysis**
1.5 credits

**NBA 5490 Managerial Finance—Practicum**
2.0 credits

**NBA 5560 Corporate Financial Policy**
1.5 credits

**IBI—Investment Banking Immersion**
Prerequisite: NCC 5060 with grade of B or better. Specifically designed for students planning to pursue careers in investment banking. Inappropriate for students interested in following a finance career in nonfinancial industry or nonfinance careers (including consulting).

This course is designed to meld the practical and theoretical aspects of the field. A great deal of interaction and discussion is expected between students, participating faculty, and visiting practitioners. While the course is designed to make its students more attractive as candidates for employment in the investment management profession, and it is expected that some of the participating firms will use their visits to identify candidates for summer internships, obtaining relevant summer internships remains the responsibility of the students.

**CMAM—Capital Markets and Asset Management**
Prerequisite: NCC 5060 with grade of B or better. Specifically designed for students planning to pursue careers in research (both buy-side and sell-side), sales, and trading, either at Wall Street firms (sell-side) or at buy-side firms such as mutual funds. Melds the practical and theoretical aspects of the field. A great deal of interaction and discussion is expected between students, participating faculty, and visiting practitioners. Staff. While the course is designed to make its students more attractive as candidates for employment in the investment management profession, it is expected that some of the participating firms will use their visits to identify candidates for summer internships, obtaining relevant summer internships remains the responsibility of the students.

**NBA 5420 Investment and Portfolio Management**
3.0 credits

**NBA 5630 Capital Markets and Asset Management Practicum**
2.5 credits

**NBA 5650 Valuation Principles**
1.5 credits

**NBA 5060 Financial Statement Analysis**
1.5 credits

**NBA 5490 Managerial Finance—Practicum**
2.0 credits

**NCC 5040 Managing and Leading in Organizations**
2.5 credits

**NCC 5080 Managing Operations**
2.5 credits

**SMI—Strategic Marketing Immersion**
Limited enrollment. Prerequisites: NCC 5000, 5010, 5020, 5030, and 5060; permission of instructor. Full-time program for the semester; students are not able to take other courses concurrently. The course objective is to begin developing students to think and act like brand managers, some of the best trained and most upwardly mobile professionals in industry. It provides students with a unique opportunity to begin internalizing the concepts, principles, and tools necessary to achieve success in brand management. While the course focuses on managing traditional consumer brands, high-tech products, services, and global branding are also addressed. In-class methods consist of (1) academic and industry lecturers; (2) on-site visits with marketing and manufacturing professionals; (3) case and project discussions and presentations; and (4) a brand management simulation. Course requirements consist of (1) discussion of readings; (2) individual case write-ups and presentations; (3) group projects and presentations (including a capstone simulation); and (4) in-class exams. There is considerable off-campus travel for field study.
NBA 5020 Managerial Cost Accounting  
3 credits

NBA 6200 Marketing Research  
3 credits

NBA 6240 Brand Management—Practicum  
4.5 credits

NCC 5040 Managing and Leading in Organizations  
2.5 credits

NCC 5080 Managing Operations  
2.5 credits

SSO—Semester in Strategic Operations  
Limited enrollment. Prerequisites: NCC-5010 and 5060 for Johnson School students; permission of instructor. Full-time program for the semester; students cannot take other courses concurrently. The course is concerned with the integration of technological, human-resource, logistical, and financial considerations to produce a manufacturing enterprise that can respond quickly and effectively to market requirements. The course is taught by a team of faculty and industrial practitioners, and much of the student work is team oriented. There is off-campus travel for field study of various manufacturing plants.

NBA 5020 Managerial Cost Accounting  
3 credits

NBA 6410 Logistics and Manufacturing Strategy  
3 credits

NBA 6500 Semester in Strategic Operations Practicum  
4.5 credits

NCC 5040 Managing and Leading in Organizations  
2.5 credits

NCC 5080 Managing Operations  
2.5 credits

E&P Entrepreneurship and Private Equities Immersion  
Comprehensive course that integrates the technical, strategic, and economic aspects of entrepreneurship; is the student’s full course load for the semester. David J. BenDaniel, the Don and Margi Berens Professor of Entrepreneurship at the Johnson School, leads the faculty team for this immersion.

NBA 5020 Managerial Cost Accounting  
3.0 credits

NBA 5320 Due Diligence in Private Equity Investments  
0.5 credits

NBA 5590 Venture Capital Industry and Private Equity Markets  
0.5 credits

NBA 5640 Entrepreneurship and Private Equity—Practicum  
3 credits

NBA 6530 Strategic Alliances  
1.0 credit

NBA 6560 Valuation Principles  
1.5 credits

NCC 5040 Managing and Leading in Organizations  
2.5 credits

NCC 5080 Managing Operations  
2.5 credits

SGE—Sustainable Global Enterprise  
The SGE immersion provides students with a breadth and depth of knowledge and experience relating to the broad impact of social and environmental issues as well as the strategic opportunity these issues present to firms across a number of industries. Students will spend much of their time in field projects that require them to address real problems currently being faced by companies who expect to receive practical, operational solutions.

NBA 6300 Sustainable Global Enterprise  
1.5 credits

NBA 6580 Sustainable Global Enterprise Practicum  
3 credits

NCC 5040 Managing and Leading in Organizations  
2.5 credits

NCC 5080 Managing Operations  
2.5 credits

*Note: Students electing to take the immersion must choose a minimum of 5 (5) additional credits of course work from the recommended electives list of Johnson School courses or other courses from other programs at Cornell. Course availability is subject to scheduling.

NCC COMMON CORE COURSES

NCC 5000 Financial Accounting  
Fall. 2.5 credits. Johnson School core course. Limited enrollment. Non-Johnson students see NCC-5500. R. Libby. Introductory accounting course that examines the subject from the viewpoint of users external to the organization. Topics include transaction analysis; the accounting cycle; financial-statement preparation, use, and analysis; revenue recognition and cost measurement; present value; and problems in financial-accounting disclosure.

NCC 5010 Statistics for Management  
Fall. 2.5 credits. Johnson School Core Course. Limited enrollment. A. Farahat. This course provides the foundations of probability and statistics required for a manager to interpret large quantities of data and to make informed decisions under uncertainty. Topics covered include decision trees, sampling, hypothesis testing, and multiple regression.

NCC 5020 Microeconomics for Management  
Fall. 2.5 credits. Johnson School core course. Limited enrollment. R. Frank and M. Waldman. Introduces microeconomic theory and applies it to problems faced by managers. Topics include supply and demand, consumer behavior, pricing when a firm has market power, and the role of contracts. The course employs a lecture format and emphasizes problem solving. Grading is based on a midterm and a final exam.

NCC 5030 Marketing Management  
Fall. 2.5 credits. Johnson School core course. Limited enrollment. Non-Johnson students see NCC-5530. S. Gupta and V. Narayan. Designed to convey the key concepts of marketing and how they fit into the larger context of management strategy and decisions. Presents both the practical “how” and the fundamental “why” of marketing activities in the light of contributions from behavioral science, economics, and statistics. The goals are to provide sufficient understanding for those who need only to interact with the marketing function, as well as communication concepts and developing processes that can provide the foundation for further course work and future experience in marketing. The course makes extensive use of case materials.

NCC 5040 Managing and Leading in Organizations  
Spring. 2.5 credits. Johnson School core course. Limited enrollment. Non-Johnson students see NCC-5540. K. O’Connor and S. Spataro. Stories are central to how we know and remember events, people, and facts and to how we communicate knowledge and history. Most of the jobs we aspire to involve a particular form of storytelling—the CEO’s vision, the analyst’s report, the planner’s strategy, the salesperson’s pitch, the consultant’s analysis, and the manager’s brand. What distinguishes these as business stories is that they are often analytical (based on a set of objective facts and statistics) and reflect a deep understanding of the complex interactions of individuals and organizations. This course has two goals: (1) to make students appreciate the complexity of the issues that often arise in organizations, and (2) to develop and refine students’ analytical storytelling abilities. To achieve these goals, the course is taught by the case-study method, an efficient way to expand the student’s experience base with respect to such issues as motivation, power, leadership, ethics, structure, design, and change. Students learn how to make good inferences about what will and won’t work in particular situations, and how to learn from their own experiences and those of others.

NCC 5060 Managerial Finance  
Fall. 2.5 credits. Johnson School core course. Limited enrollment. Non-Johnson students see NCC-5560. R. Michaela. Introduces students to the basic concepts of finance. In particular, the course addresses what type of investments firms and individuals should take on and how these investments should be financed. Understanding these concepts is essential to financial managers and professional investors and has important applications to many aspects of financial decisions all of us have to make on a daily basis (e.g., is getting an M.B.A. a good investment?). These issues involve capital budgeting decisions, stock and bond valuation, how to assess and account for risk through the capital asset pricing model (CAPM), option pricing, capital structure and cost of capital, and market efficiency. Grading is based on exams, quizzes, group case reports, homework, and class participation.
NBA 5080 Managing Operations
Spring. 2.5 credits. Johnson School core course. Limited enrollment. Prerequisite: NCC 5010 or permission of instructor. Non-Johnson students see NCC 5580. V. Gaur.
Focuses on managing processes: actions that convert inputs into outputs. Almost any business function can be modeled as a network of processes. The first part of the course examines processes, both individually and as part of a larger system; students see that good process design reflects both the volume and the variety of the product. A common course theme is the deleterious effect of variability (in demand, supply, quality, or capacity) in complex systems. Queueing theory and simulation are particularly helpful for analyzing process capabilities. The second part analyzes how goods and services are produced. After describing the strategic role of operations, it examines forecasting systems, inventory management, and just-in-time and logistic management. Constrained optimization models provide information about managing with finite resources. The final part examines process improvement through quality and productivity management and corporate learning.

NCC 5090 Strategy
Fall. 2.5 credits. Johnson School core course. Limited enrollment. Non-Johnson students see NCC 5590. V. Kadiyali and H. Schneider.
Among the critical tasks facing any senior manager are the creation, implementation, and evaluation of a business unit's strategy. This course seeks to provide the management student with the tools and frameworks essential to carrying out these tasks. Many of these tools and frameworks are based on recent advances in game theory, industrial organization, and organization theory, although the course also draws from the older business policy tradition. Students who successfully complete this course are able to analyze industries, identify areas of strategy advantage and disadvantage, and devise strategies that exploit advantages and remedy disadvantages.

NBA MANAGEMENT ELECTIVE COURSES

Accounting

NBA 5000 Intermediate Accounting
Spring. 3 credits. Prerequisite: NCC 5000 or equivalent. M. Nelson and R. Swieringa.
This course is relevant to a general business career, but is particularly relevant to careers that involve the use of financial statements. Our objective is to enable you to become more knowledgeable, skeptical consumers of financial information by teaching you to (1) understand and be able to reconstruct the accounting that produced the numbers you see in financial statements and the financial press, and (2) anticipate circumstances where financial information is likely to be biased or incomplete, in part by understanding the alternatives that were available at the time that a choice among accounting treatments was made. This objective will be achieved by a combination of lectures and analyzing and discussing articles from the financial press and cases that are based on actual financial statements.

NBA 5010 Taxes and Business Strategy
Spring. 1 credit. Prerequisites: NCC 5000 and NCC 5060. E. Maydew.
Part of being financially savvy is having an understanding of how taxation affects business decisions; e.g., forming a corporation and raising capital, operating the firm, distributing cash to shareholders through dividends and share repurchases, expanding through acquisition, and divesting lines of business. Taxes have a direct impact on cash flow and often divert 30 to 40 percent of the firm's pretax cash flow to the government, effectively making the government the single largest stakeholder in many firms. Having an understanding of how firms plan accordingly is important for just about any career path you choose; whether you will be an investment banker, venture capitalist, consultant, money manager, CFO, treasurer, controller, taking over a family-owned business, or an entrepreneur setting up a new business. Topics include tax planning fundamentals, corporate tax fundamentals, taxation of mergers and acquisitions, taxation of divestitures, international taxation, taxes and wealth planning.

NBA 5020 Managerial Cost Accounting
Fall, spring. 3 credits. Prerequisites: NCC 5000, 5010, and 5020, or equivalent. H. Bloomfield.
Designed both for those responsible for internal accounting information and those who use such information for decision making and performance evaluation. Course topics include budgeting, product costing systems, activity-based costing, activity-based management standards, cost allocation, cost variance analysis, cost estimation and prediction, cost-volume-profit analysis, responsibility accounting, performance evaluation, non-manufacturing cost analysis, cost allocation, and transfer pricing. Instruction is a mixture of lecture and case discussion. Student evaluation is based on a midterm exam, a final exam, and class participation.

NBA 5030 Strategic Cost Management
Fall. 1.5 credits. Prerequisite: NBA 5020 or permission of instructor. R. Hilton.
Focusses on the design and tools of cost management systems and the relationship of cost management to an organization's strategy. Based on cases that explore the use of cost management concepts and tools in a variety of organizations. Course topics include target costing, process value engineering, Kaizen costing, cost reduction, continuous improvement, cost-quality-functionality trade-offs, construction and implementation of a balanced scorecard, activity-based costing, activity-based management, identification of value-added and non-value-added costs, and the value chain. Instruction is based on the presentation and discussion of cases. Student evaluation is based on a case presentation, a final case write-up, and class participation.

NBA 5060 Financial Statement Analysis
Fall, spring. 1.5 credits. Prerequisite: NCC 5060, NBA 5000 (or concurrent enrollment), or permission of instructor. N. Yehuda and C. Nichols.
Develops a set of core skills essential to financial statement analysis. Covers strategic ratio analysis, cash flow analysis, pro forma financial statements, financial modeling, credit analysis, bond rating and bankruptcy predictions, valuation, and discounted cash flow techniques. Emphasizes practical applications. The course format is a combination of case studies and lectures. The lectures communicate subtler aspects of the material while the cases provide hands-on experience.

NBA 5090 Advanced Financial Statement Analysis
Fall. 1.5 credits. Prerequisites: NBA 5060, finance immersion course, or permission of instructor. Not open to students who have completed 3-credit version of course NBA 5060. N. Yehuda.
Builds on the core financial analysis skills developed in NBA 5060. Topics include trading strategies, risk analysis, discounted cash flow techniques, and acquisitions and consolidations. Course format is a lecture/discussion format. The overall focus is on using accounting-based information to make investment decisions. The case class is based with a strong emphasis on practical applications. There is no final exam.

NBA 5110 Financial Modeling
Fall, spring. 1.5 credits. Prerequisites: NBA 5060 or permission of instructor; mastery of basic Excel skills. J. D’Souza and C. Nichols.
Financial modeling is the art and science of constructing spreadsheet models of firms’ future financial statements. This course builds on the brief introduction to financial modeling in NBA 5060 by modeling the effect on the income statement, balance sheet, and statement of cash flows of more complicated financial transactions such as leveraged buyouts, mergers and acquisitions, and corporate reorganizations. The course covers the use of spreadsheet models for several important financial decisions: capital budgeting, determining the value of a company, and evaluating and communicating the value impact of strategic decisions. The course covers the basic tools and techniques that are commonly used in financial analysis.

NBA 5600 Evaluating Capital Investment Projects
Spring. 1.5 credits. Prerequisites: NCC 5060, M. Leary.
This course focuses on the financial-economic analysis of corporate investment decisions. One of the most important decisions that a firm makes is how to best allocate its capital resources. Both financial and nonfinancial managers alike need to be able to analyze and communicate the value impact of proposed capital expenditures and strategic decisions. Using both financial theory and case examples, we will explore such topics as discounted cash flow analysis, alternative decision criteria, mutually exclusive investments, lease vs. buy decisions, stochastic simulation, and real options. The course is especially useful to anyone preparing for a career role with input to business investment decisions, including marketing, operational, and corporate financial managers.

Economics

NBA 5240 Macroeconomics and International Trade
Fall, spring. 3 credits. Prerequisite: NCC 5020 or equivalent or permission of instructor. O. Heffetz and I. Aziz.
Applies basic macroeconomic theory to such issues as inflation, unemployment, economic growth, and productivity, and examines how those problems interact with international trade and finance. Students learn to be informed observers of national and international economics and discerning users of economic analyses and forecasts. Uses a lecture/discussion format.
NBA 5270 Applied Economic Analysis
Spring, 4 credits. B. Ho.
Emphasizes how economic analysis can help firms and individuals make the most of their opportunities. Of special interest to managers and consultants: the focus on examples that illustrate how faulty economic reasoning leads to inefficient outcomes. Also emphasizes strategic thinking and instructs students in the art of "economic naturalism"—the use of economic reasoning to understand and explain everyday patterns of individual and firm behavior.

Entrepreneurship

NBA 5190 Sustainability as a Driver for Innovation in the Entrepreneurial Organization
Spring, 1 credit. F. Keller.
This one credit eight-session course will give the student an overview of the emerging sustainable business model. Using the teacher’s business as an example along with appearances from other business leaders, the class focuses on principles of Sustainability and how learning to transform their own organizations. While the U.S. version of capitalism has succeeded in providing unprecedented wealth throughout the 20th century, this class will evaluate the potential of "twistedge" capitalism to benefit not only the owners but the whole of society in a manner different than "trickle" economy. Using the Hegelian notion of thesis, antithesis, and synthesis, this class will explore capitalism as practiced today as the thesis. The antithesis will be from environmental and social movement concepts. The principles of sustainability will be synthesized as the potential "new normal" for business in the future. Students will learn that in addition to traditional financial analysis, business decisions can benefit from taking into account the impacts of social capital and ecological capital as well. Students will learn using dialogue and presentations about actual cases and the logic of how the sustainable business model is being constructed.

NBA 5300 Entrepreneurship Lab
Fall, 3 credits. Prerequisites: M.B.A. students; NBA 5640 or concurrent enrollment or permission of instructor. G. Schneider]

NBA 5320 Due Diligence in Private Equity Investments
Spring, 0.5 credits. D. BenDaniel.
This is an arranged course featuring expert practitioners covering the following topics: integrating Strategic Planning into Private Equity Due Diligence, Operational Due Diligence, Effective People and Organizational Due Diligence, Review of Non-Compete and Other Key Agreements, Legal Due Diligence, Tax Planning, and Financial and Accounting Due Diligence. Because of the large enrollment expected and at the request of the visiting faculty, only students who are prepared to attend all the required sessions will be admitted and will receive credit for the course.

NBA 5570 Case Studies in Venture Investment and Management
Fall, 1.5 credits. D. BenDaniel.
Consists of a series of cases that focus on the venture capital investment process and the subsequent management of such ventures. The primary perspective is that of the venture capitalist in assembling and evaluating information, preparing forecasts, assessing risks, developing and negotiating investment structure and terms, and deciding whether to invest. Cases also focus on management and financial problems and on policy issues and the relationship between venture capitalists and entrepreneurs. The course also examines the unique role of the venture capitalist and the techniques and skills employed in growing and managing enterprises. Presentations by venture capitalists and entrepreneurs supplement student discussion and analysis of cases. Grades are based on written reports, quality of classroom participation, and a final exam.

NBA 5590 The Venture Capital Industry and Private Equity Markets
Spring, 0.5 credit. D. BenDaniel.
Four lectures (two on Friday afternoon, two on Saturday morning) will be given by Jesse Reyes, former vice president of research for Thompson's venture capital data subsidiary. The lectures will focus on the venture capital and private equity industries from the practitioners' perspective. Topics include (1) an introduction to the private equity market focusing on the transactions that define the industry, its structure, participants, history, and trends; (2) important elements of private equity investing—now an increasingly important and dynamic part of the asset allocation mix; (3) issues in private equity investing such as concentration in fewer, larger funds; and (4) the critical role of a new class of gatekeeper consultants for limited partners. There will be a final paper.

NBA 5630 The IPO and Mergers and Acquisition Process
Fall, 3 credits. T. Willett.
Gives students an in-depth look at initial public offerings and deal structures from a practitioner’s point of view. With respect to initial public offerings, the course covers the applicable statutory framework, pre-offering corporate preparations, the due diligence process, the implementation of corporate governance policies appropriate for a public company, the offering registration process, liability under federal securities laws, the Securities and Exchange Commission review process, underwriters, and selection of a trading firm. Regarding deal structures, the course explores choosing an appropriate transaction structure, deal financing alternatives, due diligence, public company transaction issues, and crucial legal aspects of the acquisition, such as caps/collars, letters of intent, successor liability, continuity of employees, and noncompetition agreements.

NBA 5640 Entrepreneurship and Private Equity
Fall, spring, 3 credits. D. BenDaniel and S. Gaul.
This course uses lectures and live case studies to address entrepreneurial management in start-up ventures and private equity investments. Topics include valuation and growth management of start-up ventures, buying and selling businesses, leveraged buyouts, and business plans produced by student teams. Guest lecturers speak on specialized topics such as boards of start-up companies, distressed businesses, real estate investment, and entrepreneurial marketing. The lectures and cases are in the first half of the semester and the business plans are developed in the second half. The course attempts to integrate marketing, finance, operations, and human-resource topics in the context of high-growth business ventures and business ventures and private equity.

NBA 5680 Global Innovation and Technology Commercialization
Spring, 1.5 credits. W. Sine.
Examines technology commercialization from an investor's point of view. Will address issues related to intellectual property, recognizing and screening opportunities, exploiting technology opportunities, and marketing high technology. Case studies and discussions with practitioners will be used to examine this topic.

NBA 5630 Strategic Alliances
Spring, 1 credit. J. Suwinski.
A wide variety of strategic alliances are being used today as companies try to leverage their resources for competitive advantage. This course gives an overview of the spectrum of alliances, examining the strategic rationale and pros and cons of each major type of alliance. The primary focus is on joint ventures as a specific form of strategic alliance, where the success rate is less than 50 percent. The course develops a set of principles that have contributed to success for Corning Incorporated. The course is taught from the perspective of the general manager of a major business unit.

NBA 6780 Advance Private Equity; Negotiations and Structuring
Spring, as the thesis. Prerequisites: NBA 5640, NBA 3000, or permission of instructor. Staff.
Focuses on venture capital financing, including the problems and issues facing emerging growth companies as they progress from early stage, start-up status to mature public companies. Emphasizes practical skills: hands-on examination, for example, of how deals are negotiated and valuations arrived at, the principal focus being the so-called Series A, or first professional, round of financing. Views the early stage space from three perspectives: (1) the entrepreneur, or founder, (2) the professional investors, or VCs, and (3) the key executives, i.e., the major players in emerging growth finance. Reviews economics, finance, tax, securities, corporate and employment law considerations, and custom and usage in the industry.

NBA 6890 Law for High-Growth Business
Fall, 3 credits. Z. Shulman.
In-depth analysis of key issues that an emerging high-growth business must consider and address, including (1) choosing type of business entity, (2) protecting confidential information and inventions, (3) sources of capital, (4) understanding capitalization structures (e.g., common stock, preferred stock, preferred stock terms and economics), (5) using stock options as employee incentives, (6) fundamental fair employment practices, (7) proper establishment and use of boards of directors and advisory boards, (8) structuring convertible debt for start-ups, (9) bankruptcy and the Foreign Corrupt Practices Act, and (10) dealing with lawyers.
Finance

NBA 5120 Applied Portfolio Management  
Fall, spring. 3 credits each semester. Limited enrollment. Students must commit to taking course in fall and spring semesters. Priority given to second-year M.B.A.s who successfully completed either NBA 5060 or finance immersion. Students must apply formally; if number of applicants exceeds 12, admission is competitive and merit-based. S. Bhobraj.

Focuses on the management of an investment fund. For full description, see Sanjeev Bhobraj.

NBA 5130 International Finance Cases  
Spring. 1.5 credits. W. Bailey.

International finance is different because of two issues: exchange rate volatility and barriers to the flow of capital. Furthermore, political risk is heightened when money crosses borders, and governance, disclosure, law, and regulation are more varied than in a single-country context. The purpose of this course is to practice applying the ideas and methods of finance to cross-border problems. The course is centered on six cases including discussions of related research and other materials.

[NBA 5210 Advanced Valuation: Mergers, Acquisitions, and Chapter Restructuring]

NBA 5400 Advanced Corporate Finance  
Fall. 3 credits. Prerequisite: NBA 5060 or equivalent. Staff.

Relevant for both investment banking and the treasurer's activities of an operating corporation. Most class sessions are lecture-discussion, but there will be several corporate finance cases. Topics include debt securities (duration, convexity, inverse floaters, bond refunding, term structure), convertible debt, capital structure, distribution policy, exotic new securities, financial strategies, and the buy versus lease decision. Investigates corporate financial policy decisions from a normative-quantitative point of view and develops skill in formulating financial models and evaluating models. Uses basic mathematics.

NBA 5405 Advanced Corporate Finance  
Spring. 1.5 credits. H. Bierman.

This course is relevant for banking, investment banking, security analysis, and the financial activities of an operation corporation. Class sessions are lecture-discussion and a very few cases. We will investigate corporate financial policy decisions from a normative-quantitative point of view and develop some skill in formulating financial models, and in evaluating financial models. The mathematics used is basic algebra. We want to develop an approach to the analysis of financing decisions of corporations. The time spent on each topic will depend on how the material is taken. There will be several class leaders from the real world talking to the class, as well as visitors.

NBA 5420 Investment and Portfolio Management  
Spring. 3 credits. Prerequisite: NCC 5060, NCC 5560, or an equivalent core finance course. G. Sear.

This course emphasizes both conceptual foundations and practical implementation. The material in the course would be helpful to anyone interested in investing. However, the course should be especially useful to students interested in an investment management career (e.g., portfolio management in mutual funds and hedge funds, equity research, equity trading, risk management, investment consulting, and investment banking). After a brief review of fundamental issues (such as the risk/return trade-off), the course contains an extensive module on strategic asset allocation with a focus on practical implementation. The course continues with an exposition of certain approaches to portfolio construction. The remainder of the course focuses on topics relevant to security selection and optimal portfolio construction. The course contains an extensive discussion of equity multifactor models and screening, with applications to value and growth investing. The course highlights trends in the investment management industry and introduces terminology and tools familiar to investment professionals.

NBA 5430 Financial Markets and Institutions  
Fall, spring. 3 credits. Prerequisite: NCC 5060. W. Bailey.

Applies principles of finance to understand modern financial markets. Central themes are the structure of financial markets, their pricing function, the interaction between financial markets and macroeconomic conditions, and the processes of innovation and regulation in these markets. Students look at the workings of a variety of markets and develop an understanding of the different problems that different types of markets address. Studies the question of market efficiency and the interaction between government policies and financial markets. Analyzes issues in innovation and regulation with basic principles of financial economics. Throughout the course, the relevance of these issues for the practical corporate, portfolio, or public sector decision maker is considered. The course includes ideas and evidence from academic research along with historical, institutional, and international perspectives. Recent events are used to illustrate concepts and develop analytic skills. Spreadsheet applications and a term project requiring data analysis develop research skills and illustrate academic concepts. Exams consist of computational, short answer, and short essay questions.

NBA 5450 The Search for Alpha  
Fall. 1 credit. R. Marin.

This course will focus on the fundamental trends under way in the asset management industry. While it will start with an overview of the investment management industry, it will move quickly toward a review of the more recent growth in hedge funds. Given the attention that the investment management industry (not to mention the world at large) has put on hedge funds and the relatively unregulated and secretive nature of the breed, the course will seek to answer the question of what exactly is going on in the industry and where it is going. The intention will be to give students an overview of the hedge fund space from the perspective of what comprises it, who the participants are (managers, investors, support areas, and intermediaries), how hedge funds are assessed and measured both individually and in portfolio, how investors access hedge funds, and what major issues face the industry.

NBA 5460 Liability Driven Alpha  
Spring. 1 credit. R. Marin.

This course will focus on the fundamental trends underway in the pension management industry. This $3 trillion arena has, from before the creation of ERISA to the present day, been managed in a very homogenous manner with similar investment approaches and very questionable results. The convergence of accounting, regulatory, and market forces is forcing change upon the industry in a way that will impact a broad range of service providers to the industry, and indeed the underlying company plan sponsors and the very participants they serve. These changes will produce major dislocations and opportunities for asset managers, investment bankers, insurance companies, private equity firms, hedge funds and a whole array of processing companies. Given the demographics of the aging baby boomer population and the looming crisis in global retirement funding, this may prove to be a bellwether issue in finance and social policy for the next decade. The changing regulatory and accounting rules that govern defined benefit plans will be reviewed with emphasis on the Pension Protection Act of 2006, FAS 158 (Phases I and II) and the convergence of U.S. and international accounting standards in this arena.

NBA 5470 Operational Alpha  
Spring. 1 credit. R. Marin.

This course will focus on the elements of the asset management industry that most critically add to success, but that are outside the traditional realm of investment strategy. It is generally understood today that risk is comprised of many elements and includes a significant component of operational risk. There are operational elements of the investment process that clearly add or detract significant value from returns just like operational risk can add to or detract from overall risk. These operational elements that add to return can be called operational alpha and the more mature a market or investment strategy becomes, or the more difficult the return environment, the more important operational alpha becomes.

NBA 5520 Cases in Corporate Finance  
Fall. 3 credits. Prerequisite: second-year M.B.A.s and Accelerated M.B.A. (AMBA) students; NCC 5060 or equivalent. H. Bierman.

We will develop an understanding of the theories of corporate finance and have discussions of corporate finance cases. Cases and lectures deal with mergers, acquisitions, valuation, corporate restructuring, LBOs, MBOs, distribution policies, and the financing of corporations. The material applies to careers in investment banking, managerial finance, and top-level executives. Several executives working in or with corporate finance will present cases. The goal is to develop a skill in analyzing the financing decisions of corporations.

NBA 5540 International Finance  
Spring. 3 credits. Prerequisite: NCC 5060 or permission of instructor. W. Bailey.

Applies principles of finance to the international setting. International finance is different in two basic respects: (1) the existence of multiple currencies adds risk to investment and financing decisions; (2) when corporations and portfolio investors cross international borders, both problems and opportunities arise. This course focuses on these issues and highlights how finance theory
can be extended to address them. Students apply the basic principles of international finance to a variety of problems. The course helps students understand the ideas and research results of international finance and adapt what they learn to the practical problems of success in the globally integrated business world. The first part of the course outlines the basic analysis of exchange rate determination, determinants of capital flows, and the value of international diversification. The second part presents a variety of problems, examples, and applications from the three basic themes described in part one. Spreadsheet assignments and a term project requiring data analysis develop students' skills and illustrate academic concepts. Exams consist of computational, short answer, and short essay questions.

**NBA 5550 Fixed-Income Securities and Interest Rate Options**

Fall. 3 credits. Prerequisites: NCC 5060, NCC 5010. Y. Grinstein and M. Leary.

Described to study the pricing, hedging, and risk management of fixed-income securities and interest rate derivatives. Topics include the term structure of interest rates, interest rate swaps, dynamic interest rate models, and the risk structure of interest rates, credit risk spreads, and corporate bond valuation. The method of instruction is lectures and discussion, and computer illustrations are an integral part of the course content.

**NBA 5580 Corporate Financial Policy**

Fall, spring. 1.5 credits. Prerequisite: NCC 5060. Y. Grinstein and M. Leary.

Provides an understanding of the financial decisions of corporations. Discusses the factors that affect corporate financial decisions and how they determine firms' financing, investment, and hedging policies. These factors include taxes, transaction costs, contracting (between managers and shareholders and between shareholders and other claimholders such as bondholders), and asymmetric information. Much of the material is presented using examples and cases designed to demonstrate how financial decisions create, destroy, or modify value.

**NBA 5650 Corporate Governance**

Spring. 1.5 credits. Prerequisites: NCC 5060 and NBA 5660 or permission of instructor. Y. Grinstein and M. Leary.

Deals with the ways in which different investors assure themselves of getting a return on their investments. How do investors get managers to return some of the profits to them? How do they make sure that managers do not invest their money in bad projects? These questions are extremely relevant for almost any organization, from start-ups to Forbes 500. This course explores these issues through a series of case studies and examples. Topics depend on time availability. Career focus: M.B.A. students aspiring to top corporate offices, regardless of functional area, or envisioning a career in M&A/investment banking, financial management, or consulting firms.

**NBA 5850 Advanced Topics in Valuation**

Fall. Credits TBD. Prerequisite: NBA 6560 or equivalent. W. Rehm.

NBA 5850 is an entirely case-based class that builds on the core valuation class. Students will apply the principles of corporate valuation (DCF, APV, and multiples) to several real-life companies in different industries. We will address how to adjust “normal” valuation method—what to do when the standard approach gives strange results. The goal is to prepare students for “real life” valuations of complex, multi-business unit companies. Teams of four students will prepare a case for each class. We will spend about one-third of each class on the prepared case, one-third on key technical issues, and one-third on an introduction to the next industry.

**NBA 5980 Behavioral Finance**

Spring. 3 credits. M. Huang.

Traditional finance theories assume that financial market participants are rational, and argue that the financial market is always efficient. Behavioral finance, on the other hand, argues that some financial market phenomena can plausibly be understood only under the assumption that some market participants are not fully rational. This course gives an introduction to behavioral finance. Introduced to the conceptual framework of behavioral finance, and then apply the framework to study a wide range of issues in asset pricing, corporate finance, and investment. Topics covered in the course include investor psychology and behavior, limits of arbitrage, aggregate market timing, anomalies in stock returns, market crashes, behavioral momentum, size, and many other effects), professional money management, corporate issuance, mergers and acquisitions, investment banking, and earnings management. As a summary of the course, we will apply the conceptual framework of behavioral finance to understanding China’s financial market.

**NBA 5650 Advanced Valuation**

Fall. Spring. 1.5 credits. D. Weinbaum.

Deals with the principles of valuation for publicly traded firms, divisions of publicly traded firms, or private firms that have publicly traded comparables, using discounted cash flow (DCF) valuation. The definitions of cash flow and discount rate depend on whether we want to value the entire firm or value only equity. Discusses (1) how to compute free cash flows based on historical income statement and balance sheets; (2) the concept of value drivers and economic value added (economic profit or residual income); (3) operating risk and risk-free rates, the relation between financial leverage and cost of capital, the levering and unlevering of equities, capital asset pricing model, computing cost of equity, cost of debt, cost of preferred stock, weighted average cost of capital, dividend valuation of dividends, and retained earnings; (4) the concept of capital structure. Introduces valuation by multiples using comparables and discusses its applications to valuing divisions of multibusiness firms.

**NBA 5730 Introduction to Derivatives, Part 1**

Fall, spring. 1.5 credits. Prerequisite: NCC 5060 or permission of instructor. X. Zhang.

Introduces students to the pricing and hedging of derivative securities. Briefly covers forward contracts, futures contracts, and swaps. The primary emphasis is on option contracts. Underlying assets include stocks, currencies, and commodities.

**NBA 6740 Introduction to Derivatives, Part 2**

Fall. 1.5 credits. Prerequisite: NCC 5060 or permission of instructor. X. Zhang.

For description, see NBA 6730.

**NBA 6940 Equity Derivatives and Related Products**

Fall. 3 credits. M. Zurack.

Relying on quantitative techniques and practical experiences, this course attempts to provide an in-depth analysis of equity derivatives and related products, structured, valued, and used by all types of investors globally. Students attending this class will learn many real-world applications of these products, which they should find useful in equity sales and trading, private wealth management, investment management, as well as in Investment Banking pursuits. The course is broken into the following sections: Exchange Traded Funds, Futures Portfolio Trading and Swaps; Equity and Credit Options and Convertibles; Strategies; Non-U.S. Markets.

**General Management**

**NBA 5140 Ethics and Corporate Culture**

Spring. 1.5 credits. D. Radcliffe and B. Wendel.

In the high-pressure worlds of business and law, all too often good people do bad things. In many cases, the unethical behavior is due in part to a “toxic” corporate culture. The attitudes, values, and practices that prevail in their organizations induce otherwise ethical employees to take actions that violate the widely shared norms of conduct. Such behavior can be costly—even disastrous—leading to ruined careers, tarnished corporate reputations, and legal liability for the individuals and their companies. In an environment where “only results matter,” it can be difficult for a new M.B.A. or law school graduate to recognize the risks. If she does see the dangers, she may still find it hard to avoid them. This course seeks, first, to help M.B.A. and law students understand how a firm’s culture can tempt—or push—employees into unethical behavior. Second, the course aims to acquaint students with strategies for dealing with ethical challenges posed by a problematic corporate culture. Class sessions include discussion of case studies and articles reporting on relevant research in organizational behavior, as well as talks by guest speakers from the fields of business and law. Since managers and attorneys frequently work together, team projects require collaboration among M.B.A.s and law students, as they bring both business and legal perspectives to bear on the most pressing ethical issues. Course grades are based on class participation and several short writing assignments (individual and group).

**NBA 5250 Energy and the Environment: An Economics Approach**

Spring. 3 credits. Prerequisite: NCC 5020. B. Ho.

Energy use and its impact on the environment will be two of the most important issues of the 21st century. The large role of energy in geopolitical relationships combined with the fact that most of the greenhouse gas emissions associated with global climate change come from energy production, means the energy sector is poised for dramatic change, and thus great opportunity. This course is designed to be a primer for potential entrepreneurs, investors, managers and policy makers on energy and environmental issues. We will consider the economic, social, political, and strategic realities of the energy sector using political/economic analysis and strategic case analysis. Topics will include environmental economics, energy economics, environmental
ethics, the politics of energy, NGO activism, climate change, the oil sector, the electricity sector, alternative energy, the international context, and sustainability.

**NBA 5330 Management Cases and Consulting Process**

Spring, 3 credits. N. Peck.

The objective of the course is to prepare first-year students for summer internships and careers in consulting and general management by developing their analytic skills and understanding of project-oriented business problems. Students will be expected to answer case questions and present solutions in class. In addition, a semester-long case study of a consulting project will be conducted with teams providing proposal, interim, and final presentations.

**NBA 5600 Business Law I (also AEM 3250)**

Fall, 3 credits. Requirement for students intending to be professional accountants. Highly recommended for finance students. Prerequisite: junior, senior, or graduate standing. D. Grossman.

Introduces the basic tenets of law as they apply to businesses and their operations. Topics include personal property, contracts, agency, and real property. Uses text readings and case studies.

**NBA 5610 Business Law II (also AEM 3210)**

Spring, 3 credits. Prerequisite: NBA 5600 or permission of instructor. D. Grossman.

The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited-liability companies. The second portion covers selected topics in business law, such as employment discrimination, secured transactions, product liability, unfair competition, and international business law.

**NBA 5620 Estate Planning (also AEM 4220)**

Fall, 14 sessions. 1 credit. Prerequisite: junior, senior, or graduate standing. D. Grossman.

Covers law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and probate procedures.

**NBA 5670 Management Writing**

Fall, spring. 1.5 credits. Priority given to M.B.A. students; open to other graduate students and employee degree candidates if room. B. Mink, C. Rosen, and A. Noble-Grange.

Students learn to write clearly and effectively by focusing on the writing process as well as the finished product. Topics include audience perspective, style, organization, strategy, and persuasion. There is a writing assignment every week. Students receive instructor and peer feedback.

**NBA 5680 Oral Communication**

Fall, spring, seven weeks. 1.5 credits. Priority given to M.B.A. students; open to other graduate students and employee degree candidates if room. B. Mink, C. Rosen, and A. Noble-Grange.

Focuses on improving the presentation skills of management students. Covers speaking formats, delivery, organization, visual aids, persuasion, and question/answer. Student speeches constitute the bulk of class time, with each student presenting seven or eight speeches, many of which are video recorded. The small class size allows for significant individual attention and feedback from peers and the instructor.

**NBA 5690 Management Consulting**

Spring, 1.5 credits. P. Stepp.

The purpose of the course is to assess the leadership and management skills of students by providing an opportunity to gather feedback on their strengths and developmental needs. The first two weeks focus on self-awareness and employ several experiential exercises and self-assessment instruments, including: Johnson Leadership 360 Assessment, the Myers-Briggs Type Indicator (MBTI), and the Fundamental Interpersonal Relations Orientation-Behavior (FIRO-B). Class members will be trained in giving and receiving feedback from team members. Activities will include various leadership and team challenges. Professional feedback providers will observe students in group work and provide feedback on their observations and the results of the individual instruments. The final day of the course, students will focus on goal setting for future leadership development.

**NBA 5710 Cornell Management Simulation**

Fall. 1.5 credits. Prerequisite: second-year M.B.A. students. Not open to students who have completed NBA 5490. S. Smith.

This computer-based simulation is played by self-selected teams of three or four students who make marketing, production, and finance decisions for one of five companies operating competitively in the same industry. After the first week, details of the simulation are explained and the software used by each team is demonstrated, the teams make periodic decisions (meeting at their own convenience). At the beginning of the simulation, each team writes a strategic intent paper and, before the results of the last decision have been determined, presents an in-depth analysis of its performance and its strategy for the future in a "board of directors" (BOD) meeting. Grades are based on the value created for the company's shareholders (relative to other firms in the same industry), the team's strategic intent paper, and the instructor's evaluation of team's performance at the BOD meeting. Meetings are periodic throughout the semester.

**NBA 5730 Seminar in Sustainable Development**

Spring. 1–3 credits, variable. A. McAdams.

Involves readings and discussion of issues in environmental management and features four significant ongoing case studies on the subject of environmental management. (Students interested in doing consulting projects in environmental management are accommodated in NBA 5750 Management Projects.)

**NBA 5750 Management Consulting Projects**

Spring. 3 credits. G. Hubbell.

This is a full-semester course designed to apply consulting processes to real business projects. Students will be formed into consulting teams focused on specific strategic, process improvement or operational problems in companies. Consultant in Residence, Greg Hubbell, will teach the course supported by Consultant Advisor, Rich Schneider. The teams will meet together with the faculty advisors on a weekly basis. Sessions will focus on cross-team learning about the application of the consulting process into a variety of consulting engagements. The Consultant Advisor and CIR will also meet as needed with each individual team to work through real-time issues presented by each consulting project.

Consulting projects are intended to include local business clients, not-for-profits, as well as large national and multinational companies. At the end of the project, each student and team will receive 360 feedback from the Consultant Advisor, CIR, the client, and other team members.

**NBA 5770 The Political, Legal, and Social Environment of Business**

Spring. 3 credits. B. Ho.

The course addresses the managerial issues in the political, legal, and social environment of business. Most strategy courses focus on interactions with customers, competitors, suppliers, workers, or financial institutions that occur in market contexts. However, many strategic interactions occur outside of the marketplace. Drawing from research in political economy, this course focuses on integrated strategy in nonmarket environments, i.e., strategy that involves nonmarket constituents and institutions such as governments, non-government organizations (NGOs) and intergovernmental organizations. Topics include: activists, the media, lobbying, the U.S. political system, environmental and other regulation, antitrust, intellectual property, international political economy, trade policy, ethics, and corporate social responsibility.

**NBA 5780 Consulting Process**

Fall, spring. 1.5 credits. N. Peck.

Focuses on understanding and applying the basic consulting process by covering the elements of a consulting engagement, including selling the engagement, scoping the project, contracting with the client, forming the consulting team, creating consultant/client work teams, defining deliverables, developing a work plan, conducting analysis, creating a communication and change plan, managing the project, overcoming resistance and barriers, developing recommendations, presenting the deliverables/implementation plan, and developing potential follow-on work. The course is organized around a real client engagement, examining the consulting process from the perspective of the case. Several guest speakers from the consulting engagement add both client and consulting perspectives. The course is intended for students with no or limited consulting experience who have an interest in exploring consulting as a career or who want to sharpen their analytical and organizational change skills.
NBA 5790 Cases in Business Strategy
Fall. 1.5 credits. Prerequisite: second-year M.B.A. students. J. Suwinski.
Focuses on the process of effective strategy formulation from the perspective of the general manager of a business unit. Discusses corporate strategy and its interaction with business unit strategies; tools for industry and company analysis; and situational analysis. Complements the core strategy course, with emphasis on understanding and practicing frameworks that are useful in case-based interviews. Draws heavily on the instructor's experience developing strategy for numerous businesses at Corning Incorporated. Guest speakers from industry and strategy consulting firms and from industry present their approaches to strategy and discuss the analytical tools they find most effective in working on business strategy. Students gain experience, via assigned cases, in analyzing business problems/opportunities, using the strategic process to formulate effective business strategies, and in presenting their recommendations in written and oral form. A major case presentation in a mock board environment at the end of the course gives each student an opportunity to play the role of a strategy consultant working on a real case.

NBA 5810 Management Cases
Fall. 1.5 credits. N. Peck.
This half-semester course will focus on analyzing multidisciplinary business cases from a CEO perspective. The course will develop students' analytical and strategic thinking and their presentation skills for effective communication as executive managers or consultants to executive managers. Students will be expected to answer case questions and present solutions in class.

NBA 6030 Sustainable Global Enterprise
Spring. 1.5 credits. Staff.
Explores the connections between "global sustainability" and business strategy—the unlimited business opportunities in solving the world's most difficult problems. Through a combination of cases, readings, lectures, videos, and simulations, class sessions will engage students in discussions aimed at developing strategy models and applying new strategy tools that incorporate principles of environmental management and social performance.

NBA 6110 Creative Design for Affordability
Spring. 1.5 credits. A. McAdams.
The idea of Creative Design for Affordability is to use product design to help students become more aware of their own creativity and to develop the background and necessary to lead or facilitate creative teams in their future careers as managers. Most important, students will be required to actively participate in their teams' creative processes and engage in designing, building, and iterating working prototypes of simple products. Another objective of the course is to give students the tools to understand the product design process as it typically occurs within some of today's organizations. Students will become well versed in real case studies from companies like Kodak and IDEO, and they will come to understand the basics of how to design products that at once appeal to the target customer, meet the customer's needs, and meet the highest quality specifications, while achieving a level of sustainability through the use of reusable or eco-friendly materials. While achieving all of these goals, students must—above all—design products that are affordable to the consumer.

NBA 6690 Leading Teams
Spring. 1.5 credits. M. Thomas-Hunt.
This course examines the design, management, and leadership of teams in organizational settings. The focus is on the interpersonal processes and structural characteristics that influence the effectiveness of teams, individual behavior in face-to-face interactions, and the dynamics of interpersonal relationships. The purpose of this course is to understand the theory and processes of group and team behavior so that leaders can successfully work with teams. Students who take advantage of everything this course has to offer will become comfortable and adept in leading group and team enterprises. The primary teaching method in this course will be inductive and experiential. Relatively little class time will be devoted to standard lectures. Much of the learning that occurs in the course will involve exercises and simulations that draw on students' current experiences in the class as well as experiences in teams and organizations outside of Cornell.

NBA 6720 Goal Setting for Personal Leadership
Fall. 1.5 credits. Prerequisite: NBA 5700.
P. Stepp.
This course is required for the Leadership Focus Program designed as a follow-up to NBA 5700 and will introduce students to "leader as coach." The lasting value of NBA 5700 Foundations of Leadership depends on the amount of follow through students achieve on their personal learning plans (MAPS), learn how to learn about personal behavior change on their own, and learn to coach others. The action learning method will be used to link leadership development to immediate business and personal concerns by challenging participants to practice leadership skills in real world activities. The course will provide structured support for personal change using MAPS plans, establishing learning and development strategies, receiving feedback and coaching support from peers and practitioners. Students will leave the course with a mission and values statement to help guide and drive personal learning plans, and align them with career aspirations.

NBA 6770 Systems Tools for Sustainable Enterprise, Concepts, Methods, and Applications
Spring. 1.5 credits. Prerequisite: Master students. J. Geurts.
Using readings and cases, this course on strategy making and sustainability introduces the students to modern hybrid interactive processes such as "systems dynamics group modeling", 'scenario building', 'strategic decision analysis', 'interactive strategic journey design', and gaming/simulation. Students will get to know and apply the tools mentioned above that can be woven together to form systemic and interactive managerial support processes using both analytical and collective learning techniques to assist an organization in policy exploration, decision making, and strategic change for sustainability.

NBA 6900 Sustainable Global Enterprise in Hospitality (also HADM 6690)
Spring. 4 credits. M. Milstein.
An advanced experiential learning course in which students are primarily tasked to work directly with hospitality companies to solve real sustainability-related issues in the marketplace. Projects relate to the greening of current operations (operational), the refurbishment of existing assets and properties (brownfield), and the establishment of new businesses (greenfield). The goal of the course is to provide students with the opportunity to develop and refine critical analysis and decision-making skills related to hospitality management and sustainability through hands-on learning experiences.

NBA 6950 Game Theory and Business Strategy
Spring. 1.5 credits. H. Schneider.
Game theory provides a framework for identifying optimal strategies and predicting the outcomes of strategic interactions when players' actions impinge upon each other. Using lectures and in-class games, this course develops the basic tools and concepts as they relate to business situation, and then applies them to business examples and cases. Some of the topics covered include strategic cooperation and punishment between firms, strategic commitments, predatory and limit pricing, entry deterrence, and auctions. The final deliverable is a take-home essay in which you apply the course material to a game theoretic setting of your choice. This course requires only basic mathematics skills, but a familiarity with strategic concepts is recommended.

International Management

NBA 5240 Macroeconomics and International Trade
Spring. 3 credits. I. Azis.
Applies basic macroeconomic theory to such problems as inflation, unemployment, economic growth, and productivity and examines how those problems interact with international trade and finance. Students learn to be informed observers of national and international economic phenomena and discerning users of economic analyses and forecasts.

NBA 5480 Global Business Risk Management
Spring. 1.5 credits. E. Iankova.
The aim of this course is to introduce students to the global risks involved in international business operations, and to develop students' general understanding of the field of global risk analysis and management. More specifically, students will get acquainted with the various types of risks that international businesses face in their overseas operations, such as: political risks (asset expropriation, contract repudiation, legal and regulatory risks), macroeconomic risks (taxation risk), market risks (intellectual property theft), financial risks, operational risks (reputation and public image issues), societal risks (activism of international nongovernmental organizations), and everyday risks (corruption). Through a combination of readings, lectures, guest speakers and case discussions, students will develop practical skills in evaluating and assessing risk, and will learn how to approach and manage risks on a global scale.

NBA 5800 Strategies for Global Competitiveness
Fall. 3 credits. Can be used to fulfill strategy requirement. A. McAdams.
Initially, students explore the role of government in several private-market industrialized nations—Japan, France, Germany, the United Kingdom, and Italy—for lessons the United States might learn and use. Students investigate the impact of each on the country’s government policies on the global competitiveness of the country’s firms. Special emphasis is given to differential policies appropriate to each of a range of industries, from the mature to the high tech (including computers, telecommunications, and electronics), and to stages of development in each economy. Possible lessons are then tested for less developed countries that might include Venezuela and Malaysia and newly emergent countries such as Singapore. Classes are run in a discussion format.

**NBA 5840 International Competitive Strategy**

Spring. 1.5 credits. G. Katzenstein.

Focuses on the development of competitive strategies in the global environment—including the identification of internationally relevant strengths and weaknesses, the movement and use of resources to gain competitive advantage, and strategies to confront competitors, both domestic and multinational.

**NBA 5870 International Mergers and Acquisitions**

Spring. 1.5–2 credits, variable. J. Hanks.

Addresses the principal business and legal issues in cross-border mergers and acquisitions, including forms and techniques of combining two businesses, negotiation, pricing and other economic terms, due diligence, issuance of securities, antitrust, duties of managers, and the resolution of employee and other social issues. The graded work is a written proposal for an M&A transaction between two existing companies in different countries prepared by small teams. Proposals are based on publicly available financial, business, legal, and other documents and data and any other information obtained. The goal of the written work is to simulate the process in which business people, investment bankers, and lawyers work together to structure transactions across national borders. The reading covers the basic business and legal issues most frequently encountered in international mergers and acquisitions. Class discussion occasionally refers to the reading but generally covers other issues.

**NBA 5890 International Management**

Spring. 3 credits. G. Katzenstein.

International management is a survey of international business from a cultural and managerial perspective. The course uses culture as a foundation to examine a variety of organizational structures related to business in an international context. The first part of the course briefly examines the context and environment of cross-cultural management. We will look at globalization, why firms get involved in international business, and how they analyze their investment environment and opportunities. The second part of the course concerns analyzing international business, including macro issues such as organizational structure, control, and culture, and micro issues such as motivation, leadership, negotiation, teams, decision making, and human resource management.

**NBA 5900 Business in Emerging Markets**

Fall. 1.5 credits. E. Iankova.

This course focuses on the opportunities and market potential, as well as the risk factors in emerging economies. It offers an in-depth comparative perspective on business development and strategy across the most important regions with emerging markets in the world—Eastern Europe, Asia, and Latin America, with a special emphasis on the BRIC countries (Brazil, Russia, India, and China). This course looks at the emerging economies from four major perspectives: market potential; trading opportunities; sourcing; and global competition. It examines in greater detail foreign investment strategies and investment decisions, determinants of enterprise behavior, modes of establishing and managing relationships, impact of local cultures, and strategic responses to potential risks and opportunities in emerging markets.

**NBA 5920 Experience in International Management**

Fall, spring. 1.5 credits. Fee charged for required faculty-approved study trip. G. Katzenstein.

Combines classroom sessions and international experience with increased awareness of business environments outside the United States. On trips, students visit local businesses, subsidiaries of foreign multinationals, government officials, local business school students, and others. Students also must attend two pre-trip meetings during spring semester (2-1/2 hours each). Those meetings are used to present information on international business conditions, industrial structures, management, and the opportunity to develop cross-cultural skills. A final paper, integrating the material learned in the classroom with their experiences, is required.

**NBA 5930 International Entrepreneurship**

Spring. 1.5 credits. Prerequisite: At least one finance or economics class. M. Goldman.

Entrepreneurial start-ups and their financing across the globe (outside of the United States) are the focus of the course. Sessions will examine the constraints to entrepreneurs and the ways in which they obtain financing with a particular focus on venture capital and emerging markets. The course will use cases of successful entrepreneurs under the most difficult circumstances and will address entrepreneurship in a serious downturn and networking across borders. In addition to common issues related to starting a business and investing in it, the class will address issues not normally on the radar screen of U.S. entrepreneurs and venture capitalists. The course will draw on the experience of investors and entrepreneurs, cases prepared especially for this course, as well as findings reported in the recent literature. This course is meant to be in part a practical guide to students who wish to be entrepreneurs outside the United States or to create cross border businesses. It may be of interest to people working in entrepreneurial environments in other organizations or students who want to get involved in various forms of financing entrepreneurial ventures. Students may use the course to explore development of a business concept or plan outside (at least in part) the United States. There will be a particular concentration on Asia, the role of government in stimulating entrepreneurship and venture capital and the nitty-gritty issues of valuing young and private firms sharing profits, raising resources, and organizing and managing human resources.

**NBA 5940 Asian Business**

Spring. 1.5 credits. G. Katzenstein.

This course takes a managerial perspective to introduce students to those differences, whether working in Asia or managing operations and personnel in Asia. The course will cover major issues in strategy, organizational behavior, and human resource management in the Asian context. The strategy part of the course will look at issues including particular Asian forms of organization and larger cultural issues such as the role of government, corruption, intellectual property, and the Asian Diaspora. The organizational behavior part of the class will look at issues such as national culture, communication, leadership, motivation, decision making, and group dynamics in an Asian context. The human resource part of the course will examine recruiting, developing, and retaining your local personnel, managing expatriates in Asia, and localization of Asian businesses.

**NBA 5950 Economics of Financial Crises**

Spring. 3 credits. I. Azis.

Familiarizes students with the analysis of the causes, nature, and consequences of financial crises, and equips them with tools of analyses to better understand the economics of financial instability and alternative strategies for dealing with them. The first part of the course concentrates on financial instability/crisis by way of explaining the empirical episodes of the crisis in various emerging market countries, and elucidating the relevant theoretical concepts in each of the cases. The second part is devoted to discussions of post-crisis episodes, emphasizing the different paths of recovery and major policy responses to the crisis. The latter includes financial and monetary policies and the unsettled relationship between interest rates and exchange rates.

**NBA 5990 Business in the European Union**

Fall. 1.5 credits. E. Iankova.

Explores the impact of the process of European integration on business organization and strategy. The foundations, institutions, and common policies of the European Union are discussed first. The course further examines how the establishment of the Economic and Monetary Union and the 2004 enlargement to the east are shaping the strategies of multinational corporations with operations in Europe. To understand better the pressures for change in a "deepening" and "widening" European Union in their complexity and entirety, students become personally involved in problem solving through issue and case discussions, such as determinants and policy of entrepreneurship in a European–U.S. comparison; corporate networks in a European–U.S. comparison; trade policy and the European Union’s trade disputes with the United States; competition policy and Microsoft's antitrust battles in European courts; environmental policies and corporate sustainability issues in Europe; the common agricultural policy of the European Union and the impact of global trade talks on European farm subsidies; work conditions in Europe and the Wal-Mart experience with doing retail business in Europe; and a variety of other mini-cases.
emerged. Such changes are affecting how concurrently new ways of pricing and of transaction costs have plummeted, while activities. For instance, search costs and of the dot-com era, information technology Beyond the hype surrounding the rise and fall online advertising, and social networks. businesses, especially managing businesses in create value from data through tools such as NBA 5230 Data-Driven Businesses and their role in the enterprise instead on the capabilities of modern database systems and their use in the business context. Focuses introduces modern data management systems and their use in the business context. Focuses on the capabilities of modern database systems and their role in the enterprise instead of going into technical detail. Topics include data models and modeling, query languages, transactions, database tuning, application servers, service-oriented and three-tier architectures, data warehousing, and data mining. Students perform several hands-on exercises involving a commercial database system.

NBA 5210 Data Mining for Marketing, Sales, and Customer Relationship Management
Spring. 1.5 credits. J. Gehrke.
Introduces modern data management systems and their use in the business context. Focuses on the capabilities of modern database systems and their role in the enterprise instead of going into technical detail. Topics include data models and modeling, query languages, transactions, database tuning, application servers, service-oriented and three-tier architectures, data warehousing, and data mining. Students perform several hands-on exercises involving a commercial database system.

NBA 6310 The Global Enterprise
Fall. 2 credits. G. Dowell.
Whether you are working in a large multinational or a business that is focused on the domestic market, global forces are affecting your organization. This course is designed to give you a strong grounding in the basic global business today, from macro forces like economic and political risk, to internal organizational issues like assessing your business’s preparedness for global business. We bring these issues to life by working with students from a foreign business school and to visit companies in that environment—for the last two years the trip has been to Shanghai, China, and it most likely will involve China again this year.

Strategic Technology Management

NBA 5180 Data Mining for Marketing, Sales, and Customer Relationship Management
Spring. 1.5 credits. J. Gehrke.
Introduces modern data management systems and their use in the business context. Focuses on the capabilities of modern database systems and their role in the enterprise instead of going into technical detail. Topics include data models and modeling, query languages, transactions, database tuning, application servers, service-oriented and three-tier architectures, data warehousing, and data mining. Students perform several hands-on exercises involving a commercial database system.

NBA 5230 Data-Driven Businesses
Spring. 1.5 credits. J. Gehrke.
The course will cover management challenges and strategy for businesses where data is a strategic asset. Topics include (1) how to create value from data through tools such as data management, search, and data mining; and (2) management challenges in data-centric businesses, especially managing businesses in markets with network effects such as search, online advertising, and social networks.

NBA 6000 The Strategic Role of Information Technology
Fall. 3 credits. D. Huttonlocher.
Beyond the hype surrounding the rise and fall of the dot-com era, information technology has had a wide-ranging impact on business activities. For instance, search costs and transaction costs have plummeted, while concurrently new ways of pricing and of organizing into new types of transactions have emerged. Such changes are affecting how firms are managed as well as how they interact with their customers, employees, and business partners. This course explores how firms can use information technology to create business value and looks at strategies that can help ensure they capture part of that value. Examines small and large companies in a variety of industries, including financial services, travel, retail, software, and manufacturing. Prior knowledge of information technology is not presumed; relevant technologies are covered in class or in assigned readings. The course format is a combination of lectures and cases.

NBA 6061 Online Electronic Commerce
Spring. 3 credits. L. Orman.
Electronic commerce, the use of information technology in conducting economic transactions and managing businesses over computer networks, has captured public attention because of its wide-ranging implications for businesses, markets, public institutions, and the general public. Electronic commerce involves a wide variety of cooperating technologies (e.g., communications, networks, databases, expert systems, and multimedia) and affects a wide variety of managerial issues. It created a new emphasis on information technologies and systems in management; led to the development of new technologies and new combinations of existing technologies to support management; and occasionally radically altered business practices and the role of management. Students in this course learn to conduct economic transactions and manage businesses on the Internet. All major technical and managerial issues are covered through computer exercises on the Internet and case studies and examples of businesses on the Internet.

NBA 6020 Commercialization of Fundamental Technologies
Spring. 1.5 credits. E. Fitzgerald.
Students explore in-depth projects based on a particular fundamental technology. Students are expected to investigate the science and technology and the strategic value of the technology via cross-disciplinary student teams. student teams will explore potential applications for fundamental advances and determine intellectual property related to the technology and applications. Students map progress with presentations, and are expected to create an end-term document covering technology, intellectual property, applications, and potential commercialization.

NBA 6080 Innovation in Pharma/Biotech: The Challenge of Change
Spring. 1.5 credits. B. Ganem and A. Biloski.
NBA 6080 will introduce JGSM students to the scientific and business principles underlying the modern pharmaceutical and biotechnology industries. The course will examine organizational models in this corporate sector and help students effectively perform financial and business evaluations of current and emerging technologies. The course will be organized into therapeutic modules, with guest speakers presenting unique perspectives on therapeutic developments in these areas. Each student will participate in a team project whose goal is to identify a therapeutic product or licensing/acquisition opportunity that would be of interest to a specific major pharmaceutical company. Course procedures will be based upon the consistency and persuasiveness of both business and technical arguments.

NBA 6100 Technology Management, Bio, Info, Nano
Fall. 1.5 credits. D. Huttonlocher.
This course will introduce students to some of the current trends in modern biotechnology, information technology, and nanotechnology, and consider cross-cutting issues such as new technology adoption, business models for new technologies, and bridging the gap between scientific relevance and new technology innovation. This course will be a “capstone” course that spends two weeks on bio/tech/pharma, two weeks on materials/nanotech, and two weeks on info/tech. Scientific and technological discoveries will continue to drive advances in a broad range of industries. The wide array of technologies in the biologic sciences, information technology, and advanced materials present numerous challenges to managers attempting to map future growth in industries that are driven technologically advanced.

NBA 6120 Disruptive Technologies
Fall. 1.5 credits. Priority given to students with technology of science backgrounds. Prerequisite: working knowledge of computers. D. Greenberg.
Beginning by presenting historical technological advances that created major paradigm shifts for communications. Presents advances in computer technology emphasizing the fundamentals behind the increased processing power, video and computer graphics capabilities, and network transmission. The second half of the course covers the effect of these scientific advances on many discipline-specific areas including photography, the film industry, the entertainment and animation industry, television broadcasting, publishing, and the computer industry itself. Sessions are devoted to the social and legal issues rising from the rapid advances in electronic communication. In attempting to predict the disruptive changes of the future, it is best to understand the technologies themselves. The course is especially tailored to a business school and industrial concerns and has interactive live demonstrations at the state-of-the-art laboratory of the Program of Computer Graphics. No prior knowledge of computer science is required.

NBA 6520 Commercializing University Science and High Technology
Spring. 1.5 credits. W. S. H. How.
How do scientists take their research to the marketplace? How do scientists and entrepreneurs find and create market opportunities? Commercializing University Science and High Technology will tackle these issues and apply our learning to projects drawn from Cornell labs and local high-tech firms. This course is designed to help students to identify, evaluate, and obtain control over technology opportunities. The course focuses on three themes: (1) the source, discovery, and evaluation of technological opportunities on a university campus, (2) increasing the efficiency of the innovation process to produce new technologies that satisfy customer needs, and (3) the different mechanisms available to appropriate returns from technology. We will use readings, cases, and discussions with practitioners to examine this phenomenon. After completing this class, students will be familiar with basic principles related to technology entrepreneurship and will have gained a deeper understanding of the technology commercialization process here at Cornell. The class will be composed of a select group of graduate students drawn from science, engineering, law, medicine, and the Johnson Graduate School of Business (enrollment is limited).
Students interested in the managerial aspects of mergers and acquisitions, divestitures and internal development will find the course especially useful.

**NBA 5860 Critical Thinking for Business Leaders**

Spring. 1.5 credits. R. Mish.

This course is based on the proposition that leading well is thinking well—that is, in order to succeed in any business leadership role, you must learn, exhibit, and model critical thinking skills to organizational stakeholders: your colleagues, supervisors/ senior executives, and customers. We spend the first few class sessions looking at a series of brief articles that attempt to advance arguments in favor of a particular business proposition, and we learn how to examine these arguments critically, including by evaluating the strength and limitations of the evidence presented and by identifying and articulating the best counter-arguments to the positions offered. We then spend the remainder of the course applying these critical thinking skills to a set of business cases, using a Strategic Thinking Problem-Solving framework. By the end of the course, the goal is for you to be able to approach business problems in a systematic and critically thoughtful way, and to produce and communicate a problem solution that is well-reasoned, well-received by ultimate decision makers, and likely to be implemented with success by the group/organization that you are leading.

**NBA 6280 Strategic Change and Renewal**

Fall. 1.5 credits. Prerequisite: NCC 5040. G. Dowell.

Today’s organizations are beset by change, and if you want to have a real impact on your company, you must be ready to deal with changes stemming from a variety of internal and external forces. This course will give you the tools to think more systematically about the challenges of managing change, by considering (a) the impetus for the change, and (b) the systemic implications of the change.

**NBA 6540 Power and Politics**

Fall. 1.5 credits. E. Mannix.

Nothing is more frustrating than having a great idea and not having the political capital to get it recognized and implemented. This course is aimed at providing you with the political intelligence to succeed in an organization. This course aims to: 1) improve your ability to diagnose the underlying distribution of power in organizations, 2) allow you to practice strategies for building your own personal power, and 3) show you how to be a more effective negotiator.

**NBA 6620 Managerial Decision Making**

Fall. 3 credits. J. Russo.

This course attempts to make its participants better managerial decision makers. However, most students find that the course applies equally well to personal decisions. There are two other objectives. The first is to convey an enduring understanding of decision concepts, skills, and tools that, taken as a whole, comprise a troubleshooter’s guide to dealing with the uncertainty, complexity, and conflict of the professional world. The second is to provide a framework for a good decision process in which all of the decision concepts, skills, and tools fit coherently. The pedagogical approach uses lectures, in-class exercises, and applications.

**NBA 6660 Negotiations**

Fall, spring. 3 credits. Staff.

Judgment is the art and science of transforming perception into thought or opinion. Negotiation is the art and science of securing agreements between two or more interdependent parties. The purpose of this course is to understand the theory and processes of negotiation as it is practiced in a variety of settings. It is designed to complement the technical and diagnostic skills learned in other courses by recognizing that while a manager needs analytical skills to develop optimal solutions to problems, he or she also needs a broad array of negotiation skills for these solutions to be accepted and implemented. The course highlights the components of an effective negotiation and teaches students to analyze their own behavior in negotiations. It is largely experiential, giving students an opportunity to develop their skills by participating in negotiations and integrating their experiences with the principles presented in the assigned readings and course discussions.

**NBA 6680 Leading Teams and Organizations**

Fall. 3 credits. Priority given to M.B.A.s. Staff.

Focuses on general principles for successfully leading teams and organizations (the personal development course is NBA 5700). Draws on the latest research in team decision making and organizational leadership to address questions such as: what is the difference between leadership and management? how does a leader establish trust and commitment to an organization? and how do leaders transform organizations? Consists primarily of case studies of leaders but also includes some experiential and group activities. Grading is based on class participation, group case analyses, and a final individual case analysis.

**NBA 6700 Becoming a Leader**

Spring. 1.5 credits. J. Detert.

This course explores the complex process of “becoming a leader” by systematically uncovering beliefs and myths about leadership and rigorously examining how they hold up to the scrutiny of critical thinking, analysis, and research. Each class will address a number of important questions about leadership. We will generally use case studies and videos to first illustrate a topic by focusing on a specific leader and decision or dilemma faced by that leader. We will then abstract from the specific to the general by discussing the principles and research findings pertaining to that aspect of leadership. Students should also develop a significantly enhanced understanding of their own leadership strengths and objectives because the course requires personalization of concepts via a number of self-reflections and exercises.

**NBA 6710 Business Ethics**

Fall, spring. 1.5 credits. D. Radcliffe.

Poor moral judgment may ruin a manager’s career or even sink a company. In general, an organization cannot survive without the trust of numerous stakeholders, and ethical lapses destroy trust and threaten vital stakeholder relationships. In today’s volatile and fiercely competitive business environment, a manager must be able to identify and effectively resolve ethical issues that inevitably arise in the
pursuit of business (and career) objectives. This course is designed to enhance students' skills in moral reasoning as it applies to managerial decision making. It begins by examining normative concepts and principles that typically enter into moral reasoning, then uses them in case studies and principles to analyze cases. Discussions seek to understand the moral issues confronting the decision makers in the cases and explore how those issues might be addressed in ethically responsible ways.

**NBA 6760 Organizing for Strategic Advantage**
Spring. 1.5 credits. Prerequisite: NCC 5090. O. Khessina.
Among the critical tasks facing any senior manager are the creation, evaluation, and implementation of a business unit's strategy. NCC 5090 (Strategy Core) and NBA 5790 (Cases in Business Strategy) teach students tools of creation and evaluation of strategies. This course is a laboratory and will offer frameworks for understanding ways of strategy implementation. Specifically, it will provide conceptual tools for designing and changing organizations given the strategic choices that have already been made. It will place special emphasis on organizational and human resources issues, hence the name, "Organizing for Strategic Advantage." The course is particularly relevant for students who are (1) thinking about working in the consulting industry; (2) planning to manage and lead firms; or (3) planning to found and own start-up companies.

**NBA 6820 Negotiation Essentials**
Spring. 1.5 credits. S. Sataro and K. O'Connor.
Judgment is the art and science of transforming perception into thought or opinion. Negotiation is the art and science of securing agreements between two or more interdependent parties. The purpose of this course is to understand the theory and processes of negotiation as it is practiced in a variety of settings. This course is designed to complement the technical and diagnostic skills learned in other courses at the Johnson School. A basic premise of the course is that while a manager needs analytical skills to develop optimal solutions to problems, a broad array of negotiation skills is needed in order for these solutions to be accepted and implemented. The course will highlight the components of an effective negotiation and teach students to analyze their own behavior in negotiations. The course will be experiential, allowing students to develop their skills by participating in negotiations and integrating their experiences with the principles presented in the assigned readings and course discussions.

**Marketing**

**NBA 6170 Emerging Technology Marketing**
Spring. 1.5 credits. Prerequisite: Graduate Students. B. LaPierre.
An overview of how successful companies combine a deep understanding of unmet customer needs with a key emerging and enabling technology to create significant new market and shareholder value. A proactive and repeatable 10-step Market Development Planning process will be described with special emphasis on tools and techniques that link industry and competitor technology trends with unmet customer needs. This course will give prospective Brand Managers, Product Managers, Business and Engineering Managers the conceptual and operating tools to proactively identify, and successfully bring from the R&D lab to the marketplace, new differentiation and competitive advantage.

**NBA 6200 Marketing Research**
Spring. 3 credits. Prerequisites: NCC 5010 and NCC 5030 or equivalent. Y. Park.
Deals with marketing research as a critical support function in corporations. The broad objective is to provide a fundamental understanding of marketing research methods employed by better-managed firms or proposed by leading academicians. The course is aimed at the manager, the ultimate user of marketing information, who is responsible for the scope and direction of research activities involved in obtaining, analyzing, and interpreting results of research. Covers the use of secondary sources of marketing information for designing studies and collecting primary data. Students are required to use up-to-date methods in research design, qualitative research, measurement, data collection, and analysis. The emphasis is on evaluating research on conceptual material and use of results rather than on mathematical derivations. Students are also exposed to the practical side of marketing research through case studies, problem sets, and projects.

**NBA 6210 Integrated Marketing Communications (also HADM 6649)**
Fall. 3 credits. L. Davion.
This course is designed to provide students with the framework and skills required to design, manage, and evaluate integrated marketing communication programs. Over the past decade, the number of communication options available to consumers, and hence to organizations, has grown exponentially. With so many different avenues for communication to, from, and among consumers, organizations must approach the communication task with the objective of creating a unified message that is consistent, coherent, and effective across all media—an integrated marketing communications program. Through class exercises, case critiques, online observation and participation, and teamwork on a simulated campaign, students will master the skills necessary for marketing campaign management.

**NBA 6220 Marketing Strategy**
Fall. 3 credits. Prerequisite: NCC 5030. Staff.
A sound marketing strategy is essential for the long-term success of a firm. Marketing strategies, while guided by environmental conditions, also seek to anticipate, exploit, and sometimes shape changes in the environment to gain competitive advantage. This requires an understanding of how customer needs evolve, how product-market boundaries shift, and how competitors are likely to react. The strategic roles of existing and new products need to be assessed, appropriate resource allocations made, and marketing strategies developed to ensure sustained growth. Successful development of marketing strategies requires an equal measure of analytical and creative thinking. This course introduces students to various concepts and analysis methods of defining opportunities and threats implicit in dynamic environments and to the process of formulating a long-term marketing strategy for a multiproduct organization. Students will learn about the theoretical and applied perspectives of marketing strategy from readings, competitive marketing strategy simulation, developing a marketing strategy plan for a firm of their choice, case analyses, and guest speakers.

**NBA 6260 Consumer Behavior**
Fall. 3 credits. Staff.
Topics include factors that influence response to various kinds of advertising, purchase decisions, product perceptions, response to promotion, consumer satisfaction, and the basic methodologies for understanding consumer behavior.

**NBA 6290 Current Topics in Marketing**
Fall. 1.5 credits. Prerequisite: NCC 5030. J. Russo.
The focus of this course will be on emerging topics such as new media, measuring ROI for marketing, channel partnerships, and global marketing. Specific topics vary from year to year. For each topic, students will be required to do readings and apply the readings and class material to an assignment in class. Students will work on in-class assignments in groups and will submit an individual term paper.

**NBA 6340 Customer Relationship Management**
Spring. 1.5 credits. Y. Park.
The course is aimed at managers who are interested in pursuing activities in CRM built around the notion of customer centrity. The principal objectives of the course are to emphasize how CRM can help accomplish strategic initiatives and improve firm profitability, to develop essential skills using the statistics program, and to implement strategic initiatives in CRM. Students will be exposed to the practical side of CRM through case studies and hands-on exercises.

**NBA 6390 Data-Driven Marketing**
Spring. 3 credits. S. Gupta.
Deals with the use of data to make marketing decisions. Introduces concepts, methods, and applications of decision modeling to address marketing issues such as segmentation, targeting, positioning, promotions, advertising, and sales force decisions. Unlike marketing courses that focus on conceptual material, this course provides skills to translate conceptual understanding into specific operational plans—a skill in increasing demand in organizations today. The course is particularly valuable to students planning careers in management consulting, marketing, and market research. It is designed for students who have some background in quantitative methods and have a willingness to deal with mathematical concepts.

**NBA 6593 Strategy and Tactics of Pricing**
Spring. 3 credits. S. Gupta.
Pricing is a critical management decision that has both strategic and tactical elements. The objective of this course is to introduce participants to proven theories and frameworks for assessing and formulating pricing strategy and tactics. A marketing manager responsible for pricing needs to understand economic, psychological, and organizational factors. This course revolves around understanding how to make effective pricing decisions, while keeping in mind these factors. Some of the topics to be covered include the analysis of relevant costs, economic value analysis (EVA), measurement
of price sensitivity, techniques for price differentiation, competitive pricing, and revenue management. This course should be useful for those pursuing careers in marketing, general management, and consulting.

### Operations Management

**NBA 6410 Logistics and Manufacturing Strategy**  
Spring. 3 credits. Prerequisite: GCC 5080 or permission of instructor. Staff.  
Covers supply-chain integration, which involves strategic management of the value chain from materials to customer. Students discuss operations strategy issues that are important to both manufacturing and service organizations. The course emphasizes written and oral communication skills. About a fourth of the classes are spent on case studies that are analyzed by small groups. There is a midterm and final exam, but the majority of the grade is evaluated based on a course project, case analyses, and a supply chain simulation assignment that allows students to apply course topics in an experiential-learning setting.

**NBA 6430 Managerial Spreadsheet Modeling**  
Fall, spring. 1.5 credits. T. Janosi.  
The goal of this hands-on, lab-style course, taught in the Parker Center, is to develop proficiency in quantitative modeling within the environment of Microsoft Excel. Students develop and use spreadsheets to analyze a variety of business problems. The course has two principal components: spreadsheets and models. Spreadsheet topics include principles of good spreadsheet design, the effective presentation of information through spreadsheets (including graphical controls like sliding bars), and advanced Excel features (e.g., data validation, conditional formatting, scenarios). Modeling topics include the art of finding the appropriate level of modeling detail, practice in dealing with vague and unstructured problems, sensitivity analysis, and working with incomplete and unreliable data.

**NBA 6470 Advanced Spreadsheet Modeling**  
Fall. 1.5 credits. T. Janosi.  
The goal of this hands-on lab course, taught in the Parker Center, is to develop proficiency with Excel’s quantitative tools of Solver (for optimization) and @Risk (for simulation). Building on their brief introduction in the Managing Operations core course, students use these advanced tools to analyze problems and cases in finance, marketing, and operations. Although the bulk of this course is devoted to case analysis, occasional lectures introduce some advanced features of these two powerful modeling tools, including integer and nonlinear programming and sensitivity analysis within optimization, and correlated random variables, scenario analysis, and valid statistical analysis within simulation.

### DOCTORAL SEMINARS

**NMI 5000 Directed Reading and Research**  
Fall, spring. 1–3 credits, variable. Prerequisites: approval of advisor and faculty members involved in research. Staff. Students undertake special-interest research under the supervision of faculty members.

**NMI 5030 Principles of Lean Six Sigma Process Improvement**  
Spring. 1.5 credits. Staff.  
Lean Six Sigma is a robust and customer-focused process improvement methodology that develops value-creating processes in an organization while simultaneously reducing costs, defects, and lead times. This 20-hour course will (1) familiarize students with the Lean Six Sigma D-MAIC process improvement roadmap, (2) introduce the technical fundamentals of Lean Six Sigma, and (3) demonstrate the use of Lean Six Sigma to support and reengineering organizations’ strategic and operating plans. Students receiving a passing grade will receive a “Principles of Lean Six Sigma” course completion certificate.

**NMI 5100 Multicultural Work Environments**  
Fall. 1 credit. Prerequisite: students whose summer internships are in a country other than that of their citizenship or prior work experience. Students should register for course in spring semester before internship after obtaining an internship offer and completing paperwork for course instructors. International students obtain and process work authorization forms with the International Students office. See Charlotte Rosen (+35 Sage Hall) for further details about academic and immigration requirements for NMI 5100. C. Rosen and B. Mink.  
Independent study. Promotes an understanding of the cultural assumptions we bring to the work environment and the effects of cultural differences on organizational interactions and productivity. Grades are posted in the following fall semester after completion of the course project (a 10-page paper).

**NRE 5010 Capital Markets Research in Accounting**  
Spring. 1.5 credits. C. Nichols.  
This course is designed to introduce topics in capital markets research and to develop students’ ability to evaluate and generate archival research in accounting. In addition, the course is intended to develop students’ understanding of common research designs used in archival studies and to identify potential research questions.

**NRE 5020 Doctoral Seminar in Marketing**  
3 credits. Prerequisite: permission of instructor; graduate-level course in mathematical statistics or econometrics (may be waived in special cases). Staff.  
Introduces students to empirical research in marketing. Although there is a strong focus on the historical development of econometric specifications of consumer choice models (with an emphasis on heterogeneity and issues of dynamic consumption patterns) and Bayesian methods in marketing, the content is to some extent driven by the students. Teaching is interactive, and each student is expected to present one of the papers studied to the rest of the class and to replicate the results of one of the papers, requiring him or her to write the necessary code and briefly discuss their findings. Students are welcome to sit in on parts of the class (e.g., the section on Bayesian Methods is broad enough that students from other areas may find the presentation useful).

**NRE 5040 Judgment and Decision Making, Research and Accounting**  
3 credits. Prerequisite: Ph.D. students. C. Nichols.  
This seminar provides a rigorous and integrative exposure to those aspects of the literature in accounting, behavioral economics, and psychology that are related to questions of accounting and auditing theory and research.

**NRE 5150 Behavioral Decision Making**  
Spring. 3 credits. Prerequisite: Graduate status. J. Russo.  
This seminar focuses on decision making, judgment, and related topics. The initial topic is competing paradigms for research on decision making and the contributions to knowledge that each has made. Specific issues include (a) the kinds of decisions that each paradigmatic approach is most successful in explaining or predicting, (b) the forces that have impelled a shift of emphasis from one paradigm to another, and (c) the expected future productivity of the different paradigms. The remainder of the course is devoted to specific topics within decision research broadly construed, with their selection and priority guided by the interest of participants.

**NRE 5170 Macro Organizational Theory Ph.D. Seminar**  
Spring. 3 credits. G. Dowell.  
We review the major themes in macro OT research, paying particular attention to institutional theory and organizational ecology, but also including organizational learning, organizational identity, strategic management, and other topics.

**NRE 5180 Marketing Model**  
Spring. 1.5 credits. S. Gupta.  
This course is a study of model-based research in the marketing literature. The course aims to accomplish three main objectives: 1) Develop the student’s knowledge of the technical details of various techniques for analyzing data. 2) Expose students to “hands-on” use of various computer programs for carrying out statistical data analyses. 3) Ask students to propose a model of consumer/behavioral behavior that potentially contribute to the literature.

**NRE 5360 Doctoral Seminar in Introduction to Asset Pricing**  
Spring. 3 credits. M. Huang.  
This course is an introductory Ph.D.-level course on the basic theories of asset pricing. It consists of four parts. The first part deals with individual choices under uncertainty, including expected utility theory, risk aversion, stochastic dominance, and two-period consumption-portfolio problems. The second part deals with equilibrium pricing theories, including implications of no arbitrage and stochastic discount factor, risk sharing.
aggregation, and consumption-based pricing in complete markets, mean-variance efficiency and the Capital Asset Pricing Model, and the Arbitrage Pricing Theory. We also explore the relation between these various pricing theories, and extend the treatment of individual consumption/portfolio problems and equilibrium pricing to a multi-period setting. In the third part, we review recent development in asset pricing by introducing some stylized facts and new theories. The fourth part gives a brief introduction to behavioral finance.

FACULTY ROSTER

Bailey, Warren B., Ph.D., U. of California, Los Angeles. Prof., Finance
BenDaniel, David J., Ph.D., Massachusetts Inst. of Technology. Don and Margi Berens Professor of Entrepreneurship
Bhgoj, Sanjeev, Ph.D., U. of Florida. Assoc. Prof., Accounting
Bierman, Harold Jr., Ph.D., U. of Michigan. Nicholas H. Noyes Professor of Business Administration; Prof., Finance
Bloomfield, Robert J., Ph.D., U. of Michigan. Prof., Accounting
D’Souza, Julia, Ph.D., Northwestern U. Assoc. Prof., Accounting. Director of Graduate Studies
Detert, James R., Ph.D., Harvard U. Asst. Prof., Management and Organizations
Dowell, Glen W. S., Ph.D., U. of Michigan. Asst. Prof., Management and Organizations
Dyckman, Thomas R., Ph.D., U. of Michigan. Ann Whitney Olin Professor of Accounting; Emeritus
Farahat, Amr A., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Operations Management
Frank, Frank J., Ph.D., U. of California, Berkeley. Prof., Economics, Henrietta Johnson Louis Professor of Management
Gavirneni, Srinagesh (Nagesh), Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Operations Management
Grinstein, Yaniv, Ph.D., Carnegie Mellon U. Assoc. Prof., Finance
Guar, Vishal, Ph.D., U. of Pennsylvania, Assoc. Prof., Operations Management
Gupta, Sachin, Ph.D., Cornell U. Prof., Marketing, Henrietta Johnson Louis Professor of Management
Hart, Stuart, Ph.D., U. of Michigan. S. C. Johnson Chair in Sustainable Global Enterprise; Prof., Management
Hass, Jerome E., Ph.D., Carnegie Mellon U. James B. Rubin Professor of Finance, Krause Faculty Fellow in Real Estate; Prof., Finance
Heffetz, Ori, Ph.D., Princeton U. Assoc. Prof. of Economics
Hilton, Ronald W., Ph.D., Ohio State U. Prof. of Finance, Clifford H. Whisbert Faculty Fellow
Hutterlacher, Daniel P., Ph.D., Massachusetts Inst. of Technology. John P. and Rilla Neasey Professor of Computing and Information Science and Business; Prof., Information Technology
Isen, Alice M., Ph.D., Stanford U. S. C. Johnson Professor, Marketing
Jarrow, Robert A., Ph.D., Massachusetts Inst. of Technology. Ronald P. and Susan E. Lynch Professor of Investment Management; Prof., Finance and Economics
Johnson, Justin, Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Economics
Kadziela, Vinida, Ph.D., Northwestern U. Prof., Marketing and Economics
Khesina, Olga M., Ph.D., U. of California, Berkeley. Asst. Prof., Management and Organizations
Leary, Mark T., Ph.D., Duke U. Asst. Prof., Finance
Libby, Robert, Ph.D., U. of Illinois. David A. Thomas Professor of Management; Prof., Accounting and Management and Behavioral Science
McAdams, Ali K., Ph.D., Stanford U. Prof., Economics
McClain, John O., Ph.D., Yale U. Prof., Operations Management; Emerson Electric Company Professor of Manufacturing Management
Michaely, Roni, Ph.D., New York U. Prof., Finance; Rudd Family Professorship of Management
Narayan, Vishal, Ph.D., New York U. Prof., Prof., Marketing
Nelson, Mark W., Ph.D., Ohio State U. Prof., Accounting; Eleanor and George Landew Professor of Management
Nichols, D. Craig, Ph.D., Indiana U. Asst. Prof., Accounting
O’Connor, Kathleen, Ph.D., U. of Illinois. Assoc. Prof., Management and Organizations
O’Hara, Maureen, Ph.D., Northwestern U. Robert W. Purcell Professor in Management; Prof., Finance
Rao, Vithala R., Ph.D., U. of Pennsylvania. Deane W. Malott Professor of Management; Prof., Marketing and Quantitative Methods
Robinson, Lawrence W., Ph.D., U. of Chicago. Assoc. Prof., Operations Management
Russo, J. Edward, Ph.D., U. of Michigan. S. C. Johnson Family Professor, Management, Prof., Marketing and Management and Organizations
Saar, Gideon, Ph.D., Cornell U. Assoc. Prof., Finance; Clifford H. Whisbert Faculty Fellow

Stepp, Pamela L., Ph.D., Cornell U. Visiting Sr. Lec., Management and Organizations
Wansink, Brian, Ph.D., Stanford U. John S. Dyson Professor of Marketing; Adjunct Prof., Marketing
ADMINISTRATION
Stewart J. Schwab, Dean and Professor of Law
Barbara J. Holden-Smith, Vice Dean and Professor of Law
Stephen F. Garvey, Associate Dean for Academic Affairs and Professor of Law
Claire M. Germain, Law Librarian and Professor of Law
Richard D. Geiger, Associate Dean, Communications and Enrollment
Anne L. Luingbeal, Associate Dean and Dean of Students
Richard F. Robinson, Associate Dean for Administration and Finance
Karen V. Comstock, Assistant Dean for Public Service
Charles D. Cramton, Assistant Dean for Graduate Legal Studies
John R. DeRosa, Assistant Dean for Student and Career Services
Nan A. Colvin, Registrar

The Law School prepares attorneys for both public and private practice. Graduates are trained to provide the highest quality professional services to their clients and to contribute to the development and reform of law and legal institutions. The curriculum is designed to prepare students for admission to the bar in all American states and territories. Students who pursue the three-year Doctor of Law degree (J.D.) must have a bachelor's degree or equivalent. Students wishing to concentrate in international law may be admitted to a program leading to the J.D. "with specialization in international legal affairs." The Law School also offers a limited number of students an opportunity to earn both a J.D. degree and an LL.M. (Master of Laws) degree in international and comparative law.

Students may pursue combined graduate degree programs with the Johnson Graduate School of Management; the Department of City and Regional Planning of the College of Architecture, Art, and Planning; the School of Industrial and Labor Relations; the graduate divisions in economics, history, and philosophy of the College of Arts and Sciences; the Université de Paris I (Panthéon Sorbonne); l’Institut d’Études Politiques de Paris; and Humboldt University.

Each year a limited number of students from abroad pursue the LL.M. degree (Master of Laws) and the J.S.D. degree (Doctor of the Science of Law). A small number of law graduates also may be admitted as special students, to pursue advanced legal studies without seeking a degree. Students in other graduate programs and qualified undergraduate students registered with the university are welcome in many classes with the permission of the instructor. In addition, highly qualified undergraduates in the College of Arts and Sciences may register in the Law School during their senior year.

For further information, refer to the Law School web site, or contact the Office of the Registrar, Myron Taylor Hall. Course descriptions are current as of April 2007. For updated law descriptions visit: www.lawschool.cornell.edu

FIRST-YEAR COURSES
LAW 5001 Civil Procedure
Full year. 6 credits. Letter grades only.
K. M. Clermont, B. J. Holden-Smith, and F. F. Rossi.
An introduction to civil litigation, from commencement of an action through disposition on appeal, studied in the context of the federal procedural system. Also, a detailed consideration of federalism and ascertainment of applicable law, jurisdiction, process, and venue; and former adjudication.

LAW 5021 Constitutional Law
Fall. 4 credits. Letter grades only.
A study of basic American constitutional law, including structural aspects of the Constitution and certain of its rights provisions.

LAW 5041 Contracts
Full year. 6 credits. Letter grades only.
A. Anghie, R. A. Hillman, N. Oman, and R. S. Summers.
An introduction to the nature, functions, and processes of exchange, contract, and contract law. The course focuses on the predominant rules and principles governing contract and related obligation, including the substantive and procedural aspects of contract law.

LAW 5061 Criminal Law
Spring. 4 credits. Letter grades only.
S. P. Garvey and J. Ohlin.
An introductory study of the criminal law, including theories of punishment, analysis of the elements of criminal liability and available defenses, and consideration of specific crimes as defined by statute and the common law.

LAW 5081 Lawyering
Full year. 4 credits. Letter grades only.
Lawyering is a year-long course designed to prepare first-year students to lawyering skills, with primary emphasis on legal writing, analysis, research, and oral presentations. Assignments are usually set in the context of a simulated court office (or judge’s chambers). In the fall semester, students write predictive memoranda that point out the strengths and weaknesses of their client’s case. To prepare the memoranda, students may need to determine the facts of the case by conducting interviews or depositions. Acting as junior attorneys, students will also make an oral presentation to a supervising attorney. The spring semester focuses on persuasive advocacy. Students prepare a memorandum, motion, or brief for submission to a court and,

LAW 5121 Property
Spring. 4 credits. Letter grades only.
E. M. Penalver and L. S. Underkuffler.
This is a course in basic property law. It covers acquisitions of rights in property, estates in land, concurrent ownership, landlord/tenant relations, and regulation of land use.

LAW 5151 Torts
Fall. 4 credits. Letter grades only.
An introduction to the principles of civil liability in the tort field: intentional wrongs, negligence, and strict liability. Attention is also given to the processes by which tort disputes are handled in our legal system.

GRADUATE COURSES
LAW 6071 Advanced Legal Research—U. S. Legal Research for LL.M.
Students
Fall (first 7 weeks of term). 1 credit.
Graduate program grading—H, S, U.
Graduate students only; limited enrollment.
M. M. Morrison.
This course will introduce LL.M. students to basic legal research in U.S. materials that will be valuable to them in their course work at Cornell and in practice. The focus will be on understanding and finding primary legal sources, including statutory codes, session laws, administrative regulations, and court decisions, as well as explanatory materials, such as law reviews and treatises. To a large extent, instruction will use online materials that are most likely to be available to the students in their future careers. There will be short introductory lectures, as well as hands-on laptop and Reading Room sessions.

Students will complete five assigned exercises using the resources learned in class, and there is no final exam. The final grade will be based on the five assigned exercises (20 percent each).

LAW 6221 Anglo-American Contract Law
Spring. 3 credits. Graduate program grading—H, S, U. Limited to graduate students.
C. Thomas.
This course is designed for foreign-trained lawyers who are familiar with basic contract law in their own country. It surveys the Anglo-American common law of contracts and related civil obligations. The pedagogic approach focuses on the case method and is Socratically based, similar to the traditional first year course in Contracts. Graduate students who wish to study contract law would generally be expected to take this one-semester course. They are free to enroll
instead in the first-year Contracts course, but if they do so, they must take that course for the full year.

**LAW 7991 Graduate Research Colloquium**
Fall, 3 credits. Limited enrollment. Seminar course required for all first-year J.S.D. candidates. Also open first to L.L.M. students and then to J.D. students if places are available. Requires scholarly and exchange students from foreign institutions highly encouraged to attend in an unofficial capacity. Satisfies writing requirement. J.S.D. and L.L.M. program grading—H, S, U. J.D. program, letter grades only. M. Lasser.

This seminar is a course in advanced academic research methodology. The colloquium is designed to prepare the students to engage in doctoral-level research, analysis and writing, especially in comparative and international contexts. How is the researcher to select an object or subject of investigation? How should she formulate research questions? How should she engage in the study of foreign and domestic legal institutions, doctrines and/or cultures? How is interdisciplinary work to be accomplished? The early portions of the course will involve discussing readings in comparative research methodology, including functionalism, Common Core analysis, legal transplant theory, historicism, law and development, legal pluralism, cultural analysis, colonial studies, and comparative institutionalism. In the latter portions of the course, students will present and critique their methodologically reflective research projects. A modest number of external speakers will be invited to present their work in progress for the purposes of generating methodologically oriented discussion.

**LAW 6761 Principles of American Legal Writing**
Fall, spring. 3 credits. Graduate program grading—H, S, U. Graduate students only; limited enrollment. L. Knight.

This course provides foreign-trained lawyers with an introduction to the American legal system and essential principles of legal writing in the United States. Students are afforded an opportunity to practice some of the forms of writing common to American legal practice, by drafting documents such as memoranda, and briefs, in the context of representing hypothetical clients. Students are given the opportunity to confer individually with the instructor and to rewrite assignments after receiving the instructor's comments.

**LAW 8991 Thesis**
Fall, spring. 5 credits. Limited to graduate students and students completing joint J.D.–L.L.M. program—Graduate program grading—H, S, U. J.D./L.L.M. program—Letter grades only.
Arrangements for a master's thesis are made by the student directly with a faculty member. A faculty member may require the student to submit a detailed outline of the proposed thesis, as well as a summary of previous writing on the subject or other appropriate information. The work is completed during the academic year under the supervision of a law faculty member.

**LAW 9901 Graduate Research**
Fall, spring. Limited to J.S.D. students.
law school - 2009–2010

America, as well as significant portions of Africa and Asia. The course will therefore provide a broad overview of “civilian” private law and procedure, criminal procedure, administrative law, and constitutional law. The course is particularly interested in the differences between common law and civil law understandings of the relationship between law-making, legal interpretation, and the judiciary.

LAW 6191 Conflict of Laws
Fall. 3 credits. S–U or letter grades.
B. J. Holdren-Smith.
This course focuses primarily on the choice-of-law methods used by courts in the United States to decide the applicable law in cases that, in their parties or events, involve more than one state or country. The course examines in detail the nature, logic, and constitutionality of such methods. In addition, the course devotes substantial attention to recognition and enforcement of judgments and, in particular, to the obligation imposed by the Constitution’s Full Faith and Credit Clause to respect the judgments of other states’ courts.

LAW 6201 Constitutional Law II: The First Amendment
Spring. 3 credits. S–U or letter grades.
S. H. Shiffrin.
A comprehensive discussion of freedom of speech, press, and association. The free-exercise-of-religion clause and the establishment clause of the First Amendment will also be treated to some extent.

LAW 6263 Criminal Procedure—Adjudications
Fall. 2 credits. S–U or letter grades. Prerequisites: none. Students who have previously taken Criminal Procedure from Professor Blume are eligible to take this course for 2 credits due to some overlap in course content. Other than first class, students who were enrolled in Criminal Procedure with Professor Blume during fall of 2008, may—but are not required to—attend class where material covered previously in Professor Blume’s Criminal Procedure course is discussed. Students who have not taken Professor Blume’s Criminal Procedure class will take class for 3 credits.

This course will primarily focus on the adjudication phase of the criminal process including pretrial detention, guilty pleas, jury composition and selection, fair trial procedures, double jeopardy and collateral review. However, the first third of the class will address various topics relating to the right to counsel.

LAW 6264 Criminal Procedure—Investigations
Fall. 3 credits. S–U or letter grades. S. F. Colb.
Criminal Procedure: Investigations examines the constitutional law that governs police attempts to solve crime and bring perpetrators to justice. The course considers the role of the Fourth Amendment prohibition against unreasonable searches and seizures as well as the Fifth Amendment ban on compelled self-incrimination, in guiding police behavior and in structuring the trials that follow constitutional violation. Students will evaluate the wisdom and constitutional validity of the Fourth Amendment exclusionary rule, which prohibits the introduction of evidence obtained as a result of an unreasonable search, and the well-known Miranda v. Arizona decision as it has evolved over time.

LAW 6301 Directed Reading
Fall, spring. 1 or 2 credits. S–U grades only. Arrange directly with instructor. Specific credit limits apply—carefully review the registration form available from online registration site or registrar’s office. An examination of a topic through readings selected by arrangement between the instructor and an individual student or group of students (not exceeding eight).

LAW 6661 Constitutional Law of the European Union
Spring. 5 credits. S–U or letter grades. M. Lasser.
This course introduces students to the law and institutions of the European Union. It examines the composition, organization, functions and powers of the Union’s governing bodies; analyzes the Union’s governing treaties and constitutional law; and studies the Union’s decision-making processes. The course also explores broader questions of political, economic and legal integration, such as the proper relation between the Union’s law and the domestic law of the Union’s Member states, and the desirability and feasibility of using the E.U. as a model on which to pattern other transnational agreements.

LAW 6732 Cross Cultural Negotiations
Fall. 2 credits. S–U grades only. Prerequisite: LL.M.s and third-year students more likely to benefit than second-year students in fall term. Limited enrollment. Course meets Nov. 12, 13, 14, 19, 20, and 21, 2009. Attendance mandatory for all classes.

This Cross Cultural Negotiation workshop is designed to give law students an intensive opportunity to develop negotiation skills which can be used in the global market place to create and repair relationships and to manage conflict. Classes will consist primarily of interactive negotiations and communication exercises, together with some lectures. Problems to be negotiated will have some rudimentary IP overtones.

LAW 6731 Dispute Resolution: Negotiation, Mediation and Arbitration
Fall. 2 credits. Letter grades only. Limited enrollment. J. P. Meyer and S. G. Yusem. During the past decade, the field of alternative dispute resolution has virtually transformed the practice of law. Today, every lawyer has a professional responsibility to his or her clients to consider the most appropriate process available to resolve issues. The course will explore the characteristics of negotiation, mediation and arbitration as well as the ethical concerns inherent in them, employing interactive and videotape dispute simulations, enabling the student to engage as a negotiator, dispute resolution advocate, mediator, and arbitrator.

LAW 6311 Education Law
Spring. 3 credits. S–U or letter grades. M. Heise.
This course focuses on selected legal issues that arise in the public and private education context, with emphasis on the elementary and secondary school setting. Topics considered include the legal and policy dimensions of the rights of students, parents, educators, and the state with respect to such issues as access to, control over, and regulation of the education setting and institutions. Issues germane to equal education opportunity, school finance, and school governance and regulation receive particular attention.

LAW 6361 Environmental Law
Spring. 3 credits. Letter grades only. Recommended prerequisite: Administrative Law. J. J. Rachlinski.
The course surveys the major environmental laws, with a primary focus on federal statutes. Emphasis will be placed on the various sources of liability to both individuals and corporations from common law, statutory provisions, administrative regulation, and enforcement policy. Corporate successor liability, liability through mergers and acquisitions will be included, including the increasing importance of performing a full range due diligence review for environmental conditions in such transactions. Special attention is paid to the economic, social, and political obstacles to efficient regulation of the environment.

6392 Ethics and Corporate Culture (also NBA 5140)
In the high-pressure worlds of business and law, all too often good people do bad things. In many cases, the unethical behavior is due in part to a toxic corporate culture. The attitudes, values, and practices that prevail in their organizations induce otherwise ethical employees to take actions that violate widely shared norms of conduct. Such behavior can be costly—even disastrous—leading to ruined careers, tarnished corporate reputations, and legal liability for the individuals and their companies. In an environment where “only results matter,” it can be difficult for a new M.B.A. or law school graduate to recognize the risks. If she sees the danger, she may still find it hard to avoid them. This course seeks to help M.B.A. and law students understand how a firm’s culture can tempt—or push—employees into unethical behavior. It also considers how employees can meet ethical challenges posed by their firms’ cultures and what leaders can do to build ethically healthy cultures.

LAW 6401 Evidence
Fall. 3 credits. Letter grades only. Limited enrollment. F. F. Rossi.
The rules of evidence in civil and criminal cases with emphasis on relevance, hearsay, authentication, witnesses, experts, and confrontation. The course focuses on the Federal Rules of Evidence, with some attention to how they diverge from the common law.

LAW 6401 Evidence
Spring. 4 credits. S–U or letter grades. S. F. Colb.
This course examines the rules that govern attorneys’ trial presentations in criminal and civil cases. Beginning with the requirement that every piece of evidence offered be relevant to a fact that bears on the dispute, the course surveys the obstacles that confront attorneys offering proof at trial. We consider the rules barring character evidence, proof of sexual propensity, and hearsay, among others. The Federal Rules of Evidence (FRE) represent the main set of law for the course, though the case method is used and will accordingly, on occasion, expose students to state analogues of the federal rules. The
exam in this course is entirely objective, i.e., true-false and multiple choice.

**LAW 6421 Family Law**
Spring, 3 credits. S–U or letter grades. C. G. Bowman.

Broadly understood, family law is the study of state-imposed rules regulating intimacy and intimate relationships in society. In this course we evaluate our assumptions and beliefs about the appropriateness of a number of current laws regulating families. Substantial attention is devoted to the social and legal consequences of marriage dissolution, including children, custody, child support, property distribution, and spousal maintenance. Other topics considered include: the legal significance of marriage rights and obligations; private ordering within the marital context; non-marital relationships and their regulation; and the legal rights of parents, children, and foster parents in situations of abuse and neglect.

**LAW 6431 Federal Courts**
Spring, 4 credits. S–U or letter grades. Prerequisite: Constitutional Law and second year course of Civil Procedure. Students without such background should consult with the instructor. Knowledge of the basic doctrines of administrative law is very useful, although not a strict prerequisite. M. Dorf.

This course examines the various constitutional, statutory, and judge-made doctrines that control access to the federal courts to vindicate federal rights. It is particularly valuable for those planning a career in public interest or the public sector, anyone else expecting to litigate extensively in federal court, and students who have or hope to obtain a judicial clerkship. Topics covered include: case or controversy limitations, including standing; constitutional and statutory limits on jurisdiction; causes of action for constitutional and statutory rights, including 42 U.S.C. §1983 and Bivens actions; bars to such actions, including sovereign immunity and abstention doctrines; and habeas corpus.

**LAW 6441 Federal Income Taxation**
Fall, spring. 4 credits. S–U or letter grades. Limited enrollment. Fall, R. A. Green; spring, R. A. Schnur.

A basic course designed to develop understanding of concepts and ability to work effectively with the Internal Revenue Code, regulations, cases, and other tax materials.

**LAW 6461 Financial Institutions**
Spring. 4 credits. S–U or letter grades. R. C. Hockett.

An introduction to the regulatory structures, as well as some of the economic, technological and other factors, that pattern the conduct of financial intermediation in the U.S. The principal focus will be upon commercial banks, investment companies (mainly mutual funds), insurance companies, pension funds and securities firms in so far as these institutions discharge a common set of economic functions and give rise to a common cluster of counterparty risks (mainly systemic risks). Legal topics to be covered accordingly include entry, functional and geographical restrictions; consumer-protection (including disclosure requirements) and competition-promotion; capital adequacy, solvency, and related risks of financial intermediation and of the "globalization" of finance, in order both to place what is distinctive about the dominant American forms of business under the protection of foreign laws and better to understand the forces operating behind recent and still unfolding changes in the American (and global) financial and finance-regulatory environments. No prior background in financial law or economics is required, but it is helpful.

**LAW 6471 Health Law**
Fall, 3 credits. S–U or letter grades. H. R. Berendt.

This course will consider legal aspects of the organization, financing, and distribution of health care in the United States. It will emphasize issues of access, costs, and quality, and address use of regulation, litigation and market-driven strategies to confront emerging problems. Readings will be from a health law casebook, supplemented by occasional handout materials. The goal is to convey an appreciation of the challenges involved in providing health care to those in need and of the role of law and lawyers in meeting these challenges.

**LAW 6501 Insurance Law**
Spring, 3 credits. S–U or letter grades. M. Heise.

Insurance is an increasingly important tool for the management of risk by both private and public enterprises. This course provides a working knowledge of basic insurance law governing insurance contract formation, insurance regulation, property, life, health, disability, and liability insurance and claims processes. The emphasis throughout the course is on the links between insurance theory, doctrine, and modern ideas about the functions of private law.

**LAW 6511 Intellectual Property**
Fall, 3 credits. Letter grades or S–U by permission of the faculty member. O. Livak.

A survey of legal mechanisms for protecting intellectual property including patent, trademark, copyright, trade secret, and related state law doctrines.

**LAW 6521 International Business Transactions**
Fall, 2 credits. S–U or letter grades. D. MacGrath.

This course provides an overview of different commercial legal systems and examines private and public law aspects of international business transactions and the legal rules governing such transactions. Examples of private international business transactions include international sale of goods, letters of credit, foreign investment, international technology transfers and joint ventures. This course also considers international dispute resolution mechanisms (including international litigation and arbitration) and related issues (including governing law, choice of forum and applicable treaties).

**LAW 6531 International Commercial Arbitration**
Fall, 3 credits. S–U or letter grades. Students who have taken the international commercial arbitration course in the Paris program will receive 1 credit for this course. All others will receive 3 credits. J. J. Barceló Illi.

A study of arbitration as increasingly the dispute resolution method of choice for international trade and international business disputes (where the parties are from different countries). The course introduces the sources and hierarchy of norms governing international arbitration and then studies the legal issues and processes concerning enforcement of agreements to arbitrate, selecting and challenging arbitrators, choosing the procedure and applicable law in arbitral proceedings, and enforcement of the resulting arbitral award. The course gives special attention to the 1958 UN Convention on the Recognition and Enforcement of Foreign Arbitral Awards (and agreements to arbitrate) known as the New York Convention, and the UNCITRAL (U.N. Commission of International Trade Law) Model Law. The course's unique approach—patterned on the nature of international commercial arbitration itself—focuses on commercial arbitration as a transnational phenomenon rather than as an instance of arbitration under any particular national system. The course materials include court decisions, arbitral awards, national arbitration statutes, the rules of various arbitration institutions, and scholarly writings—drawn from all over the world.

**LAW 6532 International Law and Politics**
Spring, 3 credits. S–U or letter grades. A. Efrat.

The course is an introduction to public international law from a social science perspective. We begin by exploring the basic principles of international law, such as treaty making and sovereignty. We then cover the laws of war, international trade law, international law and development, human rights law, international law in the U.S. legal system, and legalized resolution of international disputes. The course will emphasize the close relationship between international law and politics and will seek to answer questions such as: Why do states comply with international law? Why do states sometimes turn to an international court to settle their disputes? How and to what extent has international law been effective in facilitating trade and promoting human rights? Throughout the course, we will consider relevant historical and contemporary episodes, such as the use of force in Iraq and the development of the World Trade Organization.

**LAW 6681 International Law and Foreign Direct Investment**
Spring. 3 credits. S–U or letter grades. M. B. Ndulo.

This course studies legal aspects of direct foreign investments. It seeks to identify legal problems that are likely to affect a commercial investment in a foreign country. Inter alia, it deals with the public international law principles and rules governing the establishment by foreign businesses of various factors of production (persons and capital) on the territory of other states and from the protection of such investments. Thus, the course includes a discussion of the following topics: economic development and foreign capital; obstacles to the flow of investment to developing countries; guarantees to investors and investment codes; bilateral treaties; nationalization; joint ventures; project financing; transfer of technology; arbitration;
investment insurance; unification of trade law; and the settlement of investment disputes.

**LAW 6583 International Trade and Development**
Fall. 3 credits. S–U or letter grades. C. Thomas.
This course focuses on the intersection of two key objectives of the international order and international economic law: (1) the promotion of rules for the stabilization and liberalization of international trade; and (2) the encouragement of economic growth and development in poor countries. The course will begin with an overview of theoretical and policy models for development through trade, and then consider the origins and commitments of existing international trade law. Employing a case-study approach, the course will proceed to examine high-profile international trade disputes implicating development issues. Questions arising out of these disputes include the following: Should developing countries receive special and differential trade preferences or be subject to universal free trade principles? Speaking of universal principles, should developing country governments be subject to the same environment and social standards that apply in industrialized countries? What about intellectual property rights do they help or hinder economic growth in weak economies? And how does trade affect the debt burdens of poor countries? Finally, what do these issues, and the disputes that raised them, suggest about the chances for success of current efforts in the international trade regime, such as the stalled Doha Development Agenda?

**LAW 6590 Judicial Opinion Writing**
Fall. 3 credits. S–U or letter grades. J. Mollenkamp.
Judicial opinions are a fundamental part of our legal system. Well-written opinions share many common characteristics making them effective resolutions of current disputes as well as helpful precedent for the resolution of future disputes. This course will require students to research, write, and revise majority and dissenting opinions in various cases based upon a careful consideration of a full record, an oral argument, and any applicable precedent.

**LAW 6592 Labor Law, Practice and Policy**
Fall. 3 credits. S–U or letter grades. A. B. Cornell.
This course will focus on the federal laws regulating the organization of private-sector workers and unions and the process of collective bargaining in addition to addressing protected concerted activity unrelated to union organizing. Practice in the field of labor and employment law will be highlighted along with important and timely public policy issues.

**LAW 6601 Land Use Planning**
Fall. 3 credits. S–U or letter grades. E. Penalver.
This course will provide a broad introduction to the theory of law, and the history of land use regulation. Topics will include zoning, homeowners’ associations, nuisance, suburban sprawl, eminent domain and regulatory takings. Readings will be drawn from the leading cases as well as commentary by scholars in the fields of law, architecture, and planning.

**LAW 6614 Law and Ethics of Business Practice**
Fall. 2 credits. S–U grades only. S. J. Schweb.
Each week a distinguished guest lecturer from the business world will present a business-law problem. Speakers include the founders of businesses, the managing partners of large law firms, and the managers of hedge funds and private equity firms. The problems will cover a wide variety of topics, and the emphasis will be how to comply with the Sarbanes-Oxley audit requirements and how a hedge fund should react to improperly discovered confidential information. Students will be required to write two 5-page lead papers on particular problems, and four 2–3 page response papers on themes covered in the class. No final examination.

**LAW 6631 Law for High Growth Business (also NBA 6890)**
Fall. 3 credits. S–U or letter grades. BR. Legal students must preregister to receive first priority for the course. Limited enrollment. Z. J. Shulman.
An in-depth analysis of key issues that an emerging high growth business must consider and address, including: (i) choosing type of business entity, (ii) protecting confidential information and inventions, (iii) sources of capital, (iv) understanding capitalization structures (common stock, preferred stock, warrants, etc.), (v) use of stock options as employee incentives, (vi) fundamental employment practices, (vii) proper establishment and utilization of Boards of Directors and Advisory Boards, (viii) technology licensing and commercialization, and (ix) acceptable business practices and the Foreign Corrupt Practices Act.

**LAW 6641 The Law Governing Lawyers**
Spring. 3 credits. Letter grades only. Satisfies professional responsibility requirement. Enrolling in this course does not prohibit enrollment in another professional responsibility course. W. B. Wendel.
This course is intended to provide a comprehensive overview of the law governing lawyers in a variety of practice settings, including transactional, litigation, and civil and criminal litigation. The course is not focused merely on the ABA’s Model Rules, but draws extensively from judicial decisions in malpractice and disqualification cases, the new Restatement of the Law Governing Lawyers, and other sources of law. A major theme is the relationship between state bar disciplinary rules and the generally applicable law of tort, contracts, agency, procedure, and crimes. Another significant theme is the prevention of attorney discipline and malpractice liability through advance planning.

**LAW 6651 The Law of Branding and Advertising: Trademarks, Trade Dress, and Unfair Competition**
Fall. 2 credits. S–U or letter grades. N. St. Landau.
Fundamental trademark, trade dress, and false advertising laws are examined in the context of assisting clients to execute branding and marketing strategies. Special focus is given to branding as it relates to: “consumer products companies”; the impact of e-business and the Internet on branding strategies and acquisitions; and complex proof issues in trademark and domain name litigation. Branding strategies embody fundamental and long-established principles of the trademark laws. The Lanham Act is used to address issues ranging from confusingly similar words and designs, to false and unsubstantiated advertising claims, and public appropriation—and misappropriation—of long-established corporate icons in today’s e-commerce world. This course examines the basis of this rapidly changing body of law.

**LAW 6701 Legislation**
Spring. 3 credits. S–U or letter grades. J. Chafer.
Much of the “law” that lawyers work with is statutory. This course will examine both how legislatures go about doing their work (that is, legislative process) and how they use the text of the statute and others utilize legislative output (that is, statutory interpretation). We will begin with a case study of the drafting and judicial interpretation of the 1904 Civil Rights Act. We will then devote substantial attention to theoretical and practical issues in statutory interpretation, including theories of interpretation generally, the canons of construction, and the use of legislative history. We will also examine the rules governing legislative debate and procedure, and we will consider how the different roles of legislators and judges affect our interpretation of statutes and cases.

**LAW 6742 Patent Law**
Spring. 3 credits. Letter grades or S–U by permission of the faculty member only.
Prerequisite: An intellectual property survey course such as LAW 6511 is recommended but not required. O. Liivak.
This course will focus on U.S. patent law, giving comprehensive coverage of doctrinal elements and touching on key policy issues. No technical background is required.

**LAW 6713 Prelude to the U.S. Supreme Court and Labor and Employment Law**
Winter. 1 credit. S–U grades only. Please note that this course may require students to miss at least one day of class during the semester for travel. Class is limited to 6 students with preference given to third-year students. The course will meet for two hours at the end of the fall examination period. Prior to the start of spring semester, during the second week in January, the class will meet for two four-hour days. This period will be spent discussing the substantive law in the case and hearing student presentations. The discussion of the case will continue on the six-hour drive to D.C. and debriefing on the return leg of the trip. Students will have one class session in spring with professors who have clerked in the Supreme Court. During the intercession period, students will be required to communicate with the professor regarding their paper topics and research.

This 1-credit intercession course will expose students to a timely labor and employment law topic pending before the U.S. Supreme Court. The class will travel to D.C. sometime during the semester to hear the oral argument. During the intercession period, students will be required to read the briefs in the case, prepare a five-page paper on a related topic, and to present their research in class. Over the break, students will be required to read The Nine: Inside the Secret World of the Supreme Court, by Jeffrey Toobin or another book about the Court agreed upon by the professor. A one-page review of the book will also be required. Additional reading may be assigned.
LAW 6781 Products Liability  
Fall. 3 credits. Letter grades only.  
J. A. Henderson Jr.  
Applications of products-liability doctrine and theory to a variety of problems drawn from or closely related to actual litigation. An overview of the relevant case law, statutes, and administrative regulations, including the Restatement, Third, of Torts: Products Liability.

LAW 6791 Public International Law  
Fall. 3 credits. S-U or letter grades.  
J. Ohiin.  
An introduction to the legal rules governing the conduct of states vis-a-vis other states, individuals, and international organizations, with reference to major current events and issues. Topics include the nature, sources, and effectiveness of international law; the establishment and recognition of states; principles concerning state sovereignty, territory, and jurisdiction; the law of treaties; state responsibility; international criminal and humanitarian law; terrorism; and human rights. Special attention is given to the law governing the use of force.

LAW 6792 Real Estate Transactions and Deal Structuring (also CRP 6290)  
Spring. 3 credits. S-U or letter grades.  
D. L. Funk.  
Real estate transactions and deal structuring will examine real estate deals through a practitioner perspective within a case study and transactional approach. The course looks at the transactional components and structuring of real estate deals and related parties at each step in creating value from real estate, including acquisition and assemblage; due diligence; sourcing and financing; structuring the venture/parties; operation; disposition; and tax consequences. Additional issues within deal structuring that may be included are negotiation, managing risk including litigation and environmental issues, and analysis of financing techniques, and consequences when deals go bad, including workouts and bankruptcy. The case study format will address deals from the perspectives of investment fund manager, banker/lender, developer, REIT, joint venture partner/investor, and owner. The course will include assignments and exercises where students analyze real estate transactions, prepare and negotiate documents, and present transactions and deals to review entities.

LAW 6811 Secured Transactions  
Spring. 3 credits. S-U or letter grades.  
N. Oman.  
A study of Article 9 of the Uniform Commercial Code, the law regarding security interests in personal property. In a secured transaction, a creditor may resort directly to a secured party to satisfy the debt. Article 9 applies to a transaction, which may not be immediately apparent. Second, working through the intricacies of Article 9 will help students sharpen their skills in statutory interpretation. Finally, we will address some of the theoretical issues involved in security and debt. There are no prerequisites for this course. (Students with a particular interest in commercial law may wish to study bankruptcy as well as secured transactions, but this can be done in either order.)

LAW 6821 Securities Regulation  
Spring. 4 credits. S-U or letter grades.  
Prerequisites: Prior knowledge of the Restatement, Third, of Corporations.  
Organizations (or the equivalent for LLM.s) is required for a student to enroll. This requirement may be waived only with the permission of instructor. A student may enroll in Corporations/Business Organizations concurrently. C. K. Whitehead.  
This course analyzes key issues under the U.S. federal securities laws, principally the Securities Act of 1933 and the Securities Exchange Act, with respect to the domestic and international offer and sale of securities. It includes a study of what constitutes a security, the public offering process, material requirements for public companies, exemptions from registration (including exempt global offerings), and potential liabilities and sanctions.

LAW 6823 Social and Cognitive Psychology for Lawyers  
Spring. 3 credits. Letter grades only.  
J. J. Rachlinksi. Limited enrollment.  
In their short history, cognitive and social psychology have produced a rich understanding of how human beings think and how they interact with each other. It should therefore come as no surprise that these two fields have a number of applications to law. This course will explore those applications. Examples include: what effect common errors in judgment have on tort and contract law; how the perception of risk affects societal demand for regulation in environmental law; how organizational and group decision-making processes affect corporate decision-making; and how norms about fairness impede or facilitate negotiation and dispute resolution; how biases in judgment influence litigation strategies; and what studies of conformity mean for the development of international human rights law. The goal of this course is to introduce students with interests in different areas of law to some general principles of human thought and social interaction that will be valuable to them in their future practice.

LAW 6822 Social Science and the Law  
Fall. 3 credits. S-U or letter grades.  
V. Hans.  
This course examines the relationship of social science to law, focusing on the growing use of social science in the legal system. Over the past several decades, increasing numbers of social scientists have conducted systematic research on the operation of law and legal institutions. At the same time, social scientists themselves are testifying as experts in increasing numbers, encouraging lawyers and judges at both the trial and appellate levels to rely on social science evidence to decide cases. Social science research is also used as a tool in law reform. The aim of the course is to develop a critical analysis of these uses of social science in law and litigation. Are social scientists asking the right questions? Are lawyers, judges, legislators, and legal reformers using social science findings appropriately? Is the law’s increasing reliance on social science problematic or advantageous—or both?

LAW 6841 Sports Law  
Spring. 2 credits. Recommended prerequisites: Antitrust Law and Labor Law.  
Course meets for 10 weeks. S-U or letter grades.  
W. B. Briggs.  
The course traces the development of sports law in the United States. Particular attention is given to the relationship between business and antitrust and labor law. Contemporary issues involving arbitration, collective bargaining, amateur athletics, agents, franchise movement, and constitutional law are addressed.

LAW 6844 State and Local Government  
Fall. 3 credits. S-U or letter grades.  
State and local governments have long been regarded as “laboratories” for possible solutions to difficult social issues, and as political institutions that are closest to the people. In addition to traditional concerns, state and local governments in recent years have been the primary actors in contentious areas such as health care reform, gay marriage legalization, campaign finance reform, property rights protection, and other issues. This course will examine the powers of and legal restraints on state and local governments in state systems, and as a part of the American constitutional order. Topics will include state constitutions, the right to vote and voter registration, and their methods of interpretation; local government boundary formation and boundary change; state and local police, property, and taxing powers; the emergence of supra-local (regional) government; and the place of state and local governments in the federal system (including commerce clause, privileges and immunities clause, and taxation issues). The final part of the course will consider several areas of recent and future litigation—such as the interstate validity of gay marriages and federal challenges to states’ medical and health reforms—as a way to illustrate the difficult issues of conflict of law, and the place of state and local governments in the federal system.

LAW 6861 Supervised Teaching  
Fall, spring. 1 or 2 credits. S-U grades only.  
Arrange directly with instructor.  
Specific credit limits apply—carefully review the registration form available from online registration site or registrar’s office.

LAW 6871 Supervised Writing  
Fall, spring. 1, 2, or 3 credits. S-U grades only.  
Arrange directly with instructor.  
Specific credit limits apply—carefully review the registration form available from online registration site or registrar’s office.

LAW 6881 Supervised Teaching and Supervised Writing—Lawyering Program Honors Fellows  
Full year. 4 credits. S-U grades only.  
Prerequisite: application process. Specific credit limits apply—carefully review the registration form available from online registration site or registrar’s office.

LAW 6882 Supervised Teaching and Supervised Writing—Lawyering Program Honors Fellows  
Full year. 4 credits. S-U grades only.  
Prerequisite: application process. Specific credit limits apply—carefully review the registration form available from online registration site or registrar’s office.

LAW 6883 Supervised Teaching and Supervised Writing—Lawyering Program Honors Fellows  
Full year. 4 credits. S-U grades only.  
Prerequisite: application process. Specific credit limits apply—carefully review the registration form available from online registration site or registrar’s office.  
Lawyering Program Honors Fellows serve for the full academic year as teaching assistants in the Lawyering course. With training and guidance from the Lawyering faculty, Honors Fellows work on myriad course-related tasks. In addition to meeting regularly with first-year
students, Honors Fellows may help design course assignments and documents, critique papers, participate in simulations, and assist the research attorneys with the teaching of legal research. Honors Fellows also teach classes on the Bluebook. Additionally, Honors Fellows serve as mentors to first-year students and may participate in workshops on basic law-school skills. During the spring semester, Honors Fellows may, under the direction of the Dean of Students, tutor first-year students.

LAW 6891 Taxation of Corporations and Shareholders
Spring. 3 credits. Letter grades only.
Prerequisite: Federal Income Taxation.
L.L.M. students must secure permission of instructor. R. A. Green.
This course examines the federal income taxation of corporate transactions, including incorporations, dividends, redemptions, liquidations, and reorganizations.

LAW 6892 Negotiated and Collaborative Decision-Making
Spring. 3 credits. Letter grades only.
Increasingly, systematic and collaborative techniques are being used both to address conflict and to reach decision in diverse settings, including workplace, communities, and government. This course focuses on the nature of conflict; personal, cognitive and cultural factors affecting collaboration and negotiation; systems for conflict resolution; different orientations for negotiation, mediation, and facilitation. Private and public settings will be considered; emerging online processes will be discussed. Case studies and exercises will be used to develop critical thinking and reasoning abilities, and illustrate the collaborative, creative and response methods for resolving disputes.

LAW 6921 Trial Advocacy
The course is devoted to the study and weekly performance of the full range of trial techniques. Fundamental skills are taught in the context of challenging procedural and substantive principles. Each stage of the trial is examined: jury selection, opening statement, direct examination, cross-examination, objections, impeachment, exhibits, expert witnesses, child witnesses, pre-trial, and closing argument. In addition to a lecture and student exercises every week, students will do a full day jury trial exercise at the completion of the course on a weekend at a local court with an actual judge and jury. All weekly performance are digitally recorded and reviewed and then re-reviewed by another faculty member with the student individually. There are occasional written assignments and class attendance is mandatory for all exercises sessions and the first class lecture. The pass/fail option is available.

LAW 6941 Trusts and Estates
Fall. 4 credits. Letter grades only.
G. S. Alexander.
The course surveys the law of succession to property, including wills and intestate succession, and the law of trusts. The course provides basic tools for estate planning, but does not include systematic coverage of estate taxation.

LAW 6981 WTO and International Trade Law
Spring. 3 credits. S–U or letter grades.
J. J. Barceló III.
The law of the World Trade Organization (WTO), including substantive law theory, the basic WTO rules and principles limiting national trade policy, and the WTO dispute settlement process. A study of national (U.S.) fair and unfair trade law within the WTO framework (safe harbors, antidumping, subsidies and countervailing duty remedies). Consideration will also be given to non-trade values within the WTO system (environment, labor rights, and human rights).

PROBLEM COURSES AND SEMINARS
All problem courses and seminars satisfy the writing requirement. Limited enrollment. Admission to all problem courses and seminars determined by lottery.

LAW 7012 Advanced Criminal Procedure: Post-Conviction Remedies
Spring. 3 credits. S–U or letter grades.
This course examines the procedural and substantive techniques utilized in collateral challenges to criminal convictions in state and federal courts, and explores the tensions between the criminal justice system’s competing interests in finality and production of reliable convictions and sentences. The course includes a historical overview of modern habeas corpus, studies substantive claims for relief common to collateral proceedings, and examines important procedural limitations on relief including the exhaustion requirement, procedural default, and nonretroactivity. Much of the course will concentrate on the meaning, application and impact of the modifications to the federal habeas corpus statutes made by the Antiterrorism and Effective Death Penalty Act of 1996.

LAW 7031 Advanced Legal Research
Spring. 3 credits. Letter grades only.
This seminar law, through seminars with students research skills that are essential for success as law practitioners, regardless of their career path. The topics move beyond the basic legal research instruction in Lawyering, including efficient use of Lexis, Westlaw, and other electronic databases; internet resources; international and foreign law research; business and social science resources; and legislative history. Emphasis is placed on devising effective research strategies, finding materials, and evaluating resources. In addition to weekly assignments on each topic, students develop their skills by completing a substantial paper examining the research process and key sources in a topic of the student’s choosing.

LAW 7042 Advanced Litigation: Problem-Solving Seminar
Spring. 3 credits. S–U or letter grades.
Limited enrollment. Satisfies writing requirement.
Attendance is not mandatory for first class; highly recommended. M. Othorn.
Through a series of written and oral assignments involving hypothetical federal and state cases (criminal as well as civil) derived from the instructor’s actual experience as a litigator, students will learn reliable methods for developing effective responses to a wide range of increasingly complex litigation problems, including ones involving seemingly novel questions or unfamiliar fields. There will be some opportunities for informal writing, briefing and moot court presentations, but the primary focus will be on working through a series of problem-solving exercises designed to enable any good advocate to approach even the most challenging issues with the clarity and creativity needed to (a) identify what is at stake and (b) successfully anticipate and be prepared to respond to any potentially persuasive arguments that an adversary or court might conceivably raise. There will be no examinations. Grading will be based entirely on student work on assignments and class participation, including an overall assessment of progress over time.

LAW 7052 Advanced Persuasive Writing and Appellate Advocacy
Fall. 3 credits. S–U or letter grades.
Students will master the art of persuasive writing and oral advocacy. Lecture topics include: knowing your audience; writing a Statement of Facts that appears objective but subjectively persuades; what good judges are taught about good writing; methods to achieve clarity, brevity and logic; issue selection; the effective use of precedent; establishing credibility; understanding non-legal factors that influence decisions; the interplay between judges and their law clerks; appellate procedure and standards; reviewing the winning opening statement; and handling questions from the bench. Students will critique actual briefs, judicial opinions and oral arguments for technique and persuasive value. Guest speakers, including judges of the United States Court of Appeals for the Second Circuit and federal prosecutors, will provide advice and recommendations. Students will apply what they have learned to the drafting of an appellate brief based on an actual court record. The brief will be written in stages and followed by one-on-one critiques. Student will also present an oral argument. Initial practice arguments are critiqued by the professor and student panels (to permit students to see an argument from a judge’s perspective), and the final argument is judged by the professor.

LAW 7072 Advanced Topics in Property Theory
Spring. 3 credits. Letter grades only.
Limited enrollment. Satisfies writing requirement. L. Underkuffler.
The idea of property as that which describes the individual’s inviolable sphere has been central to our constitutional scheme and to calls for protection of various interests by the political left and the political right. In this seminar, we will examine the idea of property and its usefulness in resolving issues of current social conflict. We will begin with a general consideration of rights by examining some philosophical readings on rights theories, and critiques of those theories. We will next look at the particular right of property: what it is, and the extent to which it should be placed beyond the purview of various interests by the political right and the political left. In this seminar, we will examine the idea of property and its usefulness in resolving issues of current social conflict. We will begin with a general consideration of rights by examining some philosophical readings on rights theories, and critiques of those theories. We will next consider the extent to which property concepts can be useful employed to resolve an array of critical social issues, such as the enforcement...
of surrogacy (parenting) contacts, the sale or other control of body parts, the determination of the fate of human embryos, the pursuit of human cloning and genetic engineering, an individual's control of personal information, the recognition of relational rights (such as those of same-sex married heterosexual and gay relationships), and others. Grading will be based on brief reaction papers written by students throughout the course. Students who wish to write longer research papers in conjunction with the seminar may do so for additional credit (with permission of instructor).

**LAW 7072 Animal Rights**
Spring. 3 credits. S–U or letter grades. Limited enrollment. Satisfies writing requirement. S. F. Golb.

This seminar examines the moral assumptions underlying the legal status and human use of non-human animals. State and federal law treat animals primarily as property, sometimes modified to take account of animals' subjective experiences. We will study a variety of legal and philosophical writings that address the legal and moral status of animals, including the debate between supporters of an "animal welfare" approach (such as those that aspire to the reduction of animal suffering), and supporters of an "animal rights" approach that aims to abolish the use of animals. Among the questions the seminar poses are: What capacities, if any, warrant shielding animals from various forms of exploitation? Do animals have interests in continued existence or merely in avoiding suffering? Might some but not other human uses of animals be justified, and if so, which ones? Medical experimentation? The use of animal products (such as milk and eggs) for food? The keeping of animals as pets? In addition to the assigned readings, students will be responsible for a research paper.

**LAW 7095 Biblical Law**
Spring. 3 credits. S–U or letter grades. Limited enrollment. Satisfies writing requirement. C. M. Carmichael.

Analysis of law and narrative in the Bible from the perspective of ancient law and legal history. Topics include the nature of the law codes (e.g., hypothetical formulation versus statutory law), legal issues in the narratives (e.g., law of adultery and women's rights), law and morality (e.g., the Ten Commandments), law and religion (e.g., institutions guaranteed by the law but condemned by religious authority), the transformation of extralegal relations into legal ones (e.g., with the introduction of money), legal interpretation in antiquity (e.g., the Sermon on the Mount), social factors in legal development (e.g., shame and guilt), and aspects of criminal, family, and private law (e.g., an eye for an eye, incest rules, and uninheritance).

**LAW 7102 Capital Punishment Law**
Fall. 3 credits. S–U or letter grades. Limited enrollment. Satisfies writing requirement. C. Seeds.

This seminar examines the complex body of law governing imposition of the death penalty in the United States. The course aims to provide a historical overview of capital punishment law, critically analyze its constitutional doctrines, and introduce aspects of criminal procedure that are unique to death penalty cases. The primary focus will be on Eighth Amendment jurisprudence, including challenges to the arbitrary and discriminatory application of the death penalty; the development of modern death penalty statutes, the role of aggravating and mitigating circumstances in the capital sentencing trial, and constitutional limitations on eligibility for the death penalty. The course will also examine the constitutionality of standards for counsel in capital cases, difficult problems raised by volunteer defendants who wish to waive mitigation, the role of international law in capital cases, and the constitutionality of certain methods of execution. The seminar is recommended for students interested in the Capital Trial Clinic or the Capital Appellate Clinic.

**LAW 7092 Catholic Thought and the Law**
Fall. 3 credits. S–U or letter grades.
E. Penalver. Limited enrollment. Satisfies writing requirement.

With a Catholic majority on the Supreme Court, it is more important than ever to understand the distinctive features of the Catholic jurisprudential tradition. This course is intended to offer an introduction to Catholic social teaching as it has developed since the Pope Leo XIII’s landmark encyclical Rerum Novarum. The course involves a mixture of readings, ranging from church documents to scholarly commentary by such writers as Thomas Aquinas, John Courtney Murray, Robert George, and Charles Curran. Issues covered include the relationship between morality and law, economic justice, and the welfare state, the Theology of Liberation, the death penalty, abortion, and assisted suicide.

**LAW 7101 Central Topics in Jurisprudence and Legal Theory**
Fall. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. R. S. Summers.

This seminar will address four related topics that arise within all discrete law school courses: (1) the rational design of overall forms and complementary material or other components of the main functional legal units of a system of law, including those that are institutional such as legislatures and courts, preceptive such as rules and principles, and enforceable such as remedies, (2) the distinctive bearing of various concepts of justice on the make-up and operation of functional legal units and other phenomena of law, with several sessions on procedural justice, (3) the special and extensive nature of the resources of reason and argument in the law, and (4) the major facets of the “legal positivism vs. natural law” debate. In a discrete law school course, many occasions arise to give such topics as the foregoing some frontal and systematic treatment, yet many instructors feel there is rarely time to stop and do so without sacrificing important course coverage. The well-educated lawyer should, however, be conversant with such topics as the foregoing, and with at least some of the now very rich literature of relevance. A special seminar or course is one solution. Assigned seminar materials will include a recent book by Prof. Summers, *Form and Function in Law* (Cambridge University Press), selected jurisprudential readings, judicial opinions, statutes, and other primary sources. There will be extensive opportunity for seminar discussion. The grade will be based on a seminar paper and class discussion.

**LAW 7144 Colloquium on Law and Development in the Middle East and North Africa**

This course begins with a comparative review of contemporary approaches to law and development, from the era of 20th-century decolonization to the present day. We will then consider particular challenges in the region related to conflict resolution, democratic governance, urbanization, and market growth. The bulk of the course will feature speakers from Cornell as well as from other universities who will present their work for critical analysis by the class. Students will be required to write six short papers, which will due in advance of the class session.

**LAW 7151 Constitutional Law and Political Theory**

The purpose of the seminar is to explore theories of freedom of speech and theories of equality. How are the ideas of freedom, equality, association, and community linked in doctrine, and how should they be linked? Neoconservative, liberal, radical, feminist, and Marxist writings may be considered.

**LAW 7132 Constitutional Law and Theory Colloquium**
Fall. 3 credits. S–U or letter grades. Limited enrollment. Satisfies writing requirement. J. Chaftetz and M. Dorf.

This colloquium will examine current and classic topics in advanced constitutional law and constitutional theory. Roughly half of the sessions will feature presentations of works in progress by constitutional scholars. During the other sessions, assigned readings will mostly consist of canonical works in the field. For class meetings in which no faculty presentation occurs, responsibility for presenting the assigned reading will rotate among students in the colloquium. Over the course of the term, each student will be responsible for writing three brief reaction papers to the works in progress and at the end of the semester, each student will hand in a longer research paper on a topic approved by the instructors.

**LAW 7991 Cornell Research Colloquium**
Fall. 3 credits. Limited enrollment. Satisfies writing requirement. Required for all first-year J.S.D. candidates. J.S.D. and LL.M. program grading—H, S, U. J.D. program—Letter grades only. Open first to L.L.M. students and then to J.D. students to the extent that places are available. Visiting scholars and exchange students from foreign institutions are highly encouraged to attend in an unofficial capacity. M. Lasser.

This seminar is a course in advanced academic research methodology. The Colloquium is designed to prepare the student to conduct doctoral-level research, analysis and writing, especially in comparative and international contexts. By the end of the seminar the researcher to select an object or subject of investigation? How should she formulate research questions? How should she engage in the study of foreign and domestic legal institutions, doctrines, texts? How is interdisciplinary work to be accomplished? The early portions of the course will involve...
discussing readings in comparative research methodology, including functionalism, Common Core analysis, legal transplant theory, historicism, law and development, legal pluralism, cultural analysis, colonial studies, and comparative institutionalism. In the latter portion of the course, students will present and critique their methodologically reflective research projects. A modest number of external speakers will be invited to present their work in progress for the purposes of generating methodologically oriented discussion.

**LAW 7711 Corruption Control**  
This seminar analyzes the types of corruption that exist in both the public and private sectors, the means by which a variety of criminal and non-traditional remedies may be used to reduce the frequency and impact of corrupt activities, and the constitutional and statutory problems implicated by such approaches.

**LAW 7710 East Asian Law and Culture Seminar**  
Fall. 3 credits. S–U or letter grades. Limited enrollment. Satisfies writing requirement. Cannot be taken concurrently with LAW 7171. A. Riles.  
With many of the world's most dynamic economies now in East Asia, today's law graduates are more likely than ever to be involved with legal issues from that region. At the same time, legal problems in East Asia, from human rights, to judicial and legal education reform, to conflicts over labor, environmental and minority rights, to local debates about medical and scientific regulation and ethics, are invaluables sources of comparative insight about our own legal system. This seminar introduces students to the challenges and opportunities of studying law and culture in East Asia from a sophisticated interdisciplinary perspective. Students will participate in a semester-long colloquium and conference series on law and culture in East Asia in which Cornell faculty and guest speakers from around the world will present new research on current legal issues in the region. Students will be required to read a series of background materials in preparation for each seminar and to write three- to five-page papers responding to the presentations. Everyone who wishes to take the course for credit must attend the first class. With the permission of instructor a student will be permitted to take this seminar more than once.

**LAW 7194 Empirical Legal Studies Colloquium**  
Spring. 3 credits. S–U or letter grades. Limited enrollment. Satisfies writing requirement. V. Hans.  
This colloquium explores an in-depth exploration of Empirical Legal Studies, which involves the application of systematic research methods to the study of legal issues. Issues that have been studied using these methods include such diverse topics as the structure of the legal profession, the influence of race and gender in legal decision making, the impact of educational policies and practices, reforms in medical malpractice and civil justice, corporate law and finance, public health, discrimination, and criminal sentencing.

**LAW 7201 Empirical Studies of the Legal System**  
Fall. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. T. Eisenberg.  
This seminar will focus on empirical studies of selected topics, including the death penalty and punitive damages. Each student is expected to complete an empirical project. Each student will need a laptop computer.

**LAW 7172 Employment Discrimination**  
Fall. 3 credits. S–U or letter grades. Limited enrollment. Satisfies writing requirement. M. L. Goldstein.  
This seminar explores contemporary problems in employment discrimination law. It focuses on legal issues involving Title VII, wrongful discharge, disability discrimination, age discrimination, and equal pay. Students are required to submit a paper as partial fulfillment of the requirements of the course.

**LAW 7232 Ethical Issues in the Investigation and Prosecution of Complex Criminal Cases and Terrorism**  
Fall. 3 credits. S–U or letter grades. Limited enrollment. Satisfies writing requirement. Satisfies professional responsibility requirement. M. Bachrach.  
This seminar will explore the role of government lawyers and defense counsel in complex investigations and prosecutions, including cases and matters involving terrorism. We will read some recent cases and proceedings, including, for example: the disbarment of Michael Nifong, the prosecutor of the Duke Lacrosse team members; the Scuzzy and Stringer cases; the Chapman case; and recent cases against two criminal defense attorneys, Lynne Stewart and Robert Simels. We will also address the role of government lawyers in advising on the treatment of detained persons during interrogation. In doing so, we will read some of the materials, including recently classified memoranda, written by and about lawyers from the Office of Legal Counsel of the Department of Justice on the use of cruelty and torture in the investigations conducted as part of the war on terrorism.

**LAW 7261 Feminist Jurisprudence**  
This seminar examines the role of law, and, more generally, the role of the state, in perpetuating and remedying inequities against women. After studying the historical emergence of sexual equality law in the United States, we will discuss a number of paradigmatic feminist legal theories, including formal equality, MacKinnon's "dominance" theory, relational feminism, pragmatic feminism, and various anti-essentialist theories (e.g., critical race feminism and intersectionality). We will then proceed to apply these analytical structures to various substantive areas of law of particular concern to women, including but not limited to rape and other types of violence; abortion; surrogacy and other reproductive rights issues; pornography; prostitution; and problems encountered by women in the legal profession.

**LAW 7291 Global and Regional Economic Integration: The WTO, EU, and NAFTA**  
Spring. 3 credits. S–U or letter grades. Limited enrollment. Satisfies writing requirement. J. J. Barceló III.  
The seminar studies the process of international economic integration occurring both globally and regionally. In the global context it takes up a basic introduction to WTO law and selected problems. In the regional context it takes up the introduction to the European Union, including the institutional and lawmaking processes, the direct effect and supremacy of EU law, and the development of the four freedoms (goods, services, persons, and capital). A basic introduction to NAFTA will also be included. Student seminar papers may deal with issues arising within any of the three regimes. Comparative studies will be encouraged.

**LAW 7311 Immigration and Refugee Law**  
Fall. 3 credits. S–U or letter grades. Prerequisite: Constitutional Law. Limited enrollment. Satisfies writing requirement. S. W. Yale-Loehr.  
This course explores the evolving relationship between U.S. immigration policy and our national purposes. Immigration plays a central role in contemporary American life, significantly affecting our foreign relations, human rights posture, ethnic group relations, labor market conditions, welfare programs, public services, and domestic politics. It also raises in acute form some of the most basic problems that our legal system must address, including the rights of insular minorities, the concepts of nationhood and sovereignty, fair treatment of competing claims for scarce resources, the imperatives of mass administrative justice, and pervasive discrimination. In approaching these questions, the course draws on diverse historical, judicial, administrative, and policy materials.

**LAW 7593 Income Taxations of Corporate Mergers and Acquisitions**  
Spring. 3 credits. S–U or letter grades. Prerequisite: Federal Income Taxation is an absolute prerequisite for the seminar, unless (a) a student believes that he or she has an equivalent academic or professional background, AND (b) receives my advance permission to enroll. Limited enrollment. Satisfies writing requirement. R. Schmukler.  
This is an advanced seminar that, after reviewing the basic federal income tax principles governing taxable and nontaxable corporate mergers and acquisitions, will introduce students to some of the more complex transactional tax issues and will explore how these tax concepts are utilized in structuring acquisition transactions. The emphasis will be on domestic rather than cross-border acquisitions. There will be no final examination, but students will be asked to prepare several planning memoranda directed at different merger and acquisition fact patterns.
feature presentations by distinguished legal theorists, welfare economists, and philosophers. The other class sessions will be devoted to discussion of papers sent in advance by these guests, as well as complementary work by others.

**LAW 7582 Memory and the Law (also HD 6695)**
Fall. 3 credits. S–U or letter grades. Limited enrollment. Satisfies writing requirement. C. Brainerd.

This course will focus on how the scientific study of human memory interfaces with the theory and practice of law. Students will study relevant areas of memory research (e.g., storage, retrieval, false memory, memory deficits in impaired populations) and memory theory. Students will also study specific areas of legal practice in which the reliability of evidence is critically dependent on human memory (e.g., eyewitness identification, recovery of repressed traumatic memories, confessions, child abuse, child witnesses). Readings will come from primary library sources.

**LAW 7591 Mergers and Acquisitions**
Fall. 3 credits. S–U or letter grades. Prerequisite: Prior or concurrent: basic Business Organizations/Corporations class at Cornell or another U.S./Canadian law school. Prior or concurrent: basic Contracts class from Cornell or another U.S./Canadian law school or basic contracts class (from any other law school) deemed comparable by the professors. Limited enrollment. Satisfies writing requirement. M. I. Greene and R. A. Hall.

The focus of this course is developing the lawyering skills required by an attorney advising a client who is selling or acquiring a business. Individual drafting exercises, as well as strategy discussions and negotiations by student teams acting as counsel to the buyer or seller, will be interspersed with lectures on the business acquisition process and analysis of selected publicly available documentation of actual acquisition transactions. The typical chronology of an acquisition: negotiation by the buyer and the seller of the basic terms of the deal including selection of structure (sale of stock or assets; merger); drafting and negotiation of a term sheet or letter of intent; due diligence investigation; drafting and negotiation of the definitive acquisition agreement; handling of problems encountered between the execution of the agreement and the closing of the acquisition; and the closing.

**LAW 7594 Neuroscience and the Law**
Fall. 3 credits. S–U or letter grades. Limited enrollment. Satisfies writing requirement. P. Johnson.

This seminar examines key findings and implications for the law in the rapidly expanding field of neuroscience. Topics to be covered include the neurobiology of decision-making and memory, issues of gender difference in brain function, and the neurophysiology of trauma, addiction, and aggression. Attention will also be given to recently developed technologies for observing the human brain, the history and philosophy of clinical diagnosis as related to psychopathology and deviant behavior, and to prisons as asylums. The goal of the seminar is to enable students to integrate cutting-edge scientific findings and related controversies into their own and approach to legal practice in such areas as criminal justice, mental health disability, domestic violence, gender equity, and child welfare.

**LAW 7594 New York Civil Practice**

The course will explore the idiosyncrasies and intricacies of New York practice and procedure, with a particular focus on practice in the New York Supreme Court (the primary court of general original jurisdiction in New York). The course will also examine the rules concerning civility in litigation and the ethical boundaries of zealous representation.

**LAW 7601 Organized Crime Control**
Fall. 3 credits. S–U or letter grades. Limited enrollment. Satisfies writing requirement. R. Goldstock.

This seminar will explore the challenges of organized crime poses to society and to traditional law enforcement techniques. Students will undertake a simulated investigation using physical and electronic surveillance, the confinement of documentary evidence, and the examination of recalcitrant witnesses before the grand jury. The RICO statute will be explored in detail as well as a variety of non-criminal remedies including forfeiture and court-imposed trusteeships.

**LAW 7631 Pretrial Practice, Litigation Strategies, and Remedies in Commercial Litigation**
Fall. 3 credits. S–U or letter grades. Prerequisite: Civil Procedure and Contracts or Contracts in a Global Society. Limited enrollment. Satisfies writing requirement. Satisfies professional responsibility requirement. A. M. Radice and M. D’Amore.

This seminar studies the strategies of complex commercial litigation, focusing on case development in the pretrial period. It will address strategies and approaches to pleadings, jurisdiction, motions, pretrial discovery and remedies (and preliminary injunctions, damages) in the context of difficult and unclear legal issues. Hardball litigation techniques and ethical considerations will be considered as well as the use of litigation to achieve business goals. Actual litigated cases will be dissected and papers in the form of briefs and memoranda will be written on each. Since 90 percent of commercial cases settle before trial, this seminar will be a real life presentation of the commercial litigation process.

**LAW 7664 Special Problems in Trial Practice**
Fall. 3 credits. S–U or letter grades. Limited enrollment. Satisfies writing requirement. E. Ainslie.

An examination of professional problems faced by American trial lawyers, e.g., unethical judges, ineffective opposing counsel, unprepared witnesses and lying clients, as well as practical trial strategy issues in more typical trials. Readings from real cases, including several from the instructor’s case- files over decades of trial practice.

**LAW 7783 Topics in Intellectual Property**
Spring. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. O. Livak.

Sizable disputes and controversy surround many areas of intellectual property. This seminar explores these disputes. By surveying the academic literature the seminar aims to introduce, understand, and ultimately critique the arguments being made for and against various aspects of intellectual property.

**LAW 7785 War Crimes Trials**
Fall. 3 credits. S–U or letter grades. Limited enrollment. Satisfies writing requirement. Satisfies professional responsibility requirement. M. Rosemser.

Beginning in November 1945, in an unprecedented attempt to bring war criminals to justice, more than 20 senior government officials and military leaders of Hitler’s Third Reich were indicted and tried, what has become known as the Nuremberg Trial, for crimes against peace, war crimes, and crimes against humanity. Earlier that fall, the SS commandants, officers, and guards who had been arrested by the British upon the liberation of the Bergen-Belsen concentration camp, had been tried before a British military tribunal. These were the first of numerous trials of Nazi war criminals and related criminal and civil proceedings arising out of the Holocaust. This seminar will examine legal and ethical issues raised in these and other trials of Nazi war criminals and individuals accused of collaborating with the Nazis in perpetrating crimes against humanity, including the Eichmann Trial in Jerusalem, the Auschwitz Trial of former SS officials and guards held in Frankfurt-am-Main, Germany in 1963–65, the 1963–64 Tel Aviv trial of Herzl, Barenblat, the head of the Jewish police in the ghetto of Bedzin, Poland, and the trials of Klaus Barbie (1987), Paul Touvier (1994), and Maurice Papon (1997–98) in France.

**LAW 7784 The War on Drugs**
Fall. 3 credits. S–U or letter grades. Limited enrollment. Satisfies writing requirement. M. J. Satin.

The United States incarcerates more people for drug offenses than any other country. Of the more than 2 million people in prisons or jails, approximately one-quarter of those people have been convicted of a drug offense. This seminar examines America’s War on Drugs, including its evolution and development over the past forty years, its successes and failures, and its social and economic consequences. Specific attention will be paid to its impact on the poor and people of color. To that end, the seminar will examine the basis for and effect of disparities in sentences between crack and cocaine offenses as well as recent federal cases and legislation on this subject. Other topics include mandatory minimum sentences, drug treatment and drug court, the movement to legalize drugs, mandatory drug testing in schools and in sports, and U.S. foreign policy towards countries supplying drugs. Students will be expected to write a weekly paper on the reading.

**CLINICAL COURSES AND EXTERNSHIPS**

All clinical courses and externships have limited enrollment. Admission to all clinic courses is instructed selected.

Detailed clinical descriptions may be found at: https://support.law.cornell.edu/students/forms/ ClinicalCoursesAndExternshipsDescriptions.pdf.
first time in their lives, stark poverty and
violation; (4) act as liaisons between the
students in the Child Advocacy Clinic and the
instructor, helping to identify areas in which
the Clinic students need further instruction;
(5) act as teaching assistants, reviewing work
products of the Clinic students and assisting
them in locating research, textbooks, and
counts of court documents.

LAW 7833 Criminal Defense Trial Clinic
Fall. 4 credits. S–U or letter grades.
Prerequisite: Evidence recommended or
with permission of instructor. Limited
enrollment. Note: This course requires off-
premises travel. Students will interview
courthouse component involves attendance at
court proceedings, including pre-trial
hearing. Each student will interview
clients and witnesses, prepare clients and
witnesses for trial, conduct negotiations,
and prepare discovery demands and engage
in motion practice.

LAW 7831–7832 Full-Term Externship
Fall, spring. 12 credits. S–U grades only.
Prerequisite: permission of instructor.
Limited enrollment. Note: This course
requires off-premises travel. The student is
responsible for travel to and from the sites.
G. G. Galbrea.

The Full-Term Externship course allows
students to earn 12 credit hours as externs
working full time at approved placement sites
more often with nonprofit organizations or
governmental agencies) during the fall or
spring semester of their third year or the
spring semester of their second year. A written
application for the course must be submitted
to the instructor and approved during the
semester preceding the semester the student
plans to participate. The student must be
supervised/mentored by an attorney and
engage in regular electronic communication
with the other extern and instructor, host the
instructor for a site visit, and do a written
evaluation of the placement experience.

LAW 7801 Immigration Appellate Law
and Advocacy Clinic
Spring. 4 credits. S–U (with permission of
instructor only) or letter grades.
Limited enrollment of 4. W. Kahny and
S. B. Levy.

Students will interview clients who have petitioned for
judicial training. There is also the opportunity to learn
international law and public international
law. Students will develop their international
research and writing, and communication
skills by working in teams on projects for
international organizations and judges. The
projects may involve legal action such as
impact litigation, legal assistance and
human rights education and training, including
judicial training.

LAW 7801–7802 Labor Law Clinic
Spring & fall. 4 credits. S–U grades only.
Prerequisite: preference is given to
students who have taken Labor Law. It is
helpful to have taken Administrative or
Employment Law, but not required. Limited
enrollment. Note: This course may require
off-premises travel. Please contact the
professor if this is an obstacle. A. Cornell.

The Labor Law Clinic will provide students
a practical opportunity to learn labor law, while
making meaningful contributions to the labor
movement and working people. This clinic
will combine a substantive component with a
practitioner experience. Students will
advise labor unions on a variety of legal issues that surface
during the semester and may have the
opportunity to represent unions in different
forums. Students will communicate directly with union representatives and will be required to sort through the facts, research the
issues, and provide information and advice. Students will routinely draft legal memoranda, prepare and file pleadings and briefs as required. Students may have the opportunity to represent unions at hearings, mediation or arbitration. Students may also be required to observe at the National Labor Relations Board, Public Employment Relations Board or an arbitration. Students have also been invited to observe the collective bargaining process. A small number of students will have the opportunity to dedicate their clinical time to international labor law. Interested students can support the ongoing work of the International Commission for Labour Rights, a non-profit organization, or a global union federation with ongoing cases or projects. Student contribution in this area is likely to be research oriented.

**LAW 7872 Land Use, Development, and Natural Resource Protection Clinic**

Spring. 4 credits. S–U or letter grades. Prerequisite: Land Use and/or Water Law Clinic recommended. Limited enrollment. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites. K. S. Porter. Issues in land development may be managed to control, protect, and conserve natural resources, particularly water, are coming to the forefront of national and international policy. Land use policy is fundamental to both economic development and the protection of natural resources. The rich and complex body of law that balances often-competing needs of different stakeholders involves areas of law as diverse as land use, real estate, property, tax, contract, tort, environment, and water and environmental law. Often, even when stakeholders share a uniform vision, the transaction costs involved in executing alternative development plans are prohibitively high. This clinic provides students with the opportunity to work hands-on to identify, design and implement economically and politically viable solutions to environmental problems arising from land use decisions. Participating lawyers will assist clients such as developers, government agencies, community leaders, and public interest groups with a wide range of services. An increasingly critical concern is the role of land use and development on the quantity and quality of water resources. Potential projects include drafting/reviewing municipal ordinances and inter-municipal agreements; consulting on design parameters for development sites (i.e., what type of density is possible; what type of variances are available); drafting petition/ explanatory documents for clients who wish to obtain variances; resolving compliance issues with state and local agencies; and attending meetings and advocating for clients. Because this clinic offers a great variety of transactional work, it will be of benefit to most students who are interested in transactional practices, particularly those interested in a career in real estate, land use, finance, general practice, and environmental law.

**LAW 7881 Law Guardian Externship**

Fall, spring. 4 credits. S–U or letter grades. Limited enrollment. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites. A. J. Mooney. Students are placed at Citizens Concerned for Children, the local Law Guardian Office, where they assist the attorneys in the representation of children in abuse and neglect cases, juvenile delinquency proceedings, and FINS (Person in Need of Supervision) cases. Students also may have their own cases, in which they will assume primary responsibility for the representation. Duties may include interviewing, investigation, drafting of pleadings, and trial preparation. There will be several meetings with the instructor during the semester. Bi-weekly journals are also required.

**LAW 7901 Legislative Externship**

Fall, spring. 3 credits. S–U or letter grades. Students selected by Assemblywoman Lifton. Limited enrollment. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites. B. Strom. Students work with the local New York State Member of Assembly. Work involves drafting legislation, tracking legislation for constituents, legal research and writing, and responding to constituent requests that particularly require legal research of an explanation of law. The emphasis is on the legislative process, drafting of legislation, understanding the reasons for statutory ambiguity, and developing various skills. There are several informational meetings with the faculty supervisor related to the externship experience.

**LAW 7911-2-3 Neighborhood Legal Services Externship 1, 2, or 3**

Fall, spring. 4 credits. S–U or letter grades. Limited enrollment. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites. B. Strom. Classroom component is provided by Clinical Skills 1, 2 (fall), or 3 (spring) depending on whether the student has previously been enrolled in a course in which Clinical Skills 1 was a component. Cases involve the representation of clients of a legal services office, the Ithaca office of Neighborhood Legal Services (NLS). Along with case handling, this externship includes a classroom component, provided by Clinical Skills 1, 2, or 3. The classes are devoted to the development of lawyering skills and issues related to professional responsibility and the role of an attorney. In addition, the student will meet periodically with the faculty supervisor for review of the placement experience.

**LAW 7921 Prosecution Trial Clinic**

Fall. 4 credits. S–U or letter grades. Prerequisite: Evidence or permission of instructor. Interested students will need to submit a statement of interest and resume to Prof. Robert Sarachan by July 15, 2009. Limited enrollment. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites. R. A. Sarachan. This course gives students the opportunity to prosecute non-felony non-jury trials in Ithaca City Court. The course has both a courtroom component and a courtroom component. The classroom component involves lectures, discussion and trial simulation exercises. Topics include criminal law and procedure, prosecution ethics, trial strategy and preparation, trial conduct including direct and cross-examination, plea-bargaining and professional judgment. The courtroom component involves regular attendance at Ithaca City Court’s non-jury terms. Students will observe and critique trials and will prosecute offenses such as traffic tickets (such as speeding and running a red light), city code violations (such as open container and noise offenses), non-felony penal law violations (such as disorderly conduct, possession of marijuana) among others. Each student will be expected to conduct multiple trials during the semester, depending on docket volume. During the trial preparation sessions students will also be expected to prepare witnesses (typically police officers), conduct plea-bargaining negotiations, case research and fact investigation, respond to discovery demands, and engage in motion practice and appellate practice as needed.

**LAW 7931 Public Interest Clinic 1**

Fall, spring. 4 credits. S–U or letter grades. Limited enrollment. Note: This course may require travel for purposes of participating in hearings. G. G. Galbreath and B. Strom. Students handle civil cases for low-income clients of the Public Interest Clinic under the supervision of clinic faculty. Students interview and counsel; investigate and analyze facts; interrelate substantive and procedural law with facts in the context of legal representation; develop strategies to handle clients’ problems; identify and resolve professional responsibility issues; do legal writing; negotiate and settle cases; and represent clients in hearings. Classroom component is provided by the Clinical Skills 1 class, in which students will develop interviewing, counseling, and advocacy skills through the use of readings, videotapes, discussions, and simulation exercises.

**LAW 7932 Public Interest Clinic 2**

Fall. 4 credits. S–U or letter grades. Prerequisite: Public Interest Clinic 1 or a clinic course that included the Clinical Skills 1 classroom component. Limited enrollment. Note: This course may require travel for purposes of participating in hearings. G. G. Galbreath and B. Strom. Students handle civil cases, participate in a classroom component, Clinical Skills 2, and help supervise participants in Public Interest Clinic 1. Cases are handled as described in the course description for Public Interest 1. Students represent the clinic’s clients in both federal and state courts. Clinical Skills 2 builds on the skills taught in Clinical Skills 1.

**LAW 7933 Public Interest Clinic 3**

Spring. 4 credits. S–U or letter grades. Prerequisite: Public Interest Clinic 1 or a clinic course that included the Clinical Skills 1 classroom component. Limited enrollment. Note: This course may require travel for purposes of participating in hearings. G. G. Galbreath and B. Strom. Students handle civil cases, participate in a classroom component, Clinical Skills 3, and help supervise participants in Public Interest Clinic 1. Cases are handled as described in the course description for Public Interest 1. Students represent the clinic’s clients in both federal and state courts. Clinical Skills 3 builds on the skills taught in Clinical Skills 1 and 2.

**LAW 7953–7954–7955 Securities Law Clinic 1, 2, and 3**

Fall, spring. 4 credits. S–U or letter grades. Prerequisites: None. Pre- or co-enrollment in Securities Regulation or Dispute Resolution recommended but not required. Limited enrollment. Note: This course may require off-premises travel for potential client and witness interviews, hearings, and community presentations. Assistance will be provided to students who lack available transportation. W. A. Jacobson.
The course will focus on fundamental investigatory and advocacy skills applicable to representation of public investors in disputes subject to arbitration at the Financial Industry Regulatory Authority (F/k/a National Association of Securities Dealers), with particular focus on the elderly and to small investors. Substantive legal topics will include the scope and nature of binding arbitration under the Federal Arbitration Act and New York law, and the legal and regulatory remedies available to defrauded investors. Coursework will include training in skills such as interviewing potential clients, evaluating potential claims, preparing pleadings, conducting discovery, representing clients at hearings and negotiating settlements. Class work will include presentations by nationally-recognized experts on topics applicable to evaluation of securities accounts, trading, and products. Students will have the opportunity under faculty supervision to represent investors, to provide public education to community groups as to investment frauds, to draft position statements to regulatory authorities, and/or to participate in preparing amicus briefs, in support of public investors.

**LAW 7951–7952 U.S. Attorney's Office Clinic 1 or 2**

Fall, spring. 6 credits. S–U or letter grades. Legislation for the fall was handled by the U.S. Attorney's Office in February 2009. Limited enrollment. Note: This course requires off-premises travel. The student is responsible for travel and from the sites. C. E. Roberts.

The United States Attorney's Office Clinic is a program in which law students work 12-15 hours per week for the United States Attorney's Office in Syracuse, New York. Each student is assigned to work for an Assistant United States Attorney. Students perform research and writing, and trial assistance as needed. Students may qualify to appear in court under the supervision of their attorney, and are encouraged to observe court proceedings in the U.S. Courthouse. Students also attend a weekly seminar once a week at Cornell. The seminar will focus on writing in practice, including critiques of briefs, motions, and a petition for certiorari. Additional topics include federal criminal and civil practices, professional judgment, discretion, and habeas corpus. Guest speakers may include judges, a special prosecutor, and U.S. Department of Justice officials. Students must be a U.S. citizen. A detailed course description is available at https://support.law.cornell.edu/students/forms/ClinicalCoursesAndExternships Descriptions.pdf.

**LAW 7961 Water Law in Theory and Practice 1**

Fall. 4 credits. S–U or letter grades. Limited enrollment. This course requires off-premises travel. The student is responsible for travel and from the sites. K. S. Porter. Competing uses of water resources pose high stakes. Serious conflicts now arise with increased frequency. There is growing necessity for effective legal instruments and methods of conflict resolution to avert or resolve disputes. The Clinic addresses problems of law related to water through collaboration, negotiation, relevant research and writing. This involves selecting and working on a topic, or a dispute, of local, regional, national or international importance with leaders and experts having knowledge or involvement in the issues of the topic. A specific purpose of the clinic is to provide real world transactional experience particularly in resolving or avoiding disputes. Students have available for their projects the extensive network of resources initially established through the New York State Water Resources Institute based at Cornell University. Under faculty supervision, each student selects a project on a topic or dispute of theoretical and practical legal importance. Students consult and work with attorneys, professional staff and stakeholders engaged in work to which the projects generally involve the following steps: Identifying and defining the problem or dispute; Formulating a procedure for the project including prospective cooperators and "clients"; Developing a basic understanding of the legal issues and applicable methods through the relevant literature and documents; Participating in on and off-campus meetings, and field trips; Obtaining assistance, as relevant, from the environmental, economic, and social sciences; and preparing the final report on the project to interested groups and clients, and to the class.

**NON-PROFESSIONAL COURSES—NOT OPEN TO LAW STUDENTS**

**LAW 4021 Competition Law and Policy**

Fall. 4 credits. Letter grades only. G. A. Hay.

This course will examine issues that arise when a country attempts to implement and maintain a “competition policy” as a way of promoting economic growth and efficiency. The basic reading material will start with actual cases (most of them arising under U.S. antitrust law), and use those cases to probe the legal, economic and broad policy issues that the cases raise. This course is intended for non-law students interested in the subject should take the Antitrust Law course. The course requires no legal training or background. Economics 101 (Elementary Microeconomics) or its equivalent is a prerequisite. The course can be used by Economics majors as an equivalent to a 400-level Economics course.

**LAW 4051 The Death Penalty in America**

Spring. 4 credits. S–U or letter grades. Undergraduates only. J. H. Blume and S. L. Johnson. The death penalty has gotten increased media attention due to high profile death row exonerations, and has long been under siege for other reasons, such as racial disparities in its imposition and the prevalence of very poor representation by defense counsel. This course surveys the legal and social issues that arise in the administration of the death penalty. The reading will be largely comprised of reported death penalty cases, but will be augmented by a variety of other sources including empirical studies of the death penalty and the litigation experience of the professors. Although the focus will be on capital punishment as practiced in the United States, we will also consider international and comparative perspectives. Guest speakers will provide a range of views, and law students with experience working on capital cases will lead discussion sections.

**LAW 4121 Gender, Public Policy, and Law**

Fall. 4 credits. S–U or letter grades. Undergraduates only. C. G. Bowman. The course will include, first, a brief introduction to the history of the women's movement in the United States and to the development of the constitutional standard for gender, followed by a sampling of the competing theoretical approaches that can be taken to legal problems involving gender—a formal equality approach, the dominance approach (exemplified by Catharine MacKinnon), relational or cultural feminism (a “differences” approach represented in the legal academy by Robin West and Mary Becker), socialist feminism, pragmatic feminism, and critical race feminism. After the constitutional and theoretical foundations have been laid, we will study a series of issues and issue areas where gender is critical to legal treatment—reproduction (abortion, surrogate motherhood and other reproductive technologies, for example), rape, domestic violence, prostitution, pornography, cohabitation, same-sex marriage, and other family law issues. We will both study how these issues are treated under current law and discuss what might be better approaches to each. In order to introduce students to the study of law, we will be using a textbook used in law school courses, Becker, Bowman, Nourse, and Yuracko, Feminist Jurisprudence: Taking Women Seriously (3rd ed. 2007). No prior knowledge of legal analysis or concepts will be presumed. Requirements: two short (five-page) papers and a final exam.

**LAW 4131 The Nature, Functions, and Limits of Law (also GOVT 3131)**

Fall. 4 credits. Letter grades only. Undergraduates only. A. Riles. A general-education course for students at the sophomore and higher levels. The course will introduce students to different perspectives on what law is, what role it ought to play in society, and what it can—and cannot—accomplish. In addressing these questions, students will consider the different roles of legislators, courts, and executives. Assigned readings consist of case law, commentaries on the legal process, social scientific articles, and works of literature addressing the role of law in society.
Law School - 2009–2010

Dorf, Michael C., J.D., Harvard U. Robert S. Stevens Professor of Law
Efrat, Asif, Ph.D., Harvard U. Visiting Assoc. Prof.
Eisenberg, Theodore, J.D., U. of Pennsylvania.
   Henry Allen Mootz Professor of Law
Farina, Cynthia R., J.D., Boston U. Prof.
Garvey, Stephen P., J.D., Yale U. Prof.
Edward Cornell Law Librarian and Professor of Law
Green, Robert A., J.D., Georgetown U. Prof.
Hans, Valerie P., Ph.D., U. of Toronto (Canada). Prof.
Hay, George A., Ph.D., Northwestern U.
Edward Cornell Professor of Law and Professor of Economics, College of Arts and Sciences
Heise, Michael, Ph.D., Northwestern U. Prof.
Henderson, James A., Jr., LL.M., Harvard U.
Hillman, Robert A., J.D., Cornell U. Edwin H. Woodruff Professor of Law
Hockett, Robert C., J.S.D., Yale U. Assoc. Prof.
Hokken-Smith, Barbara J., J.D., U. of Chicago. Prof.
Johnson, Sheri L., J.D., Yale U. Prof.
Knight, Leslie, J.D., U. of California, Davis. Lec.
Lasser, Mitchel, Ph.D., Yale U. Jack G. Clarke Professor of Law
Lehman, Jeffrey S., J.D. U. of Michigan. Prof.
Liivak, Oskar, J.D., Yale U. Asst. Prof.
Martin, Peter W., LL.B., Harvard U. Jane M. G. Foster Professor of Law
Meyler, Bernadette A., Ph.D., U. of California, Davis. Prof.
Ndulo, Muna B., D. Phil., Trinity C. Prof.
Ohlin, Jens, Ph.D., Columbia U. Asst. Prof.
Oman, Nathan B., J.D., Harvard U. Visiting Prof.
Penalver, Eduardo, J.D., Yale U. Prof.
Rachlinski, Jeffrey J., Ph.D., Stanford U. Prof.
Riles, Annelise, Ph.D., U. of Cambridge (U.K.).
   Jack G. Clarke Chair in Far East Legal Studies and Prof. of Anthropology, College of Arts and Sciences
Rochow, John A., J.D., Columbia U. Prof.
Siliciano, John A., J.D., Columbia U. Prof.
Thomas, Chantal, J.D., Harvard U. Prof.
Underkuffler, Laura, J.S.M., Yale U. J. DuPratt White Professor of Law
Wendel, W. Bradley, J.S.D., Columbia U. Prof.
Whitehead, Charles K., J.D., Columbia U. Assoc. Prof.

Clinical Faculty
Galbreath, Glenn G., J.D., Case Western Reserve U. Clinical Prof.
Strom, Barry J., D., Cornell U. Clinical Prof.

Lawyering Program Faculty
Atlas, Joel J., Boston U. Clinical Prof.
Freed, Lara Gellbasser, J.D., Harvard U. Assoc. Clinical Prof.
Mollenkamp, John R., J.D., U. of Texas. Assoc. Clinical Prof.
Mooney, Andrea J., J.D., Cornell U. Clinical Prof.
Weigold, Ursula H., J.D., Cornell U. Clinical Prof.

Academic Library Staff
Calilhan, Jean M., J.D., Pennsylvania State U. Head of Research Services and Lec. in Law Court, Patricia G., J.D., Hamline U. Associate Law Librarian and Lec. in Law
Emerson, Amy A., J.D., Syracuse U. Research Attorney and Lec. in Law
Finger, Charles S., J.D., SUNY at Buffalo. Collection Development, Research Attorney and Lec. in Law
Germain, Claire M., LL.B., U. of Paris (France). Edward Cornell Law Librarian and Professor of Law
Gillespie, Janet M., M.S., Cornell U. Administrative Supervisor/Access Service
Mills, Thomas W., J.D., U. of Illinois. Head of Collections and Lec. in Law
Morrisom, Matthew M., J.D., Mercer U. Research Attorney and Lec. in Law
Pajerek, Jean M., M.L.S, SUNY at Albany. Head of Technical Services and Information Management

Members of Other Faculties Associated with the Law School
Brainerd, Charles J., Ph.D., Michigan State U. Prof., College of Human Ecology
Carmichael, Calum, M., B.Litt., Oxford U. (U.K.) Prof., College of Arts and Sciences
Funk, David L., Ph.D., U. of Wisconsin. Sr. Lec. and Dir., Prog. in Real Estate, College of Architecture, Art, and Planning
Powers, David S., Ph.D., Princeton U. Prof., College of Arts and Sciences
Shulman, Zachary, J.D., Cornell U. J. Thomas Clark Senior Lecturer of Entrepreneurship, Johnson Graduate School of Management
Wells, Martin T., Ph.D., U. of California. Prof., School of Industrial and Labor Relations

Adjunct Faculty Members
Bachrach, Marion, J.D., Cornell U.
Beresford, H. Richard, M.D., U. of Colorado.
Blyth, John E., Dr.jur., Goethe U.
Briggs, W. Buckley, J.D., Georgetown U.

DIVISION OF NUTRITIONAL SCIENCES

ADMINISTRATION
Patrick Stover, director
Charles McCormick, director of undergraduate studies
Cha-Sook You, assistant director of undergraduate studies
Charles McCormick, director of graduate studies, field of nutrition

THE DIVISION
Nutritional science draws upon the chemical, biological, and social sciences to understand the complex relationships between human health, nutritional status, food and lifestyle patterns, and social and institutional environments. Understanding these relationships includes the study of the metabolic regulation and function of nutrients, nutrient requirements throughout life, the role of diet in reducing risk of chronic disease, the nutritional quality of foods, and interventions and policies designed to promote the nutritional health of individuals, communities, and populations.

The focus of this broad field of study at Cornell is the Division of Nutritional Sciences, which brings together specialists from many disciplines. Faculty members are involved in undergraduate and graduate teaching, research, and extension of research-based knowledge throughout New York State, the nation, and the world.

The division is affiliated with both the College of Human Ecology and the College of Agriculture and Life Sciences. The undergraduate program in Nutritional Sciences is offered to students enrolled in both colleges. The undergraduate program in Human Biology, Health, and Society is offered through the College of Human Ecology. A program of study in nutrition for biological science majors is offered in collaboration with the undergraduate program in biology. Graduate study in the field of nutrition is administered by faculty members throughout the university.

FACILITIES
Most of the faculty members of the division work in Savage Hall, Kineberg Hall, and Martha Van Rensselaer (MVR) Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolics research unit, and computer facilities. Savage Hall has a graduate reading room and undergraduate student room.

UNDERGRADUATE PROGRAMS
The Division of Nutritional Sciences (DNS) offers three programs leading to a B.S. degree:

**Nutritional Sciences (NS-CHE), College of Human Ecology:** This program provides students with a strong foundation in the broad field of nutritional sciences as well as thorough training in chemistry and biology. Students may prepare for a variety of career interests, including medicine and other health careers, and sports nutrition, nutrition counseling, clinical nutrition, dietetics, nutritional biochemistry, community nutrition, and nutrition education.

**Nutritional Sciences (NS-CALS), College of Agriculture and Life Sciences:** This program is for students who want strong training in human nutrition combined with supportive course work in agriculture and the life sciences. Strong preparation in biology, chemistry, and math is required. Students in the NS-CALS program supplement the nutrition curriculum with courses in areas such as food science, animal science, plant science, advanced biology, business and economics, education, and communication.

**Human Biology, Health, and Society (HBHS), College of Human Ecology:** Established in 1997, this program gives students a strong foundation in biology. It then goes on to explore human health issues from the perspectives of both biology and the social sciences. Students complete a rigorous curriculum in the natural sciences and then, choosing from a wide array of courses offered in the College of Human Ecology, focus their studies on health issues of their choice. Students can explore such topics as gene expression and metabolism related to disease states, biological and social aspects of growth and development, and policies and programs influencing health.

The division also offers the Program of Study in Human Nutrition for biological sciences majors who may be enrolled in the College of Agriculture and Life Sciences or College of Arts and Sciences. The Program of Study in Human Nutrition offers biology majors courses on the nature and biochemical function of essential and nonessential nutrients, nutrient requirements, the role of nutrients in gene expression, and the role of diet in both risk of chronic disease and treatment of existing disease states. Students in this program of study are encouraged to complete a diverse set of advanced courses that afford a perspective on current knowledge of nutrient requirements and function and how this knowledge can be put to use. With the exception of a core course in the structure and function of nutrients, the course requirements are unspecified.

Faculty advisors work with individual students to develop a curriculum that fits the students’ interests. As part of their program, students are encouraged to obtain laboratory experience either through course work or research. Students completing the program in nutrition most often choose to continue their education in medical or graduate school and pursue careers in the applied aspects of nutrition or in laboratory-based or epidemiological research.

THE CURRICULUM
Undergraduate students in these programs complete the requirements of their colleges as well as the courses required by the program of their specific interest.

Both the NS and HBHS programs require a rigorous sequence of courses in chemistry and biology, including introductory chemistry and biology and advanced courses in organic chemistry and physiology. A minimum competency in college algebra is required with an additional math and/or statistics requirement for some programs and career paths. Students in the HBHS major also complete a course in physics and two additional courses in advanced biology.

All students complete the introductory course NS 1150 Nutrition, Health, and Society. The NS program requires the completion of four other core courses: NS 2450 Social Science Perspectives on Food and Nutrition; NS 3450 Introduction to Physicochemical and Biological Aspects of Foods; NS 3310 Physiological and Biochemical Bases of Nutrition; and NS 3320 Methods in Nutritional Sciences. Students in these programs also must select a minimum of 9 credits in advanced courses in the nutritional sciences.

The HBHS major requires 15 credits of advanced electives that explore health issues from primarily a biological or a social perspective. These courses are offered by faculty in several departments within the College of Human Ecology.

Undergraduate students in these programs have a faculty advisor with whom they meet at least twice a year. Advisors help students plan their course schedules and can suggest opportunities for individual study or experience outside the classroom.

In both undergraduate programs the correct sequencing of biology, chemistry, and/or nutrition courses is very important. Students considering these programs should obtain detailed information about course requirements from the division’s Academic Affairs office, B21 Savage Hall. This office offers a wide range of advising materials to help students develop a program of study that matches their interests and needs.

CAREER OPTIONS AND COURSE PLANNING
Requirements for the programs are the minimum set of courses necessary for a bachelor’s degree in these fields. Students should supplement their requirements with elective courses and other learning experiences that will prepare them for entry-level jobs or advanced study in their field(s) of interest. A summary of suggested electives for different career interests follows:

**Medicine and Other Health Careers:** Recommended courses for pre-med students include calculus and two semesters of physics.
Specific information about medical school admissions requirements can be obtained from the university’s Health Careers office, 203 Barnes Hall. Students interested in other health careers should acquire specific information about those requirements. Courses of interest include those related to the biological and social determinants of health; human growth, development, and behavior through the life course; interpersonal communications; advanced biology; sociology; psychology; and ethics. 

Dietetics: Students who wish to work in the areas of clinical nutrition, nutrition counseling, sports nutrition, community nutrition, or food and nutrition management should complete the academic requirements for The American Dietetic Association (ADA). The Didactic Program in Dietetics is accredited by the Commission on Accreditation of Dietetics Education and provides students with the course work necessary for application to an accredited Dietetic internship or an Approved Pre-professional Practice (APP) program. Students successfully completing didactic program requirements at Cornell are issued a Verification Statement. A one-time fee is involved in the cost of program materials and transcript evaluation. The Didactic Program in Dietetics policy and procedure for issuing verification statements can be found at nutrition.cornell.edu/dns7_dietic.html. Upon completion of a Dietetic Internship or APP program, students are eligible to take the Registered Examination of the Commission on Dietetic Registration and become a Registered Dietitian (RD). Courses in foods, nutrition and disease, microbiology, management, statistics, and nutritional care are added to the courses required for the nutrition programs. For more information about meeting ADA requirements, contact the DNS Academic Affairs office, B19 Savage Hall.

Exercise, Nutrition, and Health
Promotion: Students should complete a course in physiology and a course in anatomy after introductory biology. Students can complete the Applied Exercise Science Concentration at Ithaca College; which includes courses in kinesiology, exercise physiology, and biomechanics. Students who wish to apply to graduate schools to study physical therapy should complete a year of introductory physics, a course in statistics, a course in ethics, and three courses in psychology. Students should check the specific requirements of their schools of interest. For information about the Applied Exercise Science Concentration, contact the DNS Academic Affairs office, B21 Savage Hall.

Biomedical Research/Nutritional Biochemistry: Recommended electives include calculus, physics, genetics, advanced biology and chemistry, toxicology, and nutritional sciences courses related to the physiology, biochemistry, and metabolism of different nutrients and disease states.

Public Health and Community Nutrition: Suggested electives include courses in communications, education, human development, policy analysis and management, maternal and child nutrition, geriatric nutrition, nutrition and disease; and food economics.

Nutrition, Food, and Business: Recommended electives include courses in management, marketing, economics, communications, hotel administration, and food science.

Nutrition and Agriculture: Recommended electives include courses in food science, animal science, plant sciences, international agriculture, agricultural economics, biological sciences, and development sociology.

International Nutrition: Recommended electives include courses in language, anthropology, agricultural economics, policy, economics, development sociology, international agriculture, and nutritional sciences related to maternal and child health and problems of developing nations.

Biology and Behavior: Recommended electives include courses in psychology, human development, and neurobiology.

Food, Nutrition, and Health Policy: Recommended electives include courses in economics, sociology, government, policy analysis, and management.

Special Experiences
Undergraduates can enhance their experiences by participating in structured field experiences or study abroad. Academic credit can be earned for field experiences in a community agency, health care facility, or business. The Urban Semester in the College of Human Ecology provides students with an opportunity to study and gain field experience in New York City. All students intending to spend a semester off-campus in field experience or study abroad must plan their courses well in advance to be sure that all program requirements can be met.

Independent Study Electives
Independent study courses (NS 4000, 4010, 4020) can be used to obtain credit for more diverse or intensive experience than the classroom can offer, whether this involves laboratory work, library research, or field study. Any student interested in independent study should obtain the sponsorship of a faculty advisor and the approval of the director of undergraduate studies or consider applying to the honors program.

Honors Program
The honors program, which leads to a B.S. degree with honors in the College of Human Ecology, is a B.S. degree with distinction in research in the College of Agriculture and Life Sciences, gives official recognition to students who have demonstrated excellence in their academic work and their capacity for independent study.

In addition to fulfilling the requirements for a major, students in the honors program take seminars in designing and evaluating research (NS 3980), complete an original piece of research (at least 6 credits of NS 4990), and prepare an honors thesis. The honors project may be laboratory or field research or deal with policy and program development. For more information, students should contact Professor J. Thomas Brenna, B38 Savage Hall.

Courses Recommended for Nonmajors
Courses in nutritional sciences can strengthen programs of study in biological sciences, biology and society, communications, food science, human development, human services and other fields.

NS 1150 Nutrition, Health, and Society is open to all students. After NS 1150, nonmajors with limited backgrounds in chemistry and biology may elect NS 2450 Social Science Perspectives on Food and Nutrition, NS 2470 Food for Contemporary Living, NS 2750 Human Biology and Evolution; NS 3060 Nutritional Problems of Developing Nations; NS 3150 Obesity and the Regulation of Body Weight; NS 3470 Human Growth and Development: Biological and Behavioral Interactions; NS 4500 Public Health Nutrition. Nonmajors with strong backgrounds in chemistry and the biological sciences may consider NS 3510 Physiological and Biochemical Bases of Human Nutrition, as well as many advanced nutritional sciences courses, such as NS 3450 Introduction to Physicochemical and Biological Aspects of Foods, NS 4310 Mineral Nutrition and Chronic Disease; and NS 4410 Nutrition and Disease.

Graduate Programs
Graduate study is administered by the field of nutrition, a group of about 80 faculty members from throughout the university who have a common interest in nutritional problems. In the M.S./Ph.D. and Ph.D. degree programs, students may specialize in molecular and biochemical nutrition, human or animal nutrition, community nutrition, or international nutrition. Research is emphasized in all graduate programs. Field experience may be an important component of concentrations in community, international, and public health nutrition and nutrition education. Teaching experience and participation in the graduate student seminar (NS 7030) are important aspects of graduate training.

The specialties and interests represented by faculty in the field of nutrition provide almost unlimited opportunities for students. Cornell’s extensive laboratory and agricultural facilities ensure that students interested in experimental nutrition have exceptional choices and thorough training. As the largest faculty in the country devoted to the study of human nutrition, the field includes specialists in biochemical, metabolic, epidemiological, and sociocultural research. Opportunities to work with community and federal agencies are available to students interested in applied nutrition and public policy. Students in international nutrition are expected to conduct their thesis research abroad.

For more information about the graduate program, students should visit the web site or contact the director of graduate studies, field of nutrition, Cornell University, B19 Savage Hall, Ithaca, NY 14853-4401, 255-2628, nutrition_gfr@cornell.edu, or www.nutrition.cornell.edu/grad.html.
COURSES

NS 1150 Nutrition, Health, and Society
Fall. 3 credits. S–U or letter grades.
Evening prelim. D. Levitsky.
Discusses the facts and fallacies concerning the role that nutrition, exercise, and other health behaviors play in preventing disease, maintaining good health, and maximizing athletic performance. Emphasis is on understanding the biological mechanisms through which good nutrition and regular exercise affect psychological and physical health.

NS 1160 Personalized Concepts and Controversies
Fall. 1 credit. Limited enrollment.
Prerequisite: freshman or transfer standing.
Corequisite: NS 1150. S–U grades only.
J. Swanson.
Provides students enrolled in NS 1150 individualized assistance in many skills including using computers to analyze diets, finding and using scientific references, understanding and criticizing scientific articles, and reviewing material presented in lectures.

NS 1200 Nutrition and Health: Issues, Outlooks, and Opportunities
Spring. 1 credit. Prerequisite: freshman, sophomore, or junior standing or permission of instructor. Not an introductory nutrition course for nonmajors. S–U grades only. C. You.
For students interested in exploring careers in the broad fields of food, nutrition, and health. Experts representing different areas discuss their work, focusing on current issues and trends as well as the requisite knowledge and skills. This course introduces many of the disciplines that are drawn upon in addressing human problems related to food, diet, and health. Students explore career opportunities through a variety of assignments.

NS 1220 Nutrition and the Life Cycle
Spring. 3 credits. Prerequisite: one semester college biology or NS 1150. Letter grades only. P. Brannon.
Biography of the life cycle including development, growth, maturation, and aging and its impact on nutritional requirements of humans from the zygote to the elderly is considered. How to meet these nutritional requirements is discussed relative to the feeding issues and context of each major life stage. Course emphasizes the critical analyses of beneficial and adverse outcomes of various nutrient intakes and dietary patterns on the nutritional status and well-being through integration of nutrition and other health sciences in understanding nutritional needs during the life cycle.

NS 2450 Social Science Perspectives on Food and Nutrition
Fall. 3 credits. Limited enrollment. Must be enrolled by third class meeting.
Prerequisite: NS 1150. S–U or letter grades.
C. Bisogni and J. Sobal.
Uses theories, concepts, and methods from the social sciences to examine food, eating, and nutrition. The food choice process model is used as a framework for examining the scope of social science aspects of nutrition. Assignments include examinations, short papers, and individual research projects, one qualitative and one quantitative, for which students prepare proposals, collect and interpret data, and write papers to report data.

NS 2470 Food for Contemporary Living
Fall and spring. 2 credits. Limited enrollment. Priority given to Dietetics students. Highly recommended: NS 1150. Students must attend first lab or placement is forfeited. S–U or letter grades. Lab coat required. E. Gier.
During this laboratory course, the understanding of food ingredients and techniques of food preparation is applied to positive nutritional and health promotion goals: basic food science and nutrition principles, food safety/sanitation, sensory evaluation, and social-cultural influences on food choices; food preparation, recipe modification, sensory evaluation (taste testing required); basic cooking skills, techniques. Introduction to basic menu planning and meeting nutritional requirements while restricted to a budget. Lab performance and a lab practical factored into final student evaluation; attendance at all labs is expected.

NS 2600 Introduction to Global Health
Explore contemporary issues, problems, and controversies in global health through an interdisciplinary perspective. Introduces the global burden of disease and then examines complex social, economic, political, environmental, and biological factors that structure the origins, consequences, and possible treatments of global health problems. A limited number of problems are explored in depth (e.g., HIV, maternal mortality, malaria).

NS 2750 Human Biology and Evolution (also ANTHR 2750)
Fall. 3 credits. Prerequisite: college biology, S–U or letter grades. J. D. Haas and Z. Gu.
Examines the theories and mechanisms of modern evolutionary biology as they apply to present-day humans and their hominid ancestors. Includes lectures and discussions of molecular and paleontological evidence of human evolution, the causes and consequences of contemporary human biological diversity, and biological and behavioral modes of human adaptation to past and present natural and cultural environments.

NS 3000 Special Studies for Undergraduates
Fall or spring. Prerequisite: permission of instructor. S–U or letter grades. DNS faculty.
Special arrangements can be made to establish equivalency for courses not transferred from a previous major or institution. Students prepare a description of the study they want to undertake using a form available from the college registrar's office. The form, signed by both the instructor directing the study and the associate director of academic affairs, is filed at course registration or during the change-of-registration period.

NS 3060 Nutritional Problems of Developing Nations
Fall. 3 credits. Prerequisite: NS 1150. S–U or letter grades. Offered alternate years.
R. Stoltzfus.
Overview of the most important nutrition problems facing developing countries today and an in-depth understanding of the nutrition problems of one country, chosen as a case study for the course, explores the study/ care/food framework to analyze the causes of these nutrition problems. Instruction is through lectures and readings. Evaluation is through individual assignments, a group project, and exams.

NS 3150 Obesity and the Regulation of Body Weight (also PSYCH 3150)
Spring. 3 credits. Prerequisites: junior or senior standing; NS 1150, PSYCH 1101. S–U or letter grades. Offered alternate years. D. Levitsky.
Multidisciplinary discussion of the causes, effects, and treatments of human obesity. Topics include the biopsychology of eating behavior, the genetics of obesity, the role of activity and energy metabolism, the psychosocial determinants of obesity, anorexia nervosa, therapy and its effectiveness, and social discrimination.

NS 3200 Introduction to Human Biochemistry
Fall. 4 credits. Prerequisites: one year college biology, one year college general chemistry, and CHEM 1570 or 5570-5580, or permission of instructor. S–U or letter grades. P. Stover and S. B. Qian.
Presents the principles of biochemistry within the context of human health and disease. Teaches the metabolism of carbohydrates, lipids, proteins, and selected micronutrients from a perspective that emphasizes their role in supporting the structure and physiological functions of the major organs of the body. Incorporates the concepts of enzyme catalysis, enzyme regulation, hormone action, and bioenergetics within this framework. Covers the fundamental concepts of eukaryotic DNA structure, function, and gene expression with reference to their importance in regulating metabolism and the impact of a changing nutrient environment.

NS 3220 Maternal and Child Nutrition
Spring. 3 credits. Limited enrollment. Prerequisite: NS 1220 or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011.
P. Brannon.
Critical analyses of the nutritional requirements and impact of nutritional status on the mother, fetus, and child from global and domestic perspectives.}

NS 3310 Physiological and Biochemical Bases of Human Nutrition
Spring. 4 credits. Prerequisites: BIOBM 3300 or 3310, or NS 3200, or equivalent. S–U or letter grades. C. McCormick and L. Qi.
Examines the biochemical and physiological bases of human nutritional requirements. Uses an integrated approach to cover the digestion and metabolism of nutrients (carbohydrates, proteins, lipids, vitamins, and minerals). Metabolic and chronic diseases related to nutrition are discussed throughout the semester. Discussion sections and problem sets provide an opportunity to examine in greater depth selected topics from lectures.

NS 3320 Methods in Nutritional Sciences
Fall. 3 credits. Prerequisites: undergraduate biochemistry; NS 3450, NS 3510 preferred or concurrent registration. Letter grades only. M. N. Kazarinoff.
Laboratory introduction to principles and analytical techniques of nutritional research. Emphasizes analytical concepts and skills required to determine nutritional status and nutritional status of individuals. Topics include methods of nutrient, metabolite, and enzyme analysis in body fluids; methods for assessing individual food intake and nutritional status; and methods for assessing the composition of foods.
NS 3410 Human Anatomy and Physiology
Spring. 3 credits. Prerequisite: college biology. Priority given to DNS majors.
Letter grades only. K. O’Brien.
Introduces human anatomy and physiology by detailing the structure and function of the human body and mechanisms used to maintain homeostasis. Emphasis is given to aspects relevant to the nutritional sciences and medicine. Content includes language of anatomy, cells, tissue, integumentary, respiratory, skeletal, muscular, digestive, nervous, cardiovascular, urinary, and reproductive systems. Clinical examples are provided to highlight perturbations and physiology of topics discussed. Evaluation is based on attendance, iclicker-based class interaction, weekly quizzes, and a midterm and final.

NS 3420 Human Anatomy and Physiology Laboratory
Spring. 2 credits. Corequisite: NS 3410. Priority given to DNS majors. Students registered for lab course who are more than 10 minutes late for first meeting forfeit registration; no admittance after second week. M. Lujan.
Principles of anatomy and physiology will be presented using models of the human body, organs, skeleton, and muscles as well as interactive noninvasive assessment techniques of physiological functions. Weekly lecture will provide content connections with NS 3410 and a discussion format. Emphasis will be on location, recognition, and description of anatomical structure and relation to function. Content includes human body orientation and language of anatomy, histology, and various body systems. Evaluation based on attendance, two lab practicums, and lab written assignments.

NS 3450 Introduction to Physicochemical and Biological Aspects of Foods (also FDSC 2000)
Fall. 3 credits. Prerequisites: college-level courses in chemistry and biology. Letter grades only. R. Parker and J. Hotchkiss.
For description, see FDSC 2000.

[NS 3470 Human Growth and Development: Biological and Behavioral Interactions (also HD 3470, BSOC 3471)]
Spring. 3 credits. Prerequisites: BIOG 1101 or 1109 or equivalent; HD 1150 or PSYCH 1101 or equivalent. S–U or letter grades. Offered alternate years; next offered 2010–2011. J. Haas and S. Robertson.
Discusses the interrelationships of physical and psychological growth and development in humans during infancy. Considers its variations for behavioral, psychological, and physical development.

NS 3500 Epidemiology in Context
Spring. 3 credits. Prerequisite: introductory statistics (e.g., PAM 2100, AEM 2100, IRLST 2100). Letter grades only. D. Pelletier.
Provides the conceptual tools to critically analyze the controversies related to a wide range of contemporary health and social issues in the United States and global context. Basic principles of epidemiology are illustrated via case studies of nutritional and biomedical interventions, environmental toxins, and social issues.

NS 3980 Research in Human Nutrition and Health
Fall. 1 credit. Requirement for students in honors research program sponsored by DNS. Open to all students. S–U grades only. J. T. Breena.
Lecture course focusing on the structures and practice of professional research conducted in human nutrition and health, a field that encompasses questions ranging widely from subcellular components to population-level issues. Introduces the various approaches and methods used by researchers and addresses the topics of ethics and research controls. Describes the structure of scientific literature, preparation of research proposals, roles of scientific organizations, and funding sources. Students are required to attend and report on research seminars on campus.

NS 4000-4010-4020-4030 Special Studies for Undergraduates
Fall or spring. Variable to 3 credits. S–U grades only: after completing 2 credits S–U with final grade of S for NS 4000-4010-4020, grading option may be S–U or letter for NS 4000-4010-4020; S–U or letter grades for NS 4030. DNS faculty.
For advanced independent study by an individual or group of students who want to study a field of nutritional sciences not otherwise provided through course work in the division or elsewhere in the university. Students prepare a description of the study they want to undertake on a form to be signed by the instructor directing the study and the student’s faculty advisor. The form, available in B21 Savage Hall or in the Human Ecology registrar’s office, is filed at course registration or within the change-of-registration period. To ensure review before the close of the course registration or change-of-registration period, students should submit the special-studies form to B21 Savage Hall as early as possible.

NS 4000 Directed Readings
S–U grades only; after completing 2 credits S–U with a final grade of S for NS 4000, grading option may be S–U or letter. Study that predominantly involves library research and independent learning.

NS 4010 Empirical Research
S–U grades only; after completing 2 credits S–U with a final grade of S for NS 4010, grading option may be S–U or letter. Study that predominantly involves data collection and analysis or laboratory or studio projects.

NS 4020 Supervised Fieldwork
S–U grades only; after completing 2 credits S–U with a final grade of S for NS 4020, grading option may be S–U or letter. Study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

NS 4030 Teaching Apprenticeship
S–U or letter grades.
Study that includes assisting faculty with instruction.

NS 4130 Nutritional Genomics—Evolution and Environment
Spring. 2 credits. Prerequisites: senior or graduate standing, BIOGD 2810 or permission of instructor. S–U or letter grades. Z. Gu.
Examines selected topics related to nutrition and genome biology. Discussion of nutrition and human evolution, such as human brain evolution, evolution of taste, population variation related with nutrition, and evolution of human diseases. Reading materials are from literature and participation in class discussion is required.

[NS 4210 Nutrition and Exercise]

NS 4250 Nutrition Communications and Counseling
Spring. 3 credits. Limited enrollment. Prerequisites: NS 1150, 1220, and 2450; junior or senior standing; priority given to dietetics/nutrition majors. Letter grades only. S. Travis.
Students learn the theoretical basis of effective health promotion communications and develop effective nutrition communication skills through application in a variety of settings. Provides hands-on experiences in counseling, educational program development, and oral and written communications.

NS 4310 Mineral Nutrition and Chronic Disease
Fall. 3 credits. NS 3310 preferred. S–U or letter grades. C. McCormick.
Evaluate the evidence from primary literature that dietary calcium, sodium, and iron play an important role in the development of osteoporosis, hypertension, and anemia, respectively. An additional goal of the course is to review the molecular processes that are involved in the homeostasis of each mineral and the recommendations for daily nutrient intakes. Class discussion of key research articles is conducted and evaluated.

NS 4410 Nutrition and Disease
Fall, spring. 4 credits. Prerequisites: NS 3310 and physiology course. S–U or letter grades. Fall, M. Caudill.
Principles of nutrition, biochemistry, physiology, genetics, and pathology are combined to understand disease risk, prevention, progression, and management. Topics include nutritional genomics, obesity, cardiovascular disease, cancer, diabetes mellitus, trauma, and renal, neurological, liver, skeletal, and gastrointestinal disorders.

NS 4420 Implementation of Nutrition Care
Fall. 5 credits. Pre- or corequisites: NS 1150, NS 1220, NS 2470, NS 4410, or concurrent registration or equivalent background in courses. S–U or letter grades. Evening prelim. E. Gier.
Develop skills necessary to implement nutrition care. Application of the nutrition care process as it applies to clinical settings is emphasized. Students develop skills to perform nutrition assessment, nutrition diagnosis, nutrition intervention, monitoring, and evaluation. Content includes principles of MNT for acute and chronic diseases, menu planning for disease states, the role of other allied health practitioners in ensuring nutritional health, and reimbursement and legislation in dietetics practice.

NS 4450 Toward a Sustainable Global Food System: Food Policy for Developing Countries (also AEM 4450)
Fall. 5 credits. Preferred: 6 credits in economics, applied economics, or sociology and 6 credits in nutrition and/or agricultural sciences. Letter grades only. P. Pinstrup-Andersen.
Comprehensive presentation and discussion of policy options for a sustainable global food system, with focus on developing countries. Topics include economic policy related to nutrition, health, consumption, production, natural resource management, trade, markets, gender roles, armed conflict, and ethics. A social entrepreneurship approach focuses on on case studies and active participation by students will be used.

**NS 4500 Public Health Nutrition**  
Spring. 2 credits. Prerequisite: NS 1150. Students must attend first lec or placement is forfeited. Honors grades only. Evening prelim. K. Rasmussen.

Public health nutrition is the major professional career track for nutritionists outside of dietetics. It deals with efforts to improve the diets and nutritional status of whole populations by working at the community, state, and national levels. Course helps prepare students to work in public health nutrition by describing methods used in the assessment of nutrition problems, the development of nutrition-related policies, and the delivery of health, nutrition, and food assistance programs.

**NS 4530 Global Health, Development and Policy Issues in Tanzania**  
Summer. Course content is driven in global health, and personal values and with their field experiences, core knowledge interests in global health and integrate these assists students to explore their topical Capstone course for global health minors and how they are related to poverty and Course focuses on global health challenges, national and international levels. The course and challenges for greater harmonization at Explores the perspectives and interests of a national and international levels. The course.

**NS 4750 Mechanisms Underlying Mammalian Developmental Defects (also BIOBM 4750)**  
Spring. 3 credits. Prerequisites: PRBIO 3300, 3310–3320 or 3350 (may be taken concurrently). Offered alternate years. D. Noden and P. Stover. For description, see BIOAP 4750.

**NS 4880 Applied Dietetics in Food Service Systems**  
Spring. 3 credits. Limited to Dietetics seniors. Prerequisites: HADM 1100 or intro food service management course, NS 2470, and BIOIM 2900. White lab coat required. Fee for special supplies/training and activities: approx. $110. E. Gier. Gain experience in facility design; equipment selection, use, and care; job analysis and evaluation; human resources planning; management; service standards; menu development and volume food production; computer-assisted management; employee training; and applied safety and sanitation standards. Through planning and executing a themed event day on skills required to operate/manage a food service program. Application of quality management in food service operations and facility management is stressed. Laboratories are arranged through Cornell Dining and other off-campus sites. Completion of a professional portfolio is required. ServSafe training and examination is conducted; successful completion results in ServSafe certification.

**NS 4900 Manipulating the Mouse Genome (also BIOGD 4900)**  
Fall. 1 credit. Meets during first half of semester and provides background information for VTBMS/TOX 7010 Mouse Pathology and Transgenesis, which meets during second half. Students interested in both may require for them separately. Prerequisites: BIOGD 2800, 2810, or 2820 and BIOIM 3300, 3320 or 3350, or NS 3200. S–U or letter grades. P. Soloway. Functional genomic analysis has benefited in chromatin structure that can stably and heritably influence gene expression. Changes described in several eukaryotes, mechanisms regulating these effects, and their phenotypic applications of these methods.

---

**NS 4620 Seminar in Global Health and Development Issues: Tanzania**  
Spring. 1 credit. Restricted to students in the Global Health and IARD Summer Session and Internship Program in Tanzania. S–U grades only. J. Moseley and L. Harrington.

Seminar prepares students for the Global Health and IARD Summer Session and Internship Program in Tanzania during the summer. Students hear from Cornell faculty and other speakers on global health, agriculture, and development issues relevant to Tanzania. Course sessions also cover Tanzanian history, culture, language, and politics. Students will be actively engaged in reading, discussing, and presenting on key seminar topics.

---

**NS 4550 Actors and Interests in Global Health (also GOVT 4558)**  
Fall, spring. 3 credits. Offered at Cornell-in-Washington program only. Letter grades only. D. Pelletier.

Explores the perspectives and interests of a range of organizations involved in global health; their roles and activities; the complications for agenda-setting, policy development, and implementation arising from this diversity of actors; and the opportunities and challenges for greater harmonization at national and international levels. The course includes readings, student-driven discussions, guest speakers from the D.C. area, student presentations, and student portfolios.

---

**NS 4570 Health, Poverty, and Inequality: A Global Perspective (also ECN 4740)**  
Fall. 3 credits. Prerequisite: Introductory microeconomics and statistics or permission of instructor. S–U or letter grades. Offered alternate years. S. Dahn. Course focuses on global health challenges, and how they are related to poverty and inequality.

---

**NS 4600 Explorations in Global Health**  
Spring. 3 credits. Prerequisite: Junior or senior standing with completion of all requirements for global health minor, or permission of instructor. Letter grades only. D. Pelletier.

Capstone course for global health minors assists students to explore their topical interests in global health and integrate these with their field experiences, core knowledge in global health, and personal values and ethical frameworks. Course content is driven largely by student topical interests and experiences, and selected guest speakers. Explorations are done through individual work, team projects, and classroom discussions.

---

**NS 4610 Proteins and Amino Acids: Nutritional Regulations of Mammalian Protein Synthesis and Degradation**  
Fall. 2 credits. Letter grades only. Offered alternate years; next offered 2010–2011. M. Panopoulos. Basic biochemistry and cell biology related to processes involved in protein synthesis and degradation and the regulation of these
processes. Scientific literature will be used to provide examples of regulation of each of these processes, selected for their relevance to human nutrition and metabolism.

**NS 6110 Molecular Toxicology (also TOX 6110)**
Focuses on metabolism of drugs and environmental chemicals to toxic and mutagenic products and how they can induce developmental and reproductive alterations or carcinogenesis. Signaling pathways that regulate cellular responses to toxicant exposure are discussed. Also emphasizes molecular markers useful for assessment of human exposure to chemicals and radiation.

**NS 6140 Topics in Maternal and Child Nutrition**
Fall. 3 credits. Prerequisite: permission of instructor. Letter grades only. K. Rasmussen. Advanced course on the role of nutrition during pregnancy and lactation. The feeding and growth of infants and children in health and disease is considered. Critical evaluation of current literature is emphasized via lecture, discussion, and a term paper.

**NS 6170 Teaching Seminar**
Fall or spring. 0 credits. Prerequisite: DNS graduate students or permission of instructor. S–U grades only. C. You and D. Way. Individualized instruction focusing on development of teaching skills for guiding learning in lecture, discussion, and laboratory setting, and reflection on the impact of these skills on teaching and learning. Students identify the aspects of the specific teaching assignments they wish to develop and work with instructors on independent learning projects that may include preparation for lecturing, preparation of exams, efficient grading, and so on. Optional videotaping provides opportunities for practice and analysis.

**NS 6180 Teaching Experience**
Fall or spring. 0 credits. Prerequisite: DNS graduate students or permission of instructor. S–U grades only. C. You. Designed to provide experience in teaching nutritional sciences by direct involvement in college courses under supervision of a faculty member. The aspects of teaching and the degree of involvement vary, depending on the needs of the course and the experience of the student.

**NS 6190 Field of Nutrition Seminar (also ANSC 6190)**
Fall or spring. 0 credits. S–U grades only. Faculty and guest lecturers. Lectures on current research in nutrition.

**NS 6250 Community Nutrition in Action**
Fall. 3 credits. Prerequisite: dietetic interns. Letter grades only. Staff. Provides students enrolled as dietetic interns with supervised, in-depth experiences in a community nutrition program and fosters the integration of research, theory, and practice. Through placements in community programs, students gain experience in program administration and in assessing, designing, implementing, and evaluating food and nutrition programs for targeted populations through public and private organizations. In weekly seminars (and other seminars and observations as arranged) students integrate theory and practice, reflect upon their placement experience, learn about community nutrition research, and explore the many issues facing community food and nutrition practitioners.

**NS 6300 Anthropometric Assessment**
Spring, five weeks. 1 credit. Prerequisite: NS 3510 or equivalent and permission of instructor. S–U or letter grades. Offered alternate years. J. Haas. Topics in this lecture/lab course include biological basis of anthropometry for nutritional status assessment, quality control of anthropometric data, applications to special groups (infants, children, adolescents, pregnant women, and the elderly), statistical analysis and presentation of anthropometric data, reference standards and interpretation, measurement techniques of anthropometry, and body composition assessment.

**NS 6310 Micronutrients: Function, Homeostasis, and Assessment**
Fall. 2–4 credits. Prerequisite: intro biochemistry and NS 3310 (or equivalent) or permission of instructor. S–U or letter grades. C. McCormick, M. Caudill, K. O'Brien, and R. Parker. Advanced course in nutrition that focuses on the function, homeostasis, and metabolism of the principal dietary micronutrients (vitamins and minerals). It expands on the principles of nutritional biochemistry provided in introductory courses. One goal is to provide the scientific basis and rationale for recommended Dietary Reference Intakes. The course will draw on primary literature of both past and contemporary research. This course is divided into two parts: minerals and vitamins (each for 2 credits) during the first and second 7-week periods, respectively.

**NS 6320 Regulation of Macronutrient Metabolism**
Spring. 4 credits. Prerequisite: NS 3310 or permission of instructor. S–U or letter grades. M. Stipanuk, P. Brannon, L. Qi, P. Soloway, T. Brenna, and R. Parker. Course provides a comprehensive overview of macronutrient metabolism with an emphasis on issues relevant to human nutrition. Topics include regulation of macronutrient utilization by various tissues in response to food intake, energy stores, and energy expenditure; cellular pathways for macronutrient utilization; growth and stress signals; biological regulation of food intake and energy expenditure; the regulation of utilization of macronutrients for growth; dietary reference intakes for macronutrients; specialized functions of essential amino acids and essential fatty acids; lipoprotein and cholesterol metabolism; and the regulation, or dysregulation, of macronutrient utilization in various disease/physiological states.

**NS 6350 Introduction to Community Nutrition Research for Dietetic Interns**
Fall. 3 credits. Prerequisites: graduate standing and permission of instructor. Letter grades only. Staff. Introduces the paradigms, concepts, methods, and issues involved in community nutrition research. Students design and conduct individual research projects to inform community nutrition programs. Lectures, readings, and class discussion support students as they conduct their research activities.

**NS 6370 Epidemiology of Nutrition**
Spring. 3 credits. Prerequisites: graduate standing, BTRY 6010 and concurrent registration in BTRY 6020 or equivalent knowledge; basic knowledge of nutritional aspects of growth and development and nutritional biochemistry. S–U or letter grades. Staff. Covers principles of nutritional epidemiology, impact assessment of nutrition intervention programs, and nutritional surveillance. Presents principles of using nutritional information in decision making. Shows how the biochemistry and physiology of nutrition can be related to epidemiological assessment and research strategies.

**NS 6400 Social Science Theories in Nutrition**
Fall. 3 credits. Limited enrollment. Prerequisite: graduate standing. Letter grades only. J. Sobal. Social science theories from sociology, psychology, anthropology, economics, political science, geography, and history that contribute to understanding food, eating, and nutrition are discussed to understand how paradigms, theories, and models apply to nutrition topics, issues, and problems.

**NS 6420 Globalization, Food Security, and Nutrition (also AEM 6420)**
Fall. 2 credits. Prerequisites: permission of instructor, graduate standing, and basic understanding of economics and nutrition. Letter grades only. P. Pinstrup-Andersen. Directed readings course with a weekly 50-minute discussion session. Course is aimed at graduate students in nutrition, agricultural economics, and other relevant fields, who wish to explore how globalization may affect poverty, food security, and nutrition in developing countries and how national policies and international agreements and institutions may influence food security and nutrition. Discussion sessions are based on assigned readings for each week.

**NS 6440 Community Nutrition Seminar**
Fall and spring. 1 credit. S–U grades only. A. Gillespie. Sponsored by the Cornell Community Nutrition Program. Graduate students and faculty learn about current research in the program and related fields within and outside Cornell and about community nutrition theories and research methodologies. The seminar also provides a forum to discuss participants’ own research and current issues in community nutrition.

**NS 6520 The Foundations of Epidemiology**
Spring. 3 credits. Prerequisite: BTRY 6010 or equivalent. Letter grades only. P. A. Cassano. Intent is to train students to conduct epidemiologic research of the highest quality. Through lectures and in-class discussion, students also will learn how to evaluate research conducted by others, and how to apply epidemiologic principles to study the
role of nutrition in health, the outcomes of treatment in clinical medicine, and the evaluation of health services.

**NS 6600 Special Topics in Nutrition**
Fall or spring. 3 credits max. each semester; because topics change, may be repeated for credit. Prerequisite: graduate standing and permission of instructor. DNS faculty. Designed for students who want to become informed in any specific topic related directly or indirectly to nutrition. The course may include individual tutorial study, experience in research laboratories, and/or a lecture series on a special topic selected by a professor or a group of students, and/or selected lectures of another course already offered.

**NS 6800 International Nutrition Problems, Policy, and Programs**
Spring. 3 credits. Prerequisite: permission of instructor. TBA. Offered alternate years. Staff. Designed for graduate students who want to learn about the important nutritional problems of developing countries. The major forms of malnutrition related to poverty and their underlying causes are discussed. Emphasis is placed on programs and policies that can help poor countries and communities improve their nutritional and health status.

**NS 6850 Empirical Methods for the Analysis of Household Survey Data: Applications to Nutrition, Health, and Poverty (also ECON 7711)**
Spring. 4 credits. Prerequisites: intermediate microeconomics, intermediate statistics, or econometrics (through multiple regression and limited dependent variable models), or permission of instructor. Offered alternate years; next offered 2010-2011. D. Sahn. Advanced seminar explores recent empirical research and evaluation literature on issues of health, nutrition, education and intra-household decision-making in developing countries.

**NS 6900 Trace Element and Isotopic Analysis (also CHEM 6280)**
Fall. 3 credits. Prerequisite: CHEM 2880 or 3900, 3020 or CHEM 2080 and MATH 1120, or permission of instructor. Primarily for graduate students and advanced undergraduates. S–U or letter grades. Offered alternate years; next offered 2010-2011. J. T. Brenna. Survey course in modern high-precision isotope ratio mass spectrometry (IRMS) techniques and trace/surface methods of analysis. Topics include dual inlet and continuous flow IRMS, elemental MS, atomic, X-ray, and electron spectroscopies, ion and electron microscopies, and biological and solid state applications.

**NS 6980 International Nutrition Seminar**
Fall and spring. 0 credits. No grades given. Staff. Consists of presentations by Cornell faculty and graduate students and invited outside speakers. Speakers cover a range of topics relating to nutritional problems, policy, and programs in nonindustrialized countries.

**NS 6990 Special Topics in International Nutrition**
Fall and spring. 3 credits max. each semester; because topics change, may be repeated for credit. Prerequisite: permission of instructor. Staff. Designed for graduate students, mainly those with a concentration in international nutrition, who wish to become familiar with some specific topic related to international nutrition that is not adequately covered in an existing course. It consists of tutorial study on an agreed-upon topic.

**NS 7020 Seminar in Toxicology (also TOX 7020)**
Fall or spring. 1 credit. S–U grades only. Staff. Covers varied topics in biochemical, genetic, nutritional, veterinary, and regulatory toxicology, ecotoxicology, and environmental chemistry. Includes presentations of basic research studies, fundamental concepts, and research activities involving environmental problems of a toxicological nature. Presentations are given by speakers from Cornell and visitors.

**NS 7030 Seminar in Nutritional Sciences**
Fall and spring. 1 credit. Prerequisite: for undergraduates, permission of instructor. S–U grades only. Staff. Presentations of original articles pertinent to the nutritional sciences. Students read and learn how to critically analyze and interpret original articles published in a wide variety of journals. Students learn how to make professional presentations and how to critique the presentations given by others.

**NS 7040 Grant Writing**
Spring. 2 credits. Prerequisite: NS 7050. S–U grades only. P. Stover. Interactive course that addresses the knowledge, approach, and professional skills (conceptual, technical, and writing) required to create a successful research proposal and initiate a career in research. Format is focused around the development, execution, and evaluation of NIH-style grant proposals. Lectures will focus on the development of hypotheses, specific aims, and long term goals, as well as research design and methodology. Issues of human subject and animal experimentation, ethics, and research collaborators are also covered. Students are expected to develop a full-length grant proposal in consultation with their research advisor. Basic guidelines and approach to proposal evaluation and scoring are covered. Course concludes with a mock study section where all proposals are reviewed by the students.

**NS 8990 Master's Thesis and Research**
Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S–U or letter grades. DNS graduate faculty.

**NS 9990 Doctoral Thesis and Research**
Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S–U or letter grades. DNS graduate faculty.

---

**FACULTY ROSTER**

Bensadoun, Andre, Ph.D., Cornell U. Prof., Nutritional Sciences/Physiology, Emeritus Boscini, Carole, Ph.D., Cornell U. Prof., Bramon, Patsy, Ph.D., Cornell U. Prof., Brenna, J Thomas, Ph.D., Cornell U. Prof., Campbell, T, Colin, Ph.D., Cornell U. Jacob Gould Schurman Emeritus Professor of Nutritional Biochemistry

**Other Teaching Personnel**

Gier, Emily, M.B.A., Binghamton U. Lect., Swanson, Joy, Ph.D., Cornell U. Res. Assoc., Travis, Sue, Ph.D., Cornell U. Lect., You, Cha-Sook, Ph.D., Cornell U. Teaching Assoc., and Asst. Dir. of Undergraduate Studies

**Joint Appointees**

Bauman, Dale, Prof., Animal Science/Nutritional Sciences, Miller, Dennis, Dale, Prof., Food Science/Nutritional Sciences
Military instruction began at Cornell University in 1868 under the provisions of the Morrill Act of 1862. Since that time, officer education has been highlighted by the construction of Barton Hall in 1914 and the establishment of a formal Reserve Officers Training Corps (ROTC) unit in 1917. The program evolves to keep pace with the latest military changes and emphasizes the development of leadership and managerial skills.

The Officer Education Programs prepare students for a commission as an officer in either the United States Army, Navy, Air Force, or Marine Corps. Each service program is headed by a senior military officer who also serves as a full professor on the Cornell faculty.

**Military Science**

Lieutenant Colonel Steven Alexander, Professor of Military Science and Chair, 255-5651/4000

Captain Epstein, Major Johnson, Major Fosdick, SFC Hart, MSG Davis

**United States Army ROTC Program**

The primary objective of the Army Officer Education Program at Cornell is to commission the future officer leadership of the United States Army. Intermediate objectives are to provide students with an understanding of the fundamentals of responsibility, integrity, and self-discipline, as well as an appreciation of the citizen’s role in national defense. The application of the decision-making process to a variety of situations is given major emphasis as a valuable aid in developing leadership potential. These objectives are achieved through a program covering 1.5 to 4 years. The program includes specific courses in military science, practical training in leadership through participation in the Cadet Corps (including attendance at a five-week summer camp at Ft. Lewis, Wash.), and the opportunity to participate in a number of extracurricular activities. This combination prepares the student for commissioning and effective performance in the 16 branches of the Army. One application can result in a one- to four-year scholarship that currently provides $166,750 in funding over four years.

All courses are open to enrollment without a military obligation; some require instructor permission. Noncitizens may enroll in courses but not commission. Overall sound mental and physical condition is essential; students are required to undergo periodic physical fitness tests.

**Four-Year Program**

The program is available to graduate and undergraduate students. Veterans of the Armed Forces of the United States and students entering Cornell with AROTC credit from secondary or military schools (Junior Division AROTC) may receive advanced standing. Under the Four-Year Program, students enroll in the Basic Course (MILS I and II) during the first two years, and the Advanced Course (MILS III and IV) during the next two years. A total of 12 credits of military subjects are taken. In addition, academic enrichment courses are required in such fields as written communications, computer science, and military history. All cadets attend a five-week Leadership Development and Assessment Course (LDAC), with pay, between their junior and senior years. All contracted cadets participate in physical fitness training three days per week. Each year selected cadets are sent to the Airborne School, Winter Survival School, and Air Assault Course, depending upon availability and student standings within the ROTC program.

**Scholarships**

Scholarships are awarded on the basis of merit and are available for 1.5 to 5 years. Scholarships pay full tuition and mandatory fees, and cadets also receive between $300 and $500 a month for up to 10 months a year and $1,200 a year for books.

**Service Obligations**

ROTC graduates may serve on active duty, in the Army Reserve, or in the National Guard, depending upon the needs of the Army and the cadet’s request. Officers beginning active duty attend the OFFICER BASIC LEADERSHIP COURSE II/III (normally 10 to 16 weeks) for training in their assigned branch. Upon completion, officers are assigned to a unit and location determined by the desires of the individual and the requirements of the Army. Officers selected for reserve duty attend the OFFICER BASIC LEADERSHIP COURSE II/III, after which they are released to reserve status.

**Graduate Study**

Graduate students are allowed in the program. Active duty deferments, or educational delays, may be granted to individuals who want to attend graduate school at their own expense. Requests will be considered on the basis of the needs of the service. Admission to graduate school is the student’s responsibility.

**Military Science Courses**

All cadets take one course and a leadership laboratory each semester in military science. The number of hours a week spent in the classroom varies from semester to semester, as does the credit received for each course. Additionally, cadets work out three days a week.

**Sophomore Year (MILS II)**

**MILS 2201 Individual Leadership Studies/Teamwork**

Spring. 1 credit. Required. M. Epstein.

Students learn the basic principles of group dynamics at the level of the smallest military unit, the squad. Troop-leading procedures are introduced through case studies and role-playing exercises. Leadership theories introduced in MILS 1102 are examined in a variety of realistic settings. The practical application of behavioral theories is explored in the context of small military organizations. The course also provides practical knowledge of the various forms of topographic representation. Students use maps in terrain association and land navigation. Knowledge of topography is complemented by an orientation on significant environmental influences of physical, social, and climatic factors. Portions of the course offer experience in land navigation and orienteering.

**MILS 2250 Basic Mountaineering Course**

Fall and spring. 2 credits. Open to all students; limited to 20 per sec. Two 1-hour sec: M or R 9–9:50, Barton Hall G-1. Equipment fee: $30. D. Johnson.

This course instructs techniques for students to cope with mountainous terrain. It discusses and instructs in basic techniques including rappelling, survival, acclimatization, illness and injury, equipment, anchors, evacuation, movement, safety, and training.

**MILS 2260 Basic Orienteering**

Fall. 1 credit. Open to all students; limited to 20. Equipment fee: $20. Barton Hall G-1. M. Hart.

This course instructs the principles of orienteering including basic map reading, terrain association, and compass skills. Course running techniques are applied in field orienteering events. Instruction includes safety and survival in hot and cold weather environments.

**MILS 2270 Basic Rifle Marksmanship**

Fall. 1 credit. Open to all students; limited to 15. W 9–9:50, Barton Hall G-16. Fee for upkeep of systems: $20. M. Davis.
This course instructs the principles of rifle and pistol safety including marksmanship fundamentals, range procedures, safe weapons handling, and target engagement. Students will use state-of-the-art digital weapons engagement systems as well as real weapons.

**MILS 3321 Armed Conflict in Society**
Fall. 2 credits. Required. M. Epstein.
Provides practical knowledge in American military history. It is primarily an overview course designed to provide an understanding of the art and nature of warfare and particularly how warfare has affected the United States. The course consists of three primary areas of instruction with an emphasis on American military history. The first area of instruction addresses the art and theory of modern warfare. It analyzes America’s first attempt at war, the American Revolution, and ends with the development of modern warfare under Napoleon Bonaparte. The second phase focuses on America at war in the 19th century. It places particular emphasis on the American Civil War and the strategy of annihilation versus the strategy of attrition. The final phase looks at warfare in the 20th century and finishes with an analysis of the future of warfare for the military of the United States.

**Junior Year (MILS III)**

**MILS 3301 Leadership and Problem Solving**
Fall. 2 credits. Required. R. Brown.
After an initial introduction to techniques of presenting briefings, students are provided with a broad understanding of the principles and application of teamwork in military organizations. Particular emphasis is given to the leadership responsibilities of the commander as the team coordinator. This course helps students develop an understanding of the roles and contributions of the various branches of the Army in support of the military team.

**MILS 3302 Leadership and Ethics**
Spring. 2 credits. Required. R. Brown.
Takes on the task of decision making and the tactical application of the military team. Through the use of conferences and extensive practical exercises, students develop familiarity with the factors influencing a leader’s decisions and the process of planning, coordinating, and directing the operations of military units through operation plans and orders.

**Senior Year (MILS IV)**

**MILS 4400 Leadership and Management**
Fall. 2 credits. Required. S. Alexander.
Provides an overview of the functions, responsibilities, and interrelationships among small-unit leaders, the commander, and the staff. Discussions focus on actions of small-unit leaders, communication skills, army operations, the logistical support of the army in the field, and the army training system. The course focuses on the dynamics of leadership in battle through the detailed analysis of a series of case studies. Just war theory, ethics, and professionalism are also addressed in a seminar fashion.

**MILS 4402 Officership**
Spring. 2 credits. Required. S. Alexander.
A continuation of MILS 4401. Conferences and seminars examine the techniques of effective military practicalship with special attention given to professionalism and ethical considerations in the armed forces during both peacetime and conflict. Army operations and basic doctrine are also discussed. This is a capstone course designed to prepare the student for commissioning.

**Practical Leadership Training**

**Army Officer-Education Students**
No credit is given for leadership training, but participation is required for successful completion of the AROTC program. Students receive physical education credit for the laboratory. Each semester, cadets register for the appropriate leadership laboratory, consisting of physical fitness training three times per week, two hours of military training each week, and one weekend training exercise per semester.

**MILS 1111 Leadership Laboratory I**
Fall, spring. 0 credits. S–U.
MILS I cadets meet for two hours each week to learn a variety of military skills including rappelling, first aid, drill and ceremonies, weapons familiarization, physical fitness training, and small group leadership.

**MILS 2200 Leader's Training Course**
Summer. 6–9 credits. Perquisite: permission of instructor. S–U grades only. One to six units of credit may be granted depending upon successful completion of training. Six weeks of training, Fort Knox, Kentucky. Travel pay and salary provided through the Military Science Department. No obligation. LTC graduates eligible to enroll in ROTC Advanced Program.

**MILS 2211 Leadership Laboratory II**
Fall, spring. 0 credits. S–U.
Cadets meet for two hours each week as members of the cadre organization to participate in practical leadership exercises. Types of practical activities include rifle marksmanship, orienteering, drill and ceremonies, signal communications, physical fitness training, first aid, tactics, field exercises, and small group leadership.

**MILS 3311 Leadership Laboratory III**
Fall, spring. 0 credits. Required. S–U.
Cadets meet for two hours a week and occasional weekend prepares for a five-week summer camp that follows their junior year. Emphasis is placed on the development of individual practical leadership skills. Cadets rotate through leadership positions to practice applying decision-making skills in a myriad of situations.

**MILS 3314 Leadership Development and Assessment Course**
Summer. 4 credits. Prerequisite: permission of instructor. S–U grades only. Six-week summer training program required to achieve an Army commission. Training and testing as functional Army officers and determination of potential for service. Travel pay, room and board, and salary are provided by the U.S. Army. Held at Fort Lewis, Washington.

**MILS 4400 Special Problems for Advanced Undergraduates**
Fall, spring. 1–4 credits. Prerequisite: permission of instructor. Letter grade. Individual investigation, research, studies, or surveys of selected problems. Total credit limited to 4 units, with a maximum of 2 units per quarter.

**MILS 4411 Leadership Laboratory IV**
Fall, spring. 0 credits. Required. S–U.
Senior cadets plan and operate the leadership laboratory programs for MILS I–III cadets. The development of planning and supervisory skills is emphasized. Cadets have an opportunity to practice leadership skills developed during previous ROTC training and summer camp experiences. Includes two to three hours a week devoted to physical fitness.

**Professional Military Education (PME) Requirements**
In addition to the ROTC classes and leadership laboratories listed above, a number of courses are required as part of the contracted student’s academic program. These courses are offered by the university and round out the student’s professional education. The PME component of the ROTC program requires at least one college course in each of the following areas: communication skills, military history, and an introduction to computers. Courses that meet these requirements are approved by the Professor of Military Science.

**NAVAL SCIENCE**

Captain Larry Olsen, United States Navy, Professor of Naval Science and Commanding Officer, Naval ROTC Unit
Lieutenant Colonel Jerry Rizzo, United States Marine Corps
Lieutenant Matthew Zarracina, United States Navy
Lieutenant Douglas Rainey, United States Navy
Lieutenant Reginald Preston, United States Navy

The objective of the Naval Reserve Officers Training Corps Education Program is to prepare students for service as commissioned officers in the United States Navy or United States Marine Corps. This is accomplished by supplementing undergraduate education with instruction in essential concepts of naval science and by fostering qualities of leadership, integrity, and dedication to country. The program is compatible with most undergraduate major fields of study, including five-year baccalaureate degree programs.

The program covers four years and combines specific courses in naval science and specified academic subjects. These courses supplement weekly professional development sessions in which the practical aspects of naval science and leadership procedures are stressed. It also includes at least one summer-at-sea period.

Though the Navy and Marine Corps program has been designed to prepare future officers, naval science courses are open to all students at Cornell as space limitations allow.

**Requirements for Enrollment**
An applicant for the Naval ROTC program at Cornell must be a citizen of the United States. Applicants must have reached their 17th birthday by September 1 of the year of enrollment and be less than 27 years of age on June 30 of the calendar year in which they are commissioned. Waivers of the upper age limit may be available for those who have prior active duty military service. Applicants must also meet physical and medical
requirements. Interested students can visit the Naval ROTC Unit in Barton Hall or contact their local officer recruiter.

**Programs**

There are two programs: the Scholarship Program and the College Program. The two programs differ primarily in benefits given to the student.

**Scholarship Program**

The Scholarship Program provides approximately 1,000 scholarships in more than 70 universities nationwide to selected students who want to serve in the Navy or Marine Corps. Financial support is provided to students during college preceding the award of the baccalaureate degree.

**Benefits**

The program offers scholarships that provide full tuition and are not need-based. While on scholarship, students also receive money for instructional fees, textbooks, nonconsumable supplies, and a stipend of $250–$400 a month for a maximum of 40 months. Successful completion of the Scholarship Program leads to a commission in the Navy or Marine Corps. At Cornell University, over 90 percent of NROTC students have a scholarship. Students entering NROTC without a prior scholarship award are entitled to compete for two- or three-year scholarships controlled by the Naval Service Training Command.

**Entering the Scholarship Program**

There are three ways to enter the Scholarship Program:

1. by applying to the national competition each year. This process entails filling out and submitting an appropriate application; being interviewed; having a physical examination; and applying to, and being accepted by, one of the colleges or universities throughout the country that offers an NROTC program.

2. by enrolling in the College Program at Cornell and being recommended by the Professor of Naval Science for a scholarship after at least one semester in the program.

3. by entering through the Two-Year Scholarship Program.

**College Program**

Two College Programs are available. Both lead to a commission in the Navy or Marine Corps.

Starting in the junior year, each of these programs provides textbooks for naval science courses, uniforms, and a subsistence allowance of $350–$400 a month. The regular College Program is four years long. Academic requirements for students in this program are somewhat fewer than those for scholarship students, as noted in the curriculum section of this book.

The Two-Year College Program begins the summer before the junior year; students attend a required program, with pay, at the Naval Science Institute in Newport, R.I.

**Summer Training**

Each summer, students in the Scholarship Program spend approximately four to six weeks on a Navy ship, or participate in a naval activity that may take place anywhere in the world, for on-the-job training. College Program students attend one summer training session of the same duration between the junior and senior years.

**Active Duty Requirements**

Scholarship midshipmen commissioned in the Navy or Marine Corps serve on active duty for a minimum of four years. College program midshipmen commissioned in the Navy or Marine Corps serve a minimum of three years. In some cases, following commissioning, specialized training such as aviation or nuclear power will add additional active duty requirements.

**Choice of Assignment**

Graduates have the opportunity to request the duty they prefer upon graduation. These requests are given careful consideration, and every effort is made to assign newly commissioned officers to their duty of choice. Among the assignments available are duties in naval aviation as either a pilot or naval flight officer, on submarines, and on surface ships. Other specialties, such as special warfare or medical service corps, may be available on a limited basis.

**Marine Corps Options**

The United States Marine Corps is an integral part of the Naval Services and is commanded by the Commandant of the Marine Corps. One-sixth of the NROTC scholarship students may be Marine selectees who will be designated Marine-option midshipmen. Upon successful completion of the program they will be appointed Second Lieutenants in the United States Marine Corps.

Marine-option midshipmen follow the same program as other NROTC midshipmen for the first two years. Beginning with the junior year, Marine-option midshipmen are taught Marine-oriented courses by a Marine Officer Instructor. For First Class summer training (after the junior year), Marine-option students travel to Quantico, Va., where they undergo six weeks of intensive training known as the USMC Officer Candidate School. Upon commissioning the following year as Second Lieutenants, they are assigned to the Basic School at Quantico, Va. After the Basic School, the Marine officer is assigned duty in a variety of occupational fields. Among the duties available are infantry, aviation, artillery, tracked vehicles, engineering, communications, electronics, supply, administration, and computer science. The officer may serve on board naval vessels or at shore installations of the Marine Corps or Navy, either in this country or overseas.

The Marine Corps has a postgraduate training system similar in objectives and organization to that of the Navy. Marine officers selected for aviation receive flight training at the Naval Air Station, Pensacola, Fla., along with their Navy counterparts.

**Curriculum**

A student has three categories of requirements to fulfill as a midshipman. The first of these requirements is a weekly naval professional development session each semester. The second requirement is a naval science course each semester. The last set of requirements consists of further courses prescribed by the Navy to meet the growing need for more and better technically educated junior officers.

**Naval Professional Laboratories**

**NAVS 1141, 2241, 3341, 4441**

All students in the program participate in a two-hour professional development session each week. The session is held from 2:30 until 4:30 on Wednesday afternoons and consists of drill, athletics, and professional information events. Students gain experience in actual leadership situations and learn the fundamentals of seamanship, military formations, movements, commands, discipline, courtesies, and honors. During information briefings, special emphasis is given to applied leadership as it relates to the administrative and managerial aspects of a Navy or Marine Corps officer’s duties.

**Naval Science Courses**

All Navy and Marine midshipmen take one naval science course each semester during their freshman and sophomore years. Navy-option students continue to take a naval science course each semester during their junior and senior years. Marine-option students have slightly different curriculum requirements for their junior and senior years.

**Freshman Year (Navy and Marines)**

**NAVS 1101 Fundamentals of Naval Science**

Fall. 1 credit. M. Zarracina.

Involves a study of fundamental aspects of naval science. This includes contributions to sea power, different warfare communities involved in the physical development of naval forces, and study of resource management and naval science prospects for the future. Naval uniforms, customs, and traditions are also covered.

**NAVS 1102 Sea Power and Maritime Affairs**

Spring. 3 credits. M. Zarracina.

Discussions examine the history of the Navy as a force in diplomacy and an instrument of U.S. foreign policy. Relationships between Congress and the military for determining the national defense policy are also explored. An integrated examination of current events and issues lends historical perspective throughout the course.

**NAVS 1480 Small Boat Sailing (also PE 1480)**

Fall and spring. Physical education credit. Instructor TBA.

This is a course of instruction in basic sailing skills and safety principles. Students sail small boats on Cayuga Lake. Focus is on U.S. Navy Class B inshore skipper certifications.

**Sophomore Year (Navy and Marines)**

**NAVS 2201 Leadership and Management I (also HADM 1115)**

Fall. 3 credits. L. Olsen and J. Rizzo.

The theme of the course is the “evolving role of the manager, organizational decision maker, and leader.” The course begins by briefly covering the theoretical principles of management and progresses through practical skills used by managers and leaders. Lectures,
reading assignments, films, and discussions provide students with an excellent opportunity to consider complex managerial and leadership issues. The goal of this course is for students to begin to develop a sound personal leadership philosophy that will enable them to more effectively accomplish the assigned responsibilities of leading men and women in today's demanding and high-tech naval environment.

**NAVS 3201 Naval Ship Systems I (also MAE 1110)**
Fall. 3 credits. R. Preston.
Introduces primary ship-systems and their interrelationships. Basic principles of thermodynamics, propulsion, mechanical operation, internal communications, electronics, ship structure, and other marine systems are covered.

**Junior Year (Navy)**

**NAVS 2202 Navigation (also BEE 3050)**
Spring. 4 credits. D. Rainault.
Introduces the fundamentals of marine navigation emphasizing piloting and electronic navigation procedures. Covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, and study of tides and currents. Electronic navigation systems are discussed.

**NAVS 4401 Naval Operations**
Fall. 3 credits. D. Rainault.
 Covers the application of the nautical rules and maneuvering board in order to avoid collisions at sea. Other aspects of naval surface ship operations that are introduced include visual and electronic communications methods, tactical disposition of forces, ship handling theory, and deck seamanship topics.

**Senior Year (Navy)**

**NAVS 3202 Naval Ships Systems II (Weapons)**
Spring. 3 credits. R. Preston.
Examines the principles and theories used in the development of naval weapons systems. Extensive study is made of detection systems, especially radar and sonar, followed by discussions on weapon systems for computing, stabilizing, tracking, and weapons control and delivery.

**NAVS 4402 Leadership and Ethics**
Spring. 3 credits. L. Olsen.
Reviews a variety of topics important to the naval officer for both professional and managerial development. The material is designed to provide the midshipman with an understanding and appreciation of leadership and ethics in preparation for assignments in the naval service. Through the use of lectures, case studies, and role-playing, the student learns various aspects of naval leadership and ethical decision making. Marine-option students may also take this course.

**Junior or Senior Year (Marine Options)**

**NAVS 3310 Evolution of Warfare**
Spring. 3 credits. J. Rizzo.
A study of warfare that examines the relationship of military strategy to geography, economics, sociology, technology, and governing policy. This course examines the historical evolution of warfare, including principles of war, development of weapons and their effects on warfare, and the political goals associated with specific adversaries through history.

**NAVS 4410 Amphibious Warfare**
Spring. 3 credits. J. Rizzo.
The history of the development, theory, techniques, and conduct of amphibious operations from 490 B.C. to the present. Special emphasis is placed on amphibious operations conducted in the central Pacific during World War II and on the future of amphibious operations.

**Other Required Courses**

**Navy-Option Scholarship Program**
To be eligible for a commission in the United States Navy, midshipmen must successfully complete all the requirements for a baccalaureate degree in any field of study offered by Cornell University, and complete courses in the following subjects (specified courses to be approved by the Professor of Naval Science):
- American Military Affairs or National Security Policy (one semester)
- English (one year)
- Calculus (one year)
- Calculus-based physics (one year)
- World Cultures/Regional Studies (one semester)

The calculus requirement must be satisfied by the end of the sophomore year and the physics requirement by the end of the junior year. Although free choice of academic majors is permitted, students are encouraged to pursue majors in engineering and the physical sciences so that they may be best prepared to meet the technological requirements of the modern Navy.

**Navy-Option College Program**
Navy-option College Program students must complete college-level study in mathematics (1 year), physical science (1 year), and English (1 year), American Military History or National Security Policy (1 semester), and World Culture and Regional Studies (1 semester) as a prerequisite for commissioning. The mathematics course must be completed by the end of the junior year, the physics science course by the end of the senior year. College Program students who desire entry into the Navy-Option Scholarship Program should fulfill all of the requirements applicable to Navy-option scholarship students if they wish to be eligible for a scholarship controlled by the Naval Service Training Command.

**Marine Option**
Any midshipman, in either the Scholarship Program or the College Program, who completes all of Cornell University's degree requirements in any academic major is eligible for a commission in the U.S. Marine Corps or U.S. Marine Corps Reserve. Marine-option students take the same naval science courses and naval professional laboratories as Navy-option students for the freshman and sophomore years. During the junior and senior years, Marine-option students have slightly different naval science course requirements than their Navy-option counterparts. One semester (a minimum of 3 hours) of coursework in American Military Affairs or National Security Policy is required.

**Extracurricular Activities**
The NROTC midshipman at Cornell is offered a broad range of activities, including unit training and a comprehensive intramural sports program. Midshipmen participate in a myriad of social events, including the annual Navy/Marine Corps Birthday Ball.

**Requirements for Enrollment**
The Air Force Officer Education Program is open to any qualified undergraduate or graduate student enrolled in any major field of study. Though the program is designed to prepare future Air Force officers, academic courses in the Department of Aerospace Studies are open to all students at Cornell without incurring any military obligation. An applicant must be a United States citizen to become a commissioned officer. Noncitizens may enroll and will receive certificates acknowledging completion of the course but cannot receive a commission. U.S. permanent residents who are naturalized by their date of graduation may receive a commission. All applicants receive physical examinations at no cost and must meet certain physical requirements to be accepted. Students who are interested in qualifying for flying categories (pilot, navigator, or air battle manager) must meet more stringent physical requirements. In addition, students enrolled in the commissioning program must meet specified physical fitness requirements each semester.

**Four-Year Commissioning Program**
The Four-Year Program is open to all qualified freshmen. Sophomores and juniors may also enter a condensed version of the four-year program with the approval of the department head. Many students join the program after the first semester of their freshman year. If interested, contact the department for details.
Veterans of the U.S. armed forces, students entering Cornell from military schools, or high school students with documented Junior ROTC or Civil Air Patrol involvement may receive advanced academic standing, subject to approval by the Professor of Aerospace Studies.

The Four-Year Program consists of a two-year General Military Course (GMC) program of study followed by a two-year Professional Officer Course (POC) program of study. For four-year scholarship cadets, the first year of the GMC carries no military commitment, and students may withdraw at any time. Entry into the GMC requires two hours a week in the junior and senior years. Contact the Department of Aerospace Studies for details.

Classroom study in the POC is a 3-credit course each semester. In the junior year, cadets study Air Force leadership and management at the junior officer level. During the senior year, cadets study the elements of national security and the military's role in American society. Leadership laboratory requires two hours a week in the junior and senior years. In the leadership laboratory, cadets are exposed to advanced leadership experiences and apply principles of leadership learned in the classroom.

The Two-Year Program consists of the last two years of the regular Four-Year Program plus a five-week summer training course.

The Two-Year Program is open to all qualified students with two years of academic study remaining. Graduate or undergraduate entry into this program depends on the needs of the Air Force. Many students join the program after their freshman year. Interested students should contact the department for information.

Scholarships
The Air Force offers three- and four-year scholarships to high school seniors and one-, two-, and three-year scholarships to college students. Four-year scholarships are offered on a competitive basis to high school seniors. Scholarship information can be obtained from a high school guidance counselor, or Air Force ROTC officers at Cornell (AFROTC phone number is 607-255-4004), from a local Air Force recruiter, via the web at www.afrotc.com, or from the Air Force ROTC scholarship section, Maxwell AFB, AL 36112-6106, 354-953-2869. The deadline for submitting a four-year scholarship application is December 1 of the year preceding the academic year in which a student wants to enter the program. Students should apply early.

Scholarships for two and three years. Applications for these scholarships should be made to the Professor of Aerospace Studies during the freshman, sophomore, or junior years of college. All selections are based on the student's major, scores achieved on the Air Force Officer Qualifying Test, the student's overall grade point average, and the recommendations of the Professor of Aerospace Studies. Scholarships include amounts ranging from $3,000 per year to full tuition and fees. There is a monthly $300–$500 nontaxable allowance during the school year. A $900 per year textbook allowance is included in every scholarship. Scholarships do not include the cost of room and board. All AFROTC scholarships are merit-based, not need-based.

Fees
An initial uniform deposit of $50 is required on entry into AFROTC. Before commissioning, cadets may purchase uniforms with their deposit or return uniforms and receive their deposit back.

Benefits
All cadets in the advanced program—whether they are on scholarship or not—receive a $450–$500-a-month, nontaxable subsistence allowance during the academic year. During the four- or five-week summer field training (see below), each cadet receives a pay allowance plus an allowance for travel to and from the field site. Textbooks and supplies required for Department of Aerospace Studies courses are provided.

All cadets are eligible to participate in AFROTC-sponsored field trips made to Air Force bases throughout the country as well as voluntary summer programs for professional development. Scholarship and POC cadets are entitled to space-available travel on Air Force aircraft flying within the continental United States.

Field Training
Two types of field training are available: a four-week course for cadets in the Four-Year Program and a five-week course for Two-Year Program applicants.

Field training is designed to stimulate the development of military leadership skills through meaningful experiences. The curriculum consists of aircraft, aircrew, and survival orientation; junior officer training; physical training; small arms training; team building and leadership training. The five-week training program includes 60 hours of Air Force ROTC academic course work that substitutes for the freshman and sophomore Aerospace Studies courses. Cadets are evaluated for their officer potential at field training.

Cadets may also volunteer for one of many Advanced Training Programs. These programs can include but are not limited to the Air Force Academy Free-Fall Parachute Training, Technical Research and Development Internships, the Academy Soaring Program, Special Operations Training, and language and cultural immersion programs.

Commissioning Obligations
All students who successfully complete the AFROTC advanced program must be awarded a baccalaureate degree before receiving their commission. They then enter the Air Force as second lieutenants.

Second lieutenants commissioned in nonscience categories are required to serve on active duty for four years. Pilots are required to serve on active duty for 10 years after completing flying training. Navigators and Air Battle Managers serve eight and six years respectively after completing training.

Air Force Careers
The Air Force assigns new officers to a career field based on mission requirements, educational background, and officers’ preferences. Students in the engineering-scientific category may be assigned to practice in their specialty in research and development, communications, electronics, aeronautics, the biological sciences, computer design and maintenance, meteorology, space, or other engineering and scientific fields.

Graduates in the nontechnical category can anticipate assignments in manpower management, information management, logistics, law enforcement and investigation, intelligence, personnel, public affairs, transportation, accounting and finance, and other career fields. Specializations for language and cultural studies majors are also available.

Any undergraduate major is suitable for those who are qualified and interested in entering the space and missile career fields or in becoming pilots, navigators, or air battle managers. After completion of flying training, personnel are assigned to a specific type of aircraft.

Curriculum
Students in the Four-Year Program are required to take all courses listed below. Students in the Two-Year Program are required to take all of the courses listed for the junior and senior years. There are no prerequisites for any Aerospace Studies courses.
Freshman Year
AIRS 1161 The Foundations of the United States Air Force Fall. 1 credit. P. Ulmer.
This is a survey course designed to introduce students to the United States Air Force and Air Force Reserve Officer Training Corps. Featured topics include: mission and organization of the Air Force, officership and professionalism, military customs and courtesies, Air Force officer career opportunities, war and the American military, and Air Force heritage. Leadership laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with followership experiences.

AIRS 1162 The Foundations of the United States Air Force II Spring. 1 credit. P. Ulmer.
Continuation of AIRS 1161. Topics include Air Force core values, human relations, team building, communication skills, and officer leadership.

Sophomore Year
AIRS 2211 The Evolution of USAF Air and Space Power I Fall. 1 credit. M. Williamson.
This course is designed to examine general aspects of air and space power through a historical perspective. The course covers a time period from the first balloons and dirigibles to the role of air power in the Korean conflict. Historical examples are provided to illustrate the development of Air Force capabilities and functions to demonstrate the evolution of what has become today’s USAF air and space power. The course examines several fundamental truths associated with war in the third dimension, and provides students with an understanding of the general element and employment of air and space power from an institutional, doctrinal, and historical perspective. In addition, students continue to discuss the importance of the Air Force core values.

AIRS 2212 The Evolution of USAF Air and Space Power II Spring. 1 credit. M. Williamson.
Continuation of AIRS 2211. This course covers the role of airpower from Vietnam to the present day. Attending AIRS 2211, while helpful, is not required to take AIRS 2212.

Junior Year
AIRS 3331 Air Force Leadership Studies I Fall. 3 credits. P. Ulmer.
This course is a study of leadership required of an Air Force junior officer; it has applicability to any entry-level professional as a junior executive. The course investigates theories and styles of leadership, power and influence, the meaning and function of followership in the military context, critical thinking, problem solving and team building, group conflict management, situational leadership, and management functions and principles. Films and case studies are used for analysis of theories and principles studied. Students receive instruction and practice effective writing (e.g., background and position papers) and briefing skills (e.g., informative and advocacy briefings) for professional communications; students practice both modes of communication. The course also provides professional officer education in terms of defining professional and unprofessional relationships, working with civilian personnel, and the profession of arms. The course is open to any student. For officer candidates, a mandatory leadership laboratory complements this course.

AIRS 3332 Air Force Leadership Studies II Spring. 3 credits. Open to any student. P. Ulmer.
A continuation of AIRS 3331. The course investigates advanced skills in leadership: dynamic subordinacy, effective supervision, essentials of counseling, corrective supervision, professional authority, responsibility, and accountability. The course also investigates the meaning and application of ethical and moral leadership, professional officer ethics, military ethics in joint operations, and the core values of the Air Force. Film and case studies are used for analysis of course content. Written and briefing practice continues. For officer candidates, a mandatory leadership laboratory complements this course.

Senior Year
AIRS 4401 National Security Affairs/Preparation for Active Duty I Fall. 3 credits. M. Williamson.
This course is concerned with the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Other topics include the military as a profession, officership, military justice, civilian control of the military, preparation for active duty, and current issues affecting military professionalism. Continued emphasis is given to refining communication skills. A mandatory leadership laboratory complements this course by providing advanced leadership experiences, giving students the opportunity to apply the leadership and management principles described in this course.

AIRS 4402 National Security Affairs/Preparation for Active Duty II Spring. 3 credits. M. Johnson.
Continuation of AIRS 4401.

Leaderhip Laboratory Courses
All Air Force cadets spend two hours a week throughout the academic year in a leadership laboratory. Occasionally laboratories are held at times other than the normally scheduled period. All cadets are expected to participate in a formal dinner and to meet minimum physical fitness and weight standards each semester. Leadership lab is open to students qualified to compete for an Air Force commission.

AIRS 1141 Initial Military Experiences Fall and spring. 0 credits. Required. S–U grades.
Introduction to the responsibilities, life, and work of an Air Force officer. Basic knowledge of drill and ceremonies, military courtesies, and the wearing of the uniform. This course includes a field trip to a local military installation.

AIRS 2241 Intermediate Military Experiences Fall and spring. 0 credits. Required. S–U grades.
Designed to help students develop skill in giving commands for drill and ceremonies. Students are also introduced to the Air Force base environment in which the officer functions. Career areas available based on academic majors are described. Students participate in military drills and ceremonies and go on a field trip to a local military installation.

AIRS 3341 Junior Officer Leadership Experiences Fall and spring. 0 credits. Required. S–U grades.
Cadets assume leadership responsibilities similar to those of a junior officer. Emphasis is on the importance of applying effective human relations skills in dealing with superiors, peers, and subordinates. Cadets also gain insight into the general structure and progression patterns of selected Air Force officer career fields.

AIRS 4441 Advanced Leadership Experiences Fall. 0 credits. Required. S–U grades.
Cadets assume command leadership responsibilities to operate a military organization. Cadets apply effective leadership and managerial techniques with individuals and groups and participate in self-analysis of leadership and managerial abilities.

AIRS 4442 Precommissioning Laboratory Spring. 0 credits. Required. S–U grades.
Factors that facilitate transition from civilian to military life are reviewed. The need for military security, base services and activities, personal finances, travel regulations, and social obligations are introduced.
COLLEGE OF VETERINARY MEDICINE

ADMINISTRATION
Michael I. Kotlikoff, dean
Robert O. Gilbert, associate dean for clinical programs
Alfonso Torres, associate dean for veterinary public policy
Drew M. Noden, secretary of the college
Katherine M. Edmondson, assistant dean for learning and instruction
Robert F. Gilmour Jr., associate dean for research and graduate education
Gene R. Wheeler, assistant dean for finance and administration
Kevin Mahaney, assistant dean for alumni affairs and development
Lorin D. Warnick, associate dean for veterinary curriculum
Judith A. Appleton, associate dean for academic affairs
Bruce L. Akery, assistant dean for diagnostic operations
Douglas F. Antczak, director, James A. Baker Institute for Animal Health
Carol S. Gary, director of student financial planning
Erla Heyns, director, Flower Sprecher Veterinary Library
Mary Beth Jordan, director of human resources
Douglas D. McGregor, director of leadership and training initiatives
Jennifer A. Mailey, director of admissions
Jai Sweet, director of student services and multicultural affairs

DEPARTMENT CHAIRS
Biomedical Sciences: M. Roberson
Clinical Sciences: R. Page
Microbiology and Immunology: D. Russell
Molecular Medicine: G. Weiland
Population Medicine and Diagnostic Sciences: Y. Grohn

THE COLLEGE
The College of Veterinary Medicine offers a professional program that requires four years of full-time academic and clinical study of the normal and abnormal structure and function of the animal body and the diagnosis, treatment, and prevention of animal disease.

Graduates of the college receive the doctor of veterinary medicine (D.V.M.) degree, which is recognized by licensing boards throughout the world. Graduates generally enter private practice or academia, or become engaged in one of an increasing number of biomedical activities.

Admission requires a minimum of three years of college work, including specific prerequisite courses and experience. Applications must be filed approximately one year before the proposed matriculation date. The competition for admission is keen, since there are many more qualified applicants than can be admitted.

Graduate programs in veterinary research and postdoctoral training in clinical specialties are open to doctors of veterinary medicine and some highly qualified holders of baccalaureate degrees and lead to the degree of master of science or doctor of philosophy.

More detailed information is available at the College of Veterinary Medicine web site, www.vet.cornell.edu/.

Note: 5000- and 6000-level courses are open only to veterinary students except by written permission from the instructor.

The College of Veterinary Medicine’s professional curriculum comprises courses in two categories: Foundation courses and Distribution courses.

Courses contributing to the D.V.M. degree begin with VTMED.

FOUNDATION COURSES
Foundation courses are interdisciplinary and represent approximately 70 percent of the professional curriculum. In Foundation courses I, III, and IV (VTMED 5100, 5300, 5400), students work in small groups under the guidance of a faculty tutor. Case-based exercises are used to facilitate the understanding of basic science concepts within the context of clinical medicine. In some courses, three- to four-hour tutorial sessions are scheduled each week. These are complemented by lectures, laboratories, and discussion sessions or other organized learning opportunities specific to the individual course. Faculty members are available to respond to questions that arise as a result of the case-based exercises.

Tutorial sessions and all other organized learning programs are scheduled primarily during the mornings, thereby reserving time in the afternoon for independent study. By learning in a clinical context, students are better able to integrate material from the basic and clinical sciences and are encouraged to develop an understanding of the clinical reasoning process from the beginning of the curriculum. The tutorial-based educational format creates an atmosphere that requires students to be involved actively in their learning and allows them to develop skills in communication, information retrieval, and analysis.

Note: Courses listed in brackets [ ] are approved courses that are not offered during the 2009–2010 academic year.

VTMED 5100 The Animal Body (Foundation Course I)
Fall. 12 credits. Prerequisite: first-year veterinary students. Letter grades only. Fee charged for course guide. L. Mizer and staff.

Designed to enable students to understand the principles of veterinary anatomy at the gross, microscopic, and ultrastructural levels. Emphasizes developmental anatomy to the extent that it reflects determination of adult form and species differences. Radiologic and related imaging techniques are used throughout the course to assist in the understanding of normal structural anatomy. Understanding of the anatomic basis of common surgical procedures is achieved during the various dissection procedures. The course is based on tutorials with significant emphasis on practical laboratories. Lectures and modules complement student learning.

VTMED 5200 Cell Biology and Genetics (Foundation Course II)
Fall and spring. 8 credits. Prerequisite: first-year veterinary students; VTMED 5100. Letter grades only; G. A. Weiland and staff.

Designed to develop an appreciation of the molecular and cellular basis of animal health and disease. Students gain an understanding of the molecular mechanisms that regulate cell function, the molecular signaling processes that form the basis of integrated function and the response to disease, and the mechanisms underlying inherited traits and genetic disease. Students are introduced to the pathologic basis of disease and the immune response by studying cellular responses to injury. Emphasis is placed on defining and characterizing normal cell function and on understanding how mutations in specific genes promote disease. Fundamental biological processes as revealed by gross and microscopic pathological changes are emphasized. The course is divided into two parts separated by a midterm exam. The first part is made up of three sections: Principles of Cell Biology, Cell Signaling, and Medical Genetics. The second half of the course builds upon and expands these principles, using examples from veterinary medicine including wound repair and cancer. In both parts, clinical cases are utilized to illustrate the concepts presented.

VTMED 5220 Neuroanatomy
Spring. 1 credit. Prerequisite: first-year veterinary students. Letter grades only. M. FitzMaurice.

Designed to give students the necessary background for the understanding of neurophysiology and clinical neurology. Students will gain a basic understanding of the gross anatomy of the central nervous system (CNS), pathways involved in somatosensory and motor systems, as well as some exposure to modern imaging of the CNS (CT and MRI correlates with gross coronal sections of the CNS).
VTMED 5300 Function and Dysfunction: Part I (Foundation Course Illa)
Spring. 9 credits. Prerequisite: first-year veterinary students; VTMED 5200. Letter grades only. Fee charged for course guide. This course is offered on limited basis for demonstration of noninvasive procedures. R. Rawson and staff. Designed to develop students' understanding of how an animal maintains itself as a functional organism, how the maintenance of function is achieved through the integration of different organ systems; how tissue structure relates to tissue function; how injury alters structure and leads to dysfunction, manifested as clinical signs; how organ function can be assessed; and how organ function can be modulated pharmacologically. The course incorporates aspects of physiology, biochemistry, cell biology, histology, pathology and histopathology, clinical pathology, and pharmacology.

VTMED 5310 Function and Dysfunction: Part II (Foundation Course Illb)
Fall. 7 credits. Prerequisite: second-year veterinary students, VTMED 5300. Letter grades only. Fee charged for course guide. R. Rawson and staff. Continuation of VTMED 5300 Function and Dysfunction: Part I.

VTMED 5400 Host, Agent, and Defense (Foundation Course IV)
Fall. 12 credits. Prerequisite: second-year veterinary students, VTMED 5310. Letter grades only. Fee charged for course guide. D. Bowman (course leader) and staff. This course seeks to develop an understanding of the interplay between the immunological system of the host and the most significant bacterial and viral agents that cause disease in animals. Lectures focus primarily on adaptive and innate immunity, as well as bacterial and viral pathogens and the diseases they cause. Autoimmunity, epidemiological methods to investigate infectious disease at the herd and single-animal levels, and techniques and tools to control infectious disease are also important components of the course. In the laboratory, animals are used to illustrate some aspects of infectious disease.

VTMED 5410 Veterinary Parasitology
Fall. 2.5 credits. Prerequisite: second-year veterinary students. Letter grades only. D. D. Bowman. Provides a basic introduction to animal parasites of veterinary importance, concentrating mainly on the biology, control, and diagnosis of protozoan and metazoan parasites. Emphasizes parasites representative of significant disease processes or of significant clinical importance to veterinarians. Elaborates on pathogenesis and pathobiology of these major pathogens with the ultimate goal being to maximize the recognition of the major disease manifestations induced by the different groups of organisms. Laboratories stress certain aspects of some important parasitic groups.

VTMED 5500 Animal Health and Disease: Part I (Foundation Course V)
Spring. 10 credits. Prerequisite: second-year veterinary students, VTMED 5400. Letter grades only. Fee charged for course guide. S. Fubini and D. W. Scott. Integrates the clinical sciences of medicine, surgery, anesthesia, radiology, and theriogenology, which are themselves integrated subjects, with systems pathology and relevant aspects of applied pharmacology. The course is presented on a systems basis, moving from clinical signs of alteration in function, to pathophysiology of clinical signs, to strategies for diagnosis and treatment. Specific examples are used to establish a cognitive framework and knowledge of the most important diseases. This course provides a sound foundation for clinical rotations in Foundation Course VI. It builds on the strengths developed in earlier courses by an increased exposure to case examples in a more directed way, taking advantage of the diversity of skills and special knowledge of both faculty and students. A variety of educational techniques are used, including lectures in which interaction is encouraged, laboratories, demonstrations, case discussions, and autotutorials.

VTMED 5510 Animal Health and Disease: Part II (Foundation Course V, continued)
Fall. 20 credits. Prerequisite: third-year veterinary students, VTMED 5500. Letter grades only. Fee charged for course guide. S. Fubini and D. W. Scott. Continuation of VTMED 5500 Animal Health and Disease: Part I.

VTMED 5600 Ambulatory and Production Medicine
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Students can take more than one week early but a minimum of one week must be completed during Block VI. C. Guard and staff. Clinical service rotation in which students accompany ambulatory clinicians on farm and stable calls and learn the skills and procedures necessary for operation of a modern veterinary practice offering primary care to large-animal clients. Routine herd health visits are conducted for cattle, horses, sheep, goats, and swine. Reproductive evaluations (including pregnancy and fertility examinations), nutritional evaluation, and disease prevention are stressed. Herd health programs also include vaccinations, parasite control, mastitis prevention, and routine procedures. With appropriate herds, analysis of computerized performance data is conducted and discussed with the owner. In addition to assisting with routine scheduled work, students participate in diagnosis and medical care. Under the supervision of the clinical faculty and staff, the students are expected to formulate and carry out plans for the diagnostic evaluation and medical management of these patients.

VTMED 5602 Small-Animal Medicine
Fall, spring, winter, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. S. C. Barr, S. A. Center, J. F. Randolph, K. W. Simpson, and M. Flaminio. Structured to provide supervised clinical experience in the practice of companion small-animal medicine. The course is conducted in the Companion Animal Hospital of the Cornell University Hospital for Animals. Students interact directly with clients presenting their pets for primary or referral medical care. Under the supervision of the clinical faculty and staff, the students are expected to formulate and carry out plans for the diagnostic evaluation and medical management of these patients.

VTMED 5603 Small-Animal Soft Tissue Surgery Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. H. J. Harvey and small-animal surgery faculty. Clinical service rotation that exposes the student to the practice of surgery under hospital conditions. Students participate in office hours, diagnostic techniques, planning of therapy; and daily care of dogs and cats under the direction of a faculty veterinarian. Students assist experienced surgeons in the operating room. Client communications and the basics of efficient practice are emphasized.

VTMED 5604 Large-Animal Medicine Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. G. Perkins, D. Ainsworth, T. Divers, and M. Flaminio. Students assigned to this service assist the faculty, technicians, and residents of the Large-Animal Medicine Service in the diagnosis and care of patients. The goal of this course is for students working on this service to acquire knowledge and skills in history taking, physical examination, selection and completion of appropriate tests, diagnosis, treatment, and patient care. Daily rounds and discussions are used to monitor patient progress and further educate students. If time allows, sit-down rounds to discuss medical disorders are provided.

VTMED 5605 Large-Animal Soft Tissue Surgery Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. A. J. Nixon and staff. Clinical rotation structured to provide supervised clinical experience in the practice of large-animal surgery. Under the direction of faculty and house staff, students participate in the diagnosis, surgical treatment, and care of patients presented to the Equine and Farm Animal Hospital. Training through patient care is supplemented by formal rounds and didactic instruction.

VTMED 5606 Anesthesiology Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. A. L. Campoy, R. D. Gleed, W. A. Horne, G. Perkins, D. Ainsworth, T. Divers, and M. Flaminio. Students assigned to the service assist the faculty, technicians, and residents of the Anesthesiology Service in the diagnosis and care of patients. The goal of this course is for students working on this service to acquire knowledge and skills in history taking, physical examination, selection and completion of appropriate tests, diagnosis, treatment, and patient care. Daily rounds and discussions are used to monitor patient progress and further educate students. If time allows, sit-down rounds to discuss medical disorders are provided.
Animals, horses, and some food animals. Students participate in selecting suitable anesthetic techniques for patients in the Cornell University Hospital for Animals and then implement those techniques under the supervision of faculty and residents. The goal is for students to develop skills and thought processes necessary to perform safe anesthesia in a modern veterinary practice.

VTMED 5607 Dermatology Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. T. Kern, N. Irby, and E. C. Ledbetter. Combination of clinical experience with beginning skills in diagnostic ophthalmology. Students learn how to apply the ophthalmic diagnostic tests. A competent ocular examination is the goal of this rotation. Confidence in using direct and indirect ophthalmoscopes, slit lamps, tonometers, goniolenses, conjunctival cytology, and surgery comes with the practice provided by this rotation. Students are required to review the introductory orientation videotapes in the autotutorial center titled Ocular Examination I and II before the start of the rotation. This rotation provides surgical experience and consultations. A high percentage of the consultations are referral cases that usually challenge the service. Adequate routine case material is presented to prepare most students for practice.

VTMED 5608 Ophthalmology Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. S. P. McDonough and C. McDaniel. The pathology rotation strives to integrate gross pathology with other diagnostic modalities. Students will work in groups of three to five for the two-week rotation performing formalin-fixed mammal, avian, reptile, and exotic species, and laboratory animals under the guidance of pathology faculty and residents. Students will prepare written reports of the necropsies performed and discuss the findings in daily morning rounds. Students will also be instructed by faculty of the Animal Health Diagnostic Center with experience in ancillary diagnostic techniques. Students will be expected to use diagnostic testing regimens as integral parts of comprehensive diagnostic and therapeutic plans. Instruction will consist primarily of the discussion of clinical cases with emphasis on laboratory diagnosticians. Students will be expected to lead and participate in these discussions and will be evaluated on their ability to do so.

VTMED 5610 Radiology Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. N. L. Dykes and C. McDaniel. Two-week clinical experience in the imaging section of the Cornell University Hospital for Animals. Students use radiographic, ultrasonographic, CT, MRI, and nuclear medicine imaging techniques to evaluate animal patients under treatment in the Cornell University Hospital for Animals. Students obtain and interpret radiographic studies with guidance from radiology faculty and technical staff. Autotutorial teaching files are used to familiarize students with radiographic examples of common diseases of large- and small-animal species. Small-group discussions are scheduled to present and discuss the teaching files and current cases. The safe use of X-ray-producing equipment and radioisotopes is discussed.

VTMED 5611 Small-Animal Clinical Emergency and Critical Care Medicine
Fall, winter, spring, and summer. 2 credits. Prerequisite: first-year veterinary students. Letter grades only. N. Dhupa, G. Schoeffler, D. Fletcher, and staff. Management of both emergent and critical cases represents a significant component of the practice of veterinary medicine. The focus of this clinical rotation is the development of a knowledge base and a comprehensive set of skills necessary for a veterinarian to perform adequately in these areas, within a structured format. These skills include the appropriate evaluation (triage) and stabilization of emergency patients, the management of postoperative and other critical patients, and sensitive and effective client communication. Participants access relevant information from various sources related to emergency and critical care medicine and understand and apply these principles to clinical cases. Students will participate in the management of incoming emergency cases as well as having primary patient care responsibilities in both intensive care and intermediate care units. Students will be expected to work closely with technicians and clinicians to develop familiarity with technical and nursing procedures.

VTMED 5612 Fourth-Year Seminar
Fall and spring. 1 credit. Required component of Clinical Rotations (Foundation Course VI). First-, second-, and third-year students and all faculty and staff members also invited and encouraged to attend. S–U grades only. M. Smith, chair of Senior Seminar Committee. This course gives students the opportunity to practice interviewing clients while refreshing their physical exam skills.

VTMED 5701 Animals, Veterinarians, and Society (Part A) (Foundation Course VIIa)
Fall. 1.5 credits. Prerequisite: first-year veterinary students. Letter grades only. Fee charged for course guide. Live animals used in course instruction. N. L. Irby, C. McDaniel, and staff.

VTMED 5702 Animals, Veterinarians, and Society (Part B: Ethics) (Foundation Course VIIb)
Last part of fall semester through end of winter session. 1 credit. Prerequisite: first-year veterinary students; VTMED 5701. Letter grades only. Lecs average two hours each week; lab, 12 hours spread throughout course. Live animals used in course instruction. N. L. Irby, C. McDaniel, and staff.

Consists of both lectures and laboratory sessions. Lectures partially complement materials learned in VTMED 5200 (Foundation Course V—Cell Biology and Genetics) but for the most part focus primarily on veterinary medical ethical issues related to animal use, animal welfare, genetics counseling, and clinical day-to-day ethics. The laboratory reviews basic engine and bovine husbandry skills and the small-animal physical examination.

VTMED 5703 Animals, Veterinarians, and Society (Part C) (Foundation Course VIIc)
Spring. 1 credit. Prerequisite: first-year veterinary students; VTMED 5702. Letter grades only. Fee charged for course guide. Live animals used in course instruction. N. L. Irby, J. Morrisey, C. McDaniel, and staff.

This course gives students the opportunity to practice interviewing clients while refreshing their physical exam skills.

VTMED 5704 Animals, Veterinarians, and Society (Part D: Public Health and Preventive Medicine) (Foundation Course VIIId)
Fall. 2 credits. Prerequisite: second-year veterinary medical students; VTMED 5703. Letter grades only. Fee charged for course guide. Live animals used in course instruction. N. L. Irby, L. D. Warnick, and staff.

Complements and augments material learned in VTMED 5400 (Block IV—Host, Agent, and Defense). Emphasizes veterinary public health and preventive medicine. Topics include: aggressive animals and animal bites, routes of disease transmission, rabies control programs, zoonotic diseases, emerging infectious diseases, environmental health, and preventive health care programs including vaccination protocols in large and small animals.

VTMED 5705 Animals, Veterinarians, and Society (Part E: Introduction to Clinical Procedures) (Foundation Course VIIe)
Spring. 0.5 credit. Prerequisite: second-year veterinary students; VTMED 5704. Letter grades only. Fee charged for course guide. Live animals used in course instruction. N. L. Irby, C. McDaniel, and staff.
Laboratory course that provides a basic introduction to clinical skills students will need when they start their clinical rotations in the Cornell University Hospital for Animals. Includes a brief review of the physical examination of the dog, cat, horse, and cow. Clinical procedures include but are not limited to ear examination and treatment, IM and SQ injections, fluid administration, naso- and orogastic tube placement, urinary catheterization, and IV catheterization.

VTMED 5706 Animals, Veterinarians, and Society (Part F) (Foundation Course VIII)

Fall. 1.5 credits. Prerequisite: third-year veterinary students, VTMED 5705. Letter grades only. Fee charged for course guide. Live animal instruction. N. L. Irby, C. McDaniel, and staff. Complements material learned in VTMED 5510 Foundation Course V—Animal Health and Disease. Examines governmental regulation of the veterinary profession, including proper drug usage, extra label drug use (FDA), controlled substances (DEA), professional liability and malpractice insurance, professional and unprofessional conduct, hazardous materials in the workplace (OSHA), and environmental issues (EPA). Also includes sessions relating to the control and prevention of the spread of animal diseases and the role of USDA and specificallyAPHIS in these regulations.

The laboratory component consists of night treatments in the Equine and Farm Animal Hospital.

DISTRIBUTION COURSES

Distribution courses comprise 30 percent of the curriculum and are usually scheduled during the first half of each spring semester. During the first two years, many of the distribution courses are oriented to the basic sciences. During years three and four, students have additional distribution course offerings from which to choose. Some emphasize clinical specialties, whereas others integrate basic science disciplines with clinical medicine and are co-taught by faculty members representing both areas. Students from different classes have the opportunity to take many of these courses together. Grading options for distribution courses are either letter or S–U.

VTMED 6101 Anatomy of the Horse

Spring. 3 credits. Prerequisite: VTMED 5100 or permission of instructor; first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. P. S. Mazza. Students study carnivore anatomy by detailed systematic and regional dissection of the cat, with comparison to the dog. Student dissection is supplemented with projections, radiographs, palpation of live cats, and exercises focusing on surgical approaches. There are opportunities to dissect other carnivores, such as the ferret and the fox, depending on the availability of specimens. The lectures augment the laboratory dissection and introduce the student to clinical anatomy of the cat and functional morphological comparative features in the Order Carnivora. Students do an independent project on the carnivore species of their choice and give an oral presentation on this to the class.

VTMED 6102 Anatomy of the Ruminant

Spring. 3 credits. Prerequisite: VTMED 5100 or permission of instructor; first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. J. A. Mizer. Covers the regional anatomy of several ruminant species using dissection laboratories and lectures. Emphasizes the functional consequences of structural modifications and anatomical features to clinical practice. Correlates microscopic anatomy with gross anatomy when appropriate to relate structure to function and to provide a foundation for later study in pathology. Student dissection material is supplemented by skeletal materials, radiographs, models, pre-dissected specimens, and fresh specimens when available. A live horse will be available for palpation.

VTMED 6103 Comparative Anatomy: Pattern and Function

Spring. 3 credits. Prerequisite: VTMED 5100, first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. J. Hermanson. The goal of this course is to study anatomical variability among amniote (mammals, birds, and reptiles) and anamniote (amphibian and fish) species. This is accomplished by relating the anatomy of major organ systems in each species to a common basic pattern and considering the differences in a functional perspective. Five major systems are explored (integumentary, locomotor, cardiorespiratory, digestive, and urogenital) in a variety of species as available.

VTMED 6120 Anatomy and Histology of Fish

Spring. 2 credits. Minimum enrollment 4; maximum 6. Prerequisite: first-, second-, third-, and fourth-year veterinary students or written permission of instructor. S–U or letter grades. P. R. Bowser. Provides an overview of the diversity of anatomy and histology of fish. Students participate in lectures, discussion, and laboratory exercises to review the major organ systems. Extensive use of library resources for assigned readings is expected. Each student prepares a term project and makes one oral presentation.

VTMED 6196, 6299, 6399, 6499, 6599, 6699, 6798 Special Projects in Veterinary Medicine

Fall, winter, spring, summer. 1–4 credits, variable. S–U or letter grades. Must be arranged with College of Veterinary Medicine lecturer, senior lecturer, or tenure-track faculty member. Provides students the opportunity to work individually with a faculty member to pursue an area of particular interest, typically, not part of the established curriculum. Specific course objectives and course content are flexible and reflect the scope and academic expertise of the faculty.

VTMED 6199, 6299, 6399, 6499, 6599, 6699, 6799 Research Opportunities in Veterinary Medicine

Fall, winter, spring, summer. 1–4 credits, variable. S–U or letter grades. Must be arranged with College of Veterinary Medicine lecturer, senior lecturer, or tenure-track faculty member. Provides students the opportunity to work in the research environment of faculty involved in veterinary or biomedical research. Specific course objectives and course content are flexible and reflect the research environment. Research projects may be arranged to accumulate credit toward requirements in Distribution Sets I, II, III, IV, and V.

VTMED 6222 Canine and Feline Medical Genetics

Spring. 2 credits. Minimum enrollment 10; maximum 40. Prerequisite: VTMED 5200, 5300, and 5310. S–U or letter grades. V. N. Meyers-Wallen. Covers the genetic and pathophysiologic mechanisms underlying inherited diseases in dogs and cats that may be encountered in small-animal practice. Specific disorders of clinical importance are presented in a lecture format to illustrate the distribution, diagnosis, and control of inherited diseases in individuals and populations. Ethical considerations regarding treatment, prevention, and control measures are discussed.

VTMED 6320 Clinical Pathology

Spring. 2 credits. Minimum enrollment 25; maximum 90. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. T. Stokol and D. Schaefer. Addresses a range of issues related to laboratory medicine and interpretation of laboratory results. General topic areas include hematology, clinical chemistry and immunology, and urinalysis. The primary mode of instruction is student-driven small-group (untutored) exploration of case materials followed by faculty-moderated large-group discussions. Selected lectures and laboratory sessions supplement and expand on issues generated by the case discussions. This course builds on concepts previously addressed in Foundation Courses III and IV and provides additional exposure to practical clinical pathology procedures and microscopy.

VTMED 6321 Management of Fluid and Electrolyte Disorders

Spring. 2 credits. Minimum enrollment 20; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. R. Rawson.
Students focus on clinical manifestations and the pathophysiologic mechanisms associated with fluid, electrolyte, and metabolic acid-base disturbances in domestic animals. The course is divided into segments dealing with salt and water imbalances, potassium, calcium, and phosphate alkalosis, metabolic acidosis, metabolic alkalosis, and mixed acid-base disturbances.

**VTMED 6324 Antimicrobial Drug Therapy in Veterinary Medicine**

Spring. 1 credit. May be repeated for credit max. of two times. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. W. S. Schwall.

Familiarizes students with antimicrobial drugs used in veterinary practice. Builds on fundamental pharmacological and microbiological principles covered in Foundation Courses III and IV and considers antibacterial, antifungal, antiparasitic, and antiviral drugs from the point of view of unique pharmacokinetic properties, indications for clinical use, and potential toxicities as the basis for rational use.

**VTMED 6327 Current Concepts in Reproductive Biology (also BIOAP 7570)**

Fall. 3 credits. Minimum enrollment 6. Prerequisite: first-, second-, and third-year veterinary students and appropriate undergraduate/graduate training. Letter grades only. Offered odd-numbered years. J. Fortune, P. A. Johnson, and staff.

For description, see BIOAP 7570.

**VTMED 6328 Veterinary Clinical Toxicology**

Spring. 2 credits. Prerequisite: second-, third-, and fourth-year veterinary students. S–U or letter grades. K. Bischoff.

Provides veterinary students with a solid introduction to concepts and principles of toxicology and how they are applied in the clinical setting. Students learn about specific common toxicants, clinical signs in affected animals, and treatment protocols for the toxicants in question. Students also gain an understanding of the clinical approach to suspected or unknown toxicoses, sample collection and handling, and resources available for clinical toxicologic problems. The course is correlated with three one-hour lectures per week and one hour-long large-group discussion per week. Grades are based on weekly homework assignments, a midterm, and a final exam.

**VTMED 6421 Epidemiology of Infectious Diseases**

Spring. 1 credit. Maximum enrollment 8. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. H. Mohandes and staff.

Introduces the epidemiologic methods used in infectious disease investigations. Also discusses the importance of surveillance systems in detecting modern epidemics and in the development of effective disease prevention and control strategies. Emphasizes understanding the relationships between the host, the agent, and the environment as they relate to disease causation. Explores contemporary epidemiologic methods applicable to old diseases that remain real or potential problems, newly emerging infectious diseases, and nosocomial infections. Selected diseases are discussed to clarify the role of epidemiology in understanding the pathogenesis of infectious processes in individuals and groups of animals. Students have the opportunity to apply the methods learned to actual disease problems and write an epidemiologic report that might lead to publication in a peer-reviewed scientific journal.

**VTMED 6422 Clinical Biostatistics for Journal Readers**

Spring. 1 credit. Minimum enrollment 3; maximum 12. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades. H. N. Erb.

Students become familiar with the statistical methods commonly used in veterinary clinical articles, learn to recognize obvious misuse of those methods, and become able to interpret the statistical results.

**VTMED 6423 Clinical Diagnostic Parasitology**

Fall and spring. 0.5 credit for attending eight one-hour parasitology sessions; student usually can easily obtain 2 hours on each of the five participating rotations (Ambulatory, Community Practice Service, Dermatology, Pathology, and Wildlife). Prerequisite: second-, third-, and fourth-year veterinary students. S–U grades only. A. Lucio–Forester and D. D. Bowman.

Gives students experience in diagnosing parasitic infections. Students perform appropriate parasitologic methods on clinical samples from patients on their rotation. They also evaluate the test results in terms of treatment or management of the infections. If clinical specimens are not available, appropriate materials are provided for study and evaluation. Ambulatory students typically do qualitative and quantitative floatations on samples from large-animal cases they have encountered that week. In CPS, one hour is spent testing samples from current dog and cat patients, while a second hour is devoted to a discussion of the treatment of common endo- and ecto-parasites. Pathology students typically examine and identify intact parasites they retrieve from various organs at necropsy. This course is designed to be a logical extension to Foundation Course IV: Host, Agent, and Defense, and is expected to build on the didactic material presented in Large- and Small-Animal Parasitology.

**VTMED 6424 Approaches to Problems in Canine Infectious Diseases**

Spring. 1 credit. Minimum enrollment 10; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. S. C. Battr.

Emphasizes the clinical aspects of the more common canine infectious diseases. The overall objective is to provide details about specific infectious diseases a future small-animal practitioner may need to know to effectively diagnose and treat these diseases. Clinical signs, presentation, clinicopathologic data, diagnostic choices, treatment plans, and prevention are emphasized. Most lectures are presented by clinical faculty and therefore the material is oriented toward practical skills in managing clinical cases. Grading is based entirely on the result of a written exam (usually multiple-choice format) given in the final period.

**VTMED 6425 Shelter Medicine I**

Spring. 1 credit. Minimum enrollment 5; maximum 40. Prerequisite: VTMED 5400; third- and fourth-year veterinary students. Letter grades only. J. M. Scarlott and staff from American Society for Prevention of Cruelty to Animals.

Shelter medicine is a new and exciting discipline in veterinary medicine. Caring for animals in animal shelters requires a “herd health” as well as an individual animal perspective. This course addresses the role of veterinarians working with and for animal shelters, the principles of preventive medicine and population health in companion animals; behavioral enrichment, temperament testing, and diagnosis and treatment of behavior problems in shelter animals; design and implementation of high volume spay/neuter programs for shelters; design and implementation of trap/neuter/release programs by shelters; and the medical management of common infectious diseases in shelter cats and approved methods of euthanasia for companion animals. This is the second course in a two-course sequence.

**VTMED 6426 Timely Topics in Veterinary Parasitology: Large-Animal**

Spring. 0.5 credit. Minimum enrollment 2. D. D. Bowman.

In-depth look at one or a few parasites of special interest relative to large-animal medicine. Presents details of taxonomy, biology, epidemiology, clinical presentation, and preventive and curative treatment. Efforts are made to discuss those aspects of the disease as it relates to the practical control of these and in-depth coverage of primary literature relating to the parasite being discussed. Topics vary annually. The course is presented in a lecture/discussion format.

**VTMED 6427 Timely Topics in Veterinary Parasitology: Small-Animal**

Spring. 0.5 credit. Minimum enrollment 2. D. D. Bowman.

In-depth look at one or a few parasites of special interest relative to small-animal medicine. Presents details of taxonomy, biology, epidemiology, clinical presentation, and preventive and curative treatment. Efforts are made to discuss those aspects of the disease as it relates to the practical control of these and in-depth coverage of primary
VTMED 6428 Vaccines: Theory and Practice
Spring. 1 credit. Minimum enrollment 10. Prerequisite: introductory immunology course or VTMED 5400 or VETMI 5150; second-, third-, and fourth-year veterinary students and graduate students or others by permission of instructor. Letter grades only. Offered odd-numbered years. Clark.

Broad overview of vaccines and immunization program used in contemporary veterinary medicine, focusing on efficacy use and safety. One take-home final exam.

VTMED 6429 Infectious Diseases and Management of Swine
Spring. 2 credits. Minimum enrollment 6; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. S–U or letter grades. K. Earnest-Koons.

Provides veterinary students with a solid introduction to epidemiology and control methods for swine infectious diseases and how they are treated in the clinical setting. Students learn about specific infectious diseases, clinical signs in affected animals, and treatment protocols for disease management. Students also gain an understanding of the clinical approach to suspected or unknown infectious agents, sample collection and handling, and resources available for infectious disease diagnosis.

Good management practices for swine farmers are also reviewed and their relationship to disease is discussed. The course is conducted with three one-hour lectures per week and one hourlong large group discussion per week. Meets two days per week for one hour and one day per week for two hours. Grades are based on weekly quizzes, a final exam, a short paper, and attendance/participation.

VTMED 6430 Veterinary Perspectives on Pathogen Control in Animal Manure (also EEB/BIOMI 6430)
Spring. 2 credits. Prerequisite: third- and fourth-year veterinary students, graduate students, advanced undergraduate students interested in agricultural engineering as related to animal manure management. Letter grades only. D. D. Bowman.

In-depth look at the management of pathogens in animal manures. Reviews the pathogens involved, the role of governing agencies, the survival of pathogens in the field, and methods of pathogen destruction. Discusses commercial methods of manure processing for the control of these pathogens for the protection of other animals and the human population. Concludes with class discussions with three or four stakeholder representatives, the dairy, beef, pork, and poultry industries and their understanding of the problem as it relates to veterinary students.

VTMED 6432 Fish Health Management
Spring. 1.5 credit. Minimum enrollment 8; maximum 16. Prerequisite: first-, second-, third-, and fourth-year veterinary students or written permission of instructor. S–U or letter grades. P. R. Bowser.

Lecture and laboratory course providing an overview of the aquatic environment and the important infectious and noninfectious diseases of fish. Covers important diseases encountered in commercial aquaculture, aquarium systems, and natural waters. The laboratory is designed to provide students with a knowledge base and hands-on diagnostic experience in diseases of fish. Students also maintain and manage aquarium systems during the course to gain an appreciation for the science behind the operation of those systems. The laboratory requires time outside the normal scheduled class sessions (to be scheduled by the students) for management of the aquarium systems. Each student also makes a presentation on a topic in aquatic animal health during the course.

VTMED 6433 Anaerobic Infections of Animals
Spring, two 1-hr. lec per week for eight weeks. 1 credit. Minimum enrollment 10; maximum 80. Prerequisite: VTMED 5400. S–U or letter grades only. P. L. McDonough and staff.

Presents anaerobic infections in clinical context as an adjunct to the material covered in Foundation Course IV. Students gain an understanding of the diversity and biology of anaerobic bacteria and the niches that they occupy in the animal and avian body. A basic, clinically oriented taxonomy is presented, and students learn about the virulence and pathogenesis pathways that they will encounter in clinical practice. The clinical signs of anaerobic infections, laboratory identification and susceptibility testing, and the use of specimen transport media are also covered. Treatment of common infections, including wound care, is covered and vaccines currently available are discussed in detail. In the second four weeks of the course, students learn about the major clinical syndromes caused by anaerobes.

VTMED 6434 Shelter Medicine II
Spring. 2 credits. Minimum enrollment 3; maximum 20. Prerequisite: third- and fourth-year veterinary students. Highly recommended: VTMED 6425. Letter grades only. J. M. Scarlett.

Intended as a sequel to the Issues and Preventive Medicine in Animal Shelters course offered in the C Distribution block. In light of the time constraints in the Issues course, the principles of prevention and control to specific diseases (e.g., ringworm, kennel cough) commonly encountered in small-animal populations are not discussed. This course encourages students to apply principles of infectious disease, epidemiology, and preventive medicine to infectious disease problems in small-animal populations, with a particular emphasis on disease problems in shelters. Mention of modification to fit other small-animal populations (e.g., catteries, kennels) is made.

VTMED 6435 Forensic Science for Veterinary Technicians (also BIOSM 4450)

For description, see BIOSM 4450.

VTMED 6521 AQUAVET II: Comparative Pathology of Aquatic Animals
Two weeks of full-time instruction at Woods Hole. May be offered in the spring semester. 2 credits. Maximum enrollment 18. Prerequisites: formal course work in diseases of aquatic animals or appropriate experience and permission of instructor.

S–U or letter grades. Fee charged. Available by competitive application process to veterinary and graduate students. P. R. Bowser.

Advanced course (sponsored by Cornell U., the U. of Pennsylvania, and three marine science institutes at Woods Hole: the Marine Biological Laboratory, Woods Hole Oceanographic Institution, and Northeast Center of the National Marine Fisheries Service) covering the comparative pathology of aquatic invertebrates and vertebrates commonly used as laboratory animals. The material presented consists of discussions of the diseases of aquatic animals as well as extensive use of the material for the histopathology associated with these diseases. The course is taught by an invited faculty of 12 individuals who are leaders in their respective fields of aquatic-animal medicine.

VTMED 6522 Diseases of Birds
Spring. 2 credits. Minimum enrollment 10; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. G. V. Kollias and staff.

Designed to introduce second-, third-, and fourth-year veterinary student to the common infectious and noninfectious diseases, with an emphasis on practical knowledge of the most common infectious and noninfectious diseases affecting a variety of avian species. Emphasizes the latest diagnostic and control approaches. The course format is a combination of didactic lectures and discussions.

VTMED 6524 Feline Infectious Diseases
Spring. 1 credit, two 50-min. lec each week for eight weeks. Minimum enrollment 10; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. S. C. Baker.

Emphasizes the clinical aspects of feline infectious diseases common to cats in North America and complements knowledge acquired in Foundation Courses IV and V. The overall objective is to provide details about specific infectious diseases a future small-animal practitioner may need to know to effectively diagnose and treat diseases. Etiology, epidemiology (prevalence and transmission), pathogenesis, clinical findings, diagnosis, pathologic findings, therapy, prevention, and public health considerations are emphasized. Most lectures are presented from a clinician's point of view, and therefore the material is oriented toward practical skills in managing clinical cases. Grades are based entirely on the result of a written exam (usually multiple-choice format) given in the final period.

VTMED 6525 Osteoarthritis
Spring. 1 credit. Minimum enrollment 8; maximum 24. Prerequisite: third- and second-, third-, and fourth-year veterinary students. Letter grades only. G. Lust.

Provides a basis at the molecular, cellular, and tissue levels for understanding the function of mammalian diarthrodial joints. Includes a description of a diarthrodial joint and the composition and metabolism of articular cartilage, subchondral bone, ligaments, meniscus, capsule, and synovium. Considers the interrelationships of synovium, synovial fluid, articular cartilage, joint lubrication, biomechanical considerations, and enervation. Canine hip dysplasia is a focus during the early class sessions. The osteoarthritis associated with canine hip dysplasia serves as a basis for discussion of the etiopathogenesis of the disease. Canine osteoarthritis is
emphasized, but the diseases in other animals such as mice, guinea pigs, rabbits, cats, and horses are mentioned. Therapies such as nonsteroidal anti-inflammatory drugs, glucocorticoids, and others may be discussed.

**VTMED 6526 Veterinary Nutrition**
Spring. 2 credits. Minimum enrollment 10; maximum 30. Prerequisite: first-, second-, and third-year veterinary students or permission of instructor. Recommended for second- and third-year veterinary students. Letter grades only. J. Wakshlag.

The first half of this course provides information on the requirements and metabolic uses of the essential nutrients of companion animals as well as on formulation and evaluation of practical rations for species of veterinary interest. These concepts are applied in discussion of life stage nutritional needs, including growth, adult maintenance, gestation, lactation, aging, performance, and production. The second half covers clinically relevant diseases of nutritional deficiency and excess, including obesity, as well as the role of nutrition in the management of diseases of the various organ systems—e.g., renal, lower urinary tract, cardiac, G-I, hepatic, and musculoskeletal disease. Other topics include the role of nutrition in managing cancer and hypersensitivity disorders and in critical care, including enteral and parenteral nutrition. The course also includes an introduction to nutrition for exotic and zoo animals.

**VTMED 6527 Veterinary Aspects of Captive Wildlife Management**
Spring. 2 credits. Minimum enrollment 10; maximum 30. Prerequisite: first-, second-, third-, and fourth-year veterinary students. Letter grades only. G. V. Kollas.

Concentrates on principles of captive wildlife management, both clinical and nonclinical. Students are challenged to learn and integrate a variety of disciplines that are essential to managing wildlife successfully in a captive or semi-free-ranging environment. These disciplines include but are not limited to species-specific (1) behavior and behavioral requirements, (2) nutritional requirements and problems, (3) reproduction, (4) zoonotic and toxicological problems, (5) manual restraint and anesthesia, (6) preventive medicine, and (7) medical and legal ethics. In even-numbered years the course emphasizes non–North American wildlife species (g.e., African, Asian, Australian, and Central and South American species). Format includes lectures and student presentations. In odd-numbered years it focuses more on the North American (native) wildlife species, presented in lectures and laboratories.

**VTMED 6528 Equine Surgical and Anesthetic Techniques**
Winter, one-week period over winter intercession. 1 credit. Minimum enrollment 3; maximum 21. Enrollment by lottery. Prerequisite: VTMED 6103; priority given to students who have indicated career interest in farm animals; third- and fourth-year veterinary students. S/U grades only.

Consists of five laboratories performing surgical procedures on sheep, calves, cadaver specimens, and adult cattle. It is the intent of this course not to make the students proficient in these procedures but to familiarize them with surgical techniques and to make them more enlightened referring practitioners. The course, therefore, is intended for students anticipating food-animal practice after graduation.

**VTMED 6530 Llama Tutorial**
Fall, spring, summer. 1 credit. Prerequisite: VTMED 5400. Prerequisite second-, third-, and fourth-year veterinary students. S/U grades only. M. C. Smith.

Autotutorial or group tutorial course covering common problems of llamas and alpacas. Participants are provided with study guides consisting of brief case descriptions and sample study questions. Reference is made to textbooks, journal articles, videotapes, and (if available) a teaching llama or alpaca to assist students in finding the answers to the questions efficiently. Grading is based on an oral exam.

**VTMED 6531 Poisonous Plants**
Fall. 1 credit. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. S/U grades only. M. C. Smith.

Field trips demonstrate toxic plants growing in natural or cultivated settings. Lectures address economically important poisonous plants native to the United States and presented includes plant identification, natural habitat, toxic principles, clinical signs of toxicity, and treatment and prevention of poisoning in animals. Some of the major toxic principles found in plants and considered in detail in the course are nitrates, cyanide, oxalates, photodynamic agents, alkaloids, and mycotoxins.

**VTMED 6532 Avian Medicine and Surgery**
Spring. 2 credits. Minimum enrollment 20; maximum 40. Prerequisite: third- and fourth-year veterinary students. Letter grades only. Live birds used in some laboratories. G. V. Kollas and staff.

Designed to introduce third- and fourth-year veterinary students to the principles and practice of clinical and avian medicine and surgery. The course is taught in a basic didactic lecture and discussion format with laboratories that reinforce concepts presented in the lectures.

**VTMED 6533 Advanced Equine Lameness**

Designed to teach students the methodology of equine lameness diagnosis. Places a strong emphasis on a hands-on approach to learning and is primarily laboratory-based. During laboratories, students work in small groups on live horses to diagnose the cause of their lameness. To this end, students learn both the practical skills, such as perineural and intra-articular blocks, as well as the methodology necessary to systematically work up a lameness case. Laboratories also provide students with the opportunity to practice field radiography and gain ultrasound skills as they pertain to equine lameness. Additionally, students have the opportunity to practice basic farrier skills. Lecture topics are intended to round out the students’ understanding of lameness by providing them with a knowledge base of the common causes of lameness, organized by response to local anesthesia. Imaging interpretation is emphasized through case-based discussions.

The course is recommended for students anticipating entry into equine practice. Students seeking hands-on experience with horses are also welcome.

**VTMED 6534 Equine Reproduction**

Covers advanced aspects of equine reproductive physiology. Discusses reproductive management of mares and stallions using natural and artificial breeding strategies. Stresses diagnosis, treatment, and prevention of common reproductive disorders. The laboratory component builds on skills acquired during foundation courses and provides experience in techniques important in equine theriogenology.

**VTMED 6536–6537 Advanced Dairy Reproduction**
Spring. 6 credits;lec; 6537. Lab. Lec. 1 credit; lab. 1 credit. Minimum lab enrollment 12; maximum 24. Lab enrollment by lottery. Prerequisite: third- and fourth-year veterinary students. Lecture and lab corequisite: enrollment in both lecture and lab components. Letter grades only. R. Gilbert.

Offers lectures and labs that provide both theoretical and practical training in current approaches to the veterinary aspects of dairy-cow reproductive care and management. The aim is to empower the student with entry-level, current knowledge and skills for the reproductive aspects of any modern dairy practice.

**VTMED 6538 Special Problems in Equine Medicine**
Spring. 0.5 credit. Minimum enrollment 10; maximum 30. Enrollment by lottery. Prerequisite: third- and fourth-year veterinary students. S–U grades only.

T. Divers and staff.

Intended for students anticipating equine practice. In-depth study of important diseases, review of recent literature, health management, and hands-on procedures or demonstrations are the core of this course.

**VTMED 6539 Disorders of Large-Animal Neonates**
Spring. 1 credit. Minimum enrollment 10; maximum 100. Prerequisite: first-, second-, third-, and fourth-year veterinary students. Letter grades only. G. Perkins.
Introductory neonatology course. The emphasis is on the medical and surgical problems of foals in the early neonatal period with some information presented about calves, small ruminants, and camelid neonates. Students also spend several hours in the neonatal unit providing medical care of hospitalized patients under staff supervision.

Intended for students anticipating equine practice after graduation. Builds on material presented in the foundation courses to provide supplemental instruction in the medical and surgical problems of the horse. Lectures are case-based and emphasize disorders likely to be encountered in equine practice (colic, traumatic injuries, upper respiratory tract disorders, pancreatic disease, etc.). Laboratories emphasize diagnostic and therapeutic procedures in which an entry-level equine practitioner should be competent.

VTMED 6541 Surgical Pathology Spring, summer, fall. 1–2 credits, variable; one or two weeks, approx. eight hours per day for 1 credit per week. Prerequisite: second-, third-, and fourth-year veterinary students by permission of instructor. Letter grades only. S. McDonough.

Provides hands-on experience in the Surgical Pathology Service of the Department of Biomedical Sciences. Working with the attending pathologist, students examine tissue specimens histologically, propose diagnoses, and discuss their interpretations. Students may enroll in this course only through the Office of Student Records within the official add/drop period. All requests to enroll must be accompanied by the Supplemental Enrollment Form indicating Dr. McDonough’s approval of the enrollment and the amount of credit to be awarded. Second-year students should not enroll for any term other than summer unless they have actually reserved a January or spring-break slot through Dr. McDonough.

Provides students who have a special interest in dairy practice the opportunity for in-depth discussions of special problems in bovine medicine and surgery. Emphasizes case discussions, physical examination techniques, and ethical and practical matters. Emphasizes individual cow treatment.

VTMED 6543 Special Problems in Small-Animal Medicine Spring. 1 credit. Minimum enrollment 10; maximum 40. Prerequisite: third- and fourth-year veterinary students. S–U grades only. K. Simpson (coordinator) and staff. Students work through selected problems in small-animal medicine in two-hour weekly seminars. The focus is on the medical problems associated with cases using historic, clinical, clinical pathologic, and pathologic findings to elucidate basic pathophysiologic principles of disease. The overall objective is to give future small-animal practitioners skills in the approach to clinical problems with specific emphasis placed on history taking, clinical signs and examination skills, assessment of clinical pathology data and diagnostic materials (radiographs, ultrasonics), treatment plans, and prevention.

The course content gained in Foundation Course V and, under the instruction of a clinical faculty member, is aimed at facilitating the use of that knowledge into the practical skills of managing clinical cases.

Professional practice and financial managers teach veterinary medical students the essential elements of a successful practice, concentrating on management and organizational skills. Topics include basic practice organization, leadership styles, career planning, discipline, financial management, human resource management, marketing, building and maintaining clients, practice growth, personal finances, money management, taxes, and the law, malpractice, medical records, inventory and pharmacy management, and contracts.

VTMED 6545–6546 Sheep and Goat Medicine Spring, 6545, lec; 6546, lab. Lec. 1 credit; lab. 0.5 credit. Prerequisite: third- and fourth-year veterinary students. Lab corequisite: Sheep and Goat Medicine lec. S–U grades only. M. C. Smith.

Discusses diagnosis, treatment, and prevention of medical and surgical problems of individual small ruminants and of sheep and goat herds. Basic information on breeds, behavior, nutritional requirements, and management systems is supplied. Economically important contagious or metabolic diseases are discussed in depth. The diagnostic evaluation and differential diagnoses for common clinical presentations such as skin disease, neurologic disease, lameness, and mastitis are considered. Herd monitoring of economically important parameters and applied aspects of abortions and neonatal losses are addressed. Breeding systems, pregnancy diagnosis methods, correction of dystocia, and common surgical procedures are discussed and demonstrated in laboratory sessions.

VTMED 6547 Clinical Ophthalmology Spring. 0.5 credit. Prerequisite: third- and fourth-year veterinary students. S–U grades only. R. Riis, N. Irby, and T. Kern.

The principles and practice of entry-level veterinary ophthalmology introduced in Foundation Course V. Introduction to Veterinary Ophthalmology, are supplemented by lectures and discussions that emphasize species differences, basic surgical decision-making, and recognition of ocular conditions appropriate for referral. One of the four class periods is devoted to ocular surgical techniques performed on cadaver tissues.

VTMED 6548 Dairy Production Medicine Fall. 2 credits. Minimum enrollment 6; maximum 14. Prerequisite: third- and fourth-year veterinary students. S–U grades only. C. Guard.

Intermediate course in techniques and procedures used by veterinarians in modern dairy practice. Many of these activities fall outside the traditional boundaries of medicine, surgery, and theriogenology and might include housing, facilities, manure management, and employee education. Data analysis, disease and productivity monitoring, and evaluation of deviations from targeted performance are used to plan cost-effective interventions or corrections, followed by continued surveillance to monitor their effect. Students are introduced to the dominant software currently used in dairy management. Local dairy herds serve as additional laboratories for class projects.

VTMED 6550 Clinical Pharmacology Spring. 0.5 credit; may be repeated for credit max. of two times. Prerequisite: third- and fourth-year veterinary students. S–U grades only. W. S. Schwark.

Offered after Foundation Courses I–V and formal exposure to pharmacology course work is completed. The course is designed to familiarize students with drug use in the clinical setting and uses ongoing cases in the Cornell University Hospital for Animals as a teaching tool. Pharmacokinetic concepts are emphasized, with a focus on the rationale for drug choice, alternative drug choices available, pharmacokinetic considerations, and potential drug interactions/toxins. Course is offered at the time students are about to embark on their clinical rotations. It is designed to emphasize practical aspects of pharmacology in the clinical setting, using basic concepts obtained during formal course work. The onus is placed on the student to explain/rationalize drugs employed in clinical cases in the teaching hospital.

VTMED 6551 Topics in Veterinary Emergency and Critical Care Medicine Spring. 1 credit. Minimum enrollment 20. Prerequisite: third- and fourth-year veterinary students; for all others, permission of instructor. S–U or letter grades. D. Fletchere.

This course builds upon the foundation built in Block V. It will consist of a combination of lecture and case discussion sections. Although all of the discussions will center on small animal medicine, the same principles often apply to both small animal and large animal situations. Topics that MIGHT be covered include a selection from the following list: shock, trauma, stabilization, cardiopulmonary resuscitation, respiratory emergencies, cardiac emergencies, endocrine emergencies, acute renal failure, hemolytic emergencies, transfusion medicine, respiratory monitoring, hemodynamic monitoring, acute abdomen, emergency surgical procedures, and sepsis. The class will focus on both emergency stabilization and management of critically ill patients.

VTMED 6554 Reptile and Amphibian Medicine and Surgery Spring. 1.5 credits. Minimum enrollment 10; maximum 40. Prerequisite: third- and fourth-year veterinary students or graduate students. Letter grades only. G. V. Kollia.

Designed to introduce veterinary students to the basic principles and practice of reptile and amphibian husbandry, management, diseases and medicine, and surgery.

VTMED 6555 Dairy Business Management and Health Economics Spring. 2 credits. Minimum enrollment 5; maximum 18. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. L. Warnick and C. Guard.
This course helps veterinary students understand basic principles of dairy economics and business management and develop specific skills used by veterinarians in health economic decision making. Three main topic areas are covered: (1) overview of dairy economics from regional and national perspectives; (2) the terminology and concepts used in dairy business financial analyses and economic decision-making; (3) dairy health economics, including the application of economic tools to decisions related to disease treatment, health maintenance, and productivity.

VTMED 6556 Dairy Herd Health Epidemiology

Veterinarians are increasingly asked to advise dairy producers on productivity and management issues. This course addresses the relationships of dairy cattle diseases with herd-performance parameters. Through a combination of lectures and laboratory exercises, students learn analytic techniques and computer software skills to evaluate dairy herd disease and production problems. Topics include (1) how often production diseases occur and when; (2) how they are interrelated; (3) the impact of disease on milk production, reproductive performance, and risk of culling; and (4) how to use this information in production medicine.

VTMED 6557 Exotic Small Mammals as Pets
Spring. 1.5 credits. Maximum enrollment 80. Prerequisite: third- and fourth-year veterinary students and graduate students. Students enrolled in VTMED 6603 encouraged to enroll. Letter grades only. J. K. Morrisey.

Concentrates on the husbandry, clinical presentation, diagnosis, and treatment of common diseases of nontraditional small mammals that are kept as pets. These species include ferrets, rabbits, guinea pigs, chinchillas, hamsters, gerbils, hedgehogs, sugar gliders, and other animals. Grading is based on a midterm and final exam. Information regarding these species in the laboratory setting will also be discussed.

VTMED 6559 Applied Dairy Nutrition for Practitioners
Spring. 2 credits. Minimum enrollment 5; maximum 25. Prerequisite: veterinary students or permission of instructor. S-U grades only: D. Nydam, T. Overton, and others.

Provides a foundation in the principles of dairy cattle nutrition for veterinary students interested in dairy production medicine. Emphasizes integration of the principles of dairy cattle nutrition with practical rational formulation with troubleshooting on dairy farms, both preventive and curative.

VTMED 6560 Small-Animal Veterinary Dentistry
Spring. 0.5 credit. Prerequisite: second-, third-, and fourth-year veterinary students who have completed Block III. S-U grades only: J. R. Rawlinson.

This is an introductory-level course in small-animal dentistry. Students will complete an online auto-tutorial course that covers the basics of oral examination, dental radiography, oral pathology, and treatment options in the disciplines of oral surgery, periodontology, endodontics, orthodontics, restorative dentistry, and prosthodontics. This will be complemented by eight nonmandatory one-hour question-and-answer sessions and two mandatory three-hour lectures covering oral examination, dental radiography, basic periodontology, and simple and advanced extractions.

VTMED 6561 Advanced Imaging: Cross Sectional and Functional Modalities
Spring. 1 credit. Minimum enrollment 20; maximum 80. Prerequisite: VTMED 6501. Letter grades only. M. Thompson, N. Dykes, and P. Scrivani.

Elective course designed to complement Block V Distribution course in a lecture and laboratory format designed to introduce veterinary students to nonradiographic imaging modalities including ultrasound, CT, MRI, and nuclear scintigraphy. Content includes diagnostic imaging, abdominal ultrasound, and functional imaging of bone, thyroid, kidney, and liver. A focus on recognition of appropriateness of examination and modality will be emphasized. The course focuses on conditions affecting dogs and cats.

VTMED 6562 Animal Pain: Recognition, Prevention, and Treatment in the 21st Century

This elective course will form the foundation of veterinary pain physiology, pathophysiology, assessment, treatment, and prevention for companion and farm animals. Emphasis will be placed on pharmacologic and nonpharmacologic treatment of acute pain, surgical pain, and chronic pain typical of cancer, degenerative diseases, and surgical or traumatic disease disease in small animals, horses, and food and farm animals. Final project will utilize either case-based or problem-based critical literature review to benefit students’ understating of pain recognition and treatment in animal patients.

VTMED 6600 Theriogenology Service
Spring. 2 or 4 credits. Maximum enrollment 5 per rotation; Maximum enrollment 5 per rotation. Prerequisite: VTMED 5510; third- and fourth-year veterinary students. Letter grades only. S. Bedford, M. DaSilva, and staff.

Exposure to clinical procedures in theriogenology as provided by Cornell University Hospital for Animals patient load and augmented by teaching herd animals. Clinical techniques taught include palpation and ultrasonic evaluation, artificial insemination and pregnancy diagnosis in mares; semen collection and evaluation in stallions; and foaling monitoring and neonatal foal care. Additionally, students get exposure to breeding management and assisted reproduction in mares at the Equine Park and to theriogenology clinical cases and emergencies in CUHA comprising all equine, camelid, and canine species.

VTMED 6601 Cardiology Service
Fall and spring. 2 credits. Minimum enrollment 1 per rotation; maximum 2. Prerequisite: VTMED 5510; third- and fourth-year veterinary students. Letter grades only. S. Moise and staff.

Provides students with the opportunity to put into practice what they have learned in the foundation years. The management of the most common cardiac diseases is emphasized, including congestive heart failure, arrhythmias, and secondary cardiac diseases. All species are examined, large and small, although the majority are small animals. Diagnostics, including cardiovascular ultrasound, electrocardiography, radiography, and echocardiography, are taught. The rotation includes clinical work, didactic teaching, and self-initiated digging for information.

VTMED 6602 Laboratory-Animal Medicine
Fall and spring. 2 credits. Maximum enrollment 2 per rotation. Prerequisite: VTMED 5510; third- and fourth-year veterinary students. Letter grades only. M. Martin.

The practice of laboratory-animal medicine requires a combination of preventive programs, clinical skills, knowledge of various species’ biologies, familiarity with research methodology, and acquaintance with state and federal regulations. This course is an introduction to that specialty. Accompany laboratory-animal veterinarians on clinical rounds of Cornell’s research-animal housing and participate in laboratory diagnostic work. Review sessions are on the biology, medicine, pathology, and husbandry of rodents, rabbits, and primates and on current legislation regulating the care and use of research animals. The course may include field trips to other institutions.

VTMED 6603 Clinical Wildlife-, Exotic-, and Zoo-Animal Medicine
Fall, winter, spring, and summer. 2 credits. Maximum enrollment 3 per rotation (plus one intern or extern). Prerequisite: VTMED 5510; third- and fourth-year veterinary students. Letter grades only: G. V. Kollias and staff.

Introduces students to primary medical care of nontraditional pet species, zoo animals, and native wildlife. Students, directly supervised by the attending clinician, are responsible for the assessment, physical examination, and medical management of exotic animal species presented to the Cornell University Hospital for Animals. Other opportunities available to assist in the development of clinical skills in wildlife-, zoo-, and exotic-animal medicine include the wildlife clinic cases at the Cornell Wildlife Health Center, ongoing wildlife research and service projects, and trips to the Rosamond Gifford Zoo. Successful completion of the course requires satisfactory performance during this 14-day clinical rotation.

VTMED 6604 Quality Milk
Fall. 2 credits. Prerequisite: VTMED 5510; third- and fourth-year veterinary students. Letter grades only. R. Gonzalez and QMPS staff.

Covers the causes, diagnosis, treatment, and prevention of bovine mastitis. Stresses the role of management practices. Includes lectures, readings, discussions, laboratory exercises, and farm visits as part of the Quality Milk Production Services. Participants are expected to complete a case study on a dairy farm with udder-health problems and present their findings to the producer and farm personnel. Grading is on performance during the course and a final exam.
VTMED 6605 Special Opportunities in Clinical Veterinary Medicine
Fall, spring, and summer. Prerequisite: VTMED 5510; third-and fourth-year veterinary students. S–U grades only. W. Miller and N. Ducharme. Provides opportunities for students finished with Foundation Course V to explore professional areas not available through the regular curriculum. Blocks of two to four weeks are usually spent at other teaching hospitals, research laboratories, or zoological facilities. Student proposals are submitted to the assistant dean for learning and instruction for review and approval. Onsite supervisors of the block are required to evaluate each student formally.

VTMED 6607 Poultry Medicine and Production Rotation
Fall, two-week rotation that takes place at University of St. Hyacinthe or University of Guelph in alternating years. 2 credits. Prerequisite: VTMED 5510; third-and fourth-year veterinary students. Recommended: VTMED 6522. K. A. Schat. Provides an introduction in practical poultry medicine by instruction of lectures, discussions, and laboratory sessions including postmortem examinations. Students also visit hatcheries, broiler layer, and turkey farms.

VTMED 6608 Clinical Oncology
Fall and spring. 2 credits. Maximum enrollment 4 per rotation. Prerequisite: VTMED 5510; third-and fourth-year veterinary students. Letter grades only. K. M. Rassnick and staff. Management and prevention of cancer in companion animals represents a significant component of the practice of veterinary medicine. The focus of this clinical rotation is the development of a comprehensive set of skills necessary for a veterinarian to become an advocate for the client/patient with cancer. These skills include appropriate initial evaluation, definition, and planning of care for treatment and effective client and referring-veterinarian communication. Ability to access relevant information from numerous sources including a cancer registry and ability to understand and apply principles of surgical, medical, and radiation oncology as well as techniques specifically related to minimize pain and treatment-related effects in cancer patients.

VTMED 6609 Animal Behavior Clinic
Fall, winter, spring, and summer. 2 credits. Maximum enrollment 2 per rotation. Prerequisite: VTMED 6751; third- and fourth-year veterinary students. S–U grades only. K. A. Houpt and staff. Students participate fully in the Animal Behavior Clinic: answering telephone, mail, and e-mail inquiries; observing and taking charge of behavior cases. To answer inquiries, the student is expected to consult several behavioral textbooks or other sources. Taking charge of the cases includes reading the entire behavioral history, interviewing the owner, forming a diagnosis, conferencing with Dr. Houpt or a behavioral resident as to the proper behavioral and pharmacological treatment, demonstrating behavior-modification techniques, and writing a letter to the client. Follow-up calls to earlier cases may be made.

VTMED 6610 Hard Health and Biosecurity Risk Evaluation Using the NYS Cattle Health Assurance Program (NYSCHAP) Model
Summer; fall. 2 credits. Minimum enrollment 5. Prerequisites: VTMED 5400; second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. D. V. Nydam, K. Kaufman, F. L. Welcome, and Diagnostic Lab faculty. Introduces students to the identification of disease risk and the evaluation of cattle operations, focusing on animal health, food safety, and the environment. The course combines information on risk assessment, creation of herd plans, biosecurity, Johne’s disease, standard operating procedures, global trade, and environmental issues. Additionally, two local farms are visited to give students the opportunity to implement knowledge gained in lectures.

VTMED 6611 Small-Animal Orthopedic Surgery Service
Fall, winter, spring, and summer. 2 credits. Letter grades only. R. Todhunter and small-animal surgery faculty. Clinical service rotation that exposes the student to the practice of surgery under hospital conditions. Students participate in office hours; diagnostic techniques; planning of therapy; and daily care of dogs and cats under the direction of interns and surgical residents in training, and faculty. Students assist experienced surgeons in the operating room. Client communications and the basics of efficient practice are emphasized. Students are expected to successfully perform an orthopedic examination and localize the lameness by the end of the rotation. Shelter dogs and cats will be neutered by the students on the service as time permits.

VTMED 6612 Large-Animal Orthopedic/ Sport Medicine Surgery Service
Fall, winter, spring, and summer. 2 credits. Letter grades only. N. Ducharme, A. Nixon, L. Fortier, and staff. Clinical rotation structured to provide supervised clinical experience in the practice of large-animal surgery. Under the direction of faculty and house staff, students participate in the diagnosis, surgical treatment, and care of patients presented to the Equine and Farm Animal Hospital. Training through patient care is supplemented by formal rounds and didactic instruction.

VTMED 6613 Equine Specialty Rotation
Fall. 2 credits. Minimum enrollment 5; maximum 10. Prerequisite: VTMED 5510. Priority given to fourth-year veterinary students in equine pathway. Letter grades only. Live animals used for learning. G. Perkins and R. Hackett. The objective of the rotation is to teach students basic diagnostic recognition and clinical skills for those interested in equine practice. These skills prepare students to respond on equine-related calls on their first day of work. The Cornell horse population is used to teach these practical skills. The emphasis of this elective is hands-on with discussion, rounds, and lectures. The rotation includes lectures and corresponding discussion groups to cover the scientific basis, controversies, industry-specific state of the art and clinical indications, contraindications, and potential complications of the various modalities.

VTMED 6614 Large-Animal Clinical Emergency and Critical Care
Summer and spring. 2 credits. Prerequisite: third- and fourth-year veterinary students. Letter grades only. R. Radcliffe and staff. The evaluation and management of critical patients and other emergency problems represents a significant component of the practice of large-animal veterinary medicine. As emergency cases are frequently presented to these practitioners, it is imperative that veterinarians are well prepared. The focus of this clinical rotation is for students to acquire the knowledge, skills, and thought processes necessary to triage large-animal emergencies and manage critical patients. These skills include the appropriate evaluation, stabilization, and treatment of emergency patients and the management of post-operative cases and other critical patients. Participants access relevant information from various sources related to emergency and critical-care medicine and surgery in an effort to understand and apply these principles to clinical cases. Participation requires that students have patient care responsibilities in the Large-Animal Intensive Care Unit of the Cornell University Hospital for Animals and work closely with technicians and clinicians to develop familiarity with critical-care and nursing procedures. In addition, students will learn common veterinary skills and techniques using teaching animals when time permits. The large-animal emergency and critical-care rotation is primarily an after-hours rotation.

VTMED 6615 Special Topics in Ambulatory and Production-Animal Medicine
Fall, winter, spring, and summer. 2 credits. Prerequisite: second-, third-, and fourth-year veterinary students; VTMED 5600 and permission of instructor. Letter grades only. M. E. White and staff. Provides specialized experiences in the Ambulatory and Production Medicine Service. Consists of participation in scheduled and emergency farm calls and completion of projects designed to provide experience in herd problem-solving, records analysis, and implementing herd-health programs. Clinical service assignments are planned to meet individual student goals. Examples of focus areas available include livestock production medicine, dairy reproductive examinations, and small-ruminant medicine.

VTMED 6616 Veterinary Dentistry Service
Fall, winter, spring, summer. 2 credits. Prerequisite: third- and fourth-year veterinary students who have completed Foundation Course V. Letter grades only. J. Rawlinson. This rotation is designed to introduce students to clinical veterinary dentistry with an emphasis on small animals. The goal of this rotation is for students to become proficient in completing thorough oral examinations, identifying oral pathology, interpreting dental radiographs, discussing appropriate dental therapeutic options, and performing dental prophylaxis, basic periodontal procedures, and basic and advanced extractions.
VTMED 6617 South American Camelid Specialty Rotation
The objective of the rotation is to provide students with the necessary skills to be able to attend a routine camelid medical problem upon graduation. During the first week, students will work with the alpaca herd at the University of Massachusetts, Amherst, learning basic clinical skills and common health problems under the supervision of Dr. Purdy. During the second week, clinicians at Cornell University will provide specialty lectures and laboratories covering advanced medical problems and clinical techniques that will build upon the skills learned during the first week. The rotation will also include farm visits to familiarize students with different management systems and some of the clinical laboratories will be performed during these visits.

VTMED 6620 Introduction to Ambulatory Primary Care Medicine
Spring, summer, fall. 1 credit. Prerequisite: first-, second-, and first-semester third-year veterinary students. Letter grades only. M. White.
This a clinical service rotation in which students accompany ambulatory clinicians on farm and stable calls and learn the skills and procedures necessary for operation of a modern veterinary practice offering primary care and production medicine services to large-animal clients. Routine herd health visits are conducted for cattle, horses, sheep, goats, and swine. Reproductive evaluations (including pregnancy and fertility examinations), sick and lame animal evaluation and treatment, and other health maintenance procedures make up the majority of nonemergency work. Emergencies are usually obstetric cases, injuries, and acute illness. In addition to assisting with routine scheduled work, students participate in diagnosis and medical or surgical treatment of ill or injured animals. This includes rotating assignments for night and weekend duty.

VTMED 6621 Introduction to Small-Animal Clinical Orthopedics
Fall and spring. 2 credits. Prerequisites: UVIS training; ability to perform physical examination through Block VI lab; permission of instructor. No expertise necessary in orthopedics. Letter grades only. This distribution will allow students early in the curriculum early exposure to small-animal clinical orthopedic practice. Students will shadow the senior students for the first week until they and the supervising faculty are sure they can function more independently. Students will perform activities expected of a senior DVM student whose primary responsibility is patient care, through which they learn how to prevent, diagnose, and treat clinical orthopedic disease. History taking, physical and orthopedic exam, radiography, laboratory testing, diagnosis, and options for treatment will be learned. Students will participate in rounds, scrub into surgery, administer post-operative care, learn the SOAP format for patient management, discuss patient care with owners, become familiar with electronic UVIS records; write discharge instructions and review them with owners and discharge patients.

VTMED 6622 Small-Animal Emergency Clinical Experience
Summer (Fall). 2 credits. Prerequisites: completion of first year of veterinary school; permission of instructor. Letter grades only. Management of both emergent and critical cases represents a significant component of the practice of veterinary medicine. The focus of this course will be the initial development of a knowledge base and skill set necessary for a veterinarian to perform adequately in these areas, within a structured format. These skills will include the appropriate evaluation (triage) and stabilization of emergency patients, the management of postoperative and other critical patients, and sensitive and effective client communication. Participants will work closely with fourth-year students, interns, residents, technicians, and faculty on the Emergency and Critical Care Service to become familiar with technical and nursing procedures as well as to develop clinical skills and a systematic approach to clinical cases.

VTMED 6630 Student Rounds in Radiology
Fall and spring. 0.5 credit. Does not count toward elective rotation credits. Prerequisite: permission of instructor. P. Scrvani, M. Thompson, and N. Dykes. Radiology rounds are a gathering of veterinarians and veterinary students to discuss the condition and imaging diagnosis of patients in the hospital. These are student-presented rounds and all students are expected to attend. Presentations emphasize the selection of the appropriate imaging examination, detection of imaging signs, diagnostic or prognostic importance of imaging signs, and the impact of the imaging examination on subsequent patient care.

VTMED 6631 Diagnosis and Treatment of Diseases of the Dairy Cow—A Case-Based Approach Utilizing Hospitalized Cases
Fall, winter, spring, summer. 0.5–1 credit. 0.5 credit requires participation in seven sessions; 1 credit requires participation in 14 sessions during the semester; students may change credits up through seventh week of class; course may be taken up to three semesters. Maximum enrollment 14. Students selected after submission of résumé, letter of intent, and documentation of career focus on dairy cattle. Prerequisite: completion of first-year vet curriculum and permission of instructor. S–U grades only. T. Divers and S. Fubini. This course is designed for dairy-focused veterinary students and will expose them to diagnosis and management of diseases of dairy cattle, focusing on individual animal medicine and surgery rather than production. According to and utilizing existing hospital cases, students will meet with clinicians during the academic year to examine and discuss cases. Case logs, literature review, attendance, and class presentations will be required.

VTMED 6720 The Literature and Subject Matter of Natural History
Spring. 1 credit. Minimum enrollment 10; maximum 30. Prerequisite: third- and fourth-year veterinary students. S–U grades only. H. E. Evans. Introduces natural history literature. Shows and discusses materials relating to the earth sciences and the biology of plants and animals from around the world. Students are required to show and discuss a book that concerns natural history in a country of their choice and submit a one-page book report for duplication. (A recommended reference text is The Cambridge Illustrated Dictionary of Natural History by R. J. Lincoln and G. A. Boxshall, 1990.) Golden Guides for mammals, birds, reptiles, fishes, pond life, seashore life, and tropical fish may be given to participants.

VTMED 6721 Introduction to Avian Biomedicine
Spring. 1.5 credits. Minimum enrollment 10; maximum 60. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. G. V. Kollias, A. J. Bezuidenhout, and D. Muscarella. Introduction to avian biology for veterinary students. Includes lectures in the laboratories involving avian anatomy, physiology, and natural history. The course emphasizes the development of a strong foundation in avian biology that is applied in VTMED 6522 Diseases of Birds and VTMED 6532 Avian Medicine and Surgery.

VTMED 6722 AQUAVET 1: Introduction to Aquatic Veterinary Medicine
Four weeks of full-time instruction at Woods Hole, Mass., immediately after spring semester. 4 credits. Maximum enrollment 24 students from Cornell U., the U. of Pennsylvania, and other U.S. colleges and schools of veterinary medicine. Available, by competitive application process, to veterinary and graduate students. S–U grades only. Fee charged. P. R. Bowser. Sponsored by Cornell U., the U. of Pennsylvania, and three marine-science institutions at Woods Hole: the Marine Biological Laboratory, Woods Hole Oceanographic Institution, and Northeast Center of the National Marine Fisheries Service. Introduces veterinary students to aquatic-animal medicine. The marine environment is described and visited on field trips in the Woods Hole area. Specific aspects of the comparative anatomy, physiology, nutrition, microbiology, pathology, and medicine of a variety of marine and freshwater species are discussed. Some emphasis is placed on systems of aquaculture. The specific diseases of a few selected species are presented as examples. The course is taught by an invited faculty of 35 individuals who are leaders in their respective fields of aquatic-animal medicine. Students present seminars on appropriate topics.

VTMED 6723 Veterinary Medicine in Developing Nations
Spring. 2 credits. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. S–U grades only. Offered even-numbered years. K. A. Schat. Veterinary medicine has an important role to play in developing nations by improving and providing economical sources of animal protein for human consumption and protecting ecological resources. This seminar course provides interested veterinary students with information on and insights into the multitude of complex issues facing U.S. veterinarians working in developing nations.
VTMED 6724 Senior Seminar
Fall and spring. 0.5 credit. Does not fulfill 1-credit Set VII minimum. Prerequisite: first-, second-, and third-year veterinary students. S–U grades only. M. Smith. Attendance at all of the senior seminar sessions presented during the academic year constitutes acceptable completion of this course. If not completed during semester enrolled, an incomplete grade will be assigned and the course must be completed during the following semester or a failing grade will be assigned.

VTMED 6726 Introduction to the Professional Literature
Spring. 1 credit. Minimum enrollment 6; maximum 20. Prerequisite: first-, second-, third-, and fourth-year veterinary students. S–U grades only. S. Whitaker. Introduces veterinary students to the professional and biomedical literature, including development of critical reading skills. Students become familiar with the broad range of professional and biomedical literature and are encouraged to develop a rigorous approach to journal and scientific article review. Secondary emphasis is on developing skills in library and bibliographic search techniques and strategies for personal information management, as well as exploring the use of veterinary-related online information.

VTMED 6727 Introduction to Community Practice Service
Fall, winter, spring, and summer. 1 credit. Prerequisite: first- and second-year veterinary students; permission of instructor. S–U or letter grades. W. E. Hornbuckle. Introduces veterinary students to primary care small-animal clinical practice through direct exposure to the Community Practice Service of the Cornell University Hospital for Animals. Students observe and assist with restraint, examination, and routine treatment of pets and communication with clients. Successful completion requires satisfactory participation during 10 half-days of clinical service.

VTMED 6728 Clinical Management of Native Wildlife
Fall, spring, summer (credit given in fall). 1 credit. Maximum enrollment 30 students per semester. Prerequisite: first-, second-, third-, and fourth-year veterinary students. Letter grades only. G. V. Kollas and staff. Introduces veterinary students to primary care for native wildlife and to wildlife issues that practicing veterinarians face on a daily basis. Students are responsible for the assessment, physical examination, and medical care of native wildlife presented to the Cornell University Wildlife Health Center by the public and local wildlife rehabilitators. Student activities are directly supervised and assessed by faculty and residents on a daily basis. Scheduling is organized by a designated student supervisor. Successful completion of the course requires 40 hours of satisfactory supervised participation per semester in the clinic. Clinic times are appropriately scheduled throughout the semester. Students are required to submit two case summaries, or alternatives approved by the course leader, before the end of the semester and a log of their clinical hours.

VTMED 6729 Introduction to Equine Practice
Spring. 0.5 credit. Maximum enrollment 50. Prerequisite: veterinary students. Intended for students with little or no experience working with horses. Letter grades only. R. Hackett and C. Collyer. Introductory course in equine husbandry. Lecture topics include horse breeds and colors, housing facilities and fencing, and overview discussions of the racing, showing, and breeding industries.

VTMED 6730 Behavior Problems of Horses
Spring. 1 credit. Prerequisite: one semester of veterinary curriculum; first-, second-, third-, and fourth-year veterinary students. S–U grades only. K. A. Houpt. The goal of this course is to give veterinary students the ability to treat the behavior problems of horses. History-taking, counseling, diagnostic tests, follow-up, the importance of cooperation with the referring veterinarian, prevention of behavior problems, training techniques of value to the practitioner, and socialization of foals are presented.

VTMED 6731 Behavior Problems of Small Animals
Spring. 1 credit. Minimum enrollment 10. Prerequisite: one semester of veterinary curriculum; first-, second-, third-, and fourth-year veterinary students. S–U grades only. K. A. Houpt. The goal of this course is to give veterinary students the ability to treat the behavior problems of cats and dogs. History-taking, counseling, and follow-up methods are presented. Each student has the opportunity to participate in three cases. Behavioral and pharmacological treatments for behavior problems are presented.

VTMED 6733 Veterinarians and Food-Animal Production Systems: An Introduction
Spring. 1 credit. Minimum enrollment 5. Prerequisite: first- and second-year veterinary students; permission of instructor. Letter grades only. D. V. Nydam and invited speakers. This seminar course uses an interactive format and multiple experts from these fields to introduce future veterinarians to various food-animal production systems, how veterinarians interact with them, and the synergy between these systems and veterinarians in society. Each week the production structure of the dairy, beef, swine, poultry, or aquaculture industry, veterinarians’ role in them, and career opportunities and expectations are discussed. The offering is intended for first- or second-year students so that they can plan appropriately to take additional courses or set up externships in the following years.

VTMED 6734 Companion Animal Welfare Issues
Spring. 1 credit. Minimum enrollment 3; maximum 50. Letter grades only. J. M. Scallen and L. Miller. Companion animal welfare issues have become a major concern for many American communities. Precipitated by the changing status of companion animals, the proliferation of free-roaming cats, and human safety issues, communities are considering (or have passed) breed-specific bans, restrictions on declawing, and solutions for “free-roaming” cats. This course will address these and other issues such as pet surplus—animals entering shelters and those euthanized in shelters; the “no-kill” movement, reasons for relinquishment to shelters; recognition and documentation of animal abuse; the use of pediatric neutering in population control—studies relating to safety and potential adverse effects; dogs and cock fighting and the role of the veterinarian in the recognition and reporting of these activities. The objective of the course is to provide information for veterinary students such that they can assume leadership with regard to these issues in their future communities.

VTMED 6735 Conservation Medicine
Spring. 1.5 credits. Maximum enrollment 80. Prerequisite: veterinary students, graduate students at CVM, others by written permission of instructor. Letter grades only. G. V. Kollas, A. J. Travis, and N. Abou-Maddi. Conservation Medicine will introduce students to the basic concepts of free-ranging and captive wildlife conservation and will engage veterinary students in issues of sustainable development relating to wildlife. The course will present information not included in other courses within the curriculum that is fundamental for veterinarians contemplating a career in conservation medicine, wildlife health, or zoological medicine. This course will complement existing courses in the curriculum including, but not limited to, Introduction to Avian Biomedicine, Avian Diseases, Veterinary Aspects of Captive Wildlife, Veterinary Medicine in Developing Nations, The Literature and Subject Matter of Natural History, Comparative Anatomy, Foreign Animal Diseases, Epidemiology of Infectious Diseases, Anatomy and Histology of Fishes, and Fish Health Management. Students will learn how wildlife populations are regulated by their environment and how such populations are managed and assessed. Various habitat preservation strategies will be presented and discussed. Conversely, for critical endangered species, the focus will be on ex situ recovery programs.

VTMED 6736 Pet Loss and Bereavement Counseling Course
Spring. 0.5 credit. S–U grades only. M. McEntee. This course introduces first- and second-year veterinary students to the key issues related to the loss of a companion animal and bereavement counseling. The course provides a structured background to assist students in developing the necessary skills to deal with clients and the grieving process. Students will participate in Cornell University’s Pet Loss Support Hotline, a telephone-based community outreach program designed to provide support to callers grieving the loss of a companion animal. Students actively participate in the prerequisite nine hours of training in the fall semester, followed by hands-on experience staffing the Pet Loss Support Hotline, attendance in rounds (twice a semester), and will maintain a case log and write one case report.

UNDERGRADUATE AND GRADUATE COURSES
These courses are taught by the faculty in the College of Veterinary Medicine but do not contribute to the D.V.M. degree requirements.
Biomedical Sciences

VTBMS 3460 Introductory Animal Physiology (and BIOAP 3110) (Undergraduate)
Fall. 3 credits. Prerequisites: one year of college biology, chemistry, and mathematics. S–U (letter grades by permission of instructor). E. R. Loew. For description, see BIOAP 3110.

VTBMS 4010 Genomic Analysis
Spring. 3 credits. Prerequisites: upper-level undergraduates and graduate students; BIOGD/VTBMS 4000 or equivalent by permission of instructor. Letter grades only. T. O'Brien. Overview of approaches and tools used in genomic research. Covers experimental and computational technologies as well as theoretical concepts important for the study of genomes and their function. Topics include genome sequencing and assembly, high-throughput sequencing, comparative genomics, genetic variation and complex traits, expression profiling and proteomics, genome modification and transgenesis, modeling network structure, and dynamics. Discussions will explore how genomic tools and approaches can be integrated to study biological systems.

VTBMS 6000 Special Projects in Anatomy
Fall. 1 credit per 2.5-hour period. Prerequisite: permission of instructor. S–U grades only. Biomedical science staff.

VTBMS 6100 Genomes as Chromosomes
Fall. 1 credit. Prerequisites: upper-level undergraduates and graduate students; others by permission of instructor or BIOGD 2810 and BIOBM 3320. Letter grades only. Offered alternate years. T. O'Brien and P. Cohen. The eukaryotic genome is partitioned into discrete structural units, the chromosomes. This course examines how chromosome organization is related to chromatin structure, gene expression, DNA replication, repair, and stability. Special emphasis is placed on how the linear arrangement of sequence features along the chromosome, such as genes and regulatory modules, relate to the functional organization of the genome in the nucleus. Experimental and computational approaches used to address chromosome structure and function are studied.

VTBMS 6110 Genomes Maintenance Mechanisms
Fall. first half of semester. 1 credit. Minimum enrollment 7. Prerequisites: upper-level undergraduates and graduate students; BIOGD 2810, BIOBM 3500, or 3550, or 30/L5320 or equivalents. S–U or letter grades. R. Weiss. Focuses on the molecular mechanisms used by eukaryotic cells to preserve genomic integrity. Topics include endogenous and exogenous sources of mutation, DNA repair pathways, and cell cycle checkpoint mechanisms. Also addresses how genome maintenance impacts genome plasticity and evolution, as well as the relationship between genomic instability and disease, including cancer.

VTBMS 6120 Overview of Model Genetic Organisms
Spring. 1 credit. Minimum enrollment 5; maximum enrollment 20. Prerequisites: upper-level undergraduates and graduate students; BIOGD/VTBMS 4000 or permission of instructor. S–U or letter grades. Offered alternate years. J. Schimenti and guest lecturers. Presents the features of various model organisms and provides the basis for conducting various types of genomics/genetics research. Model systems discussed are: Arabidopsis, yeast, Drosophila, C. elegans, zebrafish, and mice.

VTBMS 6200 Research Fellowship in Biomedical Sciences
Fall. 1 credit. Cannot be used to fulfill formal course requirements for DVM curriculum. Prerequisite: permission of instructor. S–U grades only. Offered by individual faculty members in the Department of Biomedical Sciences for DVM students undertaking research in research fellowship.

VTBMS 7010 Mouse Pathology and Transgenesis (also TOX 7010)
Fall. meets during second half of semester and relies on background information from NS BIOGD 4900, which meets during first half. Students interested in both courses must register for them separately. 1 credit. Maximum enrollment 12 students. Prerequisite: permission of instructor. Highly recommended: basic histology course (BIOAP 4150) and BIOGD 4900. Letter grades only. A. Nikitin and staff. Introductory course on contemporary mouse pathology explains principles and methods of pathology. The course focuses on systematic evaluation of new genetically modified mice, with particular attention to such topics as experimental design, validation of mouse models, and identification of novel phenotypes. Also included is supervised mouse necropsy.

VTBMS 7020 The Practice of Laboratory Animal Medicine
Fall. spring. 1 credit. Prerequisite: upper-level undergraduate or graduate standing; basic knowledge of anatomy and pathology in common non-primate species. S–U or letter grades. M. E. Martin. Laboratory animal veterinarians must be trained in the regulatory aspects of research and teaching utilizing animals; in addition, they must understand the principles of facility management and design. Also, to work with researchers, lab animal veterinarians must have knowledge of basic research methodologies and animal welfare issues. This course may also be of interest to other veterinarians, veterinary students, and researchers who wish to understand the workings of the specialized field that oversees and enables the use of animals in research and teaching. The topics covered include: Laboratory Animal Medicine: Historical Perspectives; Laws, Regulations, and Policies; Design and Management of Animal Facilities; Anesthesia; Conscious Sedation; Euthanasia; Techniques of Experimentation; Control of Biohazards Used in Animal Research; Selected Zoonoses/Xenozoonoses; Genetic Monitoring; Transgenic and Knock-out Mice; Factors Influencing Animal Research; Animal Models in Biomedical Research; Research in Lab Animal and Comparative Medicine; Lab Animal Behavior.

VTBMS 7030 The Biology and Diseases of Laboratory Animals
Fall, spring. 2 credits. Prerequisite: upper-level undergraduate or graduate standing; basic knowledge of anatomy and pathology in common non-primate species. S–U or letter grades. M. E. Martin. Intended for veterinarians entering the field of laboratory animal medicine. It may also be of interest to other veterinarians, veterinary students, and researchers with a basic knowledge of anatomy and pathology who use animals in research or teaching. This course will cover the main laboratory animal species (rodents, rabbits, nonhuman primates, ruminants, swine, dogs, cats, ferrets, reptiles, amphibians, and fish). The biology, husbandry, diseases, pathology, and main research uses of these species will be covered. The course will meet for two hours weekly and will extend over the course of two years.

VTBMS 7130 Cell Cycle Analysis
Spring. 1 credit. Minimum enrollment 5 students. S–U grades only. Offered even-numbered years. A. Yen. Presents a brief historical review of the cell cycle; a summary of cell-cycle regulatory processes, and practical methods for cell-cycle analysis, including mathematical representations. Topics include growth control of bacterial cell cycle including chemostats, mammalian-cell tissue culture, cell synchronization, flow cytometry, age-density representation, G1 regulation, labelable regulatory protein models, cell transformation, regulation by growth factors and the cytoskeleton, cyclin/E2F/RB regulatory model, practical examples for analysis of cell-cycle phase durations, cell-cycle phase specific growth factor sensitivity, and timing of RB protein phosphorylation within the cell cycle. The objective of the course is to present graduate students with methods for cell-cycle analyses that will be used in their research.

VTBMS 7200 Animal Physiology and Anatomy Seminar
Fall. spring. 1 credit. Prerequisite: admission to graduate field of physiology; permission of instructor. S–U or letter grades. Designed to train graduate students in the field of physiology to become professional scientists. Students are required to give a seminar on their research, and feedback are provided. Throughout the semester, advice is provided on subjects such as preparation of manuscripts, seminars, and grant proposals.

VTBMS 7880 Seminar in Surgical Pathology
Fall. spring. 1 credit. Intended for residents in anatomic pathology; third- and fourth-year veterinary students may attend. Letter grades only. D. H. Slafer and faculty of the Section of Anatomic Pathology and Visiting Pathologists. The major objective of this discussion and seminar course is to introduce the residents to the discipline of surgical pathology. Selected material from the Surgical Pathology Service is prepared in advance for independent review by the residents. The material is presented in a slide-seminar format by the residents under the review of the faculty. Emphasis is placed on pathogenesis, etiology, and pathologic descriptions of the lesions. In addition, appropriate guest lecturers cover specific areas of interest and special topics not encountered in the departmental service programs.
Clinical Sciences

VETCS 6180 Principles of Medical Imaging (also BME 6180)
Fall. 3 credits. Prerequisite: graduate D.V.M.s or equivalent in residency or graduate training programs. Letter grades only. Y. Wang and N. Dykes. For description, see BME 6180.

VETCS 7000 Pathophysiology of Gastrointestinal Surgery
Fall. 1 credit. Prerequisite: D.V.M. or equivalent. S–U grades only. Offered every third year. S. L. Fubini. Initially presents normal anatomy and physiology of the gastrointestinal system in caninores, herbivores, and ruminants. This is followed by in-depth discussion of the pathophysiologic mechanisms and sequelae of gastrointestinal obstructions including reperfusion injury, peritonitis, adhesions, and short bowel syndrome. This course emphasizes development of an advanced understanding of surgically relevant gastrointestinal problems leading to appropriate decision-making.

VETCS 7010 Pathophysiology of Orthopedic Surgery (Graduate)
Spring. 1.5 credits. Prerequisite: D.V.M., M.D., or equivalents or permission of instructor. S–U grades only. Offered every third year. A. J. Nixon. Provides specialized training in the anatomic, physiologic, and pathologic process of musculoskeletal diseases in animals and humans, with special emphasis on surgical diseases of tendons, bones, and joints.

VETCS 7020 Pathophysiology of Respiratory and Cardinal Surgery (Graduate)
Fall. 1.5 credits. Prerequisite: D.V.M. or equivalent. S–U grades only. Offered every third year. R. P. Hackett, S. L. Fubini, and N. G. Ducharme. Using lectures and group discussions, the objective of this course is to explain the pathophysiologic of various cardiovascular diseases (cardiac arrest, cardiac arrhythmia under anesthesia) and airway disease (thoracic and upper-airway disease). As a basis for these abnormal physiologic and hemodynamic processes of ventilation are reviewed. The emphasis is placed on understanding these mechanisms and outlining the surgeon's response to them.

VETCS 7030 Surgical Principles and Surgery of the Integumentary System (Graduate)
Spring. 1 credit. Prerequisite: graduate D.V.M.s or equivalent in residency or graduate training programs. S–U grades only. Offered every third year. S. L. Fubini. Designed for surgery residents and graduate students. It is largely discussion format and examines surgical principles and surgery of the integumentary system.

VETCS 7040 Pathophysiology of Urogenital Surgery (Graduate)
Fall. 1 credit. Prerequisite: graduate D.V.M.s or equivalent in residency or graduate training programs. S–U grades only. Offered every third year. R. P. Hackett. Designed to review and discuss urogenital surgical procedures in animals and the rational basis for them. Pathophysiology is stressed. Some classes consist of reprints with discussion.

VETCS 7060 Pathophysiology of Neurologic Surgery (Graduate)
Spring. 1.5 credits. Prerequisite: D.V.M.s, M.D.s, or equivalent or permission of instructor. S–U grades only. Offered every third year. J. W. Ludders. Provides specialized training in neurosurgical techniques and application and discusses pathophysiologic implications of neurosurgical and neurologic diseases.

VETCS 7100 Advanced Veterinary Anesthesiology I
Fall. 1 credit. Prerequisite: VTMED 5606 or permission of instructor; third- and fourth-year veterinary students, graduate students, interns, and residents. S–U grades only. A. L. Campoy, M. Flores, R. D. Gleed, W. A. Horne, A. L. Looney, and J. W. Ludders. Designed to prepare students for the American College of Veterinary Anesthesiology examinations. Also suitable for interns and for residency training in other areas such as surgery and internal medicine. Speakers are from both inside and outside the college. Topics cover the basic sciences as they apply to anesthesiology such as physics and engineering, anesthesiology, physiology, and pathology. Clinically oriented lectures are also given concerning specific anesthetic techniques and species-specific differences in response to anesthetic drugs.

VETCS 7110 Advanced Veterinary Anesthesiology II
Spring. 1 credit. Prerequisite: VTMED 5606 or permission of instructor; third- and fourth-year veterinary students, graduate students, interns, and residents. S–U grades only. A. L. Campoy, M. Flores, R. D. Gleed, W. A. Horne, A. L. Looney, and J. W. Ludders. Designed to prepare students for the American College of Veterinary Anesthesiology examinations. Also suitable for interns and for residency training in other areas such as surgery and internal medicine. Speakers are from both inside and outside the college. Topics cover the basic sciences as they apply to anesthesiology such as physics and engineering, applied pharmacology, physiology, and pathology. Clinically oriented lectures are also given concerning specific anesthetic techniques and species-specific differences in response to anesthetic drugs.

Microbiology and Immunology

VETMI 2990 Research Opportunities in Microbiology and Immunology
Summer, six-week session. 6 credits; minimum 120 hours lab time expected per 3 credits. Prerequisites: one year of basic biology (scores of 5 on Biology Advanced Placement Examination of College Entrance Examination Board or BLOOK 1000 level). Letter grades only. Microbiology and Immunology faculty. Mentored research apprenticeship program designed to give laboratory experience to qualified unmatriculated high school students (participating in Cornell Summer College).

VETMI 6050 Special Projects in Microbiology (Undergraduate)
Fall, spring. 1–3 credits. Prerequisite: permission of instructor; good background in microbiology or immunology. Recommended: background in pathogenic microbiology and immunology. S–U grades only. Microbiology staff. Normally provides an opportunity for the student to work in a research laboratory or carry out a special project under supervision.

VETMI 6200 Research Fellowship in Microbiology and Immunology
Fall, spring. 1–12 credits. Cannot be used to fulfill formal course requirements for DVM curriculum. Prerequisite: permission of instructor. S–U grades only. Faculty TBA. Offered by individual faculty members in the Department of Microbiology and Immunology for DVM students undertaking research in Research Fellowship.

VETMI 7000 The Biology of Animal and Plant Viruses (Graduate and Undergraduate Interdepartmental) (participating in Cornell Summer College)
Fall. 2 credits. Letter grades only. Offered odd-numbered years. C. R. Parrish and virology faculty. Examines current topics in studies of animal and plant viruses. Topics examined in depth include the structures of viruses and their interactions with host cells.

VETMI 7050 Advanced Immunology
Spring. 3 credits. Prerequisite: basic immunology course or permission of instructor. Letter grades only. Offered even-numbered years. C. Leifer and staff. This course covers selected topics in immunology at an advanced and in-depth level through lectures and paper discussions. Topics include genomic approaches to immunology, host defense by macrophages and neutrophils, pattern recognition receptors, molecular signaling events, regulation of immune responses, T helper cell differentiation, immunologic memory, neonatal immunity, mucosal immunology, and vaccines. There will be two in-class exams in addition to the final exam.

VETMI 7070 Advanced Work in Bacteriology, Virology, and Immunology (Graduate)
Fall. 1–3 credits. Prerequisite: permission of instructor. S–U or letter grades. Microbiology staff. Designed primarily for graduate students with a good background in pathogenic microbiology and immunology. May be elected by veterinary students who are properly prepared.

VETMI 7120 Seminars in Infection and Immunity
Fall, spring. 1 credit. Requirement for graduate students in Department of Microbiology and Immunology and field of immunology. S–U grades only. D. G. Russell. Invited speakers in immunology and infection biology acquaint students with current advances in the field. Seminars are not formal course requirements and are not included in the student's schedule and student checklist. The seminar schedule and student checklist, see the web site at www.vet.cornell.edu/public/InfectionAndPathobiology/ seminar_fall.htm and www.vet.cornell.edu/public/InfectionAndPathobiology/seminar_spring.htm.

VETMI 7130 Biological and Biomedical Sciences Program—Teaching Experience
Fall, spring. 1 credit. Requirement for first-year graduate students. S–U grades only. D. G. Russell. All graduate students who are a part of the Biological and Biomedical Sciences Program must complete this 1-credit teaching experience. The goal is for each graduate student to increase his or her knowledge in a
biology area and simultaneously increase confidence in his or her teaching abilities. Specific teaching assignments are administered through the CVM’s Office of Graduate Education. A faculty mentor provides ongoing feedback throughout the experience.

VETM 7190 Immunology of Infectious Diseases
Spring. 2 credits. Prerequisite: basic immunology course or permission of instructor. S–U or letter grades. Offered odd-numbered years. M. Bynoe and staff. Focuses on molecular and cellular mechanisms underlying the immunity and innate recognition of viruses, bacteria, and protozoa pathogens.

VETM 7230 Current Topics in Immunology
Fall, spring. 1 credit. Registration each semester required of field of immunology graduate students. Prerequisite: graduate standing. S–U grades only. Immunology faculty. Immunology discussion group in which students present research papers from the contemporary scientific literature.

VETM 7250 Mechanisms of Microbial Pathogenesis (also BIOMI 7250)
Spring. 3 credits. Prerequisites: BIOMI 4040, 4090, 4170 or equivalent course; written permission of instructor for undergraduates. Letter grades only. D. Debbie, H. Marquis, and M. Scidmore. Covers the mechanisms of pathogenesis of bacteria, fungi, parasites, and viruses. Addresses the need for a course covering the breadth of microbial pathogenesis. Emphasizes, at the molecular and cellular levels, the methods microbial pathogens use to enter, survive, and cause damage to their hosts. By studying the molecular mechanisms of all the major microbial groups together, students will be able to appreciate the commonality of pathogenic mechanisms as well as see the unique properties of each group of organisms. The contribution of the host response to the pathogenesis process will be covered, but in less detail as this information is addressed in VETM 7190 Immunology of Infectious Diseases.

VETM 7370 Advanced Work in Animal Parasitology (Graduate)
Fall, spring. 1–3 credits. Prerequisite: advanced undergraduate, graduate, and veterinary students. Letter grades only. D. D. Bowman and other faculty. Intended for advanced undergraduate, graduate, and veterinary students with interests in parasitology research.

VETM 7700 Advanced Work in Avian Diseases (Graduate)
Fall, spring. 1–3 credits. Letter grades only. K. A. Schat.

VETM 7720 Advanced Work in Aquatic Animal Diseases (Graduate)
Fall, spring. 1–3 credits. S–U grades only. P. R. Bowser.

VETM 7730 Advanced Work in Avian Immunology
Fall, spring. Variable credit. Letter grades only. K. A. Schat.

VETM 7830 Seminars in Parasitology (Graduate)
Fall, spring. 1 credit. Prerequisite: veterinary or graduate students or permission of instructor. S–U grades only. D. D. Bowman. Seminar series designed to acquaint students with current research in the field of parasitology. The range of topics is determined, in part, by the interests of those participating and may include such topics as the ecology of parasitism, parasite systematics, wildlife parasitology, and parasitic diseases of plants and animals, including humans.

VETM 7835 Grad Seminar in Parasitology
Fall, spring. 1 credit. Prerequisite: permission of instructor. S–U grades only. D. D. Bowman. Seminar series designed to acquaint students with current research in the field of parasitology. The range of topics is determined, in part, by the interests of those participating and may include such topics as the ecology of parasitism, parasite systematics, wildlife parasitology, and parasitic diseases of plants and animals, including humans.

VETM 7910 Immunology of Infectious Diseases (Graduate)
Fall, spring. 3 credits. Prerequisites: one year basic biology (score of 5 on Biology Advanced Placement Exam Examination, College Board Examination, Advanced Entrance Examination Board or BLOG 100 level). Letter grades only. R. A. Cerione. Mentored research apprenticeship program designed to give laboratory experience to qualified un-matriculated high school students (participating in Cornell Summer College) or Cornell undergraduates. Students are placed in a research laboratory with a designated project under the direct supervision of a research associate (upper-level graduate student, post-doc, or faculty member). Students are graded on preparation, participation in laboratory academic life, and appropriate acquisition of techniques. At the end of the session, students are expected to give a brief (15- to 20-minute) oral presentation of their work and submit a manuscript in a form suitable for publication. The faculty director has ultimate responsibility for evaluating the student’s work and assigning the grade.

VETM 7990 Advanced Research in Immunology
Spring, summer. 3 credits. Minimum 120 hours of lab time expected per 3 credits. Prerequisites: year basic biology (score of 5 on Biology Advanced Placement Exam Examination, College Board Examination, Advanced Entrance Examination Board or BLOG 100 level). Letter grades only. R. A. Cerione. Mentored research apprenticeship program designed to give laboratory experience to qualified un-matriculated high school students (participating in Cornell Summer College) or Cornell undergraduates. Students are placed in a research laboratory with a designated project under the direct supervision of a research associate (upper-level graduate student, post-doc, or faculty member). Students are graded on preparation, participation in laboratory academic life, and appropriate acquisition of techniques. At the end of the session, students are expected to give a brief (15- to 20-minute) oral presentation of their work and submit a manuscript in a form suitable for publication. The faculty director has ultimate responsibility for evaluating the student’s work and assigning the grade.

VETM 7999 Advanced Research in Immunology (Graduate)
Summer, six-week session. 3 to 6 credits. Letter grades only. Minimum 120 hours of lab time expected per 3 credits. Prerequisites: year basic biology (score of 5 on Biology Advanced Placement Exam Examination, College Board Examination, Advanced Entrance Examination Board or BLOG 100 level). Letter grades only. R. A. Cerione. Mentored research apprenticeship program designed to give laboratory experience to qualified un-matriculated high school students (participating in Cornell Summer College) or Cornell undergraduates. Students are placed in a research laboratory with a designated project under the direct supervision of a research associate (upper-level graduate student, post-doc, or faculty member). Students are graded on preparation, participation in laboratory academic life, and appropriate acquisition of techniques. At the end of the session, students are expected to give a brief (15- to 20-minute) oral presentation of their work and submit a manuscript in a form suitable for publication. The faculty director has ultimate responsibility for evaluating the student’s work and assigning the grade.

VETM 6110 Systems Pharmacology
Spring. 2 credits. Prerequisite: permission of instructor. S–U or letter grades. Offered even-numbered years. C. M. S. Fewtrell and field of pharmacology faculty. Graduate-level course covering system- and organ-related aspects of pharmacology. Topics include drug disposition; pharmacokinetics; autonomic pharmacology; central nervous system pharmacology; pharmacology of inflammation, allergy and platelet function; and cardiovascular, gastrointestinal, and endocrine pharmacology.

VETM 6120 Topics in Pharmacology
Fall (even sections), spring (odd sections), taught once a week for 10 weeks during the semester. 0.5 credit. Prerequisite: none. S–U grades only. L. M. Nowak (even sections); H. Sonderman (odd sections). A journal club–workshop course based on topics corresponding to the Department of Molecular Medicine seminar series. In the journal club, students and professor will present papers with guidance from the course director. Career development topics will be intended to promote students reading widely in the scientific literature and to develop their public speaking skills.

VETM 6130 Medical Pharmacology
Spring, taught from third week of March through first week of May. 2 credits. Prerequisite: permission of instructor. Letter grades only. Offered odd-numbered years. A lecture course covering basic principles of pharmacology and physiology, will feature the central and peripheral nervous system and muscle, cardiovascular, renal pulmonary systems, and gastrointestinal tract. This course is intended to provide graduate students with a strong foundation in medical pharmacology required for teaching in a medical curriculum. Grades will be based on take-home midterm and final exams.

VETM 7010 Organ-System Toxicology (also TOX 6110)
Fall. 1 credit. Prerequisite: graduate students in environmental toxicology. Letter grades only. Offered even-numbered years. W. S. Schwark. Minicourse on molecular mechanisms involved in chemical toxicity. Considers specific examples of toxicity in organ systems such as the nervous system, kidney, liver, respiratory tract, and cardiovascular system.

VETM 7030 Receptor-Ligand Interactions
Fall. 2 credits. Prerequisite: permission of instructors. S–U or letter grades. Offered even-numbered years; next offered 2010–2011. G. A. Weiland and R. E. Oswald. Covers both the practical and theoretical tools for the study of ligand-receptor interactions, emphasizing the quantitative and physical chemical aspects of receptor theory. Topics discussed are basic methods of radioligand binding assays, including separation and measurement of bound and free ligand; characterization of receptor function; analysis of receptor structure; thermodynamic basis of the binding; methods of analyzing equilibrium binding; equilibrium binding for complex binding mechanisms; and kinetics of simple and complex binding mechanisms.]
Education. A faculty mentor will provide through the CVM Office of Graduate simultaneous increase skills and confidence knowledge in a biology area and graduate student to increase his or her The goal of the experience is for each VETMM 7100 Biological and Biomedical structure determination, and dynamics to proteins for resonance assignments, [VETMM 7060 Growth Factor-Coupled presented. The application of these techniques water suppression, decoupling, and others are covered.] VETMM 7070 Protein NMR Spectroscopy (also BIOBM 7300) The general theme of this course is mitogenic signaling pathways. Receptor tyrosine kinases, src, ras, and ras-regulatory proteins are covered.) VETMM 7100 Biological and Biomedical Graduate Program—Teaching Experience Fall and spring. 1 credit. Requirement for first-year graduate students S–U or letter grades only. G. A. Weiland. All graduate students who are a part of the Biological and Biomedical Sciences Graduate Program must complete a teaching experience. The goal of the experience is for each graduate student to increase his or her knowledge in a biology area and simultaneously increase skills and confidence in his or her teaching abilities. Specific teaching assignments will be administered through the CVM Office of Graduate Education. A faculty mentor will provide ongoing feedback.

VETMM 7200 Patch Clamp Techniques in Biology Spring, taught daily during second and third weeks of Jan. 2 credits. S–U grades only. Offered even-numbered years. Times TBA. L. M. Nowak. Students learn theoretical background for patch clamp studies in morning lectures. The experimental techniques of conventional and permeabilized patch whole-cell recording and single channel recordings in cell-attached and excised membrane patches are taught in 15 hours of afternoon laboratory instruction per student. Lab training sessions are arranged individually throughout the spring semester.

VETMM 7300 Graduate Research in Pharmacology or Molecular Medicine Fall, spring, and summer. 1–12 credits each topic. May not be used to fulfill formal course requirements for field of pharmacology. Prerequisite: permission of instructor. S–U grades only. Offered by individual faculty members in the Department of Molecular Medicine and the graduate field of pharmacology for graduate students undertaking research toward M.S. or Ph.D. degrees.

[VETMM 7400 Special Projects and Research in Pharmacology Fall, spring, and summer. 1–3 credits each topic. May include but are not limited to Mechanisms of Growth-Factor Action—R. A. Cerione; Mechanics of Neurotransmitter Release—M. Lindau; Central Nervous System Neurotransmitters—L. M. Nowak; Structure-Function of the Nicotinic Acetylcholine Receptor—R. E. Oswald. VETMM 7600 Directed Readings in Pharmacology Fall, spring, and summer. 1–3 credits each topic. S–U or letter grades. Reading and discussion. Field of pharmacology faculty. Individual members of the graduate field of pharmacology offer directed readings and discussions on pharmacological topics to small groups or to individual students. Topics include but are not limited to Receptor Mechanisms—G. A. Weiland; Biochemical Neuropharmacology—G. A. Weiland; Amino Acid Neurotransmitters—L. M. Nowak; Stimulus-Secrecion Coupling—C. M. S. Fewtrell; Cell Calcium—C. M. S. Fewtrell.

Population Medicine and Diagnostic Sciences VTPMD 2990 Undergraduate Research in Epidemiology Fall, spring, and summer. 3 credits; minimum 120 hours of lab time expected per 3 credits. Prerequisite: undergraduate standing; one year of basic biology (score of 5 on AP Exam); Advanced Placement Examination of College Entrance Examination Board or BIOG 1000 level) or permission of instructor. J. Scarlett, H. Erb, Y. Grohn, L. Warnick, H. Mohammed, Y. Schukken, and D. Nydam. Mentored research apprenticeship program designed to give laboratory experience in applied epidemiology to qualified unmatriculated high school students (participating in Cornell Summer College) or Cornell undergraduates. Students are placed in a research laboratory with a designed project under the direct supervision of a research associate (upper-level graduate student, post-doc, or faculty member). Students are graded on preparation, participation in laboratory, academic life, and appropriate acquisition of techniques. At the end of the six-week session, they are expected to give a brief (15- to 20-minute) oral presentation on their work and submit a manuscript in a form suitable for publication. The faculty director of the laboratory has ultimate responsibility for evaluating each student’s work and assigning the grade.

VTPMD 6250 Evolutionary Genomics of Bacteria Spring. 1 credit. Prerequisite: graduate standing. S–U or letter grades. M. J. Stanhope. Comparative genomics of bacteria is a valuable approach to deriving information on pathogenesis, antibiotic resistance, host adaptation, and genome evolution. This course provides an evolutionary perspective on comparative bacterial genomics, focusing in particular on pathogens of human and agricultural importance. The course includes lectures, discussion of relevant scientific literature, and hands-on bioinformatics exercises.

VTPMD 6640 Introduction to Epidemiology (Graduate) Fall. 3 credits. Corequisite: BTRY 6010 (College of Agriculture and Life Sciences) or permission of instructor. S–U or letter grades. H. N. Erb. Lectures and discussion deal with the fundamentals of epidemiology. Topics include outbreak investigation, causal association, data quality, the design and ethical constraints of clinical trials, and infectious-disease epidemiology.

VTPMD 6650 Study Designs (Graduate) Spring. 2 credits. Prerequisites: VTPMD/ VETCS 6640 and BTRY 6010 (College of Agriculture and Life Sciences). S–U or letter grades. H. O. Mohammed. Design and interpretation of cross-sectional, case-control, and cohort studies (including controlled clinical trials); topics include sample size, bias, and relative advantages and disadvantages. Course objectives are to (1) know the difference between different epidemiologic study designs and relative advantages and disadvantages of each; (2) given a problem (usually a field situation), be able to design an appropriate epidemiologic study; (3) be able to effectively analyze and criticize published epidemiologic studies. Consists of lectures on the principles of epidemiologic study design and related issues (sample size calculations, validity and precision, and identification and minimizing of bias); basic analysis of epidemiologic data; and discussion of published epidemiologic studies. These include observational cohort studies (prospective and retrospective), cross-sectional studies, case-control studies, and hybrid studies (ambidirectional and other hybrid designs).
Enables students in the section of epidemiology to receive graduate research credits for their doctoral research.

VTPMD 7990 Independent Studies in Epidemiology
The purpose of this course is to investigate an epidemiologic topic with one of the instructors. It provides experience in problem definition, research design, and the analysis of epidemiologic data.

Program of Study

Introduction

The College of Arts and Sciences is a community of about 4,100 undergraduates and 500 faculty members. It is also a graduate school and research center. Altogether it attracts faculty members whose research and scholarly and creative work require first-rate academic facilities and who bring to all their students the profound questioning and exciting ideas of current scholarship. Finally, the college exists within a university of other colleges at Cornell—about 19,500 undergraduate and graduate students and 1,600 faculty members. This wider community provides depth and diversity of applied and professional studies beyond what a college of the liberal arts and sciences alone can offer. Students studying the liberal arts and sciences may draw upon the knowledge and facilities of the other colleges at Cornell to complement their studies. Abundant variety and outstanding quality in many fields, including interdisciplinary fields, and emphasis on individual academic freedom and responsibility give the college and the university their distinctive character.

The richness of the college’s undergraduate curriculum is extraordinary; there is no course that all students must take, and there are nearly 2,000 from which they may choose. By choosing courses each semester, students design their own education. They develop known interests and explore new subjects. An education in the liberal arts and sciences means honing one’s critical and imaginative capacities, learning about oneself in nature and culture, and gaining experience with views of the world radically unlike one’s own. All this is highly individual, and the college relies on each student and faculty advisor to design a sensible, challenging, and appropriate course of study.

Yet the college faculty believes that each student’s education should have certain common qualities. These include familiarity with several different ways of knowing that are reflected in the various disciplines and fields of study. In addition to these general areas of knowledge, students acquire effective writing and quantitative skills, study foreign languages, achieve cultural breadth, and concentrate on one particular field through which they deepen their imaginative and critical thinking as fully as possible. To accomplish these objectives, the college has certain requirements for graduation.

The College of Arts and Sciences awards one undergraduate degree, the Bachelor of Arts degree.

Summary of Requirements

1. First-year writing seminars: two courses. (See “John S. Knight Institute for Writing in the Disciplines,” p. 59.)
2. Foreign language: completion of one course at the nonintroductory level or above (Option 1) or at least 11 credits in one language (Option 2).
3. Distribution: nine courses (may overlap with courses counting toward a major).
4. Breadth: two courses (may overlap with courses for distribution, major, or electives).
5. Major (see individual department listings for major requirements).
6. Electives: four or five courses (at least 15 credits) not used to fulfill other requirements (other than the breadth requirements) and not in the major field.
7. Residence: eight full-time semesters, unless a student can successfully complete all other requirements in fewer than eight semesters and meet the additional criteria to accelerate graduation. (See “Acceleration” below.)
8. 34 courses: a 3- or 4-credit course counts as one course. A 2-credit course counts as half a course; a 1-credit course does not normally count toward the requirement; a 6-credit language course counts as one and one-half courses. (See “Courses and Credits” for some 1-credit courses in music, dance, and theatre performance that can be cumulated to count as one-half course.)
9. Credits: a total of 120 academic credits, of which 100 must be taken in the College of Arts and Sciences at Cornell. (See “Noncredit Courses” below for courses that do not count as academic credits or courses.)
10. Physical education: completion of the university requirement (passing a swim test and two 1-credit nonacademic courses). Note: Physical education credit does not count toward graduation or toward the 12-credit minimum required for good academic standing each semester.
11. Application to graduate. (See “Graduation,” p. 597.)

Undergraduates are responsible for knowing and fulfilling the requirements for graduation and for alerting the college to any problems with their records. To check on their progress toward the degree, students are urged to consult their advising deans in 55 or 172 Goldwin Smith Hall and to check their DUST (Distributed Undergraduate Student Tracking) reports at http://data.arts.cornell.edu/as-stus. The DUST report is updated after each semester. To check on their progress in college requirements. To check on their progress in the major, students should consult their major advisors.

Explanation of Requirements

Foreign Language Requirement

The college considers competence in a foreign language essential for an educated person. Studying a language other than one’s own helps students understand the dynamics of language, our fundamental intellectual tool, and enables students to understand another culture. The sooner a student acquires competence, the sooner it will be useful. Hence, work toward the foreign language requirement should be undertaken in the first two years. Students postponing the language requirement for junior and senior years risk not being graduated in time. Courses in foreign languages and/or literature are taught in the College of Arts and Sciences by the following departments: Africana Studies and Research Center, Asian Studies, China and Asia-Pacific Studies, Classics, German Studies, Linguistics, Near Eastern Studies, Romance Studies, and Russian.

The language requirement may be satisfied in one of the following ways:

Option 1: Passing a nonintroductory foreign language course of 3 or more credits at Cornell at the 2000 level or above or (b) any other nonintroductory course at the 2000 level or above conducted in a foreign language at Cornell.

Option 2: Passing at least 11 credits of study in a single foreign language (taken in the appropriate sequence) at Cornell.

Any exceptions to these rules will be noted elsewhere in individual department descriptions.

Students whose speaking, reading, and writing competence in a language other than English is at the same level we would expect our entering freshmen to have in English (as shown by completing high school in that language or by special examination during their first year here at Cornell) are exempt from the college’s language requirement.

Placement

Entering students who have completed two or more years of high school study in a language, who have been awarded credit for language work at another college or university, or who are native speakers, bilingual, or have spoken the language at home, may enroll in a course in the same language only after being placed by examination. The placement exam may have been taken in high school (SAT II, taken after the last course, or AP, if the score was 4 or 5) or at Cornell (LP test). Being placed by examination into the first course at a nonintroductory level does not earn credit.
## Placement Tests and Advanced Placement Credit

1. The following language placement and advanced standing tests are scheduled at the beginning of each semester:
   - Chinese (Cantonese and Mandarin), Hindi, Japanese, and Korean (schedule available from Department of Asian Studies, 350 Rockefeller Hall);
   - German (schedule available from Department of German Studies, 183 Goldwin Smith Hall);
   - French, Italian, and Spanish (schedule available from Department of Romance Studies, 303 Morrill Hall) [These placement tests are also offered online during the summer.];
   - Russian (schedule available from Department of Russian, 226 Morrill Hall).

   The advanced standing examination in French, German, Italian, Russian, and Spanish, is called the CASE (Cornell Advanced Standing Examination). Eligibility for the CASE may be determined from the placement tables. In Russian only, all students seeking placement take the CASE.

   Native speakers of Spanish who have completed their secondary education in a Spanish-speaking country do not take the CASE. For these students, the Spanish program offers a walk-in service, the Native Language Accreditation for Spanish, in the third week of September and the first week of February. Students interested in this service should contact Brisa Teutli in 414 Morrill Hall, bt54@cornell.edu. Speakers of Spanish who completed their secondary education in a non-Spanish-speaking country are required to present either SAT II or AP or LPS scores for placement, or for eligibility to take the CASE exam.

2. Arabic: departmental examination, Department of Near Eastern Studies, 409 White Hall.

3. Greek: departmental examination, Department of Classics, 120 Goldwin Smith Hall.

4. Hebrew: departmental examination, Department of Near Eastern Studies, 409 White Hall.

5. Latin: departmental examination, Department of Classics, 120 Goldwin Smith Hall.

6. Persian: departmental examination, Department of Near Eastern Studies, 409 White Hall.

Distribution Requirements

In satisfying the distribution requirements, students become acquainted with a broad range of subjects and points of view among disciplines in the college and explore areas that may be entirely new to them. Or, to look at it the other way, as first-year students explore subjects that interest them, they begin to satisfy distribution requirements. Consequently, first-year students should take courses to prepare for possible majors and to explore subjects new to them and take no course only in order to satisfy a distribution requirement. Although students may complete distribution requirements over eight semesters, they can take advanced courses in subjects they (perhaps unexpectedly) find intriguing only if they have completed the introductory prerequisites. Consequently, students should not postpone satisfying distribution requirements until the last semesters. Once sure of a major, students should consider which distribution requirements are yet unfulfilled and how to fulfill them with courses that complement their overall program. Courses in the major may be applied to the distribution requirements (unless prohibited by one of the restrictions noted under restrictions on applying AP credit, transfer credit, and Cornell courses to distribution requirements).

Students must complete four courses in science and quantitative reasoning, identified below under the categories Physical and Biological Sciences (PBS) and Mathematics and Quantitative Reasoning (MQR). In addition, they must complete five courses of 3 or more credits each from four of the five categories of courses in the humanities and social sciences with no more than three in the same department. The five categories of courses fulfilling the distribution requirements in humanities and social sciences are: Cultural Analysis (CA-AS), Historical Analysis (HA-AS), Knowledge, Cognition, and Moral Reasoning (KCM-AS), Literature and the Arts (LA-AS), and Social and Behavioral Analysis (SBA-AS). How an individual course is categorized is indicated with the appropriate abbreviation in its description under its department.

It is important to recognize that only courses with the proper designation in the Arts and Sciences section of the catalog can be used toward fulfilling the distribution requirements in Arts and Sciences. Some topics courses and courses offered through the Society for the Humanities, among others, do not count toward distribution.

Students wishing to take an Arts and Sciences course that does not have a rubric assigned to it in this volume should consult their advising deans to ascertain the status of the course and see if it has, in fact, been assigned any distribution rubric after the publication of this volume. Students may not petition to change the rubric of any given course, nor may any faculty member change the rubric of a course for an individual student. Faculty members wishing to change the rubric for a course they teach must petition the Educational Policy Committee for a change in rubric, and that rubric must then be applied to the course for all students in the course.

- **Cultural Analysis (CA-AS)**
  Courses in this area study human life in particular cultural contexts through interpretive analysis of individual behavior, discourse, and social practice. Topics include belief systems (science, medicine, religious practices, arts and symbolic behavior (visual arts, performance, poetry, myth, narrative, ritual), identity (nationality, race, ethnicity, gender, sexuality), social groups and institutions (family, market, community), power and politics (states, colonialism, inequality).

- **Historical Analysis (HA-AS)**
  Courses in this group interpret continuities and changes—political, social, economic, diplomatic, religious, intellectual, artistic, scientific—through time. The focus may be on groups of people, dominant or subordinate, a specific country or region, an event, a process, or a time period.

- **Knowledge, Cognition, and Moral Reasoning (KCM-AS)**
  Offerings in this area investigate the bases of human knowledge in its broadest sense, from cognitive faculties shared by humans and animals such as perception, to abstract reasoning, to the ability to form and justify moral judgments. Courses investigating the sources, structure, and limits of cognition may use the methodologies of science, cognitive psychology, linguistics, or philosophy. Courses focusing on moral reasoning explore ways of reflecting on ethical questions that concern the nature of justice, the good life, or human values in general.

- **Literature and the Arts (LA-AS)**
  Offerings in this area explore literature and the arts in two different but related ways. Some courses focus on the critical study of artworks and on their history, aesthetics, and theory. These courses develop skills of reading, observing, and hearing and encourage reflection on such experiences; many investigate the interplay among individual achievement, artistic tradition, and historical context. Other courses are devoted to the production and performance of artworks (in creative writing, performing arts, and media such as film and video). These courses emphasize the interaction among technical mastery, cognitive knowledge, and creative imagination.

- **Social and Behavioral Analysis (SBA-AS)**
  Courses in this area examine human life in its social context through the use of social scientific methods, often including hypothesis testing, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to interpersonal relations between individuals (e.g., in friendship, love, conflict) to larger social organizations (e.g., the family, society, religious or educational or civic institutions, the economy, government) to the relationships and conflicts among groups or individuals (e.g., discrimination, inequality, prejudice, stigma, conflict resolution). Please note that CRP 1100 (The American City) and CRP 1101 (Global City) satisfy SBA but do not count as A&S credit.

- **Physical and Biological Sciences (PBS)**
  In fulfilling the four courses in science and quantitative reasoning, students must take at least two science courses. At least one of these must be from the primary list of courses in science departments in the College of Arts and Sciences:

  **Primary list:**
  (The courses listed individually are all cross-listed in an A&S science department.)

  - **Animal Science:**
    - 4270 Fundamentals of Endocrinology
  - **Anthropology:**
    - 3710 Human Paleontology
  - **Applied and Engineering Physics:**
    - 2170 Physics II: Electricity and Magnetism
    - 3500 Modern Experimental Optics
    - 3630 Electronic Circuits
    - 4500 Introduction to Solid-State Physics
    - 4700 Biophysical Methods
  - **Astronomy:**
    - 3- or 4-credit courses
  - **Biological Sciences:**
    - 3- or 4-credit courses (including any combination of two courses from BIO 1119, 2900, 4980; BIOE 3620; BIOB 1320, 3990; BIOGD 1320; BOLI 1720; BIONB 3210, 4200, 4250, 4550, and BIOSM 2040, 2250, 3620, 3710. BIOG 2000 and 4990 require permission from the Office of Undergraduate Biology.)
  - **Biological and Environmental Engineering**
    - 4710 Introduction to Groundwater
  - **Biology and Society:**
    - 2141 Biological Basis of Sex Differences
    - 4471 Seminar in the History of Biology
    - 4611 Environmental Policy
    - 4612 Environmental Policy
  - **Chemistry and Chemical Biology**
    - 3- or 4-credit courses
  - **Cognitive Science**
    - 1110 Brain, Mind, and Behavior
  - **Crop Sciences**
    - 3970 Environmental Microbiology
    - 4830 Land, Water, Agriculture, and Environment
  - **Earth and Atmospheric Sciences**
    - 3- or 4-credit courses except 2500, 2900, 3750, 4350, 4940
  - **Electrical and Computer Engineering**
    - 4870 Intro to Radar Remote Sensing
  - **Engineering Geology**
  - **Entomology**
  - **Environ. Gender, & Sexuality Studies**
  - **History**
    - 2870 Evolution
    - 4150 Seminar in the History of Biology
  - **Horticulture**
    - 2430 Taxonomy of Cultivated Plants
    - 4730 Ecology of Agricultural Systems

Students may select additional science courses from the following **supplementary list**:

- Animal Science
  - 1100 Domestic Animal Biology I
  - 1150 Domestic Animal Biology II
  - 2120 Animal Nutrition
- Anthropology
  - 1300 Human Evolution: Genes, Behavior, and the Fossil Record
  - 3270 Environmental Archaeology
  - 3350 Primate Behavior and Ecology
- Archaeology
  - 5270 Environmental Archaeology
  - 4263 Zooarchaeological Method
  - 4264 Zooarchaeological Interpretation
- Applied and Engineering Physics
  - 1100 Lasers and Photonics
- Engineering (Intro course)
  - 1100 Lasers and Photonics
- Entomology
  - 2010 Alien Empire: Bizarre Biology of Bugs (3 cr.)
  - 2100 Plagues and People (3 cr.)
  - 2120 Insect Biology
  - 2770 Natural Enemies: An Intro to Biological Control (3 cr.)
  - 3150 Spider Biology
- Food
  - 2000 Intro to Physio & Bio Aspects of Food
  - 2810 The Substance of Civilization
- Natural Resources
  - 2010 Environmental Conservation
  - 2100 Introductory Field Biology
  - 3110 Fish Ecology, Conservation, and Management
  - 4200 Forest Ecology

**Nutritional Sciences**

- 1150 Nutrition and Health
- 3610 Biology of Normal and Abnormal Behavior

**Plant Pathology**

- 2013 Magic Mushrooms, Mol ds, and More
- 2015 Mushrooms, Mol ds, and Molecules

**Psychology**

- 2250 Introduction to Biopsychology
- 3260 Evolution of Human Behavior
- 3610 Biology of Normal and Abnormal Behavior

- **Mathematics and quantitative reasoning (MQR)**

  In completing four courses in science and quantitative reasoning, students must take at least one of the following courses (note that EDCU 1150 Introductory College Mathematics counts neither toward the college degree nor toward distribution):
  - Applied Economics and Management
  - Biomathematics
  - Biostatistics 1
  - City and Regional Planning
  - Cognitive Science
  - Computer Science
  - Data Structures and Functional Programming
  - Earth and Atmospheric Sciences
  - Ecology and Evolutionary Biology
  - Economics
  - Entomology
  - Environmental Science and Engineering

**Linguistics**

- Computational Linguistics
- Topics in Computational Linguistics

**Mathematics**

- 3423 Computational Linguistics
- 4485 Topics in Computational Linguistics

**Philosophy**

- 2310 Introduction to Deductive Logic
- 3300 Foundations of Mathematics
- 3310 Deductive Logic
- 4310 Mathematical Logic
- 4311 Topics in Logic

**Policy Analysis and Management**

- 2100 Introduction to Statistics

**Psychology**

- 3500 Statistics and Research Design

**Sociology**

- 3510 Approaching Sociological Inquiry
- 3511 Evaluation and Research in Social Science

**Statistical Science**

- 2100 Introduction to Statistics

**Breadth Requirements**

Students must include in their undergraduate program at least one Arts and Sciences course that focuses on an area or a people other than those of the United States, Canada, or Europe and one course that focuses on an historical period before the 20th century. Courses that satisfy the geographic breadth requirement are marked with an @ when described in this catalog. Courses that satisfy the historical breadth requirement are marked with a #. Many courses satisfy both requirements, and students may in fact use the same course to satisfy both. Students may use courses satisfying distribution, major, or elective—but not writing—requirements in satisfaction of either of the breadth requirements. They may also apply Cornell courses (not credit from an examination) conferring proficiency in a non-Western language toward the geographical breadth requirement.

**Restrictions on Applying AP Courses and Credit from Other Institutions to the Distribution Requirements**

Students may not apply AP credit or transfer credit from another institution to the breadth requirements or to any distribution requirement.

**Students who transfer to the college from another institution** are under the above rules for advanced placement credit, but are eligible to have credit for post-high school course work taken during regular semesters (not summer school) at their previous institution count toward all distribution requirements. Transfer students receive a detailed credit evaluation when they are accepted for admission.
Restrictions on Applying Cornell Courses to the Distribution and Breadth Requirements

1. First-year writing seminars may not count toward any other college requirement.
2. No single course may satisfy more than one distribution requirement.
3. Students may count courses in their major toward distribution and breadth.
4. Only courses with the proper designation in the Arts and Sciences section of the catalog can be used toward fulfilling the distribution requirements in Arts and Sciences.
5. A student may not petition for alteration of a particular course's distribution rubric, nor may a faculty member change a course rubric for an individual student. The rubric for a course may be changed only if the Educational Policy Committee grants a petition by the course's instructor to change the rubric. If the rubric changes, it does so for the class as a whole and never for an individual student.

The Major

In their last two years, students devote roughly one-half of their time to acquiring depth and competence in a major subject. The major does not necessarily define a student's intellect or character or lead directly to a lifetime occupation, although it sometimes does some of each. Through the major, students focus and develop their imaginative and intellectual capacities through a subject they find especially interesting.

Most departments and programs specify certain prerequisites for admission to the major; they are found on the following pages in the descriptions of each department and program.

Students may apply for acceptance into the major as soon as they have completed the prerequisites and are confident of their choice. This may be as early as the second semester of freshman year, and must be no later than second semester of sophomore year. To apply, they take a copy of their official transcript to an appointment with the director of undergraduate studies in their prospective major. A department or program may refuse admission into the major if the applicant's performance does not meet established standards. A student without a major at the beginning of the junior year is not making satisfactory progress toward the degree and risks not being allowed to continue in the college. That student must meet with an advising dean and may be placed on a leave of absence as early as the first semester of the junior year if he or she has not declared a major.

Available majors

Majors are offered by each of the departments. There are also majors in American Studies, Archaeology, Biology and Society, China and Asia-Pacific Studies, Information Science, Religious Studies, Science of Earth Systems, and Feminist, Gender, and Sexuality Studies.

Some students want to pursue a subject that cannot be met within an established major. They may plan, with the help of their faculty advisor, an independent major that includes courses from several departments and even colleges. See "Independent Major and College Scholar Program," under "Special Academic Options." Whatever the major—chemistry, math, philosophy, or music—graduates from the College of Arts and Sciences earn the one degree the college awards, a Bachelor of Arts.

Double majors

Only one major is required for graduation. Some students choose to complete two or more majors. No special permission or procedure is required; students simply become accepted into multiple majors and find an advisor in each department. All completed majors are posted on the official transcript. However, even though courses in a second major count among the required 15 credits of electives (see immediately below), double majoring can constrict the variety of electives that might be valuable for an education in the liberal arts and sciences. Students should "double major" only if their intellects and direct them to do so. If a student majoring in more than one subject decides s/he does not wish to complete the second major, s/he must go to the department and formally withdraw from that major.

Minors

Students may pursue minors in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the students' major. Completed minors will appear on the student's transcript. Not all departments offer minors. Consult the appropriate department or program listing in this Course of Study or contact the appropriate department for information on minors offered and how to pursue a minor.

Electives

Of the 34 courses and 120 credits required for graduation, almost one-third are free electives. How students allocate these electives frequently makes the difference between an ordinary and a truly interesting course of study. Students must complete at least four courses and at least 15 credits offered outside the major field and not used to fill another requirement except breadth. AP credits not otherwise used may fulfill elective requirements. Students may group electives to complete one of the established interdisciplinary minors. Students may also group electives into a second major. Since only one major is required, students may count courses in a second major as electives. Some students choose to explore a variety of subjects over time develop a concentration in a department or subject outside Arts and Sciences to gain applied training or specialized knowledge.

Residence

The College of Arts and Sciences is a residential community for students who devote their energy and spirit to full-time study. The faculty believes that integrated, full-time study for a defined period best promotes intellectual and creative development and best prepares people for citizenship and careers. Consequently, eight semesters of full-time study in the College of Arts and Sciences are integral to earning the B.A. degree. Even if the minimum requirements can be met in fewer semesters, the faculty of the college expects students to take advantage of the resources of the university for eight full semesters and obtain as rich and advanced an education in the liberal arts and sciences as possible. Students may complete their undergraduate degrees with credits earned at other institutions or as part-time or summer students at Cornell only if they have completed their eight full-time semesters of residence. Students must also satisfy the criteria listed below under "Part-time study in final semester."

For transfer students from other institutions, each full semester of study at their previous institution counts as one of the eight semesters of residence. However, even if transfer students have completed more than four full semesters at their previous institution, they must spend a minimum of four semesters on the Cornell campus in Ithaca enrolled in the College of Arts and Sciences. Internal transfers from other colleges at Cornell must spend four semesters on campus in Ithaca as students in the Internal Transfer Division or in the college. Only if a transfer student spends at least four semesters in the College of Arts and Sciences can he or she accelerate (see "Acceleration, below)."

Approved study abroad, SEA Semester, Urban Semester, FALCON, and Cornell in Washington are considered semesters of residence but not semesters on the Cornell campus. Students may spend no more than two semesters on such programs and must be on campus during their last semester. Dual-degree students spending 10 semesters at Cornell who feel the need three semesters abroad may petition the Academic Records Committee for permission but must demonstrate the academic necessity of the extended time away. Semesters of extramural study in Cornell's School of Continuing Education, summers of study at other institutions, and summer sessions anywhere do not count as semesters of residence.

Acceleration

The faculty of the college desires that each student achieve depth, as well as breadth, from his or her undergraduate education. Indeed, benefiting from opportunities for advanced, seminar, and independent (sometimes honors) work is what best characterizes undergraduate education in the college. When a student feels he or she does not need eight semesters in order to achieve this depth, the student can apply to accelerate by a term (and in rare cases, two terms), compressing the first four semesters into three (or two), and completing the prerequisites for the major in time to spend four full semesters in the major.

A student desiring to accelerate should meet with an advising dean in the first month of the desired penultimate semester so that he or she may have time to submit the online application to graduate by the deadline. The advising dean will determine the student's eligibility to accelerate. Accelerants must fulfill the following requirements:

1. All graduation requirements except for the residency requirement (120 total credits, 100 Arts and Sciences credits, 34 courses, all college requirements, and the university's physical education requirement).
2. Either condition a or b:
   a. 60 credits before beginning their last four semesters in the college and the prerequisites for admission to the major in time to spend four semesters in the major.
   b. 48 credits in College of Arts and Sciences courses numbered 3000 and above and prerequisites for admission to the major in time to spend four semesters in the major. No more than three upper-level courses taken in other colleges at Cornell University may count toward the 48 credits and then only if approved as part of the major.
3. 100 credits at Cornell at "C" (not C–) or above. Courses completed with a grade of "S" will count toward the 100 credits. Advanced placement and transfer credits do not count toward this requirement.
4. Students may not use credits earned while on leave of absence to reduce their terms of residence. In other words, they must be eligible to accelerate without applying any credit toward the degree that they earned while on leave.
5. Accelerants may not finish the degree with credits earned through part-time study. Students may not accelerate if they must reduce their terms of residence. In other words, they must be eligible to accelerate without applying any credit toward the degree that they earned while on leave.

Ninth semester
Students who can graduate in eight semesters should do so. If a worthy academic plan for a full ninth or tenth semester is approved, the student enrolls in the college as a special student for the additional work. Such a status allows enrollment in a full schedule of courses and proration of tuition in the college. Acceleration is thus limited to transfer students who enter as sophomores. If a student does not meet the requirements for acceleration, that student may not petition for an exception. Acceleration is, in itself, an exception to the normal rules of the college, and the Academic Records Committee does not grant exceptions to exceptions.

Extramural study
Students in good academic standing may take a personal leave of absence and enroll in the School of Continuing Education, but such semesters of extramural study do not count as terms of residence and credits from such semesters may not be used to reduce the terms of residence.

Part-time study in special circumstances
The college and university support students (with financial aid and services) as best they can to make full-time study possible. Occasionally, however, extraordinary but nonfinancial personal, academic, or medical circumstances make studying part-time temporarily necessary and appropriate. Students in good academic standing who face extraordinary situations may petition the Committee on Academic Records for a part-time schedule and proration of tuition in the college.

Prorated tuition in the final semester
Students may complete their degrees by taking fewer than 12 credits and pay prorated tuition at Cornell after fewer than eight semesters of full-time residence only if:
1. They have completed all requirements by the end of the sixth or seventh semester, met the criteria for accelerated graduation, and are remaining to complete study beyond what is required for the degree.
2. They are writing an honors thesis in the eighth semester and can complete all degree requirements by taking exactly two courses, one of which is the thesis itself. They must register for the thesis and one additional course.
   A student must see an advising dean to confirm his or her eligibility for prorated tuition and receive a petition to be approved by his or her faculty advisor. The student must specify the number of credits to be taken in the final term, and the faculty advisor must be able to certify that the credits will allow the student to complete his or her graduation requirements. Once the student has submitted the petition to the advising dean for college approval, he or she must see college registrar Sally O’Hanlon in 55 Goldwin Smith Hall to complete the prorated tuition form necessary for the Office of the Bursar. Both the petition form and prorated tuition form must be completed and approved during the first two weeks of the final semester.

Courses and Credits
Students must complete at least 34 full courses (which may include courses student place out of with AP credit), to be graduated—that is, an average of four full courses during each of six semesters and five courses during each of two semesters. Not all courses are full courses. Course equivalencies are as follows:

Counting courses:
1-credit courses: Certain 1-credit courses in Music, and in Theatre, Film, and Dance, may aggregate so that each two can count as a half course, and four can count as a full course. Occasionally, single-credit courses do not count as part of the 34.
2-credit course = one-half course
3- or 4-credit course = one full course
5-credit BIOGD 2810 (Genetics) = one and one-half course
Other 5-credit courses = one full course each
6-credit language course = one and one-half course
Other 6-credit courses = one full course each
8-credit FALCON courses = 2 full courses each
16-credit FALCON semester = 4 full courses
16-credit Intensive Arabic semester = 4 full courses

Counting credits: Students must complete 120 credits (which may include AP credits). Of the 120, 100 must be from courses taken in the College of Arts and Sciences at Cornell.

Courses that do not count toward the 120 credits required for the degree or toward good standing. The College of Arts and Sciences does not grant credit toward the degree for every course offered by the university. Courses in military training, training as an emergency medical technician, service as a teaching assistant, physical education, remedial or developmental training, precalculus mathematics (including EDUC 115), supplemental science and mathematics offered by the Learning Strategies Center, English as a second language, keyboarding, and shorthand are among those for which degree credit and credit toward the 12 credits required each semester for good academic standing are not given. Students should consult www.arts.cornell.edu/stu-adv/courses/dontcount.php for more information and a list of courses.

Other cases in which a course may not receive credit or count toward good standing include the following:
- A course identified as a prerequisite for a subsequent course may not be taken for credit once a student completes that subsequent course.
- A repeated course. (For more information, see “Repeating courses,” below).
- A course with material that significantly overlaps with material in a course a student has already taken, for example, SOC 1101 Introduction to Sociology, and DSOC 1101 Introduction to Sociology; or any of the following statistics courses: AEM 2100 Introductory Statistics, ILRST 2100 Introduction to Statistics, ILRST 2120 Statistical Reasoning, MATH 1710 Statistical Theory and Application in the Real World, PAM 2100 Introduction to Statistics, PSYCH 3500 Statistics Research and Design, SOC 3010 Evaluating Statistical Evidence, STSCI 2010 Introduction to Statistics.

Courses that count toward the 100 required Arts and Sciences credits may include liberal arts courses approved for study abroad during a semester or academic year of full-time study (not summer study), courses taken in certain off-campus Cornell residential programs, courses (usually no more than three) that certain departments accept from other colleges at Cornell as fulfilling major requirements (and substituting for A&S courses), and courses (up to two) that an advisor accepts as part of a completed and formally established cross-college, interdisciplinary, or disciplinary program (which includes an interdisciplinary or disciplinary minor).

Courses that do not count toward the 100 required Arts and Sciences credits include
credits earned in other colleges at Cornell (except in the cases noted above), credits earned in any subject at institutions other than Cornell, and advanced placement credits. AP credits count as part of the 120 credits and 34 courses required for the degree but not as part of the maximum Arts and Sciences credits and may not be applied to distribution or breadth. AP credits are posted on the transcript during the summer between the freshman and sophomore years, after students have decided whether to accept the credit or forfeit it by taking the Cornell course out of which they had placed. If, subsequently, a student takes the course out of which s/he had placed, the AP credit will be removed because of the overlap in content. For more information on AP credits, please see pages 445–447.

Repeating courses

Students occasionally need to repeat courses. If the instructor certifies that the course content is significantly different, credit is granted a second time. If the content is the same, both grades nonetheless appear on the transcript and are included in any GPA that is calculated, but the course and credit count toward the degree only once. Repeated courses do not count toward the 12 credits required for good standing. Students considering repeating a course under this circumstance should discuss the matter with their advisor and an advising dean. Students who plan to repeat a course must submit a petition to the college registrar, Sally O’Hanlon, 55 Goldwin Smith Hall. If the original course grade was F, no petition is necessary.

Using courses to fulfill more than one requirement:

A course may fulfill more than one college requirement in any of the following situations:

1. A course may be used to fulfill distribution, breadth, and a major requirement (except as noted in earlier sections on restrictions on applying AP credits, transfer credits, and Cornell courses to distribution requirements).
2. A one-semester course in foreign literature (not language) or culture that is acceptable for certifying option 1 in that language may be applied to the relevant distribution requirement and, if appropriate, to the breadth requirement.
3. Courses may count toward breadth requirements and toward any other requirement except first-year writing seminars.
4. Courses in a second major may count as electives.

Summer session credit

A student may earn credit toward the degree by completing courses in Cornell’s summer session or by successfully petitioning for transfer credit for summer courses at other colleges. Students should consult their advisors regarding summer study plans. Credit for summer courses not taken at Cornell must be approved by the appropriate Cornell department. Approval forms and information are available online, www.arts.cornell.edu, and in the Office of Undergraduate Admissions and Advising.

Degree Programs

The following four programs allow students to alter the regular college or major requirements or to work toward more than one degree.

College Scholar Program

The College Scholar Program is meant to serve students whose interests and talents would benefit from a little more academic freedom than other students have, who demonstrate exceptional promise, and who show the maturity to plan and carry out, with the help of their advisor, a well-designed program of study. College Scholars design idiosyncratic programs: some pursue diverse interests; others integrate a variety of courses into a coherent subject. Up to 40 students in each class are accepted into the program.

College Scholars must complete 120 credits of course work (100 in the college), 34 courses, the university’s physical education requirement, and, unless they receive permission from the program to accelerate, eight full terms of undergraduate study but are not required to fulfill the other usual college requirements for the degree. All college scholars must complete a senior project. Although they are not required to complete or fulfill the general education requirements, members of the College Scholar Advisory Board believe that the spirit of those requirements is good.

Each applicant to the College Scholar Program is asked to write an essay, which is due the last Wednesday of classes in the spring of the freshman year. Students should contact Dean Ken Gabard, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall, for further information.

Dual-Degree Program with Other Colleges

The Dual-Degree Program enables especially ambitious undergraduate students to pursue programs of study in two colleges. Dual-degree candidates may earn both a Bachelor of Arts degree from the College of Arts and Sciences and: (1) a bachelor of science degree from the College of Engineering; or (2) a bachelor of fine arts degree from the Department of Art in the College of Architecture, Art, and Planning; or (3) a bachelor of science degree in urban and regional studies from the Department of City and Regional Planning in the College of Architecture, Art, and Planning; or (4) a bachelor of science degree in architectural history from the Department of Architecture in the College of Architecture, Art, and Planning.

Students enter one of these colleges as freshmen or sophomores and begin the Dual-Degree Program with the second college in the second or, in some cases, the third year. The Dual-Degree Program ordinarily takes five years to complete, and students are eligible for 10 semesters with financial aid. For further information contact Dr. Tammy Shipto in the Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Independent Major Program

The Independent Major Program allows students to design their own interdisciplinary majors and pursue a subject that cannot be found in an established major. Proposals for an independent major must be equivalent in coherence, breadth, and depth to a departmental major, well suited to the student’s academic preparation, and consistent with a liberal education. Proposals must also be supported by a faculty advisor and are assessed by a board of faculty members. Independent majors substitute for established majors, but students must still satisfy all the other requirements for the bachelor’s degree. Students should contact Dean James Finlay, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall, for further information. Deadlines for submitting independent major proposals are listed on the calendar supplement for the College of Arts and Sciences.
Double Registration with and Early Admission to Professional Schools
Registration in the senior year of the College of Arts and Sciences and the first year of Cornell Law School or the Johnson Graduate School of Management is occasionally possible. A very few exceptionally well-prepared students who have earned 105 credits before the start of the senior year and have been accepted by one of the above-named professional schools may be permitted to register simultaneously in the college and in one or another of these professional schools during the seventh and eighth terms. They earn the B.A. degree after the first year of professional school.

Students with 8 or fewer credits and two or fewer courses to complete may apply to enter the Master's of Engineering program during (but no earlier than) their eighth semester; dual-degree students may enter this program no earlier than the ninth semester. They earn the bachelor degree(s) after one semester of graduate school.

Students interested in the joint program with the Law School, the Cornell Institute for Public Affairs (CIPA), or the Graduate School of Management, or in early admission to the master's of engineering program should apply to the relevant program. All candidates should confirm their eligibility with an advising dean, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Double-registered students must, of course, complete all requirements for the B.A. degree, including 100 credits in Arts and Sciences courses.

Teacher Education
Students at Cornell may pursue teaching credentials in agriculture, biology, chemistry, earth science; general science; mathematics, and physics. Cornell students from any college are encouraged to apply for admission to the Cornell Teacher Education Program during their sophomore or junior year. Those who are admitted complete their undergraduate major in an agricultural science, mathematics or science and a minor (concentration) in education. They are then able to complete a master of arts in teaching (MAT) in one year and earn certification in New York State.

Students in agricultural science may be able to complete all certification requirements as undergraduates, although this option is not recommended.

For more information, contact the program director, Deborah Trumbull, at 255-3108 or djt2@cornell.edu.

Special-Interest Options
The following options enable students to pursue special interests within the usual degree programs.

Independent Study
Independent study affords students the opportunity to pursue special interests or research not treated in regularly scheduled courses. A faculty member, who becomes the student's instructor for the independent course, must approve the proposed study and agree to provide continuing supervision of the work. Students must prepare a proposal for independent study (proposal forms are available in the Office of Undergraduate Admissions and Advising, 55 and 172 Goldwin Smith Hall). In one semester students may earn up to 6 credits with one instructor or up to 8 credits with more than one instructor. Students who are being paid for assisting faculty in research cannot earn course credit for that work.

Undergraduate Research
An excellent way to benefit from being an undergraduate at a research university at Cornell in particular, is to become an apprentice in ongoing faculty research. About 400 students participate each year in creating new knowledge and earn independent study credit for what they learn and contribute. They sharpen their critical and creative abilities and test their interest in pursuing a research career. Sometimes they publish their work.

The Cornell Undergraduate Research Board, an undergraduate organization, conducts an annual open house to help students get started in research and an annual forum at which undergraduates present their work. See www.rso.cornell.edu/urb.

Students interested in research should consult the Director of Undergraduate Studies in the department of interest to find out about available opportunities. For more general information on the process of research or on petitioning for independent study credit for research, students should consult Dean James Finlay, Dean Maria Davids, or Dean David DeVries, in the Office of Undergraduate Admissions and Advising, or consult www.research.cornell.edu/undergrad.

Language Study
FALCON (Full-Year Asian Language Concentration). FALCON allows students who are interested in the Far East to study Chinese or Japanese exclusively for one year. They gain proficiency in the language and familiarity with the culture. Students who are interested in the Far East should be aware of the opportunities to pursue rapid and thorough beginning studies on campus with the objective of studying abroad in China or Japan. Students interested in this program should contact the Department of Asian Studies, 388 Rockefeller Hall; e-mail: falcon@cornell.edu.

Prelaw Study
Law schools seek students with sound training in the liberal arts and sciences; they neither require nor prefer any particular program of study. Students should therefore study what they love and do well. While doing that, they should also develop their powers of precise, analytical thinking and proficiency in writing and speaking. Students in the College of Arts and Sciences who are applying to law school may consult Director Howard Stark in the Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

The college offers a minor in law and society. This program offers a broad scope, complements almost any major, and attracts many students not intending to become lawyers as well as a subset of those intending to.

Premedical Study
The breadth and depth afforded by a liberal arts education are invaluable for students planning medical careers, whether they intend to practice or go into research. Such education has a profound effect on the doctor's understanding of the world and hence usefulness to patients, and it affords the flexibility of mind that is needed for major research undertakings. Medical and dental schools do not prescribe or even prefer a particular major; they do, however, require particular undergraduate courses, and most students are well advised to begin chemistry in their freshman year. Students who are interested in medical careers are urged to visit the Health Careers Office, 205 Barnes Hall.

The advisor for students in the College of Arts and Sciences who are planning careers in medicine is Dean Janice Turner, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall.

Off-Campus Programs
Many students find it important to their majors or to their overall academic programs to study off campus or abroad for one or two semesters. When it makes academic sense, the college encourages its students to pursue such studies and grants credit toward the degree for work satisfactorily completed. Students wishing to participate in any off-campus program must petition their advising dean with a list of courses they wish to take during the program and a well-reasoned explanation of why the proposed semester is crucial for their course of study.

Study Abroad
The College of Arts and Sciences encourages study, both on campus and abroad, that provides a greater understanding of the world’s peoples, cultures, economies, and environments, and prepares graduates for the challenges of international citizenship in the 21st century. Study abroad is open to students in any major who meet the college requirements and have a strong academic goal. Well-chosen and well-planned study abroad contributes a global or comparative dimension to your chosen field, enhances critical thinking and communications skills, and provides firsthand immersion in and appreciation of another culture. Focused academic work in the right institution abroad can be excellent preparation for advanced study or honors work in your final semesters at Cornell, and can lead to a career with a global component.

Requirements
• acceptance into a major
• area studies course work
• fulfillment of the College of Arts and Sciences residence requirement
• GPA of 3.0 or higher and good academic standing
• language study at the required level
• meet requirements set by the foreign university or program

Cornell Study Abroad students must study alongside degree candidates in their host institutions rather than in self-contained programs that offer courses specially designed for foreigners. The college will approve only those study-abroad proposals that demonstrate realistic and coherent academic goals that are consistent with the philosophy of a liberal arts education.

The college advocates study abroad that enables students to become competent in another language, so that they can engage
fully in daily life in another culture, develop social relationships, and complete formal course work in that language. To study abroad in a country where the host language is not English, the student must demonstrate competence in the language as a prerequisite.

For study abroad in Western Europe and Latin America, students must complete at least two semesters of the appropriate foreign language at the 2000 level at Cornell; additional course work is strongly encouraged and will increase students’ chances for acceptance into the most highly competitive programs. Consult this catalog for the required level of course work in specific languages. For study abroad in Asia, Eastern Europe, the Middle East, and parts of Africa, course work entirely in the host language is not always practical, even after several semesters of language preparation at Cornell. Students should still plan to complete as much language preparation as possible within the Cornell curriculum, at least one to two years of study, and may be approved for language-intensive programs (at least half of the permitted 15 credits) with appropriate course work in English. If Cornell does not offer instruction in the language of the proposed host country, the student may be approved for a program that combines intensive language instruction with subject course work in English. All students must continue to formally study the language of the host country while abroad.

For study abroad in English-speaking countries, direct university enrollment is approved and expected. Cornell students will engage in a full course of study, generally in their major, at a university in the home country. Students may also plan to take some coursework outside their major that reflects the social, cultural, and academic environment of the institution. Students may also take courses at the university level and at Cornell’s study centers or field schools. To study abroad, students must meet the admission requirements of the program.

Students who plan to study abroad may consider earning college credit for courses taken abroad. Cornell’s academic policies regarding credit for study abroad are designed to ensure that students receive appropriate academic credit for the courses they take while studying abroad.

The standards of integrity are those that Cornell’s Code of Academic Integrity and Cornell's Code of Student Conduct articulate. These standards apply to all members of the university community, including students, faculty, and staff. Cornell’s Code of Academic Integrity and Cornell's Code of Student Conduct articulate the standards of integrity that Cornell expects of its students.

Students must acknowledge and cite ideas from others (not just direct quotations) and help they receive from colleagues or parents. With productive study abroad students may engage in a variety of academic and extracurricular activities.

Cornell in Washington
The Cornell in Washington program offers students from all colleges in the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty under the supervision of Cornell faculty members. Potential externships are arranged through, and approved by, the Cornell in Washington office. For further information, see p. 22 or inquire at M101 McGraw Hall, 255-4090.

Off-campus Programs Offered by Other Colleges
Students wishing to participate in the Urban Semester program, Cornell in Rome Program, or the Earth and Environmental Systems (EES) semester in Hawaii must petition their advising dean with a list of the courses they wish to take during the program. The above-listed courses are selected by students from all colleges in the university. The program also offers unique externship opportunities: students serve as externs in a federal agency, congressional office, or nongovernmental organization and take part in a public policy or humanities seminar. They define and carry out individual research projects under the supervision of Cornell faculty members. Potential externships are arranged through, and approved by, the Cornell in Washington office. For further information, see p. 22 or inquire at M101 McGraw Hall, 255-4090.

ACADEMIC INTEGRITY
Academic integrity is the heart of intellectual life—both in learning and in research. All members of the university community simply must support each other's efforts to master new material and discoveries as members of the university community simply must support each other's efforts to master new material and discoveries.

Cornell's Code of Academic Integrity and Cornell's Code of Student Conduct articulate the standards of integrity that Cornell expects of its students.
Forging or Fraud on Forms
Forging signatures or credentials on college forms is an academic offense and constitutes academic fraud. In all cases of forgery on academic forms, the effect of the forged documents shall be negated; such incidents will be recorded in the Academic Integrity Hearing Board's confidential file for forgeries. If the student forges more than once, or if the forgery would advance the student’s academic standing unfairly or fraudulently, or if for any reason the situation requires some response in addition to the uniform penalty, the Academic Integrity Hearing Board might recommend further action, such as a notation on the student’s transcript, suspension, or dismissal.

ADVISING
The following advisors and offices provide academic advising, help with problems, and information on college procedures and regulations.

Pre-Major Advisors
Each new student is assigned a faculty advisor. Advisors help students plan programs of study and advise them about ways to achieve their academic goals. Advisors may also help students with study or personal problems or may direct them to other offices on campus where help is available. Academic difficulties may frequently be solved or avoided if students and advisors recognize and address problems early. Advisors and advisees meet first during orientation week to discuss course selection. New students are encouraged to see their advisors again early in the semester, before it is too late to drop courses, to discuss their academic progress and to become better acquainted. Advisors and advisees meet at least once each semester to discuss courses for the following semester, and more often if advisees wish to discuss academic or personal issues or to petition for an exception to college rules.

Major Advisors
After acceptance into a major, each student is assigned a faculty advisor in his or her department, with whom the student's major advisor and directs the course of study. The advisor eventually certifies the completion of the major. Students should consult their major advisor about all academic plans, including honors, study abroad, accelerated, and graduate study. The advisor's support is especially important to students beginning majors who need to draft or even abandon major programs.

Student Advisors
Student advisors pass on lore about the college and life at Cornell and help new students become oriented to the university.

Office of Undergraduate Admissions and Advising
This office, located in 55 Goldwin Smith Hall, 255-5004, and 172 Goldwin Smith Hall, 255-4833, is a resource for faculty and student advisors and for individual students and their parents. Advising deans are available to help students define their academic and career goals, to help with special academic options and exceptions to college rules, and to help when problems arise:

- David DeVries, associate dean for undergraduate admissions and advising and undergraduate research, 255-3586
- Juliette Corazon, minority students and liaison to Latino Studies Program, 255-4833
- Maria Davids (on leave 2009-2010), juniors, seniors, Tanner Dean's Scholars, Rawlings Cornell Presidential Research Scholars, Mellon Mays Fellows, undergraduate research, and postgraduate fellowships, 255-4833
- Christa Downey, career services, 255-4166
- James Finlay, first- and second-year students, Independent Major Program, undergraduate research, and peer advisors, 255-5004
- Ken Gabard, first- and second-year students and College Scholar Program, 255-5004
- Ray Kim, juniors, seniors, student ambassadors, 255-4833
- Irene Komor, career counseling, 254-5295
- Clare McMillan, first- and second-year students, students with disabilities, Tanner Dean's Scholars, 255-4833
- Diane J. Miller, career services, 255-6924
- Sally O'Hanlon, registrar, 255-5794
- Myra Sabir, juniors, seniors, internal transfers, Mellon Mays Fellows, and minority students, 255-4833
- Tammy Shapiro, juniors, seniors, dual-degree students, 255-4833
- Arthur Smith, first- and second-year students
- Heather Struck, seniors, prelaw students, 255-4833
- Janice Turner, minority students and pre-med students, 255-9497
- Patricia Wasylw, first- and second-year students, academic integrity, study abroad, 255-5004

Committee on Academic Records
The college's standing Committee on Academic Records has two main tasks: (1) to decide on students' petitions for exceptions to college requirements or rules and (2) to review the records of students who fail to maintain good academic standing and to take appropriate action. It accomplishes both those tasks without form and with attention to each individual situation. Its overriding goal is to help students achieve the best undergraduate education possible.

Petitions
The college faculty takes graduation requirements seriously, and the faculty's Committee on Academic Records virtually never waives a requirement outright. However, some students, with the support of their advisors, propose structuring their educations or fulfilling the spirit of college requirements in ways other than the specified norms. The Committee on Academic Records decides on such requests. Students who find that their undergraduate education was better realized by satisfying requirements or proceeding in a way that requires an exception to normal rules, for example, a substitution for the language requirement, should meet with an advising dean in the Office of Undergraduate Admissions and Advising. The deans are expert in the college's expectations and procedures and can help the student formulate a petition, if appropriate. The committee decides petitions on the basis of their educational merit.

Actions
The College of Arts and Sciences has no minimum grade requirement for graduation beyond the guideline that at least 100 Cornell credits of the 120 total required for graduation be passed with grades of C (not C–) or above. Consequently, only through actions of the Committee on Academic Records, described below under “Academic Standing,” does the college maintain the quality of the degree and attend to individual situations when things academic are not going well.

REGISTRATION AND COURSE SCHEDULING

Enrollment in Courses in the College of Arts and Sciences

New Students
During orientation week, new students attend briefings and other information sessions, meet with faculty advisors, and sign into courses. The college reserves spaces in courses for its incoming students.

Continuing Students
Continuing students select and schedule up to five courses of 3 or more credits and as many 1- and 2-credit courses as they would like during the semester before the one in which the courses will be taken. Students who do not “pre-enroll” during the designated period must wait until the beginning of the semester and may have difficulty securing places in the courses they most want. Before enrolling in courses, students plan their programs and discuss long-range goals with their faculty advisors. In addition, all students are welcome to discuss programs and plans with an advising dean in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall.

At the beginning of each semester, students find their schedules on Student Center at www.studentcenter.cornell.edu. Periodically during the semester, and particularly just before the 3-, 7-, and 12-week deadlines, they should confirm the accuracy of their records.

Limits on Numbers of Courses and Credits
To meet the 34-course requirement, students must normally take four courses during each of six semesters and five courses during each of two semesters. To meet the 120-credit requirement, students must average 15 credits per semester, (Note: AP credit and/or summer credits may reduce the average numbers of courses and credits required each semester.)

Minimum number of credits per semester
To maintain good academic standing as a full-time student, students must complete at least 12 degree credits per semester; if for compelling personal or academic reasons students need to carry fewer than 12 credits, they should consult their faculty advisor and
an advising dean. Permission is by petition only, and after the first semester, such permission is given only in extraordinary circumstances.

**Maximum number of credits per semester**

First-year students must petition to enroll in more than 18 credits; other students may enroll in up to 22 credits if their previous semester's average was 3.0 or higher and they are in good academic standing. No more than 22 credits may be taken in a regular semester without permission of the college faculty's Committee on Academic Records. Students who fail to receive approval for excess credits from the advising dean may count only 18 or 22 credits, depending on their previous semester's average, toward the degree for that semester. Students taking summer courses may earn no more than 12 credits in any one semester.

**Attendance**

Attendance in classes is expected. Absences are a matter between students and their instructors. If a student cannot attend classes because of illness or family crisis, the Office of Undergraduate Admissions and Advising will notify instructors at the request of the student or the family. Nonetheless, the student must arrange to make up examinations or other work with each instructor. A student who will be absent because of religious holidays or athletic competitions must discuss arrangements for making up work with his or her instructors well in advance of the absence. A student who must miss an examination must also consult with the professor in advance. Alternative arrangements are at the discretion of the instructor.

Student athletes should discuss scheduled absences with their instructors at the beginning of the semester. Courses vary in their tolerance of absences. Instructors are not obligated to approve absences for purposes of participating in extracurricular activities, although most will be as flexible as is sensible for a student's academic program.

**Adding and Dropping Courses**

After course enrollment (also known as pre-enrollment), students may not adjust their schedules until the new semester begins. During the first three weeks of the semester, students may change courses without petitioning. (Note: the add period for first-year writing seminars is only two weeks.) After the third week of classes, students must petition to add courses and may add them only for a letter grade. They may drop courses after the third week of the semester, but must complete the drop forms.

**Note of Incomplete**

An incomplete (INC) signifies that a course was not completed before the end of the semester for reasons beyond the student's control and acceptable to the instructor. Students must have substantial (normally at least 50 percent) equity in the course, be able to complete the remaining work, and have a passing grade for the completed portion. When a grade of incomplete is reported, the instructor submits a form stating what work must be completed, when it must be completed, and the grade (or permanent—"frozen"—incomplete) earned if the work is not completed by that date. When a final grade is determined, it is recorded on the official transcript with an asterisk and a footnote explaining that this grade was formally an incomplete.

Students should be aware that INCs are interpreted as credits not passed during a given semester. If a student's INC takes his or her record below 12 credits in a given semester, the student risks being placed on warning or on leave by the Academic Records Committee. If placed on leave, the student must complete the INC before being allowed to return, and readmission will be permitted only at the beginning of a given semester. If the INC is not completed by the beginning of a regular academic term, the student may not register for that term. Students must resolve (make up or "freeze") any incompletes with their instructors before graduation.

**Note of R (Yearlong Courses)**

R is recorded for satisfactory progress at the end of the first semester of a two-semester course. Students enroll in such courses both semesters. The grade recorded at the end of the second semester evaluates the student's performance in the course for the entire year and will also replace the grade of "R" for the first semester of the course.

Students enrolled in an R course for the thesis may occasionally wish or feel compelled not to complete that thesis. In order to drop the thesis but continue with an independent study, the student should see Sue Downes in 172 Goldwin Smith Hall for the appropriate forms.

**Grade Reports**

Grade reports are available online on Student Center at www.studentcenter.cornell.edu; they are not mailed to students. Students should periodically check their courses and grades to be sure that they are recorded correctly.

**Class Rank**

The college does not compute class rank.

**Dean's List**

Inclusion on the Dean's List is an academic honor bestowed by the dean of the college semester by semester. Based on grades, the criteria include about the top 30 percent of students and vary with the number of credits the student completes. The criteria are subject to slight changes from semester to semester and are available at www.arts.cornell.edu/stu-adv/deanlist.asp and in the Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall.
ACADEMIC STANDING

Students are in good academic standing for the semester if they successfully complete at least 12 degree credits by the end of the semester and earn no more than one D and no F or U grades. If a student completes only three courses, all grades must be above D. In addition, students are expected to make satisfactory progress toward satisfying requirements for the degree and to earn grades of C (not C–) or better in at least 100 of the 120 credits for the degree. Courses listed under ‘courses that do not count toward the degree’ do not count toward good academic standing in a semester.

Academic Actions

Students who are not in good academic standing will be considered for academic action by the college faculty’s Committee on Academic Records or by one of the advising deans of the college. Students are urged to explain their poor academic performance and submit corroborating documentation. Students may appeal a decision of the committee if they have new relevant information and documentation. They must consult an advising dean about appealing.

Warning

Any student who fails to maintain good academic standing will, at a minimum, be warned. A warning is posted on a student’s college record but is not reported to the university registrar and does not appear on official transcripts.

Required leave of absence

A student in serious academic difficulty may be required by the faculty Committee on Academic Records to take a leave of absence, normally for a full year. Usually, but not always necessary, the Committee on Academic Records warns students before suspending them. Before being allowed to return and reregister in the college, students must document how they did on leave and how they resolved their problems, and they must submit a plan for completing the degree. In some cases students will be required to furnish evidence that they are ready to return or satisfy other conditions before being allowed to reregister in the college. Students who request to return in less than a year must present to the committee extraordinarily convincing evidence of their readiness to return. “Required leave” is posted on the student’s official transcript.

Required withdrawal

The faculty Committee on Academic Records may dismiss a student from the college because of a decision unsatisfactory record for one semester or for failure to make satisfactory overall progress in grades, credits, or degree requirements. This action expels the student permanently from the college. “Required withdrawal” is posted on the student’s official transcript.

Leaves of absence (LOAs)

Most leaves of absence are not required. Taking time off from college to gain experience or funds, or to find direction, is sometimes useful. In general, students arrange in advance for leaves to take effect the following semester. Students in good academic standing must see an advising dean to obtain and submit a leave of absence statement, to be approved by the advising dean. Students may take a personal leave of absence up to the beginning of the semester (defined as the first day of classes). Students not in good academic standing may pursue a conditional leave of absence up to the first day of classes. If medical issues are involved, students must consult Gannett: Cornell University Health Services about the advisability of a leave of absence.

Any student who wishes to take a leave of absence must consult with an advising dean in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall.

Students sometimes find it necessary to take a leave of absence at some point during the semester. In addition to the serious financial consequence of taking leaves after the semester has begun (see the Proration Schedule for Withdrawals and Leaves of Absence in the General Information section of this catalog), all leaves taken during the semester are granted at the discretion of the college and must, if granted, be conditional leaves of absence. Students must discuss their need for a LOA with an advising dean.

Leaves of Absence are of four types:

1. **Personal leaves** impose no conditions concerning reentering the college except for the five-year limit (see "Return from Leave," below). Readmission is automatic upon written request made by the student to his or her advising dean by August 1 for a fall semester, or January 1 for a spring semester. The college is not obliged to re-admit any student who does not meet the deadline for a given semester.

2. **Conditional leaves** are granted by the college for students who wish to take a leave but are not in good academic standing, or for students who wish to take a leave during the current semester. In consultation with the student, an advising dean and the Committee on Academic Records set the terms of residence and may not be used to reduce the terms of residence below the required eight. See "Residence."

3. **Medical leaves** are granted by the college only upon the recommendation of Gannett Health Services, and are usually issued for at least six months. The college may attach additional conditions appropriate to the individual situation. The student’s academic standing is also subject to review at the time of the leave and on return. Students must then receive clearance from both Gannett and the college to be reregistered. Students wishing to return from a medical leave should contact Gannett several months in advance to initiate the return process, and only then contact the college.

4. **Required leaves**. The Committee on Academic Records may require a leave of absence if a student is not making satisfactory progress toward the degree. See “Academic Actions.”

Students on conditional or required leaves of absence (LOA) may not attend any classes at Cornell through the School of Continuing Education and Summer Sessions. Students on a medical LOA may not register for classes at Cornell unless they obtain the permission of the college and a recommendation from Gannett. Courses taken without college permission will not count toward degree requirements.

Return from Leave

Students wishing to return from leave must contact the college and, where appropriate, provide documentation that all conditions for readmission have been satisfied. All requests for readmission must be received by the college by August 1 for the fall semester and January 1 for the spring semester. In the case of conditional and/or medical leaves, students must consult well in advance of those dates with both the college and Gannett. On readmission, the student’s graduation date will be recalculated to account for the time spent away. Five years is the maximum length of time a student may be on leave before being withdrawn from the college.

Transferring Credits Earned While on Leave

Students who take courses elsewhere in the United States while on leave may petition to have credits transferred. Petitions are available in 55 and 172 Goldwin Smith Hall and at www.arts.cornell.edu. Approval depends on acceptable grades and the judgment of the relevant departments about the quality of the courses. If approved, these credits may be applied toward the 120 credits and 34 courses needed for graduation, but not toward the 100 credits required in the college. They may be applied to elective requirements or to the major, as allowed by the department, but not to any of the breadth or distribution requirements. Credits earned during a leave do not count toward the eight semesters of residence and may be used to reduce the terms of residence below the required eight. See "Residence."

Study Abroad and International Students on Leave of Absence

Study abroad undertaken during a leave of absence will not receive academic credit. International students on leave of absence from the College of Arts and Sciences may enroll in courses at a college or university in their home country only, as such enrollment is not defined as study abroad. They may petition for transfer of credit upon return to Cornell. If approved, the credit will count as described in the previous paragraph.

Withdrawals

A withdrawal is a permanent severance from the university and from candidacy for the degree. Students planning to withdraw should consult an advising dean. Students not requesting a leave and failing to register for a semester will be withdrawn from the college. The college faculty’s Committee on Academic Records may require a student to withdraw because of a highly unsatisfactory academic record, and the college may require a student
to withdraw because of failure to register in a timely fashion.

**Transferring within Cornell (Internal Transfer)**

Internal transfer from one college or school at Cornell into another is attractive for students whose intellectual interests change (or become more focused). Students who wish to transfer should discuss their eligibility with a counselor in the new school or college.

In some cases, students who want to transfer into the College of Arts and Sciences may transfer directly. In other cases, they may be referred to the Internal Transfer Division. During the semester immediately preceding transfer into the College of Arts and Sciences, students must complete at least 12 credits of courses in the College of Arts and Sciences with a 3.0 average and with no grades of Incomplete, S–U grades (unless only S–U grades are offered for that particular course), or grade below C (C– is below C). Satisfying this minimum requirement does not, however, guarantee admission. Admission to the college is based on consideration of the student's entire record at Cornell and the high school record, not just the work of one semester. It is also based on ability to complete the B.A. degree within a reasonable time. Internal transfers are required to spend four semesters in Arts and Sciences and should thus initiate the transfer process no later than the second semester of sophomore year. They also must complete at least 100 credits at Cornell with grades of C (not C–) or above. Interested students should see Dean Ray Kim, 172 Goldwin Smith Hall.

**GRADUATION**

**The Degree**

The College of Arts and Sciences grants only one degree (no matter the student's major): the A.B. (or B.A.). A.B. is the abbreviation of the Latin name for the degree, "artium baccalarius," or translated into English, B.A., "Bachelor of Arts."

**Application to Graduate**

In the first semester of their senior year, students will receive an e-mail instructing them to complete an online application to graduate. The application is intended to help seniors identify problems early enough in the final year to make any necessary changes in course selection to satisfy those requirements. Nonetheless, meeting graduation requirements is the student’s responsibility; problems that are discovered, even late in the final semester, must be resolved by the student before the degree can be granted. Students are responsible for checking their DUST reports and transcripts and alerting their advising deans of any problems with the academic record.

**Degree Dates**

There are three degree dates in the year: May, August, and January. Students who plan to graduate in August may attend graduation ceremonies in the preceding May. Students graduating in January are invited to a special recognition ceremony in December; they may also attend graduation ceremonies the following May.

**Honors**

**Bachelor of Arts with Honors**

Almost all departments offer honors programs for students who have demonstrated exceptional accomplishment in the major and succeeded in research. The honors programs are described by individual departments. The degree of Bachelor of Arts cum laude, magna cum laude, or summa cum laude will be conferred upon a student who, in addition to having completed the requirements for the degree of Bachelor of Arts, has been recommended for a level of honors by the major department, the Independent Major Program, or the College Scholar Program. Concentrations do not offer honors programs.

**Bachelor of Arts with Distinction**

The degree of Bachelor of Arts with distinction in all subjects will be conferred upon students who have completed the requirements for the degree of Bachelor of Arts, if they have met the following requirements by the end of their final semester:

1. completed at least 60 credits while registered in regular sessions at Cornell;
2. achieved a GPA in the upper 30 percent of their class at the end of the seventh semester, or next-to-last semester for transfers and accelerants;
3. received a grade below C– in no more than one course;
4. received no failing grade;
5. have no frozen Incompletes on their records; and
6. maintained good academic standing, including completing a full schedule of at least 12 credits, in each of their last four semesters. (Students who have been approved to be pro-rated for the final semester in order to complete an honor's thesis are considered to be in good academic standing and therefore eligible to receive distinction.)

**CALENDAR SUPPLEMENT**

All of the dates in the university calendar at the front of this volume apply to all Cornell students. Listed below are some additional dates that are of importance for students in the College of Arts and Sciences.

<table>

**Departments, Programs, and Courses**

**AFRICANA STUDIES AND RESEARCH CENTER**

The Africana Studies and Research Center is concerned with the examination of the history, culture, intellectual development, and social organization of Black people and cultures in the Americas, Africa, and the Caribbean. Its program is structured from an interdisciplinary and comparative perspective and presents a variety of subjects in focal areas of history, literature, social sciences, and African languages. African languages such as Swahili and Yoruba are consistently offered full and spring semesters and some are also taught during summer/winter session.

The center offers a unique and specialized program of study that leads to an undergraduate degree through the College of Arts and Sciences and a graduate degree, the Master of Professional Studies (African and African-American), through the university's Graduate School.

A student may major in Africana Studies; however, another attractive alternative is the center's minor in Africana Studies. This program enables the student to complete a major in any of the other disciplines represented in the college while at the same time fulfilling requirements for a minor in Africana Studies. This requires only a few more credits than is usually the case when one completes a single major course of study. Courses offered by the center are open to both majors and nonmajors and may be used to meet a number of college distribution requirements, including historical/temporal breadth (*) and geographical breadth (@) requirements, such as first-year writing seminars, languages, expressive arts, humanities, social sciences, and history.

The center also brings distinguished visitors to the campus, sponsors a new Book/Black...
The Africana Major

The undergraduate major offers an interdisciplinary study of the fundamental dimensions of the African American, African, and Caribbean experiences. Because of the comprehensive nature of the program, it is to the students’ advantage to declare themselves Africana majors as early as possible. The following are prerequisites for admission to the major:

Students should submit:
1. a statement of why they want to be an Africana Studies major;
2. a tentative outline of the area of study they are considering (African, African American, or Caribbean) for the major; and
3. a full transcript of courses taken and grades received.

The center’s director of undergraduate studies will review the applications and notify students within two weeks of the status of their request.

After acceptance as a major in the Africana Center, a student must maintain a C+ cumulative average in the center’s courses while completing the major program. The Africana major must complete 36 credits in courses offered by the center, to include the following four core courses: ASRC 2300, 2601, 2602, and 4501. Beyond the core courses, the student must take 8 credits of center courses numbereded 2000 or above and 15 credits numbereded 3000 or above. The program of an undergraduate major may have a specifically African American or African focus.

The Africana Minor

The center offers minors in Africana Studies. The center’s director of undergraduate studies will assist students with the design and coordination of minor programs. For the minor the center will require that at least 16 credits be taken in Africana Studies courses, including ASRC 2602.

Double Majors

In the case of double majors, students undertake to carry the full load of stipulated requirements for a major in each of the two departments they have selected.

Certificate in African Studies

Not available 2009–2010. In conjunction with the Institute for African Development, the Africana Studies and Research Center administers an undergraduate Certificate in African Studies program. The certificate is available to students in all of the undergraduate colleges at Cornell. Many of the courses in the program might be used to fulfill other course distribution requirements. By pursuing this certificate, students acquire an interdisciplinary understanding of Africa.

Honors

The honors program offers students the opportunity to complete a library research thesis, a field project in conjunction with a report on the field experience, or a project or experiment designed by the student. The requirements for admission to the honors program for all students—regular majors, joint majors, and double majors—are a B– cumulative average in all courses and a B+ cumulative average in the center’s courses. Each student accepted into the honors program will have an honors faculty committee consisting of the student’s advisor and one additional faculty member, which is responsible for final evaluation of the student’s work. The honors committee must approve the thesis or project before May 1 of the student’s junior year. The completed thesis or project should be filed with the student’s faculty committee by May 10 of the senior year.

Language Requirement

Courses in Swahili, Arabic, Yoruba, and Zulu may be used to satisfy the College of Arts and Sciences language requirement. In Swahili, successful completion of ASRC 2100 satisfies Option 1. For Yoruba, successful completion of ASRC 2103 satisfies Option 1. For Arabic, ASRC 2101 or ASRC 3101 satisfies Option 1. For Zulu, ASRC 2104 satisfies Option 1. ASRC majors are not required to take an African language, but the center recommends the study of an African language to complete the language requirement.

First-Year Writing Seminars

See John S. Knight Institute brochure for times, instructor, and descriptions.

ASRC 1100 Elementary Swahili I
Fall, winter, summer. 4 credits. Language lab times TBA. A. Naji. Beginner’s Swahili. Part 1—Grammar for speaking, reading, and writing. Requires no knowledge of language. Swahili is spoken in the East and Central parts of Africa.

ASRC 1101 Elementary Swahili II
Spring, summer, winter. 4 credits. Prerequisite: ASRC 1100. A. Naji. Continued study of the basic grammatical formation of the language and the introduction of reading material ranging from songs to short stories. A great many drills are used in this course to help develop the student’s comprehension of the language. Swahili tapes are used during all of these sequences.

ASRC 1102 Intermediate Swahili I
Fall. 4 credits. Prerequisites: ASRC 1100 and 1101. A. Naji. Advanced study in reading and composition.

ASRC 1104/1105 Elementary Arabic I and II (also NES 1201/1202)
Fall, spring, summer. 4 credits. M. Younes. For description, see NES 1201/1202.

ASRC 1106/2101 Intermediate Arabic I and II (also NES 1203/2200)
Fall, spring, summer. 4 credits. A. Ademoyo. Prerequisite: ASRC 2101 @ satisfies Option 1. M. Younes. For description, see NES 1203/2200.

ASRC 1108/1109 Introduction to Yoruba I and II
Fall/spring. 4 credits. A. Ademoyo. A two-semester beginner’s course in Yoruba language and culture. Organized to offer Yoruba language skills in literacy in speaking, reading, listening, writing, and translation. Focus is placed on familiar informal and formal contexts, e.g., home, school, work, family, social situations, politics, etc. Course uses Yoruba oral literature—proverbs, rhetoric, songs, popular videos, and theatre—as learning tools for class comprehension. First semester focuses on conversation, speaking and listening. Second semester focuses on writing, translation and grammatical formation. Through the language course students gain basic background for the study of an African culture, arts, and history both in the continent and in the diaspora. Yoruba language is widely spoken along the west coast of Africa and in some African communities in diaspora. Yoruba video culture, theatre, music, and arts have strong influence along the west coast and in the diaspora.

ASRC 1110 Intermediate Yoruba I
Fall. 4 credits. Prerequisite: ASRC 1109. A. Ademoyo. The intermediate course extends the development of the main language skills, reading, writing, listening, and conversation. The course deepens the development of correct native pronunciation, the accuracy of grammatical and syntactic structures; and the idiomatic nuances of the language. Students who take the course are able to (i) prepare, illustrate, and present Yoruba texts such as poems, folktales, advertisements, compositions, letters, (ii) read Yoruba literature of average complexity, (iii) interpret Yoruba visual texts of average difficulty, (iv) comprehend Yoruba oral literature and philosophy—within the context of African oral literature and philosophy—of basic complexity. Through the Yoruba language students appreciate African oral literature and philosophy. The primary textual media are Yoruba short stories, poems, short plays, films, songs, and newspapers.

ASRC 1114/1115 Elementary Zulu I and II
Fall, spring. 4 credits. S. Mkhonza. Zulu, known by native speakers as IsiZulu, is one of the 11 official languages of South Africa. Out of the four Nguni languages (Zulu, Xhosa, Swati, and Ndebele), Zulu is the most widely spoken. The advantage of learning IsiZulu is that it forms the basis for understanding the other Nguni languages. This is a two-semester elementary course which introduces students to the basic structures of the language which are applied to rapidly develop the primary speaking, reading, and writing skills of the Zulus. The class will also explore traditional and contemporary cultures of the Zulu people.

ASRC 1116 Intermediate Zulu I
Spring. 4 credits. S. Mkhonza. The course will help students to expand their understanding of the Zulu language through the communicative approach. We will focus on the four skills, speaking, listening, reading and writing. Intermediate work focuses on reading and speaking spontaneously. We will introduce composing in Zulu more reading.
Concerned with the peoples of Africa and the development of African cultures and civilizations from the earliest times to the present day. Focuses on the near modern civilizations of Africa south of the Sahara, and the ancient civilizations of Egypt and the Nile Valley, together with their contributions to the development of the major world civilizations. Also deals with the sociopolitical organization of African societies, their kinship systems, cross-cutting ties, rites of passage, gender relations, and arts (including music, dance, folklore, architecture, sculpture, painting, and body decoration).

ASRC 2304 African Encounters with Colon (also HIST 2540) @ (HA-AS)
Spring. 4 credits. D. Magaziner.
For description, see HIST 2540.

ASRC 2306 The Past and Present of Precolonial Africa (also HIST 2550) @ (HA-AS)
Spring. 4 credits. S. Greene.
For description, see HIST 2550.

ASRC 2307 The White Image in the Black Mind (also HIST 2412) @ (HA-AS)
Fall. 4 credits. S. Greene.
For description, see HIST 2412.

ASRC 2308 Caribbean History (also HIST 2308) (HA-AS)
Fall. 3 credits. J. Byfield.
This course provides an historical overview of the Caribbean beginning with a brief examination of indigenous societies and the impact of European civilization. Most of our attention will focus on the development of the plantation economy, slavery, post-emancipation, and post-colonial society. Readings pay particular attention to the ways in which race, gender, and ethnicity shape the histories of the peoples of the region. The course uses a pan-Caribbean approach by focusing on three islands—Cuba, Haiti, Jamaica—that belonged to competing empires. Although their histories are shaped in distinct ways by their former metropoles, they share certain common features. Therefore, we examine the differences and similarities of their histories as they evolved from plantation based colonies to independent nations.

ASRC 2309 Reading and Writing the African Diaspora (also HIST 2461) @ (HA-AS)
Spring. 4 credits. D. Magaziner.
For description, see HIST 2461.

ASRC 2505 Literature, Sports, and Ideology (also ENGL 2751) (LA-AS)
Fall. 3 credits. G. Farred.
This course will explore the relations amongst sport, literature, and ideology. Reading texts from a variety of genres, novels, "memoirs," social histories (that are also love letters to a particular team), and some forms that refuse easy categorization, this course seeks to understand the very distinct, and often hard to define exactly, that sport "performs" in literature. From Don DeLillo's Underworld to Eduardo Galeano's beautiful, critical contemplation on football (Soccer in Sun and Shadow) to CLR James' magisterial work on cricket (Beyond a Boundary), this course will engage writings on sport from all over the world. Sport, the premise is here, opens the reader up to the world in a way that no other literary pursuit does.

ASRC 2601 Afro-American Social and Political Thought (SBA-AS)
Spring. 3 credits. J. Turner.
This is an introductory course that reviews and analyzes the major theoretical and ideological formulations espoused by African-Americans in the struggle for liberation. We focus specifically on the political philosophy and historical significance of Malcolm X, and the work and movement of Marcus Garvey, as the prime movers of nationalism and pan-Africanism among Black people in this century. Such themes as slave resistance, nationalism, Pan-Africanism, emigration, anti-imperialism, socialism, and political and social views of Black women are discussed. Black political thought is viewed in its development as responses to concrete conditions of oppression and expression.

ASRC 2602 The Sociology of the African-American Experience (SBA-AS)
Fall. 3 credits. J. Turner.
This is an introductory course to the field of African Studies. It assumes a historical/sociological approach to the examination of the African-American experience. The course surveys the African experience, both as a question of mankind and the classical role of Black people in world civilization and the making of early culture. The course treats issues in the humanities, social sciences, and history. The course is required for all undergraduate students majoring at the African Center.

ASRC 3100/3101 Advanced Intermediate Arabic I and II (also NES 3201/3202) @ (HA-AS)
Fall/spring. 4 credits. ASRC 3100 satisfies Option 1. M. Younes.
For description, see NES 3201/3202.

ASRC 3200 Politics of Global Africa (also ASRC 6200) @ (SBA-AS)
Fall. 4 credits. A. Mazrui.
This course will combine the study of Africa with the study of two Diasporas. The Diaspora of Enslavement concerns enslaved Africans and descendents of slaves in both the Western and Eastern Diaspora. The Diaspora of Colonization concerns demographic dispersal as a result of colonialism. African Americans are part of the Diaspora of Enslavement. Algerian immigrants into France are part of the Diaspora of Colonization, and Trinidadians in Britain are a double-Diaspora—products of both enslavement and colonialism. This course will also examine the debates about whether the African peoples are owed reparations by either the West of the Arabs or both. This course will address the following areas of comparative Black experience: the politics of race, gender, religion, liberation, language, civil rights and postcolonialism.

ASRC 3205 Thinking Black Intellectuals
Spring. 4 credits. G. Farred.
"Thinking Black Intellectuals" departs from the premise that there is always, in one form or another, a "crisis"—or a question about the "role" of the intellectual. However, in the conception of this course, the intention is not to address this issue. Instead, the course seeks to "demonstrate" the act of, properly speaking, Black intellectual thinking. By reading a series of texts, from Black scholars in philosophy such as Valentin Mudimbe to the renowned African-American theologian and preacher, Gardner C. Taylor, from the artistic oeuvre of Fela Kuti to the interventionist work of Angela Davis, this course will engage the thought of Black intellectuals. What, the guiding question
as we broaden the meanings of what is Caribbean. Traditional and contemporary oral/folk/urban forms of creative expression and film expression will be features of our ongoing analysis. We will pursue some of the themes that have been current in Caribbean literature and the peculiar relationships of Caribbean literature to the construction of American and/or English literatures and the definitions of Caribbeanness. Our sub-theme focuses on the discourses of migration that have gained substantial attention in recent years and is a fundamental feature of the construction of Caribbean identities and literatures.

ASRC 3604 U.S. Education, Oppression, Resistance
Spring. 4 credits. T. Gosa
Despite salient reductions in educational inequality over the past 30 years, the academic achievement gap of Black, Latino/a, and Native American youth remains one of the most research yet stubborn social problems in American society. The goal of this course is to explore issues of race and ethnicity in American education. Students will be asked to consider the ways in which schools foster poor academic performance and deny minority youth’s cultural and ethnic identities. Topics include school and residential segregation, academic tracking, language isolation, teacher quality, pedagogy and curriculum, and family/peer group influences. We will pay special attention to how students resist unfair schooling conditions and persist against the odds. The course will conclude with the limits and possibilities for school reform.

[ASRC 4200 Afrocentricity: Paradigm and Critical Readings @ (CA-AS)]
Fall. 4 credits. Next offered 2010–2011.
A. Bekerie.
What is Afrocentricity? It is a theoretical framework designed to study and interpret the histories and cultures of peoples of Africa and African descent by locating them at the center of their experiences. In other words, it is a method of knowing the life experiences of African peoples from the inside out. The course examines—through the writings of Asante, Kete Kesawan, Myans, Amran, Mazrui, Gates, Apiah, Richards, Schlesinger, and Thiongo—the conception and depth of the paradigm, its relevance in the production and utilization of knowledge, particularly emancipatory knowledge, the history of the paradigm, and the debate it generates among a wide range of thinkers and scholars.

ASRC 4201 Islam in Africa and Its Diaspora (also ASRC 6206, DSOC 4360/6630, NES 4501) (CA-AS)
Spring. 4 credits. A. Mazrui.
It has been estimated that one-third of the Muslim population of the world is in Africa and the African Diaspora. This course addresses the historical dimension of Islam in the Black experience examining Global Africa as a whole. Within the African continent, Islam is part of the triple religious heritage, which includes rivalry with Christianity and co-existence with African indigenous religions. In the Americas, Islam is up against Western secularism and Christianity. We are concerned with how Islam has affected the politics and cultures of the African peoples worldwide, issue of slavery and Islam, and the interaction between Islam and contemporary ideologies of socialism, nationalism and race consciousness in the Black experience.

ASRC 4300 African American Politics (also ASRC 6301) (HA-AS)
Fall. 4 credits. J. Turner.
The central thesis of African-American politics has been its movements for political change and democratic access and participation. This development since the 17th century is a complex political legacy. This course conducts a close study of African-American political practice and theoretical analysis of the American political system. Implications of the political systems for prospects and limitations to participation by Black people are analyzed. Critical historical stages in the process of Black politics are examined. The development of political offices in federal and state governments, politics in critical industrial centers, as well as rural hamlets, center the course. Presidential politics—the Jesse Jackson campaigns—and new political formations including Black Republicans/conservatives constitute the emphasis on contemporary events. The course reviews the development of the literature in African-American politics.

ASRC 4301 African American History: Black Leaders and Movements
Spring. 4 credits. R. Harris.
This course addresses African American activism that provide a means for understanding the development of BlackAmerican education. Students will be asked to consider the ways in which schools foster poor academic performance and deny minority youth’s cultural and ethnic identities. Topics include school and residential segregation, academic tracking, language isolation, teacher quality, pedagogy and curriculum, and family/peer group influences. We will pay special attention to how students resist unfair schooling conditions and persist against the odds. The course will conclude with the limits and possibilities for school reform.

ASRC 4302 Nile Valley Civilization: Ethiopia, Nubia, and Egypt (also ASRC 6302) (HA-AS)
Spring. 4 credits. A. Bekerie.
Focuses on Nile Valley civilizations and their contributions to African and world history. Since natural and human resources provide the foundation for civilizations, the course also examines the ecological and cultural compositions of the river. Concentrates on the Aksumite civilization of Ethiopia, Nubian civilizations of the Sudan, and the Kemetic civilizations of Egypt. Uses archaeological, literary, oral, biological, and historical sources to study civilization centers along the Nile. Students discuss civilizations as artifacts that have material, spiritual, social, and philosophical dimensions. Students are introduced to the Ethiopic writing system as a practical lesson in the conception and understanding of aspects of African civilizations.

ASRC 4305 African Environmental History (also HIST 4271) (HA-AS)
Fall. 4 credits. D. Magaziner.
For description, see HIST 4271.

ASRC 4306 To Be Enslaved Then and Now (also HIST 4241) (HA-AS)
Spring. 4 credits. S. Greene.
For description, see HIST 4241.

ASRC 4502 African Cinema (also ARTH 4578) (LA-AS)
Fall. 4 credits. S. Hassan.
This course offers an overview of African cinema and filmmaking. It surveys historically the evolution of African cinema and focuses its early days to the present. Through screening of
selected African films, different trends within African cinema will be explored, such as "Return to the Sources" and the rediscovery of the pre-colonial past; the "Social Realist" narrative and critique of post-independence Africa; reconstructing the story of colonialism from the perspective of the colonized; and the entertainment genre. Techniques, styles, and aesthetics of African cinema will also be discussed. The course offers a unique opportunity of looking at African culture and society, and at issues of social change, gender, class, tradition, and modernization through African eyes.

[ASRC 4504 Exhibiting Cultures (also ARTH 4508) (CA-AS)]
Fall. 4 credits. Next offered 2010–2011. C. Finley.]

ASRC 4508 The Harlem Renaissance (also ENGL 4508) (LA-AS)
Fall. 4 credits. R. Richardson.
In this course, we will examine the Harlem Renaissance, including works by James Weldon Johnson, Jean Toomer, Nella Larsen, Langston Hughes, Countee Cullen, George Schuyler, Wallace Thurman, and Zora Neale Hurston. The Harlem Renaissance occurred during the 1920s in the wake of the Great Migration to the urban North. It encompassed a range of different art forms and media beyond literature, such as painting, photography, and music, and coincided with the "Jazz Age." We will consider the rise of Josephine Baker as a phenomenon in Paris. We will consider overlapping literary movements that also shaped the Harlem Renaissance profoundly, from modernism to Negritude (i.e., in France and the Caribbean). Additionally, we will explore the work of noted photographers, artists and musicians of the period.

ASRC 4509 Toni Morrison's Novels (also ASRC 6513, ENGL 4509)
Spring. 4 credits. R. Richardson.
The course will focus on reading novels by Toni Morrison, including The Bluest Eye, Sula (1973), Song of Solomon (1977), Beloved (1987), Jazz (1992), Paradise (1998), Love (2003), and A Mercy (2008). The presentation of her novels in trilogy form and her contributions to the genre of historical writing will be given some consideration. We will explore the author's stylistic innovation and expansion of this genre. We will consider topics such as how to read novels critically. We will pursue our study with attention to major public works of Morrison, from her art project as a curator at the Louvre to the Toni Morrison Society’s "Bench by the Road" project and its 2008 conference in Charleston, South Carolina and upcoming Paris meeting in summer 2010.

ASRC 4600 Politics and Social Change in the Caribbean @ (SBA-AS)
Fall. 4 credits. L. Edmondson.
Study of the historical, geostrategic, political, economic, and social (including racial and cultural) forces affecting the domestic and international experiences of Caribbean societies.

[ASRC 4601 Education Innovation in Africa and the Diaspora (also EDUC 4590) @ (SBA-AS)]
Fall. 4 credits. N. Assié-Lumumba.
This course deals with educational innovations geared to promoting equal opportunity based on gender, race and class, in Africa and the African Diaspora.

ASRC 4602 Women and Gender Issues in Africa @ (SBA-AS)
Spring. 4 credits. N. Assié-Lumumba.
There are two contrasting views of the status and role of women in Africa. One view portrays Africans as dominated and exploited by men. According to another view women have a favorable social position in Africa: indigenous ideologies consider women to be the foundation of society; they are economically active and independent and they have an identity independent of men. In this seminar we discuss the status and role of women in Africa historically as well as in the contemporary period. Topics include women in non-westernized/post-colonial societies; the impact of colonial policies on the status of women; gender and access to schooling, participation in the economy and politics; women and the law; women and health issues; gender issues in southern Africa; womanism and feminism; the United Nations Decade of Women; and the four World Conferences on Women (Mexico 1975, Copenhagen 1985, Nairobi 1985, and Beijing 1995).

ASRC 4603 Politics and Social Change in Southern Africa @ (SBA-AS)
Spring. 4 credits. L. Edmondson.
Focuses on the legacies of apartheid and the challenges of transformation toward a post-apartheid society in South Africa. Topics include the rise and decline of apartheid; the historical continuity of Black resistance against racism; women under, against, and after apartheid; South Africa's relations with its neighbors; governmental, economic, and racial dimensions of the American connection; politics of negotiation and transition to majority rule: prospects for stability, democracy, and equality; and South Africa's new role in the African continental and global arenas. Instructor's lectures are supplemented by films and class discussions.

ASRC 4605 Public Policy and the African-American Urban Community (SBA-AS)
Spring. 4 credits. J. Turner.
The socioeconomic conditions of the African-American urban community are the central focus of the course. Community development models are explored in relationship to the social needs of the African-American population. The integration and internal organization of the African American community nationally is examined.

[ASRC 4606 The Family and Society in Africa @ (also SOC 4760) @ (SBA-AS)]
Concepts of the extended family, the roles, rights and obligations of different age groups and generations; and marriage and its related issues.

ASRC 4607 African Port Cities: Empire Building at the Crossroads (also ARTH/SHUM 4825)
Fall. 4 credits. P. Meier.
For description, see SHUM 4825.

ASRC 4900-4901 Honors Thesis
4900, fall; 4901, spring. Prerequisite: permission of ASRC director of undergraduate studies. Africana Center faculty.

For senior Africana Studies majors working on honors theses, with selected reading, research projects, etc., under the supervision of a member of the Africana Studies and Research Center faculty.

ASRC 4902-4903 Independent Study
4902, fall; 4903, spring. Africana Studies faculty.
For students working on special topics, with selected reading, research projects, etc., under the supervision of a member of the Africana Studies and Research Center faculty.

ASRC 4933 Abolitionist Circuits (also ENGL 4073, HIS 4360/6630, NES 6710)
Spring. 4 credits. M. Schoolman.
For description, see SHUM 4933.

ASRC 6200 Politics of Global Africa (also ASRC 3200)
Fall. 4 credits. A. Mazrui.
For description, see ASRC 3200.

ASRC 6206 Islam in Africa and Its Diaspora (also ASRC 4201, DSOC 4360/6630, NES 6710)
Spring. 4 credits. A. Mazrui.
For description, see ASRC 4201.

ASRC 6207 Black Feminist Theories (also ENGL/FGSS 6207, COML 6465)
Fall. 4 credits. C. Boyce Davies.
This course examines black feminist theories, paying particular emphasis on the cross-cultural experiences of women as expressed both theoretically and creatively. It follows the chronologies and variations of modern black feminisms, beginning with the U.S. articulations and moving toward how particular feminist positions are constructed and theorized in other locations across the African diaspora such as Black British feminism, Caribbean feminism, African feminism. Thus we will explore the various theories and texts within their sociopolitical and geographical frames and locations, analyzing these as appropriate against or in relation to a range of feminist activism and movements.

ASRC 6301 African American Politics (also ASRC 4300)
Fall. 4 credits. J. Turner.
For description, see ASRC 4300.

ASRC 6304 Marriage and Divorce in the African Context (also FGSS 6304)
Fall. 4 credits. J. Byfield.
Marriage was the widely expected norm within African societies. The marriage was an important marker of adulthood, linking individuals and lineages in a network of mutual cooperation and support. Marriage practices and their concomitant gender expectations varied significantly between societies, and over time. As a result, marriage and divorce are especially rich terrain for exploring social history, women's agency, discursive constructions of "woman," masculinity, and gender relations of power. This course explores some of the newest scholarship on marriage by Africasta scholars. The readings demonstrate the wide cultural variety in marriage as well as the dynamic relationship between marriage and historical change. They especially highlight women's roles and expectations in marriage, masculinity and the ways men and women negotiated the rules and boundaries of marriage.

ASRC 6305 Dress, Cloth, and Identity: Africa and the Diaspora (also ARTH 6305)
Spring. 4 credits. J. Byfield.
This course uses a multidisciplinary approach to examine the importance of textiles in African social and economic history. It combines art history, anthropology, social and economic history to explore the role of textiles in marking status, gender, political authority and ethnicity. In addition, we examine the production and distribution of indigenous cloth and the consequences of colonial rule on African textile industries. Our analysis also considers the principles of African dress and clothing that shaped the African diaspora in the Americas as well as the more recent popularity and use of African fabrics and dress in the United States.

ASRC 6400 African Aesthetics (also ENGL 6401)
Fall. 4 credits. G. Farred.
What kind of thinking is being and has been produced, historically by figures in African philosophy? Intention of course is not—though that may a collateral effect—to argue against the existence of African philosophy nor is it to “define” the field, as if such a project were even possible. “Africana Thought” will, instead, seek to engage those thinkers who produce this philosophy. We will examine from the Confessions of St. Augustine through Alexander Crummell’s musings to Valentin Mudimbe’s “The Invention of Africa,” from intense reflections on the condition of black subjugation that is Frantz Fanon’s writing to locating Jacques Derrida as a philosopher of the Maghreb. Course about Africana philosophy as a project that persistently questions itself.

ASRC 6401 The Politics of Theory (also ENGL 6402, FREN 6401)
Spring. 4 credits. T. Gosa.
This graduate seminar investigates the political dynamics of the hip-hop generation. The primary focus of this course will be the major political and economic forces that have shaped the worldview of Black and Latino/a youth born between 1965 and 1984. Students will critically address major topics surrounding hip-hop including race-ethnicity, gender and sexuality, social class, segregation/mass-incarceration, politics, and education. After reviewing the socio-historical development of hip-hop, we will examine the role of hip-hop in modern black politics and activism, including its significance for mobilizing youth. Special attention will be given to the generational gap between the hip-hop generations and the Civil-Rights/Black Power parents.

ASRC 6900-6901 Thesis
6900, fall; 6901, spring. Variable credit. Prerequisite: satisfactory progress toward the major. Graduate students. Africana Studies faculty.

ASRC 6902-6903 Africana Studies Graduate Seminar
6902, fall; 6903, spring. 4 credits. Africana Studies faculty.
Designed for first-year ASRC graduate students. The seminar is coordinated and supervised by one professor but team-taught by three or four faculty members per semester. Each participating faculty member is responsible for a topical segment of the course related to her or his areas of specialization or an area of interest pertaining to theory and methodology of Africana Studies.

ASRC 6513 Toni Morrison’s Novels (also ASRC 4509)
Spring. 4 credits. R. Richardson.
For description, see ASRC 4509.
students may count two such courses toward fulfilling the major.

Honors
Candidates for honors must maintain an average of B+ in courses pertinent to the major and have taken at least one course in which they wrote a research paper. Normally, at the end of the junior year students who wish to write a senior honors essay must approach a member of the American Studies faculty and discuss their ideas for a project. With approval from the faculty member students may then register in the fall of their senior year for AMST 4993, the honors essay tutorial. At the end of the fall semester, honors candidates meet with their advisor and a second member of the American Studies faculty to discuss their progress. If satisfactory, honors students complete their honors essays in the spring by enrolling in AMST 4994.

Category Key: Courses in American Studies are broken into different categories. To determine which category (ies) a course falls in, please note the reference at the end of each course description. The key is as follows: ASE = Anthropology, Sociology, and Economics, LT = Literature and Theatre Arts, GP = Government and Public Policy, HI = History, MV = Music and Visual Studies, HR = Honors, Reading and Research.

American Studies 4300 Seminars

AMST 4300 The Milman Seminar
Fall. 4 credits. Prerequisite: permission of instructor. G. C. Altschuler.
The Milman Seminar: Baseball in American Culture. Through a reading of fiction and nonfiction, we examine the role of baseball as it has shaped and reflected the attitudes and values of Americans. Novels assigned in the course include Bernard Malamud, The Natural; Mark Harris, Bang the Drums Slowly; Philip Roth, The Great American Novel; and Robert Coover, The Universal Baseball Association. Nonfiction works may include Neil Lacnot, Negro League Baseball, Roger Kahn, The Boys of Summer, and Andrew Zimbalist, Baseball and Billions. Each student in the course writes a 25- to 55-page research paper. (HI)

AMST 4301 The Rabinor Seminar (also ENGL 4301)
Spring. 4 credits. Prerequisite: permission of instructor. M. P. Brady.
The Rabinor Seminar explores the role of diversity in the formation of a distinct American tapestry. The specific topic varies each year, but the general subject is the promise and experience of pluralism. Topic for spring 2010: Queering Latinidad. This course will examine queer Latina and Latino literature, film, and art. Beginning with John Rechy’s stunning novel about sex work, City of Dreams, and continuing with the theoretical and literary transformations wrought by Cherríe Moraga and Gloria Anzaldúa, this course explores the relationship between sex, desire, revolution, and belonging in the work of Luz Marie Umpierre, Raphael Campos, Luis Alfaro, Marga Gomez, Laura Aguilar, Frances Negron-Mutaner, and many others. We will also take up the theoretical terrain outlined by José Munoz, Maja Horn, and Yvonne Yarbro-Bejarano. This course will entail extensive reading and two longer papers. (LT)

AMST 4303 Literature as History: The Americas (also ENGL 4303)
Fall. 4 credits. B. Maxwell.
Beginning with William Carlos Williams's In the American Grain (1925), this course will consider moments in the telling of history by literary means. Responding to what they felt as the “deadness” of conventional historiography, writers such as Williams, Charles Reznikoff, John Sanford, Muriel Rukeyser, Melvin Tolson, and Paul Metcalf produced imaginative American histories that made a new world of historical narration, and in the process found new objects of historical attention, one of which was the plural, transnational America of the hemispheric Americas. This reconfiguration anticipated and in some cases shaped recent revisionist critiques of the European presence in American soil. Eduardo Galeano, Leslie Marmon Silko, David Sarnoff, Ward Churchill, Noam Chomsky, Ana Castillo); accordingly, students will read examples, some polemical, of that later work. (LT)

AMST 4306 Topics in American Studies (also ARTH/VISST 4761)
Fall and spring. 4 credits. Prerequisite: permission of instructor. Not open to freshmen. L. L. Meixner.
Topic for Fall 2009: Public art and popular entertainments as the means for everyday people to politically engage or escape the Great Depression (1929-41). Discussions include Living Newspapers, the Federal Theater Project, Union-sponsored theater including Pints and Needles, WPA muralists and printmakers, PSA photographers, Social Realists including Ben Shahn, Reginald Marsh, and Philip Evergood, alongside Grant Wood and the Regionalists. Connecting these is FDR's New Deal and its controversial government support for the arts. We consider Big Bands and swing, pulp and comic strips, star tabloids, Depression-era Hollywood gangster films, "screwball" comedies, and Fred Astaire and Ginger Rogers spectaculars. Will examine the importance of early radio in the home through FDR's fireside chats, soap operas, and serial thrillers such as the Shadow. Students will draw on the American Memory Project, documentaries, and the Johnson Art Museum collections. Films include It Happened One Night, Gay Dissooe, Double Indemnity, and Woody Allen's Radio Days. (MV)

AMST 4309 Reconstruction and the New South (also HIST 4390/6391) (HA-AS)
Fall. 4 credits. M. Washington.
This course focuses on the American South in the 19th century as it made the transition from Reconstruction to new forms of social organization and patterns of race relations. Reconstruction will be considered from a sociopolitical perspective, concentrating on the experiences of the freed people. The New South emphasis will include topics on labor relations, economic and political changes, new cultural alliances, the rise of agrarianism, and legal ofim of Jim Crow. (HI)

Courses

AMST 1101 Introduction to American Studies (CA-AS)
Spring. 4 credits. E. Maxwell.
This course is an introduction to interdisciplinary considerations of American culture. We will reflect on topics ranging from Native American relations to the land, to the European conquest of the Americas, to the development of American civic life and political culture and the ongoing African American struggle for freedom and equality. We will also study immigration as a (threatened) constant in national life and labor, the distinctions between mass culture and popular culture, the promise of American life, and violence as a persistent national woe. We'll examine these themes through literature, historical writing, music, art, film, architecture, and political economy in the United States. The course will also give attention to the many methods through which scholars have, over time, developed the discipline of American Studies, and to ongoing debates over the intellectual and political stakes of those methods. (LT)

AMST 1109 Introduction to American Studies: New Approaches to Understanding American Diversity, the 19th Century (HA-AS)
4 credits. Next offered 2010-2011. N. Salvatore. (HI)

AMST 1110 Introduction to American Studies: New Approaches to Understanding American Diversity, the 20th Century (HA-AS)
4 credits. Next offered 2010-2011. M. C. Garcia and D. Chang. (HI)

AMST 1240 Democracy and Its Discontents: Political Traditions in the United States (also HIST 1240) (HA-AS)
Summer. 3 credits. N. Salvatore.
An examination of democracy and its critics. The course explores the evolution of democracy in America, focusing on some of the dramatic and important episodes in American history. It considers the struggles over the emancipation of slaves in the 19th
century and expanded rights for women and working people in the 20th century, free-speech issues, the civil-rights movement, religious-based critiques of American culture, and conservative critiques of American liberalism. The course serves as an investigation of the ways in which political expression takes forms in modern American culture. In addition to lectures, the course features several afternoon programs that include guest lecturers and hands-on instruction in how to use the modern electronic research library. (HD)

[AMST 1311 Popular Music in America: A Historical Survey (also MUSIC 1311) # (LA-AS)]
3 credits. Next offered 2011-2012. S. Pond. For description, see MUSIC 1311. (MV)

AMST 1312 History of Rock Music (also MUSIC 1312) (LA-AS)
Spring. 3 credits. J. Petraino. For description, see MUSIC 1312. (MV)

AMST 1313 A Survey of Jazz (also MUSIC 1313) (LA-AS)
Fall. 3 credits. S. Pond. For description, see MUSIC 1313. (MV)

AMST 1530 Introduction to American History (also HIST 1530) # (HA-AS)
Fall. 4 credits. M. B. Norton. For description, see HIST 1530. (HI)

AMST 1531 Introduction to American History: 1865–Present (also HIST 1531) (HA-AS)
Spring. 4 credits. A. Sachs. For description, see HIST 1531. (HI)

AMST 1600 Introduction to American Indian Studies I (also AIS 1100) (HA-AS)
Fall. 3 credits. P. Nadasy. For description, see AIS 1100. (HI)

AMST 1601 Introduction to American Indian Studies II (also AIS 1110) (CA-AS)
Spring. 4 credits. K. Kassam. For description, see AIS 1110. (HI)

AMST 2010 Popular Culture in the United States, 1900 to 1945 (HA-AS)

AMST 2022 The Court, Crime, and the Constitution (also HIST 2020) (HA-AS)
Fall. 4 credits. R. Polenberg. For description, see HIST 2020. (HI)

AMST 2030 Introduction to American Literature (also ENGL 2030) # (LA-AS)
Fall. 4 credits. L. Donaldson. For description, see ENGL 2030. (LT)

[AMST 2033 Wilderness in North American Historical Culture (also HIST 2030) # (HA-AS)]
4 credits. Next offered 2010–2011. A. Sachs. For description, see HIST 2030. (HI)

AMST 2040 Introduction to American Literature (also ENGL 2040) (LA-AS)
Spring. 4 credits. J. Braddock. For description, see ENGL 2040. (LT)

AMST 2060 The Great American Cornell Novel (also ENGL 2060) (LA-AS)
Spring. 4 credits. M. Hite. For description, see ENGL 2060. (LT)

[AMST 2090 Seminar in Early America (also FGSS/HIST 2090) # (HA-AS)]

AMST 2100 Progressive Reform in America, 1900–1940
Fall. 4 credits. Limited to 15 students. Priority given to sophomores. N. Salvatore. This course looks at progressive reform from the early 20th century to the edge of World War II. We will look at politics, the impact of world war, contesting ideologies, the role of the corporation, and the evolving meaning of liberalism through a variety of movements and individuals. Short essays and a research paper required. (HI)

[AMST 2105 The American Musical (also ENGL/THEATR 2150, MUSIC 2250) (LA-AS)]
3 credits. Next offered 2010–2011. N. Salvato. For description, see THEATR 2150. (MV)

[AMST 2110 Black Religious Traditions: Sacred and Secular (also HIST/RELST 2110) (HA-AS)]

[AMST 2120 African American Women: 20th Century (also FGSS/HIST 2120) (HA-AS)]

[AMST 2150 Comparative American Literature (also COML 2150) (LA-AS)]
Fall. 4 credits. Next offered 2011–2012. B. Maxwell. For description, see COML 2150. (MV)

[AMST 2200 Travel in American History and Culture (also HIST 2200) (HA-AS)]

[AMST 2211 Seminar: The Blues and American Culture (also HIST 2211) (HA-AS)]

[AMST 2250 The U.S.–Mexico Border: History, Culture, Representation (also HIST/LSP 2250) (CA-AS)]

[AMST 2300 Latino Communities (also DSOC/LSP 2300) (SBA-AS)]
3 credits. Next offered 2011–2012. R. Mize. For description, see DSOC 2300 (ASE)

AMST 2350 Archaeology of North American Indians (also AIS 2350, ANTHR/ARKEO 2235) # (HA-AS)
Spring. 4 credits. K. Jordan. For description, see ANTHR 2235. (ASE)

[AMST 2360 Native People of the Northeast (also AIS/HIST 2360) # (HA-AS)]

[AMST 2390 Seminar in Iroquois History (also HIST 2390) # (HA-AS)]

AMST 2401 Introduction to Latino/a Literature (also ENGL/LSP 2400) (LA-AS)
Fall. 4 credits. M. P. Brady. For description, see ENGL 2400. (LT)

[AMST 2420 Religion and Politics in American History from J. Winthrop to R. Reed (also HIST/RELST 2420) (HA-AS)]
4 credits. Prerequisite: permission of instructor. Next offered 2010–2011. R. L. Moore. (HI)

AMST 2440 The United States in Vietnam (also HIST 2440) (HA-AS)
Spring. 4 credits. F. Logevall. For description, see HIST 2440. (HI)

AMST 2501 Race and Popular Culture (also HIST 2510) (HA-AS)
Fall. 4 credits. M. Washington. For description, see HIST 2510. (HI)

[AMST 2510 20th-Century Women Writers (also ENGL/FGSS 2510) (LA-AS)]
4 credits. Next offered 2010–2011. E. DeLoughrey. For description, see ENGL 2510. (LT)

[AMST 2520 Late 20th-Century Women Writers and Visual Culture (also ENGL 2520)]
4 credits. Next offered 2011–2012. (LT)

AMST 2599 Latinos in the United States: Colonial Period to 1898 (also HIST/LSP 2600) # (HA-AS)
Fall. 4 credits. M. C. Garcia. For description, see HIST 2610. (HI)

[AMST 2600 Introduction to American Indian Literature in the United States (also ENGL 2600) (LA-AS)]

[AMST 2610 Latinos in the United States: 1898 to the Present (also HIST/LSP 2610) (HA-AS)]

For description, see HIST 2610. (HI)
AMST 2620 Asian American Literature (also AAS/ENGL 2620) (LA-AS)
Spring. 4 credits. S. Wong.
For description, see ENGL 2620. (LT)

AMST 2640 Introduction to Asian American History (also AAS 2130, HIST 2640) (HA-AS)
Fall. 4 credits. D. Chung.
For description, see HIST 2640. (HI)

AMST 2650 Introduction to African American Literature (also ENGL 2650) (CA-AS)
Fall. 4 credits. D. Woolsheth.
For description, see ENGL 2650. (LT)

AMST 2660 Introduction to Native American History (also AIS/HIST 2660) (HA-AS)
J. Parmenter. (HI)

AMST 2680 Culture and Politics of the 1960s (also ENGL 2680) (CA-AS)
Fall. 4 credits. P. Sawyer.
For description, see ENGL 2680. (LT)

AMST 2710 Social and Political Context of American Education (also EDUC/SOC 2717) (SBA-AS)
Fall. 4 credits. J. Sipple.
For description, see EDUC 2710. (ASE)

AMST 2720 The Atlantic World from Conquest to Revolution (also HIST 2720) # (HA-AS)
Spring. 4 credits. M. B. Norton.
For description, see HIST 2720. (HI)

AMST 2721 Anthropological Representation: Ethnographies of Latino Culture (also ANTH/RISP 2721) (CA-AS)
V. Santiago-Irizarry. (ASE)

AMST 2730 Women in American Society, Past and Present (also FGSS/HIST 2730) # (HA-AS)
M. B. Norton. (HI)

AMST 2760 Survey of American Film (also FILM 2760, VISST 2300) (LA-AS)
Spring. 4 credits. Each student must enroll in a section and attend one screening per week.
S. Haenni.
Focusing mostly on Hollywood film, this course surveys some major developments in and approaches to 20th-century American cinema. We trace changes in film aesthetics and film style, the development of the American cinema as an institution that comprises an industrial system of production, social and aesthetic norms and codes, and particular modes of reception. The course introduces methodological issues in American film history—especially questions of narrative, genre, stardom, and authorship—and focuses on the ways film shapes gender, race, class, ethnic, and national identities. Screenings include work by D. W. Griffith, John Ford, Howard Hawks, Alfred Hitchcock, and others and are supplemented by readings in film criticism and history. (LT)

AMST 2820 Photography and the American Landscape (also LA 2820)
Fall. 3 credits. A. Hammer.
For description, see LA 2820. (MV)

archaeological, biological) at the 1000 or 2000 level.

- ANTHR 3000: Introduction to Anthropological Theory

- Two other courses of at least 4 credits at the 3000 level that are designated “comparative survey” courses in the catalog.

- Two 4000-level courses, one of which must be a seminar course in your senior year (4000, 4238, 4260, and 4263 are not seminar courses and do not fill the requirements).

- An additional 8 credits in elective courses, which may be in cognize disciplines with the approval of your advisor.

Exceptions to these requirements may be granted if a written petition is approved by the director of undergraduate studies.

No S–U credits or First-Year Writing Seminars may count toward the major. A letter grade of C– or better is required in all courses counted toward the major.

Study abroad and off-campus study programs: The Department of Anthropology encourages students to consider a semester of study abroad or off-campus study developed as an integral part of the student’s major concentration. The director of undergraduate studies serves as the anthropology study abroad advisor.

The Cornell–Nepal Study Program: The Cornell–Nepal Study Program is a joint program of Cornell University and Tribhuvan University, the national university of Nepal. Qualified junior, seniors, and first- or second-year graduate students work with faculty from both universities to prepare for and undertake field research projects in Nepal. Students receive 15 credits per semester; students may enroll for either fall or spring semester, or for the entire year; application is through Cornell Abroad. For further information, consult David Holmberg or Kathryn March in the Department of Anthropology.

Other anthropologically relevant study abroad options, using existing Cornell Abroad and off-campus options, can be worked out in consultation with the major advisor, the anthropology study abroad advisor, and Cornell Abroad.

Honors

Honors in anthropology are awarded for excellence in the major, which includes overall GPA and completion of an honors thesis. Undergraduate students interested in working for an honors degree should apply to the Honors Committee in the second semester of their junior year (requests for late admission may be considered, but not later than the second week of the first semester of the senior year). It is the student’s responsibility to secure an appropriate topic for a thesis and to find a faculty member willing to sponsor and supervise the research; the advisor and at least the general subject of the thesis must be identified at the time of application for admission to the Honors Program. Note that clearance from the University Committee on Human Subjects usually is required before research involving living people may begin; students contemplating such research should begin to work with their thesis advisors to design their investigations and obtain the clearance well in advance of the date when the involvement with research subjects is to begin.

Admission to the Honors Program requires an overall GPA of 3.5 or greater and a 3.5 GPA in the major. In addition, the student should have no outstanding Incompletes in courses that will be used toward the major (provisional admission with Incompletes is possible at the discretion of the chair of the Honors Committee on evidence that a good faith effort to finish them is under way). Under special circumstances, a student with an overall GPA of 3.0 may petition for admittance to the program.

Writing an honors thesis typically is a two-semester project involving 8 credits of course work; most students do this work during their senior year. During their first semester of honors work, students typically register for (1) ANTHR 4985 Honors Thesis Research (3 credits); and (2) ANTHR 4991 Honors Workshop I (1 credit). During their second semester of honors work, students typically register for (1) ANTHR 4984 Honors Thesis Write-up (2 credits); and (2) ANTHR 4992 Honors Workshop II (2 credits). The two-course/term arrangement reflects the division of supervision over the thesis between the thesis advisor and chair of the Honors Committee. The thesis advisor is ultimately responsible for guiding the scholarly development of the thesis; the chair of the Honors Committee is mainly responsible for assuring timely progress toward completion of the thesis, and providing a context for students in the Honors Program to share ideas (both editorial and substantive) as their theses progress.

Special Programs and Facilities

Collections: the department has an extensive collection of archaeological and ethnological materials housed in the Anthropology Collections. A limited number of students can make arrangements to serve as interns in the Anthropology Collections. Olin Library houses some of the most extensive collections of materials on the ethnology of Southeast Asia, South Asia, East Asia, and Latin America to be found anywhere in the United States. The biological anthropology laboratory (B65 McGraw Hall) houses an extensive collection of materials for teaching purposes, including (1) human skeletal remains, (2) articulated skeletons and cranial casts of primates, and (3) casts of important fossils in the human lineage. Independent Study: specialized individual study programs are offered in ANTHR 4910, Topics in Anthropology, a course open to a limited number of juniors and seniors who have obtained permission and supervision of a faculty member. Undergraduates should note that many 6000-level courses are open to them by permission of the instructor.

Colloquia: The Department of Anthropology holds colloquia almost every week of the semester on Friday at 3:30 p.m. in 215 McGraw Hall. Faculty members from Cornell and other universities participate in discussions of current research and problems in anthropology. Students are encouraged to attend.

For more complete information about the anthropology major, see the director of undergraduate studies or visit the Department of Anthropology web page (falcon.arts.cornell.edu/Anthro).

I. Introductory Courses

Each of these Introductory Courses provides an introduction to one of the subfields of anthropology. They do not form a sequence; students can take them in any order and at any point during their time at Cornell.

ANTHR 1200 Ancient Peoples and Places @ (HA-AS)

Spring. 3 credits. T. Volman.

A broad introduction to archaeology—the study of material remains to answer questions about the human past. Case studies highlight the variability of ancient societis and illustrate the varied methods and interpretive frameworks archaeologists use to reconstruct them. This course can serve as a platform for both archaeology and anthropology undergraduate majors.

ANTHR 1300 Human Evolution: Genes, Behavior, and the Fossil Record (PBS Supplementary List)

Spring, 3 credits. Fee for lab usage and maintenance, $5. A. Arcadi.

The evolution of humankind is explored through the fossil record, studies of the biological differences among human populations, and a comparison with our closest relatives, the primates. This course investigates the roots of human biology and behavior with an evolutionary framework.

ANTHR 1400 The Comparison of Cultures @ (CA-AS)

Fall. 3 credits. Staff.

An introduction to cultural anthropology through ethnographies, or the descriptive accounts of anthropologists. Through readings and lectures, students acquaint themselves with a number of cultures from several parts of the world. The cultures range in form from those of small-scale tribal societies to those of state societies. Throughout the course, we attempt to make sense of exotic cultures in their own terms. Attention is focused on variation in cultural patterns as they are expressed in social, economic, and ritual practices. In this encounter, the principles of anthropology, as a comparative enterprise that poses distinct cultural, intellectual, and social frameworks, will be developed. Fiction, films, and exercises supplement the formal anthropological materials.

ANTHR 1401 The Scope of Anthropology

Fall. 1 credit. Does not satisfy major requirement to take two broad introductory courses. Pre- or corequisite: ANTHR 1300 or 1400. S–U grades only.

This course is intended for majors in anthropology, prospective majors. Each week a different member of the faculty in anthropology at Cornell will make a presentation on the nature of their work within the field and discuss their interests with students. The course is meant to introduce the range of approaches found in anthropology and help students in planning future course work.

ANTHR 2400 Cultural Diversity and Contemporary Issues @ (SBA-AS)

Spring. 3 credits. M. Fiskesjo.

This course will introduce students to the meaning and significance of forms of cultural diversity for the understanding of...
II. Sociocultural Anthropology

Sociocultural anthropology is rooted in the precise observation and rigorous analysis of human cultural capacities and human social practices, relations, and institutions. All sociocultural anthropology involves both inquiry into the diversity of human cultures (ethnography) and comparative analysis of human social dynamics (social theory).

Historically, sociocultural anthropology specialized in the study of nonwestern peoples, but there are few places and domains of human activity that sociocultural anthropologists do not study. To give a few examples, sociocultural anthropologists study nuclear weapons scientists in California, the transformation of state power in Russia, and the politics of development in India. They study how television producers in Egypt contribute to nationalism, the social effects of truth commissions in Guatemala and South Africa, and the emergence of new religious and social movements in Latin America.

What distinguishes sociocultural anthropology as a field is its engagement with the full abundance of human lived experience and its integrated, comparative effort to make sense of the key processes shaping this experience. As such, sociocultural anthropology is an excellent, flexible choice of major. It teaches critical, analytical, and expressive skills and an understanding of the diversity of human cultural expression in the broad range of both individual and societal contexts. Interest in this “medicalization of life” may be one of the reasons that medical anthropology is currently the fastest-growing sub-field in anthropology.

This course encourages students to examine concepts of disease, suffering, health, and well-being in their immediate experience and beyond. In the process, students will gain a working knowledge of ecological, critical, and phenomenological, and applied approaches used by medical anthropologists. We will investigate what is involved in becoming a doctor, the socialities of medicines, controversies over new medical technologies, and the politics of medical knowledge. The universality of biomedicine (or hospital medicine) will not be taken for granted, but rather we will examine the plurality generated by the various political, economic, social, and ethical demands upon which biomedicine has developed in different places and at different times. In addition, biomedical healing and expertise will be viewed in relation to other kinds of healing and expertise. Our readings will address medicine in North America as well as other parts of the world. In class, our discussions will return regularly to consider the breadth of kinds of medicine throughout the world and to weave the specific historical and local contexts of biomedicine.

ANTHR 2468 Medicine, Culture, and Society (CA-AS)
Fall. 3 credits. S. Langwick.

Medicine has become the language and practice through which we address a broad range of both individual and societal complaints. Interest in this “medicalization of life” may be one of the reasons that medical anthropology is currently the fastest-growing sub-field in anthropology. This course encourages students to examine concepts of disease, suffering, health, and well-being in their immediate experience and beyond. In the process, students will gain a working knowledge of ecological, critical, and phenomenological, and applied approaches used by medical anthropologists. We will investigate what is involved in becoming a doctor, the socialities of medicines, controversies over new medical technologies, and the politics of medical knowledge. The universality of biomedicine (or hospital medicine) will not be taken for granted, but rather we will examine the plurality generated by the various political, economic, social, and ethical demands under which biomedicine has developed in different places and at different times. In addition, biomedical healing and expertise will be viewed in relation to other kinds of healing and expertise. Our readings will address medicine in North America as well as other parts of the world. In class, our discussions will return regularly to consider the breadth of kinds of medicine throughout the world and to weave the specific historical and local contexts of biomedicine.

ANTHR 3546 South Asian Religions in Practice (CA-AS)
Fall. 3 credits. Next offered 2011–2012.

ANTHR 2546 South Asian Religions in Practice (CA-AS)
Fall. 3 credits. Next offered 2011–2012. Staff.

ANTHR 2540 Japanese Society Through Film (CA-AS)
Fall. 3 credits. H. Miyazaki.

This is an anthropological introduction to Japanese society through a critical investigation of a wide range of films from Ozu Yasujirō’s classic films to Miyazaki Hayao’s animated films. Topics of investigation include kinship and marriage, work and workplaces, gender and sexuality, bureaucracy, crime and legal culture, nationalism and nostalgia, and technoscientific utopia.

ANTHR 2721 Anthropological Representation: Ethnographies on Latino Culture (also AMST/LSPI 2721) (CA-AS)
Fall. 3 credits. Next offered 2010–2011.

ANTHR 2400 Cultural Diversity and Contemporary Issues (SBA-AS)
Spring. 3 credits. M. Fiskesjö.

Sociocultural ethnography is the study of the broad diversity of kinds of healing and expertise. Our readings will address medicine in North America as well as other parts of the world. In class, our discussions will return regularly to consider the breadth of kinds of medicine throughout the world and to weave the specific historical and local contexts of biomedicine.

ANTHR 3406 Gifts and Exchange (SBA-AS)

ANTHR 3410 Nationalism and Revivalism (CA-AS)

ANTHR 3420 Myth, Ritual, and Symbol (also RELST 3230) (CA-AS)
Spring. 4 credits. Comparative survey. D. Holmberg.

Examine how systems of thought, symbolic forms, and ritual practice are formulated and expressed in primarily non-Western societies. Focuses on anthropological interpretations of space, time, cosmology, myth, classificatory systems (e.g., color, totems, food, dress, kinship), taboos, sacrifice, witchcraft, sorcery, and rites of passage (birth, initiation, marriage, death). Examines both the roles of specialists (e.g., spirit mediums, curers, priests, ascetics) and nonspecialists in producing these cultural forms.

ANTHR 3421 Sex and Gender in Cross-Cultural Perspective (also FGSS 3210) (SBA-AS)
Fall. 4 credits. Comparative survey. K. March.

Introduction to the study of sex roles cross-culturally and to anthropological theories of sex and gender. Examines various aspects of the place of the sexes in social, political, economic, ideological, and biological systems to emphasize the diversity in gender and sex-role definitions around the world.

ANTHR 3422 Culture, Politics, and Environment in the Circumpolar North (also ANTHR 6422) (CA-AS)
Spring. 4 credits. P. Nadasy.

This course examines the cultures and histories of the circumpolar North. The primary emphasis is on the North American Arctic and Subarctic with some attention to northern Eurasia for comparative purposes. The focus is on the indigenous peoples of the region and the socio-political and ecological dimensions of their evolving relationships with southern industrial societies.

ANTHR 3428 Conflict, Dispute Resolution, and Law in Cultural Context (SBA-AS)

ANTHR 3447 Sport @ (CA-AS)
Spring. 4 credits. S. Sangren.

Long overlooked by anthropologists, sport and recreation are increasingly recognized as
important windows into culture. Sport can be approached from a number of directions—interpreted as a ritual; viewed as a spectacle of ethnic, regional, or national identity; seen as a metaphor for life; understood as a major industry. This course will consider these and other approaches to sport, encouraging students to bring their own involvements in sport to reflect not only upon sport itself, but also upon how such reflection can illuminate cultural, psychological, and political dimensions of social life. Why, for example, do we take sport (and other forms of recreation) so seriously? Why do many of us apparently invest more passion in such pursuits than in life’s allegedly more serious activities? How is sport integrated into people’s identities? Readings will draw from popular literature and media as well as academic writing from a variety of disciplines (psychology, sociology, history) in addition to anthropology.

[ANTHR 3451 Global Movements of Cultural Heritage @ (CA-AS)]

[ANTHR 3461 Anthropology of Organizations (also ANTHR 6461) (SBA-AS)]

[ANTHR 3462 Democratizing Research (also ANTHR 6462) (SBA-AS)]

ANTHR 3465 Anthropology of the Body (also ANTHR 6465) (CA-AS)
Fall. 4 credits. S. Langwick.
This course examines a range of texts that treat the body as the subject and object of cultural, technological, political and ethical processes. Students investigate the cultivation of physical and social bodies through ethnographic and historical materials concerning healing and medicine, discipline and labor, governance and religion, aesthetics and desire. The production and reproduction of bodies and embodied practices have long been central to the way that power works. In this class, we will read and discuss a range of approaches to the body. There is much contention over how work, politics, environment, technologies, and violence shape the body and the senses. We will debate how histories of the body are intertwined with histories of gender, race, class, sexuality, (post)coloniality, modernization, science, transnationalism, and the webs of institution, ideas, and capital that comprise these phenomena. Some readings will investigate the complex mediations that account for the body as icon, text, metaphor, commodity, and raw material. Others will contend that serious attention to the production and reproduction of the body across different times and spaces challenge traditional notions of materiality and physicality. Because every examination of the body —test—implicitly or explicitly—in a theoretical and methodological approach to experience, we will also explore the histories of bodily senses, appetites and capabilities. Ultimately, our inquiry into contests over and reflections on the body, as well as specific bodies, aims to open up broader anthropological questions about authority, agency, sovereignty, and material life.

[ANTHR 3479 Culture, Language, and Thought (CA-AS)]

[ANTHR 3514 Learning in Japan @ (SBA-AS)]

[ANTHR 3516 Power, Society, and Culture in Southeast Asia (CA-AS)]

[ANTHR 3545 Peoples and Cultures of the Himalayas (also ANTHR 7545) (CA-AS)]
Fall. 4 credits. K. March.
A comprehensive exploration of the peoples and cultures of the Himalayas. Ethnographic materials draw on the lifeways of populations living in the Himalayan regions of Bhutan, India, Nepal, and Tibet. Some of the cultural issues to be examined through these sources include images of the Himalayas in the West, forms of social life, ethnic diversity, political and economic history, and religious complexity.

[ANTHR 3546 Asian Minorities @ (CA-AS)]

ANTHR 3554 Male and Female in Chinese Culture and Society (also FGSS 3440) (SBA-AS)
Fall. 4 credits. S. Sangren.
This course explores the culture of gender, sex roles, and domestic relations in late traditional and modern Chinese society. Readings and lectures range from ethnographic descriptions of the dynamics of Chinese family life, kin relations, and socialization to representations of male and female in mythologies and ritual activities. The course also considers developments subsequent to political changes in China. Although the course’s analytical focus is anthropological, readings will draw from the writings of historical, sociological, and political scientists as well. A premise of the course is that understanding sex and gender in China is essential to understanding Chinese culture and its most fundamental values. The course also aims to introduce students interested in Chinese techniques of anthropological analysis.

[ANTHR 3703 Asians in the Americas: A Comparative Perspective (also AAS 3030) (CA-AS)]

ANTHR 3734 Brazil: Many Cultures, One Nation (CA-AS)
Spring. 4 credits. J. Fajans.
From the streets of Rio to the shores of the Amazon, Anthropology studies the lives, communities, beliefs, practices, and politics of the diverse region known as Brazil. This course will look at issues of race, gender, ethnicity, religion, ritual, environment, development, and human rights across Brazil. We will examine rural and urban cultures, discuss African and European Influences, and explore the relations between indigenous and national cultures. In this context, we will look at the roles that religion, food, dress, soccer, samba, and carnival all play in producing this vibrant culture.

[ANTHR 3777 The United States (also AMST/LSP 3777) (CA-AS)]

ANTHR 4000 Development of Anthropological Thought (also ANTHR 7000) (SBA-AS)
Fall. 4 credits. Prerequisite: for undergraduates, two prior anthropology courses or permission of instructor. Staff. Examination of the history and development of anthropological theory and practice. Focuses on the differences and continuities among the various national and historical approaches that have come to be regarded as the schools of anthropology.

[ANTHR 4403 Ethnographic Field Methods (also ANTHR 6403) (SBA-AS)]

[ANTHR 4406 The Culture of Lives (also FGSS 4060) (CA-AS)]

ANTHR 4419 Anthropology of Corporations (also ANTHR 7419) (SBA-AS)
Spring. 4 credits. M. Welker.
This course develops an anthropological approach to corporations with a focus on large, profit-oriented, publicly traded corporations. To denaturalize the corporation, we will consider competing cultural logics internal to corporations as well as the contingent historical processes and debates that shaped the corporate form over the past two centuries. The course will examine processes through which various social groups have sought to alter and restrain corporations as well as reciprocal corporate attempts to reshape the social environment in which they operate.

ANTHR 4426 Ideology and Social Production (also ANTHR 7426) (SBA-AS)
Spring. 4 credits. S. Sangren.
This course is premised on the notion that understanding social life requires understanding how social institutions are produced and sustained through time—that is, one must understand “society” as a process of production. By the same token, all cultures produce ideas or “representation” (e.g., about reality, nature, society, gender, authority) that serve to legitimize or validate each society’s particular social arrangements. These ideologies play an important role in social production, on the one hand, and are also products of social processes, on the other. This course focuses on the linkages between ideology and social production in readings drawn from social theory and ethnographic case studies. We discuss strongly diverging views (psychoanalytic, postmodernist, poststructuralist, practice-theory, neo-Marxist) on how best to conceive social processes. An integrating theme is that understanding ideology and its alienating operations is essential to an analytically coherent understanding of what culture, in the last analysis, is.

ANTHR 4429 Anthropology and Psychoanalysis (also ANTHR 7429) (SBA-AS)
Fall. 4 credits. S. Sangren.
Psychoanalysis holds that desire emerges from the clash between individuals’ predisposition and the need to accommodate to others in society. Yes anthropology has been resistant to the role that psychoanalytic theory might play in linking individual desire to culture. Does psychoanalysis have anything to offer cultural anthropology? Can understanding of collective institutions be advanced with reference to theories of individual motivation and desire? Conversely, can collective life be understood without reference to individual motivation and desire? Is desire best understood as sexual in nature, or is it better understood in more abstract and existential terms. With such questions in mind, this course surveys anthropology’s engagements with psychoanalysis. We read theoretical works as well as ethnographically grounded case studies on topics ranging from religious experience, mythic narratives, the cultural construction of gender and desire, and modern popular culture.

ANTHR 4437 Anthropology of Development (also ANTHR 7437) @ (CA-AS)

ANTHR 4439 Sovereignty and Biopolitics @ (CA-AS)
Spring. 4 credits. M. Fiskejo.

This seminar course’s starting point is Agamben’s widely discussed ideas about “bare life” in relation to modern state sovereignty and to continuities with earlier forms of sovereignty. The course unfolds as a political-legal anthropology of sovereignty and citizenship, the exclusion of undesirables, and modern biopolitical control mechanisms. Readings will draw on classics from the anthropology and other literature on sovereignty and kingship, as well as case studies dealing with the modern Chinese state, the United States, the Soviet Union, etc.

ANTHR 4444 God’s and the Market (also ANTHR 7444) @ (CA-AS)

ANTHR 4455 Anthropology in the Real World (SBA-AS)

ANTHR 4478 Taboo and Pollution (CA-AS)

ANTHR 4479 Ethnicity and Identity Politics: An Anthropological Perspective (also AAS 4790) (SBA-AS)

ANTHR 4480 Anthropology and Globalization (also ANTHR 6480) @ (CA-AS)
Fall. 4 credits. Next offered 2011–2012. Staff.

ANTHR 4513 Religion and Politics in Southeast Asia (also ASIAN 4413) @ (CA-AS)
Spring. 4 credits. A. Willford.

This course explores how religious beliefs and practices in Southeast Asia have been transformed by the combined forces of colonialism, nationalism, and globalization. By examining both diversity and resurgence in one of the world’s most rapidly modernizing regions, we aim to understand the common economic, social, and political conditions that are contributing to the popularity of contemporary religious movements. At the same time, we also consider the unique ideological, theological, and cultural understandings behind different religious and movements. Through this process we also rethink conceptions of modernity.

ANTHR 4523 Making History on the Margins: The China–SE Asia Boundaries (also ANTHR 7523) @ (HA-AS)
Fall. 4 credits. M. Fiskejo.

This seminar course is a new in-depth look at classical issues regarding the making of history, revisiting the mountain borderlands in between China and Southeast Asia made famous by anthropologists (Leach, Lévi-Strauss, Kirch, and Friedmann) attempting to understand structure, history, and center-periphery transformations. Are the peoples of this region (Khac, Wa, Naga, etc. predetermined by fateful forces and processes beyond their control, as prisoners of geography and circumstance, or what role do they have in the making of their own history? The course adds themes from regions ethnography as well as theoretical issues, and forms an introduction to field research in this fertile region.

ANTHR 4542 Violence, Symbolic Violence, Terror, and Trauma in South Asia and the Himalayas (also ANTHR 6542) @ (CA-AS)

III. Anthropological Archaeology

Anthropological archaeology studies the diverse societies of the past using the material traces they left behind in the archaeological record. In addition to studying artifacts, archaeologists use unique methods to study the settings in which artifacts were produced and used by examining regional settlement patterns, the structure of sites and communities, the nature of activities, and ancient symbolism and social relations. The concerns of anthropological archaeology range from basic questions about continuity and change in the past, to application of hard science methods to date sites and determine the sources of artifacts, criticism of the uses to which the past is put in contemporary society, and protection of the archaeological record. Anthropological archaeology can be distinguished from other forms of archaeology (such as Classical or Art Historical archaeology) based on its emphasis on holistically studying past cultural systems, and by the theories and approaches it shares with sociocultural and biological anthropology.

There are numerous career opportunities for anthropological archaeologists, including work with museums, government agencies, and historic preservation groups in addition to academic employment. Private companies engaged in federally mandated cultural resource management (or CRM) archaeology employ thousands of archaeologists in the United States, and similar management programs exist in other countries.

ANTHR 1200 Ancient Peoples and Places (also ARKEO 1200) @ (HA-AS)
Spring. 3 credits. T. Volman.

For description, see Introductory Courses.

ANTHR 1401 The Scope of Anthropology
Fall. 1 credit. Staff.

For description, see Introductory Courses.

ANTHR 2200 Early People: The Archaeological and Fossil Record (also ARKEO 2200) @ (HA-AS)
Spring. 3 credits. T. Volman.

A survey of the archaeological and fossil record of human evolution. Contributions by researchers from a variety of disciplines are highlighted, as are the discoveries that have enlivened the study of human evolution for more than a century. Critical evaluation of evidence and interpretation will be stressed. Demonstrations and films supplement the lectures.

ANTHR 2201 Early Agriculture (also ARKEO 2201) @ (HA-AS)
Spring. 3 credits. N. Russell.

Throughout most of the human career, people survived by hunting and gathering wild foods. The advent of food production is one of the most profound changes in (prehistory). This course examines the current evidence for the appearance and spread of plants and animal domestication around the world. We will consider definitions of agriculture and domestication, the conditions under which it arises, the consequences for those who adopt it, and why it has spread over most of the world.

ANTHR 2215 Stone Age Art (also ARKEO 2215) @ (CA-AS)

ANTHR 2220 Field Course in Iroquois Archaeology (also ARKEO 2220) @ (SBA-AS)
Summer only. 3 credits. K. Jordan.

This course offers hands-on training in archaeological field methods through survey and excavation at historic-period Iroquois sites in the Finger Lakes region. The majority of class time will be spent engaging in supervised fieldwork, supplemented by lectures introducing archaeological methods and Iroquois history and material culture. Excavations will gather data on Iroquois residential architecture and domestic activities. Students will master field procedures, record-keeping, and interpretation of field data; study Iroquois material culture; and write a short research paper (7–10 pages) that uses data generated by the project to evaluate a topic of anthropological interest. Most class time will be spent off-campus; transportation will be arranged by the instructor.

ANTHR 2235 Archaeology of North American Indians (also AIS/AMST 2350, ARKEO 2235) @ (HA-AS)
Spring. 3 credits. K. Jordan.

This introductory course surveys archaeology’s contributions to the study of American Indian cultural diversity and change in North America north of Mexico. Lectures and readings will examine topics ranging from the debate over when the continent was first inhabited to present-day conflicts between Native Americans and archaeologists over excavation and the interpretation of the past. We will review important archaeological sites such as Chaco Canyon, Cahokia, Lamoka Lake, and the Little Bighorn battlefield. A principal focus will be on major transformations in lifeways such as the adoption of agriculture, the development of political-economic hierarchies,
and the disruptions that accompanied the arrival of Europeans to the continent.

ANTHR 3000 Introduction to Anthropological Theory (CA-AS)
Fall. 4 credits. P. Nadasdy. For description, see Sociocultural Anthropology.

[ANTHR 3217 Stone Age Archaeology (also ARKEO 3217) (HA-AS)

[ANTHR 3230 Humans and Animals (also ARKEO 3230) @ # (CA-AS)

[ANTHR 3232 Politics of the Past (also ARKEO 3232) @ # (HA-AS)

[ANTHR 3248 Iroquois Archaeology (also AIS/ARKEO 3248/6248, ANTHR 6248)
Fall. 4 credits. Next offered 2011–2012. K. Jordan.]

[ANTHR 3255 Ancient Mexico and Central America (also ARKEO 3255)
Fall. 4 credits. Next offered 2010–2011. J. Henderson.]

ANTHR 3256 Archaeology of the Andes (also ARKEO 3256) @ # (HA-AS)
Fall. 4 credits. J. Henderson. A survey of the rise and decline of civilizations in the Andean region of western South America before the European invasion. Key topics include the use of invasion-period and ethnographic information to interpret precolumbian societies, the emergence of settled farming life, and the development of the state.

ANTHR 3269 Gender and Age in Archaeology (also ANTHR 6269, ARKEO 6269/6269, FGSS 3700/6700) (SBA-AS)

ANTHR 3270 Environmental Archaeology (also ANTHR 6270, ARKEO 6270/6270) (PBS Supplementary List)
Fall. 4 credits. Comparative survey. T. Volman. A survey of selected topics in paleoenvironmental analysis and reconstruction, with emphasis on how they inform interpretations of the archaeological record. The course ranges broadly from a general consideration of human ecology and the role of environment in culture change to detailed study of specific techniques and approaches.

ANTHR 3272 Hunters and Gatherers (also ANTHR 6272, ARKEO 3272/6272) # @ (SBA-AS)
Fall. 4 credits. Comparative survey. T. Volman. A survey of contemporary and recent peoples with economies based completely or mainly on hunting and gathering. Selected societies from various parts of the world will be examined to compare aspects of technology, subsistence practices, organization and beliefs. The impact of contact with more economically advanced societies will be considered.

ANTHR 4209 Approaches to Archaeology (also ARKEO 4209) (CA-AS)
Spring. 4 credits. K. Jordan. An exploration of the concepts that have shaped modern archaeology. The course briefly examines the history of theoretical orientations in archaeology, then considers the variety of perspectives and interpretive frameworks that guide present-day investigations. Case studies illustrate the implications of the nature of the archaeological record for reconstructing subsistence and economic systems, trade, social and political organization, demography, and ideology. An undergraduate seminar, especially recommended for undergraduate majors and graduate archaeologists but open to anyone with a serious interest in archaeology.

[ANTHR 4256 Mesoamerican Religion, Science, and History (also ARKEO 4256, LATA 4250) @ # (CA-AS)

[ANTHR 4258 Archaeological Analysis (also ANTHR/ARKEO 6258, ARKEO 4258) (SBA-AS)
Spring. 4 credits. Limited to 15 students. Prerequisite: archaeology course or permission of instructor. Next offered 2011–2012. J. Henderson.]

[ANTHR 4250 Field and Analytical Methods in Archaeology (also ARKEO 4250) @ # (SBA-AS)
Spring. 4 or 6 credits. Next offered 2011–2012. J. Henderson.]

[ANTHR 4262 Catalhoyuk and Archaeological Practice (also ANTHR/ARKEO 7262, ARKEO 4262) @ # (HA-AS)

ANTHR 4263 Zooarchaeological Method (also ARKEO 4263) (PBS Supplementary List)
Fall. 5 credits. N. Russell. This is a hands-on laboratory course in zooarchaeological method: the study of animal bones from archaeological sites. It is designed to provide students with a basic grounding in identification of body part and taxon, aging and sexing, pathologies, taphonomy, and human modification. We will deal only with mammals larger than squirrels. While we will work on animal bones from prehistoric Europe, most of these skills are easily transferable to the fauna of other areas, especially North America. This is an intensive course that emphasizes laboratory skills in a realistic setting. You will analyze an assemblage of actual archaeological bones. It is highly recommended that students also take the course in Zooarchaeological Interpretation (ANTHR/ARKEO 4261) offered in the spring.

ANTHR 4264 Zooarchaeological Interpretation (also ARKEO 4264) (PBS Supplementary List)
Spring. 4 credits. Prerequisite: permission of instructor. N. Russell. This course follows from last semester’s Zooarchaeological Method. We will shift our emphasis here from basic skills to interpretation, although you will continue to work with archaeological bones. We will begin by examining topics surrounding the basic interpretation of raw faunal data: sampling, quantification, taphonomy, seasonality. We will then explore how to use faunal data to reconstruct subsistence patterns, social structure, and human/animal relations.

ANTHR 4267 Origins of Agriculture (also ARKEO 4267) # (HA-AS)

ANTHR 4268 Myth, History, and Politics: The Aztecs and Their Empire (also ANTHR/ARKEO 7268, ARKEO 4268)

ANTHR 4270 Political Economy in Archaeology (also ANTHR/ARKEO 7270, ARKEO 4270) # (SBA-AS)

ANTHR 4272 Historical Archaeology of Indigenous Peoples (also AMST 6272, ANTHR/ARKEO 7272, ARKEO/ AMST 4272) # (HA-AS)
Fall. 4 credits. K. Jordan. This seminar uses archaeology to examine the responses of nonstate indigenous peoples across the world to European expansion and colonialism over the past 500 years. Archaeology provides a perspective on indigenous lives that both supplements and challenges document-based histories. We will assess the strengths and weaknesses of various theories of culture contact, and explore a series of archaeological case studies, using examples primarily from North America with lesser emphasis on Africa and the Pacific. The seminar provides a comparative perspective on indigenous-colonial relationships, in particular exploring the hard-fought spaces of relative autonomy created and sustained by indigenous peoples.

ANTHR 4294 Seminar in Archaeology: The Archaeology of Human Origins (also ARKEO 4294) (HA-AS)
Spring. 4 credits. T. Volman. An exploration of the archaeological record associated with early modern and near-modern humans as well as their nonmodern contemporaries, such as the Neanderthals. Major issues include: what behaviors and capabilities are indicated for various populations, and how and why did these change over the course of the later Pleistocene? To what extent does the archaeological record support the "Out-of-Africa" hypothesis of a recent, African origin for all modern humans?

IV. Biological Anthropology

Biological anthropology is the subfield of anthropology that explores the physical diversity, evolutionary history, and behavioral potential of our species. Consistent with anthropology more generally, biological anthropology is concerned with human variation. The distinctive perspective of this subfield is that it examines human variation within the framework of evolutionary theory. Analyses of both biology and culture, and of the interaction between the two, mark the broad boundaries of this discipline. Within that wide scope, specific areas of inquiry are diverse, including fossil studies, primate behavior, nutrition and development, sexual behavior, parental investment, molecular and population genetics, and responses to environmental stress, disease evolution, life history analysis, and more. Some of the most
pressing social issues of our time fall within the domain of biological anthropology as well as a range of professions: the controversy over evolution and intelligent design; race, gender, and genetic determinism; the control of disease; the roots of aggression; and conservation and the role of humans in ecological systems. Although the number of Anthropology courses offered in this subfield are limited, students can pursue their interests through a variety of related courses in other departments and by constructing independent study courses with specific faculty members.

**ANTHR 1300 Human Evolution: Genes, Behavior, and the Fossil Record (PBS Supplementary List)**
Spring. 3 credits. Lab usage and maintenance fee: $5. A. Arcadi.
For description, see Introductory Courses.

**ANTHR 1401 The Scope of Anthropology**
Fall. 1 credit. Staff.
For description, see Introductory Courses.

**ANTHR 2750 Human Biology and Evolution (also NS 2750)**
Fall. 3 credits. J. D. Haas.
For description, see NS 2750.

**ANTHR 3000 Introduction to Anthropological Theory (CA-AS)**
Fall. 4 credits. P. Naidasdy.
For description, see Sociocultural Anthropology.

**ANTHR 3302 Anthropology of Everyday Life @ (SBA-AS)**
Fall. 4 credits. M. Small.
How can a subject as esoteric as anthropology affect our daily lives? This course will cover 14 individual subject topics, such as love, sex, competition, anger, war, self-deceit, marriage, work, and play at work, anthropologically, that is, from an evolutionary and cross-cultural viewpoint. Students will also be required to integrate their own experience and observation of with these subjects and demonstrate how their behavior, too, has an anthropological bent.

[ANTHR 3305 Anthropology of Parenting @ (SBA-AS)]

**ANTHR 3390 Primate Behavior and Ecology (PBS Supplementary List)**
Spring. 4 credits. Comparative survey.
Prerequisite: ANTHR 1300 or permission of instructor. A. Clark Arcadi.
The course will investigate all aspects of nonhuman primate life. Based on the fundamentals of evolutionary theory, group and inter-individual behaviors will be presented. In addition, an understanding of group structure and breeding systems will be reached through an evaluation of ecological constraints imposed on primates in different habitats. Subjects include: primate taxonomy, diet and foraging, predation, cooperation and competition, social ontogeny, kinship, and mating strategies.

**ANTHR 4390 Topics in Biological Anthropology**
Fall. 4 credits. Prerequisites: ANTHR 1300, 3390, or permission of instructor. M. Small.
Current topics in biological anthropology are explored. Topics change each semester. For further information, contact the professor or department office.

### V. Honors, Field Research, and Independent Study

**ANTHR 4910 Independent Study: Undergrad I**
Fall or spring. Credit TBA. Prerequisite: independent standing. Staff.
Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

**ANTHR 4920 Independent Study: Undergrad II**
Fall or spring. Credit and times TBA. Prerequisite: undergraduate standing. Staff.
For description, see ANTHR 4910, section II, “Honors and Independent Study.”

**ANTHR 4983 Honors Thesis Research**
Fall. 3 credits. Prerequisite: permission of Honors Committee. Staff.
Research work supervised by the thesis advisor, concentrating on determination of the major issues to be addressed by the thesis, preparation of literature reviews, analysis of data, and the like. The thesis advisor will assign the grade for this course.

**ANTHR 4984 Honors Thesis Write-Up**
Spring. 2 credits. Staff.
Final write-up of the thesis under the direct supervision of the thesis advisor, who will assign the grade for this course.

**ANTHR 4991 Honors Workshop I Write-Up**
Fall. 1 credit. Staff.
Course will consist of several mandatory meetings of all thesis writers with the honors chair. These sessions will inform students about the standard thesis production timetable, format and content expectations, and deadlines: expose students to standard reference sources; and introduce students to each other's projects. The chair of the Honors Committee will assign the grade for this course.

**ANTHR 4992 Honors Workshop II**
Spring. 2 credits. Staff.
Course will consist of a weekly, seminar-style meetings of all thesis writers until mid-semester, under the direction of the honors chair. This second semester concentrates on preparation of a full draft of the thesis by mid-semester, with ample time left for revisions prior to submission. Group meetings will concentrate on collective reviewing of the work of other students, presentation of research, and the like.

### VI. Graduate Seminars

The graduate program in anthropology is described in much greater detail on the anthropology department web page at falcon. arts.cornell.edu/Anthro. The seminars described immediately below pertain to the program in sociocultural anthropology. For information about graduate study in archaeology and biological anthropology, see the anthropology department web page.

A core set of seminars is required of all graduate students in sociocultural anthropology: ANTHR 6000 and 6010. ANTHR 6403 is strongly recommended. These courses are open to graduate students from other related fields. This sequence, and the graduate curriculum in general, is premised on the idea that anthropology is best defined as the comparative study of human social life. This definition resists institutional pressures in the academy to distinguish social science from humanistic or cultural studies and scholarly from more worldly applications. Our most important method, ethnography, is at once scientific and humanistic; disciplinary aspirations refuse to view cultural interpretation and analytic explanation as separable values. Furthermore, theory in anthropology is directly related to practice in the world whether in relation to research or more action-oriented pursuits. Consequently, the core sequences as well as most other courses for graduate students are oriented explicitly toward subverting an ideological construction of social life as separable into cultural and social (or political-economic) domains.

**ANTHR 6000 Proseminar: Culture and Symbol**
Fall. 6 credits. H. Miyazaki.
Focuses on an appreciation of symbolic, expressive, and representational forms and processes both as producers and products of social activities. Through the study of symbolic anthropology, structuralism, exchange, myth and ritual, religion, gender, personhood, linguistics, semiotics, etc., the course investigates how identity and meaning are linked to the practical exigencies of social life. While emphasizing aspects of the discipline generally associated with cultural anthropology, the course endeavors to set the stage for a dialectical understanding of social, political, economic, and symbolic activities as interrelated phenomena. The works of de Saussure, Levi-Strauss, Duby, Geertz, Victor Turner, Sahlin, among others, as well as contemporary theories are given careful attention.

**ANTHR 6010 Proseminar: Social Organization**
Spring. 6 credits. M. Welker.
Focuses on linkages between culture and social institutions, representations and practices. The nature of these linkages is debated from strongly contesting points of view in social theory (structuralist, poststructuralist, utilitarian, hermeneutic, Marxist). Unlike debates in critical theory where the form of contestation has been mainly philosophical, in anthropology, these issues have developed in ethnographic analyses. The course briefly surveys kinship theory and economic anthropology with a focus on implications for general issues in social theory. Discussion of attempts to develop dialectical syntheses around the motion of “practice” follows. The issues addressed in this section carry over into the
next, colonialism and post-colonialism, in which poststructuralist readings of history are counterposed to Marxist ones. Finally, Lacanian and Marxist visions of ideology as they relate to anthropological theory and ethnographic analysis are examined with particular emphasis on the cultural and social production of persons.

ANTHR 6248 Iroquois Archaeology (also ANTHR 3248, ARKEO/AIS 3248/6248)

ANTHR 6256 Maya History (also ARKEO 6256)
Fall. 4 credits. J. Henderson.
An exploration of Maya understandings of their own history, drawing on ethnographic, historical, and archaeological sources. Analysis of hieroglyphic inscriptions from ancient Maya cities is a major focus.

ANTHR 6258 Archaeological Analysis (also ANTHR 4258, ARKEO 4258/6258)

ANTHR 6269 Gender and Age in Archaeology (also ANTHR/ARKEO 3269, ARKEO 6269, FGSS 6700)

ANTHR 6270 Environmental Archaeology (also ANTHR 3270, ARKEO 3270/6270)
Fall. 4 credits. T. Volman.
For description, see ANTHR 3270.

ANTHR 6272 Hunters/Gatherers Past/ Present (also ANTHR 3272, ARKEO 3272/6272)
Fall. 4 credits. T. Volman.
For description, see ANTHR 3272.

ANTHR 6371 Palaeoanthropology of South Asia (also ASIAN 6671, BIOEE 6710)

ANTHR 6373 Human Evolution: Concepts, History, and Theory (also BIOEE 6730)
Fall. 3 credits. Prerequisite: one year introductory biology, ANTHR 1300, or permission of instructor. Offered alternate years. Next offered 2011–2012. K. A. R. Kennedy.

ANTHR 6403 Ethnographic Field Methods (also ANTHR 4403)

ANTHR 6421 Gender and Culture (also FGSS 6310)

ANTHR 6422 Culture, Politics, and Environment in the Circumpol North (also ANTHR 3422)
Spring. 4 credits. P. Nadasdy.
For description, see ANTHR 3422.

ANTHR 6424 Ethnoracial Identity in Anthropology, Language, and Law (also AMST/LSP 6424)

ANTHR 6430 Concepts and Categories in Theory and Practice
Fall. 4 credits. P. Nadasdy.

Concepts and categories form the basis of much human thought and action, and anthropologists have long been fascinated by how humans categorize the world. Yet, concepts and categories shape anthropological thought and practice as well. The conceptual tools we bring to bear in the study of sociocultural phenomena profoundly shape our understandings of them. Despite this, however, many of the concepts and categories that anthropologists and other social scientists use are implicit in their work rather than consciously theorized. The goal of this course is to make students aware of the role that concepts and categories play in the practice of social science and to provide them with the theoretical tools needed to evaluate conceptual frameworks in the social sciences.

ANTHR 6440 Research Design
Spring. 4 credits. K. March.
This seminar focuses on preparing a full-scale proposal for anthropological fieldwork for a dissertation. Topics include identifying of appropriate funding sources; defining a researchable problem; selecting and justifying a particular fieldwork site; situating the ethnographic case within appropriate theoretical contexts; selecting and justifying appropriate research methodologies; developing a feasible timetable for field research; ethical considerations and human subjects protection procedures; and preparing appropriate budgets. This is a writing seminar, and students will complete a proposal suitable for submission to a major funding agency in the social sciences.

ANTHR 6450 Social Studies of Economics and Finance

ANTHR 6452 Evidence: Ethnography and Historical Method

ANTHR 6461 Anthropology of Organizations (also ANTHR 3461)

ANTHR 6462 Democratizing Research (also ANTHR 3462)

ANTHR 6465 Anthropology of the Body (also ANTHR 3465)
Fall. 4 credits. S. Langwick.
For description, see ANTHR 3465.

ANTHR 6479 Technocracy: Anthropological Approaches

ANTHR 6480 Anthropology and Globalization (also ANTHR 4480)
Fall. 4 credits. Next offered 2011–2012. Staff.

ANTHR 6482 Perspectives on the Nation

ANTHR 6542 Violence, Symbolic Violence, Terror and Trauma in South Asia and the Himalayas (also ANTHR 4542)

ANTHR 6543 Chinese Ethnology
Fall. 4 credits. S. Sangren and M. Fiskesjo.
This seminar is designed for graduate students specializing in the study of Chinese culture and society and for advanced undergraduates who plan to pursue careers in the academic study of Chinese culture. The course focuses on close readings on theoretical and conceptual problems and issues in the study of Chinese culture and society, with an emphasis on perspectives provided by cultural anthropologists. Among topics that may be included are the social production of gender, ideology in myth and ritual, the cultural uses of history, and political culture; however, the particular emphases of the seminar may vary from year to year. Those with a reading knowledge of Chinese will be encouraged to explore Chinese sources, but use of such sources is not a requirement of the course.

ANTHR 7000 Development of Anthropological Thought (also ANTHR 4000)
Fall. 4 credits. Staff.
For description, see ANTHR 4000.

ANTHR 7262 Catalhoyuk and Archaeological Practice (also ANTHR 4262)

ANTHR 7263 Myth, History, and Politics: The Aztecs and Their Empire (also ANTHR/ARKEO 4268, ARKEO 7268)

ANTHR 7270 Political Economy in Archaeology (also ANTHR 4270, ARKEO 4270/7270)

ANTHR 7272 Historical Archaeology of Indigenous Peoples (also AMST 6272, AMST/ARKEO 4272, ARKEO 7272)
Fall. 4 credits. K. Jordan.
For description, see ANTHR 4272.

ANTHR 7419 Anthropology of Corporations (also ANTHR 4419)
Spring. 4 credits. M. Welker.
For description, see ANTHR 4419.

ANTHR 7426 Ideology and Social Production (also ANTHR 4426)
Spring. 4 credits. S. Sangren.
For description, see ANTHR 4426.

ANTHR 7429 Anthropology and Psychoanalysis (also ANTHR 4429)
Fall. 4 credits. S. Sangren.
For description, see ANTHR 4429.

ANTHR 7437 Anthropology of Development (also ANTHR 4437)

ANTHR 7444 God(s) and the Market (also ANTHR 4444)

ANTHR 7520 Southeast Asia: Readings in Special Problems
Fall or spring. Credit TBA. Staff.
Independent reading course on topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.
ANTHR 7523 Making History on the Margins: The China–SE Asia Borderlands (also ANTHR 4523)
Fall. 4 credits. M. Fiskejos.
For description, see ANTHR 4523.

ANTHR 7530 South Asia: Readings in Special Problems
Fall or spring. Credit TBA. Staff.
Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 7545 Peoples and Cultures of the Himalayas (See ANTHR 3545)
Fall. 4 credits. K. March.
For description, see ANTHR 3545.

ANTHR 7550 East Asia: Readings in Special Problems
Fall or spring. Credit TBA. Staff.
Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 7910 Independent Study: Grad I
Fall or spring. Credit TBA. Prerequisite: graduate standing. Staff.
Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 7920 Independent Study: Grad II
Fall or spring. Credit TBA. Prerequisite: graduate standing. Staff.
For description, see ANTHR 7910.

ANTHR 7930 Independent Study: Grad III
Fall or spring. Credit TBA. Prerequisite: graduate standing. Staff.
For description, see ANTHR 7910.

ARABIC AND ARAMAIC
See “Department of Near Eastern Studies.”

ARCHAEOLOGY

Archaeology is an interdisciplinary field at Cornell, which is one of the few universities in the United States to offer a separate archaeology major and a master’s degree. Program faculty members, affiliated with several departments, coordinate course offerings and help students identify opportunities for fieldwork, graduate study, and professional positions.

The Major
Prospective majors must complete ARKEO 1200 or one of the basic courses as defined below before they will be admitted to the major.

Because the major draws on the teaching and research interests of faculty from many departments to present a broad view of the archaeological process, interested students should discuss their course of study with a participating faculty member as early as possible. In some areas of specialization, intensive language training should be coordinated with other studies as early as the freshman year.

Once admitted to the major, students must take at least 32 additional credits from the courses listed below, or from related fields selected in consultation with a major advisor. The courses chosen should provide exposure to a broad range of cultures known through archaeology and the methods of uncovering and interpreting them. Sixteen of the credit hours should be at the 3000 level or above. At least two courses must be taken from each of the following categories: II. Anthropological Archaeology. III. Classical, Near Eastern, and Medieval Archaeology. and IV. Methodology and Technology. Only 4 credits of ARKEO 3000 Individual Study or other supervised study can count toward the major.

Courses basic to the discipline of archaeology are marked with the word “Basic” after the number of credit hours. It is recommended that majors who plan to pursue graduate studies in archaeology take at least two of the basic courses in each category. Further courses in languages and geology are also recommended.

HONORS
Honors in archaeology are awarded on the basis of the quality of an honors essay and the student’s overall academic record. Prospective honors students should have at least a 3.5 GPA in the major and a 3.0 grade point average overall. They should consult with the director of undergraduate studies by the beginning of the senior year. The honors essay is normally prepared over two semesters in consultation with a faculty advisor during the senior year. Students may enroll in ARKEO 4981 Honors Thesis Research, and to complete the thesis, they may enroll in ARKEO 4982 Honors Thesis Writeup. Both courses are offered in the fall and spring. Only ARKEO 4981 may count toward hours for completion of the archaeology major requirements. The credit hours for these courses are variable.

FIELDWORK
Every student should gain some practical experience in archaeological fieldwork on a project authorized by his or her advisor. This requirement may be waived in exceptional circumstances. The Jacob and Hedwig Hirsch bequest provides support for a fieldwork experience. They are eligible for Honors in archaeology. To minor in archaeology, the student must complete five courses, with at least three of which must be basic courses, or (2) five courses from categories II–IV, at least four of which must be basic courses. Minors are encouraged to gain some fieldwork experience. They are eligible for Hirsch Scholarships in support of fieldwork on the same basis as majors.

First-Year Writing Seminars
For course descriptions, see the First-Year Writing Program brochure.

I. Introductory Courses and Independent Study Courses

ARKEO 1200 Ancient Peoples and Places (also ANTHR 1200) # @ (HA-AS)
Spring. 3 credits. Basic. F. Gleach.
Broad introduction to archaeology: the study of material remains to answer questions about the human past. Case studies highlight the variability of ancient societies and illustrate the varied methods and interpretive frameworks archaeologists use to reconstruct them. This course can serve as a platform for both archaeology and anthropology undergraduate majors.

ARKEO 3000 Individual Study in Archaeology and Related Fields
Fall and spring. Credit TBA. Prerequisite: undergraduate students pursue topics of particular interest under the guidance of a faculty member.

ARKEO 4981 Honors Thesis Research
Fall or spring. 4 credits, variable.
Prerequisite: admission to honors program. Independent work under the close guidance of a faculty member(s).

ARKEO 4982 Honors Thesis Writeup
Fall or spring. 4 credits, variable.

ARKEO 6000 Special Topics in Archaeology
Fall and spring. 4 credits, variable. Graduate students pursue advanced topics of particular interest under the guidance of a faculty member(s).

ARKEO 8901–8902 Master's Thesis
8901, fall; 8902, spring. 4 credits, variable.
Prerequisite: master’s students in archaeology. S–U grades only. Students, working individually with faculty member(s), prepare a master’s thesis in archaeology.

II. Anthropological Archaeology

ARKEO 2200 Early People: The Archaeological and Fossil Record (also ANTHR 2200) # (HA-AS)
Spring. 3 credits. Basic. T. P. Volman.
For description, see ANTHR 2200.

ARKEO 2201 Early Agriculture (also ANTHR 2201) # (HA-AS)
Spring. 3 credits. Basic. N. Russell.
For description, see ANTHR 2201.

[ARKEO 2215 Stone Age Art (also ANTHR 2215) # (CA-AS)]

ARKEO 2235 Archaeology of North American Indians (also AIS/AMST 2350, ANTHR 2235) # (HA-AS)
Spring. 3 credits. Basic. K. Jordan.
For description, see ANTHR 2235.
[ARKEO 3217] Stone Age Archaeology (also ANTHR 3217) (HA-AS)

[ARKEO 3230] Humans and Animals (also ANTHR 3230) @ (CA-AS)

[ARKEO 3232] Politics of the Past (also ANTHR 3232) @ (HA-AS)

[ARKEO 3248] Iroquois Archaeology (also AIS 3428/6428, AMST/ANTHR/ARKEO 6248) @ (HA-AS)

[ARKEO 3255] Ancient Mexico and Central America (also ANTHR 3255) @ (HA-AS)

[ARKEO 3265] Archaeology of the Andes (also ANTHR/LATA 3256) @ (HA-AS)
Fall. 4 credits. Basic. J. Henderson.
For description, see ANTHR 3256.

[ARKEO 3269] Gender and Age in Archaeology (also ANTHR 3269/6269, FGSS 3700/6700) (SBA-AS)
Fall. 4 credits. Next offered 2010–2011.

[ARKEO 3272] Hunters and Gatherers (also ANTHR 3272/6272, ARKEO 6272) @ (SBA-AS)
Fall. 4 credits. T. Volman.
For description, see ANTHR 3272.

[ARKEO 3600] Preindustrial Cities and Towns in North America (also LA 3600, CRP 3600)

[ARKEO 4256] Mesoamerican Religion, Science, and History (also ANTHR 4256) @ (CA-AS)

[ARKEO 4262] Cataloyuk and Archaeological Practice (also ANTHR 4262, ARKEO/ANTHR 7262) @ (HA-AS)

[ARKEO 4268] Myth, History, and Politics: the Aztecs and their Empire (also ANTHR 4268, ARKEO/ANTHR 7268)

[ARKEO 4270] Political Economy in Archaeology (also ANTHR 4270, ARKEO/ANTHR 7270) @ (SBA-AS)

[ARKEO 4272] Historical Archaeology of Indigenous Peoples (also AIS 4270, AMST 4272, ANTHR/ARKEO 4272/7272) @ (HA-AS)
Fall. 4 credits. K. Jordan.
For description, see ANTHR 4272.

[ARKEO 4294] Seminar in Archaeology: The Archaeology of Human Origins (also ANTHR 4294) (HA-AS)
Spring. 4 credits. T. P. Volman.
For description, see ANTHR 4294.

[ARKEO 6248] Iroquois Archaeology (also AIS 3428/6428, AMST 6248, ANTHR 3248/6248, ARKEO 3248)

[ARKEO 6256] Maya History (also ANTHR 6256)
Fall. 4 credits. J. Henderson.
For description, see ANTHR 6256.

[ARKEO 6269] Gender and Age in Archaeology (also ANTHR 3269/6269, ARKEO 3269, FGSS 3700/6700)
Fall. 4 credits. Next offered 2010–2011.

[ARKEO 7268] Myth, History, and Politics: the Aztecs and their Empire (also ANTHR 7268, ARKEO/ANTHR 4268)

[ARKEO 7270] Political Economy in Archaeology (also ANTHR 4270/7270, ARKEO 4270)

[ARKEO 7272] Historical Archaeology of Indigenous Peoples (also AIS 7720, AMST 4272/6272, ANTHR 4272/7272, ARKEO 4272)
Fall. 4 credits. K. Jordan.
For description, see ANTHR 4272.

III. Classical, Near Eastern, and Medieval Archaeology

[ARKEO 2661] Ships and Seafaring—Intro to Nautical Archaeology (also JWST/NEST 2661) @ (HA-AS)
Fall. 3 credits. Basic. C. Monroe.
For description, see NEST 2661.

[ARKEO 2668] Ancient Egyptian Civilization (also JWST/NEST 2668) @ (HA-AS)
Spring. 3 credits. Basic. C. Monroe.
For description, see JWST/NEST 2668.

CLASS 2700] Introduction to Art History: The Classical World (also ARTH 2200) @ (HA-AS)
Fall. 4 credits. Basic. K. McDonnell.
For description, see CLASS 2700.

[ARKEO 2728] Art and Archeology of the Ancient Mediterranean World (also ARTH 2227, CLASS 2727) @ (HA-AS)
Fall. 4 credits. Next offered 2011–2012.

[ARKEO 2743] Archaeology/Roman Private Life (also ARTH 2221, CLASS 2743) @ (CA-AS)
Spring. 3 credits. Next offered 2011–2012.

[ARKEO 2744] Archaeology of Greek Private Life (also CLASS/HIST 2744, ARTH 2222) @ (CA-AS)
Spring. 3 credits. K. Bowes.
For description, see CLASS 2744.

ARKEO 3588 Archaeology of the Lands of the Bible (also NES/JWST 3588)
Spring. 4 credits. L. Monroe.
For description, see NES/JWST 3588.

IV. Methodology and Technology

[ARKEO 2220] Field Course in Iroquois Archaeology (also ANTHR 2220) (SBA-AS)
Summer only. 3 credits. K. Jordan.
For description, see ANTHR 2220.

[ARKEO 2728] Art and Archeology in the Ancient Mediterranean World (also ARTH 2227, CLASS 2727)

[ARKEO 2756] Practical Archaeology (also CLASS 2756)

[ARKEO 3661] Sumerian Language and Culture I (also JWST/NEST 3661) @ (HA-AS)
Fall. 4 credits. Next offered 2010–2011.

[ARKEO 3665] Ancient Iraq II: 2000–331 bc (also NES 3665) (HA-AS)
Fall. 4 credits. Next offered 2010–2011.

[ARKEO 3666] History and Archaeology of the Ancient Near East (also ARKEO/JWST/NEST 3666/6666) @ (HA-AS)
Fall. 4 credits. Next offered 2010–2011.

[ARKEO 3730] Archaeology, Ethics, and Nationalism (also CLASS 3730, HIST 3630) @ (CA-AS)

[ARKEO 3731] Archaeology/Ancient Mediterranean Religion (also CLASS 3731) @ (HA-AS)

[ARKEO 3800] Introduction to the Arts of China (also ARTH 3800) @ (LA-AS)
Fall. 4 credits. A. Pan.
For description, see ARTH 3800.

[ARKEO 4644] Late Bronze Age World of Ugarit (also ARKEO/JWST/NEST 6644, JWST/NEST 6644)

[ARKEO 6644] Late Bronze Age World of Ugarit (also ARKEO/JWST/NEST 4644, NEST/JWST 6644)

[ARKEO 6666] History and Archaeology of the Ancient Near East (also ARKEO/JWST/NEST 3666, JWST/NEST 6666)
Fall. 4 credits. Next offered 2010–2011.

[ARKEO 7729] Emergence of Greek Civilization (also CLASS 7729)
Spring. 4 credits. S. Manning.
For description, see CLASS 7729.

L A 5450] The Parks and Fora of Imperial Rome
Spring. 3 credits. Prerequisites: advanced standing in design field, classics, or history of art, or permission of instructor.
K. Gleason.

IV. Methodology and Technology

[ARKEO 2220] Field Course in Iroquois Archaeology (also ANTHR 2220) (SBA-AS)
Summer only. 3 credits. K. Jordan.
For description, see ANTHR 2220.

[ARKEO 2728] Art and Archeology in the Ancient Mediterranean World (also ARTH 2227, CLASS 2727)

[ARKEO 2756] Practical Archaeology (also CLASS 2756)
ARKEO 2610 Urban Archaeology (also CRP/LA 2610)  
Fall. 3 credits. Basic. S. Baugher.  
For description, see LA 2610.

ARKEO 2620 Laboratory in Landscape Archaeology (also LA 2620)  
Spring. 3 credits. Basic. S. Baugher.  
For description, see LA 2620.

ARKEO 3002 Archaeology Underwater  
Summer only. 2 credits. Off campus at Shoals Marine Lab. N. Brady.  
This course outlines the development of maritime archaeology as it has emerged from more traditional terrestrial archaeology and the still-young discipline of underwater archaeology. As its primary examples, the course focuses on the archaeology of the Isles of Shoals within the Gulf of Maine; it also conducts onsite survey and site investigations to create an in-depth archaeological and historical study of the isles. Students participate in active fieldwork, including foreshore study and underwater exploration.

ARKEO 3003 Island Archaeology  
Summer only. 2 credits. Off campus at Shoals Marine Lab. N. Hamilton.  
The objective of this course will be to train students in standardized and innovative methods and technology used in archaeological surveys, excavations, assessments, research, and compliance work. Course work will include documentation, reporting, and completion of architectural, historic, and prehistoric site survey and excavation forms suitable for historic reservation submission. Students will be able to develop research designs and strategies for Phase I, II, and III archaeological investigations. Field logistics, scheduling, ethics, public relations, and personnel-management training will be included. The Register of Professional Archaeology standards and practice will be used as a guide.

ARKEO 3090 Introduction to Materials Science (also ARTH 3250, CLASS 3750) # (HA-AS)  
Fall. 4 credits. Limited to 10 students.  
Prerequisites: permission of instructor. Letter grades only: S. Manning.  
For description, see CLASS 3750.

ARKEO 3270 Environmental Archaeology (also ANTHR 3270/6270, ARKEO 6270) [PBS Supplementary List]  
Fall. 4 credits. T. P. Volman.  
For description, see ANTHR 3270.

[ARKEO 4020 Designing Archaeological Exhibits (also ARKEO 4020)]  
Fall. Variable credit. Letter grades only.  

[ARKEO 4258 Archaeological Analysis (also ANTHR 4258/6258, ARKEO 6258) (SBA-AS)]  
Spring. 4 credits. Limited to 15 students.  
Prerequisite: archaeological course or permission of instructor. Next offered 2011–2012. J. S. Henderson.

[ARKEO 4260 Field and Analytical Methods in Archaeology (also ANTHR 4260) (SBA-AS)]  

ARKEO 4263 Zooarchaeological Method (also ANTHR 4263) [PBS Supplementary List]  
Fall. 5 credits. N. Russell.  
For description, see ANTHR 4263.

ARKEO 4264 Zooarchaeological Interpretation (also ANTHR 4264) [PBS Supplementary List]  
Spring. 4 credits. Prerequisites: ANTHR/ARKEO 4263; permission of instructor. N. Russell.  
For description, see ANTHR 4264.

[ARKEO 4267 Origins of Agriculture (also ANTHR 4267) # (HA-AS)]  

ARKEO 4370 Geophysical Field Methods (also EAS 4370) [PBS]  
Fall. 3 credits. Prerequisite: PHYS 2213 or 2208 or permission of instructor. L. D. Brown.  
For description, see EAS 4370.

ARKEO 4600 Late Quaternary Paleoecology (also EAS 4600) [PBS]  
Fall. 4 credits. M. Goman.  
For description, see EAS 4600.

[ARKEO 4903 Methods in the Study of the Ancient Near East (also JWST/NE 4903)]  
For description, see NES 4903.

ARKEO 6000 Special Topics in Archaeology  
Fall and spring. 4 credits. Staff.

[ARKEO 6020 Designing Archaeological Exhibits (also ARKEO 4020)]  
Spring. Variable credit. Letter grades only.  

ARKEO 6270 Environmental Archaeology (also ANTHR 3270/6270, ARKEO 3270)  
Fall. 4 credits. T. P. Volman.  
For description, see ANTHR 3270.

ARKEO 6510 Advanced Fieldwork in Historical Archaeology (also ARKEO 4510)  
Fall. 4 credits. S. Baugher.

ARKEO 6520 Advanced Laboratory in Historical Archaeology (also ARKEO 4520)  
Spring. 3 credits. S. Baugher.  
This course is for archaeology majors and minors who want to obtain more in-depth skills in laboratory work; identification and cataloguing of historic period ceramics, glass, and metal. The course will provide the students with skills to undertake laboratory analysis of artifacts. Students will undertake independent research projects on specific artifacts (in lieu of a term paper).

[ARKEO 7742 Research Methods in Archaeology (also CLASS 7742)]  

[BIOME 6710 Paleoenvironmental of South Asia (also ANTHR 6371, ASIAN 6672)]  

V. Relevant Courses at Ithaca College  
Contact Sherene Baugher in Landscape Architecture at sb@cornell.edu or the Ithaca College Anthropology Department at 274–1331 for further information or visit their web site at www.ithaca.edu/hs/anthro.

Prehistory of South America. M. Malpass.  
Every other year.

New World Complex Societies. M. Malpass.  
Irregular offering.

World Prehistory. J. Rossen. Every semester.

People, Plants, and Culture: Archaeobotany and Ethnobotany. J. Rossen. Every other year.

Ethnoarchaeology. J. Rossen. Every other year.

Archaeological Field School.

ASIAN STUDIES  
The Department of Asian Studies and associated faculty members in other departments encompass the study of East Asia, South Asia, and Southeast Asia and offer courses in most of the disciplines of the social sciences and the humanities. Over 40 faculty members specialize in topics arranged under our rubrics of “Literature and Linguistics,” “Religion,” and “Society and Culture,” as well as offering more broad courses under our “General Education” heading. Asian Studies courses through the 4400 level (ASIAN is the prefix) are taught in English and are open to all students in the university. Some of these courses may be counted toward majors in other departments; others fulfill various distribution requirements.

The Major  
To become an Asian Studies major, a student must first successfully complete with a minimum grade of B at least two Asia content courses (excluding writing seminars), one of which may be a language course. Applications to major in Asian Studies must be approved by the director of undergraduate studies.
Completion of the major requires completion of two years of an Asian language or the demonstration of equivalent proficiency. To demonstrate equivalent proficiency, a student with prior background in the language should attempt to test into a desired language course at the 2200 level. Completing two courses at the 2200 level, or the second semester of such a sequence (while testing out of the first semester), or testing into a language course beyond the 2200 level, serves to demonstrate proficiency. Once proficiency has been demonstrated, students may count up to 6 units of further language study among the 30 Asian Studies units required of degree candidates. These 30 units must be taken from courses numbered 2200 and above and including at least one from two of the Asian Studies categories of "Literature and Linguistics" (LL), "Religion" (RL), and "Society and Culture" (SC). Students may count up to 3000 level and at least one course at the 4100 level or above. A minimum grade of B must be received in all of these courses. Courses taken for major credit must be taken for a grade rather than S–U. Certain courses about Asia offered in other departments at the 1100 level may, at the discretion of the advisor and the DUS, be counted toward our major as if they were 2200-level courses, e.g., HIST/ASIA 1192.

Category Key: Courses in Asian Studies are broken into different categories. To determine which category a course falls in, please note the reference at the end of each course description. The key is as follows: GE = General Education, LL = Literature and Linguistics, RL = Religion and SC = Society and Culture.

Honors
To be eligible for honors in Asian Studies, a student must have a cumulative GPA of 3.7 in all Asian Studies and courses and must successfully complete an honors essay during the senior year. Students who wish to be considered for honors should apply to the director of the undergraduate program during the second semester of their junior year. The application must include an outline of the proposed project and the endorsement of a supervisor chosen from the Asian Studies advising faculty. During the first term of the senior year, the student does research for the essay in conjunction with an appropriate Asian Studies course or ASIAN 4401. By the end of the first term, the student must present a detailed outline of the honors essay and have it approved by the project supervisor and the director of undergraduate studies. The student is then eligible for ASIAN 4402, the honors course, which entails the writing of the essay. At the end of the senior year, the student has an oral examination (with at least two faculty members) covering both the honors essay and the student’s area of concentration.

Minor in East Asia Studies
A candidate for the bachelor of arts or science degree at Cornell may take a minor in East Asian studies by completing at least 18 units of course work in East Asian studies. Students normally take five courses in East Asian Studies from these East Asian courses listed (China, Japan, Korea) either under Asian Studies or Asian-related courses taught outside of the Asian Studies department. Of these, nonlanguage courses should be selected at the 2200 level or above. Two courses in an East Asian language at the 1100 level or above may be counted toward the minor. Language study is strongly encouraged. East Asian graduate courses may also be taken for the minor, as well as East Asia-related courses with a research paper on an East Asian topic. Appropriate courses taken through Cornell Abroad in East Asia may also be counted toward the minor. A minimum grade of B must be received for all courses counted toward the minor. S–U courses are ineligible. Students minoring in East Asian Studies should select an advisor from the East Asia Program faculty for course selection. For more information, contact the Department of Asian Studies, 350 Rockefeller Hall, 255–5095, or lrc.cornell.edu/asi/.

Minor in South Asia Studies
A candidate for the bachelor of arts or science degree at Cornell may achieve a minor in South Asia Studies by completing at least 18 units of course work (typically five courses) in South Asian Studies. These courses are selected from South Asia courses listed under the Department of South Asian Studies, or from other Asia-related courses offered by other departments. Of these, nonlanguage courses should be selected at the 2200 level or above. Two courses in an East Asian language at the 1100 level or above may be counted toward the minor. Language study is strongly encouraged. Appropriate South Asia graduate course work may be included in the minor with consent of the advisor and the director of undergraduate studies. One South Asia-related course with a research paper on a South Asian subject may be included with the consent of the advisor and the director of undergraduate studies. A minimum grade of B must be received for all courses toward the minor. S–U courses are ineligible. Students minoring in South Asian Studies are considered members of the South Asia Program and will have an advisor from the program faculty. (The advisor will supervise a student’s minor and does not substitute for a student’s major advisor.) For more information, contact the Department of Asian Studies, 350 Rockefeller Hall, 255–5095, or lrc.cornell.edu/asi/.

Minor in Southeast Asia Studies
A candidate for the bachelor of arts or science degree at Cornell may take a minor in Southeast Asian studies by completing 18 units of course work, including a history course and 3 courses or seminars at the intermediate or advanced level. Up to 2 Southeast Asian language courses at the 1100 level or above may be included in the minor courses. A student would include ASIAN 2208 and 4 additional courses. A minimum grade of B must be received for all courses counted toward the minor. S–U courses are ineligible. Students taking a minor in Southeast Asian Studies are members of the Southeast Asia Program and will have an advisor from the Southeast Asia program faculty. Such students are encouraged to commence work on a Southwest Asian language either at the 10-week intensive courses offered by the Southeast Asia Studies Summer Institute (SEASSI) or for students at a semester at IPK Malang, Indonesia; Khon Kaen University, Thailand; or Hanoi University, Vietnam. Fellowships are available for undergraduates through the Cornell Abroad Program. For more information, contact the Department of Asian Studies, 350 Rockefeller Hall, 255–5095, or lrc.cornell.edu/asi/.

Intensive Language Program (FALCON)
The FALCON Program offers intensive instruction in either Japanese or Mandarin Chinese. Aside from the intensive language schools of some government agencies, FALCON is the only program in the world that offers a full year of intensive instruction beginning at the elementary level and continuing through the advanced level. FALCON is a full-time program; the degree of intensity does not allow students to enroll simultaneously in other courses or to work, except perhaps on weekends. Students typically take the entire sequence of 1160, 2260, and 3360, but they may take any portion of the program if they have the necessary background as determined by a placement interview. Some students do choose to apply only to the summer portion. The spring semester of the Chinese program will be offered in Beijing at the School of International Studies at Peking University. Students must formally apply to the program. To guarantee course availability and scholarship eligibility, applications must be received by March 1. After that, applicants are reviewed on a rolling basis and acceptance is contingent on the availability of spaces. The 1160–2260–3360 sequence fulfills the language requirement for the major in Asian Studies and the joint M.B.A./M.A. in Asian Studies. Applications are available in 388 Rockefeller Hall or on the FALCON web site at lrc.cornell.edu/falcon/apply.

Study Abroad
There are many strong options for study abroad in Asia. Cornell Abroad helps students plan a year or semester abroad as part of their Cornell undergraduate degree. Cornell has affiliations with several programs and institutions in Asia and sends students to those and others.

Cornell is affiliated with IUP, the Inter-University Program for Chinese Language Studies in Beijing (at Tsinghua University) and is a member of CIEE and IES, organizations sponsoring study abroad programs offering Chinese language instruction at several levels as well as courses in Chinese studies for the humanities and social sciences. Students may also study at other programs in China, Hong Kong, and Taiwan. The Chinese FALCON program includes a spring semester in Beijing at Peking University.

Cornell is a member of the consortium of the Kyoto Center for Japanese Studies, an undergraduate semester or year program in Japanese language and Japanese studies. An agreement with International Christian University (ICU), outside Tokyo, permits Cornell students to attend that institution. Cornell students have attended CIEE and IES programs as well as other programs and institutions in Japan.

Cornell is a member of the American Association of Indian Studies, which offers fellowships for international study in India for Hindi, Bengali, and Tamil. There are study abroad options in universities or other organizations in various regions of India. In cooperation with Tribhuvan University of Nepal, Cornell organizes the Cornell–Nepal Study Program for
undergraduate and graduate students wishing to spend a semester or year studying and conducting research in Nepal. Students may spend a semester or year in Mongolia, Korea, Vietnam, Indonesia, Thailand, Singapore, or the Philippines or choose to study about Asia at such institutions as the School of Oriental and African Studies in London or the Faculty of Asian Studies at the Australian National University. Undergraduates should consult Cornell Abroad; graduate students should inquire at the East Asia Program, Southeast Asia Program, or South Asia Program offices. Students may apply up to 15 credits from abroad to the major.

First-Year Writing Seminars
See John S. Knight Institute brochure for times, instructor, and descriptions.

Asia—General Education Courses

[ASIAN 1190 East Asia to 1800 (also HIST 1900) (HA-AS)]
For description, see HIST 1900. (GE)

ASIAN 1191 Introduction to Modern Asian History (also HIST 1910) (HA-AS)
Fall. 4 credits. E. Tagliacozzo and S. Cochran.
For description, see HIST 1910. (GE)

[ASIAN 1192 Introduction to World Music II: Asia (also MUSIC 1302) (CA-AS)]
Fall. 3 credits. Next offered 2011–2012.
M. Hatch.
For description, see MUSIC 1302. (GE)

ASIAN 2208 Introduction to Southeast Asia (CA-AS)
Fall. 3 credits. T. Chalaomtiarana.
For anyone curious about the most diverse part of Asia; defines Southeast Asia both as the nation-states that have emerged since 1945 (Brunei, Burma, Cambodia, Indonesia, Laos, Malaysia, Philippines, Singapore, Thailand, and Vietnam) and as a larger cultural world extending from southern China to Madagascar and Polynesia. Students find a serious, organized introduction to a variety of disciplinary and topical approaches to this region, including geography, linguistics, history, religion and ideology, anthropology, marriage and family systems, music, literacy and literature, art and architecture, agriculture, industrialization and urbanization, politics and government, warfare and diplomacy, ecological and human degradation, and business and marketing. The course teaches both basic information and different ways of interpreting that information. (GE)

[ASIAN 2209 Script and Culture in East Asia (also ARTH 2801, HIST 2891) (LA-AS)]
Fall. 3 credits. Next offered 2010–2011.
B. Rusk.
Introduction to the history and cultural role of writing systems, with a focus on the case of East Asia. (GE)

ASIAN 2211 Introduction to Japan (CA-AS)
Fall. 3 credits. J. M. Law.
This course surveys major disciplinary approaches in the social sciences and humanities to the study of Japan by focusing on different historical formulations of Japanese native and national identity: Japan the sacred nation, Japan the aesthetic, Japan the warrior nation, Japan the peaceful (victim) nation, Japan the industrious economic superpower and Japan the hyper-modern. We introduce Japanese performance traditions, read fiction, poetry and plays, see classical films and recent anime, and study historical cases relating to each of these formulations. (GE)

ASIAN 2212 Introduction to China @ (CA-AS)
Spring. 3 credits. R. McNeal.
Interdisciplinary introduction to Chinese culture especially designed for students not majoring in Asian Studies. Explores literature, history, religion, art and archaeology, and other aspects of China’s rich and diverse heritage, from earliest times to the present. (GE)

ASIAN 2215 Introduction to South Asia @ (HA-AS)
Fall. 3 credits. A. Blackburn and L. McCrea.
As an intercultural study of the region, the course will examine sources of South Asian tradition in their historical contexts. The first part, on the transition to a modern society, will cover the mid–19th century to the Korean War. The last part will be devoted to contemporary society. (GE)

ASIAN 2218 Introduction to Korea @ (CA-AS)
Fall. 3 credits. J. Pak.
Multidisciplinary introduction to Korean history, society, and culture. The first part of the course will examine sources of Korean tradition in their historical contexts. The second part, on the transition to a modern society, will cover the mid–19th century to the Korean War. The last part will be devoted to contemporary society. (GE)

ASIAN 2250 Introduction to Asian Religions (also RELST 2250) (HA-AS)
Spring. 3 credits. D. Boucher.
Explores religious traditions in South Asia (Pakistan, India, and Sri Lanka) and East Asia (China and Japan) including Hinduism, Buddhism (South Asian and East Asian), Sikhism, Confucianism, Daoism, and Shinto. Encounters a wide range of religious expressions as well, including myth, ritual, pilgrimage, mysticism, meditation, and other religious technologies. (GE)

Asia—Literature and Linguistics Courses

The following courses are taught entirely in English and are open to any Cornell student.

ASIAN 2240 Love, War, and the Supernatural in Pre-Modern Japan @ (LA-AS)
Fall. 3 credits. J. Kanemitsu.
In this course, students will meet some of the most memorable characters depicted in Japanese literature, from the eighth through 18th centuries. In addition to each work’s historical and cultural contexts, we will consider its literary conventions and think about how genres have been defined. A survey of representative works in Japan’s literary history; this course examines changing representations of idealized male and female protagonists as they pursue desire, conquest, and occasionally both. (LL)

[ASIAN 2241 China’s Literary Heritage: An Introduction in Translation @ (LA-AS)]
Spring. 3 credits. Next offered 2012–2013.
D. X. Warner.
This is a survey course designed for, though not limited to, nonmajors with or without any knowledge of Chinese language, history, or culture. Students read a broad selection in translation of poems, prose, and narrative writings from the pre-modern period on a variety of themes. (LL)

ASIAN 2279 Chinese Mythology @ (LA-AS)
Summer. 3 credits. R. McNeal.
Students will study Chinese myths from the earliest times down to the late imperial era. Focus will be on understanding the form Chinese myths take, how they are related to religion, literature, historical accounts and intellectual trends. (LL)

ASIAN 3318 Literature and Media in Japan (also COML 3150, VISST 3318)
Fall. 3 credits. B. de Burger.
Dissolving the conventional distinction between literary studies and media studies, the course will first consider the formation of a modern national literature within the environment of rapidly transforming media in late 19th-century Japan. The primary focus, however, will be on dynamic relays and reciprocal influences among contemporary novels, films, anime, comics, video games, and digital arts. The course will use materials with translations or subtitles in English. (LL)

ASIAN 3365 Traditional Japanese Theatre (also ASIAN 6665)
Spring. 3 credits. J. Kanemitsu.
An introduction to seven genres of Japanese performing arts from the 16th through 19th centuries. In addition to examining pivotal moments in itinerant storytelling, dramatic literature, and dramaturgical treatments, we will also consider transformations in performance spaces and costuming as well as the traditions of artistic transmission. We will also be viewing recordings of modern performances and cinematic adaptations. All readings will be in English; no knowledge of the Japanese language will be required. (LL)

ASIAN 3370 Global Martial Arts, Film, and Literature (also COML/FILM 3701)
Spring. 4 credits. P. Liu.
For description, see COML 3701. (LL)

[ASIAN 3373 20th-Century Chinese Literature @ (LA-AS)]
Fall. 4 credits. Next offered 2010–2011.
E. Gunn. (LL)

ASIAN 3374 Chinese Narrative Literature @ (LA-AS)
Fall. 4 credits. E. Gunn.
Selected works in classical Chinese fiction are read in translation. Major novels, such as The Dream of the Red Chamber and Water Margin, are emphasized. (LL)

[ASIAN 3379 Southeast Asian Literature in Translation @ (LA-AS)]
L. Paterson. (LL)
classroom observation and practice teaching, and outlines the basics of phonology, morphology, grammar, sociolinguistics, pragmatics, and discourse structure and other features of language use. (LL)

**Asia—Religion Courses**

**ASIAN 2220 Buddhism in America** (also RELST 2220) (CA-AS)

Summar. 3 credits. J. M. Law.

This course focuses on a threefold division of Buddhist communities in America: (1) communities established by Asian teachers with predominantly western community members; (2) communities established to serve the needs of immigrant communities arriving from traditionally Buddhist cultures; and (3) communities established by refugee communities. The class explores how these three different methods of arrival and establishment of Buddhist traditions in North America influence the decisions these communities make as to how they adapt Buddhism to a new cultural setting. We also look at the writings of several writers and thinkers who deal with the multicultural setting. We also look at the writings of several thinkers who deal with the multicultural nature of American religious life, including Buddhism in the community of American religions in the 21st century. (RL)

**ASIAN 2226 Society and Religion in China** (also HIST 2261) @ # (HA-AS)

Fall. Next offered 2010–2011. T. J. Hinrichs. (RL)

**ASIAN 2277 Meditation in Indian Culture** (also RELST 2277) @ # (CA-AS)

Spring. 3 credits. D. Gold.

Probes the truths behind traditional claims of the priority of internal practice in Indian traditions. Students are expected to experiment with some basic meditation practices and situate them within larger South Asian world views as suggested by doctrines, rituals, iconic forms, and literary texts. Grades are based on short papers. (RL)

**ASIAN 3309 Temple in the Worlds: Buddhism in Contemporary South and Southeast Asia** (also RELST 3309) @ (CA-AS)

Spring. 3 credits. A. Blackburn.

Buddhism is often thought of as a meditative and philosophical tradition, remote from the concerns and pleasures of everyday life, practical ethics, and politics. This course explores the unfolding of Buddhist life in contemporary South and Southeast Asia, in locations such as Burma, Thailand, India, Sri Lanka, Malaysia, and Cambodia. We will see how the practices of meditation and philosophical reflection enter the lives of Buddhists, along with other expressions of devotion, aesthetic fascination, political action, and sociability. Our goal will be to recognize the sensual, emotional, and social qualities of Buddhist practice, and the ways in which life unfolds in a Buddhist idiom. (RL)

**ASIAN 3344 Introduction to Indian Philosophy** (also RELST 4344) (KCM-AS)

Fall. 4 credits. Next offered 2010–2011. L. McCrea. (RL)

**ASIAN 3347 Tantric Traditions** (also RELST 3347) @ (CA-AS)

**ASIAN 3348 Indian Devotional Poetry** (also RELST 3347) @ (LA-AS)

**ASIAN 3351 Indian Religious Worlds** (also RELST 3351) @ (CA-AS)

Spring. 4 credits. D. Gold.

A study of religious traditions as lived today in the Indian subcontinent. Attention will be paid to differences in piety and practice within alternative environments. (RL)

**ASIAN 3353 Mysticism in Chinese Religion** (also RELST 3353) @ (CA-AS)

Fall. 4 credits. D. Boucher.

This course will examine techniques of spiritual cultivation in both the Daoist and Buddhist traditions of China. In particular we will compare and contrast methods which focus on the manipulation of bodily energies and fluids, particularly in the early and medieval Daoist traditions, with the Buddhist emphasis on cognitive transformation, particularly in the Chan school. Some of our discussion will also look at the debates on the nature of mystical states as ‘pure consciousness events’ on the one hand, or culturally specific constructions on the other. (RL)

**ASIAN 3354 Indian Buddhism** (also ASIAN 6654, RELST 3354/6654) @ (HA-AS)

**ASIAN 3355 Japanese Religions** (also RELST 3355) @ (CA-AS)

**ASIAN 3359 Japanese Buddhism: Texts in Context** (also RELST 3359) @ (LA-AS)

Spring. 4 credits. J. M. Law.

Focuses on six figures in Japanese Buddhism: Saichô (767–822), Kukai (774–835), Hōnen (1133–1212), Nichiren (1222–1282), Dogen (1200–1253), and Hakuin (1668–1769). Studies their lives, writings, core practices and doctrines, and a central religious dynamic the work of each embodies: establishment of a Mahayana ordination, esoteric practice, the popularization of Buddhism, Buddhist pro-nationalist ideologies, and establishment of Zen meditation as iconic “Japanese” Buddhism. (RL)

**ASIAN 4405 Zen Buddhism: Experience and Ideology** (also RELST 4405) @ (CA-AS)

Spring. 4 credits. J. M. Law.

Explores the ideological and religious claims of Zen tradition, focusing on religious, historical, and aesthetic developments in Japan. We'll rely on primary sources in translation and secondary sources by scholars in religion and Buddhism Studies. Reading classic text on Zen for American audiences, course starts with rise of Ch'an tradition in China and development of Northern and Southern Schools, reading primary sources in translation. In Japan, we'll look at establishment of Zen in Kamakura period, focusing on developments of Rinzai and Soto Zen, and early transmissions of Chinese texts/practices to Japan through emissaries. To understand the developments of these schools, we'll study the lives/writings of Eissai and Dogen, and how their life works/writings influenced developments in Zen. We'll explore
the work of the Tokugawa Zen figure Hakunin through a focus on his key works, and his vision of Zen reform. We will study the ways Zen has become implicated in Japanese postwar identity discourses, focusing on critical readings of D. T. Suzuki and others that create an aestheticism central to Japanese national identity. Finally direct spiritual cultivation has roots in American soil. Includes field trip to one of the largest Zen monasteries in North America, near Ithaca, and a visit from a prominent Zen priest from Japan.

**ASIAN 4421 Religious Reflections on the Human Body (also RELST 4421)**

(KCM-AS)

Fall. 4 credits. Prerequisites: one religious studies course or permission of instructor. Next offered 2010–2011. J. M. Law. (RL)

**ASIAN 4427 Buddhist Monasticism (also RELST 4427) **

Fall. 4 credits. D. Boucher.

This seminar will investigate a range of monastic vocations and interests. We will be particularly interested in the socioeconomic impact of monasticism on Buddhist societies: why have so many people dedicated to the monastic life? Why have so many people dedicated so much capital to the preservation of an institution that seemingly contributes nothing to the economy? We will also want to ask questions about monastic motivations: why would someone choose to live this kind of life? What are its advantages? How do such choices influence monastic attitudes to the laity and, particularly, to women? (RL)

**ASIAN 4438 Monks, Texts, and Relics: Transnational Buddhism in South and Southeast Asia (also ASIAN 6638, RELST 4438/6638)**

(CA-AS)

Spring. 4 credits. A. Blackburn.

What role did magic and ritual play in the growth of Buddhism in South and Southeast Asia? Where did Buddhist monks travel and why? This course examines how Buddhist communities were formed by networks that carried monks, potent texts, and relics, and how these networks spread Buddhism throughout these regions, from the beginning of Buddhism to the present day. (RL)

**ASIAN 4441 Mahayana Buddhism (also RELST 4441) **

(#) (CA-AS)

**ASIAN 4444 Ritual Puppetry in a Global Context (also RELST/THETR 4444, DANCE 4377) **

(#) (CA-AS)

**ASIAN 4449 History and Methods of the Academic Study of Religion (also RELST 4449) **

(#) (KCM-AS)

Spring. 4 credits. Prerequisite: two courses in religious studies major or permission of instructor. D. Boucher.

Provides advanced students in religious studies or the humanities familiarity with important methodological issues in the academic study of religion. (RL)

**ASIAN 4460 Indian Meditation Texts (also RELST 4460) **

(#) (KCM-AS)

Draws on approaches from literary criticism, anthropology, and religious studies to explore texts that record religious experience. (RL)

**ASIAN 4462 Religion, Colonialism, and Nationalism in South and Southeast Asia (also ASIAN 6662, RELST 4462)**

(CA-AS)

Fall. 4 credits. Prerequisites: one course in ANTH, ASIAN, HIST, RELST at 3000 level or above or permission of instructor. A. Blackburn.

Taught as a seminar, the course engages recent theoretical literature on the relationships between religion, colonialism and nation formation. This theoretical literature is read in conjunction with historical and ethnographic materials from South and Southeast Asian contexts, which allow us to explore the intellectual promise and limitations of the theoretical work in question. (RL)

**ASIAN 4489 Religion and Sustainability: Traditionalist Discourses in the 21st Century (also RELST 4489) **

(#) (CA-AS)

Fall. 4 credits. Prerequisite: permission of instructor. J. M. Law.

The natural world and the relationship of human beings to animals in structure to within it is a central component of cosmogenic myths and religious ideologies in most major religious traditions. In this course, we explore how mythological, textual, ritual and ideological understandings of the relationship between human beings and the natural world universal understandings of the contemporary environmental crisis and the responsibility of human beings to address it. We will also explore how different approaches to environmentalism have tried to incorporate various religious traditions. This class will focus on cases from Hindu, Buddhist, Jain, Jewish, Christian and Muslim discourses on the natural world. We will explore a variety of models of formulating the human/natural relationship: dominion, stewardship, illusion, primary sacrality and alienation. We challenge the view that grounding environmental activism in religious discourse is an effective way for environmental work to proceed and look at concrete case studies of religious modes working for, or against, environmental sustainability. (RL)

Asia—Society and Culture Courses

**ASIAN 2206 The Occidental Tourist: Travel Writing and Orientalism in Southeast Asia (also ASIAN 5507, HIST 2070/5070) **

(#) (CA-AS)

Fall. 4 credits. Next offered 2010–2011. T. Loos. (SC)

**ASIAN 2210 Pop Culture in China (also ASIAN 2210) **

(#) (HA-AS)

For description, see HIST 2210. (SC)

**ASIAN 2219 Women and Gender in South Asia (also FGSS/HIST 2190) **

(#) (HA-AS)

**ASIAN 2225 Literature, Politics, and Genocide in Cambodia (also ASIAN 4422) **

(#) (CA-AS)

Summer. 3 credits. G. Chigas.

This course will examine various literary, historical, and social responses to the Cambodian genocide, particularly literary testimony by survivors and governmental efforts to bring the perpetrators to justice. The course considers the limited effectiveness of these responses for addressing the causes and effects of genocide despite the vow of never again. To pursue these questions, students will read selections from novels and poetry written by Cambodian survivors, along with historical accounts of the genocide and analysis attempts by the Cambodian government and the international community to bring the perpetrators to justice. (SC)

**ASIAN 2288 Indian Ocean World (also HIST 2280) **

(#) (HA-AS)

Spring. 4 credits. S. Cochran.

For description, see HIST 2280. (SC)

**ASIAN 2245 Gamelan in Indonesian History and Cultures (also MUSIC 1341, VISST 2744) **

(#) (LA-AS)

Fall or spring. 3 credits. Prerequisite: permission of instructor. C. Miller.

For description, see MUSIC 1341. (SC)

**ASIAN 2257 China Encounters the World (also CAPS 2570, HIST 2571) **

(#) (HA-AS)

Fall. 3 credits. J. Chen.

For description, see HIST 2571. (SC)

**ASIAN 2259 The Vietnam Wars in Film **

Fall. 3 credits. L. Paterson.

This course will explore cinematic depictions of the Indochina Wars from the United States, Vietnam and France. By exploring films from all three participant countries, the historical, social, and cultural contexts of these iconic wars will be critiqued. (SC)

**ASIAN 2260 Popular Culture of Japan **

Spring. 3 credits. J. Kanemitsu.

In this writing-intensive course, we will examine and analyze the mass and pop cultures of Japan from the Tokugawa period (1600–1868) up to the present, considering how the cultural conventions of different eras have been coded, decoded, and recoded. The overall course will be divided into a variety of modules, including media and communication, illustrated fiction and manga; theater, TV melodrama, and anime; gender identity, recreation, fashion. (SC)

**ASIAN 2275 History of Modern South Asia (also HIST 2750) **

(#) (HA-AS)

Spring. 4 credits. D. Ghosh.

For description, see HIST 2750. (SC)

**ASIAN 2281 Antiquity and Modernity in Contemporary China (also CAPS 2281) **

(#) (CA-AS)

Spring. 3 credits. Next offered 2010–2011. R. McNeal (SC)

**ASIAN 2290 East Asian Martial Arts (also HIST 2960) **

(#) (HA-AS)

Fall. 4 credits. Next offered 2011–2012. T. J. Hinrichs.

For description, see HIST 2960. (SC)

**ASIAN 2294 History of China in Modern Times (also HIST 2940) **

(#) (HA-AS)

Fall. 4 credits. Next offered 2010–2011. S. Cochran. (SC)

**ASIAN 2295 Power, Culture, and Heterogeneity in Premodern Japan (also HIST 2981) **

(#) (HA-AS)

For description, see HIST 2981. (SC)
[ASIAN 2296] From Slow Boats to CEOs?: The Chinese of Southeast Asia @ (CA-AS)
L. Paterson. (SC)

[ASIAN 2298] The U.S.–Vietnam War (also HIST 2890) @ (HA-AS)
Fall. 4 credits. Next offered 2010–2011.
F. Logevall. (SC)

[ASIAN 3301] Schools of Thought—Ancient China @ (HA-AS)
R. McNeal. (SC)

This class is a critical, in-depth introduction to the intellectual history of ancient China. Students will read translations from early Confucian, Legalist, Mohist, and Daoist texts, as well as lesser-known works from, e.g., the Yin-Yang school. (SC)

[ASIAN 3302] Art of War in Ancient China @ (HA-AS)
Fall. 4 credits. Next offered 2010–2011.
R. McNeal. (SC)

[ASIAN 3305] Seminar on American Relations with China (also CAPS 3000, HIST 3391) (HA-AS)
Fall. 4 credits. Taught in Washington, D.C.
R. Bush.
For description, see CAPS 3000. (SC)

[ASIAN 3315] Banaras: Sacred Geography @ (CA-AS)
Winter. 3 credits. Course taught in Banaras, India.
D. Gold and R. Gupta.
An interdisciplinary exploration of the notion “Sacred Geography” in India’s oldest continually occupied urban settlement. Students will be totally immersed in the history, culture, architecture, and traditional and performing arts of Banaras and will reflect on the notion of the city as metaphor, specifically the self-conscious representation of a city as embodiment of cosmos. (SC)

[ASIAN 3328] Construction of Modern Japan (also HIST 3328) @ (HA-AS)
J. V. Koschmann. (SC)

[ASIAN 3334] Government and Politics of Southeast Asia (also GOVT 3443) @ (HA-AS)
Spring. 4 credits. T. Pepinsky.
For description, see GOVT 3443. (SC)

[ASIAN 3335] Japan from War to Prosperity (also HIST 3300) @ (HA-AS)
Fall. 3 credits. Next offered 2011–2012.
J. V. Koschmann. (SC)

[ASIAN 3346] Modern Japanese Politics (also GOVT 3463) @ (SBA-AS)
Spring. 4 credits. S. Martin.
For description, see GOVT 3463. (SC)

[ASIAN 3350] The Arts of Southeast Asia (also ARTH 3850, VISST 3696) @ (CA-AS)
Fall. 4 credits. K. McGowan.
For description, see ARTH 3850. (SC)

[ASIAN 3361] Bakamatsu–ISHIN: Conflicts and Transformation in Early Modern Japan, 1700–1890 (also HIST 3611) @ (HA-AS)
Fall. 4 credits. Next offered 2011–2012.
K. Hirano. (SC)

[ASIAN 3381] Introduction to the Arts of Japan (also ARTH 3820) @ (LA-AS)
Fall. 4 credits. Next offered 2010–2011.
A. Pan.
For description, see ARTH 3820. (SC)

[ASIAN 3382] Art of South Asia, 1500–Present (also ARTH 3611) @ (CA-AS)
I. Dadi.
For description, see ARTH 3611. (SC)

[ASIAN 3383] Introduction to the Arts of China (also ARTH 3800) @ (LA-AS)
Fall. 4 credits. A. Pan.
For description, see ARTH 3800. (SC)

[ASIAN 3385] History of Vietnam (also ASIAN 6685, HIST 3880/6880) @ (HA-AS)
Fall. 4 credits. Meets concurrently with ASIAN 6865. Graduate students may enroll and attend a seminar sec. Next offered 2010–2011.
Survey of Vietnamese history and culture from earliest times to the present. (SC)

[ASIAN 3386] Southeast Asia through Film @ (CA-AS)
Spring. 4 credits. L. Paterson.
In Western films Southeast Asia has always been portrayed as an exotic locale of romance, haunting landscapes, and “inscrutable” smiling natives. This class will explore the ways in which the countries of Southeast Asia have been portrayed in Western cinema, in juxtaposition with films produced in the countries themselves. In what ways is this exotic region constructed through Western eyes? To what degree has Southeast Asian cinema itself imitated the Occidental constructs? What are the cultural themes explored by Southeast Asian filmmakers themselves? Through close analysis of the films, we will explore the process of visual translation from reality to fantasy in both the local and international contexts. (SC)

[ASIAN 3388] Theorizing Gender and Translation from Reality to Fantasy in Both the Films, We Will Explore the Process of Visual Translation from Reality to Fantasy in Both the Local and International Contexts. (SC)

[ASIAN 3391] Martial Arts and Society and Religion (also HIST 3191) @ (HA-AS)
Fall. 4 credits. Next offered 2011–2012.
T. J. Hinrichs. (SC)

[ASIAN 3394] The House and the World: Architecture of Asia (also ARTH 3885/VISST 3655) @ (HA-AS)
Spring. 4 credits. K. McGowan.
For description, see ARTH 3885. (SC)

[ASIAN 3396] Southeast Asian History from the 18th Century (also HIST 3960/6960) @ (HA-AS)
Spring. 4 credits. E. Tagliacozzo.
For description, see HIST 3960. (SC)

[ASIAN 3397] Premodern Southeast Asia (also ASIAN 6697, HIST 3950/6950) @ (HA-AS)
Fall. 4 credits. Next offered 2010–2011.
E. Tagliacozzo.
For description, see HIST 3950. (SC)

[ASIAN 4409] Archipelago: The Worlds of Indonesia (also ASIAN 6617, HIST 4100/6100) @ (HA-AS)
E. Tagliacozzo. (SC)

[ASIAN 4410] Chinese Film @ (LA-AS)
E. Gunn. (SC)

[ASIAN 4413] Religion and Politics in Southeast Asia (also ANTHR 4513) @ (CA-AS)
Spring. 4 credits. A. Willford.
For description, see ANTHR 4513. (SC)

[ASIAN 4416] Gender and Sexuality in Southeast Asian History (also ASIAN 6618, FGSS 4160, HIST 4160/6160) @ (CA-AS)
Fall. 4 credits. Next offered 2011–2012.
T. Loos. (SC)

[ASIAN 4417] Themes and Problems in Asian Studies # (CA-AS)
Spring. 4 credits. B. de Bary.
Strongly recommended for Asian Studies majors and prospective majors; this course provides an overview of themes and problems central to work in Asian Studies. We will see how Asian Studies developed as a field of academic inquiry, and explore central themes in the present discipline of Asian Studies. How are Asian traditions invented and transmitted? How do we study the histories of Asian literatures and aesthetics? How have mixed media and technologies shaped Asian worlds from the age of manuscripts and block prints to the digital era? What is the place of ritual and performance in Asian contexts? Is “popular culture” a new phenomenon in Asia? This course is intended for juniors and seniors. Open to first- and second-year students only with permission of instructor. (SC)

[ASIAN 4422] Literature, Politics, and Genocide in Cambodia (also ASIAN 2225) @ (CA-AS)
Summer. 3 credits. G. Chigas.
For description, see ASIAN 2225. (SC)

J. V. Koschmann.
For description, see HIST 4070. (SC)

[ASIAN 4428] Formation of the Field (also HIST 4428) @ (HA-AS)
Fall. 4 credits. Next offered 2010–2011.
N. Sakai. (SC)

[ASIAN 4429] Vitality and Power in China (also HIST/RELST/SHUM 4931, STS 4911)
Spring. 4 credits. T. J. Hinrichs.
For description, see SHUM 4931. (SC)

[ASIAN 4435] Theatre and Society: A Comparative Study of Asian Dramatic Cultures (also ASIAN 6632, THETR 4230/6230) @ (CA-AS)
Spring. 4 credits. H. Yan.
For description, see THETR 4230. (SC)

[ASIAN 4436] Topics in Indian Film (also VISST 4436) @ (LA-AS)
Fall. 4 credits. No knowledge of an Indian language required. D. Gold.
Treats various aspects of Indian film, with focal topics to vary from year to year. These topics include religion in Indian film, Indian art films, and the golden age of Indian film. All topics are discussed in relation to the conventions of mainstream Bollywood cinema.
and their social and cultural significances. Attendance at weekly screenings is required. (SC)

**ASIAN 4456 Dancing the Stone: Body and Memory (also ARTH 4858)** Spring. 4 credits. K. McGowan. For description, see ARTH 4858. (SC)

**ASIAN 4465 Cold War Aesthetics in East Asia (also COML 4430)** Fall. 4 credits. P. Liu. For description, see COML 4430. (SC)

**[ASIAN 4468 Arendt, Morisaki, Weil (also ASIAN 6668, COML 4380/6240) (KCMAS)]** Fall. 4 credits. Limited to 20 students. Next offered 2010–2011. B. de Bary. (SC)

**[ASIAN 4469 History of Medicine and Healing in China (also ASIAN 6692, BSOC/HIST/STS 4961, HIST 6961) @ (SBA-AS)]** Spring. 4 credits. Next offered 2010–2011. T. J. Hintrichs. (SC)

**ASIAN 4487 Threads of Consequence (also ARTH 4855)** Spring. 4 credits. K. McGowan. For description, see ARTH 4855. (SC)

**ASIAN 4490 China’s Economy Under Mao and Deng (also ECON/CAPS 4690) @ (SBA-AS)** Spring. 4 credits. T. Lyons. For description, see ECON 4690. (SC)

**[ASIAN 4493 Problems in Modern Chinese History (also ASIAN 6693, HIST 4930/6930) @ (HA-AS)]** Fall. 3 credits. Prerequisite: ASIAN 2294/HIST 2940 or permission of instructor. Next offered 2010–2011. S. Cochran. (SC)

**[ASIAN 4494 India: Nation and Narration, History and Literature (also HIST 4921) @ (CA-AS)]** Spring. 4 credits. Next offered 2011–2012. D. Ghosh and A. Banerjee. (SC)

**[ASIAN 4499 Problems in Modern Chinese History (also HIST 4930/6930) @ (HA-AS)]** Spring. 4 credits. Prerequisite: permission of instructor. Next offered 2011–2012. S. Cochran. (SC)

**[ASIAN 5507 The Occidental Tourist (also ASIAN 2206, HIST 2070/5070)]** Fall. 4 credits. Next offered 2010–2011. T. Loos. (SC)

**ASIAN 5599 East Asian Colloquium (also HIST 6020) Fall and spring. 2 credits. Graduate students only. K. Hirano. For description, see HIST 6020. (SC)**

Asia—Graduate Seminars

For complete descriptions of courses numbered 6000 or above, see www.lrc.cornell.edu/asian.

**ASIAN 6602 Southeast Asia Seminar** Spring. 4 credits. Staff. (SC)

**ASIAN 6603 Southeast Asia Field Seminar** Spring. 4 credits. Staff. (SC)

**[ASIAN 6604 Southeast Asia Topical Seminar]** Spring. 3–4 credits. Next offered 2009–2010. Staff. (SC)

**[ASIAN 6611 Research Methods in Pre-Modern China (also ASIAN 4437)]** Fall. 4 credits. Next offered 2010–2011. B. Rusk. For description, see ASIAN 4437. (LL)

**ASIAN 6612 Japanese Bibliography and Methodology** Fall. 3 credits. Requirement: for honors students and M.A. candidates. Prerequisite: permission of instructor. D. McKee. (LL)

**ASIAN 6613 South East Asian Bibliography and Methodology** Spring. 1 credit. Recommended: reading knowledge of at least one SE Asian language or other Asian language and a major European language. G. Green. (LL)

**[ASIAN 6615 Histories of Tokugawa Japan (also HIST 6150)]** Fall. 4 credits. Next offered 2011–2012. K. Hirano. (SC)

**[ASIAN 6618 Gender and Sexuality in Southeast Asian History (also ASIAN 4416, HIST 4160/6160)]** Fall. 4 credits. Prerequisite: graduate standing. Next offered 2011–2012. T. Loos. (SC)

**ASIAN 6619 Graduate Seminar: Translation in Theory (also COML 6160, VISS 6619)** Spring. 4 credits. B. de Bary. The course provides an introduction to various aspects of translation theory, and emphasizes relations between translation theory and trauma theory, post-structuralism, post-colonial theory, and debates on comparative literature, “world literature,” and area studies. (LL)

**[ASIAN 6626 The 18th Century and the Emergence of Literary Modernity (also COML 6300)]** Spring. 4 credits. Next offered 2010–2011. N. Sakai.

**ASIAN 6627 Asia Memoirs: Trauma and Social Upheaval in East and Southeast Asia (also ASIAN 4424)** Spring. 4 credits. L. Paterson. For description, see ASIAN 4424. (LL)

**ASIAN 6629 Contemporary Studies of Japan** Spring. 4 credits. N. Sakai. This course will help graduate students meet new demands of contemporary East Asian studies. Emphasis will be on students’ ability to express themselves and engage in their interlocutors’ debates. While reading texts particularly influential in the early and contemporary formation of the field and its critique, we will consider such questions as, what is academically and intellectually shared between American and East Asian intellectuals in the fields of humanities; how area studies specialists can engage in transnational problematic, and what is the relationship between “Japan” as an object of area studies discourse and “America” as represented in Japanese journalism, popular culture, and politics. This course will encourage students to discuss not area related topics but reflectively their own theoretical concerns in the Japanese language. (SC)

**ASIAN 6632 Theatre and Society: A Comparative Study of Asian Dramatic Cultures (also ASIAN 4435, THETR 4320/6320)** Spring. 4 credits. H. Yan. For description, see THETR 4320. (SC)

**ASIAN 6638 Monks, Texts, and Relics: Transnational Buddhism in South and Southeast Asia (also ASIAN 4438, RELST 4438/6638)** Spring. 4 credits. A. Blackburn. For description, see ASIAN 4438. (RL)

**[ASIAN 6650 Seminar in Asian Religions (also RELST 6650)]** Fall. 4 credits. Limited to 10 students. Prerequisite: graduate standing. Next offered 2010–2011. Staff.

**[ASIAN 6654 Indian Buddhism (also ASIAN 3354, RELST 3354/6654)]** Spring. 4 credits. Graduate students attend ASIAN 3354 and arrange additional meetings with instructor. Next offered 2010–2011. D. Boucher. (RL)

**ASIAN 6659 Seminar in Vedic Philology (also CLASS 7690, LING 6659) (KCMAS)** Fall. 4 credits. Next offered 2010–2011. M. Weiss. For description, see LING 6659. (LL)

**ASIAN 6662 Religion, Colonialism, and Nationalism in South and Southeast Asia (also ASIAN/RELST 4462)** Fall. 4 credits. Prerequisites: one course in ANTHR, ASIAN, HIST, RELST at 3000 level or above or permission of instructor. A. Blackburn. For description, see ASIAN 4462. (RL)

**ASIAN 6665 Traditional Japanese Theatre (also ASIAN 3365)** Spring. 4 credits. J. Kanemitsu. For description, see ASIAN 3365. (LL)

**[ASIAN 6668 Arendt, Morisaki, Weil (also ASIAN 4468, COML 4380/6240)]** Fall. 4 credits. Next offered 2010–2011. B. de Bary. (SC)

**[ASIAN 6671 Paleanthropology of South Asia (also ANTHR 6371, BIOEE 6710)]** Fall. 3 credits. Limited to 15 students. Next offered 2010–2011. K. A. R. Kennedy.

**ASIAN 6676 Southeast Asia Reading Seminar: The Early Thai Novels** Spring. 4 credits. T. Chaloemtiarana. Seminar participants will read selected early Thai novels in the vernacular to critique their role and relevance to our understanding of Thai intellectual culture, history, politics, and engagement with modernity. The seminar will privilege contextual analysis guided by New Historicism, translation theory, and colonial theory. Interested students should contact the instructor before signing up for this class. (LL)

**[ASIAN 6680 Vietnamese Literature in Translation (also ASIAN 3380)]** Fall. 4 credits. Next offered 2010–2011. L. Paterson. For description, see ASIAN 3380. (LL)

**[ASIAN 6681 Intellectual History of Empire (also HIST 6810)]** Spring. 4 credits. Next offered 2011–2012. J. V. Koschmann and N. Sakai. (SC)
**ASIAN 6685 History of Vietnam (also ASIAN 3385, HIST 3880/6880)**
Fall. 4 credits. Next offered 2010–2011.
K. Taylor.
For description, see ASIAN 3385. (SC)

**ASIAN 6688 Theorizing Gender and Race in Asian Histories and Literature (also ASIAN 3366, COML 3900/6880, FGSS 3580/6580, HIST 3880/6880)**

**ASIAN 6692 Medicine and Healing in China (also ASIAN 4469, BGSC/HIST/STS 4961, HIST 6961)**
T. J. Hinrichs. (SC)

**ASIAN 6693 Problems in Modern Chinese History (also ASIAN 4493, HIST 4930/6930)**
Fall. 4 credits. Next offered 2010–2011.
S. Cochran. (SC)

**ASIAN 6694 Problems in Modern Chinese History (also ASIAN 4499, HIST 4990/6940)**
S. Cochran. (SC)

**ASIAN 6696 Modern Southeast Asia: Graduate Proseminar (also HIST 3960/6960)**
Spring. 4 credits. E. Tagliacozzo.
For description, see HIST 3960. (SC)

**ASIAN 6697 Premodern Southeast Asia (also ASIAN 3397, HIST 3950/6950)**
Fall. 4 credits. Next offered 2010–2011.
E. Tagliacozzo.
For description, see HIST 3950. (SC)

**ASIAN 6698 Seminar in Japanese Thought (also HIST 6980)**
Fall. 4 credits. Limited to 15 graduate students. Prerequisite: reading knowledge of Japanese. Next offered 2010–2011.
J. V. Koschmann. (SC)

**ASIAN 7701–7702 Graduate Seminar in East Asian Literature**
7701 Fall, 7702, spring. 4 credits.
B. de Bary.
This course will take up Japanese language texts written by members of the “Circle Village” collective established in 1959 near Fukuoka. Work by Motsuki Kazue, Ishimure Michiko, Tanigawa Gan, and Ueno Eishin will form the core readings, but we will also consider related visual texts (woodblock prints and photography). Recent English-language research and theoretical texts will contextualize these readings. Graduate students interested in art/activist projects contemporary to the Circle Village project will be invited to make class presentations.

**ASIAN 7703–7704 Directed Research**
7703, fall or spring; 7704, fall or spring.
1–4 credits. Staff.

**ASIAN 7708 Academic Study of Religion**
Fall. 4 credits. Prerequisite: graduate standing and permission of instructor.
This course is limited to graduate students with a strong interest in the academic study of religion. (RL)

**ASIAN 8899 Master's Thesis Research**
Fall, spring. 2–4 credits. Staff.

**ASIAN 9999 Doctoral Dissertation Research**
Fall, spring. 2–4 credits. Staff.

**Asian—Honors and Supervised Reading Courses**

**ASIAN 4401 Asian Studies Honors Course**
Fall or spring. 4 credits. Prerequisite: senior standing; admission to honors program. Staff.
Supervised reading and research on the problem selected for honors work.

**ASIAN 4402 Asian Studies Honors: Senior Essay**
Fall or spring. 4 credits. Prerequisite: admission to honors program. Staff.
The student, under faculty direction, prepares an honors essay.

**ASIAN 4403–4404 Asian Studies Supervised Reading**
Fall, spring, or both. 1–4 credits.
Prerequisite: permission of instructor; majors and other qualified students.
Intensive reading under the direction of a member of the staff.

**Bengali**

**BENG 1121–1122 Elementary Bengali**
1121, fall; 1122, spring. 4 credits each semester.
Prerequisites: for BENG 1122, BENG 1121 or examination. Letter grades only. S. Mukherjee.
For beginners, provides a thorough grounding in conversational, reading, and writing skills.

**BENG 2201–2202 Intermediate Bengali**
@ II: Composition and Conversation
2201, fall; 2202, spring. 4 credits each semester.
Prerequisites: for BENG 2201, BENG 1121 or examination; for BENG 2202, BENG 2201 or examination. Letter grades only. S. Mukherjee.
Continuing focus on reading, writing and conversational skills, this course is designed to advance students’ oral competence and enhance comprehension skills through reading, conversations, and listening.

**BENG 2203–2204 Intermediate Bengali II: Composition and Conversation**
2203, fall; 2204, spring. 2 credits each semester.
Prerequisites: for BENG 2203, BENG 2202 or examination; for BENG 2204, BENG 2203 or examination. Letter grades only. S. Mukherjee.
Continuing instruction in Bengali at the higher intermediate level with a focus on conversations, discussions, and writing skills.

**BENG 3301–3302 Advanced Bengali I and II**
3301, fall or spring; 3302, fall or spring.
3 credits each semester.
Prerequisites: for BENG 3302, BENG 3301 or examination. Letter grades only. S. Tun.
For further development of listening skills in Bengali with emphasis on enriching vocabulary, strengthening grammatical competence, and understanding various genres and styles of written Bengali, such as articles on current events, anecdotes, short stories, etc.

**BENG 3301–3302 Advanced Bengali I and II**
3301, fall; 3302, spring. 4 credits each semester.
Prerequisites: for BENG 3302, BENG 3301 or examination. Letter grades only. S. Tun.
Intended for advanced language study.

**Cambodian**

See “Khmer.”

**Chinese**

Note: Testing for placement, including those with near-native abilities, takes place in registration week, before classes begin. Time and place will be posted at grad.arts.cornell.edu/ asian/programs/placement and on the bulletin board outside 350 Rockefeller Hall.

**BURM 2201–2202 Intermediate Burmese Reading @**
2201, fall or spring; 2202, fall or spring. 3 credits each semester. BURM 2201 satisfies Option 1.
Prerequisites: for BURM 2201, BURM 1122, for BURM 2202, BURM 2201.
Letter grades only. S. Tun.
Continuing instruction in Burmese. For consolidating and extending skills acquired at the elementary level in both spoken and written Burmese, and for strengthening the understanding of literary Burmese.

**BURM 3301–3302 Advanced Burmese @**
3301, fall or spring; 3302, fall or spring.
3 credits each semester.
Prerequisites: for BURM 3302, BURM 3301 or examination. Letter grades only. S. Tun.
For further development of listening skills in Burmese with emphasis on enriching vocabulary, strengthening grammatical competence, and understanding various genres and styles of written Burmese, such as articles on current events, anecdotes, short stories, etc.

**BURM 4431–4432 Directed Study**
4431, fall; 4432, spring. 1–4 credits; variable. Prerequisite: permission of instructor. Letter grades only. S. Mukherjee.
Intended for advanced language study.
CHIN 1101–1102 Beginning Mandarin I and II

1101, fall; 1102, spring. 6 credits each semester. Limited to 12 students per sec. Prerequisite: for CHIN 1102, grade of C+ or higher in CHIN 1101, or permission of instructor. Students must enroll in lec and one sec. Because of limited sec size, students missing first two class meetings without university excuse are dropped so others may register. No students added after second week of classes. Letter grades only. S. Divo and staff.

For beginners only, providing a thorough grounding in conversational and reading skills. Students with some facility in the spoken language (because Chinese is spoken at home) but who do not read characters should take 1109–1110. Students who read Chinese, but who speak "dialects," such as Cantonese or American English, should take CHIN 2215.

CHIN 1109–1110 Beginning Chinese Writing and Reading for Students of Chinese Heritage I and II

1109, fall; 1110, spring. 4 credits each semester. Prerequisite: for CHIN 1110, only continue with CHIN 2209 and 2210. Because of high demand, students missing first two meetings without university excuse are dropped so others may register. Letter grades only. Y. Lee-Mehta and staff.

Intended primarily for students who speak some Chinese (e.g., at home), but who have had little or no formal training. The focus is on characters, reading comprehension, basic composition, standard grammar, and reading aloud with standard Chinese (Mandarin) pronunciation.

CHIN 1111–1112 Elementary Cantonese I and II

1111, fall; 1112, spring. 4 credits each semester. Prerequisite: for CHIN 1111, none; for CHIN 1112, CHIN 1111 or equivalent. Students with Mandarin background should consult with instructor for enrollment. Letter grades only. H. Huang.

CHIN 1111 is for beginners with no or very limited Chinese/Cantonese language background from heritage or previous formal training. CHIN 1111/1112 gives basic training in oral/aural Cantonese spoken and used in Guangzhou. CHIN 1112 gives some basic training in reading Cantonese characters besides the training in oral/aural Cantonese. For more details, see lrc.cornell.edu/asian/courses/ch/chin212.

CHIN 2201–2202 Intermediate Mandarin I and II @

2201, fall or summer; 2202, spring or summer. 4 credits each semester. CHIN 2201 satisfies Option 1. Prerequisites: for CHIN 2201, CHIN 1102 with grade of B or above or CHIN 1160 with grade of B or above or equivalent as determined through placement exam; for CHIN 2202, CHIN 2201 or equivalent. Letter grades only. Q. Teng and staff.

Continuing instruction in written and spoken Chinese with particular emphasis on consolidating basic conversational skills and improving reading confidence and ability.

CHIN 2209–2210 Intermediate Chinese Reading and Writing for Students of Chinese Heritage I and II @

2209, fall; 2210, spring. 4 credits each semester. CHIN 2209 satisfies Option 1. Prerequisites: for CHIN 2209, a grade of B in CHIN 1110 or equivalent as determined through placement exam; CHIN 2210, CHIN 2209. Letter grades only. Staff.

Continuing focus on reading and writing for students with spoken background in standard Chinese; introduction of personal letter writing and other types of composition.

CHIN 2211–2212 Intermediate Cantonese I and II @

2211, fall; 2212, spring. 4 credits each semester. CHIN 2211 satisfies Option 1. Prerequisites: for 2211, CHIN 1102 or equivalent, or elementary conversational skills in Cantonese from heritage or previous formal training in Cantonese; for 2212, CHIN 2211 or equivalent. Mandarin speakers should consult with instructor for enrollment. Letter grades only. H. Huang.

CHIN 2211 gives comprehensive training in oral and written Cantonese at a higher level than CHIN 1111–1112. Oral training covers conversational Cantonese expression on various topics; written training includes reading with proper Cantonese pronunciation and writing Cantonese characters. For more details, see lrc.cornell.edu/asian/courses/ch/chin211 and lrc.cornell.edu/asian/courses/ch/chin212.

CHIN 2213–2214 High Intermediate Cantonese I and II @

2213, fall; 2214, spring. 4 credits each semester. CHIN 2213 satisfies Option 1. Prerequisite: for 2213, basic oral/aural and written skill in Cantonese and intention to continue the learning of Cantonese both oral and written, or completion of CHIN 2212; Prerequisite for 2214: 2213 or equivalent. Letter grades only. H. Huang.

CHIN 2213: A course primarily for students who have acquired basic oral/aural and written skill in Cantonese and have the interest to continue learning speaking, Cantonese and writing Cantonese characters; CHIN 2214: A course primarily for students who have the interest to raise their oral and written Cantonese to a higher level. For more details, see lrc.cornell.edu/asian/courses/ch/chin213 and lrc.cornell.edu/asian/courses/ch/chin214.

CHIN 2215 Mandarin for Cantonese Speakers @

Fall. 4 credits. Satisfies Option 1. Limited to 15 students. Prerequisite: advanced Cantonese with native-like reading and writing ability. Letter grades only. Staff.

CHIN 3301–3302 High Intermediate Mandarin I and II @

3301, fall; 3302, spring. 4 credits each semester. CHIN 3301 satisfies Option 1. Prerequisites: for CHIN 3301, grade of B+ or higher in CHIN 2202, or equivalent as determined through placement exam; for CHIN 3302, CHIN 3301. Letter grades only. Y. Lee-Mehta.

Continuing instruction in spoken Chinese and in various genres and styles of written Chinese.

CHIN 3306 Readings in Chinese History, Culture and Society (also CAPS 3600) @

Designed for CAPS majors to enhance Chinese proficiency while preparing them for studying in a Chinese-language setting.

CHIN 3309/3310 Business Chinese in Cultural Context I (also CHIN 5509/5510) @

Fall, spring. 4 credits each semester. CHIN 3309 satisfies Option 1. Prerequisite: two years of Chinese and permission of instructor only. Letter grades only. Z. Chen.

First part of a two-semester sequence for those who studied Mandarin at intermediate level. Will cover first five chapters of the textbook, developed surrounding five real cases. These are multinational companies, successfully operated in China by adapting their strategies to special needs of the Chinese market. By reading, discussing, and performing communicative tasks related to those cases, students will learn how to use Chinese as a "carrier of culture," acquiring a better understanding of China in economic and cultural terms. To expand students' knowledge on various business-related issues, in addition to business case analysis, supplementary reading and writing exercises as well as clips of TV shows and interviews will also be provided. Highlights are: Listening comprehension of business news reports; translation of business terms and documents; discussion of Chinese business laws, commercial language and word processing. Class will be in Chinese.

CHIN 3341 High Intermediate Mandarin: CAPS in D.C. @

Fall. 4 credits. Letter grades only. Staff.

For description, see CHIN 3501.

CHIN 4411–4412 Advanced Mandarin I and II @

4411, fall; 4412, spring. 4 credits each semester. CHIN 4411 satisfies Option 1. Prerequisites: for CHIN 4411, grade of B+ or higher in CHIN 3302, or equivalent as determined through placement exam; for CHIN 4412, grade of B+ or higher in CHIN 4411 or permission of instructor. Letter grades only. Q. Teng.

Reading, discussion, and composition at advanced levels.

CHIN 4425 Special Topics (also CHIN 6625) @

Spring. 4 credits. Prerequisite: permission of instructor. Letter grades only. Next offered 2010–2011. Staff.

CHIN 4426 Historical Documents on Modern China (also CHIN 6626, HIST 4650/6650) @

Fall. 4 credits. Prerequisite: permission of instructor. Letter grades only. Next offered 2010–2011. Staff.

CHIN 4427–4428 High Advanced Mandarin I and II @

4427, fall; 4428, spring. CHIN 4427 satisfies Option 1. 4 credits each semester. Prerequisite: for CHIN 4427, grade of B+ or higher in CHIN 2210 or CHIN 4412, or equivalent as determined through placement exam; for CHIN 4428, grade of B+ or higher in CHIN 4427 or permission of instructor. Letter grades only. W. Shao.

The focus of the course is on formal Chinese, and the main aim of this course is to help
students achieve an advanced level of Chinese performance, so they may combine Chinese with their work in their majors.

**CHIN 4431–4432 Directed Study**
4431, fall; 4432, spring. 1–4 credits, variable. Prerequisite: permission of instructor. Staff.
Intended for advanced language study.

**CHIN 4441 Advanced Mandarin: CAPS in D.C. @**
Fall. 4 credits. Letter grades only. Staff. For description, see CHIN 4411.

**CHIN 4445 Directed Study: CAPS in D.C.**
Fall. 1–4 credits. Letter grades only. Staff. For description, see CHIN 4431–4432.

**CHIN 4451 Advanced Mandarin: CAPS in Beijing @**
Fall. 4 credits. Letter grades only. Staff. For description, see CHIN 4411.

**CHIN 4455 Directed Study: CAPS in Beijing**
Fall. 1–4 credits. Letter grades only. Staff. For description, see CHIN 4431–4432.

**CHIN 4457 High Advanced Mandarin: CAPS in Beijing @**
Fall. 3 credits. CHIN 4457 satisfies Option I. Letter grades only. Staff. For description, see CHIN 4427.

**CHIN 5509–5510 Business Chinese in Cultural Context I (also CHIN 3309–3310)**
Fall, spring. 4 credits each semester. Letter grades only. Z. Chen. For description, see CHIN 3309–3310.

**[CHIN 6625 Special Topics (also CHIN 4425)]**
Fall. 4 credits. Prerequisite: permission of instructor. Letter grades only. Next offered 2010–2011. Staff.

**CHIN 6626 Historical Documents on Modern China (also CHIN 4426, HIST 4650/6500)**
Fall. 4 credits. Prerequisite: permission of instructor. Z. Chen. For description, see HIST 4650.

**Chinese FALCON (Full-Year Asian Language Contraction)**
For full information, brochures, etc., see the FALCON Program coordinator in 388 Rockefeller Hall or e-mail: falcon@cornell.edu or lrc.cornell.edu/falcon

FALCON is designed to help students develop "copability" in Mandarin Chinese by bringing them to the level where they can make progress on their own even with no further instruction. The full-year program provides over 1,800 hours of language exposure—which exceeds even the exposure that students living in China typically receive. This allows students to develop levels of fluency, accuracy, and control that are not achieved in other academic settings. By taking the entire full-year sequence, students can complete as much Chinese in one calendar year as they would complete in three or more years of regular study at most academic institutions.

The full-year sequence is CHIN 1159 or 1160 (summer), 2260 (fall), and 3360 (spring). Students typically take the entire sequence, but they may take any portion of the program if they have the necessary background as determined by a placement interview. This course sequence also serves to fulfill the language requirement for the M.A. in Asian Studies and the joint M.B.A./M.A. in Asian Studies. For more information and application forms, please contact the FALCON program office. Some students do choose to apply only to the summer portion. The spring semester of the Chinese program will be offered in Beijing at the School of International Studies at Peking University. In the summer and fall, three small interactive classes per day are conducted entirely in Chinese, and one lecture is conducted in both Chinese and English. In the spring semester, all four classes are conducted entirely in Chinese. In the summer and fall, students are also required to spend at least two one-hour sessions per day in the language lab. Additional preparation time in the language lab of up to three hours is necessary in the evenings. The demands of this 16-credit program do not normally permit students to take other courses simultaneously.

Students must formally apply to the program. To guarantee course availability and scholarship eligibility, applications must be received by March 1. After that, applicants are reviewed on a rolling basis and acceptance is contingent on the availability of spaces. Applications are available in 388 Rockefeller Hall or at lrc.cornell.edu/falcon/apply.

**CHIN 1159 Summer Intensive Chinese (FALCON)**
Summer only. 1–7 credits. Prerequisite: some previous language study in Chinese; permission of program director. S. Divo and staff.
This course is for students with significant prior background in Chinese who take CHIN 1160 for fewer than 8 credits. Formal application and a placement interview are required.

**CHIN 1160 Introductory Intensive Mandarin (FALCON)**
Summer only. 8 credits. Students who complete this course with grade of at least B are normally eligible to enroll in CHIN 2201 S. Divo and staff.
This is a nine-week intensive, 8-credit course that meets only in the summer, Monday through Friday from 8:30 am to 4:30 p.m., beginning from an absolutely introductory level introducing listening, spoken and written language. Lectures on linguistics and cultural matters, intensive practice with native speakers, and laboratory work prepare students for an intermediate level of study. This course involves work on all four skills speaking, listening comprehension, reading and writing. Students who complete this course with a grade of B or higher are normally eligible to enroll in CHIN 2201, if they choose not to continue to CHIN 2260.

**CHIN 2260 Intermediate Intensive Mandarin (FALCON)**
Fall. 16 credits. **Satisfies Option 1.** Prerequisite: grade of B+ in CHIN 1160 or equivalent with permission of instructor. Students must apply formally to FALCON program; open only to all Cornell students and students from other institutions. S. Divo and staff.
Students work on spoken and written Chinese at the intermediate level, developing fluency, accuracy, and control that are not achieved in other academic settings. This is a full-time academic program that meets Monday through Friday from 9:05 a.m. to 4:30 p.m., with 1–3 hours per day of self-directed practice in Cornell's Language Resource Center.

**CHIN 3360 Advanced Intensive Mandarin (FALCON) @**
Spring. 16 credits. Prerequisite: grade of B+ or higher in CHIN 2260 or permission of instructor. CHIN 3360 is scheduled to be held in Beijing, People's Republic of China. S. Divo and staff.
After finishing the summer and fall terms at Cornell, students have the language skills to benefit fully from a Chinese linguistic and cultural environment. FALCON's full-year students spend their last semester in Beijing, where they continue to improve their skills and put them to effective use in daily life. In Beijing, students continue to attend four small-group classes with FALCON-trained Chinese language teachers; these classes include comprehensive training to develop reading, writing, and speaking proficiency, a course in newspaper reading and translation, as well as a course in advanced listening skills. In addition, a variety of activities outside the classroom, including field trips and guest lectures are provided. Spring FALCON is scheduled at the School of International Studies at Peking University.

**Literature in Chinese**

**CHLIT 2213–2214 Introduction to Classical Chinese @ # (LA-AS)**
2213, fall; 2214, spring. 3 credits each semester. CHLIT 2213–2214 does not satisfy Option 1. Prerequisite: for 2213, qualification in Chinese or permission of instructor; for 2214, 2213 or permission of instructor. May be taken concurrently with CHIN 1101–1102, 2201–2202, 3301–3302. Open to students who have studied at least two years of any language that employs Chinese writing system (e.g., Mandarin, Cantonese, Japanese).
D. X. Warner and B. Rusk.
Two-part introductory course. Students learn the fundamental grammar and vocabulary of classical Chinese by analyzing and translating short passages. (LL)

**[CHLIT 3300 Reading from the Early Masters @ # (HA-AS)]**
Spring. 4 credits. Prerequisites: CHLIT 2213–2214 or permission of instructor. Next offered 2010–2011. R. McNeal. Students read and discuss several passages from early classical texts, such as the Confucian Analects, the Mozi, the Guanzi, and others. Attention is paid to grammar, historical context, and methodology. [LL]

**[CHLIT 3307 Readings in Classical Chinese Literature @ # (LA-AS)]**
Spring. 4 credits. Prerequisites: CHLIT 2214 or permission of instructor. Next offered 2010–2011. D. X. Warner and B. Rusk. This course surveys selected texts—primarily in prose—from the ancient and medieval periods. (LL)

**[CHLIT 4418 Medieval Chinese Narrative Tales @ # (LA-AS)]**
This course introduces students to medieval Chinese narrative literature. (LL)
**CHLIT 4420 Tang Poetry: Themes and Contexts (also CHLIT 6620) @ # (LA-AS)**

Spring. 4 credits. Prerequisite: minimum three years of Chinese and/or one year of Classical Chinese or permission of instructor. D. X. Warner.

A guided reading in Chinese of selected works on shared themes written by selected poets of the Tang dynasty (618–907). Focuses on developing the essential skills for reading Tang poems while giving attention to their social, cultural, and historical contexts. (LL)

**CHLIT 4421-4422 Directed Study**

Fall or spring. 2–4 credits each semester. Prerequisite: permission of instructor. Staff. Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop course content. (LL)

**CHLIT 4423 Readings in Chinese History @**

Spring. 4 credits. Prerequisite: equivalent of three years of Mandarin instruction; permission of instructor. Satisfies Option I. Staff. (LL)

**CHLIT 4425 Chinese Buddhist Texts @ # (LA-AS)**

Fall. 4 credits. Prerequisite: one year of classical Chinese or permission of instructor. Open to students in any area of East Asia with an interest in developing skills in Buddhist texts. Next offered 2010–2011. D. Boucher. (LL)

**CHLIT 6603 Seminar in Chinese Fiction and Drama**

Fall. 4 credits. Prerequisite: permission of instructor. Next offered 2010–2011. E. Gunn. (LL)

**CHLIT 6605 Seminar in Chinese Fiction and Drama**

Fall. 4 credits. Prerequisite: permission of instructor. E. Gunn.

As a seminar, the course engages students in contemporary fiction and drama and published critical works of them in order to build the students’ scholarly and critical abilities. Texts are in Chinese, with some criticism published in English. (LL)

**CHLIT 6610 Chinese Cultural Criticism**

**CHLIT 6615 Seminar; Ideas and Literature of Medieval China**

**CHLIT 6620 Tang Poetry: Themes and Contexts (also CHLIT 4420)**

Fall. 4 credits. Prerequisite: minimum three years of Chinese and/or one year of Classical Chinese or permission of instructor. Next offered 2010–2011. D. X. Warner.

For description, see CHLIT 4420. (LL)

**CHLIT 6621-6622 Advanced Directed Reading: Chinese Historical Syntax**

6621, fall; 6622, spring. 2–4 credits. Prerequisite: permission of instructor. Staff. Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop class readings. (LL)

**Hindi**

**HINDI 1101–1102 Introductory Hindi I and II**

1101, fall; 1102, spring. 6 credits each semester. Students may not receive credit for both HINDI 1101 and 1109. Students may not receive credit for both HINDI 1102 and 1109. Prerequisite: for HINDI 1102, HINDI 1101 or equivalent. Letter grades only. S. Singh and staff. This is a course designed for a complete beginner in Hindi. Students are not expected to have any prior knowledge in Hindi before taking this course. In this course, they will learn how to read and write Hindi script and how to speak survival Hindi in different social settings. While reading, writing, and listening are very important components of this course, much emphasis is put on spoken Hindi.

**HINDI 1109–1110 Accelerated Hindi I and II**

1109, fall; 1110, spring. 4 credits each semester. Students may not receive credit for both HINDI 1101 and 1109. Students may not receive credit for both HINDI 1102 and 1109. Prerequisite: for HINDI 1102, background in Hindi or permission of instructor; for HINDI 1110, HINDI 1109 or equivalent. Check with instructor regarding placement. Letter grades only. S. Singh and staff.

Accelerated Hindi is a course designed for heritage students. Students develop fluency and accuracy in all four language skills: reading, writing, listening and speaking. It is a parallel course of HINDI 1101, except it moves faster and the focus is on fluency and accuracy in the target language.

**HINDI 2201–2202 Intermediate Hindi I and II @**

2201, fall; 2202, spring. 4 credits each semester. HINDI 2201 satisfies Option 1. Prerequisites: for HINDI 2201, HINDI 1102 or HINDI 1110; for HINDI 2202, HINDI 2201 or permission of instructor. Letter grades only. S. Singh and staff.

This is an intermediate-level course in Hindi. Students’ competence in all four language areas will become very strong and solid. This course will work on building up their confidence in describing complicated situations and ideas in the target language, reading and writing speed, and clarity in listening comprehension such as news, complicated descriptions, and other media contents.

**HINDI 3301–3302 Advanced Hindi I and II @**

3301, fall; 3302, spring. 3 credits each semester. HINDI 3301 satisfies Option 1. Prerequisites: for HINDI 3301, HINDI 2202, for HINDI 3302, HINDI 3301; or permission of instructor. Letter grades only. S. Singh and staff.

Selected readings in modern Hindi literature. Continued work on fluency in speaking Hindi on an advanced level. There will be a combination of different reading materials from literature, journals, newspapers and many social, entertainment, and political magazines in Hindi. Discussions will be based on those readings and articles, hence giving opportunities to express views and opinions in a fluent and effective manner.

**HINDI 4431–4432 Directed Study**

4431, fall; 4432, spring. 1–4 credits, variable. Prerequisite: permission of instructor. Letter grades only. S. Singh. Intended for advanced language study.

**Indonesian**

**INDO 1121–1122 Elementary Indonesian**

1121, fall; 1122, spring. 4 credits each semester. Prerequisite: for INDO 1122, INDO 1121. Letter grades only. J. Pandin. Gives a thorough grounding in basic speaking, listening, and writing skills with an introduction to reading.

**INDO 2205–2206 Intermediate Indonesian @**

2205, fall; 2206, spring. 3 credits each semester. INDO 2205 satisfies Option 1. Prerequisites: for INDO 2205, INDO 1122 or equivalent; for INDO 2206, INDO 2205 or equivalent. Letter grades only. J. Pandin.

Develops all four skills: reading, writing, speaking, and comprehension.

**INDO 3301–3302 Advanced Indonesian @**

3301, fall; 3302, spring. Prerequisites: for INDO 3301, INDO 3301 satisfies Option 1. Prerequisite: INDO 2206 or equivalent. Letter grades only. J. Pandin.

Practical language course on an advanced level in which students read selected materials on current issues, write reports, and make oral presentations.

**INDO 4431–4432 Directed Study**

4431, fall; 4432, spring. 1–4 credits, variable. Prerequisite: permission of instructor. Letter grades only. J. Pandin. Intended for advanced language study.

**Japanese**

**JAPAN 1101–1102 Elementary Japanese I and II**

1101, fall; 1102, spring. 6 credits each semester. Prerequisite for INDO 1102: JAPAN 1101 or placement by instructor during registration period. Intended for beginners or those who have been placed in the course by examination. Students must enroll in one lec and one sec. Letter grades only. M. Suzuki and staff.

Gives a thorough grounding in all four language skills—speaking, listening, reading, and writing—at the beginning level. The lecture provides explanation, analysis, and cultural background. Sections are conducted entirely in Japanese.

**JAPAN 2201–2202 Intermediate Japanese I and II @**

2201, fall; 2202, spring. 4 credits each semester. JAPAN 2201 satisfies Option 1. Prerequisites: for JAPAN 2201, JAPAN 1102 or JAPAN 1101 or placement by instructor during registration; for JAPAN 2202, JAPAN 2201 or placement by instructor during registration. Students must enroll in lec and one sec. Letter grades only. Y. Katagiri. This course provides widely applicable language proficiency as an integrated Japanese course, which develops all four language skills (speaking, listening, reading, and writing) of the post-elementary level. Discussion sections are conducted entirely in Japanese to give opportunities to practice socioculturally appropriate language performances while enhancing listening comprehension and speaking ability through realistic situational contexts.
practices, in addition to training in practical reading and writing skills. Lectures systematically demonstrate versatile knowledge of essential structural patterns with audio-visual aids and explain cultural background and customs useful for effective oral and written communication.

**JAPAN 3301-3302 Continuing Intermediate Japanese I and II @ 3301, fall; 3302, spring. 4 credits each semester. JAPAN 3301 satisfies Option 1. Prerequisites: for JAPAN 3301, JAPAN 2202 or placement by instructor during registration; for JAPAN 3302, JAPAN 3301 or placement by instructor during registration. Letter grades only. S. Ichikawa. For students who have learned basic Japanese skills and would like to develop higher skills in reading, speaking, listening, and writing.**

**JAPAN 4401-4402 Advanced Japanese I and II @ 4401, fall; 4402, spring. 4 credits each semester. JAPAN 4401 satisfies Option 1. Prerequisites: for JAPAN 4401, JAPAN 3306 or placement by instructor during registration; for JAPAN 4402, JAPAN 4401 or placement by instructor during registration. Letter grades only. N. Larson. Develops all four language skills (speaking, listening, reading, and writing) at the advanced level.**

**JAPAN 4410 History of the Japanese Language (also ASIAN/LING 4411) @ (HA-AS) 4 credits. Prerequisite: permission of instructor. J. Whitman. For description, see LING 4411.**

**JAPAN 4421-4422 Special Topics @ 4421, fall; 4422, spring. 4 credits. Prerequisites, for JAPAN 4421, JAPAN 4402 or placement by instructor during registration; for JAPAN 4422, JAPAN 4421 or placement by instructor during registration. JAPAN 4421 satisfies Option 1. Letter grades only. M. Chapman. Intended for advanced students or placement by instructor. Advanced readings with discussion about a particular topic.**

**JAPAN 4431-4432 Directed Study 4431, fall; 4432, spring. 1–4 credits each semester. Prerequisite: permission of instructor. Letter grades only. Staff. Intended for advanced language study.**

**Japanese FALCON (Full-Year Asian Language Concentration)**

Website: irc.cornell.edu/falcon. Director: R. Sukle, 388 Rockefeller Hall, 255-0734 or rjs19@cornell.edu. Program coordinator: 388 Rockefeller Hall, 255-6457 or falcon@cornell.edu. FALCON is designed to develop “copability” in students by bringing them to the level where they can make further progress on their own even with no further instruction. The full-year program provides over 1,800 hours of language exposure which exceeds even the exposure that students living in Japan typically receive. This intensive work in Japanese allows students to develop levels of fluency, accuracy, and control of the language that is not achieved in any other type of academic setting. The full-year FALCON sequence is Japanese 1160 (summer), 2260 (fall), and 3360 (spring). By taking this entire sequence, students can complete as much Japanese in one calendar year as they would complete in three or more years of regular study at most academic institutions. This course sequence also serves to fulfill the language requirement for the M.A. in Asian Studies and the joint M.B.A./M.A. in Asian Studies. For more information and application forms, please contact the FALCON program office. Because of FALCON’s intensive nature, graduate students can complete the language work in minimal time. Undergraduates, including freshmen, achieve levels of competency that far exceed what is normally achieved in a four-year program, provided that they continue studying Japanese after FALCON. Three small interactive classes per day are conducted entirely in Japanese, and one lecture is conducted in both Japanese and English. The interactive classes are conducted by experienced and highly trained teachers, and the lecture is taught by an expert in the structure of the Japanese language. In addition to time spent in these classes, students are required to spend at least two one-hour sessions per day in language lab. Additional preparation time in the language lab of up to three hours is necessary in the evenings. One must formally apply to the program to take the courses. The deadline for application in a given year, but applications will be considered after that date if space is still available. The degree of intensity of this program makes it impossible to simultaneously take other courses or work except possibly on weekends.

**JAPAN 1159 Summer Intensive Japanese (FALCON) @** Summer only. 1–7 credits. Prerequisite: permission of program director; some previous language study in Japanese. Applications must be received by March 1. After the deadline, applications are considered provided that space is available. R. Sukle and staff. This course is for students with significant prior background in Japanese who take JAPAN 1160 for fewer than 8 credits. Formal application and a placement interview are required.

**JAPAN 1160 Introductory Intensive Japanese (FALCON) @** Summer only. 8 credits. Formal application to FALCON is required. Admission is open to all students, not just those planning to take the full year. Students from other institutions are also welcome to apply. Applications must be received by March 1. After the deadline, applications are considered provided that space is available. R. Sukle and staff. This is a nine-week intensive, 8-credit course that meets only in the summer, Monday through Friday from 8:30 a.m. to 4:30 p.m., beginning from an absolute introductory level introducing the spoken and written language. Lectures on linguistics and cultural matters, intensive practice with native speakers, and laboratory work prepare students for an intermediate level of study. This course involves work on all four skills: speaking, listening, comprehension, reading and writing. Students who successfully complete this course and plan to continue at Cornell may take the fall and spring FALCON courses (JAPAN 2260 and 3360). Students interested in other options for continuing after FALCON should consult the FALCON director, Robert Sukle, at rjs19@cornell.edu or 255-0734.

**JAPAN 2260 Intermediate Intensive Japanese (FALCON) @** Fall. 16 credits. Satisfies Option 1 or Option 2. Prerequisites: JAPAN 1160, JAPAN 1102 at Cornell, or placement by FALCON staff before beginning of fall semester. Formal application to FALCON is required. Admission is open to all students, including those from other institutions. Applications must be received by March 1. After the deadline, applications are considered provided that space is available. R. Sukle and staff. Students work on spoken and written Japanese at the intermediate level, allowing students to develop fluency, accuracy, and control that are not achieved in other academic settings. This is a full-time academic program that meets Monday through Friday from 9:05 a.m. to 4:30 p.m., with one to three hours per day of self-directed practice in Cornell’s Language Resource Center.

**JAPAN 3360 Advanced Intensive Japanese (FALCON) @** Spring. 16 credits. Prerequisite: JAPAN 2201 at Cornell or placement by FALCON staff. R. Sukle and staff. Students work on spoken and written Japanese from an intermediate to an advanced level, allowing students to develop fluency, accuracy, and control. The material is more complicated with practice on switching levels of politeness (formal to informal). There is great emphasis on eliciting from students complex explanations and narratives rather than one-sentence answers. By the end of the term students are able to speak in paragraph-length utterances. More emphasis is placed on application and vocabulary acquisition, allowing students to deal with natural, social interactions and to begin explaining ideas. After the texts are finished, students begin reading authentic publications from Japan aimed at a native Japanese reader, learning to discuss the contents of what they have read in Japanese.

**Literature in Japanese**

**[JPLIT 4406 Introduction to Classical Japanese @ # Fall. 4 credits. Prerequisite: JAPAN 4402 or permission of instructor. Next offered 2010–2011. J. Kanemitsu. Introduction to the fundamental grammar and vocabulary of classical Japanese. (L1)]**

**[JPLIT 4408 Readings in Classical Japanese @ # Spring. 4 credits. Satisfies Option 1. Prerequisite: JPLIT 4406 or permission of instructor. Next offered 2010–2011. J. Kanemitsu. Readings of excerpts and complete brief pieces from representative premodern Japanese literature mostly with the use of standard modern annotated editions. (L1)]**

**[JPLIT 6617 Modern Japanese Philosophy Fall. 4 credits. Next offered 2010–2011. N. Sakai. Seminar on modern Japanese philosophy. Students are expected to read texts in Japanese and discuss epistemic, historical, and practical issues involved in them. Supplementary reading of European and U.S. philosophical texts is also required. (L1)]**
JPLIT 6618 Japanese Philosophical Discourse II

JPLIT 6625 Directed Readings
Fall or spring. 4 credits. Staff.
Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop class readings. (LL)

JPLIT 6627–6628 Advanced Directed Readings
6627; fall; 6628, spring. 1–4 credits. Prerequisite: permission of instructor. Staff.

KHMER (Cambodian)

KHMER 1121–1122 Elementary Khmer I and II
1121, fall; 1122, spring. 4 credits each semester. Prerequisite: KHMER 1122, KHMER 1121; for beginners or those placed in course by examination. Letter grades only. H. Phan.

KHMER 2201–2202 Intermediate Khmer Reading and Writing I and II @
2201, fall; 2202, spring. 4 credits each semester. KHMER 2201 satisfies Option 1. Prerequisites: for KHMER 2201, KHMER 1122; for KHMER 2202, 2201. Letter grades only. H. Phan.

KOREA 1109–1110 Elementary Korean Reading and Writing I and II
1109, fall; 1110, spring. 4 credits each semester. Prerequisites: for KOREA 1109, placement by instructor; for KOREA 1110, KOREA 1109 or placement by instructor. If in doubt about eligibility, see instructor. Students may not receive credit for both KOREA 1101 and KOREA 1109.

KOREA 2201–2202 Intermediate Korean I and II @
2201, fall; 2202, spring. 4 credits each semester. KOREA 2201 satisfies Option 1. Prerequisites: for KOREA 2201, KOREA 1102 or placement by instructor; for KOREA 2202, 2201. Letter grades only. Staff.

KOREA 2209–2210 Intermediate Korean Reading and Writing I and II @
2209, fall; 2210, spring. 4 credits each semester. KOREA 2209 satisfies Option 1. Prerequisites: for KOREA 2209, KOREA 1110 or placement by instructor; for KOREA 2210, 2209 or placement by instructor. If in doubt about eligibility, see instructor. Letter grades only. Staff.

KOREA 3301–3302 High Intermediate Korean I and II @
3301, fall; 3302, spring. 4 credits each semester. KOREA 3301 satisfies Option 1. Prerequisites: for KOREA 3301, KOREA 2202 or KOREA 2210, or placement by instructor; for KOREA 3302, 3301 or placement by instructor. Letter grades only. Staff.

KOREA 4401–4402 Advanced Korean I and II @
4401, fall; 4402, spring. 4 credits. KOREA 4401 satisfies Option 1. Prerequisite: for KOREA 4401, KOREA 2210 or KOREA 3302 or placement by instructor; for KOREA 4402, KOREA 4401 or placement by instructor. Letter grades only. M. Song.

KOREA 4425 Special Topics @
Fall. 4 credits. KOREA 4425 satisfies Option 1. Prerequisite: Fluency in Korean and permission of instructor. Letter grades only. Taught in Korean. J. Pak.

NEPAL 1101–1102 Elementary Nepali I and II
1101, fall; 1102, spring; 1101–1102, summer. 6 credits each semester. Prerequisite: for NEPAL 1102, NEPAL 1101 or examination. Letter grades only. S. Oja.

Nepali
The Cornell Nepal Study Program
Cornell and the central campus of Tribhuvan National University (in Kathmandu) cosponsor a semester or year in Nepal at the Cornell Nepal Study Program for both undergraduate and graduate students. North American students live and study with Nepali students at the Cornell program houses near the university, taking courses taught in English by faculty from Tribhuvan University. After an intensive orientation, semester courses include intensive spoken and written Nepali language, contemporary issues in Nepal, and Research and Design Methods in a wide variety of fields in the social and natural sciences and the humanities. (Language instruction in Tibetan and Newari may also be arranged.) There is a 10-day study tour and field trip during the semester, and students execute their research proposal during four weeks of guided field research, writing up their findings for presentation at the end of the semester.

Juniors, seniors, and graduate students from any field may apply. Students should have a desire to participate in a program featuring relatively intense cultural immersion and to undertake rigorous field research. Instruction is in English, but prior study of Nepali language is strongly recommended for Cornell students. Those interested in the program should consult Cornell Abroad (cubroad@cornell.edu).

NEPAL 1101–1102 Elementary Nepali I and II
1101, fall; 1102, spring; 1101–1102, summer. 6 credits each semester. Prerequisite: for NEPAL 1102, NEPAL 1101 or examination. Letter grades only. S. Oja.

Intended for beginners. The emphasis is on basic grammar, speaking, and comprehension skills, using culturally appropriate materials and texts. Devanagari script for reading and writing is also introduced.

NEPAL 2201–2202 Intermediate Nepali Conversation I and II @
2201, fall; 2202, spring. 2201–2202, summer. 3 credits each semester. NEPAL 2201 satisfies Option 1. Prerequisites: for NEPAL 2201, NEPAL 1102 or examination; for NEPAL 2202, 2201 or examination. Letter grades only. S. Oja.

Intermediate instruction in spoken grammar and verbal comprehension skills, with special attention to developing technical vocabularies and other verbal skills appropriate to students' professional fields.

KOREA 4431–4432 Directed Study
4431, fall; 4432, spring. 1–4 credits, variable. Prerequisite: permission of instructor. Letter grades only. Staff.
Intended for advanced language study.

Literature in Korean

KRLIT 4432 Middle Korean (also LING 4432) @ (LA-AS)
Spring. 4 credits. Prerequisite: KOREA 3301 or equivalent. Next offered 2010–2011. J. Whitman.
For description, see LING 4432. (LL)
NEPAL 2203–2204 Intermediate Nepali Composition I and II @
2203, fall; 2204, spring; 2203–2204, summer. 3 credits each semester. NEPAL 2203 satisfies Option 1. Prerequisite: for NEPAL 2204, NEPAL 1101 or examination; for NEPAL 2204, 2203 or examination.
Letter grades only. S. Oja.
Systematic review of written grammar and reading comprehension, with special attention to the technical vocabularies, necessary writing skills, and published materials typical of advanced students’ professional fields.

NEPAL 3301–3302 Advanced Nepali I and II @
3301, fall; 3302, spring; 3301–3302, summer. 3 credits each semester. NEPAL 3301 satisfies Option 1. Prerequisite: NEPAL 2204 or permission of instructor. Letter grades only. S. Oja.
Reading of advanced texts, together with advanced drill on the spoken language.

NEPAL 4431–4432 Directed Study @
4431, fall; 4432, spring. 1–4 credits, variable. Letter grades only. S. Oja.
Permission of instructor needed. Intended for advanced language study.

Intensive Nepali

Nepali, the official language of Nepal, will be offered in the Summer Session at both beginning and continuing levels. Taught by faculty from Cornell University and the Cornell–Nepal Study Program at Tribhuvan University, this summer program provides an unusual opportunity to develop competence in Nepali. Emphasis will be on the spoken colloquial language, in dialogues, exercises, and conversational practice. In addition, special attention is given to assisting students in developing vocabularies and skills appropriate to their unique professional needs. Reading and writing practice use both popular and scholarly materials in the Nepali (Devanagari) script. Students will spend five hours per day in class and two further hours working with recorded materials in addition to the time required for daily preparation. Films and guest lecturers complement the summer program. The program lasts six weeks and meets five days a week. Students must formally apply to the program. Applications are available at http://lrc.cornell.edu/asian/programs/summer/nepali during the spring semester. For more information, etc., please see Kim Scott in 350 Rockefeller Hall or e-mail: kp16@cornell.edu.

NEPAL 1159 Summer Intensive Nepali
Summer only. 1–5 credits. Prerequisite: permission only. Students must formally apply. S. Oja and B. Oja.
For students who take NEPAL 1160 for fewer than 6 credits. It is a six-week intensive language course beginning at the absolute beginning level and going up to intermediate level. It includes work on all four language skills: speaking, listening comprehension, reading, and writing.

NEPAL 1160 Intensive Nepali
Summer only. 6 credits. Prerequisite: permission only. Students must formally apply. S. Oja and B. Oja.
This intensive study of Nepali provides an unusual opportunity to obtain basic competence in the language in one summer. Emphasis is upon the spoken (colloquial) language; although attention will also be given to assisting the students develop vocabularies appropriate to their professional fields as well. Reading and writing practice will use both colloquial and scholarly materials in the Nepali (Devanagari) script.

NEPAL 2260 Intermediate Intensive Nepali @
Summer only. 6 credits. Satisfies Option 1. Prerequisite: NEPAL 2260 or placement by Nepali instructors. Students must formally apply. S. Oja and B. Oja.
Intermediate instruction in spoken grammar and verbal comprehension skills, with special attention to developing technical vocabularies and other verbal skills appropriate to students’ professional fields.

NEPAL 3360 Advanced Intensive Nepali
Summer only. 6 credits. Satisfies Option 1. Prerequisite: NEPAL 2260 or placement by Nepali instructors. Students must formally apply. S. Oja and B. Oja.
Reading of advanced texts, together with advanced drills on the spoken language.

Pali

Pali 4450 Readings in Pali @
Fall and spring. 3 credits. Prerequisite: permission of instructor. Letter grades only. A. Blackburn.
Readings in Pali selected in relation to student and instructor interests. This course may be repeated for credit with different topics and readings.

Sanskrit

SANSK 1131–1132 Elementary Sanskrit I and II @ also CLASS 1331–1332, LING 1131–1132
1131, fall; 1132, spring. 4 credits each semester. Letter grades only. A. Nussbaum and A. Ruppel.
An introduction to the essentials of Sanskrit grammar. Designed to enable the student to read classical and epic Sanskrit as quickly as possible.

SANSK 2251–2252 Intermediate Sanskrit I and II @ also CLASS 2351–2352, LING 2251–2252 @ #
2251, fall; 2252, spring. 3 credits each semester. SANSK 2251 satisfies Option 1. Prerequisite: at least one year study of Sanskrit or equivalent. Offered alternate years. Letter grades only. A. Ruppel and L. McCrea.
Review of grammar and reading of selections from Sanskrit epic poetry and narrative prose.

[SANSK 3323 Buddhist Sanskrit
Fall. 4 credits. Next offered 2011–2012. D. Boucher.]

SANSK 4421–4422 Directed Study @
4421, fall; 4422, spring. 1–4 credits, variable. Prerequisite: permission of instructor. Letter grades only. Staff.
Intended for advanced language study.

Literature in Sanskrit

SNLIT 3301–3302 Advanced Sanskrit I and II @ also CLASS 3393–3394 @ (LA-AS)
3301, fall; 3302, spring. 4 credits each semester. Prerequisite: two years study of Sanskrit or equivalent. L. McCrea.
Selected readings in Sanskrit literary and philosophical texts.

SNLIT 4465 The Literature of Ancient India @
Spring. 4 credits. L. McCrea.
The course will survey in translation a selection of major works of poetry, drama, and aesthetic theory and criticism from the Sanskrit literary tradition of ancient India (IL)

Sinhala (Sinhalase)

SINHA 1121–1122 Elementary Sinhala
1121, fall; 1122, spring. 4 credits each semester. Prerequisite: for SINHA 1122, SINHA 1121 or equivalent. Letter grades only. B. Herath.
Semi-intensive introduction to colloquial Sinhala, intended for beginners. A thorough grounding is given in all the language skills; listening, speaking, reading, and writing.

SINHA 2201–2202 Intermediate Sinhala @
2201, fall; 2202, spring. 3 credits each semester. Satisfies Option 1. Prerequisites: for SINHA 2201, SINHA 1102 or SINHA 1122, for SINHA 2202, 2201 or equivalent. Letter grades only. B. Herath.
This course further develops student competence in colloquial Sinhala, intended for those who have completed an elementary course. Emphasis will be on providing a thorough grounding in all the language skills: listening, speaking, reading and writing. In addition, this course prepares students for the transition to literary Sinhala.

SINHA 3301 Literary Sinhala I @
Fall or spring. 3 credits. Satisfies Option 1. Prerequisite: SINHA 2201/2202 or permission of instructor. Letter grades only. B. Herath.
This one-semester course provides an introduction to the distinctive grammatical forms and vocabulary used in literary Sinhala. While focused particularly on the development of reading skills, the course also introduces students to Literary Sinhala composition, and builds students’ listening comprehension of semi-literary Sinhala forms (such as those used in radio and TV news).

SINHA 4400 Literary Sinhala II
Fall or spring. 2–4 credits variable. Prerequisite: SINHA 3301 or permission of instructor. B. Herath.
This one-semester course further develops students’ comprehension of written Literary Sinhala, using sample materials from a variety of genres prepared by the instructor, as well as excerpts from texts relevant to graduate student research (when appropriate).

SINHA 4431–4432 Directed Study
4431, fall; 4432 spring. 1–4 credits variable. Prerequisite: permission of instructor. Letter grades only. B. Herath.
Intended for advanced language study.

Tagalog

TAG 1121–1122 Elementary Tagalog I and II
1121, fall; 1122, spring. 4 credits each semester. Prerequisite: for TAG 1122, TAG 1121. Letter grades only. T. Savella.
Gives a thorough grounding in basic speaking and listening skills with an introduction to reading.
TAG 2205–2206 Intermediate Tagalog I and II @
2205, fall; 2206, spring. 3 credits each semester. TAG 2205 satisfies Option 1. Prerequisite: for TAG 2205, TAG 1122 or equivalent; for TAG 2206, 2205 or equivalent. Letter grades only. S. Chavan.

Develops all four skills: reading, writing, speaking, and comprehension.

TAG 3301–3302 Advanced Tagalog I and II @
3301, fall; 3302, spring. 3 credits each semester. TAG 3301 satisfies Option 1. Prerequisite: TAG 2206 or equivalent. Letter grades only. T. Savella.

Continuing instruction on conversational skills but with emphasis on reading and writing. Selected core readings in contemporary Tagalog literature are used, but students in consultation with the instructor, may select some of the reading materials.

TAG 4431–4432 Directed Study
4431, fall; 4432, spring. 1–4 credits, variable. Prerequisite: permission of instructor. Letter grades only. T. Savella.

Intended for advanced language study.

Tamil

TAMIL 1121–1122 Elementary Tamil I and II
1121, fall; 1122, spring. 4 credits. Prerequisite: for TAMIL 1122, TAMIL 1121 or permission of instructor. Letter grades only. S. Chavan.

This course will teach modern spoken and written Tamil to beginning level students. Students will learn Tamil through simple conversations, sentence and question construction, grammar, culture and festivals and folk tales of Tamilians of India, and how to express performance of simple daily activities. All course activities conducted in Tamil. An interactive videoconference course.

TAMIL 2201–2202 Intermediate Tamil I and II
2201, fall; 2202, spring. 4 credits. TAMIL 2201 satisfies Option 1. Prerequisite: for TAMIL 2201, TAMIL 1121/1122 or permission of instructor; for TAMIL 2202, TAMIL 2201 or permission of instructor. S. Chavan.

To teach modern spoken and written Tamil to intermediate-level students. This course helps to acquire Tamil language proficiency, which refines and expands previously acquired linguistic skills in culturally authentic contexts. This course further incorporates reading, discussing, and analyzing texts as a basis for the expression and interpretation of meaning. All course activities are conducted in Tamil. Video-conference with Syracuse University.

Thai

THAI 1101–1102 Elementary Thai
1101, fall; 1102, spring. 6 credits each semester. Prerequisite: for THAI 1102, THAI 1101 or equivalent. Intended for beginners or students placed by examination. Letter grades only. N. Jagacinski.

Gives a thorough grounding in all the language skills: listening, speaking, reading, and writing.

THAI 2201–2202 Intermediate Thai Reading @
2201, fall; 2202, spring. 3 credits each semester. THAI 2201 satisfies Option 1. Prerequisite: for THAI 2201, THAI 1102; for THAI 2202, THAI 2201 or equivalent. Letter grades only. N. Jagacinski.

Continuing instruction in spoken and written Thai.

THAI 2203–2204 Intermediate Composition and Conversation @
2203, fall; 2204, spring. 3 credits each semester. THAI 2203 satisfies Option 1. Prerequisite: for THAI 2203, THAI 1102; for THAI 2204, THAI 2203. Letter grades only. N. Jagacinski.

Intermediate instruction in spoken and written grammar and reading comprehension.

THAI 3301–3302 Advanced Thai @
3301, fall; 3302, spring. 4 credits each semester. THAI 3301 satisfies Option 1. Prerequisite: THAI 2202 or equivalent. Letter grades only. N. Jagacinski.

Selected readings in Thai writings in various fields.

THAI 3303–3304 Thai Literature @
3303, fall; 3304, spring. 4 credits each semester. THAI 3303 satisfies Option 1. Prerequisite: THAI 3302 or equivalent. Letter grades only. N. Jagacinski.

Reading of significant novels, short stories, and poetry written since 1850.

THAI 4431–4432 Directed Study
4431, fall; 4432 spring. 1–4 credits variable. Prerequisite: permission of instructor. Letter grades only. N. Jagacinski.

Intended for advanced language study.

Urdu

URDU 1125 Introduction to the Urdu Script (also NES 1312)
Fall or spring. 1 credit. Prerequisite: HINDI 1101 or permission of instructor. Letter grades only. S. Singh.

Focus of this course is to learn basic Urdu script. The course will meet two times per week, for one hour each. Students will learn how to read and write basic Urdu. In addition to teaching the script, the instructors will teach a significant number of most commonly used expressions and words in Urdu.

URDU 2201–2202 Intermediate Written Urdu I and II (also NES 2201–2202)
2201, fall; 2202, spring. 2 credits. Prerequisite: HINDI 1102 or HINDI 1110; and URDU 1125 or permission of instructor. Letter grades only. S. Singh.

This course is designed to develop competence in Urdu reading and writing for students with a first-year knowledge of Hindi and knowledge of Urdu script. May be taken concurrently with Intermediate Hindi.

URDU 4431–4432 Directed Study
4431, fall; 4432 spring. 1–4 credits, variable. Prerequisite: permission of instructor. Letter grades only. S. Singh.

Intended for advanced language study.

Vietnamese

VIET 1101–1102 Elementary Vietnamese I and II
1101, fall; 1102, spring. 6 credits each semester. Prerequisite: for VIET 1102, VIET 1101 or equivalent. Intended for beginners or students placed by examination. Letter grades only. T. Tranviet.

Gives a thorough grounding in all language skills: listening, speaking, reading, and writing.

VIET 2201–2202 Intermediate Vietnamese I and II @
2201, fall; 2202, spring. 3 credits each semester. VIET 2201 satisfies Option 1. Prerequisite: for VIET 2201, VIET 1102 or equivalent; for VIET 2202, 2201. Letter grades only. T. Tranviet.

Continuing instruction in spoken and written Vietnamese.

VIET 2203–2204 Intermediate Vietnamese Composition and Reading I and II @
2203, fall; 2204, spring. 3 credits each semester. VIET 2203 satisfies Option 1. Prerequisite: placement by instructor. Letter grades only. T. Tranviet.

Designed for students and "native" speakers of Vietnamese whose speaking and listening skills are at the advanced level, but who still need to improve writing and reading skills.

VIET 3301–3302 Advanced Vietnamese I and II @
3301, fall or spring; 3302, fall or spring. 3 credits each semester. VIET 3301 satisfies Option 1. Prerequisites: for VIET 3301, VIET 2202 or permission of instructor; for VIET 3302, 3301. Letter grades only. T. Tranviet.

Continuing instruction in spoken and written Vietnamese; emphasis on enlarging vocabulary, increasing reading speed, and reading various genres and styles of prose.

VIET 4431–4432 Directed Study
4431, fall; 4432, spring. 1–4 credits, variable. Prerequisite: permission of instructor. Letter grades only. T. Tranviet.

Intended for advanced language study.

Literature in Vietnamese

[VTLIT 2222 Introduction to Classical Vietnamese @ #
Spring. 3 credits. Satisfies Option 1. Prerequisite: qualification in Vietnamese or permission of instructor. Next offered 2010–2011. K. Taylor.

Introduces students to Han (classical Chinese as used in the Vietnamese language) and Nom (vernacular Vietnamese character writing). Students learn to read Han and Nom texts, from the 17th through 19th centuries, including historical records, prose writings, and poetry. (LL)]

Related Courses in Other Departments and Colleges

Check the primary department section for the offering status of the following courses. Courses in other colleges will count as College of Arts and Sciences credit only for Asian Studies majors. Courses below generally count toward the Asian Studies major, as long as the course content is 50 percent or more focused on Asia. Such courses typically fall under the heading of Society and Culture (SC).
Asia/General Courses
[ARTH 2800 Introduction to Art History: Approaches to Asian Art (SC)]
DSOC 2050 International Development (SC)
ECON 4730 Economics of Export-Led Development (SC)
ILRIC 6370 Labor Relations in Asia (SC)
ECON 4450 Industrial Policy (SC)
ECON 4540 China and India: Growth Miracle (SC)

China—Area Courses
[ANTHR 3535 The Situation of China’s Minorities (SC)]
ANTHR 7550 East Asia: Readings in Specific Problems (SC)
CAPS/GOVT 2827 China and the World (SC)
[ARTH 3800 Introduction to the Arts of China (SC)]
[ARTH 4810 The Arts in Modern China (SC)]
ECON 4690 China’s Economy Under Mao and Deng (also CAPS 4690) (SC)

Japan—Area Courses
ANTHR 2560 Japanese Society through Film (SC)
ANTHR 7550 East Asia: Readings in Specific Problems (SC)
ARCH 3309 Elements, Principles, and Theories in Japanese Architecture (SC)
[HIST 2300 Japan and the Pacific War (SC)]

South Asia—Area Courses

[MUSIC 6301 Ethnomusicology (SC)]

ASIAN AMERICAN STUDIES PROGRAM
The Asian American Studies Program is a university-wide academic program housed administratively within the College of Arts and Sciences. Its aim is to promote teaching, research, and educational activities related to Asians in the Americas and to serve as a resource to the campus and regional communities. The program’s undergraduate courses, offered within the program and cross-listed with departments in various colleges, meet distribution requirements and count toward a minor in Asian American Studies.

The program does not offer a graduate course of study, but students can undertake graduate work in Asian American Studies within selected disciplines of the university.

Undergraduate Minor
The program’s undergraduate minor affords students an opportunity to develop a multidisciplinary approach to the study of Asians in the hemispheric Americas. The course of study stresses developments not only within the United States, but also underscores the transnational and comparative contexts of Asian America and the field’s connections with African American, American Indian, Latino, and Women’s Studies. Students must work with a faculty advisor from among the program’s affiliated faculty and must complete at least 15 units of credits as follows: (1) AAS 1100 and two additional courses in Asian American Studies; (2) one course in African American, American Indian, U.S. Latino Studies, or Feminist, Gender, & Sexuality Studies; and (3) one course in East Asian, South Asian, or Southeast Asian Studies.* (*These courses must be approved by the student’s faculty advisor, and they should address issues of race, gender, or the histories and cultures of Asian peoples.) Students must file an application for the minor with the Asian American Studies Program.

Resource Center
The program’s Asian American Studies Resource Center, located in 420 Rockefeller Hall, provides meeting space for the more than 50 undergraduate student organizations of the Cornell Asian Pacific Student Union and the Society for Asian American Graduate Affairs. It also hosts a modest print collection of books, periodicals, and newspapers; a current news clipping file; a comprehensive database of publications on Asian Americans since 1977; and a sizable collection of videotapes as well as music CDs on the Asian American experience.

Research
The program encourages faculty and student research on Asian Americans by sponsoring guest lectures, conferences, film festivals, readings, and exhibits. It also funds research projects and student travel to conferences and research sites. The Asian American Studies Workshop is the program’s principal research initiative, engaging Cornell’s faculty and students with invited faculty from other universities in a yearlong intensive study of selected themes.

Core Faculty
D. Chang, C. Lai, V. Munasinghe, S. Wong

Courses
AAS 1100 Introduction to Asian American Studies (CA-AS)
Spring, 3 credits. Can be used to satisfy either social science or humanities distribution requirement. S. Wong

The purpose of this course is fourfold: (1) to introduce students to the multifaceted experiences of Asians in the United States; (2) to examine how a diverse group of people came to be identified as “Asian Americans”; (3) to understand the role of difference—gender, class, ethnicity—in the formation of “Asian American” identities; and (4) to link historical experiences with contemporary issues.

AAS 2130 Introduction to Asian American History (also AMST/MIST 2640) (HA-AS)
Fall, 4 credits. D. Chang
For description, see HIST 2640.

AAS 2620 Asian American Literature (also AMST/ENGL 2620) (LA-AS)
Spring, 4 credits. S. Wong
For description, see ENGL 2620.

[AAS 3030 Asians in the Americas: A Comparative Perspective (also ANTHR 3703) (CA-AS)
Fall, 4 credits. Next offered 2010–2011. V. Munasinghe.]
AAS 3470 Asian American Women's History (also AMST/FGSS/HIST 3470)   (CA-AS)
Spring. 4 credits. D. Chang.
For description, see HIST 3470.

AAS 3801/6801 Asian American Urban Experience (also AMST/CRP 3801/6801)
Fall. 3 credits. C. Lai.
The seminar examines the histories and geographies of urban Asian American communities. We begin with an introduction to key geographical terms and spatial theories and then use them to analyze different Asian ethnic communities throughout North America. This includes an investigation of 19th- and early-20th-century segregated ethnic enclaves on the West Coast and the East Coast as well as an examination of postwar Asian American communities in suburbs.

AAS 3901 Asian American Politics and Public Policy (also AMST/CRP 3102/6102)   (CA-AS)
Spring. 3 credits. C. Lai.
This lecture course examines key political and public policy issues affecting Asian American communities, such as immigration law, racial profiling, labor struggles, and electoral politics. We pay particular attention to political mobilization efforts of different Asian ethnic groups and examine how these groups have organized, framed their issues, and mobilized in terms of space, place, and spatial scale.

AAS 3950 Race, Space, and Place (also AMST 3950/6950, CRP 3101/6101)   (CA-AS)
Fall. 3 credits. C. Lai.
This seminar examines critical theories of race and space and investigates key sites where racial formation and spatial production intersect. These multiscalar sites include the neoliberal city, the prison industrial complex, and the Mississippi Delta. We analyze not only the fatal coupling of difference, power, and space, but also the spatial politics of resistance and refusal.

AAS 4240 Asian American Communities (also AMST/HIST 4200)   (HA-AS)
Fall. 4 credits. Next offered 2010–2011.
Q. Wang.
For description, see HD 4310.

AAS 4240 Asian American Communities (also AMST/HIST 4200)   (HA-AS)
Fall. 4 credits. Next offered 2010–2011.
D. Chang.

AAS 4520 Culture and Human Development (also COGST/HD 4520)   (CA-AS)
Spring. 3 credits. Q. Wang.
For description see HD 4520.

AAS 4530 20th-Century American Women Writers of Color (also AMST/ENGL/FGSS 4530)   (LA-AS)
Fall. 4 credits. S. Wong.
For description, see ENGL 4530.

AAS 4790 Ethnicity and Identity Politics: An Anthropological Perspective (also ANTHR 4749)   (SBA-AS)
For description, see ANTHR 4749.

AAS 4950 Independent Study
Fall or spring. 1–4 credits. Topic and credit hours TBA arranged between faculty and student. Independent study forms must be approved by Asian American Studies Program office. Staff.

[AAS 4970 Jim Crow and Exclusion-Era America (also AMST/HIST 4970/6970)

ASTRONOMY

Cornell's Astronomy faculty, research staff, graduate, and undergraduate students are active in diverse areas of modern astronomy ranging from theoretical astrophysics and general relativity to radio and radar astronomy, submillimeter, infrared and optical astronomy, and the exploration of the solar system. Cornell operates two local optical observatories, the world's largest radio telescope at Arecibo, Puerto Rico, and with two other institutions, the 200-inch optical telescope at Mt. Palomar in California. With Caltech, Cornell is carrying out a design study for a large submillimeter telescope in the high Atacama desert in Chile. Several members of the department faculty are also principal investigators on major NASA space and planetary exploration missions.

The department offers a number of courses to satisfy a general interest in astronomy. These courses have few or no prerequisites and are not intended for key geographical terms and spatial theories and then use them to analyze different Asian ethnic communities throughout North America. This includes an investigation of 19th- and early-20th-century segregated ethnic enclaves on the West Coast and the East Coast as well as an examination of postwar Asian American communities in suburbs.

A double major in

The Major
The purpose of the major in Astronomy is to provide in-depth knowledge and education about the nature of the universe. Astronomy relies heavily on preparation in physics and mathematics. Consequently, many courses in these fields are included as prerequisites. In preparation for the major, students normally elect the introductory physics sequence PHYS 1112–2212 or 1116–2217–2218 and the complementary pathway in mathematics, MATH 1110–1220–2210 or 1910–1920–2930–2940 (or equivalent). Students who anticipate undertaking graduate study are urged to elect the honors physics sequence PHYS 1116–2217–2218–3318–3327 as if possible. We recommend, but do not require, that prospective astronomy majors take at least one of the following courses: ASTRO 2211, ASTRO 2212, ASTRO 2253, ASTRO 2290. Students are also urged to acquire computer literacy. ASTRO 3334 is designed to give students hands-on experience with the methods of analysis, visualization, and simulation needed in astrophysical research. Acceptance to the major is first considered after completion of three semesters of introductory physics and mathematics and in general requires a GPA of 3.2 in physics and mathematics courses.

The major requirements stress the importance of building a strong preparation in physical science. The following upper-level courses are normally required:
PHYS 3314 or 3318, 3316, 3323 or 3327, 3341 and 4443
AEP 3210–3220 (or equivalent, e.g., MATH 4200 and 4220)
ASTRO 4410, 4431, and 4432

With permission of the major advisor, students interested in planetary studies may substitute appropriate advanced courses or may pursue an independent major under the program in the Science of Earth Systems. Majors are encouraged to supplement the above courses with any astronomy, physics, or other appropriate courses at or above the 3000 level. Advanced seniors can enroll in astronomy graduate courses with the permission of the instructor. Students are also encouraged to work with faculty members on independent study projects under the course ASTRO 4940 or to apply to a variety of programs at Cornell, Arecibo, and elsewhere that offer undergraduates summer employment as research assistants. Nearly all undergraduate majors and concentrators become involved in research projects in the junior and senior years. Students whose interest in astronomy is sparked somewhat late in their undergraduate career are encouraged to discuss possible paths with the director of undergraduate studies in Astronomy.

Honors. A student may be granted honors in Astronomy upon the recommendation of the Astronomy Advisors Committee of the Astronomy faculty. Typical requirements for graduating with honors are a minimum GPA of 3.5 over the past four semesters and grades of A– or better in ASTRO 4410, 4431, and 4432.

Double majors. A double major in Astronomy and another subject is possible in many circumstances. However, the set of courses used to fulfill the requirements for each major must be completely independent.
Minor. The minor in Astronomy for other majors normally requires 12 credits, at least 8 of which must be at the 3000 level or above. We recommend, but do not require, that sophomores planning to concentrate in Astronomy take at least one of the following courses: ASTRO 2211, ASTRO 2212, ASTRO 2253, ASTRO 2290.

Distribution Requirement

All courses in astronomy, except ASTRO 1109, may be used to fulfill the science distribution requirement in the College of Arts and Sciences.

Courses

ASTRO 1101 The Nature of the Universe (PBS)

Fall. 3 credits. Limited to 30 students per disc sec. Students may not receive credit for both ASTRO 1101 and 1103. J. Lloyd.

Introduces students to the cosmos. The birth, evolution, and death of stars, the formation of the chemical elements, and the nature of white dwarfs, neutron stars, and black holes are discussed. An introduction to the theories of special relativity and general relativity is given. The course covers the search for other worlds outside the solar system and the possible existence of life and intelligence elsewhere in the universe. Modern theories of cosmology are presented, and the origin, structure, and fate of the universe are discussed. Most of the course notes as well as sample exams and simulations are made available on the web.

ASTRO 1102 Our Solar System (PBS)

Spring. 3 credits. Limited to 30 students per disc sec. Students may not receive credit for both ASTRO 1102 and 1104.

S. Squyres and J. Veverka.

The past few decades have seen incredible advances in the exploration of our solar system. In this course students learn about the current state and past evolution of the Sun and its family of planets, moons, asteroids, and comets. The course emphasizes images and other data obtained from current and past NASA space missions and how these data provide insights about the important processes that have shaped the evolution of solar system objects. General astronomical concepts relevant to the study of the solar system are also discussed. Critical focus is on developing an understanding of the Earth as a planetary body and discovering how studies of other planets and satellites influence models of the climatic, geologic, and biologic history of our home world. Other topics covered include energy production in stars, global warming, impact hazards, the search for life in the solar system and beyond, and future missions.

ASTRO 1103 The Nature of the Universe (PBS)

Fall. 4 credits. Limited to 22 students per lab, 30 students per disc sec. Students may not receive credit for both ASTRO 1101 and 1103. J. Lloyd.

Identical to ASTRO 1101 except for addition of the laboratory.

ASTRO 1104 Our Solar System (PBS)

Spring. 4 credits. Limited to 22 students per lab, 30 students per disc sec. Students may not receive credit for both ASTRO 1102 and 1104.

S. Squyres and J. Veverka.

Identical to ASTRO 1102 except for addition of the laboratory.

ASTRO 1105 An Introduction to the Universe (PBS)

Summer. 3 credits. Recommended: high school physics. Students may not receive credit for both ASTRO 1105 and 1107.

D. Kornreich.

How do we measure the size of our galaxy and the size of the universe? Is the universe round or flat? How are the stars born, why do they shine, and how do they die? What are the chemical elements, and how were they formed in stars? What are quasars, pulsars, and black holes? How was the solar system formed? What are the environments of other planets like? What is the basic structure of Earth and the other planets? Will we catastrophically alter the earth? Does life exist elsewhere in the universe? How can we find it? Each student has an opportunity to make observations with small telescopes.

ASTRO 1106 Essential Ideas in Relativity and Cosmology (PBS)

Summer. 3 credits. Prerequisites: high school algebra and trigonometry.

A. Brazier.

Exploration of Einstein’s theories of special and general relativity, which brought about a fundamental conceptual understanding of space and time. Correspondence to, and conflicts with, common sense. Applications to various areas in special relativity (space travel, the equivalence of mass and energy, nuclear fission and fusion, and thermonuclear processes in the sun) and in general relativity (motion of light and particles in curved spacetime, cosmology, and the question of whether the universe is open or closed).

ASTRO 1107 An Introduction to the Universe (PBS)

Summer. 4 credits. Students may not receive credit for both ASTRO 1105 and 1107.

D. Kornreich.

Identical to ASTRO 1105 except for the addition of the afternoon laboratory that emphasizes mathematical problem-solving. This option is recommended for potential majors in science and engineering.

ASTRO 1195 Observational Astronomy (PBS)

Fall. 3 credits. Limited to 24 students.

G. Stacey.

Provides a “hands-on” introduction to observational astronomy intended for liberal arts students at the freshman and sophomore level. High school mathematics is assumed, but otherwise there are no formal prerequisites. The course objective is to teach how we know what we know about the universe. The course is set up with two lectures and one observing lab per week. Not all of the evening sessions are used. Planned exercises include five or six observational labs (star gazing with binoculars and small telescopes, telescopic observations and CCD imaging of star clusters, nebulae, and the planets, solar observations, radio observations of the Milky Way Galaxy), plus a selection of exercises from the following: experiments in navigating by the stars; construction and use of simple instruments such as optical spectroscopes and sun dials; laboratory spectroscopy; experiments in planetary cratering; collection and study of micrometeorites; analyses of planetary and lunar imaging data, measuring the diameter of Earth or the size of the solar system.

ASTRO 2201 Our Home in the Universe (PBS)

Fall. 3 credits. Prerequisite: freshman or sophomore standing. No scientific background assumed.

R. Giovaneli and M. Haynes.

General discussion of our relation to the physical universe and how our view of the universe has changed from ancient to modern times. Several main themes are covered over the course of the semester: the evolution of our view of the sky from that of ancient cultures to that of space telescopes; the death of stars and the formation of black holes; dark matter and the structure of galaxies, and the origin, evolution, and fate of the universe. Presents a nonmathematical introduction to these subjects and discuss uncertainties and unresolved issues in our understanding.

ASTRO 2202 Our Home in the Solar System (PBS)

Spring. 3 credits. Prerequisite: freshman or sophomore standing; some background in science.

J. Veverka.

Writing course designed to develop an understanding of our home planet as a member of a diverse family of objects in our solar system. Discussion centers on how studies of other planets and satellites have broadened our knowledge and perspective of Earth, and vice versa. We study, debate, and learn to write critically about important issues in science and public policy that benefit from this perspective. Topics discussed include global warming, the impact threat, the searches for extrasolar planets and extraterrestrial intelligence, and the exploration of Mars.

ASTRO 2211 Astronomy: Stars, Galaxies, and Cosmology (PBS)

Summer. 3 credits. Recommended: high school algebra and trigonometry. D. Campbell and G. Stacey.

Students may not receive credit for both ASTRO 2211 and 1109.

E. Ray and R. Giovanelli.

This course offers an introduction to astrophysics aimed at prospective science and engineering majors. It covers a broad array of topics in astrophysics including the formation, structure, evolution and observational properties of normal and extreme stars, galaxies and cosmology, and the underlying physical processes governing them. The textbook is by Kutter. This course is a slightly more mathematical and physics-oriented alternative to ASTRO 1101/1103.

ASTRO 2212 The Solar System: Planets, Satellites, and Rings (PBS)

Spring. 4 credits. Intended for first- and second-year engineering and physical sciences students. Prerequisite: introductory calculus or co-registration in MATH 1110 or 1910 or permission of instructor. R. Bean.

Introduction to the solar system with emphasis on the quantitative application of simple physical principles to the understanding of what we observe or can deduce. Topics include the Sun and the interior processes that control its luminosity, the interiors, surfaces, and atmospheres of the planets including the effects of greenhouse gases, satellites, and small bodies, orbits of solar system bodies and the search for extra-solar planets. Results from past and current spacecraft missions will be...
discusses including the Cassini mission to the Saturn system and the Mars Exploration Rovers.

[ASTRO 2233 - Topics in Astronomy and Astrophysics]

ASTRO 2280 - Space Exploration (PBS)
Fall. 3 credits. No special background in physical sciences, math, or engineering assumed. S. Squyres. Provides an overview of space science, with particular emphasis on the solar system, and a detailed examination of a few selected objects, including the planet Mars, the satellites in the outer solar system, and comets. The focus is on methods of collecting information and especially on spacecraft and space missions. Topics include the design and limitations of instruments. Ethical and political questions associated with space exploration are discussed. Intended for students with an interest in science, technology, and associated policy issues.

ASTRO 2290 - Relativity and Astrophysics (PBS)
Spring. 4 credits. Prerequisites: Freshman physics, calculus, and geometry, T. Herter. Provides a geometrically based introduction to special and general relativity, followed by consideration of astrophysical applications. Includes discussion of tests of Einstein's theory of space, time, and gravitation; the physics of white dwarfs, neutron stars, and black holes; an introduction to modern cosmology.

ASTRO 2299 - Search for Life in the Universe (PBS)
Spring. 4 credits. Prerequisites: two courses in any physical science subject or permission of instructors. J. Cordes and Y. Terzian. Surveys the contents of the universe. Reviews theories of cosmic and stellar evolution, and of the formation and evolution of planetary systems, planetary atmospheres, and surfaces. Questions regarding the evolution of life and the development of technology are discussed. Methods to detect extraterrestrial life with emphasis on radio telescopes and associated instrumentation are presented. Hypothetical communication systems are developed and discussed.

ASTRO 3310 - Planetary Imaging Processing (PBS)
Fall. 3 credits. Intended for sophomores or juniors majoring or concentrating in Astronomy or related fields. Prerequisites: two semesters of introductory physics and some experience with computer programming; permission of instructor required (form available in SS610). J. Bell. Reviews basic techniques employed in the collection and processing of spacecraft images of solar system objects. See www.astro.cornell.edu/courses/astro3310/main.html for course details.

ASTRO 3332 - Elements of Astrophysics (PBS)
Spring. 4 credits. Prerequisites: MATH 1120, 1220, or equivalent; PHYS 2213 or 2217. J. Houck.

ASTRO 3334 - Modern Astrophysical Techniques (PBS)
Spring. 3 credits. Prerequisites for sophomores majoring and concentrating in Astronomy or related fields. Prerequisites: two semesters of introductory physics and two semesters of calculus. Recommended: ASTRO 2283. J. Lloyd. The course reviews the basic techniques employed in astrophysical research, both observational and theoretical, to explore the universe. Basic methods and strategies of data acquisition and signal processing are discussed. Students gain hands-on experience with visualization techniques and methods of error analysis, data fitting, and numerical simulation. Exercises address the processes by which astrophysicists piece together observations made with today's foremost astronomical instruments to solve questions concerning the origin of planets, stars, galaxies, and the universe itself.

ASTRO 4410 - Experimental Astronomy (PBS)
Fall. 4 credits. Prerequisites: PHYS 2214/2218 (or 3310 or 3560), PHYS 3323/3327 (or co-registration). J. Cordes and J. Houck. Observational astrophysics. Major experiments involve techniques in CCD (charge-coupled-device) imaging, optical photometry, optical spectroscopy, radiometry, radio spectroscopy and radio astronomy. The experiments involve use of the Hartung-Boothroyd Observatory's 24-inch telescope, a laboratory two-element radio interferometer, and a radio telescope mounted on top of the Space Sciences Building. The laboratory covers the fundamentals of using astronomical instrumentation and data analysis as applied to celestial phenomena: asteroids, normal stars, supernova remnants, globular clusters, planetary nebulae, the interstellar medium, OH masers, and galaxies.

ASTRO 4431 - Introduction to Astrophysics and Space Sciences (PBS)
Fall. 4 credits. Prerequisites: mathematics above 2000 level and physics above 3000 level. Recommended: PHYS 4445. D. Chernoff and P. Nicholson. Overview of modern astrophysical concepts for physical science majors. Major topics include stellar formation, structure, and evolution; stellar atmospheres; compact objects (white dwarf, neutron star, and black holes); planets; and brown dwarfs. Current research problems in these areas are introduced along the way. The emphasis is on using fundamental principles of physics to explain astronomical phenomena. A variety of physics, including elements of atomic and molecular physics, solid state physics and fluid mechanics, are introduced or reviewed in a quick, practical fashion to be put to use in solving astrophysics puzzles.

ASTRO 4432 - Introduction to Astrophysics and Space Sciences II (PBS)
Spring. 4 credits. Prerequisite: ASTRO 4431 or permission of instructor. T. Herter and G. Stacey. Covers two broad topics: the astrophysics of the interstellar medium and cosmology. The interstellar medium section covers thermal equilibrium and radiative transport in HII regions, atomic gas regions, and molecular clouds. The cosmology section includes discussions of the universe, metrics, Friedmann equations, dark matter, cosmological tests, the early universe, and the cosmological production of the elements.

ASTRO 4445 - Introduction to General Relativity (also PHYS 4445) (PBS)
Fall. 4 credits. Staff. For description, see PHYS 4445.

ASTRO 4490 - Senior Seminar Critical Thinking (PBS)
Fall. 4 credits. Prerequisites: none. Open to all students. Y. Terzian. Critical thinking in scientific and nonscientific contexts with selections from the history of astronomy. Topics include elements of classical logic, including standards of evidence. Case studies include examples of competing hypotheses in the history of science, as well as examples from borderline sciences. Stress is put on creative generation of alternative hypotheses and their winnowing by critical scrutiny. Topics include the nature and history of the universe, the nature of time, the nature of reality, the possibilities of life on other planets, and artificial intelligence. Fallacies, illusions, and paradoxes will also be discussed. The course includes debates by the students on controversial topics such as: Can machines think? Is science and technology to be blamed for Hiroshima and 9/11? Should the genome be improved? Is the future determined?

ASTRO 4940 - Independent Study in Astronomy
Fall or spring. 2–4 credits. Prerequisite: permission of instructor; to register: obtain an independent study form in department office, 610 Space Sciences Bldg. Recommended: familiarity with topics covered in ASTRO 3332, 4431, or 4434. Individuals work on selected topics. A program of study is devised by the student and instructor.

[ASTRO 6509 - General Relativity I (also PHYS 6553)]
Fall. 4 credits. Prerequisite: knowledge of special relativity and methods of dynamics at level of Classical Mechanics by Goldstein. Next offered 2010–2011. E. Flanagan. For description, see PHYS 6553.

[ASTRO 6510 - General Relativity II (also PHYS 6554)]

ASTRO 6511 - Physics of Black Holes, White Dwarfs, and Neutron Stars
(also PHYS 6525)
Fall. 4 credits. Prerequisites: all of physics at upper-division undergraduate level. D. Lai. Compact objects (neutron stars, black holes, and white dwarfs) are the endpoints of stellar evolution. They are responsible for some of
the most exotic phenomena in the universe, including supernova explosion, radio pulsars, bright X-ray binaries, magnetars, and gamma-ray bursts. Supermassive black holes also lie at the heart of the violent processes in active galactic nuclei and quasars. The study of compact objects allows one to probe physics under extreme conditions (high densities, strong magnetic fields, and gravity). This course surveys the astrophysics of compact stars and related subjects. Emphasis is on the application of diverse theoretical physics tools to various observations of compact stars. There are no astronomy or general relativity prerequisites. At the level of Physics of Black Holes, White Dwarfs, and Neutron Stars by Shapiro and Teukolsky.

**ASTRO 6516 Galactic Structure and Stellar Dynamics**  
Fall. 4 credits. D. Chernoff.  
Introduction to the study of the structure of galaxies via the laws of modern physics. Topics include the observed kinematics and spatial distribution of stars in the vicinity of the Sun, shapes and properties of stellar orbits, the gravitational N-body problem, collisional relaxation in stellar systems, spiral structure, galaxy classification and evolution, and cosmological results in galaxy formation.

**ASTRO 6520 Radio Astronomy**  
Fall. 4 credits. J. Cordes and D. Campbell.  
Covers radio astronomy telescopes and electronics; antenna theory; observing procedures and data analysis; concepts of interferometry and aperture synthesis.

**ASTRO 6523 Signal Modeling, Statistical Inference, and Data Mining in Astronomy**  
Fall. 4 credits. Next offered 2010–2011. J. Cordes.]

**ASTRO 6525 Techniques of Optical/Infrared and Submillimeter Astronomy**  
Optical design, detectors, cryogenic techniques, and data analysis are discussed and related to instrument design and use within the context of current astronomical research.

**ASTRO 6530 Astrophysical Processes**  
Fundamentals of radiative transfer, bremsstrahlung, synchrotron radiation, Compton scattering, spectral line transfer, gas heating and cooling and topics in atomic and molecular spectroscopy topics are discussed within the framework of astrophysical sources and problems.

**ASTRO 6531 Astrophysical Fluid Dynamics**  

**ASTRO 6560 Theory of Stellar Structure and Evolution (also PHYS 7667)**  

**ASTRO 6570 Physics of the Planets**  
Fall. 4 credits. P. Nicholson.  
Introductory survey of planetary science with an emphasis on the application of physical principles. Planetary dynamics, including satellite orbit perturbations, resonances, and ring dynamics. An introduction to the theory of planetary interiors, gravitational fields, heat sources, and rotational mechanics. Intended for graduate students and seniors in astronomy, physics, and engineering.

**ASTRO 6571 Mechanics of the Solar System (also TAM 6730)**  
For description, see TAM 6730.

**ASTRO 6575 Planetary Atmospheres (also EAS 5750)**  

**ASTRO 6577 Planetary Surface Processes (also EAS 5770)**  
Spring. 3 or 4 credits (3 credits for course only; 4 credits if registered for lab trip). Next offered 2010–2011. J. Bell.

**ASTRO 6578 Planet Formation and Evolution (also EAS 5780)**  

**ASTRO 6579 Celestial Mechanics (also TAM 6720)**  
For description, see TAM 6720.

**ASTRO 6590 Galaxies and the Universe**  
The universe, its large-scale structure and history; morphology, photometry, dynamics, kinematics and active nuclei of galaxies; galaxy formation and evolution; cosmological theory and observations.

**ASTRO 6599 Cosmology (also PHYS 6599)**  
Spring. 4 credits. Prerequisites: statistical physics, quantum mechanics, and electromagnetic theory courses. R. Bean.  
Intended to provide a detailed theoretical development of current ideas in cosmology. Topics include Big Bang cosmology and universe's matter content; a cosmological chronology very early universe, symmetry breaking, inflationary scenarios, nucleosynthesis, recombination, growth of irregularities, galaxy formation and clustering, dark energy; current and future cosmological observational approaches.

**ASTRO 6690 Advanced Study and Research**  
Fall or spring. Credit TBA.  
Guided reading and seminars on topics not currently covered in regular courses.

**ASTRO 7620 Seminar: Advanced Radio Astronomy**  
Spring. 2 credits. Prerequisites: for advanced undergraduates, by permission of instructor. Recommended: some background in astronomical spectroscopy. R. Giovanelli and M. Haynes.  
The rich and homogeneous datasets acquired by recent legacy extragalactic surveys have enabled studies of the evolution across cosmic time of galaxies and their stellar populations, their star formation rates and interstellar media as well as the determination of observational constraints imposed on large-scale structure, dark matter, dark energy and fundamental constant evolution. This seminar will explore in detail the survey strategies and technical design of recent legacy-class extragalactic surveys, including ALFALFA, SDSS, 2MASS and key projects undertaken with HST, Spitzer, GALEX, the VLA and Herschel, as well as their data products and the Virtual Observatory tools available to mine them. The optimization of strategies of future extragalactic surveys will be investigated including those planned using AO40 and CCAT.

**ASTRO 7621 Seminar: Planetary Radar Astronomy**  
Discussion of radar techniques and the results from the application of these techniques to the study of solar system bodies including the Earth.

**ASTRO 7652 Advanced Atmospheric Dynamics (also EAS 6520)**  
Spring. 3 credits. S. Golucci.  
For description, see EAS 6520.

**ASTRO 7660 Cosmic Electrodynamics (also AEP 6080)**  
Spring. 2 credits. R. Lovelace.  
Selected topics discussed in detail: the solar wind, stellar winds, Bondi accretion, Bondi-Hoyle accretion, accretion disks with B fields, magnet-roto-rotational instabilities, magneto-centrifugal winds and jets from disks, Poynting jets, funnel flows, the propeller stage of accretion, advection and convection dominated accretion flows, fast dynamo processes in astrophysics.

**ASTRO 7671 Seminar: Lunar Science and Exploration (also EAS 7310)**  
Fall. 5 credits. J. Bell and M. Pritchard.  
This graduate seminar (open to motivated undergraduates) will explore scientific and engineering questions related to the myriad international human and robotic lunar missions. During the weekly meeting, the instructors and students will discuss classic and recent scientific papers on lunar composition, origin, environment, surface properties, impact cratering, and other topics. Students taking the class for credit will also complete individual or group research projects including analysis of new datasets. The results of these projects will be presented orally and in written form. The class will be offered for 3 credits, and may be taken for a grade or S–U.

**ASTRO 7671 Seminar: Planetary Science—Composition and Mineralogy of the Martian Surface (also EAS 6930)**  

**ASTRO 7671 Seminar: Planetary Science—Micron to Millimeter Astronomy**  
Covers topics of current interest in infrared and submillimeter astrophysics.

**ASTRO 7671 Seminar: The Nature and Exploration of Comets**  
The course will review the current understanding of comets. Particular attention will be given to results obtained by recent spacecraft missions.
Courses with Overlapping Content

Because the department offers many courses with overlapping content, students must choose their courses carefully to ensure that they will receive credit for each course they take. Listed below are courses that have similar content. Students will receive credit for only one of the courses in each group.

- BIOG 1101 & 1103, 1105, 1107, 1110
- BIOG 1102 & 1104, 1106, 1108, 1109
- BIOBM 3300, 3310 & 3320, 3330, NS 3200
- BIOSM 3640, 3750
- BIOSM 3760, BIOEE 3730

Biology & Society Major

K. Vogel, director of undergraduate studies, College of Arts and Sciences; S. K. Obendorf, advising coordinator, College of Human Ecology.

The biological sciences ("biology") major is distinguished from other life science majors by its focus on basic, as opposed to applied, aspects of biology. All biology majors take courses in genetics, evolutionary biology, and biochemistry—subjects fundamental to understanding questions spanning the full spectrum of biology in the age of genomics.

In addition to taking these core courses, each student completes a Program of Study ("concentration") that affords the opportunity for acquiring a more detailed knowledge of particular subject areas: Animal Physiology, Biochemistry, Computational Biology, Ecology and Evolutionary Biology, Genetics and Development, Insect Biology, Molecular and Cell Biology, Microbiology, Neurobiology and Behavior, Nutrition, Plant Biology, and Systematics and Biotic Diversity. Alternatively, students may choose to explore three or more of these areas in the General Biology Program of Study.

The continuing rapid advances in biology are built on an ever-greater integration with the physical sciences and mathematics. Thus, the biology major is designed to provide students with a strong foundation not only in core areas of modern biology, but also in chemistry, organic chemistry, physics, and mathematics.

Students work with faculty, staff, and student advisors in selecting their Program of Study and in choosing the course options that each offers. The Office of Undergraduate Biology (OUB) in 216 Stimson Hall oversees advising for biology majors, and also coordinates the extensive undergraduate biology research program, including the biology research honors program, and the Biology Scholars Program.

The biology major is very popular among students of both the College of Agriculture and Life Sciences and the College of Arts and Sciences. It provides excellent preparation not only for various advanced degrees in science, but also for such professions, because so many of its requirements are also requirements for medical, dental, or veterinary programs. For more details about the biology major and minor see the section in this catalog on biological sciences or visit www.biology.cornell.edu.

Admission to the Major

All students should have completed a year of college-level biology or the entry-level biology courses before submitting an application during their sophomore year. Juniors are considered on a case-by-case basis.

Union and submission of the application to the university major. The application includes (1) an academic goals and interests; (2) the theme the student wishes to pursue in the major; (3) a tentative plan of courses fulfilling Biology & Society requirements, including courses already taken and those the student plans to take; and (4) a transcript of work completed at Cornell University (and elsewhere, if applicable), current as of the date of application.

Acceptance into the major requires completion of the course sequence in introductory biology. Sophomores in the process of completing this prerequisite sequence may be admitted to the major on a provisional basis. It is the student's responsibility to assure that final acceptance is granted upon satisfactory completion of the introductory biology requirement. Although only one introductory biological science is a prerequisite for acceptance, students find it useful to have completed some of the other requirements (listed below) by the end of their sophomore year, preferably by the end of the first semester. Students who are considering the
1. **Core Course: (one course).** Should be completed by end of junior year.

**BSOC 3011 Life Sciences and Society (also STS 3011); or STS 2861 Science and Human Nature (also PHIL 2860).**

2. **Theme (five courses that correspond to the theme selected by the student).** These courses can be above the 1000 level, at least 3 credit hours, and taken for a letter grade. Choose these courses as follows:

a. **Natural science issues/biology elective**
   - Select from the list of BSOC-approved natural science issues courses or choose course(s) with introductory biology as a prerequisite.

b. **Humanities/social sciences electives**
   - Courses from the list of senior seminars may be used as theme electives if not used to meet another requirement, or select humanities or social sciences courses in consultation with the faculty advisor.

3. **Senior seminar (one course taken during senior year).** Courses change yearly.

   * Students may petition to take a second statistics course (an advanced course, in sequence with the statistics course taken in the foundation) in place of the calculus requirement.

**A list of approved depth courses using NS 1150 and NS 1220 as a prerequisite is available in 306 Rockefeller Hall.**

### Further Information

- **Professor Kathleen Vogel,** director of undergraduate studies, kmv8@cornell.edu
- **Professor Brian Chabot,** advising coordinator, College of Agriculture and Life Sciences, bfc1@cornell.edu
- **S. Kay Obendorf,** advising coordinator, College of Human Ecology, sko3@cornell.edu
- **Susan Sullivan,** Biology & Society Advising Office, 306 Rockefeller Hall, 255-6047, sf10@cornell.edu
- **People to contact for Biology & Society honors information:**
  - **In Arts and Sciences:** Kathleen Vogel, director of undergraduate studies, kmv8@cornell.edu
  - **In Agriculture and Life Sciences:** Brian Chabot, faculty representative to CALS Honors Committee, bfc1@cornell.edu
  - **In Human Ecology:** S. Kay Obendorf, advising coordinator, CHE, sko3@cornell.edu

### I. First-Year Writing Seminars

Consult the John S. Knight Institute web site for times, instructors, and descriptions. Web site: www.arts.cornell.edu/Knight_institute/index.html.

### II. Introductory Courses

#### [STS 1101 Science and Technology in the Public Arena (SBA-AS)]

- **Fall. 3 credits. Recommended as introduction to field. Not required; may not be used to fulfill major requirement. STS 1101 and 1102 can be taken separately or in any order.**
  - **J. Reppy.**
  - For description, see STS listings, STS 1101.

#### [STS 1102 Histories of the Future (also HIST 1620) (CA-AS)]

- **Spring. 3 credits. Recommended as an introduction to the field. Not required; may not be used to fulfill a major requirement. STS 1101 and 1102 may be taken separately or in any order.**
  - **R. Prentice.**
  - For description, see STS listings, STS 1102.
###III. Foundation Courses

####A. Ethics (one course)

**BSOC 2051 Ethical Issues in Health and Medicine (also STS 2051) (KCM-AS)**
- Fall. 4 credits. Limited to 150 students. Not open to freshmen. S. Hilgartner.
- In today's rapidly changing world of health and medicine, complex ethical issues arise in many contexts—from the private, interpersonal interactions between doctor and patient to the broad, mass-mediated controversies that make medicine into headline news. This course examines ethical problems and policy issues that arise in contemporary medicine, health care, and biomedical research. Tools for ethical analysis are applied to a variety of cases and fundamental questions in bioethics. Perspectives from social science, history, and law also inform the course. The course explores ethical questions that arise in a number of substantive contexts, including the doctor–patient relationship, medical decision-making near the end of life, human experimentation, genetics and reproductive technology, public health, and the allocation of scarce resources.

**BSOC 2061 Ethics and the Environment (also PHIL 2460, STS 2061) (KCM-AS)**
- Spring. 4 credits. Open to all undergraduates; freshmen by permission of instructor. S. Pritchard.
- Politicians, scientists, and citizens worldwide face many environmental issues today, but they are neither simple nor straightforward. Moreover, there are many ways to understand how we have, do, and could value the environment from animal rights and wise use to deep ecology and ecofeminism. This class acquaints students with some of the challenging moral issues that arise in the context of environmental management and policy-making, both in the past and the present. Environmental concerns also highlight important economic, epistemological, legal, political, and social issues in assessing our moral obligations to nature as well as other humans. This course examines various perspectives expressed in both contemporary and historical debates over environmental ethics by exploring four central questions: What is nature? Who counts in environmental ethics? How do we know nature? Whose nature?

</tbody>
</table>
STS 3241 Environment and Society (also DSC/SOC 3240)
Fall. 3 credits. G. Gillespie.
For description, see DSC 3240.

[STS 3911 Science in the American Polity: 1960 to Now (also AMST 3911, GOVT 3091)]
For description, see STS 3991.

5. Science Communication

COMM 4210 Communication and the Environment
Spring. 3 credits. May be used in Foundation only if not taken as senior seminar. Offered odd-numbered years. K. McComas.
For description, see COMM 4210.

STS 2851 Communication, Environment, Science, and Health (also COMM 2850)
Spring. 3 credits. B. Lewenstein.
For description, see COMM 2850.

[STS 3521 Science Writing for the Mass Media (also COMM 3520)]
Fall. 3 credits. Next offered 2010–2011. B. Lewenstein.
For description and prerequisites, see COMM 3520.

STS 4661 Public Communication of Science and Technology (also COMM 4660/6660, STS 6661)
Spring. 3 credits. Limited to 15 students. May be used in Foundation only if not taken as senior seminar. Offered even-numbered years. B. Lewenstein.
For description and prerequisites, see COMM 4660.

C. Biology Foundation (breadth requirement): Three courses: one from three of the following subject areas:

1. Biochemistry, Molecular and Cell Biology

BIOBM 3300 Principles of Biochemistry, Individualized Instruction
Fall and spring. 4 credits. J. Blankenship, P. Hinkle, and staff.
For description and prerequisites, see BIOBM 3300.

BIOBM 3310 Principles of Biochemistry: Proteins and Metabolism
Fall. 3 credits. May not be taken for credit after BIOBM 3500 or 3550. G. Feigenson.
For description and prerequisites, see BIOBM 3310.

BIOBM 3330 Principles of Biochemistry, Lectures
Summer, six-week session. 4 credits. S. Ely.
For description and prerequisites, see BIOBM 3330.

NS 3200 Introduction to Human Biochemistry
Fall. 4 credits. P. Stover.
For description and prerequisites, see NS 3200.

2. Ecology

BIOEE 2610 Ecology and the Environment
Fall. 4 credits. Not open to freshmen. Staff.
For description and prerequisites, see BIOEE 2610.

BIOBM 3300 Principles of Biochemistry, Individualized Instruction
Fall and spring. 4 credits. J. Blankenship, P. Hinkle, and staff.
For description and prerequisites, see BIOBM 3300.

BIOBM 3310 Principles of Biochemistry: Proteins and Metabolism
Fall. 3 credits. May not be taken for credit after BIOBM 3500 or 3550. G. Feigenson.
For description and prerequisites, see BIOBM 3310.

BIOBM 3330 Principles of Biochemistry, Lectures
Summer, six-week session. 4 credits. S. Ely.
For description and prerequisites, see BIOBM 3330.

NS 3200 Introduction to Human Biochemistry
Fall. 4 credits. P. Stover.
For description and prerequisites, see NS 3200.

2. Ecology

BIOEE 2610 Ecology and the Environment
Fall. 4 credits. Not open to freshmen. Staff.
For description and prerequisites, see BIOEE 2610.

BIOES 3640 Field Marine Science
Summer. 6 credits. Taught at Shoals Marine Laboratory; for more information and application, contact the SML office at G14 Stimson Hall. Staff.
For description and prerequisites, see BIOES 3640.

BIOES 3750 Field Marine Biology and Ecology
Summer. 6 credits. Taught at Shoals Marine Laboratory; for more information and application, contact the SML office at G14 Stimson Hall. Staff.
For description and prerequisites, see BIOES 3750.

3. Genetics and Development

BIOGD 2800 Lectures in Genetics
Fall, spring, and summer. 3 credits. T. Fox, R. MacIntyre, and D. Nero.
For description and prerequisites, see BIOGD 2800.

BIOGD 2810 Genetics
Fall, spring, and summer. 5 credits. Limited to 200 students. Not open to freshmen fall semester. T. Fox, R. MacIntyre, and D. Nero.
For description and prerequisites, see BIOGD 2810.

BIOGD 2820 Human Genetics
Spring. 2 or 3 credits (2 credits if taken after BIOGD 2810); must be taken for 3 credits to fulfill Biology & Society requirements. Limited to 25 students per disc. M. Goldberg.
For description and prerequisites, see BIOGD 2820.

NTRES 2830 Genetics for Population Biologists
Fall. 3 credits. M. Hare.
For description, see NTRES 2830.

PLBR 2250 Plant Genetics
Spring. 3 credits. Staff.
For description, see PLBR 2250.

4. Evolutionary Biology

BIOEE 2780 Evolutionary Biology
Fall or spring. 3 or 4 credits. Fall. M. Geber; spring. staff.
For description, see BIOEE 2780.

5. Animal Behavior

BIONB 2210 Neurobiology and Behavior I: Introduction to Behavior
Fall. 3, 4, or 5 credits. K. Shaw and staff.
For description and prerequisites, see BIONB 2210.

BIONB 3290 Ecology of Animal Behavior
Summer. 3, 4, or 5 credits. Taught at the Shoals Marine Laboratory; for more information, contact SML office at G14 Stimson Hall. Staff.
For description and prerequisites, see BIONB 3290.

6. Neurobiology

BIONB 2220 Neurobiology and Behavior II: Introduction to Neurobiology
Spring. 3 or 4 credits. J. R. Fetchow and staff.
For description and prerequisites, see BIONB 2220.

7. Physiology and Anatomy

BIOAP 3110 Introductory Animal Physiology, Lectures (also VTBMS 3460)
Fall. 3 credits. M. Baustian.
For description and prerequisites, see BIOAP 3110.

NS 3410 Human Anatomy and Physiology
Spring. 3 credits. K. O'Brien.
For description, see NS 3410.

8. Biological Diversity

BIOEE 2740 The Vertebrates: Structure, Function, and Evolution
Spring. 4 credits. B. McGuire.
For description and prerequisites, see BIOEE 2740.

BIOEE 2730 Biology of the Marine Invertebrates
Fall. 5 credits. D. Harvell.
For description and prerequisites, see BIOEE 2730.

BIOEE 4500 Mammalogy (Lecture)
For description and prerequisites, see BIOEE 4500.

BIOEE 4701 Herpetology, Laboratory
Spring. 2 credits. Must be taken in conjunction with 4701 to count for major credit. Offered alternate years; next offered 2010–2011. H. Greene.
For description and prerequisites, see BIOEE 4701.

BIOEE 4701 Herpetology, Laboratory
Spring. 2 credits. Must be taken in conjunction with 4701 to count for major credit. Offered alternate years; next offered 2010–2011. H. Greene.
For description and prerequisites, see BIOEE 4701.

BIOEE 4750 Ornithology
Spring. 4 credits. D. Winkler.
For description and prerequisites, see BIOEE 4750.

BIOEE 4760 Biology of Fishes
For description and prerequisites, see BIOEE 4760.

BIOEI 2900 General Microbiology
Lectures
Fall, spring, and summer. 2 or 3 credits; must be taken for 3 credits to fulfill major requirement. B. Batzing (summer) and W. Ghirose.
For description and prerequisites, see BIOEI 2900.

BIOL 2410 Introductory Botany
Fall. 3 credits. K. Niklas.
For description, see BIOL 2410.

BIOES 3080 Field Microbial Ecology
Summer. 4 credits. Taught at Shoals Marine Laboratory, N.H. L. Zettler and E. Zettler. For more information, contact SML office at G14 Stimson Hall.

BIOES 3100 Marine Symbiosis
Summer. 4 credits. Taught at Shoals Marine Laboratory, N.H. For more information, contact SML office at G14 Stimson Hall. Staff.
For description and prerequisites, see BIOES 3100.
BIOSM 3210 Anatomy and Function of Marine Vertebrates
Summer. 4 credits. Prerequisite: one year biology. Taught at Shoals Marine Laboratory, N.H.; for more information, contact SML office at G14 Stimson Hall.

BIOSM 3740 Field Ornithology
Summer. 4 credits. Taught at Shoals Marine Laboratory, N.H.; for more information, contact SML office at G14 Stimson Hall.

BIOSM 3770 Diversity of Fishes
Summer. 4 credits. Taught at Shoals Marine Laboratory, N.H.; for more information, contact SML office at G14 Stimson Hall.

BIOSM 4490 Seaweeds, Plankton, and Seagrass: the Ecology and Systematics of Marine Plants
Summer. 4 credits. Taught at Shoals Marine Laboratory, N.H.; for more information, contact SML office at G14 Stimson Hall.

V. Themes
A. Natural Science Issues/Biology

[STSCI 2100] Introductory Statistics (also STSCI 2100)
Spring. 4 credits. Staff.
For description, see ILRST 2100.

MATH 1710 Statistical Theory and Application in the Real World
Fall and spring. 4 credits. Staff.
For description, see MATH 1710.

PAM 2100 Introduction to Statistics
Fall and spring. 4 credits. J. Lewis, T. Evans, and staff.
For description, see PAM 2100.

BIOSM 3220 Ecology of Biological Invasions
Summer. two-week session. 4 credits. Prerequisite: one year biology. Taught at Shoals Marine Laboratory, N.H. R. Seeley and J. Dijkstra.
For more information, contact the SML office at G14 Stimson Hall.

BIOSM 4720 Genetics of Marine Diversity
Summer. two-week session. 4 credits. Prerequisite: one year biology. Taught at Shoals Marine Laboratory, N.H.
A. Sherlock.
For more information, contact the SML office at G14 Stimson Hall.

BME 4110 Science and Technology
Approaches to Problems in Human Health
Fall. 3 credits. C. B. Schaffer and M. G. Kaplitt.
For description, see BME 4110.

BSOC 2101 Plagues and People (also ENTOM 2100)
Fall. 3 credits. L. Harrington.
For description, see ENTOM 2100.

BSOC 2141 Biological Basis of Sex Differences (also BIOAP/FGSS 2140) (PBS)
Fall. 3 credits. Offered even-numbered years. J. Fortune.
For description, see BIOAP 2140.

BSOC 3441 Insect Conservation Biology (also ENTOM 3440)
Spring. 3 credits. J. Losey.
For description, see ENTOM 3440.

[EAS 3220 Biogeochemistry of the Hawaiian Islands
Spring. 4 credits. Prerequisites: enrollment in EES Semester in Hawaii; EAS 2200, EAS 3030, or permission of instructor. L. Derry.
For description, see EAS 3220.

EAS 3510 Marine Ecosystems Field Course
Spring. 4 credits. Prerequisites: EAS 2400; enrollment in EES Semester in Hawaii. Recommended: oceanography course. C. Greene, B. Monger, and C. D. Harvell.
For description, see EAS 3510.

ENTOM 2020 Insects
Spring. 3 credits. A. Hajek and J. Nyrop.
For description, see ENTOM 2020.

ENTOM 2770 Natural Enemies and Invasive Species
Spring. 2–3 credits (Biology & Society students must take 3-credit option).
J. P. Nyrop.
For description, see ENTOM 2770.
ENTOM 3520 Medical and Veterinary Entomology
Fall. 3 credits. L. Harrington.
For description, see ENTOM 3520.

FSAD 4390 Biomedical Materials and Devices for Human Body Repair
Spring. 3 credits. C. Chu.
For description, see FSAD 4390.

[HD 2200 The Human Brain and Mind: Biological Issues in Human Development
Fall. 3 credits. Next offered 2010–2011. Staff.
For description, see HD 2200.]

HD 2600 Introduction to Personality
(also PSYCH 2750)
Fall. 3 credits. V. Zayas.
For description, see HD 2600.

[HD 3200 Human Developmental Neuropsychology: Neurobiology of Human Diseases and Disorders
For description, see HD 3200.]

[HD 3370 Language Development (also COGST/PSYCH 4360, LING 4436)
B. Lus.
For description, see HD 3370.]

HD 3440 Infant Behavior and Development
Fall. 3 credits. Not open to freshmen.
S. Robertson.
For description and prerequisites, see HD 3440.

HD 3660 Emotional Functions of the Brain
Spring. 3 credits. R. Depue.
For description, see HD 3660.

HD 4260 Translational Research in Memory and Neuroscience
Fall. 4 credits. C. Brainerd.
For description, see HD 4260.

[HD 4330 Developmental Cognitive Neuroscience
Spring. 3 credits. May be used as depth course if BIOMN 2210 or 2220 taken as breadth. Next offered 2010–2011. Staff.
For description, see HD 4330.]

[HD 4660 Psychobiology of Temperament and Personality
Fall. 3 credits. Next offered 2010–2011.
R. DePue.
For description and prerequisites, see HD 4660.]

NS 2750 Human Biology and Evolution
(also ANTHR 2750)
Fall. 3 credits. J. Haas and Z. Gu.
For description, see NS 2750.

NS 3150 Obesity and the Control of Body Weight
Spring. 3 credits. Staff.
For description see NS 3150.

NS 3220 Maternal and Child Nutrition
Spring. 3 credits. Limited to 25 students.
P. Brannon.
For description and prerequisites, see NS 3220.

NS 3310 Physiological and Biochemical Bases of Human Nutrition
Spring. 4 credits. C. McCormick.
For description and prerequisites, see NS 3310.

NS 3500 Epidemiology in Context
Spring. 3 credits. D. Pelletier.
For description and prerequisites, see NS 3500.

[NS 3610 Biology of Normal and Abnormal Behavior (also PSYCH 3610)
Spring. 3 credits. Prerequisite: junior or senior standing. Next offered 2010–2011.
B. Stuppy.
For description and prerequisites, see NS 3610.]

[NS 4210 Nutrition and Exercise
Spring. 3 credits. Next offered 2011–2012.
S. Travis.
For description, see NS 4210.]

[NS 4750 Mechanisms of Birth Defects
Spring. 3 credits. Next offered 2011–2012.
P. Stover.
For description and prerequisites, see NS 4750.]

NTRES 2010 Environmental Conservation
Spring. 3 credits. T. Fahey.
For description, see NTRES 2010.

[NTRES 4280 Principles and Practices of Applied Wildlife Science
Spring. 3 credits. Offered alternate years; next offered 2011–2012. Staff.
For description see NTRES 4280.]

PSYCH 2230 Introduction to Biopsychology
Fall. 3 credits. D. Smith.
For description, see PSYCH 2230.

PSYCH 3260 Evolution of Human Behavior
Spring. 4 credits. B. Johnston.
For description and prerequisites, see PSYCH 3260.

Examples of biology electives

ANSC 2400 Animal Reproduction and Development
Spring. 1 credit. J. Parks.
For description, see ANSC 2400.

ANSC 2410 Animal Reproduction and Development Lab
Spring. 1 credit. J. Parks.
For description, see ANSC 2410.

[HD 4660 Psychobiology of Temperament and Personality
Fall. 3 credits. Next offered 2010–2011.
R. DePue.
For description and prerequisites, see HD 4660.]

NS 3310 Physiological and Biochemical Bases of Human Nutrition
Spring. 4 credits. C. McCormick.
For description, see NS 3310.

B. Humanities/Social Science Elective (two courses)
Courses listed earlier as social science/humanities foundation courses (2B) are particularly appropriate as social science/humanities electives. However, a single course cannot be used to meet both requirements. Examples of recommended social science or humanities electives are listed below. A more complete list is available in 306 Rockefeller Hall.

Examples of social science electives

AEM 4640 Economics of Agricultural Development (also ECON 4640)
Fall. 3 credits. R. Christy.
For description, see AEM 4640.

ALS 4000 Community Service Learning Project
Fall and spring. 3 credits. Prerequisite: permission of instructor. Mandatory organizational meeting on August 31, 4:30 p.m., 102 Mann Library. B. Chabot.
For more information, see ALS 4000.

ANTHR 2411 Nature and Culture
Spring. 4 credits. S. Sangren.
For description, see ANTHR 2411.

ANTHR 4900 Primate Conservation: Cross-Cultural Perspectives on Wilderness Preservation and Human-Animal Coexistence
Spring. 4 credits. A. Arcadi.
For description see ANTHR 4900.

BEE 3299 Sustainable Development
Spring. 3 credits. Web-based course.
N. Scott.
For description and more information, see BEE 3299.

[BSOC 3311 Environmental Governance (also NTRES 3310, STS 3311)
Fall. 3 credits. Next offered 2010–2011.
S. Wolf.
For description, see NTRES 3310.]

BSOC 3431 Biotechnology and the Economy (also STS 3431) (SBA-AS)
Fall. 4 credits. J. Reppy.
For description, see STS 3431.

BSOC 4351 Postcolonial Science (also ANTHR 4435/7435)
Spring. 4 credits. S. Stoltzfus.
For description, see ANTHR 4435.

CRP 4510 Environmental Law (also CRP 5510)
Fall. 4 credits. R. Booth.
For description, see CRP 4510.

DEA 4100 Facility Planning and Design in a Diverse Society
Spring. 3 credits. L. Maxwell.
For description, see DEA 4100.

DEA 4150 Strategic Planning for Health Care and Educational Facilities
Spring. 3 credits. L. Maxwell.
For description, see DEA 4150.

DEA 4220 Ecological Literacy in Design (also ARCH 4264)
Spring. 3 credits. J. Elliott.
For description, see DEA 4220.

DSOC 2010 Population Dynamics (also SOC 2202)
Spring. 3 credits. A. Basu and D. Brown.
For description, see DSOC 2010.

DSOC 2050 Rural Sociology and International Development (also SOC 2060)
Spring. 3 credits. P. McMichael.
For description, see DSOC 2050.

DSOC 2650 Latinos in the U.S.A. (also LSP 2010)
Spring. 3 credits. H. Velez-Guadalupe.
For description see DSOC 2650.
DSOC 4100 Health and Survival Inequalities (also FGSS/SOC 4100)  
Fall. 4 credits. A. Basu.  
For description, see DSOC 4100.

DSOC 4210 Theories of Reproduction (also FGSS/SOC 4210)  
Spring. 4 credits. A. Basu.  
For description see DSOC 4210.

HD 2510 Social Gerontology: Aging and the Life Course  
Spring. 3 credits. Limited to 60 students.  
Highly recommended: HD 2500 or equivalent, to be determined by instructor.  
E. Wethington.  
For description and prerequisites, see HD 2510.

HD 2600 Introduction to Personality (also PSYCH 2750)  
Fall. 3 credits. V. Zayas.  
For description, see HD 2600.

HD 3190 Memory and the Law  
Fall. 3 credits. C. Brainerd.  
For description, see HD 3190.

[HD 3360 Connecting Social, Cognitive, and Emotional Development]  
Fall. 3 credits. Next offered 2010–2011.  
P. Cusinod.  
For description and prerequisites, see HD 3360.

HD 3430 Social Worlds of Childhood  
Spring. 4 credits. J. Ross-Bernstein.  
For description, see HD 3430.

HD 3570 Social Inequalities in Physical and Mental Health  
Fall. 3 credits. E. Wethington.  
For description, see HD 3570.

HD 3620 Human Bonding  
Spring. 3 credits. C. Hazan.  
For description, see HD 3620.

HD 3700 Adult Psychopathology (also PSYCH 3250)  
Spring. 3 credits. H. Segal.  
For description, see HD 3700.

HD 4260 Translational Research in Memory and Neuroscience  
Fall. 4 credits. C. Brainerd.  
For description, see HD 4260.

HD 4570 Health and Social Behavior (also SOC 4570)  
Fall. 3 credits. E. Wethington.  
For description, see HD 4570.

NS 3150 Obesity and the Control of Body Weight  
Spring. 3 credits. Staff.  
For description see NS 3150.

[NS 4210 Nutrition and Exercise]  
Spring. 3 credits. Limited to nutrition majors, others by permission of instructor.  
S. Travis.  
For description and prerequisites, see NS 4210.

NS 4570 Health, Poverty and Inequality: A Global Perspective  
Spring. 3 credits. D. Sahn.  
For description see NS 4570.

[NS 6500 Food and Nutrition Assessment in a Social Context]  
Fall. 3 credits. Next offered 2011–2012.  
P. Pelletier and G. Pelto.  
For description and prerequisites, see NS 6500.

[NTRES 4310 Environmental Strategies (also DSOC 4320)]  
S. Wolf.  
For description, see NTRES 4310.

PAM 2350 U.S. Health Care System  
Spring. 3 credits. S. Nicholson.  
For description, see PAM 4550.

PAM 3370 Race and Public Policy (also SOC 3370)  
Fall. 3 credits. A. Slasser.  
For description, see PAM 3370.

PAM 3500 Contemporary Issues in Women's Health (also FGSS 3500)  
Spring. 3 credits. A. Parrot.  
For description, see PAM 3500.

PAM 3800 Human Sexuality  
Spring. 4 credits. A. Parrot.  
For description, see PAM 3800.

PAM 4370 Economics of Health Policy  
Fall. 3 credits. K. Simon.  
For description and prerequisites, see PAM 4370.

Examples of humanities electives  
PHIL 2410 Ethics  
Fall. 4 credits. T. Irwin.  
For description, see PHIL 2410.

STS 4811 Problems in the Philosophy of Science (also PHIL 4810, STS 6811)  
Spring. 4 credits. R. Boyd and A. Chignell.  
For description, see PHIL 4810.

C. Senior Seminars  
ASRC 4606 The Family and Society in Africa  
Summer. 3 credits. N. Assiê-Lumumba.  
For description, see ASRC 4606.

BSOC 3181 Living in an Uncertain World: Science, Technology, and Risk (also STS 3181)  
Fall. 4 credits. S. Pritchard.  
For description, see STS 3181.

[BSOC 4021 Bodies in Medicine, Science, and Technology (also FGSS/STS 4021) (sr sem) (CA-AS)]  
R. Prentice.  
For description, see STS 4021.

BSOC 4111 Vitality and Power in China (also HIST/STS 4111, SHUM 4931)  
Spring. 4 credits. Limited to 15 students.  
T. J. Hinrichs.  
For description, see SHUM 4931.

For description, see STS 4421.

BSOC 4471 Seminar in the History of Biology (also BIOEE 4670, HIST 4150, STS 4471) (PBS)  
Summer, six-week session, or fall. 4 credits.  
W. Provine.  
For description, see BIOEE 4670.

[BSOC 4711 The Dark Side of Biology: Biological Weapons, Bioterrorism, and Biocriminality (also STS 4711) (SBA-AS)]  
Fall. 4 credits. Prerequisites: at least one course in STS and one semester of biology beyond introductory biology. Next offered 2010–2011.  
K. Vogel.  
Rapid advances in biotechnology, as well as changing social and political climates, have created new public fears that the malicious release of pathogens and toxins by states and/or terrorist groups is a serious threat. Debates have also emerged as to what biological research and publications should be restricted and censored to prevent misuse. The course explores the scientific, social, political, legal, and ethical discussions surrounding historical and current work on dangerous pathogens and toxins. This course also takes a look at the role that the expert and lay communities play in the shaping of popular perceptions and public policies in these threat discussions.]

BSOC 4921 The History of Reason (also HIST/STS 4921, SHUM 4932)  
Spring. 4 credits. Limited to 15 students.  
P. Dear.  
For description, see SHUM 4932.

[BSOC 4961 History of Medicine in China (also ASIAN/HIST/STS 4961)]  
T. J. Hinrichs.

BSOC 6610–6611 Environmental Policy (also ALS/BIOEE 6610–6611) (PBS)  
Fall and spring (yearlong). Students must enroll in both BSOC 6610 and BSOC 6611.  
3 credits each semester. Limited to 12 students.  
D. Pimentel.  
For description and prerequisites, see BIOEE 6610–6611.

COML 4900 Energy, Empire, Modernity (also COML 6900)  
Fall. 4 credits. A. Banerjee.  
For description, see COML 4900.

COMM 4210 Communication and the Environment  
Spring. 3 credits. Offered odd-numbered years.  
K. McComas.

CSS 4100 Environmental Impacts of Agricultural Biotechnology  
Spring. 3 credits. D. Buckley and P. Hobbs.  
For description, see CSS 4100.

CSS 4940 Biotechnology and Development (also GOVT 4300)  
Spring. 4 credits. R. Herring and J. Thies.  
For description see CSS 4940.

DSOC 4380 Population and Development (also DSOC 6380, SOC 2370)  
Spring. 3 credits. D. Gurak.  
For description, see DSOC 4380.
For description, see NTRES 4330.

HD 3430 Social Worlds of Childhood
Spring. 3 credits. J. Ross-Bernstein.
For description, see HD 3430.

[HD 4140] Social and Psychological Aspects of the Death Penalty
C. J. Brainard.
For description, see HD 4140.

[HD 4180] Aging: Contemporary Issues
Fall. 3 credits. Next offered 2010–2011.
J. Mikels.
For description, see HD 4180.

[HD 4190] Midlife Development
Fall. 3 credits. Next offered 2010–2011.
A. Ong.
For description, see HD 4190.

HD 4200 Laboratory in Risk and Traditional Decision-Making
Spring. 3 credits. V. Reyna.
For description, see HD 4200.

HD 4310 Mind, Self, and Emotion: Research Seminar
Spring. 3 credits. Q. Wang.
For description, see HD 4310.

[HD 4320] Cognitive, Social, and Developmental Aspects of Scientific Reasoning (also COGST 4320)
Fall. 3 credits. Next offered 2010–2011.
B. Koslowski.
For description, see HD 4320.

HD 4590 Transitions Across the Life Span
Fall. 3 credits. C. Loeckenhoff.
For description, see HD 4590.

[HD 4640] Adolescent Sexuality (also FGSS 4670)
Fall. 3 credits. Next offered 2010–2011.
R. Savin-Williams.
For description, see HD 4640.

[HD 4660] Psychobiology of Temperament and Personality
Fall. 3 credits. Next offered 2010–2011.
R. Depue.
For description and prerequisites, see HD 4660.

HD 4680 Stress in Childhood and Adolescence
Spring. 3 credits. J. Eckenrode.
For description, see HD 4680.

HD 4740 Autism and the Development of Social Cognition
Fall. 3 credits. M. Belmonte.
For description, see HD 4740.

HD 4780 Attention Deficit/Hyperactivity Disorder in Children
Spring. 3 credits. S. Robertson.
For description, see HD 4780.

NS 4600 Explorations in Global Health
Spring. 3 credits. Prerequisite: Global Health minors or permission of instructor. D. Pelletier.
For description, see NS 4600.

NTRES 4330 Applied Environmental Philosophy
Spring. 4 credits. J. Tantillo.
For description, see NTRES 4330.

[PAM 4570] Innovation and Entrepreneurship in the Health Care Industry
Fall. 3 credits. Next offered 2010–2011.
J. Kuder.
For description see PAM 4570.

PAM 5520 Health Care Services: Consumer and Ethical Perspectives
Fall. 4 credits. A. Parrot.
For description, see PAM 5520.

[PAM 5560] Managed Care
Fall. 3 credits. For undergraduate seniors only, by permission of instructor. Next offered 2010–2011.
J. Kuder.
For description, see PAM 5560.

[STS 4111] Knowledge, Technology, and Property
S. Hilgartner.
For description, see STS 4111.

STS 4221 New York Women (also FGSS 4220) (HA-AS)
Fall. 4 credits. M. Rossiter.
For description, see STS listing, STS 4221.

STS 4311 From Surgery to Simulation
Spring. 4 credits. R. Prentice.
For description, see STS 4311.

STS 4441 Historical Issues of Gender and Science (also FGSS 4440) (CA-AS)
Spring. 4 credits. M. Rossiter.
For description see STS listing, STS 4441.

STS 4531 Knowledge and Society (also SOC 4530) (CA-AS)
Spring. 4 credits. C. Leuenberger.
For description, see STS 4531.

STS 4661 Public Communication of Science and Technology (also COMM 4660/6660, STS 6661)
Spring. 3 credits. Limited to 15 students. Offered even-numbered years.
B. Lewenstein.
For description and prerequisites, see COMM 4660.

STS 4751 Science, Race, and Colonialism (also HIST 4751)
Fall. 4 credits. S. Seth.
For description see STS listing, STS 4751.

STS 4951 Social Studies of the Human Sciences
Fall. 4 credits. C. Leuenberger.
For description, see STS listing, STS 4951.

VI. Other Courses

BSOC 1451 Body, Mind, and Health (also STS 1451) # (CA-AS)
Summer. 3 credits. Open only to junior and senior high school students. M. Hurst.
For description, see STS 1451.

BSOC 3751 Independent Study
Fall or spring. 1–4 credits. Prerequisite: biology and society majors; written permission of faculty supervisor.
Projects under the direction of a Biology and Society faculty member are encouraged as part of the program of study within the student's concentration area. Applications for research projects are accepted by individual faculty members. Students may enroll for 1 to 4 credits in BSOC 3751 Independent Study with written permission of the faculty supervisor and must elect either the letter grade or the S–U option. Students may elect to do an independent study project as an alternative to, or in advance of, an honors project. Applications and information on faculty research, scholarly activities, and undergraduate opportunities are available in the Biology and Society Office, 306 Rockefeller Hall. Independent study credits may not be used in completion of the major requirements.

BSOC 4991/4992 Honors Project I and II (also ALS 4991/4992, HE 4990)
Fall and spring (yearlong). Prerequisite: senior biology and society students by permission of department; overall GPA of 3.3. Students should apply in 306 Rockefeller Hall. Arts and Sciences students should enroll in BSOC 4991 to receive Arts and Sciences credit; CALS students should enroll in ALS 4991 to receive College of Agriculture and Life Sciences credit; HE students should enroll in HE 4990 for College of Human Ecology credit. Students who are admitted to the honors program are required to complete two semesters of honors project research and to write an honors thesis. The project must include substantial research, and the completed work should be of wider scope and greater originality than is normal for an upper-level course. The student must find a project supervisor and a second faculty member willing to serve as faculty reader; at least one of these must be a member of the Biology and Society faculty. Students must register for the 4 credits each semester for a total of 8 credits. After the fall semester, students receive a letter grade of “R”; a letter grade for both semesters is submitted at the end of the second semester whether or not the student completes a thesis or is recommended for honors. Minimally, an honors thesis outline and bibliography should be completed during the first semester. In consultation with the advisors, the director of undergraduate studies will evaluate whether the student should continue working on an honors project. Students should note that these courses are to be taken in addition to those courses that meet the regular major requirements.

If students do not complete the second semester of the honors project, they must change the first semester to independent study to clear the “R” and receive a grade. Otherwise, the “R” will remain on their record and prevent them from graduating.

CENTER FOR APPLIED MATHEMATICS
The Center for Applied Mathematics administers a broadly based interdisciplinary graduate program that provides opportunities
for study and research over a wide range of the mathematical sciences. This program is based on a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student’s program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the director of graduate studies of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.

A listing of selected graduate courses in applied mathematics can be found in the description of the center under “Interdisciplinary Centers, Programs, and Studies.”

CENTER FOR INTERNATIONAL STUDIES
See “Interdisciplinary Centers, Programs, and Studies.”

CHEMISTRY AND CHEMICAL BIOLOGY

The Department of Chemistry and Chemical Biology offers a full range of courses in physical, organic, inorganic, analytical, theoretical, bioorganic, and biophysical chemistry. In addition to their teaching interests, chemistry and chemical biology faculty members have active research programs. The link between teaching and research is a vital one in a continuously evolving scientific subject; it ensures that students will be provided with the most advanced information and perspectives and affords opportunities for students to participate in research. For additional information about the department and course offerings, see the department course web page (www.chem.cornell.edu).

The Major
To fit the widely varying needs of our undergraduate majors, the department offers two different tracks that both lead to the same undergraduate degree:

Standard Major—The standard major provides a comprehensive background in all fields of chemistry. Most students who complete the standard major go on to graduate study in chemistry or to medical school, although some students proceed directly to a position in the chemical industry. With additional independent research (which is not required), the standard chemistry major is fully accredited by the American Chemical Society.

Alternative Major—The alternative major offers a flexible program of study that is primarily designed for students who intend to double major in another field. For example, students majoring in biology can complete the alternative major with little additional coursework. This program might also be attractive for students interested in law (especially patent law), as a double major in government or economics plus chemistry is quite feasible. This program is not suited to further graduate work in chemistry. With few exceptions, students in the alternative major are not chosen to participate in the honors program in chemistry. The alternative major is not accredited by the American Chemical Society. Either version of the major can be completed in three years of study. Most students, however, complete all of the requirements in their first three years with the exception of CHEM 4100. Inorganic Chemistry, which is usually taken in the fall semester of the senior year. The typical chemistry course sequence is:

- first year: general chemistry and mathematics
- second year: organic chemistry, analytical and organic laboratories, and physics
- third year: physical chemistry lectures and laboratories
- fourth year: inorganic chemistry

Admission to the Major
Admission to the chemistry major requires the satisfactory completion of a number of introductory courses which, when taken together, demonstrate an ability to complete the major. These courses include (1) CHEM 2150–2160 or 2070–2080 (CHEM 2900 or 1560 may be substituted for 2070 but 1560 is not recommended); (2) CHEM 3000; (3) PHYS 2208 or 2213; and (4) MATH 1110–1111 or 1116; and (a) MATH 1110 + 1120 or MATH 1110 + 1220 or MATH 1910 + 1920. One additional 3- or 4-credit advanced chemistry course at the 3000 level or above. (CHEM 3580, 3600 or 3900 can be used to satisfy this requirement.)

The three additional courses may be in another field of study, such as biochemistry, physics, biology, materials science, economics, government, or education. Many students who double major use courses from their second major to satisfy this requirement. Like the standard majors, many alternative majors perform independent research, either in the chemistry department or with a member of the Chemistry field.

Honors
Any student who completes the requirements for a standard major in chemistry with a cumulative GPA of 3.5 or higher shall be awarded a degree with honors (cum laude).

In addition, senior chemistry majors who have superior grades in chemistry and related subjects and who have had good performance in at least 8 credits of undergraduate research (or the equivalent) in chemistry or a related field (e.g., biochemistry) may be nominated for the honors program. To ensure that the nomination process runs smoothly, all students who are interested in the honors program should discuss this possibility with their advisor early in the fall semester of the senior year. Admission to the honors program is by invitation only. Students completing the alternative major are only eligible for the honors program in exceptional cases.

Students in the honors program participate in the honors seminar (CHEM 4980) and write a senior thesis. The successful completion of the honors program leads to the degree of bachelor of arts with honors or high honors in chemistry.

Most standard majors also perform independent research at some point in their academic career, either during the semester or in the summer. Many students take advanced courses to complement this program.

The Alternative Major
The following courses must be completed for the alternative major:

- General chemistry: CHEM 2070 + 2080 or CHEM 2150 + 2160. (CHEM 2090 or 1560 may be substituted for CHEM 2070, but 1560 is not recommended)
- Organic chemistry: CHEM 3570 (CHEM 3570 + 3580 or CHEM 3590 + 3600 may be substituted)
- Physical chemistry: CHEM 2870 (CHEM 3890 + 3900 may be substituted)
- Inorganic chemistry: CHEM 4100
- Laboratory chemistry: CHEM 3000 + 3010 + 3020 + 3030
- Physics: (PHYS 2207 or 1112 or 1116) + (PHYS 2208 or 2213)
- Mathematics: MATH 1110 + 1120 or MATH 1110 + 1220 or MATH 1910 + 1920 + 2930

In addition, senior chemistry majors who have superior grades in chemistry and related subjects and who have had good performance in at least 8 credits of undergraduate research (or the equivalent) in chemistry or a related field (e.g., biochemistry) may be nominated for the honors program. To ensure that the nomination process runs smoothly, all students who are interested in the honors program should discuss this possibility with their advisor early in the fall semester of the senior year. Admission to the honors program is by invitation only. Students completing the alternative major are only eligible for the honors program in exceptional cases.

Students in the honors program participate in the honors seminar (CHEM 4980) and write a senior thesis. The successful completion of the honors program leads to the degree of bachelor of arts with honors or high honors in chemistry.
Program for Science Teachers

Chemistry majors who wish to become teachers will be interested to know that Cornell University offers a certification program for teachers of secondary (grades 7–12) science. Interested students apply to the program during their sophomore or junior year. If accepted, students integrate some course work in education with the rest of their undergraduate studies. All chemistry majors who enter this program will remain in the College of Arts and Sciences to complete the major.

After earning the bachelor's degree, certification students enter the graduate field of education to complete a fifth year of study at Cornell. Following this fifth year, students are eligible for a master's degree from Cornell and a teaching certificate from New York State. For additional information, contact the Department of Education, 255-2207.

Laboratory Course Regulations

Students registered for laboratory courses who do not appear at the first meeting of the laboratory will forfeit their place in that laboratory but are not automatically dropped from the course.

Students and members of the teaching staff are required to wear safety goggles and lab aprons in all chemistry laboratories. Closed-toed footwear is required (no sandals). Students are reminded to take their goggles and lab aprons to the first laboratory session. Those who fail to cooperate with the safety program will be asked to leave the laboratories.

Students in organic and analytical labs are required to pay for glassware and any other items broken or missing from their laboratory desks at the close of each semester. Students who fail to inventory their desks at the appointed time in the presence of their instructor are charged a $20 fee in addition to charges for any breakage.

Courses

Note: Class meeting times are accurate at the time of publication. If changes occur, the department will provide new information as soon as possible.

Preliminary examinations for all courses may be given in the evening.

Courses with Overlapping Content

Because the department offers several courses with overlapping content, students should select courses carefully to meet the needs of their academic programs and to ensure credit for each course they take. Listed below are groups of courses with largely similar content. In general, students may receive credit for only one course in each group.

CHEM 1506, 2070, 2090, 2160
CHEM 2080, 2150
CHEM 1570, 3570
CHEM 1007 Academic Support for CHEM 2070

Fall, spring. 1 transcript credit only; cannot be used toward graduation.

CHEM 1008 Academic Support for CHEM 2080

Fall, spring. 1 transcript credit only; cannot be used toward graduation.

CHEM 1020 Reviews material presented in CHEM 2080 lectures and also provides problem-solving strategies and practice. This course is recommended for students who want to improve their chemistry problem-solving skills. CHEM 1008 is not a substitute for CHEM 2070 lectures and recitations.

CHEM 1057 Academic Support for CHEM 3570

Fall, spring. 1 transcript credit only; cannot be used toward graduation.

Reviews material presented in CHEM 3570 lectures and offers practice with CHEM 3570 material. Weekly review sessions focus on the most important topics covered in lecture, and office hours held throughout the week are designed to help improve performance in CHEM 3570.

CHEM 1058 Academic Support for CHEM 3580

Fall, spring. 1 transcript credit only; cannot be used toward graduation.

Reviews material presented in CHEM 3580 lectures and offers practice with CHEM 3580 material. Weekly review sessions focus on the most important topics covered in lecture and office hours held throughout the week are designed to help improve performance in CHEM 3580.

CHEM 1150 The Language of Chemistry (PBS)

Fall. 3 credits. Contributes to satisfying CALS physical science requirement of one course in chemistry. S–U or letter grades.

Lec., M W F T. Rutledge.

Adam Sandler once said, "Chemistry can be a good and a bad thing. Chemistry is good when you make love with it. Chemistry is bad when you make love with it." Using this sophisticated view of chemistry as a perhaps widely held perception and as a focus, a thorough examination of the good and the bad that chemistry has accomplished will be examined.

CHEM 1460 The World of Chemistry (PBS)

Spring. 3 credits. Contributes to satisfying CALS physical science requirement of one course in chemistry. S–U or letter grades.

Students in The World of Chemistry will explore the stresses we have placed on our ecosystem—and atmosphere—and learn how chemistry allows us to understand these problems and to repair them.

CHEM 1560 Introduction to General Chemistry (PBS)

Covers fundamental chemical principles, with considerable attention given to the quantitative aspects and techniques important for further work in chemistry.

CHEM 2090 Engineering General Chemistry

Fall or spring. 4 credits. Enrollment limited to Engineering students; students from other colleges cannot take CHEM 2090 without written permission from the Chemistry Office of Undergraduate Studies. Prerequisite: high school chemistry or permission of instructor. CHEM 2090 is required of all Engineering freshmen and is a prerequisite for CHEM 2070 and cannot take CHEM 2070 without written permission. CHEM 1560 is accepted, but not recommended. CHEM 1570 has a $20 nonrefundable lab fee that covers cost of safety goggles, lab apron, and breakage. Entering students should take CHEM 2090 and cannot take CHEM 2070 without written permission from the Chemistry Office of Undergraduate Studies and the College of Engineering. Exceptionally well prepared students may receive credit for CHEM 2070 by demonstrating competence in the advanced placement examination of the College Entrance Examination Board or in the departmental examination given at Cornell before classes start in the fall. Taking CHEM 2080 after 2150 may be done only by permission of the Director of Undergraduate Studies. Lec., T R; lab, M T W R F; discs, T W R F; prelims, Oct. 6, Nov. 12, Mar. 2, Apr. 15. Fall; P. J. Wolcanski.

Covers basic chemical concepts, such as reactivity and bonding of molecules, intermolecular forces in liquids and solids, gases, chemical equilibrium, thermodynamics, introductory quantum mechanics, and kinetics. Attention will be focused on aspects of chemistry most pertinent to engineering.

CHEM 1570 Introduction to Organic and Biological Chemistry (PBS)

Spring or summer. 3 credits. Prerequisite: CHEM 1560 or 2070. Because CHEM 1570 is only a 3-credit course, it does not provide a practical route to satisfying medical school requirements. Because of duplication of materials, students who take both 1570 and 3570 will receive graduation credit only for CHEM 1570. Lec. M W F; prelims, Feb. 18, Mar. 16, Apr. 13. W. Dietrich.

Introduction to organic chemistry with an emphasis on those structures and reactions of organic compounds having particular relevance to biological chemistry.

CHEM 2070–2080 General Chemistry (PBS)

2070, fall or summer; 2080, spring or summer. 4 credits each semester. CHEM 2070 (or CHEM 2090) is a prerequisite for CHEM 2080. (CHEM 1560 is accepted, but not recommended. CHEM 2070 has a $20 nonrefundable lab fee that covers cost of safety goggles, lab apron, and breakage. Students entering should take CHEM 2090 and cannot take CHEM 2070 without written permission from the Chemistry Office of Undergraduate Studies and the College of Engineering. Exceptionally well prepared students may receive credit for CHEM 2070 by demonstrating competence in the advanced placement examination of the College Entrance Examination Board or in the departmental examination given at Cornell before classes start in the fall. Taking CHEM 2080 after 2150 may be done only by permission of the Director of Undergraduate Studies. Lec., T R; lab, M T W R F; discs, T W R F; prelims, Oct. 6, Nov. 12, Mar. 2, Apr. 15. Fall; P. J. Disalvo and D. B. Zax; spring, D. A. Usher. Covers fundamental chemical principles, with considerable attention given to the quantitative aspects and techniques important for further work in chemistry.
CHEM 2150–2160 Honors General and Inorganic Chemistry (PBS)
Fall, spring, or summer; 4 credits each semester. Limited enrollment. Prerequisites: two years high school chemistry or permission of instructor, physics, and mathematics. Corequisite: calculus course at level of MATH 1110 or 1191 for students who have not taken high school calculus; for CHEM 2160, CHEM 2150. Recommended for students who intend to specialize in chemistry or in related fields. Taking CHEM 2080 after CHEM 2150 may be done only by permission of director of undergraduate studies. Nonrefundable lab fee (covers cost of safety goggles, lab apron, and breakage): $20. Lab: M W F; lab, M T W R or F; prelims, Oct. 8, Nov. 12, Mar. 2, Apr. 8. Fall: H. F. Davis; spring: S. Lee.

CHEM 2870–2880 Introductory Physical Chemistry (PBS)
2870; fall, 2880; spring, 3 credits each semester. Prerequisites: CHEM 2080 or 2160 and MATH 1110–1120 and PHYS 2228, or permission of instructor; for CHEM 2880, CHEM 2870 or 3890. Lab: M W F; prelims: 2870: Oct. 8, Nov. 24. 2880: Mar. 11, Apr. 20. Fall: R. F. Loring; spring: H. F. Davis.

CHEM 3000 Quantitative Chemistry
Fall. 2 credits. Prerequisite: CHEM 2080 or 2160 or advanced placement in chemistry. Lec; R; lab, M T W R J. A. Marohn. Volumetric, spectrophotometric, and potentiometric techniques are emphasized. Techniques are learned by analysis of knowns, and then are used on unknowns. Lectures and problem sets stress the relationship between theory and applications.

CHEM 3010 Honors Experimental Chemistry I (PBS)
Spring. 4 credits. Prerequisites: CHEM 3000 and 3570 or 3590. Lec: M W F; 2 labs, M W or T R. T. Rutledge.

CHEM 3020 Honors Experimental Chemistry II (PBS)
Fall. 4 credits. Limited enrollment; priority given to chemistry majors. Prerequisite: CHEM 3010. Lec: M W F; 2 labs, M T W R T. H. D. Arrubuja.

CHEM 3570–3580 Organic Chemistry for the Life Sciences (PBS)
Fall or summer, 3570; spring or summer, 3590. 3 credits each semester. Prerequisite: for CHEM 3570, CHEM 2080 or 2160 or advanced placement for CHEM 3580, CHEM 3570 or permission of instructor. Recommended concurrent registration in CHEM 2510 or 3000. Because of duplication of material, students who take both CHEM 1570 and 3570 will receive graduation credit only for CHEM 1570. Lec: M W F; optional disc may be offered; prelims, Sept. 24, Oct. 20, Nov. 12, Feb. 18, Mar. 16, Apr. 22. Fall: J. Njardarson; spring: D. Y. Sogah.

CHEM 4040 Entrepreneurship in Chemical Enterprise

CHEM 4100 Inorganic Chemistry (PBS)
Fall. 4 credits. Prerequisites: CHEM 3580 or 3600, and 2870 or 3900. Lab: M W F; prelims, Sept. 24, Oct. 20, Nov. 12. D. DeBeer George.

CHEM 4120 Introduction to Inorganic Chemistry Research
Fall or spring. 2–4 credits. Prerequisites: CHEM 3030 and 3900–3990, or 2870–2880, and 2900 with average of B– or better, or permission of instructor. Selected faculty. Research in inorganic chemistry involving both laboratory and library work, planned in consultation with a faculty member.

CHEM 4330 Introduction to Analytical Chemistry Research
Fall or spring. 2–4 credits. Prerequisites: CHEM 3030 and 3900 with average of B– or better or permission of instructor. Selected faculty. Research in analytical chemistry involving both laboratory and library work, planned in consultation with a faculty member.

CHEM 4400 Bio-Inorganic Chemistry (PBS)

Address important aspects of inorganic chemistry in biological systems. Topics include: (1) the distribution and properties of their reactions, and the ways they are synthesized in nature and in the laboratory.
metals in biology; (2) coordination chemistry of biological metals; (3) properties of metal-containing macromolecules; (4) redox processes and long-range electron transfer; (5) metallocofactor catalysis; (6) metal-oxygen reactions in biology; and (7) metal trafficking and metalloprotein assembly.

**CHEM 4500 Principles of Chemical Biology** (also BIOBM 4500) (I) (PBS)
Fall. 3 credits. Prerequisites: CHEM 3570–3580, 3590–3600 or equivalent. Lec, T R H. Lin. Covers topics at the interface of chemistry and biology with a focus on problems where organic chemistry has made a particularly strong contribution to understanding the mechanism of the biological system. Topics include the organic chemistry of carbohydrates, proteins and nucleic acids, strategies for identifying the cellular target of physiologically active natural products, combinatorial chemistry, and chemical aspects of signal transduction, cell division and development.

**CHEM 4510 Structural Chemical Biology (PBS)**
Spring. 3 credits. Prerequisites: CHEM 2880 and 3580 or equivalent. Lec, T; lab, R. Next offered 2010–2011. S. Edlick. This course is intended for students with a basic understanding of chemistry who want more knowledge about chemical biology. The interrelationship between the structure and function of biologically important molecules will be explored.

**CHEM 4610 Introduction to Organic Chemistry Research**
Fall or spring. 2–4 credits. Prerequisites: CHEM 3020 or 3580 with grade of B– or better or permission of instructor. Selected faculty. Research in organic chemistry involving both laboratory and library work, planned in consultation with a faculty member.

**CHEM 4770 Introduction to Physical Chemistry Research**
Fall or spring. 2–4 credits. Prerequisite: CHEM 3900 with average of B– or better or permission of instructor. Selected faculty. Research in physical chemistry involving both laboratory and library work, planned in consultation with a faculty member.

**CHEM 4980 Honors Seminar**
Spring. 0 credits. Admission only by departmental invitation. Additional pre- or corequisites: outstanding performance in two coherent 4-credit units of research in course such as CHEM 4210, 4530, 4610, 4770, or equivalent amount of research in another context. Lec, W G W. Coates and F J. DíAsalvo. In the Chemistry Honors Seminar students will present their research in written and oral form. The Seminar will also include a broader discussion of professional issues and life skills in the world of chemistry.

**CHEM 6000–6010 General Chemistry Colloquium**
6000, fall; 6010, spring. 0 credits. R. Staff. Series of talks representative of all fields of current research interest in chemistry given by distinguished visitors and faculty members.

**CHEM 6020 Information Literacy for the Physical Scientist**
Spring. 1 credit. Primarily for graduate students and undergraduate chemistry majors doing research. Lec, T L. Solla. Introduction to the information research methods, with hands-on exploration of print and electronic resources. Much important information can be missed and valuable time wasted without efficient information research strategies. Topics include finding chemical and physical properties, reaction and analytical information; patents, web resources; using specialized resources in chemistry, physics, biochemistry, and materials science; and managing citations.

**CHEM 6050 Advanced Inorganic Chemistry I: Symmetry, Structure, and Reactivity**
Fall. 4 credits. Prerequisite: CHEM 3900–3990 or equivalent or permission of instructor. Lec, M W F P. Wolczanski. Introduction to chemical bonding and applications of group theory, including valence bond theory, and spectroscopy as applied to main group and transition-metal coordination compounds. An introduction to reactivity covers substitution, electron transfer, and related reactions. Readings are at the level of Carter’s Molecular Symmetry and Group Theory and Jordan’s Reaction Mechanisms of Inorganic and Organometallic Systems.

**CHEM 6060 Advanced Inorganic Chemistry II: Synthesis, Structure, and Reactivity of Coordination Compounds, and Bioinorganic Chemistry**
Spring. 4 credits. Prerequisite: CHEM 6050 or equivalent or permission of instructor. Lec, M W F Next offered 2010–2011. P T. Wolczanski. Synthesis, structure, and reactivity of main group and modern coordination compounds and bioinorganic systems. The mechanisms of transition-metal reactions are emphasized, and evaluation of the current literature are stressed.

**CHEM 6070 Advanced Inorganic Chemistry III: Solid-State Chemistry**
Spring. 4 credits. Prerequisite: CHEM 6050 or equivalent or permission of instructor. Lec, M W F Next offered 2010–2011. S. Lee. Third in a three-semester sequence. Interdisciplinary approach to solids. Topics include solid-state structure and X-ray diffraction, phase diagrams, diffusion kinetics, synthetic methods, electronic structure, and physical properties of solids.

**CHEM 6080 Advanced Inorganic Chemistry II: Organometallic Chemistry**
Spring. 4 credits. Prerequisites: CHEM 6050, 6650, or permission of instructor. M W F P. J. Chirik. Synthesis, structure, and reactivity of organometallic compounds. Applications in catalysis. Evaluation of the current literature is emphasized, and background readings are at the level of Applications of Organotransition Metal Chemistry by Collman, Hedges, Finke, and Norton and Organometallic Chemistry of the Transition Metals by Crabtree.

**CHEM 6250 Advanced Analytical Chemistry I**
Spring. 4 credits. Prerequisite: CHEM 2880 or 3900 or equivalent. Lec, T R H. Wu. Application of high-resolution NMR spectroscopy, infrared, and mass spectroscopy to chemical problems. Some practical experience in NMR and MS is offered.

**CHEM 6270 Advanced Analytical Chemistry II**
Spring. 3 credits. Primarily for graduate students. Prerequisite: CHEM 7950 or equivalent preferable. Lec, M W F Next offered 2010–2011. D. B. Zax. Modern techniques in nuclear magnetic resonance: Little overlap is expected with CHEM 6250, as this course focuses on more general questions of experimental design, understanding of multipulse experiments, and aspects of coherent averaging theory.

**CHEM 6280 Trace Element and Isotopic Analysis (also NS 6900)**
Fall. 3 credits. Primarily for graduate students and advanced undergraduates. Prerequisite: CHEM 2880 or 3900 or 3020, or CHEM 2080 and PHYS 2208, or permission of instructor. Lec, T R. Offered alternate years; next offered 2010–2011. J. T. Brenna. Survey course in modern high-precision isotope ratio mass spectrometry (IRMS) techniques and trace/surface methods of analysis.

**CHEM 6290 Electrochemistry**
Spring. 4 credits. Primarily for graduate students and junior and senior undergraduates. Prerequisite: CHEM 3900 or equivalent. Recommended: MATH 2130. Lec, T. R. H. D’Abrua. Fundamentals and applications of electrochemistry. Topics include the fundamentals of electrode kinetics, electron transfer theory, the electrical double layer, diffusion, and other modes of transport. A broad range of electrochemical techniques and instrumentation will also be covered.

**CHEM 6500–6510 Organic and Organometallic Chemistry Seminar**
6500, fall; 6510, spring. 0 credits. Requirement for graduate students majoring in organic or bioorganic chemistry. Juniors and seniors encouraged to attend. T R. Staff. Series of talks representative of all fields of current research interest in organic organometallic chemistry, given by research associates, faculty members, and distinguished visitors.

**CHEM 6650 Advanced Organic Chemistry**
Fall. 4 credits. Primarily for graduate students and junior and senior undergraduates. Prerequisites: CHEM 3580 or 3600, and CHEM 3900 or equivalents, or permission of instructor, some knowledge of elementary quantum mechanics. Lec, M W F W. R. Dichtel. Discussion of the properties of organic molecules, reactive intermediates, and the underlying physical phenomena that affect them.

**CHEM 6660 Synthetic Organic Chemistry**
Spring. 4 credits. Primarily for graduate students and upperclass undergraduates. Prerequisite: CHEM 6650 or permission of instructor. Lec, T. R. D. B. Collum.
Principles and theories of chemical kinetics and molecular reaction dynamics. Topics include potential energy surfaces, transition state theory, and statistical theories of unimolecular decomposition. Depending on class interest, the course also includes special topics such as surface reaction and photochemistry.

CHEM 7970 Mathematical Methods of Physical Chemistry
Fall. 4 credits. Prerequisites: one year of undergraduate physical chemistry, three semesters of calculus, and one year of college physics. Lecturer: T. R. J. Park. Provides the mathematical foundation for graduate courses in physical chemistry, such as quantum mechanics and statistical mechanics, as well as for research in experimental and theoretical physical chemistry. Topics include linear algebra, matrices, and the eigenvalue problem; functions of a complex variable and contour integration; methods of solution of relevant differential equations; special functions; partial differential equations; integral transforms. The program Mathematica is employed throughout for both analytical and numerical work. At the level of Mathematical Methods for Scientists and Engineers by McQuarrie, and Mathematical Methods for Physicists by Arfken and Weber.

CHEM 7870 Macromolecular Crystallography (also BIOMB 7380)
Fall. 3 credits. Prerequisite: permission of instructor. Lecturer: T. R. S. E. Ealick. Lectures cover the fundamentals of X-ray crystallography and focus on methods for determining the three-dimensional structures of macromolecules. Topics include crystallization, data collection, phasing methods, model building, refinement, structure validation, and structure interpretation.

CHEM 7890-7900 Introduction to Nanomaterials Research
7890, Fall. 7900, Spring. 3 credits each semester. Primarily for graduate students. Lecturer: T. R. M. A. Hines. A broad introduction to the scientific and technical challenges and techniques that underlie nanoscale materials research, including some of the skills necessary for a successful career in science or engineering (e.g., public speaking, research ethics). The course consists of a rotating series of short modules presented in a variety of formats, including lectures, workshops, laboratory experiments and seminars. Students will receive training in both experimental and computational techniques. Enrolled students must complete all modules.

CHEM 7910 Spectroscopy
Spring. 4 credits. Prerequisite: CHEM 7930 or PHYS 4443 or equivalent. Lecturer: T. R. J. H. Freed. Magnetic Resonance Spectroscopy and Molecular Spectroscopy are offered alternate years. Molecular Spectroscopy (offered Spring 2010) includes principles of molecular rotational, vibrational, and electronic spectroscopy; interaction of molecules with radiation; Born-Oppenheimer approximation; diatomic molecules, polyatomic molecules, molecular symmetry groups. At the level of Molecular Rotation Spectra by Kroto. Magnetic Resonance Spectroscopy includes: quantum mechanics of electron and nuclear spins; Fourier Transform and Two Dimensional experiments; spin relaxation; multiple quantum coherence; imaging. At the level of The Principles of Magnetic Resonance by Stichter.

CHEM 7920 Molecular Collision Theory
Spring. 4 credits. Lecturer: T. R. Next offered 2010–2011. G. S. Ezra. The concepts and methods of scattering theory are described with particular emphasis on applications to problems of chemical interest. At the level of Child's Molecular Collision Theory and Taylor's Scattering Theory.

CHEM 7930 Quantum Mechanics I
Fall. 4 credits. Prerequisites: CHEM 3900, co-registration in AEP 3210, or CHEM 7870 or equivalent or permission of instructor. Lecturer: M. W. F. G. S. Ezra. Basic quantum mechanics at the level of Landau and Lifshitz: time-independent and time-dependent Schroedinger equation, matrix, operator, and bracket formalisms, orbital and spin angular momentum, one-dimensional examples, tunnelling, hydrogen atom, many-electron wavefunctions and particle statistics, time-independent and time-dependent perturbation theory; variational principle; scattering theory.

CHEM 7940 Quantum Mechanics II
Spring. 4 credits. Prerequisites: CHEM 7930 or equivalent and CHEM 7870 or equivalent or co-registration in AEP 3220, or permission of instructor. Lecturer: M. W. F. G. S. Ezra. Topics include the density matrix; evolution operator; path integral formulation of quantum mechanics; time-dependent phenomena; two-level system; time-dependent perturbation theory; Fermi’s Golden rule; interaction of radiation with matter; second quantization, stimulated and spontaneous emission; correlation functions and response theory; electric and magnetic properties of molecules; scattering theory; theory of reaction rates; molecular spectroscopy.

CHEM 7950 Statistical Thermodynamics
Fall. 4 credits. Primarily for graduate students. Prerequisite: CHEM 3900 or equivalent. Pre or corequisite: CHEM 6810 or CHEM 7930 or equivalent. Lecturer: T. R. J. H. Freed.

CHEM 7960 Statistical Mechanics
Spring. 4 credits. Prerequisites: CHEM 7950, CHEM 7930 or CHEM 7110 or equivalent. Lecturer: T. R. F. R. Florig. Statistical mechanics of interacting atoms and molecules. Topics include liquid state theory, critical phenomena, computational statistical mechanics, and nonequilibrium statistical mechanics. Statistical thermodynamics at the level of the first 12 chapters of Statistical Mechanics by McQuarrie. Topics include ensembles and thermodynamics: microscopic states vs. macroscopic observables, maximum entropy, partition functions and calculation of thermodynamic properties; systems of noninteracting particles; Boltzmann distribution, ideal gases, ideal crystals, thermodynamics from spectroscopic data, chemical equilibrium, Bose-Einstein and Fermi-Dirac statistics, weak interacting systems: Dense gases and simple fluids.

CHEM 7980 Electronic Structure Theory
Spring. 4 credits. Prerequisites: CHEM 7930 or equivalent. Lecturer: T. R. G. K. Chan. Quantum mechanics of many-particle systems as found in quantum chemistry and condensed matter. The emphasis will be on methods and techniques, although examples will be drawn both from molecular systems and condensed matter models. Most systems will be considered at zero temperature.

CHEM 7990 Computational Chemistry: Advanced Theory

CHEM 8000 Quantum Chemistry
Fall. 4 credits. Prerequisites: CHEM 7930 or equivalent or permission of instructor. Lec, M W F. G. K. Chan. Quantum chemistry at the level of Molecular Quantum Chemistry by McQuarrie. Topics include applications to current problems in chemistry and physics.

CHINA AND ASIA–PACIFIC STUDIES

China and Asia-Pacific Studies (CAPS) offers a unique approach to the study of China’s language, history, politics, society, and foreign relations by providing students with experience both on- and off-campus, including three years in Ithaca, one semester in Washington, D.C., and one semester in Beijing. web site: www.einaudi.cornell.edu/caps

The Major

Students are required to take one of the introductory courses, CAPS 2827 (GOVT 2827) or CAPS 2570 (HIST 2571), during their first two years at Cornell, but they may declare the CAPS major before taking either of these or any other CAPS courses. The other required courses are:

- All of the following language courses: CHIN 1101–1102, 2201–2202, and 3301–3302 or CHIN 3506 (CAPS 3060) or CHIN 1109–1110 for heritage learners or the equivalent for FALCON students (fall in Ithaca or Washington before senior year).

- Two 4000-level (or above) Chinese courses in Beijing and Ithaca.

- Two of the following lecture courses: CAPS 3857/GOVT 3857, CAPS 3140/HIST 3140, CAPS 3520/HIST 3520, and CAPS 4690/ECON 4690.

- All of the following seminars: CAPS 3000 and CAPS 5000 (during fall of junior year at Cornell in Washington), CAPS 3010 and CAPS 3020 (during fall of senior year at Peking University), and CAPS 4000 (during spring of senior year in Ithaca).

Students interested in the CAPS major should speak to the program director to arrange for a major advisor.

Externships

CAPS majors hold externships in government, business, law, the media, museums, research institutions, nongovernmental organizations, or other organizations during their semesters in Washington, D.C., and Beijing. They are encouraged to coordinate the two experiences.

Honors

To become a candidate for honors, a CAPS major must maintain a grade average of B+ and have approval for a senior essay proposal from a faculty advisor. During senior year, a CAPS honors student completes the research and writing of a senior essay by taking two tutorials, CAPS 4010 in Beijing and CAPS 4020 in Ithaca.

Introductory Courses

CAPS 2403 China under Revolution and Reform (also GOVT 2403) @ (SBA-AS)
Fall. 3 credits. A. Mertha.

For description, see GOVT 2403.
Courses in Ithaca

[CAPS 2287 China and the World (also GOVT 2827) @ (CA-AS)]
Spring. 3 credits. A. Carlson.
For description, see GOVT 2827.

[CAPS 2940 History of China in Modern Times (also HIST 2940, ASIAN 2294) @ (HA-AS)]

[CAPS 3520 20th-Century Asian American Relations (also HIST 3520) @ (HA-AS)]
For description, see HIST 3520.

[CAPS 3857 Seminar on American Foreign Policy (also GOVT 3857) (SBA-AS)]

[CAPS 4020 Honors Thesis Tutorial II]
Spring. 4 credits. Prerequisite: CAPS 4010. Staff.

[CAPS 4030 Issues in China and Asia-Pacific Studies @ (CA-AS)]
Spring. 4 credits. X. Xin.
This course serves as the wrap-up seminar for CAPS students. It is designed for CAPS seniors to review their experience in conducting CAPS studies in Ithaca, Washington, D.C., and Beijing, to reflect the key challenges that they have encountered in such experiences and the solutions that they have come up with, and to enhance their basic abilities crucial for pursuing future studies and/or careers that are related to their CAPS experience after graduating from Cornell. Central to the course are the "course projects" that, with the assistance and support of instructor, the students are to take the initiative to develop by themselves.

[CAPS 4690 China's Economy Under Mao and Deng (also ECON 4690) @ (SBA-AS)]
Spring. 4 credits. T. Lyons.
For description, see ECON 4690.

[CAPS 4827 Unifying While Integrating: China and the World (also GOVT 4827/6827) @ (HA-AS)]
Spring. 4 credits. A. Carlson.
For description, see GOVT 4827.

[CAPS 4870 Asia Security (also GOVT 4877/6877) @ (SBA-AS)]
Spring. 4 credits. A. Carlson.
For description, see GOVT 4877.

[CAPS 4930 Problems in Modern Chinese History (also HIST 4930) @ (HA-AS)]

[CAPS 4999 CAPS Independent Study]
Fall and spring. 1 to 4 credits. Prerequisite: junior or senior standing. Permission of instructor required. Staff.

Chinese Language Courses

CHIN 1101-1102 Beginning Mandarin I and II
Fall and spring. 1101, fall; 1102, spring. 6 credits each semester.
For description, see CHIN 1101–1102 under "Asian Studies."

CHIN 1109-1110 Beginning Chinese Reading and Writing for Students of Chinese Heritage
Fall and spring. 1109, fall; 1110, spring. 6 credits each semester.
For description, see CHIN 1109–1110 under "Asian Studies."

CHIN 2201–2202 Intermediate Mandarin I and II
Fall and spring. 2201, fall; 2202, spring. 4 credits each semester.
For description, see CHIN 2201–2202 under "Asian Studies."

CHIN 2209–2210 Intermediate Chinese Reading and Writing for Students of Chinese Heritage
Fall and spring. 2209, fall; 2210, spring. 4 credits each semester.
For description, see CHIN 2209–2210 under "Asian Studies."

CHIN 3301–3302 High Intermediate Mandarin I and II
Fall and spring. 3301, fall; 3302, spring. 4 credits each semester.
For description, see CHIN 3301–3302 under "Asian Studies."

CHIN 3309–3310 Business Chinese in Cultural Context
Fall and spring. 3309, fall; 3310, spring. 4 credits each semester.
For description, see CHIN 3309–3310 under "Asian Studies."

CHIN 4411–4412 Advanced Mandarin I and II
Fall and spring. 4411, fall; 4412, spring. 4 credits each semester.
For description, see CHIN 4411–4412 under "Asian Studies."

CHIN 4426 Special Topics: Chinese Historical Documents on Modern China (also HIST 4650/6650; CHIN 6626)
Fall. 4 credits. Z. Chen.
For description, see HIST 4650.

CHIN 4427–4428 High Advanced Mandarin I and II
Fall and spring. 4427, fall; 4428, spring. 4 credits each semester.
For description, see CHIN 4427–4428 under "Asian Studies."

CHIN 4431–4432 Directed Study
Fall and spring. 4431, fall; 4432, spring. 4 credits each semester.
For description, see CHIN 4431–4432 under "Asian Studies."

Courses in Washington, D.C.

CAPS 3000 Seminar on American Relations with China (also ASIAN 3305, HIST 3391) (HA-AS)
Fall. 4 credits. Offered in Cornell in Washington program only. Staff. A historical review of the fragile and volatile U.S.–China relationship from the opening by Richard Nixon in the early 1970s until the present. Several individual sessions will be led by current or former executive branch or congressional officials, business people, journalists, representatives of nongovernmental organizations and others who have worked in China or have participated in the making of U.S. policy toward China.

CAPS 4997 Research Seminar in American Studies (also HIST/AMST 4997)
Fall. 8 credits. Offered in Cornell in Washington program only. S. Jackson.
For description, see HIST 4997.

CAPS 4998 Politics and Policy: Theory, Research, and Practice (also GOVT/AMST/ALS 4998; PAM 4060)
Fall. 8 credits. Offered in Cornell in Washington program only. S. Jackson.
For description, see HIST 4997.

CHIN 4445 Directed Study for CAPS Students in D.C.
Fall. 1–4 credits, variable. Offered in Cornell in Washington program only. Staff. Prerequisite: permission of instructor. Intended for advanced language study.

Courses in Beijing

CAPS 4001 China's Changing Politics, Economy, Society, and Culture @ (CA-AS)
Fall. 4 credits. Offered at Peking University for CAPS majors only. X. Xu and H. Duan.
Using resources specifically available in China, this course combines lectures, guest lectures, field trips, and faculty-directed research projects to help students achieve an in-depth understanding of China's changing politics, economy, society, and culture.

CAPS 4002 Chinese Perspectives on China's Foreign Relations @ (SBA-AS)
Fall. 4 credits. Offered at Peking University for CAPS majors only. Peking University staff.
This course, offered by faculty members of Peking University's School of International Studies, provides Chinese perspectives on contemporary China's international relations.

CAPS 4010 Honors Thesis Tutorial I
Fall. 4 credits. Offered at Peking University for CAPS majors only. Peking University staff.
This course, offered by faculty members of Peking University's School of International Studies, provides Chinese perspectives on contemporary China's international relations.

CHIN 4451 Advanced Mandarin for CAPS Students in Beijing
Fall. 4 credits. Equivalent to CHIN 4411 in Ithaca. Offered at Peking University for CAPS majors only. Staff.
For description, see CHIN 4411 under "Asian Studies."

CHIN 4455 Directed Study for CAPS Students in Beijing
Fall. 1–4 credits, variable. Prerequisite: permission of instructor. Intended for advanced language study. Offered at Peking University for CAPS majors only. Staff.
The core function of the department is the study of ancient Greek and Latin. Elementary Greek and Latin are taught in both two-semester courses and intensive summer courses. (For students whose Latin is a bit rusty, the department also offers a rapid, one-semester review class.) Students with a more advanced knowledge of Greek or Latin can choose from a wide selection of courses, from intermediate language classes at the 2000 level, which refresh and broaden knowledge of syntax and vocabulary, to graduate and faculty reading groups. All of these courses concentrate on exciting literary texts, whether the poems of Catullus and Virgil, or the dialogues of Plato and Xenophon, at the 2000 level, or, in the advanced reading groups, the latest papyrological discoveries, such as the "new" fragments of Empedocles' cosmic poem or the "new" epigrams of Posidippus.

The primary purpose of language instruction is to make possible the study at first hand of the extraordinary range of powerful and challenging ideas embodied in Greek and Latin texts. The department offers undergraduate and graduate seminars on literary, linguistic, historical, and philosophical topics, studied through the Greek and Latin works of authors from Homer (probably from the eighth century BCE) to Boethius (sixth century CE), and occasionally from later writers such as Dante, Petrarch, or Milton. The department strives to adapt its program to the needs of individual students from all disciplines.

The major in Classics offers four tracks, which are designed to introduce aspects of classical antiquity to the students with very different primary interests. Courses in art, archaeology, and dendrochronology also have wide appeal. These courses make use of the university's large collections of ancient coins and of reproductions of sculptures, inscriptions, and other ancient objects. For example, since 1976 over 500 Cornell students have worked in the Aegean Dendrochronology Project's laboratory, measuring the annual rings on thousands of samples of wood and charcoal, and using the rings to date structures as old as 3000 BCE. In the summers selected students have participated in collecting trips around the eastern end of the Mediterranean (see web site at www.arts.cornell.edu/dendro). Students who wish to gain firsthand archaeological experience may also join one of several summer Cornell-sponsored field projects in Greece and Turkey.

The study of language is a vital part of classical civilization. Only classes passed with a C- or better may be applied to the classics major.

The classics track requires: (1) six courses in Greek and Latin numbered 2101 or above; (2) either CLASS 2612 or a term of CLASS 2681/HIST 2670–CLASS 2682/HIST 2671, or (b) CLASS 2675/HIST 2650; (3) one course at the 2000 level in ancient Greek or Roman material culture; and (4) six additional courses in classical civilization, classical archaeology, ancient history, ancient philosophy, ancient Greek or Latin (at 2000 level or above), or related subjects (this last may number up to two, selected in consultation with the student's departmental advisor).

The Latin track requires: (1) LATIN 1205 or 2201; (2) five courses in Latin numbered 2202 or above; (3) one term of CLASS 2681/HIST 2670–CLASS 2682/HIST 2671; and (4) two courses in other related subjects selected in consultation with the student's departmental advisor (see below). The courses in Latin must include at least three at the 3000 level.

The Greek track requires: (1) GREEK 1105; (2) five courses in Greek numbered 2101 or above; (3) CLASS 2675/HIST 2650; and (4) two courses in other related subjects selected in consultation with the student's departmental advisor (see below). The courses in Greek must include at least three at the 3000 level.

The classical civilization track requires: (1) either (a) two 2000-level courses in either ancient Greek or Latin, or (b) one course at the 2000 level in ancient Greek and Latin; (2) either (a): CLASS 2601 or 2603 and one term of CLASS 2681/HIST 2670–CLASS 2682/HIST 2671, or (b): CLASS 2675/HIST 2650; (3) one course at the 2000 level in ancient Greek or Roman material culture; and (4) six additional courses in classical civilization, classical archaeology, ancient history, ancient philosophy, ancient Greek or Latin (at 2000 level or above), or related subjects (this last may number up to two, selected in consultation with the student's departmental advisor).

The Latin track requires: (1) LATIN 1205 or 2201; (2) five courses in Latin numbered 2202 or above; (3) one term of CLASS 2681/HIST 2670–CLASS 2682/HIST 2671; and (4) two courses in other related subjects selected in consultation with the student's departmental advisor (see below). The courses in Latin must include at least three at the 3000 level.

The classics track requires: (1) six courses in Greek and Latin numbered 2101 or above; (2) either CLASS 2612 or a term of CLASS 2681/HIST 2670–CLASS 2682/HIST 2671, or (b) CLASS 2675/HIST 2650; (3) one course at the 2000 level in ancient Greek or Roman material culture; and (4) six additional courses in classical civilization, classical archaeology, ancient history, ancient philosophy, ancient Greek or Latin (at 2000 level or above), or related subjects (this last may number up to two, selected in consultation with the student's departmental advisor).
Study Abroad
Cornell is associated with four programs that provide opportunities for summer, semester, or yearlong study abroad in Greece and Italy. The American School of Classical Studies at Athens offers a summer program for graduate students and qualified undergraduates; College Year in Athens offers semester-long courses (consult Cornell Abroad for details). The Intercollegiate Center for Classical Studies in Rome provides semester-long courses in Latin, Greek, ancient history, art, archaeology, and Italian; the American Academy in Rome offers both full-year and summer programs for qualified graduate students. The Department of Classics awards several travel grants each year for graduate students from the Townsend Memorial Fund; undergraduates are eligible for the Caplan Travel Fellowships (see "Caplan Fellowships," below). Detailed information on these programs is available in the department office, 120 Goldwin Smith Hall.

Summer Support for Language Study
The Department of Classics has at its disposal resources to assist students who wish to enroll in intensive Latin or Greek in the Cornell summer session. These courses are designed to enable students to enter second-year Latin or Greek the following fall. Preference is given to undergraduate majors in classics and other students needing Latin or Greek for completion of their majors or graduate programs; dyslexic students are accorded additional preference. Two different kinds of support are available: (1) The Kanders–Townsend Prize Fellowship provides a stipend to cover up to $4,600 in living expenses and full tuition for either GREEK 1103 or LATIN 1203, and is open only to freshman or sophomore classics majors (or potential classics majors) who have already begun one classical language and wish to start the other in the summer. (2) Classics department tuition support is open to Cornell undergraduate and graduate students and provides some level of tuition support, up to the full amount; no stipend for living expenses is offered. Applications are due in the chair of the Department of Classics by March 31. See also "Caplan Fellowships," below.

Placement in Greek and Latin
Placement of first-year undergraduates in Greek and Latin courses is determined by examinations given by the Department of Classics during orientation week. For details concerning these examinations, contact the director of undergraduate studies.

Satisfying the College Language Requirements with Greek or Latin
Ancient Greek: Option 1 is satisfied by taking GREEK 2101 or above. Option 2 is satisfied by taking either (a) GREEK 1101, 1102, and 1105 or (b) GREEK 1103 and 1105. (GREEK 1103 counts as two courses. Although credits for 1203 and 1205 add up to only 9, this sequence does satisfy Option 2 of the college’s language requirement.) The sequence LATIN 1204–1205 does not satisfy Option 2. Students can place into LATIN 2201 with an A– or better in LATIN 1202, 1203 or 1204. Upon completing 2201, they satisfy Option 1. Course overlap with LATIN 1202 therefore cannot be taken (or counted toward the degree) after completing LATIN 1202 or 1203.

First-Year Writing Seminars
The department offers first-year writing seminars on a wide range of classical and medieval topics. Consult John S. Knight Writing Seminar Program brochures for times, instructors, and descriptions.

Caplan Fellowships
The Harry Caplan Travel Fellowships are awarded annually to one or two outstanding juniors by the College of Arts and Sciences for summer travel or projects in Europe or the Near East. Interested juniors should consult the director of undergraduate studies.

Classical Civilization
CLASS 1692 Bioscientific Terminology (also BIO/17120) # (HA-AS)
Summer and winter. 3 credits. D. Bowman and H. Roisman.
A study of the Greek and Latin word elements that combine to form most of the specialized terms in the biological sciences. The student who learns the meanings of those elements and the rules of word formation can usually recognize the basic meaning of any unfamiliar word in that field. This skill is especially valuable for pre-law, pre-medical, pre-dental, pre-veterinary students and for those in other health and legal fields, as well as for students who would like to broaden their general vocabulary. This course would be excellent preparation for students prior to taking standardized test: e.g., SAT, GRE, MCAT, TOEFL, LSAT, etc.

CLASS 1699 English Words: Histories and Mysteries (also LING 1109) # (HA-AS)
Spring. 3 credits. Staff.
For description, see LING 1109.

CLASS 2601 The Greek Experience # (CA-AS)
Spring. 3 credits. Limited to 50 students.
F. Ahl.
Introduction to the literature and thought of ancient Greece. Topics include epic and lyric poetry, tragedy and comedy, and historical, political, philosophical, and scientific writings. Some attention is also given to the daily life of ordinary citizens, supplemented by slides of ancient art and architecture.

CLASS 2603 Initiation to Greek Culture # (LA-AS)
Fall. 4 credits. Limited to 18 students. Intended especially for freshmen. Students must apply in writing to chair, Department of Classics, 120 Goldwin Smith Hall.
P. Pucci.
Knowledge of Greek or Latin is not necessary, since all texts are in translation. What is necessary is the willingness to participate in three one-hour seminars each week and also a supplementary one- or two-hour session, during which the class meets and practices spoken Greek in workshops with specially invited guests. This course covers a wide range of Greek literary and philosophical works as well as modern critical and philosophical writings on the Greeks. The focus throughout is on the status of language, the many forms of discourse that appear in the literature, and the attempts the Greeks themselves made to overcome the perceived inadequacies and difficulties inherent in language as the medium of poetry and philosophy. The course inquires into the development of philosophy in the context of a culture infused with traditional, mythological accounts of the cosmos. It asks how poetic forms such as tragedy responded to and made an accommodation with philosophical discourse while creating an intense emotional effect on the audience; how the first historians, using literary and philosophical discourse, created space for their own inquiry; and discusses how these issues persist and are formulated in our own thinking.

CLASS 2604 Greek Mythology # (LA-AS)
Summer and fall. 3 credits. Limited to 50 students in summer, 200 in fall. D. Mankin.
Survey of the Greek myths. Emphasis will be placed on the content and significance of the myths in Mediterranean society, including the place of myth in Greek life and consciousness; the factors and influences involved in the creation of myths; and the use of myths for our understanding of Greek literature, religion, and moral and political concepts.

CLASS 2605 Theater, Sport, and Spectacle: Performance and Competition in Greece and Rome (also THETR 2605) # (CA-AS)
Fall. 3 credits. J. Rusten.
A study not of play-texts or ancient history per se, but the social history of the richly documented tradition of competitive artistic, athletic, and spectacular performances sponsored by cities, wealthy individuals, and kings/emperors in antiquity, with special attention to the ongoing connections and cross-influences between music/theater, athletics, and human/animal combats. We will take our comparative material from the fifth century BCE to the late Roman empire. Topics include organizational frameworks, funding sources, associations of performers and their ideologies and rivalries, regulation and hierarchies of audiences, public claqués, the adaptation of performance to political events, influence on art, and institutional and intellectual opposition. Evidence will include ancient treaties, inscriptions, mosaics, wall-paintings, and terracottas; all source readings available in English.

CLASS 2612 The Roman Experience # (CA-AS)
Spring. 3 credits. D. Mankin.
Introduction to the civilization of the Romans as expressed in their literature, religion, and social and political institutions.

CLASS 2617 Intro to New Testament and Other Early Christian Literature (also JWST/NES/RELST 2629) # (HA-AS)
Spring. 3 credits (see CLASS 2629 for additional credit). K. Haines-Eitzen.
For description, see NES 2629.

CLASS 2632 Paranoia and Conspiracy (also COML 2632) # (LA-AS)
M. Fontaine.
This course examines paranoia, fearmongering, and conspiracies imagined in ancient Greece and Rome. Readings cover a range of literary and philosophical texts.]
[CLASS 2651 The Comic Theater (also COM/LTHET 2230) # (LA-AS)]

CLASS 2661 Ancient Philosophy (also PHIL 2200) # (KCM-AS)
Fall. 4 credits. T. Brennan.
For description, see PHIL 2200.

CLASS 2675 Ancient Greece from Homer to Alexander the Great (also HIST 2650) # (HA-AS)
For description, see HIST 2650.

CLASS 2676 Periclean Athens (also HIST 2580) # (HA-AS)
Fall. 4 credits. H. Rawlings III.
The first five weeks will provide a synoptic view of Athens' historical and cultural achievement in the middle of the fifth century BC—the traditional pinnacle of "The Glory that was Greece." Readings will be taken from Greek historians, philosophers, poets and documentary texts. The next seven to eight weeks will follow the course of the Peloponnesian War to its end; readings from Thucydides will be interwoven with contemporaneous texts composed by the dramatists (Sophocles, Euripides, and Aristophanes) and the sophists (supplemented with readings from Plato). The remaining classes will consider the fate of Socrates. The basic aim of the course is to approach an understanding of how and why a vital and creative society came unglued. There will be weekly discussion sections and at least two debates.

CLASS 2680 War and Peace in Greece and Rome (also HIST 2560) # (HA-AS)
For description, see HIST 2560.

CLASS 2681 History of Rome I (also HIST 2670) # (HA-AS)
A general introduction to Roman history from the foundation of Rome in the middle of the eighth century BC to the end of the Republic (31 BC).

CLASS 2682 History of Rome II (also HIST 2671) # (HA-AS)
Summer. 4 credits. Open to first-year students. L. Van Abbenrode.
This course is the second part of a two-term survey of Roman history, examines the history of the Roman Empire from the beginnings of the Augustan Principate (31 BC) to the fall of the Western Empire in the fifth century AD (476). We will consider the creation and development of the imperial regime, explore the various types of challenges (military, cultural, and religious) to the hegemony of the Roman state, and try to understand the transformations of Roman society and culture down to the middle of the fifth century AD.

CLASS 2686 Small Wars in Greece and Rome (also HIST 2061) # (HA-AS)
Fall. 3 credits. Next offered 2010–2011. B. Strauss.

CLASS 2625 Christianization of the Roman World (also HIST 3625, NES 3633, RELST 3635) # (HA-AS)
Fall. 4 credits. E. Rebillard.
In the fourth century CE the emperors decided to favor Christianity and shortly thereafter to forbid non-Christian activity. The "end of paganism," however, did not occur all at once if ever it did ever. The study of the Christianization of the Roman world is concerned with both the impact of Christian belief and practice on the late antique society and the resistance and/or persistence of the old beliefs and practices. This seminar will focus on the approaches to the problem of Christianization and on its documentation. Through readings and discussion, we will chart the transformations of the Roman world from 300 to 600 CE and try to get a better understanding of what remains one of the most fascinating historical problems of the ancient world.

CLASS 2629 Intro to New Testament and Other Early Christian Literature (also JWST/NEST/RELST 3629)
Spring. 1 credits K. Haines-Eitzen.
Extra credit option for students who have had one year of Greek to read portions of the New Testament and other Christian writings in Greek. For description, see NES 3629.

CLASS 2630 Senior Seminar # (LA-AS)
Spring. 4 credits. H. Pelliccia.
Topic: What is a classic? What is Classics? In this course we will study the history of the idea of the classic author or text from fourth century Greece forward to the late-20th-century "canon wars."

CLASS 2642 Greeks, Romans, and Victorians (also COM/L 3820) # (LA-AS)
Explores how 19th-century (and especially Victorian English and Irish) poets, dramatists, and to a lesser extent, novelists, present Greco-Roman antiquity.

CLASS 2644 Sages and Saints/Ancient World (also HIST 3644, RELST 3644) # (HA-AS)
This seminar considers the continuities and changes in the representations of the holy man, from the sages of classical antiquity to the saints of early Christianity.

CLASS 2645 The Tragic Theater (also COM/L 3440, THER 3450) # (LA-AS)
Spring. 4 credits. Limited to 40 students. F. Ahl.
Tragedy and its audiences from ancient Greece to modern theater and film. Topics: origins of theatrical conventions; Shakespeare and Seneca; tragedy in modern theater and film. Works studied include: Aeschylus' Agamemnon; Sophocles' Oedipus Tyrannus, Philoctetes; Euripides' Alceste, Helen, Iphigenia in Aulis, Orestes; Seneca's Thyestes, Trojan Women; Shakespeare's Julius Caesar, Titus Andronicus, Othello, Strindberg's The Father; Durrenmann's The Visit; Bergman's Seventh Seal; Cocyraënnis' Iphigenia in Itea.

CLASS 2661 Hellenistic Philosophy (also PHIL 3201) # (KCM-AS)
Spring. 4 credits. T. Brennan.
An examination of the doctrines of the Greek philosophers working in the three centuries after the death of Aristotle. Emphasis on Stoicism, Epicureanism, and Skepticism.

CLASS 2669 Plato (also PHIL 3202) # (KCM-AS)
Fall. 4 credits. Prerequisite: at least one philosophy course at 2000 level or above; or permission of instructor. G. Fine.
For description, see PHIL 3202.

CLASS 2676 Greek and Roman Historiography # (HA-AS)
Spring. 4 credits. J. Rusten.
Rather than a survey of the history of ancient Greek and Rome, a study of the major ancient authors (from Herodotus through Ammianus Marcellinus) who invented and developed the genres of historical writing. We will examine their philosophical and educational aims, concepts of historical causation, demarcation of subject matter, as well as conventions and sub-genres of historiography in antiquity, and critics of historical styles and approaches. All readings in English.

CLASS 2686 Independent Study in Classical Civilization, Undergraduate Level
Fall and spring. 1–4 credits. Prerequisite: permission of director of undergraduate studies, in extraordinary circumstances only.

CLASS 4662 Topics in Ancient Philosophy (also PHIL 4200) # (KCM-AS)
Fall. 4 credits. G. Fine.
For description, see PHIL 4200.

CLASS 4681 Fourth Century and Early History of Greece (also HIST 4411) # (HA-AS)
Fall. 4 credits. Undergrads and grads will meet for two hours; grad students must stay for one additional hour. Next offered 2011–2012. B. Strauss.

CLASS 4682 Topics in Ancient Greek History (also CLASS 7684, HIST 4320/6330)

CLASS 4683 Classics and Early America (also HIST 4861, GOVT 4862) # (HA-AS)
Fall. 4 credits. Next offered 2010–2011. H. Rawlings III.
This seminar focuses on the Founders' use of Greek and Roman models in establishing the American Republic.

CLASS 7173 Ancient Philosophy (also PHIL 6200)
Fall. 4 credits. G. Fine.
For description, see PHIL 6200.

CLASS 7345 Graduate TA Training
Fall and spring. 1 credit. Staff.
Pedagogical instruction and course coordination. Requirement for all graduate student teachers of LATIN 1201–1202 and first-year writing seminars.

CLASS 7459 Seminar in Vedic Philology (also ASIAN/LING 6659)
Spring. 4 credits. Prerequisite: two years of Sanskrit or permission of instructor. M. Weiss.
For description, see LING 6659.

CLASS 7681 Fourth Century and Early Hellenistic History of Greece (also HIST 6411)
Fall. 4 credits. B. Strauss.
For description, see HIST 6411.
**GREEK 1101** Elementary Ancient Greek I
Fall. 4 credits. H. Pelliccia.
Introduction to Attic Greek. Designed to enable the student to read the ancient authors as soon as possible.

**GREEK 1102** Elementary Ancient Greek II
Spring. 4 credits. Prerequisite: GREEK 1101 or equivalent. A. Ruppel.
Continuation of GREEK 1101, prepares students for GREEK 1105.

**GREEK 1103** Intensive Greek
Summer. 6 credits. Staff.
Intensive introduction combining the fundamentals of ancient Greek grammar with readings from a variety of classical authors in the original Greek. Prepares students in a single semester for GREEK 1105.

**GREEK 1105** Intermediate Ancient Greek I (also NES 1340)
Fall. 3 credits. Prerequisites: GREEK 1102, 1103, or placement by departmental exam.
P. Pucci.
Introduces students to reading Greek literary texts (Xenophon's *Anabasis*) and a dialogue of Plato. Covers complex syntax and reviews the grammar presented in GREEK 1102 or 1103.

**GREEK 1141** Elementary Modern Greek I (also NES 1341)
Fall. 4 credits. K. Yiavis.
The course is intended for students with no experience in modern Greek. The goal is to provide a thorough grounding in Greek language with emphasis on communication. Small class size will provide intensive practice in speaking, writing, and listening/comprehension. Elementary Modern Greek II will be offered in the spring semester.

**GREEK 1142** Elementary Modern Greek II (also NES 1342)
Spring. 4 credits. Prerequisite: NES 1340/GREEK 1141 or placement by departmental exam.
K. Yiavis.
Intended for students with no experience in Greek. The goal is to provide a thorough grounding in Greek language with an emphasis on communication. Small class size provides intensive practice in speaking, writing, and listening/comprehension.

**GREEK 1143** Intermediate Modern Greek I (also NES 1343)
Fall. 4 credits. Prerequisite: GREEK 1142/NES 1341 or placement by departmental exam.
K. Yiavis.
Emphasizes complex grammatical and syntactical phenomena of the Modern Greek language through oral communication and texts. Students look into idiomatic nuances and special features of the language. Oral speech and writing are more crucial at this level.

**GREEK 2101** Greek Prose # (LA-AS)
Fall. 3 credits. Satisfies Option 1.
Selected readings from Herodotus' *Histories*.

**GREEK 2103** Homer # (LA-AS)
Spring. 3 credits. Satisfies Option 1.
Readings in the Homeric epic.

**GREEK 2104** Euripides: Alcestis # (LA-AS)
Spring. 3 credits. Satisfies Option 1.
Prerequisite: GREEK 1105. P. Pucci.
With the Alcestis we encounter Greek tragedy in one of its European versions: serious events and comic happenings interface and weave a most mysterious analysis of human responses to death, to marriage relationship, to myth. The text has no long choruses and therefore is also easier for students with a short experience of Greek. This is a wonderful introduction to Greek Tragedy.

**GREEK 2114** Intermediate Modern Greek II (also NES 2324)
Spring. 4 credits. Satisfies Option 1.
Prerequisite: GREEK 1143/NES 1342 or placement by departmental exam.
K. Yiavis.
This course emphasizes complex grammatical and syntactical phenomena of the Modern Greek language through oral communication and texts. Students look into idiomatic nuances and special features of the language. Oral speech and writing are more crucial at this level.

**GREEK 3101** Greek Epic # (LA-AS)
Spring. 4 credits. Satisfies Option 1.
Undergraduate Seminar. This course focuses on the epic language, its specificity, its poetic means (epithets, formulae, similes, etc.), its function in constructing and interpreting the world, and its aesthetic, emotional effects.

**GREEK 3102** Greek Historiography and Oratory # (HA-AS)
Fall. 4 credits. Satisfies Option 1.
Prerequisite: one 2000-level Greek course.
Undergraduate seminar. History and myth in Herodotus and Plato. Readings in Greek from Herodotus' *Histories* and Plato's *Phaedrus*, *Critias*, and *Timaeus*.

**GREEK 3103** Greek Philosophy and Rhetoric (LA-AS)
Spring. 4 credits. Satisfies Option 1.
Prerequisite: one 2000-level Greek course.
H. Rawlings III.
Undergraduate seminar. Topic: Greek rhetoric. We will read speeches by several Greek orators.

**GREEK 3104** Seminar: Greek Drama (LA-AS)
Fall. 4 credits. Satisfies Option 1.
Prerequisite: one 2000-level Greek course.
P. Pucci.

**GREEK 4101** Advanced Readings in Greek Literature # (LA-AS)
Fall. 4 credits. Prerequisite: one semester of 3000-level Greek. H. Rawlings III.
In reading the texts, we will analyze the historiographical methods employed by Herodotus and Thucydides: their use of sources, their epistemologies, their means of presenting events, their positions in the intellectual context of their times.

**GREEK 4102** Advanced Readings in Greek Literature # (LA-AS)
Spring. 4 credits. Prerequisite: one semester of 3000-level Greek. Next offered 2010–2011. Staff.

**GREEK 4116** Advanced Greek Composition (LA-AS)
Spring. 4 credits. Prerequisite: GREEK 3116 or equivalent. J. Rusten.

**GREEK 7171** Graduate Seminar in Greek
Fall. 4 credits. J. Rusten.
Topic: The fragments of Athenian comedy, 486–290 BCE. Readings in the substantial remains of comedies apart from the 11 preserved plays of Aristophanes and the three of Menander. Particular attention to the evidence for the earliest comedy and its relation to politics, the plays of Aristophanes' rivals Cratinus (Plutuses, Dionysalexander, *The Wine-Flask*) and Eupolis (*Demes, Baptsai, Toades, Manticas*), the 4th-century comedy of Antiphanes and Timocrates, the more than 100 paintings from Southern Italy illustrating scenes of 4th-century comedy, Menander's partially preserved plays (*She Gets a Haircut, The Shield, the Scyconian*), and the plays that lie behind the Latin adaptations of the third and second centuries BCE.

**GREEK 7172** Graduate Seminar in Greek
Spring. 4 credits. P. Pucci.
Topic: Aristophanes.

**GREEK 7910** Independent Study in Greek
Fall and spring. 1–4 credits.

**LATIN 1201** Elementary Latin I
Fall. 4 credits. Staff.
Introductory course designed to prepare students to start reading Latin prose at the end of a year. The class moves swiftly and includes extensive memorization of vocabulary and paradigms; study of Latin adaptation of written homework, quizzes, tests, and oral drills.

**LATIN 1202** Elementary Latin II
Spring. 4 credits. Students may not receive credit for both LATIN 1202 and LATIN 1204. Students should be ready for LATIN 1205 by the end of the course, but may take LATIN 2201 if they pass with A– or better. Prerequisite: 1201 or equivalent. Staff.
Continuation of LATIN 1201, using readings from various authors; prepares students for LATIN 1205.

**LATIN 1203** Intensive Latin
Summer. 6 credits. Staff.
Intensive introduction that quickly instills the essentials of Latin grammar before progressing to readings in the original Latin. Prepares students in a single term for LATIN 1205.

**LATIN 1204** Latin in Review
Fall. 4 credits. Students may not receive credit for both LATIN 1202 and LATIN 1204. Prerequisite: placement by departmental examination. Staff.
Undergraduate seminar. Topic: Neoteric

Undergraduate seminar. Topic: TBA.

Undergraduate seminar.

LATIN 2201 Latin Prose # (LA-AS)
Fall, spring. 3 credits. Prerequisite: LATIN 1202, 1203, 1204 or placement by departmental exam. Fall, D. Mankin; spring, A. Ruppell.
Introduces students to reading a literary Latin text (Ovid, Ars Amatoria I) Covers complex syntax and reviews the grammar presented in LATIN 1202, 1203, or 1204.

LATIN 2204 Roman Drama # (LA-AS)
Spring. 3 credits. Satisfies Option 1.
Prerequisite: LATIN 1205 or grade of A– or above in LATIN 1202, 1203, or 1204 or placement by departmental exam. E. Rebillard.
Reading of Nepos’ Life of Atticus, a wealthy and cultured Roman who himself stayed out of politics, but was the confidant of the Republic’s greatest politician, Cicero; readings also of Nepos’ Life of Cato the Elder and selections from Cicero’s Letters to Atticus.

LATIN 2202 Catullus # (LA-AS)
Fall. 3 credits. Satisfies Option 1.
Aims to present the poems of Catullus within their cultural and historical context. The poems are read and translated, and their significance both individually and as products of Late Roman Republican culture discussed in class. Selections from the works of Catullus’s contemporaries are assigned in translation.

LATIN 2220 Imperial Latin
Spring. 4 credits. Satisfies Option 1.
Undergraduate Latin seminar. Topic: TBA.

LATIN 3217 Latin Prose Composition # (LA-AS)

LATIN 3286 Independent Study in Latin, Undergraduate Level
Fall and spring. Variable to 4 credits. Prerequisite: permission of instructor. Next offered 2010–2011.

LATIN 4201 Advanced Readings in Latin Literature # (LA-AS)
Fall. 4 credits. Prerequisite: one semester of 3000-level Latin. M. Fontaine.
Topic: Ovid’s Metamorphoses.

LATIN 4202 Advanced Readings in Latin Literature # (LA-AS)
Spring. 4 credits. Prerequisite: one semester of 2000-level Latin. C. Brittain.
Topic: Epistology.

LATIN 4203 Survey of Latin Literature # (LA-AS)
Fall. 4 credits. Seniors must obtain permission from the instructor to enroll in the class. Next offered 2010–2011.

LATIN 4213 Survey of Medieval Latin Literature (also LATIN 7213, MEDVL 4103/6103) # (LA-AS)
For description, see MEDVL 4103.

LATIN 4216 Advanced Latin Prose Composition # (LA-AS)
Fall. 4 credits. Prerequisite: graduate standing; undergraduates who have completed LATIN 3217 and have permission of instructor. Next offered 2010–2011. Staff.

LATIN 4223/7223 Topics in Medieval Latin Literature (also MEDVL 4201/6201)

LATIN 7213 Survey of Medieval Latin Literature (also MEDVL 4103/6103, LATIN 4213)
For description, see MEDVL 4103.

LATIN 7222 Latin Paleography (also MEDVL 6102)

LATIN 7262 Latin Philosophical Texts (also PHIL 4002, RELST 6020) # (KGM-AS)
Fall and spring. 1–4 credits. Prerequisites: knowledge of Latin and permission of instructor. C. Brittain and S. MacDonald.
For description, see PHIL 6020.

LATIN 7271 Graduate Seminar in Latin (also PHIL 6201)
Fall. 4 credits. C. Brittain.
Topic: Cicero’s Philosophical Text.

LATIN 7272 Graduate Seminar in Latin
Spring. 4 credits. M. Fontaine.
Topic: Lucretius.

LATIN 7920 Independent Study in Latin
Fall and spring. 1–4 credits. Staff.
**Greeks and Latin Linguistics**

**GREEK 4411 Greek Comparative Grammar (also LING 4451) (KCM-AS)**

The prehistory and evolution of the sounds and forms of ancient Greek as reconstructed by comparison with the other Indo-European languages.

**LATIN 4452 Latin Comparative Grammar (also LING 4452) (KCM-AS)**

The prehistory and evolution of the sounds and forms of Classical Latin as reconstructed by comparison with the other Indo-European languages.

**LATIN 4453 Structure of Latin (also LING/ROMS 4453) (KCM-AS)**
Fall. 4 credits. Cannot be used toward the language course major requirement. Next offered 2010–2011. Staff.

For description, see LING 4453.

**GREEK 4455 Greek Dialects (also LING 4455) (KCM-AS)**
Fall. 4 credits. A. Nussbaum.

Survey of the dialects of ancient Greek through the reading and analysis of representative epigraphical and literary texts.
concern the organization and behavior of the components and how they are biologically represented in the brain. At the most specific level are questions about the properties of the elementary computational structures and processes that constitute these components. Important insights into issues of these kinds have been achieved in recent years as a result of the various Cognitive Science disciplines converging in their theoretical and methodological approaches. It is this convergence, in fact, that warrants grouping the disciplines together under the single term “Cognitive Science.” Even greater progress can be expected in the future as a consequence of increasing cooperation among the disciplines.

**Undergraduate Minor**

An interdisciplinary undergraduate minor in Cognitive Science is available to Cornell University undergraduates in the College of Arts and Sciences. Students from other colleges who seek such a minor should discuss such possibilities with the Cognitive Science office, which will provide information and contacts concerning such minors.

The undergraduate minor in Cognitive Science is designed to enable students to engage in a structured program directly related to the scientific study of cognition and the mind. The minor provides a framework for the design of structured, supervised programs of study in this growing interdisciplinary field. Such programs of study serve as complements to course work in a single discipline as represented by an individual department. It is considered crucial that students gain a strong background in their major, independent of their work in the minor. Independent majors and college scholars may also apply. Colleges vary in their procedures for formal recognition of this minor (contact the Cognitive Science office for details). The Cognitive Science Program faculty have designed five structured “tracks” that offer students different ways of satisfying the minor. In addition, students are always able to construct their own programs of study subject to approval by their minor advisor. The courses listed under each track are typical suggestions. The student should consult his or her Cognitive Science advisor to develop a more customized curriculum. In some cases, students may want to combine or cross tracks.

In general, it is expected that students in the minor will take COGST 1101 or COGST 2140 as their introductory course requirement; either COGST 4120, COGST 4160, COGST 4500, or COGST 4700 as their lab course requirement; and three courses at the 3000 and 4000 level in at least two departments (or certain suitable 2000-level courses by petition). Courses are to be chosen by student and advisor to provide a coherent program. Even though only five courses are required to complete the minor, we assume students interested in Cognitive Science will often end up taking more. An independent research project (e.g., COGST 4700 if this is not used to satisfy the lab requirement) and a research workshop (COGST 4710) are encouraged. Please note: minor modifications to this outline may be made in extenuating circumstances by the advisor, in consultation with the program director.

The five typical tracks are as follows. Note that many of these courses have substantial prerequisites.

1. **Perception and Cognition**
   - This track focuses on psychological, computational, and neurobiological approaches to the interface between perception and cognition. Students will develop a grasp of the continuum between sensory impressions and complex thought.
   - BIONB 3260 The Visual System
   - COGST/LING/PSYCH 3510 Consciousness and Free Will
   - COGST 1101/CS 1710/LING 1170/PHIL 1910/PSYCH 1102 Introduction to Cognitive Science
   - COGST/PSYCH 4160 Modeling Perception and Cognition
   - COGST 4500/HD 4370/LING 4500/PSYCH 4570 Lab Course: Language Development
   - COGST/LING/PSSYCH 4650 Topics in High-Level Vision
   - PSYCH 3050 Visual Perception
   - PSYCH 3160 Auditory Perception
   - PSYCH 4120 Laboratory in Cognition and Perception
   - PSYCH 4180 Psychology of Music

2. **Language and Cognition**
   - This track focuses on the representation, processing, and acquisition of language, as well as its role in cognition and culture. Students will acquire skills and knowledge in formal psycholinguistic experimentation, and computational modeling techniques.
   - COGST 1101/CS 1101/LING 1170/PHIL 1910/PSYCH 1102 Introduction to Cognitive Science
   - COGST/PSYCH 2140 Cognitive Psychology
   - COGST/LING/PSSYCH 2150 Psychology of Language
   - COGST/PSYCH 4270 Evolution of Language
   - COGST/LING/PSYCH 4280 Connectionist Psycholinguistics
   - COGST 4340/HD 4240 Current Topics in Cognitive Development
   - HD 4560/LING 4450/PSYCH 4360 Language Development
   - COGST 4500/HD 4570/LING 4500/PSYCH 4570 Lab Course: Language Development
   - COGST/LING 3210 Introduction to Phonetics
   - LING 3303 Introduction to Syntax
   - LING 3304 Introduction to Semantics
   - LING 4403 Syntax I
   - LING 4421–4422 Semantics I and II
   - PHIL 3320 Philosophy of Language

3. **Cognition and Information Processing**
   - This track focuses on how the mind (or a computer) can encode, represent, and store information. Students will develop an understanding of concepts, categories, memory, and the nature of information itself.
   - COGST 1101/CS 1101/LING 1170/PHIL 1910/PSYCH 1102 Introduction to Cognitive Science
   - COGST/PSYCH 2140 Cognitive Psychology
   - COGST/LING 4410 Comparative Cognition
   - COGST 2340/HD 3340 The Growth of the Mind
   - COGST/HD 4520 Cognitive, Social, and Developmental Aspects of Scientific Reasoning
   - COGST 4500/HD 4370/LING 4500/PSYCH 4570 Lab Course: Language Development
   - CS 2140 Computers and Programming
   - CS 4700 Foundations of Artificial Intelligence
   - CS 4701 Practicum in Artificial Intelligence
   - PSYCH 4120 Laboratory in Cognition and Perception
   - PSYCH 4150 Information Processing: Conscious and Nonconscious
   - PSYCH 4150 Concepts, Categories, and Word Meaning
   - PSYCH 4170 The Origins of Thought and Knowledge

4. **Cognitive Neuroscience**
   - This track focuses on neurobiological and computational approaches to understanding how perception and cognition emerge in the human brain. Students will acquire knowledge of what neural structures subserve what perceptual/cognitive processes, and how they interact.
   - COGST 1101/CS 1101/LING 1170/PHIL 1910/PSYCH 1102 Introduction to Cognitive Science
   - COGST/PSYCH 2140 Cognitive Psychology
   - COGST/HD 2200 The Human Brain and Mind
   - COGST/BIONB/PSYCH 3300 Introduction to Computational Neuroscience
   - PSYCH 3520/BIONB 3280 Biopsychology of Learning and Memory
   - PSYCH/BIONB 3960 Introduction to Sensory Systems
   - PSYCH 4250 Cognitive Neuroscience

5. **Independent Study**
   - With approval from the Cognitive Science undergraduate curriculum committee, a student and advisor in the Cognitive Science program can arrange their own unique collection of courses that do not belong to the above categories for satisfying the minor requirements.
   - COGST 4700 Undergraduate Research in Cognitive Studies
   - COGST 4710 Cognitive Studies Research Workshop

A Cognitive Science undergraduate laboratory and computer facility (201 Uris Hall) is available for all students in a Cognitive Science minor. This facility will help link resources from different laboratories across the Cornell campus as well as providing a central location for developing and conducting experimental research in Cognitive Science. Students who complete the minor requirements will have their minor in Cognitive Science officially represented on their transcript. In addition, students who have made substantial progress toward completing the requirements for the minor will be eligible for enrollment in the graduate courses in Cognitive Science during their senior year.

**Minor Application Procedures.** Initial inquiries concerning the undergraduate concentration should be made to the Cognitive Science Program coordinator, Julie.
disciplines that make major contributions to artificial systems. Draws primarily from five processing can arise from biological and works. Examines how intelligent information Surveys the study of how the mind/brain disciplines to both the advisor and the student. To be admitted to the minor, the student must submit this plan of study to the Cognitive Science undergraduate faculty committee for final approval.

In addition to assisting in and approving the student's selection of courses, the minor advisor serves as a general source of information about the field of Cognitive Science, relevant resources around the university, and job and graduate school opportunities. Often, the advisor can help the student develop independent research experience.

Independent Research. The minor encourages each student to be involved in independent research that bears on research issues in Cognitive Science, if possible. It is recommended that students report on their research activities in an annual undergraduate forum. The Undergraduate Minor Committee is committed to helping students find an appropriate research placement when needed.

The Committee for Undergraduate Minor in Cognitive Science consists of: Bart Selman, Computer Science, 255–6563, 4144 Upson Hall, selman@cs.cornell.edu; Drag A. Zec, linguistics, 255–0728, 217 Morrill Hall, dz17@ cornell.edu; Morten Christiansen, psychology, 255–5970, 2580 Uris Hall, mhc27@cornell.edu. The current director of undergraduate studies is Drag A. Zec.

Graduate Minor
Entering graduate students, as well as advanced undergraduates, who are interested in cognition and in the cognitive sciences are advised to take the proseminar course COGST 6901 Introduction to Cognitive Science (not offered 2009–2010) in the fall semester. The course, COGST 4780, is available for this purpose. It is recommended that students report on their research activities in an annual undergraduate forum. The Undergraduate Minor Committee is committed to helping students find an appropriate research placement when needed.

Graduate students minorin Cognitive Science will take additional courses recommended by their graduate committee to complete their course requirements.

For more information, consult the program office (278C Uris Hall, 255–6431, cogst@ cornell.edu) or the director of graduate studies, Morten Christiansen (255–3570, mhc27@cornell.edu).

Courses

Cognitive Science

COGST 1101 Introduction to Cognitive Science (also LING 1170, LING 1175, PHIL 1910, PSYCH 1102) (KCMA)
Fall. 3 or 4 credits; 4-credit option involves writing section instead of exams. Staff.

Surveys the study of how the mind/brain works. Examines how intelligent information processing can arise from cognitive science: philosophy, psychology, neuroscience, linguistics, and computer science. The first part of the course introduces the roles played by these disciplines in cognitive science. The second part focuses on how each of these disciplines contributes to the study of five topics in cognitive science: language, vision, learning and memory, action, and artificial intelligence.

COGST 1110 Brain, Mind, and Behavior (also BIONB 11110) (PBS)
Spring. 3 credits. Intended for freshmen and sophomores in humanities and social sciences; seniors not advised. Recommended for psychology majors; biology majors may not use course for credit toward major. Letter grades only. R. Hoy and E. Akins Regan.

Understanding how the brain creates complex human behavior and mental life is a great scientific frontier of the next century. This course enables students with little scientific background from any college or major to appreciate the extent to which the mind/brain are the interesting and important questions? How are researchers trying to answer them? What are they discovering? Why did the brain evolve this remarkable capacity?

COGST 1500 Intro to Human Environment Relations (also DEA 1500)
Spring. 3 credits. G. Evans.

For description, see DEA 1500.

COGST 2140 Cognitive Psychology (also PSYCH/INFO 2140/6140) (KCMA)
Spring. 4 credits. Limited to 200 students. Prerequisite: sophomore standing. Note: Undergraduate majors with 5 credits also should enroll in COGST 6150. S. Edelman.

For description, see PSYCH 2140.

COGST 2150 Psychology of Language (also LING/PSYCH 2150) (KCMA)
Spring. 3 credits. Prerequisite: sophomore, junior, or senior standing; any one course in psychology or human development. M. Christiansen.

For description, see PSYCH 2150.

COGST 2300 Cognitive Development (also HD 2300)
Spring. 3 credits. Prerequisite: HD 1150 or PSYCH 1101. Q. Wang.

Designed to help students develop a broad understanding of the mechanisms, processes, and current issues in cognitive development and learn to do critical, in-depth analyses of developmental research. Discusses how children's thinking changes over the course of development and evaluate psychological theories and research on various aspects of cognitive development. Topics include perception, representation and concepts, reasoning and problem solving, social cognition, memory, metacognition, language and thought, and academic skills. Students also have hands-on research experiences with "real" kids.

COGST 2380 Thinking and Reasoning (also HD 2380)
Fall. 3 credits. Prerequisite: HD 1150 or PSYCH 1101. B. Kosowski.

Examines problem solving and transfer, prelexical thinking, logical thinking, practical syllogisms, causal reasoning, scientific reasoning, theories of evidence, expert vs. novice differences, and nonrational reasoning. Two general issues run through the course: the extent to which children and adults approximate the sorts of reasoning that are described by various types of models, and the extent to which various models accurately describe the kind of thinking that is required by the sorts of problems and issues that arise and must be dealt with in the real world.

COGST 3300 Introduction to Computational Neuroscience (also BIONB 2330/PSYCH 11350) (PBS)
Fall. 3 or 4 credits; 4-credit option includes lab providing additional computer simulation exercises. Limited to 25 students. Prerequisite: BIONB 2220 or permission of instructor. S. Lerner.

For description, see BIONB 2330.

COGST 3330 Problems in Semantics—Quantification in Natural Language (also LING 3333, PHIL 3700) (KCMA)
Spring. 4 credits. Prerequisites: course in logic or semantics or permission of instructor. D. Abusch.

For description, see LING 3333.

COGST 3340 The Growth of the Mind (also HD 3340) (KCMA)
Spring. 4 credits. Prerequisite: course in human experimental psychology, cognitive psychology, statistics, HD 1150, or equivalent, or permission of instructor. Primarily intended for sophomores through seniors. B. Lust.

The fundamental issues of cognition are introduced in this course. What is the nature of human intelligence? Of logical and scientific reasoning? How are knowledge and understanding acquired and represented in the human mind? What is the nature of mental representation? What are the cognitive characteristics of the mind at birth? What is the relation of the acquisition of knowledge and understanding to their final representation? What are the relations between language and thought? In the study of these issues, how can epistemology and experimental psychology be related through the experimental method? Basic debates within the study of cognition are introduced and discussed throughout the course. Students will analyze Piaget's comprehensive theory of cognitive development and experimental results. Current research in cognitive development will be contrasted.

COGST 3370 Language Development (also HD 3370, LING 4436, PSYCH 4360) (KCMA)
Spring. 4 credits. Open to undergraduate and graduate students. Graduate students should also enroll in HD 6330 or LING 7790, a supplemental graduate seminar. Prerequisite: at least one course in developmental psychology, cognitive psychology, cognitive development, or linguistics. S–U or letter grades. B. Lust.

Surveys basic issues, methods, and research in the study of first-language acquisition. Major theoretical positions in the field are considered in the light of experimental studies in first-language acquisition of phonology, syntax, and semantics from infancy on. The fundamental linguistic issues of "Universal Grammar" and the biological foundations for acquisition are discussed, as are the issues of relations between language and thought. The acquisition of communication systems in nonhuman species such as chimpanzees is addressed, but major emphasis is on the child.

An optional lab course supplement is available (see COGST 4500/HD 4570/LING 4500/PSYCH 4570).
COGST 3420 Human Perception: Applications to Computer Graphics, Art, and Visual Display (also PSYCH 3420/6420, VISST 3342)
Fall and spring. 4 credits. Prerequisite: PSYCH 1101 or permission of instructor. Highly recommended: PSYCH 2140. D. Field. Our present technology allows us to transmit and display information through a variety of media. To make the most of these media channels, it is important to consider the limitations and abilities of the human observer. The course considers a number of applied aspects of human perception with an emphasis on the display of visual information. Topics include “three-dimensional” display systems, color theory, spatial and temporal limitations of the visual systems, attempts at subliminal communication, and “visual” effects in film and television.

COGST 4120 Laboratory in Cognition and Perception (III) (also PSYCH 4120) (KCM-AS)
Spring. 4 credits. Limited to 15 students. Prerequisite: statistics and one course in cognition and perception recommended. Graduate students, see PSYCH 6120. Next offered 2010–2011. D. J. Field. Laboratory course designed to introduce students to experimental methods in perception and cognitive psychology. Students take part in a number of classic experiments and develop at least one independent project. Computers are available and used in many of the experiments although computer literacy is not required. Projects are selected from the areas of visual perception, pattern recognition, memory, and concept learning.

COGST 4240 Computational Linguistics (also CS 3470, LING 4424) (MQR)
Fall. 4 credits. Recommended: CS 2006. Labs involve work in Unix environment. J. Hale. For description, see LING 4424.

COGST 4260 Learning Language (also PSYCH 4260/7260) (KCM-AS)
Spring. 4 credits. Limited to 20 students. Prerequisite: PSYCH 2140 or by permission of the instructor. Next offered 2010–2011. S. Edelman. For description, see PSYCH 4260.

COGST 4270 Evolution of Language (also PSYCH 4270/6270)
Fall. 3 credits. Limited to 20 students. Prerequisite: senior standing or permission of instructor. Offered alternate years. M. Christiansen. For description, see PSYCH 4270.

COGST 4280 Connectionist Psycholinguistics (also LING 4428, PSYCH 4280/6280)
Fall. 3 credits. Prerequisite: senior standing or permission of instructor. Offered alternate years; next offered 2010–2011. M. Christiansen. For description, see PSYCH 4280.

COGST 4310 Consciousness and Free Will (also BION 4330, PSYCH 4320)
Spring. 4 credits. Prerequisite: PSYCH/COGST/INFO 2140/6140. S. Edelman. This advanced course builds on the foundations of the computational understanding of the human mind provided by PSYCH 2140 (Cognitive Psychology). It covers consciousness, free will, ethics, wisdom, and happiness through a combination of readings (which include a textbook, research articles, and short stories by Borges), lectures, and in-class discussions. For details, see the instructor’s web page.

COGST 4320 Cognitive, Social, and Developmental Aspects of Scientific Reasoning (also HD 4320)
Fall. 5 credits. Prerequisites: HD 1150 or PSYCH 1101. Offered alternate years. B. Koslowski. For description, see HD 4320.

COGST 4330 Developmental Cognitive Neuroscience (also HD 4330)
Spring. 3 credits. Limited to 25 students. Prerequisite: HD 1150 or PSYCH 1101 and one semester of biology; permission of instructor. For description, see HD 4330.

COGST 4340 Current Topics in Cognitive Development (also HD 4240) (KCM-AS)
Spring. 3 credits. Corequisite: COGST/HD 2540; permission of instructor. Offered alternate years. The course will supplement survey course HD/COGST 3340 with additional discussion of current research in cognitive development. Selected current papers will be read and discussed in parallel with the HD/COGST 3340 survey course. Modern interpretations and challenges to Piaget’s theory will be evaluated in light of current literature in the field. A small group format will be adopted to encourage discussion.

COGST 4350 Mind, Self, and Emotion: Research Seminar (also HD 4310)
Fall. 3 credits. Limited to 20 students. Prerequisite: upperclass undergraduate or graduate standing. Letter grades only: Q. Wang. Examines current data and theory concerning memory, self, and emotion from a variety of perspectives and at multiple levels of analysis, particularly focusing on the interconnections among these fields of inquiry. A special emphasis is given to cross-cultural studies on memory development, self-construal, and perception of emotion.

COGST 4500 Lab Course: Language Development (also HD/PSYCH 4370, LING 4500)
Fall. 2 credits. In conjunction with COGST/HD/LING/PSYCH 4370. Next offered 2010–2011. B. Lust. Optional supplement to the survey course Language Development (COGST/HD/LING/PSYCH 4370). The lab course provides students with a hands-on introduction to scientific research, including design and methods, in the area of first-language acquisition.

COGST 4520 Culture and Human Development (also AAS/HD 4520) (CA-AS)
Fall. 3 credits. Limited to 30 students. Prerequisite: HD 1150 or PSYCH 1101. Q. Wang. Takes an interdisciplinary approach to address the central role of culture in human development. Draws on diverse theoretical perspectives, including psychology, anthropology, education, ethnography, and linguistics, to understand human difference, experience, and complexity. Empirical reflections are taken upon major developmental topics such as cultural aspects of physical growth and development; culture and cognition; culture and language; culture, self, and personality; cultural construction of emotion; culture issues of sex and gender; and cultural differences in pathology.

COGST 4650 Topics in High-Level Vision: Embodied Cognition (also PSYCH 4650/6650) (KCM-AS)
Spring. 4 credits. S. Edelman and M. Goldstein. For description, see PSYCH 4650.

COGST 4700 Undergraduate Research in Cognitive Science
Fall or spring. Variable credit. Prerequisites: enrollment in an independent research course either in Cognitive Science (e.g., COGST 4700) or in a related department or in honors thesis research in one of the departments relevant to Cognitive Science. Staff (interdisciplinary faculty from Cognitive Science Program). Provides a research workshop in which undergraduate students who are engaged in research in a particular area relevant to cognitive science can meet across disciplines to learn and practice the essentials of research using interdisciplinary approaches. In this workshop, students critique and discuss the existing literature in a field of inquiry, individual students present their research designs, methods, and results from their independent research studies, debate the interpretation of their research results, and participate in the generation of new research hypotheses and designs, in a peer group of other undergraduate students involved in related research.

COGST 4740 Introduction to Natural Language Processing (also CS 4740, LING 4474)
Fall or spring. 4 credits. Prerequisite: CS 2110. C. Cardie. For description, see CS 4740.

COGST 4760–4770 Decision Theory I and II (also COGST/ECON 4760–4770, ECON 4760–4770) (MQR)
Fall and spring. 4 credits each semester. In fall, course is lecture based. Students are required to complete several problem sets and there is a final exam. In spring, there are additional lectures as well as visiting speakers. Students are required to read speakers’ papers, participate in discussions, and complete a research project. L. Blume, E. Easley, and J. Halpern. Research on decision theory resides in a variety of disciplines including computer science, economics, game theory, philosophy, and psychology. This new course attempts to integrate these various approaches. The course is taught jointly by two economists/game theorists and a computer scientist. The course covers several areas: (1) basic decision theory. "This theory, sometimes called "rational choice theory," is part of the foundation for the disciplines listed above. It applies to decisions..."
made by individuals or by machines. (2) the limitations of and problems with this theory. Issues discussed here include decision theory paradoxes revealed by experiments, cognitive and knowledge limitations, and computational issues. (3) new research designed in response to these difficulties. Issues covered include alternative approaches to the foundations of decision theory, adaptive behavior, and shaping the individual decisions by aggregate/evolutionary forces.

COGST 4910 Research Methods in Psychology (also COGST 6910, PSYCH 4910/6910)
Spring. 4 credits. Limited to 15 students. Recommended: permission of instructor, experience in upper-division psychology courses, or graduate standing. Graduate students, see COGST 6910.
V. Zayas.
For description, see PSYCH 4910.

Computer Science

CS 1710 Introduction to Cognitive Science (also COGST 1101, LING 1170, PHIL 1910, PSYCH 1102)
Fall. 3 or 4 credits. Staff.

CS 2110 Computers and Programming
Fall, spring, or summer. 3 credits.

CS 3110 Data Structures and Functional Programming
Fall or spring. 4 credits.

CS 3470 Computational Linguistics (also COGST 4240, LING 4424)
Fall. 4 credits. M. Rooth.

CS 3810 Introduction to Theory of Computing
Fall, summer. 4 credits.

CS 4700 Foundations of Artificial Intelligence
Fall. 3 credits. T. Joachims.

CS 4701 Practicum in Artificial Intelligence
Fall. 2 credits. T. Joachims.

CS 4740 Introduction to Natural Language Processing (also COGST 4740, LING 4474)
Fall. 4 credits. M. Rooth.

CS 4780 Machine Learning
Spring. 3 credits.

CS 4860 Applied Logic (also MATH 4860)
Spring. 4 credits.

Education (College of Agriculture and Life Sciences)

EDUC 6140 Gender, Context, and Epistemological Development
Fall. 3 credits. D. Schrader.

Human Development (College of Human Ecology)

HD 1150 Human Development
Fall or summer. 3 credits.

HD 2200 The Human Brain and Mind: Biological Issues in Human Development (also COGST 2200)
Fall. 3 credits. Next offered 2010–2011.

HD 2300 Cognitive Development (also COGST 2300)
Spring. 3 credits. Q. Wang.

HD 2380 Thinking and Reasoning (also COGST 2380)
Fall. 3 credits. B. Koslowski.

HD 2660 Emotional Functions of the Brain
Spring. 3 credits.

HD 3200 Human Developmental Neuropsychology
Spring. 5 credits. B. Koslowski.

HD 3360 Connecting Social, Cognitive, and Emotional Development
Fall. 3 credits. M. Casasola.

HD 3370 Language Development (also COGST/PSYCH 3370, LING 4436)
Spring. 4 credits. B. Lust.

HD 3440 Infant Behavior and Development
Fall. 3 credits. S. Robertson.

HD 3470 Human Growth and Development: Biological and Behavioral Interactions (also PSYCH 4360)
Spring. 3 credits. S. Robertson and J. Haas.

HD 3620 Human Bonding
Fall. 3 credits.

HD 4310 Mind, Self, and Emotion: Research Seminar (also COGST 4350)
Fall. 3 credits. Q. Wang.

HD 4320 Cognitive, Social, and Developmental Aspects of Scientific Reasoning (also COGST 4320)
Fall. 3 credits. B. Koslowski.

HD 4330 Developmental Cognitive Neuroscience (also COGST 4330)
Spring. 3 credits. E. Temple.

HD 4370 Lab Course: Language Development (also COGST/LING 4450, PSYCH 4370)
Spring. 2 credits. In conjunction with HD 3570, COGST/LING/PSYCH 4360. B. Lust.

HD 4520 Culture and Human Development (also AAS/COGST 4520)
Fall. 3 credits. Q. Wang.

Linguistics

LING 1170 Introduction to Cognitive Science (also COGST 1101, CS 1710, PHIL 1910, PSYCH 1102)
Fall. 3 or 4 credits. Staff.

LING 2215 Psychology of Language (also COGST 2150, LING 7715, PSYCH 2150/T150)
Spring. 3 credits. M. Christiansen.

LING 3322 Philosophy of Language (also PHIL 3320)
Fall. 4 credits. Staff.

LING 3333 Problems in Semantics—Quantification in Natural Language (also COGST/PHIL 3330)
Spring. 4 credits.

LING 4424 Computational Linguistics (also COGST 4240, CS 3470)
Fall. 4 credits. M. Rooth.

LING 4425 Pragmatics
Spring. 4 credits.

[LING 4428 Connectionist Psycholinguistics (also COGST 4280, LING 6628, PSYCH 4280/6280)
Fall. 3 credits. Offered alternate years; next offered 2010–2011. M. Christiansen.]

LING 4436 Language Development (also COGST/HD/PSYCH 4360)
Fall. 4 credits. B. Lust.

LING 4474 Introduction to Natural Language Processing (also COGST/CS 4740)
Fall. 4 credits. L. Lee.

LING 4500 Lab Course: Language Development (also COGST 4500, HD/PSYCH 4370)
Fall. 2 credits. In conjunction with COGST/HD/LING/PSYCH 4560. B. Lust.

Mathematics

[MATH 2810 Deductive Logic (also PHIL 3310)]

MATH 4810 Mathematical Logic (also PHIL 4310)
Spring. 4 credits. Offered alternate years.

MATH 4860 Applied Logic (also CS 4860)
Spring. 4 credits.

Neurobiology and Behavior

BIONB 1110 Brain, Mind, and Behavior (also COGST/PSYCH 1110)
Spring. 3 credits. R. Hoy and E. Adkins Regan.

BIONB 2210 Neurobiology and Behavior I: Introduction to Behavior
Fall. 3 or 4 credits.

BIONB 2220 Neurobiology and Behavior II: Introduction to Neurobiology
Spring. 3 or 4 credits.

BIONB 3260 The Visual System
Spring. 4 credits. H. Howland.

BIONB 3280 Biopsychology of Learning and Memory (also PSYCH 3320)
Spring. 3 credits. T. DeVood.

BIONB 3330 Introduction to Computational Neuroscience (also COGST/PSYCH 3300)
Fall. 3–4 credits. C. Linster.

BIONB 3920 Drugs and the Brain
Spring. 4 credits. R. Harris-Warrick and L. M. Nowak.

BIONB 3960 Introduction to Sensory Systems (also PSYCH 3960)
Spring. 3 or 4 credits. B. Halpern.

BIONB 4210 Effects of Aging on Sensory and Perceptual Systems (also PSYCH 4310/6310)
Fall. 3 or 4 credits. B. Halpern.

BIONB 4240 Neuroethology (also PSYCH 4240)
Spring. 4 credits.

BIONB 4260 Animal Communication
Spring. 4 credits.

BIONB 4920 Sensory Function (also PSYCH 4920/6920, VISST 4920)
Spring. 3 or 4 credits. H. Howland.

BIONB 4960 Bioacoustic Signals in Animals and Man
Fall. 3 credits. C. Clark and R. Hoy.
### Graduate Courses and Seminars

The following courses and seminars are generally for graduate students only. However, some may be appropriate for advanced undergraduates. The director of the minor must approve an undergraduate’s use of any course for satisfying the minor requirements.

#### Graduate Courses and Seminars

- **PHIL 4920** Psychology of Music (also PSYCH 6180)
  - Fall. 3 or 4 credits. C. Krumhansl.

- **PSYCH 4240** Neuroethology (also BIONB 4240)
  - Spring. 4 credits. C. D. Hopkins.

- **PSYCH 4250** Cognitive Neuroscience (also PSYCH 6250)
  - Fall. 4 credits. Next offered 2010–2011.
  - B. Finlay.

- **PSYCH 4260** Learning Language

- **PSYCH 4270** Evolution of Language (also COGST 4270, PSYCH 6270)
  - Fall. 3 credits. Offered alternate years.
  - M. Christiansen.

- **PSYCH 4280** Connectionist Psycholinguistics (also COGST 4280, LING 4428/6628, PSYCH 6280)
  - Fall. 3 credits. Offered alternate years; next offered 2010–2011.
  - M. Christiansen.

- **PSYCH 4310** Effects of Aging on Sensory and Perceptual Systems (also BIONB 4210, PSYCH 6310)
  - Fall. 3 or 4 credits. B. Halpern.

- **PSYCH 4360** Language Development (also COGST/HD 4360, LING 4436)
  - Spring. 4 credits. B. Lust.

- **PSYCH 4370** Lab Course: Language Development (also COGST/LING 4500, HD 4370)
  - Fall. 2 credits. In conjunction with COGST/HD/LING/PSYCH 4360. B. Lust.

- **PSYCH 4650** Topics in High-Level Vision: Embodied Cognition (also COGST 4650, CS 3920, PSYCH 6655)
  - Spring. 4 credits. Offered alternate years.
  - S. Edelman and M. Goldstein.

- **PSYCH 4910** Research Methods in Psychology (also COGST 4910/6910, PSYCH 6910)
  - Spring. 4 credits. V. Zayas.

- **PSYCH 4920** Sensory Function (also BIONB/VISIT 4920, PSYCH 6920)
  - B. Halpern and H. Howland.

#### Philosophy

- **PHIL 2620** Introduction to Philosophy of Mind
  - Fall. 4 credits.

- **PHIL 4310** Mathematical Logic (also MATH 4810)

#### Psychology

- **PSYCH 1102** Introduction to Cognitive Science (also COGST/CS 1101, LING 1170, PHIL 1910)
  - Fall. 3 or 4 credits. Staff.

- **PSYCH 1110** Brain, Mind, and Behavior (also BIONB 1111, COGST 1110)
  - Spring. 3 credits. R. Hoy and E. Adkins Regan.

- **PSYCH 2050** Perception (also PSYCH 6050)
  - Fall. 3 credits. J. Cutting.

- **PSYCH 2330** Introduction to Biopsychology
  - Spring. 3 credits. S. Edelman.

- **PSYCH 2510** Psychological Counseling (also COGST 2140)
  - Spring. 3 credits. S. Edelman.

- **PSYCH 2510** Psychology of Language (also COGST 2150, LING 2215/7715, PSYCH 7150)
  - Spring. 3 credits. M. Christiansen.

- **PSYCH 2520** Introduction to Biopsychology
  - Fall. 3 credits. D. Smith.

- **PSYCH 3050** Visual Perception (also VISIT 3305)
  - Spring. 4 credits. J. Cutting.

- **PSYCH 3160** Auditory Perception (also PSYCH 7160)
  - Spring. 3 or 4 credits. C. Krumhansl.

- **PSYCH 3260** Evolution of Human Behavior (also PSYCH 6260)
  - Spring. 4 credits. R. Johnston.

- **PSYCH 3300** Introduction to Computational Neuroscience (also BIONB/COGST 3300)
  - Fall. 3–4 credits. C. Linster.

- **PSYCH 3320** Biopsychology of Learning and Memory (also BIONB 3280, PSYCH 6320)
  - Spring. 3 credits. T. DeVoogd.

- **PSYCH 3420** Human Perception: Applications to Computer Graphics, Art, and Visual Display (also COGST 3420, PSYCH 6420, VISIT 3342)
  - Fall. 3 or 4 credits. D. Field.

- **PSYCH 3610** Biopsychology of Normal and Abnormal Behavior (also NS 3610)
  - Fall. 3 credits. B. J. Strupp.

- **PSYCH 3960** Introduction to Sensory Systems (also BIONB 3960, PSYCH 6060)

- **PSYCH 4120** Laboratory in Cognition and Perception (also PSYCH 6121)
  - Spring. 3 credits. D. Field.
COGST 7000  First-Language Acquisition (also HD 6370)
Spring. 3–4 credits. Prerequisites: COGST/HD/LING/PSYCH 3570 and permission of instructor. B. Lust.
For description, see HD 6370.

COGST 7100  Research in Human Experimental Psychology (also PSYCH 7100)
Fall or spring. Credit TBA. Prerequisite: permission of instructor.

CS 6670  Machine Vision
Spr. 4 credits. R. Zabih.

CS 6700  Advanced Artificial Intelligence
Spring. 4 credits. Prerequisite: CS 4700.

CS 6740  Natural Language Processing
Fall. 4 credits. Prerequisite: CS 4700. Not offered every year.

CS 6762  Introduction to Automated Reasoning (also COGST 6710)
Fall. 4 credits.

CS 6764  Reasoning about Knowledge
Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic.

CS 6766  Reasoning about Uncertainty
Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic.

CS 7794  Seminar in Natural Language Understanding
Fall and spring. 2 credits. C. Cardie.

CS 7970  Seminar in Artificial Intelligence
Fall and spring. 2 credits.

EDUC 6140  Gender, Context, and Epistemological Development (also FGSS 6240)
Fall. 3 credits. D. Schrader.

HD 6330  Language Acquisition Seminar (also COGST/LING 6633)
Fall. 3 credits. Prerequisite: COGST/HD/LING/PSYCH 4560 or equivalent. B. Lust.

LING 6609  Second Language Acquisition and the Asian Languages (also ASIAN 6610)

LING 6633  Language Acquisition Seminar (also COGST/HD 6330)
Fall. 1–4 credits. Prerequisite: COGST/HD/LING/PSYCH 4560 or equivalent. B. Lust.

LING 6688  Connectionist Psycholinguistics (also COGST/LING 4428, PSYCH 4280/6280)
Fall. 3 credits. Offered alternate years. M. Christiansen.

LING 7700  Graduate Seminars

MATH 6810  Logic
Spring. 4 credits.

MATH 7810–7820  Seminar in Logic
Fall and spring. 4 credits each.

MATH 7880  Topics in Applied Logic
Fall. 4 credits.

NBA 6630  Managerial Decision Making
Fall. 3 credits. J. Russo.

PHIL 7000  Graduate Seminars

[PSYCH 5500  Special Topics in Cognitive Science (also COGST 5500)]

PSYCH 6140  Cognitive Psychology (also COGST 6140)
Spring. 5 credits. S. Edelman.

PSYCH 6180  Psychology of Music (also PSYCH 4180)
Fall. 4 credits. C. Krumhansl.

PSYCH 6210  Behavioral and Brain Sciences (BBS)
Fall and spring. 4 credits each semester.

PSYCH 6270  Evolution of Language

[PSYCH 6280  Connectionist Psycholinguistics (also COGST/PSYCH 4280, LING 4428/6280)]

PSYCH 6310  Effects of Aging on Sensory and Perceptual Systems (also BIONB 4210, PSYCH 4310)
Fall. 3 or 4 credits. B. Halpern.

PSYCH 6650  Topics in High-Level Vision: Embodied Cognition (also COGST/PSYCH 4650, CS 3920)
Spring. 4 credits. S. Edelman and M. Goldstein.

PSYCH 6830  Affects and Cognition (also NRE 5070)
Fall. 4 credits. A. M. Isen.

PSYCH 6910  Research Methods in Psychology (also COGST 4910/6910, PSYCH 4910)
Spring. 4 credits. V. Zayas.

PSYCH 7160  Auditory Perception (also PSYCH 3160)
Spring. 4 credits. C. Krumhansl.

COLLEGE SCHOLAR PROGRAM
K. Gabard, director (55 Goldwin Smith Hall, 255-5792)

The College Scholar Program is described in the introductory section of Arts and Sciences.

COLLS 3970  Independent Study—Senior Project
Fall or spring. 1–4 credits. Prerequisite: permission of program office.

COLLS 4990  Honors Research
Fall or spring. 1–8 credits; max. 8 credits may be earned for honors research. Prerequisite: permission of program director. Each participant must submit brief proposal approved by honors committee.

COMPARATIVE LITERATURE

The Department of Comparative Literature provides a broad range of courses in European and non-European literature as well as visual and media studies. Courses stress significant authors, themes, problems, genres, historical periods, and theoretical perspectives. In cooperation with related departments in the humanities, the departmental offerings reflect current interdisciplinary approaches to literary study: hermeneutics, semiotics, deconstruction, cultural criticism, Marxism, reception aesthetics, feminism, and psychoanalysis.

The Major

The Department of Comparative Literature provides a broad range of courses in European as well as non-European literatures. Courses devoted to literary studies variously stress significant authors, themes, problems, genres, historical periods, and theoretical perspectives. The Department also offers an array of courses in visual and media studies and enables the study of literature in relation to the history and theory of film, video, and other arts, as well as media. In cooperation with related departments in the humanities, the department encourages the interdisciplinary study of literature—in conjunction with anthropology, history, philosophy, sexuality studies, psychology, sociology, and so forth. The course offerings reflect current theoretical approaches to literature, media, and the arts—hermeneutics, semiotics, deconstruction, cultural criticism, Marxism, postcolonialism, reception aesthetics, feminism, and psychoanalysis.

Requirements for the Major

All majors in Comparative Literature are expected to have completed 10 courses, half of which must be devoted to the study of works in cultures other than English in their original languages.

Five of these courses must be taken in the Department of Comparative Literature. One of these must be a Core Course, to be taken in the junior or the senior year. The designated core courses change each semester (for 2009–2010, COML 4220 [fall], COML 4020 [spring]). Students must earn a minimum grade of C for a course to be counted toward the major. If elected, an honors essay will also count as one of these required five courses.

An honors essay (COML 4930 [fall], COML 4940 [spring]) of roughly 50 pages is optional. It is to be written during the senior year under the direction of a faculty member, preferably from within the department, who has agreed to work in close cooperation with the student. Students are urged to begin research on their
thesis topic during the summer preceding their senior year.

Students who elect to do a double major with another literature department may count up to three courses from that major toward their requirements in Comparative Literature. The department encourages students to study abroad in pursuit of their cultural and linguistic interests, and the number of courses that may be counted toward the major will be determined in consultation with the faculty advisor and with the approval of the director of undergraduate studies.

The major enables students to pursue this commitment to a comparative study that includes a substantial non-English component by offering two tracks:

A. Comparative Literary Studies. This track is designed for students who wish to place greater emphasis on literary study in their course work. Students who select this track are required to complete:

1. Five courses in Comparative Literature at the 2000 level and above.
2. Two courses in literature or other areas of the humanities at the 2000 or higher level, to be taken in one or more foreign literature departments. Texts must be read in the original language. A student may offer one advanced-level foreign language course (conversation, composition, etc.) toward fulfilling this requirement.

B. Literary, Visual, and Media Studies. This track is designed for students who wish to pursue their comparative study of literature and theory by integrating rigorous work on film, video, or other arts and media. Students who select this track are required to complete:

1. Four courses in literary study at the 2000 or higher level offered by the Department of Comparative Literature or other humanities departments or programs.
2. Six courses in visual arts or media study at the 2000 or higher level offered by the Department of Comparative Literature or other humanities departments or programs.

The following guidelines might be used to determine whether a course in Literary, Visual, and Media Studies may be counted toward the five courses in non-English cultural study required of all majors. Where the media involve a large component of speech or writing (such as film, video, or hypertext), the student would need to work with this material in the original foreign language. Where text or speech in a foreign language is peripheral in a course that focuses on visual material (such as art or architecture) from non-English cultures, the student would need to draw on primary and secondary materials in a foreign language for oral reports, papers, and so forth. Because of the flexibility and interdisciplinary range of this track, students who select it should work closely with their faculty advisor to organize a coherent plan of study and to determine, with the approval of the Director of Undergraduate Studies, which courses satisfy the foreign language requirement of the major.

Honors
A student who completes the requirements for the major with a minimum grade point average of 3.5 is eligible for the degree of bachelor of arts with honors in Comparative Literature. The department bases its decision on the students achieving grades of at least B+ on the senior essay, in coursework for the major, and on their overall academic performance at Cornell.

First-Year Writing Seminars
Most 1000-level courses may be used toward satisfying the first-year writing seminar requirements. See “John S. Knight Institute for Writing in the Disciplines” for a full description of the first-year seminar program.

Courses

COML 2000 Introduction to Visual Studies (also ENGL 2920, VISST/ ARTH 2000) (LA-AS)
Spring. 4 credits. M. I. Dadi.
For description, see VISST 2000.

COML 2010 Great Books (LA-AS)
Fall. 4 credits. COML 2010 and 2020 may be taken independently of each other.

COML 2020 Great Books (LA-AS)
Spring. 4 credits. A. Banerjee.
The course traces the evolution of the story of the road as theme, trope, and organizing principle of seminal books from the Renaissance to the postmodern. Through readings of Rabelais, Cervantes, Swift, Sterne, Twain, Gogol, Conrad, Hemingway, Nabokov, and Keroaus, literary adventures structure our experience of the world.

COML 2030 Introduction to Comparative Literature (LA-AS)
Spring. 4 credits. P. Liu.
The course is intended to answer the question persistently asked by undergraduates: “What is Comparative Literature, anyway?” We will learn about different approaches to Comparative Literature and study the literatures of five different national/historical traditions: (Kafka, Faulkner, Lu Xun, Platonov, and Murakami). We will also read philosophical writings and works of literary criticism and ask three questions: (1) Why do Comparatists want to learn foreign languages and work with texts in the original? (2) How do we compare cultures and texts? (3) Is there such a thing as “world literature”? Writing assignments will include critical essays, short response papers, and creative projects.

COML 2040 Global Fictions (CA-AS)
Spring. 4 credits. N. Melas.
This course will be an introduction and an inquiry into global perspectives on fiction. Can the reading of fiction point us toward becoming citizens of the world? How might we know this world? How might we imagine it? We will consider the condition of the stranger in this global era as well as construct a geography of reading. Readings will be drawn mainly but not only from the contemporary period and outside Europe. Readings will change depending on instructor but may include works of Rusdie, Migrant Magazines, McSweeney’s, Conde, Munif, Castellanos, Oe, Ngugi, Wolf, Kincaid, and Homer.

COML 2050 Introduction to Poetry (LA-AS)
[COML 3040 Europe and Its Others: An Introduction to the Literature of Colonialism @ (LA-AS)]
Fall. 4 credits. Next offered 2010–2011.
N. Melas.]

COML 3150 Literature and Media in Japan (also ASIAN/VISST 3318)
Fall. 4 credits. B. de Bary.
For description, see ASIAN 3318.

COML 3260 Christianity and Judaism (also RELST 3260) # (LA-AS)
Spring. 4 credits. C. Carmichael.

COML 3280 Literature of the Old Testament (also RELST 3280) # (LA-AS)
Fall. 4 credits. C. M. Carmichael.
Analysis of short sections of well-known material for in-depth discussion.

COML 3300 Political Theory and Cinema (also FILM 3300, GOVT 3705, FILM 3290) (CA-AS)
Spring. 3 credits. G. Waite.
For description, see GERST 3550.

COML 3440 The Tragic Theatre (also CLASS 3645, THETR 3450) # (LA-AS)
Spring. 4 credits. F. All.
For description, see CLASS 3645.

COML 3480 Shakespeare and Europe (also ENGL 3550) # (LA-AS)
Fall. 4 credits. W. J. Kennedy.
In their own times, Shakespeare’s plays registered a strong interest in the culture and society of Renaissance Europe beyond England. In later times, they cast a powerful spell over culture and society in 19th- and 20th-century Europe. This course will examine their debts to and influences upon continental drama. Readings will focus upon Shakespeare’s plays in relation to Italian comedy, early French tragedy, and plays by Friedrich Schiller, Bertolt Brecht, and Luigi Pirandello.

COML 3550 Decadence (also ENGL/FGSS 3550) (LA-AS)
Spring. 4 credits. E. Hanson.
For description, see ENGL 3550.

COML 3620 The Culture of the Renaissance II (also ARTH 3420, ENGL 3240, FREN 3620, HIST 3640, MUSIC 3242) # (CA-AS)
W. J. Kennedy.]

COML 3630 The European Novel # (LA-AS)
Fall. 4 credits. N. Saccamano.
This course will survey the history of the novel until the mid-19th century, focusing on the social, literary, and philosophical significance of its narrative forms. Topics to be discussed: the novel as a site of conflict between “high” and “low” culture; the relation of fictional narrative to historical and autobiographical narrative; the gender politics and class ideology of romance. Texts may include Lazzarillo de Tonnis or Cervantes’ Don Quixote. Fielding’s Tom Jones, Laclos’s Dangerous Liaisons, Goethe’s The Sorrows of Young Werther, Bronte’s Wuthering Heights.

COML 3640 The European Novel # (LA-AS)
Staff.

COML 3650 Contemporary Fiction # (LA-AS)
B. Maxwell.]

COML 3701 Global Martial Arts Film and Literature (also ASIAN 3370, FILM 3701)
Spring. 4 credits. Required: weekly film viewings W 7:30–9:30 p.m.; enrollment in sec 101. P. Liu.
With recent blockbusters such as Kill Bill, Kung Fu Hustle, Hero, and The Matrix; a spiritual and bodily discipline from medieval Asia called “martial arts” has turned into an object of popular consumption in transnational cinema. This course studies the Asianization of global postmodern culture by comparing the historical routes, institutional bases, and ideologies of representations of martial arts in film and literature. Our questions will range from the historical origins of martial arts and martial arts cinema; differences between “wuxia” and “kung fu”; contemporary Hong Kong, Taiwan, and Hollywood popular culture; Orientalism, race, and masculinity in transnational cinema; kinship, rites, honor, and duty in Chinese society; kung fu as philosophy; and the relation of martial arts to women, ethics, nation, work, and pleasure.

COML 3723 The Arabian Nights Now and Then (NES 3723/6723) # (LA-AS)
Fall. 3 credits. T. Tsuwa.
For description, see NES 3723.

COML 3735 Puppetry: Comic, Dramatic, and Political
Spring. 4 credits. B. Maxwell.
Puppetry is eminently suited to cross-cultural, cross-generational aesthetic study, and such an inquiry is what I propose. It will perhaps need little discussion if I also mention that puppetry might well be the most frequently used metaphor in characterizations of political life and operations, including electoral politics, but also authoritarian systems. At the same time, puppetry as practice, not metaphor, has been an immense, longstanding, and perennially effective reservoir for political protest. I would plan to include throughout the course attention to aesthetic and political theories that have illuminated puppetry (and in some cases might be illuminated by it: a puppet theatre debate between feminists, Marxists, and deconstructionists, referred to a puppet homeless person, for example).

COML 3799 Imagining the Other, Jews and Arabs in Contemporary Literature and Film (also NES/JWST 3799) # (LA-AS)
Fall. 3 credits. D. Stark.
For description, see NES 3799.

COML 3800 Poetry and Poetics of Americas (also AMST 3820, LATA/SPAN 3800) (LA-AS)
Fall. 4 credits. J. Monroe.
As globalization draws the Americas ever closer together, reshaping our sense of a common (uncommon) American culture, what claims might be made for a distinctive, diverse “poetry of the Americas?” How might we characterize its dominant forms and alternative practices? What shared influences, affiliations, concerns and approaches might we find and what differences emerge? Ranging across North and South America, Central America and the Caribbean, this course will place in conversation such figures as Whitman, Neruda, Poe, Borges, Dickinson, Martí, Stein, Darío, Williams, Mistry, Pound, Sebald, Borges, Rich, Césaire, Walcott, Glissant, Oppen, Brathwaite, Parra, Ashbery, Zuri, Bernstein, Harjo, Perdomo, Cisneros, Castillo, and Vicuna. All texts not written in English will be available in translation as well as in the original.

COML 3840 Art of Historical Avant-Garde (also GERST/ROMS 3770, ART/HVISST 3720) (LA-AS)
Spring. 4 credits. P. McBride.
For description, see GERST 3770.

COML 3850 Partition/Fiction and Film (also ASIAN 3389, VISST 3851)
Fall. 4 credits. A. Banerjee.
The Partition of 1947 remains the defining moment of the birth of the nation in India, Pakistan, and Bangladesh. While academic discourse has only recently begun to tackle the human dimensions of this incredibly traumatic event—with an estimated million dead and twelve million displaced—Partition has been a rich subject for literature and cinema over the last half century. Now more than ever before, it continues to serve as a fulcrum in creating narratives of national, religious, linguistic, and gendered identity. The course surveys fictional and filmic treatments of the Partition from 1947 to 2007.

COML 3860 Literature and Film of South Asia (also ASIAN 3387, VISST 3870) @ (CA-AS)
A. Banerjee.

COML 3901 Poetry’s Image
J. Monroe.

COML 3980 Theories of Gender and Race in Asian Histories and Literatures (also ASIAN 3388, 6588, COML 6680, FGSS 3560/6580) @ (CA-AS)
N. Saka.

COML 4000 Forms of the Novel (LA-AS)
Fall. 4 credits. Next offered 2010–2011.
P. Liu.

COML 4020 Dis/abled Bodies: Literature, Philosophy, and Culture
Spring. 4 credits. Core course for COML majors. Limited to 15 students. A. Weiner.
This seminar will question ideas about what constitutes a “normal” or “able” body, seeking instead to respond to literary, philosophical, and cultural articulations of physical, mental, emotional, and sensory differences. We will engage various debates in disability studies in order to challenge assumptions and posit new models of imagining the body, its interpretive and performative spaces, and the ethical valences of its transgressions. We’ll also consider the possibilities and problems of what a “rights”-based discourse means for (re) defining disability socially and politically. Literary works from Sophocles, Shakespeare, Mary Shelley, Kafka, Faulkner, and Coetzee will be placed in dialogue with critical and theoretical readings from Freud, Kristeva, Foucault, Elaine Scarry, Jean-Luc Nancy, Judith Butler, Donna Haraway, Rosemarie Garland-Thomson, and Tobin Siebers.
COML 4065  Life as We Know It:  
Readings in the BioPolitical 
Paradigm (also SHUM/ITAL 4822)  
Fall. 4 credits. T. Campbell. 
For description, see SHUM 4822.

COML 4066  Secular Disaffections: 
On Islam and the Politics of Emotion 
(also SHUM/RELSST 4823, NES 4923)  
Fall. 4 credits. R. Mas. 
For description, see SHUM 4823.

[COML 4100  Science, Technology, and 
Culture (also STS 4101) (CA-AS)]  
Fall. 4 credits. Next offered 2010–2011. 
A. Banerjee.]

COML 4115  Link, Network, Nexus 
(also FREN/SHUM 4936, GOVT 4748, STS 
4361)  
Spring. 4 credits. B. Massumi. 
For description, see SHUM 4936.

COML 4190–4200  Independent Study  
4190, fall; 4200, spring. Variable credit. 
COML 4190 and 4200 may be taken 
individually of each other. Applications 
available from the Goldwin Smith Hall. 
Students must prepare a proposal for 
independent study (proposal forms are 
available in the Office of Undergraduate 
Admissions and Advising, 55 and 172 
Goldwin Smith Hall).

COML 4220  Literature and Oblivion 
(LA-AS)  
Fall. 4 credits. Core course for COML 
majors. Limited to 15 students. N. Melas. 
This course will attempt a critical study of 
the powers of art against oblivion. We will 
start with the paradox whereby poetic language 
necessarily destroys that which it seeks to 
preserve, just as a monument substitutes for 
the loss object it commemorates. A central 
concern will be the relation of art to history, 
particularly when art’s negations encounter 
powerful worldly negations, such as those 
around gender difference and colonial 
domination. Framed by Homer’s Iliad and 
Derek Walcott’s “postcolonial” Caribbean epic 
Omeros, the readings will also be a 
comparative exercise in reading across time 
and space and will include theoretical texts 
(Plato, Hegel, Nietzsche, Blanchot, Benjamin, 
Patterson) alongside literature. Particular 
attention will be directed to improving critical 
writing skills.

COML 4250  Marx, Nietzsche, Freud 
(also GERST 4150, GOVT 4735) # (CA-AS)  
Fall. 4 credits. G. Waite. 
For description, see GERST 4150.

COML 4260  New Testament Seminar 
(also RELST 4260) # (HA-AS)  
Spring. 4 credits. Limited to 15 students. 
C. Carmichael. 
Topic: Sex and religion in the Bible. 
Identification and discussion of problems in 
the New Testament. Discussing attitudes to 
sexuality in the Bible, we will examine in Old 
and New Testament texts the clash between 
ancestral behavior and subsequent laws, as 
well as the contrast between legal and 
religious ideas. Topics will include: 
marrige and divorce, incest, intermarriage, 
gender discrimination, guilt and shame, 
homosexuality, women and purity, 
sexual language and symbols. It should be possible 
to say something new about these topics and 
also, because of the perennial nature of the 
issues, to say something that is relevant to 
contemporary life.

COML 4280  Biblical Seminar (also RELST 
4280) # (HA-AS)  
Fall. 4 credits. Limited to 15 students. 
C. Carmichael. 
A study of how biblical ethical and legal rules 
(in Exodus, Leviticus, and Deuteronomy) 
comment on incidents in the biblical 
narratives (Genesis–2 Kings). The link 
between law and narrative enables us to 
observe in detail how ancient thinkers 
evaluate ethical and legal problems of 
perennial interest.

COML 4290  Postcolonial Poetry and the 
Poetics of Relation (also COML 6350, 
ENGL 4840/6850, FREN/SPAN 
4350/6350)  
Spring. 4 credits. Limited to 15 students. 
J. Monroe. 
What kinds of poetry might be usefully 
characterized as “postcolonial” and what are 
the stakes of such a designation? What relation 
do specific poetic features have to 
geo-political, cultural, historical, economic 
circumstances, and to the condition(s) of what 
has come to be called the “postcolonial” in 
particular? With special reference to Edouard 
Glissant’s influential concept of a “poetics of 
relation,” attending as well to our own 
situatedness as readers—perhaps also, though 
not necessarily, as writers—of poetry within 
U.S. (and) academic context(s), this seminar 
will focus on Caribbean and U.S. poetry 
that is especially fruitful sites for exploring a diversity 
of approaches to these and related questions 
concerning postcoloniality, poetry, community, 
language, culture, and identity.

COML 4365  Caribbean Crossings (also 
COML 6365) (CA-AS)  
Spring. 4 credits. N. Melas. 
A critical overview of Caribbean literature in 
French, English, and Creole with particular 
attention to the historical, political and 
aesthetic nodes of connection and 
disconnection between them. Topics will 
include the differential cultures of the 
plantation system and forms of resistance to it, 
nationalist and anti-colonial movements, 
language and racial politics, local cultures in 
global flows, and changing knowledge of French 
helpful but not required.

[COML 4380  Arendt, Morisaki, Weil (also 
ASIAN 4468/6668, COML 6240) (KCM- 
AS)]  
Spring. 4 credits. Limited to 20 students. 
Next offered 2010–2011. B. de Bary.] 

[COML 4430  Cold War Aesthetics in East 
Asia (also COML 6430) # (LA-AS)]  
Spring. 4 credits. Limited to 15 students. 
L. P. Liu. 
This course is concerned with literature, 
music, film, and the Cold War in East Asia—the 
“partitioning” of China, Japan, and Korea into 
mutually hostile and temporally 
de-synchronized “zones” in the post-WWII era. 
How do aesthetic works explore this historical 
trauma and ideological rift? Beginning with 
the major historical and social scientific writings 
on the formation of “East Asia” as a region, 
we will study the shifting relations between U.S. 
and East Asian cultures through a comparison 
of two case studies: the creation of North 
Korea/South Korea, and the division/unification 
of Taiwan/China. We will compare Korean and 
Chinese histories of anti-Communism, 
responses to the legacy of Japanese 
colonialism, industries of popular culture, and 
the strategic positions of South Korea and 
Taiwan as U.S. security concerns.

[COML 4500  Renaissance Poetry (also 
ENGL 6500, ENGL 6220, ITAL 
4500/6500) # (LA-AS)]  
Fall. 4 credits. Next offered 2010–2011. 
W. J. Kennedy.]

COML 4515  Ariosto, Rabelais, Spenser 
(also COML 6515, ENGL/ROMS 
4515/6515) (LA-AS)  
Fall. 4 credits. W. J. Kennedy. 
A study of competing claims between 
narrative forms and national ideologies in 
Ariosto’s epic romance, Orlando Furioso (Italy, 
1516–32); Rabelais’s prose fiction, 
Gargantua and Pantagruel (France, 1532–52); 
and Spenser’s allegorical epic, 

[COML 4520  Renaissance Humanism 
(also COML 6520) # (LA-AS)]  
Spring. 4 credits. Limited to 15 students. 

[COML 4580  Narratives of Travel, 
Migration, and Exile (CA-AS)]  
Fall. 4 credits. Limited to 15 students. 
Next offered 2010–2011. A. Banerjee.]

COML 4600  New York, Paris, Baghdad: 
Poetry of the City (also NES 4727, 
FREN 4080)  
Spring. 4 credits. S. Toruwa. 
For description, see NES 4727.

COML 4675  Creativity and Constraints 
(also FREN 4520)  
Spring. 4 credits. T. McNulty. 
For description, see FREN 4520.

[COML 4700  Translation and Cultural 
Difference (also ASIAN 4481) # 
(KCM-AS)]  
Fall. 4 credits. Limited to 15 students. 
For description, see ASIAN 4481.

COML 4740  Topics in Modern European 
Intellectual and Cultural History 
(also HIST 4740, JWST 4674)  
Fall. 4 credits. Prerequisite: permission of 
instructor. D. LaCapra. 
Topic: History and the Human Animal. For 
description, see HIST 4740.

[COML 4800  Baudelaire in the Lyric # 
(LA-AS)]  
J. Culler.]

[COML 4810  Studies in Gender Theory: 
Kinship and Embodiment (also FGSS 
4800) (CA-AS)]  
Spring. 4 credits. Limited to 15 students. 

COML 4830  Imagining the Holocaust 
(also ENGL/JWST 4580, GERST 4570) 
(LA-AS)  
Spring. 4 credits. D. Schwarz. 
For description, see ENGL 4580.

COML 4860  Contemporary Poetry and 
Poetics (also COML 6865, ENGL/ 
SPAN 4880) (LA-AS)  
Fall. 4 credits. Limited to 15 students. 
J. Monroe. 
What gives contemporary poetry and poetics 
sits resonance and value? What are its 
dominant features, audiences, and purposes? 
In an increasingly global, pervasively 
technological culture, what’s become of such 
familiar distinctions as the “traditional” and 
the “experimental,” the “mainstream” and the 
“alternative”? How does contemporary poetry 
situate itself among other genres, disciplines, 
discourses, and media? How are we to
understand its evolving public spheres and its relation to the central cultural and historical developments of our time? With special attention to poetry since 9/11, this seminar will explore these and related questions in a range of works that open onto the rich interplay of contemporary poetry and poetics with issues concerning personal and collective identity, language, and culture.

**COML 4900 Energy, Empire, Modernity (also COML 6900)**

Fall. 4 credits. Limited to 15 students. A. Banerjee.

The course examines steam, electricity, nuclear power, and petroleum at the conjuncture of coloniality and modernity. By juxtaposing literary, visual, philosophical, and social scientific treatments from the western/northern perspective with those from colonial and postcolonial ones, we will attempt to generate a critical vocabulary for the ways in which energy becomes the index of power in both the literal and figurative sense. Texts include Joseph Conrad's *Heart of Darkness*, Khushwant Singh's *Train to Pakistan*, Arundhati Roy's *Power Politics*, Abdrerehman Muni's *Cities of Salt*, Amos Tutuola's *The Palm-Wine Drinkard*, Andrei Tarkovsky's *Stalker*, and Stephen Gaghan's *Syriana*.

**COML 4930-4940 Senior Essay**

Fall and spring. 8 credits. Times TBA individually in consultation with the director of Senior Essay Colloquium. Approximately 50 pages to be written over the course of two semesters in the student's senior year under the direction of the student's advisor. An A grade is assigned on the basis of research and a preliminary draft completed in the first semester. A letter grade is awarded on completion of the second semester.

**COML 4940 Imagining the Mediterranean (also JWST/NE/S 4736) @ (LA-AS)**

Spring. 4 credits. G. Holst-Warhaft.

For description, see NES 4738.

**COML 6020 Literature and Theory (also ENGL 6500)**

**COML 6050 Contemporary Global Fiction (also ENGL 6830)**

Fall. 4 credits. Please prepare the assignment listed on the course's Blackboard site for the first meeting of the class, W. Sept. 2. W. Cohen.

Criticism by Jameson, Casanova, Moretti, Spivak, and other leading cultural theorists.

**COML 6051 Theory of the Theatre and Drama (also GERST 4310, THETR 4310/6310)**

Fall. 4 credits. H. Yan.

For description, see THETR 6310.

**COML 6160 Translation, in Theory (also ASIAN 6619, VISST 6190)**

Spring. 4 credits. B. de Bary.

For description, see ASIAN 6619.

**COML 6185 Introduction to Systems Theory (also GERST 6190)**

Fall. 4 credits. P. Gilgen.

For description, see GERST 6190.

**COML 6190-6200 Independent Study**

6190, fall; 6200, spring. Variable credit. COML 6190 and 6200 may be taken independently. 4 credits of each other. Applications available in 247 Goldwin Smith Hall.

**COML 6235 Heidegger's Literature (also GERST 6650)**

Fall. 4 credits. A. Schwarz.

For description, see GERST 6650.

**COML 6240 Arendt, Morisaki, Wel (also ASIAN 4468/6668, COML 4380)**

**COML 6300 Aesthetics in the 18th Century (also ENGL 6300)**

**COML 6333 Negrismo and Négritude: Modernism and the Emergence of Africanist Poetics and Politics in the Caribbean (also SPAN 6150)**

Fall. 4 credits. G. Aching.

For description, see SPAN 6150.

**COML 6340 Deleuze and Lyotard: Aesthetics (also ENGL 6290, FREN 6720, VISST 6340)**

**COML 6350 Postcolonial Poetry and the Poetics of Relation (also COML 4290, ENGL 4840/6830, FREN/SPAN 6350)**

Spring. 4 credits. Limited to 15 students. J. Monroe.

For description, see COML 4290.

**COML 6360 Comparative Modernisms/Alternative Modernities**

**COML 6365 Caribbean Crossings (also COML 4365)**

Spring. 4 credits. N. Melas.

For description, see COML 4365.

**COML 6380 The 18th Century and the Emergence of Literary Modernity (also ASIAN 6626)**

**COML 6410 Derrida, Writing, and the Institution of Literature (also ENGL 4410/6420)**

**COML 6465 Black Feminist Theories (also ASRC/ENGL 6207)**

Fall. 4 credits. C. Boyce Davies.

For description, see ASRC 6207.

**COML 6500 Renaissance Poetry (also COML 4500, ENGL 6220)**

**COML 6515 Ariosto, Rabelais, Spenser (also COML 4515, ENGLISH/ROMS 4515/6515)**

Fall. 4 credits. W. J. Kennedy.

For description, see COML 4515.

**COML 6520 Renaissance Humanism (also COML 4520)**

**COML 6675 Derrida and Philosophy of Hospitality (also GOVT 6675, HADM/ENGL 5590)**

Fall. 4 credits. D. Rubenstein and L. Shaffer.

For description, see GOVT 6675.

**COML 6710 Transnational Imaginaries: Globalization and Culture**

**COML 6720 Topics in Modern European Intellectual and Cultural History (also HIST 6720)**

Fall. 4 credits. D. LaCapra.

For description, see HIST 6720.

**COML 6723 The Arabian Nights, Then and Now (also COML 3723, NES 3723/6723)**

Fall. 4 credits. S. Toorawa.

For description, see NES 6723.

**COML 6791 Acoustic Horizons: Aesthetics and Politics of Sound in Theory, Film, and New Media (also ENGL 6791)**

**COML 6792 Theory of the Lyric (also ENGL 6792)**

Fall. 4 credits. J. Culler.

For description, see ENGL 6792.

**COML 6820 Cultural Materialism and Geopolitics**

Fall. 4 credits. Limited to 15 students. P. Liu.

What is a "materialist" analysis of culture? Are the "material" and the "cultural" mutually exclusive? This course examines the foundational texts in "cultural materialism" (Marx, Lukacs, Gramsci, Althusser, Spivak, Jameson) and the implications of a dualistic construction of material vs. cultural life for geopolitical thinking. We will be interested in the different ways in which tropes of "matter" and "world" are appropriated to delineate new temporal and spatial relations in postcolonial conversations (Fanon, Said, Lye, Chatterjee, Gilroy). By paying special attention to debates about uneven development, the materiality of race and the body, and alternative modernities, we will seek to understand "materialism" itself as an overdetermined category in 20th-century political history.

**COML 6860 Althusser and Lacan (also FRLIT 6230, GERST 6860, GOVT 6790)**

Fall. 4 credits. G. Waite.

For description, see GERST 6860.

**COML 6865 Contemporary Poetry and Poetics (also COML 4860, ENGL/SPAN 4880)**

Fall. 4 credits. J. Monroe.

For description, see COML 4860.

**COML 6900 Energy, Empire, and Modernity (also COML 4900)**

Fall. 4 credits. A. Banerjee.

For description, see COML 4900.

**COML 6921 Digital Bodies, Virtual Identities (also ENGL 6960, THETR 6330)**

**COML 6970 Cosmopolitanism (also ENGL 6970)**

COMPUTER SCIENCE

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in Computer Science. For details, visit our web site at www.cs.cornell.edu/ugrad.

The Major

CS majors take courses covering algorithms, data structures, logic, programming languages, systems, and theory. Electives include artificial intelligence, computer graphics, computer vision, cryptography, databases, networks, and scientific computing. Requirements include:

- MATH 1110, 1120 (or 1220) and 2210 or (MATH 1910, 1920, and 2940)
- two semesters of introductory computer programming (CS 1110 and CS 2110 or CS 1112, 1130, and 2110). CS 1114 is an honors-level substitute for CS 1112.
- a five-course computer science core (CS 2800, 3110, 3410, or 3420: 4410, and 4820)
- three 4000+ level computer science electives (CS 4999 not allowed; CS 3220 and CS 3810 allowed). If CS 2800 was taken before Spring 2009, CS 3810 or CS 4810 must be either one of these electives or one of the technical electives (see below).
- a computer science project course (CS 4121, 4221, 4411, 4450, 4621, 4701, 5150, 5410, or 6670)
- three 3000+ level courses (only one of ENGRD 2700 or MATH 2930 may be counted) that are technical in nature, as determined by the major.
- a three-course “external specialization” in a topic other than computer science; all numbered 3000 level or greater
- one of BTRY 4080, ECE 3100, ECON 3190, ENGRD 2700, MATH 4710. CS majors in the Engineering College can use ECE 3100 as a substitute for ENGRD 2700 in satisfying the engineering distribution requirements.
- an elective requirement consisting of a single 3+ credit course or a combination of courses coming to 3+ credits total. Roughly speaking, all academic courses (inside or outside of CS) count. No PE courses, courses numbered 10xx, or ROTC courses below the 3000 level are allowed.

All the major electives described above must be courses of at least 3 credits, with the exception of the CS project course, which is at least 2 credits, or as otherwise specified.

Additionally, students’ course selections must satisfy the requirements of at least one “vector” or CS-centric specialization, defined by the department. The set of vectors at the time of this writing include artificial intelligence, computational science and engineering, data-intensive computing, graphics, human-language technologies, network science, programming languages, security and trustworthy systems, software engineering/code warrior, systems, theory, and a broad “Renaissance” vector. See www.cs.cornell.edu/ugrad for the requirements of each vector.

The program is broad and rigorous, but it is structured in a way that supports in-depth study of outside areas. Intelligent course selection can set the stage for graduate study and employment in any technical area and any professional area such as business, law, or medicine. With the advisor, the Computer Science major is expected to put together a coherent program of study that supports career objectives and is true to the aims of liberal education.

Admission

All potential affiliates are reviewed on a case-by-case basis relative to the following criteria:

- a grade of C or better in all CS courses and MATH courses
- a GPA of 2.5 or better in CS 2110 and 2800.
- a GPA of 2.5 or better in MATH 1120 (or 1220 or 1920) and 2800.

Courses used in the affiliation GPA computations may be repeated if the original course grade was below a C. The most recent grade will be used for all repeated courses. Qualifying courses must be taken at Cornell. Departmental honors in Computer Science is granted to students who have maintained a cumulative GPA greater than or equal to 3.5 and completed a set of coherent courses and research activities that satisfy the following requirements:

- at least one CS course (at least 3 credit hours) at or above the 5000 level with a grade of A– or better; no seminars.
- at least two 3-credit semesters of CS 4999 (Independent Research) with a CS faculty member, with grades of A– or better each semester.

Latin Designations (appended to the degree), awarded by the field of Computer Science for all who qualify as stated above, are based on the final cumulative GPA, as follows:

- cum laude
- magna cum laude
- summa cum laude

Note: Honors courses may not be used to satisfy the CS 4000+ elective requirement, the CS project requirement, the technical electives, or the 3+ credit elective. See the CS undergraduate web site for more information on eligibility: www.cs.cornell.edu/ugrad.

Computing in the Arts Undergraduate Minor

A minor in Computing in the Arts with an emphasis on computer science is available both to Computer Science majors and to students majoring in other subjects. For more information, see p. 531.

Courses

For complete course descriptions, see “Computer Science” under “Computing and Information Science (CIS).”

CS 1109 Fundamental Programming Concepts
Summer. 2 credits. Pre-freshman standing or permission of instructor. Prerequisites: none. S–U grades only.

CS 1110, 1112 Introduction to Computer Programming (MQR)
Fall, spring, summer. 4 credits. Students may not receive credit for CS 1110, 1112, 1113, 1114 and BEE 1510.

CS 1110, CS 1112, and CS 1114 are all described in the “Computing and Information Science (CIS)” section.

CS 1130 Transition to Object-Oriented Programming
Fall, spring. 1 credit. Prerequisite: one course in programming. S–U grades only.

CS 1132 Transition to Matlab
Fall, spring. 1 credit. Prerequisite: one course in programming. S–U grades only.

CS 1300 Introductory Design and Programming for the Web (also INFO 1300)
Fall. 4 credits.

CS 1610 Computing in the Arts (also CIS/ENGR 1610, DANCE 1540, FILM 1750, MUSIC 1465, PSYCH 1650) (LA-AS)
Fall. 3 credits. Recommended: good comfort level with computers and some of the arts.

CS 1620 Visual Imaging in the Electronic Age (also ARCH 3702, ART 1700, CIS/ENGR 1620)
Fall. 5 credits.

For description, see ART 1700.

CS 1710 Introduction to Cognitive Science (also COGST 1101, LING 1170, PHIL 1910, PSYCH 1102) (KCM-AS)
Fall, summer. 3 credits.

For description, see COGST 1101.

CS 2022 Introduction to C
Fall, spring, usually weeks 1–4. 1 credit. Prerequisite: one programming course or equivalent programming experience. Credit granted for both CS 2022 and 2024 only if 2022 taken first. S–U grades only.

CS 2024 C++ Programming
Fall. 2 credits. Prerequisite: one programming course or equivalent programming experience. Students who plan to take CS 2022 and 2024 must take 2022 first. S–U grades only.

CS 2026 Introduction to C #
Spring, usually weeks 5–8. 1 credit. Prerequisite: CS/ENGRD 2110 or equivalent experience. S–U grades only.

CS 2042 Unix Tools
Fall, usually weeks 5–8. 1 credit. Prerequisite: one programming course or equivalent programming experience. S–U grades only.

CS 2044 Advanced UNIX Programming and Tools
Spring, usually weeks 5–8. 1 credit. Prerequisite: CS 2042 or equivalent. S–U grades only.

CS 2110 Object-Oriented Programming and Data Structures (also ENGRD 2110) (MQR)
Fall, spring, summer. 3 credits. Prerequisite: CS 1110, CS 1130, or CS 1113 (CS 1112 if completed before fall 2007) or equivalent course in Java or C++.
CS 2300  Intermediate Design and Programming for the Web (also INFO 2300)
Spring. 3 credits. Prerequisite: CS 1300 strongly recommended.

CS 2800  Discrete Structures (MQR)
Fall, spring. 3 credits. Pre- or corequisite: one programming course or permission of instructor.

CS 2850  Networks (also ECON/INFO 2040, SOC 2090) (SBA-AS)
Spring. 4 credits. Prerequisites: none.

CS 3110  Data Structures and Functional Programming (MQR)
Fall, spring. 4 credits. Prerequisite: CS 2110 and 2111 or equivalent programming experience. Pre- or corequisite: CS 2800. Should not be taken concurrently with CS 3410 or 3420.

CS 3220  Introduction to Scientific Computation (also ENGRD 3220)
Spring, summer. 3 credits. Prerequisites: CS 1112 or 1132 and MATH 2220, 2250, or 2940.

CS 3300  Data-Driven Web Applications (also INFO 3300)
Fall, spring. 3 credits. Prerequisite: CS/ENGRD 2110 and (CS 2300 or permission of instructor). CS majors may use only one of the following toward their degree: CS/INFO 3500 or CS 4211.

CS 3410  Systems Programming
Spring. 4 credits. Prerequisites: CS 2110 or equivalent programming experience. Should not be taken concurrently with CS 3110.

CS 3420  Computer Organization (also ECE 3140)
Spring. 4 credits. Prerequisite: CS 2110 or ENGRD 2500. Should not be taken concurrently with CS 3110.

CS 3740  Computational Linguistics (also COGST 4240, LING 4424) (MQR-AS)
Fall or spring. 4 credits. Recommended: CS 2042.

CS 3810  Introduction to Theory of Computing
Fall, summer. 3 credits. Prerequisite: CS 2800 or permission of instructor.

CS 4120  Introduction to Compilers
Fall. 3 credits. Prerequisites: CS 3110 or permission of instructor and CS 3410 or 3420. Corequisite: CS 4121.

CS 4121  Practicum in Compilers
Fall. 2 credits. Corequisite: CS 4120.

CS 4210  Numerical Analysis and Differential Equations (also MATH 4250) (MQR)
Fall. 4 credits. Prerequisites: MATH 2210 or 2940 or equivalent, one additional mathematics course numbered 3000 or above, and knowledge of programming.

CS 4220  Numerical Analysis: Linear and Nonlinear Equations (also MATH 4260) (MQR)
Spring. 4 credits. Prerequisites: MATH 2210 or 2940 or equivalent, one additional mathematics course numbered 3000 or above, and knowledge of programming.

CS 4300  Information Retrieval (also INFO 4300)
Fall. 3 credits. Prerequisite: CS 2110 or equivalent.

CS 4302  Web Information Systems (also INFO 4302)
Spring. 3 credits. Prerequisites: CS 2110 and some familiarity with web site technology.

CS 4320  Introduction to Database Systems
Fall. 3 credits. Prerequisites: CS 3110 (or 2110, 2111, and permission of instructor).

CS 4321  Practicum in Database Systems
Fall. 2 credits. Pre- or corequisite: CS 4320. CS majors may use only one of the following toward their degree: CS/INFO 3500 or CS 4211.

CS 4410  Operating Systems
Fall. 3 credits. Prerequisite: CS 3410 or 3420.

CS 4411  Practicum in Operating Systems
Fall. 2 credits. Corequisite: CS 4110.

CS 4420  Computer Architecture (also ECE 4750)
Fall. 4 credits. Prerequisites: ENGRD 2300 and CS 3420/ECE 3140.

CS 4620  Introduction to Computer Graphics (also ARCH 3704)
Fall. 3 credits. Prerequisite: CS/ENGRD 2110.

CS 4621  Computer Graphics Practicum
Fall. 2 credits. Pre- or corequisite: CS 4620.

CS 4700  Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: CS 2110 and 2800 (or equivalent).

CS 4701  Practicum in Artificial Intelligence
Fall. 2 credits. Pre- or corequisite: CS 4700.

CS 4740  Introduction to Natural Language Processing (also COGST 4740, LING 4474)
Spring. 4 credits. Prerequisite: CS 2110.

CS 4780  Machine Learning
Spring. 4 credits. Prerequisites: CS 2110, CS 2800, or basic probability theory, and basic knowledge of linear algebra.

CS 4782  Probabilistic Graphical Models (also BTRY 4790)
Fall. 4 credits. Prerequisites: probability theory (BTRY 4090 or equivalent), programming and data structures (CS 2110 or equivalent); a course in statistical methods is recommended but not required (BTRY 4090 or equivalent). Next offered 2010–2011.

CS 4812  Quantum Info Processing (also PHYS 4481/7681) (PBS)
Spring. 3 credits. Prerequisite: familiarity with theory of vector spaces over complex numbers. For description, see PHYS 4481.

CS 4820  Introduction to Analysis of Algorithms
Spring, summer. 4 credits. Prerequisites: CS 2800 and 3110.

CS 4830  Introduction to Cryptography
Fall. 4 credits. Prerequisites: CS 2900 (or equivalent), mathematical maturity, or permission of instructor. Next offered 2010–2011.

CS 4850  Mathematical Foundations for the Information Age
Spring. 4 credits. Prerequisite: mathematical maturity.

CS 4860  Applied Logic (also MATH 4860) (MQR)
Fall. 4 credits. Prerequisites: MATH 2220 or 2940, CS 2800 or equivalent (e.g., MATH 5520, 4520, 4540, 4810), and some additional course in mathematics or theoretical computer science.

CS 4999  Independent Reading and Research
Fall. spring. 1–4 credits.

CS 5150  Software Engineering
Fall. 4 credits. Prerequisite: CS 2110 or equivalent experience programming in Java or C++.

CS 5220  Applications of Parallel Computers
Spring. 4 credits. Prerequisite: course in numerical methods at level of CS 3220 or higher.

CS 5300  The Architecture of Large-Scale Information Systems (also INFO 5300)
Spring. 4 credits. Prerequisite: CS/INFO 3500 or CS 4520.

CS 5410  Intermediate Computer Systems
Fall or spring. 4 credits. Prerequisite: CS 4410 or permission of instructor. Next offered fall 2009.

CS 5420  Parallel Computer Architecture (also ECE 5720)
Fall. 4 credits. Prerequisite: ECE 4750. For description, see ECE 5720.

CS 5430  System Security
Fall or spring. 4 credits. Prerequisites: CS 4410 or 4450 and familiarity with JAVA, C, or C* programming languages. Next offered spring 2010.

CS 5620  Interactive Computer Graphics
Fall. 4 credits. Prerequisite: CS 4620.

CS 5643  Physically Based Animation for Computer Graphics
Spring. 4 credits. Prerequisites: CS/ENGRD 3220 and/or CS 4620 or permission of instructor.

CS 5722  Heuristic Methods for Optimization (also CEE 5290, ORIE 5340)
Fall. 3 or 4 credits. Prerequisites: CS/ENGRD 2110 or 3220 or CEE/ENGRD 3200, or graduate standing, or permission of instructor.

CS 6110  Advanced Programming Languages
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.

CS 6210  Matrix Computations
Fall. 4 credits. Prerequisites: MATH 4110 and 4310 or permission of instructor. Offered alternate years.
[CS 6240] Numerical Solution of Differential Equations
Spring. 4 credits. Prerequisites: exposure to numerical analysis (e.g., CS 4210 or 6210), differential equations, and knowledge of MATLAB.

[CS 6320] Database Systems
Spring. 4 credits. Prerequisite: CS 4320 or permission of instructor.

[CS 6322] Advanced Database Systems
Fall. 4 credits.

[CS 6410] Advanced Systems
Fall or spring. 4 credits. Prerequisite: CS 4410 or permission of instructor. Next offered fall 2009.

[CS 6460] Peer-to-Peer Systems
Spring. 4 credits. Recommended. CS 6410.

[CS 6464] Advanced Distributed Storage Systems
Spring. 4 credits. Prerequisites: CS 4410 or permission of instructor.

[CS 6620] Advanced Interactive Graphics
Fall or spring. 4 credits. Prerequisite: CS 4620 and 4621 or 5620 or permission of instructor. Next offered 2010-2011.

[CS 6630] Realistic Image Synthesis
Fall or spring. 4 credits. Prerequisites: CS 4620 and 4621 or 5620 or permission of instructor. Next offered 2010-2011.

[CS 6650] The Structure of Information Networks (also INFO 6850)

[CS 6810] Theory of Computing
Fall or spring. 3 credits. Prerequisite: CS 3810 and CS 4820 or 6820 or permission of instructor. Next offered 2010-2011.

[CS 6820] Analysis of Algorithms
Fall. 4 credits. Prerequisite: CS 4820 or graduate standing.

[CS 6822] Advanced Topics in Theory of Computing
Fall or spring. 4 credits. Prerequisite: CS 6820 or permission of instructor. Next offered 2010-2011.

[CS 6830] Cryptography
Fall. 4 credits. Prerequisites: General ease with algorithms and elementary probability theory, maturity with mathematical proofs (ability to read and write mathematical proofs).

[CS 6840] Algorithmic Game Theory
Fall or spring. 3 credits. Prerequisite: background in algorithms and graphs at level of CS 4820. No prior knowledge of game theory or economics assumed. Next offered spring 2010.

[CS 6850] The Structure of Information Networks (also INFO 6850)

[CS 6860] Logics of Programs
Spring. 4 credits. Prerequisites: CS 4810, 6810, and (CS/MATH 4860 or MATH 4810).

[CS 7090] Computer Science Colloquium
Fall, spring. 1 credit. For staff, visitors, and graduate students interested in computer science. S–U grades only.

[CS 7190] Seminar in Programming Languages
Fall, spring. 1 credit. Prerequisite: CS 6110 or permission of instructor. S–U grades only.

[CS 7192] Seminar in Programming Refinement Logics
Fall, spring. 4 credits. Prerequisite: permission of instructor.

[CS 7320] Topics in Database Systems
Fall, spring. 4 credits. S–U grades only.

[CS 7390] Database Seminar
Spring. 1 credit. Prerequisite: CS 6322 or permission of instructor. S–U grades only.

[CS 7490] Systems Research Seminar
Fall, spring. 1 credit. S–U grades only.

[CS 7690] Computer Graphics Seminar
Fall, spring. 3 credits.

[CS 7726] Evolutionary Computation and Design Automation (also MAE 6500)
Spring. 4 credits. Prerequisite: programming experience or permission of instructor. Next offered 2010-2011.

[CS 7770] Seminar in Artificial Intelligence
Fall, spring. 4 credits. Prerequisite: permission of instructor. S–U grades only.

[CS 7794] Seminar in Natural Language Understanding
Fall, spring. 2 credits.

[CS 7860] Introduction to Kleene Algebra
Spring. 4 credits. Prerequisites: CS 4810 and (CS 4860 or MATH 4810).

Fall, spring. 4 credits. Prerequisite: permission of instructor. S–U grades only.

[CS 7893] Cryptography Seminar
Fall, spring. 1 credit.

[CS 7999] Independent Research
Fall, spring. Prerequisite: permission of a Computer Science advisor. Independent research for master of engineering project.

[CS 9999] Thesis Research
Fall, spring. Prerequisite: permission of a Computer Science advisor. S–U grades only.

Doctoral research.

COMPUTING IN THE ARTS UNDERGRADUATE MINOR

The computer plays a role in almost every aspect of human life, and its influence and potential now extend routinely not only to technical and commercial pursuits but also into the realms of the imaginative and the aesthetic. The Computing in the Arts minor offers students opportunities to use computers to realize works of art, to study the perception of artistic phenomena, and to think about new, computer-influenced paradigms and metaphors for the experiences of making and appreciating art. Faculty from several departments in the college offer courses toward the minor, drawing on disciplines in the arts, the social sciences, the humanities, and the physical sciences. Currently, the minor is offered in five tracks: computer science, dance, film, music, and psychology, each described in more detail below. Students may minor in the same area as their major, or in a different area.

It is likely that additional tracks in other disciplines will be added to the minor, indeed possible that this will have occurred after the publication deadline for this year’s Courses of Study but in time to take effect in the 2009–2010 academic year. The director and area representatives listed below will always have the latest information.

Director
Graeme Bailey

Applying for the Minor and Choosing Courses

Students should meet with the track representative in their chosen discipline for initial advising about the minor. For 2009–2010, these representatives are Graeme Bailey (computer science track), Kevin Ernste (music track), Allen Fogelsanger (dance track), Marilyn Rivchin (film track), and Carol Krumhansl (psychology track).

Regardless of which track they choose, all students in the minor are required to take the core course, Computing in the Arts (CS 1610, cross-listed as CIS 1610, DANCE 1540, ENGR 1610, FILM 1750, MUSIC 1465, and PSYCH 1650). This course combines fundamental background in cognitive modeling, statistics, programming, and algorithmic thinking, as preparation for more specialized work; hence, though it is not a formal prerequisite to other courses, it should be taken as early as possible in the student’s program. For students who have already gained an equivalent background through other courses, however, it may be waived by permission of the director.
In addition to the core course, each student chooses another five courses satisfying the following requirements:

1. At least one must entail a significant computing component, regardless of its home department (marked * in the lists below).
2. At least two must entail a significant artistic component (marked † in the lists below).
3. For students majoring in a field offering a track, none of the courses from that track may be double-counted as also satisfying major requirements.

The goal is to encourage the development of reasonable depth within one area, without neglecting the interdisciplinary nature of the field. Hence, rather than choosing courses at random from the lists below or focusing too narrowly on one particular corner of the field, each student should work actively with an advisor from his or her minor in building an appropriate program.

**Course Lists**

**Computer Science track.** In addition to the core course, CS 1610, any five of the following. Note that some of these courses have CS prerequisites.

†ART 1700 Visual Imaging in the Electronic Age (also ARCH 4508, CIS 1620, ENGR 1620)
*CS 3000 Introduction to Computer Science
*CS 2110 Object-Oriented Programming and Data Structures
*CS 4620 Introduction to Computer Graphics
*CS 4700 Foundations of Artificial Intelligence
*CS 4740 Introduction to Natural Language Processing
*CS 4780 Machine Learning
*CS 5640 Computer Animation
*CS 5642 Advanced Computer Animation
*INFO 3450 Human–Computer Interaction Design
*INFO 4400 Advanced Human–Computer Interaction Design
INFO 4500 Language and Technology

Up to two courses from another track.

**Dance track.** In addition to the core course, DANCE 1540 (for description, see CS 1610), any five of the following. Note that some of these courses have DANCE pre- and/or corequisites. Note also that for this track, two courses marked * should be taken, and they should not be I and II of any one series for the purposes of satisfying the * requirement.

†DANCE 2400/VISST 2430 Hip-Hop, Hollywood, and Home Movies
†DANCE 2500/VISST 2711 Beginning Dance Composition
†DANCE 3500 Intermediate Dance Composition I
†DANCE 3510 Intermediate Dance Composition II
†DANCE 3550 Techno Soma Kinesics
†DANCE 3660/THETR 3620 Lighting Design Studio 1
†DANCE 3560/MUSIC 3441/THETR 3690 Interactive Performance Technology
†DANCE 3570 Media Arts Studio
†DANCE 3680/MUSIC 3431/THETR 3680 Sound Design and Digital Audio
†DANCE 4500 Advanced Dance Composition I
†DANCE 4510 Advanced Dance Composition II
†DANCE 4550 Techno Soma Kinesics II
†DANCE 4660/THETR 4620 Lighting Design Studio II
†MUSIC 3421 Scoring the Moving Image
†PSYCH 3050/VISST 3305 Visual Perception
†THETR 3650 Automated Lighting and Control

Up to two courses from another track.

**Film track.** In addition to the core course, FILM 1750, any five of the following. Note that some of these courses have FILM pre- and/or corequisites.

†ART 1700 Visual Imaging in the Electronic Age
†ART 2702 Digital Video and Sound
†ART 2703/CS 5640 Computer Animation
†ART 2707/CS 5642 Advanced Computer Animation
†CS 3520 Animation: History and Practice
†FILM 3770 Introduction to 16mm and Digital Filmmaking
†FILM 4220 Cinematography
†FILM 4770 Intermediate Film and Video Projects: Documentary and Experimental Workshop
†FILM 4930 Advanced Film and Video Projects
†THETR 3680 Sound Design and Digital Audio
†THETR 3690 Digital Performance

Up to two courses from another track.

**Music track.** In addition to the core course, MUSIC 1465, any five of the following. Note that some of these courses have MUSIC prerequisites.

†CS 3000 Introduction to Computer Game Design
†MUSIC 1421 Introduction to Computer Music
†MUSIC 3611/3612/3613 Computer Music performance (any two of these 2-credit courses)
†MUSIC 3421 Scoring the Moving Image
†MUSIC 4351/THETR 3680 Sound Design and Digital Audio
†MUSIC 4441/THETR 3690 Interactive Performance Technology
†MUSIC 4101 Counterpoint
†MUSIC 4103 Topics in Post-Tonal Theory and Analysis
†MUSIC 4111 Composition
†MUSIC 4122 Orchestration

Up to two courses from another track.

**Psychology track.** In addition to the core course, PSYCH 1650, any five of the following. Note that some of these courses have PSYCH prerequisites.

†ART 1700 Visual Imaging in the Electronic Age (also ARCH 4508, CIS/CS/ENGR 1620)
†CS 3620 Introduction to Computer Graphics
†INFO 2140/PSYCH 2140 Cognitive Psychology
†MUSIC 1421 Introduction to Digital Music
†PSYCH 1481/PSYCH 4180 Psychology of Music
†PSYCH 2050 Perception
†PSYCH 3050 Visual Perception
†PSYCH 3160 Auditory Perception
†PSYCH 3420 Human Perception: Applications to Computer Graphics, Art, and Visual Display

Up to two courses from another track.

**Czech**

See “Department of Russian.”

**Dance**

See “Department of Theatre, Film, and Dance.”

**Dutch**

See “Department of German Studies.”

**Earth and Atmospheric Sciences**

**Science of Earth Systems (SES)**

Offered by the Department of Earth and Atmospheric Sciences

Contact: 2124 Snee Hall, 255-5466, www.eas.cornell.edu

The Earth Sciences have never been more critical to society than they are today. Global warming, dwindling energy resources, inadequate water supplies, political strife over strategic minerals, and megadisasters threatened by volcanic eruptions, earthquakes, tsunamis, and hurricanes: these are but a few of the headlines that appear with increasing frequency. The Department of Earth and Atmospheric Sciences at Cornell is a global leader in research directed toward understanding the fundamental processes that have shaped our planet, and is committed to providing Cornell students with the earth literacy needed to serve as informed citizens and wise stewards of the Earth. EAS faculty members and graduate students carry out frontier research on both basic and applied aspects of subjects as diverse as satellite monitoring of volcanic activity, the deep structure of the Andes and Tibetan Plateau, the nature of the earth’s ionosphere, and the impact of aerosols on global climate.

The Science of Earth Systems (SES) major is the undergraduate program offered by EAS to Cornell students in the Colleges of Engineering, Arts and Sciences, and Agriculture and Life Sciences. Students in this program can pursue education and research that prepares them to
The SES major provides a strong preparation for graduate school in any one of the earth sciences, such as atmospheric sciences, geological sciences, geophysics, geochemistry, oceanography, hydrology, and biogeochemistry. Students seeking employment with the B.A. or B.S. degree will have many options in a wide variety of careers related to energy, the environment, and critical resources in both the past, present, and future. By analyzing the complex relations among the ocean, solid earth, atmosphere, and biosphere, students can help meet society's growing demand for energy, minerals, and clean water as well as contribute to mitigating the negative impacts related to global warming, rising sea level, natural hazards, and decreasing biodiversity.

To achieve a complete understanding of these important issues, students must have a desire to take a very hands-on approach. An abundance of opportunities exist for geological, oceanographic, and meteorological research in the field and for nationwide and international travel, as well as paid research experience. Students have worked with faculty members in the Andes, the Alps, the Rocky Mountains, the Atacama Desert, the Caribbean, Tibet, and Hawaii, and have spent a semester at sea in the Woods Hole Ocean Studies Program. Students are also able to probe the ionosphere of Earth and the surface of Mars by utilizing techniques in remote sensing.

The SES major provides a strong preparation for graduate school in any one of the earth sciences, such as atmospheric sciences, geological sciences, geophysics, geochemistry, oceanography, hydrology, and biogeochemistry. Students seeking employment with the B.A. or B.S. degree will have many options in a wide variety of careers related to energy, the environment, and critical resources in both the private sector and government. Students with the strong science background provided by the SES major are also highly valued by graduate programs in environmental law, public affairs, economics, and public policy.

Requirements for the Science of Earth Systems major

1. Basic Math and Sciences
   This part of the SES curriculum builds a strong and diverse knowledge of fundamental science and mathematics, providing the student with the basic tools needed in upper-level science classes.
   a. MATH 1110-1120 (or MATH 1910-1920)
   b. PHYS 1112-2213 (or PHYS 2207-2208)
   c. CHEM 2070-2080, or CHEM 2090-2080, or CHEM 2070-1570
   d. BIOLOGY—three options:
      i. one year of biology, choosing from the introductory biology sequences of courses: BIOG 1101/1102, 1103/1104, or 1105/1106, or BIOG 1109/1110
      ii. one semester from the introductory biology sequences of courses (listed in option 1) and EAS/BIOEE 1540 or EAS 1700

iii. Students may substitute (with written permission of their advisor) one semester of biology with an additional semester of chemistry, math, or physics.

2. The required introductory course in earth science, EAS 2200 The Earth System.
3. SES Core Courses: The core courses emphasize the interconnectedness of the Earth system, and are founded on the most modern views of the planet as an interactive and ever-changing system. Each course is the traditional boundaries of disciplinary science. Three core courses selected from the following four core courses are required for the major.
   - EAS 3010 Evolution of the Earth System
   - EAS 3030 Biogeochemistry
   - EAS 3040 Interior of the Earth
   - EAS 3050 Climate Dynamics

4. Concentration Courses: The concentration(s) requirement is achieved by four intermediate to advanced-level courses (3000 level and up) that build on the core courses and have prerequisites in the required basic sciences and/or mathematics courses. Note that additional basic math and science courses may be required to complete the concentration(s) courses. Depending upon the student's choice of concentration(s). The concentration(s) courses build depth and provide the student with a specific expertise in some facet of Earth system science. Four concentration(s) are defined for the major: geological sciences, biogeochemistry, atmospheric sciences, and ocean sciences. Other concentration(s) can be tailored to a student's interests in concert with the student's advisor and approval of the curriculum committee. The concentration(s) should be chosen during the junior year or before in consultation with the student's advisor and the approval of the Director of Undergraduate Studies.

5. Field/Observation/Laboratory Experience: Exposure to the basic observations of earth science, whether directly in the field, or indirectly by various techniques of remote sensing or in the laboratory, is necessary to understand fully the chosen area of concentration(s) means of satisfying this requirement generally include 3 credits of course work. Possibilities for fulfilling the field observation requirement include the following:
   - Courses in the Hawaii Environmental Semester Program;
   - Courses given by the Shoals Marine Laboratory;
   - EAS 2500 Meteorological Observations and Instruments;
   - EAS 3520 Synoptic Meteorology I;
   - EAS 4170 Field Mapping in Argentina;
   - EAS 4910 and/or 4920 Undergraduate Research, with appropriate choice of project;
   - Field courses taught by another college or university (3-credit minimum).

For more information contact John Cisne, Department of Earth and Atmospheric Sciences, john-cisne@cornell.edu, and visit the web site: www.eas.cornell.edu.

Honors. An honors program is offered by the Department of Earth and Atmospheric Sciences for superior students. Candidates for honors must maintain an overall 3.0 GPA, a cumulative average of 3.5 in the major, and complete an honors thesis (usually through EAS 4910 and/or 4920) and apply for the honors program by the end of the junior year. Students interested in applying should contact the director of undergraduate studies during the second semester of the junior year or early in the first semester of the senior year.

Courses

EAS 1101 Introductory Geological Sciences (To Know Earth) (PBS)
Fall. 3 credits. A. Andronicos and R. Allmendinger.
Designed to enhance an appreciation of the physical world. Emphasizes natural environments, surface temperatures, and dynamic processes such as mountain belts, volcanoes, earthquakes, glaciers, and river systems. Interactions of the atmosphere, hydrosphere, biosphere, and lithosphere (Earth system science). Water, mineral, and fuel resources; environmental concerns. Field trips in the Ithaca region.

EAS 1108 Earth in the News (PBS)
Summer. 3 credits. S. L. Losh.
Provides an introduction to physical geology and earth systems science and explores the scientific basis for informed decision making regarding many timely environmental issues, including global warming, water pollution and use, geologic hazards such as floods, earthquakes, and volcanic activity, and fossil fuel distribution and use; and land use. A field trip is taken in the Ithaca area.

EAS 1109 Dinosaurs
Fall. 1 credit. J. L. Cisne.
An introductory survey course for anyone interested in dinosaurs. Lectures examine the fossil evidence and illustrate how various geological and biological disciplines contribute to understanding dinosaurs and their world.

EAS 1150 Severe Weather Phenomena (PBS)
Summer. 3 credits. M. W. Wysocki.
An understanding of important aspects of severe weather will be explored including snowstorms/lake effect snow, windstorms, tornadoes, thunderstorms, tropical cyclones, El Niño, floods, drought, and heat waves.

EAS 1190 Fossil Preparation
Fall. 1 credit. Prerequisite: EAS 1109 or related EAS course. W. Allmone and J. Cisne.
Hands on experience in the preparation and curation of fossils in laboratories at the Paleontological Research Institution (PRI). Students provide own transportation to the Museum of the Earth via public transit or other means. Activities include preparation and study of vertebrate, invertebrate, and plant specimens; sorting of bulk material such as field collections and mastodon dung, and curation of prepared specimens.

EAS 1220 Earthquakes! (also ENGRI 1120) (PBS)
Spring. 3 credits. L. Brown.
Explores the science of natural hazards, their societal impacts, and means of mitigation. The focus is on earthquakes, volcanoes, and tsunamis, but hurricanes and other weather, climate change, landslides, wildfires, and the threat of extinction from a future impact by an extraterrestrial body are also considered.
EAS 1310 Basic Principles of Meteorology (PBS)
Fall. 3 credits. M. W. Wysocki.
Simplified treatment of the structure of the atmosphere: heat balance of the Earth; general and seasonal weather patterns; air masses, fronts, and cyclones; and hurricanes, thunderstorms, tornadoes, and atmospheric condensation. The optional 1-credit laboratory for this course is offered as EAS 1350.

EAS 1330 Basic Meteorology Lab
This course is required for atmospheric science majors, but is optional for other students taking EAS 1310.

EAS 1340 Weather Analysis and Forecasting
Spring. 1 credit. Prerequisites: EAS 1310 and EAS 1330. S–U grades only. M. W. Wysocki and staff.
This course will serve as an extension of the EAS 1330 first-year majors lab. It will provide opportunity for formal weather briefings, explore specific storms (synoptic and mesoscale, including the climatology of each storm type), through assigned readings, map analysis, and weather discussions.

EAS 1400 Freshman Writing Seminar
“Writing in the Sciences: Environmental Perspectives”
Spring. 3 credits. S. Jessup.
This course is a Freshman Writing Seminar in which students examine interactions between humans and the natural environment from individual, societal, and scientific perspectives. Readings include a brief historical survey of humanity’s role within the natural world and short readings about current environmental issues. Includes a research project where each student explores a current environmental issue.

EAS 1540 Introductory Oceanography, Lecture (also BIOEE 1540) (PBS)
Fall. 4 credits. B. J. Emery and H. B. Belcher.
This two-semester course will introduce students to a broad understanding of the ocean and its physical processes. Emphasis will be placed on the interaction of the ocean with the atmosphere and the Earth’s environment. The course will cover topics such as the Earth’s climate system, ocean circulation, and atmospheric dynamics. Students will be introduced to the fundamental principles of oceanography and will learn how to apply these principles to understand the ocean environment.

EAS 1700 Evolution of the Earth and Life (PBS)
Spring. 3 credits. J. L. Cisne.
Earth systems and their evolution; Earth history’s astronomical context; plate tectonics, continental drift, and their implications for climate and life; co-evolution of life and the atmosphere; precursors for ongoing global change; dinosaurs, mass extinctions, and human ancestry. Includes laboratories on reconstructing geological history and mapping ancient geography. Fossil collecting on field trips.

EAS 2130 Marine and Coastal Geology (PBS)
Summer. 4 credits. Prerequisite: introductory geology or ecology or permission of instructor. Staff.
A special two-week course offered at Cornell’s Shoals Marine Laboratory (SML), located on an island near Portsmouth, N.H. For more details and an application, contact SML office, G14 Stimson Hall.

EAS 2200 The Earth System (PBS)
Fall. 3 credits. Letter grades only. W. M. White.
Integrated introduction to the earth system stressing the biological, chemical, geological, and physical interactions among the atmosphere, ocean, and solid earth. Topics include biogeochemical cycles, climate dynamics, and the evolution of the atmosphere, biosphere, cryosphere (ice), hydrosphere (oceans and inland waters), and lithosphere (solid earth).

EAS 2250 Meteorological Observations and Instruments
Fall. 4 credits. Prerequisite: EAS 1310. M. W. Wysocki.
Covers methods and principles of meteorological measurements and observations including surface, free-air, and remote systems. Also covers instrument siting, mounting, and protection; instrument response characteristics, calibration, and standardization; and recorders and data logging systems. Laboratory exercises are in observation and data analysis.

EAS 2680 Climate and Global Warming (PBS)
Spring. 3 credits. Prerequisite: basic college math. S–U grades only. A. T. DeGaetano.
Familiarizes students from a range of disciplines with such contemporary issues in climatology as global warming and El Niño. Introduces the natural greenhouse effect, past climates, observed and projected climate changes and impacts. Also covers natural climate variations (e.g., El Niño) and their consequences and predictability. Readings focus on recent scientific findings to climate change.

EAS 2960 Forecast Competition
Fall and spring. 1 credit. Students enroll for two consecutive semesters; credit awarded after second semester; may be repeated for credit. Prerequisite: undergraduate standing in atmospheric science. Permission of instructor. S–U grades only. D. S. Wilks.
Two-semester course providing daily exercise in probabilistic weather forecasting, in which students compete to forecast local weather most skillfully.

EAS 3010 Evolution of the Earth System (also POTR 3030) (PBS)
Fall. 4 credits. Prerequisites: EAS 2200, MATH 1110 or 1910 and one course in chemistry. Two Saturday field trips. T. Jordan, S. Riha, and W. Allmon.
Life activities alter the physical and chemical environment, and are altered by that environment. This interaction over very long times constitutes a co-evolution of Earth and life. Course uses modern systems, tens of thousand year old systems, and hundreds of million year old systems to illustrate principles, methods of reconstructing deep history, and the context of natural change inherent to life and earth.

EAS 3030 Introduction to Biogeochemistry (also NTRES 3030) (PBS)
Fall. 4 credits. Prerequisites: CHEM 2070 or equivalent, MATH 1120, plus a course in biology and/or geology. J. Yavitt.
Control and function of the Earth’s global biogeochemical cycles. Begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers, and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, bio-active metals, the use of isotopic tracers, controls on atmospheric carbon dioxide, and mathematical models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.

EAS 3040 Interior of the Earth (PBS)
Spring. 4 credits. Prerequisite: EAS 2200 or permission of instructor. C. Andronicos.
This class will investigate the geology of the solid earth with emphasis on igneous and metamorphic petrology, structure of the continents and ocean basins, and large scale tectonics. Interaction between deformation, melt generation and metamorphism will be examined as mechanisms by which the crust is differentiated from the underlying mantle. Geophysical and geochronological techniques for probing the deep interior of the earth will be investigated. Plate tectonics will be used as a unifying theme to understand processes operating in the solid earth.

EAS 3050 Climate Dynamics (PBS)
Fall. 3 credits. Prerequisites: two semesters of calculus and one of physics. N. Mahowald.
Processes that determine climate and contribute to its change are discussed, including atmospheric radiation, ocean circulation, and atmospheric dynamics. Contemporary climate change issues are investigated and discussed in the context of natural variability of the system.
EAS 3050 Evolution of Ancient and Modern Oceans (also BIOISM 3050) (PBS)  
Summer. 6 credits. Prerequisites: introductory biology (two semesters) and a college course in Earth Science, or permission of instructor. W. Allmon.

An intensive survey of the biological and geological history of the oceans, starting with the record of ancient oceans and life preserved in the rocks of central New York, followed by a transect and examination of the history of the Appalachian Mountains, ending with the oceanography and marine biology of the Gulf of Maine at Shoals Marine Lab.

EAS 3220 Biogeochemistry of the Hawaiian Islands (PBS)  
Spring. 4 credits. Prerequisites: enrollment in Earth and Environmental Sciences Semester in Hawaii; EAS 2200, EAS 3030, or permission of instructor. L. A. Derry.

A field-oriented biogeochemistry course held on the island of Hawaii. Field, class, and laboratory work focuses on: the interactions between landscape age and climate strongly control biogeochemical cycles and ecosystem development in Hawaii. Other topics include succession of ecosystems, evolution of nutrient cycles, and impacts of invasive species. The class is structured around field projects, carried out both in groups and individually.

EAS 3340 Microclimatology (PBS)  
Spring. 3 credits. Prerequisite: a course in physics. D. S. Wilks.

The relationship of radiant energy, temperature, wind, and moisture in the atmosphere near the ground. The interplay between physical processes of the atmosphere, plant canopies, and soil is examined with emphasis on the energy balance.

EAS 3400 Field Study of the Earth System (PBS)  
Spring. 6 credits. Prerequisites: enrollment in Earth and Environmental Sciences Semester in Hawaii; one semester of calculus (EATH 1910/1920/1930 or 1110/1120) and two semesters of any of the following: PHYS 2207/2208 or 1112/2123; CHEM 2070/2080 or 2090/2080; BIOE 1103/1104 or 1105/1106 or 1109/1110; or equivalent course work. A. Moore.

Interdisciplinary field course covering fundamental concepts of the Earth system. Topics include global circulation patterns in the solid Earth, atmosphere, ocean, and climate; physical and biological processes in marine ecosystems; and physical and biological processes in marine ecosystems. The course is structured around field projects, carried out both in groups and individually.

EAS 3420 Atmospheric Dynamics (PBS)  
Spring. 3 credits. Prerequisites: MATH 2130, 2220, or 2930 or equivalent; one year of physics. Staff.

Introduction to the basic equations and techniques used to understand motion in the atmosphere, with an emphasis on the scales and times typical of storm systems (the synoptic scale). The governing equations of atmospheric flow are derived from first principles and applied to middle latitude and tropical meteorology. Topics include balance flow, atmospheric waves, circulation, and vorticity.

EAS 3500 Dynamics of Marine Ecosystems (also BIOEE 3500) (PBS)  
Fall. 3 credits. Prerequisites: one year of calculus and a semester of oceanography (i.e., EAS 1540), or permission of instructor. Offered alternate years. C. H. Greene and R. W. Howarth.

Lecture course covering the interactions of physical and biological processes in marine ecosystems.

EAS 3510 Conservation Oceanography (also BIOEE 3510) (PBS)  
Spring. 4 credits. Prerequisites: EAS 3400; enrollment in Earth and Environmental Sciences Semester in Hawaii. Recommended: oceanography course. C. H. Greene and C. D. Harvell.

Covers the interactions of physical and biological processes in marine ecosystems. Starts by looking at these processes on ocean-basin to regional scales and works down to the smaller scales relevant to individual organisms. Students are introduced to modern techniques of marine-ecosystems research, including remote sensing, oceanographic-survey methods, and experimental marine ecology. This course is field and laboratory intensive with students engaged in hands-on, active learning that takes advantage of local resources.

EAS 3520 Synoptic Meteorology I (PBS)  
Spring. 3 credits. Prerequisite: EAS 3410. Corequisite: MATH 2207/2208 or equivalent. W. Wysocki.

Study of weather map analysis and forecasting techniques by applying the principles of fluid and heat flow. Strengthens previously introduced meteorological concepts which are applied to forecasting midlatitude scale weather systems, such as cyclones, anticyclones, jet streams, fronts, and waves.

EAS 3530 Physical Oceanography (PBS)  
Fall. 3 credits. Prerequisites: MATH 1120 or 1920, or one year of physics, or permission of instructor. Offered alternate years; next offered 2010–2011. B. C. Monger.

The course covers thermohaline and wind-driven circulation and surface-ocean boundary-layer dynamics. Mathematical expressions for describing conservation of momentum, mass, and heat in a fluid are used to explain the ocean’s responses to wind and buoyancy forcing.

EAS 4010 Fundamentals of Energy and Mineral Resources (PBS)  
Fall. 3 credits. Recommended: previous course in geology. L. Catthels.

The Earth’s energy and mineral resources reflect some of the most important changes and dramatic events that have punctuated earth history. Course provides an overview of resource types in the context of the Earth’s atmospheric evolution, rifting, mantle convection, and hydrologic cycle. The processes of resource accumulation are described in terms of simple chemical and physical principles and in the societal contexts of supply, demand, and sustainability.

EAS 4040 Geodynamics (PBS)  
Spring. 3 credits. Prerequisite: calculus and calculus-based physics or permission of instructor. Offered alternate years; next offered 2010–2011. J. Phipps Morgan.

Quantitative study of the deformation, heat transport, and melting processes that have shaped the evolution of the solid Earth. Familiar physical and chemical principles and concepts are applied to the study of plate tectonics, fluid dynamics, mantle convection, melting, and mountain building.

EAS 4050 Active Tectonics (PBS)  
Spring. 3 credits. Recommended: mechanical background equivalent to EAS 4260/4960. S–U or letter grades. Offered alternate years. R. Lohman.

Field mapping course in Argentina that fulfills field requirement for majors with interests in Geological Sciences and provides a field geological experience for others. Course consists of lectures in Buenos Aires followed by field exercises in the Sierra Pampeanas, Precordillera, and Main Cordillera Ranges of the Argentine Andes in the provinces of San Juan and Mendoza. A variety of exercises use modern techniques in the field mapping of a broad range of variably deformed sedimentary, metamorphic and igneous rocks. Offered alternate years; next offered 2010–2011. J. Phipps Morgan.

This course will use geological, geochemical, and geophysical approaches to explore the geology of the ocean floor.

EAS 4170 Field Mapping in Argentina (PBS)  
Summer. 4 credits. Prerequisite: introductory course and EAS 4200 or 3040. Offered alternate years. S. Mahlburg Kay.

Field mapping course in Argentina that fulfills field requirement for majors with interests in Geological Sciences and provides a field geological experience for others. Course consists of lectures in Buenos Aires followed by field exercises in the Sierra Pampeanas, Precordillera, and Main Cordillera Ranges of the Argentine Andes. Field exercises are based on exercises in the Argentine Andes in the provinces of San Juan and Mendoza. A variety of exercises use modern techniques in the field mapping of a broad range of variably deformed sedimentary, metamorphic and igneous rocks. The course further provides an introduction to the tectonics and magmatic processes of the central Andes with emphasis on comparable processes in the U.S. Exercises are done in combination with students and faculty of the University of Buenos Aires.

EAS 4250 European Discovery of Impacts and Explosive Volcanism  
Spring. 2 credits. Prerequisite: junior, senior, or graduate students with background in geology and permission of instructor. Letter grades only. Meets one day per week plus field trip during spring break. Fee probably charged for required weekend field trip. Offered alternate years; next offered 2010–2011. J. Phipps Morgan and C. Andronicos.

EAS 4260 Structural Geology (PBS)  
Spring. 4 credits. Prerequisite: one semester of calculus, plus introductory geology course or permission of instructor. Offered alternate years. W. Allmon.

The nature and origin of deformed rocks at submicroscopic to global scales. The course begins with review of elementary principles of continuum mechanics and continues with a discussion of deformation mechanisms commonly observed in earth materials. The geometry, kinematics, and mechanics of faults,
folds, are then addressed and the class ends with a description of the tectonic setting of structural families such as thrust belts, rift provinces, and zones of strike slip deformation. A weekend field trip to a region of spectacular folding and thrusting provides and opportunity to apply the concepts learned in lecture.

[EAS 4340] Exploration Geophysics (PBS)  
Fall. 3 credits. Prerequisites: MATH 1920 and PHYS 2208 or 2213, or equivalent. Offered alternate years; next offered 2010–2011. L. D. Brown.  
Fundamental principles of subsurface imaging by geophysical methods as used in oil exploration and environmental investigations.

[EAS 4350] Statistical Methods in Meteorology and Climatology (MQR)  
Fall. 3 credits. Prerequisites: one introductory course in each of statistics (e.g., AEM 2100 and calculus. D. S. Wilks.  
Statistical methods used in climatology, operational weather forecasting, and selected meteorological research applications. Includes statistical characteristics of meteorological data, including probability distributions and correlation structures. Covers operational forecasts derived from multiple regression models, including the MOS system; and forecast evaluation techniques.

[EAS 4370] Geophysical Field Methods (also ARKEO 4370) (PBS)  
Fall. 3 credits. Prerequisite: PHYS 2208 or 2213, or permission of instructor. Offered alternate years. L. D. Brown.  
Field exercises using geophysical techniques to probe the subsurface.

[EAS 4400] Seminar on Climate Change Science, Impacts, and Mitigation  
Fall. 3 credits. Prerequisites: junior or higher standing. Offered alternate years; next offered 2010–2011. N. Mahowald.

[EAS 4470] Physical Meteorology (PBS)  
Fall. 3 credits. Prerequisites: one year each of calculus and physics. Offered alternate years. A. T. DeGaetano.  
Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include an introduction to atmospheric radiation processes; atmospheric optics and electricity; microphysical cloud processes; and principles of radar probing of the atmosphere.

[EAS 4510] Synoptic Meteorology II (PBS)  
Fall. 3 credits. Prerequisites: EAS 3410 and 3420. S. J. Colucci.  
Structure and dynamics of large-scale, mid-latitude weather systems, such as cyclones, anticyclones, and waves, with consideration of processes that control temperature changes and precipitation. Lab sessions involve real-time weather forecasting and the computer application of a numerical model of the atmosphere to study selected large-scale, mid-latitude weather systems.

[EAS 4530] Mineralogy (PBS)  
Fall. 4 credits. Prerequisite: CHEM 2070 or 2090 or permission of instructor. S. Mahlburg Kay.  
Chemical and physical properties and identification of minerals with emphasis on the rock-forming minerals that are the principal constituents of the Earth and nearby planets. Topics include internal and external crystallography, crystal chemistry, introductions to x-ray crystallography and optical mineralogy, and a systematic examination of the structures, chemistry, and occurrence of the rock-forming minerals. Independent project includes use of electron microprobe (EPMA) and x-ray facilities.

[EAS 4540] Petrology and Geochemistry (PBS)  
Spring. 3–4 credits. Prerequisite: EAS 3510. Offered alternate years, next offered 2010–2011. R. W. Kay.  
Principles of phase equilibrium as applied to igneous and metamorphic systems. Distribution of trace elements and isotopes as used to define processes and chronologies. Kinetics, reaction pathways and textural and mineralogical characterization. Geochemistry, origin and dating of igneous and metamorphic rocks as applied the formation and evolution of the earth, terrestrial planets and meteorites.

[EAS 4550] Geochemistry (PBS)  
Fall. 4 credits. Prerequisites: CHEM 2070 or 2090 and MATH 1920 or equivalent. Recommended: EAS 3040. Offered alternate years. W. M. White.  
The Earth from a chemical perspective. Covers the formation of the elements; cosmochemistry; chemical evidence regarding the formation of the Earth and solar system; trace-element geochemistry; isotope geochemistry; geochemical thermodynamics and kinetics; chemical evolution of the crust, mantle, and core; weathering and the chemistry of natural waters; chemistry of rivers and the oceans; hydrothermal systems; and ore deposition.

[EAS 4560] Mesoscale Meteorology (PBS)  
Fall. 3 credits. Prerequisites: EAS 3410 and 3420 or permission of instructor. S. J. Colucci.

[EAS 4570] Atmospheric Air Pollution (PBS)  
Fall. 3 credits. Prerequisites: EAS 3410 or thermodynamics course, and one semester of chemistry, or permission of instructor. Offered alternate years, next offered 2010–2011. M. W. Wysocki.

[EAS 4580] Volcanology (PBS)  
Fall. 3 credits. Prerequisite: EAS 3040 or equivalent. Offered alternate years; next offered 2010–2011. R. W. Kay.  
Causes of volcanism, melting in the Earth, and the origin of magmas. Physical volcanology, nature and types of volcanic eruptions and associated deposits, and eruption mechanisms.

[EAS 4600] Late Quaternary Paleoeocology (also ARKEO 4600) (PBS)  
Fall. 4 credits. Offered alternate years; next offered 2010–2011. M. Goman.  
Explores fossil remains of the Late Quaternary paleoecology. The field research provides students with hands-on experience in sediment core collection; while in the laboratory students learn the basics of core analysis, pollen, and macrofossil analysis.

[EAS 4610] Paleoclimate: Since the Last Ice Age (PBS)  
Fall. 3 credits. Prerequisites: EAS 2200 or permission of instructor. Offered alternate years. M. Goman.  
This course examines changes and variability in climate for the last 210,000 years.

[EAS 4620] Marine Ecology (also BIOEE 4620) (PBS)  
Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE 2610. Offered alternate years; next offered 2010–2011. C. D. Harvell and C. H. Greene.  
For description, see BIOEE 4620.

[EAS 4700] Weather Forecasting and Analysis (PBS)  
Spring. 3 credits. Prerequisites: EAS 3520 and 4510. TBA. M. W. Wysocki.  
Applied course with an opportunity to focus on weather forecasting and analysis techniques for various regions around the world. Lectures emphasize the application of student's knowledge of atmospheric dynamics, thermodynamics, and computer-data analysis to forecast the development and movement of multiscale weather systems. Students participate in weekly forecast discussions, write daily forecasts that include a synoptic discussion, quantitative precipitation forecasts, and severe-weather outlook for the forecast region, and lead class discussion on assigned readings.

[EAS 4710] Intro to Groundwater (also BEE 4710) (PBS)  
Spring. 3 credits. Prerequisite: MATH 2930 and fluid mechanics or hydrology course. Offered alternate years; next offered 2010–2011. L. Cathles and T. Steenhus.  
Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

[EAS 4750] Special Topics in Oceanography  
Fall, spring, summer. 2–6 credits. Variable. Prerequisites: one semester of oceanography and permission of instructor. Fall, spring; C. H. Greene; summer: B. C. Monger.  
Undergraduate instruction and participation in advanced areas of oceanographic research. Topics change from semester to semester. Contact instructor for further information.

[EAS 4760] Sedimentary Basins (PBS)  
Spring. 3 credits. Prerequisite: EAS 3010 or permission of instructor. Offered alternate years. T. E. Jordan.  
Focus on the physical characteristics of sedimentary basins, which host fossil fuels and groundwater, and can potentially store CO2.

[EAS 4780] Advanced Stratigraphy (PBS)  
Fall. 3 credits. Prerequisite: EAS 3010 or permission of instructor. Offered alternate years; next offered 2010–2011. T. E. Jordan.  
Covers modern improvements on traditional methods of the study of ages and of genetic relations among sedimentary rocks, emphasizing 3-D relationships. Introduces techniques and applications of sequence stratigraphy.

[EAS 4790] Paleobiology (also BIOEE 4790) (PBS)  
Spring. 4 credits. Prerequisites: one year of introductory biology and either BIOEE 2740, 3750, EAS 3010, or permission of instructor. W. Allmon.  
Surveys the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of Earth and atmospheric science students concerning the nature and significance of the fossil record for their respective studies.
EAS 4800  Our Changing Atmosphere: Global Change and Atmospheric Chemistry (also BEE 4800) (PBS)
Fall. 3 credits. Prerequisites: CHEM 2090, MATH 1920, PHYS 1112, or equivalent, or permission of instructor. S–U or letter grades. P. G. Hess.

EAS 4820  Atmospheric Modeling
Spring. 3 credits. Prerequisite: differential equations, introductory computer background, junior standing or above, or permission of instructor. S–U or letter grades. N. Mahowald.
Climate and numerical weather prediction models are important tools for policy and science. This course describes the basic principles of the numerics in these models, including finite difference, spectral methods, and subgrid parameterizations. Included will be a discussion of numerical stability and verification of models.

[EAS 4830  Land, Water, Agriculture, and Environment (also CSS 4830) (PBS)]

For description, see CSS 4830.

[EAS 4840  Inverse Methods in the Natural Sciences (PBS)]
Covers the fundamentals of radar, antennas, and remote sensing. Students are exposed to the principles underlying the analysis and design of antennas used for communication and for radar-related applications. They also encounter both a mathematical and a practical description of how radar function, how their performance can be optimized for different applications, and how signals acquired by them can be processed. The objective is to familiarize students with a wide variety of radars rather than turn them into practicing radar engineers. Each topic is developed from basic principles so students with a wide variety of backgrounds are able to take the course. Emphasis is placed on radar applications in geophysics, meteorology and atmospheric sciences, astronomy and space sciences. Radar remote sensing of the Earth from spacecraft receives special attention.

EAS 4870  Introduction to Radar Remote Sensing (also ECE 4870) (PBS)
Spring. 3 credits. Prerequisite: PHYS 2208 or 2213 or equivalent or permission of instructor. D. L. Hysell.
Covers the fundamentals of radar, antennas, and remote sensing. Students are exposed to the principles underlying the analysis and design of antennas used for communication and for radar-related applications. They also encounter both a mathematical and a practical description of how radar function, how their performance can be optimized for different applications, and how signals acquired by them can be processed. The objective is to familiarize students with a wide variety of radars rather than turn them into practicing radar engineers. Each topic is developed from basic principles so students with a wide variety of backgrounds are able to take the course. Emphasis is placed on radar applications in geophysics, meteorology and atmospheric sciences, astronomy and space sciences. Radar remote sensing of the Earth from spacecraft receives special attention.

EAS 4880  Geophysical Imaging
Fall. 3 credits. Prerequisites: MATH 1920 or 1120 and PHYS 2208 or 2213. Offered alternate years. M. Pritchard and R. Lohman.
Covers the fundamentals of radar, antennas, and remote sensing. Students are exposed to the principles underlying the analysis and design of antennas used for communication and for radar-related applications. They also encounter both a mathematical and a practical description of how radar function, how their performance can be optimized for different applications, and how signals acquired by them can be processed. The objective is to familiarize students with a wide variety of radars rather than turn them into practicing radar engineers. Each topic is developed from basic principles so students with a wide variety of backgrounds are able to take the course. Emphasis is placed on radar applications in geophysics, meteorology and atmospheric sciences, astronomy and space sciences. Radar remote sensing of the Earth from spacecraft receives special attention.

EAS 4900  Undergraduate Research
Fall, spring. 1–4 credits. Students must complete form at 2124 Snoe Hall. Staff.
(J. L. Cisne, coordinator).
Introduction to the techniques and philosophy of research in the earth sciences and an opportunity for undergraduates to participate in current staff research projects. Topics chosen in consultation with, and guided by, a staff member. A short written report is required, and outstanding projects are prepared for publication.

EAS 4940  Special Topics in Atmospheric Science (undergraduate level)
Fall, spring. 8 credits max. S–U or letter grades. Staff.
The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the beginning of the semester. The same course is not offered more than twice.

EAS 4960  Internship Experience
Fall, spring. 1–2 credits. Prerequisites: EAS 3400; enrollment in Earth and Environmental Sciences Semester in Hawaii. S–U grades only. A. Moore.
During the last three and a half weeks of the semester students carry out a service learning project with a local NGO, environmental business, government agency, research lab, or educational facility. Projects are carefully designed with the student, sponsoring agency, and faculty member. A final report is required.

EAS 4970  Individual Study in Atmospheric Science
Fall or spring. 1–6 credits. S–U grades only. Students must register using independent study form. Staff.
Topics are arranged at the beginning of the semester for individual study or for group discussions.

EAS 4980  Teaching Experience in Earth and Atmospheric Sciences
Fall, spring. 1–4 credits. S–U grades only. Staff.
The student assists in teaching an EAS course appropriate to his or her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses course objectives and teaching techniques with the faculty member in charge of the course.

EAS 4990  Undergraduate Research in Atmospheric Science
Fall or spring. Credit TBA. S–U grades only. Students must register using independent study form. Staff.
Independent research on current problems in atmospheric science.

EAS 5000  Design Project in Geohydrology
Fall, spring. May continue over two or more semesters. 3–12 credits. Alternative to industrial project for M.Eng. students choosing hydrology option. L. M. Cathles.

EAS 5020  Case Histories in Groundwater Analysis
Spring. 4 credits. L. M. Cathles.
Groundwater flow in a specific area, such as a proposed nuclear-waste disposal site, is analyzed in depth. Geological and resource data on the area are presented early in the course. Then the material is analyzed by students working as an engineering analysis team. Each student makes a weekly progress report and writes part of a final report. Results are presented in a half-day seminar at the end of term.

EAS 5050  Fluid Dynamics in the Earth Sciences
Spring. 3 credits. Prerequisites: MATH through 2940, PHYS through 2208 or 2214 or permission of instructor. Offered alternate years. L. Cathles and M. Wysocki.
The Earth System provides fascinating examples of fluid dynamic phenomena such as turbulent convection in the outer core; convection in the viscous mantle, which drives crustal plates and causes volcanism and earthquakes; rapid flows in the atmosphere and oceans, which impact climate; and electromagnetic effects in the solar wind and magnetosphere. This course investigates the Earth using fluid dynamics. Students in Earth Sciences will gain insights provided by fluid dynamics. Students from other fields will see spectacular applications and learn about the Earth System in a different and fundamental way.

EAS 5110  Earth System Interactions
Fall. 1 credit (S–U grades) or 2 credits (w/paper, letter grades). Prerequisite: permission of instructor. J. L. Cisne.
New ways of conceptualizing, characterizing, and measuring phenomena can be quite as important as new instruments or empirical discoveries in opening new areas to exploration or established ones to more rigorous investigation. This seminar aims to prepare seniors and beginning graduate students for independent research on Earth systems by analyzing examples ranging from epoch-making classics to work now appearing in the literature.

EAS 5220  Advanced Structural Geology I
Fall. 3 credits. Prerequisites: EAS 4260 and permission of instructor. Offered alternate years. R. W. Allmendinger and C. Andronicos.

EAS 5240  Advanced Geologic Remote Sensing
Fall. 3 credits. Prerequisites: EAS 4260 and permission of instructor. Offered alternate years. R. W. Allmendinger.
Geometry, kinematics, and mechanics of structural provinces.

EAS 5330  Advanced Mineralogy
Fall. 3 credits. Prerequisite: EAS 4940. Offered alternate years. R. W. Kay.

EAS 5540  Advanced Geophysical Imaging
Spring. 3 credits. Prerequisites: EAS 4530 or permission of instructor. Offered alternate years. S. Mahlburg Kay.
Advanced crystallography and crystal chemistry of minerals and methods of their study. Intended to follow EAS 4530 or equivalent. Includes X-ray diffraction, optical and electron microprobe methods and can include other more advanced techniques. Concentration is on chemistry and structures of minerals and their use in understanding the thermal and pressure structure and evolution of the Earth and other planets. Includes an individual research project.

EAS 5750  Planetary Atmospheres (also ASTRO 6575)
Fall. 4 credits. Prerequisites: undergraduate physics, vector calculus. Offered alternate years; next offered 2010–2011. P. Gierasch. For description, see ASTRO 6575.

EAS 5770  Planetary Surface Processes (also ASTRO 6577)
Spring. 3 or 4 credits. Offered alternate years. J. Bell.
For description, see ASTRO 6577.
An exploration of solution methods for inverse problems with examples taken from geophysics and related fields, with particular attention to making inferences from inaccurate, incomplete, or inconsistent physical data.

**EAS 5880 Advanced Methods in Radar (also ECE 5890)**

Fall. 3 credits. Prerequisite: EAS 4870 or permission of instructor. D. Hysell.

This course will address the theory and practice of advanced radar techniques used for remote sensing, with emphasis placed on studying the upper atmosphere and ionosphere. Roughly the first half of the course will be devoted to incoherent scatter theory, the theory that relates the statistics of the signals scattered from an ionospheric plasma to the state variables that describe the plasma. The second half of the course will examine methods for measuring ionospheric parameters using incoherent scatter theory in concert with advanced radar modes and data analysis techniques. Students taking this course should be familiar with radar fundamentals and plasma kinetic theory.

**EAS 6280 Geology of Orogenic Belts**

Spring. 3 credits. Prerequisite: permission of instructor. Staff.

**EAS 6410 Analysis of Biogeochemical Systems**

Spring. 3 credits. Prerequisite: MATH 2940 or permission of instructor. Offered alternate years; next offered 2010–2011. L. A. Derry.

Covers dynamics of biogeochemical systems; kinetic treatment of biogeochemical cycles; box models, residence time, response time; analytical and numerical solutions of model systems.

**EAS 6480 Air Quality and Atmospheric Chemistry (also MAE 6480)**

Fall. 3 credits. Prerequisites: first-year chemistry and thermodynamics (or equivalent) and fluid mechanics (or equivalent); graduate standing or permission of instructor. K. M. Zhang.

Factors determining air quality and effects of air pollutants on public health, ecological systems, and global climate change.

**EAS 6520 Advanced Atmospheric Dynamics (also ASTRO 7652)**

Spring. 3 credits. Prerequisites: EAS 3410 and 3420 or equivalent. S. J. Colucci.

**EAS 6650 Isotope Geochemistry**

Spring 3 credits. Open to undergraduates. Prerequisite: EAS 4550 or permission of instructor. Offered alternate years; next offered 2010–2011. W. M. White.

Nucleosynthetic processes and the isotopic abundance of the elements; geochronology and cosmochronology using radioactive decay schemes.

**EAS 6660 Applied Multivariate Statistics**

Spring. 3 credits. Prerequisites: multivariate calculus, matrix algebra, and two statistics courses. Offered alternate years; next offered 2010–2011. D. S. Wilks.

**EAS 6750 Modeling the Soil–Plant–Atmosphere System (also CSS 6750)**

Spring. 3 credits. Prerequisites: CSS/EAS 4850 or equivalent. S. J. Riha.

Study of topics in atmospheric science that are more specialized or different from other courses. Special topics covered depend on staff and student interests.

**EAS 6920 Special Topics in Atmospheric Science**

Fall or spring. 1–6 credits. S–U or letter grades. Staff.

Study of topics in atmospheric science that are more specialized or different from other courses. Special topics covered depend on staff and student interests.

**EAS 6930 Special Topics in Geological Sciences**

Fall or spring. 1–3 credits, variable. S–U or letter grades. Staff.

Study of specialized advanced topics in the Earth sciences through readings from the scientific literature, seminars, and discussions.

**EAS 7000–7990 Seminars and Special Work**

Fall, spring. 1–3 credits. Prerequisite: permission of instructor. Staff.

Advanced work on original investigations in earth and atmospheric sciences. Topics change from semester to semester. Students should contact appropriate professor for more information.

**EAS 7010–7020 Thesis Research**

7010, fall; 7020, spring. 1–15 credits. Variable. Staff.

**EAS 7110 Upper Atmospheric and Space Physics**

Fall or spring. 1–6 credits. Seminar course. D. L. Hysell.

**EAS 7220 Advanced Topics in Structural Geology**

R. W. Allmendinger.

**EAS 7310 Advanced Topics in Remote Sensing and Geophysics**

M. Pritchard.

**EAS 7330 Advanced Topics in Geodynamics**

Spring. J. Phipps Morgan.

**EAS 7500 Satellite Remote Sensing in Biological Oceanography**

Summer. 3 credits. B. C. Monger.

The intensive summer course meets from 9 a.m. to 5 p.m. for a two-week period. The goal of the course is to teach participants the skills needed to work independently to acquire data sets derived from a variety of satellite sensors (SeaWiFS, MODIS, AVHRR, SeaWinds and Topex-Poseidon) and to merge these data sets to examine biological responses to changes in the physical environment. Course time is split equally between lectures and computer lab work. Lectures cover the fundamentals of bio-optics, pigment algorithms, primary production algorithms and the underlying physical principals leading to the measurement of sea surface temperature, ocean wind speed and ocean topography. Computer labs focus on developing the IDL (Research Systems, Inc.) programming skills needed to process, analyze and visualize satellite image data. See the course syllabus for more details on the topics covered in this course.

**EAS 7510 Petrology and Geochemistry**

Fall. 3 credits. J. Phipps Morgan.

**EAS 7570 Current Research in Petrology and Geochemistry**

S. Mahlbarg Kay.

**EAS 7620 Advanced Topics in Paleobiology**

W. D. Allmon.

**EAS 7650 Topics in Paleoecology**

Fall. 1 credit. S–U grades only. G. Dietl.

**EAS 7710 Advanced Topics in Sedimentology and Stratigraphy**

T. E. Jordan.

**EAS 7730 Paleobiology**

J. L. Csine.

**EAS 7750 Advanced Topics in Oceanography**

C. H. Greene.

**EAS 7800 Earthquake Record Reading**

Fall. M. Barazangi and R. Lohman.

**EAS 7810 Advanced Topics in Exploration Geophysics**

L. D. Brown.

**EAS 7930 Andes–Himalayas Seminar**

**EAS 7950 Low Temperature Geochemistry**

**EAS 7960 Geochemistry of the Solid Earth**

W. M. White.

**EAS 7970 Fluid–Rock Interactions**

L. M. Cathles.

**EAS 7990 Soil, Water, and Geology Seminar**

Spring. L. M. Cathles and T. S. Steenhuis.

**EAS 8500 Master's-Level Thesis**

Research in Atmospheric Science

Fall or spring. Credit by arrangement. S–U grades only. Hours by arrangement. Graduate faculty.

Limited to students specifically in the master's program in atmospheric science.

**EAS 9500 Graduate-Level Dissertation Research in Atmospheric Science**

Fall or spring. Credit by arrangement. S–U or letter grades. Hours by arrangement.

Graduate faculty.

Limited to students in the atmospheric science Ph.D. program only before "A" exam has been passed.

**EAS 9510 Doctoral-Level Dissertation Research in Atmospheric Science**

Fall or spring. Credit by arrangement. S–U or letter grades. Hours by arrangement.

Graduate faculty.

Limited to students admitted to candidacy in the atmospheric science Ph.D. program after "A" exam has been passed.
EAST ASIA PROGRAM
140 Uris Hall

Director: D. X. Warner. Academic: D. Boucher, A. Carlson, J. Chen, Z. Chen, S. G. Cochran, B. de Barry, S. Diro, G. Fields, M. Fiskejo, E. Gunn, T. J. Hintichs, K. Hirano, J. Kanemistu, P. J. Katzenstein, J. V. Koschmann, J. M. Law, P. Liu, T. P. Lyons, S. Martin, D. McKee, R. McNeal, A. Mertha, H. Miyazaki, V. Nee, A. Pan, L. Paterson, A. Riles, B. Rusk, N. Sakai, P. S. Sangren, M. Shin, R. J. Sukle, K. Taylor, H. Wan, Q. Wang, J. Whitman, X. Xu, H. Yan, L. Zheng. Language: E. Akamatsu, M. Chapman, J. Choi, W. S. George, H. Hong, S. Ichikawa, H. Jeong, Y. Katagiri, S. Lai, N. Larson, F. Li, X. Li, C. Liao, F. L. Mehta, W. Shao, M. Song, M. Suzuki, Q. Teng, L. Xu, Y. Yamasaki. Emeritus: R. Barker, K. W. Brazell, T. C. Campbell, E. H. Jorden, T. L. Mei, C. Peterson, V. Shue, R. J. Smith, M. W. Young. Cornell’s East Asia Program, charged with fostering knowledge of the histories, cultures, and contemporary affairs of East Asia (China, Japan, and Korea), serves as a cross-campus clearinghouse for information and is a focal unit for all of the university’s East Asia-related students, faculty, community outreach, and public activities. Courses are offered through departments in the humanities and social sciences, business, city and regional planning, international and comparative labor relations, and rural sociology. A minor in East Asian Studies is offered in the Department of Asian Studies, and students enrolled in the minor are considered members of the East Asia Program. The program also offers a number of East Asia-related activities throughout the year, designed to promote awareness and enjoyment of East Asian cultures on the Cornell campus. Recognized as a National Resource Center (NRC) by the United States Department of Education, the Program is nationally renowned as one of the country’s premier centers for teaching and research on East Asia and in promoting advanced foreign language training in Mandarin, Cantonese, Korean, and Japanese: areal and international knowledge in the liberal arts and applied disciplines focused on East Asia. In addition, EAP was recently awarded a Foreign Language and Area Studies (FLAS) grant by US/ED. Together with the NRC funding, the FLAS fellowship program supports graduate students who wish to acquire a high level of competence in languages critical to the national needs of the United States and in a fuller understanding of the areas, regions, or countries in which that language is used.

ECONOMICS

The Major
Prerequisites
ECON 1110 and 1120 and MATH 1110 (or equivalents) are required, all with grades of C or better; MATH 1120 (or equivalent) is recommended. ECON 3010 with a grade of C or better substitutes for 1110. ECON 3020 with a grade of C or better substitutes for 1120.

Requirements
Eight courses listed by the Department of Economics at the 3000 level or above, or approved by the student’s major advisor, all with grades of C– or better. (S–U grade option is not allowed.)

These eight courses must include:
1. ECON 3130 and 3140
2. ECON 3210, or ECON 3190 and 3200 (ECON 3130, 3140, 3210 or 3210, 3200 should be completed before senior year.)
3. at least three courses from the following: ECON 3180, 3200, 5220–5990

ECON 3010 with a grade of B or better substitutes for both 1110 and 3130; ECON 3020 with a grade of B or better substitutes for both 1120 and 3140. If ECON 3210 is applied toward the major, neither 3190 nor 3200 can be applied.

ECON 4980 and 4990 cannot be counted toward the eight-course requirement.

If ECON 3150 is applied to the major, ECON 3010 cannot be.

If ECON 3140 is applied to the major, ECON 3020 cannot be.

If both ECON 3670 and ECON 3680 are taken, only one can be applied to the major.

Honors Program
An honors program is currently being offered. Students should consult the director of undergraduate studies before May of their junior year for more information.

Recommended Courses

Courses

ECON 1001 Academic Support for ECON 1110
Fall, spring. 1 transcript credit only; cannot be used toward graduation. Reviews lecture material presented in ECON 1110 lectures; provides problem-solving techniques, study tips, and additional problems to prepare for exams and problem sets; provides additional time for questions and discussion of concepts. Provides additional instruction for students who need reinforcement.

ECON 1002 Academic Support for ECON 1120
Fall, spring. 1 transcript credit only; cannot be used toward graduation. Reviews lecture material presented in ECON 1120 lectures; provides problem-solving techniques, study tips, and additional problems to prepare for exams and problem sets; provides additional time for questions and discussion of concepts. Provides additional instruction for students who need reinforcement.
ECON 1110 Introductory Microeconomics (SBA-AS)
Fall, spring, winter, and summer. 3 credits. ECON 1110 is not a prerequisite for 1120. Students may not receive credit for both ECON 1110 and HADM 1141. Students who take ECON 1110 and ECON 3130 may not receive credit for ECON 3010 or PAM 2000. Explanation and evaluation of how the price system works in determining what goods are produced, how goods are produced, who receives income, and how the price system is modified and influenced by private organizations and government policy.

ECON 1120 Introductory Macroeconomics (SBA-AS)
ECON 1110 is not a prerequisite for 1120. Students who take ECON 1120 and 3140 may not receive credit for ECON 3020. Analysis of aggregate economic activity in relation to policy, and growth of national income. Topics may include the determination and effects of unemployment, inflation, balance of payments, deficits, and economic development, and how these may be influenced by monetary, fiscal, and other policies.

ECON 2040 Networks (also CS 2850, INFO 2040, SOC 2090) (SBA-AS)
Spring. 4 credits. This interdisciplinary course examines network structures and how they matter in everyday life. The course examines how each of the computing, economic, sociological and natural worlds are connected and how the structure of these connections affects each of these worlds. Tools of graph theory and game theory are taught and then used to analyze networks. Topics covered include the web, the small world phenomenon, markets, neural networks, contagion, search and the evolution of networks.

ECON 3350 Public Finance: The Microeconomics of Government (SBA-AS)
Fall. 4 credits. Prerequisites: ECON 1110–1120 and 3130, or equivalent, and one semester of calculus. Analyzes the role of government in a free market economy. Topics include public goods, market failures, allocation mechanisms, optimal taxation, effects of taxation, and benefit–cost analysis. Current topics of an applied nature vary from semester to semester.

ECON 3410 Labor Market Analysis (SBA-AS)
For description, see ILRSE 4400.

ECON 3440 Development of Economic Thought and Institutions (SBA-AS)
For description, see ILRSE 3440.

ECON 3470 Economics of Education (SBA-AS)
For description, see ILRSE 6470.

ECON 3510 Industrial Organization I (SBA-AS)
Fall. 4 credits. Students may not receive credit for both ECON 3510 and AEM 4320. Prerequisite: ECON 3130 or equivalent. Surveys problems in American economic history from the Civil War to World War I.

ECON 3520 Industrial Organization II (SBA-AS)
Spring. 4 credits. Prerequisite: ECON 3130 or equivalent. Focuses primarily on the pricing decisions of firms. The course does not consider the strategic response of other firms to these pricing decisions. The pricing decisions include price discrimination, commodity bundling, pricing a product line and pricing a durable good. In addition to pricing decisions, the course considers topics associated with private information such as adverse selection,
signaling, and moral hazard. Numerous theoretical models are presented and empirical results are discussed.

**ECON 3580 Behavioral Economics (SBA-AS)**
Spring. 4 credits. Prerequisite: ECON 3150. Introduces students to behavioral economics, an emerging subfield of economics that incorporates insights from psychology and other social sciences into economics. Examines evidence on how human behavior systematically departs from the standard assumptions of economics, and also investigates attempts by behavioral economists to improve economic analyses.

**ECON 3610 International Trade Theory and Policy (SBA-AS)**
Fall. 4 credits. Prerequisites: ECON 1100–1120 and 3130. Surveys the sources of comparative advantage. Studies commercial policy and analyzes the welfare economics of trade between countries. Some attention is paid to the institutional aspects of the world trading system.

**ECON 3620 International Monetary Theory and Policy (SBA-AS)**
Spring and summer. 4 credits. Prerequisites: ECON 1100–1120 and 3140. Surveys the determination of exchange rates and theories of balance of payments adjustments. Also explores open economy macroeconomics and analyzes some of the institutional details of foreign exchange markets, balance of payments accounting, and the international monetary system.

**ECON 3670 Game Theoretic Methods (SBA-AS)**
Fall. 4 credits. Students may not receive credit for both ECON 3670 and ECON 3680. Prerequisites: ECON 1110 or equivalent. ECON 3670 is not a prerequisite for ECON 3680. Introduces students to the use of game-theoretic methods for the social sciences. This leads to an analysis of the social and political foundations of economics that prepares students to think strategically about social and economic matters and thus serves as a background for more advanced courses in economics, game theory, and related social sciences.

**ECON 3680 Game Theory (MGR)**
Spring. 4 credits. Students may not receive credit for both ECON 3670 and ECON 3680. Prerequisites: ECON 3130 and 3190. ECON 3670 is not a prerequisite for ECON 3680. Studies mathematical models of conflict and cooperation in situations of uncertainty (about nature and about decision makers).

**ECON 3710 Economic Development (SBA-AS)**
Fall. 4 credits. Prerequisite: ECON 3130 or equivalent. Studies the problem of sustaining accelerated economic growth in less-developed countries. Emphasizes trade-offs between growth, welfare, and equity; the legacy of colonialism; relevance of history and economic theory; problems of capital formation, economic planning and international specialization; and the interaction of industrialization, agricultural development, and population change.

**ECON 3720 Applied Economic Development (SBA-AS)**
Spring. 4 credits. Prerequisite: ECON 1110–1120. Examines several special topics in the economics of developing countries. Recent topics are the concepts of development and underdevelopment, the debate over development economics, the peasant household and its place in the world economy, the debate vs. market debate and the role of the state in economic development, and the question of sustainable development.

**ECON 4040 Economics and the Law (SBA-AS)**
Spring. 4 credits. Prerequisite: ECON 1110. Examines, through the lens of economic analysis, of legal principles drawn from various branches of law, including contracts, torts, and property. Cases are assigned for class discussion; in addition, there are several writing assignments.

**ECON 4080 Production Economics and Policy (SBA-AS)**
For description, see AEM 6080.

**ECON 4090 Environmental Economics (SBA-AS)**
For description, see AEM 6080.

**ECON 4160 Intertemporal Economics (SBA-AS)**
Fall. 4 credits. Prerequisite: ECON 3130. Intended for advanced economics majors who are especially interested in economic theory. Topics include (1) review of the one good Ramsey model of optimal savings and accumulation; conditions for intertemporal efficiency in production; comparative dynamics and sensitivity analysis; (2) some earlier models of capital accumulation; the roles of present value and internal rate of return in guiding investment decisions; (3) growth, exhaustible resources; pollution and conservation: discussion of the trade-offs facing a society.

**ECON 4170 History of Economic Analysis (HA-AS)**
Spring. 4 credits. Prerequisites: ECON 1110–1120 or permission of instructor. Covers early writings in economics and their relationship to current economic analysis and policy issues. Examples include: ancient and medieval philosophers on justice in exchange; mercantilist arguments for trade protection; early theories about the effect of monetary expansion (D. Hume); the role of the entrepreneur (Cantillon); and general competitive equilibrium (the Physiocrats). The most recent reading assignment in this course is Adam Smith's Wealth of Nations but the emphasis is on the relationship between the precursors of Adam Smith and his Wealth of Nations to modern economics analysis and current efforts to answer some of the questions raised in the early writings on economics.

**ECON 4190 Economic Decisions under Uncertainty (SBA-AS)**
Fall. 4 credits. Prerequisites: ECON 3130 and 3190. Next offered 2010–2011. Provides an introduction to the theory of decision making under uncertainty with emphasis on economic applications of the theory.

**ECON 4230 Resource Economics (SBA-AS)**
For description, see AEM 6300.

**ECON 4300 Policy Analysis: Welfare Theory, Agriculture, and Trade (SBA-AS)**
For description, see AEM 6300.

**ECON 4340 Financial Economics, Derivatives, and Risk Management (SBA-AS)**
Summer only. 4 credits. Prerequisite: ECON 3130. Helps students understand, design, and price derivative contracts. Topics include pricing of forwards, options, and swaps; developing trading strategies with derivatives; using derivatives for financial risk management; and the importance of flexibility in various economic settings.

**ECON 4370 Economics of Health Policy (SBA-AS)**
For description, see AEM 6300.

**ECON 4380 Economics of Public Health (SBA-AS)**
For description, see AEM 6300.

**ECON 4410 Economics of Consumer Law (SBA-AS)**
For description, see AEM 6300.

**ECON 4430 Compensation, Incentives, and Productivity (SBA-AS)**
For description, see AEM 6300.

**ECON 4440 Evolution of Social Policy in Britain and America (SBA-AS)**
For description, see AEM 6300.

**ECON 4450 Industrial Policy (SBA-AS)**
Spring. 4 credits. Prerequisite: ECON 3130. Highlights of the course include: (1) the role of the state in an industrial society; the drive for industrialization; the prevention of de-industrialization; the views of the Nobelists—Friedman, the Libertarian vs. North, the institutionalist, the original intent of laissez-faire; (2) the major debates—the pros and cons of the Washington Consensus ("liberalization"); IMF and "conditionality"; market failure vs. government failure as roots for crises; (3) the East Asian episodes; Komiya on the Japanese MITI—early successes/recent problems; Liusu Kim about Korean policy—subsequent difficulties the necessary price for the early triumphs; industrial policy without protectionism (the cases of Singapore and Penan, Malaysia)—viable approaches under the WTO rules; (4) present developments and implications; trade frictions (the export expansion of the PRC); environmental concerns.

**ECON 4460 Economics of Social Security (SBA-AS)**
For description, see AEM 6300.

**ECON 4500 Resource Economics (SBA-AS)**
For description, see AEM 6300.

**ECON 4540 China and India: Growth Miracle (also AEM 4540) (SBA-AS)**
For description, see AEM 6300.

**ECON 4550 Income Distribution (SBA-AS)**
For description, see AEM 6300.

**ECON 4570 Women in the Economy (also FGSS 4460) (SBA-AS)**
For description, see AEM 6300.

**ECON 4580 Topics in 20th-Century Economic History (SBA-AS)**
For description, see AEM 6300.
ECON 4690 China's Economy under Mao and Deng (also CAPS 4690) (SBA-AS)
Spring. 4 credits. Prerequisite: ECON 1110–1120 or permission of instructor. Examines the development of the Chinese economy and the evolution of China's economic system between the early 1950s and late 1990s.

ECON 4730 Economics of Export-Led Development (SBA-AS)
Fall. 4 credits. Prerequisites: ECON 3130, 3140, or equivalent. Examines the phenomenon of export-led development from both the theoretical and empirical points of view. Concentration is on experiences within the West Pacific Rim.

ECON 4740 Health, Poverty, and Inequality: A Global Perspective
For description, see NS 4570.

ECON 4750 The Economy of India @ (SBA-AS)
Fall. 4 credits. Prerequisite: ECON 1110–1120 or equivalent background. Next offered 2010–2011. Presents the major economics and development problems of contemporary India and examines the country's future economic prospects. The aim is, however, to discuss these problems in their proper historical perspectives. Hence, the course starts with a brief outline of the social and political history of India. It then turns to a more detailed account of the economic history of India in two stages.

ECON 4760 Decision Theory I (also COGST 4760, CS 5846, ECON 6760) (MQR)
Fall. 4 credits. Research on decision theory resides in a variety of disciplines including computer science, economics, game theory, philosophy, and psychology. This course attempts to integrate these various approaches. The course is taught jointly by faculty from Game Theory and Computer Science. The course covers several areas: (1) basic decision theory. This theory, sometimes known as a rational choice theory, is part of the foundation for the disciplines listed above. It applies to decisions made by individuals or by machines; (2) the limitations of and problems with this theory; Issues discussed here include decision theory paradoxes revealed by experiments, cognitive and knowledge limitations, and computational issues; and (3) new research designed in response to these difficulties. Issues covered include alternative approaches to the foundations of decision theory, adaptive behavior and shaping the individual decisions by aggregate/evolutionary forces and more computationally based approaches.

ECON 4770 Decision Theory II (also COGST 4770, CS 5847, ECON 6770) (MQR)
Spring. 4 credits. Prerequisite: ECON 4760 or 6760 or CS 5846. A continuation of ECON 4760.

ECON 4980 Independent Study in Economics
Fall or spring. Variable credit. Independent study.

ECON 4990 Honors Program
Fall and spring. 8 credits. Prerequisites: ECON 3130, 3140, 3210 (or 3190–3200).

Students should consult the director of undergraduate studies for details. Admission is competitive. Interested students should apply to the program in the spring semester of their junior year.

Graduate Courses and Seminars
ECON 6090 Microeconomic Theory I
Fall. 4 credits. Topics in consumer and producer theory.

ECON 6100 Microeconomic Theory II
Spring. 4 credits. Topics in consumer and producer theory, equilibrium models and their application, externalities and public goods, intertemporal choice, simple dynamic models and resource depletion, choice under uncertainty.

ECON 6110 Microeconomic Theory III
Fall. 4 credits. Prerequisites: ECON 6090 and 6100. This class is part of a three-semester sequence in microeconomic theory. It provides a rigorous underpinning of partial equilibrium competitive analysis and reviews theories of noncompetitive markets, including Bertrand, Cournot, and monopolistic competition. It covers the classical sources of market failure (public goods, externalities, and natural monopoly) and discusses market failures stemming from informational asymmetries. It also provides an introduction to contract theory, bargaining theory, social choice theory, and theory of mechanism design.

ECON 6130 Macroeconomic Theory I
Fall. 4 credits. Covers the following topics: static general equilibrium; intertemporal general equilibrium: infinitely lived agents models and overlapping generations models; welfare theorems; equivalence between sequential markets and Arrow-Debreu Markets; Ricardian proposition; Modigliani-Miller theorem; asset pricing; recursive competitive equilibrium; the Neoclassical Growth Model; calibration; and introduction to dynamic programming.

ECON 6140 Macroeconomic Theory II
Spring. 4 credits. Covers the following topics: dynamic programming; stochastic growth; search models; cash-in-advance models; real business-cycle models; labor indivisibilities and lotteries; heterogeneous agents models; optimal fiscal and monetary policy; sustainable plans; and endogenous growth.

ECON 6160 Intermediate Mathematical Economics I
Fall. 4 credits. Prerequisites: calculus II and intermediate linear algebra. Covers selected topics in Matrix algebra (vector spaces, eigenvalues, simultaneous linear equations, characteristic value problem), calculus of several variables (elementary real analysis, partial differentiation, convex analysis), classical optimization theory (unconstrained maximization, constrained maximization).

ECON 6170 Econometrics I
Fall. 4 credits. Prerequisite: ECON 3190–3200 or permission of instructor. The probabilistic and statistical background for meaningful application of econometric techniques. Topics include: probability theory probability spaces, random variables, distributions, moments, transformations, conditional distributions, distribution theory and the multivariate normal distribution, convergence concepts, laws of large numbers, central limit theorems, Monte Carlo simulation; statistics: sample statistics, sufficiency, exponential families of distributions. Further topics in statistics are considered in ECON 6200.

ECON 6200 Econometrics II
Spring. 4 credits. Prerequisite: ECON 6190. A continuation of ECON 6190 (Econometrics I) covering estimation: estimation theory, least squares methods, method of maximum likelihood, generalized method of moments, theory of hypothesis testing, asymptotic test theory, and nonnested hypothesis testing; and: econometrics: the general linear model, generalized least squares, specification tests, instrumental variables, dynamic regression models, linear simultaneous equation models, nonlinear models, and applications.

ECON 6410 Health Economics I
For description, see PAM 6410.

ECON 6480 Economic Analysis of the University
Fall. 4 credits. For description, see ILIRE 6480.

ECON 6760 Decision Theory I (also COGST 4760, CS 5846, ECON 4760)
For description, see ECON 4760.

ECON 6770 Decision Theory II (also COGST 4770, CS 5847, ECON 4770)
For description, see ECON 4770.

ECON 6920 Health Economics II
For description, see PAM 6920.

ECON 6990 Readings in Economics
Fall or spring. Variable credit. Independent study.

ECON 7030 Seminar in Peace Science
Fall. 4 credits. Topics covered at an advanced level are: game theory, coalition theory, bargaining and negotiation processes, cooperative procedures, microbehavior models, macrosocial processes, and general systems analysis.

ECON 7110 Stochastic Econometrics: Concepts and Techniques
Fall. 4 credits. Prerequisites: ECON 6090, 6100, 6130, 6140, 6190, and 6200. Reviews a number of techniques that have been useful in developing stochastic models of economic behavior. These include discrete-time Markov processes, dynamic programming under uncertainty, and continuous-time diffusion processes. Examples of economic models are drawn from recent literature on optimal capital accumulation and optimal savings and portfolio selection problems; permanent income hypothesis; and dynamic models of price adjustment. Advanced level: graduate students contemplating work in economic theory and econometric theory gain exposure to current research.

ECON 7120 Advanced Macroeconomics
4 credits. Prerequisites: ECON 6130, 6140. Introduces students to some of the topics and analytic techniques of current macroeconomic research. The course has three parts: dynamic programming, new Keynesian economics, and recent theories of economic growth. The dynamic programming section includes models of consumption, investment, and real business cycles. The new Keynesian section covers models of wage and price rigidity, coordination failure, and credit markets. The section on endogenous growth looks at recent efforts to add nonconvexities to models of
ECON 7130 Advanced Macroeconomics II
Spring. 4 credits. Prerequisites: ECON 6130, 6140.
Reviews the most recent research in endogenous growth theory. This theory is little more than a decade old, but it has produced a large number of both empirical and theoretical results that have substantially reshaped the general field of macroeconomics. It is perhaps no exaggeration to say that most of the work at the frontier of today's macroeconomics belongs to this field. An increasing number of papers have been touching important issues such as learning by doing, RD investment, market structure, private and public organization of RD, education financing, human capital accumulation, technological unemployment, growth and business cycles, inequality and growth, political equilibrium, democracy and growth, instability, social conflict, capital accumulation, intergenerational and vested interests and barriers to technology adoption, international transfers of technologies, and sustainable development. This course aims to orient the student in this large and variegated literature consisting of recently published articles and working papers. Understanding this literature is a sound training in the analytical methods used at the frontier of theoretical research, but it also provides a number of empirical results at the center of the economic debate.

ECON 7140 Empirical Macroeconomics
Spring. 4 credits. Prerequisites: ECON 6130 and 6140.
Advanced graduate-level course emphasizing empirical applications. Students learn how to deal with data and how to estimate and test macroeconomic theories, and can develop research topics in applied macroeconomics for their dissertations.

ECON 7170 Mathematical Economics
4 credits. Prerequisites: ECON 6090–6100 (or equivalent training in micro theory) and MATH 4130–4140 (or equivalent training in analysis).
The primary theme of this course is to explore the role of prices in achieving an efficient allocation of resources in dynamic economies. Some of the classical results on static equilibrium theory and welfare economics on attaining optimal allocation through decentralized organizations are examined through an axiomatic approach. Some basic issues on capital theory are also analyzed.

ECON 7180 Topics in Mathematical Economics

ECON 7190 Advanced Topics in Econometrics I
Fall. 4 credits. Prerequisite: ECON 6090–6100 or permission of instructor.
Covers advanced topics in econometrics, such as asymptotic estimation and test theory, robust estimation, Bayesian inference, advanced topics in time-series analysis, errors in variable and latent variable models, qualitative and limited dependent variables, aggregation, panel data, and duration models.

ECON 7200 Advanced Topics in Econometrics II
Spring. 4 credits. Prerequisite: ECON 6190–6200 or permission of instructor.
For description see ECON 7190.

ECON 7230 Semi/Non Parametric Econometrics
Fall. 4 credits. Prerequisite: ECON 6190–6200 or permission of instructor.
Analyzes the ways identification problems limit the conclusions that may be drawn in empirical economic research and studies how identified and partially identified parameters can be estimated. In the first part of the course, the focus is on nonparametric models. Ways data can be combined with weak assumptions to yield partial identification of population parameters are discussed.

ECON 7310 Monetary Economics
Spring. 4 credits. Prerequisites: ECON 6140 or permission of instructor.
Covers advanced topics in monetary economics, macroeconomics, and economic growth—such as overlapping-generations, taxes and transfers denominated in money, transactions demand for money, multi-asset accumulation, exchange rates, and financial intermediation.

ECON 7320 Monetary Economics
Fall. 4 credits. Prerequisites: ECON 7310 or permission of instructor.
Covers advanced topics in monetary economics, macroeconomics, and economic growth—such as economic volatility, the “burden” of cyclical fluctuations, and welfare implications of optimal taxation. These topics are discussed in a game-theoretic context.

ECON 7350 Public Finance: Resource Allocation and Fiscal Policy (also AEM 7350)
Fall. 4 credits.
Develops a mathematical and highly analytical understanding of the role of government in market economies and the fundamentals of public economics and related issues. Topics include generalizations and extensions of the fundamental theorems of welfare economics, in-depth analysis of social choice theory and the theory on implementation in economic environments, public goods and externalities and other forms of market failure associated with asymmetric information. The theoretical foundation for optimal direct and indirect taxation is also introduced along with the development of optimal consumption surplus measures and an application to benefit cost analysis. Topics of an applied nature vary from semester to semester depending on faculty research interests.

ECON 7360 Public Finance: Resource Allocation and Fiscal Policy
Spring. 4 credits.
Spends a large part of the semester covering the revenue side of public finance. Topics include the impact of various types of taxes as well as the determination of optimal taxation. The impact of tax changes on labor supply, savings, company finance and investment behavior, risk bearing, and portfolio choice are explored. Other topics include the interaction of taxation and inflation, tax evasion, tax incidence, social security, unemployment insurance, deficits, and interactions between different levels of government.

ECON 7380 Public Choice
Spring. 4 credits. Prerequisites: ECON 6090, 6100.
This course has two parts. It begins with an introduction to economic theories of political decision making. Reviews the theory of voting, theories of political parties and party competition, theories of legislative decision making and interest group influence. Also discusses empirical evidence concerning the validity of these theories. The second part uses these theories to address a number of issues in public economics. Develops the theory of political failure, analyzes the performance of alternative political systems and discusses the problem of doing policy analysis, which takes into account political constraints.

ECON 7400 Social and Economic Data
Spring. 4 credits. For description, see ILRLE 7400.

ECON 7420 Seminar in Labor Economics I
For description, see ILRLE 7450.

ECON 7430 Seminar in Labor Economics II
For description, see ILRLE 7460.

ECON 7470 Economics of Education I
For description, see ILRLE 7470.

ECON 7471 Economics of Education II
For description, see ILRLE 7471.

ECON 7480 Applied Econometrics I
For description, see ILRLE 7410.

ECON 7490 Applied Econometrics II
For description, see ILRLE 7420.

ECON 7510 Industrial Organization and Regulation
Fall. 4 credits. Prerequisites: ECON 6090, 6100.
Focuses primarily on recent theoretical advances in the study of industrial organization. Topics include market structure, nonlinear pricing, quality, durability, location selection, repeated games, collusion, entry deterrence, managerial incentives, switching costs, government intervention, and R&D patents. These topics are discussed in a game-theoretic context.

ECON 7520 Industrial Organization and Regulation
Spring. 4 credits. Prerequisites: ECON 6090, 6100, 7510.
Rounds out some topics in the theory of industrial organization with the specific intent of addressing the empirical implications of the theory. Reviews empirical literature in the SCP paradigm and in the NEIO paradigm.

ECON 7560 Noncooperative Game Theory
Spring. 4 credits. Prerequisites: ECON 6090–6100 and 6190.
Surveys equilibrium concepts for noncooperative games. Covers Nash equilibrium and a variety of equilibrium, refinements, including perfect equilibrium, proper equilibrium, sequential equilibrium and more. Pays attention to important special classes of games, including bargaining games, signalling games, and games of incomplete information. Most of the analysis is from the strict decision-theoretic point of view, but also surveys some models of bounded rationality in games, including games played by automata.

ECON 7570 Economics of Imperfect Information
Spring. 4 credits. Prerequisites: ECON 6090–6100 and 6190.
Considers some major topics in the economics of uncertain information. Although the precise
topics considered vary from year to year, subjects such as markets with asymmetric information, signalling theory, sequential choice theory, and record theory are discussed.

ECON 7580 Psychology and Economic Theory
Fall, spring. 4 credits. Prerequisites: economics graduate core or permission of instructor. Explores the ways in which insights from psychology can be integrated into economic theory. Presents evidence on how human behavior systematically departs from the standard assumptions of Economics and how this can be incorporated into modeling techniques.

ECON 7600 Topics in Political Economy
Fall. 4 credits. Prerequisite: economics graduate core or permission of instructor. Develops critiques and extensions of economic theory, taking into account the political and social moorings of economic activity and equilibria. The formation and persistence of social norms; the meaning and emergence of property rights; the role of policy advice in influencing economic outcomes; and the effect of political power and ideology on economic variables are studied. While these topics were popular in the classic works of political economy, recent advances in game theory and, more generally, game-theoretic thinking allows a new approach to these topics. Hence, the course begins by devoting some lectures to elementary ideas in game-theory and strategic analysis.

ECON 7610 International Economics: Trade Theory and Policy
Fall. 4 credits. Prerequisites: ECON 6090, 6100. Surveys the sources of comparative advantage. Analyzes simple general equilibrium models to illustrate the direction, volume, and welfare effects of trade. Topics in game theory and econometrics as applied to international economics may be covered.

ECON 7620 International Economics: International Finance and Open Economy Macroeconomics
Spring. 4 credits. Prerequisite: ECON 7610. Surveys the determination of exchange rates and theories of balance of payment adjustments. Explores open economy macroeconomics by analyzing models of monetary economies. Topics in monetary economics and econometrics as applied to international economics are covered.

ECON 7640 International Trade and Foreign Investment
Spring. 4 credits. Prerequisites: economics graduate core. The course will address new trade theory, introducing increasing returns, imperfect competition, and heterogeneous firms. A central part of the course will be patterns of foreign investments.

ECON 7700 Topics in Economic Development
For description, see AEM 6670.

ECON 7711 Empirical Methods for the Analysis of Household Survey Data: Applications to Nutrition, Health, and Poverty
For description, see NS 6853.

ECON 7720 Economics of Development (also ILRLE 7490)
Spring. 4 credits. Prerequisites: first-year graduate economic theory and econometrics. Analytical approaches to the economic problems of developing nations. Topics include old and new directions in development economics thinking, the welfare economics of poverty and inequality, empirical evidence on who benefits from economic development, labor market models, project analysis with application to the economics of education, and development policy.

ECON 7730 Economic Development
Fall. 4 credits. Prerequisites: ECON 6090, 6100, and 6110. Concerned with theoretical and applied works that seek to explain economic development, or lack thereof, in countries at low-income levels. Specific topics vary each semester.

ECON 7760 Computational Economics
Spring. 4 credits. Prerequisites: ECON graduate CORE. Computational economics is intended to teach students how to solve problems using a computer economic model that cannot be solved analytically. It should give students a strong background for applied and empirical research.

ECON 7840 Seminars in Advanced Economics
Fall and spring. 4 credits.

ECON 7850 Third-Year Research Seminar
Fall. 4 credits.

ENGLISH

The Department of English offers a wide range of courses in English composition or literature, or 5 on the CEEB Advanced Placement Examination in English, as well as to students who have completed another first-year writing seminar.

Courses for Nonmajors
For students majoring in fields other than English, the department provides a variety of courses at all levels. A number of courses at the 2000 level are open to qualified freshmen, and all are open to sophomores. Courses at the 3000 level are open to all sophomores, juniors, and seniors; they are also open to freshmen who have received the instructor’s prior permission. The suitability of courses at the 4000 level for nonmajors depends in part on the course topics, which are subject to change from year to year. Permission of the instructor is sometimes required; prior consultation is always strongly advised.

The Major in English
Students who major in English develop their own programs of study in consultation with their major advisors. Some choose to focus on a particular historical period or literary genre or to combine sustained work in creative writing with the study of literature. Others pursue interests in such areas as women’s literature, African–American literature, literature and the visual arts, or critical theory.
The department recommends that students prepare themselves for the English major by taking one or more of its preparatory courses, such as ENGL 2700 The Reading of Fiction, ENGL 2710 The Reading of Poetry, or ENGL 2720 Introduction to Drama. The "ENGL" prefix identifies courses sponsored by the Department of English, all of which appear in the English section of Courses of Study or the department's supplementary lists of courses; it also identifies courses sponsored and taught by other academic units and cross-listed with English. These courses concentrate on the skills basic to the English major and to much other academic work—responsive, sensitive reading and writing, expository and creative writing. As first- or second-year writing seminars, any one of them will satisfy one half of the College of Arts and Science's first-year writing requirement. ENGL 2800, 2810, 2880, and 2890 are also suitable preparations for the major and are open to students who have completed their first-year writing seminar requirement. ENGL 2010 and 2020, which together constitute a two-semester survey of major British writers, though not required, are strongly recommended for majors and prospective majors. ENGL 2010 and 2020 (unlike ENGL 2800, 2810, 2880, and 2890) are also "approved for the major" in the special sense of that phrase explained below.

To graduate with a major in English, a student must complete with a grade of C or better 10 courses (40 credit hours) approved for the English major. All ENGL courses numbered 1000 and above are approved for the major. In addition, with the exception of first-year writing seminars (ENGL 2700, 2710, and 2720), 2000-level courses in creative and expository writing (ENGL 2800, 2810, 2880, and 2890), and courses designated for nonmajors, all 2000-level ENGL courses are also approved for the major. Courses used to meet requirements for the English major may also be used to meet the distribution requirements in the College of Arts and Sciences. Many of these courses may be used to meet the college's "historical breadth" requirement as well.

Of the 40 credits required to complete the major, at least 12 credits (three courses) must be from courses in which 50 percent or more of the material consists of literature originally written in English before 1800; 8 credits (two courses) must be gateway courses (2000 through 2050); 8 credits (two courses) must be at the 4000 level or above; and another 12 credits (three courses) must form an intellectually coherent "concentration." The 4000-level and pre-1800 requirements may be satisfied only with ENGL courses, and ENGL 4930–4940, the Honors Essay Tutorial, may not be used to satisfy either one. Courses that satisfy the pre-1800 requirement are so designated in Courses of Study. Many English majors use ENGL 2010 or ENGL 2020 to begin meeting this requirement since these courses provide an overview of earlier periods of British and American literatures and so enable students to make more informed choices of additional pre-1800 courses. ENGL 2020 does not qualify as a pre-1800 course. Neither do courses offered by other departments unless they are cross-listed with English. Advanced courses in foreign literatures may not be used to fulfill the pre-1800 requirement, but they may be used for English major credit provided they are included within the 12-credit limit described below. The three-course concentration requirement must be satisfied with any courses approved for the major. The department's "Guide to the English Major" suggests areas of concentration and offers examples of courses that fall within those areas, but majors define their own concentrations in consultation with their advisors.

As many as 12 credits in appropriate courses offered by departments and programs other than English may be used to satisfy English major requirements. These courses in literature and creative writing offered by academic units representing neighboring or allied disciplines (German, Romance Studies, Russian, Asian Studies, Classics, Comparative Literature, Africana Studies, and the Program in African, African-American, African Studies, Humanities, American Studies, Feminist, Gender and Sexuality Studies, Religious Studies, Asian American Studies, and Theatre, Film, and Dance) are routinely counted toward the 40 hours of major credit provided they are appropriate for juniors or seniors, as are most courses at the 3000 level and above. English majors who are double majors may exercise this option even if all 12 credits are applied to their second major. All English majors are urged to take courses in which they read foreign works of literature in the original language, and for that reason 2000-level literature courses for which qualification is a prerequisite (as well as more advanced foreign literature courses) may be counted toward the English major. Credit from other non-ENGL courses may be included within the 12 credits of nondepartmental courses approved for the major only when the student is able to demonstrate to the advisor's satisfaction their relevance to his or her individual program of study.

Planning a Program of Study

Few students know from the moment they decide to pursue a major in English exactly what they wish to study. Moreover, it is natural for interests to change in the course of time. The effort of creating or discovering a coherent pattern in the courses selected is itself a valuable part of a literary (as well as a liberal) education, and English majors are expected to complete a program of study when seeking their advisors' approval of courses each semester. While the Department leaves a great deal to the discretion of its individual majors and their academic advisers, it expects them to choose courses with an eye to breadth and variety on the one hand and focus and coherence on the other.

Students with a special interest in developing their skills as writers of verse or prose will find a variety of workshop courses in English majors. ENGL 4920 and 4930–4940 are encouraged to seek admission to the departmental program leading to the degree of master of fine arts in English. Such a program is conducted under Cornell auspices.

No more than 16 credits per year, or 8 credits per semester, of non-Cornell credit may be applied to the English major. This restriction applies to study abroad even when that study is conducted under Cornell auspices.

The Major in English with Honor

Second-semester sophomores who have done superior work in English and related subjects are encouraged to seek admission to the departmental program leading to the degree of bachelor of arts with honors in English. Following an interview with the chair of the Honors Committee, qualified students will be admitted provisionally to the program. During their junior year these students complete at least one honors seminar (ENGL 4910 or 4920) and are encouraged to take an additional 4000-level English course in the area of their thesis topic. On the basis of work in these and other English courses, a provisional honors candidate will select a thesis topic and secure a thesis advisor by the end of the junior year. A student who has been accepted by a thesis advisor becomes a candidate for honors rather than a provisional candidate.

During the senior year, each candidate for honors in English enrolls in a yearlong tutorial (ENGL 4930–4940) with the faculty member chosen as thesis advisor. The year's work culminates in the submission of a substantial scholarly or critical essay to be judged by at least two members of the faculty. More information about the Honors Program may be found in a leaflet available in the English offices.

First-Year Writing Seminars Recommended for Prospective Majors

ENGL 2700 The Reading of Fiction

Fall, spring, summer. 3 credits. Each section limited to 17 students. Recommended for prospective majors in English. This course does not satisfy requirements for the English major.

This course examines modern fiction, with an emphasis on the short story and novella. Students write critical essays on authors who flourished between 1870 and the present, such as James, Joyce, Woolf, Hurston, Lawrence, Fitzgerald, Hemingway, Faulkner, Iffy, Welty, Salinger, and Morrison. Reading lists vary from...
section to section, and some may include a novel, but close, attentive, and imaginative reading and writing are central to all.

**ENGL 2710 The Reading of Poetry**

Fall, spring. 3 credits. Each sec limited to 17 students. Recommended for prospective English majors. This course does not satisfy requirements for the English major.

What can reading poetry teach us about writing critical essays? How can we become more perceptive and critical readers of poetry, and also better prose writers? This course deals with a variety of poetic forms, including sonnets, odes, sestinas, villanelles, and songs. By engaging in discussions and working with varied writing assignments, we will explore major modes and genres of English poetry, learn about versification techniques, rhetorical strategies, and thematic and topical concerns. In the process, we will expand the possibilities of our own writing.

**ENGL 2720 The Reading of Drama**

Fall, spring. 3 credits. Each sec limited to 17 students. Recommended for prospective English majors. This course does not satisfy requirements for the English major.

In this course, we will study and write critically about plays, older and newer, in a variety of dramatic idioms and cultural traditions. We will practice close, interpretive reading of texts as preparation for writing well about drama, dealing with the whole play, not just a single passage or character. The writing of poetry; study of models; analysis of students’ poems; personal reflective essay. K. Gottschalk.

**ENGL 2800–2890 Expository Writing (LA-AS)**

Fall, spring. 4 credits. Each section limited to 16 students. Students must have completed their college’s first-year writing requirements or have the permission of the instructor. S. Davis and staff. Website: http://courses.cit.cornell.edu/engl2800-2890/. This course does not satisfy requirements for the English major.

ENGLISH 2800–2890 offers guidance and an audience for students who wish to gain skill in expository writing—a common term for critical, reflective, investigative, and literary nonfiction. Each section provides a context for writing defined by a form of exposition, a discipline or practice, or a topic intimately related to the written medium.

Course members will read in relevant published material and write and revise their own work regularly, while reviewing and responding to one another’s. Since these seminar-sized courses depend on members’ full participation, regular attendance and submission of written work are required. Students will confer individually throughout the term.

Critical Writing and Literary Nonfiction

**ENGL 2860 Philosophical Fictions (LA-AS)**

Spring. 4 credits. Limited to 15 students. Prerequisite: permission of instructor based on a writing sample. S. Davis.

"Fictions" of thought and language abound in works that deliberately test and play with ideas: dialogues, satires, parables, philosophical tales, and "thought-experiments." Students will write critically about such works and experiment with writing in similar forms in order to argue flexibly, ridicule vice and folly, or involve readers in pleasingly or disturbingly insoluble problems. Readings may include Plato’s Phaedrus or Gorgias, Swift’s Gulliver’s Travels, parables by Jesus and Kafka, dystopias by Ursula Le Guin and Garry Churchill, science fiction by Philip K. Dick and Octavia Butler, short stories by Jorge Luis Borges and Flannery O’Connor, and essays by Richard Rorty and Jacques Derrida. See http://courses.cit.cornell.edu/sad4449/38601.

**ENGL 3810 Reading as Writing, Writing as Reading (LA-AS)**

Fall. 4 credits. Limited to 15 students. Prerequisite: permission of instructor based on a writing sample. S. Davis.

Successful completion of one half of the First-Year Writing Seminar requirement. Majors and prospective majors, please note: Although recommended for prospective English majors, ENGL 2800–2810 cannot be counted toward the 40 credits required for completion of the English major. It is a prerequisite for 3000-level courses in creative writing, which count toward the major.

ENGL 2800–2810 Creative Writing (LA-AS)

Fall, spring, summer, winter. 3 credits. Limited to 18 students. Prerequisite: completion of the First-Year Writing Seminar requirement. Majors and prospective majors, please note: Although recommended for prospective English majors, ENGL 2800–2810 cannot be counted toward the 40 credits required for completion of the English major. It is a prerequisite for 3000-level courses in creative writing, which count toward the major.

ENGL 2800–2810 is not a prerequisite for ENGL 2810.

An introductory course in the theory, practice, and reading of prose, poetry, and allied forms. Students are given the opportunity to try both prose and verse writing and may specialize in one or the other. Many of the course meetings are conducted as workshops.

**ENGL 3820–3830 Narrative Writing (LA-AS)**

3820, fall; 3830, spring. 4 credits each semester. Each section limited to 15 students. Prerequisite: ENGL 2800–2810 and permission of instructor based on submission of a manuscript (bring manuscript to first day of class). Fall: sem 101, M. Koch; sem 102, R. Morgan; sem 103, H. Viramontes; Spring: H. Viramontes, J. Lennon, M. McCoy.

The writing of fiction; study of models; analysis of students’ work.

**ENGL 3840–3850 Verse Writing (LA-AS)**

3840, fall or summer; 3850, spring. 4 credits each semester. Each section limited to 15 students. Prerequisite: ENGL 2800–2810 and permission of instructor based on submission of manuscript (bring manuscript to first day of class). Fall: sem 101, A. Fulton; sem 102, TBA. Spring: K. McClane, TBA.

The writing of poetry; study of models; analysis of students’ poems; personal conferences.

**ENGL 4800–4810 Seminar in Writing (LA-AS)**

4800, fall; 4810, spring. 4 credits each semester. Each section limited to 15 students. Prerequisite: permission of instructor, normally on the basis of a manuscript. The manuscript should be submitted to the instructor no later than the first day of class. Previous enrollment in ENGL 2800 or 2810 and at least one 3000-level writing course recommended. Successful completion of one half of the 4800–4810 sequence does not guarantee enrollment in the other half; students must receive permission of the instructor to enroll in the second course. Fall: sem 101, A. Fulton; sem 102, E. Quinonez; spring; J. Lennon and L. Van Chef-Stefanof.
ENGL 2010 Introduction to American Literatures (also AMST 2030) # (LA-AS)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors.

ENGL 2020 Introduction to American Literatures: The Making of America: Reconstruction to the Present (also AMST 2040) (LA-AS)
Spring. 4 credits. J. Reddock.

ENGL 2040 Contemporary World Literature @ (LA-AS)
Fall. 4 credits. E. Anker.

ENGL 2050 Introduction to American Cultures (CA-AS)
Fall. 4 credits. J. Juffer.

ENGL 2070 Introduction to Modern Poetry (LA-AS)

ENGL 2090 Shakespeare and the 20th Century (LA-AS)
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. S. Davis.

What can we learn about Shakespeare’s plays from their reception in the 20th and 21st centuries? What can we learn about modern cultures from their appropriations of these texts and of the Shakespeare mystique? We will study four or five plays and their adaptations in film and theater and explore the uses made of Shakespeare in education, advertising, and public culture and by the “Shakespeare industry” itself. For spring 2010: Midsommer Night’s Dream, Richard III, Othello, Lear, and Merchant of Venice, together with films directed by Ismael Merchant and James Ivory, Richard Loncraine, Janet Suzman, Trevor Nunn, and Akira Kurosawa and plays by Bertolt Brecht, Wendy Wasserstein, and Arnold Wesker. See http://courses.cit.cornell.edu/sad4449/2080.

ENGL 2130 Cultures of the Middle Ages # (CA-AS)
4 credits. This course may be used as one of the three pre-1800 courses required of English majors. S. Zacher.

This course introduces a wide range of literature written before 1500 and the cultures it was written in, especially in the region that became known as England. No previous knowledge of this material is required. We will read, in translation and with other help, a sample of works originally in Latin, Old English, Middle English, French, and Italian, beginning with the arrival of Christianity to England and ending with the splitting of the English church from Rome in the 16th century. Authors, works, and genres considered may include Bede, Beowulf, Old English prose and
poetry, saints' lives, histories (including Gildas and Geoffrey of Monmouth), women's writing, French and English romance, Boccaccio, Chaucer, and late-medieval drama. Requirements include regular informal writings and three formal, medium-sized papers.

ENGL 2270 Shakespeare (also THTR 2270) (LA-AS) Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. B. Correll. An introduction to the dramatic works of Shakespeare, with a representative selection from the comedies, histories, and tragedies. We will study and discuss the formal and linguistic features of the plays; their historical, political, and cultural contexts; early modern theater history; issues of gender, class, and race as they inform and enliven the works; and questions of reading Shakespeare as an author, a field of study, and a cultural institution.

Major Genres and Areas

ENGL 2400 Introduction to Latino/a Literature (also AMST 2401, LSP 2400) (LA-AS) Fall. 4 credits. M. P. Brady. From the radical manifestos of revolutionaries to the satirical plays of union organizers, from new, experimental novels to blogs, this course will examine Latino/a literature published in the United States beginning in the early 19th century and continuing to the present. We will pay particular attention to the historical, theoretical, and literary context for this literature. We will also study memoir, poetry, essays. Authors will include José Martí, Arturo Schomburg, María Cristina Mené, Bernardo Vega, Gloria Anzaldúa, Sandra Cisneros, Junot Díaz, Manuel Muñoz, and Pedro Pietri.

ENGL 2510 20th-Century Women Writers (also AMST/FGSS 2510) (LA-AS) Fall. 4 credits. Next offered 2011–2012. J. Adams. The course will introduce students to the African-American literary tradition. Through aesthetic and contextual approaches, we will consider how African-American life and culture has defined and constituted the United States of America. From slave narratives to Hip-Hop music, we will trace the range of artistic conventions and cultural movements while paying close attention to broader historical shifts in American life over the past three centuries. We will ask: How do authors create and define tradition? What are some of the recurring themes and motifs within this tradition? Authors will include: Phillis Wheatley, David Walker, Frederick Douglass, Ida B. Wells-Barnett, W.E.B. Du Bois, Zora Neale Hurston, Lorraine Hansberry, James Baldwin, Audre Lorde, Toni Morrison, and Paul Beatty.

ENGL 2730 Children’s Literature (LA-AS) Fall. 4 credits. Next offered 2011–2012. J. Adams. This course may be used as one of the three pre-1800 courses required of English majors. H. Shaw and T. Hill.

ENGL 2740 Scottish Literature (LA-AS) Fall. 4 credits; may be taken for 3 or 4 credits; those choosing 4 credits will complete an additional writing project. This course may be used as one of the three pre-1800 courses required of English majors. H. Shaw and T. Hill.

ENGL 2750 Desire (also COML/FGSS 2760, THTR 2780) (LA-AS) Spring. 4 credits. Next offered 2011–2012. Letter grades only. E. Hanson. For description, see LING 2170.

Special Topics

ENGL 2100 Medieval Romance: Voyage to the Otherworld (LA-AS) Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. T. Hill.

ENGL 2210 Medieval Romance: Voyage to the Otherworld (LA-AS) Fall. 4 credits. This course will survey some medieval narratives concerned with representative voyages to the otherworld or with the impinging of the otherworld upon ordinary experience. The syllabus will normally include some representative Old Irish otherworld literature: selections from The Mabinogion; selections from the Lay of Marie de France; Chrétien de Troyes's Erec, Yvain, and Lancelot; and the Middle English Sir Gawain and the Green Knight. We will finish by looking at a few later otherworld romances, such as selections from J. R. Tolkien. All readings will be in modern English. Requirements: three brief (two to three typed pages) papers and a final exam designed to test the students' reading.

ENGL 2150 The American Musical (also THTR 2150, AMST 2105, MUSIC 2250) (LA-AS) Fall. 4 credits. N. Salvato.

ENGL 2170 History of the English Language (also LING 2217) (HA-AS) Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. W. Harbert. For description, see LING 2170.

ENGL 2630 Studies in Film Analysis: Hitchcock (also FGSS 2630, FILM 2650) (LA-AS) Fall. 4 credits. L. Bogel. Through detailed analysis of at least 15 of Hitchcock's major films—from British silents such as Blackmail and the British talkies of the 30s (The Thirty-Nine Steps) to the early '40s work in Hollywood (Spellbound, Notorious), and into the late period (Rear Window, Psycho)—we will consider Hitchcock as a major technical and stylistic innovator in the history of cinema. As texts for psychoanalytic and feminist approaches to study, his films invite questions about film language, the ethics of spectatorship, and the nature of desire and sexuality. Frequent short essays and viewing exercises encourage students to engage with their writing the course's critical concerns. Regular required screenings after class. Enrollment limited to twenty. Preference given to Film and English majors.

ENGL 2680 Culture and Politics of the 1960s (also AMST 2680) (CA-AS) Fall. 4 credits. P. Sawyer. Nearly half a century ago, the Civil Rights movement, the Cold War and the Vietnam War stimulated critiques and alternative experiments in living that changed American society forever. What can the experiences of young "boomers" and others who lived through the 1960s teach a later generation living through a similar period of turmoil and hope? This interdisciplinary course combines an historical overview with the close reading of texts, concentrating on the topics of racial justice, war, the counterculture, the New Left, the women's movement, and the movement for gay and lesbian rights. Texts will include The Autobiography of Malcolm X, Wolfe's Electric Kool-Aid Acid Test, Vonnegut's Slaughterhouse-5, music of Dylan and Joplin, speeches of King, films, manifestos, memoirs, and poems. A research paper will explore the history of activism at Cornell during those years.

ENGL 2511 Literature, Sports, and Ideology (also ASRC 2505) (LA-AS) Fall. 3 credits. G. Farred. For description, see ASRC 2505.

ENGL 2960 Linguistic Theory and Poetic Language (also LING 2217) (HA-AS) Spring. 4 credits. J. Bowers.
Courses for Sophomores, Juniors, and Seniors

Courses at the 3000 level are open to sophomores, juniors, and seniors and to others with the permission of the instructor.

**ENGL 3200 Literature and Theory (also ENGL 6200, COML 3200/6200) (LA-AS)**

**ENGL 3300 Old English (also ENGL 6110) (LA-AS)**

Fall. 4 credits. This course may be used as one of the three pre-1900 courses required of English majors. Z. Sacher.

The course is intended as an introduction for graduate and undergraduate students to the Old English language; graduate students may also opt to use it for somewhat more advanced work, if they wish. We will begin with simple prose texts and proceed to poetic texts such as The Widsith, The Seafarer, The Dream of the Rood, and The Wife’s Lament. The course will address language and literature as a pairing. There will be regular translations and discussions, a mid-term, a short paper, and a final exam.

**ENGL 3320 Spenser (also ENGL 6120) (LA-AS)**

Spring. 4 credits. This course may be used as one of the three pre-1900 courses required of English majors. B. Correll.

Edmund Spenser stands out among Renaissance writers for his brilliant early work, and then dig into his two greatest achievements: the epic The Faerie Queene, and The Canterbury Tales, his oft-censored panorama of medieval English life. Read in Middle English, this will prove surprisingly easy and pleasant.

**ENGL 3370 Shakespeare (LA-AS)**

Spring. 4 credits. This course may be used as one of the three pre-1900 courses required of English majors. P. Lorenz.

A lecture and discussion course on Shakespeare’s plays from the middle to late part of his career: “dark comedies,” late tragedies, and romances. While we will pay particular attention to questions of dramatic form and historical context, the main focus of the course is on careful close readings of the play-texts themselves. Plays include Hamlet, Measure for Measure, Othello, King Lear, Macbeth, Antony and Cleopatra, The Winter’s Tale, and The Tempest.

**ENGL 3380 The Bible as Literature (LA-AS)**

**ENGL 3390 Milton and the English Revolution (also HIST 3051) (LA-AS)**

Fall. 4 credits. This course may be used as one of the three pre-1900 courses required of English majors. R. Kalas and R. Weil.

This course places Milton in the context of the intellectual and political upheavals of the mid-17th century English Revolution foregrounding his engagement with debates on religion, freedom and republic as well as his experience of revolution and reaction. Readings include selected short poems, Comus, Samson Agonistes, Paradise Regained, Paradise Lost, Areopagitica, The Doctrine and Discipline of Divorce, Eikonoklastes, and other polemical works.

**ENGL 3390 Restoration and 18th-Century Literature (LA-AS)**

Fall. 4 credits. This course may be used as one of the three pre-1900 courses required of English majors. F. Bogel.

Close reading of texts in a variety of genres (poetry, fiction, drama, autobiography) will be guided by such topics as: the nature of satire, irony, and mock-forms; the languages of the ridiculous and the sublime; the politics of gender and sexuality; the authority and fallibility of human knowledge; connections among melancholy, madness, and imagination. Works by such writers as Rochester, Behn, Finch, Dryden, Swift, Gay, Defoe, Johnson, Boswell, Sterne, and Cowper.

**ENGL 3390 The 18th-Century English Novel (LA-AS)**

Spring. 4 credits. This course may be used as one of the three pre-1900 courses required of English majors. N. Saccamanno.

A study of form and theme in the British novel tradition. The course focuses on representative novels mostly from the 18th century, paying close attention to language and structure but also to cultural contexts and to the development of the novel form itself. We will explore such topics as truth and fiction; romance, realism, satire, and the gothic; heroic and mock-heroic modes; sentiment, sensibility, and sexuality; race and gender; and the forms and uses of narrative. Readings may include Behn’s Oroonoko, Defoe’s Moll Flanders, Richardson’s Clarissa, Fielding’s Tom Jones, Johnson’s Rasselas, Sterne’s Sentimental Journey, and Austen’s Emma.

**ENGL 3350 Modern Western Drama, Modern Western Theater: Theory and Practice (also THETR 3350/VISST 3735) (LA-AS)**

ENGL 3390 Austen and Others [(LA-AS)]
Fall. 4 credits. H. Shaw.
Our main business (and pleasure) will be to read and discuss nearly all of Austen's fiction. As for the Others in the course title, they will be a miscellaneous bunch—novelists who preceded and followed her, critics recent and not so recent, 19th-century consultant on good breeding, experts on landscape gardening and country houses, a couple of filmmakers. Why do we read Austen? Why should we? How do her novels work to delight? What makes her singular? Is she our contemporary, or our own? These are some of the questions that will engage us.

ENGL 3400 Studies in Romantic Literature: The English Romantic Period # (LA-AS)
Fall. 4 credits. Next offered 2011-2012.

ENGL 3450 The Victorians # (LA-AS)
Spring. 4 credits. J. Zigarovich.
A century after the death of Queen Victoria, the culture that bears her name is alive and well in contemporary society, from critical and political discourse to the popular media and consumer culture. An introduction to British literature of the Victorian Age (1837-1901), this course investigates the uses of Victorian culture in the following areas: Industrialism; the construction of social and anthropological ideas of culture; Nature and the Human Animal; Wealth and Class; Education; Childhood; Feminism; Sexuality and Desire; Death and Mourning; Imperialism; and Satire and Popular Culture in mass culture. Poetry and non-fiction prose of Tennyson, Browning, Arnold, Carlyle, Pater, Mill, and others, emphasizing literary, social, and political issues, and religious controversies, will be covered, in addition to the drama and criticism of Oscar Wilde and possibly the prose work of Charlotte Brontë, Charles Dickens, and Thomas Hardy.

ENGL 3480 Studies in Women's Literature: Feminist Literary Traditions (also AMST 3481, FGSS 3480) (LA-AS)

ENGL 3490 Shakespeare and Europe (also COML 3490) # (LA-AS)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. W. Kennedy. For description, see COML 3490.

ENGL 3500 The Modern Tradition (LA-AS)
Spring. 4 credits. D. Schwartz.
Critical study of major works by Hardy, Conrad, Lawrence, Joyce, Woolf, Eliot, Yeats, Hopkins, Wilde, Wallace Stevens, and others. While the emphasis will be on close reading of individual texts, we shall place the authors and works within the context of literary, political, cultural, and intellectual history. The course will seek to define the development of literary modernism (mostly but not exclusively in England), and relate literary modernism in England to that in Europe and America as well as to other intellectual developments. We shall be especially interested in the relationship between modern literature and modern painting and sculpture; on occasion, we shall look at slides. Within the course material, students will be able to select the topics on which they write essays.

ENGL 3510 Caribbean Literature: Migrating Subjects (also ASRC/FGSS 3510) (LA-AS)
Fall. 4 credits. C. Boyce Davies. For description, see ASRC 3510.

ENGL 3530 The Modern Indian Novel # (LA-AS)
Spring. 4 credits. S. Mohanty. A survey of the modern Indian novel, from its origins in the latter part of the 19th century to the present. An attempt will be made to read the novels as responses to colonialism and to the challenges of a postcolonial society. Texts (mainly novels, but also a few short stories) drawn from a variety of Indian languages as well as English, including works by such authors as U. R. Ananthamurthy, Rabindranath Tagore, Salman Rushdie, Gopinath Mohanty, Anita Desai, Fakir Mohan Senapati, Ambui, Prem Chand, Arundhati Roy, and R. K. Narayan. Two papers (5-6 pp. and 12-14 pp.) and a journal.

ENGL 3540 The British Modernist Novel # (LA-AS)
Fall. 4 credits. Next offered 2010-2011.

ENGL 3550 Decadence (also COML/FGSS 3550/6551, LA-AS)
Spring. 4 credits. E. Hanson.
"My existence is a scandal," Oscar Wilde once wrote, summing up in an epigram the effect of his carefully cultivated style of perversity and paradox. Through their valorization of aestheticism and all that was considered artificial, unnatural, or perverse, the so-called "Decadent" writers of the late 19th century sought to free the pleasures of beauty, spirituality, and sex from their more conventional ethical moorings. We will discuss literary and visual texts by Charles Baudelaire, Edgar Allan Poe, J.-K. Huysmans, Leopold von Sacher-Masoch, A. C. Swinburne, Walter Pater, Renée Vivien, James McNeill Whistler, and Aubrey Beardsley, with a particular focus on Oscar Wilde. Students may read French and German texts in the original or in English translation.

ENGL 3570 The Gothic # (HA-AS)
Spring. 4 credits. J. Zigarovich.
For this course, we will trace the evolution of the fantastic and haunting from the origins of the movement. We will examine the early sources of the Gothic then trace the development of the supernatural and macabre in the 19th century. What are the psychological effects of the representation of fear, irrationality, and social conflict? How can we understand Gothic monsters as social Others? What elements create terror, the sublime, and the uncanny? The course will cover philosophical and critical approaches to the genre as we learn about the cultural impact of the Gothic. Texts covered may include Edgar Allan Poe's short stories, Mary Shelley's Frankenstein, Robert Louis Stevenson's Strange Case of Dr. Jekyll and Mr. Hyde, and Bram Stoker's Dracula.

ENGL 3571 The Modern Irish Writers (CA-AS)
Fall. 4 credits. K. Attele.
This is a course on Irish writing of the modern period. In our readings over the semester (which will include a number of the 20th century's major literary texts), we will cover the development of Irish writing from the Yeats-led Irish Revival of century's early years through Joyce's high modernism to the proto-postmodernisms of O'Brien and Beckett. Along the way we will also inquire into the ways in which Irish modernism raises fundamental questions about such things as: the relation between language and national identity; the nature of modernism's "newness"; colonial, postcolonial, and "semicolonial" culture; the political uses of literature; and the contending forces of consumerism and nationalism in the modern period.

ENGL 3590 Consuming Passions: Media, Space, and the Body (also FGSS 3590) (CA-AS)
Spring. 3 credits. J. Juffer. For description, see FGSS 3590.

ENGL 3600 Another World Is Possible: The American Left Before the 1960s (also AMST 3600) (LA-AS)
Fall. 4 credits. Next offered 2010-2011. P. Sawyer.

ENGL 3610 Studies in the Formation of U.S. Literature: Emerson to Melville (also AMST 3610) # (LA-AS)

ENGL 3620 Studies in U.S. Literature after 1850: Reconstructing America (also AMST 3640) (LA-AS)
Fall. 4 credits. Next offered 2010-2011.

ENGL 3630 Studies in U.S. Literature: The Age of Realism and Naturalism (also AMST/FGSS 3630) (LA-AS)

ENGL 3640 Studies in U.S. Literature After 1950: American Literature, the 1980s (also AMST 3640) (LA-AS)
Spring. 4 credits. D. Wouloshet.
This course will explore literature of the 1980s against the broader cultural and historical landscape of 80s America. In many ways, we live in the immediate shadow of the 1980s, but our slight remove from the decade affords us a chance to look back at the literature and culture of the 80s with some distance (and familiarity). In this course, we will give particular emphasis to the following themes: postmodernism, the blurring of literary genres, the blurring of taste (high vs. low culture), the emphasis on (racial, gender, and sexual) difference, pop culture, and history. Authors may include: Don Delillo, Kurt Vonnegut, Maxine Hong Kingston, Thomas Pynchon, Toni Morrison, Norman Mailer, Ishmael Reed, Audre Lorde, and Gloria Anzaldúa.

ENGL 3650 American Literature Since 1945 (also AMST 3650) (LA-AS)
Fall. 4 credits. Next offered 2010-2011. B. Maxwell.

ENGL 3660 Studies in U.S. Fiction Before 1900: The 19th-Century American Novel (also AMST 3660) # (LA-AS)
Spring. 4 credits. Next offered 2010-2011.

ENGL 3670 Studies in U.S. Fiction: Novels and Short Stories in the Americas (also AMST 3670) (LA-AS)
Fall. 4 credits. M. P. Brady.
This course will consider well-known and obscure fiction by writers ranging from the New to the Latin Americas. We will examine major themes and issues as well as consider various aesthetic trends. Writers to be studied may include Nathaniel Hawthorne, Pauline Hopkins, William Dean Howells, Mariano Azuela, Willa Cather, Thomas Pynchon, Toni Morrison, Flannery O'Connor, Joy Kogawa, Henry James, Edith Wharton, and more.

ENGL 3690 Fast-Talking Dames and Sad Ladies: 1940s and Now (also FILM/FGSS 3690) (LA-AS) Spring. 4 credits. Limited to 15 students. Students must be able to attend Mon. and/or Tues. late-afternoon screenings. Film fee: $20. L. Bogel.

Focusing on sassy or subdued heroines of Hollywood’s 1940s films and current films, this seminar works to define romantic comedy and melodrama as genres as well as vehicles for female stars; as ways of viewing the world. Psychoanalytic and feminist analyses of these films will help us pose questions about gender and culture, about gendered spectatorship, about Hollywood’s changing constructions of “woman,” the “maternal,” and the “feminine,” and about representations of desire, pleasure, fantasy, and ideology. Required twice-weekly screenings of such films as Goldilocks, The Lady Eve, Notorious, The Women, The Philadelphia Story, His Girl Friday, Mrs. Dalloway, The Hours, First Wives’ Club, All About My Mother, Silence of the Lambs, and Far from Heaven.

ENGL 3700 The Victorian Novel (LA-AS) Fall. 4 credits. P. Sawyer.

In the 19th century, British novelists produced some of the most complex representations of human society and historical change in fiction. They also drew upon a variety of narrative techniques: free indirect discourse, multiprotagonist narrative, symbolic structure, multiple narrators, and “found” documents. In addition to introducing students to specific texts and authors, this course will concern ways of reading fiction in general. Topics will include representations of community and class, the modern city, the supernatural, and the construction of male and female identity. Likely readings: Austen, Emma; Scott, ‘The Two Drovers’; Emily Bronte, Wuthering Heights; Dickens, Little Dorrit; Eliot, Middlemarch; and Hardy, Tess of the d’Urbervilles.

ENGL 3711 American Poetry to 1950 (also AMST 3711) (LA-AS) Fall. 4 credits. R. Gilbert.

In this course we’ll trace the main lines of development that have shaped American poetry from its inception in the 17th century, through the radical originality of Walt Whitman and Emily Dickinson, down to the bold innovations of early 20th-century poets. In addition to Whitman and Dickinson, poets to be studied include Anne Bradstreet, Ralph Waldo Emerson, Edgar Allan Poe, Robert Frost, Ezra Pound, T. S. Eliot, H. D., Wallace Stevens, William Carlos Williams, Marianne Moore, Langston Hughes, and Hart Crane. Weekly informal reading responses; three essays.

ENGL 3712 American Poetry Since 1950 (also AMST 3712) (LA-AS) Spring. 4 credits. R. Gilbert.

The second half of the 20th century has been a remarkably diverse period in American poetry, characterized by restless exploration of new issues and forms of experience. In this course we’ll focus on a series of representative figures born between 1900 and 1950. These may include some or all of the following: Theodore Roethke, Elizabeth Bishop, Gwendolyn Brooks, John Berryman, Robert Lowell, Robert Creeley, Allen Ginsberg, Frank O’Hara, W. S. Merwin, James Wright, A. R. Ammons, John Ashbery, James Merrill, Sylvia Plath, and Adrienne Rich. Weekly informal reading responses; three essays.

ENGL 3721 Medieval and Renaissance Drama (also THETR 3720) (LA-AS) Spring. 4 credits. This course may be used as one of the seven courses pre-1800 required of English majors. Next offered 2010–2011. M. Raskolnikov.

ENGL 3721 Food, Gender, Culture (also AMST/FGSS 3720) Fall. 4 credits. K. McCullough.

For description, see FGSS 3720.

ENGL 3731 Reading for Writers: Weird Stories (LA-AS) Fall. 4 credits. J. R. Lennon.

This course will focus on short fiction that depart[s] from representational reality, studied from a writerly point of view. We’ll examine excursions from the conventions of plot, character, narrative structure, and grammar. What opportunities have these departures afforded fiction writers? Do they wish to imply that conventional narrative has lost its luster, or do they merely serve to broaden its boundaries? Included will be works by Chekhov, Nabokov, Dybek, Dixon, Link, Lethem, Davis, Murakami, Saunders, Mieville, Whitehead, and others. Grade will come from in-class presentations and discussion, and from a portfolio of experimental writing assignments. The course is open to all undergraduates, though I recommend taking ENGL 2800 first. Poets welcome.

ENGL 3732 Reading for Writers: Reading as Poets (LA-AS) Spring. 4 credits. A. Fulton.

In this class, students will learn to use contemporary poetry books as catalysts for their own poetry. We’ll read a volume of contemporary poems each week with an eye toward issues of content and craft. We also might read a few essays on poetics. Rather than respond to the reading with papers, students will respond with poems directly influenced by or in conversation with the assigned books, and with brief explanations of the ways in which their poems encounter a given text. In class, we’ll consider each book’s focus, structure, and techniques. Discussions will help us understand and appreciate divergent aesthetics. In essence, the course recognizes the reading of contemporary poetry as the most essential element of a poet’s education. Please note: This is not a poetry workshop. Classroom discussion will focus on the assigned books.

ENGL 3751 Magical Realism Revisited (CA-AS) Spring. 4 credits. E. Quinonez.

Magical Realism was the term used to power the “boom period,” when Latin American writers were being popularly translated into English during the ‘60s and ‘70s. We’ll examine the term as both a genre and as anti-imperialist, coded, writings of protest. We’ll inspect what magical realism means in today’s world and also examine its “cousins”: fantasy, science fiction, horror, myth, folklore, and anything in between. We’ll screen movies, hear songs, see slides of paintings from Latin America. The bulk of the texts will be “boom writers" García Márquez, Vargas Llosa, Rosario Castellanos, Jorge Amado, Luisa Valenzuela, Juan Rufio, Jose Donoso, Clarice Lispector as well as texts by Amy Bender, Paul Auster, Salman Rushdie, Toni Morrison, and others who have been influenced by magical realism.

ENGL 3770 Herman Melville (also AMST 3770) (HA-AS) Fall. 4 credits. M. Cobb.

Who doesn’t long for an adventure? Who’d refuse the chance to learn about the meaning of life? Who hasn’t spent years of a life chasing a big, white fish? Melville, for sure, takes us on a great aesthetic voyage through some of American literature’s major obsessions. And now you’re invited aboard. The bulk of the class will be on the sea, hunting that whale in one of the world’s most acclaimed novels, Moby Dick, but we’ll also plunge into Billy Budd, Satori, and The Piazza Tales (especially “Benito Cereno,” “The Encantadas,” and “Bartleby, The Scrivener”). We’ll also read some select works from writers that resonate with Melville’s (and our) imagination, especially Milton, Shakespeare, and Hawthorne. And we’ll pay particular attention to things that always preoccupy Melville’s readers: nationality, politics, identity, religion, history, class, race, gender, sexuality, formal experimentation, Romanticism, the economy, realism, allegory, and the Gothic, among others.

ENGL 3790 Reading Nabokov (also RUSSL 3385) (LA-AS)

ENGL 3810 Reading as Writing (LA-AS) See complete course description in section headed “Creative Writing.”

ENGL 3820–3830 Narrative Writing (LA-AS) See complete course description in section headed “Creative Writing.”

ENGL 3840–3850 Verse Writing (LA-AS) See complete course description in section headed “Creative Writing.”

ENGL 3860 Philosophic Fictions (LA-AS) See complete course description in section headed “Creative Writing and Literary Nonfiction.”

ENGL 3870 Autobiography: Theory and Practice (LA-AS) See complete course description in section headed “Critical Writing and Literary Nonfiction.”
ENGL 3880 The Art of the Essay (LA-AS)
See complete course description in section headed "Critical Writing and Literary Nonfiction."

[ENGL 3970 Policing and Prisons in American Culture (also AMST 3970) (CA-AS)

[ENGL 3980 Latino/a Popular Culture (also AMST 3981, LSP 3980) (CA-AS)
Spring. 4 credits. U.S. Latino/a history is strongly recommended as a prerequisite, but not required. Next offered 2011–2012. M. P. Brady.]

Courses for Advanced Undergraduates

Courses at the 4000 level are open to juniors and seniors and to others by permission of instructor unless other prerequisites are noted.

[ENGL 4020 Literature as Moral Inquiry (KCM-AS)
Fall. 4 credits. Next offered 2011–2012. S. Mohanty.]

Fall. 4 credits. R. Gilbert.
A close study of three major contemporary American poets who have had unusually long and varied careers. We will survey each poet's work from his/her earliest books to the most recent, paying close attention to individual poems while charting significant shifts of style and content. We'll also consider each poet's engagement with extra-literary realms: science (Ammons), visual art (Ashbery), gender politics (Rich). Three essays; one or two in-class presentations.

[ENGL 4040 Paleography, Bibliography, and Reception History (also ENGL 6040) # (LA-AS)

ENGL 4050 The Politics of Contemporary Criticism (LA-AS)
Spring. 4 credits. S. Mohanty.
An introduction to some of the major issues in contemporary criticism and theory, with primary focus on such questions as: What is a (literary or cultural) text? What is interpretation and can it ever be objective? How do cultural and social differences shape reading and interpretation? What views about knowledge, society, and politics underlie particular critical strategies and methodological choices? Drawing on representative essays and books from a variety of critical schools and traditions (from New Criticism to deconstruction, Marxism, hermeneutics, new historicism, and feminism), we will examine the competing claims of the various positions and focus on the implications of answers to the above questions for textual analysis. Readings from CLEANTH BROOKS, Jacques Derrida, Michel Foucault, Hans-Georg Gadamer, Sandra Harding, Fredric Jameson, Tony Morrison, Barbara Herrnstein Smith, Charles Taylor, and Richard Rorty, among others.

ENGL 4072 Medieval Translation in Motion (also FREN/SHUM 4824)
Fall. 4 credits. S. Chaganti.
For description, see SHUM 4824.

ENGL 4073 Abolitionist Circuits (also HIST/SHUM 4933)
Spring. 4 credits. M. Schoolman.
For description, see SHUM 4933.

ENGL 4074 Art Writing: Tracing the Visible (also ARTH/VISST/SHUM 4934)
Spring. 4 credits. M. Jacobus.
For description, see SHUM 4934.

[ENGL 4100 The Roots of Buffy the Vampire Slayer: Folklore and Medieval Romance
Spring. 4 credits. Prerequisites: there are no requirements as such but students should have some background in medieval literature and a reading knowledge of French and Middle English would be useful. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2010–2011. T. Hill.]

[ENGL 4130 Middle English (also ENGL 6130) # (LA-AS)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2010–2011. T. Hill.]

[ENGL 4140 Bodies of the Middle Ages: Embodiment, Incarnation, Performance (also FGSS 4140) # (LA-AS)
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2010–2011. M. Raskolnikov.]

ENGL 4170 The Archaeology of the Text from Chaucer through the Renaissance (also ENGL 6170) # (HA-AS)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. A. Galloway.

[ENGL 4190 The Old English Laws and Their Politico-Cultural Context (also ENGL 6090, HIST 4691/6691) # (CA-AS)
Fall. 4 credits. Next offered 2011–2012. P. Hyams and T. Hill.]

ENGL 4210 Shakespeare in (Con)Text (also THTR 4460, VISST 4546) # (LA-AS)]

[ENGL 4211 Advanced Seminar in the Renaissance: Literature, Science, and Renaissance Curiosities # (LA-AS)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2011–2012. J. Mann.]

[ENGL 4220 Renaissance “Traffic” # (LA-AS)
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2010–2011. B. Kalas.]

[ENGL 4230 Renaissance Lyric # (LA-AS)
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2011–2012. B. Correll.]

ENGL 4270 Advanced Seminar in Shakespeare: Shakespeare and Marlowe (also THTR 4270) # (LA-AS)
Fall. 4 credits. B. Correll.

This course brings together two of the most striking and powerful writers of the early modern period. Their work in drama and in verse, often innovative and path-breaking, provokes questions and thoughts not only about their historical relationship but also about issues of power (including the cultural authority of classical heritage), gender/sexuality, nation and empire. Texts will include The Jew of Malta, The Merchant of Venice, Dido Queen of Carthage, Antony and Cleopatra, Tamburlaine I and II, Richard III, Edward II, Richard II, Hero and Leander, Venus and Adonis, and some classical source material. There are no prerequisites for the course other than an adventurous mind and an appetite for work.

[ENGL 4280 Problem Poems: Close Reading and Critical Debate # (LA-AS)
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2010–2011. F. Bogel.]

[ENGL 4290 Adam's Rib and Other Divine Signs (also RELST 4290) # (LA-AS)

ENGL 4300 Romantic Beginnings
Spring. 4 credits. C. Caruth.
This course presents a study of major Romantic writers with a focus on the nature of literary, political and historical beginnings. We will examine the portrayal of revolution as an originary historical and political event and consider its relation to poetic originations. Among our interests will be the role of language as the Romantic writers conceived it in both the literary and political spheres and the struggle with literary form as the site of radical beginning. We will also consider memory in the constitution of the past (and future) and the complex relation between remembering and creating. Themes include the child and orphan and the encounter with death, revolution and freedom (in Wordsworth, Coleridge, the Shelleys, Keats; political, literary theory; Douglass, Hawthorne, Melville).

ENGL 4301 Rabino Seminar: Queering Latinidad (also AMST 4301)
Spring. 4 credits. M. P. Brady.
For description, see AMST 4301.

ENGL 4303 Literature as History: The Americas (also AMST/COML 4303)
Spring. 4 credits. B. Maxwell.
For description, see AMST 4303.

[ENGL 4310 Defoe and His Contemporaries # (HA-AS)
Spring. 4 credits. Next offered 2011–2012. N. Saccamano.]

[ENGL 4321 Telling Fictions (also COML 4321)

[ENGL 4440 Romantic Drama (also ENGL 6440, THTR 4460/6460) (LA-AS)
Fall. 4 credits. Next offered 2011–2012. R. Parker.]

ENGL 4450 Text Analysis for Production: How to Get from the Text onto the Stage (also THTR 4450)
Spring. 4 credits. B. Levitt.
For description, see THTR 4450.
[ENGL 4500] History of the Book # (LA-AS)

[ENGL 4508] The Harlem Renaissance (also ASRC 4508) (LA-AS)
Fall. 4 credits. R. Richardson
For description, see ASRC 4508.

[ENGL 4509] Toni Morrison's Novels (also ASRC 4509, COML 4513)
Spring. 4 credits. R. Richardson.
For description, see ASRC 4509.

[ENGL 4515] Ariosto, Rabelais, Spenser (also ENGL 6515, COML/ROMS 4515/6515) (CA-AS)
Fall. 4 credits. W. Kennedy.
For description, see COML 4515.

[ENGL 4530] 20th-Century Women Writers of Color (also AAS/FGSS 4530) (LA-AS)
Fall. 4 credits. S. Wong.
In this course, we’ll be reading literature—primarily novels—produced by hemispheric American women writers of the mid- to late 20th century. We will look at how these writings articulate concerns with language, home, mobility, and memory, and at how the work is informed by the specificities of gender, race, region and class. Readings may include work by Leslie Marmon Silko, Sandra Cisneros, Theresa Hak Kyung Cha, Jamaica Kincaid, Gwendolyn Brooks, Ann Petry, Fae Myenne Ng, Carolivia Herron, Helena Maria Viramontes, and Shani Mootoo. Course requirements will include class presentations, short responses to the readings, and a longer research essay.

[ENGL 4560] Constructing the Book, Reconstructing the Text (also ENGL 6500) # (LA-AS)
Fall. 4 credits. D. Schwarz.
This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2011–2012. C. Ruff.

[ENGL 4580] Imagining the Holocaust (also COML 4830, GERST 4570, VI SST 4580) (LA-AS)
Spring. 4 credits. D. Schwarz.
What is the role of the literary imagination in keeping the memory of the Holocaust alive for our culture? We shall examine major and widely read Holocaust narratives that have shaped the way we understand and respond to the Holocaust. We shall begin with first person reminiscences—Wiesel's Night, Levi's Survival at Auschwitz—and The Diary of Anne Frank—before turning to realistic fictions such as Kinkels's Schindler's List (and Spielberg's film), Kertesz's Fates of the Fatherland, Kovacevski's The Painted Bird, and Ozick's "The Shawl." We shall also read the mythopoetic vision of Schwarz-Bart's The Last of the Jews, the illuminating distortions of Epstein's King of the Jews, the Kafkaesque parable of Appelkoff's Badenheim 1939, and the fantastic cartoons of Spiegelman's Maus books.

[ENGL 4600] Melville (also AMST 4600) # (LA-AS)

[ENGL 4601] Riddles of Rhythm (LA-AS)

[ENGL 4610] The American Short Story: Where We've Been, Where We're Going

[ENGL 4650] American Violence (LA-AS)
Fall. 4 credits. Next offered 2012–2013. S. Samuels.

[ENGL 4660] James on Film (also THETR 4460) (LA-AS)

[ENGL 4662] Contemporary U.S. American Indian Poetry (also AMST 4662)

[ENGL 4690] The Paranoiac Style in Contemporary American Fiction and Film (LA-AS)

[ENGL 4700] Senior Seminar in the Novel: Reading Joyce's Ulysses (LA-AS)

[ENGL 4701] Documentary Recording, Writing, and Film (LA-AS)

[ENGL 4710] Transatlantic Nature: Writing Natural History in 18th- and 19th-Century Literature
Fall. 4 credits. L. Donaldson.
Transatlantic Nature is an interdisciplinary seminar that focuses on the literary and historical contexts of natural history writing in the 18th and early 19th centuries. Natural history is an important genre because it raises crucial questions about humanity's relationship to the natural world, the ethical implications of science, and the immersion of intellectual life in colonial history. It also occasioned some of the most exquisite art in the 18th and 19th centuries and anticipated many of the ecological insights of the modern world. This course will focus on the intersection of these dimensions as well as the intersection of natural history's geographical origins in both Europe and North America. Possible authors include William Bartram, Marc Catesby, Gilbert White, Maria Sybilla Merian, and John James Audubon.

[ENGL 4740] Advanced Seminar on Major Authors: Hemingway, Fitzgerald, and Faulkner (LA-AS)

[ENGL 4750] Advanced Seminar in the 20th Century: AIDS Literature (also AMST 4755, FGSS 4751)
Spring. 4 credits. D. Woubshet.
AIDS is one of the hallmarks of our contemporary world, and the loss endured due to this pandemic has been of epic proportions. In this seminar, we will consider literary and other responses to this cataclysmic event. We will give particular attention to the following questions: How do artists rely on, dilate, or overhaul antecedent conventions to express AIDS loss? What are the insights and limitations of particular stylistic and formal choices? How do artists balance consolation in the face of compounded crises? How are their creative responses shaping our interpretation of the history and memory of AIDS? Authors may include: Melvin Dixon, Tony Kushner, Paul Monette, Jamaica Kincaid, Susan Sontag, Essex Hemphill, Marlón Riggs, Larry Kramer, Thomas Glave, and Michael Cunningham.

[ENGL 4780] Intersections in Lesbian Fiction (also AMST 4780, FGSS 4770) (LA-AS)

[ENGL 4790] Advanced Seminar in American Literature: Visual Culture and Women's Literature (also AMST/ FGSS 4790, VI SST 4600) (LA-AS)
Fall. 4 credits. Next offered 2012–2013. S. Samuels.

[ENGL 4791] Transgender and Transsexuality (also FGSS 4791) (LA-AS)
Fall. 4 credits. Next offered 2011–2012 M. Rasko
For description, see section “Creative Writing.”

[ENGL 4820] Hamlet: The Seminar (also THETR 4470) # (LA-AS)
Fall. 4 credits. B. Levine.
For description, see THETR 4470.

[ENGL 4840] Postcolonial Poetry and the Poetics of Relation (also COML 4290/6350, FREN 4350/ 6850, SPAN 4350/6350) (LA-AS)

[ENGL 4860] American Indian Women's Literature (also AIS 4860) (LA-AS)

[ENGL 4880] Contemporary Poetry and Poetics (also COML 4880) (LA-AS)
Fall. 4 credits. J. Monroe.
For description, see COML 4880.

[ENGL 4910] Honors Seminar I
Fall. 4 credits. Open to students in the Honors Program in English or related fields, or by permission of instructor. Sem 1: Reading Joyce's Ulysses
D. Schwarz. A thorough episode-by-episode study of the art and meaning of Joyce's Ulysses. We shall place Ulysses in the context of Joyce's canon, Irish culture, and literary modernism. We shall explore the relationship between Ulysses and other experiments in modernism—especially painting and sculpture—and show how Ulysses redefines the concepts of epic, hero, and reader. We shall discuss how Ulysses raises major issues about the city, colonialism, and popular culture, and dramatizes what it means for the central character to be a Jew and an outsider in Dublin. We shall also discuss strategies of reading and approaches to literary study. No previous experience with Joyce is required.
ENGL 4920 Honors Seminar II
Spring. 4 credits. Open to students in the Honors Program in English, or related fields, or by permission of instructor. Sem 1: Formalist Analysis of Poetry and Prose
F. Bogel. Formalist criticism made its first significant appearance in England and America in the 1930s and 1940s under the label “The New Criticism.” Since then, its fortunes have fallen and risen several times, and it has been revised, rejected, adapted, vilified, and much else, surviving mainly in the techniques of “close reading,” or detailed analysis of the linguistic features of poetry and prose. This seminar, focusing on English and American poems and prose works, will explore the possibilities, assumptions, strategies, and limitations of contemporary formalist analysis, and its relation to other modes of critical analysis such as psychoanalytic criticism, feminist and gender criticism, and deconstruction. Readings in criticism and theory will combine with critical analysis of poetry and prose. A principal aim of the seminar is to deepen and enrich the interpretive skills that will be put to work in students’ honors theses.

Sem 2: Accident and Allusion in Romantic Writing
Chase. C. Accidents are a theme and a problem for “solitary walkers” and city-dwellers of the late 18th and early 19th century such as Wordsworth, Rousseau, Coleridge, and Shelley. “Love of nature” makes for unexpected storylines. A child attached to lakes happens upon a drowning; a philosopher—botanizing—is knocked out by a Great Dane. How do such moments sustain our belief that the mind is not reliant on chance, fate, or nature? In this course we will examine how accident and choice are linked with meter, images, and echoes of other’s writing. So-called Romantics leave us asking where their feelings are allusions, and how our histories are shared.

ENGL 4920 Honors Essay Tutorial I
Fall or spring. 4 credits. Prerequisites: senior standing and permission of director of the Honors Program.

ENGL 4920 Honors Essay Tutorial II
Fall or spring. 4 credits. Prerequisites: ENGL 4930 and permission of director of the Honors Program.

ENGL 4930 Independent Study
Fall or spring. 2–4 credits. Prerequisites: departmental advisor and director of undergraduate studies.

Courses Primarily for Graduate Students
Permission of the instructor is a prerequisite for admission to courses numbered in the 6000s. These are intended primarily for graduate students, although qualified undergraduates are sometimes admitted. Undergraduates seeking admission to a 6000-level course should consult the instructor. The list of courses given below is illustrative only; a definitive list, together with course descriptions and class meeting times, is published in a separate department brochure before course enrollment each semester.

Graduate Courses in English 2009–2010
Fall
ENGL 6000 Colloquium for Entering Students
A. Galloway.
ENGL 6110 Old English (also ENGL 3110)
S. Zacher.
ENGL 6151 Visionaries and Vision Literature in the Middle Ages
A. Galloway.
ENGL 6207 Black Feminist Theories (also ASRC 6207)
C. Boyce Davies.
ENGL 6281 Elizabethan and Jacobean Drama and Criticism
J. Mann.
ENGL 6330 Satire, Sensibility, Imitation, and Mechanism in 18th-Century Literature
F. Bogel.
ENGL 6390 Studies in Romantic Literature: Writers of the Revolution
R. Parker.
ENGL 6401 Africana Thought (also ASRC 6400)
G. Farred.
ENGL 6515 Ariosto, Rabelais, Spenser (also ENGL 4515, COML/ROMS 4515/6515)
W. Kennedy.
ENGL 6760 Theory and Poetics of the Novel
H. Shaw.
ENGL 6762 Theory of the Lyric (also ENGL 6762)
J. Culler.
ENGL 6780 Contemporary Global Fiction (also COML 6050)
W. Cohen.
ENGL 6830 Contemporary Poetry and Poetics (also COML 6050)
J. Lennon.
ENGL 6831 Human Rights
E. Anker.
ENGL 6957 Race and Time
S. Wong.
ENGL 7020 Decolonization and Culture: Key Issues in Contemporary Theory
S. Mohanty.
ENGL 7800 M.F.A. Seminar: Poetry
L. Van Cleef-Stefanion.
ENGL 7801 M.F.A. Seminar: Fiction
J. Lennon.
ENGL 7850 Close Reading for Writers: American Realisms, American Unrealisms
S. Vaughn.

Spring
ENGL 5850 Linguistic Theory and Poetic Structure (also ENGL 2960, LING 2850/5850)
J. Bowers.
ENGL 6120 Beowulf (also ENGL 3120)
T. Hill.
ENGL 6190 Chaucer and Gower
A. Galloway.
ENGL 6290 Milton: Authorship and Transgression
R. Kalis.

ENGL 6320 Studies in 18th-Century Literature: Key Texts of Modernity
L. Brown.
ENGL 6402 The Politics of Theory (also ASRC 6401)
G. Farred.
ENGL 6411 After the End: Literature in the Ashes of History
C. Caruth.
ENGL 6551 Decadence (also ENGL 3550, COML/FGSS 3550/6551)
E. Hanson.
ENGL 6571 Modernist Feminism, Feminist Modernism (also FGSS 6571)
M. Hite.
ENGL 6611 What Is a Just Society? Native American Philosophies and the Limits of Capitalism’s Imagination (also AMST 6611)
E. Cheyfitz.
ENGL 6772 Spaces of Cultural Studies
J. Juffer.
ENGL 7810 MFA Seminar: Poetry
K. McClane.
ENGL 7811 MFA Seminar: Fiction
E. Quinonez.
ENGL 7850 Reading for Writers: Contemporary Poetry and Poetics
A. Fulton.

EUROPEAN STUDIES MINOR
Sydney Van Morgan, coordinator
Students from any college may choose an undergraduate minor in European studies to complement any major. The purpose of the minor is to provide a coherent structure for students with an interest in interdisciplinary study in the field of European studies.

The minor has three tracks: European politics, economics, and society; modern European history; and European culture. The requirements for the minor are:

1. Competence in at least one modern European language, Romance, Germanic, or Slavic (i.e., completion of a fifth-semester course or equivalent with a grade of at least B–, or demonstration of an advanced level of competence in an oral proficiency interview test where available).
Introduction to the Program

The Feminist, Gender, & Sexuality Studies Program (FGSS) is an interdisciplinary program in the College of Arts and Sciences that seeks to deepen our understanding of gender and sexuality. Since its founding in 1972 as Women's Studies, the Program has integrated the study of gender with complex structures of power and inequality including race, sexuality, class, and nation. Over the past several decades, the curriculum has also increasingly broadened its scope theoretically and methodologically to encompass cultural, historical, literary, scientific, and quantitative analysis.

Students find that these innovative methods and theories enhance their lifelong personal and intellectual growth, as well as their professional development insofar as they prepare students for future study or work in a wide variety of fields: law, medicine, social policy, art, psychology, literature, and so on.

The Program is built around several assumptions about the study of gender and sexuality. First, understandings of sex, sexuality, and gender are neither universal nor immutable; to study them is to gain a fuller sense of how these social constructions shape us as individuals. Second, gender and sexuality are best understood when examined in relation to one another by learning about women and men of different economic classes, sexual orientations, and cultural and racial backgrounds. Third, even the most current knowledge derived from the humanities, social sciences and natural sciences is not as impartial, objective, or neutral but instead emerges out of particular historical and political contexts.

Students, as a consequence, transfer the critical and analytical skills they acquire in FGSS courses to other courses and activities beyond Cornell.

Program Offerings

Feminist, Gender, & Sexuality Studies offers an undergraduate major, an undergraduate minor, and a graduate minor. Undergraduate students in the College of Arts and Sciences who wish to major in FGSS may apply directly to the program. Undergraduate students in other colleges at Cornell will need to work out special arrangements and should speak to FGSS’s director of undergraduate studies (DUS).

The Undergraduate Major: FGSS

1. Prerequisite courses: Before applying to the major, the student must complete any two FGSS courses with a grade of B– or better. Courses that are crosslisted with another department, students may register through FGSS or the cross-listing department. Suggested entry-level courses include any FGSS course at the 2000 level, especially 2010 and 2020, both of which are required for completion of the major. FGSS courses at the 2000 level or above may count as both prerequisites and as part of the FGSS major. First-year writing seminars may count as prerequisites but not as part of the major.

2. Required course work:
   a. A minimum of 36 credits in FGSS courses with a grade of C– or higher is required for the major. For FGSS courses that are cross-listed, students may register through FGSS or the cross-listing department.
   b. These 36 credits must include the following three courses:
      - FGSS 2010 Introduction to Feminist, Gender, and Sexuality Studies
      - FGSS 2010 Introduction to Feminist, Gender, and Sexuality Theories
      - FGSS 4000 Senior Seminar in Feminist, Gender, and Sexuality Studies
   c. The 36 credits must also include at least one FGSS course with a significant focus in each of the following three categories: (Note: Although a given course may satisfy one, two, or even three of these categories, a given student must take at least two courses to fulfill this requirement):
      - LBG studies
      - Intersecting structures of oppression: race, ethnicity, and/or class
      - Global perspectives: Africa, Asia, Latin America, or Middle East, by itself or in a comparative or transnational framework.
   d. Students interested in the honors program should consult the DUS late in the spring semester of their junior year, or very early in the fall semester of their senior year.

The Honors Program: To graduate with honors, a student majoring in FGSS must complete a senior thesis under the supervision of an FGSS faculty member and defend that thesis orally before an honors committee. To be eligible, a student must have at least a cumulative 3.5 GPA in their coursework and a 3.3 GPA in all courses applying to their FGSS major. Students interested in the honors program should consult the DUS late in the spring semester of their junior year, or very early in the fall semester of their senior year.

The FGSS Undergraduate Minor

Undergraduate students in any college at Cornell may minor in Feminist, Gender, & Sexuality Studies in conjunction with a major defined elsewhere in the university. The minor consists of five FGSS courses with a grade of C– or higher, through FGSS or the cross-listing department that are completed with a grade of C– or above, none of which may be counted toward the student’s non-FGSS major. An exception to this rule may be made for students in the contract colleges, who may petition the FGSS DUS to count one course from their major toward the FGSS minor. First-year writing seminars may not be included within the five required courses. Students wishing to minor in FGSS should see the DUS.

The five courses required for the FGSS Undergraduate Minor must include:
FGSS 2010 Introduction to Feminist, Gender, and Sexuality Studies
FGSS 2020 Introduction to Feminist, Gender, and Sexuality Theories
Any FGSS course that satisfies at least one of the three categories required for a major as defined above.
Any two additional FGSS courses of the student’s choice.

The LGBT Undergraduate Minor
FGSS serves as home to the Lesbian, Gay, Bisexual, & Transgender (LGBT) Studies Program, which offers an undergraduate minor as well as a graduate minor. The undergraduate minor consists of four courses. For a complete listing of all courses that will fulfill this minor please see the LGBT Studies portion of this catalog.

1. First-Year Writing Seminars
FGSS 1060 FWS: Women and Writing (also ENGL 1060)
Fall and spring. 3 credits. Staff.

2. Courses
FGSS 2010 Introduction to Feminist, Gender, and Sexuality Studies (CA-AS)
Fall and spring. 4 credits. J. Juffer and S. Martin.
Feminist, Gender, & Sexuality Studies is an interdisciplinary program focused on understanding the impact of gender and sexuality on the world around us and on the power hierarchies that structure it. This course focuses mainly on the experiences, historical conditions, and concerns of women as they are shaped by gender and sexuality both in the present and the past. Students read a variety of texts, personal narratives, historical documents, and cultural criticism across a range of disciplines. In doing so students consider how larger structural systems of both privilege and oppression affect individuals' identities, experiences, and options, and simultaneously examine forms of agency and action taken by women in the face of these larger systems.

FGSS 2020 Introduction to Feminist, Gender, and Sexuality Theories (also VISST 2020) (CA-AS)
Spring. 4 credits. H. Hoehst.
Introduces students to critical approaches in feminist scholarship to the cultural, socioeconomic, and political situation(s) of women. Particular attention is paid to the conceptual challenges and dangers posed by attempts to study women without taking account of relations between race, class, and gender in ideological and social formations. Readings draw on work in various disciplines and include literary texts and visual images.

FGSS 2140 Biological Basis of Sex Differences (also BIOP 2140, BSOC 2141) (PBS)

FGSS 2190 Women and Gender in South Asia (also ASIAN 2219, HIST 2190) (HA-AS)

FGSS 2460 Contemporary Narratives by Latina Writers (also LSP/SPAN 2460)
Fall. 3 credits. Next offered 2011–2012. Staff.

FGSS 2490 Feminism and Philosophy (also PHIL 2490) (KCM-AS)
Fall. 4 credits. N. Sethi.
For description, see PHIL 2490.

FGSS 2730 Women in American Society, Past and Present (also AMST/HIST 2730)

FGSS 2760 Desire (also COML/ENGL 2760, THETR 2760)

FGSS 2840 Sex, Gender, and Communication (also COMM 2840)
Fall. 3 credits. L. Van Buskirk.
For description, see COMM 2840.

FGSS 3130 Special Topics in Drama and Performance (also THETR 3130)

FGSS 3040 Sex, Power, and Politics (also GOVT 3043)

FGSS 3070 African American Women in Slavery and Freedom (also AMST/HIST 3070) (HA-AS)

FGSS 3130 Special Topics in Drama and Performance (also THETR 3130)

FGSS 3210 Sex and Gender in Cross-Cultural Perspective (also ANTHR 3210) (SBA-AS)
Fall. 4 credits. K. March.
For description, see ANTHR 3210.

FGSS 3221 Lives of Scientists and Engineers (also STS 3221)

FGSS 3250 Queer Performance (also THETR 3250) (LA-AS)
Fall. 4 credits. S. Warner.
For description, see THETR 3250.

FGSS 3251 History of the Family in the U.S. (also AMST/HIST 3251) (HA-AS)
Spring. 4 credits. T. Carroll.
For description, see HIST 3251.

FGSS 3370 Contemporary American Theater (also THETR/AMST 3370)

FGSS 3440 Male and Female in Chinese Culture and Society (also ANTHR 3554) (SBA-AS)
Fall. 4 credits. S. Sangren.
For description, see ANTHR 3554.

FGSS 3450 American Film (also AMST/ENGL 3440, VISST 3645) (LA-AS)

FGSS 3470 Asian American Women’s History (also AAS/AMST/HIST 3470) (CA-AS)
Spring. 4 credits. D. Chang.
For description, see HIST 3470.

FGSS 3480 Studies in Women’s Literature (also AMST 3431, ENGL 3480) (LA-AS)

FGSS 3500 Contemporary Issues in Women’s Health (also PAM 3500)
Spring. 3–5 variable credits. A. Parrot.
For description, see PAM 3500.

FGSS 3510 Caribbean Literature (also ASRC/ENGL 3510) (LA-AS)
Fall. 4 credits. G. Boyce-Davies.
For description, see ASRC 3510.

FGSS 3550 Decadence (also COML/ENGL 3550) (LA-AS)
Spring. 4 credits. E. Hanson.
For description, see ENGL 3550.

FGSS 3580 Theorizing Gender and Race in Asian Histories and Literatures (also ASIAN 3388/6688, COML 3980/6980) (CA-AS)

FGSS 3590 Consuming Passions: Media, Space, and the Body (also ENGL 3590) (CA-AS)
Spring. 3 credits. J. Juffer.
This course examines the intersections of gender, sexuality, space, and popular culture. Ranging across media—film, literature, television, and music—the class analyzes how these different forms represent and constitute gendered and sexual bodies. How does the Lifetime channel, for example, represent itself as a woman’s space? Spike as a man’s space? Are these distinctions breaking down, resulting in more hybrid genres? How do race, ethnicity, age, and class figure in? We connect media to sites of production, distribution, and consumption, such as the theater, the home, and cyberspace with particular emphasis on the affective and often passionate realm of consumption. Questions of access are considered: which technologies have provided access to marginalized groups, and on what terms? What are the political possibilities of popular culture, and what are the intersections of politics and pleasure?

FGSS 3600 Gender and Globalization (also GRP/LATA 3650) (SBA-AS)
Fall. 3 credits. L. Beneria.
This course invites students to think globally about gender issues and to trace the connections between global, national, and local perspectives.

FGSS 3630 Age of Realism and Naturalism (also AMST/ENGL 3630) (LA-AS)
[FGSS 3680] Marriage and Sexuality in Medieval Europe (also HIST 3680) # (HA-AS)

[FGSS 3690] Fast-Talking Dames and Sad Ladies (also ENGL/FILM 3690) (LA-AS)
Spring. 4 credits. L. Bogel.
For description, see ENGL 3690.

[FGSS 3700/6700] Gender and Age in Archaeology (also ANTHR/ARKEO 3269/6269)

[FGSS 3702] Desire and Cinema (also COM/L/ENGL 3702) (LA-AS)

[FGSS 3720] Food, Gender, Culture (also ENGL 3721, AMST 3720)
Fall. 4 credits. K. McCullough.
In addition to nourishing the body, food operates as a cultural system that produces and reflects group and individual identities. In this class we will examine foodways—the behaviors and beliefs attached to the production, distribution, and consumption of food—to explore the way food practices help shape our sense of gender, race, sexual orientation, and national identity. In doing so we will focus primarily on literature and film but will also range into the fields of anthropology, sociology, and history. Some questions under discussion: How do factors such as gender, class, race, and religion shape the foods we eat and the circumstances in which we eat them? How do writers use the language of food to explore issues such as gender, sexuality, class and race?

[FGSS 3850] Gender and Sexual Minorities (also HD 3840)
Fall. 3 credits. K. Cohen.
For description, see HD 3840.

[FGSS 3990/3991] Undergraduate Independent Study
Fall and spring. 1–4 credits. Prerequisites: one course in Feminist, Gender, and Sexuality Studies and permission of a Feminist, Gender, and Sexuality Studies faculty member. Staff.

[FGSS 4000] Senior Seminar in Feminist, Gender, and Sexuality Studies
Fall. 4 credits. Prerequisite: requirement for and limited to Feminist, Gender, and Sexuality Studies majors and undergraduate minors. K. McCullough.
Although the topic/focus of this course surely varies with the instructor, it is always treated as a broad capstone course for majors.

[FGSS 4021] Bodies in Medicine, Science, and Culture (also BSOC/STS 4021)

[FGSS 4040] Women Artists (also ARTH 4610) (LA-AS)
Fall. 4 credits. J. Bernstock.
For description, see ARTH 4610.

[FGSS 4060] The Culture of Lives (also ANTHR 4406) # (CA-AS)

[FGSS 4100] Health and Survival Inequalities (also DSOC/SOC 4100) (SBA/AS)
Fall. 4 credits. A. Basu.
For description, see DSOC 4100.

[FGSS 4140] Bodies in the Middle Ages: Embodiment, Incarnation, Performance (also ENGL 4140) # (LA-AS)

[FGSS 4141] Women's Activism and Social Change in the 20th-Century U.S. (also ANTH 4141) (HA-AS)
Fall. 4 credits. T. Carroll.
For description, see HIST 4141.

[FGSS 4160] Gender and Sexuality in Southeast Asia (also ASIAN 4416, HIST 4160/6160) @ (CA-AS)

[FGSS 4210] Theories of Reproduction (also DSOC/SOC 4210) (SBA-AS)
Fall. 4 credits. M. Rossiter.
For description, see STS 4210.

[FGSS 4220] New York Women (also HIST/STS 4221) (HA-AS)
Fall. 4 credits. M. Rossiter.
For description, see STS 4221.

[FGSS 4231] Gender and Technology (also BSOC/HIST/STS 4231) (HA-AS)
Spring. 4 credits. S. Pritchard.
For description, see STS 4231.

[FGSS 4232] Images of Women in Antiquity (also ART H 4232, CLASS 4732) # (CA-AS)

[FGSS 4270] Parody (also THETR 4220/6220) (LA-AS)

[FGSS 4330] The Female Dramatic Tradition (also THETR 4360/6360, FGSS 6330)

[FGSS 4440] Historical Issues of Gender and Science (also STS 4441) (CA-AS)
Spring. 4 credits. M. Rossiter.
For description, see STS 4441.

[FGSS 4450] American Men (also AMST/HIST 4440) (HA-AS)

[FGSS 4460] Women in the Economy (also IRLE 4450, ECON 4570)
Fall. 4 credits. F. Blau.
For description, see IRLE 4450.

[FGSS 4480] Global Perspectives on Violence against Women (also PAM 4440)

[FGSS 4507] Black Women Writers: International Dimensions (also ASRC 4507/6507, FGSS 6507) (LA-AS)
Fall. 4 credits. C. Boyce-Davies.
For description, see ASRC 4507.

[FGSS 4510] Women in Italian Renaissance Art (also ARTH 4450) # (HA-AS)

[FGSS 4530] 20th-Century American Women Writers of Color (also AMST/ENGL 4530) (LA-AS)
Fall. 4 credits. S. Wong.
For description, see ENGL 4530.

[FGSS 4610] Sexuality and the Law (also AMST/GOVT 4625, FGSS 7620, GOVT 7625)

[FGSS 4630] Feminist Theory/Law and Society (also AMST 4590, GOVT 4635)

[FGSS 4640] Women in the Modern Middle East (also HIST/NE 4642)

[FGSS 4740/6740] Feminism, Post-Feminism, Cyberfeminism (also ARTH 4740/6740)
Spring. 4 credits. D. Woubshet.
For description, see ENGL 4751.

[FGSS 4770] Intersections in Lesbian Fiction (also AMST/ENGL 4780)

[FGSS 4790] Advanced Seminar in American Literature: Visual Culture and Women's Literature (also AMST/ENGL 4790, ARTH 4795, VISST 4800)

[FGSS 4791] Transgender and Transsexuality (also ENGL 4791) (LA-AS)

[FGSS 4950] Gender and Power in England: 1600–1800 (also HIST 4950) @ (CA-AS)
Spring. 4 credits. R. Weil.
For description, see HIST 4950.

[FGSS 4990/4991] Senior Honors Thesis
Fall and spring. 1–8 credits. Prerequisite: FGSS seniors only. Staff.
To graduate with honors, FGSS majors must complete a senior thesis under the supervision of a FGSS faculty member and defend that thesis orally before an honors committee. To be eligible for honors, students must have at least a cumulative GPA of 3.0 in all course work and a 3.3 average in all courses applying to their FGSS major. Students interested in the honors program should consult the DUS late in the spring semester of their junior year or very early in the fall semester of their senior year.

[FGSS 6030] The Question of Feminist and Queer Criticism in Premodern Studies (also ENGL 6030)

[FGSS 6040 Passions and Politics: Affect, Protest, Performance (also THETR 6060)]

[FGSS 6050 Camp, Kitsch, and Trash (also ENGL 6510, THETR 6050)]
Spring. 4 credits. N. Salvato.
For description, see THETR 6050.

[FGSS 6060 Psychology of Adolescence in Case Study (also EDUC 6170)]

[FGSS 6140 Gender and International Development (also CRP 6140)]

[FGSS 6170 Feminist Methodology (also GOVT 6423)]
This course seeks to familiarize students with primarily qualitative methodological tools to be applied to individual research questions.

[FGSS 6180 The Psychology of Moral Development and Education (also EDUC 6160)]

[FGSS 6207 Black Feminist Theories (also ASRC/ENGL 6207, COML 6465)]
Fall. 4 credits. C. Boyce-Davies.
For description, see ASRC 6207.

[FGSS 6232 Images of Women in Antiquity (also ARTH 6232, CLASS 7732)]

[FGSS 6240 Epistemological Development and Reflective Thought (also EDUC 6140)]
Fall. 3 credits. D. Schrader.
For description, see EDUC 6140.

[FGSS 6304 Marriage and Divorce in the African Context (also ASRC 6304)]
Fall. 4 credits. J. Byfield.
For description, see ASRC 6304.

[FGSS 6310 Sex and Gender in Cross-Cultural Perspective (also ANTHR 6421)]
Fall. 4 credits. K. March.
For description, see ANTHR 6421.

[FGSS 6360 Comparative History of Women and Work (also ILR/IC 6360)]

[FGSS 6370 Parody (also THETR 4200/6200)]

[FGSS 6400 Historical Issues of Gender and Science (also HIST 6410, STS 6401)]
Fall. 4 credits. S. Seth.
For description, see STS 6401.

[FGSS 6470 The Theatricality of Gender, Philosophy, and French Literature (also FREN 6470)]
Fall. 4 credits. M. C. Vallois.
For description, see FREN 6470.

[FGSS 6540 Queer Theory (also COML/ENGL 6540)]

[FGSS 6544 Gender and Politics (also GOVT 6544)]
Fall. 4 credits. S. Martin and S. Mettler.
For description, see GOVT 6544.

[FGSS 6550 Modernist Fiction and the Erotics of Style (also ENGL 6550)]

[FGSS 6551 Decadence (also ENGL 6551)]
Spring. 4 credits. E. Hanson.
For description, see ENGL 6551.

[FGSS 6571 Modernist Feminism, Feminist Modernism (also ENGL 6571)]
Spring. 4 credits. M. Hite.
For description, see ENGL 6571.

[FGSS 6580 Theorizing Gender and Race in Asian Histories and Literatures (also ASIAN 6880, COML 6680)]

[FGSS 6610 Erotics of Visuality (also ENGL 6610)]

[FGSS 6700 Gender and Age in Archeology (also ANTHR/ARKEO 6269)]

[FGSS 6811 James Baldwin (also AMST/ENGL 6811)]

[FGSS 6990 Topics in Feminist, Gender, and Sexuality Studies]
Fall and spring. Variable credit. Staff.
Independent reading course for graduate students on topics not covered in regularly scheduled courses. Students develop a course of readings in consultation with a faculty member in the field of Feminist, Gender, and Sexuality Studies who has agreed to supervise the course work.

[FGSS 7620 Sexuality and the Law (also FGSS 4610, 7625, GOVT 4625)]

GERMAN STUDIES
L. Adelson; C. Alm (Swedish); B. Buettner, associate language program director; P. Gilgen; A. Groos; P. U. Hohenhali; C. Tonnea (Dutch); G. Lischke, language program director and director of undergraduate studies; G. Matthias; D. McBride; P. McBride, acting director of graduate studies; A. Schwarz, department chair; G. Waite. Emeritus: D. Barthick, H. Deinert.

The Department of German Studies offers students a wide range of opportunities to explore the literature and culture of German-speaking countries, whether as part of their general education, a major in German Studies, a double major, or a German minor involving another discipline, or as preparation for graduate school or an international professional career. Courses are offered in German as well as in English; subjects range from medieval to contemporary literature and from film and visual culture to intellectual history, music, history of psychology, and feminist, gender, and sexuality studies.

The course offerings in German begin with GERST 1210–1220, 1230 (introduction language level): Students complete with intermediate-level courses, which provide further grounding in the language and in German literature and cultural studies. GERST 2000 provides instruction for German in the culture of business, leading to certification. On the advanced level (3000 level or above), we offer thematically oriented courses that include intensive language work (3000–3200); literature and culture study courses in German, including the senior seminar; and seminars of interdisciplinary interest taught in English. Addressing a broad spectrum of topics in German culture, our courses appeal to German majors and other qualified students alike.

The department’s offerings in English begin with a series of first-year writing seminars introducing various aspects of German literature (e.g., the fairy tale and Romantic consciousness or 20th-century writers such as Kafka, Hesse, Mann; Brecht, theorists such as Marx, Nietzsche, and Freud, issues in mass culture and modernity, problems of German national identity/ies, and cinema and society. Courses in German and English at the 3000 and 4000 levels explore such topics as the Faust legend, aesthetics from Kant to Heidegger, city topographies, Freud and his legacy, opera from Mozart to Strauss, the German novel, literature and philosophy, political theory and cinema, the Frankfurt School, migration and globalization, and feminist theory. It may be possible to arrange a German section for courses taught in English, either informally or formally (for credit). Students are encouraged to discuss this possibility with instructors.

SEQUENCE OF COURSES
Courses in German:
Introductory level: GERST 1210–1220, 1230 (introduction language level): Students complete with intermediate-level courses, which provide further grounding in the language and in German literature and cultural studies. GERST 2000 provides instruction for German in the culture of business, leading to certification. On the advanced level (3000 level or above), we offer thematically oriented courses that include intensive language work (3000–3200); literature and culture study courses in German, including the senior seminar; and seminars of interdisciplinary interest taught in English. Addressing a broad spectrum of topics in German culture, our courses appeal to German majors and other qualified students alike.
Advanced Standing

Students with an AP score of 4 or 5 are automatically granted 3 credits in German. Students with an AP score of 4 or better, an LPG score of 65 or higher, or an SAT II score of 690 or higher must take the CASE exam for placement in courses above GERST 2000. Students coming to Cornell with advanced standing in German and/or another subject are encouraged to consider a double major and to discuss the options with the director of undergraduate studies as early as possible.

Certificate in German Language Study

The Certificate in German Language Study is issued to recognize substantial language study beyond the GERST 2000 level in the Department of German Studies. Students are awarded the certificate after passing three German Studies courses held in German with a grade of B or above. Two of these courses must be at the 3000 level or above. No more than two of the three courses can be taken with the S-U option. Applications for the language certificate may be picked up in the Department of German Studies (185 Goldwin Smith Hall) in February.

Internships

The department works with the USA-Interns program to provide summer internships to qualified students with German companies and agencies. Interested students should contact the language program director, Gunhild Lischke (g15@cornell.edu, G75 Goldwin Smith Hall, 255-0725), early in the fall semester.

Majors in German Studies

The department offers two options for the major: German literature and culture, and German area studies. The latter is a more broadly defined sequence that includes work in related disciplines. The course of study in either major is designed to give students proficiency in reading, speaking, and writing in German, to acquaint them with German culture, and to help them develop skills in reading, analyzing, and discussing German texts in relevant disciplines with those goals in mind. The department also encourages study abroad. For both majors, there is a wide variety of courses co-sponsored with other departments (Comparative Literature; Government; History; Music; Theatre, Film, and Dance; Feminist, Gender, and Sexuality Studies).

The department encourages double majors and makes every effort to accommodate prospective majors with a late start in German. Students interested in a major should consult the director of undergraduate studies, Gunhild Lischke, G75 Goldwin Smith Hall.

Minor in German Studies

The undergraduate minor in German Studies is intended for students enrolled in any of the seven undergraduate colleges at Cornell who wish to gain a broad understanding of the culture, literature, and society of German-speaking countries while they are refining their language competence. The minor is designed to provide for breadth while permitting flexibility to emphasize areas of interest in German studies.

To declare the minor, students must have attained competence in German at the GERST 2000 level. Students must complete a minimum of four courses at the 2000 level and above selected from the offerings of the German Studies Department. At least one of these courses must be taught in German at the 3000 level or higher. One of the four courses may be from another department as long as it has a substantial German component. No more than one course per semester taken as part of a study abroad program may be counted toward the minor. GERST 4510–4520 Independent Study may not be counted at all.

Interested students in the German Minor should consult with the department's Director of Undergraduate Studies, Gunhild Lischke, G75 Goldwin Smith Hall.

German (Literature and Culture)

Students in this major select courses from the Department of German Studies and may use them to pursue individual interests in literature, film and visual culture, theater and performing arts, music, intellectual and political history, and gender studies, for example. Please consult with the director of undergraduate studies.

Admission: By the end of their sophomore year, prospective majors should have successfully completed GERST 2020, 2040, or 2060.

To complete the major, a student must:

1. Demonstrate competence in the German language by successful completion of two 3000-level courses with intensive language work (GERST 3000–3200) or the equivalent.

2. Complete six courses in the Department of German Studies at the 3000 level or above. One of these must be GERST 4100 Senior Seminar.

3. Select a faculty advisor from the department.

German Area Studies

Students select courses from the Department of German Studies as well as courses with a substantial German component from other departments, such as Comparative Literature; Government; History; Music; Theatre, Film, and Dance; and Feminist, Gender, and Sexuality Studies.

Admission: By the end of their sophomore year, prospective majors should have successfully completed GERST 2020, 2040, or 2060.

To complete the major, a student must:

1. Demonstrate competence in the German language by successful completion of two 3000-level courses with intensive language work (GERST 3000–3200) or the equivalent.

2. Complete six courses with a substantial German component at the 3000 level or above. Three of these must be in the Department of German Studies, including GERST 4100 Senior Seminar.

3. Select a committee of one or more faculty advisors to help formulate a coherent program of study. One of the advisors must be from the Department of German Studies.

Honors

Honors in German Studies are awarded for excellence in the major, which includes overall grade point average and completion of the honors thesis. Students are awarded either honors (cum laude), high honors (magna cum laude), or the highest honors (summa cum laude) in the program based on the honors advisors' evaluation of the level and the quality of the work completed toward the honors degree. The honors distinction will be noted on the student's transcript and will also be indicated on the student's diploma.

Prerequisites for admission. Students must have upperclass standing, an overall GPA of a B or higher, and a GPA of 3.5 or higher in the major. Students must first consult with the director of undergraduate studies in German Studies regarding eligibility for the honors program.

Procedure. Students who wish to be considered for honors ideally should apply to the director of undergraduate studies no later than the second term of the junior year. Students who are off campus in their junior year must apply by the third week of classes in the first semester of their senior year. Students should secure the consent of a faculty member to serve as the director of both the reading course (GERST 4510) and the writing of a thesis (GERST 4540). With the help of their thesis advisor, students choose an area of special interest and identify at least one other faculty member who is willing to serve on the honors committee. An oral thesis defense concludes the process.

Study Abroad in a German-Speaking Country

The Department of German Studies strongly supports study abroad as an opportunity for students to live and study in a German cultural context. The experience of living abroad promotes personal growth, provides new intellectual perspectives through cultural immersion, and opens up academic and professional opportunities.

Students interested in studying abroad are encouraged to consider the Berlin Consortium, of which Cornell is a member. The program is run in conjunction with the Free University of Berlin and is of very high caliber. Six weeks of an intensive language practicum held at the Berlin Consortium center are followed by one or two semesters of study at the university. Participants enroll in regular courses at the university. Assistance in finding internships between semesters may be available to students staying for an entire academic year. Four semesters of German language study are prerequisite for participating in the program; ideally the last of these courses should be at the 3000 level.

Students interested in this or other study abroad options in Germany, Austria, or Switzerland should consult the language program director, Gunhild Lischke (G75 Goldwin Smith Hall, 255-0725, g15@cornell.edu).
First-Year Writing Seminars
Consult the John S. Knight Institute brochure for course times, instructors, and descriptions.

Courses Offered in German

GERST 1210 Exploring German Contexts I
Fall or spring. 4 credits. Intended for students with no prior experience in German or language placement test (LPG) below 37, or SAT II below 370. G. Lischke, G. Matthias, and staff.

Students develop basic abilities in listening, reading, writing, and speaking German in meaningful contexts through interaction in small group activities. Course materials including videos, short articles, poems, and songs provide students with varied perspectives on German language, culture, and society.

GERST 1220 Exploring German Contexts II
Fall or spring. 4 credits. Prerequisite: GERST 1210, LPG 37–44, or SAT II 370–450. G. Matthias, G. Lischke, and staff.

Students build on their basic knowledge of German by engaging in intense and more sustained interaction in the language. Students learn more advanced language structures allowing them to express more complex ideas in German. Discussions, videos, and group activities address topics of relevance to the contemporary German-speaking world.

GERST 1230 Expanding the German Dossier
Fall or spring. 4 credits. Successful completion of GERST 1210, 1220, and 1230 satisfies Option 2. Prerequisite: study of German and LPG 45–55 or SAT II 460–580. Staff.

Students continue to develop their language skills by discussing a variety of cultural topics and themes in the German-speaking world. The focus of the course is on expanding vocabulary, reviewing major grammar topics, developing effective reading strategies, improving listening comprehension, and working on writing skills. Work in small groups increases each student's opportunity to speak in German and provides for greater feedback and individual help.

GERST 2000 Germany: Intercultural Context (CA-AS)
Fall or spring. 3 credits. Satisfies Option 1. Prerequisite: GERST 1230 or LPG 50–64 or SAT II 590–680, or placement by exam. G. Lischke.

Content-based language course on the intermediate level. Students examine important aspects of present-day German culture while expanding and strengthening their reading, writing, and speaking skills in German.

Materials for each topic are selected from a variety of sources (fiction, newspapers, magazines, and the Internet). Units address a variety of topics including studying at a German university, modern literature, Germany online, and Germany at the turn of the century. Oral and written work and individual and group presentations emphasize accurate and idiomatic expression in German.

Successful completion of the course enables students to continue with more advanced courses in language, literature, and culture.

GERST 2020 Literary Texts and Contexts (LA-AS)
Spring. 3 credits. Satisfies Option 1. Prerequisite: GERST 2000 or equivalent or placement exam. Conducted in German. D. McBride.

Students in this intermediate course read and discuss a number of works belonging to different literary genres by major German-speaking authors such as Kafka, Waser, Brecht, Mann, Frisch, Dürrenmatt, Bachmann, and others. They explore questions of subjectivity and identity in modern society, of human existence as existence in language, and of the representation of history in literary texts. Activities and assignments focus on the development of reading competency in different literary genres, the improvement of writing skills including the accurate use of idiomatic expressions, the expansion of students' German vocabulary, and the systematic review of select topics in German grammar.

GERST 2040 Working with Texts (CA-AS)
Fall or spring. 3 credits. Satisfies Option 1. Prerequisite: GERST 2000 or placement by exam (placement score and CASE).

D. McBride and A. Schwarz.

Emphasis is on improving oral and written expression of idiomatic German. Enrichment of vocabulary and appropriate use of language in different conversational contexts and written genres. Material consists of readings in contemporary prose, articles on current events, videos, and group projects. Topics include awareness of culture, dependence of meaning on perspective, interviews with native German speakers, German news broadcasts, reading German newspapers on the Internet.

GERST 2060 German in Business Culture (CA-AS)
Fall. 3 credits. Satisfies Option 1.

Prerequisite: GERST 2000 or placement by exam. Students without previous knowledge of business German are welcome. G. Lischke. Students learn German and understand business culture at the same time. This German language course examines the German economic structure and its major components: industry, trade unions, the banking system, and the government. Participants learn about the business culture in Germany and how to be effective in a work environment. Emphasis is on the use of media will be constructed. This knowledge will then be applied practically through discussing aspects of German culture visible in the WWW. The highlight of the course will be an intercultural encounter with a German Class from the University of Osnabrück using Web 2.0 applications. In the produced content, students will become part of the Web 2.0 in German through an intercultural discussion of German life visible in the World Wide Web (WWW).

GERST 3210 After the Fires: Divided Germany 1945–1989 (CA-AS)
Fall. 4 credits. Satisfies Option 1. Taught in German. L. Adelson.

Introduction to the history and culture of postwar Germany, the development and unification of the two Germanies, and their societies. The emphasis is on cultural and social institutions as well as political and intellectual debates. Focal topics include responses to the Nazi past, Germany and Europe, and West German post-war reconstruction. Taught in German. G. Matthias.

GERST 3220 German-Jewish Perspectives in the Early 20th Century (CA-AS)
Spring. 4 credits. Satisfies Option 1. Prerequisites: any German course at 3000–3200 level or by placement exam. Taught in German. A. Glazova.

The term "modernism" is usually associated with projects of renewal, which "re-write" the world within their own, newly founded language. The early 20th century, when European modernism was in bloom, was also a time of this renewal in the sphere of German-Jewish culture. Specifically Jewish themes such as Hassidic tales or kabbalistic knowledge become for the first time a part of the German literary tradition. While Martin Buber and Franz Rosenzweig's new translation of the Bible is symptomatic, their theological writings and efforts in re-defining Jewish learning are paradigmatic for this renewal.
Courses conducted in English

GERST 3530 19th- and 20th-Century European Thought (also PHIL 2240) (KCM-AS)
Spring. 4 credits.
For description, see PHIL 2240.

GERST 3550 Political Theory and Cinema (also COML 3300, FILM 3290, GOVT 3705) (CA-AS)
Spring. 4 credits. G. Waite.
An introduction (without prerequisites) to fundamental problems of current political theory, filmmaking, and film analysis, along with their interrelationship. Particular emphasis on comparing and contrasting European and alternative cinema with Hollywood in terms of post-Marxist, psychoanalytic, postmodernist, and postcolonial types of interpretation. Filmmakers/theorists might include: David Cronenberg, Michael Curtiz, Kathryn Bigelow, Gilles Deleuze, Rainer Fassbinder, John Ford, Jean-Luc Godard, Marleen Gorris, Werner Herzog, Alfred Hitchcock, Allen and Albee, Hughes, Stanley Kubrick, Fredric Jameson, Chris Marker, Pier-Paolo Pasolini, Gillo Pontecorvo, Robert Ray, Martin Scorsese, Ridley Scott, Ordinary Stone, George Romero, Steven Shaviro, Kid Tsukada, Maurizio Viano, Slavoj Zizek. Although this is a lecture course, there will be ample time for class discussions.

GERST 3560 Metropolis: Urban Sites in Literature

GERST 3600 (formerly GERST 342) Words and Music (also MUSIC 3245) # (LA-AS)
Spring. 4 credits. Prerequisite: some ability to read music. Taught in English, with reading options in English or German. Students with no experience in reading music (playing an instrument) are encouraged to enroll concurrently in the 1-credit course MUSIC 1100. A section in German will be available for 1 extra credit (GERST 3601).
This course surveys the evolution of texts set to music in German-speaking culture of the 19th and 20th centuries. A brief presentation of Luther and the Protestant hymn will introduce several Baroque music, especially cantatas and oratorios by Bach. After tracing the emergence of a secular culture of sensibility in Mozart’s Abduction from the Seraglio and late 18th-century songs, readings and listening will explore Classicism and Romanticism, focusing on songs and song cycles by Beethoven, Schubert, Schumann, and Brahms. A final seminar will investigate the role of words and music in constructing German nationalism, especially folk songs and Wagner’s use of the past in operas such as Tannhäuser or Die Meistersinger.

GERST 3740 Opera and Culture (also MUSIC 3222) # (LA-AS)

GERST 3770 The Art of the Historical Avant-Garde (also ARTH/VISST 3672, COML 3840, ROMS 3770) (LA-AS)
Spring. 4 credits. Prerequisite: any GERST 3000–3200-level course or equivalent. P. McBride.
At the height of modernism (1910–1930), avant-garde artists and intellectuals began arguing that art could be employed to “reconstruct the universe,” as one Futurist manifesto put it. They joined forces with the most radical political movements of their day and created innovative artistic practices ranging from collage, montage, and the found object to the installation and the happening that continue to shape our perception of art and popular culture. This course will focus on strategies for politicizing art as well as formulating a new relation between high and popular culture in Germany, Italy, and France in the first half of the 20th century. Our investigation of avant-garde art will include original documents of Italian Futurism, Expressionism, Dada, and Surrealism.

GERST 4050 Introduction to Medieval German Literature I # (LA-AS)
Fall. 4 credits. Prerequisite: reading knowledge of German. A. Groos.
After a brief introduction to basic aspects of the medieval universe, ranging from cosmology to psychology, reading will focus on introductory texts of art as well as aristocratic courtly culture. Using the predominant genres of aristocratic self-representation, the heroic epic (Nibelungenlied), Arthurian romance (Hartmann’s Wart), and Minnesang, discussions will investigate the court as the locus of conflicting forces in the rise of the secular culture in Germany, examining such issues as the first vernacular construction of social and sexual identity, generational conflicts within the communal-dynastic order, the rise of individualism (the knightly quest), and subjectivity (the love lyric).

GERST 4060 Introduction to Medieval German Literature II # (LA-AS)
Spring. 4 credits. Prerequisite: GERST 4050 or equivalent or permission of instructor. Anchor course for the medieval period. A. Groos.
Political lyrics by Walther von der Vogelweide will introduce agendas of conflict in 13th-century German culture, ranging from crusades to civil war. Against this backdrop, we will examine the utopian quest to win the Holy Grail and heal the Fisher King in Wolfram’s Parzival, using Balthrop’s approach to pre-novelistic discourse. From the love lyric trace representation of gender across emerging class differences, the increasing complexity of self, and instabilities of the performance text. Concluding topics may include women mystics and late medieval narratives of socio-sexual violence, anti-Semitism, and urban Angst.

GERST 4070 Teaching German as a Foreign Language
Fall. 4 credits. Intended for graduate students preparing to teach German. G. Liesche.
Designed to familiarize students with current ways of thinking in the field of applied linguistics and language pedagogy. Introduces different concepts of foreign language methodology as well as presents and discusses various techniques as they can be implemented in the foreign language classroom. Special consideration is given to topics such as planning syllabi, writing classroom tests, and classroom discussions and performance. Participants conduct an action research project.

GERST 4090 Spinoza and the New Spinozism (also COML 4090, GOVT 4769, JWST 4790) (LA-AS)
GERST 4150 Marx, Freud, Nietzsche (also COML 4250, GOVT 4739) (CA-AS)
Fall. 4 credits. Prerequisite: none. G. Waite. This is an introduction to the three “master thinkers” who have shaped 20th-century thought. It offers a critical overview of their ideas and discusses currents of modernity and post-modernity. We consider the effects of their work: (a) specific critical and historical analyses; (b) theoretical and methodological writings; (c) programs and manifestos; and (d) styles of argumentation, documentation, and persuasion. This also entails an introduction, for non-specialists, to essential problems of political economy, continental philosophy, psychology, and literary and cultural criticism. Second, we compare the underlying assumptions and the interpretive yields of the various disciplines and practices founded by Marx, Nietzsche, and Freud: historical materialism and communism, existentialism and power-knowledge analysis, and psychoanalysis, respectively. We also consider how these three writers have been fused into a single constellation, “Marx-Nietzsche-Freud,” and how they have been interpreted by others, including L. Althusser, A. Badiou, and K. Marx. This is a lecture course but there will be plenty of time for discussion.

GERST 4410 Germanic Linguistics (also LING 4441) (HA-AS)
Next offered 2011–2012. V. Caron.

GERST 4470 Imagining the Holocaust (also COML 4830, ENGL/JSST 4580) (LA-AS)
Spring. 4 credits. D. Schwartz. For description, see ENGL 4580.

GERST 4610 The Man without Qualities and Theories of Narration (also COML 6141)

GERST 4960 Theorizing the Public Sphere

GERST 4965 Introduction to Systems Theory (also COML 6185)
Fall. 4 credits. P. Gilgen. Niklas Luhmann’s systems theory is one of the great theoretical edifices of the last few decades. Ostensibly a sociological theory, Luhmann’s work arguably has had its most disruptive, and most enduring, influence in the humanities. On the basis of his Introduction to Systems Theory, this course will provide a thorough examination of Luhmann’s theoretical edifice and its theoretical building blocks, such as Talcott Parsons’s systems theory, Heinz von Foerster’s second-order cybernetics, George Spencer Brown’s “calculus of discern,” Gregory Bateson’s theory of information, and Humberto Maturana’s concept of autopoiesis. In addition, we will follow the development of Luhmann’s own theory and analyze closely several of Luhmann’s other texts, such as Observations of Modernity, Ecological Communication, Love as Passion, and The Reality of the Mass Media. (All readings will be available in English).

GERST 5030 Literature of Fascism and Antifascism (also PHIL 5030)
Fall and spring. 1–4 credits, variable. M. Kosch. For description, see PHIL 5030.

GERST 5160 Spaces of Literature

GERST 5450 Honors Thesis
Spring. 8 credits. Prerequisite: GERST 4530. Staff.

GERST 5470 Thoerizing the Public Sphere

Graduate Courses
Note: For complete descriptions of courses numbered 6000 and above consult the appropriate instructor.

GERST 6030 Literature of Fascism and Antifascism (also PHIL 6030)
Fall and spring. 1–4 credits, variable. M. Kosch. For description, see PHIL 6030.

GERST 6131 German Philosophical Texts (also COML 6141)

GERST 6160 Jews in German Culture Since 1945
Spring. Required readings in German. Class discussion in English. L. Adelson. Amongst widespread discussion of Holocaust memory as a “globalized” phenomenon, which becomes increasingly untethered from the historical referent, this seminar explores literature written in German since 1945, largely by Jewish authors, on the subject of Jewish life and German history. For these writers and their texts, the historical encounter with National Socialism remains pivotal to a broad range of aesthetic strategies for representing the murder of Jews for the first time. We shall consider how these currents of representation, including the “other beginning” in H__rlin and “the essence of human freedom” in Schelling, Adorno (on “parataxis” in H__rlin), De Man (on the “flight from reality” and “the German ideology”), Freud (on “the uncanny” in Hoffmann), Balibar (on “the internal border” in Fichte), Heidegger (on “the other beginning” in H__rlin and “the essence of human freedom” in Schelling), Adorno (on “parataxis” in H__rlin), De Man (on the “rhetoric of romanticism”), Lacoue-Labarthe and Nancy (on “the literary absolute”), following W. Benjamin, “the absorption of the subject” (applying M. Fried to the paintings of Caspar David Friedrich), and Deleuze & Guattari (on “the war machine” in Kleist). Of
particular interest is “the crisis of reproduction” (Althusser), involving both sexuality and social class, which entails the theme of “incest” in several forms. The primary focus will be on the close reading of texts.

[GERST 6370] 19th-Century Fiction: The Realist Project

[GERST 6380] Readings of Recollection (also COML 6010)

[GERST 6390] Walter Benjamin: Constellations of Thought

[GERST 6420] Operatic States: Imagining Community in Music-drama (also MUSIC 7223)
Fall. 4 credits. A. Groos.

For description, See MUSIC 7223.

[GERST 6470] German Literature from 1949 to 1989

[GERST 6480] Critical Theory and Literature: Lukács, Benjamin, Adorno
Spring. 4 credits. P. U. Hohendahl.

In recent years the literary criticism of Lukács, Benjamin, and Adorno has received renewed attention, but in many instances this interest has remained abstract and without regard for the literary works that were the basis for their theoretical reflections. Instead, the seminar will focus on their contributions to literary criticism and literary theory in the context of modern literary history. The seminar will examine the aesthetic and methodological questions raised in Critical Theory by looking equally at the literary works and the interpretations offered by the Lukács, Benjamim, and Adorno. Special attention will be given to the period of German Classicism and European Modernism. Among the literary authors to be examined will be Goethe, George, Kafka, Brecht, Proust, and Beckett.

[GERST 6500] The Culture of Weimar Germany
Fall. 4 credits. P. McBride.

This survey course is an introduction to the major developments in the culture of Weimar Germany. Individual works will be drawn primarily from literature and the visual arts and will be studied in relation to relevant cultural, political, and social contexts. Lectures and discussions will focus both on detailed interpretation of individual texts as well as on the general historical background and developments of the period.

[GERST 6620] Reassembling Culture: Montage and Collage in Weimar Germany

[GERST 6630] Nietzsche and Heidegger

[GERST 6650] Heidegger's Literature (also COML 6520)
Fall. 4 credits. A. Schwarz.

Compared to other philosophers Heidegger very rarely mentions literary authors in his works. When he does, however, attention needs to be paid to the reasons for his specific choices. Of course, Heidegger also devotes entire essays to particular authors and literary works, but those are also singular and beg the question why certain authors and works enter Heidegger’s thought and others not. In this seminar we shall analyze the relationship between Heidegger's philosophical project and his examinations of literary works. Guiding questions for the seminar will be: What is the status of a literary or poetic text in Heidegger's conceptualizations of language? Do literary texts serve as mere examples for philosophy or do they write their own philosophies? What is the status of “named” works of art in Heidegger's thought? We shall also discuss Heidegger's relationship to pre-Romantic and Romantic philosophies of language (Herder, Hamann, Humboldt, Schelling). Other authors under study will include: Goethe, Schiller, Stifter, Rilke, Trakl, Nietzsche, George, Sophocles, Hoelderlin et al. Secondary texts will be compiled in a reader. Primary texts will be available in both German and English. Seminar will be held in English.

[GERST 6680] Literature and the Uncanny

[GERST 6710] Postcolonial Theory and German Studies

[GERST 6860] Althusser and Lacan (also COML 6680, GOVT 6795, FREN 6230)
Fall. 4 credits. Reading knowledge of French not required. G. Waite.

This seminar takes up the old “dialogue” or “confrontation” between Marxism and psychoanalysis as it continues in our “postmodern” or “post-communist” era, based on close readings of selected works by Louis Althusser and by Jacques Lacan. Specific topics include: the significance of their personal relationship, the role of “anti-philosophical” Lacanian concepts in Althusser’s philosophy or “aleatory materialism”; writers of common interest (from Spinoza to Freud); the homologism between the “return to Marx” and the “return to Freud”; their modes of interpretation and argumentation; the technique of “symptomatic reading”; differing concepts of “structure,” “overdetermination,” and “contradiction” and the question whether “ideology is (the) unconscious”; and their critiques of Marxism, Stalinism, and capitalism. Other writers include: Badiou, Balibar, Butler, Copjec, Freud, Gramsci, Machiavelli, Marx, Mao, Negri, Spinoza, Zizek.

[GERST 6890] The Aesthetic Theory of Adorno

[GERST 6960] Rites of Contact: Emergent German Literatures and Critical Method

GERST 7530–7540 Tutorial in German Literature
7530: Fall; 7540: Spring. 1–4 credits each semester. Prerequisite: permission of instructor.

Dutch

DUTCH 1210–1220 Elementary/Continuing Dutch
1210 (elementary), fall; 1220 (continuing), spring. 4 credits each semester. Prerequisite: permission of instructor. C. Hosea.

Intensive practice in listening, speaking, reading, and writing basic Dutch in meaningful contexts. The course also offers insight into Dutch language, culture, and society.

DUTCH 2030 Intermediate Dutch
Fall. 5 credits. Prerequisite: DUTCH 1220 or permission of instructor. Offered in Dutch. C. Hosea.

Improved control of Dutch grammatical structures and vocabulary through guided conversation, discussions, compositions, reading, and film, drawing on all Dutch-speaking cultures.

DUTCH 3000 Directed Studies
Spring. 1–4 credits, variable. Prerequisite: permission of instructor. Conducted in Dutch. C. Hosea.

Individualized advanced Dutch studies. Provides students with individualized programs which can be anything from advanced mastery in any or all skills to the mastery of Dutch for research, language, and history in support of all disciplines.

Swedish

SWED 1210 Elementary Swedish
Fall. 4 credits. C. Alm.

Participants gain fundamental Swedish language proficiency and functional communication skills, as well as cultural insights into Sweden and its Nordic context. Oral and written expression and skills in listening and reading are developed in an interactive immersion classroom, enriched by a textbook, additive multimedia and textual materials, as well as practical activities using computer web tools. Brief podcasts introduce issues of current interest, and participants explore Swedish or Scandinavian language, culture, and society in guided portfolios. Intended for students without prior experience in Swedish.

SWED 1220 Continuing Swedish
Spring 4 credits. Prerequisites: SWED 1210 or equivalent Swedish language background. C. Alm.

Participants expand their proficiency in speaking, listening to, reading, and writing Swedish by working with online resources, texts, media, and cinema. The first part of the course is dedicated to topics such as leisure activities, education, government, community, seasonal festivities, and traditions. During the second half of the course, participants read and converse about level-appropriate fiction and engage with complementary materials. Particular attention is paid to functional oral and written communication, enrichment of language structures, and vocabulary (including...
SWED 3000 Directed Studies
Fall. 1–4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor, C. Alm.
Directed study of Swedish (or Scandinavian) topics that address particular needs in relation to their field of studies. Topics might include, but are not limited to, extending Swedish language skills, studying translation or linguistic aspects of the Swedish speech community, cinematic/iterary themes or directors/authors, historical developments, or particular technological, entrepreneurial, or social issues. Interested students are encouraged to contact the instructor to determine a directed plan of study.

GOVERNMENT

Web site: falconarts.cornell.edu/Govt

“Government” is what Cornell calls a department that elsewhere might be termed political science. The focus of this discipline is power applied to public purposes. Some faculty concentrate on purposes, some on applications. Some engage in the close reading of great texts of political philosophy, while others analyze the behavior of power wielders and publics in this and other societies. Government is divided into four subfields: U.S. politics, comparative politics (other nations), political theory (philosophy), and international relations (transactions between nations).

The Major
To be admitted to the major, a student must pass two Cornell government courses.

To complete the major, a student must:

1. pass two of the introductory government courses (GOVT 1111, 1313, 1615, 1817);
2. pass an additional course in one of the remaining subfields (American government, comparative government, political theory, or international relations). This course may be any course offered in the government department, including introductory courses, upper-level courses, or seminars but must be minimum of 3 credits. Students are strongly advised to take at least one course in each of the four subfields;
3. accumulate an additional 28 credits of government course work at the 3000 level or above;
4. complete at least one seminar-style course in government that may be applied toward the 28 credits. These courses include those numbered 4000.XX to which students are admitted by application only; or other 4000-level GOVT courses in which no more than 15 students are enrolled.
5. accumulate 11 credits in upper-level courses in related fields (e.g., anthropology, economics, history, science and technology studies, psychology, and sociology). Upper-level courses are usually courses numbered at the 3000 level or above (2000-level courses are not considered upper-level). Students should consult with their major advisor to choose appropriate courses. All choices of related courses must be approved by the major advisor or the director of undergraduate studies.
6. all courses used to fulfill a government major must be passed with a letter grade. No S–U grades accepted.

To summarize, a total of 10 government courses and three additional courses (11 credits) of upper-level related courses are required to complete the major. For more information about the government major, please visit our web site: falconarts.cornell.edu/Govt.

Cornell in Washington Program.
Government majors may apply to the Cornell in Washington program to take courses and undertake a closely supervised externship during a fall or spring semester.

European Studies Minor. Government majors may elect to group some of their required and optional courses in the area of European studies, drawing from a wide variety of courses in relevant departments. Students are invited to consult Professors P. Katzenstein and S. G. Tarrow for advice on course selection and foreign study programs.

Model European Community Simulation. Undergraduates with an interest in the European Union, public affairs, or debating may participate in an annual European Union simulation held, on an alternating basis, in April at SUNY Brockport or in January in Brussels. The simulation provides an opportunity for participants, representing politicians from the members states, to discuss issues and resolutions of current concern to the European Union.

To prepare for the simulation, a 2-credit course is offered by the Department of Government each year (GOVT 4313 or 4323). Participation in the simulation is open only to those who register for this course. Anyone interested in participating or finding out more information should contact the Institute for European Studies at 120 Uris Hall, 255-7592.

International Relations Minor. See the description under "Special Programs and Interdisciplinary Studies."

Honors. Application to the honors program is made in the early spring of the second semester of a student's junior year. For more information about the honors program and an application form, please visit falconarts.cornell.edu/Govt.

First-Year Writing Seminars. Consult the John S. Knight Institute brochure for times, instructors, and descriptions.

Major Seminars. Fall or spring. 4 credits. These seminars, emphasizing important controversies in the discipline, cap the majors' experience. Thus preference in admission is given to majors over nonmajors and seniors over juniors. Topics and instructors change each semester. For more information, please visit "Guide to the Undergraduate Major in Government" on falconarts.cornell.edu/GOV/ugrad_brochure.html#seminars.
modern state and party institutions following the collapse of the Qing Dynasty in 1911, through the communist rise to power and into the Mao era (1949–1976), culminating in the period of “opening up and reform” (1978–present). The second part of the course examines China’s institutional apparatus, focusing on mapping out the government, Party, and military bureaucracies; examining relations between Beijing and the localities; and on the institutionalization of these structures and processes over time. The third part of the course combines the insights of the course thus far to illuminate some of the current “hot button” issues facing the Chinese state and their world, combining politics and policy and examining the relationships between the two. No prior knowledge of China is required or expected.

GOVT 2605 Social and Political Philosophy (also PHIL 2420) (KCM-AS)
Spring. 4 credits. E. Taylor. For description, see PHIL 2420.

[GOVT 2626 French Thought After May '68 (also COM/L/HIST 2331) (HA-AS)]

[GOVT 2716 Politics of Violence in 20th-Century Europe (also HIST 2711) (HA-AS)]

GOVT 2729 Origins of the Social (HIST 2320) (HA-AS)
Spring. 4 credits. C. Robics.

For description, see HIST 2320.

GOVT 2747 History of Modern Middle East in 19–20th Century (also HIST/JWST/NEWS 2747) # (HA-AS)
Fall. 3 credits. Z. Fahmy.

For description, see NES 2747.

GOVT 2827 China and the World (also CAPS 2827) @ (CA-AS)
Spring. 3 credits. A. Carlson.

Study of the dramatic rise of China through reviewing major developments in contemporary Chinese foreign policy since the establishment of the People’s Republic of China (PRC), and concentrating more specifically on major developments in Chinese foreign policy during the 1980s and 1990s. Such a wide-ranging survey of Chinese foreign policy involves not only a consideration of the evolution of China’s relations with its major bilateral partners but also an investigation of how China has defined its broader relationship with the international system. In addition, students are asked to consider which causal factors have been of primary importance in motivating Chinese behavior. (IR)

GOVT 3021 Social Movements in American Politics (also AMST 3021) (HA-AS)

Analyzing movements from the 19th century to the present, we examine the conditions that gave rise to the movements, their accomplishments, and their political legacies. (AM)

[GOVT 3021 Imagining America (also AMST 3031) (CA-AS)]

GOVT 3023 Sex, Power, and Politics (also FGSS 3040) (SBA-AS)

GOVT 3063 Society and Party Politics (also SOC 3070) (SBA-AS)
Spring. 4 credits. S. Van Morgan.

For description, see SOC 3070.

GOVT 3071 Introduction to Public Policy Analysis (SBA-AS)
Summer. 4 credits. Offered in Cornell in Washington Program. S. Jackson.

Public policy is shaped by many forces. This course will enhance your ability to understand those forces and the policies that they produce. It will provide you with tools for thinking about, assessing, and evaluating those policies. And it will introduce you to the substantive core of several major issues in America today. The course will have three segments. In the first, we will examine the relevant institutions, interests, and ideologies which operate in the policy arena and the debates about the impact of these forces which engage students of the policy process. In the second, we will consider two different lenses through which we might peer to evaluate policies. In the third, we will discuss the main lines of debate in contemporary American politics concerning four substantive issues: crime and punishment, education, the economy and foreign trade, and foreign policy. The course will meet four days a week for one hour. Based on assigned readings, the class sessions will mix lectures, discussions, group activities, and guest speakers.

GOVT 3091 Science in the American Polity (also AMST/STS 3911) (SBA-AS)

For description, see STS 3911.

GOVT 3111 Urban Politics (also AMST 3111) (SBA-AS)

GOVT 3128 America’s Changing Faces (also AMST 3128)
Summer. 2 credits. Offered in Cornell in Washington Summer Program. S. Jackson.

A new generation of leaders has emerged in America’s political, economic, educational and cultural institutions. Those leaders employ and explore in their work modern communications technologies such as the Internet. Thereby, they are changing both what is done, and how things are done in the respective life spheres. This course explores the resulting changes in the nature of American life and asks questions about the interactions among the different realms of life. (AM)

GOVT 3131 The Nature, Functions, and Limits of Law (also LAW 4131) (CA-AS)
Fall. 4 credits. Prerequisite: undergraduate standing. A. Riles.

For description, see LAW 4131.

[GOVT 3141 Prisons (also AMST 3141) (SBA-AS)]

[GOVT 3143 Research in Government (SBA-AS)]
Fall, winter, and spring. 3 credits. Next offered 2010–2011. W. Kipnis.

[GOVT 3169 Visualizing Foreign Policy]
GOVT 3150 The American Legal System: Its Nature, Functions, and Institutions
Summer. 4 credits. Offered in New York City. C. Stewart.
For description, see Summer Session link www.sce.cornell.edu.

GOVT 3161 The American Presidency (also AMST 3161) (SBA-AS)
Fall. 4 credits. E. Sanders.
This course will explore and seek explanations for the performance of the 20th–
to 21st-century presidency, focusing on its institutional and political development, 
recruitment process (nominations and elections), relationships to social groups, 
economic forces, and “political time”, and foreign and domestic policy-making.

GOVT 3171 Campaigns and Elections (also AMST 3171) (SBA-AS)
Fall. 4 credits. Prerequisite: GOVT 1111 or permission of instructor. Next offered 2011–2012. P. Enns.
This course examines campaigns and elections, focusing primarily on national elections in the United States. Topics typically include campaign finance, negative campaigning, the noncompetitiveness of congressional elections, presidential elections, why there are almost but not quite three parties, voter turnout, individual voting decisions, how the votes are counted (or not), and elections and the economy. We examine several theories that may explain some of these phenomena, including in particular theories of rational choice. Course requirements usually include two papers with one being based on original analysis of election survey data.

GOVT 3181 U.S. Congress (also AMST 3181) (SBA-AS)
The role of Congress in the American political system. Topics include: the political setting within which Congress operates, the structure of Congress, the salient features of the legislative process, and recent congressional behavior in a number of policy areas. (AM)

GOVT 3191 Racial and Ethnic Politics (also AMST/LSP 3191) (SBA-AS)

GOVT 3212 Public Opinion and Representation (SBA-AS)
This course will examine the nature of public opinion and analyze when and how it influences government. Specifically, the class will study various definitions of public opinion, theories of opinion formation and change, and how public opinion influences government policy. We will also analyze public attitudes toward specific issues, such as race and welfare, and we will discuss normative issues, such as the role opinion should play in American democracy.

GOVT 3241 Inequality and American Democracy (also AMST 3241) (SBA-AS)
Can democratic governance survive amid high economic inequality? We investigate effect across three major aspects of the American political system: voice, governance, and public policy.

GOVT 3293 Comparative Politics of Latin America (also DSOC/LATA 3290) (SBA-AS)
Spring. 4 credits. Knowledge of Spanish or Portuguese not required. G. Flores-Macias.
This course provides an introduction to civilizing perspectives in Latin America, including dependency theories, import-substitution industrialization, the debt crisis, market reform, and the period of the post-Washington Consensus. The third section of the course presents a selection of the region’s central social issues including class structures, civil–military relations, church–state relations, social movements, and both internal and international migration. Throughout the semester, we will make reference to specific countries to illustrate each topic.

GOVT 3303 Politics of the Global North (also ILRIC 4330)
For description, see ILRIC 4330. (CO)

GOVT 3313 Middle Eastern Politics (also NES 3850) (CA-AS)
Spring. 4 credits. D. Patel.
This course offers an introduction to contemporary Middle Eastern politics. The goal is to provide students with historical background and theoretical tools to answer the following core questions: (1) Why do authoritarian political systems persist in the Middle East more than they do elsewhere? (2) Why have Islamist groups become prominent opposition forces in and across some countries? (3) Why do some Middle Eastern countries suffer from high levels of political violence while others are spared? (4) What accounts for the region’s current economic underdevelopment? (5) Would the adoption of Western-style political institutions improve governance and stability in the region? The course explicitly compares outcomes and explanations within the region, between the region and other world areas, and over time.

GOVT 3322 Modern European Politics (SBA-AS)

GOVT 3344 Islamic Politics (also NES 3844) (SBA-AS)
Fall. 4 credits. D. Patel.
This course examines the relationship between politics and contemporary Islamist movements. We will investigate the following core questions: (1) What are the religious and political implications of the modern world or reactions against it? How do “Islam” mobilize adherents? Are İslamist movements products of the modern world or reactions against it? How does “Islam” mobilize adherents? Why have Islamists become prominent opposition forces in recent decades in some countries, but not others? Why do some Islamists, but not others, espouse violence? Do Islamists movements change as they participate in pluralist political processes? The course investigates the evolution of Turkish Islamist movements in the context of anti-colonial struggles, modern nation-state formation, neo-liberal reform, and in relation to forms of political opposition under authoritarianism and democracy. We will explore cases from the Middle East, Central Asia, South Asia, Southeast Asia, and West Africa in order to identify and account for variation in Islamic political mobilization.

GOVT 3353 African Politics
Fall. 4 credits. N. van de Walle.
This is an introductory course on the politics of Sub-Saharan Africa. The goal is to provide students with historical background and theoretical tools to understand present-day politics on the continent. The first part of the course will survey African political history, touching on: pre-colonial political structures, colonial experiences and legacies, nationalism and independence movements, post-independence optimism and state-building, the authoritarian turn, economic crises, and recent political and economic liberalizations. The second part of the course will examine some contemporary political and economic issues. These include: the effects of political and social identities in Africa (ethnicity, social ties, class, citizenship); the politics of poverty, war, and dysfunction; Africa in the international system; and current attempts to strengthen democracy and rule of law on the continent.

GOVT 3383 Comparative Political Economy (SBA-AS)

GOVT 3415 Modern European Society and Politics (also SOC 3410) (SBA-AS)
Fall. 4 credits. S. Van Morgan.
This survey course provides an interdisciplinary overview of European social and political issues. Themes of the course will include, but will not be limited to, the political development of the nation-state, modes of governance, welfare state restructuring, party systems and elections, social movements, immigration and demography, culture and identity, external relations, and the special challenges posed by European political and economic integration. A series of background and contextual lectures will be complemented by presentations given by leading Europeanists.

GOVT 3427 Germany and Europe (SBA-AS)

GOVT 3437 Politics of the European Union (SBA-AS)
Spring. 4 credits. T. Zittel.
Despite recent bad feelings, the countries constituting the European Union (EU) still remain the most important partners for the United States in the world. And despite the rise of China and other Asian countries, the EU, together with the United States, still calls the tune in the international economy. However, even citizens of the European Union generally know very little about how this complex structure works. This course explores the policies and policy-making of the European Union against the backdrop of the postwar history of European integration and the institutional framework of the EU. Also considered is the external dimension of the EU and explore current debates about the emerging European polity, in particular the European constitution. Throughout the course students reflect on parallels with the American political system and the state of current transatlantic relations. (IR)
GOVT 3443 Government and Politics of Southeast Asia (also ASIAN 3334) @ (HA-AS)
Spring. 4 credits. T. Pepinsky.
Southeast Asia is one of the world’s most diverse and fascinating regions. This course will survey the political development of modern Southeast Asia, from the colonial period through today, focusing on Burma, Indonesia, Malaysia, the Philippines, Thailand, and Vietnam. We will seek to understand variation across time, across countries, and within countries on topics such as economic development, state-building, democratization, corruption, ethnic relations, and civil violence.

GOVT 3463 Modern Japanese Politics (also ASIAN 3346) @ (SBA-AS)
Spring. 4 credits. S. Martin.
In the 1980s, Japan was number one. The consolidation of its postwar democracy and rapid economic growth offered an alternative political economic model for emerging democracies. By the 1990s, the economic bubble burst and provided momentum for reforming the Japanese way of doing politics. Whereas the U.S. sought to learn from Japan’s success in the 1980s, Japan has now begun to apply lessons from its failures to politically resolving our own economic crisis. This course examines the rise and fall of the “1955 System” and Japan’s ongoing struggle to reach a new equilibrium through reforms aimed at producing a better democracy. These broad themes will be addressed through a close analysis of citizen engagement with the institutional framework in an increasingly global context.

GOVT 3555 Politics and Literature (also AMST 3655) (LA-AS)
Fall. 4 credits. M. Berezin.
This course elaborates a critique of everyday life as a tool for class presentation. (IR)

GOVT 3605 Ideology (CA-AS)
Fall. 4 credits. D. Rubenstein.
Focuses on critical approaches to the study of ideology in order to understand the role of ideology in political subject formation. After an initial presentation of the classical Marxist texts on ideology, examines 20th-century reworkings of hegemony theorist Antonio Gramsci and the critical structuralist approaches of Roland Barthes, Jean Baudrillard, and Dick Hebdige. Concentrates on the “lived relation” to ruling ideas in the form of ideologies of everyday life. The second part of the course is devoted to psychoanalytically oriented theories (Freud, Lacan) which address the internalization of belief, both in relation to the intrapsychic and in the interaction between psychic and state apparatuses. Concludes with Louis Althusser’s notion of interpellation, which resumes the Marxist, structuralist and psychoanalytic objectives of the course material. The theorists in the second part of the course are contextualized within the experience of the historical traumas of fascism and French decolonization. Throughout the semester, students reflect on the continued relevance of socialist ideologies, centered around notions of class interest, to late-20th-century ideologies attachments to national, religious, gendered, ethnic, technological identities. (PT)

GOVT 3625 Modern Political Philosophy (also PHIL 3460) (KCM-AS)
Fall. 4 credits. R. Miller.
For description, see PHIL 3460.

GOVT 3633 Politics and Culture (also SOC 2480) (HA-AS)
Fall. 4 credits. M. Berezin.
For description, see SOC 2480.

GOVT 3655 Politics and Literature (also AMST 3655) (LA-AS)

GOVT 3665 American Political Thought from Madison to Malcolm X (also AMST 3665, HIST 3160) # (HA-AS)
Fall. 4 credits. I. Kramnick.
Survey of American political thought from the 18th century to the present. Particular attention is devoted to the persistence of liberal individualism in the American tradition. Politicians, philosophers, and poets provide the reading. Insightful historical and social context is offered.

GOVT 3695 Marx and After # (KCM-AS)
We will read the texts of Marx that set the agenda for a real social and theoretical debate, and key essays that have built on his dialectical materialist theory in the 20th century.

GOVT 3705 Political Theory and Cinema (also COML 3300, FILM 3290, GERST 3550) (CA-AS)
Spring. 4 credits. G. Wäże.
For description, see GERST 3550.

GOVT 3716 Education of Princes (also COM/LNES 3716) # (HA-AS)
For description, see NES 3716.

GOVT 3725 Ideology 2: Everyday Life (also COM/LFREN 3725) # (CA-AS)
Spring. 4 credits. D. Rubenstein.
This course elaborates a critique of everyday life in writings of 20th- and 21st-century continental authors such as Henri Lefebvre, Michel de Certeau, Pierre Bourdieu, Jean Baudrillard and Guy Debord, among others. Topics to be considered include consumerism, neoliberalism, situationism as well as larger philosophical issues relating to time, space and technology.

GOVT 3735 Political Freedom
Spring. 4 credits. J. Frank.
This course will explore dilemmas surrounding the concept and practice of political freedom. We will begin with an examination of traditional philosophical approaches to this issue—such as debates about free will and determinism, agency and structure, and negative and positive liberty—but we will primarily focus on how these traditional rubrics obscure our understanding of the particularity of political freedom. In order to better grasp this particularity we will explore diverse theoretical, literary, and social scientific works. Authors read may include Sophocles, Augustine, Dostoevsky, Plato, Arendt, Emerson, Dewey, Foucault, Melville, Berlin, Gaventa, and Scott.

GOVT 3847 Weapons of Mass Destruction (also PHYS 2206) # (HA-AS)
Spring. 4 credits. Students enrolled in GOVT 3847 receive SBA-AS and Students enrolled in PHYS 2206 receive PBS-AS.
S. Kreps and G. Lewis.
The 20th and early 21st centuries have been profoundly affected by the development of extremely destructive, technologically-based weapons, often (and sometimes wrongly) lumped together under the term “weapons of mass destruction.” This course will examine topics such as the ethics, technology, ethics, and politics of nuclear weapons. In addition, the course will explore the nuclear arms race, efforts to restrain it via arms control, important concepts and strategies including nuclear deterrence, and recent and current issues associated with nuclear proliferation. Similarly, the technology, past and future potential uses, and prospects for preventing future use of biological, chemical, and radiological weapons will be covered. Finally, the delivery systems that enable the use of many of the above weapons will also be covered, ranging from the mass and fire bombings of World War II, to the massive missile arsenals of the Cold War, and to current issues such as the deployment and effectiveness of missile defenses.

GOVT 3857 American Foreign Policy (also CAPS 3857) (SBA-AS)
America is marked by multiple traditions and identities as well as a state on steroids, or impertum, and a nation on stilts, or civilization. These traits are reflected in its foreign policies. (IR)

GOVT 3867 The Causes of War (SBA-AS)

GOVT 3898 International Law (HA-AS)
Fall. 4 credits. Taught in Washington, D.C. Is international law a pious delusion, helpless in the face of real power? Or is pursuing policy becoming so entangled in international standards that international law is now eroding national sovereignty? This course surveys the theoretical foundations and general history of international law since the 17th century to highlight what is new in the doctrines and institutions by which it operates in the contemporary world. The course gives special attention to the relation between international and U.S. law and to the workings of international law in particular fields—including environmental and human rights protection, trade regulation, and control of terrorism. (IR)

GOVT 3937 Introduction to Peace and Conflict Studies (SBA-AS)
Fall and summer. 4 credits. S. Kreps.
This course serves as an introduction to the study of war, peace, and peacemaking. We will study different theories of peace and war from a variety of disciplinary perspectives. The course will cover definitions of peace and war, causes of conflict, and modes of conflict prevention and resolution. The concepts will be applied to a range of historical and current conflicts. Students will prepare analyses of specific conflicts or instances of peacemaking for class presentation. (IR)
This course explores differences in foreign policy across states, introducing competing theories on how policy and applying them to specific countries and foreign policy issues.

GOVT 3957 New Forces in International Politics (SBA-AS)
Fall. 4 credits. A. Carlson.
How important are regional groupings, non-governmental organizations, narco-terrorists, ethnic groups and transnational environmental issues, within international politics? These forces seem to be occupying an increasingly central position in the international arena, yet the factors that have caused their rise, and the degree to which they have transformed the face of international politics, are still poorly understood. In this course we will address such issues through exploring how students of international politics have described and explained the emergence of these new forces in the international system during the post-Cold War period. In short, the course will focus on determining the extent to which we are witnessing a transformation of the international political system, and why such a change is (or is not) taking place.

GOVT 3977 Israeli-Palestinian Conflict (also HIST/SOC 3970, JWST/NES 3697) @ (HA-AS)
Spring. 4 credits. R. Brann.
For description, see NES 3697.

[GOVT 4032 Immigration and Politics Research Seminar (also AMST/LSP 4032) (SBA-AS)]
M. Jones-Correa.

[GOVT 4041 American Political Development in the 20th Century (also AMST 4041, AMST/GOVT 6121) (HA-AS)]
Fall. 4 credits. Next offered 2010–2011.
E. Sanders.
Examines major political reform periods leading to policy change in economic regulation, social welfare, and national security policy.

[GOVT 4051 The Postmodern Presidency: Election 2008 (also AMST 4051) (CA-AS)]
Fall. 4 credits. D. Rubenstein.

[GOVT 4061 Politics of Slow-Moving Crisis (also AMST 4061/6161, GOVT 6161) (SBA-AS)]
Fall. 4 credits. Next offered 2011–2012.
M. Jones-Correa.

[GOVT 4142 Causes and Consequences of American Foreign Policy (also AMST 4142, GOVT/AMST 6142) (SBA-AS)]
Fall. 4 credits. Next offered 2011–2012.
E. Sanders.
What is the impact of U.S. foreign policy on the world, U.S. society, and political institutions? What are the forces that drive U.S. foreign policy?

GOVT 4222 Political Culture (also AMST 4222)
Spring. 4 credits. R. Benson.
This course will explore the relationship between popular belief, political action, and the institutional deployment of social power. The class will be roughly divided in three parts, opening with a discussion of how the material world influences the culture of a society. The middle section will connect culture to political ideology, including symbolism and the construction of group identity. The last part of the course will consider ways in which cultural symbols and ideology can be manipulated in order to legitimate government authority. We will then, coming full circle, trace how political regimes can influence the social practices from which culture originates.

[GOVT 4231 The 1960s: Conceptualizing the Future from the Past (also AMST 4231)]
Fall. 4 credits. Next offered 2010–2011.
J. Kirshner and T. Lowi.

GOVT 4241 Contemporary American Politics (also AMST 4241, AMST/GOVT 6291) (HA-AS)
Spring. 4 credits. M. Shelter.
Seminar analyzing some major changes in U.S. electoral and group politics in recent decades. Topics include: partisan realignment, the new conservatism, racial cleavages, “identity politics,” and democratic decline.

GOVT 4281 Government and Public Policy: An Introduction to Analysis and Critique (also AMST 4281/6281, GOVT 7281) (SBA-AS)
Fall. 4 credits. T. J. Lowi.
Concentrates on history and criticism of U.S. policies and the policies associated with them. Particular attention is given to the origins and character of the regulatory state and the welfare system. (AM)

[GOVT 4293 Politics of Science (also STS/BSOC 4293) (SBA-AS)]
Fall. 4 credits. Next offered 2010–2011.
R. Herring.
A research seminar in which each student, or perhaps some in clusters, will write research papers on the politics of science. How do societies—and increasingly global regimes—deal with collective uncertainty and risk? What are the arguments about trade-offs and precaution? Science claims for itself only a method of judging truth claims through transparent and replicable testing of theory-driven hypotheses. How do they work? We will explore how biological (“creation science” or “Vedic science”) and civilizational (“Western science”) embeddings of hospitality and cosmopolitanism such as Derrida on hospitality from the 1990’s until his death. We also consider contemporary readers of Plato, Xenophon, Kant, Levinas, and the Bible, we focus on the writings of Jacques Derrida on hospitality from the 1990’s until his death. We also consider contemporary readers of hospitality and cosmopolitanism such as Tracy McNulty, Pierre Bourdieu, Seyla Benhabib, Bonnie Honig, James Davidson, Andrew Sandoval-Strausz, and Wayne Koestenbaum. These theoretical texts would be put in tension with practitioners such as Danny Meyers, E. M. Staatler, films (Frears, Loach), novels (Kirin Desai) and labor manifests (Ehrenreich, Levinson).

GOVT 4374 States and Societies in the Middle East (also AMST 6474, NES 4874/6874)
Spring. 4 credits. D. Patel.
This seminar surveys research approaches and puzzles in contemporary Middle Eastern politics. Students will be introduced to some of the major arguments, hypotheses and debates in the literature. Topics to be considered include: the nature and legacies of colonialism, state-building and the character of contemporary Middle Eastern regimes, the political economy of oil, economic crises, elections and political “liberalization,” and the role of Islamism in political, social, and economic life. The seminar is designed principally for advanced undergraduates who focus their research on the Middle East and advanced undergraduates who have taken courses in Middle Eastern politics or history.

GOVT 4585 American Political Thought (also AMST 4585, GOVT 6585) (HA-AS)
Fall. 4 credits. J. Frank.

[GOVT 4616 Interpreting Race and Racism: Du Bois (also AMST 4616) (HA-AS)]
A. M. Smith.
Seminar in critical race theory and the contemporary implications of the Reconstruction Amendments to the Constitution, with a focus on the work of Du Bois.

[GOVT 4625 Sexuality and the Law (also AMST 4625/6625, FGSS 4610/7620, GOVT 7625) (KCM)]
A. M. Smith.

[GOVT 4635 Feminist Theory/Law and Society (also AMST 4365) (CA-AS)]
Fall. 4 credits. Next offered 2010–2011.
A. M. Smith.
Feminist analysis of policy and legal issues central to gender justice: reproductive rights, HIV and AIDS, poverty policy, transnational women’s advocacy, prisons, same-sex marriage, etc. (PT)

GOVT 4646 Derrida and Philosophy of Hospitality (also GOVT/COML 6675, HADM 5590)
Fall. 4 credits except for HADM 5590, which is 3 credits. D. Rubenstein and L. Shaffer.
Beginning with an examination of hospitality in Plato, Xenophon, Kant, Levinas, and the Bible, we focus on the writings of Jacques Derrida on hospitality from the 1990’s until his death. We also consider contemporary readers of hospitality and cosmopolitanism such as Tracy McNulty, Pierre Bourdieu, Seyla Benhabib, Bonnie Honig, James Davidson, Andrew Sandoval-Strausz, and Wayne Koestenbaum. These theoretical texts would be put in tension with practitioners such as Danny Meyers, E. M. Staatler, films (Frears, Loach), novels (Kirin Desai) and labor manifests (Ehrenreich, Levinson).

GOVT 4665 Islamism (also NES 4953) @ (HA-AS)
Fall. 4 credits. Prerequisite: graduate students or juniors and seniors who have taken GOVT 1615 or 3000-level course in political theory. S. Buck-Morss.
This course is intended to introduce students to the complexities of political Islam as a modern experience of opposition that deals with issues of social justice, legitimate power, and ethical life. While we will read translations of original sources by founding theorists (Sayyid Qutb, Ali Shariati, Iqbal) as well as excerpts from speeches by Islamic militants (Ayatollah Khomeini, Osama bin Laden), our approach is not only textual. We are interested in the role Islamism plays in everyday life of hundreds of thousands of contemporary Muslims, analyzed by anthropologists, literary
critics, media analysts (of cassettes, cinema, and internet) and others who describe its audio, visual, public, private, and networking effects. We will also examine recent interconnections between Islamic with Western thinkers (Malcolm X, Frantz Fanon).

**GOVT 4675 Extrastatecraft (also SHUM/VIST 4826)**
Fall. 4 credits. K. Easterling.

For description, see SHUM 4826.

**GOVT 4705 Contemporary Reading of the Ancients (CA-AS)**
Fall. 4 credits. Graduate students welcome to enroll. Next offered 2011–2012. D. Rubenstein.

**GOVT 4715 Critical Reason, The Basics: Kant, Hegel, Marx, Adorno (also GERST 4710) (KOM-AS)**

**GOVT 4735 Marx, Freud, Nietzsche (also COML 4250, GERST 4150) (CA-AS)**
Fall. 4 credits. G. Waite.

For description, see GERST 4150.

**GOVT 4748 Link, Network, Nexus (also COML 4115, FREN/SHUM 4936, STS 4361)**
Spring. 4 credits. B. Massumi.

For description, see SHUM 4936.

**GOVT 4769 Spinoza and the New Spinozism (also COML/GERST 4090, JWST 4790) (LA-AS)**

**GOVT 4809 Politics of ‘70s Films (SBA-AS)**

**GOVT 4817 International Conflict and Laws of War (SBA-AS)**
Spring. 4 credits. S. Kreps.

The purpose of this course is to explore contemporary international law as it addresses the use of military force. It first explores jus ad bellum—the law relating to the recourse to force, including its historical development, the UN Charter framework for the use of force, and a number of current issues relating to the jus ad bellum. These will include: preemptive force, rescue of nationals, humanitarian intervention, civil conflict, and terrorism. The course then turns to an examination of jus in bello—the law relating to the conduct of hostilities. It evaluates the legal framework established by the Hague and Geneva Conventions and discusses a variety of contemporary issues, including the treatment of prisoners of war, the use of nuclear weapons and other weapons of mass destruction, and weapons targeting policies. The course then examines courts and other tribunals that have been established to try persons for violation of international legal rules dealing with the use of force. Such tribunals include: the Nuremberg Tribunal, the International Criminal Tribunals for Yugoslavia and Rwanda, and the International Criminal Court. Finally we will explore the future of the law relating to the use of force. (IR)

**GOVT 4827 Unifying While Integrating: China and the World (also CAPS 4827, GOVT 6827) (HA-AS)**
Spring. 4 credits. A. Carlson.

Seminar intended to examine the increasingly complex relationship that has evolved between China and the rest of the international system during the 1980s and 1990s. Emphasizes the interrelated, yet often contradictory, challenges facing Beijing in regard to the task of furthering the cause of national unity while promoting policies of integration within the region and interdependence with the global economy. Concentrates especially on ongoing controversies over the rise of Chinese nationalism in many regions within China. (IR)

**GOVT 4837 The Military and New Technology (also STS 4831) (SBA-AS)**
Fall. 4 credits. Next offered 2011–2012. Staff.

For description, see STS 4831.

**GOVT 4862 Classics and Early America (also CLASS 4683, HIST 4861) (HA-AS)**

For description, see CLASS 4683.

**GOVT 4877 Asian Security (also CAPS 4870, GOVT 6877) (SBA-AS)**
Fall. 4 credits. E. Sanders.

Throughout the 1990s it has been part of the conventional wisdom of international relations scholarship that Asia was, in the words of Aaron Friedberg, “ripe for rivalry.” In this seminar we explore the accuracy of such an assessment through studying Asia’s historical and contemporary security situation. Such an examination will be oriented toward introducing students to the main security issues confronting Asia, alongside an exploration of the extent to which competing explanations drawn from different strands of IR theory and the security field can explain such issues. In addition, we will ask students to challenge the limitations of traditional security studies through considering the importance of new actors and issue areas within the region. In short, while the Seminar will have a regional focus on East Asia, it will be framed within the broader literature of the field.

**GOVT 4917 Ethics in International Relations (KCM-AS)**

This course examines current and historical issues in international relations from the perspective of international law, norms, and ethics.

**GOVT 4949 Honors Seminar: Thesis Clarification and Research**
Fall. 4 credits. Prerequisite: acceptance into honors program. E. Sanders.

Designed to help thesis writers in the honors program during the early stages of their research projects.

**GOVT 4959 Honors Thesis: Research and Writing**
Spring. 4 credits. Prerequisite: successful completion of GOVT 4949. E. Sanders.

**GOVT 4998 Politics and Policy: Theory, Research, and Practice (also ALS/AMST/PSY 4998, PAM 4060)**
Fall, spring. Offered in Cornell in Washington Program.

This required course forms the core of the Cornell in Washington program for students in the public policy option. The central course objective is to provide students with the instruction and guidance necessary to analyze and evaluate their own chosen issue in public policy. Toward that end, the course has three components: (1) weekly lectures providing background on the structures and processes of national politics and policy as well as training in research methodology; (2) student externships; and (3) individual research papers or projects. All three components interrelate so as to provide students with a strategy and framework for integrating classroom based learning, field experience and individual research.

**GOVT 4999 Undergraduate Independent Study**
Fall or spring. 1–4 credits.

One-on-one tutorial arranged by the student with a faculty member of his or her choosing. Open to government majors doing superior work, and it is the responsibility of the student to establish the research proposal and to find a faculty sponsor. Applicants for independent study must present a well-defined program of study that cannot be satisfied by pursuing courses in the regularly scheduled curriculum. No more than four credits of independent study may count toward fulfillment of the major. Students who elect to continue taking this course for more than one semester must select a new theme or subject each semester. Credit can be given only for work that results in a satisfactory amount of writing. Emphasis is on the capacity to subject a body of related readings to analysis and criticism. Keep in mind that independent study cannot be used to fulfill the seminar requirement. The application form for independent study is available in 210 White Hall and must be completed at the beginning of the semester in which the course is being taken.

**GOVT 6019 Methods of Political Analysis I**

Introduction to the quantitative analysis of political data, with an emphasis on probability theory, descriptive statistics, measures of association, and hypothesis testing.

**GOVT 6029 Methods of Political Analysis II**
Spring. 4 credits. P. Enns.

This course will introduce students to some basic methods for conducting quantitative analyses in political science. After taking this course, students will be able to read and critique political science research that uses basic statistical analyses as well as be able to use basic statistical techniques, such as multiple regression analysis, in their own research. The course will begin with basic probability theory and proceed to statistical analysis of political data.

**GOVT 6031 Field Seminar in American Politics**

Introduces the major issues, approaches, and institutions of American government and the various subfields of American politics. Focuses on both substantive information and theoretical analysis. (AM)

**GOVT 6053 Comparative Method in International and Comparative Politics**
Spring. 4 credits. C. Anderson.
An in-depth, graduate-level introduction to qualitative and comparative methods of political analysis, with special emphasis on the application of these methods in comparative and international politics. Through readings, discussions, and written assignments, students will explore strategies for concept formation, theory construction, and theory testing, using the craft and tools of comparative political analysis.

**GOVT 6067 Field Seminar in International Relations**  
Fall. 4 credits. S. Keeps.  
General survey of the literature and propositions of the international relations field. Criteria are developed for judging theoretical propositions and are applied to the major findings. Participants are expected to do extensive reading in the literature as well as research. (IR)

**GOVT 6075 Field Seminar in Political Thought**  
Spring. 4 credits. I. Kramnick.  
A survey of the early modern political theory canon, emphasizing texts and writers from the 17th and 18th centuries. (PT)

**GOVT 6101 Political Identity: Race, Ethnicity, and Nationalism**  

**GOVT 6121 American Political Development in the 20th Century** (also AMST 6121, AMST/GOVT 4041)  
For description, see GOVT 4041.

**GOVT 6132 The Politics of Inequality**  
Spring. 4 credits. S. Mettler.  
In the mid-20th century United States, egalitarianism seemed to be on the rise: the ranks of the middle class swelled and policy makers eradicated laws that had long sanctioned racial and gender hierarchies. Then, beginning in 1973 and to the present, economic inequality escalated, stratifying Americans by income and wealth and reinforcing old cleavages that the civil rights and feminist movements had sought to overcome. This course investigates how American politics has influenced and been shaped by these developments. We will examine trends across the political system, investigating aspects of political voice, including political participation and public opinion; political institutions, including Congress, political parties, and interest groups; and public policy, considering the extent to which it ameliorates or fosters inequality. The course offers a broad survey of important literature in the field of American politics.

**GOVT 6142 Causes and Consequences of U.S. Foreign Policy** (also AMST 4142/6142, GOVT 4142)  
Fall. 4 credits. E. Sanders.  
For description, see GOVT 4142.

**GOVT 6151 State and Economy in Comparative Perspective**  

**GOVT 6171 Politics of Public Policy**  

**GOVT 6202 Political Culture** (also AMST 6202)  
Spring. 4 credits. R. Bensel.  
This graduate course will explore the relationship between popular belief, political action, and the institutional deployment of social power. The class will be roughly divided in three parts, opening with a discussion of the material foundations of cultural ideation in socioeconomic “practice.” The middle section will connect ideation to political ideology, including symbolism and group identity. The last portion of the course will consider the impact of both cultural ideation and political ideology on institutional structure and legitimation. This section will also trace how political regimes can influence, coming full circle, to the material foundations of cultural ideation.

**GOVT 6264 Social Movements in Latin America** (also GOVT 4264)  
For description, see GOVT 4264.

**GOVT 6274 People, Markets, and Democracy**  
Examines the relationship between the economy and democracy. Focuses on behavioral political economy in democratic or democratizing countries. Major topics include inequality and democratic performance.

**GOVT 6291 Contemporary American Politics** (also AMST 4291/6291, GOVT 4241)  
Spring. 4 credits. M. Shefter.  
For description, see GOVT 4241. (AM)

**GOVT 6301 Institutions** (also AMST 6301)  
Fall. 4 credits. R. Bensel.  
This graduate course will explore the ways in which institutional rules shape the conduct and outcome of politics as collective decision-making and deliberation. The focus will be primarily on the United States Congress where the literature on institutional design and structure is both comprehensive and deep. Subordinate sections of the course will cover the general literature on theories of institutional formation and influence over politics, as well as briefly addressing law and judiciaries in order to broaden the sampling of specific cases and applications.

**GOVT 6324 Proseminar in Chinese Politics**  
Spring. 4 credits. A. Mertha.

**GOVT 6334 Political Economy of Development**  
Fall. 4 credits. K. Roberts and K. Morrison.  
This course provides an overview of major theoretical and empirical works regarding the political determinants of improvements in human well-being. Focusing broadly on issues of economic growth and distribution, the topics we will cover include economic reform, industrialization strategies, agricultural development, the institutional foundations of growth, human capital development, regional inequality, and poverty reduction. Along the way, we will encounter a variety of theoretical traditions as well as methodological approaches and touch on most regions of the world.

**GOVT 6353 Field Seminar in Comparative Politics**  
Fall. 4 credits. S. Tarrow.  
This course provides an introduction to comparative politics, introducing students to classic works as well as recent contributions that derive from those works. Topics to be covered include democracy, authoritarianism, state-building, political parties, welfare states, and social movements and revolutions. Members of the subfield will join the seminar on alternative weeks to develop each topic introduced by the classical readings. (CO)

**GOVT 6384 Democracy and the Media**  
Spring. 4 credits. T. Zettl.  
The relationship between democracy and the media is conflict-laden. Modern democracy would be on the one hand impossible without media. Media are considered on the other as a potential threat to modern democracy. The increasing pervasiveness of mediated political communication emphasizes the tension between democracy and the media to increasing degrees. This class aims at an in-depth survey on the concepts that we use to analyze the relationship between democracy and the media and on the findings emerging from empirical research guided by these concepts. The class adopts a comparative perspective to understand the impact of contextual factors on the relationship between democracy and the media.

**GOVT 6393 Comparative Political Participation**  

**GOVT 6413 Revitalizing Labor: A Comparative Perspective** (also ILRIC 6320)  
Spring. 4 credits. L. Turner.  
For description, see ILRIC 6320.

**GOVT 6423 Feminist Methodology** (also FGSS 6170)  
For description, see FGSS 6170.

**GOVT 6461 Public Opinion**  
Spring. 4 credits. P. Enns.  
This course provides an introduction to the vast literature devoted to public opinion. We will survey the major theoretical approaches and empirical research in the field of political behavior, although we will touch on participation and voting only in passing. The primary focus will be on American public opinion, although there will be some attention to comparative work. In addition to empirical research on the antecedents of opinion and its role in the larger political system, we will consider normative work on the meaning and measurement of opinion and its role in democratic politics. (AM)

**GOVT 6474 States and Societies in the Middle East** (also GOVT 4374, NES 4874/6874)  
Spring. 4 credits. D. Patel.  
This seminar surveys research approaches and puzzles in contemporary Middle Eastern politics. Students will be introduced to some of the major arguments, hypotheses and debates in the literature. Topics to be considered include: the nature and legacies of colonialism, state-building and the character of contemporary Middle Eastern regimes, the political economy of oil, economic crises, elections and political ‘liberalization,’ and the
role of Islamism in political, social, and economic life. The seminar is designed principally for graduate students who focus their research on the Middle East and advanced undergraduates who have taken courses in Middle Eastern politics or history.

**GOVT 6523 Methods for Field Research**

Fall. 4 credits. D. Patel. This research seminar surveys the study of political culture. The course is designed to assess the strengths and weaknesses of various approaches that seek to account for the influence of culture on economic and political behavior and institutions, and to account for shifts in culture over time. A wide range of methodological approaches within political science are examined, as well as approaches from anthropology, sociology, and economics. Applications include ethnicity and identity, conflict, regime type, and economic growth. The focus is on how rationalist and institutionalist approaches ignore or incorporate political culture through choice, coordination, and common knowledge.

**GOVT 6544 Gender and Politics (also FGSS 6544)**

Fall. 4 credits. S. Martin and S. Mettler. What role does gender play in political behavior, law, and public policy? How can we explain the variation in that role across historical and national contexts? This course considers the social, cultural, and institutional mechanisms through which states structure gender roles and relations. It also investigates how gender regimes influence patterns of political activism and social change. We will examine puzzles such as why greater gender equality is found in some political contexts than others, and why states feature different configurations of rights and restrictions with respect to gender, for example with some granting relatively high degrees of social equality while restricting reproductive freedom, and vice versa. Specific attention will be given to how gender categories and debates shape the discipline of political science, shaping the questions we ask and the answers we find.

**GOVT 6564 Comparative Political Representation**

Fall. 4 credits. T. Zittel. This in-depth examination of main problems of political representation from a comparative perspective. The main focus will be on the established Western democracies. The class is structured in three main parts. In its first part we will discuss core theoretical concepts guiding the comparative analysis of representative systems. The second part will consist of a discussion of the empirical literature on representative systems; of differences between democratic systems; of the causes for these differences and of their consequences. A third part deals with the question, whether representative democracy is in need of reform because of a lack of performance and/or because of a changing social and technological environment.

**GOVT 6585 American Political Thought (also AMST 6585, AMST/GOVT 4585)**

Spring. 4 credits. J. Frank. For description, see GOVT 4585.

**GOVT 6603 States and Social Movements (also SOC 6600)**

Spring. 4 credits. Next offered 2010–2011. S. Tarrow. This course is a broad examination of several types of contemporary social movements, civil wars, nationalist episodes and revolutions in different parts of the world. (COI)

**GOVT 6625 Field Seminar in Political Theory**

Fall. 4 credits. Next offered 2010–2011. J. Frank. Introduces students to several contemporary approaches to political theorizing, with an emphasis placed on different modes of interpretation. Authors read may include: Althusser, Arendt, Butler, Foucault, Habermas, Kristeva, MacIntyre, Skinner, Strauss, Taylor, Wollin, and Zizek. (PT)

**GOVT 6645 Democratic Theory (also AMST 6645)**

**GOVT 6665 Media Theory: Film and Photograph (also VISST 6466)**

**GOVT 6675 Derrida and Philosophy of Hospitality (also GOVT 4646, HADM 5590, COML 6675)**

Fall. 4 credits except for HADM, which is 3 credits. For description, see GOVT 4646.

**GOVT 6695 Modern Social Theory I**

Fall. 4 credits. S. Buck-Morss. Topics vary. In fall 2009, we will reflect philosophically and politically on Imagination, dealing with theories of the image and its social participation. Our approach will be cognitive-empirical rather than romantic-artistic. Aesthetic here means experiential, i.e., perceptible through the senses. Collectively shared images are examined as social facts endowed with political power, not artistic representations generated by genial subjects. With the invention of camera/digital technology, image-events have become determinant in history. Moving (away) from the modern philosophic canon—Kant, Hegel, Dewey, Adorno—we will consider imagination as a social process in the pre-printing press past (Mondzain on the icon), the post-printing press present (Benjamin on the image), and the digital future (neuro-scientific theories, imagination as metaphor). (PT)

**GOVT 6705 Modern Social Theory II**

Spring. 4 credits. S. Buck-Morss. In spring 2010, we will read Walter Benjamin's *Arcades Project*. We will approach the text as a materialist philosophy of history with a political intent, paying special attention to the work of social theorists whom he cites in the project: Karl Marx (dreamworlds), Georg Simmel (urban life), Charles Fourier (communism), St-Simonians (industrial utopia) Bakunin (revolution) and Claire Déméar (feminism). Advanced seminar, not recommended for undergraduates.

**GOVT 6827 Unifying While Integrating: China and the World (also CAPS/GOVT 4827)**

Spring. 4 credits. A. Carlson. For description, see GOVT 4827.

**GOVT 6857 International Political Economy**

Fall. 4 credits. Next offered 2010–2011. P. Katzenstein. Exploration into a range of contemporary theories and research topics in the field of international political economy. The seminar covers different theoretical perspectives and a number of substantive problems. (IR)

**GOVT 6867 War, States, and Contention**

Fall. 4 credits. S. Tarrow. This course will examine the relationships among state-building, war-making, and contention over rights in wartime, in preparations for war, and in the wake of war. It asks: first, do states expand rights or retract rights during or after wars; second, are there certain kinds of rights (for example, rights related to war mobilization) that are repressed during wars, while others (those peripheral to mobilization) are expanded—for example, the suffrage; third, are some kinds of wars more or less restrictive of rights than others; Fourth, do wars like the “War on Terror” reduce the incentives for states to extend rights and increase their tendency to retract or abuse rights; finally, how do social movements respond to the expansion of executive authority and the limitation of rights during wars?

**GOVT 6887 Political Economy and National Security**

Spring. 4 credits. Next offered 2010–2011. J. Kirshner. This seminar considers the relationship between economics and national security. Specific topics will change from year to year, but will typically include the following: the economic foundations of power, economic coercion, the economic roots of conflict, and the ways in which structural changes in the international economy shape and limit state authority. (IR)

**GOVT 6897 International Security Politics**

Fall. 4 credits. Next offered 2011–2012. P. Katzenstein and J. Weeks. This seminar introduces students to a variety of theoretical perspectives and empirical approaches related to international conflict, peace, and security. (IR)
GOVT 6917  Normative Issues in IR (also GOVT 4888, PHIL 4471/6470)  Spring. 4 credits. R. Miller  
For description, see PHIL 4471.

GOVT 6927  Administration of Agriculture and Rural Development (also IARD 6060)  Spring. 4 credits. N. Uphoff and T. W. Tucker.  
For description, see IARD 6030.

GOVT 6999  CIPAs Weekly Colloquium  Fall. 1 credit. S–U grades only. T. Lowi.  
Colloquium is the weekly seminar series hosted by the Cornell Institute for Public Affairs (CIPA). It is also a required, 1-credit course for all CIPA Fellows and is graded S–U based on attendance. The colloquium series is a collaborative effort between the CIPA Colloquium Committee and the faculty and staff of CIPA.

This course will undertake a general survey of the classical and modern theories of political economy. The works of Smith, Keynes, Shumpeter, and Hayek, among others, will be studied and placed within the context of the history and evolution of the thought, practice, and method of the field. Issues pertaining to the politics of macroeconomics and money will be of prominent (but not exclusive) interest in the course. (PT)]

GOVT 7063  Labor in Global Cities (also ILRCB 7060)  Fall. 4 credits. L. Turner.  
For description, see ILRCB 7060. (CO)

GOVT 7073  Game Theory 1: Perfect Information  Fall. 4 credits. K. Morrison.  
Game theory is a tool for studying strategic interaction. This course offers a critical introduction, with applications to comparative politics, American politics, and international relations. We will study the core concepts of game theory, how to formulate, solve, and empirically test games in ways that help advance research; and how to assess game-theoretic arguments in the political science literature. The course requires no prior training in game theory or formal methods.

GOVT 7074  Game Theory 2: Advanced Topics  Spring. 4 credits. Prerequisite: GOVT 7073. K. Morrison.  
This is the second of two graduate courses on game theory in the government department. In the first half of this course, we will focus on advanced topics, including coalition games, games of imperfect information, evolutionary games, and bargaining. The second half of the course will be focused on helping students develop their own models, using the techniques learned in both of the courses.

GOVT 7281  Government and Public Policy (also AMST 4281/6281, GOVT 4281)  Fall. 4 credits. T. J. Lowi.  
For description, see GOVT 4281. (AM)

For description, see GOVT 4625.]

GOVT 7999  Independent Study  Fall or spring. 4 credits. Not open to undergraduates. Undergraduates wishing to conduct supervised study should register for GOVT 4999. Individualized readings and research for graduate students. Topics, readings, and writing requirements are designed through consultation between the student and the instructor. Graduate students in government who are looking to use this as an option to fulfill their course requirements should check with their chairs to be certain that the program of study is acceptable for this purpose. Applications must be completed and signed by the instructor and by the chairs of their special committees. They are available from, and must be returned to, the graduate assistant in 212 White Hall.

HISTORY  
The popularity of history among Cornell students is due to its usefulness as preparation for graduate, professional, or law school and for any career that requires critical thinking and good writing; the reputation of the faculty for scholarship, teaching, and advising; and most of all, the intrinsic interest of the discipline. A wide variety of introductory and advanced courses is offered. The department is particularly strong in ancient, medieval, and modern European history; in American, Latin American, and Asian history; and in the history of science.

Advanced Placement  
Students who pass the AP American and/or European History exam with a score of 3 or 5 have two options: (1) use the AP credits to fulfill the Arts and Sciences course credit requirements for graduation, or (2) take introductory American and/or European history courses.

The Major  
To complete the history major, a student must fulfill the requirements listed below:

Entry requirement: completion of any two history courses excluding first-year writing seminars.

1. Take nine history department courses (for either 3 or 4 credits each), completing all of them with a grade of C or better. (Courses taken for entry may count toward fulfilling the major.)

2. Of the total nine courses:
   a. four must be in courses designated as outside U.S. history and
   b. three must be in courses designated as history before 1800. (Courses that count toward the Arts and Sciences historical breadth requirement do not necessarily count toward the history major.)

Courses used to fulfill requirement (1) above may also be used to fulfill requirement (2), in respect both to (a) and (b) if applicable. A course in American history before 1800 may be used to fulfill requirement (2b). A course before 1800 in a field other than American history can be used toward fulfillment of both requirements (2a) and (2b).

A list of those courses that fulfill the "outside U.S." and "pre-1800" requirements is maintained by the history department. Only courses from that list fulfill these requirements.

3. Two of the nine courses must be seminars, of which one must be a 4000-level seminar. Starting fall 2008, HIST 4000, 4001, and 4002 may not be used to fulfill the 4000-level seminar requirement.

Honors  
The history department offers an honors program for students who wish to research and write a thesis during their senior year. In addition to writing the thesis, honors students must maintain a 3.5 average in their history courses, take HIST 4000 Honors Proseminar during their junior year plus an additional 4000-level seminar, preferably during their junior year, and complete 10 courses in history (for 3 or 4 credits each). During the second semester of the sophomore year or early in the junior year, interested students should speak to a faculty member or faculty advisor about the honors program.

Before the beginning of the senior year, the candidate presents, in conversation or in writing, a thesis proposal to an appropriate member of the faculty. The faculty member who approves the proposal ordinarily becomes the thesis supervisor. If for any reason it is necessary to change supervisors, this arrangement should be confirmed no later than the fourth week after the beginning of the candidate’s senior year.
Honors candidates should register in HIST 4001, a seminar course in honors research. Any exceptions to this must be approved by the Honors Committee. HIST 4001 is a 4-credit course that permits honors candidates to conduct research and to begin writing the honors essay in their senior year. At the end of the first semester of the senior year, as part of the requirements for HIST 4001, the student submits to the supervisor a 10- to 15-page overview, or, alternatively, a preliminary draft of some part of the thesis along with an outline of the whole to the instructor of 4001 and to the student's supervisor. HIST 4002 is a 4-credit seminar course that permits honors candidates to complete the honors essay and to demonstrate their understanding of the ways in which the themes explored in the thesis fit into a larger historical context.

The completed thesis is evaluated by three readers, including the supervisor and a first reader elected by the student, in consultation with his or her supervisor.

The text of the honors essay may not exceed 60 pages except by permission of the chair of the Honors Committee and the student's supervisor. Three copies are due during the third or fourth week of April. In May, each honors candidate is given an oral exam administered by the supervisor; exam focuses on the essay as well as the specific subfield of history in which the student has conducted research (e.g., Periclean Athens, 17th-century science, 19th-century American politics).

To qualify for a bachelor of arts degree with honors in history, a student must (1) sustain at least a 3.5 cumulative average in all history courses, (2) take specific courses for honors credit, and (3) complete a senior honors thesis. Honors in history, a student must (1) sustain at least a 3.5 cumulative average in all history courses, (2) take specific courses for honors credit, and (3) complete a senior honors thesis.

First-Year Writing Seminars

HIST 1141 First-Year Writing Seminar: Witchcraft in the Early Modern Atlantic World

Spring. 3 credits. D. Corpis. This seminar examines how European beliefs about witchcraft and divination were exported to Africa and the Americas in the period 1500–1800. We will explore how non-European concepts of the supernatural and magical intersected with European ideas during the initial stages of European colonial expansion. We will read a range of documents, including transcripts from witch trials, treatises about witchcraft, and books written by historians that interpret the historical meaning of witchcraft. Students will write a range of papers that aim to answer the following types of questions: Who were witches? What was the European imagination? Why were the people accused of witchcraft more often women than men? Why did European society believe that Native Americans or Africans were likely to be involved in witchcraft? (EM)

HIST 1230 First-Year Writing Seminar: Monstrous Births, Scheming Midwives: Childbirth in Europe 1500–1700

Fall. 3 credits. Students should register through First-Year Writing Program. R. Weil.

When Mary Toft gave birth to rabbits in 1726, only some (but not all) doctors thought she was faking. Why was her story plausible, and how were the rabbits explained? Who controlled childbirth, and who had the power to decide whether a pregnancy was real? How did Mary Toft experience the event? Monstrous births, dishonest midwives, infanticide, and the powers of pregnant women were topics of fascination and debate in early modern Europe and America. In this course we use writings by midwives, medical treatises, letters, autobiographies, news reports, and trial records to examine practices and beliefs surrounding childbirth, and at how these in turn reflected concerns about property, sexuality, health, and religion. (EM)

HIST 1220 Democracy and Its Discontents: Political Traditions in the United States (also AMST 1240) (HA-AS)

Summer. 3 credits. N. Salvatore.

For description, see AMST 1240. (AM)

Introductory Courses

HIST 1510 Introduction to Western Civilization II (HA-AS)

Summer and fall. 4 credits. D. Corpis. The West and its relations with the rest of the world are central topics today, but just what is the West and what is its history? This course surveys the history of the West from remote antiquity to the 16th century. We will consider developments in technology, economy, politics, religious institutions and faiths, cultural media and social ideals. Together, these themes add up to civilization in the West. We will acquaint students with these dimensions of the past while seeking to acquire the basic skills professional historians use to learn about this past. (ER) (EM)

HIST 1511 Introduction to Western Civilization Part II (HA-AS)

Summer and spring. 4 credits. H. Case and T. R. Travers.

This course introduces students to the major social, intellectual, political, cultural, artistic, and literary events and movements that emerged in Europe since the Protestant Reformation. Readings will offer a variety of perspectives on topics such as: modernity and its meaning, revolution (industrial, social, political, cultural, artistic), imperialism, war, and the emergence of modern ideologies (capitalism, communism, liberalism, fascism). (ER) (EM)

HIST 1530 Introduction to American History (also AMST 1530) (HA-AS)

Fall and summer. 4 credits. HIST 1530 is not a prerequisite for HIST 1531. M. B. Norton.

A survey of American history from the beginnings through the Civil War. Topics include cultural encounters in the age of Columbus, European colonization, the American Revolution, the early republic, westward expansion, and the origins and outcome of the Civil War. (AM)

HIST 1531 Introduction to American History, 1865-Present (also AMST 1531) (HA-AS)

Summer and spring. 4 credits. HIST 1530 is not a prerequisite for HIST 1531. A. Sachs.

An introductory survey of the development of the United States since the Civil War. (AM)

[HIST 1900 East Asia to 1800 (also ASIAN 1190) Fall and summer. 4 credits. Next offered 2010–2011. T. J. Hinrichs and K. Hirano.]

[HIST 1910 Introduction to Modern Asian History (also ASIAN 1191)] (HA-AS)

Fall. 4 credits. S. Cochran and E. Tagliacozzo.

The history of Asia-Pacific from the 19th century to the present, focusing on relations of India and Southeast Asia with each other and with the West. (AS)

HIST 1950 Colonial Latin America (also AIS/LATA 1950) (HA-AS)

Fall. 4 credits. R. Grabois.

This course is a general introduction to, and overview of, the history of Latin America from the initial “encounters” of peoples from Africa and Iberia with the “New World,” through the movements for independence in most of mainland Latin America in the early 19th century, to the collapse of Spanish colonial rule in the Pacific and Caribbean later that century. Through lectures, discussions and the reading of primary sources and secondary texts, the course examines the economic and social organization of the colonies, intellectual currents and colonial science, native accommodation and resistance to colonial rule, trade networks and imperial expansion, labor regimes and forms of economic production, and migration and movement. No prior knowledge of Latin American history is required. (LA)
HIST 1960  Modern Latin America (also LATA 1960) @ (HA-AS)
Spring. 4 credits. R. Craib.
An introductory survey of Latin American history from the early 19th century to the present, with particular emphasis on processes of nation-state formation and the development of capitalist economies. Prominent themes include U.S.-Latin American Relations; neocolonialism; and radicalism and revolution in society. How individuals are explored through a variety of primary and secondary sources. (LA)

HIST 2001  Supervised Reading
Fall or spring. 2 credits. Prerequisite: junior or senior standing. Permission of instructor required. Staff. (HR)

Sophomore Seminars

HIST 2020  The Court, Crime, and the Constitution (also AMST 2022) (HA-AS)
Fall. 4 credits. Limited to 15 students. Permission of instructor required. R. Polenberg.
A seminar designed for sophomores but open to others as space permits. An examination of 20th-century Supreme Court decisions on such issues as the "third degree," illegal search-and-seizure, the exclusionary rule, and the right against self-incrimination. Special attention will be given to events leading up to Miranda v. Arizona in 1966, and to the ways the Court has modified that holding. (AM)

HIST 2030  Wilderness in North American History and Culture (also AMST 2033) # (HA-AS)
Fall. 4 credits. Limited to 15 students. Priority given to sophomores. Students must commit to a weekend-long field trip in Sept. Next offered 2010–2011. A. Sachs.]

HIST 2050  The French Enlightenment: Methods, Ambitions, Contradictions # (HA-AS)

HIST 2061  Small Wars in Greece and Rome (also CLASS 2686) # (HA-AS)

HIST 2070  The Occidental Tourist: Travel Writing and Orientalism in Southeast Asia (also ASIAN 2206/5507, HIST 5070) # (CA-AS)
Spring. 4 credits. Limited to 15 students. Prefer (but not required) that students have taken HIST 1910 or 3960. Letter grades only. Next offered 2010–2011. T. Loos.

HIST 2081  Microhistory and the Margins of Early Modern Europe # (HA-AS)

HIST 2090  Seminar in Early American History (also AMST/FGSS 2090) # (HA-AS)

HIST 2100  The Government of God # (HA-AS)

HIST 2110  Black Religious Traditions: Sacred and Secular (also AMST/RELST 2110) (HA-AS)
A survey on the black religious and spiritual traditions during bondage and the early years of freedom. This course will examine slave religion, the rise of black churches in the North, the formation of black churches after the Civil War, the independent church movement and the churches' role in social protest. (AM)

HIST 2120  African-American Women in the 20th Century (also AMST/FGSS 2120) (HA-AS)

HIST 2141  Crusade, Heresy, and Inquisition in the Medieval Mediterranean # (HA-AS)

HIST 2161  Iran and the World @ (HA-AS)

HIST 2170  Subversion as Foreign Policy (HA-AS)
Fall. 4 credits. Next offered 2012–2013. T. Loos and R. Craib.

HIST 2180  Seminar on Genocide (HA-AS)
Fall. 4 credits. Limited to 15 students. Permission of instructor required. I. Hull.
This course examines some of the most terrible events of the 20th century, events such as the mass murders of the Armenians (1915–1918), the European Jews (1939–1945), the Cambodians (1975–1979), and the Hutus of Rwanda (1994). Students will apply historical methods to address such questions as the preconditions leading to genocide; the relation of genocide to war, revolution, nation-building, and ideology; the motivations of perpetrators; the limits of victim's efforts at self-defense; the responses of the regional or world community; and the legal and political consequences of such acts. (EM)

HIST 2190  Women and Gender in South Asia: State and Society from Pre-Colonial to Post-Colonial (also ASIAN 2219, FGSS 2190) @ (HA-AS)

HIST 2200  Travel in American History and Culture (also AMST 2200) (HA-AS)

HIST 2210  Pop Culture in China (also ASIAN 2210) @ (HA-AS)

HIST 2211  Seminar: The Blues and American Culture (also AMST 2211) (HA-AS)

HIST 2230  International Law (HA-AS)

HIST 2250  The U.S.-Mexico Border: History, Culture, Representation (also AMST/LSP 2250) (CA-AS)

HIST 2261  Society and Religion in China (also ASIAN 2268) @ # (HA-AS)

HIST 2271  Family Life in Renaissance Italy (also ITAL 2270) @ (HA-AS)

HIST 2272  Study of Terrorism (HA-AS)
Fall. 4 credits. C. Verhoeven.
This seminar examines approaches to the study of European terrorism. By the end of the semester, students should have a grasp of (1) the history of terrorism as it developed over the course of the 19th and early 20th centuries (learning in the process how to distinguish terrorism from other forms of modern political violence, e.g. partisan warfare, state terror, etc.) and (2) the ways terrorism has been perceived, presented, and remembered by contemporaries and subsequent generations. Questions, therefore, will include the following: How has terrorism been approached by political theory, history, literature, etc.? How have these approaches constructed terrorism as an object of scientific investigation? How were terrorists perceived and represented by their contemporaries (in the press, literature, art)? How did terrorists represent themselves (in political pamphlets, autobiographies, fiction?) Readings will include archival materials, manifestos, memoirs, and novels, as well as classic pieces of political writing (e.g. Lenin, Schmitt, Arendt). (EM)

HIST 2280  Indian Ocean World (also ASIAN 2288) @ (HA-AS)

HIST 2290  Jefferson and Lincoln: American Ideas about Freedom (HA-AS)

HIST 2300  Seminar in History and Memory @ (HA-AS)

HIST 2308  Caribbean History (also ASRC 2308) (HA-AS)
Fall. 3 credits. J. Byfield.
For description, see ASRC 2308. (AF)

HIST 2321  Introduction to Military History # (HA-AS)
Fall. 4 credits. Next offered 2011–2012. B. Strauss.

HIST 2330  Origins of the Social (also GOVT 2729) (HA-AS)
Spring. 4 credits. Limited to 15 students. Permission of instructor required. C. Robcis.
Political philosophy has often been preoccupied with the problem of the "social": how is society born? How do individuals come together and what allows gives their actions and discourses an overall framework? How does a population become a community governed by explicit and implicit rules, norms, mechanisms of inclusion and exclusion? And...
how does this social formation address questions of power and law, state and nation, equality and justice, identity and difference, citizenship and civility? This seminar provides an introduction to some of the major figures of European intellectual history who have attempted to think and rethink this problem of "the social." The class will focus on the close reading and the historization of each text. Readings will include Hobbes, Locke, Rousseau, Marx, Stuart Mill, Durkheim, Mauss, Freud, Levi-Strauss, Derrida, Gayle Rubin, Monique Wittig, Carole Pateman, Judith Butler. (EM)

[HIST 2331 French Thought after May '68 (also COML 2301/GOVT 2626) (HA-AS)]

[HIST 2340 Seminar: Gender in Early Modern Europe (also FGSS 2340) # (CA-AS)]

[HIST 2350 Antisemitism and the Crisis of Modernity (also JWST 2350) (HA-AS)]
Fall. 4 credits. Limited to 15 students. Next offered 2010–2011. V. Caron.

[HIST 2360 Native Peoples of the Northeast (also AMST 2360) # (HA-AS)]

[HIST 2380 Families in China since the 17th Century (also ASIAN 2388)] # (HA-AS)
Fall. 4 credits. S. Cochran.

[HIST 2390 Seminar in Iroquois History (also AIS/AMST 2390) # (HA-AS)]

[HIST 2410 Riot and Revolution in 19th-Century Africa: The Birth of the Modern (also ASRC 2410) # (HA-AS)]

[HIST 2411 Enslaved! Then and Now # (HA-AS)]

[HIST 2412 The White Image in the Black Mind (also ASRC 2307) # (HA-AS)]
Fall. 4 credits. S. Greene.

[HIST 2420 Religion and Politics in American History: From J. Winthrop to R. Reed (also AMST/RELST 2420) (HA-AS)]

[HIST 2430 History of Things (HA-AS)]
Spring. 4 credits. Limited to 15 students. E. Tagliacozzo.

This course will examine material culture as an avenue of looking at history in broad and comparative ways. The course is global in shape and unrestricted temporarily; it asks how “things” make up our world, and how they affect our lives historically and help shape the human story. Glass, dyes, opium, salt, coal, sugar, tea, and even shrunken heads will all be considered. (CO)

[HIST 2440 The United States in Vietnam (also AMST 2440) (HA-AS)]
Spring. 4 credits. Limited to 15 students. F. Logevall.

The long U.S. involvement in Vietnam has been the subject of endless controversy and scholarly analysis in recent decades, and the debate shows little sign of ending anytime soon. This seminar will look closely the origins and course of the war, and at its impact on American politics and society. Though our focus will be on the U.S. side of the story, some attention will be paid also to Vietnamese perspectives. Course materials will include recent monographs as well fictional accounts, primary sources, and occasional films. (AS)

[HIST 2461 Reading and Writing the African Diaspora (also ASRC 2309) @ (HA-AS)]
Spring. 4 credits. D. Magaziner.

This sophomore seminar considers the history, culture, politics, and imagination of the African diaspora from the era of the Atlantic slave trade to the present day. We begin with some foundational questions relating to the Middle Passage of African-derived communities in the Atlantic world, and the still-potent memories of enslavement. From there we move on to examine the political direction of global African identity in the 19th and 20th centuries, considering such issues as colonization, returnees, conversion to Christianity, anti-imperialism, pan-Africanism, racism, development and health, and the global cultural politics of black nationalism during the Cold War. Students will read a variety of primary and secondary works, as well as a number of novels, over the course of the semester. In addition, each student will be responsible for organizing and leading a class session and will develop an in-depth research paper on one of the course’s issues. (AF)

[HIST 2470 The Age of Charlemagne (HA-AS)]

[HIST 2480 Ghosts and Legacies: The Construction of Public Memory (HA-AS)]

[HIST 2491 French Social Thought from Rousseau to Foucault (HA-AS)]

[Lecture Courses]

[HIST 2500 Technology in Society (also ECE/ENGGR 2500, STS 2501) (HA-AS)]
Fall. 3 credits. R. Kline.
For description, see ENGGR 2500. (HS)

[HIST 2510 Race and Popular Culture (also AMST 2510) (HA-AS)]
Fall. 4 credits. M. Washington.

This course examines the intersection of race and popular culture in America, historically and thematically, focusing primarily on the black-white experience. The course is global in shape and unrestricted temporarily; it asks how “things” make up our world, and how they affect our lives historically and help shape the human story. Glass, dyes, opium, salt, coal, sugar, tea, and even shrunken heads will all be considered. (CO)

[HIST 2520 Modern East-Central Europe (HA-AS)]
Fall. 4 credits. H. Case.

This course covers the key events, political ideologies, social and cultural trends, and definitions of East-Central Europe from 1848 to the present. Themes will include experiences of empire, war, and revolution, the rise of nationalism, liberalization, fascism, and communism, totalitarian regimes, dissident movements, the post-communist transition, the experiences and roles of women in the region's history, the fate of minorities and multi-national states, European integration, and the future of the region. (EM)

[HIST 2530 Introduction to Islamic Civilization (also NES/RELST 2655) # (HA-AS)]
Fall. 3 credits. D. Powers.
For description, see NES 2655. (NE)

[HIST 2540 African Encounters with Colonialism (also ASRC 2304) @ (HA-AS)]
Spring. 4 credits. D. Magaziner.

This course covers African history from roughly the 1840s to the present. It moves thematically from the Indian Ocean trade and economic relationships with Europe associated with the decline of the slave trade to the rise of ‘formal’ imperialism, the construction and maintenance of the imperial states, decolonization, and the variety of post-colonialisms in different parts of the continent. Along the way it considers religion, popular culture, and different ways in which the West has attempted to understand Africa. (AF)

[HIST 2550 The Past and Present of Pre-Colonial Africa (also ASRC 2306) @ (HA-AS)]
Spring. 4 credits. S. Greene.

How has Africa's pre-colonial past influenced current events in Africa and elsewhere? To answer this question, this course explores the pre-19th-century histories of four different cultural areas in Africa (e.g., Ancient Egypt, the West African coast). Using both ancient and more recent oral traditions, travelers' accounts and visual images, we link these histories to current debates about the role of history in contemporary politics, the significance of race, class and gender in times past and present, and the role of Africa in world affairs. (AF)
This is a lecture and discussion course focusing on how China has encountered the world since the 17th century, with an emphasis on the late 19th and 20th centuries. In particular, it will analyze the age-old Chinese "Central Kingdom" conception and how the conception was challenged during modern times as the result of Western and Japanese incursion and China's inability to deal with the consequences of the incursion. It will further analyze the impact of the Chinese "victim mentality" in order to pursue a deeper understanding of why radical revolutions have dominated China's modern history. While the emphasis of this course is on China's external relations, foreign policy issues will be examined in the context of China's political, economic and social developments in broader terms. The course's purpose is not just to impart information but also to cultivate a basic understanding of the significance of the Chinese experience in the age of worldwide modernization. Grade in this class will be calculated on the basis of class participation, quizzes, midterm and final exams, and one essay assignment. (AS)

**HIST 2580 Periclean Athens (also CLASS 2676) # (HA-AS)**
Fall. 4 credits. H. Rawlings.
For description, see CLASS 2670. (EA)

**HIST 2590 The Crusades # @ (HA-AS)**

**HIST 2600 Latinos in the United States: Colonial to 1898 (also AMST 2599, LSP 2600) # (HA-AS)**
Fall. 4 credits. M. C. Garcia.
This course examines the history of Latino populations in the United States from the Colonial period to 1898: how Mexican American, Puerto Rican, Cubans, and other Latino populations emerged, and how they responded to and reshaped the societies in which they lived. Much of the course focuses on the "facts" of history (e.g. the Latino experience during key moments in American History such as the Texas revolution, the conquest of the West, the Spanish-American war, etc.) but the goal of the course is to help students learn to assess evidence and conflicting interpretations. Readings will draw from political, social and cultural history. (AM)

**HIST 2620 The Middle Ages: Introduction and Sampler # (CA-AS)**

**HIST 2640 Introduction to Asian American History (also AAS 2130, AMST 2640) # (HA-AS)**
Fall. 4 credits. D. Chang.
An introductory history of Chinese, Japanese, Asian Indians, Filipinos, and Koreans in the United States from the mid-19th century to the 1990s. Major themes include racism and resistance, labor migration, community formation, imperialism, and struggles for equality. (AM)

**HIST 2650 Ancient Greece from Homer to Alexander the Great (also CLASS 2675) # (HA-AS)**

**HIST 2660 Introduction to Native American History (also AIS/AMST 2660) # (HA-AS)**

**HIST 2671 History of Rome II (also CLASS 2682) # (HA-AS)**

**HIST 2674 History of the Modern Middle East in the 19th-20th Century (also GOVT 2747, JWST/NE 2674) # (HA-AS)**
Fall. 4 credits. Z. Fahmy.
For description, see NES 2674. (NE)

**HIST 2691 Holy War, Crusade, and Jihad in Judaism, Christianity, and Islam (also COML 2310, JWST/NE 2651) @ (HA-AS)**

**HIST 2699 History of the Ottoman Empire, 1300–1922 (also NES 2699) # (HA-AS)**
Spring. 3 credits. A. Karakaya-Stump.
For description, see NES 2699. (NE)

**HIST 2711 Politics of Violence in 20th-Century Europe (also GOVT 2716) (HA-AS)**

**HIST 2720 The Atlantic World from Conquest to Revolution (also AMST 2720) # (HA-AS)**
Spring. 4 credits. M. B. Norton and R. Weil.
After Europeans first crossed the Atlantic in the late 15th century, the ocean became a vast highway linking Spain, France, Britain and the Netherlands to the Americas and Africa. In this course we will examine the lives of the men and women who inhabited this new world from the time of Columbus to the 18th century revolutions in Haiti and North America. Topics will include the destruction and reconfiguration of indigenous societies; slavery and other forms of servitude; the resistance, rebellions and acts of indigenous groups and slaves; religion; and the construction of gender, race and ethnicity.

**HIST 2750 History of Modern South Asia (also ASIAN 2275) @ (HA-AS)**
Fall. 4 credits. S. Ghosh.
This introductory course is a broad survey of the history of the Indian subcontinent from the end of the Mughal empire around 1700 to the present. This course is framed by two major transitions: from a Mughal government to British colonial government, and from colonialism to several postcolonial states. Prominent themes in the course include the emergence of religious and regional identities, ethnic violence, social reform and the "woman question," deindustrialization, and nationalism. Using primary sources and scholarly articles by a varied group of scholars, this course questions whether there is such a thing as one history of South Asia. (AS)

**HIST 2770 Getting Medieval I: The Early Middle Ages # (HA-AS)**
Fall. 4 credits. Prerequisite: HIST 2620. Next offered 2010–2011. O. Falk.

**HIST 2771 Getting Medieval II: The Age of Cathedral, Cartel, and Crossbow # (HA-AS)**
Fall. 4 credits. Prerequisite: HIST 2620/HIST 2770 or permission of instructor. Next offered 2010–2011. O. Falk.

**HIST 2791 International Humanitarianism # (HA-AS)**
Spring. 4 credits. J. Weiss.
This course studies international humanitarian and human rights activities from their origins to the present. The ideological and social roots of humanitarian thought and action receive attention, as does the often-overlapping, sometimes conflictual relationship between humanitarianism and human rights advocacy. Case studies will include the anti-slavery movement, the activities of faith-based groups, biographical studies of pioneering individuals, and the international response to various genocides. (EM)

**HIST 2810 Science in Western Civilization: Medieval and Early Modern Europe up to Isaac Newton (also STS 2811) # (HA-AS)**
Fall. 4 credits. HIST 2810 is not a prerequisite for HIST 2820. Next offered 2010–2011. P. Dear.

**HIST 2820 Science in Western Civilization: Newton to Darwin; Darwin to Einstein (also STS 2821) # (HA-AS)**
Spring. 4 credits. HIST 2810 is not a prerequisite for HIST 2820. S. Seth.
This course aims to make comprehensible both the science and the humanities the historical structure and development of modern science and to show
historical studies of nature and human knowledge from Greek Antiquity to the 20th century form the framework for current Western views of the world, while the roots of the present-day dominance of "science" as a symbol of progress and modernity lie in an alliance between knowledge of nature and power over nature that took shape in the 19th century after a long period of emergence. This course covers the 19th, 19th, and early 20th centuries.

[HIST 2940 History of China in Modern Times (also ASIAN 2294, CAPS 2940) @ (HA-AS)]

[HIST 2960 East Asian Martial Arts (also ASIAN 2290) @ (HA-AS)]

[HIST 2970 Imperial Russia: Peter the Great to the Revolution of 1917 # (HA-AS)]
Fall. 4 credits. C. Verhoeven.
This course surveys the history of Imperial Russia, with emphasis on the empire's recurrent experience of revolutionary change in the political, socioeconomic, and cultural spheres. Topics include such remodeling projects as Peter the Great's westernization and Alexander II's "Great Reforms"; military upheavals like 1812, 19th-century imperialist warfare, the Revolution of 1905, World War I, and the Revolution of 1917; late, and therefore very rapid industrialization and urbanization, and the attempts by successive generations of rebels and revolutionaries to put their political theories into practice. A good deal of class readings will be drawn from Russia's rich literary heritage, especially its "golden age" (e.g., Tolstoy, Dostoevsky). (EM)

[HIST 2971 Politics, Culture, and Society in Early Modern Europe, 1450-1789 # (HA-AS)]

[HIST 2981 Power, Culture, and Heterogeneity in Premodern Japan, 1200–1600 (also ASIAN 2295) # (HA-AS)]

[HIST 3002 Supervised Research]

[HIST 3140 History of American Foreign Policy, 1912 to the Present (also AMST/CAPS 3140) (HA-AS)]
Spring. 4 credits. F. Logevall.
Students examine the emergence of the United States as a world power in the 20th century. The course focuses on the domestic sources of foreign policy and the assumptions of the major policy makers (Wilson through Clinton). Important themes include the American response to a revolutionary world since 1912, the role of American racial views in the making of foreign policy, and the increasingly dominant role of the president in the making of U.S. foreign policy. (AM)

[HIST 3150 Environmental History: The United States and Beyond (also AMST 3150) # (HA-AS)]
Spring. 4 credits. A. Sachs.
This lecture course serves as an introduction to the historical study of humanity's interrelationship with the natural world. Environmental history is a relatively new and quickly evolving field, taking on increasing importance as the environment itself becomes increasingly important in world affairs. During this semester, we'll examine the sometimes unexpected ways in which "natural" forces have shaped human history (the role of germs, for instance, in the colonization of North America); the ways in which human beings have shaped the natural world (through agriculture, urbanization, and industrialization, as well as the formation of things like wildlife preserves); and the ways in which cultural, scientific, political, and philosophical attitudes toward the environment have changed over time. This is designed as an intensely interdisciplinary course: we'll view history through the lenses of ecology, literature, art, film, law, anthropology, and geography. Our focus will be on the United States, but, just as environmental pollutants cross borders, so too will this class, especially toward the end when we attempt to put U.S. environmental history into a geopolitical context. (AM)

[HIST 3160 American Political Thought: From Madison to Malcolm X (also AMST/GOVT 3665) # (HA-AS)]
Fall. 4 credits. I. Kramnick.
For description, see GOVT 3665. (AM)

[HIST 3170 British-French North America (also AMST 3170) # (HA-AS)]
empire for Britain itself. (EM)

Seek to understand both the experiences of particular colonies and the consequences of imperial expansion, ideologies of empire, the nature of imperial power, the relationship of the development of family structures in the U.S. This course will examine both the diverse experiences of actual families in the American past, and changing ideologies about the family and its social role. We will examine in particular immigration, reproduction and childrearing, sexuality, work, leisure, and consumption. We will maintain a sustained focus on changing constructions of race, ethnicity, gender and class and the interactions of these social relations with social structures including the labor and housing markets, immigration and naturalization law, and the educational system. Through this exploration, we will see both how social structures including the family shaped individuals' experiences, and how historical actors responded to and changed these structures. We will also gain a better understanding of what's at stake in today's debates about the family, and will conclude by asking how contemporary social policies could better address the needs of all families. Students will have the opportunity to write a family history of their own, or to complete an alternative research assignment. (AM)

A survey of British imperial history from the late 18th century until the period after World War II. Major themes include: the causes of imperial expansion, ideologies of empire, the nature of imperial power, the relationship between imperialism and globalization, and the process of decolonization. Using essays, diaries, newspapers, fiction, and film, students seek to understand the experiences of particular colonies and the consequences of empire for Britain itself. (EM)

Spring. 4 credits. D. Powers.
For description, see NES 3677. (NE)

[HIST 3680] Marriage and Sexuality in Medieval Europe (also FGSS 3680) (HA-AS)

[HIST 3700] History of the Holocaust (also JWST 3700) (HA-AS)
Spring. 4 credits. V. Caron.
This course will analyze the meaning of the Holocaust from three vantage points: that of European history; that of Jewish history; and that of those states and religious institutions that shared responsibility by having stood in silence. Topics include: the evolution of modern anti-Semitism; the role of anti-Semitism in the Nazi ideology and program; the bureaucratization of death; Jewish life in ghettos and concentration camps; the fate of Jews in occupied Europe and the question of collaboration; Jewish political behavior under duress; the responses of the Western allies and the Churches; contemporary interpretations of the Holocaust and the meaning of evil. (EM)

[HIST 3710] World War II in Europe (HA-AS)
Summer and fall. 4 credits. J. Weiss.
The Second World War remains the single most important set of events shaping the contemporary world. The course deals with both the events of World War II as they shaped European and world history and the way those events were remembered and commemorated in postwar years. Lectures, screenings, and readings will examine: the role of wartime political leaders and military commanders in the experience of war and occupation for soldiers and civilians, including Resistance movements and collaborators; Nazi genocide; intellectual and cultural changes during the war, including the impact on literature and philosophy; strategic questions about the origins and conduct of the war; the concluding phases involving the Nuremberg Trials, the Yalta and Potsdam conferences, and the launching of the Cold War; and the representation of the war in subsequent films, literature, and political culture. (EM)

[HIST 3730] Law, Crime, and Society in Early Modern Europe (HA-AS)

[HIST 3731] Religion and Society in Early Modern Europe (also RELST 3731) (HA-AS)
Spring. 4 credits. D. Corpis.
European Christendom both exploded and imploded in the 16th century, creating a fragmented and fractious religious landscape that still marks Europe to this day. This course examines the significant changes brought about by the Protestant and Catholic Reformations and explores the impact of new religious dogmas, beliefs, practices, and institutions upon the broader order of European politics, society, and culture. Topics covered will include: the thought of Luther and Calvin, the Anabaptists, the Peasants’ War, the responses of the Catholic Church, the changes in women’s piety, heresy and witchcraft; and the Wars of Religion, and Christianity’s encounters with Judaism and Islam. (EM)

[HIST 3750] The African American Workers, 1865 to 1910: The Rural and Urban Experience (also ILRCB 3850) (HA-AS)
Fall. 3 credits. Junior or senior standing or permission of instructor. Next offered 2010–2011. N. Salvatore.

[HIST 3760] The African–American Workers, 1910 to the Present: Race, Work, and the City (also ILRCB 3860) (HA-AS)
Fall. 3 credits. Next offered 2011–2012. N. Salvatore.

[HIST 3780] Topics in U.S. Women’s History (also AMST 3708) (HA-AS)
Fall. 4 credits. Prerequisite: FGSS/HIST 2730 or 3030, or permission of instructor. Next offered 2011–2012. M. B. Norton.

[HIST 3790] The First World War: Causes, Conduct, Consequences (HA-AS)
Spring. 4 credits. Open to freshmen. I. Hull.
This course examines the long-term and immediate political, social, and cultural causes of World War I, its catastrophic prosecution, and its revolutionary consequences. Recurring themes are: the building of nation-states, the diplomatic and military systems of the 19th and 20th centuries, mass mobilization, the development of mass violence, and the emergence of millenarian visions of the future. (EM)

[HIST 3840] Europe and Early Cold War (HA-AS)

[HIST 3860] The Indian Ocean in World History (HA-AS)
Fall. 4 credits. S. Aslanian.
The purpose of this course is to introduce students to the rapidly growing field of Indian Ocean studies. Our approach will be to study the Indian Ocean as one of the oldest maritime highways connecting diverse regions, cultures and “civilizations.” The time period for the course will roughly coincide with the emergence of Islam in the seventh century CE to the intrusion of various European powers into the region and the subsequent emergence of the global economy and colonialism in the 19th century. In studying the Indian Ocean “world” within the framework of global history, particular attention will be paid to the role of port cities and their networks and especially to a variety of seaborne long-distance merchant communities (Geniza Jews, Muslims, Julian Armenians, and Indians) that
facilitated the circulation of commodities, cultures, and ideas and in doing so helped to
give shape to the Indian Ocean as a “unified”
aquatic space in world history. We will rely on
a variety of texts including primary sources
such as travel literature, scholarly studies of
the economic history of merchant
communities, as well as Amrit Ghosh’s
extraordinary novel of medieval life in
the Indian Ocean, entitled In an Antiquit Land.
The format of the course will be lecture and
discussion. Students are strongly urged to
begin reading In an Antiquit Land from
the first week of class. (AS)

[HIST 3880 History of Vietnam (also
ASIAN 3385/6685, HIST 6880) @ #

[HIST 4211 Women’s Activism and Social
Change in the 20th Century U.S.
(also AMST/FGSS 4141) (HA-AS)]
Fall. 4 credits. T. Carroll.
This is a service-learning course in which
students will examine women’s leadership
in movements for social change, and lead their
own study groups on the same topic with
young people in local prisons. During the
term, we will examine activists from a variety
of movements including those mobilizing on
issues relating to economic justice, race
relations, sexual identity, peace, gender
equality, public health, and social welfare. We
will focus on the tactics and the strategies, as
well as the successes and failures, of social
movements in the 20th-century United States.
We will both study and practice
consciousness-raising and group education as
methods of social change, and emphasize the
relationship between activists’ intellectual
contributions and their community
engagement. At the start of the semester,
students will receive training in leading small-
group discussions. Students will meet weekly
outside of class in groups of three to four to
plan activities for their study group, and must
reserve Thursdays from 2:35 to 4:30 to travel
to local institutions to meet with their study
groups. Students eligible for work study may
count their service hours toward their work
study requirements. In addition to the service
requirements, students must complete
assigned readings, keep a weekly reflection
journal, and complete a group final
presentation analyzing and evaluating their
experience over the semester. (AM)

[HIST 4150 Seminar in the History of

[HIST 4170 History of Jews in Modern
France (also FREN 4130, JWST 4170)
(HA-AS)]
Spring. 4 credits. Permission of instructor
required. V. Caron.
This course will explore the integration of
Jews into French society from the French
Revolution to the present. Topics will include:
the debate over Jewish emancipation during
the Enlightenment; the French Revolution, and
the Napoleonic era; the processes of religious
and social assimilation; the rise of antisemitism
and the Dreyfus Affair; Jewish responses to
antisemitism; the immigrant challenge; and
refugee crisis of the 1930’s; the Vichy era
and Jewish resistance during World War II; and
the reconstruction of the French Jewish
community since 1945. (EM)

[HIST 4200 Asian American Communities

Fall. 4 credits. Offered in Cornell in
Washington Program. A. Krut. (AM)
[HIST 4260] The West and Beyond: Frontiers and Borders in American History and Culture (also AMST 4260) (HA-AS)

[HIST 4261] Commodification and Consumerism in Historical Perspective: Sex, Rugs, Salt, and Coal (also AMST 4261) @ (HA-AS)
Fall. 4 credits. Priority given to juniors and seniors majoring in history and American studies. A. Sachs.

Everything is for sale today—but has it always been? We’ll look at the history of various commodities to explore the changing cultural and environmental impacts of market forces. Why are “oriental” rugs collector’s items? How did we come to keep salt shakers on our dinner tables? When did coal start replacing wood as a fuel source? This course will cross multiple boundaries of time and space as it examines both case studies and broader theoretical perspectives, allowing us to draw connections between our culture of consumption and the social forces wrapped up in production. How was the taste for sugar linked to the slave trade? Is prostitution really the oldest profession? What goes into your daily cup of coffee besides half and half? And what was western society like before everything had a price? (AM)

[HIST 4270] Reading the Africa Diaspora (HA-AS)

[HIST 4271] African Environmental History (also ASRC 4305) @ (HA-AS)
Fall. 4 credits. D. Magaziner

This course offers systematic and in-depth analysis of issues and themes related to the environmental history of sub-Saharan Africa. Students read a variety of scholarly and popular writing about topics such as African agricultural and wildlife management practices, nature, landscape and conflicts over conservation during the colonial and post-colonial era, and the politics and social history of environmental crisis and disease. The course’s seminar format allows students to develop their own areas of interest and, in addition to the reading, students will be responsible for informed class discussion and one substantial paper over the course of the semester. (AF)

[HIST 4280] Freud and His Commentators (also GERST 4270) (HA-AS)

[HIST 4300] America in the Camera’s Eye (also AMST 4302)

[HIST 4301] Black Leaders and Movements in African American History (also ASRC 4301)
Spring. 3 credits. R. Harris.

For description, see ASRC 4301. (AF)

[HIST 4310] Migrant Workers (also CRP 3850/5850, HIST 6310, IRRCB 4020, LSP 4310/6310) (HA-AS)

Fall. 4 credits. Next offered 2011–2012. N. Salvatore.

[HIST 4320] Topics in Ancient Greek History (also CLASS 4320, HIST 6330)

[HIST 4330] History of Modern German Jewry: From Enlightenment to the Post-1945 Era (also JWST 4330) (HA-AS)

[HIST 4360] Conflict Resolution in Medieval Europe # (KCM-AS)

[HIST 4390] Reconstruction and the New South (also AMST 4390, HIST 6391) # (HA-AS)
Fall. 4 credits. Limited to 15 students. Limited to juniors and seniors. M. Washington.

This course focuses on the American South in the 19th century as it made the transition from Reconstruction to new forms of social organization and patterns of race relations. Reconstruction will be considered from a sociopolitical perspective, concentrating on the experiences of the freed people. The New South emphasis will include topics on labor relations, economic and political changes, new cultural alliances, the rise of agrarianism, and legalization of Jim Crow. (AM)

[HIST 4400] Undergraduate Seminar in Recent American History (also AMST 4400) (HA-AS)
Fall. 4 credits. Permission of instructor required. R. Polenberg.
Topic: The Blues and American Culture (AM)

[HIST 4411] Fourth-Century and Early History of Greece (also CLASS 4410) # (HA-AS)
Fall. 4 credits. Next offered 2011–2012. B. Strauss.

[HIST 4421] To Be Enslaved Then and Now (also ASRC 4306) # (HA-AS)
Spring. 4 credits. S. Greene.

In this course, we will read and analyze select texts (both oral and written) that were composed between the late 18th century and 2005 by individuals who were enslaved or who boasted of enslaving others. Emphasis is placed on African and African American texts but in comparison with narratives by Europeans, Asians and Latin Americans. For whom were these texts produced and for what purpose? How much in these texts is history, how much is fiction, and how do we determine the difference? What can these texts tell us about the individual authors and the political, economic and cultural contexts in which they were written? These and other related questions will structure this seminar. (AF)

[HIST 4440] American Men (also AMST/ FGSS 4450) (HA-AS)

[HIST 4460] Strategy in World War II (HA-AS)
Spring. 4 credits. Permission of instructor required. J. Weiss.

Strategic decision-making in World War II. The course will be organized into a “task force” addressing crucial problems faced by the European–American Allies in World War II: the invasion of northwest Europe; strategic bombing tactics, the rescue of European Jews, and coordination with the Soviet Union. Individual presentations/papers followed by meetings to draft group reports. (EM)

[HIST 4470] Crusaders and Chroniclers # (HA-AS)

[HIST 4501] Representing Atrocity: Questions of Historical Knowledge, Memory and Otherness in the Study of the Nanking Massacre Discourse (also ASIAN 4451)

How did the seemingly apolitical realm of popular culture become one of the grave political concerns of the Shogunate in early modern Japan? By investigating the complex interplay between popular and popular culture, the course seeks to rethink the widely received conceptions of the political and the cultural, and to theorize the transformative process of Tokugawa society. (AS)

[HIST 4520] History of the New Europe (HA-AS)

[HIST 4552] The World of the Phoenicians (also NES/JWST 4550)
Spring. 4 credits. C. Monroe.

<td>Prerequisite: equivalent of three years Mandarin instruction. Permission of instructor required. Z. Chen. This course is designed to help graduate students and qualified undergraduate to conduct research on topics on modern Chinese history. To qualify to take the course, a student should have studied Chinese to the advanced level. It will concentrate on helping students develop the ability to read and interpret historical documents in Chinese. Altogether eight sets of original documents representing different events and periods are selected. Documentary films will also be shown in class to enhance students' understanding. While doing so, both linguistic and historical issues will be addressed and analyzed, so students will develop a better understanding of how to deal with some of the general challenges that they will be facing in conducting primary-source research on modern China. Class will be conducted in Chinese. (AS)</td>

<td>T. J. Hinrichs. Chinese discourses have long linked the circulation of cosmic energies, political power, and bodily vitalities. In these models political order, spiritual cultivation, and health are achieved and enhanced through harmonizing these flows across the levels of Heaven-and-Earth, state, and humankind. It is when these movements are blocked or out of synchrony that we find disordered climates, societies, and illness. In this course, we will examine the historical emergence and development of these models of politically resonant persons and bodily centered politeis, reading across primary texts in translation from these otherwise often separated fields. For alternate frameworks of analysis as well as for comparative perspectives, we will also examine theories of power and embodiment from other cultures, including recent scholarship in anthropology and critical theory. </table>
It is a truism that early modern society was a "patriarchal" one in which men had authority—but how did that authority operate and what were its limits? How did the exercise of power between men and women intersect with religious, literary, legal and political institutions? We will approach these questions chronologically, examining the impact of the Reformation, the English Revolution, the Enlightenment, the rise of middle class and polite culture. We will also explore them methodologically and generally, with an eye to how different kinds of evidence and sources can produce different kinds of conclusions. Historians' hypotheses will be tested by analysis of primary sources. (EM)

A research colloquium designed for European history graduate students. The colloquium will offer a forum for students to present papers and to discuss the work of visiting scholars. (EM)

[HIST 6020 East Asian Colloquium (also ASIAN 5599) Fall and spring. 4 credits. K. Hirano. A forum for graduate students to present their work and discuss the work of others. (AS)

[HIST 6030 The Americas Colloquium Fall and spring. 4 credits. Fall, E. Baptist; spring, staff. A research colloquium designed for graduate students in U.S. and Latin American history. The colloquium will offer a forum for students to present papers and to discuss their work and that of occasional visiting scholars. (AM)

[HIST 6061 The New Cold War History (also HIST 4061) Spring. 4 credits. Limited to 15 students. Open to undergraduates and graduate students, although with separate requirements. Next offered 2010–2011. E. Tagliacozzo.]

[HIST 6083 The Past in the Present/The Present in the Past: Histories of Southeast Asia (also ASIAN 6083) Fall. 4 credits. Next offered 2011–2012. T. Loos.]

[HIST 6100 Archipelago: Worlds of Indonesia (also ASIAN 4409/6617, HIST 4100) Spring. 4 credits. Limited to 15 students. Open to undergraduates and graduate students, although with separate requirements. Next offered 2010–2011. E. Tagliacozzo.]

[HIST 6114 Readings in Cultural Materialism: Theory and Practice Spring. 4 credits. K. Hirano. The course is intended to be a forum where graduate students closely read and examine a set of scholarly works regarded collectively as the school of "Cultural Materialism." During the 1970s and 80s, a group of Marxism-inspired scholars began to suggest a way to overcome the old Marxist model of economic determinism by taking "culture" seriously as an integral part of materialist studies. This intellectual movement laid a foundation for what we currently call "Cultural Studies." By revisiting their works, we will discuss what insights we can draw from them for our contemporary scholarly agendas and projects. The readings include Lenin and Philosophy (Althusser), Prison Notebooks (Gramsci), Culture and Materialism (Williams), Marxism and Literature (Williams), Marxism and Philosophy of Language (Volosinov), Dialogic Imagination (Bakhtin), Postmodernism, or, The Cultural Logic of Late Capitalism (Jameson), and others. (AS)

[HIST 6160 Gender and Sexuality in Southeast Asia (also ASIAN 4416/6618, FGSS/HIST 4160) Fall. 4 credits. Limited to 15 students. Intended for graduate students. Letter grades only. Next offered 2011–2012. T. Loos.]

[HIST 6180 Readings in 20th-Century U.S. Political, Intellectual, and Diplomatic History Fall. 4 credits. Prerequisite: graduate standing. Next offered 2011–2012. F. Logevall.]

[HIST 6231 The Intellectual History of Early Modern Empire Fall. 4 credits. Next offered 2010–2011. R. Weil.]

[HIST 6270 Graduate Seminar in Early American History Spring. 4 credits. Prerequisite: graduate standing. Permission of instructor required. Next offered 2010–2011. J. Parmenter.]

[HIST 6280 Graduate Seminar: 19th-Century U.S. History Spring. 4 credits. D. Chang. This course will introduce students to the historiography of the 19th-century United States. We will investigate the period both thematically and chronologically. We will read, discuss, and critique works written from a variety of perspectives and using a number of different approaches. (AM)

[HIST 6300 Topics in Ancient History (also CLASS 7682) Spring. 4 credits. E. Reihillard. For description, see CLASS 7682. (EA)

[HIST 6310 Migrant Workers (also CRP 3850/5850, HIST 4310, ILRCB 4020, LSP 4310/6310) Spring. 4 credits. Next offered 2010–2011. R. Crab.]

[HIST 6330 Topics in Ancient Greek History (also CLASS 4360/7684, HIST 4320) Spring. 4 credits. Next offered 2011–2012. B. Strauss.]

[HIST 6350 The Writing of History Spring. 4 credits. A. Sachs. This graduate seminar approaches the writing of history as a problem rather than a given, as a craft or even an art rather than a standard method of presenting research. We'll consider as many kinds of history writing as possible, including some that are more traditional and some that are more experimental. To get at the complexity of the problem, we'll approach it from at least three distinct angles, examining the actual history of the writing of history
going back to Herodotus, "The Father of Lies"); the theory and philosophy of the writing of history; and current writing practices. Readings will range widely through time and space and will be assessed not just for the quality of their arguments or their place in a given historiography but also for their success as pieces of writing. We’ll discuss such topics as narrative structure, the role of the first person, tone, character development, and the basic use of language. Students will also be expected to do a fair amount of writing for this class and to share their papers in a workshop setting—though no new research will be required during the semester.

Obviously, the course is geared toward students in the History department, but anyone doing historical writing in any discipline whatsoever—English, Science and Technology Studies, Sociology, etc.—is warmly invited to sign up. (AM)

[HIST 6360 Ancient Warfare (also CLASS 7676)]
Spring. 4 credits. Prerequisites: at least one course in ancient history and a reading knowledge of Greek and Latin. Permission of instructor required. Next offered 2010–2011. B. Strauss.

[HIST 6390 Mao and the Chinese Revolution]
Fall. 4 credits. J. Chen.
This is a reading and research seminar designed to provide an in-depth investigation of one of the most magnificent, yet destructive, revolutions in human history—the Chinese Communist revolution, as well as the person who had shaped and led the revolution—Mao Zedong. The course develops in three phases. Phase I offers an introduction of Mao and the existing scholarship about Mao and his revolution. Phase II focuses on reading assignments of texts about Mao and by Mao. In Phase III, each student will write a comprehensive research essay on a Mao-related topic, and will orally present his or her own essay and, in addition, provide critique to a fellow student's essay and oral presentation. (AS)

[HIST 6391 Reconstruction and the New South (also HIST/AMST 4390)]
Fall. 4 credits. M. Washington.
For description, see HIST 4390. (AM)

[HIST 6410 Science, Technology, Gender: Historical Issues (also FGSS 6400, STS 6401)]
Spring. 4 credits. S. Seth.
For description, see STS 6401.

[HIST 6411 Fourth-Century and Early Hellenistic History of Greece (also CLASS 7681)]
Fall. 4 credits. B. Strauss.
Topics include the evolution of the Greek city-state; society, economy, and gender; democracy, oligarchy, and tyranny; the careers of Philip, Alexander, and the Successors. Greco-Persian relations. Sicily and southern Italy, and the establishment of the Hellenistic Kingdoms. (EA)

[HIST 6420 The Politics of History-Writing: Historiography and Post-Colonial Criticism of South Asia]

[HIST 6481 Seminar in Latin American History]
Fall. 4 credits. R. Grahl.
Topic for Fall 2009: Peasants, Workers, and Intellectuals in Modern Latin America. This course is a readings and research seminar on the history of Spanish America from roughly 1750 to 2000, with particular attention to the post-independence histories of peasants, urban workers, and intellectuals. Weekly readings will include a major monograph on Latin America and particular theme (idea of peasant community; gender and labor; immigration and the social question; rise of the middle classes; politics of memory; the Left, among others) plus additional theoretical articles from various disciplines and fields that complement or challenge authors’ conceptualizations of their material. As well as weekly participation and presentations, students will be expected to research and write a 25- to 30-page research paper based on primary sources. Reading knowledge of Spanish is helpful but not required. (LA)

[HIST 6510 India and British Political Thought (also INDI 6500–6550)]
Spring. 4 credits. T. R. Travers.
This seminar explores at how Britons who fought, traded, conquered and governed in early modern South Asia thought about their own actions, and also about the states and cultures they encountered. What did Britons think about the Mughal empire, and how did they understand and explain the rise of the British empire in India? What opportunities existed for intellectual exchanges between British and Indian political ideas in this period? In what ways did encounters with India feed back into British political thought? (EM)

[HIST 6540 Topics in East-Central European History]
Spring. 4 credits. H. Case.
Topic for Spring 2010: War in Modern East-Central European History. (EM)

[HIST 6550 Early Modern Atlantic World (also AMST 6550)]

[HIST 6560 Topics in Medieval Historiography (also HIST 4560)]

[HIST 6610 Graduate Seminar in 20th-Century German History]

[HIST 6641 Medieval Poverty]

[HIST 6650 Historical Documents on Modern China (also CHIN 4425/6626, HIST 6650)]
Fall. 4 credits. Prerequisite: equivalent of three years Mandarin instruction. Permission of instructor required. Z. Chen.
For description, see HIST 4650. (AS)

[HIST 6651 Law, Society, and Culture in the Middle East, 1200–1500 (also HIST/NEES 3651/6651)]

[HIST 6671 Spartacus (also CLASS 7667)]

[HIST 6691 The Old English Laws and Their Politico-Cultural Context (also ENGL 4190, HIST 4691)]
Fall. 4 credits. Next offered 2011–2012. P. Hyams and T. Hill.

[HIST 6720 Seminar in European Intellectual History (also COML 6720)]
Fall. 4 credits. D. LaCapra. (EM)

[HIST 6730 Topics in Modern European Intellectual History (also COML 6730, JWST 6740)]

[HIST 6750 Genocidal Regimes]
Fall. 4 credits. J. Weiss.
Obviously, the course is geared toward students in the History department, but anyone doing historical writing in any discipline whatsoever—English, Science and Technology Studies, Sociology, etc.—is warmly invited to sign up. (AM)

[HIST 6760 History and Story in the Norse Sagas (also ENGL 4120, HIST 4760)]

[HIST 6800 Historical Approaches to Science (also STS 6801)]

[HIST 6810 Intellectual History of Empire (also ASIAN 6681)]

[HIST 6830 Seminar in American Labor History (also ILRCB 7081)]
Fall. 3 credits. Prerequisite: graduate standing. Next offered 2012–2013. N. Salvatore.

[HIST 6861 Readings in Japanese Historiography (also ASIAN 6686)]

[HIST 6870 Seminar on Thailand (also ASIAN 6601, HIST 4870)]

[HIST 6880 History of Vietnam (also ASIAN 3385/6685, HIST 3880)]

[HIST 6920 Approaches to Medieval Violence (also HIST 4910)]

[HIST 6930 Problems in Modern Chinese History (also ASIAN 4493/6693, HIST 4930)]

[HIST 6940 Problems in Modern Chinese History (also ASIAN 4499/6694, HIST 4990)]
Fall. 4 credits. Prerequisite: HIST 2940 or permission of instructor. Next offered 2011–2012. S. Cochran.

[HIST 6950 Premodern Southeast Asia (also ASIAN 3397, HIST 3950)]
Fall. 4 credits. Next offered 2010–2011. E. Tagliacozzo.]
HISTORY OF ART

The Department of the History of Art provides a broad range of introductory and advanced courses in art of Europe and the Americas, East and Southeast Asia, Africa, Native American art and Indigenous Studies from antiquity to the present.

The Major

Department majors acquire a broad understanding of the history of art in several chronological and geographical areas: ancient, medieval, Renaissance, modern (Europe and the Americas), Southeast Asia, China, Japan, Latin America, and Africa. Additionally, majors practice a range of art historical methods and interpretive strategies, including connoisseurship, dendrochronology, feminism, iconography, semiotics, critical theory, and social history. Majors are encouraged to locate the history of art within allied humanities fields and the applied arts by taking courses in history, literature, history of architecture, and fine arts. The study of foreign languages is strongly encouraged.

Requirements for the Major

Prospective majors should consult the director of undergraduate studies. Students wishing to declare a major in the history of art should have completed any two courses above the 1000 level at Cornell in the department by the end of their sophomore year and have received a grade of B or above in both.

Courses

**ARTH 2000 Introduction to Visual Studies**

(Also VISST/COML 2000, ENGL 2920) (LA-AS)

Spring. 4 credits. J. Dadi.

For description, see VISST 2000.

**ARTH 2019 Thinking Surrealisms**

(Also COML 2200, VISST 2190) (LA-AS)

Fall. 4 credits. B. Maxwell.

For description, see COML 2200.

ARTH 2200 Introduction to Art History: The Classical World (also CLASS 2700) (HA-AS)

Spring. 4 credits. K. Fisher.

The course is an overview of the art and archaeology of the Greek and Roman world, covering the sculpture, vase painting, and architecture of the ancient Greeks from the Geometric period through the Hellenistic, and the art of the Romans from the early Republic to the time of Constantine the Great.

**ARTH 2221 Archaeology of Roman Private Life (also ARKEO/CLASS 2743) (CA-AS)**

For description, see CLASS 2743.

**ARTH 2222 Archaeology of Greek Private Life (also CLASS/ARKEO/HIST 2744) (CA-AS)**

For description, see CLASS 2744.

**ARTH 2227 Art and Archaeology in the Ancient Mediterranean World (also ARKEO 2726, CLASS 2727) (HA-AS)**

The course is an overview of the art and archaeology of the Ancient Mediterranean World from the 8th century BC to the time of Constantine the Great in the early 4th century AD. Assignments will include one major paper.

**ARTH 2350 Introduction to Art History: Islamic Art and Culture @ # (HA-AS)**

A survey of major works of Islamic art from 1400 to 1700, including all arts, with an emphasis on painting and on analysis of the artworks.

**ARTH 2400 Introduction to Art History: Renaissance and Baroque Art (also VISST 2645) (CA-AS)**

A survey of major works of European artists from 1400 to 1700, including all arts, with an emphasis on painting and on analysis of the artworks.

**ARTH 2402 Survey of European Art: Renaissance to Modern # (CA-AS)**

Summer only. 3 credits. D. Royce-Roll.

The major traditions and movements in western European art from the Renaissance to the modern period. Painting, sculpture, and architecture with an emphasis on painting. Each Friday class meets at the Herbert F. Johnson Museum of Art with gallery talks and viewing of relevant works that supplement the previous four days of classroom lectures.

**ARTH 2419 Rembrandt and His Circle: Technologies of Vision (also VISST 2419) (CA-AS)**

Fall. 4 credits. L. Pincus.

The variety of visual experience in 17th-century Dutch art is legion: still life, portraiture, self-portraiture, landscape, cityscape, genre, and architectural painting. New scientific technologies and trade routes, a robust economy and bustling commerce also place their marks on the cultural and artistic production in the Netherlands. In this course, we will dip into these multiple facets of the Dutch scene, but in critical rather than a general way, in order to assess Dutch "technologies of vision" in picturing and describing their world. Also important will be our inquiry into the context of Dutch art.
production: the social, economic, and political factors that made the Dutch art market so unusually vital.

ARTH 2500 Introduction to the History of Photography (CA-AS)
Fall. 4 credits. I. Dadi.
Provides a survey of the history of photography over the course of two centuries. Starting with its invention in the 1830s, this course covers the subject topically and chronologically. During the 19th century, it focuses on technical developments and on the complex relations that situate photography in relation to painting, portraiture, urban life, war, anthropology, exploration, and science. During the 20th century, photography has been enriched by new developments that include its use as a modernist and experimental art form, in social documentary and photojournalism, in propaganda, in advertising and fashion, and its centrality in the practice of conceptual art, postmodernism, and in the digital era.

ARTH 2600 Introduction to Art History: The Ancient World (LA-AS)
Spring. 4 credits. Not open to students who have taken ARTH 2601. Each student must enroll in a sec. J. Bemstock.
Considers modern art in a historical and cultural context, from pictorial painting associated with the French Revolution through American pop art. The emphasis is on major movements and artists: Neo-Classicism (David), Romanticism (Delacroix), Realism (Courbet), Impressionism (Monet), Post-Impressionism (Van Gogh), Cubism (Picasso), Fauvism (Matisse), Surrealism (Miro), Abstract Expressionism (Pollock), and Pop Art (Warhol). Different critical approaches are examined.

ARTH 3100 History of Photography (LA-AS)
Summer. 4 credits. I. Dadi.
During the 19th century, it focuses on its technical development and on the complex relations that situate photography in relation to painting, portraiture, urban life, war, anthropology, exploration, and travel, and science and industry. While these topics continue to be important during the 20th century, photography has been enriched by new developments that include its use as a modernist and experimental art form, in social documentary and photojournalism, in propaganda, in advertising and fashion, and its centrality in the practice of conceptual art, postmodernism, and in the digital age.

ARTH 3171 Architectural History of Washington, D.C. # (HA-AS)
Fall or spring. 4 credits. Prerequisite: students in Cornell in Washington program; nonarchitects. Staff.
Historical and critical survey of the architecture of Washington. Attention is given to the periods, styles, architects, and clients—public and private—of the notable buildings and the urban space of the nation’s capital. The vocabulary of architectural analysis and criticism is taught. Field trips required.

ARTH 3224 Hellenistic Culture: The Age of Alexander: Globalization in the Ancient World? (also CLASS 3744) @ (CA-AS)
Spring. 4 credits. A. Alexandridis.
After Alexander the Great’s conquest of the Near and Middle East, Greek language, education and material culture was disseminated in a vast area from the Mediterranean to India and left a long lasting imprint even on areas, like Northern India, that had not previously been under direct Greek influence. On the Greek side, this encounter with so many different peoples and cultures deeply transformed Greek language, religion and art. Indeed it itself further engendered a new, simultaneously energizing a canonical idea of “Greekness.” The resulting interaction created a manifold amount of mixed and specifically local cultures. The lecture course will analyze this process and try to understand whether it can be understood as a pre-modern example of globalization.” The class will cover the period from the advent of Alexander the Great (356–323 BC) to the end of the Hellenistic kingdom, the Egypt of Cleopatra VII (51–30 BC). We will focus on phenomena such as urbanization and the formation of civic identities; assimilation and conflict, especially in a Jewish context; the advent of new Eastern religions; economy and trade routes as well gender relations. The period as a whole has only recently become a focus of combined historical, philological and archaeological research. Therefore, current scholarly debates will form an integral part of the course.

ARTH 3230 Iconography of Greek Myth (also CLASS 3727) # (HA-AS)
This class will give an overview of the most important Greek myths and mythological figures as depicted in Greek and Roman times.

ARTH 3250 Introduction to Dendrochronology (also ARKEO 3090, CLASS 3750) (HA-AS)
Fall. 4 credits. S. Manning.
For description, see CLASS 3750.

ARTH 3300 Romanesque and Early Gothic Art and Architecture: Europe and the Mediterranean, 900 to 1150 AD (also NES 3759) # (LA-AS)
Spring. 4 credits. Prerequisite: ARTH 2500 or ARTH 2750. Staff.
Survey lectures and discussion of the visual cultures (architecture, luxury objects, book illumination and illustration) of the Medieval visual world, with a focus on Romanesque and Mediterranean Europe (Ottonian, Romanesque, Early Gothic) and the Islamic World (Al-Andalus, Fatimid Egypt, Jerusalem). From 900–1150 AD. We will pay particular attention to the ways and places in which East and West meet and, following a brief introductory period at the beginning of each half of the semester, also will be engaging the material from a thematic and critical perspective.

ARTH 3303 History and Popular Culture in Africa (also ASRC/ENGL/HIST 3303)
Spring. 4 credits. J. Byfield.
For description, see ASRC 3303.

ARTH 3440 Leonardo, Michelangelo, and Raphael (also VISST 3443) # (HA-AS)
Spring. 4 credits. C. Lazzaro.
This course focuses on the Great Renaissance artists, Leonardo, Michelangelo, and Raphael. It examines each as both thinker and artist, through his writings as well as his painting, sculpture, and architecture. It also analyzes the contributions of the artist as genius and as courtier in biographies and other writings about them.

Leonardo was an extraordinarily innovative painter partly because of the breadth of his thinking, and we will examine his treatises on artistic practice as well as anatomy, natural science, and engineering. Michelangelo invented grandiloquent artistic projects for his ambitious patrons, and his novel verbal language has parallels with the verbal language in his poetry. Raphael was the consummate court artist, whose activities as antiquarian and archaeologist helped him to produce a new classicism.

ARTH 3500 African American Art (also ASRC 3500) (LA-AS)
Fall. 4 credits. C. Finley.
This course investigates the different forms of African-American visual artistic traditions in relation to the historical or religious contexts and sociocultural context from the early days of slavery to the present time. We start with an overview of African art and the experiences of the Middles Passage and slavery in relation to African-American traditional and experimental arts including: pottery, architecture, ironwork, quilt making, and basketry. This is followed by a fine-art survey starting with the 18th and 19th centuries and continuing through the early-20th-century Harlem Renaissance up to the present. Certain issues related to African-American arts and creativity such as improvisation, Black Aesthetic, and Pan-Africanism also are explored. Slides, films, and filmstrips are used extensively to illustrate topics discussed. Visits to museums and relevant current exhibitions may be arranged.

ARTH 3520 African American Cinema @ (LA-AS)
Fall. 4 credits. S. Hassan.
This course offers and overview of African cinema and filmmaking. It surveys historically the evolution of African cinema from its early days to the present. Through screening of selected African films, different trends within African cinema will be explored, such as “Return to the Sources” and the rediscovery of the pre-colonial past; the “Social Realist” narrative and critique of post-independence Africa; reconstructing the story of colonialism from the perspective of the colonized; and the entertainment genre. Techniques, style, and aesthetics of African cinema will also be discussed. The course offers a unique opportunity of looking at African culture and society, and at issues of social change, gender, class, tradition, and modernization through African eyes.

ARTH 3550 Modern and Contemporary Latin American Art (also LATA 3680, LSP 3551) (HA-AS)
This course is designed as a thematic survey of Latin American art from the early 20th century to the present.

ARTH 3600 Introduction to Art History: Contemporary Art: 1960 to Present (CA-AS)
Spring. 4 credits. Prerequisite: ARTH 2600 or equivalent. Next offered 2010–2011.
I. Dadi.

ARTH 3605 U.S. Art from FDR to Reagan (also AMST 3605) (LA-AS)
Fall. 4 credits. J. Bemstock.
Considers the contextual features of American art from the 1930s through the late 1980s. Examines art in relation to political, social, and economic factors, with particular focus on the role of the government and its role in promoting art and artists.
developments on which the course focuses are: Abstract Expressionism, Pop Art, Earth Art, and Feminist Art. Examines various critical approaches.

**ARTH 3611 Art of South Asia, 1500–present (also ASIAN 3382) (CA-AS)**

South Asian art since the early modern era, including Vijayanagar architecture, Mughal art, British colonial art, posters, and modern painting.

**ARTH 3740 Painting 19th-Century America (also AMST/VISST 3740) (CA-AS)**
Fall. 4 credits. Recommended: ARTH 2400. L. L. Meixner.

Art and everyday life in 19th- and early 20th-century America with an emphasis on Anglo-European traditions. Considers democratic cultures and identities through topical units: the Peale family and America’s first public museum; P. T. Barnum’s dime museum, traveling teachers, and working-class audiences; daguerreotypes and the rising middle class; genre painting and regional types such as the Yankee peddler, Missouri riverboatman, and the frontiersman; Hudson River School “Grand Tour” sublime; artist-explorers, Darwin, and Latin America as a spectacle; class and gender construction in the Gilded Age; the Ashcan School, New York City, and urban spectators; immigrants and early documentary photography. Alongside paintings we consider political cartoons, fashion plates, advertisements, and popular illustrations.

**ARTH 3760 Impressionism in Society (also FREN 3610, VISST 3662) (CA-AS)**
Spring. 4 credits. Not open to freshmen. L. L. Meixner.

Discusses French Impressionist art as the product of 19th-century public life. By relating Impressionism to state culture, we trace subversive themes such as criminality, café-concert and brothel societies, clandestine prostitution, and class-regulated leisure. Students consider Parisian spectacle and commodity culture, the rise of the department store and gallery system, and the importance of print culture and photography to the movement. Images include paintings, playbills, posters, and advertisements. Organizing thematic units are theories of vision and power, urban surveillance, the flâneur and voyeurism, and early cinematic spectatorship. Artists include Manet, Monet, Atget, Cassatt, Degas, Tissot, Toulouse-Lautrec, and Van Gogh.

**ARTH 3800 Introduction to the Arts of China (also ASIAN 3383/ARKEO 3800) (also NES 3795) (CA-AS)**
Fall. 4 credits. A. Pan.

This course offers a survey of the art and culture of China, from the Neolithic period to the 20th century. We begin with an inquiry into the meaning of national boundaries and the controversy of the Han Chinese people, which helps us identify the scope of Chinese culture. Pre-dynastic (or prehistoric) Chinese culture is presented through both legends about the origin of the Chinese, and scientifically excavated artifacts. Art of the dynamic and modern periods is presented in light of contemporaneous social, political, geographical, philosophical and religious contexts. Students work directly with objects in the Herbert F. Johnson Museum of Art.

**ARTH 3820 Introduction to the Arts of Japan (also ASIAN 3381) (also NES 4795) (CA-AS)**

As an island nation east of the Asian continent, Japan developed a unique culture that reflects both continental and indigenous characteristics. This course examines pre- and post-contact with continental culture and the process of artistic acculturation and assimilation in successive periods of Japanese art history.

**ARTH 3850 The Arts of Southeast Asia (also ASIAN 3350/VISST 3696) (CA-AS)**
Fall. 4 credits. K. McGowan.

The arts of Southeast Asia will be studied in their social context, since art plays a role in most of the salient occasions in life in traditional societies. Special emphasis will be devoted to developments in Indonesia, Thailand, and Cambodia. Among topics covered will be the shadow puppet theater of Java, textiles, architecture, sculpture, and Bali’s performance tradition.

**ARTH 3855 The House and the World: Architecture of Asia (also ASIAN 3394, VISST 3655) (CA-AS)**
Spring. 4 credits. K. McGowan.

In many Asian societies, houses are regarded as having a vitality of their own. This course will examine the role of the house as a living organism in Asia. Houses also function as storehouses for material and immaterial wealth; artifacts such as textiles, jewelry, sculptures, and masks function within the house as ancestral heirlooms, conveying their own currents of life force, the power from which serving to blend with the vitality of the house. The indigenous architectural traditions of India, Vietnam, Thailand, Indonesia, and the Philippines will be examined. By studying the inhabited spaces of others, divining their technologies of construction and their applied symbologies, students will be provided with powerful tools for examining the visual skills and sensibilities of other cultures.

**ARTH 3915 Art in the Modern World (also ANTH 3415) (CA-AS)**
Summer only. 4 credits. For description, see ANTH 3415.

Seminars
Courses at the 4000 to 6000 level are open to juniors and seniors, majors, and graduate students unless otherwise stated. All seminars involve the writing and presentation of research papers. Enrollment is limited to 15 students. Students may repeat courses that cover a different topic each semester.

**ARTH 4100 Proseminar (also VISST 4200, ARTH 6100) (HA-AS)**
Spring. 4 credits. Limited enrollment. Prerequisite: history of art majors. Grades should enroll in ARTH 6100. I. Dadi.

Works of art have always engaged political, social, and cultural meanings. This seminar introduces the methods that art historians have engaged in, studying the objects and ideas that constitute the historiography of their discipline. Challenged and enlarged by cultural debates over issues of class, ethnicity, nationality, sexual orientation, and gender, the field of art history is expanding to incorporate problems of assessing quality of attention and reception along with authorship, of artistic production in place of artistic creation, and of Western-oriented attitudes to race in reference to orientalism and colonialism. Readings focus on historically situating methods and the implications of their cross-cultural application. Papers encourage students to put methods into practice, realizing in the process that subject matter is not an isolated choice to which methods are applied, but something that profoundly affects the approach the researcher brings to the writing of art history. In addition to the seminar meeting from 2:30 to 4:30, students are required to attend the Visual Culture Colloquium held on most Mondays from 5 to 6:30 p.m.

**ARTH 4107 The Museum and the Object (also VISST 4607) (CA-AS)**
Fall. 4 credits. Prerequisite: history of art majors; freshmen and sophomores by permission of instructor. All classes meet in Johnson Art Museum study gallery. K. McGowan.

Gives advanced students the opportunity to work directly with original objects from the collection in the Herbert F. Johnson Museum. Focuses on art and curatorial practice by questioning the ways quality is determined in works of art. Topics include methods of attribution, fakes and forgeries, technique and media, restoration and conservation, art education and theories of perception. Seminar leaders include the curatorial staff of the art museum.

**ARTH 4150 Intro to Critical Theory (also ARTH 6170) (CA-AS)**

This seminar will introduce students to theoretical texts relevant to multiple areas in the history of art and visual culture.

**ARTH 4236 Sexuality in Greek and Roman Art (also ARTH 6236, CLASS 4733) (CA-AS)**
Fall. 4 credits. Next offered 2010–2011. A. Alexandridis.

**ARTH 4305 Looking for Love: Visual and Literary Cultures of Love in the Medieval Mediterranean 1100–1400 (also NES 4795)**
Spring. 4 credits. C. Robinson. Prerequisite: Permission of instructor required. A comparative and interdisciplinary seminar whose focus is the visual world created by the pan-Mediterranean (Iberian Peninsula, Maghreb, France, Italy, Turkey, Egypt, and Persia) culture of “Courtly Love” beginning during the 11th century AD, and continuing as a principle factor in medieval cultural production for the remainder of the period. Particular attention will be paid to the ways in which the visual dimensions of this cultural mixture, compliment, contradict, or at times even exist independently of, its oral and written spheres. Reading knowledge of any Romance or Semitic language and/or Persian, in addition to English, is highly advantageous.

**ARTH 4311 The Multicultural Alhambra (also NES 4511)**

An interdisciplinary seminar structured around the mythic palace built by the Nasrid dynasty in Granada, Spain.

**ARTH 4331 Topics in Islamic Art (also ARTH 6331, NES 4731/6731) (HA-AS)**
ARTH 4440 Constructing the Self in the 16th Century (also ARTH 6440) # (HA-AS)
Spring. 4 credits. C. Lazzaro.
This seminar examines the construction of the self through gender, class, and group identity in early modern Europe, especially Italy. Portraits, self-portraits, and autobiographies recorded self-fashioning in clothing, bearing, gesture, manner, speech, while etiquette manuals instructed in civility, the mark of class and education. The course considers some of the public and private settings in which the social self was performed, among them studies and banquets. We consider as well such socially constructed identities as the male adolescent and the female poet.

[ARTH 4445 Nature, Cultural Landscape, and Gardens in Early Modern Europe (also ARTH 6445)]
Examines cultural understandings of nature in early modern Europe, especially Italy.

[ARTH 4451 Prints and Visual Culture in Early Modern Europe (also VISST 4451, ARTH 6451)] # (HA-AS)

ARTH 4506 Caribbean Dialogs: Online! @ (CA-AS)
Summer only. 4 credits. P. Archer-Straw.
Using Caribbean art as a case study, the course explores themes such as new world history, colonization, Diaspora, trauma, violence and tourism. Through an understanding of basic cultural theory, class members come to see how perceptions of Caribbean culture are historically fluid and subject to variation as they are categorized and textualized. Similarly through active participation students are invited to question their own considerations of identity, culture, race and ethnicity. Caribbean Dialogues: Online! examines the creative potential of the region's artists to show ways that they are reconfiguring themselves to meet the needs of a changing world at once apprehensive but also charmed by black culture.

[ARTH 4508 Exhibiting Cultures: Museums, Monuments, Représentation and Display (also AMST 4508/6508, ARTH 6508, ASRC 4504/6508) (CA-AS)]
Fall. 4 credits. Grad students should enroll in 6508. Next offered 2010–2011. C. Finley.]

ARTH 4509 Black Arts Movement (also ASRC 4505, AMST 4509) (CA-AS)
Spring. 4 credits. C. Finley.
This distance learning course examines the art, music, literature and film of African Americans during the 1960s. The Black Arts Movement was an explosive cultural flourishing that emerged in the United States in the wake of African liberation and decolonization movements abroad in Civil Rights and Black Power movements locally and internationally.

ARTH 4600 Studies in Modern Art (LA-AS)
Fall. 4 credits. Permission of instructor required.
This seminar examines both feminist art criticism and the work of women artists from antiquity to the present. We consider the works of the most prominent women artists from each period in relation to the changing roles of women in society. The artists covered include Jennifer Barlett, Artemisia Gentileschi, Elizabeth Vigee-Lebrun, Mary Cassatt, Kathe Kollwitz, Georgia O’Keefe, Louise Nevelson, Joan Mitchell, Judy Chicago, and Barbara Kruger.

[ARTH 4690 Comparative Modernities (also ARTH 6690, VISST 4641) @ (CA-AS)]
Fall. 4 credits. Next offered 2010–2011. I. Dadi.]

ARTH 4695 Studies in Global Modern Art (also ARTH 6695) # @ (CA-AS)
Fall. 4 credits. E. Dhillon.
Topic for fall 2009: Orientalism and Modern Art of the Middle East. This seminar explores how the “ Orient” has been visually represented in Western art, architecture, literature, and media since the 19th century. Popular and scholarly ideas about the Orient and Orientalism have come under increasing scrutiny since the publication of Edward Said’s influential critique. Explores debates surrounding Said and also discusses its salience in the analysis of modern and contemporary art and visual culture. Includes discussions of French Orientalist paintings; Hollywood depictions of the Orient; national independence movements that redeployed colonial textual and visual archives to formulate the national past. Examines the strategies of modern and contemporary artists from the Middle East who have appropriated, resisted and bypassed the trope of Orientalism altogether.

ARTH 4696/6696 The Art Market (also ARTH 6696) (LA-AS)
Fall. 4 credits. C. Finley.
This course will examine the history of the art market, from the 16th century to the present. We will study the production, sale and exchange of works of art as well as the patrons, artists and collectors who participate in this economic, social and political form of taste-making and aesthetic valuation. Students will learn about the rules and practice of the art market, such as the Medici family in Renaissance Italy, our main focus will be on the creation of a global art market in the 20th century. Using case studies, sample topics include: the patterns of transportation, exchange and trade; the interaction of collectors, critics and curators; the spaces and contexts of display of contemporary collections; auction houses and commercial galleries; and fakes, forgeries, thefts and scandals. Special attention will be paid to considering the contemporary art market (post-1980) and the collecting, exchange and valuation of film, photography, painting, performance and installation art. Global markets for the exchange of art in Asia, Europe, Africa, North America and South America will be highlighted as well as the exhibitions of contemporary art such as Art Basel, the Cairo Biennale and the Venice Biennale that fuel these markets.

ARTH 4761 Art and Social Histories (also AMST, VISST 4761) (CA-AS)
Fall and spring. 4 credits. Permission of instructor required. Auditing not permitted. Not open to freshmen.

Toy Fair for fall 2009: Public Culture and the Great Depression. Seminar explores public and popular entertainments as the means for everyday people to politically engage or escape the Great Depression (1929–41). Discussions include WPA murals and printmakers, FSA photographers, Social Realists including Ben Shahn, Reginald Marsh, and Philip Evergood, alongside Grant Wood and the Regionalists. Connecting these is FDR’s New Deal and its controversial government support for the arts. We consider big bands and swing, pulp and comic strips, star tabloids, Depression-era Hollywood gangster films, screwball comedies, and Fred Astaire and Ginger Rogers spectacles. Will examine the importance of early radio in the home through FDR’s fireside chats, soap operas, and serial thrillers such as the Shadow. Students will draw on the American Memory Project, documentaries, and the Johnson Art Museum collections. Films include It Happened One Night, Gay Divorcee, Double Indemnity, and Woody Allen’s Radio Days.

ARTH 4771 Indigenous Art, Film, and New Media: Anti-Colonial Strategies (also ARTH 6771, COML 4771/6771) (CA-AS)
Fall. 4 credits. J. Rickard.
This course examines Indigenous art, new media, and film from three distinct interrelated perspectives of aesthetics, technology, and history/culture. The relationship between technology and tradition reevaluates established assumptions between representation, power, and the gaze. Decolonizing methodologies will establish the translatability of Indigenous oral tradition to visual expression as a form of cultural agency. The use of media as a cultural and political intervention will be discussed through the work of Hopi filmmaker Victor Masayesva, Inuit filmmaker Zacharias Kunuk, the Kayapo Media Collective, Aboriginal artist Tracy Moffat, new media artist Mohawk, Skawanati, Maori photographer John Miller, and more. The construction, circulation, and reception of Indigenous visual culture will be discussed within a transnational, diasporic, and global frame.

[ARTH 4815 Buddhist Arts of China (also ARTH 6815) @ # (CA-AS)]
Fall. 4 credits. Next offered 2010–2011. A. Pan.]

ARTH 4818 Exhibition Seminar (also ARTH 6818) @ (CA-AS)
Fall. 4 credits. A. Pan.
Public display of art objects and artifacts involves more than just artistic presentations. How is the title selected? What (whose) work is included? How are they displayed? How are they framed in the exhibition space as well as in an exhibition catalogue? These complex issues are integral to exhibition discourse. Students review past exhibitions and design a new exhibition based on the collection at the Herbert F. Johnson Museum of Art. The final product will be on view to the public and will be accompanied by an exhibition catalogue co-authored by all participants in the seminar. Students will learn how to engage in academic and scholarly inquiry of issues related to exhibition design, and will experience hands-on aspects of museum work related to organizing an exhibition.

ARTH 4821 Mobility and Invention (also SHUM/VISST 4821)
Fall. 4 credits. Limited to 15 students. M. Fernandez.
For description, see SHUM 4821.
ARTH 4825 African Port Cities: Empire Building at the Crossroads (also ASRC 4607, SHUM/VISST 4825) Fall. 4 credits. Limited to 15 students. P. Meier. For description, see SHUM 4825.

ARTH 4855 Threads of Consequence: Textiles in South and Southeast Asia (also ASIAN 4487) Spring. 4 credits. K. McGowan. From boldly patterned cotton mantles to simple working garments, sumptuous silks to embroidered story cloths encircling shrines—textiles play a salient role in the ceremonial and ritual life of many Asian societies. This seminar explores how patterned clothes serve as a symbolic medium, functioning on multiple levels of understanding and communication. As spun, dyed, and woven threads of consequence, textiles can be seen to enter into all phases of social, economic, political, religious, and performance processes, often assuming unusual properties and attributes. As bearers of talismanic messages, signifiers of rank, and as the recipients of influences from maritime trade and touristic demand, textiles are read between the folds of complex exchange mechanisms in South and Southeast Asia.

ARTH 4858 Dancing the Stone: Body, Memory, and Architecture (also ASIAN 4456) Spring. 4 credits. Prerequisite: permission of instructor K. McGowan. This course examines the role of temples and their sculptural programs in South and Southeast Asia as a creative stimuli for performative reenactments. Choreographic encounters between imagination and memory are mapped as they occur at various points historically and politically in Java, Bali, Cambodia, and India. Because architectural choreography implies the human body’s inhabitation and experience of place, the nature of ritualized behavior and its relationship to performance and politics is explored spatially, both in organizing experience and defining or redefining identity on colonial, national, and diasporic margins. Students have the unique opportunity to balance the demands of learning a Javanese traditional dance and/or its musical accompaniment, taught by visiting artists while exploring performance traditions in historical perspective.

ARTH 4934 Art Writing: Tracing the Visible (also SHUM/VISST 4934) Spring. 4 credits. Limited to 15 students. M. Jacobus. For description, see SHUM 4934.

ARTH 4991 Independent Study Fall. 1–4 credits; may be repeated for credit. Prerequisite: permission of department faculty member. Individual investigation and discussion of special topics not covered in the regular course offerings, by arrangement with a member of the department.

ARTH 4992 Independent Study Spring. 1–4 credits; may be repeated for credit. Prerequisite: permission of department faculty member. Individual investigation and discussion of special topics not covered in the regular course offerings, by arrangement with a member of the department.

ARTH 4997 Honors Research Fall or spring. 2 credits. Staff. The prospective honors student does rigorous independent readings supervised by a selected thesis advisor. By the end of the semester, an annotated bibliography and detailed outline of the thesis should be completed.

ARTH 4998 Honors Work I Fall. 4 credits. Intended for senior art history majors who have been admitted to the honors program. Basic methods of art historical research are discussed and individual readings assigned, leading to selection of an appropriate thesis topic.

ARTH 4999 Honors Work II Spring. 4 credits. Prerequisite: ARTH 4998. The student under faculty direction prepares a senior thesis.

ARTH 5991–5992 Supervised Reading 5991, fall; 5992, spring. 1–4 credits; may be repeated for credit. Prerequisite: graduate standing.

ARTH 5993–5994 Supervised Study 5993, fall; 5994, spring. 1–4 credits; may be repeated for credit. Prerequisite: graduate standing.

ARTH 6060 Visual Ideology (also GERST 6600) For description, see GERST 6600.

ARTH 6100 Proseminar (also ARTH 4100, VISST 4200) Spring. 4 credits. Limited enrollment. Undergraduates should enroll in ARTH 4100. I. Dadi. For description, see ARTH 4100.

[ARTH 6170 Intro to Critical Theory (also ARTH 4150) Fall. 4 credits. Next offered 2010–2011. M. Fernandezi. For description, see ARTH 4150.]

[ARTH 6252 Research Methods in Archaeology (also CLASS 7742) Spring. 4 credits. Next offered 2010–2011. S. Manning. For description, see CLASS 7742.]

ARTH 6305 Dress, Cloth, and Identity in Africa and the Diaspora (also ASRC/HIST/ANTHR/FSDA 6305) Spring. 4 credits. J. Byfield. For description, see ASRC 6305.

[ARTH 6311 The Multicultural Alhambra (also ARTH 4311, NES 4511) Spring. 4 credits. Next offered 2010–2011. C. Robinson. For description, see ARTH 4311.]

[ARTH 6331 Topics in Islamic Art (also ARTH 4331, NES 4731/6731) Fall. 4 credits. Next offered 2010–2011. C. Robinson.]

ARTH 6440 Constructing the Self in the 16th Century (also ARTH 4440) Spring. 4 credits. C. Lazzaro. For description, see ARTH 4440.

[ARTH 6445 Nature, Cultural Landscape, and Gardens in Early Modern Europe (also ARTH 4445) Fall. 4 credits. Next offered 2010–2011. C. Lazzaro. For description, see ARTH 4445.]

[ARTH 6508 Exhibiting Cultures: Museums, Monuments, Representation and Display (also AMST 4508/6508, ARTH 4508, ASRC 4504/6508) Spring. 4 credits. Undergraduates should enroll in ARTH 4508. Next offered 2010–2011. C. Finley. For description, see ARTH 4508.]

[ARTH 6690 Comparative Modernities (also ARTH 4690, VISST 4641) Fall. 4 credits. Next offered 2010–2011. I. Dadi. For description, see ARTH 4690.]

ARTH 6695 Studies in Global Modern Art (also ARTH 4495) Fall. 4 credits. I. Dadi. For description, see ARTH 4495.

ARTH 6696 The Art Market (also ARTH 4696) Fall. 4 credits. C. Finley. For description, see ARTH 4696.

ARTH 6771 Indigenous Art, Film, and New Media: Anti-Colonial Strategies (also ANTHR 4771/6471, ARTH 4771, COML 4771/6771) Fall. 4 credits. J. Rickard. For description, see ARTH 4771.

ARTH 6818 Exhibition Seminar (also ARTH 4818) Fall. 4 credits. A. Pan. For description, see ARTH 4818.

HUMAN BIOLOGY PROGRAM

J. Haas, nutritional sciences, director (220 Savage Hall; 255–2665); A. Clark (molecular biology and genetics); P. Cassano (nutritional sciences); B. Finlay (psychology); J. Fortune (physiology/women’s studies), E. Frongillo (nutritional sciences), R. Johnston (psychology), K. A. R. Kennedy (ecology and systematics/anthropology), D. Levitsky (nutritional sciences), D. L. Pelletier (anthropological sciences), W. Provine (ecology and systematics/history), S. Robertson (human development), R. Savin-Williams (human development), M. Small (anthropology)

Human biology integrates the methods and theories of many disciplines, such as biological anthropology, nutrition, neurobiology, physiology, psychology, demography, ecology, genetics, and paleontology into a comprehensive study of biological diversity in Homo sapiens. A central focus of this interdisciplinary approach to the study of the human organism is an understanding of evolutionary processes that explain our biological variation through space and time. The curriculum of study seeks to educate future biological scientists to address the concerns of a society that is becoming more demanding of the scientific community to place its specialized biological knowledge in a broad context. The human biology curriculum is of particular relevance to undergraduate students in premedical and predentistry programs, biological anthropology, nutrition, human development, ecology and evolutionary biology, psychology, physiology, genetics, and the health-related sciences. It serves to bring together students who have a common interest in humankind as defined from these diverse fields and to provide a forum for student-faculty interaction on various topics relating to human evolution.
and biological diversity. Human biology is not a major but a curriculum of study that provides majors in various departments and colleges with a program for selecting elective courses that deal with the biology of the human species. Students after their freshman year may develop a program of study in human biology while majoring in any one of a number of different departmental fields.

**Basic Requirements**

The requirements for a program of study in human biology are designed to ensure sufficient background in physical sciences and mathematics to enable the student to pursue a wide range of interests in the fields of modern biological sciences, anthropology, and fields related to the evolution and biological diversity of the human species. Adjustments may be made in these requirements, depending on the student's academic background and affiliation with colleges and schools within the university.

The basic requirements are one year of introductory biology (BIOG 1101–1103 plus 1102–1104 or 1105–1106 or BIOG 1107–1108 offered during the eight-week Cornell Summer Session); one year of general chemistry (CHEM 2070–2080 or 2150–2160); one course of college mathematics (MATH 1110, 1106, or 1105 or equivalent); one course in genetics; one course in biochemistry; one course in evolutionary theory and ecology. The courses listed below are representative of the offerings in human biology and are included to assist the student in organizing a curriculum of study. They are organized into three groups that reflect the three levels of integration noted above: (1) human anatomy and physiology, (2) human behavior, and (3) human evolution and ecology. Students should consult their faculty advisor in human biology for help in selecting appropriate courses.

Elective courses should be taken that enable the student to acquire breadth in the subject matter of human biology outside of their departmental major. Therefore only 6 of the 15 human biology elective credits may also fulfill requirements for the major. Courses should be selected that also provide sufficient exposure to the integration of basic anatomical and physiological sciences with the behavior of individuals and groups within the context of evolutionary theory and ecology. The courses listed below are representative of the offerings in human biology and are included to assist the student in organizing a curriculum of study. They are organized into three groups that reflect the three levels of integration noted above: (1) human anatomy and physiology, (2) human behavior, and (3) human evolution and ecology. Students should choose at least one course from each of these areas of integration.

PAM 4380 Economics of Public Health
Fall. 3 credits.

PSYCH 3260 Evolution of Human Behavior
Spring. 3 credits.

PSYCH 4720 Evolution of Language (also COGST 4270)
Fall. 3 credits.

VTPMD 6640 Introduction to Epidemiology
Fall. 3 credits.

HUNGARIAN
See “Department of Linguistics” and “Russian.”

INDEPENDENT MAJOR PROGRAM
J. Finlay, director, 55 Goldwin Smith Hall, 255-5004.
The Independent Major Program is described in the introductory section of “College of Arts and Sciences.”

IM 3510 Independent Study
Fall or spring. 1–4 credits. Prerequisite: permission of program director.

IM 4990 Honors Research
Fall or spring. 1–8 credits; max. of 8 credits may be earned for honors research. Prerequisite: permission of program director. Each participant must submit brief proposal approved by Honors Committee.

INDONESIAN
See “Department of Asian Studies.”

INEQUALITY MINOR
363 Uris Hall
www.inequality.cornell.edu
254-8674
The study of inequality lies at the heart of current debates about segregation, affirmative action, the “glass ceiling,” globalization, and any number of other contemporary policy issues. In recent years, public and scholarly interest in issues of inequality has intensified, not merely because of historic increases in income inequality in the United States and other advanced industrial countries, but also because inequalities of race, ethnicity, and gender are evolving in equally dramatic and complicated ways.
The inequality minor allows undergraduate students to supplement their studies for their major with a coherent program of courses oriented toward the study of inequality. Although Cornell University is a leading center of scholarship on poverty and inequality, this strength is necessarily distributed across many departments and colleges; an interdisciplinary minor thus allows students to combine these resources into an integrated program of study. The institutional home for the inequality minor is the Center for the Study of Inequality
Cornell University. Students are exposed to current controversies in the study of inequality, while facilitating interdisciplinary dialogue between concentrators and faculty members at Cornell University. Students are expected to research on inequality under way at Cornell presented by guest lecturers and also participate in debates on pressing inequality-relevant issues (e.g., welfare reform, school vouchers, immigration policy, affirmative action).

3. Electives

In addition to the overview course and core course, students must select four electives from the list of qualified courses. This list can be viewed on the web site for the Center for the Study of Inequality, www.inequality.cornell.edu. Although students may tailor their courses to match their interests, the electives and overview course must be distributed across at least three departments (thereby ensuring breadth in the analytic approaches that are represented).

4. Lectures and Seminars

The Center for the Study of Inequality (CSI) hosts occasional lectures and symposia, and minors are expected to attend them when possible. These events will be announced via e-mail and are also listed on the center web site, www.inequality.cornell.edu.

Enrolling in the Minor

The web site for the Center for the Study of Inequality, www.inequality.cornell.edu, provides current information on the Inequality Minor. For students considering the minor, it may be useful to schedule a meeting with the assistant to the director (inequality@cornell.edu).

Sample Programs

The inequality minor allows students considerable flexibility in devising programs that reflect their interests. As examples of possible programs, we have listed below sample tracks, each comprising a different set of possible electives. The first program listed below is a general track that provides an overview of the field, while the remaining nine programs are more specialized and focus on particular issues within the field. This sampling of programs is obviously illustrative and does not cover the entire wide range of interests that may be addressed within the minor.

Globalization and Inequality

As a global economy takes hold, there has been increasing concern that economic inequalities will grow apace, especially North–South inequalities between rich and poor countries. The countervailing “optimistic view” is that between-country disparities will in the long run wither away and render inequality an entirely internal, within-country affair. These and related lines of argumentation can be explored in courses that address such topics as income inequality, theories of economic development, emerging patterns of international migration, and globalization and gender.

1. Overview Course (choose any one)

2. Controversies About Inequality (DSOC/ILROB/PAM/SOC 2220, GOVT 2225, PHIL 1950)

3. Possible Electives (choose any four):

   • International Development (DSOC 2050, SOC 2206)
   • Economic Development (ECON 3710)
   • Labor Markets and Income Distribution in Developing Countries (ILRHR 4350)
   • Contemporary Controversies in the Global Economy (AEM 2000)
   • Environmental Aspects of International Urban Planning (CRP 4530/6890)
   • Gender and Globalization (CRP 3650, FGSS 3600)
   • Education, Inequality, and Development (DSOC 3050)
   • Sex and Gender in Cross-Cultural Perspective (ANTHR 3421/6421, FGSS 3210/6310)

   Rural Areas in Metropolitan Society (DSOC 3360)
   • Gender and International Development (CRP/FGSS 6140)

Social Policy and Inequality

In the modern period, inequalities generated in the market and through other social institutions are typically regarded as excessive, and the state is seen as the main tool for redistribution, discrimination abatement, equalization of life chances, and related forms of amelioration. The social policy and inequality track explores the role of the state in generating and reducing inequalities of various kinds.

1. Overview Course (choose any one)

2. Controversies About Inequality (DSOC/ILROB/PAM/SOC 2220, GOVT 2225, PHIL 1950)

3. Possible Electives (choose any four):

   • Organizations and Social Inequality (ILROB 6260)
   • Employment Discrimination and the Law (ILRHR 6840)
   • Human Resource Economics and Public Policy (ILRHR 3600)
   • Economics of the Public Sector (PAM 2040)
   • Introduction to Policy Analysis (PAM 2300)
   • Introduction to Public Policy (GOVT 3071)
   • Urban Politics (GOVT 3111)
   • Evolving Families: Challenges to Family Policy (PAM 3350)
   • Low-Income Families: Qualitative and Policy Perspectives (PAM 3350)
   • Risk and Opportunity Factors in Childhood and Adolescence (HD 3530)
   • Social Policy and Social Welfare (CRP 4480/5480)
   • Policy Analysis: Welfare Theory, Agriculture, and Trade (AEM 6300, ECON 4300)
   • Economic Analysis of the Welfare State (ECON 4600, ILRHR 6420)
   • Health and Social Behavior (HD 4570, SOC 4570)
   • Public Policy and the African-American Urban Community (ASRC 4605)
   • Beliefs, Attitudes, and Ideologies (PSYCH 4890/6890)
   • Research on Education Reform and Human Resource Policy (ILRHR 6601)

The Ethics of Inequality

Charges of social injustice are often charges of excessive inequality. What are the political, philosophical, and legal debates that are relevant to such judgments? Under what conditions should rich countries assist poor ones? At what point should governments step in and redistribute income? When should parents pass on their wealth to their children? The ethics of inequality track examines the conditions under which inequalities might be deemed legitimate or illegitimate, evaluates prevailing inequalities and social policy as against this yardstick, and explores the larger
role of values in popular and scholarly judgments about inequality.

1. Overview Course: Inequality, Diversity, and Justice (CRP/GOVT/SOC 2930, PHIL 1930)
2. Controversies About Inequality (DSOC/ILROB/PAM/SOC 2220, GOVT 2225, PHIL 1950)
3. Possible Electives:

A. Ethics Courses (choose two)
Values in Law, Economics, and Industrial Relations (ILRSC 6070)
Contemporary Moral Issues (PHIL 1450)
Global Thinking (GOVT 2947)
Modern Political Philosophy (PHIL 3460)
Feminism and Philosophy (FGSS/PHIL 2490)

B. Social Science Classes (choose two)
Select courses in consultation with advisor (see list of electives below).

Poverty and Economic Development
Over the past century, rich countries have undergone significant changes. Some developed countries remain burdened with massive poverty. The courses listed below examine the sources and causes of world poverty, the rise of global anti-poverty social movements, and the types of policy interventions that might stimulate economic development and reduce poverty.

1. Overview Course (choose any one)
2. Controversies About Inequality (DSOC/ILROB/PAM/SOC 2220, GOVT 2225, PHIL 1950)
3. Possible Electives (choose any four):
   Economic Development (ECON 3710)
   Issues in African Development (CRP 4770/6770)
   Labor Markets and Income Distribution in Developing Countries (ILRSC 4550)
   Health and Survival Inequalities (DSOC/FGSS/SOC 4100)
   Applied Economic Development (ECON 3720)
   Low-Income Families: Qualitative and Policy Perspectives (PAM 3550)
   Gender and International Development (FGSS/CRP 6140)
   Economics of Hunger and Malnutrition (ECON 4740, NS 4570)

Social Movements and Inequality
The history of modern society may be seen in large part as a history of anti-poverty social movements (e.g., the Enlightenment, socialism, the union movement, the civil rights movement, feminism) interspersed with occasional inequality-inducing reactions (e.g., the post-socialist transition). The social movements track examines the causes, effects, and likely future of such social movements and the reactions they spawn.

1. Overview Course (choose any one)
2. Controversies About Inequality (DSOC/ILROB/PAM 2220, GOVT 2225, PHIL 1950)
3. Possible Electives (choose any four):
   Possible Electives (choose any four):
   Utopia in Theory and Practice (SOC 1150)
   Social Movements (SOC 2800)
   Social Movements in American Politics (AMST 3020, GOVT 3021)
   States and Social Movements (GOVT 6603, SOC 6600)
   Comparative Labor Movements in Latin America (ILRSC 6510)
   Union Organizing (ILRSC 4000)
   Theories of Industrial Relations Systems (ILRSC 6060)
   Revitalizing the Labor Movement: A Comparative Perspective (GOVT 6413, ILRSC 6520)
   Prisons (GOVT 3141)

Education and the Reproduction of Inequality
In the contemporary period, the study of inequality has increasingly turned on the study of formal education, as schools have become the main institutional locus for training and credentialing workers and for signaling potential employers about (putative) worker quality. The inequality and education track examines educational institutions and how they are organized, how they generate equality and inequality, and how possible institutional changes (e.g., vouchers, required testing) might affect the reproduction of inequalities.

1. Overview Course (choose any one)
2. Controversies About Inequality (DSOC/ILROB/PAM/SOC 2220, GOVT 2225, PHIL 1950)
3. Possible Electives (choose any four):
   Social and Political Context of American Education (EDUC 2710, SOC 2710/5710)
   Education, Inequality, and Development (DSOC 3505)
   Schooling, Racial Inequality, and Public Policy in America (SOC 3570)
   Research on Education Reform and Human Resource Policy (ILRSC 6601)
   Education, Technology, and Productivity (ILRSC 6950)
   Education Innovation in Africa and the Diaspora (ASRC 4601, EDUC 4590)
   Education and Development in Africa (ASRC 6600)

Race and Ethnicity in Comparative Perspective
This program of study examines the many forms of racial and ethnic inequality as revealed across different times and places. When race and ethnicity are examined from an explicitly comparative perspective, it becomes possible to identify regularities and better understand the forces of competition, conflict, and subordination among ethnic and racial groups. The courses listed below address such issues as the causes of discrimination, the implications of residential segregation for inequality, the sources of ethnic and racial differences in income, the effects of anti-inequality reform efforts (e.g., affirmative action), and the possible futures of ethnic and racial stratification.

1. Overview Course (choose any one)
2. Controversies About Inequality (DSOC/ILROB/PAM/SOC 2220, GOVT 2225, PHIL 1950)
3. Possible Electives (choose any four):

A. General Courses
Introduction to American Studies: New Approaches to Understanding American Diversity, the 20th Century (AAS/AMST 1110)
Racial and Ethnic Politics (AMST/GOVT/LSP 3191)
Health and Survival Inequalities DSOC/FGSS/SOC 4100)
Sociology of Health and Ethnic Minorities (DSOC/LSP 2200)
Prisons (GOVT/AMST 3141)
Racial and Ethnic Differentiation (PAM/SOC 3570)
Ethnicity and Identity Politics: An Anthropological Perspective (AAS 4790, ANTHR 4749)
Political Identity: Race, Ethnicity, and Nationalism (GOVT 6101)

B. Immigration and Ethnicity
Immigration and a Changing America (DSOC 2750)
Introduction to American Studies (AMST 1101)
Population Dynamics (DSOC 2010, SOC 2202)
Race and Ethnicity (SOC 1104)
Strangers and Citizens: Immigration and Labor in U.S. History (ILRSC 3620)

C. Case Studies
African–American Social and Political Thought (ASRC 2601)
African–American Women: 20th Century (AMST/FGSS/HIST 2120)
African–American Social History, 1865 to 1910: The Rural and Urban Experience (HIST 3750, ILRSC 3850)
African–American Social History, 1910 to The Present: Race, Work, and the City (HIST 3760, ILRSC 3860)
African–American Women in Slavery and Freedom (AMST/HIST 3030, FGSS 3070)
Public Policy and the African–American Urban Community (ASRC 4605)
Politics and Social Change in Southern Africa (ASRC 4603)
Afro–American Historiography (AMST/HIST 6101)
Latinos in the United States (DSOC/SOC 2650, LSP 2010)
Latinos in the United States: Colonial Period to 1898 (AMST 2599, HIST/LSP 2600)
Latinos in the United States: 1898 to the Present (AMST/HIST/LSP 2610)
Introduction to Asian American Studies (AAS 1100)
Introduction to Asian American History (AAS 2130, AMST/HIST 2640)
Asians in the Americas: A Comparative Perspective (AAS 3030, ANTHR 3703)
Introduction to American Indian Studies (AIS 1100)
The Family and Inequality
Although workers in modern labor markets are often analytically treated as independent individuals, they of course typically belong to families that pool the labor supply of their members, consume goods jointly, and serve in some circumstances as units of collective production. It might therefore be asked how the modern labor market has adapted to and evolved in the context of the family (and, obversely, how the family has responded to the market). The courses within this track explore such issues as the causes and consequences of the intrafamilial division of labor, the effects of marriage and family structure on careers, and the transmission of socioeconomic advantage from one generation to the next.

1. Overview Course (choose any one)
2. Controversies About Inequality (DSOC/ILROB/PAM/SOC 2220, GOVT 2225, PHIL 1950)
3. Possible Electives:
   Work and Family in Comparative Perspective (SOC 2203)
   Families and the Life Course (HD/SOC 2500)
   Work-Family Policies in Comparative Perspective (PAM 3320)
   Economics of Family Policy (PAM 6050)
   Politics and Culture (GOVT 3633, SOC 2490)
   Cultural Sociology (SOC 6300)

INFORMATION SCIENCE

The Major
Information Science (IS) is an interdisciplinary field that explores the design and use of information systems in a social context: the field studies the creation, representation, organization, application, and analysis of information in digital form. The focus of Information Science is on systems and their use rather than on the computing and communication technologies that underlie and sustain them. Moreover, Information Science examines the social, cultural, economic, historical, legal, and political contexts in which information systems are employed, both to inform the design of such systems and to understand their impact on individuals, social groups, and institutions.

Courses in the Information Science (IS) major are assigned to three area-based tracks:

Human-Centered Systems This area examines the relationship between humans and information, drawing from human–computer interaction and cognitive science.

Information Systems This area examines the computer science problems of representing, organizing, storing, manipulating, and accessing digital information.

Social Systems This area studies the cultural, economic, historical, legal, political, and social contexts in which digital information is a major factor. Students must complete a set of 11 core courses: one introductory course, four courses in mathematics and statistics, and two courses from each of the three IS area-based tracks. Students must also obtain depth in two tracks—a primary and a secondary track—that together best represent their interests. In particular, completion of the major requires four advanced courses from the selected primary track and three advanced courses from the secondary track.

Requirements
Core (11 courses)
1. Introductory (one course):
   - INF 1300 Introductory Design and Programming for the Web
2. Math and Statistics (four courses):
   - MATH 1110 Calculus I
   - Either MATH 2310 Linear Algebra with Applications or MATH 2210 Linear Algebra and Differential Equations
   - Either INF 2050 Mathematical Methods for Information Science or CS 2800 Discrete Structures

One of the following:
- MATH 1710 Statistical Theory and Application in the Real World
- HADM 2201 Hospitality Quantitative Analysis
- AEM 2100 Introductory Statistics
- PAM 2100 Introduction to Statistics
- ENGRD 2700 Basic Engineering Probability and Statistics
- BTRY 3010 Statistical Methods I
- SOC 3010 Evaluating Statistical Evidence
- CEE 3040 Uncertainty Analysis in Engineering
- ILRST 3120 Applied Regression Methods
- ECON 3190 Introduction to Statistics and Probability
- PSYCH 3500 Statistics and Research Design

3. Human-Centered Systems (two courses):
   - INF 2140 Cognitive Psychology
   - INF 2450 Communication and Technology

4. Information Systems (two courses):
   - CS 2110 Object-Oriented Programming and Data Structures*

*CS 2110 is an intermediate programming course that requires prior knowledge of Java. Students who have not learned Java can take CS 1130 after completing INF 1300 and 2300 or they can take CS 1110.

5. Social Systems (two courses):
   - Either ECON 3010 Microeconomics or ECON 3130 Intermediate Microeconomic Theory
   - One of the following: INF 2921 Inventing an Information Society, INF 3200 New Media and Society, INF 3551 Computers: From the 17th Century to the Dotcom Boom, INF 3561 Computing Cultures

Where options in the core courses exist, the choice will depend on the student’s interests and planned advanced courses for the selected primary and secondary tracks.

Tracks
Students must complete four advanced courses in their primary track and three advanced courses in their secondary track, selected from those listed below.

All courses in the major must be taken for a letter grade. Students must earn a C- or better in all courses used for the major.

Courses taken to satisfy the core course requirements may not be used to fulfill the track requirements.

Additional information on Information Science courses can be found below and in the “Computing and Information Science (CIS)” section of Courses of Study. Course information for all other courses in the major can be found in the relevant departments (e.g., AEM, CS, STS).

Human-Centered Systems
- PSYCH 3420 Human Perception: Applications to Computer Graphics, Art, and Visual Display*
- INFO 3450 Human–Computer Interaction Design
- PSYCH 3470 Psychology of Visual Communications
- INFO 3650 Technology and Collaboration
- PSYCH 3800 Social Cognition*
- PSYCH 4160 Modeling Perception and Cognition
- INFO 4400 Advanced Human–Computer Interaction Design
- INFO 4450 Seminar in Computer-Mediated Communication
- INFO 4500 Language and Technology
- DEA 4700 Applied Ergonomic Methods
- *Students who take PSYCH 3420 may also count its prerequisite, PSYCH 2050, toward the Human-Centered Systems primary or secondary track requirements. Similarly, students who take PSYCH 3800 may also count PSYCH 2800 toward the Human-Centered Systems primary or secondary track requirements. At most, one of PSYCH 2050 or PSYCH 2800 can be counted toward the primary or secondary track requirements.

INFO 7050 Graduate Seminar
Fall, spring. 1 credit. For description, see INFO 7050 in CIS section.

INFO 7090 IS Colloquium
Fall, spring. 1 credit. For staff, visitors, and graduate students interested in information science.

INFO 7900 Independent Research
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member. Independent research for M.Eng. students and pre-A exam Ph.D. students.

INFO 9900 Thesis Research
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member. Thesis research for post-A exam Ph.D. students.

INTERNATIONAL RELATIONS MINOR
Office: 190B Uris Hall, 255-7645, www.einaudi.cornell.edu/initiatives/itc.asp, D. R. Lee (AEM), director

Objective
The International Relations (IR) minor is an interdisciplinary program for undergraduate students enrolled in any of the seven undergraduate colleges at Cornell. The IR minor provides a structured yet flexible program that enables undergraduates to take advantage of the vast resources available at the university for studying the politics, economics, history, languages, and cultures of the countries and regions of the world. Graduates of the program have gone on to pursue further education in fields such as political science and anthropology and to successful careers in international law, economics, agriculture, trade, finance, international development, and government service, among others. They have gone on to work in international and nongovernmental organizations, in cross-cultural affairs, in journalism, and in education.

The International Relations minor is not a major or a department, but rather a program offering a selection of courses reaching across colleges and departments. Students pursue the IR minor in addition to their regular degree. Students concentrating in international relations have majored in fields ranging from anthropology, city and regional planning, communications, economics, government, and history to natural resources, industrial and labor relations, and computer science. International course work and language study add a global and cross-cultural dimension to those majors. Some students even design an independent major in some aspect of international relations or comparative social or cultural studies. Spending a semester or year of study abroad can contribute to meeting the course requirements of the IR minor, including the language requirement.

Course Requirements
These requirements are designed to expose students to a broad range of perspectives in international relations while allowing them to tailor their course selections to specific interests. Courses throughout the university are grouped into four subject areas:

1. International Economics and Development
2. World Politics and Foreign Policy
3. Transnational Processes and Policies
4. Cultural Studies

Within these four subject areas, courses are also divided into “core” and “elective” categories. Altogether, students must complete eight courses from the four groups according to one of two options. Option A emphasizes the politics and economics of international relations. Option B puts greater stress on culture. In choosing either option, students should ensure that they acquire familiarity with more than one geographic region or country. All courses used to fulfill the minor requirements must be taken for a letter grade. Courses can count both toward a major and the International Relations minor.

Option A: One core course from each of Groups 1, 2, 3, and 4; one elective from each of Groups 1, 2, 3, and 4

Option B: One core course from each of Groups 1, 2, 3, and 4; one elective from either Group 1 or Group 2; one elective from each of Groups 3 and 4; one additional elective from either Group 3 or Group 4

Before pre-registration a course list for the following semester (as well as lists for the current and previous semesters) can be obtained from the administrative coordinator in 190B Uris Hall, as well as from the web site. Note: These lists are not necessarily complete. Other courses throughout the university qualify for the IR minor by prior arrangement.

Language Requirement
Students in the IR minor are expected to complete additional language study beyond the College of Arts and Sciences' degree...
requirement (for those in Arts and Sciences). This study can be accomplished in one of two ways: (1) two years of one foreign language (proficiency plus one course that uses the language to explore some aspect of foreign culture); (2) two languages at proficiency.

**Study Abroad**

Students in the IR minor are encouraged to study abroad to bring a practical dimension to their expertise in international issues. Those who choose this option will find the requirements for the concentration highly compatible with courses taken abroad. Students are encouraged to contact the administrative coordinator before departure.

**Completion**

Transcripts will reflect successful completion of the requirements for the minor. In addition, students will receive a special certificate and a letter of confirmation signed by the director of the IR Minor and the director of the Mario Einaudi Center for International Studies.

**Enrollment**

To obtain course lists, to enroll and for all further information, please contact the IR administrative coordinator, Mario Einaudi Center for International Studies, 190B Uris Hall, 255-7645; irc@is.cornell.edu.

**Course List for 2009–2010**

Core course options (one from each group) and selected electives are listed below; other electives are possible. Most courses are offered one semester only. Offerings may change, so see the administrative coordinator, course roster, and IR web site for updates and further details.

### Group 1: International Economics and Development

**Core:**

AEM/ECON 2300 International Trade and Finance
AEM 4290 International Finance
AEM 4300 International Trade Policy
ECON 3610 International Trade Theory
ECON 3620 International Monetary Theory and Policy

**Electives:**

AEM 4350 Political Economy of the WTO and Globalization
AEM 4420 Emerging Markets
AEM/ECON 4640 Economics of Agricultural Development
ANTHR 3684 Africa in the Global Economy
CRP 3270 Regional Economic Impact Analysis
CRP 4170 Economic Development: Firms, Industries, and Regions
ECON 3710 Economic Development
ECON 4690 China’s Economy under Mao and Deng
GOVT 3303/ILRIC 3330 Politics of the Global North
GOVT 3393 Political Economy of Development
GOVT 3549 Capitalism, Competition, and Conflict

### Group 2: World Politics and Foreign Policy

**Core:**

GOVT 1817 Introduction to International Relations

**Electives:**

AMST/HIST 3140 History of American Foreign Policy 1912–Present
ASIAN 2298/HIST 2890 The U.S.–Vietnam War
ASRC 3110 Government and Politics in Africa
ASRC 4600 Political and Social Change in Caribbean
GOVT 3313 Middle Eastern Politics
GOVT 3323 Modern European Politics
GOVT 3857 American Foreign Policy
GOVT 3867 The Causes of War
GOVT 4827 Unifying While Integrating: China and the World
HIST 2571 China Encounters the World
HIST 3710 World War II in Europe
HIST 4050 U.S.–Cuba Relations
NES 4672 Nationalisms in the Arab World

### Group 3: Transnational Processes and Policies

**Core:**

GOVT/SOC 3957 Introduction to Peace Studies
GOVT 3957 New Forces in International Politics

**Electives:**

AEM 4450 Food Policy for Developing Countries
AEM/ECON 4640 Economics of Agricultural Development
CRP 3540 Introduction to Environmental Planning
CRP 3840 Green Cities
CRP 4530 Environmental Aspect of International Urban Planning
DSOC 2050/SOC 2206 International Development
DSOC 2750 Immigration and a Changing America
DSOC 3240 Environment and Society
FDSC/IARD 4020 Agriculture in the Developing Nations I
HD 4830 Early Care and Education in Global Perspective
IARD 3000 Perspectives in International Agricultural and Rural Development
IARD 4940 Special Topics in International Agriculture
ILRCB 3040 Seminar in American Labor and Social History
ILRHR 4690 Immigration and the American Labor Force
NTRES 3320 Ethics and the Environment

### Group 4: Cultural Studies

**Core:**

ANTHR 1400 Introduction to Anthropology: The Comparison of Cultures
ANTHR 1420 Cultural Diversity and Contemporary Issues

**Electives:**

AAS 3030/ANTHR 3703 Asians in the Americas
AMST/ANTHR 3453 Anthropology of Colonialism
AMST/ANTHR/LSP 3777 The United States
AMST/ARTH 3605 U.S. Art from FDR to Reagan
AMST/HIST 1530 Introduction to American History
AMST/HIST 2110 Black Religious Traditions: Sacred and Secular
AMST/HIST 3450 Cultural and Intellectual Life of 19th-Century Americans
AMST/ILRCB 3060 Recent History of American Workers
ANTHR 2730 Cultures of Native North America
ANTHR 3421/FGSS 3210 Sex and Gender in Cross-Cultural Perspective
ANTHR 3516 Power, Society, Culture in Southeast Asia
ANTHR 3535 Situation of China’s Minorities
ARKEO/JWST/NES 3665 Ancient Iraq II
ARTH 2350 Introduction to Art History: Islamic Art and Culture
ARTH 2400 Introduction to Art History: Renaissance and Baroque
ARTH 3202/CLASS 3740 Arts of the Roman Empire
ARTH 3510/ASRC 3501 Introduction of African Art
ASIAN 1191/HIST 1910 Introduction to Modern Asian History
ASIAN 2208 Introduction to Southeast Asia
ASIAN 2211 Introduction to Japan
ASIAN 2245/MUSIC 1341 Gamelan in Indonesian Culture
ASIAN 3385/HIST 3880 Vietnamese Histories
ASIAN 3397/HIST 3950 Premodern Southeast Asia
ASIAN 4494/HIST 4921 India: Nation and Narration, History, Literature
ASIAN 6601/HIST 4870 Seminar on Thailand
ASRC 2800 African Civilizations and Culture
ASRC 3500 African History: Earliest Times to 1800
ASRC 4601 Education Innovation in Africa and the Diaspora
ASRC 4606 Family and Society in Africa
CLASS 4625/HIST 4831/RELST 4625 Christianization/Roman World
COML 3620/ENGL 3250/HIST 3640 Culture of the Renaissance II
COML 3860 Literature and Film of South Asia
COML 4520 Renaissance Humanism
COML 4740 Topics in Modern European Intellectual History
COML 4960 Imagining the Mediterranean
ENGL 2740 Scottish Literature
ENGL 3330 The 18th-Century English Novel
ENGL 3490 Shakespeare and Europe
FGSS/HIST 2190 Women in South Asia
PROGRAM OF JEWISH STUDIES

D. Starr, director (modern Hebrew and Arabic Literature; Critical Theory; Middle Eastern Film), L. Addison (German-Jewish Literature and Culture), R. Brann (Judeo-Islamic Studies), V. Caron (Modern French and European-Jewish History), M. Diesing (Yiddish Language and Linguistics), Z. Fahmy (Modern Middle Eastern History), K. Haines-Eitzen (Early Judaism and Early Christianity), R. Hoffmann (Holocaust Studies), P. Hohendahl (German Literature), P. Hyams (Medieval Jewish History), D. LaCapra (Holocaust Studies), M. Migiel (Italian Literature), C. Monroe (Near Eastern Mediterranean Studies; Nautical Archaeology), L. Monroe (Hebrew Bible Studies), D. I. Owen (Ancient Near Eastern History and Archaeology; Assyriology; Biblical History and Archaeology), R. Polenberg (American-Jewish History), E. Rebillard (Jews in the Roman Empire), N. Scharf (Hebrew Language), D. Schwarz (Anglo-Jewish Literature), G. Shapiro (Russian-Jewish Literature), S. Shoer (Hebrew Language), P. Stevens (curator), Emeritus: D. Bathrick, N. Furman, J. Porte, E. Rosenberg, Y. Szekely.

The Program of Jewish Studies was founded as an extension of the Department of Semitic Languages and Literatures, now the Department of Near Eastern Studies, in 1973 and attained status as an intercollegiate program in 1976. The program has grown out of the conviction that Judaic civilization merits its own comprehensive and thorough treatment and that proper understanding of any culture is inconceivable without adequate knowledge of the language, literature, and history of the people that created it. Accordingly, the offerings in the areas of Jewish languages and literatures have been considerably expanded, and courses in ancient, medieval, and especially modern Jewish history and culture have been added to the program.

It is a broadly based, interdisciplinary program, bringing together faculty from various Cornell departments and colleges. The Program of Jewish Studies supports teaching and research in the many areas of Jewish Studies. It is a secular, academic program, whose interests are diverse and cross-cultural. The program recognizes its special relationship to teaching and research in classical Judaica and Hebraica pursued by the members of the Department of Near Eastern Studies, with particular emphasis on the interrelationship between Judaism, Christianity, and Islam.

It presently enables students to obtain basic instruction and specialization in the fields of Semitic languages, the Hebrew Bible; medieval and modern Hebrew literature; ancient, medieval, and modern European and Middle Eastern Jewish history; and Holocaust studies. In some of these fields students may take courses on both graduate and undergraduate levels. Faculty throughout the university provide breadth to the program by offering courses in related areas of study.

For more information, please visit www.arts.cornell.edu/jwst/index.html.

Courses Offered

JWST 1101–1102 Elementary Modern Hebrew I and II (also NES 1101–1102) Fall, 1101; fall, 1102, spring. 4 credits. Letter grades only. S. Shoer and N. Scharf.

For description, see NES 1101–1102.

JWST 1103 Elementary Modern Hebrew III (also NES 1103) Fall. 4 credits. N. Scharf and S. Shoer.

For description, see NES 1103.

JWST 1104 Beginners Intensive Hebrew (also NES 1104) Summer. 3 credits. S. Shoer.

For description, see NES 1104.

JWST 1105 Hebrew Summer Follow-Up (also NES 1105) Fall. 1 credit. S. Shoer.

For description, see NES 1105.

JWST 2100 Intermediate Modern Hebrew: Special Topics in Hebrew (also NES 2100) Fall. 4 credits. Satisfies Option 1. N. Scharf.

For description, see NES 2100.

For description, see LING 2241.

JWST 2350 Antisemitism and Crisis Modernity (also HIST 2350) (HA-AS) Fall. 4 credits. Next offered 2010–2011. V. Caron.

JWST 2611 Prophecy in AncientIsrael (also NES/RELST 2611) Spring. 3 credits. L. Monroe.

For description, see NES 2611.

For description, see NES 2629.

JWST 2661 Ancient Ships and Seafaring—Introduction to Nautical Archaeology (also ARKEO/NES 2661) (LA-AS) Fall. 4 credits. C. Monroe.

For description, see NES 2661.

JWST 2668 Ancient Egyptian Civilization (also ARKEO/NES 2668) (HA-AS) Spring 3 credits. C. Monroe.

For description, see NES 2668.

JWST 2674 History of the Modern Middle East: 19th-20th Centuries (also GOVT 2747, HIST/NE5 2674) (LA-AS) Fall. 3 credits. Z. Fahmy.

For description, see NES 2674.

JWST 2724 Introduction to the Hebrew Bible (also NES/RELST 2624) (LA-AS) Fall. 5 credits. L. Monroe.

For description, see NES 2724.

JWST 2793 Middle Eastern Cinema (also FILM 2930, NES 2793, VISST 2193) (LA-AS) Fall. 4 credits. Next offered 2010-2011. D. Starr.
JWST 2920 Modern European Jewish History 1789–1948 (also NES 2620, HIST 2910)
Fall. 4 credits. S. Gutman. For description, see HIST 2910.

JWST 3101 Advanced Intermediate Hebrew: Aspects of Israelite Society (also NES 3101) @ Fall. 4 credits. N. Scharf. For description, see NES 3101.

JWST 3102 Advanced Intermediate Hebrew II: Aspects of Israelite Culture (also NES 3102) @ Spring. 4 credits. N. Scharf. For description, see NES 3102.

[JWST 3103 Love, Wine, Death, and In Between (also NES 3103) @ (CA-AS) Fall. 4 credits. Next offered 2010–2011. S. Shoer. For description, see NES 3103.]

JWST 3105 Intensive Conversational Hebrew (also NES 3105) @ Fall. 2 credits. Limited to 15 students. Prerequisite: NES 3102, 4100, or permission of instructor; non-native speakers only. N. Scharf. For description, see NES 3105.

[JWST 3524/6524 Israelite Prophecy (also RELST/INES 3524) @ (LA-AS) Spring. 4 credits. Next offered 2010–2011. L. Monroe. For description, see NES 3524.]

JWST 3588 Biblical Archaeology (also NES/RELST 3588) Spring. 4 credits. L. Monroe. For description, see NES 3588.

[JWST 3619 Near Eastern Christianities, 50–650 CE (also HIST/RELST 3619) @ (HA-AS) Fall. 4 credits. Next offered 2010–2011. K. Haines-Eitzen. For description, see NES 3619.]

JWST 3625 Introduction to the Hebrew Bible—Seminar (also NES/RELST 3625) Fall. 4 credits. L. Monroe. For description, see NES 3625.

JWST 3629 Introduction to New Testament and Other Early Christian Literature (also NES/CLASS/RELST 3629) Spring. 1 credit. Prerequisite: concurrent or past enrollment in NES 2629 or one year of ancient Greek. K. Haines-Eitzen. For description, see NES 3629.

[JWST 3661 Sumerian Language and Culture I (also ARKEO/INES 3661/6661, JWST 6661) @ (HA-AS) Fall. 4 credits. Next offered 2010–2011. D. I. Owen. For description, see NES 3661.]

[JWST 3665 Ancient Iraq II (also ARKEO/INES 3665) @ (HA-AS) Fall. 4 credits. Next offered 2010–2011. D. I. Owen.]

[JWST 3666 History and Archaeology of the Ancient Near East (also ARKEO/INES 3666, JWST 6666) @ (HA-AS) Fall. 4 credits. Next offered 2010–2011. D. I. Owen. For description, see NES 3666.]

JWST 3697 Israeli-Palestinian Conflict (also GOVT 3977, NES 3697, HIST/SOC 3970) @ (HA-AS) Spring. 4 credits. R. Brann. For description, see NES 3697.

JWST 3799 Imagining the Other: Jews and Arabs in Contemporary Literature and Film (also COM/LNES 3799) @ (LA-AS) Fall. 4 credits. D. Starr. For description, see NES 3799.

[JWST 4100 Advanced Readings in Modern Hebrew (also NES 4100) Fall. 4 credits. Limited to 15 students. Next offered 2010–2011. D. Starr.]

[JWST 4101 Modern Hebrew Literature (also NES 4101) @ (LA-AS) Spring. 4 credits. Next offered 2010–2011. D. Starr. For description, see NES 4101.]

JWST 4102 Biblical Hebrew Prose—Genesis (also NES/RELST 4102) @ (LA-AS) Fall. 4 credits. L. Monroe. For description, see NES 4102.

JWST 4170 History of Jews: Modern France (also HIST 4170) (HA-AS) Spring. 4 credits. V. Caron. For description, see HIST 4170.

JWST 4540 Maimonides and Averroes (also NES/RELST 4540, SPAN 4380) @ (CA-AS) Spring. 4 credits. Next offered 2010–2011. R. Brann. For description, see NES 4540.

JWST 4550 The World of the Philocianics (also HIST 4552, NES 4550) Spring. 4 credits. C. Monroe. For description, see NES 4550.

JWST 4580 Imagining the Holocaust (also COM/L 4830, ENGL 4580, GERST 4570) (LA-AS) Spring. 4 credits. D. Schwarz. For description, see ENGL 4580.

[JWST 4644 Late Bronze Age World of Ugarit (also ARKEO/HIST/NES 4644/6644, CLASS 4744/7744, JWST 6644) @ (HA-AS) Spring. 4 credits. Next offered 2010–2011. C. Monroe. For description, see NES 4644.]

[JWST 4670 Wealth and Power in Early Civilizations (also NES 4670) @ (LA-AS) Fall. 4 credits. Next offered 2010–2011. C. Monroe. For description, see NES 4670.]

JWST 4674 Topics in Modern European Intellectual and Cultural History (also COM/L/HIST 4740) Fall. 4 credits. D. LaCapra. For description, see HIST 4740.

JWST 4738 Imagining the Mediterranean (also COM/L 4960, NES 4738) @ (LA-AS) Spring. 4 credits. G. Holst-Warhaft. For description, see NES 4738.

JWST 4784 Israeli Nation: Self and Literature (also NES 4784) Spring. 4 credits. D. Starr. For description, see NES 4784.

JWST 4991–4992 Independent Study—Undergraduate Fall and spring. Variable credit. Staff.

[JWST 6112 Readings in Medieval Hebrew Poetry and Prose (also NES 6112) Fall. 4 credits. Next offered 2010–2011. D. Starr.]

JWST 6150 Jews in German Culture since 1945 (also GERST 6150) Spring. 4 credits. L. Adelson. For description, see GERST 6150.

JWST 6642 Topics in Ancient History (also HIST 6300, NES 6642, CLASS 7682) Spring. 4 credits. E. Rebillard. Topic: Sharing the City: Pagans, Jews and Christians in Late Antiquity. For description, see CLASS 7682.

JOHN S. KNIGHT INSTITUTE FOR WRITING IN THE DISCIPLINES

The director of the John S. Knight Institute is Paul Lincoln Sawyer, professor in the Department of English. Katherine Gottschalk, senior lecturer in the Department of English, is the Walter C. Teagle Director of First-Year Writing Seminars. The institute’s offices are in 101 McGraw Hall, 255–4061.

T. Carrick (Writing Workshop), D. Evans (Writing Workshop), D. Faulkner (Writing Workshop), K. Hjortshøj (Writing in the Majors), J. Martin (Writing Workshop), J. Pierpont (Writing Workshop), E. Shapiro (Writing in the Majors).

The John S. Knight Institute helps to coordinate the teaching of writing in all undergraduate schools and colleges (the School of Industrial and Labor Relations; the School of Hotel Administration; and the colleges of Agriculture and Life Sciences; Architecture, Art, and Planning; Arts and Sciences; Engineering; and Human Ecology). The program administers writing seminars for first-year and upperclass students, discipline-based seminars in its Writing in the Majors Program, tutorial writing classes, and seminars in the teaching of writing. More than 30 academic departments and programs participate in the program.

First-Year Writing Seminars
For first-year students the Institute offers the First-Year Writing Seminars—more than 125 different courses in the humanities, social sciences, expressive arts, and sciences. Through introductory work in a particular field of study, seminars help students write good English expository prose—prose that, at its best, is characterized by clarity, coherence, intellectual force, and stylistic control. All seminars pursue this common aim through
small classes and adherence to a program-wide set of guidelines.

• Seminars should require at least six—and at most nine—formal essays on new topics, totaling 25–30 pages of polished prose.

• No fewer than three of the six to nine required essays should go through a process of development under the instructor’s guidance (e.g., revision, peer review, responses to readings, conferences).

• All seminars should spend ample classroom time on work directly related to writing.

• Reading assignments in the course subject should be kept under 75 pages per week to permit regular, concentrated readings.

• All students should meet in at least two individual conferences with the instructor.

Offerings change from semester to semester. Each semester’s First-Year Writing Seminars are described on the web at https://fws.arts.cornell.edu.

First-Year Writing Seminars aim to ensure that students will enjoy the benefits of small classes. Instead of pre-enrolling in their writing courses, students request placement in one of five writing seminars by filling out an electronic ballot in August for the fall semester and in November for the spring semester. Over 90 percent receive one of their top three choices. By ballot, students may change their writing seminars via electronic add and drop. Writing seminars may be added only during the first two weeks of each semester.

The colleges and the schools served by the Institute accept First-Year Writing Seminars in fulfillment of their individual graduation requirements in categories referred to variously as “first-year writing,” “oral and written expression,” and the like. The Institute does not decide whether students may receive 3 credits toward the writing requirement through transfer credits or writing-course substitutions.

For work done at other institutions to be accepted as equivalent to First-Year Writing Seminars, students should demonstrate that they have done a reasonably equivalent amount of writing in a formal course (e.g., it is not sufficient to write one 30-page term paper.) Students in the College of Engineering and the College of Arts and Sciences must file an “application for transfer evaluation” to request writing credit for such courses; students in other colleges should consult their college registrars.

In unusual circumstances, upper-level students may petition to take a Cornell writing course other than a First-Year Writing Seminar to satisfy part of their writing requirement. The John S. Knight Institute must approve all such petitions in advance.

For information about the requirements for First-Year Writing Seminars and descriptions of seminar offerings, see the John S. Knight Institute website web site at www.arts.cornell.edu/knight_institute.

English 2880–2890: Expository Writing

Helps students write with more confidence and skill in all disciplines. Open to Cornell sophomores, juniors, and seniors. ENGL 2880–2890 courses explore themes shaped by a genre or use of expository writing, by the common concerns of several disciplines, or by an interdisciplinary topic intimately related to the written medium. Although English department instructors make up roughly half the staff, the Knight Institute’s involvement enables the course to extend and diversify its offerings in several directions, by offering sections that appeal to the varied interests and needs of students in many areas of study. Students may choose among a variety of sections focusing on such themes as “Teens Gone Wild: The Invention of Adolescence,” “Free Speech in the 21st Century,” and “TV Nation: Television and Identity in America.” All staff are selected because their special interests and their training and experience in First-Year Writing Seminars promise original course design and superior performance.

Writing in the Majors

Spanning the humanities, social sciences, and sciences, the Knight Institute’s upper-level, Writing in the Majors courses do not satisfy formal writing requirements, and faculty participation is entirely voluntary. While all Writing in the Majors courses include extensive writing, usually with guided revision, they also emphasize other forms of active, interactive learning essential to scholarship and careers in the disciplines. Writing in the Majors initiatives have included individual and collaborative research projects, collaborative writing, oral presentations, group oral exams, field studies, authentic student-designed laboratory experiments, debates, analytical and critical reading exercises, topical symposia, conversation groups, student-led discussions, poster sessions, and many kinds of informal writing, including online exchanges. Varying radically in design and size, from enrollments of fewer than 10 students to more than 300, Writing in the Majors courses over the past 20 years have involved collaboration with 150 faculty members and more than 250 graduate teaching assistants to enrich learning in 75 upper-level courses offered in 24 departments. Since 2007–2008, the Knight Institute has substantially increased the number of Writing in the Majors courses offered at the 2000 level. These courses are intended to provide students who are still in the early stages of their academic careers with opportunities to engage with disciplinary subject matter through writing.

WRIT 7101 Writing in the Majors Seminar

Fall and spring, 1 credit. S–U grades only. Teaching assistants assigned to Writing in the Majors projects enroll in a six-week course on teaching strategies in advanced instruction.

Courses in Community Literacy

Writing outreach has become an increasingly important feature of writing programs in various campuses. Cornell’s rich opportunities in service learning are formed on the assumption that learning by doing has a valid place in a university curriculum; they include volunteer activities and for-credit courses that span colleges and departments, as well as a concentration in Public Service Scholarship, which is sponsored by the Public Service Center. The courses listed below all concern writing as an interaction with community members outside Cornell, in the form of oral interviews, mentoring, or other collaborative work. For other writing courses with outreach components, see the First-Year Writing Seminar WRIT 1400 Common Ground: Cornell and Ithaca Students in Collaboration and ENGL 2890.106 Fieldwriting: Telling Community Stories, a second ENGL 2890 Expository Writing. For opportunities to receive training and practice as a writing tutor working with Cornell undergrads, contact Tracy Hamler Carrick, director of the Writing Walk-In Service.

WRIT 4100 Learning Behind Bars

A service learning course offered in conjunction with the Basic Writing course of the Prison Education Project. Course work includes tutoring inmates once a week at the Auburn Correctional Facility in addition to regular class meetings at Cornell.

WRIT 4130 Service Learning and Democratic Citizenship: The Literature of Social Action and Social Vision

Spring, 3 credits. D. Evans.

To what extent is civic engagement fundamental to democratic citizenship? This course seeks to answer that question by exploring the components of service learning as a discipline and to strengthen the intellectual foundation of students who wish to incorporate civic engagement into their curriculum. Students will become familiar with the history of service learning, explore competing theories of social justice and social
inequality, and develop a framework for social action that exists at the juncture of theory and practice. Readings will include texts by Dewey, Freire, bell hooks, Franklin, Jefferson, Thoreau, Addams, Baldwin, King, Dorothy Day, and Fanon. Weekly seminar papers as well as a term paper through which students develop their own philosophy of civic engagement.

**WRIT 4180 Audio Documentary**
Spring, 3 credits. A. Hammer.
For description, see LA 4180.

**Teaching Writing**
Each summer and fall, the institute offers instruction in the teaching of writing to new staff members in the First-Year Writing Seminars and other interested instructors. Teaching Writing, offered in the summer or fall, is primarily a course for graduate students. The program also sponsors a summer apprenticeship program for a limited number of graduate students, and a summer seminar for faculty members interested in the teaching of writing.

**WRIT 7100 Teaching Writing**
Summer and fall, 1 credit. S–U grades only. Preparing graduate instructors of Cornell’s First-Year Writing Seminars to teach courses that both introduce undergraduates to particular fields of study and help them develop writing skills they will need throughout their undergraduate careers. Seminar discussions and readings on pedagogical theories and practices provide an overview of the teaching of writing within a disciplinary context. As part of the course, participants develop written assignments designed to be used in their own First-Year Writing Seminars.

**Writing Workshop**
The John S. Knight Institute offers “An Introduction to Writing in the University” for first-year students (or transfer students needing writing credit) through the Writing Workshop. This course is designed for students who have had little training in composition or who have serious difficulty with writing assignments.

**WRIT 1570 and 1580** are graded S–U only, and students receive a grade of S if they are granted credit toward their college writing requirements. Students who think this course might be appropriate including non-native speakers of English scoring less than 600 on the Test of English as a Foreign Language (TOEFL) should attend the assessment sessions offered by the Writing Workshop during orientation week each fall. The workshop also offers a Walk-In Service (see below) to help students work on writing assignments. The director is Joe Martin, senior lecturer in the Writing Workshop. The workshop offices are in 174 Rockefeller Hall, 255-6349.

**The Writing Walk-In Service**
Through the Writing Walk-In Service, the Writing Workshop offers tutoring assistance in writing to any student who needs help with a writing project. The Writing Walk-In Service has tutors available during the academic year in 174 Rockefeller Hall and North and West Campus residential areas. The director is Tracy Carrick. For information, contact the Writing Workshop, 174 Rockefeller Hall, 255-6349.

**WRIT 1137–1138, 1134 An Introduction to Writing in the University**
1137, fall; 1138, spring; 1134, summer, 3 credits each semester. Limited to 12 students per sec. in fall and spring, 6 in summer. Prerequisite: permission of instructor. S–U grades only. Writing seminar designed for students who need more focused attention to master the expectations of academic writing. Emphasizes the analytic and argumentative writing and critical reading essential for university-level work. With small classes and weekly student/teacher conferences, each section is shaped to respond to the needs of students in that particular class.

**WRIT 1139 Special Topics in Writing**
Fall and spring, 3 credits. Cannot fulfill writing or distribution requirements. Prerequisites: undergraduate standing; permission of instructor. S–U grades only. These courses allow students the opportunity to resolve significant writing challenges that have interfered with their academic progress. Students must have ongoing writing projects on which to work. Instruction is in weekly tutorials. Interested students should go to 174 Rockefeller for more information.

**WRIT 7102 Graduate Writing Workshop**
Fall and spring, 3 credits. Limited to 10 students per sec. Prerequisites: graduate standing; permission of instructor. S–U grades only. Gives graduate students the opportunity to resolve significant writing challenges that have interfered with their academic progress. Students must have ongoing writing projects to work on. Instruction is in weekly tutorials. Interested students should go to 174 Rockefeller Hall for further information.

**WRIT 7103 Work in Progress**
Fall and spring, 3 credits. Limited to 10 students per sec. Prerequisites: graduate standing; permission of instructor. S–U grades only. Writing seminar for graduate students who have substantial work in progress, such as professional articles, theses, or dissertations. In the first two weeks students discuss rhetorical and stylistic features of scholarly writing and methods of composing and revising, with relevant readings. Remaining weeks emphasize exchange and discussion of drafts, supplemented by individual conferences. The course goal is the improvement and completion of student writing projects.

Cornell’s Latin American Studies Program (LASP), founded in 1961, has become one of the nation’s premier Latin American centers. Today, as part of the Mario Einaudi Center for International Studies, LASP provides a focus for all activities on the Cornell campus oriented toward Latin America. Latin Americanists are active in most of Cornell’s colleges and schools, with diverse strengths including agricultural sciences, anthropology, art history, city and regional planning, government, history, labor relations, languages, literature and nutrition.
LASP’s mission is to stimulate learning about Latin America through teaching, research, graduate and postgraduate programs, and more. Undergraduate Minor
Undergraduate minor in Latin American Studies is earned with a minimum of 15 credits in Latin American Studies courses and with approved facility in Spanish or Portuguese. Language facility is demonstrated by successful completion of SPAN 2190 or PORT 2190 or the equivalent. Course selections must consist of at least three fields, including one at an advanced level. The complete list of approved courses is available at http://einaudi.cornell.edu/academics. This list includes all LATA courses and others across colleges and schools with at least 50 percent Latin American content.

**Courses**

**LATA 1950 Colonial Latin America (also AIS/HIST 1950) @ (HA-AS)**
Fall 4 credits. R. Crabl.
For description, see HIST 1950.
LATINO STUDIES PROGRAM

LATINO STUDIES PROGRAM
434 Rockefeller Hall

Undergraduate Minor
The Latino Studies Program offers an interdisciplinary undergraduate minor in Latino studies, with courses drawn from history, sociology, anthropology, literature, and language, but the program also cross-lists courses from other colleges.

• To complete the minor, students must take at least five courses (a minimum of 15 credits) in Latino Studies, including a core course, Latinos in the United States (DSOC 2560, LSP 2010, and SOC 2650), which is offered each spring semester.

• Students are required to include at least three courses from Groups I and II (one from each group, and another from either group). Of the three courses, two must be at the 3000 or 4000 level.

One elective course (see list below) can count toward the minor. Courses must be completed with a letter grade of C or above. Independent studies and first-year writing seminars do not count toward minor requirements. The list varies each semester in accordance with faculty schedules and visiting appointments.

Group I: Humanities
LSP 2250 The United States–Mexico Border: History, Culture, Representation (also AMST/HIST 2250)
LSP 2400 Intro to Latina/o Literature (also AMST 2401, ENGL 2400)
LSP 2460 Contemporary Narratives by Latina Writers (also FGSS/SPAN 2460)
LSP 2480 Poetry of the Latina/o Experience (also SPAN 2480)
LSP 2600 Latinos in the United States: Colonial Period to 1898 (also AMST 2599, HIST 2600)
LSP 2610 Latinos in the United States: 1898 to the Present (also AMST/HIST 2610)
LSP 2640 Survey in U.S.–Latino Literature (also AMST 2641, ENGL 2640)
LSP 3930 Contemporary Latino Writers (also SPAN 3930)
LSP 3980 Latina/o Popular Culture (also AMST 3981, ENGL 3780)
LSP 4130 Classics of Latina/o Literature (also SPAN 4130)
LSP 4301 Queering Latinidad (also ENGL/AMST 4301)
LSP 4620 Senior Seminar in Latina/o Studies: Chicana Feminism in a Globalizing World (also ENGL 4620)

Group II: Social Sciences
LSP 2010 Latinos in the United States (also DSOC/SOC 2650)
LSP 2200 Sociology of Health and Ethnic Minorities (also DSOC 2200)
LSP 2300 Latino Communities (also AMST/DSOC 2300)
LSP 2721 Anthropological Representation: Ethnographies on Latino Culture (also AMST/ANTHR 2721)
fields, including anthropology, history, literature, law, sociology, government, education, planning, and human development, enabling students to develop programs that meet their specific interests.

**Requirements:** Students wishing to complete a graduate minor in Latino Studies need to formally register with the Latino Studies Program office, take an upper-level seminar as well as work intensively with a faculty member outside of their major field. Over the course of their study they will be expected to take two other Latino Studies graduate or advanced undergraduate courses outside of their major field. In lieu of available courses, the student and his or her minor field advisor might design a special project that culminates in a paper given at a conference or presented for publication. Each special project will require the approval of the director of graduate studies for the minor field.

www.gradschool.cornell.edu/fields.php?ids=MF

**Library**

The Latino Studies Program library in 432 Rockefeller Hall serves Cornell students, faculty, staff, and the wider local community. The library maintains print and media material pertinent to U.S. Latino issues including a collection of books, research material, archives, and films. The library and conference room also provide meeting space for more than 25 Latino student organizations.

**Courses**

**LSP 1101 Research Strategies in Latino and African Studies (also ASRC 1900)**

The digital revolution has made an enormous amount of information available to research scholars, but discovering resources and using them effectively can be challenging. This course introduces students with research interests in Latino and Africana Studies to search strategies and methods for finding materials in various formats (e.g., digital, film, and print) using information databases such as the library catalog, print and electronic indexes, and the World Wide Web. Instructors provide equal time for lecture and hands-on learning. Topics include government documents, statistics, subject-specific online databases, social sciences, the humanities, and electronic citation management.

**LSP 1301 Introduction to World Music: Africa and the Americas (also MUSIC 1301)**

Spring. 3 credits. T. Cosgrave and E. Acree.

Discusses the health status of minorities in the United States. Specifically explores intragroup diversity such as migration, economic status, and the influence of culture and the environment on health status and access to health care. Although special attention is given to Latino populations, discussion encompasses other minorities who face similar problems.

**LSP 2250 U.S.–Mexico Border: History, Culture, Representation (also AMST/HIST 2250) (CA-AS)**

**LSP 2300 Latino Communities (also AMST/DSOC 2300)**

**LSP 2400 Intro to Latino Literature (also AMST 2401, ENGL 2400) (LA-AS)**

Fall. 4 credits. M. P. Brady. For description, see ENGL 2400.

**LSP 2460 Contemporary Narratives by Latina Writers (also FGSS/SPAN 2460)**

**LSP 2600 Latinos in the United States: Colonial to 1898 (also AMST 2599, HIST 2600) # (HA-AS)**

Fall. 4 credits. M. C. Garcia. For description, see HIST 2600.

**LSP 2610 Latinos in the United States: 1898 to the Present (also AMST/HIST 2610) # (HA-AS)**

**LSP 2721 Anthropological Representation: Ethnographies on Latino Culture (also AMST/ANTHR 2721)**

**LSP 3130 Spanish Writing Workshop for Advanced English-Spanish Bilinguals (also SPAN 3130)**

1 credit. Prerequisite: permission of instructor. Students must be registered concurrently with LSP 2020. Next offered 2010–2011.

**LSP 3180/5180 Politics of Community Development: Transnational Latino and the U.S. City (also CRP 3180/5180)**

Spring. 3 credits. A. Sanchez. For description, see CRP 3180/5180.

**LSP 3191 Racial and Ethnic Politics (also AMST/GOVT 3191)**

**LSP 3550 Latinos, Law, and Identity (also AMST/DSOC 3550)**

Fall. 3 credits. R. Mize. For description, see DSOC 3550.

**LSP 3551 Modern and Contemporary Latino/Latin American Art (also ARTH 3551)**

LSP 3750 Comparative U.S. Racial and Ethnic Relations (also AMST/DSOC 3750)
Spring. 3 credits. R. Mize.
For description, see DSOC 3750.
LSP 3760/6760 Latin/Latino American Cities (also CRP 3760/6760)
Fall. 3 credits. L. Sanchez.
For description, see CRP 3760/6760.

[LSP 3777 The United States (also AMST/ANTHR 3777) (CS-AS)]

LSP 3930 Contemporary Latino Writers (also SPAN 3930) (LA-AS)
Spring. 3 credits. D. Castillo.
For description, see SPAN 3930.
LSP 3950/6590 Immigrant Entrepreneurship, Markets, and the Restructured U.S. City: The Latino Case (also CRP 3111/6111)
Spring. 3 credits. A. Sanchez.
For description, see CRP 3580.46/5850.04.

[LSP 3980 Latina/o Popular Culture (also AMST 3981, ENGL 3980) (CS-AS)]

[LSP 4032 Immigration and Politics (also AMST/GOVT 4032) (SBA-AS)]

[LSP 4050 U.S.-Cuba Relations (also AMST/HIST/LATA 4050/6050)

[LSP 4130 Classics of Latina/o Literature (also SPAN 4130) (LA-AS)]

LSP 4200–4210 Undergraduate Independent Study
Fall and spring. 2–4 credits. Prerequisite: permission of instructor.
Guided independent study.

LSP 4301 Queering Latinidad (also ENGL/AMST 4301)
Spring. 4 credits. M. P. Brady.
For description, see AMST 4301

[LSP 4310/6310 Migrant Workers (also HIST 4310/6310, ILRCB 4020) (HA-AS)]
Emphasis is on migrant farmworkers in the United States, mostly from the Caribbean and mainland Latin America, with an increasing focus as the semester progresses on farmworkers in central and upstate New York.
Course requirements: analytical essays, a final paper, and participation in a service-learning project that are arranged in conjunction with the instructor.

LSP 4510 Multicultural Issues in Education (also AMST/EDUC 4510)
Fall. 3 credits. S. Villenas.
For description, see EDUC 4510.
LSP 4680 Immigration: History, Theory, and Practice (also AMST/HIST 4850) (HA-AS)
Fall. 4 credits. Prerequisite: permission of instructor. M. C. García.
For description, see HIST 4850.
LSP 4681 Refugees (also HIST/AMST 4681) (HA-AS)
Spring. 4 credits. M. C. Garcia.
For description, see HIST 4851.

LSP 6200–6210 Graduate Independent Study
Fall, spring. 2–4 credits. Prerequisite: permission of instructor.
Guided independent study.

LAW AND SOCIETY
Co-directors: M. Lynch (science and technology studies), 302 Rockefeller Hall, 255-7294, mel27@cornell.edu, and R. Lieberwitz (ILR), 287A Ives Hall, 255-3289, rlf5@cornell.edu.
Advisors: G. Alexander (law), E. Anker (English), D. Dunning (psychology), M. Evangelista (government), C. Grumbach (Ethics & Public Life Program), G. Hay (law), S. Hilgarten (science and technology studies), P. Hyams (history), M. Karr (ILR), M. Katzenstein (government), R. Miller (philosophy), M. B. Norton (history), D. Powers (Near East studies), A. Riles (law), V. Santiago-Irizarry (anthropology).
The Law and Society minor provides an opportunity for focused study of the interaction between law and society from an interdisciplinary perspective predominantly rooted in the social sciences and humanities: anthropology, comparative literature, economics, government, history, philosophy, psychology, science and technology studies, and sociology.
The Law and Society minor is open to all undergraduates. Though many of those who register for the minor have intentions of going on to law school or a law-related profession, Law and Society is not designed as a minor only for students interested in entering law school. The best candidates for the Law and Society minor are students interested in broader relations between legal institutions and historical and contemporary societies. This broader topic is, and should be, of interest to many students, regardless of whether they intend to enter the legal profession. A large selection of courses and on-campus events is available for completing the minor. The benefits of a student's participation depend on the particular courses and events selected, and the effort and interest invested.

Registration
To allow sufficient time for a coherent program of study to be developed and completed, students who have an interest in the law and society minor are required to register before the start of the second semester of their junior year. Under extenuating circumstances, late registrations may be accepted at the discretion of the directors, but only if the registrant has a plan already formulated for completing the minor's requirements. Late registrants can use the standard online registration form but should also submit the online completion plan at the time of registration. Information about, and forms required for, the law and society minor can be found at epl@cornell.edu. As part of the registration process, each student is assigned a law and society adviser who is available to provide guidance with course selection and help with other questions or concerns related to the student's participation in the minor. The name and contact information of the assigned adviser are included in a welcome e-mail that is sent shortly after a student's registration form is received.

Four-Event Requirement
Many students find access to and participation in law and society events a particularly beneficial component of the minor. Officially registered law and society students are notified of qualifying events (usually at least 10 per semester) and other information related to the concentration through an e-mail listserv and postings outside the Ethics and Public Life office. Between registration and graduation, students must attend a minimum of four events (signature on official sign-in sheets is the required proof of attendance for credit); students seeking a broader perspective are encouraged to attend as many events as they can.

Four-Course Requirement
Law and society is an interdisciplinary minor requiring students to successfully complete four courses (at least 12 credits) from the approved course list, earning a letter grade no lower than C+ in each (C– for appropriate courses completed before the spring 2008 semester). Students registering for law and society after the conclusion of the spring 2008 semester will be required to select one course each from four (out of five) different categories of study. At least two courses must fall outside the student's major, and no more than two courses can be in the same subject area; the only exception being cross-listed courses, which may be counted in any of the departments listed. Appropriate courses taken before registering for the law and society minor can be counted toward the four-course requirement. There are no required courses, but past students have found GOVT 3131 and PSYCH 2650 particularly relevant. For the most current list of approved courses, please consult the Law and Society web page or contact the EPL office.

At the discretion of the law and society directors, permission may be granted to substitute an appropriate course that has been:
1. accepted from another educational institution toward the student's degree program (one course maximum)
2. taken as part of a semester abroad program and approved by Cornell for course credit
3. recently added to the Cornell curriculum

The best evidence of a course’s appropriateness is the syllabus, which is often available online and can be submitted electronically to epl@cornell.edu for a determination. Petitions for course substitutions should be submitted before the student’s final semester and include identification of a course already approved that is closest in content to the course being petitioned for approval.

Progress Toward Completion
To facilitate tracking of courses taken and events attended, a printable student progress record is available on the Law and Society web page.

rll5@cornell.edu

For more information on the Law and Society minor, please visit the Law and Society web page or contact the EPL office.

For extenuating circumstances, late registrations may be accepted at the discretion of the directors, but only if the registrant has a plan already formulated for completing the minor's requirements. Late registrants can use the standard online registration form but should also submit the online completion plan at the time of registration. Information about, and forms required for, the law and society minor can be found at epl@cornell.edu.
web page. By the end of the student's next-to-last semester before graduation, the course and event information from the student progress record is to be submitted electronically using the online Completion Plan.

The law and society minor is administered by the Ethics and Public Life (EPL) office. For more information, consult www.arts.cornell.edu/epl/lawsociety.htm or contact the EPL administrative assistant at 240 Goldwin Smith Hall, ep1@cornell.edu, 255-8515.

LESBIAN, GAY, BISEXUAL & TRANSGENDER STUDIES

The field of Lesbian, Gay, Bisexual & Transgender Studies is devoted to the interdisciplinary study of the social construction of sexuality. LGBT Studies is founded on the premise that the social organization of sexuality is best studied from the perspectives offered by those positions that have been excluded from established cultural norms.

In addition to offering a graduate minor, the field of LGBT Studies offers an undergraduate minor, which is administered under the auspices of Feminist, Gender, & Sexuality Studies (FGSS) and which consists of four courses from the list below. Although most of the courses in LGBT Studies (including those on men) generally fall under the aegis of FGSS and are hence croslisted with it, not all of the courses in FGSS are sufficiently focused enough on the social construction of sexuality per se to be part of the LGBT Studies minor. In order to qualify for the minor, courses must devote a significant portion of their time to sexuality and to questioning the cultural and historical institutions of exclusive heterosexuality. Students selecting their four courses from the LGBT Studies subset must identify their minor as either LGBT Studies or FGSS; they cannot double-count their credits and thereby use the same courses for both.

Students interested in the LGBT Studies minor should contact the Lesbian, Gay, Bisexual & Transgender Studies Office in 391 Uris Hall.

Courses
ANTHR 2400 Cultural Diversity and Contemporary Issues
Fall. 3 credits. Staff Fall. For description, see ANTHR 2400.

ANTHR 3421/6421 Sex and Gender in Cross-Cultural Perspective (also FGSS 3210/6210)
Fall. 4 credits. K. March.
For description, see ANTHR 3421.

[ENGL 2760 Desire (also COML/FGSS 2760, THETR 2780)] Spring. 4 credits. Letter grades only. Next offered 2011–2012. E. Hanson.

[ENGL 3550 Decadence (also COML/FGSS 3550)] Spring. 4 credits. E. Hanson.
For description, see ENGL 3550.

[ENGL 6550 Modernist Fiction and the Erotics of Style (also FGSS 6550)] Spring. 4 credits. E. Hanson.

FGSS 2010 Introduction to Feminist, Gender, and Sexuality Studies
Fall and spring. 4 credits. J. Juffer and S. Martin.
For description, see FGSS 2010.

[FGSS 3702 Desire and Cinema (also COML/ENGL 3702)] Spring. 4 credits. Next offered 2011–2012. E. Hanson.

[FGSS 4000 Senior Seminar in Feminist, Gender, and Sexuality Studies]
Fall. 4 credits. S. Martin.
For description, see FGSS 4000.

[FGSS 4791 Transgender and Transsexuality (also ENGL 4791)] Fall. 4 credits. Next offered 2011–2012. M. Raskolnikov.

[HD 3040 Gender and Sexual Minorities (also FGSS 3850)] Fall. 3 credits. K. Cohen.
For description, see HD 3840.

[HIST 4160 Gender and Sex in Southeast Asia (also ASIAN 4416, FGSS 4160)] Fall. 4 credits. Next offered 2011–2012. T. Loes.

LINGUISTICS
ling.cornell.edu
J. Whitman, chair (209 Morrill Hall); M. Weiss, director of graduate studies (218 Morrill Hall); W. Harbert, director of undergraduate studies (210 Morrill Hall); D. Abusch, J. Bowers, W. Browne, A. Cohn, M. Dieseng, J. Hale, S. Hertz, A. Nussbaum, M. Rooth, C. Rosen, M. Wagner, D. Zec. Visiting: S. Khan.

Linguistics, the systematic study of human language, lies at the crossroads of the humanities and the social sciences, and much of its appeal derives from the special combination of intuition and rigor that the analysis of language demands. The interests of the members of the Department of Linguistics and linguistic colleagues in other departments span most of the major subfields of linguistics: phonetics and phonology, the study of speech sounds; syntax, the study of how words are combined; semantics, the study of meaning; historical linguistics, the study of language change over time; and sociolinguistics, the study of language’s role in social and cultural interactions.

Studying linguistics is not a matter of studying many languages. Linguistics is a theoretical discipline with ties to such areas as cognitive psychology, philosophy, logic, computer science, and anthropology. Nonetheless, knowing particular languages (e.g., Spanish or Japanese) in some depth can enhance understanding of the general properties of human language. Not surprisingly, then, many students of linguistics owe their initial interest to a period of exposure to a foreign language, and those who come to linguistics by some other route find their knowledge about languages enriched and are often stimulated to embark on further foreign language study. Students interested in learning more about linguistics and its relationship to other disciplines in the humanities and social sciences are encouraged to take LING 1101, a general overview, which is a prerequisite for most other courses in the field, or one of the first-year writing seminars offered in linguistics (on topics such as metaphor and the science of language). LING 1101 and other introductory courses fulfill the social science distribution requirement. Most 1100- and 2200-level courses have no prerequisites and cover various topics in linguistics (e.g., LING 1170 Introduction to Cognitive Science; LING 2285 Linguistic Theory and Poetic Structure) or focus on the linguistics of a particular geographic region or historical development of particular languages (e.g., LING 2217 History of the English Language to 1300; LING 2241 Yiddish Linguistics). Some of these courses also fulfill the breadth requirements. Talks and discussions about linguistics are offered through the Undergraduate Linguistics Forum and the Linguistics Colloquium (sponsored by the department and the Cornell Linguistic Circle). These meetings are open to the university public and anyone wishing to learn more about linguistics is most welcome to attend.
The Major

For questions regarding the linguistics major, contact Professor Wayne Harbert (210 Morrill Hall, 255–8441, weh2@cornell.edu).

The prerequisite for a major in linguistics is the completion of LING 1101 and either LING 3301, 3302, 3303, or 3304. The major has its own language requirement, different from that of the College of Arts and Sciences, which should be completed as early as possible: majors must complete the equivalent of two semesters of college-level study of a language that is either non-European or non-Indo-European (language study undertaken to satisfy the college requirement can also count toward the major requirement if the language meets these conditions). With approval of the department's director of undergraduate studies, this requirement may be waived for students taking the cognitive studies concentration or a double major. The minimum acceptable grade in courses counted toward the major is C.

The other standard requirements for the linguistics major are as follows:

1. LING 3301 Introduction to Phonetics, LING 3302 Introduction to Phonology, LING 3303 Introduction to Syntax, and LING 3304 Introduction to Semantics and Pragmatics (one of which will already have been taken as a prerequisite to the major).
2. LING 3314 Historical Linguistics.
3. Three additional courses in linguistics at the 3300 or #4000 level, of which two must be general linguistics.
4. A course at or beyond the 3300 level in the structure of a language, or LING 3500 Field Methods for Undergraduates or LING 4400 Language Typology.

Some substitutions to these standard requirements are possible after consultation with your advisor and approval by the DUS.

Honors

Applications for honors should be made during the junior year or by the start of fall semester of the senior year. For further information, please contact the DUS.

Candidates for admission must have a 3.0 (B) average overall and should have a 3.5 average in linguistics courses. In addition to the regular requirements of the major, the candidate for honors will complete an honors thesis and take a final oral exam in defense of it. The thesis is usually written during the senior year but may be started in the second semester of the junior year when the student's program so warrants. The oral exam will be conducted by the honors committee, consisting of the thesis advisor and at least one other faculty member in linguistics. Members of other departments may serve as additional members if the topic makes this advisable. LING 4493 and 4494 may be taken in conjunction with thesis research and writing but are not required.

First-Year Writing Seminars

For descriptions, consult the John S. Knight brochure for times, instructors, and descriptions.

Courses

LING 1101 Introduction to Linguistics (KCM-AS)
Fall or spring. 4 credits each semester. Fall, R. Katzir; spring, J. Hale.
Overview of the science of language, especially its theoretical underpinnings, methods, and major findings. Areas covered include: the relation between sound and meaning in human languages, social variation in language, language change over time, universals of language, and the mental representation of linguistic knowledge. Students are introduced to a wide variety of language phenomena, drawn not only from languages resembling English, but also from many that appear to be quite unlike English, such as those native to the Americas, Africa, Asia, Australia, and the South Pacific.

LING 1109 English Words: Histories and Mysteries (also CLASS 1699) (HA-AS)
Spring. 3 credits. W. Harbert.
Where do the words we use come from? This course examines the history and structure of the English vocabulary from its distant Indo-European roots to the latest in technical jargon and slang. Topics include formal and semantic change, taboo and euphemism, borrowing, new words from old, “learned” English loans from Greek and Latin, slang, and society.

LING 1111 American Sign Language I
Summer only. 4 credits. T. Galloway.
Students with no previous background in American Sign Language (ASL) are introduced to the nature of a signed language and develop expressive and receptive skills in ASL. Basic grammar and vocabulary are covered, including explanations of the fundamental parts of a sign, proper use of fingerspelling, and the significance of nonmanual features. Instruction is supplemented with videotexts allowing students to begin to explore the visual literature of the Deaf community in the United States—stories, poems, and jokes that are unique to Deaf culture. Readings and class discussions acquaint students with the causes of deafness, the historical development of ASL and its linguistic status, and characteristics of deaf education both throughout history and in the present day.

LING 1112 American Sign Language II
Summer only. 4 credits. Prerequisite: LING 1111 or permission of instructor. T. Galloway.
In this intermediate course, students continue to develop expressive and receptive fluency in ASL. Focus is on greater descriptive skill, developing intermediate-level narratives, and enhancing conversational ability. Advanced grammar and vocabulary is supplemented with further instruction in the linguistic structure of ASL. Readings, class discussions, and videotexts containing samples of the visual literature of the U.S. Deaf community continue students’ investigation into American Deaf history and the shaping of modern Deaf culture.

LING 1131–1132 Elementary Sanskrit (also CLASS 1311–1312, SANS 1131–1132)
1131, fall; 1132, spring. 4 credits each semester. Fall, A. Nussbaum; spring, A. Ruppel.
For description, see SANS 1131–1132.

LING 1170 Introduction to Cognitive Science (also COGST 1101, CS 1710, PHIL 1910, PSYCH 1102) (KCM-AS)
Fall, summer. 3 credits. Staff.
For description, see COGST 1101.

LING 2215 Psychology of Language (also COGST/PSYCH 2215) (KCM-AS)
Spring. 3 credits. W. Harbert.
Explores the development of the English language from its Indo-European beginnings through the period of Early Middle English. Topics include linguistic reconstruction, changes in sound, vocabulary and grammatical structure, external influences, and Old and Early Middle English language and literature. This course forms a sequence with LING 2218, but the two may be taken independently.

LING 2218 History of the English Language since 1300 (also ENGL 2180) (HA-AS)
Spring. 4 credits. W. Harbert.
Traces English from Chaucer to the present, including the development of standard English and dialects, and the rise of English as a world language.

LING 2236 Introduction to Gaelic
Spring. 3 credits. W. Harbert.
Introduction to the Scottish Gaelic language, with some discussion of its history, structure, and current status.

LING 2238 Introduction to Welsh
Introduction to the Welsh language, with discussion of its history, structure, and current status, and a brief introduction to Welsh literature.

LING 2241 Yiddish Linguistics (also JWST 2271) (SBA-AS)
Yiddish language and linguistics, including aspects of its morphology, syntax, and phonology. Also the history of the Yiddish language, and sociolinguistic topics such as Yiddish as a minority language, and the influence of Yiddish on American English.

LING 2244 Language and Gender (also FGSS 2440) (SBA-AS)
Explores connections between language (use) and gender/sex systems. Readings draw from work in linguistics, anthropology, philosophy, psychology, literature, and women's studies and feminist theory.

LING 2246/5546 Minority Languages and Linguistics (SBA-AS)
Examines minority languages from linguistic, social, and political perspectives, including such issues as language death, language maintenance, bilingualism, language policy, and language rights.
L I N G U I S T I C S 607

LING 2251–2252 Intermediate Sanskrit (also CLASS 2351–2352, SANSK 2251–2252) @ #
2251, fall; 2252, spring. 3 credits each semester. Satisfies Option 1. Fall: L. McClelland; spring: A. Ruppel.
For description, see SANSK 2251–2252

LING 2261/6661 Introduction to Indo-European Linguistics (HA-AS)
An introduction to the phonology, morphology, and syntax of Proto-Indo-European and the chief historical developments of the daughter languages.

LING 2285/5585 Linguistic Theory and Poetic Structure (also ENGL 2960/5850) (LA-AS)
Spring. 4 credits. Graduate students register under LING 5585. J. Bowers.
The aim of this course is to show how certain results of modern linguistics can usefully be applied to the analysis and interpretation of poetry.

LING 3300 Field Methods for Undergraduates (KCM-AS)
Spring. 4 credits. Prerequisite: students should normally have completed (or be concurrently enrolled in) LING 3501, 3502, 3503, 3504. Next offered 2010–2011. W. Harbert.
A hands-on course in which students gain experience in eliciting linguistic data from a native speaker of an unfamiliar language, organizing and analyzing those data and producing descriptions of the lexicon, phonetics, phonology, morphology, syntax, and texts in the language on the basis of them.

LING 3301 Introduction to Phonetics (KCM-AS)
Fall. 4 credits. Prerequisite: LING 1101 or permission of instructor. S. Khan.
Introduction to the study of the physical properties of human speech sounds, including production, acoustics, and perception of speech. Prerequisite: in-depth exposure to the breadth of sounds found across human languages. Students achieve a high level of skill in phonetic transcription and some practice in reading spectrograms. An introduction to speech synthesis and automatic speech recognition is also provided. A small course project to discover the phonemes of an unknown language is undertaken.

LING 3302 Introduction to Phonology (KCM-AS)
Spring. 4 credits. Prerequisite: LING 1101 or permission of instructor. A. Cohn.
Introduction to phonology, which studies the patterning of speech sounds in human language. Emphasis is on formal devices, such as rules and representations, that capture the internal organization of speech sounds as well as their grouping into larger units, syllables, and feet.

LING 3303 Introduction to Syntax (KCM-AS)
Fall. 4 credits. Prerequisite: LING 1101 or permission of instructor. J. Bowers.
Introduction to syntax, which studies how words are combined to form phrases and sentences. The course aims to give students the ability to address questions regarding the syntactic properties that are shared by natural languages (as well as those that distinguish them) in a precise and informed way. Topics include those that lie at the heart of theoretical syntax: phrase structure, transformations, grammatical relations, and anaphora. Emphasis throughout the course is placed on forming and testing hypotheses.

LING 3304 Introduction to Semantics and Pragmatics (KCM-AS)
Spring. 4 credits. Prerequisite: LING 3303 or permission of instructor. M. Diesing.
Examines the two major components of sentence meaning: (1) how sentences mean what they mean and (2) how they can be used to communicate more than what they (literally) mean. Investigates precise ways of describing the possible interpretations of a sentence and the relationship between meaning and syntactic structure. Topics include the representation of lexical meaning, the meaning of quantifier phrases and analyses of scope ambiguities, and classic puzzles of reference. Also examines possible applications to the theory to linguistically interesting legal cases (torts and criminal law), slips of the tongue, acquisition studies, language disorders, and connections with the philosophy of language.

LING 3308 Readings in Celtic Languages
Fall or spring, depending on demand. 1 credit. Prerequisite: permission of instructor. W. Harbert.
Reading/discussion groups in Welsh or Scottish Gaelic.

LING 3314 Introduction to Historical Linguistics # (HA-AS)
Spring. 4 credits. Prerequisite: LING 3301 or permission of instructor. M. Weiss.
Survey of the basic mechanisms of linguistic change, with examples from a variety of languages.

LING 3315–3316 Old Norse
3315, fall; 3316, spring. 4 credits each semester. L. Heimisdóttir.
Old Norse is a collective term for the earliest North Germanic literary languages: Old Icelandic, Old Norwegian, Old Danish, and Old Swedish. The richly documented Old Icelandic is the center of attention, and the purpose is twofold: the students gain knowledge of an ancient North Germanic language, important from a linguistic point of view, and gain access to the medieval Icelandic (and Scandinavian) literature. 3315: The structure of Old Norse (Old Icelandic), phonology, and morphology, with reading of selections from the Prose-Edda, a 13th-century narrative based on the Eddaic poetry. 3316: Extensive reading of Old Norse texts, among them selections from some of the major Icelandic family sagas: Njal’s saga, Grettis saga, and Egils saga, as well as the whole Hrafnkel’s saga.

LING 3321–3322 History of the Romance Languages (also ROMS 3210–3220) # (HA-AS)
3321, spring; 3322, spring. 4 credits each semester. Prerequisites: for LING 3321, LING 1101, or equivalent and qualification in any Romance language; for LING 3322, LING 3321, or permission of instructor. C. Rosen.
3321 covers popular Latin speech, early documentary sources, Pan-Romance phonological changes, regional divergence, early external history, and non-Latin influences. 3322 covers the shaping of Romance morphological systems, changes in the lexicon, medieval diglossia, and the emergence of Romance standards. 3321 and 3322 both include selected readings in the earliest Romance texts.

LING 3333 Problems in Semantics (also COGST 3330, PHIL 3700) (KCM-AS)
Fall. 4 credits. Prerequisite: logic or semantics course or permission of instructor. A. Busch.
Looks at problems in the semantic analysis of natural languages, critically examining work in linguistics and philosophy on particular topics of current interest.

LING 3347 Topics in the History of English (HA-AS)
Fall. 4 credits. Prerequisite: LING 2217, 3314, course in Old or Middle English, or permission of instructor. Next offered 2010–2011. W. Harbert.
Treats specific topics in the linguistic history of the English language, selected on the basis of the particular interests of the students and the instructor.

LING 3390 Independent Study in Linguistics
Fall or spring. 1–4 credits, variable. Prerequisite: LING 1101 and permission of instructor. Staff.
Independent study of linguistics topics not covered in regular curriculum for undergrads.

LING 4310 Topics in Cognitive Studies (also COGST/BION/PSYCH 4310)
For description, see COGST 4310.

LING 4400 Language Typology (KCM-AS)
Studies a basic question of contemporary linguistics: in what ways do languages differ, and in what ways are they all alike? Efforts are made to formalize universals of syntax and to characterize the total repertory of constructions available to natural languages. Common morphological devices and their syntactic correlates are covered. Emphasis is on systems of case, agreement, and voice.

LING 4401–4402 Phonology I, II (KCM-AS)
4401, fall; 4402, spring. 4 credits each semester. Prerequisites: for LING 4401, LING 3302 or equivalent; for LING 4402, LING 4401 or permission of instructor. Fall. D. Zec; spring. A. Cohn.
4401 provides a basic introduction to phonological theory. The first half of the course focuses on basic principles of phonology, patterns of sounds, and their representations. In the second half, the nature of syllable structure and feature representations are explored. 4402 provides further refinement of the issues investigated in 4401, focusing in particular on metrical theory, lexical phonology, autosegmental phonology, and prosodic morphology.

LING 4403–4404 Syntax I, II (KCM-AS)
4403, fall; 4404, spring. 4 credits each semester. Prerequisites: for LING 4403, LING 3303; for LING 4404, LING 4403 or permission of instructor. Fall, R. Katzir; spring. M. Diesing.
4403 is an advanced introduction to syntactic theory within the principles and parameters/minimalist frameworks. Topics include phrase structure, argument structure (uncaccusative verbs, unergative verbs, double object constructions), principles of word order, and
techniques allow the creation of grammars that
meaning within generative grammar. These
number of "hands-on" projects are part of the
speaker normalization, theories of speech
articulatory phonetics. Topics include feature
detailed survey of some areas in acoustic and
speech synthesis, and stress and intonation.
characteristics of sounds, speech perception,
methods of speech analysis, acoustic
transcription and production of some of the
physiology of the speech production apparatus,
Provides a basic introduction to the study of
Russian.
Phonological, morphological, and syntactic
Introduction to the linguistic study of
Russian, with an emphasis on morphology and
syntax.]

LING 4417 History of the Russian Language (also RUSSA 4401)
(KCM-AS)
Spring. 4 credits. Prerequisite: permission of instructor. W. Browne.
Phonological, morphological, and syntactic
developments from Old Russian to modern Russian.

LING 4419 Phonetics I (KCM-AS)
Fall. 4 credits. Prerequisite: LING 3301 or permission of instructor. S. Khan.
Provides a basic introduction to the study of
phonetics. Topics include anatomy and
physiology of the speech production apparatus,
transcription and production of some of the
world's sounds, basic acoustics, computerized
methods of speech analysis, acoustic
characteristics of sounds, speech perception,
speech synthesis, and stress and intonation.

LING 4420 Phonetics II (KCM-AS)
Spring. 4 credits. Prerequisite: LING 4419.
Continuation of Phonetics I, providing a more
detailed survey of some areas in acoustic and
articulatory phonetics. Topics include feature
theory, vocal tract acoustics, quantal theory,
speaker normalization, theories of speech
perception, coarticulation, theories of speech
production, and prosody. In addition, a
number of "hands-on" projects are part of the
course.]

LING 4421 Semantics I (KCM-AS)
Fall. 4 credits. Prerequisite: LING 3301.
D. Aboosh.
Introduces methods for theorizing about
meaning within generative grammar. These
techniques allow the creation of grammars that
pair syntactic structures with meanings. Students look at several empirical areas in
detail, among them complementation
(combining heads with their arguments),
modification, conjunction, definite descriptions,
relative clauses, traces, bound pronouns, and
quantification. Also an introduction to logical and
mathematical concepts used in linguistic
semantics (e.g., set theory, functions and their
types, and the lambda notation for naming
linguistic meanings) is included in the course.

LING 4422 Semantics II (KCM-AS)
Spring 4 credits. Prerequisite: LING 4421 or
permission of instructor. R. Katzir.
Uses the techniques introduced in Semantics I
to analyze linguistic phenomena, including
t quantifier scope, ellipsis, and referential
pronouns. Temporal and possible worlds
semantics are introduced and used in the
analysis of modality, tense, and belief
sentences. The phenomena of presupposition,
 indefinite descriptions, and anaphora are
analyzed in a dynamic compositional
framework that formalizes the idea that
sentence meaning effects a change in an
information state.

LING 4423 Morphology (KCM-AS)
Fall. 4 credits. Prerequisite: LING 1101 or
permission of instructor. M. Diesing.
Addresses the basic issues in the study of
words and their structures. Provides an
introduction to different types of
morphological structures with examples from
a wide range of languages. Special emphasis is
given to current theoretical approaches to
morphological theory and to computational
models of morphology.

LING 4424 Computational Linguistics
(also COGST 4240, CS 3740) (MQR)
Fall. 4 credits. Recommended: previous
course work in linguistics or programming.
J. Hale.
Introduces methods for doing a language
computationally, including parsing and
representation of syntactic analyses;
compositional morphology; probabilistic
grammars; feature constraint formalisms for
syntax; treebank methodology.

LING 4425 Pragmatics (also PHIL 4720)
(KCM-AS)
Fall. 4 credits. Prerequisite: LING 3304 or
PHIL 2310, or permission of instructor.
Introduction to aspects of linguistic meaning
that have to do with context and with the use of
language. Topics include context change
semantics and pragmatics, presupposition and
accommodation, conversational implicature,
speech acts, and the pragmatics of definite
descriptions and quantifiers.

LING 4427 Structure of Hungarian
(also HUNGR 4427) (KCM-AS)
Fall. 4 credits. Prerequisite: LING 1101.

LING 4428/6628 Connectionist
Psycholinguistics (also COGST 4280,
PSYCH 4280/6280)
Fall. 5 credits. Next offered 2010–2011.
M. Christiansen.
For description, see PSYCH 4280.

LING 4430 Structure of Korean (also
ASIAN/KOREA 4430) (KCM-AS)
Spring. 4 credits. Prerequisite: KOREA 1102
or linguistics course. No previous
background in linguistics is required, but students should
have a command of written Korean of at least
the third-year level.]

LING 4433 The Lesser-Known Romance
Languages (also ROMS 4330) (KCM-
AS)
Spring. 4 credits. Prerequisites: LING 1101
and qualification in any Romance language.
Survey of several Romance languages/dialects,
examining sound systems, grammars, and
historical evolution from Latin. Readings
represent both the modern languages and their
earliest attested stages.]

LING 4436 Language Development (also
COGST/HD/PSYCH 4360) (KCM-AS)
Fall. 4 credits. Next offered 2010–2011.
B. Lust.
For description, see COGST 3370.]

LING 4441 Introduction to Germanic
Linguistics (also GERST 4410)
(HA-AS)
Spring. 4 credits. Prerequisite: LING 1101 or
permission of instructor. Next offered
Survey of major issues in historical Germanic
linguistics.

LING 4443 Linguistic Structure of
Russian (also RUSSA 4403) (KCM-AS)
Fall. 4 credits. Prerequisites: reading
knowledge of Russian. Next offered 2010–
A synchronic analysis of the structure of
modern Russian. This course deals primarily
with phonology and its relation to
morphology.

LING 4450 Lab Course: Language
Development (also COGST 4500,
HD/PSYCH 4370)
Fall. 2 credits. Next offered 2010–2011.
B. Lust.
For description, see COGST 4500.

LING 4451 Greek Comparative Grammar
(also GREEK 4411) (KCM-AS)
Fall. 4 credits. Next offered 2010–2011.
A. Nussbaum.
For description, see GREEK 4411.

LING 4452 Latin Comparative Grammar
(also LATIN 4452) (KCM-AS)
Fall. 4 credits. Next offered 2010–2011.
A. Nussbaum.
For description, see LATIN 4452.

LING 4453 Structure of Latin (also
LATIN/ROMS 4453) (KCM-AS)
Fall. 4 credits. Prerequisite: a basic
knowledge of Latin forms and
constructions or some previous work in
Romance and/or general linguistics. Next
An analysis of the phonology, morphology, and syntax of Latin from a synchronic point of view. The course is intended for a twofold audience—students of Latin interested in a linguist's-eye view of the facts and students of general and/or Romance linguistics interested in what Latin data might have to offer for historical and general linguistic purposes.

LING 4455 Greek Dialects (also GREEK 4455) (KCM-AS) Fall. 4 credits. A. Nussbaum. For description, see GREEK 4455.

LING 4456 Archaic Latin (also LATIN 4456) (LA-AS) Spring. 4 credits. M. Weiss. For description, see LATIN 4456.

[LING 4457 Homeric Philology (also GREEK 4457) (LA-AS)] Spring. 4 credits. Next offered 2011–2012. A. Nussbaum. For description, see GREEK 4457.

[LING 4459 Mycenaean Greek (also GREEK 4459) (LA-AS)] Spring. 4 credits. Next offered 2011–2012. A. Nussbaum. For description, see GREEK 4459.

LING 4474 Introduction to Natural Language Processing (also COGST/CS 4740) Spring. 4 credits. C. Cardie. For description, see CS 4740.

LING 4476 Statistics for Linguists Spring. 4 credits. J. Hale. Introduces distributions, sampling, and statistical hypothesis testing as tools for linguistic research. Students learn to use appropriate software, and as time permits, craft predictive theories using probabilistic grammars and linear models. Only high math presupposed.

LING 4485 Topics in Computational Linguistics (MQR) Fall. 4 credits. M. Rooth and D. Zec. Computational modeling of phonology. Emphasizes finite state formalisms that make it possible to explicitly construct optimality theoretic phonology, including constructs such as harmony orders and constraint families, and to compute with large or even infinite candidate sets. Accessible both to students with background in phonology and those with computational preparation.

LING 4493 Honors Thesis Research Fall. 4 credits. Staff. May be taken before or after LING 4494, or may be taken independently.

LING 4494 Honors Thesis Research Spring. 4 credits. Staff. May be taken as a continuation of, or before, LING 4493.

LING 6600 Field Methods Spring. 4 credits. Prerequisites: LING 4401, 3301, or 3302 and 4403 or 3303, or permission of instructor. J. Whitman. Elicitation, recording, and analysis of data from a native speaker of a non-Western language not generally known to students.

LING 6601 Topics in Phonological Theory Spring. 4 credits. Variable. Prerequisites: LING 4401 and one higher-level phonology course. Next offered 2010–2011. Staff. Selected topics in current phonological theory.

LING 6602 Topics in Morphology Spring. 4 credits. Prerequisites: LING 4401 or 4403 or permission of instructor. J. Bowers. Selected topics in current morphological theory.

LING 6604 Research Workshop Spring. 4 credits. Requirement for third-year linguistics graduate students. S–U grades only. W. Harbert. Provides a forum for presentation and discussion of ongoing research, and development of professional skills. Participants must enroll in a concurrent independent study with a special committee member, or a relevant workshop.

LING 6606 Historical Syntax Fall. 4 credits. Prerequisite: LING 4403. J. Whitman.

LING 6615 Topics in Semantics Fall. 4 credits. Prerequisite: LING 4421 or permission of instructor. M. Rooth. Selected topics in semantic theory, focusing on recent literature.

LING 6616 Topics in Syntactic Theory Fall. 4 credits. Prerequisite: LING 4404 or permission of instructor. M. Diesing. Examination of recent developments in syntactic theory, including “minimalist” approaches to phrase structure, derivations/representations and the nature of economy conditions, and parametric differences.

LING 6617-6618 Hittite 6617, fall; 6618, spring. 4 credits each semester. Prerequisites: for LING 6617, permission of instructor; for LING 6618, LING 6617 or permission of instructor. Next offered 2010–2011. M. Weiss. Introduction to the cuneiform writing system and the grammar of Hittite, followed by the reading of selected texts.

LING 6619 Rigveda Fall. 4 credits. Prerequisite: permission of instructor. Next offered 2011–2012. Staff.

LING 6623-6624 Old Irish I, II 6623, fall; 6624, spring. 4 credits each semester. Prerequisite: for LING 6624, LING 6623 or permission of instructor. Next offered 2010–2011. M. Weiss.

LING 6625 Middle Welsh Spring. 4 credits. Prerequisite: permission of instructor. Next offered 2011–2012. W. Harbert. Students develop a reading knowledge of Middle Welsh through translating selections from prose and poetry. No familiarity with Welsh is assumed.

LING 6633 Language Acquisition Seminar (also COGST/HD 6330) Fall. 1–4 credits. Prerequisite: LING 4436 or equivalent or permission of instructor. B. Lust. This seminar reviews and critiques current theoretical and experimental studies of first language acquisition, with a concentration on insights gained by cross-linguistic study of this area. Attention is also given to the development of research proposals.

LING 6634 Seminar in Philosophy of Language (also PHIL 6710) Fall. 4 credits. M. Eklund. For description, see PHIL 6710.

LING 6637 Introduction to Tocharian Fall. 4 credits. Prerequisite: knowledge of other ancient IE language and historical linguistics methods. Next offered 2010–2011. M. Weiss. Introduction to the grammar of Tocharian A and B.

LING 6645 Gothic Fall. 4 credits. Prerequisite: LING 1101. Highly recommended: reading knowledge of Old High German. Offered every three years; next offered 2010–2011. W. Harbert. Linguistic structure of Gothic, with extensive readings of Gothic texts.

LING 6646 Old High German, Old Saxon (also GERST 6580) Spring. 4 credits. Prerequisite: LING 1101. Highly recommended: reading knowledge of Modern German. Offered every three years; next offered 2010–2011. W. Harbert. Combines a survey of the linguistic history and structure of Old High German and Old Saxon with extensive readings from the major documents in which they are recorded.

LING 6648 Speech Synthesis (also INFO 6648) Spring. 4 credits. Prerequisite: LING 4401, 4419, or permission of instructor. Offered alternate years; next offered 2010–2011. S. Hertz. Investigates the nature of the acoustic structure of speech synthesis. The course may also be of interest to students in psychology, computer science, and cognitive science.

LING 6649 Structure of Old English (also ENGL 6170) Fall. 4 credits. Prerequisite: LING 4441. Offered every three years. Next offered 2010–2011. W. Harbert. Linguistic overview of Old English, with emphasis on phonology, morphology, and syntax.
Acquaintance with mathematics is also extremely useful for students in the social sciences and valuable for anyone interested in the full range of human culture and the ways of knowing the universe in which we live.

The Department of Mathematics faculty has strong groups specializing in algebra, number theory, combinatorics, real and complex analysis, Lie groups, topology and geometry, logic, probability and statistics, mathematical physics, and applied mathematics. Related departments at Cornell have specialists in computer science and operations research. Courses in these topics can be integrated readily into the mathematics major.

The department offers a rich variety of undergraduate courses, and many of its beginning graduate courses are suitable for advanced undergraduates as well. Under some conditions, a student may carry out an independent reading and research project for college credit under the supervision of a faculty member.

Members of the department are available to discuss with students the appropriate course for their levels of ability and interest, and students are urged to avail themselves of this help. Students who want to take any of the courses numbered 3000 or above are invited to confer with the instructor before enrolling.

**Course Numbering System**

The first digit of the course number indicates the level of the course: roughly, 1 and 2 indicate underclass courses; 3 and 4, upperclass courses; 5, professional-level and mathematics education courses; 6 and 7, graduate courses. Within the MATH subject area, the second digit often indicates the subject matter: 0, general; 1 and 2, analysis; 3 and 4, algebra and combinatorics; 5 and 6, topology and geometry; 7, probability and statistics; 8, logic, or other.

In the MATH subject area, conversion of course numbers from the old 3-digit system to the new 4-digit system was accomplished in most cases by adding a 0 as the 4th digit. In the MATH subject area, the second digit often indicates the subject matter: 0, general; 1 and 2, analysis; 3 and 4, algebra and combinatorics; 5 and 6, topology and geometry; 7, probability and statistics; 8, logic, or other.

The seven alternatives (a–g) below are available to students graduating in May 2011 for courses numbered 3000 or above. For upperclass courses, and many of its beginning graduate courses are suitable for advanced undergraduates as well. Under some conditions, a student may carry out an independent reading and research project for college credit under the supervision of a faculty member.

Members of the department are available to discuss with students the appropriate course for their levels of ability and interest, and students are urged to avail themselves of this help. Students who want to take any of the courses numbered 3000 or above are invited to confer with the instructor before enrolling.

**Advanced Placement**

Freshmen who have had some calculus should carefully read “Advanced Placement,” p. 8. Those who have not taken an advanced placement exam should take a placement test at Cornell during fall orientation. For guidance in selecting an appropriate course, please consult First Steps in Math, published on the Mathematics Department web site (www.math.cornell.edu) under “Courses.”

**The Major**

The mathematics major adapts to a number of purposes. It can emphasize the theoretical or the applied. It can be appropriate for professionals and nonprofessionals alike, and can be broad or narrow. It can also be combined easily with serious study in another subject in the physical, biological, or social sciences by means of a double major and/or concentration. (See “Double Majors” below for more information.) Questions concerning the major should be brought to a member of the Mathematics Major Committee.

**Prerequisites**

Students are admitted to the major after successfully completing a semester of multivariable calculus and a semester of linear algebra. The department recommends either MATH 2210–2220 or 2230–2240 with grades of B+ or better. Alternative prerequisites are MATH 1920 and 2940 with grades of B– or better or MATH 2130 and 2540 with grades of B+ or better. A 3- or 4-credit computer programming course with a grade of C– or better is also required for acceptance to the major. Eligible courses include: CS 1110, 1112, 1131, 1134, and 2110.

**Requirements**

Students must complete nine courses, as described in items 1–3 below, under the following constraints:

- At least two of the MATH courses must be at the 4000 level (or above) (Students graduating before May 2011 are exempt from this constraint.)
- A course may be counted toward the major only if it is taken for a letter grade and a grade of C– or better is received for the course.
- No course may be used to satisfy more than one requirement for the major.
- 2-credit courses count as half courses.
- 5000-level MATH courses do not count toward the major.

Major advisors may make adjustments to the major requirements upon request from an advisor, provided the intent of the requirements is met. In particular, many suitable graduate courses are not listed here.

1. Two courses in algebra. Eligible courses are: MATH 4310 or 4330; MATH 4320 or 4340; MATH 4370; MATH 4500; MATH 5320; MATH 5360.

2. Two courses in analysis. Eligible courses are: MATH 3110, 3210, 3240, 4130, 4140, 4180, 4200, 4220, 4240, 4250 (also CS 4210), 4260 (also CS 4220), 4280.

3. Five further high-level mathematical courses. The seven alternatives (a–g) below do not exhaust the possibilities. A mathematics major interested in a concentration in a subject different from those below may develop a suitable individual program in consultation with his or her major advisor.

**Concentration in Mathematics:**

i. Four additional MATH courses numbered 3000 or above. For students graduating in May 2011 or later, at least one of the four courses must be among the following geometry/topology courses: MATH 3560, 4500, 4510, 4520, 4530, 4540, 4550, 4560.

ii. One course dealing with mathematical models. Any course from outside mathematics with serious mathematical content and dealing with scientific matters. Serious mathematical content includes, but is not limited to,
extensive use of calculus or linear algebra. Eligible courses include any course from another department that would satisfy one of the concentrations, as well as CS 2110, MATH 3940/PHIL 3300, MATH 4810/PHIL 4510, MATH 4820/PHIL 4311, MATH 4830/PHIL 4312, PHYS 1116, PHYS 2208, PHYS 2213, and PHYS 2217. Other 1000-level physics courses and PHYS 2207 may not be used, but some courses in other fields may be accepted.

b. Concentration in Computer Science: Five additional courses from (iii) and (iv) below, of which at least one is from (iii) and three are from (iv).

iii. Mathematics courses numbered 3000 or above.

iv. Computer science courses with significant mathematical content. Eligible courses are: CS 3220, 3810, 4110, 4210 (also MATH 4250), 4220 (also MATH 4260), 4520, 4620, 4700, 4702, 4740, 4780, 4812, 4820, 4830, 4850, and 4860.

c. Concentration in Economics: Five additional courses from (v), (vi), and (vii) below, as follows: one course from (v), three courses from (vi), and a fifth course from any of (v), (vi), or (vii).

v. Mathematics courses numbered 3000 or above.

vi. Economics courses with significant mathematical content. Eligible courses are: ECON 3190/6190, 5200/6200, 5250, 5270, 5680, 4160, 4190, 4760/6760, 4770/6770, 6090, 6100, 6110, 6130, 6140, 7170, 7180, 7480, 7490, 7560. Only two of the econometrics courses (5200/6200, 5250, 5270, 7480, 7490) are allowed.

vii. Courses in operations research with significant mathematical content and dealing with material of interest in economics. Eligible courses are: ORIE 3300, 3310, 3500, 3510, 4150, 4300, 4320, 4330, 4350, 4360, 4370, 4520, 4540, 4600, 4630, 4710, 4740, 4850, 5600, 5610, and 5640.

d. Concentration in Mathematical Biology: Five additional courses from (viii) and (ix) below, with three courses from (viii) and two courses from (ix).

viii. Biology courses that have mathematical content or provide background necessary for work at the interface between biology and mathematics. Eligible courses are: BIOL/MATH 3620, BIOB 4220, BTRY 4080, 4090, 4080, 4090, 4640.

ix. Mathematics courses numbered above 3000. Particularly appropriate are MATH 4200 and 4710.

e. Concentration in Mathematical Physics: Five additional courses from (x) and (xi) below, of which at least one is from (x) and three are from (xi).

x. Mathematics courses in analysis, geometry, algebra, and combinatorics, probability and statistics, and mathematical logic. Eligible courses are: MATH 3110, 3210, 3230, 4100, 4130, 4140, 4200, 4180, 4220, 4240, 4250 (also CS 4210), 4260 (also CS 4220), 4280, 4310 or 4330, 4320 or 4340, 4370, 4410, 4420, 4500, 4510, 4520, 4530, 4540, 4550, 4710, 4720, 4810, 4820, 4830, 4860.

xi. Physics courses that make significant use of advanced mathematics. Eligible courses are: PHYS 3314, 3316, 3318, 3323, 3327, 3341, 4443, 4444, 4445, 4454, 4455, 4480, 4481.

f. Concentration in Operations Research: Five additional courses from (xii) and (xiii) below, of which at least one is from (xii) and three are from (xiii).

xii. Mathematics courses numbered 3000 or above.

xiii. Courses in operations research in which the primary focus involves mathematical techniques. Eligible courses are: ORIE 3300, 3310, 3500, 3510, 4150, 4300, 4320, 4330, 4350, 4360, 4370, 4520, 4540, 4600, 4630, 4710, 4740, 4850, 5600, 5610, and 5640.

g. Concentration in Statistics: Five additional courses from (xiv), (xv), and (xvi) below, which include both from (xv) and at least two from (xvi). (MATH 1710 is also recommended for students who have not had experience with real-world data, although it will not count toward any of the math major requirements. It should be taken or audited before or concurrent with MATH 4710.)

xiv. Mathematics courses numbered 3000 or above.

xv. MATH 4710 and 4720.

xvi. Courses in other departments with significant content in probability and statistics, complementing (xiv).

h. Double Majors: A double major with computer science, mathematics, or physics can be facilitated by the following courses: MATH 1910–1920–2930–2940, MATH 3000 or above. (MATH 1910 may be substituted for MATH 1120.)

i. Senior Thesis: A senior thesis can be of value to a student’s experience in the mathematics major. It is intended to allow students to conduct an in-depth investigation not possible in regular course work. The work should be independent and creative. It can involve the solution of a serious mathematics problem, or it can be an expository work, or variants of these. Conducting independent research, paying careful attention to exposition in the finished written product, and the advisability of an optional oral presentation can have a lasting positive impact on a student’s educational and professional future.

ii. Teacher Education in Mathematics: For information on the various possibilities for students considering teaching mathematics in schools, go to www.math.cornell.edu/Undergraduate/Teaching.

iii. Precalculus: Students who need to take Calculus I (MATH 1106 or 1110) but are lacking the necessary prerequisites may take MATH 1006, MATH 1099, or BTRY 1150 to prepare. These courses do not carry credit toward graduation in the Arts College.

iv. Calculus Sequences: Students should consult their advisors and keep major prerequisites in mind when planning a suitable program. The following are general recommendations.

1. Students who expect to major in mathematics or a science for which a strong math background is recommended, should take MATH 1110–1120 or MATH 1110–1220 and continue with MATH 2210–2220 or 2240–2240. (MATH 1910 may be substituted for MATH 1120.)

2. Students who have an aversion to mathematical theory might be happier with MATH 1910–1920–2930–2940, MATH 1110–1120–2130, or MATH 1110–2130.

3. MATH 1910–1920–2930–2940 is required for students in the engineering college and recommended by some advisors in fields strongly related to the mathematical and physical sciences, such as astronomy, computer science, physics, and physical chemistry.

4. MATH 1110–1120–2130 is a good choice for students who need to master the basic techniques of calculus but whose majors will not require a substantial amount of
5. MATH 1110–2100 is an option for students who need some linear algebra but not a full year of calculus.

Switching between calculus sequences is often difficult, especially at the 2000 level. Students should not attempt such a switch without consulting the director of undergraduate studies.

**Special-Purpose Sequences**

Students who will take no more than two semesters of mathematics can gain a broader view of the subject by taking one semester of calculus and one non-calculus mathematics course. The following options are particularly useful for students in the life and social sciences and will satisfy the mathematics requirement for most medical schools.

1. MATH 1105–1106 provides a one-year Introduction to the mathematical topics that are most useful to biologists and social scientists. (MATH 1110 may be substituted for MATH 1106.)

2. An introductory statistics course (MATH 1710, for example), taken before or after a semester of calculus (MATH 1106 or MATH 1110), teaches students how to work with data and can be more useful in some disciplines than a second semester of calculus.

Students who want two semesters of calculus are advised to take the first two semesters of one of the calculus sequences, but students with excellent performance in MATH 1106 may follow that course with MATH 1120 or 1220.

**Courses with Overlapping Content**

Because the department offers many courses with overlapping content, students must choose their courses carefully to ensure that they will receive credit for each course they take. Listed below are groups of courses that have similar content. Students will receive credit for only one of the courses in each group.

- MATH 1106, 1110
- MATH 1120, 1220, 1910
- MATH 1920, 2130, 2220, 2240
- MATH 2210, 2230, 2310, 2940
- MATH 3230, 4290
- MATH 4310 and 4330
- MATH 4320 and 4540
- MATH 4710, ECON 3190, BTRY 4080
- MATH 4720, ECON 3190, BTRY 4090

**Note:** Courses with overlapping content are not necessarily equivalent courses. Students are encouraged to consult a mathematics faculty member when choosing between them.

**Undergraduate Course offerings**

Please visit www.math.cornell.edu for further information and up-to-the-minute corrections. For guidance in selecting an appropriate course, please consult the *Steps in Math*, published on the mathematics department web site under “Courses.”

Foundation courses: 1105, 1106, 1110, 1120, 1220, 1910, 1920, 2130, 2210, 2220, 2230, 2240, 2310, 2930, 2940

Mathematics Education: 4510

History of Mathematics: 4030

General and Liberal Arts Courses: 1300, 1340, 1350, 1710, 3040, 4010

Algebra and Number Theory: 3520, 3560, 4510, 4520, 4530, 4540, 4570, 4500

Combinatorics: 4410, 4420, 4550

Geometry and Topology: 3560, 4500, 4510, 4520, 4550, 4540

Probability and Statistics: 1710, 2710, 4710, 4720, 4740

Mathematical Logic: 2810, 3840, 4810, 4820, 4800

Applied Analysis and Differential Equations: 3230, 3620, 4200, 4220, 4240, 4250, 4260, 4280

**MATH 1000 Calculus Preparation**

Fall. 2 transcript credits only; cannot be used toward graduation. Prerequisite: permission of instructor. Interested students must complete a questionnaire at 310 Malott Hall to request admittance to the course. Priority will be given to students who need the course to prepare for MATH 1106 or 1110.

Introduces a wide variety of topics of algebra and trigonometry that have applications in various disciplines. Emphasis is on the development of linear, polynomial, rational, trigonometric, exponential, and logarithmic functions. Students will have a better understanding of the behavior of these functions in their application to calculus because of the strong emphasis on graphing. Application of these mathematical ideas is addressed in problem-solving activities.

**MATH 1005 Academic Support for MATH 1105**

Fall. 1 transcript credit only; cannot be used toward graduation.

Students may not receive credit for both MATH 1105 and MATH 1110.

Topics include functions and graphs, limits and continuity, differentiation and integration of algebraic, trigonometric, inverse trig, logarithmic, and exponential functions; applications of differentiation, including graphical, max–min problems, tangent line approximation, implicit differentiation, and applications to the sciences; the mean value theorem; and antiderivatives, definite and indefinite integrals, the fundamental theorem of calculus, substitution in integration, the area under a curve. Graphing calculators are used, and their pitfalls are discussed, as applicable to the above topics. MATH 1110 can serve as a one-semester introduction to calculus or as part of a two-semester sequence in which it is followed by MATH 1120 or 1220.

**MATH 1106 Calculus for the Life and Social Sciences (MQR)**

Fall. 3 credits. Prerequisite: three years of high school mathematics (including trigonometry and logarithms) or MATH 1000, MATH 1009, or BTRY 1150. For students planning to take MATH 1120, MATH 1110 is recommended rather than 1106. Students may not receive credit for both MATH 1106 and MATH 1110.

**MATH 1110 Calculus I (MQR)**

Fall, spring, summer. 4 credits. Prerequisite: three years of high school mathematics (including trigonometry and logarithms) or MATH 1000, MATH 1009, or BTRY 1150. Students may not receive credit for both MATH 1110 and MATH 1106.

**MATH 1111 Calculus II (MQR)**

Fall, spring. 4 credits. Prerequisite: MATH 1110 with grade of C or better or excellent performance in MATH 1106. Those who do well in MATH 1110 can expect to major in mathematics or strongly mathematics-related field should take 1220 instead of 1120. Due to an overlap in content, students will receive credit for only one course in the following group: MATH 1120, MATH 1220, MATH 1910.

Focuses on integration: applications, including volumes and arc length; techniques of integration, approximate integration with error
estimates, improper integrals, differential equations (separation of variables, initial conditions, systems, some applications). Also covers infinite sequences and series: definition and tests for convergence, power series, Taylor series with remainder, and parametric equations.

**MATH 1220 Honors Calculus II (MQR)**
Fall. 4 credits. Prerequisite: one semester of calculus with high performance or permission of department. Students planning to continue with MATH 2130 are advised to take 1120 instead of this course. Due to an overlap in content, students will receive credit for only one course in the following group: MATH 1220, MATH 1120, MATH 1910.

Takes a more theoretical approach to calculus than MATH 1120. Topics include differentiation and integration of elementary transcendental functions, techniques of integration, applications, polar coordinates, infinite series, and complex numbers, as well as an introduction to proving theorems.

**MATH 1300 Mathematical Explorations (MQR)**
Fall. 3 credits. For students who wish to experience how mathematical ideas naturally evolve. The course emphasizes ideas and imagination as opposed to techniques and calculations. The homework involves students in actively investigating mathematical ideas. Topics vary depending on the instructor. Some assessment is done through writing assignments.

**MATH 1340 Mathematics and Politics (MQR)**
Spring. 3 credits. We apply mathematical reasoning to some problems arising in the social sciences. We discuss game theory and its applications to political and historical conflicts. Power indices are introduced and used to analyze some political institutions. The problem of finding a fair election procedure to choose among three or more alternatives is analyzed.

**MATH 1350 The Art of Secret Writing (MQR)**
Fall, summer. 3 credits. Students will receive credit for only one course in the following group: MATH 1350, MATH 1600.

Due to an overlap in content, students will receive credit for only one course in the following group: MATH 1350, MATH 1600.

Topics include the following: encryption and number theory, message encryption, decryption, and testing hypotheses. The linear model, and the least squares estimator. The course concludes with a discussion of tests and estimates for regression analysis of variance (if time permits). The computer is used to demonstrate some aspects of the theory, such as sampling distributions and the Central Limit Theorem. In the lab portion of the course, students learn and use computer-based methods for implementing the statistical methodology presented in the lectures.

**MATH 1910 Calculus for Engineers (MQR)**
Fall, spring, summer. 4 credits. Prerequisite: three years high school mathematics including trigonometry and logarithms and at least one course in differential and integral calculus. Due to an overlap in content, students will receive credit for only one course in the following group: MATH 1910, MATH 1120, MATH 1220.

Essentially a second course in calculus. Topics include techniques of integration, finding areas and volumes by integration, exponential growth, partial fractions, infinite sequences and series, and power series.

**MATH 1920 Multivariable Calculus for Engineers (MQR)**
Fall, spring, summer. 4 credits. Prerequisite: three years high school mathematics including trigonometry and logarithms and at least one course in differential and integral calculus. Due to an overlap in content, students will receive credit for only one course in the following group: MATH 1920, MATH 2130, MATH 2220, MATH 2240.

Introduction to multivariable calculus. Topics include partial derivatives, double and triple integrals, line integrals, vector fields, Green's theorem, Stokes' theorem, and the divergence theorem.

**MATH 2130 Calculus III (MQR)**
Fall, spring. 4 credits. Prerequisite: MATH 1120, 1220, or 1910. Due to an overlap in content, students will receive credit for only one course in the following group: MATH 2130, MATH 1920, MATH 2220, MATH 2240.

Designed for students who wish to master the basic techniques of multivariable calculus, but whose major will not require a substantial amount of mathematics. Topics include vectors and vector-valued functions; multivariable and vector calculus including multiple and line integrals; first- and second-order differential equations with applications; systems of differential equations; and elementary partial differential equations. The course may emphasize different topics in the syllabus in different semesters, such as Green's theorem, Stokes' theorem, and the divergence theorem.

**MATH 2210 Linear Algebra (MQR)**
Fall, spring. 4 credits. Prerequisite: two semesters of calculus with high performance or permission of department. Recommended for students who plan to major in mathematics or a related field. For a more applied version of this course, see MATH 2510. Due to an overlap in content, students will receive credit for only one course in the following group: MATH 2210, MATH 2230, MATH 2310, MATH 2940.

Topics include vector algebra, linear transformations, matrices, determinants, orthogonality, eigenvalues, and eigenvectors. Applications are made to linear differential equations.

**MATH 2220 Multivariable Calculus (MQR)**
Fall, spring. 4 credits. Prerequisite: MATH 2210. Recommended for students who plan to major in mathematics or a related field. Due to an overlap in content, students will receive credit for only one course in the following group: MATH 2220, MATH 1920, MATH 2130, MATH 2240.

Differential and integral calculus of functions in several variables, line and surface integrals as well as the theorems of Green, Stokes, and Gauss.

**MATH 2230 Theoretical Linear Algebra and Calculus (MQR)**
Fall. 4 credits. Prerequisite: two semesters of calculus with grade of A– or better, or permission of instructor. Due to an overlap in content, students will receive credit for only one course in the following group: MATH 2230, MATH 2210, MATH 2310, MATH 2940.

MATH 2230–2240 provides an integrated treatment of linear algebra and multivariable calculus designed for students who have been highly successful in their previous calculus courses. The material is presented at a higher theoretical level than in 2210–2220. Topics in 2230 include vectors, matrices, and linear transformations; differential calculus of functions of several variables; inverse and implicit function theorems; quadratic forms, extrema, and manifolds; multiple and iterated integrals.

**MATH 2240 Theoretical Linear Algebra (MQR)**
Fall, spring. 4 credits. Prerequisite: MATH 2230. Due to an overlap in content, students will receive credit for only one course in the following group: MATH 2240, MATH 1920, MATH 2130, MATH 2220.

Topics include vector fields; line integrals; differential forms and exterior derivative; work, flux, and density forms; integration of forms over parametrized domains; and Green's, Stokes', and divergence theorems.

**MATH 2310 Linear Algebra with Applications (MQR)**
Fall, spring. 3 credits. Prerequisite: MATH 1110 or equivalent. Students who plan to major in mathematics should take MATH 2210 or 2940. Due to an overlap in content, students will receive credit for only one course in the following group: MATH 2310, MATH 2210, MATH 2230, MATH 2940.

Introduction to linear algebra for students who wish to focus on the practical applications of the subject. A wide range of applications are discussed and computer software may be used. The main topics are systems of linear equations, matrices, determinants, vector spaces, orthogonality, and eigenvalues. Typical
applications are population models, input/output models, least squares, and difference equations.

**MATH 2710 A Second Course in Statistics**

Spring. 4 credits. Prerequisite: two semesters of calculus (MATH 1110-1120 or equivalent) or permission of instructor. Recommended: an introductory statistics course such as AP statistics, MATH 1710, ILRST 2100, or similar. Designed for students who wish to build on their knowledge of basic statistics to obtain a more modern and more advanced perspective on the field. The treatment will be elementary and accessible to students of the sciences and other fields, but a good working knowledge of calculus is assumed. An extended review of probability and random variables will be given first. Statistical inference topics to be discussed include estimation, testing hypotheses, nonparametric methods, multiple regression, and the analysis of variance. Both classical and Bayesian statistical methods are developed in an integrated presentation. Computer exercises will supplement the theory. With some effort, students with no prior knowledge of statistics should be able to master the course.

**MATH 2810 Deductive Logic (also PHIL 3310) (MQR)**

Fall. 4 credits.

For description, see PHIL 3310.

**MATH 2930 Differential Equations for Engineers (MQR)**

Fall, spring, summer. 4 credits. Prerequisite: MATH 1920. Taking MATH 2930 and 2940 simultaneously is not recommended. Introduction to ordinary and partial differential equations. Topics include: first-order equations (separable, linear, homogeneous, exact); mathematical modeling (e.g., population growth, terminal velocity); qualitative methods (slope fields, phase plots, equilibria, and stability); numerical methods; second-order equations (method of undetermined coefficients, application to oscillation and phase resonance, boundary-value problems and eigenvalues); Fourier series; linear partial differential equations (heat flow, waves, the Laplace equation); and linear systems of ordinary differential equations.

**MATH 2940 Linear Algebra for Engineers**

Fall, spring, summer. 4 credits. Prerequisite: MATH 1920. Taking MATH 2930 and 2940 simultaneously is not recommended. Introduction to ordinary and partial differential equations. Topics include: first-order equations (separable, linear, homogeneous, exact); mathematical modeling (e.g., population growth, terminal velocity); qualitative methods (slope fields, phase plots, equilibria, and stability); numerical methods; second-order equations (method of undetermined coefficients, application to oscillation and phase resonance, boundary-value problems and eigenvalues); Fourier series; linear partial differential equations (heat flow, waves, the Laplace equation); and linear systems of ordinary differential equations.

**MATH 2940 Linear Algebra for Engineers (MQR)**

Fall, spring, summer. 4 credits. Prerequisite: MATH 1920. Taking MATH 2930 and 2940 simultaneously is not recommended. Introduction to ordinary and partial differential equations. Topics include: first-order equations (separable, linear, homogeneous, exact); mathematical modeling (e.g., population growth, terminal velocity); qualitative methods (slope fields, phase plots, equilibria, and stability); numerical methods; second-order equations (method of undetermined coefficients, application to oscillation and phase resonance, boundary-value problems and eigenvalues); Fourier series; linear partial differential equations (heat flow, waves, the Laplace equation); and linear systems of ordinary differential equations.

**MATH 3140 Introduction to Analysis (MQR)**

Fall, spring, 4 credits. Prerequisites: MATH 2210, 2230, 2310, or 2940. Provides a transition from calculus to real analysis. Topics include rigorous treatment of fundamental concepts in calculus: including limits and convergence of sequences and series, continuity and uniform continuity and differentiability of functions. Emphasis is placed upon understanding and constructing mathematical proofs.

**MATH 3110 Introduction to Analysis (MQR)**

Fall, spring, 4 credits. Prerequisites: MATH 2110–2120, 2210–2220, or 2910 and 2940. Provides a transition from calculus to real analysis. Topics include rigorous treatment of fundamental concepts in calculus: including limits and convergence of sequences and series, continuity and uniform continuity and differentiability of functions. Emphasis is placed upon understanding and constructing mathematical proofs.

**MATH 3210 Manifolds and Differential Forms (MQR)**

Fall. 4 credits. Prerequisites: multivariable calculus and linear algebra (e.g., MATH 2210–2220, 2230–2240, or 1920 and 2940). A manifold is a type of subset of Euclidean space that has a well-defined tangent space at every point. Such a set is amenable to the methods of multivariable calculus. After a review of some relevant calculus, this course investigates manifolds and the structures that they are endowed with, such as tangent vectors, boundaries, orientations, and differential forms. The notion of a differential form encompasses such ideas as surface and volume forms, the work exerted by a force, the flow of a fluid, and the curvature of a surface, space, or hyperspace. The course re-examines the integral theorems of vector calculus (Green, Gauss, and Stokes) in the light of differential forms and applies them to problems in partial differential equations, topology, fluid mechanics, and electromagnetism.

**MATH 3230 Introduction to Differential Equations (MQR)**

Fall. 4 credits. Prerequisites: multivariable calculus and linear algebra (e.g., MATH 2210–2220, 2230–2240, or 1920 and 2940), or permission of instructor. Students may not receive credit for both MATH 3230 and MATH 4280. Next offered 2010–2011. Intended for students who want a brief one-semester introduction to the theory and techniques of both ordinary and partial differential equations.

**MATH 3320 Introduction to Number Theory (MQR)**

Fall. 4 credits. Prerequisite: MATH 2210, 2230, 2310, or 2940. An introductory course on number theory, the branch of algebra that studies the deeper properties of integers and their generalizations. Usually includes most of the following topics: the Euclidean algorithm, continued fractions, Pythagorean triples, Diophantine equations such as Pell’s equation, congruences, quadratic reciprocity, binary quadratic forms, Gaussian integers, and factorization in quadratic number fields. May include a brief introduction to Fermat’s Last Theorem.

**MATH 3360 Applicable Algebra (MQR)**

Spring. 4 credits. Prerequisite: MATH 2210, 2230, 2310, or 2940. Introduction to the concepts and methods of abstract algebra and number theory that are of interest in applications. Covers the basic theory of groups, rings and fields and their applications to such areas as public-key cryptography, error-correcting codes, parallel computing, and experimental designs. Applications include the RSA cryptosystem and use of finite fields to construct error-correcting codes and Latin squares. Topics include elementary number theory, Euclidean algorithm, prime factorization, congruences, theorems of Fermat and Euler, elementary group theory, Chinese remainder theorem, factorization in the ring of polynomials, and classification of finite fields.

**MATH 3560 Groups and Geometry (MQR)**

Spring. 4 credits. Prerequisite: MATH 2210, 2230, 2310, or 2940. Prior knowledge of group theory is not a prerequisite. A geometric introduction to the algebraic theory of groups, through the study of symmetries of planar patterns and 3-dimensional regular polyhedra. Besides studying these algebraic objects themselves, the course also provides an introduction to abstract mathematical thinking and mathematical proofs, serving as a bridge to the more advanced 4000-level courses. Abstract concepts covered include: axioms for groups; subgroups and quotient groups; isomorphisms and homomorphisms; conjugacy; group actions, orbits, and stabilizers. These are all illustrated concretely through the visual medium of geometry.

**MATH 3620 Dynamic Models in Biology (also BIOEE 3620) (MQR)**

Spring. 4 credits. Prerequisite: two semesters of introductory biology (BIOG 1101–1102, 1105–1106, 1107–1108, 1109–1110, or equivalent) and completion of math requirements for biological sciences major or equivalent. Next offered 2010–2011.

For description, see BIOEE 3620.

**MATH 4010 Honors Seminar: Topics in Modern Mathematics (MQR)**

Spring. 4 credits. Prerequisite: two mathematics courses numbered 3000 or higher or permission of instructor. Next offered 2010–2011. Participatory seminar aimed at introducing senior and junior mathematics majors to challenging problems and areas of modern mathematics. Helps students develop research and expository skills.

**MATH 4030 History of Mathematics # (MQR)**

Spring. 4 credits. Prerequisite: two mathematics courses above 3000, or permission of instructor. Survey of the development of mathematics from antiquity to the present, with an emphasis on the achievements, problems, and mathematical viewpoints of each historical period and the evolution of such basic concepts as number, geometry, construction, and proof. Readings from original sources in translation. Students are required to give oral and written reports. In addition to the lecture, a problem session (to be arranged) will meet twice a week.
MATH 4130 Honors Introduction to Analysis I (MQR)
Fall, spring. 4 credits. Prerequisite: high level of performance in MATH 2210–2220, 2230–2240, or 2920 and 2940 and familiarity with proofs. Students who do not intend to take MATH 4140 are encouraged to take MATH 4130 in the spring.
Introduction to the rigorous theory underlying calculus, covering the real number system and functions of one variable. Based entirely on proofs. The student is expected to know how to read and, to some extent, construct proofs before taking this course. Topics typically include construction of the real number system, properties of the real number system, continuous functions, differential and integral calculus of functions of one variable, sequences and series of functions.

MATH 4140 Honors Introduction to Analysis II (MQR)
Spring. 4 credits. Prerequisite: MATH 4130. Proof-based introduction to further topics in analysis. Topics may include the Lebesgue measure and integration, functions of several variables and directional calculus, implicit function theorem, infinite dimensional normed and metric spaces, Fourier series, ordinary differential equations.

MATH 4180 Introduction to the Theory of Functions of One Complex Variable (MQR)
Spring. 4 credits. Prerequisite: MATH 2200–2240, 3110, or 4130 or permission of instructor.
Theoretical and rigorous introduction to complex variable theory. Topics include complex differential and integral calculus for functions of a complex variable including Cauchy's theorem and the calculus of residues, elements of conformal mapping. Students interested in the applications of complex analysis should consider MATH 4220.

MATH 4200 Differential Equations and Dynamical Systems (MQR)
Fall. 4 credits. Prerequisite: high level of performance in MATH 2210–2220, 2230–2240, 1920 and 2940, or permission of instructor.
Course in ordinary differential equations in one and higher dimensions: qualitative, analytic, and numerical methods. Emphasis is on differential equations as models and the implications of the theory for the behavior of the system being modeled and includes an introduction to bifurcations.

MATH 4220 Applied Complex Analysis (MQR)
Spring. 4 credits. Prerequisite: MATH 2210–2220, 2230–2240, 1920 and 2940, or permission of instructor.
Course in complex analysis; construction of the real number system and functions of one variable. Based entirely on proofs. Students who do not intend to take MATH 4140 are encouraged to take MATH 4130 in the spring.

MATH 4240 Wavelets and Fourier Series (MQR)
Spring. 4 credits. Prerequisite: MATH 2210–2220, 2230–2240, 1920 and 2940, or permission of instructor. Next offered 2010–2011.
Both Fourier series and wavelets provide methods to represent or approximate general functions in terms of simple building blocks. Such representations have important consequences, both for pure mathematics and for applications. Emphasis is on clear statements of results and key ideas of proofs, working out examples, and applications.

MATH 4250 Numerical Analysis and Differential Equations (also CS 4210) (MQR)
Fall. 4 credits. Prerequisites: MATH 2210 or 2920 or equivalent, one additional mathematics course numbered 3000 or above, and knowledge of programming.
Introduction to the fundamentals of numerical analysis: error analysis, approximation, interpolation, numerical integration. In the second half of the course, the above are used to build approximate solvers for ordinary and partial differential equations. Strong emphasis is placed on understanding the advantages, disadvantages, and limits of applicability for all the covered techniques. Computer programming is required to test the theoretical concepts throughout the course. MATH 4250 (CS 4210) and MATH 4260 (CS 4220) provide a comprehensive introduction to numerical analysis; these classes can be taken independently from each other and in either order.

MATH 4260 Numerical Analysis: Linear and Nonlinear Problems (also CS 4220) (MQR)
Spring. 4 credits. Prerequisites: MATH 2210 or 2920 or equivalent, one additional mathematics course numbered 3000 or above, and knowledge of programming.
Introduction to the fundamentals of numerical linear algebra: direct and iterative methods for linear systems, eigenvalue problems, singular value decomposition. In the second half of the course, the above are used to build iterative methods for nonlinear systems and for multivariate optimization. Strong emphasis is placed on understanding the advantages, disadvantages, and limits of applicability for all the covered techniques. Computer programming is required to test the theoretical concepts throughout the course. MATH 4250 (CS 4210) and MATH 4260 (CS 4220) provide a comprehensive introduction to numerical analysis; these classes can be taken independently from each other and in either order.

MATH 4280 Introduction to Partial Differential Equations (MQR)
Spring. 4 credits. Prerequisite: MATH 2210–2220, 2230–2240, or 1920 and 2940, or permission of instructor. Students may not receive credit for both MATH 3230 and MATH 4280.
Topics are selected from first-order quasilinear equations, classification of second-order equations, with emphasis on maximum principles, existence, uniqueness, stability, Fourier series methods, approximation methods.

MATH 4310 Linear Algebra (MQR)
Fall. 4 credits. Prerequisite: MATH 2210, 2230, 2310, or 2940. Undergraduates who plan to attend graduate school should take MATH 4310–4340.
Students may not receive credit for both MATH 4310 and MATH 4330.
Introduction to linear algebra, including the study of vector spaces, linear transformations, matrices, and systems of linear equations. Additional topics are quadratic forms and inner product spaces, canonical forms for various classes of matrices and linear transformations.

MATH 4320 Introduction to Algebra (MQR)
Spring. 4 credits. Prerequisite: MATH 3320, 3360, 4310 or 4320, or permission of instructor.
Undergraduates who plan to attend graduate school in mathematics should take MATH 4330–4340. Students may not receive credit for both MATH 4320 and MATH 4340.
Introduction to various topics in abstract algebra, including groups, rings, fields, factorization of polynomials and integers, congruences, and the structure of finitely generated abelian groups. Optional topics are modules over Euclidean domains and Sylow theorems.

MATH 4330 Honors Linear Algebra (MQR)
Fall. 4 credits. Prerequisite: high level of performance in MATH 2210, 2230, 2310, or 2940. Students may not receive credit for both MATH 4310 and MATH 4330.
Honors version of a course in advanced linear algebra, which treats the subject from an abstract and axiomatic viewpoint. Topics include vector spaces, linear transformations, polynomials, determinants, tensor and wedge products, canonical forms, inner product spaces, and bilinear forms. Emphasis is on understanding the theory of linear algebra; homework and exams include at least as many proofs as computational problems. For a less theoretical course that covers approximately the same subject matter, see MATH 4310.

MATH 4340 Honors Introduction to Algebra (MQR)
Spring. 4 credits. Prerequisite: MATH 4330 or permission of instructor. Students may not receive credit for both MATH 4320 and MATH 4340.
Honors version of a course in abstract algebra, which treats the subject from an abstract and axiomatic viewpoint, including universal mapping properties. Topics include groups, groups acting on sets, Sylow theorems, rings, factorization: Euclidean rings and ideals, principal ideal domains and unique factorization domains, the structure of finitely generated modules over a principal ideal domain, fields, and Galois theory. The course emphasizes understanding the theory with proofs in both homework and exams. An optional computational component using the computer language GAP is available. For a less theoretical course that covers similar subject matter, see MATH 4320.

MATH 4370 Computational Algebra (MQR)
Spring. 4 credits. Prerequisite: linear algebra (MATH 2940, or MATH 2210, or MATH 4310).
Introduction to Gröbner bases theory, which is the foundation of many algorithms in computational algebra. In this course, students learn how to compute a Gröbner basis for polynomials in many variables. Covers the following applications: solving systems of polynomial equations in many variables, solving diophantine equations in integer variables, 3-colorable graphs, and integer programming. Such applications arise, for example, in computer science, engineering, economics, and physics.

MATH 4410 Introduction to Combinatorics I (MQR)
Fall. 4 credits. Prerequisite: MATH 2210, 2230, 2310, or 2940.
Combinatorics is the study of discrete structures that arise in a variety of areas, particularly in other areas of mathematics, computer science, and many areas of application. Central concerns are often to count objects having a particular property (e.g., trees) or to prove that certain structures exist (e.g., matchings of all vertices in a graph). The first semester of this sequence covers basic questions in graph theory, including extremal graph theory (how large must a graph be before one is guaranteed to have a certain subgraph) and Ramsey theory (which shows that large objects are forced to have structure). Variations on matching theory are discussed, including theorems of Dilworth, Hall, König, and Birkhoff, and an introduction to network flow theory. Methods of enumeration (inclusion/exclusion, Möbius inversion, and generating functions) are introduced and applied to the problems of counting permutations, partitions, and triangulations.

MATH 4420 Introduction to Combinatorics II (MQR)
Spring. 4 credits. Prerequisite: MATH 2210, 2230, 2310, or 2940.
Continuation of MATH 4410, although formally independent of the material covered there. The emphasis here is the study of certain combinatorial structures, such as Latin squares and combinatorial designs (which are of use in statistical experimental design), classical finite geometries and combinatorial geometries (also known as matroids, which arise in many areas from algebra and geometry through discrete optimization theory). There is an introduction to partially ordered sets and lattices, including general Möbius inversion and its application, as well as the Polya theory of counting in the presence of symmetries.

MATH 4500 Matrix Groups (MQR)
Fall. 4 credits. Prerequisite: MATH 2210–2220, 2230–2240, or 1920 and 2940. Next offered 2010–2011.
Topics include Lie algebras (which are an extension of the notion of vector multiplication in three-dimensional space), the exponential mapping (a generalization of the exponential of a matrix), and representation theory (which studies the different ways in which groups can be represented by matrices.)

MATH 4510 Euclidean and Spherical Geometry (MQR)
Fall. 4 credits. Prerequisite: MATH 2210, 2230, 2310, or 2940), or permission of instructor.
Covers topics from Euclidean and spherical (non-Euclidean) geometry. Nonlecture, seminar-style course organized around student participation.

MATH 4520 Classical Geometries (MQR)
Spring. 4 credits. Prerequisite: MATH 2210, 2230, 2310, or 2940), or permission of instructor.
Introduction to hyperbolic and projective geometry—the classical geometries that developed as Euclidean geometry was better understood. For example, the historical problem of the independence of Euclid’s fifth postulate is understood when the existence of the hyperbolic plane is realized. Straightedge (and compass) constructions and stereographic projection in Euclidean geometry can be understood within the structure of projective geometry. Topics in hyperbolic geometry include models of the hyperbolic plane and relations to spherical geometry. Topics in projective geometry include homogeneous coordinates and the classical theorems about conics and configurations of points and lines. Optional topics include principles of perspective drawing, finite projective planes, orthogonal Latin squares, and the cross ratio.

MATH 4530 Introduction to Topology (MQR)
Fall. 4 credits. Prerequisite: MATH 2210, 2230, 2310, or 2940, plus at least one mathematics course numbered 3000 or above, or permission of instructor. Topology may be described briefly as qualitative geometry. This course begins with basic point-set topology, including connectedness, compactness, and metric spaces. Later topics may include the classification of surfaces (such as the Klein bottle and Möbius band), elementary knot theory, or the fundamental group and covering spaces.

MATH 4540 Introduction to Differential Geometry (MQR)
Spring. 4 credits. Prerequisites: MATH 2210–2220, 2230–2240, or 2930–2940, plus at least one mathematics course numbered 3000 or above. MATH 4530 is not a prerequisite. Differential geometry involves using calculus to study geometric concepts such as curvature and geodesics. This introductory course focuses on the differential geometry of curves and surfaces. It may also touch upon the higher-dimensional generalizations. Riemannian manifolds, which underlie the study of general relativity.

MATH 4550 Applicable Geometry (MQR)
Spring. 4 credits. Prerequisite: good introduction to linear algebra (e.g., MATH 2210, 2230, 2310, or 2940) or permission of instructor. Does not assume students know the meaning of all words in the following description. Next offered 2010–2011.
Introduction to the theory of n-dimensional convex polytopes and polyhedra and some of its applications, with an in-depth treatment of the case of three dimensions.

MATH 4710 Basic Probability (MQR)
Fall. 4 credits. Prerequisites: one year of calculus. Recommended: some knowledge of multivariate calculus. Due to an overlap in content, students will receive credit for only one course in the following group: MATH 4710, ECON 3190, BTRY 4080. Introduction to probability theory, which prepares the student to take MATH 4720. The course begins with basic combinatorial probability, finite probability, independence, conditional probability, and Bayes formula. Density and distribution functions and their properties are introduced. The law of large numbers and the central limit theorem are stated and their implications for statistics are discussed.

MATH 4720 Statistics (MQR)
Spring. 4 credits. Prerequisites: MATH 4710 and knowledge of linear algebra (e.g., MATH 2210). Recommended: some knowledge of multivariate calculus. Due to an overlap in content, students will receive credit for only one course in the following group: MATH 4720, ECON 3190, BTRY 4090. Statistics have proved to be an important research tool in nearly all of the physical, biological, and social sciences. This course serves as an introduction to statistics for students who already have some background in calculus, linear algebra, and probability theory. Topics include parameter estimation, hypothesis testing, and linear regression. The course emphasizes both the mathematical description of statistics and techniques for data analysis that are useful in solving scientific problems.

MATH 4740 Stochastic Processes (MQR)
Spring. 4 credits. Prerequisites: MATH 4710, BTRY 4080, ORIE 3600, or ECON 3190 and some knowledge of matrices and linear algebra. Depending upon the interests of the instructor and the students, other topics may include queueing theory, martingales, Brownian motion, and option pricing. This course may be useful to graduate students in the biological sciences or other disciplines who encounter stochastic models in their work but who do not have the background for more advanced courses such as ORIE 6500.

MATH 4810 Mathematical Logic (also PHIL 4311) (MQR)
Spring. 4 credits. Prerequisites: MATH 2220 or 2230 and preferably some additional course involving proofs in mathematics, computer science, or philosophy. Next offered 2010–2011.
First course in mathematical logic: formal definitions of languages, truth, proofs and computability. Completeness, incompleteness and compactness theorems.

MATH 4820 Topics in Logic (also PHIL 4311) (MQR)
Spring. 4 credits. Prerequisite: MATH 2220 or 2230, and at least one additional course in mathematics, computer science, or philosophy. Typically considered as a research course involving individual study under the supervision of a faculty member.

MATH 4860 Applied Logic (also CS 4860) (MQR)
Fall. 4 credits. Prerequisites: MATH 2210–2220, 2230–2240, or 1920 and 2940; CS 2800 or equivalent (e.g., MATH 3520, 3560, 4520, 4540, or 4810); and additional course in mathematics or theoretical computer science. Covers propositional and predicate logic, compactness and completeness by tableaux, natural deduction, and resolution. Other possible topics include equational logic; Herbrand Universes and unification; rewrite rules and equational logic, Knuth-Bendix method and the congruence-closure algorithm and lambda-calculus reduction strategies; topics in Prolog, LISP, ML, or Nuprl; and applications to expert systems and program verification.

MATH 4900 Supervised Reading and Research
Fall, spring. 1–6 credits.
Supervised reading and research by arrangement with individual professors. Not for material currently available in regularly scheduled courses.

Professional-Level and Mathematics Education Courses
MATH 5080 Mathematics for Secondary School Teachers
Fall. 4 credits. Prerequisite: secondary school mathematics teachers or permission of instructor.
Examination of the principles underlying the content of the secondary school mathematics curriculum, including connections with the history of mathematics and current mathematics research.

Graduate Courses

Many of our graduate courses are topics courses for which descriptions are not included here; however, during each pre-enrollment period a schedule of graduate courses to be offered the following semester is posted at www.math.cornell.edu under “Courses.” This web site includes course descriptions that are often more detailed than those included here, as well as a means for interested students to participate in the process of scheduling meeting times.

MATH 6110 Real Analysis
Fall. 4 credits.
MATH 6110-6120 are the core analysis courses in the mathematics graduate program. 6110 covers measure and integration and functional analysis.

MATH 6120 Complex Analysis
Spring. 4 credits.
MATH 6110-6120 are the core analysis courses in the mathematics graduate program. 6120 covers complex analysis, Fourier analysis, and distribution theory.

MATH 6130-6140 Topics in Analysis
6130, fall; 6140, spring, 4 credits each. 6130 next offered 2010–2011.

MATH 6170 Dynamical Systems
Fall. 4 credits. Generally offered every two years.
Topics include existence and uniqueness theorems for ODEs; Poincare-Bendixon theorem and global properties of two dimensional flows; limit sets, nonwandering sets, chain recurrence; pseudo-orbits and structural stability; linearization at equilibrium points; stable manifold theorem and the Hartman-Grobman theorem; and generic properties: transversality theorem and the Kupka-Smale theorem. Examples include expanding maps and Anosov diffeomorphisms; hyperbolicity: the horseshoe and the Birkhoff-Smale theorem on transversal homoclinic orbits; rotation numbers; Herman’s theorem; and characterization of structurally stable systems.

MATH 6180 Smooth Ergodic Theory
Topics include invariant measures; entropy; Hausdorff dimension and related concepts; hyperbolic invariant sets: stable manifolds, Markov partitions and symbolic dynamics; equilibrium measures of hyperbolic attractors; ergodic theorems; Pesin theory: stable manifolds of nonhyperbolic systems; Liapunov exponents; and relations between entropy, exponents, and dimensions.

MATH 6190-6200 Partial Differential Equations
6190, fall; 6200, spring. 4 credits each semester.
Covers basic theory of partial differential equations.

MATH 6210 Measure Theory and Lebesgue Integration
Fall. 4 credits.
Covers measure theory, integration, and Lp spaces.

MATH 6220 Applied Functional Analysis
Spring. 4 credits.
Covers basic theory of Hilbert and Banach spaces and operations on them. Applications.

MATH 6280 Complex Dynamical Systems
This course covers various topics in the dynamics of analytic mappings in one complex variable, including Julia sets, the Mandelbrot set, and selected additional topics.

MATH 6310 Algebra
Fall. 4 credits. Assumes familiarity with material of standard undergraduate course in abstract algebra.
MATH 6310-6320 are the core algebra courses in the mathematics graduate program. 6310 covers group theory, especially finite groups; rings and modules, ideal theory in commutative rings; arithmetic and factorization in principal ideal domains and unique factorization domains; introduction to field theory; tensor products and multilinear algebra. (Optional topic: introduction to affine algebraic geometry.)

MATH 6320 Algebra
Spring. 4 credits. Prerequisite: MATH 6310.
MATH 6310-6320 are the core algebra courses in the mathematics graduate program. 6320 covers Galois theory, representation theory of finite groups, introduction to homological algebra. Familiarity with the material of a standard undergraduate course in abstract algebra will be assumed.

MATH 6330 Noncommutative Algebra
Fall 4 credits.
Covers Wedderburn structure theorem, Brauer group, and group cohomology.

MATH 6340 Commutative Algebra
Spring. 4 credits.
Covers Dedekind domains, primary decomposition, Hilbert basis theorem, and local rings.

MATH 6490 Lie Algebras
Topics include nilpotent, solvable and reductive Lie algebras; enveloping algebras; root systems; Coxeter groups; and classification of simple algebras.

MATH 6500 Lie Groups
Spring. 4 credits.
Topics include topological groups, Lie groups; relation between Lie groups and Lie algebras; exponential map, homogeneous manifolds; and invariant differential operators.

MATH 6510 Algebraic Topology
Spring. 4 credits.
One of the core topology courses in the mathematics graduate program. An introductory study of certain geometric processes for associating algebraic objects such as groups to topological spaces. The most important of these are homology groups and homotopy groups, especially the first homotopy group or fundamental group, with the related notions of covering spaces and group actions. The development of homology theory focuses on verification of the Eilenberg-Steenrod axioms and on effective methods of calculation such as simplicial and cellular homology and Mayer-Vietoris sequences. If time permits, the cohomology ring of a space may be introduced.

MATH 6520 Differentiable Manifolds I
Fall. 4 credits. Prerequisites: advanced calculus, linear algebra (MATH 4310), point-set topology (MATH 4530).
One of the core topology courses in the mathematics graduate program. Introduction to geometry and topology from a differentiable viewpoint, suitable for beginning graduate students. The objects of study are manifolds and differentiable maps. The collection of all tangent vectors to a manifold forms the tangent bundle, and a section of the tangent bundle is a vector field. Alternatively, vector fields can be viewed as first-order differential operators. Students study flows of vector fields and prove the Poincare–Bendixon theorem. In the presence of a Riemannian metric, the notions of parallel transport, curvature, and geodesics are development. Students examine the tensor calculus and the exterior differential calculus and prove Stokes’ theorem. If time permits, de Rham cohomology, Morse theory, or other optional topics are introduced.

MATH 6530 Differentiable Manifolds II
Spring. Prerequisites: MATH 6520 or equivalent. Next offered 2010–2011.
Advanced topics from differential geometry and differentiable topology selected by instructor. Examples of eligible topics include transversality, cobordism, Morse theory, classification of vector bundles and principal bundles, characteristic classes, microlocal analysis, conformal geometry, geometric analysis and partial differential equations, and Atiyah-Singer index theorem.

MATH 6610 Geometric Topology
Fall. 4 credits. Next offered 2010–2011.
Introduction to some of the more geometric aspects of topology and its connections with group theory. Possible topics include surface theory, 3-manifolds, knot theory, geometric and combinatorial group theory, hyperbolic groups, and hyperbolic manifolds.

MATH 6620 Riemannian Geometry
Spring. 4 credits.
Topics include linear connections, Riemannian metrics and parallel translation; covariant differentiation and curvature tensors; the exponential map, the Gauss Lemma and completeness of the metric; isometries and space forms, Jacobi fields and the theorem of Cartan-Hadamard; the first and second variation formulas; the index form of Morse and the theorem of Bonnet-Myers; the Rauch, Hessian, and Laplacian comparison theorems; the Morse index theorem; the conjugate and cut loci; and submanifolds and the Second Fundamental Form.

MATH 6710 Probability Theory I
Fall. 4 credits. Prerequisite: knowledge of Lebesgue integration theory, at least on real line. (Students can learn this material by taking parts of MATH 4130–4140 or 6210.)
A mathematically rigorous course in probability theory which uses measure theory but begins with the basic definitions of independence and expected value in that context. Law of large numbers, Poisson and central limit theorems, and random walks.

MATH 6720 Probability Theory II
Spring. 4 credits. Prerequisite: MATH 6710.
Conditional expectation, martingales, Brownian motion. Other topics such as Markov chains, ergodic theory, and stochastic calculus depending on time and interests of the instructor.
MATH 6740 Introduction to Mathematical Statistics
Spring. 4 credits. Prerequisites: MATH 6710 (measure theoretic probability) and ORIE 6700, or permission of instructor. Topics include an introduction to the theory of point estimation, hypothesis testing and confidence intervals, consistency, efficiency, and the method of maximum likelihood. Basic concepts of decision theory are discussed; the key role of the sufficiency principle is highlighted and applications are given for finding Bayesian, minimax, and unbiased optimal decisions. Modern computer-intensive methods like the bootstrap receive some attention, as do simulation methods involving Markov chains. The parallel development of some concepts of machine learning is exemplified by classification algorithms. An optional section may include nonparametric curve estimation and elements of large sample asymptotics.

MATH 6810 Logic
Spring. 4 credits. Covers basic topics in mathematical logic, including propositional and predicate calculus; formal number theory and recursive functions; completeness and incompleteness theorems, compactness and Skolem-Löwenheim theorems. Other topics as time permits.

MATH 7110–7120 Seminar in Analysis
7110, fall; 7120, spring. 4 credits each semester. Next offered 2010–2011.

MATH 7130 Functional Analysis
Spring. 4 credits. Covers topological vector spaces, Banach and Hilbert spaces, and Banach algebras. Additional topics selected by instructor.

MATH 7150 Fourier Analysis

MATH 7170 Applied Dynamical Systems (also TAM 7760)
Fall. 4 credits. Recommended: TAM 6750, MATH 6170, or equivalent. Topics include review of planar (single-degree-of-freedom) systems; local and global analysis, stability and bifurcations in planar systems; center manifolds and normal forms; the averaging theorem and perturbation methods; Melnikov's method; discrete dynamical systems, maps and difference equations, homoclinic and heteroclinic motions, the Smale horseshoe and other complex invariant sets; global bifurcations, strange attractors, and chaos in free and forced oscillator equations; and applications to problems in solid and fluid mechanics.

MATH 7210–7220 Seminar in Algebra
7210, fall; 7220, spring. 4 credits each semester. Next offered 2010–2011.

MATH 7250 Topics in Algebra
Fall, spring. 4 credits. Selection of advanced topics from algebra, algebraic number theory, and algebraic geometry. Course content varies.

MATH 7270 Algebraic Number Theory
Fall, spring. 4 credits. Topics include algebraic number fields, rings of integers, ideals, class groups, and units. Additional topics selected by instructor.

MATH 7310–7320 Seminar in Algebra
7310, fall; 7320, spring. 4 credits each semester. Next offered 2010–2011.

MATH 7350 Topics in Algebra
Fall, spring. 4 credits. Topics include advanced topics in algebra, algebraic number theory, and algebraic geometry. Content varies.

MATH 7400 Homological Algebra
Fall. 4 credits. Next offered 2010–2011.

MATH 7510–7520 Berstein Seminar in Topology
7510, fall; 7520, spring. 4 credits each semester.

MATH 7530 Algebraic Topology II
Fall. 4 credits. Next offered 2010–2011. Continuation of 6510. The standard topics most years are cohomology, cup products, Poincaré duality, and homotopy groups. Other possible topics include fiber bundles, fibrations, vector bundles, and characteristic classes. May sometimes be taught from a differential forms viewpoint.

MATH 7550–7560 Topology and Geometric Group Theory Seminar
7550, fall; 7560, spring. 4 credits each semester.

MATH 7570–7580 Topics in Topology
7570, fall; 7580, spring. 4 credits each semester. Selection of advanced topics from modern algebraic, differential, and geometric topology. Content varies.

MATH 7610–7620 Seminar in Geometry
7610, fall; 7620, spring. 4 credits each semester.

MATH 7670 Algebraic Geometry
Fall, spring. 4 credits.

MATH 7710–7720 Seminar in Probability and Statistics
7710, fall; 7720, spring. 4 credits each semester.

MATH 7740 Statistical Learning Theory
Fall, spring. 4 credits. Prerequisites: basic mathematical statistics (MATH 6740 or equivalent) and measure theoretic probability (MATH 6710). The course aims to present the developing interface between machine learning theory and statistics. Topics include classification and pattern recognition, support vector machines, neural networks, tree methods, and boosting.

MATH 7750 Statistical Theories Applicable to Genomics
Fall. 4 credits. Next offered 2010–2011. Focuses on statistical concepts useful in genomics (e.g., microarray data analysis) that involve a large number of populations. Discusses false discovery rate (FDR) of Benjamini and Hochberg, and Storey's papers relating to pFDR. Also discusses the empirical Bayes approach, which could "borrow the strength" from other populations.

MATH 7770–7780 Stochastic Processes
7770, fall; 7780, spring. 4 credits each semester.

MATH 7810–7820 Seminar in Logic
7810, fall; 7820, spring. 4 credits each semester.

MATH 7830 Model Theory
Spring. 4 credits. Introduction to model theory at the level of the books by Hodges or Chang and Keisler.

MATH 7840 Recursion Theory
Fall. 4 credits. Covers theory of effectively computable functions; classification of recursively enumerable sets; degrees of recursive unsolvability; applications to logic; hierarchies; recursive functions of ordinals and higher type objects; generalized recursion theory.

MATH 7870 Set Theory

MATH 7880 Topics in Applied Logic
Fall. 4 credits. Covers applications of the results and methods of mathematical logic to other areas of mathematics and science. Topics vary each year; some recent examples are: automatic theorem proving, formal semantics of programming and specification languages, linear logic, constructivism (intuitionism), non-standard analysis, automata theory, and finite model theory. This year the course will be conducted as a teaching and research seminar covering current topics in the logical foundations of computer science. Topics will include logics and model theory for hybrid systems, non-monotonic reasoning, and probabilistic reasoning.

MATH 7900 Supervised Reading and Research
Fall. 4 credits. Next offered 2010–2011.

MEDIEVAL STUDIES

Undergraduate Study in Medieval Studies
Undergraduate students may pursue an undergraduate minor in medieval studies, for which they must complete five courses at the 2000 level or above in at least two different disciplines, of which up to two may also count toward their major. Students should seek out an advisor, and may wish to consult with the director. Those completing a minor will receive a notification on their transcripts and a certificate signed by the director and the dean of the college; students who are completing undergraduate minors are currently eligible for the Miller Scholarship offered by the Telluride Association, funding a year at the Central European University in Budapest, Hungary.

Students derive many other benefits from pursuing such a minor, as they do from taking courses in medieval cultures, languages, and literature generally. The Medieval Studies Program houses a lively undergraduate association, Quodlibet, which arranges frequent lectures on medieval topics and an annual celebratory reading of prose and poetry in many medieval languages. Cornell’s students and scholars pursuing varied interests in these many realms constitute a strong and supportive community. Course work in medieval studies enhances the student’s enjoyment and understanding of the artistic and material relics of the Middle Ages: Gregorian chant, illuminated manuscripts and stained glass windows, Gothic cathedrals, Crusader castles, and picturesque towns cramped within ancient walls. The student will discover the serious realities involved in, and
shaped by Arthurian tales of knights and ladies, dungeons, dragons, and other marvels. Students can analyze and appreciate the horrors of the Black Death, triumphs in courtly love and pitched battle, swords and scimitars, caliphs and popes, fear of demons and djinns, and angels. The period saw many of the foundational choices that have, for good and ill, made the world what it is today. Many of our current challenges in the fields of law, social rights, attitudes toward power, authority, gender relations, and sexual mores derive from the ways in which these and other questions were formulated a millennium ago. Many of the courses listed by the Medieval Studies Program pertain specifically to these fields, as well as to the interdisciplinary combinations for which the program is noted.

**Medieval Languages**

Medieval texts (like all others) become most lively and informative when read in the original, and Cornell fortunately offers many courses for students interested in acquiring the relevant skills: Medieval Latin, Old English, Middle English, Gothic, Old Saxon, Old High German, Middle High German, Old Norse— Icelandic, Old Irish, Middle Welsh, Old Occitan (Provençal), Old French, Medieval Spanish, Medieval Italian, Old Russian, Old Church Slavonic, Classical Arabic, Medieval Hebrew, Classical Chinese, and Classical Japanese.

Some medieval languages require study of a modern language (e.g., French for Old Occitan and Old French) or a classical language (Classical Latin for Medieval Latin) as background. Students interested in an undergraduate minor in medieval studies should begin the study of a medieval language as early as possible, so that they may be able to study texts in the original before they graduate. Students are advised to consult the sponsoring departments for information about the prerequisites for various medieval languages.

**Graduate Study**

The Medieval Studies Program offers both an interdisciplinary and a literary comparative Ph.D. in medieval studies. Disciplinary fields of concentration offered within the Field of medieval studies are medieval archaeology, medieval history, medieval history of art, medieval literature, medieval music, medieval philology and linguistics, and medieval philosophy. Information about the graduate program in medieval studies is available from the field coordinator (medievalst@cornell.edu), and at [Cornucopia](http://www.arts.cornell.edu/medieval), the program's website.

**Medieval Studies Courses: Graduate and Undergraduate**

Courses in various aspects of medieval studies are offered every year in several cooperating departments, including Art History, Asian Studies, Classics, Comparative Literature, English, German Studies, History, Linguistics, Music, Near Eastern Studies, Philosophy, Romance Studies, Russian Literature, and by the Society for the Humanities. For descriptions, please see the home department. The current year's offerings are:

**ARTH 3300** Romanesque and Early Gothic Art and Architecture
Spring. 4 credits. C. Robinson.

**ARTH 4305** Looking for Love: Visual and Literary Cultures of Love in the Medieval Mediterranean 1100–1400
Spring. 4 credits. C. Robinson.

**CHLIT 2213–2214** Introduction to Classical Chinese
2213, fall; 2214, spring. 5 credits each semester. D. X. Warner.

**CHLIT 4420** Tang Poetry: Themes and Contexts
Spring. 4 credits. D. X. Warner.

**CLASS 3625** Christianization of the Roman World (also HIST/NES 3625, RELST 3635)
Fall. 4 credits. E. Rebillard.

**CLASS 3750** Introduction to Dendrochronology (also ARKEO 3090, ARTH 3250)
Fall. 4 credits. S. Manning.

**CLASS 7682** Topics in Ancient History (also HIST 6300, JWST/INES 6642)
Spring. 4 credits. E. Rebillard.

**COML 4515/6515** Ariosto, Rabelais, Spenser (also ENGL/ROMS 4515/6515)
Fall. 4 credits. W. J. Kennedy.

**ENGL 2100** Medieval Romance: Voyage to the Otherworld
Fall. 4 credits. T. Hill.

**ENGL 2130** Cultures of the Middle Ages
Fall. 4 credits. S. Zacher.

**ENGL 2740** Scottish Literature
Fall. 4 credits. T. Hill and H. Shaw.

**ENGL 3080** Old Norse—Icelandic Literature in Translation
Spring. 4 credits. T. Hill.

**ENGL 3110/6110** Old English
Fall. 4 credits. S. Zacher.

**ENGL 3120/6120** Beowulf
Spring. 4 credits. T. Hill.

**ENGL 3190** Chaucer
Spring. 4 credits. M. Raskolnikov.

**ENGL 6151** Visionaries and Vision Literature in the Middle Ages
Fall. 4 credits. A. Galloway.

**ENGL 6190** Chaucer and Gower
Spring. 4 credits. A. Galloway.

**FREN 3280** Medieval Francophone Literature
Fall. 4 credits. M. Migiel.

**FREN 4390** Poems of Force: Medieval Epic
Spring. 4 credits. C. Howie.

**GERST 4050–4060** Introduction to Middle High German
4050, fall; 4060. Spring. 4 credits each term. A. Groos.

**ITAL 3400** History of the Grotesque
Fall. 4 credits. C. Howie.

**ITAL 4270/6270** Dante’s Commedia
Spring. 4 credits. M. Migiel.

**LATIN 4202** Advanced Readings in Latin Literature
Spring. 4 credits. C. Britain.

**LATIN 7271** Latin Graduate Seminar: Cicero’s philosophical works
Fall. 4 credits. C. Britain.

**LING 1109** English Words: Histories and Mysteries
Spring. 3 credits. W. Harbert.

**LING 2217** History of the English Language to 1300 (also ENGL 2170)
Fall. 4 credits. W. Harbert.

**LING 2218** History of the English Language since 1300 (also ENGL 2180)
Spring. 4 credits. W. Harbert.

**LING 2236** Introduction to Scottish Gaelic
Spring. 3 credits. W. Harbert.

**LING 4417** History of the Russian Language (also RUSSA 4401)
Spring. 4 credits. W. Browne.

**LING 6645** Gothic
Fall. 4 credits. W. Harbert.

**[MEDVL 4103/6103 Survey of Medieval Latin Literature](http://www.arts.cornell.edu/medieval) (also LATIN 4213/7213)
Fall. 4 credits. Next offered 2011–2012. This course is designed to introduce students to characteristic genres and discourses of Medieval Latin.

**[MEDVL 4201/6201 Topics in Medieval Latin Literature](http://www.arts.cornell.edu/medieval) (also LATIN 4223/7223)

**[MEDVL 6102 Latin Paleography](http://www.arts.cornell.edu/medieval) (also LATIN 7222)
Spring. 4 credits. Next offered 2011–2012. Latin Paleography will be devoted in approximately equal measure to the dating, localization, and reading of scripts, and to codicological methods in the study of medieval manuscripts.

**[MEDVL 7770 Medieval Studies Proseminar](http://www.arts.cornell.edu/medieval)
Fall. 2 credits. Staff. Next offered 2010–2011. This course is designed to introduce graduate students to some of the bibliography and approaches available for studying the Middle Ages.

**MEDVL 8010 Directed Study—Individual**
Fall and spring. 2–4 credits.

**MEDVL 8020 Directed Study—Group**
Fall and spring. 2–4 credits.

**NES 2655 Introduction to Islamic Civilization (also HIST 2540, RELST 2655)**
Fall. 3 credits. D. Powers.

**NES 2754 Introduction to Near Eastern Civilizations: The Literature of the Princes, Prophets, and Poets (also COML 2754)**
Fall. 3 credits. S. Toorawa.

**NES 3212 Quran and Commentary (also RELST 3212)**
Fall. 4 credits. D. Powers.

**NES 3677 Search for the Historical Muhammad (also HIST/RELST 3677)**
Spring. 4 credits. D. Powers.

**ARTS AND SCIENCES - 2009–2010**

**MUSIC**

Office: 255-4097

Web site: www.music.cornell.edu

**Musical Performance and Concerts**

Musical performance is an integral part of Cornell’s cultural life and an essential part of its undergraduate academic programs in music. The department encourages music-making through its offerings in individual instruction and through musical organizations and ensembles that are directed and trained by members of the faculty. Students from all colleges and departments of the university join with music majors in all of these ensembles:

- Vocal ensembles: Chamber Singers, Chorale, Chorus, Glee Club, World Music Choir
- Instrumental ensembles: Chamber Music Ensembles, Chamber Orchestra, Symphony Orchestra, Jazz Ensembles, Jazz Combos, Chamber Winds, Wind Ensemble, Wind Symphony, Gamelan Ensemble, Middle Eastern Music Ensemble, World Drum and Dance Ensemble, Steel Band, Percussion Ensemble

Information about requirements, rehearsal hours, and conditions for academic credit can be found in the following listings for the Department of Music. Announcements of auditions are posted during registration each fall semester and, where appropriate, each spring semester as well.

The university is also home to many student-run musical organizations not affiliated with the Department of Music, including the Big Red Marching Band and Big Red Pep Band, and several a cappella groups. Information is available directly from each group.

The Department of Music and the Faculty Committee on Music sponsor more than 100 formal and informal concerts each year by Cornell’s ensembles, faculty, and students and by distinguished visiting artists. The great majority of these concerts are free and open to the public. Lectures and concerts are listed at www.music.cornell.edu. Additional information is available through the events information office (255-4760).

**Nonmajors**

In addition to its performing, instructional, and concert activities, the department offers numerous courses for nonmajors, many of which carry no prerequisites and presuppose no previous formal training in music. Consult the following course listings, and for further information consult Professor C. Johnston Turner, director of undergraduate studies (255-3712), or the department office, 101 Lincoln Hall (255-4097).

**The Minor**

For those non-majors across the university whose involvement with the music department forms an essential aspect of their undergraduate study, the undergraduate minor in Music gives both formal recognition and structural coherence to their musical studies. The Music minor is designed to provide for breadth by requiring involvement in each of the three principal subdisciplines (music theory, music history, and musical performance), while at the same time permitting enough flexibility that each student can emphasize the area or areas that interest him or her most.

The following courses are required to fulfill the undergraduate minor in Music:

1. One course in music theory: MUSIC 1101 for 3 credits, 1105 for 3 credits, or 2101/2103 for 5 credits. A student given Advanced Standing in place of MUSIC 2101/2103 should take a higher-numbered theory course; placement alone cannot fulfill this requirement.

2. One course in music history and culture, drawn from courses listed in *Courses of Study* as Music in History and Culture (3 credits) and those listed as Music History Courses for Majors and Qualified Non-Majors (3-4 credits).

3. Four credits in performance, drawn from those courses listed as Musical Instruction (i.e., private lessons in voice or another instrument), or Musical Organizations and Ensembles, or both. Since these are 1- and 2-credit courses, students may achieve their total of 4 credits in various ways: two semesters of 2-credit courses, four semesters of 1-credit ensembles, or a combination of the two.

4. In addition to these 10–13 credits, an additional 8 credits of elective courses from any Music subdiscipline, including Electroacoustic Music, of which at least 3 credits must be in a classroom (not performance) course.

**The Major**

The major carries the study of music to an advanced level through the integration of performance, music theory, and music history. It is designed to accommodate both students who are oriented toward eventual graduate or professional work in music and those who wish to take a more general approach, often in conjunction with a major in another department.

Students contemplating a major in music should arrange for placement examinations and advising in the department as early as possible, preferably during the freshman orientation period. Information is available from the director of undergraduate studies. Prerequisites for admission to the major are completion of MUSIC 2102 and 2104, preferably by the end of the freshman year, with an overall grade of B– or better in each course. In consultation with the director of undergraduate studies, students are expected to have chosen an advisor from among the department faculty before acceptance into the major; admission to the major is decided by the faculty as a whole. Students majoring in music then design their course of study with their advisor.

Music majors must complete the Core Curriculum plus at least two electives. The electives allow students to focus in specific areas, such as composition, performance, jazz studies, vernacular music, Western art music, or Asian music. Students may, however, choose electives that reflect a more broadly based study. Those intending to pursue graduate study or professional work in music are advised to take further courses in addition to the two required electives.

The Core Curriculum consists of courses:

1. in music theory: MUSIC 3101, 3102, 3103, 3104
2. in music history: MUSIC 3201, 3202, 3211, 4211
3. in performance: four semesters of participation in a musical organization or ensemble sponsored by the department of music (MUSIC 3601 through 3634 and 4601 through 4651)

Electives: at least 8 credits from the following:

1. in music theory: courses among the theory listings above 3104
2. in music history: MUSIC 3222 through 3901, or 4501 and above.
3. in performance: MUSIC 3502 or 4501

**Honors.** The honors program in music is intended to provide special distinction for the department’s ablest undergraduate majors.
Qualified students are invited to become candidates by the faculty in the second semester of their junior year. As soon as possible thereafter, the student forms a committee of three or more faculty members to guide and evaluate the honors work. In their senior year, candidates enroll in MUSC 4911–4912 with the chair of the honors committee as instructor. Candidates are encouraged to formulate programs that allow them to demonstrate their musical and scholarly abilities, culminating in an honors thesis, composition, or recital, to be presented not later than April 1 of the senior year. An oral examination on the honors project will be administered by the candidate's committee not later than April 20. The level of honors conferred is based primarily on the candidate's performance in the honors program, and secondarily on the candidate's overall record in departmental courses and activities.

Computing in the Arts Undergraduate Minor

A minor in Computing in the Arts with an emphasis on music is available both to music majors and to students majoring in other subject areas. For information, please consult www.cis.cornell.edu/ComputingArts, or contact the director, Professor Graeme Bailey.

Distribution Requirement

College of Arts and Sciences students may apply either one or two music department courses toward the distribution requirement in Literature and the Arts (LA) or Cultural Analysis (CA), as noted. Neither first-year seminars nor advanced placement credit count toward this requirement.

If one music course is counted for distribution, it must carry at least 3 credits, and it may not be in musical performance (MUSC 3501, 3502, or 4501) or in organizations and ensembles (MUSC 3601 through 3634 and 4601 through 4651). Any two of the 2-credit courses MUSC 3112, 3113, or 3114 count as one course for this purpose.

If two music courses are counted for distribution in LA, they must total at least 6 credits, and at least one of the courses must be academic (as described in the preceding paragraph), not performance-oriented. The second "course," however, may comprise either up to 4 credits earned in performance (MUSC 3501, 3502, or 4501) or up to 4 credits earned in organizations and ensembles (MUSC 3601 through 3634 and 4601 through 4651), but not both.

Facilities

Music Library. The Sidney Cox Library of Music and Dance in Lincoln Hall has an excellent collection containing periodicals, books, scores, parts, sound and video recordings, microforms, rare materials, and electronic resources. Its depth and breadth serve the needs of a wide variety of users on the campus and its listening and video viewing facilities are open to all members of the Cornell community.

Concert Halls. The Department of Music sponsors more than 100 concerts annually. Cornell's principal concert halls are Bailey Hall Auditorium (about 1,400 seats), Sage Chapel (about 800), and Barnes Hall Auditorium (about 280). Rehearsal Spaces and Practice Rooms. Departmental ensembles rehearse primarily in Lincoln Hall, Barnes Hall, and Sage Chapel. Twenty-six studios in Lincoln Hall are available for individual practice by pianists, vocalists, and instrumentalists who are members of the Cornell community. Of these, seven have grand pianos, six have upright pianos, and two have percussion instruments. For information about access to the practice rooms, see www.music.cornell.edu/performing/practice-rooms or contact the department office.

Instruments. Six concert grand pianos are available for performances in the various concert halls, plus several historical keyboard instruments, including fortepianos, harpsichords, and clavichords. Four distinctive organs are available to qualified individuals for lessons and practice. In addition, the music department owns a limited number of string, wind, and percussion instruments that may be rented by members of the department's ensembles.

Cornell Electroacoustic Music Center (CEMC). The Cornell Electroacoustic Music Center comprises a research lab, a 14-workstation teaching lab in the Music Library, and a primary multichannel studio. Several live performance and recording rigs are also available, from hand-held to solid-state. A combination of commercial and open-source software solutions service an array of student and faculty interests, including sound manipulation and sound spatialization, live performance, multimedia, intelligent music systems (adaptive and algorithmic composition), music notation, sound art and experimentation, and high-resolution recording. The center operates its own web server with space for web hosting, data backup, and remote login. CEMC's facilities are state-of-the-art and can accommodate almost any creative inclination.

Courses

Music Theory

Students contemplating the music major are strongly advised to take MUSIC 2101, 2102, 2103, and 2104 in the freshman year; in any case MUSIC 2102 and 2104 must be completed no later than the end of the sophomore year.

MUSC 1100 Elements of Musical Notation

Fall or spring, weeks 2–5. 1 credit. Corequisite: any 3-credit music course and permission of instructor. Staff. This four-week course, given at the beginning of each semester, fulfills the requirement of basic pitch, rhythm, and score-reading skills needed for some intermediate courses and 2000-level courses with prerequisites.

MUSC 1101 Fundamentals of Music (LA-AS)

Spring. 3 credits. No previous training in music required. M. Hatch. An introduction to the theory of music from around the world: the structures of melody and rhythm (pulse, meter, scales, modes, texture, timbre, harmony, form) and the influences of audiences, music technologies (including instruments), reasons, and contexts for music making on instrumental and vocal music from classical, folk, traditional, and popular music of Asia, Africa, Europe, and the Americas. Extensive listening and video examples.

MUSC 1105 Introduction to Music Theory (LA-AS)

Fall. 3 credits. Recommended: experience in reading music; students may take MUSC 1100 concurrently. J. Webster. An elementary, self-contained introduction to the theory of Western tonal music. Fundamental musical techniques, theoretical concepts, and their application. Intervals, scales, triads; basic concepts of tonality and form; analysis of representative works. Coverage primarily of "classical" (concert) music, with some attention to popular music and jazz.

MUSC 1466 Physics of Musical Sound (also PHYS 1204) (PBS)

Spring. 3 credits. K. Selby. For description, see PHYS 1204.

MUSC 2101 Tonal Theory I (LA-AS)

Fall. 3 credits. Prerequisites: admission by departmental diagnostic exam and concurrent enrollment in or previous credit for MUSC 2103, or equivalent. Intended for students expecting to major in music and other qualified students. Staff. Detailed study of the fundamental elements of modal and tonal music: rhythm, scales, intervals, triads; melodic principles and two-part counterpoint; diatonic harmony and four-part voice leading; form and structures. Study engages different repertoires, including Western art music as well as non-Western and popular traditions.

MUSC 2102 Tonal Theory II (LA-AS)

Spring. 3 credits. Prerequisites: MUSC 2101 and 2103 or equivalent; concurrent enrollment in or previous credit for MUSC 2104. Intended for students expecting to major in music and other qualified students. A grade of B– or better in MUSC 2102 is required for admission to music major. Staff. Continued study of voice leading and harmonic progression, including diatonic modulation; analysis of binary and ternary forms as well as jazz, blues, and pop phrase models.

MUSC 2103 Musicianship I

MUSC 2104 Musicianship II

Spring. 2 credits. Pre- or corequisite: MUSC 2102. Intended for students expecting to major in music and other qualified students. Staff. Sight singing: longer melodies in three clefs, including diatonic modulations. Keyboard: diatonic chord progressions and sequences. Dictation: intervals, rhythms; longer melodies; chorale phrases with diatonic modulation. Score reading: three parts using treble, alto, and bass clefs. Transcriptions of pop, jazz, and other genres.
MUSIC 3101 Tonal Theory III (LA-AS)  
Fall. 3 credits. Prerequisites: MUSIC 3102 and 3104 or equivalent. Corequisite: MUSIC 3103. Staff. Continuation of diatonic and introduction to chromatic harmony; species counterpoint; composition in small forms.

MUSIC 3102 Tonal Theory IV (LA-AS)  
Spring. 3 credits. Prerequisites: MUSIC 3101 and 3103 or equivalent. Corequisite: MUSIC 3104. Staff. Study of and composition in larger forms, including sonata form; systematic study of chromatic harmony, voice-leading, and modulation; composition in chromatic style.

MUSIC 3103 Musicianship III  

MUSIC 3104 Musicianship IV  
Spring. 2 credits. Pre- or corequisite: MUSIC 3102. Staff. Sight singing: melodies in four clefs, including modality and chromatic modulation. Keyboard: chromatic sequences, chromatic modulations, improvised modulations employing diatonic pivot chords. Dictation: intervals, rhythms, short melodies, and short, diatonic chorale phrases. Score reading: four parts, including transposing instruments. Musical terms: other terms in French, German, and Italian.

MUSIC 3111 Jazz Improvisation I  
Fall. 3 credits. Prerequisite: MUSIC 2101 or permission of instructor. P. Merrill. An introduction to fundamental jazz theory, technique, and applied skills.

MUSIC 3112 Jazz Improvisation II  
Fall. 3 credits. Prerequisite: MUSIC 3111. Next offered 2010–2011. P. Merrill. Continuation of jazz theory, technique, and applied skills.

MUSIC 3113 Jazz Improvisation III  
Spring. 3 credits. Prerequisite: MUSIC 3112. Next offered 2010–2011. P. Merrill. Class work and assignments emphasize Coltrane and post-Coltrane harmony, advanced rhythmic development, augmented vocabulary, and an introduction to playing "free."

MUSIC 3115 Jazz Piano  
Spring. 3 credits. Prerequisite: MUSIC 2101 or permission of instructor. Next offered 2010–2011. P. Merrill. An introduction to jazz keyboard technique, intended primarily for jazz instrumentalists with little or no keyboard experience and pianists with little or no jazz experience.

MUSIC 4101 Counterpoint # (LA-AS)  
Spring. 4 credits. Prerequisite: MUSIC 2101 or permission of instructor. Next offered 2010–2011. S. Stucky.

MUSIC 4102 Topics in Music Analysis (also MUSIC 6101) (LA-AS)  
Spring. 4 credits. Prerequisite: MUSIC 2101 or permission of instructor. Next offered 2010–2011. J. Webster.

MUSIC 4103 Topics in Post-Tonal Theory and Analysis (also MUSIC 7102) (LA-AS)  

MUSIC 4111 Composition (LA-AS)  
Spring. 4 credits. Prerequisite: MUSIC 3101 or permission of instructor. Next offered 2010–2011. S. Stucky. Principles of composition, approached through traditional forms (variation, sonata) and through the imitation of specific 20th-century styles. May be taken more than once for credit, by permission and if taught by a different instructor.

MUSIC 4121 Conducting (LA-AS)  
Fall. 4 credits. Prerequisite: MUSIC 3101 or equivalent. Next offered 2011–2012. C. Johnston Turner. Covers fundamentals of score reading, score analysis, rehearsal procedures, and conducting technique; instrumental and choral contexts.

MUSIC 4122 Orchestration (LA-AS)  
Spring. 4 credits. Prerequisite: MUSIC 3101 or permission of instructor. Next offered 2010–2011. R. Sierra. Orchestration based on 19th- and 20th-century models.

MUSIC 4123 Jazz Arranging (LA-AS)  
Fall. 4 credits. Prerequisite: MUSIC 3111 or permission of instructor. Next offered 2011–2012. P. Merrill. A survey of jazz arranging techniques for the big band.

Music in History and Culture  

MUSIC 1201 Hildegard to Handel # (LA-AS)  
Fall. 3 credits. Prerequisite: ability to read music or concurrent enrollment in MUSIC 1100. Next offered 2010–2011. R. Harris-Warrick. The main trends in Western music from the beginnings of musical staff notation in the 10th century to the mid-18th century. Emphasis on the evolution of musical styles and the changing social, cultural, economic, and political conditions that gave rise to those styles. Topics include Gregorian chant, organum, Ars nova, Renaissance polyphony, the invention of opera, and the rise of instrumental music.

MUSIC 1202 Monteverdi to Minimalism # (LA-AS)  
Fall. 3 credits. Prerequisite: ability to read music or concurrent enrollment in MUSIC 1100 or successful completion of another college-level music course. C. Johnston Turner.

MUSIC 1301 Introduction to World Music I: Africa and the Americas (also LSP 1301) @ (CA-AS)  
Spring. 3 credits. No previous training in music required. Next offered 2010–2011. S. Pond.

MUSIC 1302 Introduction to World Music II: Asia (also ASIAN 1192) @ (CA-AS)  

MUSIC 1311 Popular Music in America: A Historical Survey (also AMST 1311) # (LA-AS)  
Spring. 3 credits. Next offered 2010–2011. S. Pond. This is a general introductory course addressing the broad range of styles described as popular music, as it has developed in the United States.

MUSIC 1312 History of Rock Music (also AMST 1312) (LA-AS)  
Spring. 3 credits. No previous training in music required. J. Peraino. This course examines the development and cultural significance of rock music from its origins in blues, gospel, and Tin Pan Alley up to alternative rock and hip hop. The course concludes with the year 2000.

MUSIC 1313 A Survey of Jazz (also AMST 1313) (LA-AS)  
Fall. 3 credits. No previous training in music required. S. Pond. This course addresses jazz from two perspectives: the various sounds of jazz, as well as the historical streams—musical and cultural—that have contributed to its development. Listening and writing assignments are major components of the course.

MUSIC 1341 Gamelan in Indonesian History and Cultures (also ASIAN 2245, VISST 2744) @ (LA-AS)  
Fall or spring. 3 credits. Prerequisite: permission of instructor. No previous knowledge of musical notation or performance experience necessary. C. Miller. An introduction to Indonesia through its art. Elementary techniques of performance on the Indonesian *gamelan;* a general introduction to Indonesian history and cultures, and the sociocultural contexts for the arts there. Several short papers and one longer research report are required. Instruction by visiting Balinese musician.

MUSIC 2221 Bach and Handel # (LA-AS)  
Spring. 3 credits. Prerequisite: any 3-credit music course or permission of instructor. D. Yarlesley. Both composers created oeuvres of incomparable richness and diversity. By examining in depth selected masterpieces, this course hopes to offer new perspectives on the continued relevance and vital rewards of their music, both instrumental and vocal, sacred and secular.

MUSIC 2222 Haydn and Mozart # (LA-AS)  
Fall. 3 credits. Prerequisite: any 3-credit music course or permission of instructor. J. Webster. A survey of the lives, works, and historical roles of Joseph Haydn and Wolfgang Amadeus Mozart.

MUSIC 2223 Beethoven # (LA-AS)  
Fall. 3 credits. Prerequisite: any 3-credit music course or permission of instructor. Next offered 2011–2012. J. Webster. A survey of Beethoven's life, works, and influence. While the primary focus is his musical style and its development, the course also covers social-cultural factors and the psychology and reception of genius.
MUSIC 2224 Mozart in History, History in Mozart # (HA-AS)
Spring. 3 credits. Prerequisite: ability to read music or concurrent enrollment in MUSIC 1100. Next offered 2011–2012. Staff.

MUSIC 2241 Opera (also THETR 2730) # (LA-AS)
Spring. 3 credits. No prerequisite. R. Harris-Warrick.

MUSIC 2242 The Orchestra and Its Music # (LA-AS)
Spring. 3 credits. Prerequisite: any 3-credit music course or permission of instructor. Next offered 2010–2011. N. Zaslav.

MUSIC 2244 The Organ in Western Culture # (LA-AS)
Fall. 4 credits. Prerequisite: permission of instructor. Next offered 2010–2011. A. Richards and D. Yearsley.

MUSIC 2201 Survey of Western Music I # (LA-AS)
Spring. 4 credits. Pre- or corequisite: MUSIC 2101/2103 or permission of instructor. J. Peraino.

MUSIC 2202 Survey of Western Music II # (LA-AS)
Fall. 4 credits. Pre- or corequisite: MUSIC 2101/2104 or permission of instructor. A. Richards.

MUSIC 2222 Opera and Culture (also GERST/THETR 3740) # (LA-AS)
Spring. 4 credits. Prerequisite: any 3-credit music course or proficiency in German or Italian. Next offered 2011–2012. A. Groos.

MUSIC 2231 Topics in Western Art Music to 1750 #
Fall. 4 credits. Prerequisite: MUSIC 2102 or permission of instructor. Next offered 2011–2012. Staff.

MUSIC 2232 Topics in Western Art Music 1750–Present
Spring. 4 credits. Prerequisite: MUSIC 2102 or permission of instructor. Next offered 2010–2011. Staff.

MUSIC 3224 Words and Music (also GERST 3600) # (LA-AS)
Spring. 4 credits. A. Groos.

MUSIC 3245 Early Dance (also DANCE 4399)
Fall. 1 credit; may be repeated for credit. Next offered 2010–2011. R. L. and R. Harris-Warrick.

MUSIC 3246 The Organ in Western Culture II (also ARTH 3420, COML/FREN RELST 3460) # (CA-AS)

MUSIC 3253 Music and Choreography (also DANCE 3530) (LA-AS)
Fall. 3 credits. Attendance at dance concerts and music concerts required. A. Fogelsanger.

MUSIC 3501 Discovering Hip-Hop: Research and the Cornell Hip-Hop Collection # (LA-AS)
Fall. 3 credits. Limited to 15 students. Prerequisite: permission of instructor. S. Pond.

MUSIC 3513 Music and Choreography (also DANCE 3530) (LA-AS)
Fall. 3 credits. Attendance at dance concerts and music concerts required. A. Fogelsanger.

MUSIC 3514 Music and Queer Identity (CA-AS)

MUSIC 3515 Music and Choreography (also DANCE 3530) (LA-AS)
Fall. 3 credits. Attendance at dance concerts and music concerts required. A. Fogelsanger.

MUSIC 3516 Music and Choreography (also DANCE 3530) (LA-AS)
Fall. 3 credits. Attendance at dance concerts and music concerts required. A. Fogelsanger.

MUSIC 3520 Topic: Baroque Dance
Introduces students to the basic movement vocabulary of dances from Western Europe during the Baroque period.

MUSIC 3521 Topic: Baroque Dance
Introduces students to the basic movement vocabulary of dances from Western Europe during the Baroque period.

MUSIC 3522 Culture of the Renaissance II (also ARTH 3420, COML/FREN RELST 3460) (CA-AS)

MUSIC 3524 Culture of the Renaissance II (also ARTH 3420, COML/FREN RELST 3460) (CA-AS)

MUSIC 3525 Culture of the Renaissance II (also ARTH 3420, COML/FREN RELST 3460) (CA-AS)
A composition-based introduction to computer hardware and software for digital sound and digital media. Fundamentals of MIDI sequencing and other techniques for producing electroacoustic music. Each student creates several short compositions.

MUSIC 1465 Computing in the Arts (also CS/CIS/ENGRI 1610, FILM 1750, PSYCH 14 1650) [LA-AS]
Fall. 4 credits. M. Hatch.
For description, see CS 1610.

[MUSIC 2421 Computers in Music Performance (LA-AS)]
A course in live performance and real-time, interactive sound manipulation techniques.

[MUSIC 2422 Scoring the Moving Image (LA-AS)]
A course in composing music for multimedia: film, animation, theater, dance, art, design, and/or games. MUSIC 3421 is appropriate as a continuation for those who have taken MUSIC 1421 or 2421, but is open to others by permission.

MUSIC 3431 Sound Design and Digital Audio (also DANCE/THER 3680) (LA-AS)
Fall and spring. 3 credits. W. Cross.
For description, see THER 3680.

[MUSIC 3441 Interactive Performance Technology (also DANCE 3560, THER 3690) (LA-AS)]
For description, see THER 3690.

Independent Study and Honors

MUSIC 4901 Independent Study in Music
Fall or spring. 1–6 credits. Prerequisite: departmental approval; experience in proposed area of study. Staff.
Independent study affords students the opportunity to pursue special interests or research not treated in regularly scheduled courses. A faculty member, who becomes the student’s instructor for the independent course, must approve the proposed study and agree to provide continuing supervision of the work. Students must prepare a proposal for independent study; forms are available in the Office of Undergraduate Admissions and Advising, 55 and 172 Goldwin Smith Hall.

MUSIC 4911–4912 Honors in Music
Fall and spring. 8 credits per year. Prerequisite: senior honors candidates. Staff.
See “Honors” under “The Major” at the beginning of the MUSIC listings.

Musical Instruction

Cornell faculty members offer individual instruction in voice, organ, harpsichord, piano and fortepiano, violin, viola, cello, percussion, and some brass and woodwind instruments to those students advanced enough to do college-level work in these instruments. Lessons are available by audition only. They may be taken either without credit (MUSIC 3501) or with credit (MUSIC 3502 or 4501). All students studying with Cornell faculty members must enroll in MUSIC 3501, 3502, or 4501. Instruments may sometimes be studied for noncredit or credit outside Cornell, but also by audition only (see MUSIC 3501–4501, Secs 8, 9, and 10). For more information, please go to www.music.cornell.edu.

Lessons for beginners. The Department of Music does not offer lessons for beginners, but can recommend teachers outside Cornell for those who wish to begin studying voice or an instrument.

Auditions. Auditions are held at the beginning of each semester for lessons for advanced students. Contact the music department office in 101 Lincoln Hall for information.

Earning academic credit for lessons. For every 4 credits earned in MUSIC 3502, the student must have earned, or currently be earning, at least 3 credits in another music course (excluding MUSIC 3502, 4501, 3601–3611, or 4601–4631). These 3 credits must be earned before, or simultaneously with, the first 2 credits in 3502; they cannot be applied retroactively. Only music courses taught at Cornell or approved transfer courses from other colleges or universities may be used to satisfy this requirement.

Fees. For information about the fee structure for lessons, see the department’s web site or contact the music department office. All fees are nonrefundable once lessons begin, even if the course is subsequently dropped.

Lessons taken outside Cornell. Under certain conditions, advanced students may earn credit for lessons taken outside Cornell. An audition is required, and no credit can be granted for beginning instruction. For further information, read the description of MUSIC 3501, 3502, and 4501, Secs 8, 9, and 10; and contact the Music Department office.

Scholarships. Music majors receive a scholarship of up to the department’s full lesson fee per semester. All scholarships are intended only for lessons in the student’s primary performance medium. Scholarship registration forms, available in the music department office, are to be returned to the office within the first three weeks of classes.

MUSIC 3501, 3502, and 4501 Individual Instruction
Prerequisite: advanced students only; may register after successful audition with instructor, or, if student needs to study outside Cornell, with appropriate faculty sponsor. Students should contact instructor or music department office for audition information. Students may register for these courses in successive semesters or years.

MUSIC 3501
Fall or spring. 0 credits each semester. See section listing below for instructors.

Students who pass a successful audition to study with Cornell faculty, but either wish to take only a half-hour lesson per week or cannot receive credit for lessons, must enroll in MUSIC 3501. S–U grades only.

MUSIC 3502
Fall or spring. 2 credits each semester. See section listing below for instructors.

Students earn 2 credits each semester for a one-hour lesson (or two half-hour lessons) per week, accompanied by an appropriate practice schedule. Credit may be earned only in conjunction with academic music courses; see “Earning Academic Credit for Lessons,” above. Letter grades only.

MUSIC 4501
Fall or spring. 4 credits each semester. See section listing below for instructors. Open only to undergraduates majoring in music and graduate students in music. The section numbers listed below apply to MUSIC 3501, 3502, or 4501, depending on the instrument studied.
See Sec 10. J. Kellock.*
See 18, 19, and 20. Individual Instruction
Outside Cornell.
All the standard orchestral and band instruments, keyboard instruments, guitar, and voice may, under certain conditions, be studied for credit with outside teachers. This course is available primarily for the study of instruments not taught at Cornell and when there is limited enrollment in MUSIC 3501 and 3502. Prior approval and audition by a member of the faculty in the department are required, and credit may be earned only as described under “Earning academic credit for lessons,” above. Additionally, a departmental petition must be completed by the end of the third week of classes. For information and a list of approved teachers, consult the department office, 101 Lincoln Hall.

* Students taking voice lessons for credit are required to attend Prof. Kellock’s weekly studio class.

Musical Organizations and Ensembles

Students may participate in musical organizations and ensembles throughout the year. Permission of the instructor is required, and admission is by audition only (usually at the beginning of each semester), except that the World Music Choir and the Cornell Gamelan Ensemble are open to all students without prior audition. Registration is permitted in two of these courses simultaneously and students may register in successive years, but no student may earn more than 8 credits in these courses. Membership in these musical organizations and ensembles is also open to qualified students who wish to participate without earning credit. In that case, students should register for 0 credits with a pass/fail grade option.
MUSIC 3602 Chorus
Fall and spring. Either 0 credits, S–U, or 1 credit, letter grade, each semester. Prerequisite: successful audition. Fall: staff; spring: S. Tucker. A mixed-voice chorus specializing in music for women's voices and in mixed-voice repertory.

MUSIC 3603 Glee Club
Fall and spring. Either 0 credits, S–U, or 1 credit, letter grade, each semester. Prerequisite: successful audition. Fall: staff; spring: S. Tucker. A male-voice chorus specializing in music for men's voices and in mixed-voice repertory.

MUSIC 3604 Chorale
Fall and spring. Either 0 credits, S–U, or 1 credit, letter grade, each semester. Prerequisite: successful audition. H. Jancaitis. Study and performance of selected choral music for mixed voices.

MUSIC 3610 Gamelan Ensemble
Fall and spring. Either 0 credits, S–U, or 1 credit, letter grade, each semester. Prerequisite: permission of instructor. C. Miller. Advanced performance on the Indonesian gamelan. Tape recordings of gamelan and elementary number notation are provided. Some instruction by visiting Balinese artist.

MUSIC 3611 World Music Choir
Spring. Either 0 credits, S–U, or 1 credit, letter grade, each semester. Prerequisite: permission of instructor. Fall: staff; spring: S. Tucker. A mixed-voice chorus whose repertoire is drawn from Africa, Central America, South America, the Caribbean, Eastern Europe, and Asia. Music reading skills are not necessary, but a good ear is essential.

MUSIC 3612 World Drum and Dance Ensemble
Fall and spring. Either 0 credits, S–U, or 1 credit, letter grade, each semester. Prerequisite: permission of instructor. T. Feeney. WDDE focuses in 2009–10 on traditional music and dance of the Anlo-Ewe culture of southern Ghana. WDDE rehearses weekly for performance as ready throughout the semester. No prior experience is necessary, and all members of the group will sing, drum, and dance.

MUSIC 3613 Cornell Steel Bands
Fall and spring. Either 0 credits, S–U, or 1 credit, letter grade, each semester. Prerequisite: audition with instructor. T. Feeney. The Cornell Steel Bands perform traditional music from Trinidad for steel pans, including calypso and soca, as well as repertoire expanding the boundaries of the instruments. The group includes the standard steel pan orchestra, as well as an "engine room" consisting of drumset, congas, tros (brake drums), and other percussion instruments. One or more sections will form in 2009–10, dependent on demand and ability. The groups rehearse weekly, and perform as ready throughout the semester. Prior musical experience is necessary, though not limited to percussion, and participants must audition.

MUSIC 3614 Middle Eastern Music Ensemble (also NES 3914)
Fall and spring. Either 0 credits, S–U, or 1 credit, letter grade, each semester. Prerequisite: permission of instructor. G. Holst-Warhaft. Performance of diverse musical traditions from the Middle East. Instruction in individual instruments (oud, ney, kanoun, and percussion) and group rehearsals, culminating in one or two performances per semester. Songs are taught in several languages, with the assistance of local language and diction teachers.

MUSIC 3615 Jazz Ensemble II
Fall and spring. Either 0 credits, S–U, or 1 credit, letter grade, each semester. Prerequisite: successful audition. P. Merrill. Study and performance of classic and contemporary big band literature. Rehearsal once a week with one to two performances a semester.

MUSIC 3621 Symphony Orchestra
Fall and spring. Either 0 credits, S–U, or 1 credit, letter grade, each semester. Prerequisite: successful audition. C. Kim. Study and performance of a broad repertoire of orchestral works from Beethoven to the present.

MUSIC 3631 Wind Symphony
Fall and spring. Either 0 credits, S–U, or 1 credit, letter grade, each semester. Prerequisite: successful audition. M. Maris. The goal of this music performance and service learning course is to provide the opportunity in which learning experiences address human and community needs, and to allow the necessary time for reflection on those experiences. The focus of the course is on musical and personal leadership within communities—from the local to the foreign and from the known to the unknown. Communities in this context are defined by the community of students and musicians within the wind ensemble, the local communities in Ithaca and other New York state schools, and school, conservatory, and municipal communities in Costa Rica.

MUSIC 3633 Wind Ensemble
Fall and spring. Either 0 credits, S–U, or 1 credit, letter grade, each semester. Prerequisite: successful audition; previous background in percussion. C. Johnston Turner. The Cornell Wind Ensemble performs pieces from the growing percussion repertory, exploring the breadth and depth of its possibilities for percussionists. Concerts might involve collaborations with composers and other instrumentalists, improvisation, or student-initiated ideas for performance.

MUSIC 4601 Chamber Singers
Fall and spring. Either 0 credits, S–U, or 1 credit, letter grade, each semester. Prerequisite: successful audition. H. Jancaitis. A mixed-voice chamber choir specializing in Renaissance and 20th-century music.

MUSIC 4615 Jazz Ensemble I
Fall and spring. Either 0 credits, S–U, or 1 credit, letter grade, each semester. Prerequisite: successful audition. P. Merrill. Study and performance of classic and contemporary big band literature. Rehearsals twice a week with two to four performances per semester.

MUSIC 4616 Jazz Combos
Fall and spring. Either 0 credits, S–U, or 1 credit, letter grade, each semester. Prerequisite: successful audition. P. Merrill. Study and performance of classic and contemporary small-group jazz.

MUSIC 4621 Chamber Orchestra
Fall and spring. Either 0 credits, S–U, or 1 credit, letter grade, each semester. Corequisites: enrollment in a Cornell large ensemble (orchestra, wind ensemble/symphony, jazz band, or choral group), and permission of instructor. Coordinator: C. Johnston Turner. Flexible instrumentation ensembles perform original woodwind, brass, and percussion music. The ensembles participate in Wind Symphony and Wind Ensemble concerts in addition to several chamber concerts throughout the year.

MUSIC 4641 Instruction in Gamelan Instruments
Fall and spring. Either 0 credits, S–U, or 1 credit, letter grade, each semester. Limited enrollment. Prerequisite: permission of instructor. C. Miller. Concentrated instruction for students in advanced techniques of performance on Indonesian gamelan instruments.

MUSIC 4651 Chamber Music Ensembles
Fall and spring. Either 0 credits, S–U, or 1 credit, letter grade, each semester. Prerequisite: successful audition. Coordinator: M. Yampolsky. Study and performance of chamber music works from duos to octets, for pianists, string, and wind players.

Graduate Courses
Open to qualified undergraduates by permission of instructor.

[MUSIC 6101 Analytical Technique (also MUSIC 4102)]

[MUSIC 6201 Introduction to Bibliography and Research]
Fall. 4 credits. B. Boettcher. This course explores the nature of the discipline and introduces the many types of bibliographic tools, both printed and electronic, needed to pursue research in music.
were constructed, as well as the aesthetic controversies that surrounded them.

N. Zaslav.

Topic: Instrumental music in the larger forms.

Topic: Lutoslawski.

[MUSIC 7211 Seminar in Performance Practice] Fall. 4 credits. N. Zaslav.
Topic: The music of Mozart and his contemporaries. 

N. Zaslav.

[MUSIC 7223 Operatic States: Imagining Community in Music-Drama (also GERST 6420)] Fall. 4 credits. A. Groos.
This seminar will explore how states and communities are represented in opera from the 18th century to the end of World War II. Discussions will begin with representations of the absolutist state in baroque opera, examining its preoccupation with paradigms of good and bad rulership before turning to attempts in operas such as Die Zauberflöte and Fidelio to examine implications of the absolutist legacy for civil society and the emerging bureaucratic state. Other sessions will be devoted to 19th-century opera, focusing on responses to the French Revolution and the changing role of the masses and “the people,” before turning to the years immediately before and during World War II, ranging from the Zeitoper of the 1920s to alternative musical universes (Strauss) and Viktor Ullmann’s Der König von Atlantis, composed in Theresienstadt concentration camp.

J. Peraino.

A. Richards.

[MUSIC 7240 Film and Music] Fall. 4 credits. D. Yaruley.
Topic: Film and music.

[MUSIC 7301 Topics in Ethnomusicology] Spring. 4 credits. Also open to graduate students in anthropology, linguistics, psychology, sociology, Africana Studies, Asian Studies, and other cognate fields by permission of instructor. Next offered 2010–2011.
S. Pond.

[MUSIC 7501 Historical Performance] Fall and spring. 4 credits per semester. Prerequisite: permission of instructor. Staff. Lessons on the major instrument with supplementary study and research on related subjects. 

[MUSIC 7901 Independent Study and Research] Fall and spring. Credit TBA. Staff.

NEAR EASTERN STUDIES

The Department of Near Eastern Studies (409 White Hall, 255-6275) offers courses in Near Eastern civilization including archaeology, history, religions, languages, and literatures. These course offerings treat the Near East from the dawn of history to the present and emphasize methods of historical, cultural, and literary analysis. Students are encouraged to take an interdisciplinary approach to the religions and cultures of the region and their articulation during antique, late antique, medieval, and modern times. For more information, please visit www.arts.cornell.edu/nest/.

The Major

A major in Near Eastern Studies offers students the opportunity to explore the languages, literatures, cultures, religions, and history of the Near East/Middle East from antiquity to the modern day. The major is designed both to acquaint students broadly with the region and its cultures as well as to study a particular subfield in depth.

Prerequisites

- The applicant for admission to the major in Near Eastern Studies must have completed at least two Near Eastern Studies content courses, one of which can be a language course. Students are strongly encouraged to enroll in language courses and/or NES 2651 or 2754 either before signing into the major or early on in their major.
- Prospective majors must meet with the director of undergraduate studies before submitting a major application.
- To qualify as a major, a cumulative grade average of C or better is required.

Major Requirements

For students graduating in the Classes of 2006 or earlier, consult the department. The precise sequence and combination of courses chosen to fulfill the major is selected in consultation with the student's advisor. All majors must satisfy the following requirements (no course may be used to satisfy two requirements; S–U option not permitted):

1. Two years of one Near Eastern language or, in exceptional cases, one year of two Near Eastern languages.
2. Nine 3- or 4-credit NES courses, which must include the following:
   a. NES 2651 Judaism, Christianity, and Islam or NES 2754 Introduction to Near Eastern Civilizations
   b. NES 4560 Junior/Senior Proseminar: Theory and Method in Near Eastern Studies
   c. Seven additional courses, of which at least three must fulfill temporal breadth,
      defined as: one course whose chronological parameters fall within the period 5000 BCE to 600 CE, one course whose chronological parameters fall within the period 600 CE to 1800 CE, and one course whose chronological parameters fall between 1800 CE and the present. The following are examples (a complete list may be obtained in the department office):

   **3000 BCE to 600 CE**
   - NES 2623 Introduction to the Hebrew Bible
   - NES 2629 Introduction to the New Testament
   - NES 2644 Introduction to Ancient Judaism
   - NES 2661 Ancient Sefaring
   - NES 2666 Jerusalem through the Ages
   - NES 3554 Gender, Sexuality, and the Body in Early Christianity @
   - NES 3623 Reinventing Biblical Narrative @
   - NES 3664 Ancient Iraq I
   - NES 3665 Ancient Iraq II
   - NES 3720 Women in the Hebrew Bible @

   **600 CE to 1800 CE**
   - NES 2214 Qur'an and Commentary
   - NES 2556 Introduction to the Qur'an
   - NES 2634 Muslims and Jews in Confluence and Conflict
   - NES 2655 Introduction to Islamic Civilization
   - NES 2673 History of the Middle East: 13th to 18th Centuries
   - NES 3559 Islamic Spain @
   - NES 3651 Law, Society, and Culture in the Middle East
   - NES 4618 Seminar in Islamic History @

   **1800 CE to the present**
   - NES 2655 Jews and Arabs in Contact and Conflict: The Modern Period
   - NES 2674 History of the Modern Middle East: 19th to 20th Centuries
   - NES 3685 Middle Eastern Cities @
   - NES 3693 History of Jews and Christians in the Modern Middle East
   - NES 3697 History of the Israeli–Palestinian Conflict
   - NES 3703 Cosmopolitan Alexandria @
   - NES 3719 Crime and Conflict in the Modern Arabic Novel

   i. A maximum of three of these seven courses can be at the 2000 level; a minimum of four must be at the 3000 level or above.

   iii. One of the 3000-level or above courses must be a research seminar (courses are designated with ®). The following are examples (a complete list can be found in the department office):
   - 3594 Islamic Spain: Culture and Society @ # (CA) ®
   - 3594 Gender, Sexuality, and the Body in Early Christianity # (CA) ®
   - 3685 Middle Eastern Cities: History, Society, and Culture @ # (HA) ®
   - 4657 Formation of Islamic Law @ # (HA) ®
   - 4727 New York, Paris, Baghdad: Poetry of the City) ®

   iv. Note: a maximum of two independent studies courses may be applied to the major; a maximum of two courses may receive credit for more than one major; a maximum of 15 credits of relevant, departmentally approved course work taken overseas or at another university may be applied to the major.

   For students graduating in the classes of 2006 or earlier, consult the department.

   **Honor**. Each fall, a small number of highly qualified seniors enter the Near Eastern Studies Honors Program. The Honors Program is open to NES majors who have done superior work and who wish to devote a substantial part of their senior year to advanced, specialized, independent research and writing of a thesis.

   **Note well**: Successfully completing an honors thesis will require sustained interest, exceptional ability, diligence, and enthusiasm. Students must also take two honors courses (NES 4998 in fall and NES 4999 in spring), in addition to the regular major requirements.

   While admission to the Honors Program and completion of a thesis do not guarantee that students will be awarded honors in Near Eastern Studies, most students find the experience intellectually rewarding as it is rigorous.

   **Requirements**. In order to be considered for the Honors Program, candidates must fulfill all of the following requirements:
   - Minimum grade point average of 3.5 in the Near Eastern Studies major;
   - Superior performance overall at Cornell (minimum 3.5 GPA);
   - Completion of at least four semesters or equivalent in a relevant Near Eastern language;
   - Satisfactory completion of an NES research paper (“®” course);
   - Completion of at least one course in the subfield relevant to the proposed thesis (e.g., early Islamic history, modern Hebrew literature, etc.);
   - Prospective honors students are strongly encouraged to take NES 4560 (NES Proseminar) in their junior year.

   **Study abroad**. Students are encouraged to consult with their advisor about options and eligibility to study abroad. With appropriate advance consultation and approval upon return, NES will accept credits earned abroad toward the major. Students are reminded that the College of Arts and Sciences requires that they carry a minimum of 15 credits during a semester abroad.

**First-Year Writing Seminars**

For descriptions, consult the John S. Knight Institute brochure for times, and instructors.

**Language Courses**

**Arabic**

NES 1201–1202 Elementary Arabic I and II (also ASRC 1104/1105) 1201, fall; 1202, spring or summer. 4 credits each semester. Limited to 18 students per sec. Prerequisite: for NES 1202, NES 1201 or permission of instructor. M. Younes and staff.

Provides a thorough grounding in all language skills: listening, speaking, reading, and writing. It starts with spoken Arabic and gradually integrates Modern Standard Arabic in the form of listening and reading texts. Emphasis is on learning the language through using it in meaningful contexts. Students who successfully complete the two-semester sequence are able to (1) understand and actively participate in simple conversations involving basic practical and social situations (e.g., introductions, greetings, school, home, family, work, simple instructions; (2) read Arabic material of limited complexity and variety (e.g., simple narrative and descriptive texts, directions); (3) write notes and short letters describing an event or a personal experience. An important objective of the course is to familiarize students with basic facts about the geography, history, and culture of the Arab world.

NES 1203–2200 Intermediate Arabic I and II (also ASRC 1106/2101) 1203, fall; 2200, spring or summer. 4 credits each semester. NES 2200 satisfies Option 1. Limited to 18 students per sec. Prerequisites: for NES 1203, one year of Arabic or permission of instructor; for NES 2200, NES 1203 or permission of instructor. Letter grades recommended. M. Younes and staff.

Sequel to NES 1201–1202. Continued development of the four language skills through extensive use of graded materials on a wide variety of topics. Increased attention is given to developing native-like pronunciation and grammatical accuracy, but the main focus is on developing communication skills. The student who successfully completes 2200 is able to: (1) understand and express himself or herself in Arabic in situations beyond the basic needs; (2) read and comprehend written Arabic of average difficulty; (3) write a letter, a summary of a report, or a reading selection. An appreciation of Arabic literature and culture is sought through the use of authentic materials.

NES 2204 Introduction to Quranic Arabic (also ASRC 2106, RELST 2204) (LA-AS) Spring. 4 credits. Prerequisite: knowledge of Arabic alphabet. H. Al-Musi.
This course is designed for students who are interested in reading the language of the Qur'an with accuracy and understanding. The first week (4 classes) will be devoted to an introduction of the history of the Qur'an: the revelation, collection, variant readings, and establishment of an authoritative edition. The last week will be devoted to a general overview of “revisionist” literature on the Qur’an. In the remaining 12 weeks, we will cover all of Part 1 (Cuba, suwaras 78-114) and three suwaras of varying length (36, 19, and 12). We will start with the shortest suara and move gradually to longer ones. The Suuras will be presented and analyzed, and new vocabulary and grammatical structures will be discussed, explained, and practiced systematically. Each lesson will include, in addition to the text of the suara, word-building exercises devised to facilitate the acquisition and retention of new vocabulary. At the end of the semester, the successful student will have mastered a working vocabulary of 1500 and 2000 words, correct pronunciation, and the most commonly used grammatical structures. In addition, the course will provide the student with a firm foundation on which to build advanced study of Classical Arabic.

NES 3201–3202 Advanced Intermediate Arabic I and II (also ARSC 3100-3101) @ (LA-AS)
3201 Fall; 3202 spring, 4 credits each semester. NES 3201 satisfies Option 1. Limited to 15 students. Prerequisite: for NES 3201, NES 2200 or permission of instructor; for NES 3202, NES 3201 or permission of instructor. Letter grades recommended. M. Younes and staff. Introduces students to authentic, unedited Arabic language materials ranging from poems, short stories, and plays to newspaper articles dealing with social, political, and cultural issues. Emphasis is on developing fluency in oral expression through discussion of issues presented in the reading selections. There is more emphasis on the development of native-like pronunciation and accurate use of grammatical structures than on elementary and intermediate Arabic. A primary objective of the course is the development of writing skill through frequent exercises in topics of interest to individual students.

NES 3203–3204 Current Events in Arabic Media @ (CA-AS)
3203, fall; 3204, spring, 4 credits. F. Hijazi. In this course students will be introduced to authentic, unedited Arabic language materials from Arabic newspapers, magazines, TV broadcasts and interviews, and other on-line media. The topics covered will include, among other things, politics, economics, business, sports, and women’s issues. Students can suggest other topics that interest them to the teacher. Emphasis will be on developing fluency in oral and written expression through discussions, debates, presentations, and written work. The order of activities for each topic will be: reading or listening to a selection before coming to class, class discussion and/or debate, an oral presentation by the students, and, finally, a written homework assignment about the same topic. All activities and materials will be conducted entirely in Arabic. There will be more focus on the development of native-like pronunciation and accurate use of grammatical structures than at the lower levels.

[NES 4203 Readings in Arabic Poetry (LA-AS)]
Fall, 4 credits. Prerequisite: NES 3202, a 4000-level NES Arabic course, or permission of instructor. Next offered 2010–2011. S. M. Toorawa.

NES 4206 Structure of the Arabic Language (also LING 4416) @ (KCM-AS)
Spring, 4 credits. Prerequisite: 1 year of Arabic or linguistic background. The course consists of a brief history of Arabic and its place in the Semitic language family, the sociolinguistic situation in the Arab world (digglossia), Arabic phonology (sounds, emphasis, syllable structure, and related processes), morphology (verb forms and derivational patterns), and syntax (basic sentence structures, cases, and moods).

[NES 4211 Readings in Arabic Literature @ (LA-AS)]
Fall, 4 credits. Prerequisite: NES 3202, a 4000-level Arabic course, or permission of instructor. Next offered 2010–2011.

Intensive Arabic Program (IAP)
Modeled in part on the FALCON program in Chinese at Cornell University, the Intensive Arabic Program is designed to help students attain proficiency in Arabic in both its spoken and written forms in a condensed period of time. The program consists of three phases: (1) The first phase covers the equivalent of elementary Arabic I and II, and can be taken during the fall and spring semesters of the academic year, or as part of the Arabic summer intensive program. (2) The second phase covers the equivalent of Intermediate Arabic I and II and Advanced Arabic I and II and is taken in a total immersion environment at Cornell. During this phase, up to 12 students will take only Arabic classes for the duration of the fall semester. (3) The third phase takes place at the Hashemite University in Jordan during the following spring semester. The students who successfully complete the second phase will spend the spring semester at the Hashemite University with one of the teachers in the Cornell Arabic program. The course work will be taught entirely in Arabic with a focus on Arab society, history, and culture.

Credits for Cornell Undergraduates
The fall and spring semesters will each be the equivalent of 16 credits for Cornell undergraduates. Ideally, students would enroll in the yearlong program during their junior year, but the other years are also a possibility. The program will enable students to fulfill their language requirement and, depending on their major, they would have the option of applying the other courses toward their major. For Near Eastern Studies majors, all the courses would go toward the major (beyond the NES 1101-1102). Nonmajors will be able to count the spring courses toward the geographic breadth requirements. Upon their return, students would have the option of continuing their study of Arabic by enrolling in Intermediate-level courses in NES.

Cornell undergraduates seeking degrees in colleges other than Arts and Sciences, please note that you will be transferred to the College of Arts and Sciences during IAP. This means that all costs will be assessed according to Arts and Sciences rates, not those of your “home” college.

For further information, contact the Department of Near Eastern Studies, 409 White Hall, 255-6275 or visit our web site, www.arts.cornell.edu/nes.

NES 3206 Intensive Arabic Program (IAP)
Fall. 16 credits. Satisfies Option 1. M. Younes and staff. In the first half of this 16-credit total immersion course, we will continue to develop the four language skills of listening, speaking, reading, and writing through the extensive use of graded materials on a wide variety of topics (education, food, health, sports, religion, politics, economics, etc.). In the second half, students will be introduced to authentic, unedited Arabic language materials ranging from short stories, poems, and songs to newspaper articles dealing with social, political, and cultural issues related to the Arab world and the Middle East. While more attention is given to developing native-like pronunciation and grammatical accuracy than in NES 1101–1102, the main focus of the course will be on encouraging fluency and facility in understanding the language and communicating ideas in it. Building on the foundation started in NES 1101–1102, this course will continue the practice of introducing Arab society, history, and culture. Oral and written expression will be developed through discussions of issues presented in the reading selections, which will be followed by free composition exercises built around topics of interest to individual students.

NES 3207 Current Events in Arabic Media (IAP)
Spring. 8 credits. M. Younes and staff. In this 8-credit, one-semester, topic-based course, students will be introduced to authentic, unedited Arabic language materials from Arabic newspapers, magazines, TV broadcasts and interviews, and online media. Topics will include, among other things, politics, economics, business, sports, and women’s issues. Students can suggest other topics that interest them to the teacher. Emphasis will be on developing fluency in oral and written expression through discussion and presentations, and written work. The order of activities for each topic will be: reading or listening to a selection before coming to class, class discussion and/or debate, an oral presentation by the students, and, finally, a written homework assignment about the same topic. All activities are conducted entirely in Arabic. There will be more focus on the development of native-like pronunciation and accurate use of grammatical structures than at the lower levels.

NES 3213 Introduction to Jordanian Society (IAP)
Spring. 4 credits. M. Younes and staff. Selected readings and discussions on the following topics: (1) the history of the Hashemite Kingdom of Jordan; (2) urban, rural, and bedouin communities and urbanization; (3) Palestinians and other Arab refugees in Jordan; (4) the Jordanian/Arab family (structure, responsibilities, functions); (5) marriage and divorce; (6) kinship and gender roles; (7) the role of religion in the society.
### Arabic Grammar (IAP)

Spring. 4 credits. M. Younes and staff. A systematic and comprehensive examination of all aspects of Arabic grammar: phonology (the sound system), morphology (word formation), and syntax (sentence structure). All the readings and discussions will be in Arabic. References in English will be used for research purposes.

### Greek

**NES 1340–1341 Elementary Modern Greek I and II** (GREEK 1141–1142)
1140, fall; 1141, spring. 4 credits. Prerequisite: NES 1340/GREEK 1141 or placement by departmental exam. K. Yiavis.
For description, see GREEK 1141–1142.

**NES 1342–2324 Intermediate Modern Greek I and II** (GREEK 1143–2144)
Fall. 4 credits. NES 2324/GREEK 2144 satisfies Option 1. Prerequisite: NES 1341/GREEK 1142 or placement by departmental exam. K. Yiavis.
For description, see GREEK 1143–2144.

### Hebrew

**NES 1101–1102 Elementary Modern Hebrew I and II** (also JWST 1101–1102)
1101, fall; 1102, spring. 4 credits each semester. Limited to 18 students per sec. Prerequisite: for NES 1102, NES 1101 with grade of C– or better or permission of instructor. Letter grades only. S. Shoer.
Intended for beginners. Provides a thorough grounding in oral and written language skills. Students who complete the course are able to function in basic situations in a Hebrew-speaking environment.

**NES 1103 Elementary Modern Hebrew III** (also JWST 1103)
Fall. 4 credits each semester. Limited to 15 students per sec. Prerequisite: NES 1102 with grade of C– or better or permission of instructor. Letter grades recommended. N. Scharf.
Sequel to NES 1101–1102. Continued development of reading, writing, grammar, oral comprehension, and speaking skills.

**NES 1104 Beginners Intensive Hebrew** (also JWST 1104)
Summer. 3 credits. S. Shoer.
This course will be taught in Israel as part of the University of Haifa Summer Hebrew Program. The curriculum is comparable to the current Cornell University class NES 1101 or JWST 1101 (Elementary Modern Hebrew I). After completing this program, students will be able to continue and join the Elementary Modern Hebrew II class (NES 1102 or JWST 1102) in the spring 2010 semester. The class is taught using Ivrit B’Ivrit (Teaching Hebrew using Hebrew) and is part of a comprehensive integrated skills curriculum, based on Hebrew as a living language. Students are encouraged to use Hebrew from the moment they wake up, during their meals and throughout the day. The students study grammar, reading, writing, structure of the language, listening, and conversation.

**NES 1105 Hebrew Summer Follow-Up** (also JWST 1105)
Fall. 1 credit. S. Shoer.
This course is an advanced study of classical Arabic through a close reading of selected chapters of the Qur’an, together with the Qur’anic commentary (tafsir) and other relevant literature. Special attention is given to grammar, syntax, and lexicography.

**NES 2100 Intermediate Modern Hebrew: Special Topics in Hebrew** (also JWST 2100)
Spring. 4 credits. Satisfies Option 1. Prerequisite: NES 1103 with grade equivalent to C– or above or permission of instructor. Letter grades recommended. N. Scharf.
The course is aimed at training students in exact and idiomatic Hebrew, expanding vocabulary and usage of grammatical knowledge, and acquiring facility of expression in both conversation and writing. Uses written and oral exercises built around the texts. Reading and selection of discussions from Hebrew literature and Israeli culture through the use of texts and audiovisual materials. See web site: http://irc.cornell.edu/hebrew/nes2100.

**NES 3101 Advanced Intermediate Modern Hebrew I: Aspects of Israeli Society** (also JWST 3101)
Fall. 4 credits. Satisfies Option 1. Limited to 15 students. Prerequisite: NES 2100 with grade of C– or above or permission of instructor. N. Scharf.
Advanced study of the Hebrew language both orally and through the analysis of mostly unedited texts of social, political, and cultural relevance, with less emphasis on the study of grammar. Students are introduced to articles published in Israeli newspapers and magazines, works by authors, and movies. Students develop composition and advanced writing skills by studying language structure, idioms, and various registers of style.

**NES 3102 Advanced Intermediate Modern Hebrew II: Aspects of Israeli Culture** (also JWST 3102)
Spring. 4 credits. Satisfies Option 1. Limited to 15 students. Prerequisite: NES 3101 with grade equivalent to C– or above or permission of instructor. Letter grades recommended. N. Scharf.
This course is a continuation of work done in NES/JWST 3101, with less emphasis on the study of grammar. We will read and discuss texts of cultural relevance using articles published in Israeli newspapers, web sites, and works by authors in each of the three principal genres: poetry, theater, and novels. See web site: http://irc.cornell.edu/hebrew/nes3102.

**NES 3103 Love, Wine, Death, and In Between** (also JWST 3103) @ #
Fall. 4 credits. Prerequisite: NES 3102 or permission of instructor. Letter grades recommended. Next offered 2010–2011. S. Shoer.
This course introduces students to a survey of Hebrew poetry from medieval Spain to modern Israel, with focus on secular themes of romance, life pleasures, and esthetic enjoyments. It is intended to continue the development of all aspects of the language. Emphasis is on developing fluency in oral expression through discussion of the reading selections and the development of writing skill.

**NES 3105 Intensive Conversational Hebrew** (also JWST 3105)
Fall. 2 credits. Limited to 15 students. Prerequisite: NES 3102, 4100, or permission of instructor; non-native speakers only. Letter grades recommended. N. Scharf.

**NES 4101 Modern Hebrew Literature** (also JWST/RELST 4101) @ (LA-AS)

**NES 4102 Biblical Hebrew Prose—Genesis** (also JWST/RELST 4102) @ (LA-AS)
Fall. 4 credits. Satisfies Option 1. Prerequisite: one year of biblical or modern Hebrew. L. Monroy.

From the Garden of Eden to Noah’s Ark, from Abraham’s journey from Haran to Joseph’s coat of many colors, the book of Genesis contains stories that are at once familiar to Western readers, and foreign in their ancient Near Eastern setting. Through reading the book of Genesis in the original Hebrew, this course will address issues such as how the Israelites understood their origins, and their relationships with their God, Yahweh, their neighbors, and the land of Canaan itself, as well as how these themes are developed in biblical myth and folklore. Close attention will be paid to matters of grammar, syntax, and vocabulary in order to develop students’ skills in reading biblical Hebrew prose and to enhance their understanding of the Hebrew language itself as a window on ancient Israelite thought. Students will be expected to utilize commentaries, biblical Hebrew grammars, and lexicons in the preparation of assigned texts.

### Hindi-Urdu

**NES 1312 Introduction to Urdu Script** (also URDU 1125)
Fall. 1 credit. S. Singh.
For description, see URDU 1125.

**NES 2201–2202 Intermediate Written Urdu I and II** (also URDU 2201–2202)
2201, fall; 2202, spring. 2 credits. Prerequisite: HINDI 1102 or HINDI 1110; and URDU 1125 or permission of instructor. Letter grades only. S. Singh.
For description, see URDU 2201–2202.

### Persian

**NES 1320–1321 Elementary Persian I and II**
1320, fall; 1321, spring. 4 credits each semester. Limited to 15 students. I. Gocheleishvili.
Designed for students who want an effective and comprehensive approach to learning Persian that will enable them to progress in the language skills of speaking, listening, reading, and writing. At the completion of this course, students are prepared to deepen their comprehension of Persian through literature and the media.

**NES 1322–2322 Intermediate Persian I and II**
1322, fall; 2322, spring. 4 credits. NES 2322 satisfies Option 1. Prerequisite: one year (two semesters) elementary Persian or permission of instructor I. Gocheleishvili.
A continuation of NES 1320–1321. Continued development of speaking, listening, reading, and writing skills.
Ancient Near Eastern Languages
Hieroglyphic Egyptian

NES 3450–3451 Hieroglyphic Egyptian I and II
3450, fall; 3451, spring. 4 credits. A. Kleinerman.

An introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2153–2000 BCE). Students learn to read and write hieroglyphics, begin immediately to read *The Tale of the Shiffer* of Sety I, and are soon reading historical inscriptions of Ramesses II, selections from the Book of the Dead and the Pyramid texts, as well as myths and wisdom literature. Secondary readings in Egyptian history and culture provide context for the texts we will read in the original glyphs.

Topics Courses

[NES 2525 Islam in America (also AMST/RELST 2525) (CA-AS)]

NES 2537 Ninth-Century Baghdad and Its "Bad Boys and Girls" @ #
Spring. 3 credits. No prerequisites.
S. M. Toorawa.

The ninth and 10th centuries in Baghdad have come to be known as the "golden age." In this course we will read works from this golden age, in particular by and about a "golden group" I call the "bad boys and girls of Baghdad." We will read Jahiz on envy; Ibn al-Muqaffa' on the "bad boys and girls of Baghdad." We will begin immediately to read *The Tale of the Shiffer* of Sety I, and are soon reading historical inscriptions of Ramesses II, selections from the Book of the Dead and the Pyramid texts, as well as myths and wisdom literature. Secondary readings in Egyptian history and culture provide context for the texts we will read in the original glyphs.

Turkish

NES 1330–1331 Elementary Turkish I and II
1330, fall; 1331, spring. 4 credits each semester. Limited to 15 students. A. Yavas.

Intended for students with no experience in Turkish. The goal is to provide a thorough grounding in Turkish language with an emphasis on communication. Small class size provides intensive practice in speaking, writing, and listening/comprehension. The course is co-sponsored by the Institute for European Studies.

NES 1332–2332 Intermediate Turkish I and II
1332, fall; 2332, spring. 4 credits. NES 2332 satisfies Option I. Prerequisite: one year (two semesters) elementary Turkish or permission of instructor. Staff.

A continuation of NES 1330–1331. Continued development of speaking, listening, reading, and writing skills.

Ancient Near Eastern Languages

Hieroglyphic Egyptian

NES 3450–3451 Hieroglyphic Egyptian I and II
3450, fall; 3451, spring. 4 credits. A. Kleinerman.

An introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2153–2000 BCE). Students learn to read and write hieroglyphics, begin immediately to read *The Tale of the Shiffer* of Sety I, and are soon reading historical inscriptions of Ramesses II, selections from the Book of the Dead and the Pyramid texts, as well as myths and wisdom literature. Secondary readings in Egyptian history and culture provide context for the texts we will read in the original glyphs.
in a secular course on the Bible, students will be challenged to question certain cultural assumptions about the composition and authorship of the Bible, and will be expected to differentiate between a text's content and its presumed meaning.

**NES 2728 Introduction to Modern Middle Eastern Literature (also COML 2728)**  
Spring. 3 credits. D. Starr.  
This course offers an introduction to modern literatures in Arabic, Hebrew, Persian, and Turkish. All readings will be in English. We will discuss poetry, short stories, and a novel from each tradition. Readings will be drawn from the work of an array of influential authors, including Nobel laureates S. Agnon (Israel), Naguib Mahfouz (Egypt), and Orhan Pamuk (Turkey).

**NES 2754 Introduction to Near Eastern Civilizations: The Literature of Princes, Prophets, and Poets (also COML 2754)**  
Fall. 3 credits. S. M. Toorawa.  
This course (which also fulfills an NES major requirement) is a multidisciplinary introduction to Near Eastern civilizations, exploring history, literature, religion, art, architecture, and archeology, and other aspects of the Near East's rich and diverse heritage from earliest times to the present. Together we will read and discuss such ancient works as the *The Epic of Gilgamesh*, "The Song of Songs," and the Qur'an, such medieval works as the *Travels* of Ibn Battuta, the *Shahnameh* of Ferdowsi, and the poems of Yehuda Ha-Levi, and modern material from the Arabic, Armenian, Hebrew, Persian, and Turkish literary traditions. We will also watch films and be joined by outside speakers. All material is in English translation.

**NES 2793 Middle Eastern Cinema (also COML/FILM 2930, JWST 2793, VISST 2193)**  

**NES 3212 Qur'an and Commentary (also RELST 3212)**  
Fall. 4 credits. D. Powers.  
This course is an advanced study of classical Arabic through a close reading of selected chapters of the Qur'an, together with the Qur'anic commentary (tafsir) and other relevant literature. Special attention is given to grammar, syntax, and lexicography.

**NES 3524/5524 Israeliite Prophecy (also JWST/RELST 3524)**  

**NES 3551 Law, Society, and Culture in the Middle East (also HIST 3651/6651, NES 6551)**  

**NES 3588 Biblical Archaeology (also JWST/RELST 3588)**  
Spring. 4 credits. L. Monroe.  
The purpose of the course is to place the Bible within the context of a larger ancient world that can be explored by systematic excavation of physical remains. Students will become familiar with archaeological excavations and finds from ancient Syria-Palestine from 10,000 BCE to 586 BCE. We will explore this archaeological evidence on its own terms, taking into consideration factors such as archaeological method and the interpretive frameworks in which the excavators themselves work, as well as the implications of this body of evidence for understanding the complexity and diversity of biblical Israel.

**NES 3600 History of the Holocaust (also HIST/JWST 3700)**  
Spring. 4 credits. V. Caron.  
For description, see HIST 3700.

**NES 3619 Near Eastern Christianities, 50–650 ce (also HIST/JWST/RELST 3619)**  

**NES 3629 Introduction to New Testament and Other Early Christian Literature (also CLASS/JWST/RELST 3629)**  
Spring. 1 credit. Pre- or corequisite: NES 2629 or one year of ancient Greek. K. Haines-Eitzen.  
A weekly seminar that may be taken in addition to NES 2629. The seminar will provide an opportunity to read portions of the New Testament and other early Christian writings in Greek. We will work on grammatical and textual issues as well as other problems related to translations.

**NES 3633 Christianization of the Roman World (also CLASS/HIST/RELST 3632)**  
Fall. 4 credits. E. Reillillard.  
For description, see CLASS 3625.

**NES 3661 Sumerian Language and Culture (also ARKEO/JWST 3661/6661, NES 6661)**  

**NES 3665 Ancient Iraq II: 2000–331 BCE (also ARKEO/JWST 3665)**  

**NES 3666 History and Archaeology of the Ancient Near East (also ARKEO/JWST 3666/6666, NES 6666)**  

**NES 3677 Search for the Historical Muhammad (also HIST/RELST 3677)**  
Spring. 4 credits. D. Powers.  
Unlike Moses or Jesus, Muhammad is said to have been born in the full light of history. The earliest extant biography of the Prophet, the *Life of Muhammad* by Ibn Hisham (d. 833), contains a full account of the Prophet's career, from his birth ca. 570 to his death in 632. In this seminar, we will read the *Life of Muhammad* and analyze selected episodes from a critical historical perspective.

**NES 3697 Israeli-Palestinian Conflict (also GOVT 3977, HIST/SOC 3970, JWST 3697)**  
Spring. 4 credits. R. Brann.  
This course examines the history of the conflict between two peoples with claims to the same land (Palestine/Israel), from the rise of their national movements at the turn of the 20th century and their eventual clash down to the present crisis. We will investigate the various stable and shifting elements in the evolution of the conflict including conflicting Israeli and Palestinian narratives and mythologies about the nature of the conflict. Among many issues to be addressed are: the relationship of this conflict to the history of European colonialism in the Middle East, the emergence of Pan-Arabism and Islamism, the various currents in Zionism and its relationship to Judaism, the implication of great power rivalry in the Middle East, the different causes and political repercussions of the four Arab-Israeli wars, efforts at peacemaking including Oslo and Camp David, and the significance of the two Palestinian uprisings.

**NES 3703Cosmopolitan Alexandria (also NES 6703)**  

**NES 3709 Modern Arabic Drama (also LA-AS)**  

**NES 3716 Education of Princes: Medieval Advice Literature of Rulership and Counsel (also COML/GOVT 3716)**  

**NES 3720 Women in Ancient Israel (also JWST/RELST 3270)**  

**NES 3723 The Arabian Nights: Then and Now (also COML 3723/6723, NES 6723)**  
Fall. 4 credits. No prerequisites. S. M. Toorawa.  
The medieval Arabic cycle of stories known as *The Arabian Nights* or *The Thousand and One Nights* is a classic of world literature. In the first half of the course we will read the Nights and discuss both its dominant themes—deceit, love, sex, revenge, violence, and justice—and its storytelling contexts and antecedents (e.g., the Sanskrit *Jataka Tales* and the Middle Persian *Tales of Bidelai*). And in the second half, we will explore the ways in which its themes and tales have been adapted and appropriated by authors such as Jan Potocki in Polish, Edgar Allan Poe and John Barth in English, Jorge Luis Borges in Spanish, and Naguib Mahfouz in Arabic itself. All material is in English translation.
Phoenicians are known mostly from the seafaring and inventing our alphabet, they left An ancient Semitic people known for region approximately where Lebanon is today.

For description, see ARTH 4311.

NES 3844 Islamic Politics (also GOVT 3344) @ (SBA-AS)
Fall. 4 credits. D. Patel.
For description, see GOVT 3344.

NES 3850 Middle Eastern Politics (also GOVT 3313) @ (CA-AS)
Spring. 4 credits. D. Patel.
For description, see GOVT 3313.

NES 3914 Middle Eastern Music Ensemble (also MUSIC 3614)
Fall and spring. 1 credit each semester.
Limited to 40 students. Prerequisite: permission of instructor. G. Holst-Warhaft.
For description, see MUSIC 3614.

NES 4101 Modern Hebrew Literature (also JWST 4101) @ (LA-AS)
Spring. 4 credits. Satisfies Option I. Prerequisite: NES 4100 or equivalent. Students who successfully completed 3102 may enroll with permission of instructor. Next offered 2010–2011. Staff.

NES 4211 Readings in Arabic Literature (LA-AS)

NES 4501 Islam in Africa and Diaspora (also ARSC 4201/6206) @ (CA-AS)
Spring. 4 credits. A. Mazrui.
For description, see ARSC 4201.

NES 4511 The Multicultural Alhambra (also ARTH 4311, VISST 4621)
For description, see ARTH 4311.

NES 4540 Maimonides and Averroes (JWST/RELS 4540, SPAN 4380) @ # (CA-AS)

NES 4550 The World of the Phoenicians (also HIST 4552, JWST 4550)
Spring. 4 credits. C. Monroe.
The Phoenicians were an enigmatic culture and people who originally lived in a coastal region approximately where Lebanon is today. An ancient Semitic people known for seafaring and inventing our alphabet, they left us virtually no texts of their own. The Phoenicians are known mostly from the writings of others, notably ancient Greeks and biblical authors, and from artifacts in ivory, stone, and metal. In order to understand their material culture and historical importance, we must look broadly in time and space, and this reveals to us a “world” of cultural interactions that stretches across the Mediterranean and Near East, and far into the Early Bronze Age or third millennium BCE into Greco-Roman times. We will read about the Phoenician homeland and its colonies, and investigate their maritime economy, language, religion, and adventures abroad. In doing so, we will be exploring the ancient Mediterranean and beyond and meeting a host of other fascinating peoples in the process. Some research and a written paper will be required.

NES 4560 Theory and Method in Near Eastern Studies (CA-AS)
Spring. 4 credits. Requirement for NES majors. Z. Fahmy.
Seminars offering advanced Near Eastern Studies students the opportunity to read and discuss the range of theories and methods that have been employed by scholars in the interdisciplinary area of Near Eastern Studies. After giving attention to the historical development of area studies programs—and their current status and relevance—students read a wide range of highly influential works in Near Eastern Studies. Literary theory, historiography, post-colonialism, archaeology, gender theory, and comparative religions are a few of the approaches, methods, and theories explored. Authors include Talal Asad, Homi K. Bhabha, Mircea Eliade, Timothy Mitchell, Mary Douglas, Zachary Lockman, Edward Said, J. Z. Smith.

NES 4600 Religion and Imperial Politics in the Early Modern Middle East (also HIST 4611) @ (HA-AS)
Fall. 4 credits. This course is designed for graduates and advanced undergraduates who preferably have taken at least an introductory level course in Islamic and/or Middle Eastern History. A. Karakaya-Stump.
The Early Modern Middle East was dominated by two regional empires: the Ottomans in Anatolia and the Balkans, and the Safavids in Iran. This seminar examines the interplay between religion and politics in the history of these two major premodern Islamic Empires. Topics include notions of religion, sects, and state in Islam; the place of messianism and the ghaza (“holy war”) ideology in the rise of the Ottoman and Safavid empires; the Sunni Ottoman-Shi’i Safavid conflict; sources of imperial legitimacy; the religious elite and the state; oppositional or revivalist religious movements and their accommodation and/or repression by the state; and the treatment of non-Muslims. Attention will also be paid to how growing Western hegemony and missionary activism in the region affected state policies vis-a-vis the sectarian minorities and the non-Muslims.

NES 4605 Contesting Identities in Modern Egypt (also HIST 4091) @ (HA-AS)
Fall. 4 credits. Next offered 2010–2011. Z. Fahmy.

NES 4639 Readings in Arabic Historical ecologies (also RELST 4639) @ # (HA-AS)
Spring. 4 credits. D. Powers.
This class will introduce students to Arabic historical texts. The topic for this year’s seminar will be the Arab conquests. Review of grammar, syntax, and vocabulary. Prerequisite: Reading knowledge of Arabic.
of Alexandria in Cavafy and other Alexandrian authors. We will also consider how the myth of the Mediterranean has affected modern literary imagination within and beyond the region.

NES 4784  Israeli Nation: Self and Literature (also JWST 4784)
Spring. 4 credits. D. Starr.
In this course we will read a selection of works by Israeli authors written after the establishment of the state in 1948. We will focus in particular on the formation of national identity as it has been shaped and reshaped through literary works. Even from the earliest years of the state there were sites of resistance against the pressure to conform. Some of the texts we read explore these tensions between the self and nation, while others explore alternate collective identities within or beyond the confines of the nation and the state. Among the authors we may read are: Orly Castel-Bloom, Sami Mikhail, Amin Or, Yakov Shabtai, Anton Shammas, A. B. Yehoshua. All works will be read in English translation. No knowledge of Hebrew is required.

NES 4874  States and Societies in the Middle East (also GOVT 4374/6474, NES 6874)
Spring. 4 credits. D. Patel.
For description, see GOVT 4374.

NES 4903  Methods in the Study of the Ancient Near East (also ARKEO 4903, JWST 4903)
This seminar will focus on the reconstruction of the early history and culture of the ancient Near East that was made possible by combining the results of extensive archaeological discovery with the decipherment of the cuneiform languages of Sumer, A, C, Turkey, Egypt, and Israel in order to explain the methodological similarities and differences utilized by scholars in each of these areas. Selected readings in anthropological, archaeological, philological, historical, and literary sources will be augmented by audio-visual materials to provide a comparative perspective on the various approaches to the study of the ancient Near East.

NES 4914  Liminality in Maritime Archaeology (also HIST/SHUM 4814)
Fall. 4 credits. C. Monroe.
For description, see SHUM 4814.

NES 4916  Crossing Oceans of Time (also SHUM 4816, HIST 4816)
Fall. 4 credits. M. Aymes.
For description, see SHUM 4816.

NES 4923  Secular Disaffections: On Islam and the Politics of Emotion (also COML 4066, RELST/SHUM 4823)
Fall. 4 credits. R. Mas.
For description, see SHUM 4823.

NES 4953  Islamism (also GOVT 4665)
Fall. 4 credits. S. Buck-Morss.
For description, see GOVT 4665.

NES 4991–4992  Independent Study, Undergraduate Level
Fall and spring. Variable credit. Prerequisite: permission of instructor. Staff.

NES 4998–4999  Independent Study, Honors
Fall and spring. 8 credits. Prerequisite: permission of instructor. Staff.

NES 6112  Readings in Medieval Hebrew Poetry and Prose (also JWST 6112)

NES 6642  Topics in Ancient History (also CLASS 7682, HIST 6300, JWST 6642)
Spring. 4 credits. E. Rebillard.
For description, see CLASS 7682.

NES 6723  The Arabian Nights: Then and Now (also COML 3723/6723, NES 3723)
Fall. 4 credits. No prerequisites. S. M. Toorawa.
The medieval Arabic cycle of stories known as The Arabian Nights or The Thousand and One Nights is a classic of world literature. In the first half of the course we will read the Nights and discuss both its dominant themes—deceit, love, sex, revenge, violence, and justice—and its storytelling contexts and antecedents (e.g., the Sanskrit Jātaka Tales, and the Middle Persian Tales of Bidpai). And in the second half we will explore the ways in which its themes and tales have been adapted and appropriated by authors such as Jan Potocki in Polish, Edgar Allan Poe and John Barth in English, Jorge Luis Borges in Spanish, and Naguib Mahfouz in Arabic itself. All material is in English translation.

NES 6727  New York, Paris, Baghdad: Poetry of the City (also COML 4600/6870, NES 4727)
Spring. 4 credits. S. M. Toorawa.
The City is a recurrent theme and focus in much poetry, especially poetry of the modernists. We will read these poets to discover how they write the City, how they read it, and how other poets have responded. We will accompany Adonis, Baudelaire, Bayati, Cavafy, Lorca, Sayyab, Whitman (and others) to New York, Paris, Baghdad, Alexandria, Beirut (and elsewhere). All readings in translation, but we will use bilingual editions. Weekly thought essays, and a final paper.

NES 6874  States and Societies in the Middle East (also GOVT 4374/6474, NES 4874)
Spring. 4 credits. D. Patel.
For description, see GOVT 4374.

NES 6991–6992  Independent Study: Graduate Level
Fall and spring. Variable credit. Prerequisite: permission of instructor. Staff.

NES 7633  Gender in Late Antiquity (also CLASS/HIST/RELST 7633, FGSS 7630)
Fall. 4 credits. K. Haines-Eitzen and K. Bowes.
For description, see CLASS 7633.

NES 7979  Water and Culture in the Mediterranean: a Crisis? (also BEE 7540, LAW 7792)
For description, see BEE 7540.

NEPALI
See “Department of Asian Studies.”

PARI
See “Department of Asian Studies.”

PHILOSOPHY
The study of philosophy provides students with an opportunity to become familiar with some of the ideas and texts in the history of thought while developing analytical skills that are valuable in practical as well as academic affairs. It affords the excitement and satisfaction that come from understanding and working toward solutions of intellectual problems. The curriculum includes offerings in the history of philosophy, logic, philosophy of science, ethics, social and political philosophy, metaphysics, and theory of knowledge. Any philosophy course numbered in the 1000s or 2000s is suitable for beginning study in the field. Sections of PHIL 1100, 1120, and 1130 are part of the first-year writing seminar program; they are taught by various members of the staff on a variety of philosophical topics, and because of their small size (17 students at most) they provide ample opportunity for discussion. Students who want a broad introduction to philosophy may take PHIL 1100, but many students with special interests may find that the best introduction to philosophy is a 2000-level course in some particular area of philosophy; such courses have no prerequisites and are usually open to first-year students.

The Major
Students expecting to major in philosophy should begin their study of it in their freshman or sophomore year. Admission to the major is granted by the director of undergraduate studies of the department on the basis of a student’s work during the first two years. Normally the student must have completed two philosophy courses with grades of B or better. Eight philosophy courses, taken for a letter grade, are required for the major. They must include at least one course on ancient philosophy (PHIL 2200, or a course with a large component on Plato or Aristotle), at least one course on classical modern metaphysics and epistemology from Descartes through Kant (e.g., PHIL 2220 or a course on the empiricists, the rationalists, or Kant), and a minimum of three courses numbered above 2000. Students admitted to the major are required to take a minimum of six philosophy courses numbered above 2000, and may not count more than one section of PHIL 1110, 1120, or 1130 toward the major. Courses numbered in the 1900s, 2900s, and 3900s do not count toward the major. A course in formal logic (e.g., PHIL 2310), while not required, is especially recommended for majors or prospective majors.

Philosophy majors must also complete at least 8 credits of course work in related subjects approved by their major advisors.
What should we eat? Whom should we befriend or love? How should we love—for example, should we assume that all good romantic relationships are monogamous? How should we spend our leisure time? Does the Internet pose new ethical problems? What, if anything, is wrong with athletes taking steroids? How should we think about ourselves and our loved ones in the face of illness, disability, aging, and death? What can Alzheimer’s tell us about the nature of personhood? Does life have any “meaning”—whatever that means?

PHIL 1512 Philosophy and Film (also FILM 1512) (KCM-AS)
Summer. 3 credits. C. Maguidhir.
This course uses film to examine and highlight fundamental problems in philosophy as well as pay special attention to philosophical issues in the medium of film. Philosophical topics covered may include artificial intelligence, personal identity, free will, skepticism, philosophy of time, the problem of evil, film and emotion, and film and art.

PHIL 1810 Introduction to the Philosophy of Science (KCM-AS)
Summer. 3 credits. N. Sethi.
Philosophy of Science introduces the philosophical study of problems that arise from the practice of science. Our focus will be on such topics as scientific objectivity, scientific explanation, the role of values in the sciences, the nature of scientific observation and reasoning. We will also attempt to apply philosophical analysis to controversies that involve science and society.

PHIL 1910 Introduction to Cognitive Science (also COGST 1101, CS 1710, LING 1170, PSYCH 1102) (KCM-AS)
Fall, summer. 4 credits. M. Spivey.
For description, see COGST 1101.

PHIL 2200 Ancient Philosophy (also CLASS 2661) (KCM-AS)
Spring. 4 credits. T. Brennan.
An introductory survey of ancient Greek philosophy from the so-called Presocratics (6th century BCE) through the Hellenistic period (1st century BCE) with special emphasis on the thought of Socrates, Plato, and Aristotle.

PHIL 2220 Modern Philosophy (KCM-AS)
Spring. 4 credits. Best taken in conjunction with PHIL 2200 (Ancient Philosophy), although this is not a prerequisite.

PHIL 2240 19th- and 20th-Century European Thought (KCM-AS)
Spring. 4 credits. M. Korsch.
A survey of European philosophy of the 19th and 20th centuries. Figures may include Hegel, Marx, Kierkegaard, Nietzsche, Husserl, Heidegger, Horkheimer, Adorno, Habermas, and Foucault.

PHIL 2830 Puzzles and Paradoxes (KCM-AS)
Fall. 4 credits. M. Ekland.

The course provides an overview of a number of famous philosophical puzzles and paradoxes and important attempts to solve them. Among the paradoxes that may be discussed are Zeno’s paradoxes of space, time and motion, the paradox of the heap, the liar paradox, Russell’s set-theoretic paradox, and various paradoxes concerning knowledge and rationality.

PHIL 2310 Introduction to Deductive Logic (MQR)
Spring. 4 credits. H. Hodes.
Sentential languages, the truth-functional connectives, and their logic; first-order languages, the quantifiers “every” and “some,” and their logic.

PHIL 2410 Ethics (KCM-AS)
Spring. 4 credits. F. Taylor.
An introduction to the philosophical study of ethical reasoning and ethical theories. Topics may include ethical skepticism, ethical relativism and ethical objectivity; ethical egoism, utilitarianism, deontological theories and virtue ethics. Readings may be drawn from contemporary debates as well as from the long history of philosophical writing about ethics.

PHIL 2420 Social and Political Philosophy (also GOVT 2605) (KCM-AS)
Spring. 4 credits. E. Taylor.
This course will examine key issues in social and political philosophy. Topics may include the legitimacy of the state; political obligation; the nature and demands of justice; equality; liberty and autonomy. Selected readings may be drawn from historical as well as contemporary sources.

PHIL 2450 Ethics and Health Care (KCM-AS)
Spring. 4 credits. N. Sethi.
An introduction to the philosophical study of ethical problems that arise from the practice of medicine as such or that arise in response to developments within medicine and the larger world.

PHIL 2460 Ethics and the Environment (also BSOC/STS 2061) (KCM-AS)
Spring. 4 credits. Limited to 40 students. Open to all undergraduates; freshmen by permission of instructor. S. Pritchard.
For description, see BSOC 2061.

PHIL 2490 Feminism and Philosophy (also FGSS 2490) (KCM-AS)
Fall. 4 credits. N. Sethi.
This class will explore and examine feminist re-reading of some key issues in traditional philosophy. Our focus will be on the role of gender in the construction of philosophical problems and concepts as well as on the various ways in which traditional philosophy reflects bias against women. Topics include feminist theories of knowledge and science, ethics, law and political theory.

PHIL 2530 Religion and Reason (also RELST 2630) (KCM-AS)
Spring. 4 credits. S. MacDonald.
An introduction to some of the main issues in philosophy of religion. Topics may include the existence and nature of God, the problem of evil, the nature of faith, and the epistemology of religious belief. Readings are drawn from the history of philosophy and contemporary philosophical debates.
PHIL 2620 Introduction to Philosophy of Mind (KCM-AS)
Spring. 4 credits. N. Silins.
An introduction to some of the central issues in philosophy of mind. Questions to be addressed may include: What is the relation between the mind and the body? How can consciousness fit into our picture of the physical world? What is the difference between a reflex and an intentional action? Readings are typically drawn from recent sources.

PHIL 2640 Introduction to Metaphysics (KCM-AS)
Fall. 4 credits. R. Bennett.
This course is an introduction to some of the central questions in metaphysics—the study of what there is and how it works. Possible topics include persistence through change, freedom of the will, the nature of time (and the possibility of time travel), causation, properties, and necessity.

PHIL 2860 Science and Human Nature (also STS 2861) (KCM-AS)
Spring. 4 credits. R. Boyd.
An examination of attempts in the biological and social sciences to offer scientific theories of human nature and human potential and to apply such theories to explain important social and psychological phenomena.

Intermediate or Advanced Courses
Some of these courses have prerequisites.

PHIL 3202 Plato (also CLASS 3669) # (KCM-AS)
Fall. 4 credits. Prerequisites: at least one previous course in philosophy at 2000 level or above; or permission of instructor. G. Fine.
We will study several of Plato’s major dialogues, including the Apology, the Meno, Phaedo, and Republic. Topics include knowledge and reality; morality and happiness; the nature of the soul.

PHIL 3204 Hellenistic Philosophy # (KCM-AS)
Spring. 4 credits. Prerequisites: at least one previous course in philosophy at 2000 level or above or permission of instructor. T. Brennan.
We will study the doctrines and theories of the Epicurean, Stoic, and Skeptic Schools that flourished in the period after the death of Aristotle. This period saw extensive new developments in logic, metaphysics, epistemology, and ethics. The rediscovery of Hellenistic Philosophy in the Renaissance led to the rejection of Medieval Aristotelianism and the birth of early modern philosophy.

PHIL 3220 Modern Rationalism
Spring. 4 credits. Prerequisite: One PHIL course, preferably 2220, 3221, or an equivalent. A. Chignell.
A mid-level look at the epistemology and metaphysics of the classical Continental rationalists. Topics typically include: ideas, skepticism, belief, knowledge, science, bodies, minds, God, causation, natural laws, afterlife, personal identity. Readings from some (but not all) of the following: Descartes, Malebranche, Spinoza, Leibniz, Wolff, the early Kant.

PHIL 3260 Origins of Analytic Philosophy
Spring. 4 credits. Prerequisite: two previous philosophy courses or permission of instructor. M. Eklund.
An overview of some important authors and themes from the early years of analytic philosophy (from the late 19th century through the early 20th century). Authors discussed may include Gettlob Frege, Bertrand Russell, G. E. Moore and the early Ludwig Wittgenstein.

PHIL 3310 Deductive Logic (also MATH 2810) (MQR)
Fall. 4 credits. Prerequisite: PHIL 2310 or permission of instructor. H. Hodes.
A mathematical study of the formal languages of propositional and predicate logic, including their syntax, semantics, and deductive systems. Various formal results will be established, most importantly soundness and completeness.

PHIL 3410 Ethical Theory (KCM-AS)
Fall. 4 credits. N. Sturgeon.
Topic: Consequentialism and Its Critics. This course will examine one of the deepest divides in modern philosophical debates about ethics, between those who think the moral evaluation of acts, character traits, and social institutions ultimately depends solely on their good or bad consequences, and critics who find this approach fundamentally misguided.

PHIL 3460 Modern Political Philosophy (also GOVT 3625) (KCM-AS)
Fall. 4 credits. R. Miller.
This course will primarily focus on studying and scrutinizing general conceptions of justice. Topics explored typically include liberty, economic equality, democracy, community, the general welfare, and tolerance. We will also look at implications for particular political controversies such as abortion, welfare programs, and pornography.

PHIL 3700 Problems in Semantics (also COGST 3300, LING 3333) (KCM-AS)
Fall. 4 credits. D. Abusch.
For description, see LING 3333.

PHIL 3810 Philosophy of Science (also STS 3811) (KCM-AS)
Fall. 4 credits. R. Boyd.
This course will cover various topics in the philosophy of science.

PHIL 3900 Independent Study
Fall or spring. Variable credit.
To be taken only in exceptional circumstances. Must be arranged by the student with his or her advisor and the faculty member who has agreed to direct the study.

Advanced Courses and Seminars
These courses are offered primarily for majors and graduate students.

PHIL 4002 Latin Philosophical Texts (also RELST 4100)
Fall and spring. Variable credit. C. Brittain and S. MacDonald.
Reading and translation of Latin philosophical texts.

PHIL 4003 German Philosophical Texts
Fall and spring. 4 credits. Prerequisites: basic reading (not necessarily speaking) knowledge of German and permission of instructor. Open to upper-level undergraduates. M. Kosch.
Reading, translation, and general discussion of important texts in the German philosophical tradition. Readings for a given term are chosen in consultation with students.

PHIL 4200 Topics in Ancient Philosophy # (KCM-AS)
Fall and spring. 4 credits. Fall, G. Fine; spring, T. Brennan.
Advanced discussion of topics in ancient philosophy.

PHIL 4220 Modern Philosophy # (KCM-AS)
Spring. 4 credits. M. Kosch.
Advanced discussion of topics or authors in "modern" Western philosophy (roughly the 17th and 18th centuries). Topic for 2010: Kierkegaard.

PHIL 4311 Topics in Logic (MQR)
Spring. 4 credits. H. Hodes.
This course will focus on intuitionistic logic, including (1) its relationships to classical logic, some "intermediate logics" between intuitionistic and classical, and a modal logic. We'll consider (2) both proof-theoretic and model-theoretic characterizations of the consequence relations for these logics, (3) algebraic/topological (and time permitting, categorical) characterizations of intuitionistic consequence. (4) We'll also look at how certain mathematical theories have been developed on the basis of intuitionistic logic.

PHIL 4410 Topics in Contemporary Ethical Theory (KCM-AS)
Fall. 4 credits. N. Sturgeon.
A course for philosophy graduate students and advanced undergraduates on some selected range of topics in contemporary normative or philosophical ethics. Fall 2009 topic: Moral Realism.

PHIL 4460 Topics in Political Philosophy (KCM-AS)
Fall. 4 credits. E. Taylor.

PHIL 4471 Normative Issues in International Relations
Fall. 4 credits. R. Miller.
An investigation of normative aspects of international affairs, examining moral principles, specific cases, and proposals for reform. Topics may include the ethics of war, global poverty and global economic justice, fairness and democracy in multinational institutions, forms of transnational domination and their moral significance, human rights regimes, equity and adequacy in containing climate change.

PHIL 4620 Topic in Philosophy of Mind (KCM-AS)
Spring. 4 credits. N. Silins.

PHIL 4810 Problems in the Philosophy of Science (also STS 4811) (KCM-AS)
Spring. 4 credits. R. Boyd and A. Chignell.
Advanced discussion of some problem or problems in the Philosophy of Science. Topic: Neo-Kantian/Hegelian Analytic Philosophy.

PHIL 4900 Informal Study for Honors
Fall and spring. 4 credits. Prerequisite: Senior honors students.
See "Honors" at the beginning of the Philosophy section.

PHIL 6020 Latin Philosophical Texts (also LATIN 7262, RELST 6020)
Fall and spring. Variable credit. Prerequisites: Knowledge of Latin and permission of instructor. S. MacDonald and C. Brittain.
Reading and translation of Latin philosophical texts.
PHIL 6030 German Philosophical Texts (also GERST 6131)
Fall and spring. Variable credit. Open to upper-level undergraduates. Prerequisite: basic reading (not necessarily speaking) knowledge of German. M. Kosch. Reading, translation, and English-language discussion of important texts in the German philosophical tradition. Readings for a given term are chosen in consultation with students.

PHIL 6200 Seminar in Ancient Philosophy (also CLASS 7173)
Fall. 4 credits. G. Fine. Graduate seminar covering a topic in ancient philosophy.

PHIL 6201 Graduate Seminar in Latin (also CLASS 7271)
Fall. 4 credits. C. Brittain. For description, see CLASS 7271.

PHIL 6210 Seminar in Medieval Philosophy
Fall. 4 credits. S. MacDonald. Graduate seminar covering a topic in medieval philosophy.

PHIL 6410 Seminar in Ethics and Value Theory
Fall. 4 credits. M. Kosch. Graduate seminar covering a topic in ethics and value theory.

PHIL 6470 Seminar on Normative Issues in International Relations
Spring. 4 credits. R. Miller. For description, see PHIL 4471.

PHIL 6610 Seminar in Epistemology
Spring. 4 credits. N. Silins. Graduate seminar covering a topic in epistemology.

PHIL 6640 Seminar in Metaphysics
Spring. 4 credits. K. Bennett. Graduate seminar covering a topic in metaphysics.

PHIL 6710 Seminar in Philosophy of Language (also LING 6634)
Fall. 4 credits. M. Ekland. Graduate seminar covering a topic in philosophy of language.

PHIL 6810 Seminar in Philosophy of Science (also STS 6811)

PHYSICS
J. R. Patterson, chair (109 Clark Hall, 255–6016); E. Mueller, director of undergraduate studies (115 Clark Hall, 255–8158, physicsdss--mailbox@cornell.edu).

PHYSICS 1101–1102 is a self-paced auto-tutorial course sequence designed for students who recognize the need for a basic understanding of physics, but who do not have preparation in calculus and who do not intend to take further physics courses.

PHYSICS 2207–2208 and 1112–2213–2214 are introductory physics courses for students who want a solid grounding in physics and a chance to develop their calculus-based problem solving skills. Non-majors considering more advanced work in physics are encouraged to take 1112–2213–2214 or 2207–2213–2214.

Courses beyond the introductory level that may be of interest to non-majors include PHYS 3316 Modern Physics I, PHYS 3330 Modern Experimental Optics, and PHYS 3360 Electronic Circuits.

General education courses currently include PHYS 1201, Why the Sky is Blue: Aspects of the Physical World, PHYS 1203, Physics of the Heavens and Earth, and PHYS 1204, The Physics of Musical Sound.

Students may obtain advanced placement and credit, as outlined in “Advanced Placement of Freshmen,” and transfer credit for physics courses taken elsewhere. Students seeking transfer credit or advice on the use of AP credit should consult the Physics director of undergraduate studies.

The Physics Major: Two Routes to a Promising Future
The analytical and problem solving skills and the fundamental conceptual and practical understanding of how the world works provided by an education in physics have allowed physics majors to pursue careers—and have major impacts—not just in physics, but in engineering, education, medicine and the life sciences, the military services, and computer and information sciences, earth and environmental sciences, law, finance and economics, management consulting, philosophy of science, government, and public policy. Reflecting this breadth of opportunity, the Physics Department offers two approaches to the major:

1. The concentration within physics is the principal path to professional or graduate work in physics and closely related fields. Students interested in pursuing an M.B.A. may concentrate in economics. Students interested in a career in education (and in capitalizing on the critical national shortage of high school physics teachers) may concentrate in education, allowing them to complete a master’s degree in Physics Education with New York State Teacher certification in one additional year at Cornell.

2. The concentration outside physics provides more flexibility for those want to develop skills in physics but whose career interests lie elsewhere. For example, a pre-medical or biophysics student may concentrate in biology; a pre-law student may concentrate in business, history, or public policy; and a student planning graduate work in econometrics or on pursuing an M.B.A. may concentrate in economics. Students interested in education careers (and in capitalizing on the critical national shortage of high school physics teachers) may concentrate in education, allowing them to complete a master’s degree in Physics Education with New York State Teacher certification in one additional year at Cornell.

Physics majors—especially those concentrating within physics—are advised to start the introductory physics sequence in the first semester of their freshman year, as a delayed start reduces flexibility in future course scheduling. Students who switch to the physics major after taking introductory physics in their sophomore year can usually still complete an outside concentration. Acceptance into the major program is normally granted upon completion of a year of physics and mathematics courses at Cornell with all course grades at the B– level or higher. Grades of at least C– (or S for S–U only courses) are required in all courses counting toward the physics major.

Advising
Prospective majors are urged to meet with the Physics Director of Undergraduate Studies for advice on advanced placement credit and on program planning. Based on their specific
interests, students will be matched by the DUS with a major advisor. The student and major advisor will then work out the details of the major course program.

Courses for Physics Majors

The Physics Core—All physics majors must complete a core of physics and mathematics courses, as follows:

- A three-semester introductory physics sequence, either PHYS 1112–2213–2214, or its more analytic “honors” version 1116–2217–2218. PHYS 2207 students with life/chemical/health science interests who decide to switch to the physics major may complete 2207–2213–2214. A transition from 2208 to 2214 is also possible for students with very strong math backgrounds.

- Mathematics courses covering single and multivariable calculus, linear algebra, series representations, and complex analysis: MATH 1910 or 1120; 1920 or 2210; 2930 or 2220; and 2940 or 2210; or their equivalents. Inside concentrators should complete at least one additional year of applicable mathematics such as AEP 3210 and 3220.

- Five upper-level courses beyond the three-semester introductory sequence, consisting of: (1) the two-course sequence in modern physics (PHYS 3316–3317), (2) at least three semester hours of laboratory work selected from PHYS 3310, 3330, 3560, 4510, or ASTRO 4410, (3) an intermediate course in classical mechanics (PHYS 3314 or 3318), and (4) an intermediate course in electromagnetism (PHYS 3323 or 3327). Students who complete the 1112–2213–2214 or 2207–2213–2214 introductory sequence are advised to complete the 1-credit course PHYS 2216 before taking PHYS 3316.

In addition to the core, each physics major must complete at least 15 semester hours of credit in an area of concentration that has been agreed upon by the student and major faculty advisor.

Concentration within Physics

Students planning professional or graduate work in physics are encouraged to take the more advanced and analytically rigorous versions of the core courses—PHYS 1116, 2217, 2218, 3318, and 3327. Students with weaker high school preparation may start in PHYS 1112 and then switch to the advanced sequence in later semesters. The best-prepared students, who may qualify for advanced placement credit for PHYS 1112 and/or 2213, are still strongly encouraged to start with 1116.

For a concentration within physics, the minimum 15 hours beyond the core must be composed of physics courses with numbers greater than 3000. These 15 hours must include the senior laboratory course PHYS 4410 in addition to one of the lab courses listed for the core, so that a physics concentration requires a minimum of 7 credit hours of laboratory work. The accompanying table shows some typical course sequences that fulfill the major requirements. The sequence followed by each student will depend upon his or her interests and pre-college preparation, and will be determined in consultation with the major advisor. Majors are strongly encouraged to participate in the department’s research activities. If this activity is done as an independent project, PHYS 4490, up to 8 credit hours can be applied toward the concentration.

Concentration outside of Physics

For outside concentrations, the courses to be counted in the minimum 15 credit hours beyond the core must have internal coherence and lead to mastery in the area of concentration. The course sequence must be worked out with and approved by the major faculty advisor. At least 8 of the 15 credit hours must be in courses numbered above 3000. Past areas of concentration include astronomy, business, chemical physics, computer science, econometrics, education, geophysics, history, and philosophy of science, law, meteorology, and public policy. A combined biology/chemistry concentration is common for premedical students or those who wish to prepare for work in biophysics.

The department particularly wishes to encourage students with an interest in science education. Physics majors can obtain teaching certification by concentrating in education and then completing a one-year master of arts in teaching (M.A.T.) degree. Information about the education concentration and M.A.T. can be obtained from the Department of Education’s Cornell Teacher Education Program, from the physics department’s Teacher in Residence, or from the Physics director of undergraduate studies.

Concentration within physics concentrations may follow either PHYS 1112–2213–2214, 3314, and 3323, or the advanced 1116–2217–2218, 3318, and 3327. Students concentrating in astronomy who might continue on to graduate school in that field are encouraged to take PHYS 3318 and 3327 in the core and ASTRO 4410, 4431, and 4432 toward the concentration.

Honor

A student may be granted honors in physics upon the recommendation of the Physics Advisors Committee of the physics faculty. There is no particular course structure or thesis requirement for honors.

Double Majors

Double majors including physics are possible and not at all uncommon. However, any course used to satisfy a requirement of another major may be used in satisfaction of physics major requirements only if the student’s concentration is within physics.

Courses with Overlapping Content

The grouped courses listed in the chart below have largely similar content. Students should select courses for their academic program carefully, as they may receive credit for only one course in each group.

PHYS 1101, 1112, 1116, 2207
PHYS 1102, 2208, 2213, 2217
PHYS 2214, 2218
PHYS 3314, 3318
PHYS 3323, 3327
PHYS 1116, 2216
PHYS 2206, GOVT 3847

Typical Physics Course Sequences (other sequences are also possible)

</table>

- For majors with concentrations outside physics, there is wide variation in individual programs, arranged to best match the field of concentration.
- Crossovers between the two sequences 1112–2213–2214 and 1116–2217–2218 are possible, although the combination 1112–2213–2218 is difficult. PHYS 2207 may be substituted for PHYS 1112. Students taking 2217 after 1112 must co-register for 2216.
- Students taking the honors sequence 1116–2217–2218 are strongly encouraged to start with PHYS 1116. Exceptionally well-prepared students may be able to begin work at Cornell with PHYS 2217. Such students should visit the Director of Undergraduate Studies for advice in planning a course program.
- Physics electives for the major include 3560, 4444, 4454, 4455, 4480, 4490, 6525, 6553, 6561, 6572, the senior seminars 4481–4489, ASTRO 3332 or 4431–4432, and AEP 4340.
- One semester of intermediate laboratory, listed here as 3x0, is required.
- Well-prepared sophomores wishing to take PHYS 3318 should consult the instructor before registering.
- Students interested in graduate work in physics immediately after Cornell are advised to begin the introductory physics sequence in their first semester.
In addition, students with credit for PHYS 1101, 1112, 1116, or 2207, or an advanced placement equivalent who wish to enroll in PHYS 1200–1206 must obtain written permission from the instructor and the Physics director of undergraduate studies.

**Course Prerequisites**

Achieving success in a physics course is easier if you have the proper preparation. Each physics course description lists prerequisite courses that develop mastery in the needed mathematics and physics. Students who wish to enroll in a course but lack the listed prerequisites can often succeed with an appropriate work plan, especially if they have other relevant prior experience. These students must discuss their preparation with the course instructor and with their advisor before enrolling.

**Courses**

**PHYS 1012 PHYS 1112 Supplement**

Spring. 1 credit. S–U grades only.

R. Lieberman. Provides backup instruction for PHYS 1112. Recommended for students who either feel insecure about taking PHYS 1112 or simply want to develop their problem-solving skills. Emphasizes getting the student to develop a deep understanding of basic concepts in mechanics. Much class time is spent solving problems and applications.

**PHYS 1013 PHYS 2213 Supplement**

Fall. 1 credit. S-U grades only.

R. Lieberman. Provides backup instruction for PHYS 2213. Description is the same as for PHYS 1012. Except the material covered is electricity and magnetism.

**PHYS 1101 General Physics I (PBS)**

Fall, summer (eight-week, six-week, or first four weeks only for those doing PHYS 1102 in the second four weeks); 4 credits. Enrollment may be limited and freshmen are excluded. General introductory physics for non-physics majors. Prerequisites: three years high school mathematics, including some trigonometry. Students without high school physics should allow extra time for PHYS 1101. Includes less mathematical analysis than PHYS 2207 but more than PHYS 1200–1206, 1209, 1210. T. Arias. Emphasizes quantitative and conceptual understanding of the topics of introductory physics developed without use of calculus. The course is mostly self-paced in a mastery-oriented format including eight subject units and a final retention (review) unit each semester. Most important occurs in the learning center with personal tutoring by staff, assigned readings, problems, laboratory exercises, videotaped lectures, tutorials, and solutions of sample test questions at the course web site. Unit testing is designed to measure mastery with a limit of three test tries. Major topics for 1101: kinematics, forces and dynamics, momentum, energy, fluid mechanics, waves and sound, thermal physics, kinetic theory, and thermodynamics. At the level of College Physics, second ed., by Giambattista, Richardson, and Richardson.

**PHYS 1102 General Physics II (PBS)**

Spring, summer (eight-week, six-week, or second four weeks only for those doing PHYS 1101 in first four weeks); 4 credits. Enrollment may be limited. Prerequisite: for PHYS 1102, PHYS 1101 or 1112 or 2207. Includes less mathematical analysis than PHYS 2208 but more than PHYS 2200–2206, 2209, 2210. T. Arias. Emphasizes quantitative and conceptual understanding of the topics of introductory physics developed without use of calculus. The course is mostly self-paced in a mastery-oriented format including eight subject units and a final retention (review) unit each semester. Most important occurs in the learning center with personal tutoring by staff, assigned readings, problems, laboratory exercises, videotaped lectures, tutorials, and solutions of sample test questions at the course web site. Unit testing is designed to measure mastery with a limit of three test tries. Major topics for 1102: electricity and magnetism, optics, relativity, quantum, nuclear, and particle physics. At the level of College Physics, second ed., by Giambattista, Richardson, and Richardson.

**PHYS 1103 General Physics (PBS)**

Summer. 4 credits. Prerequisites: three years high school mathematics, including some trigonometry. Next offered 2010–2011. General introductory physics for non–physics majors. Basic principles treated quantitatively but without calculus. Topics include kinematics; forces and Newton's Laws; momentum, and energy; thermal physics, fluid mechanics; sound and waves.

**PHYS 1112 Physics I: Mechanics (PBS)**

Fall, spring, summer (six-week session). 4 credits. Primarily for engineering students and prospective physics majors. Prerequisite: MATH 1910 or 1120. Recommended: coregistration in MATH 1920. Fall, A. LeClair; spring, staff. Covers the mechanics of particles with focus on kinematics, dynamics, conservation laws, central force fields, periodic motion. Mechanics of many-particle systems: center of mass, rotational mechanics of a rigid body, and static equilibrium. At the level of University Physics, Vol. 1, by Young and Freedman, 12th ed.

**PHYS 1116 Physics I: Mechanics and Special Relativity (PBS)**

Fall, spring. 4 credits. More analytic than PHYS 1112; intended for students who are comfortable with deeper, somewhat more abstract approach; intended mainly but not exclusively for prospective majors in physics, astronomy, or applied and engineering physics. Prerequisites: good secondary school preparation, proficiency with basic calculus, and enjoyment of puzzle-solving. Corrective transfers between PHYS 1116 and PHYS 1112 (in either direction) are encouraged during first three weeks of instruction. Fall, L. Gibbons; spring, K. Shen. At the level of An Introduction to Mechanics by Kleppner and Kolenkow.

**PHYS 1117 Concepts of Modern Physics**

Fall. 1 credit. Enrollment may be limited. Corequisite: PHYS 1112 or 1116 or 2213 or 2217. For freshmen who plan to major in physics, applied and engineering physics, or astronomy. S–U grades only. A. Sadoff. Intended for freshmen who plan to major in physics or a closely related field (i.e., applied and engineering physics or astronomy) and would like to learn about the concepts of modern physics early in their physics education. Possible topics of discussion are scientific methodology, symmetry and conservation laws, quantum theory, the unification of forces and matter in the Standard Model, and big-bang cosmology.

**PHYS 1190 Supplemental Introductory Laboratory**

Fall. 1 credit. Times TBA with instructor. Limited enrollment. S–U grades only. Prerequisites: 3 transfer credits for introductory physics lecture material; a degree requirement for laboratory component of that introductory course; approval of director of undergraduate studies; and permission of lecturer of that course at Cornell. Students must file PHYS 1190 permission form in 121 Clark Hall with physics department course coordinator.

Students perform the laboratory component of one of the introductory courses (PHYS 1112, 2207, 2208, 2213, 2214) to complement the lecture-related course credit acquired elsewhere. Those wishing to take equivalent of one of these introductory courses at another institution should receive prior approval from the physics director of undergraduate studies.

**PHYS 1201 Why the Sky Is Blue: Aspects of the Physical World (PBS)**

Fall. 3 credits. A. Sadoff. Descriptive physics course aimed specifically at the nonscience student. There is an emphasis on the ideas of modern physics where the approach is both historical and thematic. The methodology of science and the nature of evidence is emphasized. An overriding theme is the unification and character of physical laws as shown, for example, through the great principles of symmetry and conservation. While a few computational problems are assigned, the purpose is to help students understand the concepts rather than to master problem-solving techniques.

**PHYS 1202 How Physics Works (PBS)**

Spring. 3 credits. Intended for nonphysics majors. No background in either science or mathematics beyond high school algebra assumed. Staff. Introduces students who are not majoring in scientific or quantitative disciplines to the techniques and ways of reasoning employed in physics. By gaining an understanding of two milestones in the history of physics (the discoveries of Newton and the application of the laws of laws of probability to physical problems), students learn about the interaction of experiment, mathematics, and conjecture that has fueled the advance of physics.

**PHYS 1203 Physics of the Heavens and the Earth—A Synopsis**

Spring. 3 credits. Prerequisite: none; uses high school algebra and geometry. For nonscience majors, H. Padamsee. Shows how the unification of apparently distinct areas of physics leads to an explosion in the growth of our knowledge and understanding. The material is divided into three parts: the physics of motion on earth; motion in the heavens; and synthesis. Trace how ideas about celestial and terrestrial motion evolved separately at first, from the ancient ideas of Greek philosophers to the dynamics and telescopic discoveries of Galileo during the Renaissance. The two arenas finally
melded under Newton's Universal Gravitation. Einstein's special and general theories of relativity eventually supplant Newton's ideas. There is an emphasis throughout on "how do we know the laws?" These are the stories of breakthrough discoveries and brilliant insights made by fascinating people, offering a humanistic perspective.

**PHYS 1204 Physics of Musical Sound (also MUSIC 1466) (PBS)**

Spring. 3 credits. Open to all students and suitable for nonscientists; does not serve as prerequisite for further science courses. Assumes no scientific background but uses high school algebra. K. Selby. Explores musical sound from a physics point of view. Topics include: how various musical instruments work; pitch, timbre, scales, intervals and tunings; hearing; room acoustics; reproduction of sound. Science writing and physics problem-solving skills are developed through weekly assignments. Student activities include hands-on investigations of musical instruments, and field trips. Students write a term paper investigating a topic of their choice. At the level of *The Science of Sound* by Rosing, Moore, and Wheeler.

**PHYS 2206 Weapons of Mass Destruction (also GOVT 3847) @**

Spring. 4 credits. Students enrolled in PHYS 2206 receive PBA-AS; students enrolled in GOVT 3847 receive SBA-AS. Kreps and G. Lewis. For description, see GOVT 3847.

**PHYS 2207 Fundamentals of Physics I (PBS)**

Fall. 4 credits. Prerequisites: high school physics plus MATH 1110 or 1106, or solid grasp of basic notions of introductory calculus. M. Liepe. PHYS 2207–2208 is a two-semester introduction to physics with emphasis on tools generally applicable in sciences, intended for students majoring in physical science, mathematics, or analytically oriented biological science. The combination of lectures illustrated with demonstrations from the sciences, medicine, and everyday life, weekly labs tightly coupled to lectures that introduce computer-aided data acquisition and analysis, and recitations that emphasize cooperative problem-solving provide a rich exposure to the methods of physics and the basic analytical and scientific communication skills required by all scientists. Course covers mechanics, conservation laws, waves, and topics from thermal physics, fluids, acoustics, and materials physics. At the level of *Fundamentals of Physics*, Vol. I, eighth ed., by Halliday, Resnick, and Walker.

**PHYS 2208 Fundamentals of Physics II (PBS)**

Spring. 4 credits. Prerequisites: PHYS 2207 or 1112 or 1101; substantial contact with introductory calculus (e.g., MATH 1110 or 1106). A continuation of PHYS 2207. R. Fulbright. Covers electricity and magnetism, and topics from geometrical and physical optics, quantum and nuclear physics. At the level of *Fundamentals of Physics*, Vol. II, eighth ed., by Halliday, Resnick, and Walker.

**PHYS 2213 Physics II: Heat/Electromagnetism (PBS)**

Fall, spring, summer (six-week session). 4 credits. Primarily for students of engineering and prospective physics majors. Prerequisite: PHYS 1112 and MATH 1920 or 2220. Coregistration with MATH 1920 may be allowed by instructor in exceptional cases. Fall, H. Tye; spring, P. Krekic; summer, R. Wheeler. Topics include temperature, heat, the laws of thermodynamics, electrostatics, behavior of matter in electric fields, DC circuits, magnetic fields, Faraday's law, AC circuits, and electromagnetic waves. At the level of *Understanding Physics*, Vol. 1 and 2, by Young and Freedman, 12th ed.

**PHYS 2214 Physics III: Oscillations, Waves, and Quantum Physics (PBS)**

Fall, spring, summer (six-week session). 4 credits. Primarily for engineering students and prospective physics majors. Prerequisites: PHYS 1112 and MATH 2920. Fall, A. Giambattista; spring, staff; summer, D. Briota. Physics of oscillations and wave phenomena. Driven oscillations and resonance; mechanical waves, sound waves, electromagnetic waves, reflection and transmission of waves, standing waves, beats, Doppler effect, polarization, interference, diffraction, transport of momentum and energy, wave properties of particles, and introduction to quantum physics with applications to phenomena in physics, engineering, and biology.

**PHYS 2216 Introduction to Special Relativity**

Fall, spring. classes held in first 5–7 weeks. 1 credit. Enrollment may be limited. Coregistration in this course is required for registration in PHYS 2217, unless the student has taken a relativity course at level of PHYS 1116 or ASTRO 1106. Students cannot get credit for PHYS 2216 if they have taken PHYS 1116. Prerequisites: PHYS 1112 or 2207 or permission of instructor. S–U grades only. Introduction to Einstein's Theory of Special Relativity, including Galilean and Lorentz transformations, the concept of simultaneity, time dilation and Lorentz contraction, the relativistic transformations of velocity, momentum and energy, and relativistic invariance in special relativity. At the level of *Introduction to Relativity* by J. B. Kogut.

**PHYS 2217 Physics II: Electricity and Magnetism (also AEP 2170) (PBS)**

Fall, spring. 4 credits. Enrollment may be limited. Intended for students who have done very well in PHYS 1112 and 2217 and in mathematics and who desire more analytic treatment than that of PHYS 2213. Prospective physics majors are encouraged to register. Prerequisites: PHYS 2217 (with grade of B or higher) and course in differential equations (MATH 2940) or permission of instructor. Fall, E.-A. Kim; spring, staff. The first part of the course gives a thorough discussion of wave equations, including traveling waves, standing waves, energy, momentum, power, reflection and transmission, interference and diffraction. Derives wave equations on strings, sound, elastic media, and light. Covers solutions of these wave equations and Fourier series and transforms. The second part introduces thermodynamics and statistical mechanics, including heat engines, the Carnot cycle, and the concepts of temperature and entropy. Evening exams may be scheduled. At the level of *Physics of Waves* by Elmore and Heald and *Thermal Physics* by Schroeder.

**PHYS 3310 Intermediate Experimental Physics (PBS)**

Spring. 3 credits. Enrollment may be limited. Prerequisite: PHYS 2208 or 2213. Students select from a variety of experiments. An individual, independent approach is encouraged. Facilities of the PHYS 4410 lab are available for some experiments.

**PHYS 3311 Intermediate Mechanics (PBS)**

Spring. 4 credits. Prerequisites: PHYS 2208 or 2213 or 2216 (or equivalent) and MATH 2940 (or equivalent). Assumes prior introduction to linear algebra and Fourier analysis. Intended for physics majors with concentration outside of physics or astronomy; PHYS 3318 covers similar material at more analytical level. D. G. Cassel. Likely topics include Lagrangian mechanics; Newton's laws; conservation of energy; conservation of momentum; rectilinear motion; force; circular motion; central forces; constrained systems; rigid body motion; motion in non-inertial reference frames; and nonlinear behavior including bistability and chaos. Students not only become more familiar with analytic methods for solving problems in mechanics but also gain experience with computer tools. At the level of *Classical Mechanics* by John R. Taylor.

**PHYS 3316 Basics of Quantum Mechanics (PBS)**

Fall, spring. 3 credits. Prerequisites: PHYS 2214 or 2218, PHYS 1112 or 2216, and coregistration in at least MATH 2940 or equivalent. Assumes that majors registering in PHYS 3316 will continue with PHYS 3317. Fall, G. Dugan; spring, M. Liepe. Topics include atomic and molecular physics, quantum mechanics, and applications to quantum systems. Concepts in microphysics; light quanta and matter waves; Schrödinger equation and solutions for square well, harmonic oscillator, and the hydrogen atom; wave packets, scattering and tunneling; angular momentum, spin, and magnetic moments. At the level of *An Introduction to Quantum Physics* by French and Taylor.
Phys 3317 Applications of Quantum Mechanics (PBS)
Fall. 3 credits. Prerequisite: Phys 3316. I. Bazarov.
Covers a number of applications of quantum mechanics to topics in modern physics. Topics include: the physics of single and multi-electron atoms, quantum statistical mechanics, molecular structure, quantum theory of metals, band theory of solids, superconductivity, nuclear stability, quantum electrodynamics, nuclear reactions, and elementary particle physics.

Phys 3318 Analytical Mechanics (PBS)
Spring. 4 credits. Prerequisites: Phys 1116 or permission of instructor; Aep 3210 or appropriate course(s) in mathematics. Intended for junior physics majors concentrating in physics or astronomy; Phys 3314 covers similar material at less demanding level. Assumes prior exposure to Fourier analysis, linear differential equations, linear algebra, and vector analysis. Staff.
Newtonian mechanics of particles and systems of particles, including rigid bodies; oscillating systems; gravitation and planetary motion; moving coordinate systems; Euler's equations; Lagrange's equations; Hamilton's equations; normal modes and small vibrations; introduction to chaos. At the level of Classical Mechanics by Goldstein, Classical Dynamics by Marion and Thornton, and Analytical Mechanics by Hand and Finch. Supplementary reading is assigned.

Phys 3327 Advanced Electricity and Magnetism (PBS)
Fall. 4 credits. Prerequisites: Phys 2208 or 2213/2214 (or equivalent) and Math 2940/2940 (or equivalent). Recommended: coregistration in Aep 3210 or appropriate mathematics course. Intended for physics majors with concentration outside of physics or astronomy; Phys 3327 covers similar material at more analytical level. A. Sievers.
Topics include electro/magnetostatics, boundary value problems, dielectric and magnetic media, Maxwell's Equations, electromagnetic waves, including guided waves, reflection and refraction, and electromagnetic radiation. At the level of Introduction to Electrodynamic by Griffiths.

Phys 3327 Advanced Electricity and Magnetism (PBS)
Fall. 4 credits. Prerequisites: Phys 2217/2218 or permission of instructor. Corequisite: Aep 3210 or appropriate mathematics course(s). Intended for physics majors concentrating in physics or astronomy. Phys 3327 covers similar material at less demanding level. Assumes knowledge of material at level of Phys 2217 and makes extensive use of vector calculus, and some use of Fourier transforms and complex variables. I. Cohen.
Covers electro/magnetostatics, vector and scalar potentials, multipole expansion of the potential solutions to Laplace's Equation and boundary value problems; time-dependent electrodynamics; Maxwell's Equations, electromagnetic waves, reflection and refraction, wave guides, retarded potential, antennas; relativistic electrodynamics, four vectors, Lorentz, transformation of fields. At the level of Classical Electromagnetic Radiation by Heald and Marion.

Phys 3330 Modern Experimental Optics (also Aep 3300) (PBS)
Fall. 4 credits. Limited enrollment. Prerequisite: Phys 2214 or equivalent. G. Hoffstaeter.
A practical laboratory course in basic and modern optics. Students use lasers and basic optical bench equipment to cover a wide range of topics from geometrical optics to interference, diffraction, and polarization. Each experimental setup is equipped with standard, off-the-shelf optics and opto-mechanical components to provide the students with hands-on experience in practical laboratory techniques currently employed in physics, chemistry, biology, and engineering. Students are also introduced to digital imaging and image processing techniques. Five projects are prescribed and one last project defined and designed by the student with help from the instructor. At the level of Optics by Hecht.

Phys 3331 Thermodynamics and Statistical Physics (PBS)
Fall. 4 credits. Prerequisites: Phys 2214, 3316, and Math 2940. V. Eber.
Covers statistical physics, developing both thermodynamics and statistical mechanics simultaneously. Lagrangean and Hamiltonian formulations; normal modes and small vibrations; introduction to chaos. At the level of Fundamentals of Statistical and Thermal Physics by Reif.

Phys 3360 Electronic Circuits (also Aep 3630) (PBS)
Fall, spring. 4 credits. Prerequisites: undergraduate course in electricity and magnetism (e.g., Phys 2208, 2213, or 2217) or permission of instructor. No previous electronics experience assumed, although course moves quickly through introductory topics such as basic DC circuits. Fall semester usually has smaller enrollment. S–U grade option available by permission of instructor for students who do not require course for major. Fall, E. Kirkland; spring, I. Bazarov.
Practical electronics encountered in a scientific or engineering research/development environment. Analyze, design, build, and test circuits using discrete components and integrated circuits. Analog circuits: resistors, capacitors, operational amplifiers, feedback amplifiers, oscillators, comparators, passive and active filters, diodes and transistor switches and amplifiers. Digital circuits: combinational and sequential logics (gates, flip-flops, registers, counters, timers), analog to digital (ADC) and digital to analog (DAC) conversion, signal averaging, computer architecture and interfacing. Additional topics may include analog and digital signal processing, light level communications, transducers, and noise reduction techniques and computer-aided circuit design. At the level of Art of Electronics by Horowitz and Hill.

Phys 4400 Informal Advanced Laboratory
Fall, spring. 1–3 credits, variable. Prerequisites: physics or permission of instructor. P. McEuen.
Experiments of widely varying difficulty in one or more areas, as listed under Phys 4410, may be done to fulfill the student's special requirements.

Phys 4410 Advanced Experimental Physics (PBS)
Fall, spring. 4 credits. Prerequisite: senior standing or permission of instructor; Phys 2214 (or 3310 or 3660) plus 3318 and 3327, or permission of instructor. P. McEuen.
Selected topics in experimental concepts and techniques. About 60 different experiments are available in acoustics, optics, spectroscopy, electrical circuits, electronics and ionics, magnetic resonance, X-rays, low temperature, solid state, cosmic rays, and nuclear physics. The student performs three to four different experiments, depending on difficulty, selected to meet individual needs and interests. Independent work is stressed. Lectures are on experimental techniques used in experiments in the laboratory and on current research topics.

Phys 4443 Intermediate Quantum Mechanics (PBS)
Spring. 4 credits. Prerequisites: Phys 3316, 3525, or 3327 or Aep 3210 or appropriate mathematics course(s); coregistration in Phys 3314 or 3318, permission of instructor. Assumes prior experience in linear algebra, differential equations, and Fourier transforms. Staff.
Provides an introduction to concepts and techniques of quantum mechanics, at the level of An Introduction to Quantum Mechanics by Griffiths.

Phys 4444 Introduction to Particle Physics (PBS)
Spring. 4 credits. Prerequisite: Phys 4443 or permission of instructor. Staff.
The standard model of particle physics: behavior of high-energy particles and radiation; elementary particles; basic properties of accelerators and detectors; general symmetries and conservation laws. At the level of Introduction to Elementary Particles by Griffiths or Modern Elementary Particle Physics by Kane.

Phys 4445 Introduction to General Relativity (also ASTRO 4445) (PBS)
Fall. 4 credits. Offered as alternative to the more comprehensive, two-semester graduate sequence Phys 6553 and 6554. L. McAllister.
One-semester introduction to general relativity, which develops the essential structure and phenomenology of the theory without requiring prior exposure to tensor analysis. General relativity is a fundamental cornerstone of physics that underlies several of the most exciting areas of current research, including relativistic astrophysics, cosmology, and the search for quantum theory of gravity. The course briefly reviews special relativity, introduces basic aspects of differential geometry, including metrics, geodesics, and the Riemann tensor, describes black hole spacetimes and cosmological solutions, and concludes with the Einstein equation and its linearized gravitational wave solutions. At the level of Gravitation: An Introduction to Einstein's General Relativity by Hartle.
PHYS 4454 Introductory Solid-State Physics (also AEP 4500) (PBS)
Fall. 4 credits. Prerequisite: PHYS 3443, AEP 3560, or CHEM 7590 highly desirable but not required. C. Fennie.
Introduction to modern solid-state physics, including crystal structure, lattice vibrations, electron theory of metals and semiconductors, and selected topics from magnetic properties, optical properties, superconductivity, and defects. At the level of Introduction to Solid State Physics by Kittel and Solid State Physics by Ashcroft and Mermin.

PHYS 4455 Geometrical Concepts in Physics (PBS)
Spring. 4 credits. Prerequisite: PHYS 3323 or equivalent and at least coregistration in PHYS 3318 or permission of instructor. Usually offered every other spring. Most nonquantum physical theories are based on one or another form of geometry: Newtonian mechanics on Euclid, electromagneticism on Minkowski, general relativity on Riemann, string theory on higher dimensionality. This course surveys the unification of classical physics that accompanies the application of Hamilton's principle of least action to these various geometries. At the level of Geometric Mechanics by Talman.

PHYS 4456 Introduction to Accelerator Physics and Technology (also PHYS 7656) (PBS)
Fall. 3 credits. Prerequisites: PHYS 3323 or 3327 and PHYS 3314 or 3318. Next offered 2010–2011. G. Hoffstaetter.
Fundamental physical principles of particle accelerators and enabling technologies, with a focus on basic effects in linear and circular accelerations as used for elementary particle collision experiments and for X-ray sources.

PHYS 4480 Computational Physics (also ASTRO 7690, PHYS 7680) (PBS)
Spring. 3 credits. Assumes familiarity with standard mathematical methods for physical sciences and engineering (differential equations, Fourier transforms, and linear algebra) and with some form of computer programming (e.g., C++, Octave, Mathematica, or Python). S–U grades only. J. Sethna.
Covers numerical methods for ordinary and partial differential equations, linear algebra and eigenvalue problems, integration, nonlinear equations, optimization, and fast Fourier transforms. Finds out how and why the "black-box" numerical routines you use work, how to improve and generalize them, and how to fix them when they don’t. Based on the text Numerical Recipes by William H. Press, Saul A. Teukolsky, William T. Vetterling, and Brian P. Flannery.

PHYS 4481 Quantum Information Processing (also CS 4812, PHYS 7681) (PBS)
Spring. 3 credits. Prerequisite: familiarity with theory of finite-dimensional vector spaces over complex numbers. A technology that successfully exploits fundamental principles of quantum physics can spectacularly alter both the nature of computation and the means available for the transmission of information.

PHYS 4484 Teaching and Learning Physics (also PHYS 7684)
Fall, spring. 1 credit. Prerequisites: none. R. Thorne.
This 1-hour weekly seminar provides undergraduate and graduate students with an introduction to core concepts in physics education. Participants discuss articles and videos drawn from physics and science education research and from cognitive science, and engage in collaborative activities that help them become more effective teachers and learners. This seminar is especially valuable for those considering teaching physics at some point in their careers. Topics include: Questioning Strategies, Classroom Discourse and Bloom’s Taxonomy, Learning Theory, Conceptions and Conceptual Change, Epistemology, Metacognition, and Cooperative Learning. Text: Articles from science, engineering, and math education journals.

PHYS 4487 Selected Topics in Accelerator Technology (also PHYS 7687)
Fall. 2 credits. Prerequisite: PHYS 3323 or 3327. S–U grades only. Next offered 2010–2011.
Fundamentals of accelerator technology. Consists of a series of topical seminars covering the principal elements of accelerator technology.

PHYS 4488 Advanced Topics in Accelerator Physics (also PHYS 7688) (PBS)
Spring. 3 credits. S–U grades only. G. Hoffstaetter.
After an introduction to the history of particle accelerators and to their fundamental physical principles, selected topics in accelerator physics will be covered. Such topics are: microwave structures in particle acceleration, linear and nonlinear beam dynamics, collective effects and beam instabilities, characteristics of synchrotron radiation, a project in storage ring design, and experiments with charged particle beams at Cornell’s accelerator laboratory.

PHYS 4490 Independent Study in Physics
Fall or spring. Variable to 4 credits; max. of 8 credits may be applied to physics major. Prerequisite: permission of professor who will direct proposed work. Copy of Request for Independent Study form must be filed with physics department course coordinator, 121 Clark Hall.
Individual project work (reading or laboratory) in any branch of physics.

PHYS 4491 Data Analysis in Particle Physics
Spring. Variable to 4 credits. Prerequisite: PHYS 1112 or 1116. J. Alexander.
A nuts-and-bolts training course covering essential tools and techniques of particle physics analysis for students who want to do particle physics research.

PHYS 4500 Informal Graduate Laboratory
Fall, spring. Variable to 2 credits. Prerequisite: permission of instructor. P. McEuen.
Experiments of widely varying difficulty in one or more areas, as listed under PHYS 6510, may be done to fill special requirements.

PHYS 4501 Contemporary Physics for Teachers
Summer. 2 credits.
Lectures are given by Cornell faculty on topics including: atomic-scale imaging, the Standard Model, and nanofabrication of integrated circuits. Hands-on activities developed by Cornell scientists working with teachers are presented by teachers. Activities are tied to the New York State Physics Core Curriculum where possible.

PHYS 5602 Topics in Physics for Teachers
Summer. 1 credit.
This is a lecture and laboratory course open to CIPT alumni and other high school physics teachers. The course is organized around daily themes that may include atomic games, physics with water, and discrepant events. Lectures are given by Cornell faculty; hands-on activities developed by Cornell scientists working with teachers are presented by teachers. Lab activities may include: a pinball game analogy to the Bohr model, interference in thin films, projectile motion with water, and energy conversion in a mousetrap. Activities are tied to the NYS Physics Core Curriculum where possible.

PHYS 5603 Physics Education for Teachers
Summer. 1 credit. Primarily intended for graduate students. Next offered 2010–2011. This rigorous 35-hour (one-week) course is designed specifically for secondary science teachers to increase physical science content knowledge as aligned with the NYS Intermediate core curriculum.

PHYS 5610 Advanced Experimental Physics
Fall, spring. 3 credits. Optional course associated with PHYS 4410 available. P. McEuen.
About 60 different experiments are available in acoustics, optics, spectroscopy, electrical circuits, electronics and ionics, magnetic resonance, X-rays, low temperature, solid state, cosmic rays, and nuclear physics. Students perform three to four experiments selected to meet individual needs. Independent work is stressed. Lectures include techniques used in experiments in the advanced laboratory and on current research topics.

PHYS 5620 Projects in Experimental Physics
Fall, spring. Variable to 3 credits. Prerequisite: PHYS 5610. To be supervised by faculty member. Students must advise department course coordinator of faculty member responsible for project. Projects of modern topical interest that involve some independent development work by student. Opportunity for more initiative in experimental work than is possible in PHYS 6510.

PHYS 5625 Physics of Black Holes, White Dwarfs, and Neutron Stars (also ASTRO 6511)
Fall. 4 credits. Prerequisite: none. D. Lai.
For description, see ASTRO 6511.

PHYS 5653 General Relativity I (also ASTRO 6509)
A comprehensive introduction to Einstein’s theory of relativistic gravity. This course focuses on the formal structure of the theory.
PHYS 6561 Classical Electrodynamics
Spring. 3 credits. C. Csaki.
Courses include Maxwell's equations, electromagnetic potentials, Green's functions, electromagnetic waves, and radiation theory. The practical application of appropriate mathematical methods is emphasized. At the level of Classical Electrodynamics by Jackson.

PHYS 6562 Statistical Mechanics
Fall. 4 credits. Primarily for graduate students. Prerequisites: good knowledge of quantum mechanics, classical mechanics, and undergraduate-level thermodynamics or statistical mechanics class. Staff. Starts with the fundamental statistical concepts of temperature, entropy, and free energy, defining the microcanonical, canonical, and grand canonical ensembles. Touches upon Markov chains, random walks, diffusion equations, and the fluctuation-dissipation theorem. Covers Bose-Einstein and Fermi statistics, black-body radiation, Bose condensation, superfluidity, metals, and white dwarves. Discusses fundamental descriptions of phases, and introduces Landau theory, topological order parameters, and the homotopy classification of defects. Briefly studies first-order phase transitions and critical droplet theory and concludes with a discussion of critical phenomena, scaling, universality, and the renormalization group.

PHYS 6572 Quantum Mechanics I
Fall. 4 credits. D. Rubin.
Covers the general principles of quantum mechanics, formulated in the language of Dirac. Covers systems with few degrees of freedom such as the hydrogen atom, including fine and hyperfine structure. Theory of angular momentum, symmetries, perturbations and collisions are developed to analyze phenomena displayed by these systems. At the level of Quantum Mechanics: Fundamental by Gottfried and Yan. A knowledge of the subject at the level of PHYS 4443 is assumed, but the course is self-contained.

PHYS 6574 Applications of Quantum Mechanics II
Spring. 4 credits. Knowledge of concepts and techniques covered in PHYS 6561 and 6572 and of statistical mechanics at undergraduate level assumed. Possible topics include identical particles, many electron atoms, second quantization, quantization of the electromagnetic field, scattering of complex systems, radiative transitions, and introduction to the Dirac equation.

PHYS 6599 Cosmology (also ASTRO 6599)
For description, see ASTRO 6599.

PHYS 7635 Solid-State Physics I
Fall. 3 credits. Prerequisites: good undergraduate solid-state physics course (e.g., PHYS 4481), undergraduate statistical mechanics, and familiarity with graduate-level quantum mechanics. D. Ralph.
Survey of the physics of solids: crystal structures, X-ray diffraction, phonons, and electrons. Selected topics from semiconductors, magnetism, superconductivity, disordered materials, dielectric properties, and mesoscopic physics. The focus is to enable graduate research at the current frontiers of condensed matter physics.

PHYS 7636 Solid-State Physics II
Spring. 3 credits. Prerequisite: PHYS 7635. Staff.
Continuation of PHYS 7635. Topics from quantum condensed-matter physics not included in that course, which may include Fermi Liquid Theory, magnetism, superconductivity, broken symmetries, elementary excitations, topological defects, superfluids, the quantum Hall effect, mesoscopic quantum transport theory, Anderson localization, and other metal insulator transitions.

PHYS 7645 An Introduction to the Standard Model of Particle Physics
Spring. 3 credits. A. Ryd.
This course is an introduction to the Standard Model of particle physics. Familiarity with Feynman rules, Lagrangians, and relativistic wave equations at the level of PHYS 7651 is assumed. Topics covered include strong and electro-weak interactions, Higgs mechanism, and phenomenon of weak interactions, the quark model, particle accelerators and detectors. The course is taught at the level of Electroweak Interactions: An Introduction to the Physics of Quarks and Leptons by Peter Renton and Introduction to High-Energy Physics by Donald H. Perkins, and The Standard Model: A Primer by Cliff Burgess and Guy Moore.

PHYS 7646 Topics in High-Energy Particle Physics
Covers topics of current interest, such as high-energy electron and neutrino interactions, electron positron annihilation, and high-energy hadronic reactions.

PHYS 7651 Relativistic Quantum Field Theory I
Fall. 3 credits. Undergraduates letter grades only; graduate S–U. Y. Grossman.
Topics include consequences of causality and Lorentz invariance, quantization of Klein-Gordon and Dirac fields, perturbation theory, Feynman diagrams, calculation of cross sections and decay rates, and an introduction to radiative corrections and renormalization with applications to electromagnetic and interactions. At the level of An Introduction to Quantum Field Theory by Peskin and Schroeder.

PHYS 7652 Relativistic Quantum Field Theory II
Spring. 3 credits. Staff.
A continuation of PHYS 7651. Introduces more advanced methods and concepts in quantum field theory. Topics include functional integral methods, quantization of non-Abelian gauge theories, renormalization, and renormalization group theories, spontaneous symmetry breaking, anomalies, solitons, and instantons. Instead of the standard model of strong and electroweak interactions, some applications to condensed-matter physics will be discussed. At the level of An Introduction to Quantum Field Theory by Peskin and Schroeder.

PHYS 7653 Statistical Physics
Fall. 3 credits. Prerequisites: quantum mechanics at level of PHYS 6572, statistical physics at level of PHYS 6562 J. Sethna.
Survey of topics in modern statistical physics selected from phase transitions and the renormalization group, linear response and fluctuation-dissipation theories; quantum statistical mechanics; and nonequilibrium statistical mechanics; soft matter and/or biological applications.

PHYS 7654 Basic Training in Conditional Matter Physics
Spring. 3 credits. Prerequisites: PHYS 6562, 6574, 7635, 7636, and 7653, or permission of instructor. S–U grades only. Staff.
Advanced topics in condensed-matter physics are taught by several members of the faculty. Past modules include random matrix theory, the quantum Hall effect, disordered systems and computational complexity, asymptotic analysis, superfluid physics, generalized rigidity, many-body methods applied to nanotubes, constraint problems, quantum optics, Luttinger liquids, and quantum antiferromagnets. Future topics may include dilute cold gases and exotic quantum phenomena, thermodynamic Green's functions, 1/N expansions, density functional theory, instants, dynamical mean-field theory, conformal field theory, Fermi liquid theory and superconductivity, localization and disordered metals, renormalization, multi-scale methods, duality transformations, and Chern-Simons gauge theory. Detailed course content will be announced at the end of the fall semester.

PHYS 7655 Introduction to Accelerator Physics and Technology (also PHYS 4456)
Next offered 2010–2011. For description, see PHYS 4456.

PHYS 7661 Advanced Topics in High-Energy Particle Theory
Fall. 3 credits. Prerequisite: PHYS 7652. S–U grades only. M. Perelstein.
Present advanced topics of current research interest. Subject matter varies from year to year. Some likely topics are two-dimensional conformal field theory with applications to string theory.

PHYS 7665 Seminar: Astrophysics
Fall. 3 credits. Next offered 2010–2011.
For description, see ASTRO 7699.

PHYS 7667 Theory of Stellar Structure and Evolution (also ASTRO 6560)
For description, see ASTRO 6560.

PHYS 7680 Computational Physics (also ASTRO 7690, PHYS 4480)
For description, see PHYS 4480.

PHYS 7681 Quantum Information Processing (also CS 4812, PHYS 4481)
For description, see PHYS 4481.

PHYS 7682 Computational Methods for Nonlinear Systems (also CIS 6229)
Fall. 3 credits. Enrollment may be limited. E. Mueller.
Graduate computer laboratory, focusing on tools for computation, simulation, and analysis of complex, nonlinear systems arising in a broad range of fields including physics, biology, engineering, applied mathematics, and computer science. The course is pitched
at a high level of computational sophistication, but is designed to fit into the busy schedules of first-year graduate students.

**PHYS 7683-7689 Special Topics**

Offerings are announced each semester. Typical topics are group theory, analyticity in particle physics, weak interactions, superfluids, stellar evolution, surface physics, Monte Carlo methods, low-temperature physics, magnetic resonance, phase transitions, and the renormalization group.

**PHYS 7684 Teaching and Learning Physics (also PHYS 4484)**

For description, see PHYS 4484.

**[PHYS 7687 Selected Topics in Accelerator Technology (also PHYS 4487)]**

Next offered 2010-2011. For description, see PHYS 4487.

**PHYS 7688 Advanced Topics in Accelerator Physics (also PHYS 4488)**

For description, see PHYS 4488.

**PHYS 7690 Independent Study in Physics**

Fall or spring. Variable to 4 credits. Students must advise department course coordinator, 121 Clark Hall, of faculty member responsible for grading their project. S–U grades only.

Special graduate study in some branch of physics, either theoretical or experimental, under the direction of any professorial member of the staff.

**POLISH**

See "Department of Russian."

**PORTUGUESE**

See "Department of Romance Studies."

**PSYCHOLOGY**

The major areas of psychology represented in the department are perception, cognition, and development (PCD), behavioral evolutionary neuroscience (BEN), and social and personality psychology. These areas are very broadly defined, and the courses are quite diverse. Behavioral evolutionary neuroscience (BEN) includes animal learning, neuropsychology, interactions between hormones, other biochemical processes, and behavior. Perception, cognition, and development includes such courses as cognition, perception, memory, and psycholinguistics. Social and personality psychology is represented by courses in social psychology and personality (e.g., Psychology and Law, Judgment and Decision Making), as well as courses in fieldwork and psychopathology. In addition to the three major areas mentioned above, the department emphasizes the statistical and logical analysis of psychological data and problems.

**The Major**

Admission to the major is usually granted to any student in good standing in the college who has passed three or more psychology courses with grades of C+ or better. Provisional admission requires two such courses. To apply to the major and receive an advisor, a major application form may be obtained from the department office (211 Uris Hall) and should be completed and taken to one of the faculty members whose name is listed on the form.

Requirements for the major are:

1. a total of 40 credits in psychology (including prerequisites), from which students majoring in psychology are expected to choose, in consultation with their advisors, a range of courses that covers the basic processes in psychology (laboratory and/or field experience is recommended), for any courses taken in 2009-2010 or later to count toward the 40 required credits, the student must earn a grade of C– or better; and
2. demonstration of proficiency in statistics before the beginning of the senior year. (See the section below on the statistics requirement.) Normally it is expected that all undergraduate psychology majors will take at least one course in each of the following three areas of psychology:

1. Perception, cognition, and development (PCD)
2. Behavioral evolutionary neuroscience (BEN)
3. Social and personality psychology

The following classification of Department of Psychology offerings is intended to help students and their advisors choose courses that will ensure that such breadth is achieved.

1. Perception, cognition, and development: PSYCH 1102, 2050, 2090, 2140, 2150, 3050, 3160, 4240, 4280, 4280, 4280, 4240, 4240, 4290, 4290, 4510, 4350, 4400, 4410, 4440, 4920.
3. Social and personality psychology: PSYCH 2650, 2750, 2800, 2820, 3250, 3270, 3280, 3800, 3850, 4050, 4300, 4520, 4520, 4580, 4820, 4850, 4910.
4. Other courses: PSYCH 1101, 1990, 3470, 3500, 4101, 4700, 4710. The major advisor determines to which group, if any, these courses may be applied.

With the permission of the advisor, courses in other departments may be accepted toward the major requirements.

**Fieldwork, independent study, and teaching.** The department requires students to observe the following limits on fieldwork, independent study, and teaching:

1. Undergraduates may not serve as teaching assistants for psychology courses if they are serving as teaching assistants for any other course during the same semester.
2. An undergraduate psychology major cannot apply more than 12 of the credits earned in independent study (including honors work) and fieldwork toward the 40 credits required by the major.

**Statistics requirement.** Proficiency in statistics can be demonstrated in any one of the several ways listed below.

1. Passing PSYCH 3500.
2. Passing an approved course or course sequence in statistics in some other department at Cornell.
3. Passing a course or course sequence in statistics at some other college, university, or college level summer school. The course or sequence must be equivalent to at least 6 semester credits. The description of the course from the college catalog and the title and author of the textbook used must be submitted to Professor Gilovich for approval.
4. Passing an examination. This examination can be given at virtually any time during the academic year if the student gives notice at least one week before. Students who have completed a theoretical statistics course in a department of mathematics or engineering and who wish to demonstrate competence in applied statistics usually find this option the easiest. Students planning this option should discuss it in advance with Professor Gilovich.

**Concentration in biopsychology.** Psychology majors interested in psychology as a biological science can elect to specialize in biopsychology. Students in this concentration must meet all of the general requirements for the major in psychology and must also demonstrate a solid background in biology, the physical sciences, including at least introductory chemistry; and mathematics. Students will design with their advisors an integrated program in biopsychology built around courses on physiological, chemical, anatomical, and ecological determinants of human and nonhuman behavior offered by the Department of Psychology. Additional courses in physiology, anatomy, biochemistry, neurochemistry, neurobiology, and behavioral biology may be designated as part of the psychology major after consultation between the student and his or her biopsychology advisor.

**Concentration in social and personality psychology.** Psychology majors who wish to specialize in social psychology are expected to meet the general requirements set by their department, including statistics. To ensure a solid interdisciplinary grounding, students in the concentration are permitted to include some major courses in sociology and related fields. Advisors will assist students in the selection of a coherent set of courses from social organization, cultural anthropology, experimental psychology, social methodology, and several aspects of personality and social psychology. Seniors in the concentration may elect advanced and graduate seminars, with the permission of the instructor.

**Undergraduate honors program.** The honors program is designed for exceptional students who wish to pursue an intensive and independent program of research in psychology. Successful participation serves as
evidence of the student's facility in the two most important skills required of an academic psychologist: namely, the capacity to acquire and integrate a substantial body of theoretical and factual material and the ability to devise and execute a creative empirical research project.

The honors program offers students the closest contact and consultation with faculty they will likely experience while at Cornell, and all qualified majors who are planning graduate work in any academic field should consider applying. However, it should also be noted that conducting honors research and completing a thesis is an extremely demanding undertaking, both in time and effort. Due to the demands of both research and writing, it is expected that after the Christmas break, honors students will return to campus as early as possible to continue their work, as well as remain on campus through all of spring break.

The focus of the honors program is conducting an experiment, analyzing the data that result, and describing the project in a thesis that closely approximates a professional-level research report both in form and quality. The research project is to be conducted under the close sponsorship of a faculty member. Subject to approval, it is possible that a minor in Computing in the Arts may be included in an honors thesis. Students that successfully complete the honors program graduate with one of levels of honors, which is noted on their diplomas. The customary level is cum laude, awarded to approximately two-thirds of psychology honors graduates.

Approximately one-third receive the next higher level of honors, which is magna cum laude. A student who has both an unusually strong academic record in psychology and completes a thesis of exceptionally high quality will be considered for summa cum laude, the highest level of honors. However, there are unusual cases. The T. A. Ryan Award, accompanied by a cash prize, is awarded to the student who conducts the best honors program project in a given year. Students in the program register for 3 or 4 credits of PSYCH 1710 Independent Study in both fall and spring semesters. Format and binding of the thesis follows guidelines for the doctoral dissertation and master's thesis. The thesis is due at the end of spring semester.

**Courses**

**PSYCH 1102 Introduction to Cognitive Science (also COGST 1101, CS 1710, LING 1170, PHIL 1910) (KCM-AS)**

- Fall, summer (six-week). 3 or 4 credits (+4 credit option; Iiffy writing sec instead of exams). Staff. For description, see COGST 1101.

**PSYCH 1103 Introductory Psychology Seminars**

- Fall. 1 credit. Limited to 200 students. Corequisite: PSYCH 1101. 12 different time options. J. B. Maas and staff. Weekly seminar that may be taken in addition to PSYCH 1101 to provide an in-depth exploration of selected areas in the field of psychology. Involves extensive discussion and a seminar paper related to the seminar topic. Choice of seminar topics and meeting times are available at the second lecture of PSYCH 1101.

**PSYCH 1110 Brain, Mind, and Behavior (also BIONB/COGST 1110) (PBS)**

- Spring. 3 credits. Prerequisite: freshmen and sophomores in humanities and social sciences; juniors and seniors not allowed. Not recommended for psychology majors; biology majors may not use for credit toward major. Letter grades only. E. Edkins Ragan and R. Hoy. For description, see COGST 1110.

**PSYCH 1650 Computing in the Arts (also CIS/CS/ENGR 1610, DANCE 1540, FILM 1750, MUSC 1450) (LA-AS)**

- Fall. 3 credits. G. Bailey. For description, see CS 1610.

**PSYCH 2050 Perception (also PSYCH 6050)**

- Fall. 3 credits. Open to all students. Graduate students, see PSYCH 6050. J. E. Cutting. One of four introductory courses in cognitive psychology. Basic perceptual concepts and phenomena are discussed with emphasis on stimulus variables and visual mechanisms. All sensory modalities are considered. Visual and auditory perception are discussed in detail.

**PSYCH 2090 Developmental Psychology (also PSYCH 7090) (KCM-AS)**

- Spring. 4 credits. Graduate students, see PSYCH 7090. M. Goldstein. One of four introductory courses in cognition and perception. A comprehensive introduction to current thinking and research in developmental psychology that approaches problems from both psychobiological and cognitive perspectives. We use a comparative approach to assess principles of development change. The course focuses on the development of perception, action, cognition, language and social understanding in infancy and early childhood.

**PSYCH 2140 Cognitive Psychology (also COGST 2140/6140, INFO 2140, PSYCH 6140) (KCM-AS)**

- Spring. 4 credits. Limited to 200 students. Prerequisite: sophomore standing. Graduate students, see PSYCH 6140. S. Edelman. Introduces the idea of cognition as information processing or computation, using examples from perception, attention and consciousness, memory, language, and thinking. Participants acquire conceptual tools that are essential for following the current thought on the nature of mind and its relationship to the brain.

**PSYCH 2150 Psychology of Language (also COGST 2150, LING 2215) (KCM-AS)**

- Spring. 3 credits. Prerequisites: sophomore, junior, or senior standing; any one course in psychology or human development. M. Christiansen. Provides an introduction to the psychology of language. The purpose of the course is to introduce students to the scientific study of psycholinguistic phenomena. Covers a broad range of topics from psycholinguistics, including the origin of language, the different components of language (phonology, morphology, syntax, and semantics), processes involved in reading, computational modeling of language processes, the acquisition of language (both under normal and special circumstances), and the brain bases of language.

**PSYCH 2230 Introduction to Biopsychology (PBS: supplementary list)**

- Fall. 3 credits. Prerequisites: none. May be used to satisfy psychology major breadth requirement and as alternative prerequisite for upper-level biopsychology courses. S. Smith. Introduction to psychology from a biological perspective, which focuses on brain mechanisms of behavior. Topics include the structure and function of the nervous system, physiological approaches to understanding behavior, hormones and behavior, biological bases of sensation and perception, learning and memory, cognition, emotion, and communication.

**Introductory courses in social and personality psychology**

- Each of the following three courses (2650, 2750, 2800) provides an introduction to a major area of study within social and personality psychology. These courses are independent of one another, and none have any prerequisites. Students may take any one of the courses or any combination of them (including all three). Courses may be taken in any order or simultaneously.

**PSYCH 2610 Development of Social Behavior (also HD 2610) (SBA-AS)**

- Fall. 3 credits. Prerequisites: HD 1150, PSYCH 1101. J. Mikeb. For description, see HD 2610.

**PSYCH 2650 Psychology and Law (SBA-AS)**

- Fall. 3 credits. D. A. Dunning. Examines the implications of psychological theory and methods for law and the criminal justice system. Concentrates on psychological research on legal topics (e.g., confession, eyewitness testimony, jury decision making, homicide, aggression, the prison system), social issues (e.g., death penalty, affirmative action), and on psychologists as participants in the legal system (e.g., assessing insanity and dangerousness and for expert testimony).

**PSYCH 2750 Introduction to Personality Psychology (also HD 2600) (SBA-AS)**

- Fall. 3 credits. Recommended: introductory psychology or human development. V. Zayas. A shared assumption among personality psychologists is that each person possesses a personality—i.e., characteristic ways of thinking, feeling, and behaving—that uniquely...
distinguishes him or her from other people. Each individual's personality is the culmination of his or her genetic makeup, biology, early life experiences, learning and culture. In this undergraduate-level course, we will review the major theories and research paradigms (e.g., trait, biological, cognitive) of modern-day personality psychology. The course will emphasize contemporary research, theory, and methodology, as well as provide a review of historical accounts that have significantly contributed to current conceptualizations.

**PSYCH 3160 Auditory Perception (also PSYCH 7160) (KCM-AS)**

Spring, 4 credits. Limited to 15 students. Prerequisite: PSYCH 1102, 2050, 2090, or 2140 (or other similar engineering, physics, linguistics, or biology courses). Graduate students, see PSYCH 7160. C. L. Krumhansl. Lab course designed to introduce students to experimental methods in auditory perception and cognition. Students learn principles of experimental design and statistical analysis, conduct a literature review in their chosen area of research, and complete at least one independent research project. Computers are available and used in many of the experiments although computer literacy is not required. Projects are selected from the areas of auditory perception, perceptual organization, and memory of music, speech, and environmental sounds.

**PSYCH 3200 Community Outreach (also HD 2820)**

Fall, 2 credits. Prerequisites: PSYCH 1101 or HD 1150. H. Segal. Provides students with information and perspectives essential to volunteer fieldwork with human and social service programs in the community. Readings are drawn from the field of community psychology and include analyses of successful programs, such as Head Start, as well as a review of the methods by which those programs are developed and assessed. Although students are not required to volunteer, the instructor provides students with a list of local agencies open to student placements.

**PSYCH 3220 Adult Psychopathology (also BIONB 3220, PSYCH 7220) (PBS)**

Fall, 3 credits. Two loci plus sec in which students read and discuss original papers in the field, give an oral presentation, and write a term paper. Prerequisites: junior or senior standing; any one of the following: PSYCH 2230, BIONB 2210 or 2220, or one year introductory biology plus psychology course. Graduate students, see PSYCH 7220. Next offered 2010–2011. E. Adkins Regan. Comparative and evolutionary approaches to the study of the relationship between reproductive hormones and sexual behavior in vertebrates, including humans. Also hormonal contributions to parental behavior, aggression, stress, learning and memory, and biological rhythms.

**PSYCH 3240 Biopsychology Laboratory (also BIONB 3240) (PBS)**

Fall, 4 credits. Limited to 20 students. Prerequisites: junior or senior standing; PSYCH 2230 or BIONB 2210 or 2220, and permission of instructor. Lab fee: $50. T. J. DeVoogd. Experiments designed to provide experience in animal behavioral (including learning) and its neural and hormonal mechanisms. A variety of techniques, animal species, and behavior patterns are included.

**PSYCH 3250 Adult Psychopathology (also HD 3700) (SBA-AS)**

Fall, 3 credits. Prerequisite: sophomore, junior, or senior standing; any one course in psychology or human development. No S–U option. H. Segal. A theoretical and empirical approach to the biological, psychological, and social (including cultural and historical) aspects of adult psychopathology. Readings range from Freud to topics in psychopharmacology. The major mental illnesses are covered, including schizophrenia as well as mood, anxiety, and personality disorders. Childhood disorders are not covered.

**PSYCH 3260 Evolution of Human Behavior (PBS: Supplementary List)**

Spring, 4 credits. Prerequisite: PSYCH 2230, or introductory biology, or introductory anthropology. R. E. Johnston. Broad comparative approach to the behavior of animals and humans with special emphasis on the evolution of human behavior. Topics vary but include some of the following: human evolution, evolutionary and sociobiological theory, animal communication, nonverbal communication, language, cognitive capacities, social behavior and organization, cooperation and altruism, sexual behavior, mating and marriage systems, aggression, and warfare.

**PSYCH 3270 Field Practicum I (also HD 3270) (SBA-AS)**

Fall only. 3 credits. Limited enrollment. Prerequisites: PSYCH 3250 or HD 3700 (or taken concurrently), and permission of instructor. Students must commit to taking PSYCH 3280 in spring semester. Letter grades only. H. Segal. Composed of three components that form an intensive undergraduate field practicum. First, students spend three hours per week at local mental health agencies, schools, or nursing facilities working directly with children, adolescents, or adults; supervision is provided by host agency staff. Second, the instructor provides additional weekly individual, clinical supervision for each student. Third, seminar meetings cover issues of adult and developmental psychopathology, clinical techniques, and current research issues. Students write one short paper, two final take-home exams, and present an account of their field experience in class.

**PSYCH 3300 Introduction to Computational Neuroscience (also BIONB/BME/COGST 3300) (PBS)**

Fall, 3 or 4 credits. Offered 2010–2011. C. Linster. For description, see BIONB 3300.

**PSYCH 3320 Biopsychology of Learning and Memory (also BIONB 3320, PSYCH 6320) (PBS)**

Spring, 3 credits. Limited to 60 students. Prerequisites: one year of biology and either a biopsychology course or BIONB 2220. Graduate students, see PSYCH 6320. T. J. DeVoogd. Surveys the approaches that have been or are currently being used to understand the biological bases for learning and memory. Topics include invertebrate, “simple system” approaches, imprinting, avian song learning, hippocampal and cerebellar function, or research using fMRI pathology in humans. Many of the readings are from primary literature.

**PSYCH 3420 Human Perception: Applications to Computer Graphics, Art, and Visual Displays (also C O G S T 3420, PSYCH 6420, VISST 3342)**

Fall. 3 or 4 credits; 4-credit option involves term paper. Highly recommended: PSYCH 2050. Graduate students, see PSYCH 6420. D. J. Field. Our present technology allows us to transmit and display information through a variety of media. To make the most of these media channels, it is important to consider the limitations and abilities of the human observer. The course considers a number of applied aspects of human perception with an emphasis on the display of visual information. Topics include “three-dimensional” display systems, color theory, spatial and temporal limitations of the visual systems, attempts at subliminal communication, and “visual” effects in film and television.
by the end of the course you will have a to the developmental and social factors from the evolutionary explanations of emotion with the most influential theories of emotion—

last few decades. In this course, we will tackle understanding emotional phenomena in the smarter? What triggers certain emotions? Are make us less rational? Do they make us all cultures experience similar emotions? How makes us all emotion experts of a sort.

We've all been mad, sad, happy, and disgusted. We've all been feeling embarrassed. We've been feeling emotions nearly our whole lives, and this makes us all emotion experts of a sort. Nonetheless, these feelings can be mysterious. Where do they come from? Do people across all cultures experience similar emotions? How can we regulate our emotions? Do emotions make us less rational? Do they make us smarter? What triggers certain emotions? Are there gender differences in emotions? The science of emotion is fairly young, but there has been an enormous amount of progress in understanding emotional phenomena in the last few decades. In this course, we will tackle the aforementioned questions and more. By the end of the course you should be familiar with the most influential theories of emotion—from the evolutionary explanations of emotion to the developmental and social factors involved in making us emotional creatures. So while we are all intuitive experts on emotion, by the end of the course you will have a different kind of expertise—one grounded in the most recent scientific discoveries in this exciting field.

**PSYCH 3470 Psychology of Visual Communications (SBA-AS)**
Spring. 3 credits. Limited to 15 students.
Prerequisites: PSYCH 1101 and permission of instructor. J. B. Maas.
Exploration of the role of education, communication, perception, attitude, and behavior change as they relate to the effectiveness of visually based communication systems. Emphasis is on the use of photography and computer graphics to deliver educational messages. A digital camera with manual control of f-stops and shutter speed is mandatory.

**PSYCH 3500 Statistics and Research Design (MQR)**
Fall, summer (three-week). 4 credits. Limited to 120 students. Staff.
Acquaints the student with the elements of statistical description (e.g., measures of average, variation, correlation) and, more important, develops an understanding of statistical inference. Emphasis is placed on these statistical methods of principal relevance to psychology and related behavioral sciences.

**PSYCH 3610 Biopsychology of Normal and Abnormal Behavior (also NS 3610) (PBS: Supplementary List)**
Spring. 3 credits. Limited to 50 students in psychology and 50 students in nutritional sciences. Prerequisites: junior or senior standing; introductory biology and introductory psychology or permission of instructor. S–U or letter grades. Next offered 2010–2011. B. J. Strupp.
For description, see NS 3610.8.

**PSYCH 3800 Social Cognition (SBA-AS)**
Fall. 3 credits. Prerequisites: junior or senior standing; PSYCH 2800. Next offered 2010–2011. M. Ferguson.
What are the causes and consequences of our own and other's judgments, feelings, attitudes, and behaviors? This course introduces students to social cognition, which is a research perspective that uses both cognitive and social psychological theories and methodologies to explain such social phenomena.

**PSYCH 3950 The Psychology of Emotion (SBA-AS)**
Spring. 3 credits. D. Pizarro.
We've all been mad, sad, happy, and disgusted. Some of us get nostalgic at times, and some of us are easily embarrassed. We've been feeling these emotions nearly our whole lives, and this makes us all emotion experts of a sort. Nonetheless, these feelings can be mysterious. Where do they come from? Do people across all cultures experience similar emotions? How can we regulate our emotions? Do emotions make us less rational? Do they make us smarter? What triggers certain emotions? Are there gender differences in emotions? The science of emotion is fairly young, but there has been an enormous amount of progress in understanding emotional phenomena in the last few decades. In this course, we will tackle the aforementioned questions and more. By the end of the course you should be familiar with the most influential theories of emotion—from the evolutionary explanations of emotion to the developmental and social factors involved in making us emotional creatures. So while we are all intuitive experts on emotion, by the end of the course you will have a different kind of expertise—one grounded in the most recent scientific discoveries in this exciting field.

**PSYCH 3960 Introduction to Sensory Systems (also BIONB 3960) (PBS)**
Spring. 4 credits. Limited to 35 students.

**PSYCH 4050 Intuitive Judgment (SBA-AS)**
Fall. 4 credits. Limited to 18 students by application. Priority given to psychology majors. Staff.
Information on specific topics for each semester, including instructor, prerequisites, and time and place, may be obtained from the Department of Psychology office, 211 Uris Hall. T. Gilovich.
This course examines classic and contemporary scholarship on the subject of how people make judgments and decisions in their everyday and professional lives.

**PSYCH 4101 Undergraduate Seminar in Psychology**
Fall or spring. 2 credits. Priority given to psychology majors. Staff.
Information on specific topics for each semester, including instructor, prerequisites, and time and place, may be obtained from the Department of Psychology office, 211 Uris Hall. T. Gilovich.
This course examines classic and contemporary scholarship on the subject of how people make judgments and decisions in their everyday and professional lives.

**PSYCH 4120 Laboratory in Cognition and Perception (also COGST 4120, PSYCH 6121) (KCM-AS)**
Spring. 4 credits. Limited to 15 students.
Prerequisite: statistics and one course in cognition or perception recommended. Graduate students, see PSYCH 6120.
D. J. Field.
Laboratory course designed to introduce students to experimental methods in perception and cognitive psychology. Students take part in a number of classic experiments and develop at least one independent project. Computers are available and used in many of the experiments although computer literacy is not required. Projects are selected from the areas of visual perception, pattern recognition, memory, and concept learning.

**PSYCH 4180 Psychology of Music (also MUSIC 4181, PSYCH 6180) (KCM-AS)**
Fall. 8 or 4 credits depending on whether student elects to do independent project. Intended for upper-level students in music, psychology, engineering, computer science, linguistics, physics, anthropology, biology, and related disciplines. Some music background desirable but no specific musical skills required. Graduate students, see PSYCH 6180. C. L. Krumhansl.
Covers the major topics in the psychology of music treated from a scientific perspective. Reviews recent developments in the cognitive science of music, beginning with music acquisition and synthesis, and extending to music and its emotional and social effects.

**PSYCH 4200 Advanced Neurobiology Learning and Memory (also PSYCH 6200) (KCM-AS)**
Spring. 3 credits. Prerequisites: PSYCH 2230 or HD 2200 and BIONB 2220. Offered alternate years. D. Smith.
For description, see BIONB 4200.

**PSYCH 4230 Neuroethology (also BIONB 4230) (PBS)**
Fall. 4 credits. Prerequisites: BIONB 2210 or 2220 or BIOG 1101–1102 and permission of instructor. S–U or letter grades. Disc. one hour each week. C. D. Hopkins.
For description, see BIONB 4230.

**PSYCH 4240 Neuroethology (also BIONB 4240) (PBS)**
Fall. 4 credits. Prerequisites: introductory biology; biopsychology or neuroscience (e.g., PSYCH 2230 or BIONB 2210, 2220); and an introductory course in perception, cognition, or language (e.g., PSYCH 1102, 2090, 2140, or 2150). Graduate students, see PSYCH 6240. S–U or letter grades. Offered alternate years; next offered 2010–2011. B. L. Finlay.
Studies the relationship between structure and function in the central nervous system, stressing the importance of evolutionary and mechanistic approaches for understanding the human behavior and cognition.

**PSYCH 4260 Learning Language (also COGST 4260, PSYCH 7260) (KCM-AS)**
Fall. 3 credits. Prerequisites: introductory biology; biopsychology or neuroscience (e.g., PSYCH 2230 or BIONB 2210, 2220); and an introductory course in perception, cognition, or language (e.g., PSYCH 1102, 2090, 2140, or 2150). Graduate students, see PSYCH 6260. S–U or letter grades. Offered alternate years; next offered 2010–2011. S. Edelman.

**PSYCH 4270 Evolution of Language (also COGST 4270, PSYCH 6270)**
Fall. 3 credits. Prerequisite: junior or senior standing; any one course in psychology or human development. Graduate students, see PSYCH 6270. S–U or letter grades. Offered alternate years. M. Christiansen.
Seminar surveying a cross-section of modern theories, methods, and research pertaining to the origin and evolution of language. Considers evidence from psychology, the cognitive neurosciences, comparative psychology, and computational modeling of evolutionary processes. Topics for discussion may include: What does the fossil record tell us about language evolution? What can we learn from comparative perspectives on neurobiology and behavior? Can apes really learn language? Did language come about through natural selection? What are the language evolution predictions for language? What is the relationship between phylogeny and ontogeny?
PSYCH 4280 Connectionist Psycholinguistics (also COGST 4280, LING 4428/6628, PSYCH 6280) Fall. 3 credits. Prerequisite: senior standing or permission of instructor. Graduate students, see PSYCH 6280. Offered alternate years; next offered 2010–2011. T. M. Christiansen.

PSYCH 4300 Moral Reasoning (also PSYCH 6300) (SBA-AS) Fall. 4 credits. Prerequisites: open to junior and senior psychology majors and to graduate students; open to others by permission of instructor. Next offered 2010–2011. D. Pizarro.

In recent years there has been a resurgence of interest in the science of morality. Recently, scientists across a wide range of disciplines have made discoveries that bear on the question of how and why humans have a sense of morality. The goals of this course are to offer an introduction to the science behind our moral sense. In order to achieve this goal, we will read articles on almost every area of scientific psychology. By the end of the course you should be well versed in the primary issues and debates involved in the scientific study of morality.

PSYCH 4310 Effects of Aging on Sensory and Perceptual Systems (also BIONB 4210, PSYCH 6310) (PBS) Fall. 4 credits. Prerequisites: introductory biology or psychology, plus second course in perception, neuroscience, cognitive science. Graduate students, see PSYCH 6310. B. P. Halpern. Literature-based examination of post-maturation changes in the perceptual, structural, and physiological characteristics of somesthetic, visual, auditory, and chemosensory systems. Emphasis is on human data, with nonhuman information included when especially relevant. Quality of life issues are included. Current developments in human sensory prosthetic devices, and in regeneration or replacement of receptor structures or organs are examined. Brief written statements by e-mail of questions and problems related to each set of assigned readings are required in advance of each class meeting and are automatically distributed to all members of the class. This course is taught using the Socratic method, in which the instructor asks questions of the students. Students are expected to be made using clickers, which will be used only for responses to questions and not for attendance or grading (http://atc.cit.cornell.edu/course/polling/clickers.cfm). Students read, analyze, and discuss in class difficult original literature dealing with the subject matter of the course. Students are expected to come to each class having already done and thought about the assigned readings, and to take an active part in each class. All examinations are take-home.

PSYCH 4340 Sensory Construction (also PSYCH 6364) Spring. 3 credits. Prerequisites: one introductory course in neurobiology (PSYCH 2250 or BIONB 2220) and one introductory course in perception or cognition (PSYCH 1102, 2050, 2090, or 2140) or permission of instructor. T. Cleland. Is it true that everything you encounter is stored somewhere in your memory, if only you could recall it? How does that information get into your brain in the first place? This course investigates how coherent sensory percepts are constructed from the physical features of sensory stimuli, the properties of animal sensors and neural circuits, the active allocation of cognitive and physiological resources to selective sampling, and the integration of sampled data, prior knowledge, and expectations. Emphasis is placed on integrating multiple approaches—including biophysical, neurobiological, evolutionary, cognitive, social, and legal—to the problem of complex perception, cognition and memory.

PSYCH 4350 Olfaction, Pheromones, and Behavior Fall. 4 credits. Prerequisites: introductory biology and course in neurobiology and behavior or biopsychology or 3000-level course in biopsychology or permission of instructor. Offered alternate years. R. Johnston. Covers chemical signals, olfaction, and behavior in vertebrates (including humans), as well as the neurobiology of olfaction and odor-mediated behaviors. Behavioral topics may vary from year to year but include evaluation of and advertisement for mates, aggression and territorial behavior, parental-young interactions, social recognition (species, sex, individual, kin reproductive state, status), memory for odors, odor and endocrine interactions, imprinting, and homing and navigation. Basic aspects of the structure and function of the olfactory system are also covered, including the molecular biology of chemo-reception, olfactory coding, and higher-order processing in the central nervous system. The format includes lectures, discussions, and student presentations.

PSYCH 4360 Language Development (also COGST/HD 3370, LING 4436) (KCM-AS) Fall. 4 credits. Open to undergraduate and graduate students. Graduate students should also enroll under HD 6330/LING 6430, supplemental graduate seminar. Prerequisite: at least one course in developmental psychology, cognitive psychology, cognitive development, or linguistics. S–U or letter grades. B. Lust. For description, see HD 3570.

PSYCH 4370 Lab Course: Language Development (also COGST 4500, HD 4370, LING 4450) Spring. 2 credits. Offered in conjunction with COGST/HD 4360 and LING 4436, Language Development. R. B. Lust. Optional supplement to the survey course Language Development (HD 3570, COGST/LING/PSYCH 4360) for students with a hands-on introduction to scientific research, including design and methods, in the area of first-language acquisition. For description, see COGST 4500.

PSYCH 4380 Social Neuroscience Fall. 4 credits. Prerequisite: PSYCH 2230, 3220, 3520, or 3260. B. Johnston. Comparative approach to the neural and endocrine mechanisms of social behavior in animals and humans. Species similarities and differences in these mechanisms related to evolved differences in social organization and mating systems. In humans, mechanisms related to difficulties with social interaction and behavior such as Asperger’s syndrome, autism, and social anxiety psychopathology.

PSYCH 4400 To Sleep, Dream, and Remember (also PSYCH 6400) Fall. 4 credits. Prerequisites: at least PSYCH 2230 or BIONB 2210. Recommended: additional course in biopsychology, or biopsychology, or neurobiology. S–U or letter grades. Graduate students, see PSYCH 6400. H. S. Porte.

What brain events instigate, maintain, and switch the states of sleep? How does the brain construct a dream? What brain events produce and sustain a night terror? Does the sleeping brain work for memory or against it? These questions will be considered in cognitive neuroscience. Students must be conversant with brain anatomy and brain physiology.

PSYCH 4410 Laboratory in Sleep Research (also PSYCH 6410) Spring. 4 credits. Lab fee: $50. Graduate students, see PSYCH 6410. H. S. Porte. Emphasizing the neurobiology of sleep state, this course introduces students to the laboratory study of human sleep and its psychological correlates. Serving as both experimenter and subject, each student learns the physical rationale and techniques of electroencephalography and other bioelectric measures of behavioral state. Analyzing data they have collected themselves, students work in small groups to complete a collaborative term project. Overnight sleep recording sessions are required.

PSYCH 4440 Neural Computation (also BIONB 4440) (PBS) Spring. 3 credits. Limited to 10 students. Prerequisites: PSYCH 2250 or BIONB 2220, or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. T. Cleland. Lecture and computer lab course covering the biophysical mechanisms underlying neural computation and information coding by neurons and networks. Students will study and develop computational models of single neurons and small neural networks. An independent modeling project will be required.

PSYCH 4450 Trauma and Treatment (also PSYCH 6520) (SBA-AS) Fall. 4 credits. Limited to 10 students; priority given to senior psychology and human development majors. Prerequisite: course work in both psychopathology and social development; permission of instructor by e-mail application during preregistration. Letter grades only. S. Bem.

An in-depth examination of psychological trauma and its treatment in psychotherapy. Special attention is given to neuroscience of danger, defense, and emotional dysregulation, the effects of early traumatic attachment on development, the key role of dissociation, and an array of treatments including dialectical behavior therapy, play therapy, sensorimotor therapy, gestalt therapy, and psychoanalytic therapy.
PSYCH 4650 Topics in High-Level Vision: Embodied Cognition (also COGST 4650, PSYCH 6650) (KCM-AS)
Spring. 4 credits. Graduate students, see PSYCH 6650. Offered alternate years. S. Edelman and M. Goldstein.
High-level vision is a field of study concerned with functions such as visual object recognition and categorization, scene understanding, and reasoning about visual structure. It is an essentially cross-disciplinary endeavor, drawing on concepts and methods from neuroanatomy and neurophysiology, cognitive psychology, applied mathematics, computer science, and philosophy. This course concentrates on a critical examination of a collection of research publications, linked by a common thread, from the diverse perspectives offered by the different disciplines. Students write biweekly commentaries on the assigned papers and a term paper integrating the material covered in class.

PSYCH 4700 Undergraduate Research in Psychology
Fall or spring. 1–4 credits. Prerequisite: written permission from staff member who will supervise work and assign grade must be included with course enrollment material. Students should enroll in section listed for that staff member; section list available from Department of Psychology. S–U or letter grades. Staff. Practice in planning, conducting, and reporting independent laboratory, field, and/or library research.

PSYCH 4710 Advanced Undergraduate Research in Psychology
Fall or spring. 1–4 credits. Prerequisite: written permission of staff member who will supervise work and assign grade must be included with course enrollment material. Students should enroll in section listed for that staff member; section list available from Department of Psychology. S–U or letter grades. Staff. Advanced experience in planning, conducting, and reporting independent laboratory, field, and/or library research. One, and preferably two, semesters of PSYCH 4700 is required. The research should be more independent and/or involve more demanding technical skills than that carried out in PSYCH 4700.

[PSYCH 4780 Parenting and Child Development (also HD 4440, PSYCH 6780) (KCM-AS)
Fall. 4 credits. Limited to 25 students. Intended for seniors and graduate students. Graduate students, see PSYCH 678. Next offered 2010–2011. M. Goldstein.]

PSYCH 4810 Advanced Social Psychology (also PSYCH 6810)
Fall. 4 credits. Limited to 15 students, by application. Priority given to senior psychology majors. Graduate students, see PSYCH 6810. D. T. Regan.
The focus is on current readings, namely selected articles from very recent issues of the best social psychological journals. Readings are chosen for their importance, their readability, and the likelihood that they will generate stimulating discussion.

PSYCH 4820 Automaticity (also PSYCH 6820) (SBA-AS)
Spring. 4 credits. Prerequisites: PSYCH 2800; at least one course in cognitive psychology or permission of instructor. R. M. Ferguson.

What is automaticity? This is a topic that has gained considerable momentum in social psychology over the past 10 to 15 years and has been broadly applied to classic social psychological phenomena, including judgments, attitudes, emotion, motivation, and behavior. The crux of this momentum has been the controversial argument that such phenomena can occur without a person's awareness, intention, effort, or control. Although there is an abundance of empirical work on this topic, there still remain a number of unanswered and interesting questions. The objective of the course is twofold. The first is for students to learn the automaticity literature in social psychology; the second is to identify such critical questions, and speculate on possible answers. The course reviews a wide range of theoretical and empirical work on automaticity and examines contemporary definitions of automaticity within social and other areas of psychology. The analysis of automaticity is necessarily closely linked with issues such as unconscious vs. conscious processing, attention, control, intentionality, and free will.

PSYCH 4850 The Self (also PSYCH 6850) (SBA-AS)
Spring. 4 credits. Limited to 15 students. Prerequisite: PSYCH 2750 or 2800 or permission of instructor, with priority given to seniors and graduate students. D. Dunning.
An enduring task in psychological inquiry has been to survey the ways in which a person's self-image influences emotion, thought, and action. What is self-esteem, and is it a good or a bad thing? How do concerns over self-image motivate people? Do people really know themselves accurately? How does a person's sense of self develop, and does it differ across cultures? Students will be introduced to these and other topics by reading original research articles, and should expect to take part in class discussions of the issues raised.

PSYCH 4910 Research Methods in Psychology (also COGST 4910, COGST/PSYCH 6910)
Spring. 4 credits. Limited to 15 students. Prerequisite: permission of instructor. V. Zayas.
Research methods are the tools that allow psychologists to test the validity of hypotheses. This course provides a survey of the methods used by scientists in personality and social psychology as well as related behavioral sciences to empirically test hypotheses. Specifically, this course will discuss the following topics: (i) philosophy of science, (ii) research designs and methods, (iii) data collection, analysis, and validity, (iv) report writing, and (v) recurrent and emerging trends and issues in the field of research methods and quantitative analysis. Students concentrate on completing a small research project in which they conduct an experiment, interpret its data, and write up the results.

PSYCH 4920 Sensory Function (also BIONB 4920, PSYCH 6920) (PBS)
Spring. 4 credits. Limited to 25 students. Prerequisite: 3000-level neuroscience course, or BIONB 2220 or BIOAP 3110, or equivalent; knowledge of elementary physics, chemistry, and behavior. S–U or letter grades. Graduate students, see PSYCH 6920. Offered alternate years; next offered 2010–2011. B. P. Halpern and H. C. Howland.
In general, this course has covered classical topics in sensory function such as vision, hearing, touch, and balance, as well as some more modern topics like sensory processing, location of stimulus sources in space, the development of sensory system, and nonclassical topics such as electroreception and internal chemoreceptors.

PSYCH 5310 Consciousness and Free Will (also BIONB 4330, COGST 4310)
Spring. 4 credits. Prerequisite: COGST/INFO/PSYCH 2140/6140. S. Edelman.
For description see COGST 4310.

Advanced Courses and Seminars
Advanced seminars are primarily for graduate students, but with the permission of the instructor they may be taken by qualified undergraduates. The selection of seminars to be offered each semester is determined by the needs of the students.

A supplement describing these advanced seminars is available at the beginning of each semester and can be obtained from the department office (211 Uris Hall). The following courses may be offered either semester and carry 4 credits unless otherwise indicated.

PSYCH 6000 General Research Seminar
PSYCH 6050 Perception (also PSYCH 2050)
Fall. 4 credits. Non-arts graduate students only. J. E. Cutting.

PSYCH 6100-6110 Perception
PSYCH 6120 Perception Lunch Seminar
Spring and fall. J. Cutting.

PSYCH 6121 Laboratory in Cognition and Perception (also PSYCH 4120)
Spring. 4 credits. D. J. Field.

PSYCH 6140 Cognitive Psychology (also COGST/PSYCH 2140, COGST 6140)
Spring. 4 credits. S. Edelman.

PSYCH 6180 Psychology of Music (also MUSIC 4181, PSYCH 4180)
Fall. 4 credits. C. Krumhansl.

PSYCH 6181 Topics in Psycholinguistics
PSYCH 6200 Advanced Neurobiology and Memory
Spring. 3 credits. D. Smith.

PSYCH 6210 Behavioral and Brain Sciences
Fall and spring. 4 credits each semester.

PSYCH 6220 Topics in Perception and Cognition
PSYCH 6230 Navigation, Memory, and Context: What Does the Hippocampus Do? (also PSYCH 4230)
Spring. 4 credits. D. Smith.

[PSYCH 6250 Cognitive Neuroscience (also PSYCH 4250)
Fall. 4 credits. Next offered 2010–2011. B. L. Finlay.]

PSYCH 6270 Evolution of Language (also COGST/PSYCH 4270)
Fall. 3 credits. M. Christiansen.

PSYCH 6271 Topics in Biopsychology
Fall or spring. Staff.

**Summer Session Courses**

The following courses are also frequently offered in the summer session, though not necessarily by the same instructor as during the academic year. Not all of these courses are offered in a particular summer. Information regarding these courses and additional summer session offerings in psychology is available from the department before the end of the fall semester.

PSYCH 1101  Introduction to Psychology: The Frontiers of Psychological Inquiry
PSYCH 1102  Introduction to Cognitive Science
PSYCH 1128  Introduction to Psychology: Personality and Social Behavior
PSYCH 1990  Sports Psychology
PSYCH 2230  Introduction to Biopsychology
PSYCH 2800  Introduction to Social Psychology
PSYCH 3500  Statistics and Research Design

**RELIGIOUS STUDIES MAJOR**

The Religious Studies Program, an academic unit providing a major in the scholarly study of religion, offers a wide variety of courses addressing various approaches to, and topics in, the study of religion.

The Religious Studies Program is designed to meet the needs of three classes of students: (1) students planning to pursue advanced degrees in the academic study of religion or allied disciplines or subdisciplines (e.g., history of religions, religion and literature, religion and psychology, ethics, theology, area studies); (2) students seeking courses on topics relating to religion to fulfill distribution requirements; and (3) students desiring a more systematic exposure to the academic study of religion as a significant component of a liberal arts education. To all students, our program offers an excellent opportunity to develop a deeper understanding and appreciation of the complex ways in which religious traditions inform human thought and behavior. The courses offered through our program are built on the established scholarly tradition of the study of religion as an academic, as opposed to confessional, pursuit. Religious traditions are explored in all of their complexity through comparative, contextual (in specific historical or cultural contexts), and thematic studies.

The program also hosts lecture series, conferences, symposia, and periodic social gatherings for faculty members and students throughout the academic year to foster a sense of intellectual community.

**The Major in Religious Studies**

Signing into the major: To sign into the major in Religious Studies, a student must have completed at least one course in
Religious Studies before scheduling an appointment with the program director. Here is the process:

1. Schedule an appointment with the director of the Religious Studies Program, whose name and e-mail address can be found on the Religious Studies web site.

2. In addition to a copy of the current Cornell transcript (the informal one students regularly receive is acceptable), students should bring to their meeting with the director all of these forms, available in the Religious Studies office, 409 White Hall:
   a. a completed Religious Studies major application form
   b. a proposed "course of study," which will be used as a guide in the student's conversation with the director and revised for formal submission to the program upon your entrance as a major
   c. a College of Arts and Sciences advisor/major form, which will be signed by the director and advisor. The advisor will be assigned in the student's meeting with the director based on interest.

Advising in the Religious Studies Program: Upon entering the major in Religious Studies, a student is assigned a faculty advisor whose area of expertise most closely matches the proposed interest of the student. An up-to-date approved advisor list is available in the Religious Studies office. Note that not all faculty members who cross-list courses with RELST can serve as RELST advisors. Working closely with one's RELST advisor when selecting courses is an important component of this program, enabling students to fulfill the requirements for the major while creating an integrated and coherent course of study out of our large number of multidisciplinary course offerings.

To graduate as a major in Religious Studies, a student must (1) complete with letter grades the program's three core courses, RELST 2250 Introduction to Asian Religions, RELST 2651 Holy War: Crusade and Jihad, and RELST 4449 History and Methods of the Academic Study of Religion; and (2) complete with letter grades seven additional courses approved for the major.

Students must complete 10 courses cross-listed with Religious Studies:

### Three Core Courses:
- RELST 2250 Introduction to Asian Religions
- RELST 2651 Holy War: Crusade and Jihad
- RELST 4449 History and Methods of the Academic Study of Religion

The requirement for either or both RELST 2250/2651 may be satisfied by taking two or more courses in the relevant traditions with some attention to breadth.

The requirement for RELST 2250 may be satisfied by taking at least one course on South Asian traditions AND one course on East Asian traditions.

The requirement for RELST 2651 may be satisfied by taking at least one course in each of two or more of the traditions of Near Eastern origin (Judaism, Christianity, and Islam).

Absolutely no student will be exempted from RELST 4449.

### Seven Additional Courses

In selecting their additional courses for the major, students are expected to consult closely with their advisors to ensure that their programs have adequate breadth in Religious Studies generally and depth in a particular tradition, cultural area, or approach to the field. Most courses approved for the major are offered by cooperating departments within the College of Arts and Sciences. A comprehensive up-to-date list of these courses is maintained at the office of the Religious Studies Program, 409 White Hall.

Graduating with Honors in Religious Studies:

**General Information**

1. **Eligibility.** 3.0 cumulative average and 3.5 average inside the major with no grade in the major below B-. Program director notifies eligible candidates during the spring semester of the junior year or before commencement of final year.

2. **Honors Courses.** Candidates must sign into RELST 4995 Senior Honors Essay for 8 credits (two courses) for two semesters. After the first semester, an R in the transcript indicates that this course (usually for 8 credits) is a yearlong course. When the project is completed at the end of the second semester, the grade recorded could be up to 12 credits. (The 8-credit limit is the result of the conviction that earning more than 8 credits for a single piece of one's undergraduate education is unwise.)

   The student submits the honors proposal (with and according to the program's instruction/cover sheet) to the Religious Studies administrator before the end of the second semester, the grade recorded could be up to 12 credits. (The 8-credit limit is the result of the conviction that earning more than 8 credits for a single piece of one's undergraduate education is unwise.)

3. **Honors Committee—three faculty members.** While students are required to have three faculty members on their committee at the time of the submission of the final draft, only two of them must be identified when the proposal is submitted. In the event the advisor is on leave, the program will assign a committee member from the list of approved RELST advisors. The three members should be:
   a. The professor who has agreed to work closely with the student over the year and to be the supervisor/grader of the project is chair of the committee.
   b. The student's Religious Studies major advisor (required)
   c. Another knowledgeable faculty member Sometimes the advisor is the supervisor/chair. If that is the case, the student needs two additional knowledgeable professors for the committee of three.

#### Courses Approved for the Major Sponsored by Religious Studies

- [RELST 2204 Introduction to Qur'anic Arabic](#) Spring 4 credits. H. Al-Masri.
- [RELST 2250 Introduction to Asian Religions](#) Spring 3 credits. D. Boucher.
- [RELST 2277 Meditation in Indian Culture](#) Spring 3 credits. D. Gold.
- [RELST 2611 Prophecy in Ancient Israel](#) Spring 3 credits. L. Monroe.
- [RELST 2629 Intro to the New Testament](#) Spring 3 credits. K. Haines-Eitzen.
- [RELST 2650 Religion and Reason](#) Spring 4 credits. S. MacDonald.
- [RELST 2655 Intro to Islamic Civilization](#) Fall 3 credits. D. Powers.
- [RELST 2724 Introduction to the Hebrew Bible](#) Fall 3 credits. L. Monroe.
- [RELST 3260 Christianity and Judaism](#) Spring 4 credits. C. Carmichael.
- [RELST 3309 Temple in the World: Buddhism in Contemporary South and Southeast Asia](#) Spring 3 credits. A. Blackburn.

Courses with RELST are cross-listed as:

- [RELST 2420 Religion and Politics in American History](#)
- [RELST 2611 Prophecy in Ancient Israel](#)
- [RELST 2629 Intro to the New Testament](#)
- [RELST 2650 Religion and Reason](#)
- [RELST 2655 Intro to Islamic Civilization](#)
- [RELST 2724 Introduction to the Hebrew Bible](#)
- [RELST 3212 Qur'an and Commentary](#)
- [RELST 3230 Myth, Ritual, and Symbol](#)
- [RELST 3260 Christianity and Judaism](#)
- [RELST 3309 Temple in the World: Buddhism in Contemporary South and Southeast Asia](#)
- [RELST 3351 Indian Religious Worlds](#)

Courses with RELST are cross-listed as:

- [RELST 2250 Introduction to Asian Religions](#)
- [RELST 2277 Meditation in Indian Culture](#)
- [RELST 2420 Religion and Politics in American History](#)
- [RELST 2611 Prophecy in Ancient Israel](#)
- [RELST 2629 Intro to the New Testament](#)
- [RELST 2650 Religion and Reason](#)
- [RELST 2655 Intro to Islamic Civilization](#)
- [RELST 2724 Introduction to the Hebrew Bible](#)
- [RELST 3212 Qur'an and Commentary](#)
- [RELST 3230 Myth, Ritual, and Symbol](#)
- [RELST 3260 Christianity and Judaism](#)
- [RELST 3309 Temple in the World: Buddhism in Contemporary South and Southeast Asia](#)
- [RELST 3351 Indian Religious Worlds](#)
[RELST 3353] Mysticism in Chinese Religions (also ASIAN 3353) @ (CA-AS)
Fall. 4 credits. D. Boucher. For description, see ASIAN 3353.

[RELST 3359] Japanese Buddhism (also ASIAN 3359) @ (HA-AS)
Spring. 4 credits. J. M. Law. For description, see ASIAN 3359.

[RELST 3460] Modernization of the American Mind (also AMST/HIST 3460) (HA-AS)
Fall. 4 credits. J. M. Lawrence. For description, see AMST/HIST 3460.

[RELST 3588] Biblical Archaeology (also JWST/NEAS 3588)
Spring. 4 credits. L. Moore. For description, see NEAS 3588.

[RELST 3629] Intro to the New Testament (also CLASS/JWST/NEAS 3629)
Spring. 1 credit. K. Haines-Eitzen. For description, see NEAS 3629.

[RELST 3635] Christianization of the Roman World (also CLASS/HIST/NEAS 3625) @ (HA-AS)
Fall. 4 credits. E. Rebillard. For description, see CLASS 3625.

[RELST 3677] Search for the Historical Mohammad (also HIST/NEAS 3677)
Spring. 4 credits. D. Powers. For description, see HIST 3677.

[RELST 3731] Religion and Society in Early Modern Europe (also HIST 3731) # (HA-AS)
Spring. 4 credits. D. Corr. For description, see HIST 3731.

[RELST 4100] Latin Philosophical Texts (also PHIL 4100)
Spring. Variable credits. S. MacDonald and C. Brittain. For description, see PHIL 4100.

[RELST 4102] Biblical Hebrew: Genesis (also JWST/NEAS 4102) @ (LA-AS)
Fall. 4 credits. E. M. Moore. For description, see NEAS 4102.

[RELST 4260] New Testament Seminar (also COML 4260) # (HA-AS)
Spring. 4 credits. C. Carmichael. For description, see COML 4260.

[RELST 4404] Japanese Buddhism: Experience and Ideology (also ASIAN 4405)
Spring. 4 credits. J. M. Law. For description, see ASIAN 4405.

[RELST 4427] Buddhist Monasticism (also ASIAN 4427) @ (CA-AS)
Fall. 4 credits. D. Boucher. For description, see ASIAN 4427.

[RELST 4438] Monks, Texts, and Relics: Transnational Buddhism in South and Southeast Asia (also ASIAN 4438/6638) (CA-AS)
Spring. 4 credits. A. Blackburn. For description, see ASIAN 4438.

[RELST 4449] History and Methods of the Academic Study of Religion (also ASIAN 4449) # (KCMA-AS)

[RELST 4460] Indian Meditation Texts (also ASIAN 4460) @ (KCMA-AS)

[RELST 4489] Religion and Sustainability (also ASIAN 4489)
Fall. 4 credits. A. Blackburn. For description, see ASIAN 4489.

[RELST 4639] Readings in Arabic Historical Texts (also NEE 4639) @ (HA-AS)
Spring. 4 credits. D. Powers. For description, see NEE 4639.

[RELST 4821] Religious and Secular in American Culture (also AMST/HIST 4821) (HA-AS)
Fall. 4 credits. Next offered 2010–2011. L. Moore. For description, see HIST 4821.

[RELST 4823] Secular Disaffections: On Islam and the Politics of Emotion (also COML 4066, NEE 4923, SHUM 4923)
Fall. 4 credits. R. Mas. For description, see SHUM 4923.

[RELST 4931] Vitality and Power in China (also HIST/SHUM 4931, STS 4911)
Spring. 4 credits. T. J. Hinrichs. For description, see SHUM 4931.

[RELST 4990–4991] Directed Study
4990, fall; 4991, spring. 2–4 credits each semester. For majors in Religious Studies; permission of director required. Staff.

[RELST 4995] Senior Honors Essay
Fall and spring (two semesters). 8 credits. Requirement for honors in Religious Studies. Staff.

[RELST 6020] Latin Philosophical Texts (also PHIL 6020)
Fall. 4 credits. S. MacDonald and C. Brittain. For description, see PHIL 6020.

ROMANCE STUDIES

The prerequisites for the French major are FREN 2190 (French Intermediate Composition and Conversation I) and FREN 2210 (Reading, Listening, Thinking: Introduction to Interpretation). Students admitted to the major are expected to take FREN 3210 (Readings in Modern Literature and Culture) and FREN 3220 (Readings in Early Modern Literature and Culture). They will then take six more courses to complete the major: an advanced language course (3010 or 3050, or above), and five literature or culture courses. Two of these literature/culture courses can be taken in related fields, if the course has a significant French component: French History, Art History, Government, Sociology, Linguistics, Philosophy, Visual Studies, etc.

Students are encouraged to study abroad, through Cornell-sponsored or Cornell-approved programs, such as EDCUO in Paris. When appropriate, this work can be counted toward the required course work for the major. Students should consult with the DUS of Romance Studies, the Study Abroad advising dean, and Cornell Abroad, as well as with their faculty advisor, before taking courses abroad, to assure that they are appropriate.

Outline of the French Major

Prerequisites

1. FREN 2190
2. FREN 2210
3. Advanced Language course—3010, 3050, or above (depending on placement)
Core Courses
(4) FREN 3210
(5) FREN 3220

Other Courses (at least five more courses)
(6, 7, and 8)
Three of these courses must be in French (either taught in Romance Studies or in a Cornell-approved study abroad program in a Francophone country) AND be on French or Francophone subjects. Only courses about the Francophone world of FREN 3130 can count towards the major.

(9 and 10)
Two courses may be in English and/or in related fields (History, Art History, Government, Anthropology, Sociology, etc.): 50 percent of the subject matter in these courses must be related to France or Francophone cultures (French history, etc.).

One of these courses must be on pre-1789 literature or culture, one must be on Francophone literature or culture, and one must be at the 4000 level. Please note that in some cases, one course may cover two of these requirements (for example, a 4000-level course may also be on a pre-1789 topic, such as Medieval or Early Modern literature).

Administration of the French Major
Students are admitted to the major by the director of undergraduate studies but are guided by their individual advisors. A copy of each student's progress is given to the director of undergraduate studies for approval and safe-keeping.

Minor in French Studies
Its purpose is to supplement a student's major with a complementary focus or concentration that is indicated on the graduate's transcript. The minor in French Studies, organized by the interdisciplinary Program in French Studies, is designed to be compatible with all kinds of majors and is open to students in all the undergraduate colleges. The minor promotes broad understanding of French culture, as well as Francophone literatures, societies, and their political/economic systems; it also encourages students to refine and practice their language skills. Students pursuing the minor must attain proficiency (by taking a placement exam or completing a 2000-level course in French) and must take the core course The French Experience (FREN 2240) or an approved equivalent of the core course (approved alternatives will be listed on the program website). Students may also petition the program director to use an advanced course conducted in French as their core course. Completion of the Minor requires, in addition to the core, three non-language courses on French and Francophone topics. Only one of the four courses required for the minor can be taken S–U.

Applications for the minor are accessible at the French Studies website www.cornell.edu/french-studies/about/index.asp and should be submitted to the Department of Romance Studies (303B Morrill Hall) or to Callean Hile at clh2@cornell.edu.

Study Abroad in France
French majors or other interested students may study in France for one or two semesters during their junior year. Opting for one of several study-abroad plans recognized by the Department of Romance Studies facilitates the transfer of credit. Information about these plans is available from the director of undergraduate studies.

Students must be Cornell undergraduates with a strong academic record. The minimum French preparation is the completion of FREN 2190 or its equivalent in advanced credit or placement by the Cornell CASE examination. Taking FREN 3010 or 3050, or even 3120 or 3130 is, however, strongly recommended. Students interested in studying in France are encouraged to consider the special benefits offered by EUDOCO, the program in Paris cosponsored by Cornell, Emory, and Duke Universities. EUDOCO offers advanced students a challenging course of study and the experience of total immersion in French life and culture in Paris. Participants in this program may spend the year or semester as fully matriculated students at the Universities of Paris VII or IV and other institutions of higher learning in Paris, including the possibility of study at the Institut d'Études des Sciences Politiques (Sciences Po), selecting courses in many fields from the regular university course offerings. Students begin the academic year with an intensive three-week orientation in French history, society, and daily life. While it is possible to enroll in the EUDOCO Program for one semester, admission will be offered first to students planning to study abroad for the full academic year. EUDOCO maintains a center in Paris with full support staff. The resident director, chosen annually from the Cornell, Emory, and Duke faculties, teaches a special seminar each semester, provides academic advice, and helps ensure the quality of the courses. The center, which includes a small library and word-processing facilities, is regularly used by students for special tutorials, seminars, and lectures, as well as informal gatherings.

Honors. The honors program encourages well-qualified students majoring in French literature and culture to do independent work in French beyond the core course work for the major. The preparation of the senior honors essay, generally spread over two semesters, provides a unique learning opportunity, since it allows for wide reading and extensive rewriting to a degree not possible in the case of course papers.

To be eligible for honors, students must have a general grade point average of at least 3.00 and a grade point average of at least 3.5 in the French major.

No special seminars or courses are required of honors students, but they will have regular meetings with the faculty advisor and other faculty members. The seminar is to be made available for reading by the jury on or before April 15. The awarding of honors is determined by the student's grades in the major and the quality of the honors essay.

Courses in the French Program
Enrollment in a language course is conditional upon the student's eligibility for the particular level and on attendance at the first scheduled class session. Because of the high demand for language courses, a student who fails to attend the first class meeting will be dropped so others may register.

Note: Students placed in the 2000-level course have the option of taking language and/or literature courses.

FREN 1210–1220 Elementary French
1210, fall; 1220, spring. 4 credits each term. Students who have previously studied French must have an LPF score lower than 37, or SAT II lower than 410, to be eligible for FREN 1210. Prerequisite for 1220: LPF score 37–44 or SAT II 410–480, FREN 1210. S. Tun (course coordinator) and staff.

FREN 1210–1220 is a two-semester sequence of courses designed to provide a thorough grounding in French language and an introduction to intercultural competence as preparation for real-world application or eventual work in literary and/or cultural studies. Classes provide context- and genre-specific practice in speaking, listening, reading, writing, as well as analytical skills for grammar, with the goal of helping students to develop the necessary tools to become independent language learners.

FREN 1230 Continuing French
Fall or spring. 4 credits. Prerequisite: FREN 1220 or an LPF score of 45–55 or SAT II 490–590. Recommended courses after FREN 1220: FREN 2060 or 2090. C. Waldron (course coordinator) and staff. FREN 1230 is an all-skills course designed to improve pronunciation, oral communication, and reading ability; to establish a groundwork for correct writing; and to provide a substantial grammar review. The approach in the course encourages the student to see the language within the context of its culture.

FREN 2060 French Intermediate Reading and Writing
Fall or spring. 4 credits. Satisfies Option 1 of language requirement. Prerequisite: FREN 1230, LPF score 56–64, or SAT II 600–680. Conducted in French. Recommended courses after FREN 2060: FREN 2100, 2190 or 2210. Students who have taken FREN 2060 are not eligible to take FREN 2090 for credit. S. Tun. This language course is designed for students who want to focus on their reading and writing skills. Emphasis is placed on grammar review and expansion, vocabulary development, and appreciation of different styles of language. Diverse text types are used, including a contemporary novel and student-selected material.

FREN 2090 French Intermediate Composition and Conversation I
Fall, spring, or summer. 4 credits. Satisfies Option 1 of language requirement. Prerequisite: FREN 1230, LPF score 56–64, or SAT II 600–680. Recommended courses after FREN 2090: FREN 2100, 2190, or 2210. Students who have taken FREN 2090 are not eligible to take FREN 2060 for credit. C. Sparfel (course coordinator) and staff; summer: C. Waldron.
This intermediate-level course is designed for students who want to focus on their speaking and writing skills. Emphasis is placed on strengthening of grammar skills, expansion of vocabulary and discourse levels to increase communicative fluency and accuracy. The course provides continued reading and listening practice as well as development of effective language learning strategies.

**FREN 2100 Pronunciation of Standard French**
Spring. 3 credits. This course cannot serve to fulfill the language requirement. Prerequisite: FREN 2060 or higher, or CASE Q++. T. Alkire. This intermediate-level course focuses on accent reduction. Students will learn how to transcribe French sounds while simultaneously engaging in systematic listening and pronunciation exercises. The exercises target vowels, consonants and basic intonational patterns. Expository intonation may be addressed near the end of the semester if time permits. Class work will include memorization of short dialogues and scenes from films. Students will achieve better pronunciation, greater fluency, and increased self-assurance in spoken French by the end of the course.

**FREN 2190 French Intermediate Composition and Conversation II**
Fall or spring. 4 credits. Satisfies Option 1 of language requirement. Prerequisite: FREN 2060 or 2090 or Q+++ on the Cornell Advanced Standing Examination (CASE). Taught in French. FREN 2210 may be taken concurrently with 2190. Recommended courses after FREN 2190: FREN 2220, 3120, or 3050. S. LoBello (course coordinator) and staff. This course emphasizes conversation based on short stories, poems, a play, a novel, newspaper articles, short videos and oral presentations by students. Improving grammatical accuracy and enriching vocabulary in oral and written expression of French occur in the lively classroom discussions, as well as through written and oral analyses of the readings, compositions on student-selected topics, and through grammar review. Themes and emphases may vary from section to section.

**FREN 2210 Reading, Looking, Thinking: Introduction to Interpretation (LA-AS)**
Fall or spring. 3 credits. Satisfies Option 1 of language requirement. Prerequisite: FREN 2060 or 2090 or CASE Q++. Conducted in French. Fall: T. McNulty and staff; spring: M. C. Vallois and staff. Designed to introduce students to methods of textual analysis, through reading and discussion of works in various genres (narrative prose, drama, poetry) from the French and Francophone world. Emphasizes the development of analytical skills, in particular close readings by a variety of authors from different periods.

**FREN 2240 The French Experience (CA-AS)**
Fall. 4 credits. Conducted in English. L. Ferri. An examination of French society, economy, and institutions through key moments in a long history, in order to figure out what made French culture so distinctive—even though some have claimed recently that the "French cultural exception is dead." Looking attentively at texts and contexts (the bibliography will include, e.g., Yves Lacoste's Vive la nation! Long Live the Nation, Jonathan Nosseir's documentary film Mondovino, Mehdil Behlaj Kacem's La Psycose française, les banlieus, and Ariel Kenigs's Quitter la France/devenir France, we will move beyond clichés, and attempt to understand how post-imperial France tries to adapt to the complex processes known as globalization and multiculturalism without losing its "national identity." Special attention will be paid to the construction of Europe and to the notions of "European citizenship" and "European model." Taught in English. Mandatory readings in French (book chapters, newspapers, an oral presentation in English or French, and a final paper (8,000 characters) in English.

**FREN 3010 Advanced French Composition and Conversation**
Fall or spring. 4 credits. Satisfies Option 1 of language requirement. Prerequisite: FREN 2190 or Q+++ on the Cornell Advanced Standing Examination (CASE). Recommended courses after FREN 3010: FREN 2220, 3120, or above. FREN 2220 may also be taken concurrently with 3010. Students who have taken FREN 3050 are not eligible to take FREN 3010 for credit. Either FREN 3010 or 3050 is required for the major. S. LoBello (course coordinator) and staff. In this course, oral communication skills, writing practice, and a comprehensive review of fundamental grammatical structures are integrated with the reading of short stories and articles on current events taken from French magazines or newspapers, chosen for thematic or cultural interest. Students write weekly papers (essays or translations) and give at least one oral presentation in class.

**FREN 3050 Advanced French through Film**
Fall or spring. 4 credits. Satisfies Option 1 of language requirement. Prerequisite: FREN 2190 or Q+++ on the Cornell Advanced Standing Examination (CASE). Recommended courses after FREN 3050: FREN 2220, 3120 or above. FREN 2220 may also be taken concurrently with 3050. Students who have taken FREN 3010 are not eligible to take FREN 3050 for credit. Either FREN 3010 or FREN 3050 is required for the major. C. Waldron. This language course provides students with opportunities to further develop their written and oral communication, as well as their listening and reading skills, through the use of French contemporary films, related readings, and presentations by guest speakers. Particular emphasis is given to the cultural and historical context within viewed films, as it relates to contemporary French society.

**FREN 3120 Advanced French Stylistics**
Fall. 4 credits. Satisfies Option 1 of language requirement. Prerequisite: FREN 3010 or 3050, or Q+++ on the Cornell Advanced Standing Examination (CASE). Students who have taken FREN 3130 are not eligible to take FREN 3120 for credit. T. Alkire. This course on stylistics and translation aims to help students develop a richer, more nuanced and idiomatic command of both the spoken and written language. Systematic study of grammar is discontinued as more attention is devoted to topics such as descriptive and prescriptive norm, post-authorial style, varieties of spoken and written French and their literary representations, rhetorical figures, poetics, as well as translation theory and textual analysis. Writing exercises include pastiche, précis, explication de texte, an exercice de style, and theme. Additional exercises will target vocabulary development. Semester-style participation in class discussions is expected, as are oral presentations.

**FREN 3130 Advanced French through News**
Spring. 4 credits. Satisfies Option 1 of language requirement. Prerequisite: FREN 3010 or 3050, or placement by Cornell Advanced Standing Examination (CASE). Students who have taken FREN 3120 are not eligible to take FREN 3130 for credit.

This course prepares students for interacting at an advanced level of proficiency in both speaking and writing. Students will increase their vocabulary and knowledge of idiomatic French, while discussing and debating topics of current interest as they are presented in French televised news broadcasts and other media. A flexible approach allows students to improve their language skills on an individualized basis.

**FREN 3210 Readings in Modern French Literature and Culture (LA-AS)**
Fall. 4 credits. Satisfies Option 1 of language requirement. Prerequisites: FREN 2060, 3120, or 3050, or CASE Q+++ placement. Conducted in French. L. Dubreuil. This course is designed to teach ways of reading and understanding works created from the Romantic period to the present day, in their cultural context. A range of texts from various genres is presented, and students refine their analytical skills and their understanding of various methodologies of reading. Texts by authors such as Balzac, Baudrillard, Cixous, Duras, Genet, Mallarmé, Michaux, Proust, Rimbaud, Sartre, Sartre.

**FREN 3220 Readings in Early Modern French Literature and Culture (LA-AS)**
Spring. 4 credits. Satisfies Option 1 of language requirement. Prerequisite: FREN 2060, 3120, or 3050, or CASE Q+++ placement. Conducted in French. M. Greenberg. This course is designed to familiarize students with works from the Renaissance, the Classical period, and the Enlightenment, as well as the cultural and historical context in which these texts are created, reflecting a dynamic period of significant change for France. Texts by such authors as Ronsard, du Bellay, Montaigne, Molière, Marguerite de Navarre, Corneille, Diderot, de Lafayette, Racine, Perrault, Rousseau. Students may read the original languages or in translation.

**FREN 3280 Medieval Francophone Literature**
Fall. 4 credits. Satisfies Option 1 of language requirement. Prerequisites: FREN 2210, 3010, or 3050, or CASE Q+++ placement. C. Howes. This course is dedicated to examining how medieval French literature was never really French in the first place. There was, after all, no political entity commensurate with modern France in the Middle Ages, and no unifying language with the symbolic power that French has, for better or worse, acquired in modernity. Nonetheless, linguistic differences mattered, and these differences were often
also political ones, distinguishing north from south and centers from margins. Through close readings of Anglo-Norman, Franco-Italian, and Occitan texts, including narratives of colonial conquest and cultural traffic, we’ll have a chance to examine the porous boundaries of the medieval Francophone world. Primary texts will include authors such as Marco Polo, Brunetto Latini, Marie de France, Clemence of Barking, Arnaut Daniel, the Song of Roland and the Song of the Albigensian Crusade: Readings and discussion in French.

**FREN 3350 Romance to Revolution: The French Novel before 1750–1850 # (LA-AS)**

Spring. 4 credits. Satisfies Option 1 of language requirement. Prerequisites: FREN 2210 or permission of instructor. M. C. Vallois.

In addition to considering formal questions relating to the development of the novel in French, this course examines problems such as the appearance of narrative and historical consciousness, the representation of woman, and the relation between literature and society. Texts include such major works as Balzac’s Contes, Mme de LaFayette, Prevost, Rousseau, Diderot, Laclos, and Sade.

**FREN 3365 Shipwrecks: Disaster, Deliverance, and Colonial Modernity (also SPAN 2360) (LA-AS)**

Spring. 4 credits. Satisfies Option 1 of language requirement. Prerequisites: FREN 2210, 3010, or 3050, or CASE Q++ placement. L. Dubreuil.

This course will present some of the major features of Québécois society, culture, religion, politics, and literature, from the early times of “Nouvelle France” (16th–17th century) to contemporary Québec. We will explore topics such as: the origins of Calvinism, political activism, isolation and migrations, (post)coloniality and identity, Montréal. This is a truly multidisciplinary class, based on various pieces (voyage descriptions, political texts and memoirs, poems, theater plays, novels, films, songs, etc.). We will study excerpts from historical documents (Samuel de Champlain, the Jesuit descriptions of Québec), or authors such as Emile Nelligan, Gaston Miron, Anne Hébert, Robert LeRage, Gilles Vigneault, etc.

**FREN 3710 Reading/Screening Women's Stories in French and Francophone Cultures # (CA-AS)**

Fall. 4 credits. Satisfies Option 1 of language requirement. Prerequisites: FREN 2210, 3010, or 3050, or CASE Q++ placement. M. C. Vallois.

The class is an introduction to reading and interpreting women’s stories as they are represented, written, at times erased before being recovered in French and Francophone history and cultures. The course will analyze several figures/icons/images from the Old Regime to our time. The goal of the course is to familiarize students with the analyses of different strategies and techniques of representation (esthetic, historical, scientific, autobiographical, and fictional). The corpus of works studied will include fictional and historical writing as well as paintings and films. Examples of such case studies could include: Joan of Arc, Marguerite de Valois, Marie-Antoinette, Heroines of fairy tales, Camille Claudel, unknown women workers, or well-known contemporary women authors such as Marguerite Duras, Marjane Satrapi, or Maryse Condé.

**FREN 3730 Religious Violence in French and Francophone Texts # (CA-AS)**

Spring. 4 credits. Satisfies Option 1 of language requirement. Prerequisites: FREN 2210, 3010 or 3050, or CASE placement, or permission of instructor. R. Long.

This course will examine the various forms of religious violence taken on: war, massacre, pillage, and torture—and consider the symbolic meanings invested in these forms of violence in the context of the work of René Girard (La Violence et le sacré). We will raise the question of what makes this sort of violence so intractable, and what has fostered the continuity of religious conflict over such a long span of time. For example, the ceremonial or ritualistic nature of this violence seems to give it an internal justification that is not subject to laws concerning human rights. Then, we will examine how a range of authors throughout history represent this violence in critical fashion. A number of texts present the impossibility of representing extreme violence, raising the question of how events can be witnessed when the witnesses are dead or traumatized by them. How can such extreme violence be represented or explained without being justified or rationalized? We will examine how the presentation of violence as a spectacle raises the question of moral responsibility in the context of large-scale and ongoing violence, implicating also those who observe but who do not directly participate. We will also consider Maalouf’s Les Croisades vues par les arabs (as well as his Identités meurtrières), Joinville’s La Vie de Saint Louis, Théodore Agrippa d’Aubigné’s Les Tragiques, Elle Wiesel’s Le Nuit, Gillo Pontecorvo’s La Bataille d’Alger, Jean Genet’s Les Paravents, Shoshana Felman and Dori Laub’s Testimony, and Elaine Scarry’s The Body in Pain.

**FREN 3860 Perfume, Jewelry, Cigarettes in French Literature (LA-AS)**

Fall. 4 credits. Satisfies Option 1 of language requirement. Prerequisites: FREN 2210, 3010 or 3050, or CASE Q++ placement. R. Klein.

Artifacts like perfume, jewelry, and cigarettes are often the focus of literary attention in France, not only for Epicurean motives but because, being essentially frivolous, without any evident social utility, they resemble in that respect aesthetic objects of art itself. This course proposes to read a number of works in which perfume, jewelry, and cigarettes are featured prominently, where their charms and seductions are illustrated and mobilized in the interest of broader allegorical aims.

**FREN 3890 Canonical States, Canonical Stages (LA-AS)**

Fall. 4 credits. M. Greenberg.

This course will be a comparative reading of several 17th-century French authors that we will read will be Shakespeare, Lope de Vega, Calderon, Corneille, and Racine. The course will attempt to delimit the origins of the modern state in the exclusionary practices that 17th-century writers deployed both for contemporary (to the plays) audiences and to 21st-century audiences. Our critical apparatus will borrow from different theories of ideology and subjectivity, as they pertain to the theatrical experience.

**FREN 4010 Politics and Perversion in French 17th-Century Literature (also FREN 6010) (LA-AS)**

Spring. 4 credits. M. Greenberg.

This course will use the concept of “perversion” in its sexual, political, and theological definitions to examine the tensions of 17th-century French literature and culture. We will begin with a discussion of the work and trial of Théophile de Viau—a trial that sets the tone of government intervention in poetic creation for the entire century. We will then look at other “scandals” including the heated debates of several religious women (Jeanne des Anges, Marie de l’Incarnation, Mme Guyon) who were involved in several of the theological scandals (possession) of the century. We will also look at some of the writings of P. Bayle and other Protestant and Catholic dissident intellectuals whose writings veered away from orthodoxy. Works by La Fontaine and his relation with N. Fouquet will be discussed in relation to the establishment of Louis XIV’s version of absolutism in the arts. Finally we will look at a tragedy or two by both Corneille and Racine where sexual passion is shown to pervert familial structures necessary—or thought so—for a well one.

**FREN 4150 Negrismo and Negritude: Africanist Poetics and Politics (also FREN 6150, SPAN 4150/6150) @ (LA-AS)**

Fall. 4 credits. Open to students with very good reading knowledge of both Spanish and French. G. Aching.

For description, see SPAN 4150.

**FREN 4190-4200 Special Topics in French Literature # (CA-AS)**

Fall. 4 credits. Satisfies Option 1 of language requirement. Fall. 4 credits. Satisfies Option 1 of language requirement. Prerequisite: permission of instructor. Staff.

Guided independent study of special topics.

**FREN 4240 Freud: An Introduction to Psychoanalysis (also FREN 6240) # (CA-AS)**

Fall. 4 credits. M. Greenberg.

The class is intended to be an introduction for beginning graduate students to the history and theory of psychoanalysis. We will be primarily interested in reading the early texts of psychoanalysis, especially Freud, while indicating the different directions analytic theory and practice will take in their later developments.

**FREN 4290-4300 Honors Work in French # (CA-AS)**

Fall. 4 credits. R grade given at end of fall semester and final grade at end of spring semester. Open to juniors and seniors. Consult director of honors program for more information. Staff.

**FREN 4310 French Theater: Staged Reading (LA-AS)**

Fall. 4 credits. Conducted in French. L. Dubreuil.

This class gives students the opportunity to analyze literature, to practice theater, and to study French language at the same time. The final product of this course will be a public staged reading of a play in French (this play being conjointly determined by the students and the instructor). A staged reading involves performers reading aloud a text that they know well but they do not need to memorize, with only minimal movements, costumes,
prop, or lights. Throughout the semester, we will work on literary interpretation as well as on the practice of reading (voice, expression). Texts from the 17th to the 21st century might be studied. Though a previous experience in acting would be nice, it is by no means required to attend the class.

FREN 4250 Postcolonial Poetry and the Poetics of Relation (also COML 4290/6350, FREN 6350, SPAN 4350/6350) (LA-AS)
Fall. 4 credits. J. Monroe. For description, see COML 4290.

FREN 4390 Poems of Force: Medieval Epic (LA-AS)
Spring. 4 credits. C. Howie. This seminar is dedicated to the glittry, gory battle poems of the French Middle Ages, with special emphasis on the role of violence in the construction of national, narrative, and erotic identities. We’ll take a look at two famous war poems, the Song of Roland and Rerouel de Cambray, as well as the romance afterlife of Virgil’s Aeneid in the 12th-century Roman d’Elion. Time permitting, we’ll also turn to Renaissance appropriations of medieval epic (and romance) tropes, particularly Tasso’s Jerusalem Delivered. In addition to close readings of these texts, we’ll turn to modern and contemporary thinkers such as Simone Weil, Anne Carson, Elaine Scarry, and others who have dealt delicately with the ethics and aesthetics of violence. Readings primarily in French, discussion in English. No previous experience with Old French required.

FREN 4520 Creativity and Constraints (also COML 4675)
Spring. 4 credits. T. McNulty. Against our tendency to identify invention and discovery with an unbounded horizon—the open expanse of an uncharted territory, the limitless products of the imagination, or the unmarked potential of the blank page—this course will consider the role of boundaries, limits, obstructions, and constraints in shaping the creative process. Our discussions will draw upon a wide range of sources, from medieval lyric to contemporary architecture, from site-specific artworks to games and game theory, from the role of constraints in Sigmund Freud’s conception of the psychoanalytic transference to Gaston Bachelard’s and Henri Lefebvre’s meditations on space, from literary mappings of civic space to Martin Heidegger’s articulation of building, dwelling, and thinking. More specifically, we will focus on 20th-century collectives and movements whose members have sought in self-imposed limits or constraints both a renewal of the creative process and a means of transforming the social, political, and urban spaces in which they live: Surrealism and Dada, the French literary collective Oulipo, the Situationists, and the Danish film collective DOGMA, among others. Students will have the opportunity to conceive and execute artistic, social or political projects inspired by course readings in addition to writing formal papers.

FREN 4740 Romantic Novel (LA-AS)
Fall. 4 credits. R. Klein. French Romanticism finds its most compelling expression in novels of disappointed love. This course will include a selection of those novels by Chateaubriand, Benjamin Constant, Nerval, Balzac, Stendhal, and Flaubert. Romantic love will be considered in relation to courtly love as it was formulated in Europe in the 12th and 13th century; preserved and transformed by the Petrarchian tradition.

FREN 4824 Medieval Translation in Motion (also ENGL 4072, SHUM 4824)
Fall. 4 credits. S. Chaganti. For description, see SHUM 4824.

FREN 4935 Subjectivation as Mode of Psychoanalysis—Zola’s Department Store (also SHUM 4935)
Spring. 4 credits. S. Tsai. For description, see SHUM 4935.

FREN 4936 Link, Network, Nexus (also COML 4115, GOVT 4748, SHUM 4936, STS 4361)
Spring. 4 credits. B. Massumi. For description, see SHUM 4936.

FREN 6010 Politics and Perversion in France in 17th-Century Literature (also FREN 4150)
Spring. 4 credits. M. Greenberg. For description, see FREN 4010.

FREN 6150 Negrismo and Negritude: Africanist Poetics and Politics (also FREN 4150, SPAN 4150/6150)
Fall. 4 credits. Open to students with very good reading knowledge of both Spanish and French. G. Aching. For description, see FREN 4150.

FREN 6240 Freud: An Introduction to Psychoanalysis
Fall. 4 credits. M. Greenberg. For description, see FREN 4240.

FREN 6300 French Reading for Graduates
Spring. 3 credits. Prerequisite: graduate standing. T. Alkire. Designed for those with little or no background in French. Aims primarily to develop skill in reading French. Covers grammar basics, extensive vocabulary, and strategies for reading in a foreign language. Some flexibility in selecting texts according to fields of interest.

FREN 6390-6400 Special Topics in French Literature
6990, fall; 6400, spring. 2–4 credits each semester. Guided independent study for graduate students.

FREN 6470 The Theatreality of Gender, Philosophy, and French Literature (also FGSS 6470)
Fall. 4 credits. M. C. Vallois. Selecting specific case studies from the time of Descartes and Marie de Gournay to Derrida and Butler, the seminar will examine the relationship between philosophical discourse and the theatricality of sexuality and gender in literary, juridical, scientific and other historical French and Francophone texts. The period of the Long Enlightenment (17th–18th centuries), which witnessed the questioning of Cartesian philosophy by the qualitativelit reformers, will be central to the seminar. The goal of this inquiry is, however, to reframe the problematics of sexual differentiation as historical representation and production of “experience.” The preceding and succeeding moments of intellectual inquiries (the libertine phase as well as the age of the social sciences) will bring new light to the nature/culture and universal/particular debate. It will do so also through the reading of these texts by contemporary theorists of our modernity such as Meleaux-Ponty, Foucault, Irigaray, Derrida, Spivak, Butler, and David-Menard. Some of the primary texts studied could include the works of Marguerite de Valois, Madame de Lambert, Montesquieu, Diderot, Germaine de Staël, George Sand, Simone de Beauvoir and Hélène Cixous, Margee Conde.

FREN 6490 The Refusal of Politics
Spring. 4 credits. I. Dubwud. Graduate seminar on the negative relations between literature and politics. It will include a reading of some theories of engagement and dégagement (or retrait) from the last decades. We will compare these theories with the discrete and problematic solutions that literary oeuvres have invented. We shall focus on the literary refusal of society in 19th-century France and will consider different ways of living in an “ivory tower.” Authors to be studied could include Mme. de Staël, Vigny, Hugo, Baudelaire, Flaubert, Maupassant, Mallarmé, or Zola.

FREN 6650 Queer Theory (also FGSS/ITAL 6650)
Spring. 4 credits. C. Howie. This course explores queer fiction in the widest possible sense. We’ll take a look at the complicated relationship between narrative and sexuality in modern French and Italian literature, with occasional detours into the Anglophone world. In the process, we’ll pay special attention to canonical figures of modern homosexuality (e.g., Colette, Gide, Genet, Youssoufian, and Pasolini) and to writers less comfortably, which is to say more queerly, positioned within that cannon (e.g., Kathy Acker, David Wojnarowicz, Pat Califia, Hervé Guibert, Pier Vittorio Tondelli). Readings and discussion in English.

Italian

The Major
The Italian section offers a major in Italian with tracks in Italian literature and culture and Italian studies. The first track is designed for students who wish to study Italian language, literature, and culture through the works of writers, artists, and cultural figures who have developed rich and varied aesthetic traditions. The second track in Italian studies includes a broader progression of courses that entails work in related disciplines. Both are designed to provide students with proficiency in reading, speaking, and writing in Italian, to familiarize them with Italian culture, and to assist them in analyzing Italian texts in related fields. For further information, students are asked to consult the director of undergraduate studies.

Track 1: Italian Literature and Culture
Track 1 is designed for students who: (1) wish to study Italian language, literature, and culture through the works of writers, artists, and cultural figures; and (2) wish to do most of their course work in Italian. Admission: the prerequisite for official admission to Track 1 of the Italian major is successful completion of any ITAL course at the 2000 level or higher conducted in Italian.
Students who wish to follow Track 1 in Italian are advised to consult with the director of undergraduate studies (DUS). The DUS will take into account the student's interest, preparation, and career goals and assign the student to an advisor. Students majoring in Italian are expected to become conversant with a fair portion of the masterworks of Italian literature, to acquaint themselves with the outlines of Italian literary and cultural history, and to develop some skill in textual and cultural analysis. In conjunction with the major advisor, the student will craft an individualized plan of studies that will meet the minimum requirements for Track 1 as listed here:

- At least 10 Italian literature or culture courses at the 2000 level and higher (the prerequisite may be counted toward this requirement. The 1-credit Italian practicum and the 1- or 2-credit independent study options do not count as full credits). One of these courses must be at the 4000 level and one must focus on Italian texts before the 19th century. With the permission of the advisor, the student may substitute for two of these courses that are deemed relevant to the student’s study of Italian, e.g., a course in another national literature; a course in critical theory, or a course in European history.
- At least 20 credits in courses conducted entirely in Italian. The Italian practicum may be used to fulfill 3 of these credits. Twelve of these credits must be in courses in Italian at the 3000 level or above.
- Competency in the Italian language (as demonstrated by examination or by coursework approved by the DUS).

ITAL 4040 History of the Italian Language and ITAL 4030 Linguistics: Structure of Italian may be counted toward the 10 courses required for the major. Note: An introductory course is prerequisite for ITAL 4030 and 4040.

**Track 2: Italian Studies**

Track 2 in Italian Studies is designed primarily for students who wish to pursue individual interests that do not fall within Track 1 of a major. Students select courses from Italian as well as courses from other departments that have a substantial Italian component, such as History of Art, Architecture, Government, Music, and Comparative Literature. For the list of approved Italian studies courses, please see the director of undergraduate studies.

**Admission:** By the end of their sophomore year, prospective majors in Track 2 should have taken ITAL 2190 Intermediate Conversation and Composition or demonstrated the equivalent level of fluency.

To complete the program, students must:

1. Demonstrate competence in the Italian language by completing ITAL 3130 Advanced Conversation and Composition, or its equivalent (such as ITAL 3500 Italian Writing Workshop);
2. Complete the core series of Italian Studies courses: ITAL 2900 Perspectives in Italian Culture (fall), ITAL 2950 Italian Cinema (fall), and ITAL 2970 Introduction to Italian Literature (spring);
3. Complete at least five courses (20 credits) from the approved list of Italian Studies courses at the 3000 level or above from no more than three departments. Students planning on studying abroad for a year or a semester in Italy should plan their course work to emphasize their individual interests. Note: Students must maintain a B– in at least five of the five Italian Studies courses; and
4. Select a committee of one or more faculty advisors to help formulate a coherent program of study. One of the advisors must come from the Italian section.

Students are encouraged to enrich the program by combining this option with other majors in related fields such as history of art, music, comparative literature, or architecture.

**Minor in Italian Studies**

In order to complete an undergraduate minor in Italian Studies, students must take at least five courses (a minimum of 15 credits) by selecting courses in consultation with the minor advisor, one of which must be ITAL 2900 Perspectives in Italian Culture. These courses must be allocated among at least three Cornell departments and may include one introductory course and one course at the advanced level. Language competence must be demonstrated by successfully completing ITAL 2190. Please note that courses taken as part of a study abroad program approved by the Study Abroad Dean may count toward meeting the above requirements.

Students wishing to enroll in the minor must register their intent by contacting the director of undergraduate studies, who will assign a faculty advisor to students.

**Study Abroad in Italy**

Italian studies faculty members strongly encourage students to consider studying abroad in Italy. Students will have the opportunity to immerse themselves in Italian and gain a singular perspective on the Italian cultural context.

Students are urged to consider the Bologna Cooperative Studies Program (BCSP), of which Cornell is an affiliated member. BCSP offers qualified undergraduate students an opportunity to study for a full academic year or a semester at the University of Bologna for credit. During each semester of the academic year, which begins in October and extends through June, BCSP studies students in one or two regular University of Bologna courses with Italian students. Students may also take special courses in Italian literature, language, art history, film studies, and contemporary politics.

Enrollment in a language course is conditional upon the student’s eligibility for the particular level and on attendance at the first scheduled class session. Because of the high demand for language courses, a student who fails to attend the first class meeting will be dropped so others may register.

**Note:** Students placed in the 2000-level course will take ITAL 1230; those with 56 or higher in the five Italian Studies courses at the 1210–1220 level; those with 56 or higher on the Italian language examination. At the end of ITAL 1220, students who score lower than 56 on the LPI take ITAL 1230; those with 56 or higher may enter the 2000-level sequence. M. Baraldi, K. Serafin and staff.

This introductory course provides a thorough grounding in all the language skills: listening, speaking, reading, and writing, with practice in small groups. Lectures cover grammar and culture.

ITAL 1230 Continuing Italian

Fall or spring, 4 credits. Prerequisite: ITAL 1220, or LPI 45–55 or SAT II 460–580. K. Bättig von Wittelsbach

This is an all-skills course designed to improve speaking and reading ability, establish a groundwork for correct writing, and provide a substantial review of grammar.

ITAL 2090 Italian Intermediate Composition and Conversation I

Fall or spring, 4 credits. Satisfies Option 1 of language requirement. Prerequisite: ITAL 1230, or LPI 56–64, or SAT II 590–680, or CASE Q. F. Cervesi

This course provides a review of composition, reading, pronunciation, and grammar as well as guided practice in conversation. It emphasizes the development of accurate and idiomatic expression in the language.

ITAL 2140 World News, Italian Views (CA-AS)

Spring, 4 credits. Satisfies Option 1 of language requirement. Limited to 18 students. Prerequisite: ITAL 2090 or permission of instructor. Designed to improve students’ proficiency in Italian. Special attention will be given to writing. Conducted in Italian. M. Migiel

In this seminar, we will read, discuss, and write about a variety of global and transnational issues that get debated in the Italian media. Our approach to these cultural issues will be grounded in theoretical and discursive analysis. Students will be required to analyze information from Italian and English (both U.S. and British) sources. Students who read other languages (e.g., French, Spanish) will be encouraged to offer points of comparison. Topics will take into account student interests and are likely to include current events; international politics; developments in science and technology; economic and business ventures; cultural events; sports.

ITAL 2190 Italian Intermediate Composition and Conversation II

Spring, 4 credits. Satisfies Option 1 of language requirement. Prerequisite: ITAL 2090 or equivalent. K. Bättig von Wittelsbach

Guided conversation, composition, reading, pronunciation, and grammar review emphasize the development of accurate and idiomatic expression in the language.

ITAL 2900 Perspectives in Italian Culture (CA-AS)

Fall, 3 credits. “Core course” in track two of the Italian major, offered every year. Conducted in English with discussion section in Italian. R. Welch

This course aims to provide students with the tools necessary to understand the most important social, political, and artistic developments occurring in contemporary Italian culture. These include the nature of geographic and national fragmentation in post-Risorgimento “ITALY”; the “Southern” question and the phenomenon of “Costa Nostra”; Italian contributions to world cinema; and the politics of food. By providing students with interdisciplinary perspectives on Italian culture, they will be introduced to how Italian culture is produced and consumed globally.
today. Primary readings include selections from Peter Robb, Leonardo Sciascia, and Tim Parks, and films from Rossellini, de Sica, Sergio Leone, and Benigni. A group of secondary readings stimulates the discussion of the historical and cultural panorama of contemporary Italy.

ITAL 2950 The Cinematic Eye of Italy (CA-AS) Fall. 3 credits. Satisfies Option 1 of language requirement. Prerequisite: ITAL 2090 or permission of instructor. Introduces students to Italian cinema from the 1940s to today. Students will view the representative works of the most important Italian directors in order to create a perspective on one of the world’s major national cinematic traditions. We will pay close attention to the sociopolitical context of the films as well as considering the technical and formal issues that arise when studying Italian cinema. Emphasis will be given to Italian neo-realist, Italian political cinema of the 1970s, and contemporary Italian films.

ITAL 2970 Introduction to Italian Literature (LA-AS) Spring. 3 credits. Satisfies Option 1 of language requirement. “Core course” in Italian Studies major. Prerequisite: ITAL 2090 or permission of instructor. Conducted in Italian. L. Fabbi. The course aims to introduce students to Italian literature, mainly through readings in prose and poetry from the 20th century. The course includes significant practice in grammar, vocabulary building, and composition, and to this end, students are required to write five papers of medium length over the course of the semester.

ITAL 3020 Italian Practicum Spring. 1 credit. Staff. Students enrolled in an Italian literature or culture course that is conducted in English may opt to take this practicum provided that they have already attained proficiency in the language.

ITAL 3130 Advanced Italian: Language in Italian Culture (LA-AS) Spring. 4 credits. Satisfies Option 1 of language requirement. Prerequisite: ITAL 2100 or equivalent. Conducted in Italian. K. Bättig von Wittelsbach. This course is designed to develop accuracy and fluency in oral and written expression, and to sharpen awareness of idiomatic and stylistic nuances in present-day Italian. The material discussed is drawn primarily from a wide range of social and cultural issues in modern Italy, and in the areas of Europe where Italian is an official (Switzerland) or a regional minority language (Istria). Some of the topics discussed are: the role of Italy in the European Community, the place of the minorities (especially that of more recent, non-European immigrants) in the Italian public life, the importance of art and artist in the contemporary Italian society, and the changing Italian language and its regional varieties. Listening and speaking skills are cultivated through the frequent use of authentic audio and visual materials. Readings range from fictional to analytical and argumentative, with writing assignments frequently centered on the text being read. Presentations and grammar review are also an important component of this course.

ITAL 3400 History of the Grotesque (LA-AS) Fall. 3 credits. Satisfies Option 1 of language requirement. Prerequisite: ITAL 2090 or permission of instructor. Italian literature seen from a certain angle, is a series of moments of rhetorical exaggeration, bodily deformity, sexual overkill, religious satire, and extreme violence: hallmarks of an aesthetic category that came, at some point in the modern period, to be called the grotesque. We’ll examine the particular shapes to which this category can be applied across time, and which may in turn alter the very shape of the category. After all, the grotesque is nothing if not a question of shapes: of anticipated literary and bodily forms, and their eventual disappointment or monstrous transformation; of how aesthetic devices not only represent but produce the “normal” body as an effect of its many variations. Expect blasphemous monkeys, farting devils, and lots of intimidating women.

ITAL 3890 Modern Italian Novel (also ITAL 6890) (LA-AS) Spring. 4 credits. R. Welch. Topic for Spring 2010: Narrating the City: The Case of Rome. In this course, we will examine a fervently articulated and debated social object—the city—and its uses in modern Italian narrative. We will situate our inquiry on the intersections of urban and narrative space in the “eternal city” of Rome—the locus of governmental and ecclesiastical power in modern Italy, and the inspiration for and site of countless imaginative renderings in art, literature, film, and television. This course is concerned in particular with the space of Rome from the late 19th to the 20th century, and our readings will include novels, films, and short stories that represent Rome as a site of working-class struggle, bourgeois rationality, aristocratic decadence, fascist power and resistance, racial and sexual marginality, and/or affective (trans)formation. Our readings will address the following questions: if clearly defined boundaries delimit the city as a political space, what limits are at work in defining it within a narrative space? What kinds of inclusions, and exclusions shape a given urban space? What relationships—geographic, social, temporal—are (or were) also rhetorical and narrative—are forged between the city and its periphery? Primary readings to include novels and films by Matilde Serao, Gabriele D’Annunzio, Alberto Moravia, Natalia Ginzburg, Roberto Rossellini, and Pier Paolo Pasolini. Secondary readings to include essays by: Louis Althusser, Roland Barthes, Walter Benjamin, Marshall Berman, Giuliana Bruno, Michel De Certeau, and Michel Foucault.

PORT 1210–1220 Elementary Brazilian Portuguese I–II 1210, fall; 1220, spring. 4 credits each semester. PORT 1210 is the prerequisite for PORT 1220. J. Oliveira. This is a full-year introductory course, intended for students with no knowledge of Portuguese, and with limited or no knowledge of Spanish. Stress is placed upon the development of the fundamental communication skills: listening, speaking, reading, and writing.

PORT 2090–2190 Intermediate Brazilian Portuguese for Spanish Speakers I–II 2090, fall; 2190, spring, 4 credits each semester. PORT 2090 satisfies Option 1 of language requirement. Prerequisite: for 2090, PORT 1220; for 2190, PORT 2090 or permission of instructor. J. Oliveira. PORT 2090–2190 is a full-year course intended for students who have already taken the first level of Portuguese, or as an intensive introductory course for those who are native/ near native speakers of Spanish. An all-skills course with particular emphasis on Brazilian Portuguese spoken within the context of its culture, it presents a fast-paced review focused on improving grammatical accuracy, pronunciation and on enriching vocabulary.

PORT 3200 Readings in Modern Brazilian Literature (LA-AS) Spring. 4 credits. Staff. This course aims to provide an overview of modern Brazilian literature. It will cover the
major literary movements and the essential
canonical writers of 19th- and 20th-century
Brazil. Some of the topics to be discussed are:
the formation of the national literature;
literature and slavery; foreign models and
rewritings; diverse definitions of national
spaces and landscapes; relationships between
aesthetic innovations and political issues and
different literary definitions of frontiers,
margins, and exclusions. The course also
intends to introduce students to the practice
of literary analysis, and to provide an
opportunity to improve language skills in
Portuguese through extensive oral and written
practice. Some of the authors to be read
include Aluísio de Andrade, J. M. Machado de
Assis, Mário de Andrade, Oswald de Andrade,
Clarice Lispector, Graciliano Ramos, João
Guimarães Rosa, Nelson Rodrigues and Aba
Cristina César.

PORT 4200 Special Topics in Brazilian Literature
Spring. 2–4 credits. Prerequisite: permission
of instructor.
Guided independent study of specific topics.
For undergraduates interested in special
problems not covered in courses.

PORT 4720 Between Fact and Fiction: The Documentary Tradition in Latin American, Film, and Visual
Arts (also SPAN 4720) @ (CA-AS)
Spring. 4 credits. L. Horne.
This course explores how the concept of
“documentary” becomes articulated in multiple
cultural practices in contemporary Latin America. Through a selection of texts, films,
photographic installations and other works we
will study how the documentary genre
permeates different cultural manifestations,
acting as a crossing point between different
artistic media. We will explore how the
presence of the document blurs the boundary
not only between fact and fiction, but also
between subject and object, and ultimately
between the different arts. The course
provides a historical survey of the
“documentary tradition” throughout the 20th
century seeking to understand the specificities
of the contemporary moment. Both classic
and recent theoretical texts on the subject will
be covered.

PORT 6400 Special Topics—Grad
Spring. 2–4 credits. L. Horne.
Guided independent study of specific topics.

Romance Studies
Faculty: D. Cruz de Jesús.

ROMS 5070 Methodology of Romance Language Learning and Teaching
Spring. 3 credits. Required for all graduate TAs who will be teaching Romance
languages for the first time at Cornell.
D. Cruz de Jesús.
Focuses on language teaching as facilitation of
learning, thus on the learner’s processing of
language acquisition and the promotion of
reflective teaching. Pedagogical approaches
will be addressed from a learner-centered
perspective involving effective language
learning strategies and analysis.

ROMS 5080 Pedagogy Practicum
Fall. 1 credit. Required for all graduate TAs
teaching language for the first time in the
Department of Romance Studies. Staff.
This practicum is designed to better enable
the TAs to meet the needs of their students in
the understanding and acquisition of the
linguistic forms, notions and functions covered
in their course.

Spanish
G. Aching, S. Amigo-Silvestre, M. Balsa,
M. Berviá, T. Berviá, B. Bosteels, D. Castillo,
D. Cruz de Jesús, M. A. García,
J. Rodríguez-García, L. Horne, P. Keller,
C. Lavlews, N. Maldonado-Méndez,
J. E. Paz-Soldán, S. Pinet, M. K. Redmond,

Emeritus: C. Morón Arroyo.

The Major
The Spanish major is designed to give students proficiency in the oral and written
language, to acquaint them with Hispanic
culture, and to develop their skill in literary and
linguistic analysis. Satisfactory completion
of the major should enable students to meet
text, and literature requirements for
teaching, to continue with graduate work in
Spanish or other appropriate disciplines, and
to satisfy standards for acceptance into the
training programs of the government, social,
agencies, and business concerns. A Spanish
major combined with another discipline may
also allow a student to undertake
preprofessional training or graduate study
in law or medicine. Students interested in the
major are encouraged to seek faculty advice
as early as possible. For acceptance into the
major, students should consult the director of
undergraduate studies, who will admit them to
the major, and assign them an advisor from
the Spanish faculty. Spanish majors will then
work out a plan of study in consultation with
their advisors. Spanish majors have great
flexibility in designing their programs of study
and areas of concentration. Previous training
and interests as well as vocational goals will
be taken into account when the student's
program of course is determined.
SPAN 2190 is a prerequisite to entering
the major in Spanish.

All majors will normally include the following
core courses in their programs:
1. SPAN 2150, 2150, and 2170 (not
necessarily in that order).
2. SPAN 3100 and 3110.
3. One of the two senior seminars offered
each year. A minimum grade of B– is
required in order for a course to count
toward the major.

The Spanish Literature Option
The Spanish literature option normally
includes at least 15 credits of Spanish
literature beyond the core courses. Literature
majors are strongly urged to include in their
programs all the major periods of Hispanic
literature.

Area Studies Option (Spanish, Latin American,
or U.S. Latino Studies):
At least 15 credits of courses at the 3000 level
and above in any of those focus areas beyond
the core, all courses to be approved through
consultation with the major advisor. Courses
should reflect interdisciplinary interests in the
area and may include up to three other
academic fields of interest. For example, a
student interested in Latin American studies
may want to include courses on such topics as
Latin American history, government, rural
sociology, and economy. Students who want
to specialize in U.S. Latino issues may want to
include such topics as sociology of Latinos,
Latino history, and Latino medical issues in
addition to further studies in literature.

Students specializing in Spanish studies
planning on spending a year or semester in
Spain (but not exclusively toward students)
frequently plan their course work to
emphasize Spanish history, art, political
economy, and other related field courses, such
as courses on Islam and Moorish or Jewish
Spain.

Students are encouraged to enroll the major
program by including a variety of courses
from related fields or by combining Spanish
with related fields such as history, philosophy,
sociology, anthropology, art, music, classics,
English, comparative literature, and other
foreign languages and literatures. The
interdepartmental programs in Latin American
studies and Latino studies sponsor relevant
courses in a variety of areas.

The J. G. White Prize and Scholarships are
available annually to undergraduates who
achieve excellence in Spanish.

Minor in Spanish
The minor promotes a broad understanding of
Spanish and Spanish American culture,
literature, and society; it also encourages
students to refine and promote language
skills. In order to complete the minor, students
must take a minimum of 5 courses (15
credits), distributed as follows: Language
competence must be demonstrated by
successfully completing either SPAN 3100
(Advanced Spanish Conversation and
Pronunciation) or SPAN 3110 (Advanced
Spanish Writing Workshop). Students pursuing
a minor must furthermore complete either
SPAN 2200 (Perspectives on Latin America)
or SPAN 2290 (Perspectives on Spain), as well as
three elective courses to be chosen in
consultation with the student's advisor. Among
those electives, students are strongly
couraged to take at least one course at the
advanced 3000–4000 level.

Students wishing to enroll in the minor must
register their intent by contacting the minor
advisor, who will assign a faculty advisor to
each student.

Study Abroad in Spain: Cornell, the
University of Michigan, and the University of
Pennsylvania co-sponsor an academic year in
Spain program. Students enrolled in this
program spend the first month before the fall
semester begins in an orientation session at
the University of Seville, where they take
courses in Spanish language and culture and
take advantage of special lectures and field
trips in Andalusia. Once the semester begins,
students enroll in regular classes at the
University of Seville and at the program's
center facility. Center courses are designed for
the program and include a seminar offered by
the resident director, from the faculty of either
Cornell, Michigan, or Pennsylvania. Other
center courses typically include history of art,
history of the Mediterranean literature course,
and Spanish composition and syntax. In Seville,
students live in private homes and a rich array of cultural activities
and excursions are organized every semester.

Applicants are expected to have completed
SPAN 2190 before departure. Completion of
SPAN 3110 is highly recommended. Students
are strongly encouraged to study abroad for
the entire year rather than one semester. Students interested in the study abroad program should visit Cornell Abroad in 474 Uris Hall and see the Cornell Abroad web site: www.cuaudi.cornell.edu/abroad.

Study Abroad in Bolivia: The summer program in Cochabamba, Bolivia, is sponsored by the Latin American Studies Program and accepts both undergraduate and graduate students. Students live with Bolivian families and normally take two courses with Cornell faculty who participate in this program. In addition to coursework, students work in Bolivian culture, politics, and social movements. The program features the opportunity to do intensive study in Quechua, the native language spoken by many Bolivians, and Peruvians, as well as Spanish, and to participate in research and internships with grass-roots communities, government offices, and businesses.

New Summer program in Nicaragua: Cornell is partnering with the Centro de Idiomas in Ocotal, Nicaragua to offer an exciting new experiential learning opportunity. The program offers Spanish language instruction (from beginning Spanish to more advanced conversational Spanish) and internships (choose from opportunities in agriculture, education, health or engineering). Participants earn 3 Cornell credits (LATA 4970 or IARD 4970: Independent Study).

Honors: Honors in Spanish may be achieved by superior students who want to undertake guided independent reading and research in an area of their choice. Students in the senior year select a member of the Spanish faculty to supervise their work and direct the writing of their honors essay (see SPAN 4290–4300).

Courses in the Spanish Program

Enrollment in a language course is conditional upon the student’s eligibility for the particular level and on attendance at the first scheduled class session. Because of the high demand for language courses, a student who fails to attend the first class meeting will be dropped so others may register.

Note: Students placed in the 2000-level course have the option of taking language and/or literature course.

SPAN 1120 Elementary Spanish: Review and Continuation
Fall. 4 credits. Students may not receive credit for both SPAN 1120 and 1220. Prerequisite: LPS 57–64 or SAT II 570–580. Students who have taken SPAN 1210 may enroll. Meets five times a week: four class sessions and one lecture. M. M. R. Rebecchi. Provides a basic review and then moves on to more advanced Spanish. Fall, M. A. García and staff.

SPAN 1220 Elementary Spanish I
Fall. 4 credits. Students with no previous knowledge of Spanish or up to two years of high school Spanish. Meets five times a week: four class sessions and one lecture. M. K. Redmond and staff. Using an integrated approach in small classes, this course develops listening, speaking, reading, and writing in a cultural context. Class sessions are conducted entirely in Spanish and the language is actively used in communicative, creative, and critical thinking activities. Students read short cultural and literary texts to foster vocabulary acquisition and develop reading strategies. Students develop writing skills by writing and editing compositions on various subjects. Lectures introduce and clarify grammatical structures. Daily preparation and active participation are required. After this course, students may take SPAN 1230.

SPAN 1230 Elementary Spanish II
Spring. 4 credits. Students may not receive credit for both SPAN 1120 and 1220. Prerequisite: SPAN 1210, or LPS 57–64, or SAT II 590–680. Class meets four times a week: four class sessions and one lecture. M. K. Redmond and staff. Using an integrated approach in small classes, this course develops listening, speaking, reading, and writing in a cultural context. The course begins with a fast-paced review of SPAN 1210 and then introduces new material. Class sessions are conducted entirely in Spanish and the language is actively used in communicative and critical thinking activities. Students read cultural and literary texts to foster vocabulary acquisition, complete analytical exercises, and develop reading strategies. Students continue developing writing skills by writing and editing compositions. Lectures introduce and clarify grammatical structures. Daily preparation and active participation are required. After 1220, students may take SPAN 1230, 2070, or 2090 depending on their LPS score, which is the final exam.

SPAN 1230 Continuing Spanish
Fall, spring, or summer. 4 credits. Prerequisite: SPAN 1220, or LPS 45–55, or SAT II 460–580. Meets four times a week. Fall and spring: S. Amigo-Silvestre and staff; summer: A. Stratakis-Tóth. The goal of this low-intermediate course is to achieve a higher level of comprehension as well as to advance oral and written expression in a cultural context. Small classes are conducted entirely in Spanish and the language is actively used in communicative, creative, and critical thinking activities. Students engage in linguistic and literary analysis of texts to develop new vocabulary, complete analytical exercises, and develop reading strategies. Students continue developing writing skills by writing and editing compositions on various subjects and review grammatical structures on their own. Although the instructor may clarify as needed, oral presentations, daily preparation and active participation are required. After this course, students may take SPAN 2000, 2070, or 2090.

SPAN 2070 Intermediate Spanish for the Medical Professions
Fall or spring. 4 credits. Satisfies Option 1 of language requirement. Prerequisite: SPAN 1230, LPS 56–64, or SAT II 590–680, Q on CASE exam. Students who have taken SPAN 2000 or 2090 should speak to instructor. A. Stratakis-Tóth. Provides a conversational grammar review, with dialogues, debates, compositions, and authentic readings on health-related themes. Special attention is given to relevant cultural differences and how cultural notions may affect medical care and discuss discussing literary texts, and viewing films. Particular emphasis is on writing academic essays with editing and peer/instructor feedback. Small classes are conducted entirely in Spanish and the language is actively used in communicative, creative and critical thinking activities. Students are exposed to Spanish cultural vocabulary and grammatical structures on their own. Oral presentations, daily preparation, and active participation are required. After this course, students may take SPAN 2140, 2150, 2170, or 2190.

SPAN 2140 The Spanish Difference: Readings in Modern Iberian Literatures (LA-AS)
Fall or spring. 4 credits. Satisfies Option 1 of language requirement. Prerequisite: SPAN 2070 or 2090, or CASE Q+, or permission of instructor. Conducted in Spanish. Fall, M. Balsa and staff; spring, P. Keller and staff. Introductory survey of modern Spanish literature. Students develop their analytical skills and learn basic literary concepts such as genre (drama, lyric, short story and novel) and style (romanticism, realism, etc.) as well as male/female perspectives and the translation of literature to film language. The survey introduces students to Spanish cultural complexity through readings of works by authors representative of its diverse linguistic and literary traditions.

SPAN 2150 The Tradition of Rupture: Latin American Writing from Modernism to the Present (also LATA 2150) (LA-AS)
Fall or spring. 4 credits. Satisfies Option 1 of language requirement. Prerequisite: SPAN 2070 or 2090, or CASE Q+, or permission of instructor. Conducted in Spanish. Fall, B. Bosteels and staff; spring, J. M. Rodríguez-García and staff. Readings and discussion of representative texts of the 19th and 20th centuries from various regions of Spanish America. Among the authors considered are Sarmento, Hernández, Martí, Darío, Agustini, Cortázar, García Márquez, Poniatowska, and Valenzuela.

SPAN 2170 Early Hispanic Modernities: Readings in Medieval and Early Modern Iberian and Spanish-American Literatures (also LATA 2170) (LA-AS)
Fall or spring. 4 credits. Satisfies Option 1 of language requirement. Prerequisite: SPAN 2070 or 2090, or permission of instructor. Conducted in Spanish. Fall, M. A. García; spring, S. Pinet. This course explores major texts and themes of the Hispanic tradition from the 11th to the 17th centuries. We will examine general questions on literary analysis and the
relationship between literature and history around certain events, such as medieval multicultural Iberia, the creation of the Spanish Inquisition in the 15th century and the expulsion of the Jews in 1492; the encounter between the Old and the New Worlds; the "opposition" between high and low in popular culture; and of the secular and the sacred in poetry and prose. Issues of representation regarding gender, identities, and subjectivity may also be studied. Readings may be drawn from medieval short stories and miracle collections; chivalric romances, Columbus, and the literary as well as geographic discovery, Lázaro de Torres, Cervantes, Lope de Vega, Calderón, and Sor Juana Inés de la Cruz, among others.

SPAN 2190 Intermediate Spanish II (Composition and Conversation)
Fall or spring. 4 credits. Satisfies Option 1 of language requirement. Prerequisite: SPAN 2070, or SPAN 2090, or CASE Q++. Class meets three times a week. T. Bevila and staff.
This advanced-intermediate course is designed to prepare students for study abroad and entry into the major. It prepares students for advanced level courses, in a native-speaker context. Students study stylistics, analyze, and discuss texts, view films, and acquire advanced reading strategies. Continued emphasis is on writing academic essays with editing and peer/instructor feedback. Small classes are conducted entirely in Spanish and the language is actively used in communicative, creative, and critical thinking activities. Students are responsible for reviewing grammatical structures on their own and take greater command of their own language learning process. Oral presentations, daily preparation, and active participation are required. SPAN 2190 may be taken concurrently with SPAN 2140, 2150, or 2170.

SPAN 2200 Perspectives on Latin America (also LATA 2200) @ (CA-AS)
Spring. 3 credits. Highly recommended for Latin American studies concentrators. Conducted in English. 1-credit disc sec conducted in Spanish. B. Bosteels and C. Lawless. Interdisciplinary, co-taught course offered every spring. Topics vary by semester, but readings always focus on current research in various disciplines and regions of Latin America. The range of issues addressed include the economic, social, cultural, and political trends and transitions in the area. In the weekly meetings, instructors and guest lecturers facilitate student discussions. Students taking the course are required to participate in all class discussions and write a research paper in their chosen focus area.

SPAN 2230 Perspectives on Spain (LA-AS)
Fall. 4 credits. Satisfies Option 1 of language requirement. Prerequisite: SPAN 2190 or permission of instructor. Conducted in Spanish. P. Keller.
An introduction to Spain's history, plural cultures, and present-day society. Through a series of books, films, and other visual representations we will explore such topics as the place of tradition, religion, and the family in modern Spain. Our focus will be on the transformation of Spain from an authoritarian state under General Franco's dictatorship (1939–1975) into a remarkably diverse and pluralistic nation in which linguistic, cultural, political, and gender differences have been consecrated in a very progressive legislation. This course satisfies the main requirement for the minor in Spanish, may be used as an elective for the major, and is crucial to those planning to study abroad in Spain in the near future.

SPAN 2340 Faith, Love, and Adventure in Medieval Spain (LA-AS)
Fall. 4 credits. Satisfies Option 1 of language requirement. Prerequisites: SPAN 2190, CASE Q++, or permission of instructor. S. Pint.
Examines a wide variety of cultural objects and practices of Medieval Spain—from art objects to religious practices, from poetry to music—to address questions of identity, faith, institutions, historicity, and nation-building in multicultural Iberia. Students are expected to participate actively in class discussion and to prepare written critical analyses. Primary sources constitute the main corpus, but modern perspectives on the Spain of the Middle Ages are also included.

SPAN 2360 Shipwrecks: Disaster, Deliverance, and Modernity (also FREN 3365) (LA-AS)
Spring. 4 credits. G. Aching.
This course examines actual and imagined shipwrecks as the means by which witnesses, survivors, writers reflect on the relation between disaster and deliverance; civilization and barbarism, and necessity, freedom, and contingency, and the role of capitalism in these relations. The course begins with classical readings on shipwrecks and castaways, such as selections from Homer's Odyssey, the shipwreck of St. Paul, and Horace's shipwrecked sailor. Subsequent readings focus principally on shipwrecks within colonial frameworks, such as Alvar Núñez Cabeza de Vaca's Castaway's, Luis de Góngora's Solitudes, Daniel Defoe's Robinson Crusoe, Jen-Baptiste Savigny's and Alexandre Corrêard's Narrative of a Voyage to Senegal in 1816, as well as on Herman Melville's Moby Dick. Critical readings include selections from Marx's Capital and C. L. R. James's Mariners, Renegades, and Castaways.

SPAN 3010 Hispanic Theatre Production (also LATA 3010)
Fall. 1–3 credits, variable. 3 credits satisfies Option 1 of language requirement and fulfills (LA-AS). D. Castillo.
Students develop a specific dramatic text for full-scale production. The course involves selection of an appropriate text close analysis of the literary aspects of the play, and group evaluation of its representational value and effectiveness. All students in the course are involved in some aspects of production of the play, and write a final paper as a course requirement. Credits are variable depending upon the student's role in play production: a minimum of 50 hours of work is required for 1 credit; a maximum of 3 credits are awarded for 100 hours or more of work.

SPAN 3020 Spanish in the Disciplines (also LATA 3020)
Fall or spring. 1 credit. Staff.
Spanish-language discussion section supplementing the course materials during the lecture section including conversation in Spanish and discussion of course lecture in Spanish.

SPAN 3100 Advanced Spanish Conversation and Pronunciation
Fall or spring. 3 credits. Satisfies Option 1 of language requirement. Prerequisite: SPAN 2190 or CASE Q++. B. Teutli.
Conversation course with intensive oral practice obtained through the production of video programs. Students practice the fundamental aspects of communication in the standard spoken and written Spanish, with some focus on dialectal variations. There are weekly pronunciation labs.

SPAN 3110 Advanced Spanish Writing Workshop
Fall or spring. 4 credits. Satisfies Option 1 of language requirement. Prerequisite: SPAN 2190 or CASE Q++ or equivalent. C. Lawless and staff.
This course, which is required for the major, is designed to help the learner develop increased accuracy and sophistication in writing in Spanish for academic purposes. To this end, there will be ample writing and revising practice, with a focus on specific grammatical and lexical areas, customized to the needs of the students enrolled in the course. SPAN 3110 may be taken concurrently with SPAN 2140, 2150, or 2170.

SPAN 3170 Creative Writing Workshop (in Spanish)
Fall. 4 credits. Satisfies Option 1 of language requirement. Prerequisite: SPAN 2140, 2150, 2170, or 2190, or CASE Q++, or permission of instructor. Conducted in Spanish. E. Paz-Soldán.
Focuses on the practice of narrative writing in Spanish. Explores what makes a novel and a short story work, paying close attention to narrative structure, plot, beginnings/endings, character development, theme, etc. Students read classic novels and short stories as points of departure for the discussion. Because the course is a workshop, students are expected to write their own fiction.

SPAN 3300 Literature and the Arts (LA-AS)
Fall. 4 credits. Satisfies Option 1 of language requirement. Prerequisites: SPAN 2140, 2150, or 2170, or permission of instructor J. M. Rodríguez-García.
Literature is just one of many genres and media that artists have used to capture the ongoing transformations in our ways of looking at reality. The dialogue between literature and other artistic productions (e.g., painting, music, sculpture) will be the main focus of this course. Whose topics may feature one or more of the following combinations: the interface of poetry and the visual arts, of fiction and cartography, and of avant-garde writing and technology-based modes of representation, among others.

SPAN 3540 Stages: Theater of Early Modern Spain (CA-AS)
Spring. 4 credits. Satisfies Option 1 of language requirement. Prerequisites: SPAN 2140, 2150, or 2170, or permission of instructor S. Pint.
This is a survey course of theater of Golden Age Spain. Historical development of the genre within a Spanish and European context will be emphasized, while addressing questions of literary history, social context, the space of the stage, evolving structure of the "comedia," etc. Authors may include Lope de Vega, Tirso de Molina, Calderón de la Barca, Juan Ruiz de Alonón, Augustín Moreto, Sor Juana Inés de la Cruz.
BRITISH LITERATURE

SPAN 3600 Autobiographical Narrative and the Cuban Socialist Revolution (LA-AS)
Fall. 4 credits. Satisfies Option 1 of language requirement. Prerequisite: SPAN 2140, 2150, 2170, or CASE Q++, or permission of instructor. G. Aching.
This course examines the work of a number of women from different racial, geographical, social class, and linguistic backgrounds, and we read works by U.S.-based authors who write in English, Spanish, and Spanglish. We explore some of the rich heritage of Latinas in a variety of genres, including poetry, narrative fiction, essay, theater, and film. We will include texts by authors such as Lucha Corpi, Lorna Dee Cervantes, Cherrie Moraga, Migdalia Cruz, Ana Castillo, Lourdes Portillo, and Patricia Cardoso. Opportunities are provided for those students who wish to develop nontraditional responses to the fiction and essays.

SPAN 3930 Contemporary Latino Writers (also LASP 3930) (LA-AS)
Spring. 4 credits. D. Castillo.
This course looks at the work of a number of women from different racial, geographical, social class, and linguistic backgrounds, and we read works by U.S.-based authors who write in English, Spanish, and Spanglish. We explore some of the rich heritage of Latinas in a variety of genres, including poetry, narrative fiction, essay, theater, and film. We will include texts by authors such as Lucha Corpi, Lorna Dee Cervantes, Cherrie Moraga, Migdalia Cruz, Ana Castillo, Lourdes Portillo, and Patricia Cardoso. Opportunities are provided for those students who wish to develop nontraditional responses to the fiction and essays.

SPAN 3940 Spanish Cinema: The Sinister, the Satirical, and The Scandalous
Spring. 4 credits. Satisfies Option 1 of language requirement. Prerequisite: SPAN 2140, 2150, 2170, or CASE Q++, or permission of instructor. Conducted in Spanish. P. Keller.
This course offers an in-depth survey of Spanish films directed and produced between the years of 1950 and 1975. In addition to studying films that are representative of Spain's three socialist regimes, we will also examine films that are representative of the years 1975-1991. Opportunities are provided for those students who wish to develop nontraditional responses to the fiction and essays.

SPAN 4190-4200 Special Topics in Spanish Literature
4190, fall: 4200, spring. 2-4 credits each semester. Prerequisite: permission of instructor. Staff.
Guided independent study of special topics.

SPAN 4290-4300 Honors Work in Spanish
4290, fall: 4300, spring (yearlong). 8 credits. 8 grade given at end of fall semester and final grade at end of spring semester. Open to junior and seniors. Consult director of honors program for more information. Staff.

SPAN 4500 Literature of the Conquest (also SPAN 6500) (LA-AS)
This course examines the cultural and psychological impact of the "Discovery" on the literatures of the Old and New World. In a voyage that takes us from the Caribbean to the mesetas of ancient Mexico and the Andean region of South America, we will explore the formation of various discourses on the New World through a close reading of 16th- and 17th-century European and Amerindian texts. Particular attention will be paid to the formation of an "American discourse" in the literary subjects who launched a campaign against the political views of the colonizers. Reading selections may be drawn from Columbus, Cabeza de Vaca, Bartolome de las Casas, Hernan Cortes, Bernal Diaz, Aztec and Maya testimonies, Cabeza de Vaca, Contemp. Michel de Montaigne, Pedro de Cieza de Leon, Inca Garcilaso de la Vega, Guaman Poma, and Alonso de Ercilla, among others.

SPAN 4550 Don Quijote (also SPAN 6530) (LA-AS)
Fall. 4 credits. Prerequisite: SPAN 2170 and one of the following two courses: SPAN 2140 or 2150, or permission of instructor. Conducted in Spanish.
Don Quijote is not only the first modern work of literature, as Foucault noted, but also the first European novel, as the Czech novelist Kundera hailed it. In fact, Foucault believed that Cervantes' discovery of the arbitrary relation of words and things ushered in the modern age. A revolutionary document of its own age, Don Quijote confronts us with the complex history of Christians, Jews, and Muslims in early modern Spain, especially, with the conflicts between Christianity and Islam in the Iberian Peninsula and the Mediterranean. Four centuries before Freud, Cervantes questioned the meaning of madness, inspiring into the close bonds between delusions and fantasy, dreams and artistic production. Stressing a critique of creation with Cervantes' own creation, our close reading of Don Quijote will explore its links to the network of institutions, practices, and beliefs that constituted early modern Spanish culture.

SPAN 4600 More than Meets the Eye: Early 20th-Century Spanish Theater as Theory
Fall. 4 credits. M. Balsa.
This seminar aims to provide an overview of modern Brazilian literature and Brazilian critical theory for graduate students and advanced undergraduate students specializing in Latin America. It will cover the major literary movements and the essential canonical writers and cultural critics of 19th- and 20th-century Brazil. Some of the topics to be discussed are the formation of a national literature; literature and slavery; foreign models and rewritings; diverse definitions of national spaces and landscapes; relationships between aesthetic innovations and political issues and different literary definitions of frontiers, margins and exclusions. Authors to be read include: Paul Sartre, René Ménil, José Lezama Lima, Léon Damas, and Paul Gilroy.

SPAN 4630 Modern Andean Literature (LA-AS)
Fall. 4 credits. J. E. Paz-Soldán.
This course examines the literary production of the Andean region (Peru, Bolivia, and Ecuador). Taking as our point of departure the early 20th century, we will examine issues such as the sociocultural heterogeneity of the region, which challenges the idea of a unified, modern nation-state; the tension of interethnic relations, and the emergence of indigenous cultural and political movements; the clashes between modernity and tradition, and the emergence of urban literature.

SPAN 4670 Modern Lyric Forms (CA-AS)
Spring. 4 credits. Conducted in Spanish. J. M. Rodríguez-García.
Literature is just one of the many genres and media that artists have used to capture the ongoing transformations in our ways of looking at reality. The relationship among literature and painting will be the main focus of this course, whose topics include the literary representation of still-life scenes; the
modern art’s fascination with such disparate materials as clay and glass; the equation of artistic works with vessels—“vases”—into which a meaning is poured; and the treatment of mass-produced commodities and gadgets as art works. The studied poems will most often be connected with visual arts and works in the visual arts that will be shown in class. We will also study two major texts by playwright Antonio Buero Vallejo that fictionalize the lives of the great Spanish painters Velázquez and Goya.

SPAN 4720 Between Fact and Fiction: The Tradition in Latin American Literature, Film, and Visual Arts (also PORT 4720) (CA-AS)
Spring. 4 credits. L. Horne.
For description, see PORT 4720.

SPAN 4750 Between Landscape and Loss: Visualizing Contemporary Spanish Literature
Fall. 4 credits. This is the mandatory senior seminar for majors. P. Keller.
This course offers a survey of 20th-century Spanish culture by exploring texts centered on the theme of landscape and loss. The main aim of the class will be to think about representations of collective and individual experiences of loss through different literary genres and visual mediums. Some of the topics to be discussed will be loss of empire, exile, homecoming, nostalgia, mourning, existentialism, failure and hope. Another aim of the course will be to discuss the landscape as visual narratives that portray certain struggles for loss and recovery by examining texts that depict wounded or scarred spaces, uninhabitable homes, abandoned towns, and desolate, ghostly cities. An additional focus of the course will be to consider how trauma and memory are linked to the concept of “place,” and thus to question the relationship between the poetics of place and the politics of loss. The course includes both canonical and non-canonical works and spans a range of genres (painting, documentary, short narrative, novel, essay, film, photography) dating from the early 1900s to the present. Among the artists we will look at are Unamuno, Dalí, Dali, García Lorca, Cela, Almazárez, Ercé, Saura, Suso de Toro, and Fontcuberta. Supplemental readings in Spanish history and introductory theory and criticism will be assigned to complement primary texts.

SPAN 4830 Macondo/McOndo (SBA-AS)
Spring. 4 credits. J. E. Paz-Soldán.
This course explores Latin American literature from the 60s onward, taking a look at the changing landscape, from the heyday of theBoom writers and Garcia Marquez’ “magical realism,” to urban fiction in the 90s. We will study authors such as García Marquez, Manuel Puig, Daimela Eltit, Roberto Bolano, Alberto Cárdenas. Among the topics to be discussed will be the narrative construction of subjects who had indeed been enslaved; (2) the romantic imagination and sympathy and their articulations in British abolitionist and Cuban reformist discourses; and (3) sensibility and the product of African and European sensibilities. The studied poems will most often be connected with visual arts and works in the visual arts that will be shown in class. We will also study two major texts by playwright Antonio Buero Vallejo that fictionalize the lives of the great Spanish painters Velázquez and Goya.

SPAN 4850 Negrismo and Negritude: Africanist Poetries and Politics (also Espan 4150, FREN 4150/6150)
Fall. 4 credits. Open to students with very good reading knowledge of both Spanish and French. G. Aching.
For description, see SPAN 4150.

SPAN 6240 Critical Theories: Marx and Freud in Latin America
Fall. 4 credits. E. Baracca.
Seminar studying some of the most important models of critical theory available for the study of literature, culture and society in Latin America. Particular attention is given to creative and theoretical works that elaborate upon the doctrines of Marx and Freud and their followers.

SPAN 6310 Subjectivity in the Slave Narrative
Spring. 4 credits. G. Achinger.
This seminar will begin with a close reading of Hegel’s section on self-consciousness, especially the sub-sections “Lordship and Bondage” and “Stoicism, Skepticism, and the Unhappy Consciousness” from Phenomenology of Spirit, and continue with selected chapters from Judith Butler’s The Psychic Life of Power. We will follow these readings with an examination of interpretations of Hegel’s theory of the subject in selected readings from W. E. B. Du Bois (The Souls of Black Folk); Orlando Patterson (Slavery and Social Death); Paul Gilroy (The Black Atlantic); Howard McCrory and Bill E. Lawson (Between Slavery and Freedom); Susan Buck-Morss (Hegel and Haiti); and Ian Baucom (Specters of the Atlantic). The slave narratives that we will examine include Olaudah Equiano’s The Interesting Narrative of the Life of Olaudah Equiano, Juan Francisco Manzano’s Autobiografía de un esclavo, R. Madden’s translation of Manzano’s writings, Frederic Douglass’ Narrative of the Life of Frederick Douglass: An American Slave; and Mary Prince’s The History of Mary Prince: A West Indian Slave Related By Herself. We will also read “fictionalized” narratives of the experience of enslavement such as, Gertrudis Gómez de Avellaneda’s Sab, Anselmo Suárez y Romero’s Francisco de Solimena, Antonio Zambra’s El negro Francisco, and Miguel Barnet’s more contemporary Biografía de un cimarrón. This seminar will not focus on how the selected slave narratives seamlessly illustrate the validity of Hegel’s theory of the subject; nor will it attempt to come up with a notion of black subjectivity. Rather, our readings and discussions will elucidate and examine (1) the tensions between abstraction and experience/history in the narrative construction of subjects who had indeed been enslaved; (2) the romantic imagination and sympathy and their articulations in British abolitionist and Cuban reformist discourses; and (3) sensibility and the product of African and European sensibilities. The studied poems will most often be connected with visual arts and works in the visual arts that will be shown in class. We will also study two major texts by playwright Antonio Buero Vallejo that fictionalize the lives of the great Spanish painters Velázquez and Goya. Ortega y Gasset, Bakhtin, Jameson, Frye, Culler, Cascarino, Benjamin, Freud, Lévi-Strauss, assessing the possible consequences of this course’s main hypothesis: that of the novel is simultaneously a theory of modernity and a theory of the subject.

SPAN 6500 Literature of the Conquest (also SPAN 4500)
For description see, SPAN 4500.

SPAN 6530 Don Quijote (also SPAN 4550)
Fall. 4 credits. M. A. Garces.
For description, see SPAN 4550.

The Russian Major
Russian majors study Russian language, literature, and linguistics and emphasize their specific fields of interest. It is desirable, although not necessary, for prospective majors to complete RUSSA 1121–1122, 2203–2204, and RUSSL 2209 as freshmen and sophomores, because these courses are prerequisites to most of the junior and senior courses that count toward the major. Students may be admitted to the major upon satisfactory completion of RUSSA 1121 or the equivalent. Students who elect to major in Russian should consult the director of undergraduate studies as soon as possible. For a major in Russian, students are required to complete (1) RUSSA 3403–3404 or the equivalent, and (2) 18 credits from 3000- and 4000-level language and linguistics courses, of which 12 credits must be in literature in the original Russian.

With the permission of the instructor, students may add 1 credit to certain literature courses by registering for RUSSA 4491. Such courses involve a one-hour section each week with work in the Russian language. Students may count two 1-hour credits toward the 12 hours of Russian literature in the original language required for the major.

Satisfying the Foreign Language Requirement
1. Options 1a and 1b:

  1a. Any Russian-language (RUSSA) course totaling 3 or 4 credits at the 2000 level or above (with the exception of RUSSA 3300 Directed Study) satisfies the Arts and Sciences language requirement under Option 1a.

  1b. After completing the prerequisites RUSSA 1121 and RUSSA 1122, students may satisfy the language requirement by taking RUSSL 2209. Students who qualify for RUSSL 2212 may satisfy the language requirement by
Language and Linguistics

RUSSIAN 1121–1122 Elementary Russian

• First-year intensive: 1103 + 1121 in the fall, 1104 + 1122 in the spring
• First-year nonintensive: 1105 in the fall, 1122 in the spring
• Second-year intensive: 1125 + 2203 in the fall, 1126 + 2204 in the spring
• Second-year nonintensive: 2203 in the fall, 2204 in the spring
• Second-year “mostly reading, lighter load”: 1125 in the fall, 1126 in the spring

RUSSA 1125–1126 Reading Russian

Fall, 1125; spring, 1126. 2 credits each semester. sec 1 for non-native speakers of Russian; sec 2 for native speakers of Russian. Prerequisite for 1125 sec: 1122 or placement by department; prerequisite for 1126 sec: 1125 or placement by department; prerequisite for 1125 and 1126 sec: 2 placement by department. Times TBA with instructors.* See starred (*) note at end of RUSSA section. S. Paperno and V. Tsimberov. The emphasis is on reading unabridged articles on a variety of topics from current Russian periodicals and web pages and translating them into English; a certain amount of discussion (in Russian) may also be undertaken.

RUSSA 2203–2204 Intermediate Composition and Conversation

2203, fall; 2204, spring. 3 credits each semester. Satisfies Option 1. Prerequisite: for RUSSA 2203, RUSSA 1122 and 1104, or RUSSA 1122 with grade higher than B, or placement by department; for RUSSA 2204, RUSSA 2203 or equivalent. R. Krivitsky, S. Paperno, and V. Tsimberov. Guided composition, translation, reading, pronunciation, and grammar review, emphasizing the development of accurate and idiomatic expression in the language. Course materials include video clips from an original Russian feature film and work with Russian web sites, in addition to the textbook.

RUSSA 3300 Directed Studies

Fall or spring. 1–4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor.* See starred (*) note at end of RUSSA section. Staff. Taught on a specialized basis for students with special projects (e.g., to supplement a non-language course or thesis work).

RUSSA 3303–3304 Advanced Composition and Conversation

3303, fall; 3304, spring. 4 credits each semester. RUSSA 3303 Satisfies Option 1. Prerequisite: for RUSSA 3303, RUSSA 2204 or equivalent; for RUSSA 3304, RUSSA 3303 or equivalent. R. Krivitsky, S. Paperno, and V. Tsimberov. Reading, writing, and conversation: current Russian films (feature and documentary), newspapers, television programs, Russian web sites, and other materials are used. In some years, completing interviews with native speakers of Russian is a component of RUSSA 3304.

RUSSA 3305–3306 Reading and Writing for Heritage Speakers of Russian

3305, fall; 3306, spring. 2–3 credits, variable. Prerequisite: placement by department. Times TBA with instructor.* See starred (*) note at end of RUSSA section. Course may be cancelled if enrollment is insufficient. S. Paperno and V. Tsimberov. Intended for students who speak grammatically correct Russian but do not know Russian grammar and who have not learned to read or write Russian well (or have not learned written Russian at all). The two courses are very similar and do not constitute a sequence. Each may be taught slightly faster or slower in a given year, depending on the needs and interests of the students. Two classes a week teach writing and grammar and include related reading. These classes are required, and the students who take them receive 2 credit hours. The third (optional) class teaches reading and discussion, and grants an additional credit hour.

RUSSA 3308 Russian Through Popular Culture

Spring. 2–3 credits, variable. Prerequisite: RUSSA 304 for non-native speakers of Russian; RUSSA 3305 or 3306 for heritage speakers of Russian; for all others with advanced knowledge of Russian, placement by department. Not open to fluent native speakers of Russian (recommended: RUSSA 3309/3310 and RUSSL courses). Conducted in Russian. Times TBA with instructor.* See starred (*) note at end of RUSSA section. R. Krivitsky. Aims to expand the students' vocabulary and their comprehension, speaking, reading, and writing skills, as well as cultural competence, through a mosaic study and discussion of a variety of styles in contemporary Russian popular culture (1970s through the present). Course materials include traditional and urban folklore, film, animation, published texts (prose and poetry), and recordings of songs. Includes two or three essays or similar writing assignments. Work is distributed so that a student may attend all three weekly meetings for 3 credit hours or only two of the meetings for 2 credit hours.

RUSSA 3309–3310 Advanced Reading

3309, fall; 3310, spring. 4 credits each semester. Satisfies Option 1. Prerequisite: RUSSA 3308, RUSSA 3309, or RUSSA 3310, RUSSA 3305 or 3306, RUSSA 3307 or 3308. Students who take Options 1 and 2 and Options 3 and 4 may not take RUSSA 3309 and 3310, RUSSA 3305 and 3306, RUSSA 3307 and 3308, respectively.

RUSSA 3309, 3310 (also LING 4417) (HA-AS)

Fall. 4 credits. W. Browne. For description, see LING 4417–4418.

RUSSA 4401 History of the Russian Language (also LING 4447) (HA-AS)

Fall. 4 credits. W. Browne. For description, see LING 4447–4448.

RUSSA 4403 Linguistic Structure of Russian (also LING 4443) (KCM-AS)

RUSSA 4413–4414 Advanced Conversation and Stylistics

4413, fall; 4414, spring. 2 credits each semester. Prerequisites: for RUSSA 4413, RUSSA 3304 or equivalent; for RUSSA 4414, RUSSA 4413 or equivalent. Times TBA with instructor.* See starred (*) note at end of RUSSA section. V. Tsimberov. Intended for students who speak grammatically correct Russian but do not know Russian grammar and have not learned to read or write Russian well (or have not learned written Russian at all). The two courses are very similar and do not constitute a sequence. Each may be taught slightly faster or slower in a given year, depending on the needs and interests of the students. Two classes a week teach writing and grammar and include related reading. These classes are required, and the students who take them receive 2 credit hours. The third (optional) class teaches reading and discussion, and grants an additional credit hour.
ARTS AND SCIENCES - 2009–2010

RUSSA 4491 Reading Course: Russian Literature in the Original Language
Fall or spring. 1 credit each semester. Prerequisite: permission of instructor. Times TBA with instructor.* See starred (*) note at end of RUSSA section. Staff.

RUSSA 6633–6634 Russian for Russian Specialists
6633, fall; 6634, spring. 1–4 credits, variable. Prerequisite: four years of college Russian or equivalent. Times TBA with instructor.** See starred (*) note at end of RUSSA section. Staff.

RUSSA 6623–6624 Russian for Russian Specialists
6623, fall; 6624, spring. 1–4 credits, variable. Prerequisite: four years of college Russian or equivalent. Times TBA with instructor.* See starred (*) note at end of RUSSA section. Staff.

RUSS 2209 Readings in Russian Prose and Poetry # (LA-AS)
Fall. 3 credits. Reading in Russian; discussion in English. Satisfies Option 1. Prerequisite: for students with 2+ semesters of Russian language (RUSSA 1121/1122 or equivalent). N. Pollak.

RUSSA 2212 Readings in 20th-Century Russian Literature (LA-AS)
Spring. 3 credits. Reading, writing, and discussion in Russian. Satisfies Option 1. G. Shapiro.

RUSSA 2217 The Russian Connection, 1830 to 1867 (also COML 2790) # (LA-AS)

RUSSA 2220 The Russian Connection, 1870 to 1960 (also COML 2800) (LA-AS)

RUSSL 3337 Films of Russian Literary Masterpieces (LA-AS)

RUSSL 3338 Lermontov’s Hero of Our Time # (LA-AS)
4 credits. Reading in Russian; discussion in English. Next offered 2010–2011. N. Pollak. Hero of Our Time has been called the first major Russian novel. Close reading, attention to linguistic and literary problems.

RUSSL 3350 Education and the Philosophical Fantasies (also COML 3500) # (LA-AS)

RUSSL 3367 The Russian Novel # (LA-AS)

RUSSL 3368 20th-Century Russian Literature (LA-AS)

RUSSL 3369 Dostoevsky # (LA-AS)

RUSSL 3373 Chekhov in the Context of Contemporary European Literature and Art # (LA-AS)
4 credits. In translation. Next offered 2010–2011. Staff. Anton Chekhov’s stories in the context of the European art of the short story and...
contemporary paintings. Readings in English translation.

[RUSSL 3385 Reading Nabokov (also ENGL 3790) (LA-AS)
4 credits. In translation. Limited to 18 students; priority given to seniors. Next offered 2010–2011. G. Shapiro. Nabokov’s Russian works in translation from Mary to The Enchanter, and two novels he wrote in Ithaca while teaching literature at Cornell, Lolita and Pnin.]

RUSSL 3393 Honors Essay Tutorial
Fall and spring. 8 credits. Must be taken in two consecutive semesters in senior year; credit for first semester is awarded upon completion of second semester. For information, see director of undergraduate studies. Times TBA with instructor. Staff.

RUSSL 4409 Russian Stylistics (LA-AS)
Spring. 4 credits. Also open to graduate students. Prerequisite: proficiency in Russian or permission of instructor. This course may be counted toward the 12 credits of Russian literature in the original language for the Russian major. S. Senderovich. Beyond normative grammar. Introduction to idiomatic Russian (morphology, syntax, vocabulary, phraseology) and genres of colloquial and written language. Development of writing skills.

[RUSSL 4415 Post-Symbolist Russian Poetry (LA-AS)
4 credits. Reading in Russian; discussion in English. Prerequisite: proficiency in Russian or permission of instructor. This course may be counted toward the 12 credits of Russian literature in the original language for the Russian major. N. Pollak. Verse, critical prose, and literary manifestos by selected early 20th-century Russian poets, including Annenski, Pasternak, and Mandelstam.]

RUSSL 4430 Practice in Translation (LA-AS)
Spring. 4 credits. Prerequisite: proficiency in Russian or permission of instructor. N. Pollak. Practical workshop in translation: documents, scholarly papers, literary works (prose and poetry). Mostly Russian to English, some English to Russian.

RUSSL 4432 Pushkin # (LA-AS)
Spring. 4 credits. Reading in Russian; discussion in English. Prerequisite: proficiency in Russian or permission of instructor. May be counted toward 12 credits of Russian literature in the original language for the Russian major. S. Senderovich. Selected works by Pushkin: lyrics, narrative poems, and Eugene Onegin.

[RUSSL 4433 Short Works of Tolstoy # (LA-AS)
4 credits. Reading in Russian; discussion in English. Prerequisite: RUSSL 2209 or 2212 or equivalent mastery of Russian language skills. Next offered 2011–2012. Staff. A selection of short stories and short novels in Russian. Attention to style, themes, idioms. Assignments adjusted to students’ language capabilities.]

RUSSL 4492 Supervised Reading in Russian Literature
Fall or spring. 1–4 credits each semester. Independent study. Prerequisite: students must find an advisor and submit a plan before signing up. Times TBA with instructor. Staff.

[RUSSL 4493 Anton Chekhov # (LA-AS)
4 credits. Reading in Russian; discussion in English. Prerequisite: proficiency in Russian or permission of instructor. Next offered 2011–2012. Staff. Major works of Chekhov in Russian; focus on style and language. Readings include stories (“Anna on the Neck,” “Darling,” “Steppe”) and plays (Uncle Vanya and Seagull).]

RUSSL 4499 The Avant-Garde in Russian Literature and the Arts (LA-AS)
Fall. 4 credits. Reading in Russian; discussion in English. Prerequisite: proficiency in Russian or permission of instructor. P. Carden. Literature, theater, and the visual arts in the richly innovative period 1890–1920.

Graduate Seminars

RUSSL 6611 Supervised Reading and Research
Fall or spring. 2–4 credits each semester. Prerequisite: proficiency in Russian or permission of instructor. Times TBA with instructor. Staff.

Related Languages

Note: Completion of the 1131–1132–1133–1134 sequence in HUNGR/POLISH/SEBCR fulfills the Option 2 language requirement.

Czech

[CZECH 3300 Directed Studies
Spring. 1–4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor. See double-starred (*) note at end of UKRAN section. Taught on a specialized basis to address particular student needs.]

Hungarian

HUNGR 1131–1132 Elementary Hungarian
3 credits. Prerequisite: for 1132: HUNGR 1131 or permission of instructor. G. Nehler. Teaches the basic grammar of Hungarian. Designed to aid the student in all facets of language acquisition: speaking, listening, comprehension, reading, and writing. Second-semester Hungarian (1132) teaches more advanced grammar of the language at an intermediate level.

[HUNGR 1133–1134 Continuing Hungarian
1133, fall; 1134, spring. 3 credits. Prerequisite: for 1134, HUNGR 1133. A conversation and reading course designed to aid the student in all facets of language acquisition: speaking, listening, comprehension, reading, and writing. Fourth-semester Hungarian (1134) teaches more advanced instruction of the language at an intermediate level.]

HUNGR 3300 Directed Studies
Fall or spring. 1–4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor. See double-starred (*) note at end of UKRAN section. Staff. Taught on a specialized basis to address particular student needs.

[HUNG 4427 Structure of Hungarian (also LING 4427) (KCM-AS)
Spring. Next offered 2010–2011.]

Polish

[POLISH 1131–1132 Elementary Polish
1131, fall; 1132, spring. 3 credits each semester. Prerequisite: for POLISH 1132, POLISH 1131 or equivalent. Offered alternate years; next offered 2010–2011. Staff. Covers all language skills: speaking, listening comprehension, reading, and writing.]

POLISH 1133–1134 Continuing Polish
1133, fall; 1134, spring. 3 credits each semester. Prerequisite: for POLISH 1133, POLISH 1132 or permission of instructor; for POLISH 1134, POLISH 1133 or equivalent. Times TBA with instructor. (*)Offered alternate years. See double-starred (*) note at end of UKRAN section. Staff. An intermediate conversation and reading course.

POLISH 3300 Directed Studies
Fall or spring. 1–4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor. See double-starred (*) note at end of UKRAN section. Staff. Taught on a specialized basis to address particular student needs.

[POLISH 3301 Polish through Film and Literature (LA-AS)
3 credits. Satisfies Option 1. Prerequisite: POLISH 1134 or permission of instructor. Times TBA with instructor. See double-starred (*) note at end of UKRAN section. Staff. Taught on a specialized basis to address particular student needs.]

Croatian

[SEBCR 1131–1132 Elementary Serbo-Croatian
1131, fall; 1132, spring. 3 credits each semester. Prerequisite for SEBCR 1132: SEBCR 1131 or equivalent. Times TBA with instructor. See double-starred (*) note at end of UKRAN section. Staff. Covers all language skills: speaking, listening comprehension, reading, and writing. Includes Bosnian.]
SEBCR 3300 Directed Studies
Fall or spring. 1–4 credits, variable. Prerequisite: permission of instructor. Times TBA with instructor. See double-starred (**) note at end of UKRAN section. Staff. Taught on a specialized basis to address particular student needs.

**For these courses, contact the Russian department (russiandept@cornell.edu or 255-8350) for time and place of organizational meeting(s).**

SCIENCE AND TECHNOLOGY STUDIES

In today's world, issues at the intersection of the technical and the social arise continually in all aspects of life, from the role of computers in society, the history of evolutionary theory, and the challenges of environmental controversies, to the ethical dilemmas of genomics and biomedicine. The field of science and technology studies (S&TS) explores the practices that shape science and technology, examines their social and cultural context, and analyzes their political and ethical implications. S&TS provides a strong liberal arts background from which students can go on to careers in law, medicine, environmental policy, business, and a variety of other professions where the social aspects of science and technology loom large.

The Science and Technology Studies Major
The Department of Science and Technology Studies has revised the major for students applying to the major, effective fall 2008. Admission to the major requires successful completion of one S&TS course. First-Year Writing Seminars may count as the prerequisite, but not as part of the major. There are no other prerequisites, but students should plan to fulfill the science PBS and quantitative MQR requirements of the College of Arts and Sciences early in their college careers in order to be in a position to plan an additional science or engineering courses as outlined below. Students intending to major in Science and Technology Studies should submit an application during their sophomore year. Juniors are considered on a case-by-case basis. The application includes: (1) a one-page statement explaining the student's intellectual interests and why the major is consistent with the student's academic interests and goals; (2) a tentative plan of courses fulfilling S&TS requirements; and (3) an up-to-date transcript of work completed at Cornell University (and elsewhere, if applicable). Further information and application materials are available at 306 Rockefeller Hall (255-6047).

The Honors Program
The honors program is designed to provide independent research opportunities for academically talented S&TS majors. Students who enroll in the honors program are expected to do independent study and research, with faculty guidance, on issues in science and technology studies. Students who participate in the program should find the experience intellectually stimulating and rewarding whether or not they intend to pursue a research career. S&TS majors are considered for entry into the honors program at the end of the second semester of their junior year. To qualify for the S&TS honors program, students must have an overall Cornell cumulative grade point average (GPA) of at least 3.00 and a 3.50 cumulative GPA in courses taken for the major. Additionally, the student must have formulated a research topic, and have found a project supervisor and a second faculty member willing to serve as the advisors; at least one of these must be a member of the S&TS department. More information on the honors program is available from the S&TS undergraduate office at 306 Rockefeller Hall (255-6047).

The Biology and Society Major
The Department of Science and Technology Studies also offers the Biology and Society major, which includes faculty from throughout the university. The Biology and Society major is designed for students who wish to combine the study of biology with exposure to perspectives from the social sciences and humanities. In addition to providing a foundation in biology, Biology and Society students obtain background in the social dimensions of modern biology and in the biological dimensions of contemporary social issues.

The Minor in Science and Technology Studies

The minor in Science & Technology Studies (S&TS) is designed for students who wish to engage in a systematic, interdisciplinary exploration of the role of science and technology in modern societies. The minor is intended for students with varied academic interests and career goals. Majors in the natural sciences and engineering have an opportunity to explore the social, political, and ethical implications of their selected fields of specialization, while students majoring in the humanities and social sciences have a chance to study the processes, products, and impacts of science and technology from an S&TS perspective.

To satisfy the requirements for the S&TS minor, students must complete, with a letter grade of C– or above, a minimum of four courses selected from the course offerings listed for the major, excluding independent seminars. The four courses must include STS 1101 and at least one course at the 3000 or 4000 level. No more than one course can be at the 1000 level. Interested students may obtain further information about courses and a list of course descriptions by contacting the S&TS undergraduate office, 306 Rockefeller Hall (255-6047).
Graduate Field of Science & Technology Studies
Students may obtain further information about the field and course offerings by contacting the S&TS graduate field office, 306 Rockefeller Hall (255-3810).

First-Year Writing Seminars
Consult the John S. Knight Institute web site for times, instructors, and descriptions: www.arts.cornell.edu/Knight_institute/index.html.

Introductory Courses

STS 1101 Science and Technology in the Public Arena (SBA-AS)
Fall. 3 credits. STS 1101 and 1102 may be taken separately or in any order. Recommended as introduction to field; not required and may not be used to fulfill a major requirement. Next offered 2011–2012. J. Reppy.
Introductory public policy issues involving developments in science and technology. Studies such topics as secrecy and national security, the politics of expertise, public understanding of science, computers and privacy, and the management of risk. Applies concepts from the field of science and technology studies to analyze how issues are framed and public policy produced.

STS 1102 Histories of the Future (CA-AS)
Spring. 3 credits. Recommended as introduction to field; not required and may not be used to fulfill a major requirement. STS 1101 and 1102 may be taken separately or in any order. R. Prentice. From Frankenstein to The Matrix; science fiction and film have depicted contemporary science, technology, and medicine for almost two centuries. This course introduces students to historical and social studies of science and technology using science fiction films and novels, as well as key readings in science and technology studies. What social questions can fictional accounts raise that factual ones can only anticipate? How have “intelligent machines” from Babbage’s Analytical Engine to Hal raised questions about what it means to be human? What can Marvel Comics teach us about changes in science and technology? When can robots be women and, in general, what roles did gender play in scientific, technological, and medical stories? How was the discovery that one could look inside the human body received? How do dreams and nightmares of the future emerge from the everyday work of scientific and technological research?

Core Courses

STS 2101 What Is Science? An Introduction to the Social Studies of Science and Technology (also SOC 2100) (CA-AS)
Spring. 3 credits; also offered as writing-intensive 4-credit option, by permission only, and limited to 15 students. K. Vogel. Introduces some of the central ideas in the field of Science and Technology Studies (S&S). As well as serving as an introduction to students who plan to major in Biology and Society or in Science and Technology Studies, the course is aimed at students with backgrounds in either the sciences or the humanities who are challenged to think more critically about what we mean by science, what counts as scientific knowledge and why, and how science and technology intervene in the wider world. The course is a mixture of lecture, discussion, and other activities. The discussion sections are an integral part of the course and attendance is required. In addition, a series of written assignments throughout the semester and a take-home final during exam week compose the majority of the grade.

STS 2851 Communication, Environment, Science, and Health (also COMM 2850)
Spring. 3 credits. B. Lewenstein. For description, see COMM 2850.

STS 2861 Science and Human Nature (also PHIL 2860) (KCM-AS)
Spring. 4 credits. R. Boyd. For description, see PHIL 2860.

STS 2871 Evolution (also BIOEE 2070, HIST 2870) (PBS)
Fall. 3 credits. W. Provine. For description, see BIOEE 2070.

STS 2921 Inventing an Information Society (also ECE/ENGRG 2980, HIST 2920) (HA-AS)
Spring. 3 credits. R. Kline. For description, see ENGRG 2980.

STS 3011 Life Sciences and Society (also BSOC 3011) (SBA-AS)
Fall. 4 credits. M. Lynch. For description, see BSOC 3011.

STS 3111 Sociology of Medicine (also SOC 3130) (SBA-AS)
Fall. 4 credits. Not open to freshmen. C. Leuenberger.
This course provides an introduction to the ways in which medical practice, the medical profession, and medical technology are embedded in society and culture. We will ask how medicine is connected to various sociocultural factors such as gender, social class, race, and administrative cultures. We will examine the rise of medical sociology as a discipline, the professionalization of medicine, and processes of medicalization and demedicalization. We will look at alternative medical practices and how they differ from and converge with the dominant medical paradigm. We will focus on the rise of medical technology in clinical practice with a special emphasis on reproductive technologies. We will focus on the body as a site for medical knowledge, including the medicalization of sex differences, the effect of culture on nutrition and eating disorders such as obesity and anorexia nervosa. We will also read various classic and contemporary texts that speak to the illness experience and the culture of surgeries, hospitals, and patients and we will discuss various case studies in the social construction of physical and mental illness.

STS 3181 Living in an Uncertain World: Science, Technology and Risk
Fall. 4 credits. S. Pritchard.
This course explores the history, sociology, and ethics of risk. In particular, we will focus on the complex and often ambiguous relationship between science, technology, and risk. A historical perspective shows how science and technology have generated risks while they have also played key roles in managing and solving those very risks. By examining several case studies, including 19th-century mining, the 1911 Triangle fire, nuclear science, the space shuttle disasters, asbestos litigation, Hurricane Katrina, and the contemporary financial crisis, we will consider how risk and ideas about risk have changed over time. By exploring different historical and cultural responses to risk, we will examine the socio-political dimensions of the definitions, perceptions, and management of risk both in the past and the present.

STS 3221 Lives of Scientists and Engineers (also FGSS 3221) (HA-AS)
This course will explore the lives of a variety of scientists and engineers—American, international, men, women, and minorities—through readings of biographies, autobiographies, and other sources. The goal will be to examine the obstacles overcome, opportunities offered, and choices made; the reasons and rationalizations by which they were made; and the uses made of idealized biographies in science education, requirement, myth-making, and national prestige. Weekly readings, discussion, and research paper required.

S&TS Courses

STS 2051 Ethical Issues in Health and Medicine (also BSOC 2051) (KCM-AS)
Fall. 4 credits. Limited to 150 students. S. Hilgartner. For description, see BSOC 2051.
STS 2061 Ethics and the Environment (also BSOC 2061, PHIL 2460) (KCM-AS)
Spring. 4 credits. S. Pritchard. For description, see BSOC 2061.
STS 2331 Agriculture, History, and Society: From Squanto to Biototechnology (HA-AS)
Fall. 3 credits. M. Rossiter. Surveys the major themes in the development of agriculture and agribusiness in the United States in the 19th and 20th centuries. These include particular individuals (e.g., Liberty Hyde Bailey, Luther Burbank, G. W. Carver, Henry A. Wallace, and Norman Borlaug), the rise of government support and institutions (including U.S.D.A. and Cornell), noteworthy events (the dust bowl, World War II, and the environmental movement), and the achievements of the Green and “Gene” Revolutions.
STS 2501 Technology in Society (also ECE/ENGRG/HIST 2500) (HA-AS)
Fall. 3 credits. R. Kline. For description, see ENGRG 2500.
STS 2811 Science in Western Civilization: Medieval and Early-Modern Europe to Isaac Newton (also HIST 2810) # (HA-AS)
STS 2821 Science in Western Civilization: Newton to Darwin, Darwin to Einstein (also HIST 2820) # (HA-AS)
Spring. 4 credits. STS 2811 is not a prerequisite to 2821. S. Seth. For description, see HIST 2820.
STS 2825 Communication, Environment, Science, and Health (also COMM 2850)
Spring. 3 credits. B. Lewenstein. For description, see COMM 2850.
STS 2851 Science and Human Nature (also PHIL 2860) (KCM-AS)
Spring. 4 credits. R. Boyd. For description, see PHIL 2860.
STS 2871 Evolution (also BIOEE 2070, HIST 2870) (PBS)
Fall. 3 credits. W. Provine. For description, see BIOEE 2070.
[STS 3551 Computers: From the 17th Century to the Dotcom Boom (also COMM 3550, INFO 3551) (HA-AS)]

Fall. 4 credits. No technical knowledge of computer use is presumed or required. STS 3551 and 3561 can be taken separately or in any order. Next offered 2011–2012. Staff. How did computing technology, once useful only to technical specialists, come to colonize industry, academia, the military, and the home? This course will place computing technologies in social and historical context.

[STS 3561 Computing Cultures (also COMM/VISST 3560, INFO 3561) (CA-AS)]

Spring. 4 credits. No technical knowledge of computing is presumed or required. STS 3551 and 3561 may be taken separately or in any order. R. Prentice. Computers are powerful tools for working, playing, thinking, and living. Laptops, PDAs, webcams, cell phones, and iPods are not just devices, they also provide narratives, metaphors, and ways of seeing the world. This course critically examines how computing technology and society shape each other and how this plays out in our everyday lives. Identifies how computers, networks, and information technologies reproduce, reinforce, and rework existing cultural trends, norms and values. Looks at the values embodied in the cultures of computing and consider alternative ways to imagine, build, and work with information technologies.

[STS 3601 Ethical Issues in Engineering Practice (also ENGRQ 3600)]

Spring. 3 credits. Limited to juniors and seniors only. P. Dong. For description, see ENGRQ 3600.

[STS 3811 Philosophy of Science: Knowledge and Objectivity (also PHIL 3810) (KCM-AS)]

Fall. 4 credits. R. Boyd. For description, see PHIL 3810.

[STS 3911 Science in the American Polity, 1960 to Now (also AMST 3911, GOVT 3091) (SBA-AS)]

Spring. 4 credits. Next offered 2011–2012. S. Hilgartner. This course reviews the changing political relations between science, technology, and the state in America from 1960 to the present. It focuses on policies involving science and technology in different institutional settings, such as Congress, the court system, and regulatory agencies. The tension between the concepts of science as an autonomous republic and as just another interest group is a central theme.

[STS 4001 Components and Systems: Engineering in a Social Context (also MAE 4000/4010)]

Fall. 3 credits. Offered alternate years. Z. Warhaft. For description, see MAE 4000.

[STS 4021 Bodies in Medicine, Science, and Technology (also BSOC/FGS 4021) (CA-AS)]

Spring. 4 credits. Limited to 15 students. Next offered 2010–2011. R. Prentice. Every day we are barraged with cultural messages telling us to eat better, get more exercise, stop smoking, practice safe sex. These messages make us insecure about our bodies: Am I thin enough, ripped enough, sexy enough? They are also contradictory: Fish makes you smarter; mercury in fish makes you sick. Many of these messages use the language of science and medicine: There are obesity “epidemics” and chocolate “addictions.” Our bodies are described and treated like machines: transplant surgeons talk about our “spare parts,” computer programmers describe us as “wetware.” Our sense of our bodies may feel improvised, created on the fly from a collage of scientific, medical, cultural, and advertising snapshots. This course draws from literature in science and technology studies, anthropology, and feminist and gender studies to examine how bodies emerge from the shifting lessons of science, technology, and medicine, as well as how cultural and political demands express themselves in and through bodies.

[STS 4071 Law, Science, and Public Values (also BSOC 4071) (SBA-AS)]

Spring. 4 credits. M. Lynch. Examines problems that arise at the interface of law and science. These problems include the regulation of novel technologies, the role of technical expertise in public decision-making, and the control over scientific research. The first part of the course covers basic perspectives in science and technology studies (S&TS) and how they relate to legal decisions and processes. The second part covers a series of examples and legal cases on the role of expert judgments in legal and legislative settings, intellectual property considerations in science and medicine, and legal and political oversight of scientific research. The final part examines social processes and practices in legal institutions, and relates these to specific cases of scientific and technological controversy. Lectures and assignments are designed to acquaint students with relevant ideas about the relationship between legal, political, and scientific institutions, and to encourage independent thought and research about specific problems covered in the course.

You can find more information about these courses and other courses offered in the Arts and Sciences department by visiting the university’s course catalog.
relationship between people and the environment, including the impact of human activities, such as subsistence, agriculture, transportation, industry, and city-building on the environment, and the influence of geography, natural resources, and the environment on human society. (2) The role of race, class, and gender in shaping the relationship between peoples and the environment. (3) The social construction of environmental knowledge, including ideas such as conservation versus preservation, wilderness and national parks, and natural resources and sustainable development. (4) The role of the state, imperialism, and foreign policy in shaping the relationship between nature and society across national boundaries. This course will take a global approach, allowing us to consider how world environmental history can inform the study of U.S. environmental history.

**STS 4221 New York Women (also FGSS 4220, HIST 4231) (HA-AS)**

Fall. 4 credits. Limited to 15 students. M. Rossiter.

Over the centuries New York State has been the site of activity for a great many women of consequence. This course is a one-semester survey of the past and present activities and contributions of rural and urban women in a variety of fields of interest to Cornell students—politics, medicine, science, the law, education, business (including hotels), entertainment, communications, government, labor, religion, athletics, the arts and other areas. Weekly readings and discussion and a paper, possibly using local or university archives.

**STS 4231 Gender and Technology (also BSOC/FGSS/HIST 4231) (HA-AS)**

Spring. 4 credits. S. Mitchell.

Why are some technologies such as cars and computers associated with men and masculinity? How did vacuum cleaners and sewing machines become gendered female? How do technological artifacts and systems constitute, mediate, and reproduce gender identities and gender relations? How do technologies uphold gender hierarchies and thus social inequalities? This class explores the relationship between gender and technology from a comparative cultural, social, and historical perspective. Specific themes include: meanings, camouflage, and display; socialization; industrialization, labor, and work; technologies of war; the postwar workplace; sex and sexuality; and reproductive technologies. Most course materials focus on western Europe and the United States since the late 18th century, but the issues raised in this class will prepare students to think about the relationship between gender and technology in other contexts including our own.

**[STS 4291 Politics of Science (also BSOC 4291, GOVT 4293) (SBA-AS)](fall. 4 credits. Next offered 2010–2011. R. Herring. ][**

**STS 4311 From Surgery to Simulation (also BSOC 4311) (SBA-AS)**

Fall. 4 credits. P. Treherne.

A cliche among medical professionals says, "If you have a hammer, every problem looks like a nail." In other words, treatment decisions often are dictated by available technologies. This course looks at medical technologies from dissection to X-rays to anti-depressants and the ways they shape how medical professionals look at and practice upon the human body. Takes a broad view of technology, encompassing systems of practice that shape how work is conducted and the body is understood, as well as specific machines and treatments with specific uses. Considers how these technologies often are not only treatments for individual patients but also metaphors for larger cultural questions.

**STS 4331 International History of Science I (HA-AS)**

Spring. 4 credits. M. Rossiter.

Survey of the major scientific events and institutions in several foreign nations, including developing countries. Covers the period 1600 to the present and gives some attention to who in each country becomes a scientist, who rises to the top, and who emigrates. Weekly readings and a research paper.

**STS 4361 Link, Network, Nexus (also BSOC 4361, COML 4115, FREN/SHKM 4936, GOVT 4748)**

Spring. 4 credits. B. Massumi.

For description, see SHUM 4936.

**[STS 4421 The Sociology of Science (also BSOC 4421, SOC 4420) (SBA-AS)](Spring. 4 credits. Next offered 2010–2011. T. Pinch. A view of science less as an autonomous activity than as a social institution. Discusses such issues as controversies in science, analysis of scientific text, gender, and the social shaping of scientific knowledge.)**

**STS 4441 Historical Issues of Gender and Science (also FGSS 4440) (CA-AS)**

Spring. 4 credits. Not open to freshmen. M. Rossiter.

A one-semester survey of women's role in science and engineering from antiquity to the 1980s, with special emphasis on the United States in the 20th century. Readings include biographies and autobiographies of prominent women scientists, educational writings and other primary sources, and recent historical and sociological studies. By the end of the semester, students attain a broad view of the problems that have faced women entering science and those that still remain.

**STS 4471 Seminar in the History of Biology (also BIOEE 4670, BSOC 4471, HIST 4747) (PBS) Summer or fall. 4 credits. Limited to 18 students. S–U or letter grades. W. Provine. For description, see BIOEE 4670.**

**STS 4531 Knowledge and Society (also SOC 4530) (CA-AS)**

Spring. 4 credits. Limited to 15 students. C. Leuenberger.

Focuses on the historical evolution of the sociology of knowledge as a theoretical paradigm and an empirical research field. Examines the phenomenological origins of the sociology of knowledge and many of its central texts. Studies how it has been applied to such areas as personhood, interaction, religion, identity, and the emotions. Also considers epistemological questions that arise, and covers various methodological and empirical approaches that have been influenced by the sociology of knowledge such as ethnomethodology, conversation analysis, and the sociology of science and technology.

**[STS 4581 Intelligibility in Science (also to HIST 4581) (HA-AS)](Spring. 4 credits. Next offered 2012–2013. P. Dear. )[**

**STS 4661 Public Communication of Science and Technology (also COMM 4660/6660, STS 6661)**

Spring. 3 credits. Limited to 15 students. B. Lewenstein.

For description, see COMM 4660.

**[STS 4711 The Dark Side of Biology: Biological Weapons, Bioterorism, and Biocriminality (also BSOC 4711) (SBA-AS)](Fall. 4 credits. Next offered 2010–2011. K. Fei.)**

This course examines the social construction and utilization of scientific conceptions of race in the West. We begin with the existence (or not) of conceptions of biological race in the early-modern period, focusing on early voyages of discovery and so-called 'first encounters' between the peoples of the Old and New Worlds. In the second part of the course we will look at early engagements of racial thought in the late 18th century and at the problems of classification that were raised, before examining the roots of 'Scientific Racism.' Part three looks at Darwin, Social Darwinism, and eugenics movements in different national contexts, concluding with a study of Nazi science and the subsequent trials of doctors at Nuremberg. The last part of the course examines recent and contemporary applications of racial thinking, including the debate over the origin of AIDS, race and IQ, and the question of whether doctors should make use of race as a category when researching and prescribing new treatments.

**STS 4811 Philosophy of Science (also PHIL 4810, STS 6811) (KCM-AS)**

Spring. 4 credits. R. Boyd and A. Chugglem.

For description, see PHIL 4810.

**[STS 4831 The Military and New Technology (also GOVT 4837) (SBA-AS)](Fall. 4 credits. Next offered 2011–2012. Staff)

Military organizations are seen paradoxically as both inflexible, hide-bound institutions and avid proponents of new technology. This course examines changes over time in the attitude of the military toward new technology and analyzes competing explanations for these changes. Have advances in technology altered the traditional notions of how battles are fought and won? Have military needs been a driver of new technology? Special attention will be given to the so-called "Revolution in Military Affairs" and the implications of the rise in asymmetric warfare for future developments in military technology.

**STS 4911 Vitality and Power in China (also BSOC 4911, HIST/SHKM 4931)**

Spring. 4 credits. P. Dear.

For description, see SHUM 4931.

**STS 4921 The History of Reason (also BSOC 4921, HIST/SHKM 4932)**

Spring. 4 credits. P. Dear.

For description, see SHUM 4932.

**STS 4951 Social Studies of the Human Sciences (CA-AS)**

Fall. 4 credits. C. Leuenberger.

Explores how the human and social sciences have provided the knowledge and categories we use to make sense of people and their
debates over inoculation in the 18th century, Summer Course and prevent them from graduating. Otherwise, the "R" will remain on their record must change the first semester to independent honors project. Students should note that the student should continue working on an undergraduate studies will evaluate whether be completed during the first semester. In honors thesis outline and bibliography should be recommended for honors. Minimally, an a thesis, and whether or not they are second semester whether or not they complete semester, for a total of 8 credits. After the fall S&TS department. [ST] 4991/4992 Honors Project Fall and spring (yearlong). Prerequisite: senior S&TS students by permission of department; overall Cornell cumulative GPA of 3.00 and 3.30 cumulative GPA in courses for a major. Applied in 306 Rockefeller Hall. Students admitted to the honors program are required to complete two semesters of honors project research and to write an honors thesis. The project must include substantial research, and the completed work should be of wider scope and greater originality than is normal for an upper-level course. The student must find a project supervisor and a second faculty member willing to serve as faculty reader; at least one of these must be a member of the S&TS department. *Students must register for 4 credits each semester, for a total of 8 credits. After the fall semester, students will receive a letter grade of "R" for the first semester with a letter grade for both semesters. Students at the end of the second semester whether or not they complete a thesis, and whether or not they are recommended for honors. Minimally, an honors thesis outline and bibliography should be completed during the first semester. In consultation with the advisors, the director of undergraduate studies will evaluate whether the student should continue working on an honors project. Students should note that these courses are to be taken in addition to those courses that meet the regular major requirements. If students do not complete the second semester of the honors project, they must change the first semester to independent study to clear the "R" and receive a grade. Otherwise, the "R" will remain on their record and prevent them from graduating.

Summer Course

STS 1451 Body, Mind, and Health: Perspectives for Future Medical Professionals (also BSCC 1451) # (CA-AS) Summer. 3 credits. Open only to sophomore, junior, and senior high school students. M. Hurst. This course surveys health related medical controversies from the Colonial Period to the present. Students learn about important debates over inoculation in the 18th century, sanity and insanity in the 19th century, and venereal disease in the 20th century. Lectures and readings also map the changing experience and authority of men and women engaged in caring and curing. Because health and disease are culturally contingent, course materials explore the history of specific diseases including cardiovascular disease, syphilis and AIDS, anorexia nervosa and chronic fatigue syndrome. We consider why it is that certain diseases become more prevalent in one time period than another, and how gender, race, ethnicity, and region shape the experience of disease in America, both in the past and present. Finally, we also investigate some of the scientific, social, and ethical challenges facing medical and mental health professionals in the 21st century.

Graduate Seminars

[ST] 6271 Making People Through Expert Knowledge Spring. 4 credits. Next offered 2011–2012. C. Leuenberger. This seminar explores how the human and social sciences have approached the knowledge and categories we use to make sense of human beings and their behavior. Looking across a range of disciplines—including sociology, psychiatry, psychology, psychoanalysis, and economics—we will look at how human beings have become objects of scientific investigation. We will focus on how culture, politics, and the professional environment impact the human sciences and how the use of rhetoric constitutes academic discourse. We will also focus on the social scientific construction of selves, sex, gender, and race.] [ST] 6272 Self and Society Fall. 4 credits. Next offered 2010–2011. C. Leuenberger. How has the self become a political, scientific, and cultural project caught up in the ideological battles of modern times? What roles do cultural institutions, politics and science play in making human beings visible, understandable and knowable? Questions in this course will focus on the construction of sexuality; the gendering of women (and men) in scientific work; (2) aspects of the literature on gender, science, and technology; (3) the construction of selves, sex, gender, and race; and, if so, are alternative technologies, which embody different assumptions about society, possible? Do engineers have implicit theories about gender? Is technology gendered? How can we understand the interaction of society and technology? Throughout the course the arguments are illustrated by detailed examinations of particular technologies, such as the ballistic missile, the bicycle, the electric car, and the refrigerator.] [ST] 6341 Information Technology in Sociocultural Context Spring. 4 credits. Next offered 2010–2011. P. Sengers. Analyzes information technology using historical, qualitative, and critical approaches. Discusses questions such as: In what ways is information technology often portrayed as radically new—actually deeply historical? How do information technologies represent and intervene in debates and struggles among people, communities, and institutions? How is the design of information technology tools entangled in the realms of law, politics, and commerce? In what ways are the social consequences of information technologies produced as much by the claims we make about the technologies as about the raw functionality of the tools themselves? This course investigates these issues through the lenses of long-standing debates and current controversies.

Critical Debates in Science and Technology, Gender: Historical Issues (also FGSS 6400, HIST 6410) Fall. 4 credits. S. Seth. This course explores five, often interrelated, aspects of the literature on gender, science, and technology: (1) The historical participation of women (and men) in scientific work; (2) the embodiment of scientific, medical, and technical knowledge; (3) the scientific construction of sexuality; (4) the gendering of technological systems and artifacts; and (5) feminist critiques of scientific knowledge. We begin with an analysis of reason, gender, and sexuality in the classical and late-antique western world, before moving on to an

[ST] 6311 Qualitative Research Methods for Studying Science (also SOC 6310) Spring. 4 credits. C. Leuenberger. Much has been learned about the nature of science by sociologists and anthropologists from various lab coats and studying scientists in action. This course looks at the methods used in this new wave of science studies. Examines what can be learned by interviewing scientists, from videos, and from detailed examinations of scientific texts. Students gain hands-on experience by conducting a mini-project in which they investigate some aspect of scientific culture.

[ST] 6321 Inside Technology: The Social Construction of Technology (also SOC 6320) Spring. 4 credits. Next offered 2010–2011. T. Pinc. Rather than analyze the social impact of technology upon society, this course investigates how society gets inside technology. In other words, is it possible that the very design of technologies embody assumptions about the nature of society? And, if so, are alternative technologies, which embody different assumptions about society, possible? Do engineers have implicit theories about society? Is technology gendered? How can we understand the interaction of society and technology? Throughout the course the arguments are illustrated by detailed examinations of particular technologies, such as the ballistic missile, the bicycle, the electric car, and the refrigerator.
examination of the origins of modern western science in the scientific revolution, considering the claim that "science," by its very nature, is an androcentric enterprise. The rise of scientific and medical disciplines and professions in the 19th century will provide a focus for discussions of the systematic exclusion of women from the production of scientific knowledge at precisely the point that women's bodies become the object of intensive scientific study. Drawing on a range of material, the course considers the construction of homosexual and intersexual individuals in scientific discourse. In later weeks, we will discuss so-called "postmodern" critiques of science, and will debate the possibilities for "feminist science."

STS 6460 Anthropology of the Body (also ANTHR 3465/6465, STS 3460)
Fall. 4 credits. S. Langwicik.
For description, see ANTHR 3465.

STS 6661 Public Communication of Science and Technology (also COMM 6660/4660, STS 4661)
Spring. 4 credits. B. Lewenstein.
For description, see COMM 4660.

[STS 6801 Historical Approaches to Science (also HIST 6800)
Fall. 4 credits. Prerequisite: graduate standing. Next offered 2010–2011. P. Dear. Examines philosophical, sociological, and methodological dimensions of recent historiography of science.]

STS 6811 Philosophy of Science (also PHIL 4810, STS 4811)
Spring. 4 credits. R. Boyd.
For description, see PHIL 4810.

[STS 7001 Special Topic 1: Science Studies and the Politics of Science
Fall. 4 credits. Prerequisites: STS 7111 or permission of instructor. Next offered 2010–2011. M. Rossiter. Theoretical developments in science and technology studies have called attention to the contingent and socially embedded character of both knowledge claims and technological systems. Drawing on literature from several disciplines, this seminar explores the consequences of these findings for social and political studies of science. Issues and problems considered include trust and skepticism, political and legal agency, reflexive institutions, relativism and social action, science and norms, and the co-production of knowledge and social order.]

STS 7003 Special Topic 3: Issues in the Social and Cultural History of Technology
Spring. 4 credits. R. Kline.
This seminar focuses on different issues in the social and cultural history of technology each semester. Typical issues include Gender and Technology, Rethinking Technological Determinism. Was there an Information Revolution?, Consumerism, and the Military and Technology in the United States. Students read and discuss exemplary books and articles on a topic for the first half of the course, then give presentations on their research papers.

STS 7111 Introduction to Science and Technology Studies (also HIST 7110)
Fall. 4 credits. M. Lynch and K. Vogel.
Provides students with a foundation in the field of science and technology studies. Using classic works as well as contemporary exemplars, seminar participants chart the terrain of this new field. Topics for discussion include, but are not limited to: historiography of science and technology and their relation to social studies of science and technology; laboratory studies; intellectual property; science and the state; the role of instruments; fieldwork; politics and technical knowledge; philosophy of science; sociological studies of science and technology; and popularization.

Independent Study

STS 6991 Graduate Independent Study
Fall or spring. 2–4 credits. Permission of department required. Applications and information are available in 306 Rockefeller Hall.

SCIENCE OF EARTH SYSTEMS
See "Department of Earth and Atmospheric Sciences."

SERBO-CROATIAN
See "Department of Russian."

SINHALA (SINHALESE)
See "Department of Asian Studies."

SOCIETY FOR THE HUMANITIES
Timothy Murray, Director

Fellows for 2009–2010
Timothy Campbell
Seeta Chaganti
Peter Dear
Keller Easterling
María Fernández
TJ Hinrichs
Mary Jacobs
Ruth Mas
Brian Massumi
Prita Sandy Meier
Martha Schoolman
Shi-Ling Stephanie Tsai

The society annually awards fellowships for research in the humanities. The fellows offer, in line with their research, seminars intended to be exploratory or interdisciplinary. These seminars are open to graduate students and suitably qualified undergraduates. The theme for 2009–2010 is "Networks/Mobilities."

SHUM 4821 Mobility and Invention (also ARTH/VISST 4821)
Fall. 4 credits. Limited to 15 students. M. Fernández.

After 1940, numerous artists and intellectuals from various parts of the world emigrated or resided outside of their home countries for extended periods. Especially in Europe and the United States, immigrants significantly contributed to the formation of new fields of knowledge and practice. While the migrant has been discussed at length in light of theories of hybridity, resistance, and cosmopolitanism, scholars have paid little attention to the migrant as inventor or creator. Are there conditions specific to the experience of migration that foster the generation and actualization of new ideas? Are theories of cosmopolitanism and translation sufficient to theorize immigrants' creativity? This seminar will function as a transtemporal and transnational space for the exploration of these questions. Students from diverse fields and schools are welcomed.

SHUM 4822 Life as We Know It: Readings in the Biopolitical Paradigm (also COML 4065, ITAL 4822)
Fall. 4 credits. Limited to 15 students. T. Campbell.

In this seminar we will be reading some of the most important philosophical contributions to what Giorgio Agamben has called the biopolitical paradigm, that is the increasingly intense ways in which biology and politics have come to be superimposed over one another across the last 30 years. After an initial foray into the writings of Hannah Arendt on life and politics, we turn to Michel Foucault and his seminars from the 1970s where the terms, biopolitics and biopower, are most forcefully introduced. In the remainder of the semester we will trace how iterations of the term in Foucault square with more recent philosophical reflections, most of which originate in Italy (Agamben, Virno, Negri). Finally, we'll turn to Roberto Esposito's deconstruction of the biopolitical paradigm.

SHUM 4823 Secular Disaffection: On Islam and the Politics of Emotion (also COML 4066, NES 4923, RELST 4823)
Fall. 4 credits. Limited to 15 students. R. Mas.

This course takes as its focus the constitution of Islam by normative discourses of secular modernity in order to think about the categories of "religion" and "the secular." Special attention will be placed on the politics of secular liberal governance and the impacts that these have on the constitution of Muslim subjects, their bodies, and affects in the secular public sphere. We will examine the relationship of sentiments, emotions, and affect to the structures of force associated with secular models of politics that purport to banish religion from their sphere. Texts will include works by Talal Asad, Charles Hirschkind, Michel Foucault, Saba Mahmood, Brian Massumi, Jean-Luc Nancy, Jacques Rancière, Ann Stoler, and others.

SHUM 4824 Medieval Translation in Motion (also DANCE 4384, ENGL 4072, FREN 4824)
Fall. 4 credits. Limited to 15 students. S. Chaganti.

This seminar will use medievall studies to explore medieval traditions of translation. By foregrounding the role of movement in English and French medieval culture, this class will investigate how we might understand translation in terms of spatial as well as textual materiality. The syllabus will combine literary readings with historical and theoretical foundations. It will include classic studies of medieval translation theory; more recent work examining translation and cultural movement; and critical theories of space, translation, and motion. In addition to providing medievalist
students with a new perspective on some important texts, the course also offers nonmedievalists a critically inflected view of early literary self-reflection on translation.

**SHUM 4825 African Port Cities: Empire Building at the Crossroads (also ARTH/VISST 4825, ASRC 4607)**

Fall. 4 credits. Limited to 15 students. P. Meier.

The coastal cities of the African continent have long been nodes of intercultural contact and diaspora. In such fluid borderlands, urban space and the built environment are a particularly fraught terrain, where boundaries of cultural belonging and identity are constantly being reworked. We will focus on the “Age of Empire” in order to consider Africa’s multiple positions in the global market and diverse experiences of imperial and colonial aggression. This seminar therefore will examine key questions regarding how we conceive of port cities as “networked” sites. To this end we will work to elucidate how the heterogeneous societies of coastal Africa transformed, fragmented, and reconstituted diverse material sites (including architecture, public space, sculpture, and the body) in order to assert local ways of being.

**SHUM 4826 Extrastatecraft (also ARCH 4408, SHUM 4934, VISST 4826)**

Fall. 4 credits. Limited to 15 students. K. Easterling.

This seminar researches global infrastructures—the substrate of networks and subroutines, management styles, and standards that act as a medium of transnational polity. The material will examine how socio-technical networks of trade, communication, tourism, labor, transportation, energy, and finance have been theorized. From a number of fields including studies of organization, the material will assemble a relational understanding of the political agency or disposition inherent in these networks. The course will also consider techniques of dissent as alternative to the activist apparatus customarily assembled to meet this political reality.

**SHUM 4931 Vitality and Power in China (also ASIAN 4429, BSOC/STS 4911, HIST/RELST 4931)**

Spring. 4 credits. Limited to 15 students. T. J. Hirsch.

Chinese discourses have long linked the circulation of cosmic energies, political power, and bodily vitalities. In these models political order, spiritual cultivation, and health are achieved and enhanced through harmonizing these flows across the levels of Heaven-and-Earth, state, and humankind. It is when these movements are blocked or out of synchrony that we find disordered climates, societies, and illness. In this course, we will examine the historical emergence and development of these models of politically resonant persons and bodily centered polities, reading across primary texts in translation from these otherwise often separated fields. For alternate frameworks of analysis as well as for comparative perspectives, we will also examine theories of power and embodiment from other cultures, including recent scholarship in anthropology and critical theory.

**SHUM 4932 The History of Reason (also BSOC/STS 4921, HIST 4932)**

Spring. 4 credits. Limited to 15 students. P. Dear.

This course will examine ways in which “reason” was understood, deployed, and contested in European thought and practice from the early-modern period through to the 20th century. We will read primary sources that theorize or employ notions of “reason” (Descartes, Hobbes, Hume, Kant, etc.). Theoretical controversy over the foundations of “reason” in political economy as well as in formal logic in the 19th century will also be studied, to counterpoint practical uses in early anthropological work from the late 19th and 20th centuries on the notion of a “Great Divide” between western and non-western cultures.

**SHUM 4933 Abolitionist Circuits (also ASRC/HIST 4933, ENGL 4073)**

Spring. 4 credits. Limited to 15 students. M. Schiavo.

An interdisciplinary seminar drawing on literary, historical, and geographical approaches to consider the roles of both physical transit and the geographic imaginary in 19th-century antislavery writing. Topics discussed will likely include the cross-border community of black activists living around the Great Lakes, the persistence of emancipationism throughout the antebellum period, abolitionist travel literature, and the historical existence and cultural deployment of the maroon communities in the Caribbean and the southern U.S. Primary texts will include works by William Wells Brown, Mary Ann Shadd Cary, Martin Delany, Ralph Waldo Emerson, Joseph John Gurney, Herman Melville, James Redpath, Harriet Beecher Stowe, and Samuel Ringgold Ward, as well as the unique resources available through Cornell’s Samuel Joseph May Collection of abolitionist pamphlets.

**SHUM 4934 Art Writing: Tracing the Visible (also ARTH/VISST 4934, ENGL 4074)**

Spring. 4 credits. Limited to 15 students. M. Jacobus.

“Art Writing” will take a psychoanalytic, phenomenological, and philosophic lens to visual art and writing about it. Seminars will cluster around looking, knowing, facing, fearing, feeling, and writing, as represented in both theory and practice, including video-art and photography. We will read critics such as T. J. Clark and Mieke Bal alongside theorists such as Benjamin, Derrida, and Barthes. Case studies will focus on selected artists who have prompted rereadings or reinterpretations of the visual in their practice, including Richter, Viola, and Twombly. This course will be of interest to students of literature and art who also want to read visual culture and theory.

**SHUM 4935 Subjectivation as Mode of Production—Zola’s Department Store (also FREN 4935)**

Spring. 4 credits. Limited to 15 students. S. Tsai.

Subjectivation as mode of production, a conceptual device developed by Zola and further elaborated into the critique of the modernity by Foucault and Deleuze, evokes the genealogy of ethics and the production as a process of “becoming condition.” Based on Emile Zola’s novel La Bête humaine (1888), we will inquire into the production of subjectivity, or rather, the mode of existence, in the reign of the Second Empire in France.

**SHUM 4936 Link, Network, Nexus (also BSOC/STS 4361, COML 4115, FREN 4936, GOVT 4748)**

Spring. 4 credits. Limited to 15 students. B. Massumi.

This course will consider a related constellation of philosophical conceptions of locality and globality, connection and continuity, which challenge common assumptions underlying present-day notions of the network. The philosophical paradigms to be examined include the concepts of the “nexus” and “extensive continuum” (A. N. Whitehead), “nonlocal linkage” and “transspatiality” (Raymond Ruyer), “intensity” and “multiplicity” (Bergson), “reticulation” (Gilbert Simondon), and “smooth space” (Deleuze/Guattari). These concepts will be deployed and their implications explored through a consideration of current issues, such as the military doctrine of “network-centric warfare” and network-oriented social-movement politics.

**SOCILOGY**

Sociology is the study of social life, social change, and the social causes and consequences of human behavior. Sociologists investigate the structure of groups, organizations, and societies, and how people interact within these contexts. Since all human behavior is social, the subject matter of sociology ranges from the intimate family to the hostile mob, from organized crime to religious cults, from the divisions of race, gender, and social class to the shared beliefs of a common culture; and from the sociology of work to the sociology of sports. In fact, few fields have such broad scope and relevance for research, theory, and application of knowledge.

Sociology provides many distinctive perspectives on the world, generating new ideas and critiquing the old. The field also offers a range of research techniques that can be applied to virtually any aspect of social life: street crime and delinquency, corporate downsizing, how people express emotions, welfare or education reform, how families differ and flourish, or problems of peace and war. Because sociology addresses the most challenging issues of our time, it is a rapidly expanding field whose potential is increasingly tapped by those who craft policies and create programs.

**Requirements**

In addition to the academic requirements established by the College of Arts and Sciences, students must also fulfill requirements for the Sociology major. Ten courses are required in the sociology major. All courses toward the major must be taken for a letter grade, and students must earn a C- or higher in each course. The courses required for the major are divided into the following categories:

- SOC 1101 Introduction to Sociology
- SOC 3750 Classical Theory
SOC 3010 Evaluating Statistical Evidence
seven additional (i.e., elective) courses in sociology

The Honors Program
Honors in sociology are awarded for excellence in the major, which includes overall GPA and completion of an honors thesis. In addition to the regular requirements of the major, candidates for honors must maintain a cumulative GPA of at least a 3.5–4.0 in all sociology classes, complete SOC 4950 and 4960 (in the senior year), and write an honors thesis.

Students are awarded either honors (cum laude), high honors (magna cum laude), or highest honors (summa cum laude) in the program based on the honors advisors’ evaluation of the level and the quality of the work completed towards the honors thesis and the quality of the course work. The honors distinction will be noted on the student’s official transcript and it will also be indicated on the student’s diploma.

Complete information on the major can be found on the department’s undergraduate program web page: www.soc.cornell.edu/undergrad. In addition to regularly updated course lists, the web page provides an overview of the discipline of sociology, procedures for declaring the major and applying to the honors program, and strategies for locating research opportunities.

The main department web site, www.soc.cornell.edu, provides an overview of the department’s faculty members, their research, and the department’s affiliated research centers.

Introductory Courses

SOC 1101 Introduction to Sociology (SBA-AS)
Fall, spring. 3 credits. Students may not receive credit for both SOC 1101 and DSOC 1101. B. Cornwell.
This course introduces students to sociological perspectives and methodologies. We will begin by considering sociological perspectives that focus on macro-level spheres of society (e.g., the economy, politics) and sweeping societal changes that have occurred within them over the past couple of centuries. The remaining bulk of the course introduces alternatives to these macro-oriented models of society. First, we will cover arguments that address the causes and consequences of individuals’ integration into and contributions to society, and attempt to answer such questions as: Why do people follow seemingly irrational social norms? We will then complicate matters by considering explanations that assume that there is some measure of individual rationality behind individuals’ behavior. Finally, we will consider how micro social forms, especially social networks, emerge through both rational and nonrational kinds of social action.

SOC 1104 Race and Ethnicity (SBA-AS)
Fall. 3 credits. L. Auf der Heide.
This course explores race and ethnicity from a sociological viewpoint. Topics will include, but aren’t limited to: the social construction of race and ethnicity in the United States over time; historical and contemporary racism, prejudice, and discrimination; the relationships between race/ethnicity and educational achievement/attainment, occupational prestige, income, wealth, and health; racial and ethnic identity; and current national debates regarding race/ethnicity, such as affirmative action and immigration. Throughout the course, we will address these issues in light of contemporary and classical sociological theories.

[SOC 1105 Introduction to Economic Sociology (SBA-AS)]
Fall. 3 credits. Next offered 2010–2011. V. Nee.
For description, see department.

[SOC 1150 Utopia in Theory and Practice (SBA-AS)]
This course discusses the literary utopias of Moore, Morris, and Bellamy, and the dystopias of Huxley, Orwell, and Zamiati. Also examines real social experiments.

General Education Courses

SOC 2070 Problems in Contemporary Society (also DSOC 2070) (SBA-AS)
Fall. 4 credits. M. de Santos. Examines contemporary social problems, with a focus on their sources in the organization of society. Modern societies are based on three fundamental types of institutions—social norms, hierarchies, and markets. Each is subject to distinctive types of failures resulting in problems that include poverty, prejudice and discrimination, intolerance and hate, alcohol and drug abuse, physical and mental illness, crime and delinquency, and urban problems. In analyzing these problems the course emphasizes the institutions through which they are created and perpetuated and the form of institutional change required to address them.

SOC 2090 Networks (also CS 2850, ECON/INFO 2040) (SBA-AS)
Spring. 4 credits. D. Easley and J. Kleinberg.
For description, see ECON 2040.

SOC 2100 What Is Science? (also STS 2011) (CA-AS)
Spring. 3 credits. K. Vogel.
For description, see STS 2011.

SOC 2150 Organizations: An Introduction (also DSOC 2150) (SBA-AS)
Fall. 4 credits. M. Brashears.
Most of us spend the majority of our lives in the context of formal organizations; we attend schools, work for corporations, attend churches, join sororities or fraternities, and shop at our local coops. While the prominence of formal organizations in our daily lives is an indicator of their success and efficiency in modern society, we also know that organizations can be impersonal, unresponsive, and even corrupt. This course provides an introduction to the study of organizations in sociology. We will consider various types of organizations and how they operate, evolve, and change. A general theme throughout the course is the tension between complex organizations as efficient, productive institutions and the many unintended, and even perverse, consequences that organizations can have for those who interact with them. We also consider the role organizations play in both maintaining social stability and facilitating social change.

SOC 2160 Health and Society (SBA-AS)
Spring. 4 credits. E. York Cornwall.
This course will examine how social factors shape physical and mental health. First, we will review social scientific research on the relationship between health and status characteristics, neighborhood and residential context, employment, social relationships and support, religion, and related behaviors. We will devote particular attention to the development of research questions and methodological approaches in this work. Next, we will directly examine the relationship between health and social factors using data from a nationally representative survey. Course instruction will include statistical analysis of survey data and social scientific writing. Students will develop their own research exploring how social factors contribute to health.

SOC 2180 American Community and Society (SBA-AS)
Fall. 4 credits. M. Brashears.
This course will explore what we mean by community and society and present a number of different explanations for their development and operation. We will begin with general structural theories in sociology, which account for community through the basic demographic and mathematical features of human groups. We will then proceed to explore how structure interacts with culture and agency in specific contexts, including sex, gender, and economics. We will conclude by examining more cultural explanations for the development and change of community and society.

SOC 2202 Population Dynamics (also DSOC 2010) (CA-AS)
Spring. 3 credits. Staff.
For description, see DSOC 2010.

[SOC 2203 Work and Family in Comparative Perspective (SBA-AS)]
Fall. 4 credits. Next offered 2010–2011. Staff.
For description, see department.

SOC 2206 International Development (also DSOC 2050) (HA-AS)
Spring. 3 credits. Staff.
For description, see DSOC 2050.

SOC 2208 Social Inequality (also DSOC 2090) (SBA-AS)
Spring. 4 credits. K. Weeden.
Reviews contemporary approaches to understanding social inequality and the processes by which it comes to be seen as legitimate, natural, or desirable. We address questions of the following kind: What are the major forms of stratification in human history? Are inequality and poverty inevitable? How many social classes are there in advanced industrial societies? Is there a “ruling class?” Are lifestyles, attitudes, and personality shaped fundamentally by class membership? Can individuals born into poverty readily escape their class origins and move upward in the class structure? Are social contacts and “luck” important forces in matching individuals to jobs and class positions? What types of social processes serve to maintain and alter racial, ethnic, and gender discrimination in labor markets? Is there an “underclass?” These and other questions are addressed in light of classical and contemporary theory and research.

[SOC 2210 Race, Class, and Gender Research in Practice (SBA-AS)]
This course introduces the underlying logic of social scientific research in context of contemporary debates about social inequality: e.g., educational testing and tracking, race-based affirmative action.

[SOC 2220] Controversies about Inequality (also DSOC/LROB/PAM 2220, GOVT 2225, PHIL 1950) (SBA-AS)
For description, contact department.

[SOC 2250] Schooling and Society
This course will use classical and contemporary theory, as well as recent research, to explore the institution of education.

[SOC 2460] Drugs and Society (SBA-AS)
Spring. 4 credits. D. Heckathorn.
The course focuses on drug use and abuse as a social rather than a medical or psycho-pathological phenomenon. Specifically, the course deals with the history of drug use and regulatory attempts in the United States and around the world; the relationship between drug use and race and class conflict; pharmacology and use patterns related to specific drugs; perspectives on the etiology of drug use/abuse; AIDS prevention and harm reduction interventions; drug-using subcultures; drug policy, drug legislation, and drug enforcement; and the promotion and condemnation of drug activities in the mass media.

[SOC 2480] Politics and Culture (also GOVT 3633) (HA-AS)
Fall. 4 credits. M. Berezin.
Focuses on currently salient themes of nationalism, multiculturalism, and democracy. It explores such questions as who is a citizen; what is a nation; what is a political institution; and how do bonds of solidarity form in modern society. Readings are drawn principally from sociology and where applicable from political science and history. Journalist accounts, films, and web site research supplement readings.

[SOC 2510] Social Gerontology: Aging and the Life Course (also HD 2510)
Spring. 3 credits. E. York Cornwell.
For description, see HD 2510.

[SOC 2560] Sociology of Law (SBA-AS)
Fall. 4 credits. E. York Cornwell.
This course provides an introduction to the sociological perspective of law and legal institutions in modern society. A key question is the extent to which the law creates and maintains social order. And, what is its role in social change? We will review theoretical perspectives on the reciprocal relationship between law and society, and consider how this relationship is reflected in contemporary legal issues. Empirical research covered in this course will examine social interactions among actors within legal institutions (including the criminal courts, law school classrooms, and the jury room) and how individuals experience and utilize the law in everyday life.

[SOC 2650] Latinos in the United States (also DSOC 2650, LSP 2010) (SBA-AS)
Spring. 3 credits; 4-credit option available. H. Velez.
Exploration and analysis of the Hispanic experience in the United States. Examines the sociohistorical background and economic, psychological, and political factors that converge to shape a Latino group identity in the United States. Perspectives are suggested and developed for understanding Hispanic migrations, the plight of Latinos in urban and rural areas, and the unique problems faced by the diverse Latino groups. Groups studied include Mexican Americans, Dominicans, Cubans, and Puerto Ricans.

Fall. 3- or 4-credit option. J. Sipple.
For description, see EDUC 2710.

[Methods and Statistics Courses]

[SOC 3010] Evaluating Statistical Evidence (also SOC 6010) (MQR)
Fall. 4 credits. Prerequisite: Arts and Sciences students only. M. Brashears.
This course will introduce students to the theory and mathematics of statistical analysis. Many decisions made by ourselves and others around us are based on statistics, yet few people have a solid grasp on the strengths and limitations of these techniques. This course will provide a firm foundation for statistical reasoning and logical inference using probability. While there is math in this course, it is not a math class per se, as a considerable amount of attention is devoted to interpreting statistics as well as calculating them.

[SOC 3040] Social Networks and Social Processes (SBA-AS)
How do groups self-segregate? What leads to group formation? How should we think about social change? How does the group recruit new members? Select leaders? Make and enforce rules? Do social groups play a role in the emergence and functioning of political parties? In addition to investigating different types of party systems, the societal roots of political parties, and the influence of institutions on electoral politics, the course will also examine contemporary debates, such as the relationship between culture and electoral behavior. Case studies will be drawn from a number of Western and non-Western settings.

[Intermediate Courses]

[SOC 3110] Group Solidarity (SBA-AS)
Spring. 4 credits. M. Macy.
What is the most important group that you belong to? What makes it important? What holds the group together, and how might it fall apart? How does the group recruit new members? Select leaders? Make and enforce rules? Do some members end up doing most of the work while others get a free ride? This course explores these questions from an interdisciplinary perspective, drawing on sociobiology, economics, and social psychology, as it applies alternative theories of group solidarity to a series of case studies, such as urban gangs, spiritual communities, the civil rights movement, pro-life activists, athletic teams, work groups, and college fraternities.

[SOC 3130] Sociology of Medicine (also STS 3111) (SBA-AS)
Fall. 4 credits. C. Leutenberger.
For description, see STS 3111.

[SOC 3190] Contemporary Sociological Theory (SBA-AS)
Introduction to main ideas and lines of research in contemporary sociology, from the emergence of the field in the American academy to the present.

[SOC 3240] Environment and Society (also DSOC 3240, STS 3241) (SBA-AS)
Spring. 3 credits. Staff.
For description, see DSOC 3240.

[SOC 3270] Tolerance and Fundamentalism (SBA-AS)
For description, contact department.

[SOC 3360] Evolving Families: Challenges to Public Policy (also PAM 3360) (SBA-AS)
Spring. 3 credits. S. Sassler.
For description, see PAM 3360.

[SOC 3370] Race and Public Policy (also PAM 3370) (SBA-AS)
Fall. 3 credits. S. Sassler.
For description, see PAM 3370.

[SOC 3410] Modern European Society and Politics (also GOVT 3413) (SBA-AS)
Fall. 4 credits. S. Van Morgan.
For description, see GOVT 3413.

[SOC 3500] Sociology of China's Transition to Capitalism (also GOVT 3500) (SBA-AS)
Spring. 3 credits. V. Nee.
China's rise as a major global economic power is examined in this course from the sociological perspective. The political elite initiated economic reform in 1978 to revive its state-owned economy; yet from the reform emerged a new capitalist economy. The course examines the social origin of entrepreneurs, the nature of the firms they founded, their use of social networks in markets, and the social construction of the economic institutions of capitalism. The course studies the social and economic transformations caused by the rise of capitalism, from the “floating population” of migrant rural labor, new urban consumer society, to the social costs of degradation of the natural environment. Lastly, the course compares capitalism in China and in the West, pointing to similarities and differences in the varieties of capitalist economies and how they experience global economic crisis.

[SOC 3570] Schooling, Racial Inequality, and Public Policy in America (SBA-AS)
Spring. 4 credits. S. Morgan.
After examining alternative explanations for why individuals obtain different amounts and types of educational training, the course focuses on how an individual's family background and race affect his or her trajectory through the educational system. The course covers the specific challenges that have confronted urban schooling in America since the 1960s, including the classic literature on the effects of school and community resources on student achievement and as well as the development and later evaluation of school desegregation policies. Also considers case studies of current policy debates in the United States, such as housing segregation and school
resegregation, voucher programs for school choice, and the motivation for and consequences of the establishment of state-mandated testing requirements. Throughout the course, emphasis is placed upon the alternative modes of inquiry and writing which opposing scholars, policymakers, and journalists use to address these contentious topics.

SOC 3620 Employment Inequality and the Law (SBA-AS)
Fall. 4 credits. E. Hirsh.
The work people do is important for all aspects of their lives, including their earnings, their social status, where they live, and opportunities for their children. This course examines gender, race, and ethnic inequality in the context of employment. While traditional explanations of employment inequality focus on how differences in workers’ skills and qualifications lead to disparities in income, status, and other work-related rewards, this course emphasizes how organizations and social structures—such as hiring practices, workplace policies, and the law—produce variation in inequality. The course concludes with a discussion of how employment law can intervene in the perpetuation of sex, race, and ethnic inequality.

[SOC 3670 Social Inequalities in Physical and Mental Health (also HD 3570)
Fall. 3 credits. Next offered 2010–2011. E. Wethington.]
For description, see HD 3570.

SOC 3710 Comparative Social Inequalities (also DSOC 3700) (SBA-AS)
Fall and spring. 3 credits. Fall, R. Mize; spring, T. Hirschel.
For description, see DSOC 3700.

SOC 3750 Classical Theory # (SBA-AS)
Spring. 3 credits. Staff.
Introduction to the classics in sociology, primarily works by Karl Marx, Max Weber, Emile Durkheim, and Georg Simmel. Students also study the works of Alexis de Tocqueville, Montesquieu, and Joseph Schumpeter. Special emphasis is put on the concepts, ideas, and modes of explanation that characterize the classics. Students also look at these writers’ empirical material, and what may be termed the social construction of the classics. Course requirements include active class participation and three tests in class.

SOC 3950 The Nature of Capitalism: Markets, Firms, and People (SBA-AS)
Spring. 4 credits. R. Swedberg.
This course looks at the modern economy from a sociological perspective in which the role of capitalism is emphasized. It begins with a presentation and discussion of the key theoreticians of capitalism, such as Marx, Weber, Schumpeter, and Polanyi. It then continues with the various institutions that make up or are part of the capitalist system, such as the firm, the market, the state, and the legal system. Cultural aspects of capitalism as well as normative argument, for and against capitalism, will also be discussed. Course requirements include active class participation and three tests in class.

SOC 3970 Israeli–Palestinian Conflict (also GOVT 3977, HIST 3970, JWST/ NES 3697) (HA-AS)
Spring. 4 credits. R. Brann.
For description, see NES 3697.

Advanced Courses

The following courses are intended for advanced undergraduates with substantial preparation, as well as for graduate students in sociology and related disciplines. The normal prerequisite for all 4000-level courses is one introductory course plus 3010 (or an equivalent statistics course). Students who are not sure whether their background is sufficient for a particular course should consult the professor.

SOC 4080 Qualitative Methods (also SOC 5080) (SBA-AS)
Spring. 4 credits. M. Berezin.
This course aims to acquaint students with the practice of non-quantitative research methods. It does not offer a laundry list of techniques, rather it asks students to think about how particular methods are more or less suited to the answering of particular types of research questions. The course is divided into four parts: (1) an introduction to discussion of theory, methods and evidence in social science; (2) a series of readings and exercises on particular methods; (3) an analysis of full-length works to see how they were put together; (4) discussion of student projects.

SOC 4110 Health and Survival Inequalities (also DSOC/FGSS 4100) (SBA-AS)
Fall. 4 credits. A. Basu.
For description, see DSOC 4100.

SOC 4210 Theories of Reproduction (also DSOC/FGSS 4210) (SBA-AS)
Spring. 4 credits. A. Basu.
For description, see DSOC 4210.

SOC 4250 Artificial Societies (also SOC 5270) (SBA-AS)
This seminar is an introduction to computer simulation. The course surveys the history of social simulation and introduces students to complexity theory, game theory.

SOC 4340 Online Social and Information Networks
Fall. 4 credits. M. Macy.
This research seminar will introduce students to the methods of network analysis and online data collection, and to empirical models of online social interaction, including diffusion, homophily, and social influence. Students will design, develop, and carry out a semester-long research project using these methods and models.

SOC 4420 The Sociology of Science (also BSOC/STS 4421) (SBA-AS)
For description, see STS 4421.

SOC 4460 Economic Sociology (also SOC 6460) (SBA-AS)
Fall. 4 credits. Next offered 2011–2012. V. Nee.
This course introduces the field of economic sociology and covers major topics addressed by sociologists studying the intersection of economy and society.

SOC 4510 Special Topics in Social Psychology: Social Structure and Personality
Spring. 4 credits. L. Auf der Heide.
As individuals living in societies, we are both impacted by our positions within society, and have the ability, through our membership in groups, to impact society. The study of social structure and personality examines this reciprocal relationship between individuals and their societies. This course is structured in three units. In the first unit of the course students will examine how sociologists view the questions posed by which individuals come to have a self, how we think about ourselves, and how we feel about ourselves. The second unit will expose students to literature that documents how an individual’s location along various dimensions in the social structure (for example, race and ethnicity, gender, age, or social class) impacts familial, work, and educational outcomes. And during the third unit students will investigate the impact of changing cultural values and social structures on our perceptions of the world and our sense of who we are as individuals. Throughout the course, students will be actively engaging with these topics using a positivist, scientific lens; students will be encouraged to approach topics critically, apply concepts to real-life experiences, and write a culminating research paper on a topic of particular interest to the student.

SOC 4530 Knowledge and Society (also STS 4531) (CA-AS)
Spring. 4 credits. C. Leuenberger.
For description, see STS 4531.

SOC 4570 Health and Social Behavior (also HD 4570)
Fall. 3 credits. Prerequisites: HD 2500, SOC 1101, DSOC 1101, or SOC 2500 and a course in statistics. Letter grades only. E. Wethington.
For description, see HD 4570.

SOC 4780 The Family and Society in Africa (also ASRC 4606) (SBA-AS)

SOC 4910 Independent Study
Fall or spring. 1–4 credits. For undergraduates who wish to obtain research experience or do extensive reading on a special topic. Prerequisite: acceptable prospectus and agreement of a faculty member to serve as supervisor for project throughout semester. Graduate students should enroll in 8910–8920.

SOC 4920 Economic Sociology of Entrepreneurship (SBA-AS)
For description, see department.

SOC 4950 Honors Research
Fall or spring. 4 credits. Prerequisite: sociology seniors; permission of instructor.

SOC 4960 Honors Thesis: Senior Year
Fall or spring. 4 credits. Prerequisite: SOC 4950.

Graduate Core Courses

These courses are primarily for graduate students in sociology but may be taken by other graduate students with permission of the instructor.

[SOC 5010 Basic Problems in Sociology I
Analysis of theory shaping current sociological research. Examination of several central problems in sociological inquiry provides an occasion for understanding tensions and continuities between classical and
contemporary approaches, for indicating the prospects for unifying microsociological and macrosociological orientations, and for developing a critical appreciation of efforts to integrate theory and research.]

**SOC 5020 Basic Problems in Sociology II**  
Fall. 4 credits. D. Heckathorn.  
Continuation of SOC 5010. Emphasis is on the logical analysis of theoretical perspectives, theories, and theoretical research programs shaping current sociological research. The course includes an introduction to basic concepts used in the logical analysis of theories and examining their application to specific theories and theoretical research programs. Theoretical perspectives include functionalism, social exchange, and interactionism.

**SOC 5060 Research Methods II**  
Spring. 4 credits. E. Hirsh.  
This course provides an in-depth examination of linear modeling. We begin with the basics of linear regression, including estimation, statistical inference, and model assumptions. We then review several tools for diagnosing violations of statistical assumptions and what to do when things go wrong, including dealing with outliers, missing data, omitted variables, and weights. Finally, we will explore extensions of the linear regression model, including models for categorical outcomes and hierarchical linear modeling. While statistical modeling is the focus of the course, we proceed with the assumption that models are only as good as the theoretical and substantive knowledge behind them. Thus in covering the technical material, we will spend considerable time discussing the link between substantive knowledge and statistical practice.

**Graduate Seminars**

These seminars are primarily for graduate students but may be taken by qualified advanced undergraduates who have permission of the instructor. The seminars offered in each semester are determined in part by the interests of students, but it is unlikely that any seminar will be offered more frequently than every other year. The list below indicates seminars that are likely to be offered, but others may be added and some may be deleted. Students should check with the department before each semester.

**SOC 5080 Qualitative Methods (also SOC 4080)**  
Spring. 4 credits. M. Berezin.  
For description, see SOC 4080.

**SOC 5100 Seminar on Comparative Societal Analysis**  
Spring. 3 credits. Prerequisite: advanced graduate students throughout social sciences; permission of instructor. Next offered 2010–2011. M. Berezin.  
For description, see department.

**SOC 5180 Social Inequality**  
Fall. 4 credits. S. M. Logan.  
This course serves as an introduction to contemporary theories, debates, and models regarding the structure of social classes, the determinants of social mobility, the sources and causes of racial, ethnic, and gender-based inequality, and the putative rise of postmodern forms of stratification. The twofold objective is to both review contemporary theorizing and to identify areas in which new theories, hypotheses, and research agendas might be fruitfully developed.

**SOC 5190 Workshop on Social Inequality**  
Spring. 4 credits. Prerequisite: SOC 5180; sociology Ph.D. students, or permission of instructor. Next offered 2010–2011. K. Weeden.  
A forum in which students and others can present, discuss, and receive instant feedback on their inequality-related research. Its goal is to help students advance their research.

**SOC 5270 Artificial Societies (also SOC 4250)**  
For description, see SOC 4250.

**SOC 5290 Conflict and the Nation-State**  
The nation–state developed out of conflict, through military competition within Europe and the rise of and response to colonial empires in the Americas, Asia, and Africa.

**SOC 5400 Organizational Research**  
Seminars focusing on contemporary sociological research on organizations. It centers theoretically on the interplay of institutional, ecological, and choice-theoretic accounts of organizational structure and action.

**SOC 5710 Social and Political Context of American Education (also AMST/EDUC 2710/5710, SOC 2710)**  
Fall. 5 or 4 credits, option. J. Sipple.  
For description, see EDUC 2710.

**SOC 5800 Identity and Interest in Collective Action**  
Fall. 4 credits. Offered every other year. M. Macy.  
This research seminar examines the problem of collective action from alternative theoretical perspectives: one centered on shared interests, the other on common identities. The former claims that groups are held together because the members are interdependent and thus benefit from mutual trust and cooperation in a common endeavor. Identity theorists contend that trust and cooperation may also depend on affective and normative ties among participants who share a salient demarcation (including a “shared fate”). We will explore this debate, and its possible resolution, through an examination of formal theoretical studies (including game theoretic, evolutionary, and agent-based models) as well as empirical research using experimentation and comparative case analysis. We will also examine research on informal social control (including reciprocity and reputation systems), social networks, and mobilizing strategies as mechanisms for reconciling the tension between individual self-interest and collective obligations. The primary goal is to identify, formulate, and launch promising research projects, and to that end, seminar members will be expected to critically engage the literature each week and to write a final paper that advances original research (as a detailed prospectus or, where practical, as a publishable article).

**SOC 5910 Special Seminars in Sociology**  
Fall and spring. 2–4 credits. Staff.

These graduate seminars are offered irregularly. Topics, credit, and instructors vary from semester to semester. Students should look at the Sociology Department bulletin board at the beginning of each semester for current offerings.

**SOC 6010 Evaluating Statistical Evidence (also SOC 3010)**  
Fall. 4 credits. M. Brashears.  
For description, see SOC 3010.

**SOC 6050 Political Sociology**  
Fall. 3 credits. Next offered 2011–2012. S. Soule.  
For description, see department.

**SOC 6060–6070 Sociology Colloquium**  
Fall and spring. 0 credits. Requirement for sociology graduate students. Staff.  
A series of talks representative of current research interests in sociology, given by distinguished visitors and faculty members.

**SOC 6080 Proseminar in Sociology**  
Fall. 1 credit. Prerequisite: first-semester sociology graduate students. Staff.  
Discussion of the current state of sociology and of the research interests of members of the graduate field; taught by all members of the field.

**SOC 6090 Special Topics in Methodology**  
For description, see department.

**SOC 6100 The Sociological Classics**  
The purpose of the course is to make the student familiar with the concepts, ideas and ways of reasoning that characterize the major works of the classics.

**SOC 6110 Introduction to Network Theory and Methods**  
Spring. 4 credits. Intended as an introduction for students who have not had exposure to network analysis previously or who are interested in the historical role of networks in sociology. M. Brashears.

Social Network Analysis (SNA), or the mathematical analysis of webs of relationships, is a thriving part of sociology and an active research area for numerous other disciplines. This course is intended to introduce students to the basics of SNA and help them apply it to a variety of research questions. We will discuss the theoretical underpinnings of the area, basic concepts used in SNA analyses, and finally methods for describing and interpreting network data. At the completion of this course students should have a basic understanding of social networks and be able to carry out a variety analyses on their own.

**SOC 6260 Controversies in Economic Sociology**  
Fall. 4 credits. R. Swedberg.  
This course is open to seniors and graduate students. It takes the form of a seminar in which each meeting will be devoted to a discussion of a controversial and/or difficult issue in economic sociology. Issues that will be discussed for-and-against include the notion of embeddedness, the market, bonuses, and Homo economicus. For these classes, there will be two readings for each class: one for and one against. Each student will have to argue once “for” and once “against” on some
issue. A few topics will also be included where there exist substantially different interpretations rather than just 'for-and-against' opinions. The main topic here is the current financial crisis, but we will also be discussing different programs in economic sociology besides embeddedness, especially those of Max Weber and Pierre Bourdieu.

**SOC 6300 Cultural Sociology**

Spring. 4 credits. M. Berezin.
Cultural sociology is a flourishing sub-field within sociology that incorporates a wide range of substantive areas (art, inequality, family, politics) and uses a wide range of methods from the ethnographic to the textual. This course proposes to explore some of the leading works and ideas in that field and to analyze how culture operates in social life. It begins by analyzing the different meanings that sociologists have ascribed to culture. We begin by reading classics like Durkheim's *Elementary Forms of Religious Life* then move on to contemporary theorists such as Geertz, Bourdieu, Alexander and Swidler. We then read a series of empirically grounded case studies that make culture the basis of the analysis (i.e., Lamont, *Money Manners and Morals*). We will also analyze certain cultural objects such as films, art, etc. to put into practice some of the ideas from the readings. There is no course such as this taught by a practicing cultural sociologist in the university.

**SOC 6320 Inside Technology: The Social Construction of Technology (also STS 6321)**

Fall. 4 credits. Staff. For description, see STS 6321.

**SOC 6350 Network Sampling and Network Structure**

Fall. 4 credits. Next offered 2010–2011.
D. Heckathorn.
Network sampling methods provide means for drawing probability samples of hidden and hard-to-reach populations. These are difficult to sample using standard survey research methods.

**SOC 6460 Economic Sociology (also SOC 4460)**

Fall. 4 credits. Next offered 2011–2012.
V. Nec.
For description see SOC 4460.

**SOC 6500 Research Methods in Social Movements**

S. Soule.
For description, see department.

**SOC 6600 States and Social Movements (also GOVT 6603)**

S. Tarrow.
For description, see GOVT 6603.

**SOC 6660 Event History Analysis**

Spring. 4 credits. D. Strang.
Event history analysis (also known as hazard or survival analysis) is a family of methods for the study of discrete outcomes over time. Typical sociological examples are demographic events (births, deaths) and forms of institutional or structural change (marriage, job entry, revolution). This class introduces main concepts, models, and measurement issues in event history analysis, and provides students with an opportunity to gain practical familiarity with the technique.

**SOC 6860 War, States, and Human Rights (also GOVT 6867)**

Fall. 4 credits. S. Tarrow.
For description, see GOVT 6867.

**SOC 6910 Independent Study**

Fall or spring. 2–4 credits. Prerequisite: graduate status and permission of faculty member and to supervise project. Staff. For graduates who wish to obtain research experience or to do extensive reading on a special topic. Permission to enroll for independent study is granted only to students who present an acceptable prospectus and secure the agreement of a faculty member to serve as supervisor for the project throughout the semester.

**SOC 7780 Solidarity in Groups (also ILROB 7780)**

Fall. 5 credits. Next offered 2010–2011.
E. Lawler.
For description, see ILROB 7780.

**SOC 8910–8920 Graduate Research**

8910, fall; 8920, spring. Variable to 4 credits each semester. Prerequisite: graduate standing and permission of thesis supervisor.

**SOC 8950–8960 Thesis Research**

8950, fall; 8960, spring. Variable to 6 credits each semester. Prerequisite: permission of thesis supervisor.

---

**SOUTHEAST ASIA PROGRAM**

The South Asia Program coordinates research, teaching, and special campus events relating to Afghanistan, Bangladesh, India, Pakistan, Nepal, and Sri Lanka. The program faculty include members from a variety of disciplines, including agricultural economics, agricultural engineering, anthropology, architecture, art, city and regional planning, comparative religion, development sociology, ecology and systematics, economics, English, geography, government, history, history of art, human ecology, industrial and labor relations, international agriculture, linguistics, and literature. Undergraduates with a special interest in the region may major in Asian Studies with a concentration in Southeast Asian studies with any other major or minor.

**SOUTH ASIA PROGRAM**

The South Asia Program coordinates research, teaching, and special campus events relating to Afghanistan, Bangladesh, India, Pakistan, Nepal, and Sri Lanka. The program faculty include members from a variety of disciplines, including agricultural economics, agricultural engineering, anthropology, architecture, art, city and regional planning, comparative religion, development sociology, ecology and systematics, economics, English, geography, government, history, history of art, human ecology, industrial and labor relations, international agriculture, linguistics, and literature. Undergraduates with a special interest in the region may major in Asian Studies with a concentration in Southeast Asian studies, or pursue a Master of Professional Studies in another school with a concentration in Southeast Asian studies. Ph.D. students specializing in Southeast Asia receive a doctorate in a discipline such as history, history of art, anthropology, government, linguistics, music, economics, or city and regional planning. Undergraduates interested in Southwest Asia also have the option to pursue a minor in Southwest Asian studies.

For courses available in Southeast Asian studies and details on the major, see the Department of Asian Studies listing in this volume. Additional information is available at the Cornell University website.
Participation by students from all disciplines.

Arts ethic of the college. The department invites students in accordance with the general liberal arts ethic of the college. The department provides students with a wide range of opportunities in theatre, film, and dance. It also offers bachelor of arts degrees in theatre (described below) may also be used to fulfill this requirement.

Four courses in the area of theatre studies (see ‘Theatre Studies’ section of theatre courses) chosen in the following manner:

1. One course must be at 3000 level
2. One course must be at 4000 level
3. Two additional courses at the 3000 or above level
4. One of the four courses must be pre-20th century.

Three courses (at least 9 credits) in other theatre courses chosen in consultation with the faculty advisor. Course taken to qualify for admission to the Advanced Undergraduate Theatre Program (described below) may also be used to fulfill this requirement.

Courses in which a student receives a grade below C cannot be used to fulfill the requirements for a Theatre Major.

Honors
Theatre honors program is for majors who have demonstrated exceptional ability in the major and who seek an opportunity to explore branches of their subject not represented in the regular curriculum or to gain experience in original research. To be part of the honors program the student must maintain a GPA of 3.5 in classes for the theatre major and an average of 3.0 in all courses. Students must consult with their advisors in the spring of their junior year to enroll in the honors programs.

The Advanced Undergraduate Theatre Program
The department offers advanced study in directing, playwriting, design/technology, and stage management to students who qualify on the basis of outstanding achievement in course work. Admission to the AUTP is by invitation of the area faculty supervisor and the completion of a recommended “track” of courses or equivalent experience. (For recommended courses of study see listing of courses at end of departmental listings.) Approval process includes a portfolio review and/or interview. The program provides students with intensive study in theatre as well as the opportunity to collaborate with professional faculty and guest artists.

Minor in Theatre
The Theatre Minor is divided into three tracks in order to allow students to focus in the area that interests them most within the theatre discipline. The Theatre Studies Track is the most generalized, providing an introductory exposure to performance and production studies, with the remaining courses taken in theatre history, theory and criticism. The Theatre Performance Track is tailored to students who wish to focus their studies in the areas of acting and directing. And the Theatre Production Track is tailored to those students interested in exploring more specifically theatre design and technology.

Requirements:

Theatre Studies Track
1. THETR 2400 or 2410: Introduction to World Theatre I or II
2. THETR 2800: Introduction to Acting
3. Three acting or directing courses
4. One theatre studies course at any level
5. One 3000-level theatre studies course
6. One 3000-level theatre studies course

Theatre Performance Track
1. THETR 2400 or 2410: Introduction to World Theatre I or II
2. THETR 2800: Introduction to Acting
3. Three acting or directing courses
4. One theatre studies course at any level
5. One 3000-level theatre studies course

Theatre Production Track
1. THETR 2400 or 2410: Introduction to World Theatre I or II
2. THETR 2800: Introduction to Acting
3. Three acting or directing courses
4. One theatre studies course at any level
5. One 3000-level theatre studies course

Courses in which a student receives a grade below C cannot be used to fulfill the requirements for the Theatre Minor.

Information on current courses that can be used to satisfy requirements of the above minors can be obtained at 223 Schenck Center, or online at www.einaudi.cornell.edu/theatrearts/academics/theatre/TheatreMinorRequirements.asp.
Independent Study, Internships, and Honors

**THETR 3000 Independent Study**
Fall, spring, or summer. 1–4 credits.

**THETR 4850 Undergraduate Internship**
Fall, spring, or summer. 1–3 credits.
Prerequisite: majors or concentrators in the department.

**THETR 4950 Honors Research Tutorial**
Fall. 4 credits. Prerequisite: honors students in theatre.

**THETR 4960 Honors Research Tutorial**
Fall. 4 credits. Prerequisite: honors students in theatre.

**THETR 7210 Independent Study for Graduate Students in Theatre**
Fall and spring. 1–4 credits. Staff.

**First-Year Writing Seminars**
Consult the John S. Knight Institute brochure for times, instructors, and descriptions.

**Theatre Studies**

- **THETR 2150 The American Musical (also AMST 2105, ENGL 2150, MUSIC 2250) (LA-AS)**
  Fall. 3 credits. Next offered 2010–2011.
  N. Salvato.
  The musical is a distinct and significant form of American performance. This course will consider the origins, development, and internationalization of the American musical and will emphasize how political, social, and economic factors shape the production of important American musicals.

- **THETR 2230 The Comic Theater (also CLASS 2651, COML 2230) (LA-AS)**
  J. Rusten.
  For description, see CLASS 2651.

- **THETR 2360 Public Voice and Civic Gesture (also DANCE 2450, VISST 2260)**
  Fall. 1 credit. Next offered 2010–2011.
  B. Suber.
  For description, see DANCE 2450.

- **THETR 2400 Introduction to World Theatre I—Antiquity through 1500 @ (LA-AS)**
  Fall. 4 credits. S. Warner.
  A survey of practices, literatures, and themes of global performance in Africa, America, Asia, and Europe from antiquity through 1500. Examines case studies from ancient Egypt, Greece, Rome, the Near East, India, China, Japan, and England, continuing up to the age of European imperialism. Looks at issues of masking and identity, storytelling and ritual, stage and society, tradition and modernity. Lectures are combined with periodic student projects.

- **THETR 2410 Introduction to World Theatre II—NeoClassical to the Present @ (LA-AS)**
  Spring. 4 credits. N. Salvato.
  A survey of practices, literatures, and themes of global performance from around 1600 to the present. Examines the development of European and Asian vernacular and national theatrical traditions; recent ethnic and popular performance traditions of Europe, Asia, Africa, and meso-America; recurring issues of realism and theatricality; avant-garde innovations; colonial expansion and marginalized; intercultural and transnational exchanges. Lectures are combined with periodic student projects.

- **THETR 2605 Theater, Sport, and Spectacle: Performance and Competition in Greece and Rome (also CLASS 2605) @ (CA-AS)**
  Fall. 3 credits. J. Rusten.
  For description, see CLASS 2605.

- **THETR 2700 Shakespeare (also ENGL 2270) @ (LA-AS)**
  Spring. 4 credits. B. Correll.
  For description, see ENGL 2270.

- **THETR 2770 Theatrical Opera (also MUSIC 2241) @ (LA-AS)**
  Spring. 3 credits. R. Harris-Warrick.
  For description, see MUSIC 2241.

- **THETR 2770 Desire (also COML/ENGL/FGSS 2760) (LA-AS)**
  E. Hanson.

- **THETR 3100 Special Topics in Drama and Performance (also ENGL 3760, FGSS 3130)**
  Fall. 4 credits. Next offered 2010–2011.
  S. Warner.
  An intensive study of a particular dramatist, period, form or problem in drama and/or performance. Topics, prerequisites and formats will vary from year to year.

- **THETR 3190 Music, Dance, and Light (also DANCE 3590, VISST 3519) (LA-AS)**
  Spring. 3 credits. Attendance at dance concerts and music concerts required.
  A. Fogelsanger and E. Innemann.
  For description, see DANCE 3590.

- **THETR 3260 Queer Performance (also FGSS 3250) (LA-AS)**
  Fall. 3 credits. Limited to 15 students.
  S. Warner.
  What constitutes queer performance? What is queer’s relationship to lesbian and gay? What is performance’s relationship to theatre? Is sexuality all we mean by queer?

- **THETR 3350 Modern Western Drama, Modern Western Theatre: Theory and Practice (also ENGL 3350, VISST 3735) (LA-AS)**
  N. Salvato.
  This course investigates drama and the cultural contexts of its performance from the mid-19th century to the mid-20th century in Europe and the United States.

- **THETR 3360 American Drama and Theatre (also AMST 3360) (LA-AS)**
  Spring. 4 credits. Prerequisite: permission of instructor. Limited to 25 students. Next offered 2010–2011.
  N. Salvato.
  This course explores major American playwrights from 1900 to 1960, introducing students to American theater as a significant part of modern American cultural history.

- **THETR 3370 Contemporary American Theatre (also AMST/ENGL 3370) (LA-AS)**
  S. Warner.
  In this course we will examine major trends in American drama from 1960 to the present.

- **THETR 3450 The Tragic Theatre (also CLASS 3645, COML 3440) @ (LA-AS)**
  Spring. 4 credits. Limited to 40 students.
  F. Abi.
  For description, see CLASS 3645.

- **THETR 3720 Medieval and Renaissance Drama (also ENGL 3720) @ (LA-AS)**
  M. Raskolnikov.
  For description, see ENGL 3720.

- **THETR 4030 Ritual, Play, Spectacle, Act: Performing Culture (also THETR 6030) (LA-AS)**
  S. Warner.

- **THETR 4070 Transnational Imagination: A Seminar on Modern Theatre and Cultural History (also THETR 6070) (LA-AS)**
  Fall. 4 credits. H. Yan.
  This seminar examines a selection of works by major dramatic artists and critical theorists central to the making of modern theatre and cultural history. Materials are organized with a focus on variable aesthetics of visibility and disappearance as sites of human practices in social politics of place, dislocation, and transformation within and across nationally marked boundaries. Special attention is paid to such issues as codifications of the world stage, regimes of intelligibility, and productive relations between nationally designated performances and present moment of imagination exceeding such designation in the theatres of modern history. Further discussion is devoted to the different ways in which textual scenes, theatrical productions, intellectual articulations, and public events explored in this seminar converge to evoke transformational styles of social subjects, forms of cultural embodiments, and methods of political belongings in the midst of a crisis-ridden era of Globalization. Readings include
Japanese authors such as Kishida Kunio, Kubo theatres will be introduced and studied in the traditional forms of Chinese and Japanese the beginning of the 20th century. While major profound ruptures and variable continuities Japanese theatres with an emphasis on the texts assigned for each session and come to institutions of theatre and drama over greater time exploring both their reception within the traditions. In so doing we will seek to develop will be to focus our analysis on a smaller span of over two thousand years, the point theories of theatrical representation from Aristotle to the present. Although covering a variety of political agendas and aesthetic challenges the boundaries of text to discover the possibilities of performance. Asks: How do we translate inspiration into tangible (or intangible) theatrical imagery? Working in workshop format as actors and writers, students explore the process of developing theatre pieces based on a variety of sources.

**THETR 4260 Adaptation: Text/ Theatricality (also VISST 4260) (LA-AS)**
Spring. 4 credits. Prerequisite: permission of instructor. B. Miller.
Mounting a script into a show is a process of adaptation from page to stage. This course challenges the boundaries of text to discover the possibilities of performance. Is there a "female dramaturgy?" What is the female tradition in the theatre? This course explores these questions through an investigation of texts by women dramatists, including Hrotsvitha, Aphra Behn, and Caryl Churchill, as well as the works of some critics as Sue Ellen Case and Jill Dolan.

**THETR 4460 Romantic Drama (also ENGL 4440/6440, THETR 6440) (LA-AS)**

**THETR 4450 Text Analysis for Production: How to Get from the Text onto the Stage (also ENGL 4450, VISST 4545)**
Spring. 4 credits. Limited to 15 students. Prerequisite: THETR 2500 or 2910 or 3980, or permission of instructor. B. Levitt.
Examines the play as the central, essential source for production decisions made by the actor, the director, the designer, and the dramaturg. Students "present" their conclusions about the performance of studied texts through project work as either an actor, director, designer, or dramaturg, as well as through two to three papers.

**THETR 4460 Shakespeare in (Con)text (also ENGL 4210, VISST 4546) (LA-AS)**
Fall. 4 credits. Limited to 15 students. Prerequisite: permission of instructor. Next offered 2010–2011. B. Levitt.
Examines how collaboration among stage directors, designers, and actors leads to differing interpretations of plays. The course focuses on how the texts themselves are blueprints for productions with particular emphasis on the choices available to the actor inherent in the text.

**THETR 4470 Hamlet: The Seminar (also ENGL 4820) (LA-AS)**
Fall. 4 credits. Limited to 15 students. Prerequisites: THETR 2400, 2410, 2420 or equivalent and permission of instructor. B. Levitt.
The most studied and written about work in Western Literature outside the Bible, Hamlet, according to Harold Bloom, is our secular savior and our ambassador to death. This course centers on a close reading of the play. Through research and assigned readings the course texts theoretical viewpoints about the play against the text itself by reading the theory in relationship to the production history.

**THETR 6000 Proseminar in Theatre Studies**
Spring. 4 credits. Prerequisite: graduate standing.

An introduction to the theory and methods involved in the study of the theatre. Attention focuses on pedagogy and the profession in Part I. Part II explores current scholarly trends.

**THETR 6050 Camp, Kitsch, and Trash (also ENGL 6510, FGSS 6050)**
Spring. 4 credits. N. Salvato.
This seminar investigates histories of taste; the traffic between popular culture and "high art"; and the relationships among material artifacts, identity politics, and community formations.

**THETR 6060 Passionate Politics (also FGSS 6060)**
Complete Course Title: Passionate Politics: Affect, Protest, Performance. This course explores the relationship between affect, performance, and political engagement.

**THETR 6070 Transnational Imagination: A Seminar on Modern Theatre and Cultural History (also THETR 4070)**
Fall. 4 credits. H. Yan.
For description, see THETR 4070.

**THETR 6270 Studies in Shakespeare and Marlowe (also ENGL 6270)**
Fall. 4 credits. B. Correll.
For description, see ENGL 6270.

**THETR 6300 Melodrama, Modernism, and Modernity (also ENGL 6300)**
This course examines the history of melodrama and the various theories, often sharply divergent, that have developed about and around it.

**THETR 6310 Theory of Theatre and Drama (also COML 6051, GERST/ THETR 4310)**
Fall. 4 credits. H. Yan.
For description, see THETR 4310.

**THETR 6320 Theatre and Society: A Comparative Study of Asian Dramatic Cultures (also ASIAN 4435/6632, THETR 6320)**
Spring. 4 credits. H. Yan.
For description, see THETR 4320.

**THETR 7100 The Pedagogy of Theatre**
Fall. 4 credits. Corequisite: relevant undergraduate class and permission of instructor. Staff.
Provides graduate students in the field of theatre an opportunity to work directly with a faculty member to explore pedagogical theory and practice for undergraduate theatre classes in all areas of the curriculum.

**Acting**

**THETR 1550 Rehearsal and Performance**
Fall or spring. 1–2 credits; 1 credit per production experience per semester up to 2 credits per semester. Students must register for course in semester in which credit is earned. Prerequisite: students who are assigned roles after tryouts at department's scheduled auditions. Students should add this course only after they have been assigned roles. S–U grades only.
The study, development, and performance of roles in departmental theatre or dance productions or the study and practice of directing as experienced in assisting faculty and guest directors.
THETR 2500 Rehearsal Workshop
Fall or spring. 2 credits. Limited to 30 students. Prerequisites: participation in a particular department production and permission of instructor. Staff. Enables students participating in a particular production to gain expertise and/or knowledge to contribute to that production. The focus of the course depends on the needs of a particular production (e.g., history, choreography, textwork, dramaturgy).

THETR 2800 Introduction to Acting (LA-AS)
Fall and spring. 3 credits. Limited to 16 students per sec. Preregistration and registration only through roster in department office, 223 Schwartz Center. No online registration. Staff. An introduction to the actor's technique and performance skills, exploring the elements necessary to begin training as an actor, i.e., observation, concentration, and imagination. Focus is on physical and vocal exercises, improvisation, and text and character. There is required play reading, play attendance, and some scene study.

THETR 2810 Acting I (LA-AS)
Fall and spring. 3 credits. Limited to 14 students per sec. Prerequisites: sophomore standing and above; THETR 2800 and audition. Registration only through roster in department office, 223 Schwartz Center. Practical exploration of the actor's craft through exercises in physical and psychological action, improvisation and scene study.

THETR 2820 Standard American Stage Speech (LA-AS)
Fall. 3 credits. Limited to 10 students. Prerequisites: THETR 2800 and permission of instructor. Next offered 2010–2011. A. Van Dyke. Introduction to Standard American Stage Speech. Study of various regional American accents and Standard American Stage Speech using the International Phonetic Alphabet (IPA) as a way to designate the vowel, diphthong, and consonant sounds of spoken English.

THETR 2840 Speech and Dialects for Performance (LA-AS)
Spring. 3 credits. Limited to 10 students. Primarily for department majors. Prerequisites: THETR 2810 and permission of instructor. A. Van Dyke. Development of speech and dialects in dramatic text.

THETR 2880 Acting II (LA-AS)
Fall. 3 credits. Limited to 12 students. Prerequisite: THETR 2810 and audition. M. Dreyer. Continuation of Acting I. Special consideration is given to a physical approach to characterization.

THETR 3810 Acting III: Advanced Scene Study (LA-AS)
Spring. 3 credits. Limited to 10 students. Prerequisite: audition. Strong preference given to those who have taken THETR 4460. B. Levitt. Focuses on advanced problems for the stage. Monologues and scenes are drawn from Shakespeare and classical sources.

THETR 3840 Commedia: A Contemporization of Physical Acting Styles and the Comic Approach (also VISST 3850) (LA-AS)
Spring. 3 credits. Limited to 10 students. Prerequisite: THETR 2810, and permission of instructor. B. Milles. A wholly physical acting course based in the practices of Commedia dell'arte—stock characters, physical lazi, improvisation, street theatre—using improvisation, some mask work, clown and viewpoint training. An exploration of how to use the body to illuminate text, and how to mine text to maximize comedy.

THETR 3850 Advanced Studies in Acting Techniques (LA-AS)
Fall or spring. 3 credits, may be repeated for credit. Limited to 8 students. Prerequisites: THETR 2810, 2840, and audition, and permission of instructor. A. Van Dyke. Scene study using plays that require the accents studied in THETR 2840.

THETR 3860 Solo Performance (LA-AS)
Fall. 4 credits. Prerequisites: THETR 2800, 2810, and permission of instructor. B. Levitt. THETR 3860 was designed to explore the evolution and performance of material from nonscripted forms and focus on the performance of those texts by the solo performer. Material may be drawn from newspapers, novels, poetry, nonfiction, biography, autobiography, and interviews.

THETR 4810 Senior Seminar in Theater Exploration
Spring. 3 credits. Prerequisites: 3000-level acting course and/or senior theater student by permission of instructors. Next offered 2010–2011. B. Levitt and A. Van Dyke. This seminar will re-explore and summarize the techniques taught in acting and theater classes relating to performance and serve as a culminating experience for those undergraduates whose major study of interest during their four years at Cornell has been in the performance side of Theatre Arts.

THETR 4770 Student Laboratory Theatre Company
Fall or spring. 1–2 credits. The Student Laboratory Theatre Company (SLTC) is a group of student-actors who earn credit by acting in three scenes directed by students taking THETR 4980. Students enrolling in SLTC for credit earn 1 credit for two projects and 2 credits for three projects. SLTC also meets with directors once a week.

THETR 3980 Fundamentals of Directing I (also VISST 3798) (LA-AS)
Fall. 3 credits. Limited to 9 students. Prerequisite: permission of instructor. Special consideration given to students who have completed THETR 2800 or are intending to continue in area of stage or screen directing. Students should see instructor one-on-one in advance to sign up for course. D. Feldshuh. Focused, practical exercises teach the student fundamental staging techniques that bring written text to theatrical life. A core objective is to increase the student's awareness of why and how certain stage events communicate effectively to an audience. Each student directs a number of exercises as well as a short scene.

THETR 4980 Fundamentals of Directing II (LA-AS)
Spring. 4 credits. Limited enrollment. Prerequisite: THETR 2800 and 3980, and permission of instructor. Recommended: THETR 2500 and 2810 (D. Feldshuh). Builds on the staging techniques learned in Fundamentals of Directing I. In this course each student directs actors from the Student Laboratory Theatre Company in a series of projects and public presentations focusing on specific directorial challenges.

THETR 4990 Practicum in Directing
Fall or spring. 1–4 credits. Prerequisites: THETR 2400, 2500, 2800, 3980, 4890, and permission of instructor. D. Feldshuh. Allows the student who has completed the appropriate prerequisites the opportunity to direct a full presentation of theatre in conjunction with a faculty mentor. May also involve an internship with a prominent director on campus or the opportunity to assist direct a faculty or guest director.

Playwriting

THETR 3840 Playwriting (LA-AS)
Fall. 4 credits. Limited to 12 students. Prerequisite: permission of instructor. B. Milles. Various approaches and techniques are examined as the student is introduced to the art and craft of dramatic writing. The student is required to read dramatic texts, observe theatre productions and rehearsals, and write. The semester culminates in the completion of a 20- to 30-minute one-act play.

THETR 3490 Advanced Playwriting (LA-AS)
Spring. 4 credits. Prerequisite: THETR 3480 or permission of instructor. Next offered 2010–2011. B. Milles. Continuation of THETR 3480. An intensive writing class. Students are encouraged to explore a rich creative landscape culminating in the completion of a full-length play.

THETR 4970 Seminar in Playwriting
Fall or spring. 1–4 credits. Prerequisite: THETR 3480 and 3490 and permission of instructor. Next offered 2010–2011. Staff. Extension of THETR 3480 and 3490. Students formulate a process for developing a full-length play, which they develop over the course of the semester.

Design, Technology, and Stage Management

Design

THETR 2500 Fundamentals of Theatre Design and Technology (LA-AS)
Fall and spring. 4 credits. Limited to 12 students. Not open to first-semester freshmen. Registration through department roster only in 223 Schwartz Center. Highly recommended: concurrent enrollment in 1 credit of Production Lab (THETR 1510 or 2510). Students required to purchase materials that instructor specify (approx. cost $50). S. Lambert, W. Cross, E. Intemann, and S. Bernstein. Lectures, discussion, and project work introduce the principles of designing scenery, costumes, lighting and sound, and the technical process of realizing designs on stage.
THETR 2540 Theatrical Makeup Studio
Spring. 3 credits. Limited to 10 students. Prerequisite: permission of instructor. Registration only through department roster in 223 Schwartz Center. Students are required to purchase makeup kits that instructor provides (approx. cost $50). It is expected that any interested student will have taken courses within the department in any of the areas of: design, acting, dance, or film, or will have completed rehearsal and performance (THETR 1550) credit. Next offered 2010–2011. Basic technique of makeup design and application for the stage including corrective, old age, likeness, and animals; use of some three-dimensional makeup and false facial hair.

THETR 3190 Music, Dance, and Light (also DANCE 3590, VISST 3519) (LA-AS)
Fall. 3 credits. Limited to 12 students. Attendance at dance concerts and music concerts required. Next offered 2010–2011. E. Intemann and A. Fogelsanger. Artistic values, parameters, and concerns of music (sound design), dance, and lighting design are compared and contrasted, and the combination of design elements is analyzed in contemporary dance.

THETR 3410 CAD Studio for Theatre Design (LA-AS)
Spring. 3 credits. Prerequisite: THETR 2500 and 3400 and permission of instructor. Registration only through department roster in 223 Schwartz Center. Experience in theatre production and graphic communication helpful but not essential. S. Brokhouse and staff. Students will utilize commercially available computer assisted design software to explore the process of designing scenery, costume and lighting for the live theatre. AutoCad, Vectorworks and Photoshop are some of the applications utilized.

THETR 3430 Costume History: From Fig Leaf to Vanity f (LA-AS)
Fall. 3 credits. Limited to 20 students. S. Bernstein.

THETR 3620 Lighting Design Studio I (also DANCE 3660, VISST 3620) (LA-AS)
Fall. 4 credits. Limited to 6 students. E. Intemann. The theory and practice of lighting design as a medium for artistic expression. This course explores the aesthetic and mechanical aspects of light and their application in a variety of disciplines. Emphasis is on understanding lighting’s function in an environment and manipulating light effectively. Artistic style and viewpoint are also covered.

THETR 3640 Scenic Design Studio (LA-AS)
Fall and spring. 3 credits. Limited to 10 students. Prerequisite: THETR 2500 and 3400 or permission of instructor. Experience in theatre production and drawing skills is helpful but not essential. Students are required to purchase materials that instructor will specify (approx. cost $50). Course co-meets with THETR 4640. K. Goetz.

THETR 3650 Automated Lighting and Control
Fall. 3 credits. Limited to 8 students. E. Intemann and F. Sellers. Covers the understanding and application of light control technologies, including electrical systems, color, optics, dimming protocols, and console programming. Students complete a series of projects culminating in the programming and use of moving fixtures and lighting visualization software.

THETR 3660 Costume Design Studio (LA-AS)
Fall. 3 credits; may be repeated for credit. Limited to 10 students. Students are required to purchase materials that instructor will specify (approx. cost $70). S. Bernstein. Design of costumes for the theatre; focusing on script and character analysis, period research, design elements, figure drawing and rendering skills, and an understanding of production style.

THETR 3680 Sound Design and Digital Audio (also DANCE 3680, MUSIC 3431) (LA-AS)
Fall and spring. 3 credits. Prerequisite: permission of instructor. Recommended: some experience with audio/video recording or editing. W. Cross. Basics of digital audio, psychoacoustics, and sound design as they apply to theatre, film, and music production. Weekly projects require time spent in the studio outside of class. Students create soundtracks for text and moving image, with final projects in 5.1 surround sound, using Pro Tools and Digital Performer.

THETR 3690 Interactive Performance Technology (also DANCE 3560, MUSIC 3441) (LA-AS)

THETR 3710 Costume Design Studio II (LA-AS)
Fall. 3 credits. Limited to 10 students. Prerequisite: THETR 3660, or THETR 2500 with permission of instructor. Students are required to purchase materials that instructor will specify (approx. cost $50). S. Bernstein.

THETR 4620 Lighting Design Studio II (also DANCE 4660, VISST 4563) (LA-AS)
Spring. 4 credits. Limited to 6 students; may be repeated for credit. Prerequisite: THETR 2500 or 3620 or permission of instructor. E. Intemann. Concentrates on designing lighting for different genres of performance in various venues. Emphasis is placed on developing both the visual sophistication and the technical artistry of the lighting designer. Commitment, personal style, and professional presentation are stressed.

THETR 4640 Scene Design Studio II (LA-AS)
Fall and spring. 3 credits. Limited to 10 students. Prerequisite: THETR 3640 or permission of instructor. Students are required to purchase materials that instructor will specify (approx. cost $50). Course co-meets with THETR 3640. K. Goetz.

Technology

THETR 2560 Technical Production Studio II
Spring. 3 credits. Limited to 6 students. $30 materials fee. Prerequisite: THETR 2500 or permission of instructor. Additional hands-on time in prop and paint shops required, to be discussed. Stage Properties: introduction to the basic techniques of painting scenery, including but not limited to the layout and painting of bricks, marble, stone, and wood grain for the theatre. Individual projects in scene painting and participation on paint crew for productions are included.

THETR 3400 Theatrical Draffining and Technical Drawing Studio
Fall. 5 credits. Limited to 5 students. Prerequisite: permission of instructor. S. Brookhouse. Implementation of the fundamentals of drafting and technical drawing. Introduction of the concept of an individual style in the approach to drafting for the theatre. Involves a series of projects to familiarize students with the convention and process of visualization and drafting, using both mechanical drafting techniques and AUTOCAD.

THETR 3410 CAD Studio for Theatre Design (LA-AS)
Spring. 3 credits. Prerequisite: THETR 2500 and 3400 and permission of instructor. Registration only through department roster in 223 Schwartz Center. Experience in theatre production and graphic communication helpful but not essential. S. Brookhouse and staff.

THETR 3410 CAD Studio for Theatre Design (LA-AS)
Spring. 3 credits. Prerequisite: THETR 2500 and 3400 and permission of instructor. Registration only through department roster in 223 Schwartz Center. Experience in theatre production and graphic communication helpful but not essential. S. Brookhouse and staff.

THETR 3410 CAD Studio for Theatre Design (LA-AS)
Spring. 3 credits. Prerequisite: THETR 2500 and 3400 and permission of instructor. Registration only through department roster in 223 Schwartz Center. Experience in theatre production and graphic communication helpful but not essential. S. Brookhouse and staff.
Vectorworks, and Photoshop are some of the applications utilized.

**THETR 3520 Themed Entertainment: The Technical Perspective**
Fall. 3 credits. Limited to 12 students. R. Archer.
Exploration into the integration of art and science in today's theme parks and interactive entertainment attractions. Papers, projects, and discussions deal with planning and development aspects of large-scale entertainment projects including architecture, engineering, construction, and attraction installation. Focus is on the specialized entertainment technologies that make these attractions work: audio and lighting design, ride and show control systems, and special effects.

**THETR 3540 Stagecraft Studio**
Fall. 3 credits. Prerequisite: THETR 2500 or permission of instructor. Highly recommended: concurrent enrollment in at least 1 credit of THETR 1510 or 2510. R. Archer.
Exploration of the techniques and practice of theatrical production as they relate to specific areas of production. Development of relevant communication skills and understanding of the production process as experienced by a working stage manager or assistant stage manager. THETR 1530 complements this course.

**THETR 3550 Stage Management Laboratory III**
Fall and spring. 1–4 credits; may be repeated for credit. Before registering, students must attend orientation meeting at 7:30 p.m. in Kiplinger Theatre at Schwartz Center on first Tuesday of classes. Prerequisite: permission of instructor. P. Lillard.
Practical experience in theatrical production as stage manager for a dance theatre concert or an AUP production under the supervision of the faculty production manager. THETR 3700 complements this course.

**THETR 3570 Stage Management Studio**
Fall. 2 credits. Prerequisite: THETR 2500 or 2800 or permission of instructor. Students are required to purchase materials that instructor will specify (approx. cost $10). P. Lillard.
Introduction to the concepts and techniques of stage management as they relate to specific areas of production. Development of relevant communication skills and understanding of the production process as experienced by a working stage manager or assistant stage manager. THETR 1530, 2530, and 3530 complement this course.

**THETR 4530 Stage Management Laboratory I**
Fall and spring. 1–5 credits; may be repeated for credit. Prerequisite: admission to Advanced Undergraduate Theatre Program. P. Lillard.
Practical experience in theatrical production as stage manager for a season production under the supervision of the faculty production manager.

**Production Laboratories**

**THETR 1510 Production Laboratory I**
Fall and spring. 1–3 credits; may be repeated for credit. No prerequisites or experience required. Orientation meeting at 7:30 p.m. on first Tuesday of classes each semester in Kiplinger Theatre at Schwartz Center. P. Lillard, S. Bernstein, and R. MacPike.
Provides practical experiences in theatrical production. Students can work on scenery, costumes, properties, lighting, or stage crew.

**THETR 2510 Production Laboratory II**
Fall and spring. 1–3 credits; may be repeated for credit. Prerequisite: permission of instructor. Orientation meeting at 7:30 p.m. on first Tuesday of classes each semester in Kiplinger Theatre at Schwartz Center. P. Lillard, R. Archer, S. Bernstein, and R. MacPike.
Practical experience in theatrical production as a light board operator, sound board operator, video operator, follow-spot operator, sound technician, head dresser or scenery/props special project.

**THETR 3510 Production Laboratory III**
Fall and spring. 1–3 credits; may be repeated for credit. Prerequisite: permission of instructor. P. Lillard, R. Archer, S. Bernstein, and R. MacPike.
Practical experience in theatrical production as a master electrician, assistant technical director, assistant costume shop manager, or assistant to a faculty or guest director or designer.

**THETR 3510 Production Laboratory IV**
Fall and spring. 1–4 credits; may be repeated for credit. Prerequisite: admission to Advanced Undergraduate Theatre Program. P. Lillard, R. Archer, S. Bernstein, D. Hall, W. Cross, and E. Internam. Practical experience in theatrical production, in the position of designer, shop manager, technical director, or sound engineer.

**Independent Study, Internships, and Honors**

**THETR 3000 Independent Study**
Summer, fall, or spring. 1–4 credits.
Independent study in the theatre allows students the opportunity to pursue special interests not treated in regularly scheduled courses. A faculty member, who becomes the student's instructor for the course, must approve the student's program of study and agree to provide continuing supervision of the work. Students must prepare a proposal for independent study, which is available in 223 Schwartz Center.

**THETR 4850 Undergraduate Internship**
Fall, spring, or summer. 1–3 credits.
To be eligible to enroll and receive credit for an internship, students must either be majors or be concentrators in the department. Students are responsible for arranging their own internships in consultation with the faculty in their area of choice before preregistration for the semester in which the internship is planned to take place. To receive credit within this course, the internship must be unpaid. Students must follow the rules and procedures stated in the departmental internship form.

**THETR 4950 Honors Research Tutorial**
Fall or spring. 4 credits. Prerequisite: honors students in theatre.
First of a two-semester sequence (the second is THETR 4960) for seniors engaged in an honors project.

**THETR 4960 Honors Research Tutorial**
Fall or spring. 4 credits. Prerequisite: honors students in theatre.
Second of a two-semester sequence (the first is THETR 4950) for seniors engaged in an honors project.

**THETR 7210 Independent Study for Graduate Students in Theatre**
Fall and spring. 1–4 credits.
Independent study in theatre allows graduate students the opportunity to pursue special interests not treated in regularly scheduled courses. A faculty member, who becomes the student's instructor for the course, must approve the student's program of study and agree to provide continuing supervision of the work. Students must prepare a proposal for independent study, which is available in 223 Schwartz Center.

**Film**

Faculty: A. Villarejo, D. Fredericksen (director of undergraduate studies in film), S. Haen, (on leave fall 2009), A. Hiss, L. Patti, M. Rivchin.

The study of film began in this department in the 1920s and continues to be based here. In the intervening years, however, it has also spread into a significant number of other departments in the College, including Africana studies, anthropology, Asian studies,
comparative literature, English, German studies, government, history, psychology, Romance studies, and FGSS. This proliferation of courses has been accompanied by a comparable proliferation of perspectives and faculty concerns, e.g., the relationship of national animal literatures and specific cultures, film's relationships to myth and ideology, the use of film as historical evidence, film's efficacy as a rhetorical medium, and film's contribution to perennial issues in aesthetics, the history of the arts, and studies in cognition. However, foundational courses in film production and in the history, theory, and criticism of film as an art are centered in this department.

This richness of courses and perspectives is matched by the ways in which students may make film the focus of their undergraduate studies. The three ways currently being used are: (1) majoring in film within the Department of Theatre, Film, and Dance; (2) constructing an individually tailored Independent Major in film (including the possibility of placing film in tandem with another medium or discipline); and (3) focusing on film as a College Scholar. Students interested in options 2 or 3 should consult both Don Fredericksen (director of undergraduate studies in film) and the director of the College Scholar Program or the director of the Independent Major Program. Students interested in the first option should consult Don Fredericksen.

Students who do not wish to major in film may elect to minor in film under the new guidelines approved by the College of Arts and Sciences. Details of this new option are described below. If interested, consult with Don Fredericksen, director of undergraduate studies in film. In addition, students should be aware that the college has a five-course minor in visual studies, which can be taken independently of, or in conjunction with, a major in film. Students interested in the visual studies minor should contact the undergraduate coordinator, Jessica Smith, in the Department of Art History and Visual Studies.

Film Major Requirements

The department's film major requires a total of 50 credits in film and related courses. Students should note that a number of film courses— including two required "core" courses (FILM 3750 and 3760)—are offered in alternating years. This means that students cannot fulfill the requirements for the major in less than two years and that they should plan accordingly, in consultation with their major advisor. In particular, students must plan to be in residence at Cornell during the fall semesters of both their junior and senior years to take FILM 3750 and 3760. Within the "core" required courses, FILM 2740. Introduction to Film Analysis, is to be taken during the sophomore year. Note: Prospective majors must earn a grade of B (not B–) or higher in FILM 2740 to be accepted into the major. Students may not enter the major until they have completed FILM 2740 in the fall semester of their sophomore year.

Majors wishing to use the production courses in a substantial manner must plan carefully and work within certain limits. These courses are FILM 3240, 3770, 3830, 4220, 4780, and 4930. Enrollment in each of these courses is limited by the nature of the work and by facilities. Enrollment in FILM 4220, 4770, 4780, and 4930 depends on the quality of previous work in FILM 3770 and/or 3830; enrollment is not guaranteed. Majors without a strong interest in production can complete the production requirement with the following course: FILM 3770, after they have taken FILM 2740 in their sophomore year. The total credits in production courses cannot exceed 20 hours; this limit is strictly enforced.

1. A core of four film courses:
   - [FILM 2740 Introduction to Film Analysis (offered every fall semester) 4]
   - [FILM 3750 History and Theory of Commercial Narrative Film (offered alternate fall semesters; next offered fall 2010) (prerequisite for film majors: FILM 2740) 4]
   - [FILM 3760 History and Theory of Documentary and Experimental Film (offered alternate fall semesters) (prerequisite for film majors: FILM 2740) 4]
   - FILM 5770 Introduction to 16mm and Digital Filmmaking (offered every fall semester) 4
   - 2. One of the following theatre courses:
      - THETR 2500 Fundamentals of Theatre Design/Technology (offered every semester) 4
      - THETR 2800 Introduction to Acting (offered every semester) 3
      - THETR 3980 Directing I (prerequisite: permission) (offered every fall semester) 3
      - 3. Four courses (15–16 credits) in film offered by Theatre, Film and Dance as below; or (with permission of advisor) by other departments:
         - FILM 2640 Stordam (offered fall 2009) 4
         - FILM 2650 Studies in Film Analysis: Hitchcock's Films (offered fall 2009) 4
         - FILM 2760 Survey of American Film (offered alternate years; next offered spring 2010) 4
         - ITAL 2950 Cinematic Eye of Italy 3
         - FILM 3290 Political Theory and Cinema 4
         - FILM 3330 Korean History, Society, and Film 3
         - [FILM 3430 International Cinema (offered alternate years; next offered spring 2011) 3]
         - [FILM 3440 American Film Melodrama (next offered 2010–2011) 4]
         - FILM 3520 Short Cinema (offered alternate years; offered spring 2010) 4
         - FILM 3690 Fast-Talking Dames and Sad Ladies: 1940s and Now (offered yearly; offered spring 2010) 4
         - [FILM 3720 Archive Fever (offered alternate years; next offered fall 2010) 4]
         - FILM 3790 Modern Documentary Film (offered alternate spring semesters; offered spring 2010) 4
         - FILM 3850 Screenwriting (offered TBA) 4
         - FILM 3901 Brazilian Cinema: 1960s to Present 4
         - [FILM 4220 Cinematography (offered alternate years; next offered fall 2010) 3]
         - ASIAN 4410 Chinese Film 4
         - ASIAN 4436 Topics in Indian Film 4
         - FILM 4550 History of Modern Polish Cinema (offered alternate years; offered fall 2009) 4
         - FILM 4730 Film and Spiritual Questions (offered alternate spring semesters; offered spring 2010) 4
         - [FILM 4740 Jung, Film, and the Process of Self-Knowledge (offered alternate years; next offered spring 2011) 4]
         - [FILM 4750 Seminar in the Cinema I (offered most years; next offered fall 2010; topic varies; may be repeated for credit) 4]
         - FILM 4760 Seminar in the Cinema II (offered spring 2010 and 2011; topic varies; may be repeated for credit) 4
         - FILM 4780 Intermediate Film and Video Projects: Workshop (offered alternate years; next offered fall 2009) 4
         - GOVT 4809 Politics of 70s Film 4
         - FILM 4930 Advanced Film and Video Projects (offered every spring) 4

4. 15 credits of related course work inside or outside the Department of Theatre, Film and Dance, as approved by the major advisor. The courses chosen to fulfill this requirement should reinforce each major's particular interest in film and will not necessarily be film courses per se. For example, a student interested in the psychology of film, or in ethnographic film, or in film vis-à-vis intellectual or social history, or in film and social change will be encouraged to choose related course work in those areas.

5. Students must earn at least a B (not B–) in FILM 2740 to enter the major. In all subsequent courses used for the major a grade of C (not C–) must be achieved. Courses in which these minimums are not achieved must be repeated, if the student is to receive credit in the major.

6. Course work in production cannot exceed 20 credit hours.

Film Minor

The Film Minor serves students in other majors who wish to undertake, and have noted on their transcripts, some substantial study in film. The one path excluded from the minor is the one in film production; in this regard the film minor differs from the theatre and dance minors. The film program is not able to accommodate further demands upon the current film production faculty, facilities, and equipment. It is the judgment of the film faculty that minors need to have a general knowledge of film analysis/theory and film history, thus the prescribed courses in requirements one and two. In addition film minors will choose three elective courses from history, theory, and criticism of film. To be accepted into the film minor, please contact Don Fredericksen, director of undergraduate studies in film studies.
Requirements:
1. FILM 2740 Introduction to Film Analysis
2. Either FILM 3750, History and Theory of Narrative Film, or FILM 3790, History and Theory of Documentary and Experimental Film
3. Three additional film courses, chosen from the list of film courses suitable for satisfying requirement three in the film major, except—except in very special and limited cases—FILM 3770, Introduction to 16mm and Digital Filmmaking; FILM 4220, Cinematography; FILM 4780, Intermediate Film and Video Projects; and FILM 4970, Advanced Film and Video Projects. Freshman Writing Seminars focused on film cannot be used to satisfy this requirement.
4. To enter the minor, a student must earn a C or higher in FILM 2740. (To enter the film major a student must earn a B or higher in this course.)
5. The film minor students cannot be accommodated in the film production sequence (FILM 3770, 4220, 4780, and 4930), given current demands upon those courses by the film majors. This restriction does not presently apply to FILM 3830, Screenwriting; although were demand were to overwhelm this course, it would have to be restricted as well.

For more information, visit our web site at www.cis.cornell.edu/ComputingArts/academics/film/FilmMinorRequirements.asp or go to 223 Schwartz Center for the Performing Arts.

Computing in the Arts Undergraduate Minor
A minor in Computing in the Arts with an emphasis on film is available both to film majors and to students majoring in other subjects. For more information, see “Computing in the Arts Undergraduate Minor” under “Departments, Programs and Courses” in the “College of Arts and Sciences” or www.cis.cornell.edu/ComputingArts.

Honors
Students who have maintained a GPA of 3.7 in their film major courses, and an average of 3.2 in all courses, may elect to work for honors in film during their senior year. They must consult with their advisor in the spring of their junior year about the honors program in film. Honors projects are possible in filmmaking, screenwriting, and film analysis (history, criticism, theory). Projects in filmmaking and screenwriting require a written analytical component related to the creative work.

The Advanced Undergraduate Filmmaking Program
Through FILM 4930 course work, the department offers advanced study in filmmaking to students who qualify on the basis of outstanding achievement in film studies and film production courses. Contact Marilyn Rivchin for details.

Film Study Abroad
The College of Arts and Sciences, through this department and in concert with a number of other American colleges and universities, offers up to a full year of study at the Paris Center for Critical Studies and, through the center, at the University of Paris III. The center's film program is theoretical, critical, and historical. It is most useful to students whose major interest is in the academic study of film and serves as a complement to Cornell’s film courses. Fluency in French is required. FILM 2740 and 3790 are prerequisites. Inquiries should be addressed to Professor Fredericksen, Cornell’s liaison with the center.

Through the Cornell Abroad office, students have also recently studied film and filmmaking in England, Ireland, Australia, Argentina, and the Czech Republic.

FILM 1512 Philosophy and Film (also PHIL 1512) (KCM-AS)
Summer. 3 credits. For description, see PHIL 1512.

FILM 2650 Studies in Film Analysis: Hitchcock's Films (also ENGL/FGSS 2630) (LA-AS)
Fall. 4 credits. Bogel. For description, see ENGL 2630.

FILM 2740 Introduction to Film Analysis: Meaning and Value (also FILM 6740, VISST 2174/6174) (LA-AS)
Fall. 4 credits.Limited to 40 students. Graduate students must enroll in FILM 6740. D. French. Intensive consideration of the ways films generate meaning and of the ways we attribute meaning and value to films. Discussion ranges over commercial narrative, art cinema, documentary, and personal film modes. Prospective film majors must enroll in their sophomore year.

FILM 2760 Survey of American Film (also AMST 2760, VISST 2300) (LA-AS)
Spring. 4 credits. Required film screenings; discussion once a week. S. Haenni. For description, see AMST 2760.

FILM 2850 Stardom (CA-AS)
Fall. 4 credits. L. Patti.
From heavenly creatures to tabloid trash, this course will explore stardom in cinema, television, and new media. Framed by approaches from semiotics, psychoanalysis, economics, and cultural studies, we will examine histories and theories of stars and star systems, investigating the importance of aesthetic strategies (from three-point lighting to the close-up), technological innovations (from sound to high-definition), industrial formations (from United Artists to SAG), the mass media (from studio productions to online tabloids), and fandom (from autograph auctions to fan fiction). We will discuss Hollywood stardom in tandem with both other national star systems and the transnational circulation of stars. An emphasis on the importance of race and sexuality in the production and reception of stardom will guide our inquiries.

[FILM 3240 Animation Workshop: Experimental and Traditional Methods (LA-AS) Summer. 3 credits. Cost for equipment: $150. Next offered 2010–2011. M. Tomlinson. The art of animation involves many dimensions, including time and motion. This course introduces students to the fundamentals of traditional animation and the mechanics used to capture the illusion of movement.]

FILM 3250 Animation History and Practice (LA-AS)
Summer. 3 credits. Limited to 12 students. Equipment fee: $150.00. M. Tomlinson. Beginning with the pre-history of animation, optical toys and magic lantern projections, and continuing through a century of animation history to contemporary work, this course investigates the history of animation from around the world, through a variety of hands-on production projects, as well as lectures, discussions, research, and screenings. Combining tactile and digital methods, students create weekly collaborative and individual animated films, incorporating lessons from the historical work studied.

FILM 3290 Political Theory and Cinema (also COML 3300, GERST 3550, GOVT 3705) (CA-AS)
Spring. 4 credits. G. Waite. For description, see GERST 3550.

[FILM 3430 Inter/National Cinema (CA-AS) Spring. 3 credits. Offered alternate years; next offered spring 2010–2011. L. Patti. The terms transnational and global are frequently invoked to describe the contemporary internationalization of cinema. This course will analyze global cinema in relation to national cinemas.]

[FILM 3440 American Film Melodrama (also AMST/ENGL 3440, FGSS 3450, VISST 3645) (LA-AS) 4 credits. Recommended: some background in film analysis. Offered alternate years; next offered 2010–2011. S. Haenni. Melodramatic styles and themes from the early 20th century to the present; melodrama as a "mode of excess" which registers ideological contradictions and powerfully affects film audiences.]

[FILM 3460 Film Noir (also AMST/VISST 3480) (LA-AS) 4 credits. Next offered 2011–2012. For description, see AMST 3480.]

FILM 3520 Short Cinema
Spring. 4 credits. Offered alternate years. L. Patti. This course will bring into dialogue a variety of contemporary commercial and experimental cinema and new media to explore the theoretical and historical boundaries of short cinema as a genre. We will watch cartoons, music videos, commercials, trailers, webisodes, DVD bonus features (including interviews and outtakes), youtube clips, cell phone films, Oscar-nominated shorts, and anthology films in order to map the broad terrain of short cinema. Readings will emphasize the industrial and technological underpinnings of short cinema and the commercial, critical, and popular reception of short cinema as we discuss the viability of the theorizing of short cinema as counter-cinema or minor cinema.

FILM 3690 Fast-Talking Dames and Sad Ladies: 1940s and Now (also ENGL/FGSS 3690) (LA-AS)
Spring. 4 credits. L. Bogel. For description, see ENGL 3690.
An intensive consideration of canonical experimental, or animation forms, and a final recording, and digital editing. Students technical skills in digital video and 16mm filmmaking, emphasizing the development of Creative, hands-on production course in

FILM 2740 (or higher-level film studies course) and permission of instructor. Equipment fee: $150 (paid in class). Average cost to each student for materials and processing is $500. M. Rivchin. Creative, hands-on production course in filmmaking, emphasizing the development of original ideas and the acquisition of basic technical skills in digital video and 16mm formats: cinematography, lighting, sound recording, and post-production. Students complete several exercises and two short projects exploring narrative, documentary, experimental, or animation forms, and a final project, which is shown in a public, open-campus screening at the end of the semester.

FILM 3770 History of Documentary and Experimental Film (also VISST 3176) (LA-AS)

Fall. 4 credits. Highly recommended: FILM 2740. Fee for screening expenses: $10 (paid in class). Offered alternate years.

A. Villarejo. Analyzes canonical works in documentary film to World War II, and canonical works in the avant-garde/experimental/personal film tradition(s) in Europe and the United States from the 1920s to the present.

FILM 3777 Introduction to 16mm and Digital Filmmaking (LA-AS)

Fall, spring. 4 credits. Limited to 12 students. Intended primarily for juniors and seniors, second-semester sophomores (who may need to sign up a year or more in advance), with priority given to film majors. Prerequisite: FILM 2740 (or higher-level film studies course) and permission of instructor. Equipment fee: $150 (paid in class). Average cost to each student for materials and processing is $500. M. Rivchin.

Creative, hands-on production course in filmmaking, emphasizing the development of original ideas and the acquisition of basic technical skills in digital video and 16mm formats: cinematography, lighting, sound recording, and post-production. Students complete several exercises and two short projects exploring narrative, documentary, experimental, or animation forms, and a final project, which is shown in a public, open-campus screening at the end of the semester.

FILM 3790 Modern Documentary Film (LA-AS)

Spring. 4 credits. Recommended: previous completion of FILM 3760. Offered alternate years. D. Fredericksen.

An intensive consideration of canonical documentary films from 1945 to the present. Emphasis is on the documentary film as an artistic and rhetorical form with a distinct history and set of theoretical questions.

FILM 3830 Screenwriting (LA-AS)

Fall and spring. 4 credits. Limited to 12 students. Prerequisite: completed application, writing sample, and permission of instructor; must go to 223 Schwartz Center to apply. Staff.

This course explores the fundamentals of traditional Hollywood and independent screenplays.

FILM 4220 Cinematography (LA-AS)

Fall. 4 credits. Limited to 8 students. Pre- or corequisite to FILM 4930. Prerequisite: permission of instructor. Letter grades only. Equipment fee: $150 (paid in class).

Camera basics, composition, and directing techniques, designed for students who have taken at least FILM 3770. Course may also include a section devoted to acting and directing for the camera (with up to six film students and six acting students); consult the instructor. Offered alternate years.

M. Rivchin. Students work in groups on a series of tests, short exercises, and scene projects using 16mm cameras, digital video cameras, HD camera movement apparatus, a range of lighting instruments, filters, and gels to expand their knowledge of the technical and aesthetic aspects of cinematography. When possible, the course will focus on acting and directing for the camera through scene work.

FILM 4550 History of Modern Polish Film (LA-AS)

Fall. 4 credits. Prerequisite: some film analysis or European history coursework. Offered alternate years. D. Fredericksen.

Analysis of Polish film from 1945 to the present, within the context of Poland's postwar history. Emphasis upon the ways Polish filmmakers dealt with the Soviet-imposed government and "political correctness" from 1944 to 1989.

FILM 4720 Film and Spiritual Questions (LA-AS)

Spring. 4 credits. Limited to 20 students. Offered alternate years. D. Fredericksen.

The use of film as a medium for the expression of spiritual questions. Special attention is given to the work of Andrej Tarkovsky, the Russian film director and theorist.

FILM 4740 Jung, Film, and the Process of Self-Knowledge (LA-AS)

Spring. 4 credits. Limited to 20 students. Offered alternate years; next offered 2010–2011. D. Fredericksen.

"Know thyself" is one of the oldest and most enduring imperatives of the human spirit. This seminar details the Jungian approach to this imperative and then tests its critical capacities with respect to films.

FILM 4750 Seminar in Cinema I (also AMST 4750) (LA-AS)

Fall. 4 credits. Next offered 2010–2011.

FILM 4760 Seminar in Cinema II (LA-AS)

Spring. 4 credits. Topic for spring 2010: European Cinema/ Metropolitan Culture. At least since the formation of the European Union, but possibly much earlier, the very idea of a "European Cinema" (as distinct from the national cinema idea) has been fantasized about and nurtured through transnational funding initiatives. This course establishes the concept of "European cinema" from industrial, social, and aesthetic perspectives. It then tracks European cinema by looking at specific European cities. Case studies may include classic, best-known metropoles—London, Paris, Berlin—but also cities found on the periphery, such as Marseilles, Naples, Helsinki, Warsaw, or Moscow. Films will be drawn from a range of genres and periods, from the famous "city symphonies" of the 1920s to the Eurothriller and the contemporary banlieu films. Topics may include the changes, the old European city, the relationship between built and cinematic form, migration and cosmopolitanism, class and gender, and will be framed by historical readings. Topic for spring 2011 (Fredericksen): Film Eco-criticism: Human/Nature/Film.

FILM 4780 Intermediate Film and Video Projects: Narrative Workshop (LA-AS)

Fall. 4 credits. Limited to 8 students.

Intended for juniors and seniors, with priority given to film majors. Prerequisites: FILM 3770 as minimum in production; priority given to those who have also taken FILM 3850: THETR 3980 or FILM 4220, and permission of instructor based on proposals. Equipment fee: $150 (paid in class). Digital video projects costs: $100–$200. Offered alternate years. M. Rivchin. Intensive course in digital video production (with 16mm film as an option in which each student develops a significant, original narrative script or documentary or experimental project that he or she then directs, shoots in crews, and edits. Readings, discussions, and exercises are designed to increase the student's knowledge and practice of screenwriting or other pre-visualization methods; pre-production, and practice of directing, cinematography, lighting, sound recording, and more advanced digital editing techniques. Completed projects are publicly screened at the end of the semester.

FILM 4850 Undergraduate Internship

Fall or summer. 1–3 credits.

To be eligible to enroll and receive credit for an internship, students must either be majors or minors in the department. Students are responsible for arranging their own internships. To receive credit within the course, the internship must be unpaid. Students must follow the rules and procedures stated on the departmental internship form.
FILM 6740 Introduction to Film Analysis: Meaning and Value (also FILM 2740, VISST 2174/6174)
Fall. 4 credits. Limited to 10 graduate students. D. Fredericksen.
Intensive consideration of the ways films generate meaning and of the ways we attribute meaning and value to films. Discussion ranges over commercial narrative, documentary, and personal film modes. Graduate students who intend to teach film at the undergraduate level are especially welcome. In addition to full participation in the work of FILM 2740, graduate students read and discuss primary sources in film theory in weekly group tutorials.

FILM 6750 History and Theory of the Commercial Narrative Film
Fall. 4 credits. Prerequisite for film majors FILM 2740. Fee for screening expenses: $10 (paid in class). Offered alternate years; next offered 2010–2011. S. Haenni.
A survey of narrative cinema from around the word, with emphases on early narrative cinema, cinematic realism, interwar European modernist cinema, popular American film, post–World War II art cinema, and recent global cinema.

FILM 6760 History and Theory of Documentary and Experimental Film
Fall. 4 credits. Highly recommended: FILM 2740. Fee for screening expenses: $10 (paid in class). Offered alternate years. A. Villarejo.
Analyzes canonical works in documentary film to World War II, and canonical works in the avant-garde/experimental/personal film tradition(s) in Europe and the United States, 1945 to the present.

FILM 7220 Independent Study in Film for Graduate Students
Fall or spring. 1–4 credits. Staff.
Related Courses in other Departments
Not all courses are offered in 2009–2010. Consult instructors.

Fall. 4 credits. Cutting.

VISST 2000 Introduction to Visual Studies
Spring. 4 credits. Fernandez.

Dance
Faculty: J. Chu (on leave spring 2010), A. Fogelsanger (director of undergraduate studies in dance), E. Intemann, J. Kovar (on leave fall 2009), J. Morgenroth (on leave fall 2009), J. Self, B. Suher.
The dance program offers courses in dance technique, improvisation, composition, performance, analytical analysis of movement, dance technology, music for dance, and the history, theory, and criticism of dance. Technique courses include introductory dance technique, modern dance at three levels, and Western classical dance at three levels. (Other dance forms, such as Indian dance, and capoeira, are offered periodically. A variety of courses in other dance idioms, taken through the Physical Education program, supplement these offerings.) Technique courses develop strength, flexibility, coordination, and the ability to perceive and reproduce phrases of dance movement with clarity of rhythm, body design, and expression. The more advanced courses require the ability to perform complex phrases in various styles. Students may earn up to 16 academic credits (2 each semester) in technique courses. Students may also satisfy the physical education requirement by taking dance technique courses or other movement courses in the dance program. Students taking technique for academic credit must also register through their own colleges. The schedule for all dance technique courses is available in the main office of the Sheila W. and Richard J. Schwartz Center for the Performing Arts.

The faculty offer rehearsal and performance workshops in which they choreograph and rehearse original dances, performed in public concert. Admission to rehearsal and performance courses is by permission. Students may receive one academic credit per semester (5–U grades only) when performing in student-faculty concerts by registering for DANCE 1250.

Major in Dance Requirements
Prerequisites: 2 credits in category I below and one course in category II below. Prerequisites count toward the 40 credits fulfilling the major.
The major: 40 credits (toward which the prerequisites for the major count) are required of all students majoring in dance as follows:

I. 6 credits: six 1-credit movement courses chosen from Dance Technique (DANCE 1200, 2200, 2210, 2220, 2240, 3210, 3220, 4210, and 4220), Explorations (DANCE 2410, 3410), Improvisation (DANCE 2480), Indian Dance (1320), World Dance Techniques (1300), and other courses approved by the dance faculty. The 6 credits must include at least 2 from Dance Technique courses, and at least 2 from Explorations and Improvisation courses. Any two of these courses taken to satisfy the university’s Physical Education requirement may be counted toward the major, thus decreasing the number of academic credits possibly to as low as 38. Movement courses taken for 0 academic credits do not count towards the major.

II. 14 credits: Dance composition (DANCE 2500 and 3500) and history/theory (DANCE 3141 and 4080 or other 4-credit, 4000-level DANCE seminar course).

III. 2 credits: 1 credit of performance (DANCE 1250) and 1 credit of production (DANCE 1610, 1630, 2610, or 2630).

IV. 18 credits: selected from Dance and related fields, including: at most two additional 1-credit movement courses beyond those required in category I; at most 4 credits in DANCE 1250, 1610, 1630, 2610, 2630, and 3240 beyond those required in category III; and at most two of the following courses outside Dance, which may include courses on sound, music, light, world movement forms, design, performance and visual studies, and must be approved by the dance faculty. Otherwise any Dance courses may be used to satisfy category IV.

In all courses used for the dance major, a grade of C (not C–) must be achieved. Courses in which this minimum is not achieved must be repeated or the student is to receive credit in the major.

A partial list of courses from outside Dance that may be used to satisfy part IV of the major requirements includes MUSIC 1105, 1201, 1202, 1301, 1302, and 2101; and THETR 2500 and 3840.

Honors
The honors program in dance is intended for students who have shown exceptional accomplishment in the dance major, and it results in the awarding of one of three levels of honors with the degree: cum laude, magna cum laude, or summa cum laude. To be part of the honors program students must maintain a GPA of 3.5 in classes for the dance major and an average of 3.0 in all courses. Qualified students are invited to become candidates by the faculty early in the second semester of their junior years. As soon as possible thereafter, each honors candidate forms a committee of three dance faculty members to guide and evaluate the honors work. Candidates are encouraged to formulate a program based on interdisciplinary work, in which case the committee must include a faculty member from the relevant department in place of one from the Dance faculty. Candidates propose projects that will allow them to demonstrate their abilities in scholarship and/or practice, culminating in a public presentation of a thesis or creative work (demonstrating choreography, performance, or some other aspect of dance). A performance-oriented project requires a written analytical component related to the creative work, setting it in a historical, theoretical, or aesthetic context. (The paper is not simply a recounting of how a student did...
the project.) The candidate must distribute a proposal to the committee members before the end of the junior year. Students planning a production component may show work on one of the department concerts, or may produce their own concerts. In this latter case they must inform the production manager of the Department of Theatre, Film and Dance by April 1 of the junior year as there is a limited number of slots for concerts within the Schwartz Center. A student not accepted for one of these slots will have to come up with an alternative proposal. Limited technical support will be available.

Although the honors committees, and in particular their chairs, are responsible for supervising candidates’ honors programs and keeping them on schedule, candidates are required to take initiative and show independence in the planning and realizing of their proposed projects, beginning promptly at the start of the senior year on the 8 credits of work expected evenly throughout the two semesters. Candidates enroll in DANCE 4050–4060 with the chairs of the honors committees as instructors, and must schedule a full committee meeting at the beginning of the senior year and arrange to meet with their chairs on a regular basis thereafter, and with other committee members as necessary. After the public presentation in the spring, comprehensive examinations administered by the candidates’ committees are held not later than the first day of finals. The level of honors conferred is based primarily on the candidates’ performance in the honors programs, and secondarily on their overall record in departmental courses and activities.

Dance Minor
The Dance Minor is open to any student in the university, including those outside the College of Arts and Sciences, with the approval of the Director of Undergraduate Studies in Dance.

1. DANCE 2500 Beginning Composition (3 credits).
2. DANCE 3141 History (4 credits).
3. Other DANCE courses totaling a minimum of 11 credits.

In all courses used for the Dance Minor that offer letter grades, a grade of C (not C–) must be achieved. Courses in which this minimum is not achieved must be repeated if the student is to receive credit in the Minor. For additional information please go to 223 Schwartz Center.

Computing in the Arts Undergraduate Minor
A minor in Computing in the Arts with an emphasis on dance is available both to dance majors and to students majoring in other subjects. For more information, see “Computing in the Arts Undergraduate Minor” under “Departments, Programs and Courses” in the “College of Arts and Sciences” or contact the Director of Undergraduate Studies in Dance, danceprogram@cornell.edu. Information is also online at www.cis.cornell.edu/ComputingArts.

Theatre, Film and Dance Summer Study in Rome and/or Paris/Dublin
Many of the dance courses are also offered during a summer program in Rome, Paris, and Dublin. For more information see www.arts.cornell.edu/theatrearts/academics/dance/

DANCE 1250 Dance Rehearsal and Performance
Fall, spring, and summer. 1 credit. Students must register for course in semester in which credit is earned; requests for retroactive credit are not honored. Prerequisite: students cast in faculty-choreographed dances. Students may add this course only after they have been assigned roles. S–U grades only. Faculty: Includes the study, development, and performance of roles in departmental dance productions.

DANCE 1320 Indian Classical Dance
(also PE 1190)
Spring. 1 credit. D. Bor. For description, see PE 1190.

[DANCE 2200 Dance Technique II (also PE 1181)]
Fall. 1 credit. may be repeated. Satisfies PE requirement if taken as PE. Attendance at dance concerts required. S–U grades only. Next offered 2010–2011. J. Self. Introductory dance technique intended for students with some dance training. Material covered includes attention to rhythm, design, and movement expression.

[DANCE 2210 Dance Technique II/Classical (also PE 1182)]
Spring. 1 credit. may be repeated. Satisfies PE requirement if taken as PE. Attendance at dance concerts required. S–U grades only. Next offered 2010–2011. B. Suber. Introductory Western classical technique intended for students with some dance training. Material covered includes specific spinal and center work with attention to rhythm, design, and movement expression.

[DANCE 2220 Dance Technique II/Modern (also PE 1183)]
Fall, spring, and summer. 1 credit; may be repeated. Satisfies PE requirement if taken as PE. Attendance at dance concerts required. S–U grades only. Fall, B. Suber; spring, J. Kover. Introductory modern technique intended for students with some dance training. Material covered includes specific spinal and center work with attention to rhythm, design, and movement expression.

[DANCE 2240 Dance Technique Workshop (also PE 1188, VISST 2540)]
Spring and summer. 1 credit; may be repeated. Satisfies PE requirement if taken as PE. Attendance at dance concerts required. Requires attendance at performances with written responses. S–U grades only. Next offered 2010–2011. J. Self. Includes the study, development, and performance of roles in departmental dance productions.

[DANCE 2240 Dance Technique Workshop (also PE 1188, VISST 2540)]
Spring and summer. 1 credit; may be repeated. Satisfies PE requirement if taken as PE. Attendance at dance concerts required. S–U grades only. Next offered 2010–2011. J. Self. Introductory modern technique intended for students with some dance training. Material covered includes specific spinal and center work with attention to rhythm, design, and movement expression.

[DANCE 2240 Dance Technique Workshop (also PE 1188, VISST 2540)]
Spring and summer. 1 credit; may be repeated. Satisfies PE requirement if taken as PE. Attendance at dance concerts required. S–U grades only. Next offered 2010–2011. J. Self. Introductory modern technique intended for students with some dance training. Material covered includes specific spinal and center work with attention to rhythm, design, and movement expression.

[DANCE 2240 Dance Technique Workshop (also PE 1188, VISST 2540)]
Spring and summer. 1 credit; may be repeated. Satisfies PE requirement if taken as PE. Attendance at dance concerts required. S–U grades only. Next offered 2010–2011. J. Self. Introductory modern technique intended for students with some dance training. Material covered includes specific spinal and center work with attention to rhythm, design, and movement expression.

DANCE 2410 Explorations in Movement and Performance (also PE 1191)
Fall. 1 credit. Limited to 16 students. Satisfies PE requirement if taken as PE. Attendance at dance concerts required. S–U grades only. J. Self. A physically demanding exploration into various movement realms. Specific subjects covered are gender, movement, erotic power, spiritual power, ritual, and performance. Techniques include extensive use of breath, animal movement, improvisation, and group games. This course requires an eagerness to investigate the nature of...
of performance and explore unfamiliar territory in movement.

**DANCE 2430 Hip-Hop, Hollywood, and Home Movies: Exploring Movement and Media**
(also VISST 2430) (LA-AS)
Fall and summer. 3 credits. Permission of instructor. Requirements include attendance at performances with written responses, selected readings, and home-movie production. Letter grades. Letter grades. J. Self.

This course is a laboratory for generating and exploring contemporary dance forms. Monday sessions are devoted to viewing media and discussion. We will be looking at early B-boy films, recent dance-battle documentaries, classic dance clips from Hollywood films, and other related pieces (Black Dance, Show Dance, Art Dance). Wednesday is a laboratory for trying out movements and creating simple dance/music videos (home-movies). This course will be of special value for choreographers using popular dance forms and those interested in the history of popular culture. Everyone must be willing and able to improvise dance moves, teach classmates and exchange movement ideas.

**DANCE 2450 Public Voice and Civic Gesture**
(also THETR 2360)
Fall and summer. 1 credit. Next offered 2010–2011. B. Suber.

This course combines acting and movement techniques encouraging process-oriented work.

**DANCE 2480 Dance Improvisation**
Spring and summer. 1 credit; may be repeated. Limited to 12 students. Attendance at dance concerts required. S–U grades only. A. Fogelsanger.

When the body knows when, where, and how to move without prior direction, we call that improvisation. This course coaxes inspiration, seeking to make it reliable and to keep it surprising. It offers the possibility of “training” one’s movement instincts to respond relevantly and with spontaneity. Solo and group forms are covered. Live musical accompaniment.

**DANCE 3210 Dance Technique III/Classical**
(also PE 1184)
Fall, spring, and summer. 1 credit; may be repeated. S–U grades only. B. Suber.

Intermediate Western classical technique. Work is done on strengthening the body through a movement technique emphasizing presence and musicality based on harmonic muscular control.

**DANCE 3220 Dance Technique III/Modern**
(also PE 1185)
Fall, spring, and summer. 1 credit; may be repeated. S–U grades only. B. Suber.

Intermediate modern technique focusing on rhythm, placement, and phrasing for students who are prepared to refine the skills of dancing. Students are challenged by complex phrases and musicality.

**DANCE 3240 Writing Dance Criticism**
Fall and spring. 1 credit; may be repeated. Corequisite: DANCE 2240, 3210, 3220, 4210, or 4220. Attendance at two or three concerts required. Fall, J. Chu, B. Suber, or J. Self; spring, J. Self, B. Suber, and J. Morgenroth.

Dance criticism for incorporation with technique. Topics rotate depending on instructor, class focus, and relevance to guest dance companies. Attendance at two or three concerts required (same as for dance technique), additional readings and/or viewing of recorded performances as assigned by instructor, and three five- to seven-page analytic papers.

**DANCE 3250 Repertory**

Reconstructs a dance by an important modern dance choreographer. Through a close examination of the composition process, and with readings, the course studies the historical and aesthetic role of this work and its continued influence today.

**DANCE 3410 Explorations in Movement and Performance II: Masculine, Feminine, or Neutral**
Spring. 1 credit. Limited to 16 students. Prerequisite: DANCE 2410, 2480, or permission of instructor. Satisfies PE requirement if taken as PE. Attendance at dance concerts required. S–U grades only. Next offered 2010–2011. J. Self.

Continues themes from Explorations in Movement and Performance (DANCE 2410), with special emphasis on the differences and similarities between ‘masculine’ or ‘feminine’ expressions in movement and performance.

**DANCE 4210 Dance Technique IV/Classical**
(also PE 1186, VISST 4210)
Fall and spring. 1 credit; may be repeated. S–U grades only. B. Suber.

Advanced and pre-professional Western classical. A continuation of and supplement to DANCE 3210.

**DANCE 4220 Dance Technique IV/Modern**
(also PE 1187, VISST 4220)
Fall and spring. 1 credit; may be repeated. S–U grades only. B. Suber.

Advanced and pre-professional Modern technique. A continuation of and supplement to DANCE 3220.

**DANCE 4290 Dance Technique in New York**
Dance composition for one’s own and student projects. S–U grades only. Fall, J. Chu; spring, J. Self; summer, B. Suber, J. Chu, and J. Kovar.

This course encourages students to compose and present short projects, both solo and in groups, at performances with written responses, with readings, the course studies the historical and aesthetic role of this work and its continued influence today.

**DANCE 4300 Dance Composition**
(also VISST 2511) (LA-AS)
Fall, spring, and summer. 3 credits. Attendance at dance concerts required. Fall, B. Suber; spring, J. Self; summer, B. Suber, J. Chu, and J. Kovar.

Weekly assignments in basic elements of choreography. Students compose and present short studies that are discussed and reworked. Problems are defined and explored through class improvisations. Informal showing at end of semester. Includes informal showing of work.

**DANCE 4350 Intermediate Dance Composition I**
(FALL) (LA-AS)
Fall, spring, and summer. 3 credits. Prerequisite: DANCE 3500. Co- or prerequisite: DANCE 3530. Attendance at dance concerts required. Fall, B. Suber; spring, J. Self; summer, B. Suber, J. Chu, and J. Kovar.

Intermediate choreographic projects are critiqued in progress by faculty and peers. Consideration of design problems in costuming and lighting. For full description, see DANCE 3500.

**DANCE 4351 Intermediate Dance Composition II**
(LA-AS)
Fall, spring, and summer. 3 credits. Prerequisite: DANCE 3500. Co- or prerequisite: DANCE 3530. Attendance at dance concerts required. Fall, B. Suber; spring, J. Self; summer, B. Suber, J. Chu, and J. Kovar.

Continuation of DANCE 3500. For full description, see DANCE 2500.

**DANCE 4352 Music and Choreography**
(also MUSIC 4512) (LA-AS)
Fall. 3 credits. Attendance at dance concerts and music concerts required. A. Fogelsanger.

Intended to expose students to music they probably have not heard and are unlikely to seek out on their own, particularly contemporary ‘classical’ music and music used in modern concert dance; to mark out the possible relationships between music and dance when combined in concert; and to pull apart the compositional construction of musical pieces to consider what musical structuring ideas might be profitably applied by choreographers to making dances. The course also considers examples from film and the plastic arts, provides students with some experience making sound and movement, and includes discussion of and writing about concerts, and audio and video recordings.

Reading topics include criticism and aesthetics of dance, music, and the arts in general, in particular concentrating on counterpoint, minimalism, improvisation, and polytony.
ARTS AND SCIENCES - 2009–2010

DANCE 4010 Senior Project in Dance
Fall and spring. 3 credits; students receive grade when DANCE 4020 is completed. Prerequisite: DANCE 3510; senior dance majors. NOTE: This course is being phased out and replaced by DANCE 4011 Advanced Project in Dance. Open only to students graduating by May 2010. First of a two-semester sequence (the second is DANCE 4020) for senior dance majors. Students create a project in choreography and performance, dance, film or video, dance pedagogy, or other appropriate area agreed on with their senior project advisor and committee. In addition, there is a 15-page paper that expands their work into a historical, theoretical, or aesthetic context. For guidelines see the director of undergraduate studies in dance.

DANCE 4011 Advanced Project in Dance
Fall and spring, 4–6 credits, variable. Students create a dance project. Possibilities include a choreographic project for performance/presentation, community performance, site-specific work, interdisciplinary collaboration, community teaching, conference organizing, or other proposals. The student chooses a project adviser, who need not be the student’s academic adviser. A proposal is due April 1 if the project will take place in the fall and due November 1 if the project will take place in the spring.

DANCE 4020 Senior Project in Dance II
Fall and spring. Prerequisite: DANCE 4010. NOTE: This course is being phased out and replaced by DANCE 4011 Advanced Project in Dance. Open only to students graduating by May 2010. Second of a two-semester sequence (the first is DANCE 4010) for senior dance majors.

DANCE 4500 Advanced Dance Composition I (LA-AS)
Fall, spring, and summer. 3 credits. Prerequisite: DANCE 3510. Attendance at dance concerts required. Fall, B. Suber; spring, J. Self; summer, J. Chu, B. Suber, and J. Kovar. Students work on advanced choreographic problems, to be presented in performance. Work in progress is critiqued by faculty members on a regular basis. For full description, see DANCE 2500.

DANCE 4510 Advanced Dance Composition II (LA-AS)
Fall, spring, and summer. 3 credits. Prerequisite: DANCE 4500. Attendance at dance concerts required. Fall, B. Suber; spring, J. Self; summer, J. Chu, B. Suber, and J. Kovar. Continuation of DANCE 4500. For full description, see DANCE 2500.

History, Criticism, and Theory
[DANCE 3120 The Moving Body: Form and Function (PBS supplementary list)]

DANCE 3141 History: The Body in Performance (LA-AS)
Fall. 4 credits. Prerequisites: readings, viewing of videos, and attendance at live performances. Letter grades only. J. Chu. How does the physical body/shape/skeleton reflect its historical context? What is the meaning of the “beautiful” in dance? Beginning with 16th-century court dances, we will explore how aesthetics have been aligned both with and against political, social, and cultural questions concerning the use of traditional technological media presentation (sound, film, and video) through the use of emerging digital technologies. Included in the process is the analysis of built environments that both inspire and are designed to be inhabited by these disciplines. This studio course explores the resulting neo-performance forms being created within the range of digital media processing; such as gallery installations, multimedia dance-theatre, personal interactive media (games and digital art) and web projects. Computer-imaging and sound-production programs are examined and used in the class work (human form-animation software [Life Forms], vocal recording and digital editing [Protos and Hyperprism], digital-imaging tools [Photoshop, Final Cut Pro, Flash, Dreamweaver, and Director]. The new context of digital performance raises questions concerning the use of traditional lighting, set, costume, and sound-design techniques that are examined as they are repositioned by digital-translation tools with the goal of creating experimental and/or conceptual multimedia performance and/or installation work. Theoretical texts on dance and theatrical performance, film studies, the dynamic social body, architecture, and digital technology are also used to support conceptual creative work.

DANCE 4080 Seminar in Dance Studies (also VISST 4580) (CA-AS)
Spring and summer. 4 credits. Limit to 15 students. Spring, J. Morgenroth; summer, B. Suber and J. Chu. Topic for spring 2010: Movement in Time and Space. According to modern science, we live in a space–time continuum. The visual arts, including dance, painting, sculpture, film, and theater, manipulate time and space in order to situate their work in space–times of their own devising. While the arts and sciences are often thought of as existing in separate worlds, practitioners of each realm are exploring similar questions within their own modes of inquiry. Thinking about dance performance will be pivotal in this course, looking at the ways in which artists in the 20th and 21st centuries have warped traditional notions of time and space. We will also consider how scientific theories about time and space have affected the arts. Viewing of selections from the work of Merce Cunningham, Anna Halprin, Trisha Brown, Eiko & Koma, and others. Two papers and an individual or paired project that will ask that you reexamine and renew your assumptions about time and space.

DANCE 4089 Formalist Aesthetics of Modernism and Postmodernism in Music, Dance, and Painting
Spring. 4 credits. Limited to 15 students. Next offered 2010–2011. A. Fogelsanger. This seminar examines the ways in which the aesthetics of modernism from the idea of absolute music and the rise of abstraction in painting, through atonality, modern dance, minimalism, and postmodernism.

Interdisciplinary Courses
DANCE 1540 Computing in the Arts (also CS/CIS/ENGR 1610, FILM 1750, MUSIC 1465, PSYCH 1650) (LA-AS)
Fall. 3 credits. G. Bailey. For description, see CS 1610.

DANCE 2580 Courses of Action: Producing Performance Locally, Regionally, Globally (LA-AS)
Fall. 3 credits. Next offered 2010–2011. J. Self. This course is a hands-on, pro-active course devoted to studying current performance venues on the Cornell campus, and in Tompkins County, New York State, and beyond.

DANCE 3550 Techno Soma Kinesics: Repositioning the Performing Body in Space through the Lenses of Digital Media (LA-AS)
Spring. 4 credits. B. Suber. Works to expand the specific aesthetics of live performance (music, theatre, and dance) and traditional technological media presentation (sound, film, and video) through the use of emerging digital technologies. Included in the process is the analysis of built environments that both inspire and are designed to be inhabited by these disciplines. This course explores the resulting neo-performance forms being created within the range of digital media processing; such as gallery installations, multimedia dance-theatre, personal interactive media (games and digital art) and web projects. Computer-imaging and sound-production programs are examined and used in the class work (human form-animation software [Life Forms], vocal recording and digital editing [Protos and Hyperprism], digital-imaging tools [Photoshop, Final Cut Pro, Flash, Dreamweaver, and Director]. The new context of digital performance raises questions concerning the use of traditional lighting, set, costume, and sound-design techniques that are examined as they are repositioned by digital-translation tools with the goal of creating experimental and/or conceptual multimedia performance and/or installation work. Theoretical texts on dance and theatrical performance, film studies, the dynamic social body, architecture, and digital technology are also used to support conceptual creative work.

DANCE 3560 Interactive Performance Technology (also MUSIC 3441, THETR 3690) (LA-AS)
Fall. 3 credits. Laptop computer and MAX/ MSP software and Jitter software required, see www.cycling74.com for student software pricing. Lab performance at end of semester. Next offered 2010–2011. W. Cross and A. Fogelsanger. For description, see THETR 3690.1
DANCE 3570 Media Arts Studio I (also FILM/MUSIC 3910) (LA-AS)  
Fall or spring. 3 credits. Prerequisite: permission of instructor and junior standing, minimum FILM 2770 or 3770, or DANCE 4550. Equipment fee: $50 (paid in class). Next offered 2010–2011. Participating faculty include M. Rivchin, film; B. Suber, dance. A collaborative interdisciplinary studio course in a variety of digital and electronic media, including art, architecture, music, dance, film, and video.

DANCE 3580 Ancient/Modern Corporeal Realities (also FILM/ITAL 3270, VISST 3210)  
Summer. 4 credits. B. Suber, J. Rhodes, and B. Milles. Held in Rome, this course examines that modern city as it interfaces with its past, by analyzing corporeal/spatial epistemologies through the analyses of films that used Rome as a location, visiting those location sites that extend from the historic center to as far as the suburb LEUR. Topics include examination of the ways in which class relates to social and public space and urban space as performance. Additional course work in film production, performance, and writing allows students to re-inscribe their spatial/corporeal experiences into an alternative exhibition space of the city street or the written page. In addition, each student will be required to produce formal textual documentation and full textual analyses of this process and final performance, installation, or text-based product.

DANCE 3590 Music, Dance, and Light (also THETR 3190, VISST 3519)  
(LA-AS) Spring. 3 credits. Attendance at dance concerts and music concerts required. E. Intemann and A. Fogelsanger. Artistic values, parameters, and concerns of music (sound design), dance, and lighting design are compared and contrasted, and the combination of design elements is analyzed in contemporary dance.

DANCE 4377 Ritual Puppetry in a Global Context (also ASIAN/RELST 4444)  

DANCE 4550 Techno Soma Kinesics II: Reposititology of the Performing Body in Space through the Lenses of Digital Media (LA-AS)  
Spring. 4 credits. B. Suber. Continuation of DANCE 3550. DANCE 4550 expands on principles using more complex and interactive software using MAX/MSP and Jitter, Director, DVD Studio Pro, and Dreamweaver.

DANCE 4848 Communities in Multicultural Practice (also HE 4800)  
Fall and spring. 6 credits. S. Beck. This course is the same as HE 4800 but the DANCE number is for DANCE students from the Department of Theatre, Film and Dance who wish to participate in the Urban Semester Program, or for other students in the College of Arts and Sciences who wish to receive credit for work done outside the college. Students from DANCE will, whenever possible, have their internship assignments within appropriate dance organizations or activities. For these purposes, the instructor will be assisted by various DANCE faculty and alumni.

DANCE 4849 Multicultural Practice (also HE 4900)  
Fall and spring. 6 credits. S. Beck.

DANCE 4650 Lighting Design Studio II (also THETR 4620, VISST 4563)  
(LA-AS) Spring. 4 credits. C. Intemann. For description, see THETR 4620.

Independent Study, Internships, and Honors

DANCE 3000 Independent Study  
Summer, fall, or spring. 1–4 credits. Independent study in the dance allows students the opportunity to pursue special interests not treated in regularly scheduled courses. A faculty member, who becomes the student's instructor for the course must approve the student's program of study and agree to provide continuing supervision of the work. Students must prepare a proposal for independent study, which is available in 223 Schwartz Center.

DANCE 4050 Honors Research Tutorial I  
Fall or spring. 4 credits. Prerequisite: honors students in dance. First of a two-semester sequence (the second is DANCE 4060) for seniors engaged in an honors project. For guidelines, see the director of undergraduate studies in dance.

DANCE 4060 Honors Research Tutorial II  
Fall or spring. 4 credits. Prerequisite: honors students in dance. Second of a two-semester sequence (the first is DANCE 4050) for students engaged in an honors project.

DANCE 4850 Undergraduate Internship  
Fall, spring, or summer. 1–3 credits. To be eligible to enroll and receive credit for an internship, students must be majors in the department. Students are responsible for arranging their own internships in consultation with the faculty in their area of choice before preregistration for the semester in which the internship is planned to take place. To receive credit within this course, the internship must be unpaid. Students must follow the rules and procedures stated in the departmental internship form.

Tracks toward admission into the advanced undergraduate theatre program

Design, Technology, and Stage Management
Recommended for individuals interested in a Design, Technology, or Stage Management track:

THETR 2500 Fundamentals of Theatre Design and Technology

THETR 1510 and 2510 Production Lab I and II (at least 1 credit of each)

Recommended for Scenic Design emphasis:

THETR 3400 Theatrical Drafting and Technical Drawing Studio

THETR 3510 Production Lab III (as design assistant)

THETR 3540 Stagecraft Studio

THETR 3640 Scene Design Studio

Upon admission to the program:

THETR 4510 Production Lab IV (at least 1 credit)

Recommended for costume design or costume shop management emphasis:

THETR 3510 Production Lab III (as design assistant)

THETR 3560 Costume Construction Studio

THETR 3660 Costume Design Studio I

THETR 3710 Costume Design Studio II
Upon admission to the program:

**THETR 4510** Production Lab IV (at least 1 credit)

Recommended for Lighting Design or costume
shop management emphasis:

**THETR 2520** Technical Production Studio I

**THETR 3510** Production Lab III (as assistant
tech)

**THETR 3510** Production Lab III (as design assistant)

**THETR 3620** Lighting Design Studio I

Upon admission to the program:

**THETR 4510** Production Lab IV (at least 1 credit)

Recommended for Sound Design emphasis:

**THETR 2520** Technical Production Studio I

**THETR 2520** Technical Production Studio II

**THETR 3400** Theatrical Drafting and Technical Drawing Studio

**THETR 3510** Production Lab III (as assistant technical director)

**THETR 3540** Stagecraft Studio

Upon admission to the program:

**THETR 4510** Production Lab IV (at least 1 credit)

Recommended for Technical Direction emphasis:

**THETR 2520** Technical Production Studio I

**THETR 2550** Technical Production Studio II

**THETR 3400** Theatrical Drafting and Technical Drawing Studio

**THETR 3510** Production Lab III (as assistant technical director)

**THETR 3540** Stagecraft Studio

Upon admission to the program:

**THETR 4530** Stage Management Lab IV

**Directing**

Recommended for individuals interested in a directing track:

**THETR 1510** or **THETR 2510** Production Lab I and II (at least 2 combined credits)

**THETR 2400/THETR 2410** Introduction to Western Theatre (one semester only)

**THETR 2500** Fundamentals of Design and Technology

**THETR 2800** Introduction to Acting

**THETR 3980** Fundamentals of Directing I

**THETR 4530** Stage Management Lab IV

**Playwriting**

Recommended for individuals interested in a playwriting track:

**THETR 2400/2410** Introduction to Western Theatre (one semester only)

**THETR 2500** Fundamentals of Design and Technology

**THETR 2800** Introduction to Acting

**THETR 3480** Playwriting

**THETR 3490** Advanced Playwriting

Students in the advanced undergraduate theatre program may also elect to take FILM 4850 (Undergraduate Internship) in addition to or in place of one production assignment.

**TURKISH**

See "Near Eastern Studies."

**TWI/AKAN**

See "African Studies and Research Center."

**UKRAINIAN**

See "Department of Russian."

**URDU**

See "Department of Asian Studies."

**VIETNAMESE**

See "Department of Asian Studies."

### VISUAL STUDIES UNDERGRADUATE MINOR

Visual studies is a minor that provides students with an interdisciplinary approach to visual art, media (including digital works), performance, and perception. Faculty from departments throughout the college offer courses toward the minor, drawing on such various disciplines as the history of art, film, literary studies, psychology, theatre, and others. Requirements for the minor include the core course VISST 2000 Introduction to Visual Studies, which introduces students to critical thinking about visual studies as well as close textual analysis in social and historical contexts. Responsibility for teaching the core course rotates among faculty affiliated with the minor, and the course, as much as possible, entails interdepartmental collaboration in the form of team-teaching or visiting lectures. In addition to the core course, students must take one course within the Theory/Practice group plus three additional courses at the 2000 level or above. No more than two courses from the minor may be double-counted toward a student’s major. All courses must be taken for a letter grade.

Students interested in pursuing the minor should first discuss it with their current advisors, and then either download the form from the visual studies web site (www.cornell.edu/histart/vstudies.html) or contact the visual studies undergraduate coordinator, Jessica Smith in GM08 Goldwin Smith Hall. Students who have not been in contact with a visual studies advisor will have one selected for them from among the minor’s affiliated faculty.

**Interdisciplinary Graduate Concentration**

The concentration in visual studies is not meant to substitute for disciplinary training, which will not be waived by the addition of interdisciplinary courses. The "Course List in Visual Studies for 2009–2010" alerts incoming students to courses that may be relevant to their interests, and aids them in discovering the network of professors working in visual studies, spanning multiple departments and schools at Cornell.

### VISUAL STUDIES Minor Course List

**VISST 1101** Design Studio I (also DEA 1010)  
Fall. 3 credits. J. Elliott.  
For description, see DEA 1010.

**VISST 2000** Introduction to Visual Studies (also ARTH/COML 2000, ENGL 2920) (LA-AS)  
Spring. 4 credits. Requirement. Requirement for undergraduate concentrators. I. Dadi. Provides a broad introduction to the visual cultures and media of the world, and to the historical impact of visual arts.  

**VISST 2020** Introduction to Feminist Theory (also FGSS 2020) (CA-AS)  
Spring. 3 credits. Staff.  
For description, see FGSS 2020.

**VISST 2174/6174** Introduction to Film Analysis: Meaning and Value (also FILM 2740/6740) (LA-AS)  
Fall. 4 credits. Limited to 40 students. Students should enroll in FILM 6740.  
For description, see FILM 2740.

**VISST 2190** Thinking Surrealisms (also ARTH 2019, COML 2200) (LA-AS)  
Fall. 4 credits. B. Maxwell.  
For description, see COML 2200.

**VISST 2193** Middle Eastern Cinema (also COML 2293, JWST/NES 2793) @ (LA-AS)  
Fall. 4 credits. Next offered 2010–2011.

**VISST 2300** Survey of American Film (also AMST/FILM 2760) (LA-AS)  
Spring. 3 credits. S. Haenni.  
For description, see AMST 2760.

**VISST 2360** Public Voice and Civic Gesture (also DANCE 2450, THETR 2360)  
Fall. 1 credit. Next offered 2010–2011.  
For description, see DANCE 2450.
VISST 2419 Rembrandt's Circle: Technologies of Vision (also ARTH 2419) (CA-AS)
Fall. 4 credits. I. Pincus.
For description, see ARTH 2419.

VISST 2430 Hip-Hop Hollywood (also DANCE 2430, PE 1189)
Fall and summer. 3 credits. J. Self.
For description, see DANCE 2430.

VISST 2540 Dance Technique Workshop (also DANCE 2240, PE 1188)
Spring and summer. 0–1 credit. S–U grades only. Next offered 2010–2011.
For description, see DANCE 2240.

VISST 2511 Beginning Dance Composition (also DANCE 2500) (LA-AS)
Fall, spring, and summer. 3 credits.
For description, see DANCE 2500.

VISST 2645 Renaissance and Baroque (also ARTH 2400) (HA-AS)
For description, see ARTH 2400.

VISST 2744 Gamelan in Indonesian History and Cultures (also ASIAN 2245, MUSIC 1341) (LA-AS)
Fall and spring. 3 credits. No previous knowledge of musical notation or performance experience required. C. Miller.
For description, see MUSIC 1341.

VISST 3175 History and Theory of Commercial Narrative Film (also FILM 3750) (LA-AS)
Fall. 4 credits. Fee for screening expenses: $10 (paid in class). S. Haenni.
For description, see FILM 3750.

VISST 3176 History and Theory of Documentary and Experimental Film (also FILM 3760/6760) (LA-AS)
Fall. 4 credits. Fee for screen expenses: $10 (paid in class). A. Villarejo.
For description, see FILM 3760.

VISST 3210 Ancient/Modern Corporate Realities (also DANCE 3580, FILM ITAL 32709) (LA-AS)
Summer. 4 credits. B. Suber, J. Rhodes, and B. Milles.
For description, see DANCE 3580.

VISST 3305 Visual Perception (also PSYCH 3050)
Spring. 4 credits. Limited to 20 students. Prerequisite: PSYCH 2050 or permission of instructor. J. Cutting.
For description, see PSYCH 3050.

VISST 3318 Literature and Media in Japan (also ASIAN 3318, COML 3150)
Fall. 3 credits. B. deBary.
For description, see ASIAN 3318.

VISST 3342 Human Perception: Application to Computer Graphics, Art, and Visual Display (also COGST/PSYCH 3420, PSYCH 6420)
Fall. 3 or 4 credits. 4-credit option involves term paper. Prerequisite: PSYCH 1101 or permission of instructor. PSYCH 2050 strongly recommended. D. Field.
For description, see PSYCH 3420.

VISST 3443 Leonardo, Michelangelo, and Raphael (also ARTH 3440) (HA-AS)
Spring. 4 credits. C. Lazzaro.
For description, see ARTH 3440.

VISST 3519 Music, Dance, and Light (also DANCE 3590, THETR 3190) (LA-AS)
Spring. 3 credits. E. Internemann and A. Fogelsanger.
For description, see DANCE 3590.

VISST 3560 Computing Cultures (also COMM 3595, INFO/STS 3581) (CA-AS)
Spring. 4 credits. R. Prentice.
For description, see STS 3561.

VISST 3620 Lighting Design Studio I (also DANCE 3660, THETR 3620) (LA-AS)
Fall. 4 credits. E. Internemann.
For description, see THETR 3620.

VISST 3645 American Film Melodrama (also AMST/ENGLISH 3440, FGSS 3450) (LA-AS)

VISST 3655 The House and the World: Architecture of Asia (also ARTH 3655, ASIAN 3394) (CA-AS)
Spring. 4 credits. K. McGowan.
For description, see ARTH 3855.

VISST 3662 Impressionism in Society (also ARTH 3760) (CA-AS)
Spring. 4 credits. Not open to freshmen. L. Meixner.
For description, see ARTH 3760.

VISST 3672 The Art of the Historical Avant-Garde (also ARTH 3672, COML 3840, GERST/ROMS 3770) (LA-AS)
Spring. 4 credits. P. McBride.
For description, see GERST 3770.

VISST 3696 Arts of Southeast Asia (also ARTH 3850, ASIAN 3350) (CA-AS)
Fall. 4 credits. K. McGowan.
For description, see ARTH 3850.

VISST 3735 Performative Modernism (also ENGLISH/THETR 3350) (CA-AS)
Fall. 4 credits. M. Woods.
For description, see ENGLISH/THETR 3350.

VISST 3740 Painting 19th-Century America (also AMST/ARTH 3740) (CA-AS)
Fall. 4 credits. L. Meixner.
For description, see ARTH 3740.

VISST 3798 Fundamentals of Directing I (also THEATR 3980) (LA-AS)
Fall. 5 credits. Limited to 10 students. Prerequisite: permission of instructor. Special consideration given to students who have completed THEATR 2800 or intend to continue in area of stage or screen directing. Students should see instructor one year in advance to sign up for course. D. Feldshuh.
For description, see THEATR 3980.

VISST 3812 Edge Cities: Celluloid New York and Los Angeles (also AMST/ARCH 3812)
Spring. 3 credits. S. Haenni and M. Woods.
For description, see AMST 3812.

VISST 3850 Commedia: A Contemporization of Physical Acting Styles and the Comic Approach (also THEATR 3840) (LA-AS)
Spring. 4 credits. B. Milles.
For description, see THEATR 3840.

VISST 3851 Partition/Fiction and Film (also ASIAN 3389, COML 3850) (LA-AS)
Fall. 4 credits. A. Banerjee.
For description, see COML 3850.

VISST 3870 Literature and Film of South Asia (also ASIAN 3387, COML 3860) (CA-AS)

VISST 4210 Dance Technique IV/Classical (also DANCE 4210, PE 1186)
Fall and spring. 1 credit. May be repeated for credit. Prerequisite: History of Art majors only. I. Dadi.
For description, see DANCE 4210.

VISST 4220 Dance Technique IV/Modern (also DANCE 4220, PE 1187)
Fall and spring. 1 credit. By placement only; no pre-enrollment. Attendance at dance concerts required. J. Chu and J. Self.
For description, see DANCE 4220.

VISST 4260 Adaption: Text/Theatrically (also THEATR 4260) (LA-AS)
Spring. 4 credits. B. Milles.
For description, see THEATR 4260.

VISST 4436 Topics in Indian Film (also ASIAN 4436) (LA-AS)
Fall. 4 credits. D. Gold.
For description, see ASIAN 4436.

VISST 4451 Prints and Visual Culture in Early Modern Europe (also ARTH 4451/6451) (HA-AS)
For description, see ARTH 4451.

VISST 4452 Caribbean Dialogs: Online! (also ARTH 4526) (CA-AS)
Summer only. 4 credits. P. Archer-Straw.
For description, see ARTH 4526.

VISST 4545 Text Analysis for Production: How to Get from the Text onto the Stage (also ENGLISH 4441, THEATR 4450)
Spring. 4 credits. Limited to 15 students. Prerequisite: THEATR 2500 or 2810 or 3890, or permission of instructor. B. Levitt.
For description, see THEATR 4450.

VISST 4546 Shakespeare in (Con)text (also ENGLISH 4210, THEATR 4460) (LA-AS)
For description, see THEATR 4460.

VISST 4563 Lighting Design Studio II (also DANCE 4660, THEATR 4620) (LA-AS)
Spring. 4 credits. Limited to 6 students; may be repeated for credit. Prerequisite: THEATR 2500 or 3620, or permission of instructor. E. Internemann.
For description, see THEATR 4620.

VISST 4580 Seminar in Dance Studies (also DANCE 4680)
Spring and summer. 4 credits. Limited to 15 students. Spring. B. Suber; summer, B. Suber and J. Chu.
For description, see DANCE 4680.
VISST 4607 The Museum and the Object (also ARTH 4107) (CA-AS)
Fall. 4 credits. Not open to freshmen or sophomores without permission of instructor. All classes meet in Johnson Art Museum Study Gallery. K. McGowan.
For description, see ARTH 4107.

VISST 4641 Comparative Modernities (also ARTH 4690/6690, COML 4910) (CA-AS)

VISST 4761 Art and Social Histories (also ARTH 4761) (CA-AS)
Fall and spring. 4 credits. Permission of instructor required; auditing not permitted. Not open to freshmen. L. Meixner.

VISST 4800 Advanced Seminar in American Literature: Gender and Visual Culture in Women's Literature (also AMST/ENGL/FGSS 4790, ARTH 4979) (LA-AS)

VISST 4821 Mobility and Invention (also ARTH/SHUM 4821)
Fall 4 credits. Limited to 15 students. M. Fernandez.
For description, see SHUM 4821.

VISST 4825 African Port Cities: Empire Building at the Crossroads (also ARTH/SHUM 4825, ASRC 4607)
Fall. 4 credits. Limited to 15 students. P. Meier.
For description, see SHUM 4825.

VISST 4826 Extrastatecraft (also GOVT 4678, SHUM 4826)
Fall. 4 credits. Limited to 15 students.
K. Easterling.
For description, see SHUM 4826.

VISST 4934 Art Writing: Tracing the Visible (also ARTH/SHUM 4934)
Spring. 4 credits. Limited to 15 students. M. Jacobus.
For description, see SHUM 4934.

*Exams begin Wednesday at 7:00 p.m.
†Access via Student Center (studentcenr.cornell.edu)

The dates shown in this calendar are subject to change at any time by official action of Cornell University.

In this calendar, the university has scheduled classes, laboratories, and examinations on religious holidays. It is the intent of the university that students who miss those activities because of religious observances be given adequate opportunity to make up the missed work.

The Law School and College of Veterinary Medicine calendars differ in a number of ways from the university calendar. Please consult the catalogs of those colleges for details.

The courses and curricula described in this catalog, and the teaching personnel listed herein, are subject to change at any time by official action of Cornell University.

The rules and regulations stated in this catalog are for information only and in no way constitute a contract between the student and Cornell University. The university reserves the right to change any regulation or requirement at any time.

This catalog was produced by the Office of Publications and Marketing at Cornell University.
