

2009–2010

COURSES of Study

Cornell University

Cornell University Officials

David J. Skorton, President

Senior Staff

W. Kent Fuchs, Provost

Antonio M. Gotto, Jr., Provost for Medical Affairs and Stephen and Suzanne Weiss Dean of the Joan and Sanford I. Weill Medical College

James J. Mingle, University Counsel and Secretary of the Corporation

Thomas W. Bruce, Vice President for University Communications

Stephen Philip Johnson, Vice President for Government and Community Relations

Susan H. Murphy, Vice President for Student and Academic Services

Mary G. Opperman, Vice President for Human Resources

Charles D. Phlegar, Vice President for Alumni Affairs and Development

Paul Streeter, Interim Vice President for Planning and Budget

Academic Leadership

Antonio M. Gotto, Jr., Provost for Medical Affairs and Stephen and Suzanne Weiss Dean of the Joan and Sanford I. Weill Medical College

Glenn C. Altschuler, Dean of the School of Continuing Education and Summer Sessions

Robert L. Constable, Dean for Computing and Information Science

David P. Hajjar, Dean of the Weill Graduate School of Medical Sciences

Susan A. Henry, Ronald P. Lynch Dean of the College of Agriculture and Life Sciences

Michael D. Johnson, Dean of the School of Hotel Administration

Harry C. Katz, Kenneth F. Kahn Dean of the School of Industrial and Labor Relations

Anne R. Kenney, Carl A. Kroch University Librarian

Kent Kleinman, Gale and Ira Drukier Dean of the College of Architecture, Art, and Planning

Michael I. Kotlikoff, Austin O. Hooley Dean of the College of Veterinary Medicine

G. Peter Lepage, Harold Tanner Dean of the College of Arts and Sciences

Alan D. Mathios, Rebecca Q. and James C. Morgan Dean of the College of Human Ecology

Christopher K. Ober, Interim Dean of the College of Engineering

Alison G. Power, Dean of the Graduate School

Stewart J. Schwab, Allan R. Tessler Dean of the Law School

L. Joseph Thomas, Anne and Elmer Lindseth Dean of the S.C. Johnson Graduate School of Management

Office of the Provost

David R. Harris, Deputy Provost and Vice Provost for Social Sciences

Robert A. Buhrman, Senior Vice Provost for Research

Doris Davis, Associate Provost for Admissions and Enrollment

Stephen F. Hamilton, Associate Provost for Outreach

Elizabeth A. Mannix, Vice Provost for Equity and Inclusion

Stephen Kresovich, Vice Provost for the Life Sciences

Laura Schaefer Brown, Vice Provost for Undergraduate Education

Alice N. Pell, Vice Provost for International Relations

Robert C. Richardson, Senior Science Advisor

Ronald Seeber, Vice Provost for Land Grant Affairs

John A. Siliciano, Vice Provost

Office of the Provost for Medical Affairs

David P. Hajjar, Ph.D., Senior Executive Vice Dean, Executive Vice Provost, and Dean of the Graduate School of Medical Sciences

Stephen M. Cohen, Executive Vice Dean for Administration and Finance and Associate Provost

Javaid I. Sheikh, M.D., Interim Dean, Weill Cornell Medical College in Qatar

Steven P. Rosalie, Executive Vice Dean and Associate Provost for International Initiatives

Other Administrative Leadership

Joanne M. DeStefano, Vice President for Financial Affairs

Michael B. Dickinson, University Auditor

Steve Schuster, Interim Executive Director for Information Technologies

Curtis S. Ostrander, Interim Vice President for Risk Management and Public Safety

James H. Walsh, Chief Investment Officer

Kyu-Jung Whang, Vice President for Facilities Services

Kathy Zoner, Interim Chief of Police

Dean of the University Faculty: William E. Fry

Robert W. and Elizabeth C. Staley Dean of Students:

Kent L. Hubbell

Cornell University has an enduring commitment to support equality of education and employment opportunity by affirming the value of diversity and by promoting an environment free from discrimination. Association with Cornell, either as a student, faculty, or staff member, involves participation in a free community where all people are recognized and rewarded on the basis of individual performance rather than personal convictions, appearance, preferences (including sexual or affectional orientation), or happenstance of birth.

Cornell University's history of diversity and inclusion encourages all students, faculty, and staff to support a diverse and inclusive university in which to work, study, teach, research, and serve. No person shall be denied admission to any educational program or activity or denied employment on the basis of any legally prohibited discrimination involving, but not limited to, factors such as race, color, creed, religion, national or ethnic origin, gender, sexual orientation, age, gender identity or expression, marital status, disability, or veteran status. Cornell University is an affirmative action, equal opportunity employer.

Concerns and complaints related to equal opportunity in education and employment based on aspects of diversity protected under federal, state, and local law, including sexual harassment complaints filed by any member of the Cornell community against an academic or nonacademic staff member, as well as complaints arising under Title IX, should be directed to the Office of Workforce Diversity, Equity and Life Quality (WDELQ), 160 Day Hall, Ithaca, NY 14853-2801 (telephone: 607-255-3976; fax: 607-255-7481; TDD: 607-255-7066; e-mail equalopportunity@cornell.edu).

Cornell University is committed to assisting those persons with disabilities who have special needs related to their educational pursuit or employment. Information on services provided to prospective and current Cornell students with disabilities can be obtained by contacting Student Disability Services, Center for Learning and Teaching, 420 Computing and Communications Center, Ithaca, NY 14853-6601 (telephone: 607-254-4545; facsimile: 607-255-1562; TDD: 607-255-7665, www.clt.cornell.edu). Prospective employees in need of workplace accommodation for participation in the selection process should contact WDELQ. Current employees in need of a workplace accommodation pursuant to the Americans with Disabilities Act or New York State law should contact Medical Leaves and Administration, 840 Hanshaw Rd., Ithaca, NY 14850 (telephone: 607-216-1400, fax: 607-216-1425).

All members of the Cornell Community are encouraged to report bias activity, including hate crimes, either experienced directly or observed to WDELQ. They may also report the matter to a bias reporting team member (www.cornell.edu/diversity/biasreport.cfm).

Members of the Cornell University community are strongly encouraged to report immediately any criminal activity and suspicious person(s) to the Cornell University Police Department (607 255-1111). Incidents that may or may not be crimes may also be reported to "campus security authorities," which include, in addition to the Cornell University Police, those with responsibility for controlling access to buildings or facilities and officials having significant responsibility for students or campus activities. Licensed counselors and campus clergy (pastoral counselors) are exempt from reporting requirements. Cornell University encourages counselors and clergy, if and when they deem it appropriate, to inform those who they counsel of procedures for reporting crimes on a voluntary, confidential basis for inclusion in the Cornell University Police Statistical Crime Record.

For Cornell University directory information or general information, call 607 255-2000 or 607 254-INFO. Courses of Study is available on the web at cornell.edu/academic/courses/cfm.

To obtain a copy of this catalog, please follow these guidelines:

If you are a prospective undergraduate student and don't have web access, please contact the Undergraduate Admissions Office, Cornell University, 410 Thurston Ave., Ithaca, NY 14850-2488, 607 255-5241.

If you are a prospective graduate student, please consult the listing of the course catalog on the web (see above for address).

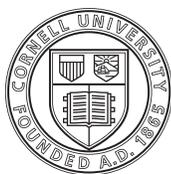

If you are a currently enrolled student, please consult the listing of the course catalog on the web (see above for address) or contact your college registrar.

All others please contact the Office of the University Registrar, Cornell University, B07 Day Hall, Ithaca, NY 14853-2801, 607 255-4232, e-mail: dtsy1@cornell.edu

Accreditation

Cornell University is accredited by the Middle States Commission on Higher Education.

A copy of the most recent reaffirmation of Cornell's accreditation can be found at dpb.cornell.edu/accreditation.htm. Requests to review additional documentation supporting Cornell's accreditation should be addressed to Marin Clarkberg, Associate Director, Institutional Research and Planning, Cornell University, 441 Day Hall, Ithaca, NY 14853-2801, mec30@cornell.edu.

Cornell University

(USPS 132-860)

Volume 101 of the series "Cornell University" consists of four catalogs, of which this is number three, dated August 1, 2009. Issued once in January, once in July, once in August, and once in November. Published by Cornell University, Publications and Marketing, East Hill Plaza, 353 Pine Tree Road, Ithaca, NY 14850-2820. Periodicals postage paid at Ithaca, New York.

Postmaster: Send address changes to Cornell University, Office of the University Registrar, B07 Day Hall, Ithaca, NY 14853-2801.

CORNELL UNIVERSITY—GENERAL INFORMATION

Introduction

Courses of Study (www.cornell.edu/academics/courses.cfm), a catalogue of Cornell University's many academic programs and resources, contains information about colleges and departments, interdisciplinary programs, undergraduate and graduate course offerings, and procedures. Students also should consult with their college's advising office for specific information on their college's academic policies and procedures, degree programs, and requirements. Not included in this publication is information concerning the Medical College and the Graduate School of Medical Sciences, located in New York City.

It is not possible to keep this single volume completely up-to-date. The most current information regarding course descriptions, schedules, sections, rooms, credits, and registration procedures may be found at www.cornell.edu/academics/courses.cfm, which also includes the Course and Time/Room Rosters. Students are also advised to consult individual college and department offices for up-to-date course information.

Cornell community members are expected to comply with all university policies, including the Code of Conduct and the Code of Academic Integrity available at www.policy.cornell.edu.

The following are offices and sources of information about admission to Cornell University.

Undergraduate Admissions Office, 410 Thurston Avenue, Ithaca, NY 14850-2488, 255-5241, admissions.cornell.edu.

Graduate School, 143 Caldwell Hall, Ithaca, NY 14853-2602, 255-5820, gradschool.cornell.edu, gradschool@cornell.edu.

Law School, Myron Taylor Hall, Ithaca, NY 14853-4901, 255-5141, www.lawschool.cornell.edu/admissions, lawadmit@lawschool.cornell.edu.

Samuel Curtis Johnson Graduate School of Management, Office of Admissions, 111 Sage Hall, Ithaca, NY 14853-6201, 255-4526, www.johnson.cornell.edu.

College of Veterinary Medicine, Office of Student and Academic Services, Cornell University, S2009 Schurman Hall, Ithaca, NY 14853-6401, 253-3700, www.vet.cornell.edu/prospective.htm.

Weill Cornell Medical College, Office of Admissions, 445 E. 69th Street, New York, NY 10021, 212-746-1067, www.med.cornell.edu/education/admissions, wcmc-admissions@med.cornell.edu.

Graduate School of Medical Sciences of Cornell University, Office of Admissions, 445 E. 69th Street, New York, NY 10021, 212-746-6565, www.biomedsci.cornell.edu, wgms@med.cornell.edu.

University Registration

University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must

- complete course enrollment according to individual college requirements;
- settle all financial accounts, including current semester tuition;
- satisfy New York State and university health requirements;
- have no holds from their college, the Office of the Judicial Administrator, Gannett Health Services, or the bursar.

Individuals must become registered students by the end of the third week of the semester or their access to services and education will be terminated and they will be subject to a \$350 late fee, then \$25 per week after the sixth week plus any finance charges.

Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes, reside in university-owned residences, or use any other university services. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises. The university does not permit retroactive registration and does not record courses or grades for unregistered persons.

LEAVES AND WITHDRAWALS

Students wishing to take a leave from their college are required to apply for a voluntary Leave of Absence (LOA) with an expected

return date. Students who do not apply for and receive approval for a LOA will be automatically withdrawn from the university following the fifth week of the semester and may be required to apply for readmission. Withdrawn students and students on a LOA may not enroll in course work with the university (e.g., extramural studies, summer/winter session). Students on a LOA are not eligible for privileges afforded to full-time registered students, including housing, dining, library, and transit privileges.

Students may withdraw from the university at their own discretion. In addition, a college may withdraw a student who fails to return at the end of a period of authorized leave.

Medical leaves are granted by the student's college upon recommendation by Gannett Health Services.

Bursar Information

TUITION, FEES, AND EXPENSES

Tuition for Academic Year 2009–2010

Endowed Divisions

Undergraduate

Architecture, Art, and Planning	
Arts and Sciences	
Engineering	
Hotel Administration	\$37,750

Graduate

Graduate School (with chair in an endowed college)	\$29,500
Johnson Graduate School of Management Two-Year Program	
entering students	\$47,150
second-year students	\$46,700

Professional

Law School	
entering and second-year students	\$48,950
third-year students	\$48,050
LL.M. one-year program students	\$51,530

Contract Divisions (tuition rates are tentative)

Undergraduate

Agriculture and Life Sciences	
Human Ecology	
Industrial and Labor Relations	
New York State resident*	\$21,610
Nonresident	\$37,750

Graduate and Professional Students

Graduate School (with chair in a contract college)	\$20,800
Veterinary Medicine	
New York State resident DVM	\$26,500
Nonresident DVM	\$39,500
Graduate, Ph.D.	\$20,800

Student Activities Fee (Tentative)

Undergraduate students	\$204
Graduate and professional students	\$70

Summer Session (2009) \$970
per credit**

In Absentia Fees

Undergraduate \$200 per semester
Graduate and professional \$200 per semester
Law and management \$75 per semester

The amount, time, and manner of payment of tuition, fees, or other charges may be changed at any time without notice.

* **Residency status** is determined at the time of admission by the college. Change in residency status is determined by the university bursar following matriculation. The deadline for submission of requests for the Fall 2009 semester is June 1, 2009. The deadline for the Spring 2010 semester is November 1, 2009. Further information and an application can be found at www.bursar.cornell.edu.

****Regular session rate.** Special program rates may vary.

Admission application fees and forms may be found at www.cornell.edu/admissions.

Tuition Refund Policy

Amounts personally paid for tuition may be refunded if the student requests a leave of absence or withdrawal from the office of the dean of his or her college of enrollment. The date of this request will determine the tuition liability for the semester. All students refer to the "Proration Schedule for Withdrawals and Leaves of Absence" below.

Repayment policy. Students receiving financial aid from the university who withdraw during a semester will have their aid reevaluated, possibly necessitating repayment of a portion of aid received. Repayment to aid accounts depends on the type of aid received, government regulations, and the period of time in attendance. Cornell is authorized to offset any credit balances against any debts owed by the student to the university.

Proration Schedule for Withdrawals and Leaves of Absence

Fall 2009 and Spring 2010

Percentage	All Students	
	Fall 2009	Spring 2010
no charge	8/27-9/2	1/25-1/31
10% charge	9/3-9/9	2/1-2/7
20% charge	9/10-9/23	2/8-2/21
30% charge	9/24-9/30	2/22-2/28
40% charge	10/1-10/7	3/1-3/7
50% charge	10/8-10/14	3/8-3/14
60% charge	10/15-10/21	3/15-3/21
80% charge	10/22-10/28	3/22-3/28
100% charge	10/29	3/29

Special programs, such as Cornell Abroad and Executive MBA, may follow their own tuition refund policies for withdrawals and leaves of absence. Please refer to the appropriate program office for details regarding those policies.

BILLING AND PAYMENT

Billing

Electronic billing (E-billing) is the official method of billing. Paper bills will not be sent. Tuition and room and board charges will be billed in July and December and must be paid before registration. The due date for these semester bills will normally be 5 to 10 working days before registration day. All other charges, credits, and payments will appear on monthly statements.

It is possible that some charges will not be listed on the first bill and will appear on a subsequent monthly bill. *A student must be prepared to pay any charges appearing on a subsequent bill even though the student receives a financial aid stipend before the charges are billed.*

All payments are due by the due date stated on the bill; all payments must be *received* by that date to avoid *finance charges*. Payments are *not* processed by postmark.

The Office of the Bursar conducts all business directly with the student. Monthly charges, as well as any awards, grants, scholarships, and loans, are listed and billed under the student's name. Refund checks and direct deposit refunds are also drawn in the name of the student. Cornell is also authorized to offset any credit balances against any debts owed by the student to the university.

Payments

An individual who has outstanding indebtedness to the university will not be allowed to register or reregister in the university, receive a transcript of record, have academic credits certified, be granted a leave of absence, or have a degree conferred. University policy precludes the use of any current financial aid for payment of past-due charges.

The Office of the Bursar acts as a clearinghouse for student charges and credits that are placed directly on a student's bill by several departments and offices of the university. *Because the Office of the Bursar does not have detailed records concerning many items that appear on a bill, students should contact the office involved if they have questions.*

For further information, students should contact the Office of the Bursar, Cornell University, 260 Day Hall (tel. 255-2336; fax 255-6442; uco-bursar@cornell.edu; www.bursar.cornell.edu). Bursar account information may be viewed real time on *Student Center*.

Student Health Insurance

Because of the high cost of medical care, it is Cornell University policy that every full-time registered student must have health insurance coverage.

The Student Health Insurance Plan (SHIP) is developed especially for Cornell students and provides extensive coverage at a reasonable cost for most on- or off-campus medical care. Complete and current details of the SHIP, its cost, and population-specific material for undergraduates, graduate students, and professional students are mailed to each student

in July. Undergraduates, graduate students, and professional students each have separate deadlines and guidelines. Please be sure to check the July mailing for complete details.

The Student Health Insurance Plan provides coverage 24 hours a day, 365 days a year, anywhere in the world. Students graduating midyear may be eligible to purchase the Early Grad Plan. Those enrolled in the SHIP may enroll their eligible dependents for an additional cost (fall deadline: September 30). Graduate and professional students who prefer to pay monthly must enroll in the installment payment plan no later than September 30. Because of policy restrictions, the plan is nonrefundable (except for dependents who no longer meet eligibility requirements and students who withdraw from Cornell within the first 30 days of the academic year).

For more information, students should contact Cornell University Office of Student Health Insurance, 409 College Avenue, Suite 211 (tel. 255-6363; sicu@cornell.edu; www.studentinsurance.cornell.edu).

Student Record Privacy Statement: Annual Notification Under FERPA

The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their education records. Further details may be found in Cornell Policy 4.5 Access to Student Information, available at www.policy.cornell.edu/Vol.4_5.cfm. These rights include:

1. The right to inspect and review the student's education records within 45 days of the day the university receives a request for access.

Students should submit to the office of the university registrar, written requests that identify the record(s) they wish to inspect. The university official will make arrangements for access and notify the student of the time and place where the records may be inspected. If the records are not maintained by the university official to whom the request was submitted, that official shall advise the student of the correct official to whom the request should be addressed.

2. The right to consent to disclosures of personally identifiable information contained in the student's education records, except to the extent that FERPA authorizes disclosure without consent:
 - a. Disclosure to school officials with legitimate educational interests. A school official is a person employed by the university in an administrative, supervisory, academic (including emeritus faculty), research, or support staff position (including law enforcement unit personnel and health staff); a person or company with whom the university has contracted (such as an attorney, auditor, or collection agent); a person serving on the Board of Trustees; or a student serving on an official committee, such as a disciplinary or grievance committee, or assisting another school official in performing his or her tasks.

A school official has a legitimate educational interest if the official needs to review an education record to fulfill his or her professional responsibility.

- b. Upon request, to officials of another school in which a student seeks or intends to enroll.
- c. To parents or legal guardians of dependent students as that term is defined in the Internal Revenue Code. In general, the university does not make education records available to the parents of a student. However, where the university believes that it is in a dependent student's best interest, information from the student's education records may, at the university's discretion, be released to the parents or legal guardians of such a dependent student. Such disclosure generally will be limited to information about a student's official status at the university, but parents or legal guardians of a dependent student may also be notified upon the authorization of the dean of the student's college, or the Vice President for Student and Academic Services, or the Dean of Students, or their designees in the following cases:
 - when a student has voluntarily withdrawn from the university or has been required by the university to withdraw;
 - when a student has been placed on academic warning;
 - when the student's academic good standing or promotion is at issue;
 - when a student engages in alcohol- or drug-related behavior that violates Cornell policies;
 - when a student has been placed on disciplinary probation or restriction.
 - in exceptional cases when a student otherwise engages in behavior calling into question the appropriateness of the student's continued enrollment in the university.

Unless otherwise indicated in writing by the student at the time of registration, or thereafter, the university will presume that a full-time undergraduate student is a dependent as that term is defined in the Internal Revenue Code. Undergraduate students who are not financially dependent and do not wish to permit their parents or legal guardian access to their education records should advise the Office of the University Registrar in writing and provide evidence of financial independence. Graduate and professional students are not assumed to be financially dependent upon their parents or legal guardian for these purposes.

- d. Disclosure of directory information. Cornell University has defined directory information to include the following: name, local address, local telephone listing, e-mail address, photograph, major field of study and college attended, dates of attendance, enrollment status, participation in officially recognized activities and sports, weight and height (of members of athletic teams) and any degrees earned and awards received. Directory information may be released unless the student updates his/her privacy settings on *Student Center*. Students who

wish to suppress their directory information from the printed telephone directory must perform this update within 10 days of the date of official university registration. Students may rescind their no-release request at any time by writing to the Office of the University Registrar or on *Student Center*.

3. The right to request the amendment of the student's education record that the student believes is inaccurate.

Students may ask the office of the university registrar to amend a record that they believe is inaccurate. They should write the university official responsible for the record, clearly identify the part of the record they want changed, and specify why it is inaccurate.

If the university decides not to amend the record as requested by the student, the university will notify the student of the decision and advise the student of his or her right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the student when notified of the right to a hearing.

4. The right to file a complaint with the U.S. Department of Education concerning alleged failures by Cornell University to comply with the requirements of FERPA. The name and address of the office that administers FERPA is:

Family Policy Compliance Office
U.S. Department of Education
400 Maryland Avenue, SW
Washington, DC 20202-5901

Financial Aid and Federal Loans Satisfactory Academic Progress Policy for Undergraduate Students

Federal regulations (General Provision CRF 668.1) require that Cornell University review the academic progress of students who apply for and/or receive financial assistance. This includes but is not limited to the William D. Ford Federal Direct Loan program and all Cornell grants. To be making satisfactory academic progress toward a degree, students must maintain specified grade point averages and proceed through the program at a pace leading to completion within a specified time frame. This regulation applies to each financial aid applicant, whether a previous aid recipient or not. Failure to make satisfactory academic progress may affect your eligibility for financial aid. The specific requirements for GPA and credit hours can be found by reviewing the complete policy on the Office of Financial Aid and Student Employment web site, finaid.cornell.edu.

Academic Integrity

Absolute integrity is expected of every Cornell student in all academic undertakings. Any fraudulent act by a student to advance his or her academic status merits a severe penalty and such cases are governed by the Code of

Academic Integrity. A pamphlet titled the *Code of Academic Integrity and Acknowledging the Work of Others* is available from the office of the dean of faculty, and at www.policy.cornell.edu/Code_of_Academic_Integrity.cfm.

Protection of Human Participants in Research

The Human Research Protection Program is designed to assure the safety and well-being of individuals who participate in research projects at Cornell University. Research activities covered by the Human Research Protection Program include, but are not limited to, experiments and psychological or physical tests on humans, surveys, questionnaires, and studies of existing data, documents, or records in which there are individual identifiers. To help faculty, students, and staff members determine if an activity or project falls under the purview of Cornell's Human Research Protection Program, the Office of Research Integrity and Assurance (ORIA) has developed a Decision Tree, available at www.irb.cornell.edu.

The Institutional Review Board for Human Participants (IRB) is the official review board for all university projects that seek to use humans as research participants, assuring compliance with university policy and federal regulations protecting human subjects in research at universities. All proposals involving human participants in any category, including those initiated by students, must be submitted to the IRB for review before any research activities begin. Only after receiving an approval letter from the IRB, or an Exemption from IRB Review by ORIA, may a project be initiated. The guidelines for the use of human participants in research are available at www.irb.cornell.edu. Inquiries and communications about the guidelines should be directed to the IRB administrator (255-5138; irbhp@cornell.edu).

Use of Animals for Courses

Vertebrate animals serve as an invaluable aid in instruction. It is recognized, however, that some students have ethical objections to the use of vertebrate animals in this manner. Courses that use vertebrate animals are identified as such in the course descriptions. Students who have concerns about the use of animals in these courses should consult the course instructor for more information about the precise ways in which the animals are used. A set of university guidelines on the use of vertebrate animals in teaching for faculty and students is printed below and is available from departments in which the courses are offered. The use of live vertebrates in instruction is reviewed and approved by the Institutional Animal Care and Use Committee (IACUC) (www.iacuc.cornell.edu).

Cornell's Animal Users Health and Safety Program (AUHSP) covers faculty, staff, students, visiting scholars, contractors, and volunteers who have direct or indirect exposure to Cornell-owned vertebrate research and training animals. Program requirements are based on the type and frequency of exposure to animals, animal tissues, and/or time spent in an animal care facility (e.g., working, visiting, doing

maintenance work). Students enrolled in courses utilizing vertebrate animals are required to fill out a Risk Assessment Form (www.oria.cornell.edu/AUHSP/documents/AUHSPRiskAsstForm.pdf) and enroll in the AUHSP. Additionally, students should contact the Occupational Medicine Office of Gannett Health Services, or their personal health care provider, before working with animals or entering an animal facility, if they may have any medical conditions that may increase their risk.

Background: On December 8, 1987, the Cornell University Institutional Animal Care and Use Committee approved a series of guidelines recommended to them by the University Animal Welfare Committee. These guidelines were prepared by a subcommittee of faculty members, after they had the opportunity to evaluate the use of animals in undergraduate teaching (and student concerns for the same) from a representative sample of instructors.

Guidelines

1. For demonstrating certain principles and procedures, the use of animals in teaching is recognized as an invaluable, often essential, pedagogical device.
2. For courses in which vertebrate animals are to be used in dissection, surgery, or in other experimental procedures, the course description that appears in *Courses of Study* should alert students to this fact.
3. A detailed description of the intended use of vertebrate animals should be available to students upon request to the instructor of each course.
4. Faculty members are encouraged to explain their reasons and need for using vertebrate animals and should indicate to students the availability of the procedures described in item 8 below.
5. Students are encouraged to discuss their concerns about the instructional use of vertebrate animals with the instructor of the course.
6. When consistent with pedagogical objectives, faculty members are encouraged to consider adopting alternative methods and procedures that do not involve the use of live animals.
7. When students object on ethical or other valid grounds to participating in an exercise using vertebrate animals, instructors are encouraged to provide alternative means when consistent with pedagogical objectives for learning the same material.
8. A student who is reluctant to voice his or her concerns about animal use in a particular course or who thinks these concerns have not received proper attention may seek assistance from the chair of the Institutional Animal Care and Use Committee (IACUC) at 255-3749 or by e-mail at iacuc-mailbox@cornell.edu. Confidential reports may be made to http://secure.ethicspoint.com/domain/en/report_custom.asp?clientid=6357.
9. Faculty members should instruct students in the responsible use of animals. For more information, see www.policy.cornell.edu/vol1_4.cfm.

Advanced Placement

Definition and Purpose of Advanced Placement Credit

Advanced placement credit is college credit that students earn before they matriculate as freshmen and that counts toward the degree and degree requirements as specified by the individual college at Cornell. Its primary purpose is to exempt students from introductory courses and to place them in advanced courses. Its value is that it allows students to include more advanced courses in their course of study.

Sources of Advanced Placement Credit

Advanced placement credit may be earned from the following:

1. The requisite score from the Advanced Placement Examinations (AP exams) from the College Entrance Examination Board (CEEB) in Princeton, N.J. The requisite scores, which vary by subject, are determined by the relevant departments at Cornell and are listed on pages 9–10.
2. Acceptable performance on a Cornell department exam (offered only in some subjects, usually during orientation).
3. A regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments accept credit from virtually all accredited colleges; some do not.
4. GCE Advanced Level and International Baccalaureate Examinations are listed on page 11.

Note: *Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the college provides a transcript of such work.*

Students who have taken such courses may, however, earn credit by taking an appropriate examination as described in paragraph 1 or 2 above.

The appropriate department of instruction within the university sets the standards of achievement that must be met for advanced placement in its subject, recommends Advanced Placement credit for those who meet the standards, and determines which Cornell courses the credit places students out of. The final decision for awarding advanced placement credit at Cornell and applying it to degree requirements rests with each individual college (consult the relevant college sections of *Courses of Study*). Students need not accept advanced placement, although forfeiting the advantage of moving quickly into advanced courses affects one's overall education. If they take the Cornell course they have placed out of, they relinquish the advanced placement credit.

Advanced placement examinations.

Entering first-year students should have their scores from CEEB Advanced Placement Examinations sent to their college or school registrar's office (see list below).

Departmental advanced standing examinations.

In certain subjects, students may also qualify for advanced placement or credit, or both on the basis of departmental examinations given on campus during Orientation Week. A schedule of these examinations appears in the orientation booklet mailed in late summer to entering

students. The departments that award advanced placement and credit on the basis of departmental examinations are shown on pages 9–12. Students need to register for those examinations in the relevant department.

Transfer of credit. Entering first-year students who have completed college courses for which they want to receive credit toward their Cornell degree should send transcripts and course syllabi to their college or school office (see the list below).

Written inquiries. Students can address questions to departments, schools, or college offices by adding Ithaca, NY 14853 to the addresses given in the following sections.

College of Agriculture and Life Sciences
140 Roberts Hall

College of Architecture, Art, and Planning
B1 West Sibley Hall

College of Arts and Sciences
55 Goldwin Smith Hall

College of Engineering
158 Olin Hall

School of Hotel Administration
180 Statler Hall

College of Human Ecology
145 Martha Van Rensselaer Hall

School of Industrial and Labor Relations
101 Ives Hall

CREDIT AND PLACEMENT

The tables on the following pages summarize how credit and placement are determined for most subjects. Supplementary information for some subjects is also provided.

International Credentials

The policies currently in effect for General Certificate of Education (GCE) "A" Level Examinations and International Baccalaureate Higher Level Examinations are summarized in the table on pages 9 and 10. Students may submit results of the French Baccalaureat or German Abitur for possible credit depending on the stream or specialization followed. Accepted students holding any other secondary school credentials are urged to sit for the Advanced Placement Examinations of the College Entrance Examination Board or for the departmental examinations offered during Orientation Week.

The table lists subjects and the marks for which credit will be awarded.

CEEB's AP Exams

<i>Subject</i>	<i>Score</i>	<i>Advanced Placement (AP) Credit</i>	<i>Placement</i>
Arabic			Department of Near Eastern Studies determines credit and placement based on departmental examination.
Biology			see www.biology.cornell.edu for credit and placement information.
Chemistry	5	4 credits	Department determines placement on basis of student/advisor meeting before registration and/or an exam given during fall orientation. Placement out of 2070, 2080, or 2090; if students take 2150 they may also receive 4 AP credits. Pre-med students with AP credit should contact the Health Careers Center to determine how many general chemistry courses they should take. A few medical schools require two semesters of general chemistry; they do not accept AP credit as one of the required courses.
Computer science AB	4,5	4 credits	Placement out of CS 1110. Department offers placement exam during fall orientation.
Computer science A	5	4 credits	Placement out of CS 1110. Department also offers placement exam during fall orientation.
Economics, micro	4,5	3 credits	Placement out of ECON 1110 and HADM 1141.
Economics, macro	4,5	3 credits	Placement out of ECON 1120.
English literature and composition			varies by college
English language and composition			varies by college
Environmental science	4,5	3 credits	Placement out of EAS 1101 and NTRES 2010. (Engineering and BEE students receive no credit.)
French language	4,5	3 credits	Department of Romance Studies determines placement. Students should take the CASE† to obtain appropriate placement.
French literature	4,5	3 credits	Department of Romance Studies determines placement. Students should take the CASE† to obtain appropriate placement.
German	4,5	3 credits	Department of German Studies determines credit and placement. Students should take the CASE† to obtain appropriate placement.
Government and politics, U.S.	4,5	3 credits	Placement out of GOVT 1111.
Government and politics, comparative	4,5	3 credits	Placement out of GOVT 1313.
Greek, Ancient			Department of Classics determines credit and placement based on departmental examination.
Greek, Modern			Department of Classics determines credit and placement based on departmental examination.
Hebrew			Department of Near Eastern Studies determines credit and placement based on departmental examination.
American history	4,5	4 credits	Placement out of HIST 1530 (also AMST 1530) and 1531 (also AMST 1531).
European history	4,5	4 credits	Placement out of HIST 1510 and 1520.
Human geography		no credit	
Italian language	4,5	3 credits	Department of Romance Studies determines placement. Students should take the CASE† to obtain appropriate placement.
Italian literature	4,5	3 credits	Department of Romance Studies determines placement. Students should take the CASE† to obtain appropriate placement.
Latin			Department of Classics determines credit and placement based on departmental examination.

CEEB's AP Exams *(continued)*

<i>Subject</i>	<i>Score</i>	<i>Advanced Placement Credit</i>	<i>Placement</i>
Mathematics BC	4,5	8 credits	Placement out of MATH 1106, 1110, 1120, 1220, and 1910. Permission to take MATH 2210, 2230, 2130, or 2310. Students wishing to take engineering calculus will place into MATH 1920.
	3	4 credits	Placement out of MATH 1106 and 1110. Permission to take MATH 1120, 1220, 1910, or 2310.
Mathematics AB or AB subscore of BC exam	3,4,5	4 credits	Placement out of MATH 1106 and 1110. Permission to take MATH 1120, 1220, 1910, or 2310.
Music			Department of Music determines credit and placement based on departmental examination.
Persian			Department of Near Eastern Studies determines credit and placement based on departmental examination.
Physics B	5	8 credits	Placement out of PHYS 1101–1102. Students who also have a score of 4 or 5 on Mathematics BC may choose to accept 4 AP credits for 2207 or 1112 and then take 2208 or 2213. Students in the College of Engineering should refer to www.engineering.cornell.edu/student-services/academic-advising/academic-information/ap-credit/index.cfm for credit and placement information.
	4	4 credits	Placement out of PHYS 1101. (Students may receive credit for only one of the courses in each group: [PHYS 1101, 1112, 1116, 2207] OR [PHYS 1102, 2208, 2213, 2217].)
Physics C–Mechanics	4,5	4 credits	Placement out of PHYS 1112 or 2207, or placement into PHYS 1116 with no AP credit. For more information, contact department representative. (Students may receive credit for only one of the courses in each group: [PHYS 1101, 1112, 1116, 2207] OR [PHYS 1102, 2208, 2213, 2217].)
Physics C–Electricity/Magnetism	5	4 credits	Placement out of PHYS 2213. (Students may receive credit for only one of the courses in each group: [PHYS 1101, 1112, 1116, 2207] OR [PHYS 1102, 2208, 2213, 2217].)
Psychology	4,5	3 credits	Placement out of PSYCH 1101.
Spanish language	4,5	3 credits	Department of Romance Studies determines placement. Students should take the CASE† to obtain appropriate placement.
Spanish literature	4,5	3 credits	Department of Romance Studies determines placement. Students should take the CASE† to obtain appropriate placement.
Statistics (excluding engineering students)	4,5	4 credits	Placement out of AEM 2100, PAM 2100, ILRST/STSCI 2100, or MATH 1710 (not HADM 2201).
Studio art		no credit	
Turkish			Department of Near Eastern Studies determines credit and placement based on departmental examination.
World history		no credit	

†Cornell Advanced Standing Examination. Contact Callean Hile, 303 Morrill Hall, for French, Italian, and Spanish. Contact Miriam Zubal, 183 Goldwin Smith Hall, for German.

Subject	Marks	Credit
International Baccalaureate (IB) Higher-Level Examinations are awarded advanced standing and credit on receipt of the examination results from the I.B. Office.		
Anthropology		subject to departmental review
Biology		see www.biology.cornell.edu
Chemical and Physical Systems	6 or 7	8 credits (PHYS 1101 and 1102)
Chemistry	6 or 7	4 credits (CHEM 2070 or 2090)
Computer Science	6 or 7	4 credits (CS 1110)
Economics	6 or 7	6 credits (ECON 1110 and 1120)
English Literature	7	3 credits and placement out of one first-year writing seminar
	6	3 credits (excluding Arts and Sciences students)
History	6 or 7	4 credits
Mathematics	6 or 7	4 credits and placement out of MATH 1106 and 1110. Students may obtain more credit by taking the Mathematics Department placement exam during orientation week. (Engineering and BEE students receive no credit.)
Music		by departmental examination
Philosophy	7	subject to department review
Physical Science	6 or 7	8 credits (4 credits, CHEM 2060; 4 credits, PHYS 1010)
Physics	6 or 7	4 credits (PHYS 1101, 1112, or 2207). (Students may receive credit for only one of the courses in each group: [PHYS 1101, 1112, 1116, 2207] OR [PHYS 1102, 2208, 2213, 2217].)

General Certificate of Education (GCE) Advanced (“A”) Level Examination are awarded advanced standing and credit. Students must present the original or a certified copy of their examination certificate to receive credit.

Biology	see www.biology.cornell.edu	
Chemistry	A	8 credits (CHEM 2070 or 2090 and 2080)
	B	4 credits (CHEM 2070 or 2090)
Economics	A	6 credits (ECON 1110 and 1120)
English Literature	A	3 credits and placement out of one first-year writing seminar
	B	3 credits (excluding Arts and Sciences students)
Mathematics	A, B, or C	4 credits and placement out of MATH 1106 and 1110. Students may obtain more credit by taking the Mathematics Department placement exam during orientation week. Students who take the A level exam in Singapore will receive 8 credits and placement out of MATH 1106, 1110, 1120, 1220, and 1910. (Engineering and BEE students receive 4 credits.)
		4 additional credits for PHYS 2213 are granted for a combination of grades of A or B and a minimum of 8 advanced placement or advanced standing credits in mathematics. Students planning to major in physics are encouraged to enroll in PHYS 1116. Students taking 1116 do not receive 4 credits for 1112. Students taking 2217 do not receive credit for 2213. Students in the College of Engineering should refer to www.engineering.cornell.edu/student-services/academic-advising/ap-credit/index.cfm for credit and placement information.
Music		by departmental examination
Philosophy	A or B	subject to department review
Physics	A or B	4 credits for PHYS 1101, 1112, or 2207.

SUPPLEMENTARY INFORMATION

Chemistry and Chemical Biology

The Department of Chemistry and Chemical Biology offers two 8-credit sequences that satisfy prerequisites for further work in the department: CHEM 2070–2080 (2090 for engineering students) and 2150–2160. CHEM 2150–2160 is intended for students with a solid background in chemistry and strong math skills.

Freshmen may qualify for advanced placement and advanced standing credits in chemistry by satisfactory performance on the CEEB Advanced Placement Examination or an international examination, or by passing an advanced standing examination offered by the department. A score of 5 on the CEEB examination entitles a student to 4 credits. A student may earn 4 or 8 credits by suitable performance on the departmental examinations. To take the departmental

examinations (exams are offered at the beginning of each semester), students must sign up beforehand in the Chemistry and Chemical Biology Office of Undergraduate Studies, 131 Baker Laboratory, or online at www.chem.cornell.edu/cref/advplreg.aspx.

The specific course in which a student will register after having received a certain advanced placement standing will be decided by consultation between the student, his or her advisor, and the professors teaching the courses. Questions may also be directed to the director of undergraduate studies, in G50 Baker Laboratory. Students receiving advanced placement who are interested in a major in chemistry or a related science should consider taking CHEM 2150–2160 and should consult the CHEM 2150 instructor or department staff.

Computer Science

Students who receive a score of 4 or 5 on the AB version of the CEEB Advanced Placement

Examination in computer science, a score of 5 on the A exam, or a score of 6 or 7 on the IB exam will receive 4 advanced placement credits and may take CS 2110. These credits may be used to satisfy the requirement in computer programming for students in the College of Engineering.

Freshmen may also earn 4 credits by suitable performance on a departmental examination, given during Orientation Week. To take the departmental examination, students need only show up at the time and location indicated on the Orientation Week Schedule; advanced sign-up is not necessary.

Mathematics (Calculus)

For guidance in selecting an appropriate course, please consult *First Steps in Math*, published on the Mathematics Department web site (www.math.cornell.edu) under Courses.

The calculus courses MATH 1110, 1120, and 1910 cover substantially the same topics as calculus courses given in many high schools, and it is best to avoid repeating material that has already been covered at an appropriate level. Secondary-school students who have had the equivalent of at least one semester of calculus should, if possible, take one of the CEEB's two Advanced Placement Examinations (Calculus AB or Calculus BC) during their senior year.

The Department of Mathematics offers a placement examination during orientation week that covers the material of the AP Calculus program. The department exam should be taken by

1. students who have had at least a semester of calculus but did not take a CEEB Advanced Placement Examination; or
2. students who believe that their placement is incorrect.

Students are strongly urged to take the departmental placement exam even if they feel that their grasp of the material is uncertain. The placement information is useful in any case, and the grade on the test does not become a part of the student's record. No advance registration for the departmental examination is necessary. (A separate placement exam for students in the College of Engineering or the BEE program will be announced during the academic briefings.)

Students who have been awarded advanced placement credit for calculus may not also receive academic credit for similar courses taken at Cornell.

Students who are in neither the College of Engineering nor in the Biological and Environmental Engineering (BEE) program of the College of Agriculture and Life Sciences. Students who have 4 AP credits for calculus will forfeit those credits if they take MATH 1106 or 1110. Students who have 8 AP credits for calculus will forfeit 4 credits if they take MATH 1120, 1220, or 1910 and all 8 credits if they take MATH 1106 or 1110.

Students in the College of Engineering or the Biological and Environmental Engineering (BEE) program of the College of Agriculture and Life Sciences.

Engineering students will take the engineering calculus sequence, which assumes students have one semester of calculus experience before entering Cornell. Because the engineering sequence is more advanced than other sequences at Cornell, engineering students may receive at most 4 AP credits, which they will forfeit if they take MATH 1910, the first course in the sequence.

Modern Foreign Languages

Students who have studied a language for two or more years and want to continue study in that language at Cornell must present the results of a placement test. See "Placement Tests and Advanced Placement Credit" under "Foreign Language Requirements" in the College of Arts and Sciences section of this catalog. Students whose SAT II or AP scores are two years old or more, or who have had a year of formal study or substantial informal study since they last took a placement test should take the Cornell placement test again during orientation week if they plan to continue course work.

Advanced standing credit may be earned as follows:

1. Students with a score of 4 or 5 on the language Advanced Placement Examination of the CEEB earn 3 credits and are eligible to take the Cornell Advanced Standing Examination (CASE).
2. Students who achieve a minimum score of 65 on the Cornell language placement test given during orientation week are eligible to take the Cornell Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of 3 credits.
3. For formal language work done after high school at an accredited college, credit is considered by the relevant department on submission of a syllabus and transcript. Note that credit transfer and placement are the result of different processes. Students wishing to enroll in a language course at Cornell are required to take the placement test.
4. Native speakers of languages other than English may, if an examination by the appropriate department is available, be granted a maximum of 3 credits in a foreign language.

Information about times and places of placement tests is available in the orientation booklet and from Academic and Career Counseling Services at sao.cornell.edu/orientation/placement.htm. For more information, see "College of Arts and Sciences" on language course placement, or contact Callean Hile, 303 Morrill Hall, for French, Italian, and Spanish (placement tests in French, Italian, and Spanish are available at collt.lrc.cornell.edu); Miriam Zubal, 183 Goldwin Smith Hall, for German; Doreen Silva, 226 Morrill Hall, for Russian; Kim Robinson, 388 Rockefeller Hall, for Asian languages, Nava Scharf, 409 White Hall, for Hebrew; or Munther Younes, 409 White Hall, for Arabic.

Music

Advanced placement and credit are awarded only in music theory, and only on the basis of an examination administered by the Department of Music; that is, credit cannot be earned on the basis of the AP, IB, or other examinations from outside Cornell, nor on the basis of course work done elsewhere. Outstanding performance on the departmental examination will earn students 3 credits and placement directly into MUSIC 2102. In rare instances students may place into MUSIC 3101, in which case they will earn 6 credits. The placement examination is normally administered on the Sunday during fall orientation week and, when necessary, at the beginning of the spring semester. For more information about the examination, see the departmental web site.

Physics

Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (Physics B or Physics C), certain international examinations, or the departmental examination (offered only during orientation week, fall semester; appointment required). For information about the departmental examination, consult the director of undergraduate studies, 115 Clark Hall (physicsdus@cornell.edu).

Physics B—Students earning a score of 5 may receive 8 credits for non-calculus-based PHYS 1101 and 1102. Those earning a score of 5 in Physics B and a score of 4 or 5 in Calculus BC may choose to accept 4 credits in calculus-based PHYS 1112 or 2207 instead of 8 credits in PHYS 1101 and 1102. Those earning a score of 4 may receive 4 credits in PHYS 1101. Students in the College of Engineering should refer to www.engineering.cornell.edu/student-services/academic-advising/academic-information/ap-credit/index.cfm.

Physics C—Mechanics: Students earning a score of 4 or 5 may receive 4 credits for PHYS 1112 or 2207, or placement into PHYS 1116, a more analytic first-semester course, with no AP credit.

Physics C—Electricity and Magnetism: Students earning a score of 5 may receive 4 credits for PHYS 2213.

Students will not receive credit for an advanced placement course if they receive credit for a Cornell course with similar content. Students may receive credit for only one of the courses in each group:

PHYS 1101, 1112, 1116, 2207

PHYS 1102, 2208, 2213, 2217

A student planning a major in physics or applied and engineering physics and who is eligible for AP credit should consult with his or her advisor or the department representative.

Advanced placement into a next-in-sequence course depends on the completion of the appropriate mathematics prerequisites before enrolling. To qualify for advanced placement credit, it is not necessary to continue the study of physics.

General information and advice may be obtained from the director of undergraduate studies, 115 Clark Hall, or from the Department of Physics, 109 Clark Hall.

Statistics

Students who have been awarded advanced placement credit for statistics may not also receive academic credit for similar courses taken at Cornell. In particular, they will forfeit those credits if they take AEM 2100, HADM 2201, ILRST/STSCI 2100, MATH 1710, or PAM 2100.

Course Enrollment

PREENROLLMENT

Course enrollment for each semester at Cornell takes place partway through the preceding semester using an online application through *Student Center*. Dates are announced in advance and are posted on *Student Center*. Students are expected to meet with their faculty advisors before this period to affirm that the courses they plan to take will ensure satisfactory progress toward a degree.

New students and transfer students may be sent course enrollment instructions by their college offices before they arrive on campus. Procedures vary from college to college.

COURSE ADD/DROP/CHANGE

Students may adjust their schedules during add/drop/change periods. Courses may be added, dropped, or changed online through *Student Center*. Permission-only courses and courses with specific add/drop procedures will be handled using a written add/drop form. The form is completed by the student and signed by both the student's advisor and an appropriate representative of the department offering the course (an instructor, department staff member, or college registrar, depending on the college). The completed and signed form must be returned to the student's college office to be processed. Professional schools, the School of Continuing Education and Summer Sessions, the Department of Physical Education and Athletics, and First-Year Writing Seminars have different course enrollment and add/drop policies. See the chart below for their course add/drop/change fees.

Late Course Enrollment and Late Add/Drop/Change Fees

Academic Unit	Late Course Enrollment Fee	Late Course Add/Drop/Change Fee
Continuing Education and Summer Sessions	†	
Johnson Graduate School of Management	\$100	\$100
Law School	No fee	No fee
Physical education	\$30	\$20*
Veterinary medicine	\$100*	\$100*

†Consult the Summer Session catalog and the Division of Extramural Study brochure for fees.

*Consult the college office for special considerations and requirements.

EXPLANATION OF COURSE NUMBERING SYSTEMS AND SUBJECT CODES

1100 level—introductory course, no prerequisites, open to all qualified students

2000 level—lower-division course, open to freshmen and sophomores, may have prerequisites

3000 level—upper-division course, open to juniors and seniors, prerequisites

4000 level—upper-division course, open to seniors and graduate students

5000 level—professional level (e.g., management, law, veterinary medicine)

6000 level—professional and graduate-level course, open to upper-division students

7000 level—graduate-level course

8000 level—master's level, thesis, research

9000 level—doctoral level, thesis, research

The list of courses that follows is arranged in two broad groups.

Group 1: Divisions that offer both undergraduate- and graduate-level courses

Agriculture and Life Sciences

Architecture, Art, and Planning

Arts and Sciences

Engineering

Hotel Administration

Human Ecology

Industrial and Labor Relations

Nutritional Sciences

Officer Education

Group 2: Graduate professional divisions

Law

Management

Veterinary Medicine

No courses are offered by the Graduate School as a unit; graduate-level courses are contained in the various departments that offer the instruction.

Within each division, courses are generally arranged in alphabetical order by department and in numerical order within the departments. All courses are briefly described for those divisions (group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (group 2) are designated by number and title only.

Class Attendance, Meeting Times, and Examinations

CLASS ATTENDANCE AND MEETING TIMES

Students are expected to be present throughout each semester at all meetings of courses for which they are registered. The right to excuse a student from class rests at all times with the faculty member in charge of that class.

Absences because of religious beliefs. In accordance with Section 224-a of the New York State Education Law, each student who is absent from school because of his or her religious beliefs must be given an equivalent opportunity to register for classes or make up examinations, study, or work requirements that he or she may have missed because of such absence on any particular day or days. No fees of any kind shall be charged by the university

for making available to such student such equivalent opportunity.

Class Meeting Times

Monday/Wednesday

	10:10 A.M.	01:10 P.M.
	01:25 P.M.	04:25 P.M.
(Mon. and Wed.)	07:30 P.M.	10:30 P.M.

On Monday, Tuesday, Wednesday, and Thursday the hours of 4:25 P.M. to 7:30 P.M., on Fridays the hours after 4:25 P.M., on Saturday the hours after 12:05 P.M., and all day Sunday shall be free from all formal undergraduate classes or laboratory exercises.

Evening preliminary examinations that will be given outside of normal class hours may be scheduled on Tuesday and Thursday evenings only, beginning at 7:30 P.M. All room assignments are scheduled by the Office of the University Registrar. The dates and times of these examinations are listed in the course rosters for each semester.

Evening academic activities commencing at 7:30 P.M. on Mondays and Wednesdays, other than regularly scheduled courses and prelims previously approved by the office of the university faculty, are not permitted. Violation of these rules interferes with other university activities (e.g., athletic, musical, theatrical, or employment).

Any exception to the above regulations, other than those for evening preliminary examinations, will require permission of the dean or director of the college or school offering the course. Exceptions to the regulations on evening preliminary examinations require approval of the dean of the university faculty. All such exceptions must include provision of special arrangements for the students for whom conflicts are generated by such an exception.

FINAL EXAMINATIONS

Final examinations for undergraduate courses are scheduled by the Office of the University Registrar. Examinations may be one, two, or two and one-half hours in length at the discretion of the department concerned. The schedule of final examinations is available online at www.cornell.edu/academics/courses.cfm.

General Rules Governing Final Examinations

Legislation of the university faculty governing study periods and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the Office of the University Registrar without prior written permission of the dean of the faculty.
2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.
3. Permission will be given by the dean of the faculty to offer an alternate examination during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time the examination was originally scheduled. The faculty member requesting such a change shall be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the university registrar's office.
4. No tests are allowed during the last week of scheduled classes unless such tests are

part of the regular week-by-week course program and are followed by an examination (or the equivalent) during the final examination period.

5. Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period completing them.
6. Faculty can require students to submit papers during the week preceding the study period.
7. Take-home examinations should be given to classes well before the end of the regular semester and should not be required to be submitted during study period but rather well into the examination period.

The university policies governing study period and final examinations are:

1. Each course should require that a final examination or some equivalent exercise (for example, a term paper, project report, final critique, oral presentation, or conference) be conducted or due during the period set aside for final examinations.
2. Although not specifically prohibited, it is university policy to discourage more than two examinations for a student in one 24-hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a make-up for other valid reasons, such as illness or death in the family.
3. Students have a right to examine their corrected exams, papers, etc., to be able to question their grading. (Note that students have no absolute right to the return thereof.) Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester, preferably till the end of the following semester, to afford students such right of review.

EVENING PRELIMINARY EXAMINATIONS

The most convenient times and places for "prelims" are the normal class times and classrooms. In cases where the only alternative is to hold evening preliminary examinations, they may be scheduled only on Tuesday and Thursday evenings and only after 7:30 P.M.

An alternative time to take the examination *must* be provided for those students who have academic, religious, athletic, or employment conflicts at the time scheduled.

Note that instructors holding evening examinations are strongly urged to indicate this in the course descriptions listed in *Courses of Study* and *must* notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed. For more information on the policy governing evening examinations, contact the office of the dean of the faculty, 315 Day Hall.

Grading Guidelines

The official university grading system is composed of letter grades with pluses and minuses. Passing grades range from A+ to D-; F is failing. INC denotes a grade of incomplete, and R is the grade given at the end of the first semester of a yearlong course. The grades of INC and R do not have quality-point equivalents attached. These are the quality-point equivalents:

A+ =4.3	B+ =3.3	C+ =2.3	D+ =1.3
A =4.0	B =3.0	C =2.0	D =1.0
A- =3.7	B- =2.7	C- =1.7	D- =0.7
			F =0.0

This is how a semester average is computed:

Course	Grade	Points	Quality Credits	Product
CHEM 103	B+	3.3	x 3	= 9.9
ENGL 151	C-	1.7	x 3	= 5.1
DEA 145	B	3.0	x 4	= 12.0
PAM 100	B	3.0	x 3	= 9.0
DEA 111	C	2.0	x 3	= 6.0
<i>Total</i>			16	42.0

To arrive at the semester average, add the products (credits x quality points) and divide by the number of credits taken. Here, 42 divided by 16 equals 2.63.

The cumulative average (an average of grades from two or more semesters) equals the sum of the products of all the grades at Cornell divided by the total number of credits taken.

S-U GRADES

On September 6, 1972, the Faculty Council of Representatives passed the following legislation:

"Resolved, that:

- a. the S-U system have symbol equivalents which are uniform within the university; S means C- or above; U means D+, D, D-, or failure.
- b. S-U options be chosen by the student during the first three weeks of the semester.
- c. the Announcements and/or supplementary course registration materials describing each course include a description of the course grading options, particularly if the course is graded with an exclusive S-U. Any change in grading options must be announced by the instructor within the first two weeks of the semester.
- d. course requirements (required reading, term paper, etc.) be the same for students electing S-U grades as for those electing letter grades."

The rules for the S-U option are further defined by each of the academic units. They are as follows:

Agriculture and Life Sciences. (1) Must have 100 credit hours with A, B, C, D grades (prorated for transfer students). (2) The S-U option is available only in those courses so designated in the course catalog after approval by the Educational Policy Committee. (3) Freshmen are limited to one optional S-U per semester.

Architecture, Art, and Planning. (1) All courses specifically required for a degree excluded. Various departments may designate specific required courses where S-U will be permitted. (2) In a course designated as S or U, the entire class is so graded. The instructor must announce this decision within the first two weeks of class. (3) Where the option for S or U exists, both student and instructor must agree on the option. This agreement must be made by the end of the third week of classes on the appropriate form in the college office. Once agreed upon, this grade option will be used for the final grade.

Arts and Sciences. (1) Courses that count toward satisfaction of major requirements should not be taken for an S or U grade unless the department grants permission. (2) Permission of instructor. (3) A minimum of 80 of the 120 hours required for the A.B. degree must be in courses for which the student has received letter grades.

Engineering. (1) The course in question must be offered with an S-U option. (2) The student must have completed at least one full semester of study at Cornell. Freshmen may not take any courses on an S-U basis during their first semester with the exception of courses graded "S-U only" such as physical education, ROTC, supplemental courses, and writing workshops. (3) The proposed S-U course must count as either a liberal studies distribution or an approved elective in the Engineering curriculum. (4) Students may elect to enroll S-U in only one course each semester in which the choice between letter grade and S-U is an option. (Additional courses offered "S-U only" may be taken in the same semester as the "elected S-U" course.) (5) After the end of the third week of classes, the grading option may not be changed nor will students be permitted to add a course in which they were previously enrolled (in the current semester) under a different grading option. Note: Courses graded S-U do not count toward eligibility on the Dean's List and may weaken a student's chances for acceptance into graduate school. Questions regarding the S-U grading option should be addressed to Engineering Advising.

Graduate School. (1) Seminars and thesis research courses are usually graded S-U, and should be registered accordingly or a grade error results at semester's end. Other courses may be registered as S-U only if offered as S-U option.

Hotel. (1) A maximum of 4 S-U credit hours per semester, not including those only offered S-U, which may only be in non-career track courses (M.M.H.) or nonconcentration, non-hotel elective courses (B.S.). (2) A maximum of 6 credits total may be taken S-U toward distribution elective requirements.

Human Ecology. (1) Not part of student's major. (2) May be used in the 9 credit hours required outside the major in Human Ecology courses. (3) Not part of hours required in humanities, natural sciences, and social sciences. (4) A department may approve S-U grading in specific courses if approved by Educational Policies Committee. (5) Total of 12 credits in S-U courses (not counting physical education) may be counted toward degree requirements during a student's college career.

Industrial and Labor Relations. (1) This option may be elected, if available in ILR electives, or in out-of-college electives but not including directed studies. (2) Degree requirements

include a minimum of 105 letter grade (A+ to D-) credits. (3) Student must also be in good academic standing. (4) A U grade is considered the equivalent of an F in determining a student's academic status. (5) Limited to two courses per semester, not to exceed four hours in any one course.

Internal Transfer. (1) S-U grades permitted only when it is the only option or (2) when specifically approved by an admissions officer in the school or college to which the student plans to transfer.

Law. Each J.D. student, after the first year, may elect to take up to two upper-class courses on an S-U basis. Students must make this election in writing to the registrar's office within two weeks of the end of the add/drop period. If made, the election shall be irrevocable. Students may not make this election in courses that they use to satisfy the Law School's upper-class writing or professional responsibility requirements. Instructors may designate specific courses that they teach as not eligible for the S-U election.

Veterinary Medicine. (1) There is one foundation course in the veterinary curriculum that is offered on an S-U basis only. All required core foundation courses must be taken for a letter grade. (2) Elective courses for veterinary students may be offered on an S-U basis at the option of the professor. S-U optionally graded courses must be chosen within the add/drop deadline.

INCOMPLETE

The grade of incomplete is appropriate only when two basic conditions are met:

1. the student has a substantial equity at a passing level in the course with respect to work completed; and
2. the student has been prevented by circumstances beyond the student's control, such as illness or family emergency, from completing all of the course requirements on time.

A grade of incomplete may not be given merely because a student fails to complete all course requirements on time. It is not an option that may be elected at the student's own discretion.

While it is the student's responsibility to initiate a request for a grade of incomplete, reasons for requesting one must be acceptable to the instructor, who establishes specific make-up requirements. The instructor has the option of setting a shorter time limit than that allowed by the student's college for completing the course work. Several colleges require that a statement signed by the instructor be on file indicating the reason for the grade of incomplete and the restriction, if any.

It is the responsibility of the student to see that all grades of incomplete are made up before the deadline and that the grade has been properly recorded with the student's college registrar.

CHANGES IN GRADES

Changes in a grade may be made only if the instructor made an error in assigning the original grade.

OFFICIAL TRANSCRIPTS

An official transcript is one that bears the official signature of the university registrar, sent in a sealed envelope directly from the Office of the University Registrar to another institution or agency as directed by the student. Transcripts may be requested at registrar.sas.cornell.edu. There is no fee except for overnight and/or express mail services.

University Requirements for Graduation

The *university* has only two requirements for graduation that must be fulfilled: the swim test and physical education courses. A student's *college* determines degree requirements such as residency, number of credits, distribution of credits, and grade averages. See the individual requirements listed by each college or school or contact the college registrar's office.

STUDENT RESPONSIBILITIES

Students are responsible for meeting all requirements for the courses in which they are enrolled, as defined by the faculty members teaching the courses. It is also the student's responsibility to be aware of the specific major, degree, distribution, college, and graduation requirements for completing his or her chosen program of studies. Students should know how far they have progressed in meeting those requirements at every stage of their academic career.

PHYSICAL EDUCATION

Classes

All undergraduate students must complete two semesters of work in physical education unless exempted from this requirement for medical or other special reasons or by virtue of advanced standing on admission. For transfer students the requirement is reduced by the number of semesters satisfactorily completed, not necessarily including physical education, in a college of recognized standing before entering Cornell. Credit in physical education may be earned by participating in courses offered by the Department of Athletics and Physical Education, participating on an intercollegiate athletic team, or performing in the marching band.

Physical education is a requirement of the first two terms at Cornell. Students must register for it in each semester, except those in which postponements are granted, until the requirement is satisfied.

Temporary postponements may be granted on the basis of physical disability, schedule conflicts, or excessive work load (employment exceeding 20 hours per week). Gannett Health Services can provide certifications based on health, and the financial aid office can provide certifications of employment. Students should see the director or assistant director of Physical Education to establish postponements or waiver of the requirement. Questionable or unusual cases may be resolved by petition to the Faculty Advisory Committee on Athletics and Physical Education.

Swim Test

The Faculty Advisory Committee on Athletics and Physical Education has established a basic swimming and water safety competency requirement for all entering freshman undergraduate students. Normally, the test is given for women in the Helen Newman pool and for men in the Teagle pool as part of their orientation process. The test consists of a feet-first entry into the deep end of the pool and a continuous 75-yard swim using front, back, and optional strokes. Any student who cannot pass the swim test is required to include the course Beginning Swimming and Water Safety in his or her program of physical education before electives can be chosen. A swim test hold will be placed on the student's record until he or she has passed the swim test or fulfilled the requirement by satisfactory attendance in two semesters of Beginning Swimming and Water Safety. Students unable to meet the swim requirement because of medical, psychological, or religious reasons must petition the Faculty Advisory Committee on Athletics and Physical Education for a waiver of the requirement. When a waiver is granted by the Faculty Committee on Physical Education, an alternate requirement is imposed. The alternate requirement substitutes a course in either Certified First Responder, Emergency Medical Technician, or Wellness and Fitness for the original swimming requirement.

Internal Transfer Division

Students may not always be satisfied with the original Cornell school or college into which they've been admitted, and may decide to transfer from one college to another within the university. This process is called internal transfer, and application procedures and deadlines vary by college. It may be possible to be admitted directly into a new program. Students who are uncertain if they immediately qualify for direct transfer, however, should contact the Internal Transfer Division (ITD). Generally students whose current curriculum differs substantially from that of their target college, or students with below-average records, are not eligible for direct transfer but can apply for sponsorship to the ITD.

To apply for sponsorship, candidates must interview with the division's director and submit a copy of their target college's application for internal transfer to the ITD. In many cases, colleges formally sponsor students in ITD and essentially guarantee admission if students successfully complete the requirements (taking particular courses, earning a specified grade point average while enrolled in ITD) that are outlined in their letter of sponsorship. Students are encouraged to apply simultaneously for direct transfer and for sponsorship to ITD, so that if direct transfer is denied, their target college may offer the opportunity of being sponsored in the Internal Transfer Division. Tuition and fees for students sponsored in ITD are the same as those of the sponsoring college.

For more information about internal transfer requirements, students should contact the admissions office of their target college and the office of the Internal Transfer Division, 220 Day Hall (255-4386).

Service-Learning Course Guide

Service-learning courses at Cornell are offered from various colleges and disciplines to engage students, faculty, and community partners on issues relating to poverty, literacy, education, access, health care, immigration, hunger, affordable housing, environment, and others. Service-learning courses are academically rigorous and offer students opportunities to link theory and practice through structured public service activities in collaboration with local communities, and thus gain further understanding and appreciation of the discipline, while achieving an enhanced sense of civic responsibility.

Through Service-learning, students gain hands-on problem-solving skills, develop an aptitude for critical thinking, and become active citizens in our democratic society. The Cornell Public Service Center (PSC) serves as the hub of public service and civic engagement activities on campus.

For students and faculty members who are interested or engaged in public service, public scholarship, and civic engagement, the Public Service Center has developed a comprehensive list of Service-learning courses on campus. For more information, please visit www.psc.cornell.edu.

Interdisciplinary Centers, Programs, and Studies

ANDREW D. WHITE PROFESSORS-AT-LARGE

726 University Avenue (255-0832)
adwhiteprofessors.cornell.edu

The program has its origins in Cornell's early history. Andrew D. White, the first president of Cornell University, inaugurated the position of nonresident professor, to be held by eminent scholars, scientists, and intellectuals who periodically visit the university for the stated purpose of "contributing to the intellectual and cultural life of the university." Toward this end, Andrew D. White Professors-at-Large engage in a variety of activities including public lectures, ongoing courses, and collaborative research, as well as holding office hours for undergraduate and graduate students. They serve for a six-year term and are full members of the faculty when in residence.

Term Ending in 2010

Aldous, David, statistician
 Leeson, Lynn Hershman, digital artist
 Peskin, Charles, mathematician
 Sala, Osvaldo, ecologist
 Tibi, Bassam, Islamist

Term Ending in 2011

Sims, Lowery Stokes, art curator

Term Ending in 2012

Angier, Natalie, science writer

Term Ending in 2013

Lakhdar Brahimi, diplomat
 Sir Partha Dasgupta, economist
 Shri Kulkarni, astronomer

Ann Markusen, regional planner
 Laura Restrepo, writer, journalist, and activist

Term Ending 2014

Hélène Cixious, writer and literary theorist
 Hans Föllmer, mathematician
 Denise Riley, philosopher and poet

FRANK H. T. RHODES CLASS OF '56 UNIVERSITY PROFESSORSHIP

To commemorate their 40th reunion, the Class of 1956 initiated an endowment to create the Frank H. T. Rhodes Class of '56 University Professorship in honor of Cornell's ninth president (1977-1995). The purpose of the Rhodes Class of '56 Professorship is to strengthen the undergraduate experience by bringing to the university individuals from every walk of life who represent excellence of achievement and to create opportunities for interaction with undergraduates. The endowment also makes it possible to create public events related to the professorship such as lectures, performances, films, art exhibits, or conferences. Rhodes Class of '56 Professors are full members of the faculty while in residence. Appointments are awarded for a period of one to five years. During each year of their appointment, Rhodes Class of '56 Professors visit the campus for a week to engage in a variety of activities including public lectures, ongoing courses, and collaborative research.

Current Appointments

Eisenman, Peter, architect
 Grandin, Temple, associate professor of animal science
 Moses, Robert Parris, civil rights leader and founder of the Algebra Project
 Zinni, Anthony, USMC four-star general (retired)

CENTER FOR APPLIED MATHEMATICS

657 Frank H. T. Rhodes Hall (255-4335)

The Center for Applied Mathematics administers a broad-based interdepartmental graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. Each student develops a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student's program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.

Graduate students in the center take courses related to their program of study that are offered by various departments. Below are listed selected courses in applied mathematics in the main areas of research interest of the center's members. Detailed descriptions of these courses can be found in the listings of the individual departments.

Selected Applied Mathematics Courses

Basic Graduate Courses in Mathematics and Applied Mathematics

MATH 4130 Honors Introduction to Analysis I
 MATH 4140 Honors Introduction to Analysis II
 MATH 4330 Honors Linear Algebra
 MATH 4340 Honors Introduction to Algebra
 MATH 6110 Real Analysis
 MATH 6120 Complex Analysis
 MATH 6150 Mathematical Methods in Physics
 MATH 6210 Measure Theory and Lebesgue Integration
 MATH 6220 Applied Functional Analysis
 MATH 6310-6320 Algebra
 MATH 6330 Noncommutative Algebra
 MATH 6340 Commutative Algebra
 MATH 6510 Algebraic Topology
 MATH 6610 Geometric Topology
 TAM 6100, 6110 Methods of Applied Mathematics I, II, III
 TAM 6130 Asymptotics and Perturbation Methods

Analysis (and Differential Equations)

MATH 4280 Introduction to Partial Differential Equations
 MATH 6170 Dynamical Systems
 MATH 6180 Smooth Ergodic Theory
 MATH 6190-6200 Partial Differential Equations
 MATH 6520-6530 Differentiable Manifolds I and II
 MATH 6620 Riemannian Geometry
 MATH 7110-7120 Seminar in Analysis
 MATH 7130 Functional Analysis
 MATH 7150 Fourier Analysis
 MATH 7170 Applied Dynamical Systems

Logic and Theory of Computing

CS 5220 Applications of Parallel Computers
 CS 6766 Reasoning about Uncertainty
 CS 6810 Theory of Computing
 CS 7192 Seminar in Programming Refinement Logics
 MATH 4860 Applied Logic (also CS 4860)
 MATH 6810 Logic
 MATH 7810-7820 Seminar in Logic
 MATH 7830 Model Theory
 MATH 7840 Recursion Theory
 MATH 7870 Set Theory
 MATH 7880 Topics in Applied Logic

Numerical Mathematics and Operations Research

CS 4220 Numerical Analysis: Linear and Nonlinear Problems (also MATH 4260)
 CS 6210 Matrix Computations
 CS 6220 Sparse Matrix Computations
 CS 6240 Numerical Solution of Differential Equations
 CS 6670 Machine Vision
 CS 6820 Analysis of Algorithms
 MATH 4250 Numerical Analysis and Differential Equations (also CS 4210)
 ORIE 6335 Scheduling Theory
 ORIE 6300-6310 Mathematical Programming, I and II
 ORIE 6320 Nonlinear Programming
 ORIE 6325 Interior-Point Methods for Mathematical Programming

Discrete Mathematics and Geometry

MATH 4410 Introduction to Combinatorics I
 MATH 4420 Introduction to Combinatorics II
 MATH 4550 Applicable Geometry
 ORIE 6328 Convex Analysis
 ORIE 6330 Graph Theory and Network Flows
 ORIE 6336 Integer Programming

Information Communication and Control Theory

CHEME 4720 Feedback Control Systems (also ECE 4720, MAE 4780)
 ECE 4110 Random Signals in Communications and Signal Processing
 ECE 4250 Digital Signal Processing
 ECE 4670 Digital Communication Receiver Design
 ECE 5210 Theory of Linear Systems (also MAE 5210)
 ECE 5620 Fundamental Information Theory
 ECE 5640 Detection and Estimation
 ECE 5670 Digital Communications
 ECE 5800 Control and Optimization of Information Networks

Mathematical Biology

BIOEE 4600 Theoretical Ecology
 BTRY 6970 Individual Graduate Study in Biometry and Statistics

Mathematical Economics

ECON 6190 Econometrics I
 ECON 6200 Econometrics II
 ECON 7100 Stochastic Economics: Concepts and Techniques
 ECON 7170 Mathematical Economics
 ECON 7180 Topics in Mathematical Economics
 ECON 7190-7200 Advanced Topics in Econometrics

Mechanics and Dynamics

CHEME 7310 Advanced Fluid Mechanics and Heat Transfer
 CHEME 7510 Mathematical Methods of Chemical Engineering Analysis
 CHEME 7530 Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation
 MAE 6010 Foundations of Fluid Dynamics and Aerodynamics
 MAE 7340 Analysis of Turbulent Flows
 MAE 7370 Computational Fluid Mechanics and Heat Transfer
 TAM 5700 Intermediate Dynamics
 TAM 5780 Nonlinear Dynamics and Chaos
 TAM 6710 Hamiltonian Dynamics
 TAM 6720 Celestial Mechanics (also ASTRO 6579)
 TAM 6730 Mechanics of the Solar System (also ASTRO 6571)
 TAM 6750 Nonlinear Vibrations
 TAM 7510 Continuum Mechanics and Thermodynamics
 TAM 7520 Nonlinear Elasticity
 TAM 7760 Applied Dynamical Systems (also MATH 7170)

Probability and Statistics

ECE 4110 Random Signals in Communications and Signal Processing
 ECE 5620 Fundamental Information Theory
 ECE 5660 Fundamentals of Networks
 MATH 6710-6720 Probability Theory
 MATH 6740 Introduction to Mathematical Statistics
 MATH 7770-7780 Stochastic Processes
 ORIE 5560 Queuing Systems: Theory and Applications
 ORIE 5550 Applied Time-Series Analysis
 ORIE 6510 Probability
 ORIE 6540 Applied Stochastic Processes
 ORIE 6620 Advanced Stochastic Processes

ORIE 6700 Statistical Principles
 ORIE 6710 Intermediate Applied Statistics
 BTRY 4080 Theory and Probability
 BTRY 4090 Theory of Statistics

Robotics and Vision

CS 6670 Machine Vision
 ECE 5470 Computer Vision

Theoretical/Mathematical Physics/Chemistry

CHEM 7920 Molecular Collision Theory
 CHEM 7930 Quantum Mechanics I
 CHEM 7940 Quantum Mechanics II
 CHEM 7960 Statistical Mechanics
 CHEM 7980 Bonding in Molecules
 PHYS 6553-6554 General Relativity (also ASTRO 6509-6510)

 PHYS 6562 Statistical Mechanics
 PHYS 6572 Quantum Mechanics I
 PHYS 6574 Applications of Quantum Mechanics II
 PHYS 7651-7652 Relativistic Quantum Field Theory

MARIO EINAUDI CENTER FOR INTERNATIONAL STUDIES

170 Uris Hall (255-6370)

The Mario Einaudi Center for International Studies was established in 1961 to encourage and support comparative and interdisciplinary research on international subjects. Currently, it supports four U.S. Department of Education Title VI National Resource Centers and 15 other international programs. While some programs offer study of geographic regions, others focus on such topics as international agriculture, nutrition, population, law, planning, politics, rural development economics, and world peace. More than 800 faculty members voluntarily collaborate with the center and its associated programs. Undergraduate students may choose from a variety of minors such as international relations, Latin American studies, modern European studies, French studies, East Asian studies, South Asian studies, Southeast Asian studies, global health, or international agriculture and rural development.

In its ongoing effort to anticipate and respond to changing global circumstances and perspectives, the center applies its resources to new pilot activities and initiatives that bring faculty members and students together across traditional disciplines and departmental boundaries. As part of its Foreign Policy Initiative, the center has formed a network of 38 faculty members, brought experts to campus to speak on topical themes as part of a Distinguished Speaker Series, and provided seed funding for activities in foreign policy studies. The center also organizes semi-annual seed grant competitions for faculty and programs to advance international studies at Cornell and support faculty to mobilize additional external support.

Each year the center brings an eminent world leader to campus as the Henry E. and Nancy Horton Bartels World Affairs Fellow to deliver a public lecture, meet with classes, and interact informally with faculty members and students. The center also hosts a Current Events Roundtable each June that enables Cornell alumni to join faculty members in discussions of key world events.

Graduate students' overseas field research is supported through the center's annual travel grant competition as well as the Fulbright fellowship program and the Fulbright-Hays awards, which are both administered by the center.

Web sites of many international programs are hosted by the center along with the university's International Gateway (www.international.cornell.edu), a web site created by the center to showcase Cornell's international dimensions.

An undergraduate course, *Issues behind the News: An Interdisciplinary Analysis of International Current Events*, is coordinated by the center and offered by the Department of Government of the College of Arts and Sciences. The center invites faculty from across the university to deepen students' understanding of issues on the front pages of newspapers as events unfold during the semester.

CENTER FOR THE STUDY OF INEQUALITY

363 Uris Hall
254-8674 (tel.)
inequality@cornell.edu
www.inequality.cornell.edu

The Center for the Study of Inequality (CSI) fosters basic and applied research on social and economic inequalities as well as the processes by which such inequalities change and persist. The study of inequality lies at the heart of current debates about segregation, affirmative action, the "glass ceiling," globalization, and any number of other contemporary policy issues. In recent years, public and scholarly interest in issues of inequality has intensified, not merely because of historic increases in income inequality in the United States and other advanced industrial countries, but also because inequalities of race, ethnicity, and gender are evolving in equally dramatic and complicated ways. The mission of CSI is to support research and teaching relevant to issues of inequality, to disseminate findings resulting from this research, and to otherwise facilitate the study of inequality in the United States and throughout the world.

Minor in Inequality Studies

The minor in inequality studies allows undergraduate students to supplement their studies for their major with a coherent program of courses oriented toward the study of inequality. The minor is organized into tracks examining such topics as globalization and inequality; social policy; the ethics of inequality; poverty and economic development; social movements; education and inequality; race and ethnicity in comparative perspective; and the family and inequality. The minor is open to students enrolled in any of the seven Cornell undergraduate colleges. When the

requirements of the minor are met, an official note is made on the student's academic record (see www.inequality.cornell.edu/academics for further information).

Symposia and Lecture Series

CSI regularly sponsors symposia, workshops, and lecture series that draw attention to the most pressing problems and controversies in the field. The current schedule of events is listed on the center's web site (www.inequality.cornell.edu).

For more information about CSI, contact us at 254-8674 or inequality@cornell.edu.

COGNITIVE SCIENCE

278G Uris Hall
255-6431
cogst@cornell.edu
www.cogsci.cornell.edu

Cognitive Science focuses on the nature and representation of knowledge. It approaches the study of perception, action, language, and thinking from several perspectives—theory, experiment, and computation—with the aim of gaining a better understanding of human cognition and the nature of intelligent systems. The comparison between human and artificial intelligence is an important theme, as is the nature of mental representations and their acquisition and use. Cognitive Science draws primarily from the disciplines of computer science, linguistics, neuroscience, philosophy, and psychology. The field of Cognitive Science is primarily represented by faculty members in the following departments: Communication, Computer Science, Design and Environmental Analysis, Economics, Education, Electrical and Computer Engineering, Human Development, Information Science, Linguistics, Mathematics, Mechanical and Aerospace Engineering, Neurobiology and Behavior, Philosophy, Psychology, and Sociology, as well as the Johnson Graduate School of Management.

Undergraduate Programs

An undergraduate minor in Cognitive Science in the College of Arts and Sciences provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline as represented in an individual department. For further information on the undergraduate program, see the Cognitive Science Program under College of Arts and Sciences and/or contact Julie Simmons-Lynch, program coordinator (255-6431 or cogst@cornell.edu).

Graduate Programs

Cornell offers a graduate field minor in Cognitive Science. Cornell's unique program of graduate training, which seeks to tailor an optimal program of study and research for each individual, fosters interdisciplinary committees. It is the norm for students interested in Cognitive Science to combine faculty members from such fields as philosophy, computer science, linguistics, psychology, or neurobiology and behavior on common committees. For further information on the graduate field of Cognitive Science, contact Morten Christiansen, director of graduate studies (255-3570, mhc27@cornell.edu).

edu) and/or contact Julie Simmons-Lynch, program coordinator, 278G Uris Hall, Office of Cognitive Science (255-6431 or cogst@cornell.edu).

Courses

Courses from across the university that are relevant to the Cognitive Science Program are listed in this catalog in the Cognitive Science Program section under Arts and Sciences.

CORNELL ABROAD

300 Caldwell Hall
255-6224 (tel.)
255-8700 (fax)
cuabroad@cornell.edu
www.cuabroad.cornell.edu

Study abroad is an integral part of a Cornell education. Those aspiring to lead in this century need, more than ever before, knowledge and experience of the diverse world beyond the boundaries of their home country. To help students develop the knowledge, skills, and attitudes necessary for informed citizenship in today's world, Cornell Abroad offers a wide range of international study opportunities that reflect the fundamental educational goals and objectives of the university. Study abroad is a continuous experience with study on campus, enabling students to make regular progress toward the degree.

Qualified students study abroad through programs administered by Cornell and other institutions, and by enrolling directly in foreign universities. Among the many study abroad programs available, students select programs with thoughtful planning and apply with the approval of their colleges and faculty advisors. To earn credit for overseas study during the fall and/or spring semester(s), students must apply through Cornell Abroad, whose staff members assist in the planning and application process.

LOCATIONS ABROAD

Cornell students majoring in a broad array of fields in all seven undergraduate colleges study in more than 40 countries each year. The following list includes programs chosen frequently by students with college approval; programs preceded by an asterisk (*) are managed by or affiliated with Cornell.

AFRICA

Botswana, Cameroon, Ghana, Kenya, Madagascar, Mali, South Africa, Tanzania, Uganda: SIT Study Abroad

Ghana: University of Ghana (through CIEE); NYU

Kenya: Wildlife Management (School for Field Studies); University of Nairobi; Minnesota Studies in International Development

South Africa: Universities of Cape Town and KwaZulu-Natal, Organization for Tropical Studies, International Human Rights Exchange (Bard)

ASIA

China: Chinese University of Hong Kong; *Cornell FALCON at Peking University; Inter-University Program for Chinese Language Studies at Tsinghua University, Beijing; Peking, Nanjing, and East China Normal Universities (CIEE); International Chinese Language Program at National Taiwan University; IES, CET, and the Alliance for Global Education in Beijing or Shanghai; Hong Kong University of Science and Technology; Syracuse or Columbia University program at Tsinghua University; *CAPS at Peking University

India: School for International Training; St. Stephen's College Delhi (through Brown or Rutgers University); CIEE at University of Hyderabad; IES Delhi; Alliance for Global Education in Pune

Indonesia: SIT Study Abroad, Bali

Japan: *Kyoto Consortium for Japanese Studies; International Christian University and other university programs; IES Tokyo; CIEE Tokyo at Sophia University; Kyushu University

Korea: Yonsei University; Ewha University

Nepal: *Cornell-Nepal Study Program (Samyukta Adhyayan Karikam Nepal) at Tribhuvan University

Thailand: Khon Kaen University (CIEE)

Vietnam: University of Hanoi (CIEE), CET

AUSTRALIA AND NEW ZEALAND

Australia: Australian National University, Canberra; University of Sydney; University of Melbourne; University of New South Wales, Sydney; University of Queensland, Brisbane; University of Western Australia, Perth; School for Field Studies Tropical Rainforest Studies; Sydney Internship (Arcadia, Boston University)

New Zealand: Otago, Auckland, Massey, Canterbury, and Lincoln Universities; EcoQuest

EUROPE

Czech Republic: UPCES (CERGE-EI) at Charles University, CET program in Jewish Studies, CIEE Prague

Denmark: *Danish Institute for Study Abroad (DIS)

France: *EDUCO (Cornell, Duke, and Emory in Paris) at Université de Paris VII, Paris IV, Paris I, Institut d'Études Politiques de Paris ("Sciences Po"); Critical Studies Program at the University of Paris (CIEE); Paris Internship (Boston University); IES Business and International Affairs, Paris

Germany: *Berlin Consortium for German Studies at the Free University of Berlin; Wayne State University in Munich and Freiburg; Heidelberg University

Greece: College Year in Athens; Arcadia

Hungary: Central European University; CIEE Budapest; Budapest Semester in Math

Ireland: Trinity College Dublin and the National University Colleges of Dublin, Galway, and Cork

Italy: *Bologna Consortial Studies Program; *Cornell College of Architecture, Art, and Planning in Rome; Arcadia University in Florence at the Accademia Italiana; Boston University in Padova; IES Milan and Rome; Intercollegiate Center for Classical Studies in Rome or Sicily; Syracuse University in Florence

Netherlands: University of Amsterdam; Leiden University

Russia: St. Petersburg University (CIEE); Moscow International University and other universities (American Council of Teachers of Russian); Smolny College, Math in Moscow

Spain: *Cornell-Michigan-Penn program at the University of Seville; *Consortium for Advanced Studies in Barcelona; various language and culture programs

Sweden: The Swedish Program at the University of Stockholm

United Kingdom: *Direct enrollment at: the University of Birmingham; University of Bristol; Cambridge University; City University; University of East Anglia; University of Edinburgh; University of Glasgow; University of Manchester; University of Oxford; University of St. Andrews; University of Sussex; University of Warwick; University of York; University of London: King's College, University College (including the School of Slavonic and East European Studies), Imperial College of Science and Technology, the London School of Economics and Political Science, and the School of Oriental and African Studies, the University of the Arts (including London College of Fashion), as well as other universities and art schools of choice.

Externally sponsored programs in the UK include the British American Drama Academy; the Arcadia, Boston, and Rochester University internships; and the Hansard Parliamentary Internship Programme.

Students studying in the United Kingdom enjoy a variety of services, and cultural activities, provided by the Cornell-Brown-Penn Centre in London.

LATIN AMERICA, CENTRAL AMERICA, AND THE CARIBBEAN

Argentina, Chile, or Peru: various university-based study abroad programs, through the Institute for Study Abroad of Butler University or CIEE

Brazil, Chile, Ecuador, Mexico, Nicaragua, Panama, Peru: School for International Training (SIT)

Costa Rica: Organization for Tropical Studies (OTS) Semester Abroad in tropical biology; School for Field Studies; CIEE

Ecuador: Minnesota Studies in International Development

Ecuador, Jamaica, or Mexico: International Partnership for Service Learning (IPSL)

Honduras: Escuela Agrícola Panamericana (Zamorano)

Mexico: Instituto Tecnológico y de Estudios Superiores de Monterrey (ITESM); Universidad de las Americas-Puebla (UDLA); Universidad Iberoamericana; School for Field Studies in Baja California; ISFA-Butler program at Universidad Autónoma de Yucatán, Merida

MIDDLE EAST AND NORTH AFRICA

Egypt: American University in Cairo

Israel: Ben-Gurion University; University of Haifa; Hebrew University of Jerusalem; Tel Aviv University

Jordan: University of Jordan (CIEE), SIT

Lebanon: American University of Beirut

Morocco: SIT Study Abroad, CIEE, Boston University, IES

Oman: SIT Study Abroad

Other Locations

Cornell students are by no means limited to the locations listed above or to the programs identified for particular countries. In recent years, they have also studied in Austria, Croatia, Dominican Republic, Finland, Mongolia, Poland, Portugal, Switzerland, Tajikistan, Turkey, Venezuela, and elsewhere.

Who Studies Abroad

Students from all seven undergraduate colleges and from all major fields study abroad; they are expected to have a cumulative grade point average of 3.0 or above. Over 500 undergraduates studied abroad last year. Because the colleges usually require that students complete at least 60 hours of undergraduate credit on the Ithaca campus, students who transfer to Cornell as juniors may be unable to count study abroad credit toward their Cornell degree.

When Students Study Abroad and for How Long

Students may study abroad during their sophomore, junior, or senior year. Junior year is the traditional choice, but second-semester sophomore year or first-semester senior year abroad is increasingly popular. To ensure preparation, it is important to begin planning for study abroad as early as freshman year. Although semester-long programs are usually available, academic-year programs are highly recommended.

Application Process

Applications for all study abroad programs—Cornell programs, as well as those administered by other institutions—are available at Cornell Abroad, 300 Caldwell Hall, where students are encouraged to consult the library of study abroad materials, talk with staff members, and attend information meetings. The Cornell Abroad web site is an excellent resource for links to universities and programs worldwide, as well as for applications and comprehensive information on all aspects of study abroad. Students meet with the study abroad advisors in their colleges to discuss how they will meet college degree requirements.

Each applicant completes a written statement of academic purpose outlining goals for study abroad and the program of study that will be followed. College Approval Forms are signed by both the faculty advisor and the college study abroad advisor. Arts and Sciences,

Human Ecology, and Industrial and Labor Relations students submit applications to their college for forwarding to Cornell Abroad; Agriculture and Life Sciences, Architecture, Art, and Planning, Engineering, and Hotel Administration students submit applications directly to Cornell Abroad. Cornell Abroad reviews all applications and forwards them to programs and universities. *All students who wish to receive academic credit for study abroad must apply through Cornell Abroad and their undergraduate college.*

The application *deadline* for study abroad in the fall 2010 semester and the 2010–2011 academic year is February 15, 2010, for all programs *except* Oxford and Cambridge, for which the deadline to study at those universities for the academic year in 2010–2011 is November 1, 2009. Many universities and programs admit on a rolling basis before and after these dates. Students planning to study abroad in the spring semester should initiate the application process during the preceding spring. Early application may improve your chances of admission. In all cases, it is a good idea to check with Cornell Abroad.

Registration, Credit Transfer, and Grades

Students who apply through Cornell Abroad to programs approved by their colleges, as outlined above, remain registered at Cornell during study abroad. They are eligible for financial aid and receive full academic credit for pre-approved courses of study completed with satisfactory grades. Students enroll for a normal full load of courses abroad, according to the standards of the institution or program overseas, and usually receive 30 credits per year, or 12 to 20 credits per semester. The colleges review course work taken abroad and make the final decisions concerning credit transfer and distribution. When study abroad credit has been transferred, the Cornell transcript will indicate the names of the courses taken, the grades received, and the total credits earned for each semester. *Foreign grades are not translated into the Cornell/American grading system, nor are they averaged into the Cornell grade point average.*

Foreign Language Requirements

Study abroad programs in non-English-speaking countries that offer direct enrollment in universities generally require the equivalent of at least two years of college-level language study. Students should make firm plans for any requisite language courses early in their freshman year. English-language study abroad programs are increasingly available in non-English-speaking countries—for example, Belgium, Denmark, Egypt, France, Hong Kong, Hungary, Israel, Italy, Japan, Korea, Netherlands, People's Republic of China, and Sweden. Cornell requires students who participate in programs in a non-English-speaking country with English-language course work to take at least one language course as part of their program of study and strongly encourages them to take more. Students should consult with their college study abroad advisors about relevant language preparation, and students in the College of Arts and Sciences should note that they are required to have studied the host country language, if taught at Cornell, before study abroad.

Housing Arrangements

Study abroad programs generally provide housing in the homes of local residents, in halls of residence for university students, or in rental apartments. Cornell Abroad will advise students of the arrangements that are available and most appropriate to their individual needs.

Costs

Students studying abroad in Cornell-managed programs pay a fixed Cornell Abroad Tuition per semester, which covers tuition, housing during term (with some exceptions), orientation, program-sponsored trips and events, and administrative and financial aid costs, including emergency medical evacuation and repatriation coverage. It may include other items (e.g., meals, commuter passes) depending on the program. Students pay other costs (e.g., airfare and personal expenses) directly. Different fee levels for Cornell programs reflect the relative costs of operation.

Pending approval by the Board of Trustees, in 2009–2010 the Cornell Abroad Tuition for students participating in the Berlin Consortium for German Studies, the Cornell Nepal Study Program, EDUCO (Emory, Duke, and Cornell in Paris), or the Michigan–Cornell–Penn Program in Seville is \$21,950.

For the Denmark Institute for Study Abroad (DIS), the Cornell Abroad Tuition is \$23,490 per semester, and for the Kyoto Consortium for Japanese Studies (KCJS), the Tuition is \$28,325 per semester. For the Bologna Consortial Studies Program (BCSP), the Tuition is \$16,345 per semester for academic-year students and \$18,995 for spring-only participants. For the Consortium for Advanced Studies in Barcelona (CASB) the fee is \$22,250 for fall and \$23,600 for spring.

Students studying in all other programs in 2009–2010 pay the tuition and other costs charged by their programs and a Cornell International Program Tuition (CIPT) of \$4,995 per semester. The CIPT covers the direct and indirect costs of study abroad to the university, including financial aid for all study abroad students. Students studying in the United Kingdom and Israel on direct enrollment programs at British and Israeli universities pay a Cornell International Program Tuition of \$5,410. This higher amount covers the cost of on-site support services provided by Cornell Abroad.

Financial Aid

Students who are accepted for study abroad during the academic year or semester, having applied through Cornell Abroad, are eligible for two semesters of financial aid, consistent with general university aid policy; this applies to all programs, whether run directly by Cornell or not. Students who have transferred into Cornell with 60 or more credit hours are not likely to receive aid for study abroad assuming they would thereby need more than eight semesters to earn the undergraduate degree. Some programs abroad offer need-based and merit-based scholarships; there are also external sources of aid for which Cornell Abroad students are eligible.

Security Abroad and Related Issues

The decision to study in a particular region of the world must be made by each student and his or her family in light of their own interpretation of current events. The director, associate director, and staff of Cornell Abroad stay in regular contact with representatives abroad and receive information regarding safety and security conditions worldwide through the U.S. Department of State Office of Citizens Emergency Services and other agencies. As long as the State Department does not restrict travel by U.S. citizens, Cornell Abroad does not normally recommend limitations on student plans for study abroad. Cornell Abroad will do everything possible to notify students immediately that they should defer plans when official travel restrictions are issued. Nothing is as important as student security and well-being.

Responsibility for a decision to withdraw from a program or return home early rests with the individual and his or her family. There can be no guarantee of credit for students who withdraw from programs sponsored by colleges and universities other than Cornell; they are advised to inquire about the policies of those institutions regarding the completion of academic work and the potential financial implications of premature departure. In the event of a disrupted semester, refunds of tuition and fees, and the number of credits to be awarded, will be reviewed by Cornell and affiliated institutions on a case-by-case basis. Most institutions sponsoring study abroad programs strive to facilitate student completion of academic programs even under unusual circumstances and have tuition refund policies based on prorated formulas.

Sources of Information and Advice Concerning Study Abroad

Cornell Abroad (300 Caldwell Hall): Richard Gaulton, Ph.D., director; Kristen Grace, Ph.D., associate director; Libby Okihiro, student services coordinator; Kathy Lynch, financial services coordinator. The Cornell Abroad library contains an extensive collection of university catalogs and study abroad program brochures, files of course syllabi and evaluations, books, videotapes and CDs, and some information on travel, summer study, and work abroad. Comprehensive information is provided on the Cornell Abroad web site (www.cuabroad.cornell.edu), which incorporates links to universities, programs, and resources worldwide as well as a database of cost estimates. In the early weeks of every semester, students and faculty and staff members discuss programs in a series of information meetings announced in the *Cornell Daily Sun* and on the Cornell Abroad web site (www.cuabroad.cornell.edu). The director and associate director are available at Cornell Abroad for individual advising.

College Study Abroad Advisors

Agriculture and Life Sciences: Christine Potter, 140 Roberts Hall; *Architecture, Art, and Planning:* Melanie Holland, B-1 West Sibley Hall; *Arts and Sciences:* Dean Pat Wasyliv, 55 Goldwin Smith Hall; *Engineering:* Engineering Advising, 167 Olin Hall; *Hotel Administration:* Barbara Lang, 180 Statler Hall; *Human Ecology:* Paul Fisher, 172 Martha Van Rensselaer Hall; *Industrial and Labor Relations:* Kevin Harris, 101 Ives Hall.

CORNELL IN WASHINGTON PROGRAM

M101 McGraw Hall
255-4090
ciw.cornell.edu

Cornell in Washington is a unique opportunity for students in any major or with any career interest. Qualified juniors and seniors in all colleges can earn full academic credit—and grades that count in their GPAs—for a semester in Washington, D.C., taking small, seminar courses from Cornell faculty members, conducting research, getting real-life work experience, and living at the Cornell Center near Dupont Circle.

Washington, as the center of much of the nation's political energy, is an ideal place to be part of American public policy and the institutions and processes through which it is formulated and implemented. At the same time, Washington's rich collection of libraries, museums, theaters and art galleries offers an opportunity to enjoy and explore American cultural life, present and past. Washington's vast financial, technology, and health-related sectors create endless opportunities in those arenas, as well.

In addition to working at a self-selected externship, Cornell in Washington students enroll in one of two core courses—Studies in Public Policy or Studies in the American Experience—that involve a major research project on a topic of their choice. Students also select one or two other seminars from such fields as government, history, economics, history of art, and social policy. All seminars carry appropriate credit toward fulfillment of major, distribution, and other academic requirements.

The program is housed at the Cornell Center, 2148 O Street, NW, Washington, DC 20037. The academic and administrative space is located on the first floor and 27 residential units for approximately 60 students are on the upper floors.

Tuition

Students are registered as full-time students, earn Cornell credit, pay full tuition of their home college, and remain eligible for financial aid.

Housing

Apartments are rented at the Cornell Center. All are fully furnished (except for dishes, cookware, towels, and bedding) and reasonably priced by both Washington and Cornell standards. Two students are assigned to each efficiency and three to each one-bedroom apartment. Students are discouraged from bringing automobiles. The public transportation system, consisting of both bus and subway service, is extensive and convenient to the center, and street parking is not permissible.

Applications

Students may apply online at ciw.cornell.edu or obtain an application from the Cornell in Washington program office at M101 McGraw Hall. Applications should be submitted the semester before participation.

Summer in Washington

A modified program involving courses and internships is available during the summer. Students earn 6 to 8 credits depending on their course selection.

Information

The Cornell in Washington program web site is located at ciw.cornell.edu. Regular information meetings are held on campus in early October and March. These meetings are advertised in the *Cornell Daily Sun* and on campus bulletin boards. Additional information concerning externships, courses, housing, and other features of the program may be obtained at either the Cornell in Washington program office at M101 McGraw Hall, 607-255-4090, or in Washington at the Cornell Center, 2148 O Street, NW, Washington, DC 20037, 202-466-2184.

CORNELL INSTITUTE FOR PUBLIC AFFAIRS

294 Caldwell Hall
255-8018 (tel.)
255-5240 (fax)
cipa@cornell.edu
www.cipa.cornell.edu

The Cornell Institute for Public Affairs (CIPA) offers a university-wide two-year program of graduate professional studies leading to the master of public administration (M.P.A.) degree. CIPA leverages the vast academic and professional resources of Cornell to train the next generation of leaders working at the intersections of the public, private, and nonprofit sectors.

CIPA fellows (graduate students) have the opportunity to study public policy and program management from a cross-disciplinary perspective. Students gain an understanding of the political and administrative processes through which issues, problems, and policies are formulated; the economic and fiscal basis for government action in a market economy; and the analytical tools for assessing policy implications. They study the behavior of both public and private organizations and their management. They also develop sensitivity to the moral and ethical dimensions of policy issues.

Faculty Members

The depth and flexibility of the program is reflected in the growing number of affiliated faculty members. CIPA is not confined within a single school or college, but spans the entire university. More than 100 field faculty members, representing 25 departments, welcome CIPA fellows into their courses and serve on professional report/thesis committees. The core faculty is the heart of the CIPA structure. With broad representation from across the university, the core faculty bring an academic richness to CIPA that transcends disciplinary boundaries. These faculty members provide instruction in the foundation courses. Core faculty members include David B. Lewis, CIPA director, City and Regional Planning; Richard Booth, City and Regional Planning; Nancy Brooks, City and Regional Planning; Nancy Chau, Applied Economics and Management; Gary S. Fields, the John P. Windmuller Chair in International and Comparative Labor; Neema Kudva, City and Regional Planning; (Daniel) Pete Loucks, Civil and Environmental Engineering; Theodore J. Lowi, the John L. Senior Professor of American Institutions in the Department of Government; Kathryn S. March, Anthropology; Norman Uphoff, Government; and Jerome Ziegler,

Department of Policy Analysis and Management.

M.P.A. Program Flexibility

The two-year master of public administration (M.P.A.) degree program consists of 16 courses; CIPA fellows typically take four courses per semester for four semesters. Although the M.P.A. program offers a basic structure for study, each CIPA fellow works closely with a faculty advisor to design an individualized program based on his or her specific area of interest. Courses may be taken through the program in any department or college in the university.

Advising

Upon entering the M.P.A. program, each fellow is assigned a program advisor based on his or her area of interest. These advisors are drawn from the CIPA core faculty. They assist fellows in designing their individual program of study and selecting their courses. The assignment of advisors is meant to assist new students in getting a strong start with their studies. Once familiar with the resources available, students are welcome to ask another core faculty member to be their program advisor.

Toward the end of their first year, when they select their professional report/thesis topic, CIPA fellows choose a report/thesis advisor from among the more than 100 faculty members in the field of public affairs. The advisor guides the fellow in research and writing.

Foundation Course Work

To develop a foundation of basic concepts and capabilities for the study of public policy, CIPA fellows take three courses in each of the following three subject areas:

- Administration, Politics, and Public Policy
- Economics and Public Finance
- Quantitative Analysis

At least one of the three courses in each subject area must be a core foundation course—a course taught by a CIPA core faculty member.

Concentration Course Work

Concentration course work enables fellows to focus on a specific area of public policy study. Students choose their course of study—domestic or international—from the following options:

- Environmental Policy
- Finance and Fiscal Policy
- Government, Politics, and Policy Studies
- Human Rights and Social Justice
- International Development Studies
- Public and Nonprofit Management
- Science and Technology Policy
- Social Policy

Fellows select a concentration during the latter half of the first year of course work.

Practical Experience, Internships, Off-Campus Study, and/or Public Service Exchange

Experiential learning is an integral component of CIPA's educational strategy, and a practical experience such as an internship is a

requirement for obtaining the M.P.A. degree. Internships allow students to apply training in a practical environment and establish contacts for permanent employment. CIPA's Office of Professional Development provides assistance to fellows in finding internships that match their interests, expertise, and professional goals. Appropriate internships are available in public policy— or public affairs—related organizations in both the public and private sector. In recent years, 98 percent of fellows actively searching for an internship find one. Organizations include:

- Deloitte and Touche
- Government Accountability Office
- New York City Office of Management and Budget
- The Overseas Private Investment Corporation
- United Nations
- U.S. Agency for International Development
- U.S. Congress
- U.S. Congressional Research Service
- U.S. Department of State
- World Food Program
- state, local, and urban municipal governments
- nongovernmental organizations and think tanks worldwide
- private sector consulting firms

CIPA fellows also have the opportunity to gain professional experience off-campus, while taking a semester of courses for credit, through the following three programs:

- Cornell in Rome
- Cornell in Washington
- Cornell–Nepal Study Program

In 2008, two additional opportunities for study abroad became available in Mexico City, Mexico, and Budapest, Hungary.

Fellows may also fulfill the practical experience requirement by participating in the Public Service Exchange, a unique service learning partnership with nonprofit and government agencies, providing fellows with the opportunity to engage in the supervised practice of public policy. For more information, see www.pse.cipa.cornell.edu.

Professional Writing Requirement

As a culmination of studies in the M.P.A. program, each fellow develops and submits either a professional report or thesis. Typically, the report or thesis grows out of a fellow's specific area of concentration and often incorporates work done during the summer internship or an off-campus study program. Both the CIPA professional report and the thesis require the student to synthesize and apply his or her education to formulate a solution to a policy problem. The thesis places a greater emphasis on problem definition and literature review, while the professional report emphasizes feasibility, practitioner accessibility, and adapting a student's writing to the professional culture and standard practices of the client organization. The level of work expected for the M.P.A. thesis or professional report is equivalent to one or two semester-long courses.

Co-Curricular Activities

CIPA fellows gain practical skills by organizing, managing, and participating in a variety of professional development activities on campus. These provide fellows with opportunities to share work experience with other fellows, and to meet practitioners and distinguished faculty members in the field of public affairs. These student-led initiatives include:

- **Colloquium Committee:** This student group sets the agenda for the weekly Colloquium Series and makes arrangements for the chosen guest lecturers to come to campus.
- **Point of View (POV):** The CIPA Public Affairs television program, POV is part talk show and part debate show. Fellows work in all aspects of TV production and presentation, gaining invaluable experience for the media exposure they will encounter as public-policy professionals.
- **The Current:** CIPA fellows publish a journal of student policy research. Working on *The Current* offers fellows a firsthand view of the rigors of publishing academic work, and also provides a foundation in professional writing and editing—necessary skills for preparing reports and position papers, and publishing research findings.

Complementary Degrees

CIPA fellows may elect to combine their M.P.A. program with study for a complementary degree such as a J.D. from the Cornell Law School, an M.B.A. from the Graduate School of Management, an M.M.H. from the Hotel School, or an M.R.P. in the field of City and Regional Planning. Admission to the complementary degree program is independent from admission into CIPA.

Accelerated Master's Program

An accelerated program for Cornell undergraduates allows advanced students to apply to CIPA in their junior year, begin CIPA-related course work in their senior year, and complete the M.P.A. in just one year beyond their undergraduate studies.

Residence Requirement

Fellows are required to spend four semesters of study in residence to complete the M.P.A. Those who enroll in the Cornell Accelerated Master's Program can earn the equivalent of two semesters in residence during their senior year.

Admission

The CIPA program seeks diversity in its student body, drawing from a pool of applicants who have studied in a wide range of disciplines. No specific background or undergraduate major is required, although individuals with previous work experience in policy making or implementation are strongly encouraged to apply. Admission to CIPA is selective. A faculty committee evaluates individual applications based on the following:

- overall academic record
- potential for public-policy leadership as evidenced by professional work; community, extracurricular, or other relevant experience (a copy of one's current résumé is an application requirement)

- GRE scores
- two letters of recommendation
- an extensive written statement of purpose, as outlined on the CIPA web site: www.cipa.cornell.edu

Applicants for whom English is a second language will need to achieve the following minimum scores on the new (2005) Internet-based test version of the TOEFL: writing 20, listening 15, reading 20, speaking 22.

Although CIPA has a policy of rolling admission, applications should be submitted by the end of January to be considered for financial aid. For more information, contact the Cornell Institute for Public Affairs, 294 Caldwell Hall (tel: 255-8018; fax: 255-5240; cipa@cornell.edu; www.cipa.cornell.edu).

Financial Aid

CIPA provides some funding to more than 80 percent of its students. The institute itself, however, is unable to provide full support for any individual student. Fellows often win support from Fulbright, Truman, World Bank, and other programs. In addition, Cornell offers numerous assistantship and employment opportunities for graduate students. Applicants are encouraged to explore all available sources of external funding, including grants that may be provided by current employers. Decisions on institute funding are determined on a rolling basis following admission decisions.

CORNELL PLANTATIONS

One Plantations Road
255-2400
plantations@cornell.edu
www.plantations.cornell.edu

Introduction

Cornell Plantations is Cornell University's arboretum, botanic garden, natural areas, and many on-campus gardens—places of exceptional beauty, diversity, and learning opportunities. Areas managed include over 4,000 acres of natural areas on and off campus in addition to the 150 acres in the F. R. Newman Arboretum and the 25 acres of botanical gardens in and around central campus.

Cornell Plantations provides unique outdoor laboratories and plant collections for Cornell's academic programs and research in disciplines such as ecology and evolutionary biology, landscape architecture, ornamental horticulture, and bioengineering. While many of Cornell Plantations' resources are on or near campus, several thousand acres in and around Tompkins County preserve quality examples of native vegetation and rare plants and animals. The lands include bogs, fens, glens, swamps, wet and dry forests, vernal ponds, and meadows. Arrangements to use these natural areas for classes and research can be made by calling Cornell Plantations. Cornell Plantations has something for everyone! We're also the many places that non-horticultural students and faculty members visit for classes ranging from art, literature, and women's issues, to nutrition.

Credit Courses

Cornell Plantations offers two for-credit courses: HORT 4800 Plantations Fall Lecture Series and HORT 4850 Public Garden

Management. HORT 4800 is a 1-credit S-U lecture series offered each fall. HORT 4850 is a 3-credit course offered alternate spring semesters. Cornell Plantations also offers noncredit classes and workshops such as botanical illustration, arts and crafts, gardening techniques, and ecology walks; visit www.plantations.cornell.edu, or call 255-2400 for more information.

Internships

Cornell Plantations' internship program is just for you, the Cornell University student! Since the 1990s, more than 100 university students have been working side by side with Plantations' knowledgeable staff, learning and having fun. A number of positions in various areas are available each year, beginning after finals in May. All positions strive to build on classroom learning through hands-on work, encouraging students' interests in horticulture and the natural world. Visit our web site for details.

Master's Program

Cornell Plantations' master of professional studies program offers fully funded fellowships in public garden leadership. Visit our web site for program details.

Planning a Visit

To discover all that is Cornell Plantations, visit www.plantations.cornell.edu or pick up a visitor's map or a copy of the *Cornell Plantations Path Guide* at the Garden Gift Shop in the Lewis Education Center just below Tower Road. The *Path Guide* and accompanying video are also available at the Cornell Store.

PROGRAM ON ETHICS AND PUBLIC LIFE

240 Goldwin Smith Hall
255-8515

The critical issues of public life are inescapably ethical issues. In the economy, we face questions of equity and justice and questions about the relation between prosperity, the environment, and the quality of individual lives. In constitutional law, we confront dilemmas about civil rights, freedom of speech, privacy, and abortion. In politics and government, we wrestle with questions about campaigning, character, and compromise. And in international affairs, we encounter the complexities of war and peace, human rights, multilateral aid, and climate change.

The university-wide Program on Ethics and Public Life (EPL) is Cornell's initiative in the systematic study of the ethical dimension of specific public issues. EPL grew out of a conviction that these questions need something more than abstract philosophical discussion. In addition to the general study of values and principles that goes on in theoretical ethics, universities need to foster ways of thinking about the complex, uncertain, and urgent problems of the real world, ways of thinking that are realistic without sacrificing their ethical character.

EPL seeks to enhance and facilitate the discussion of ethical issues by students whose central educational interests lie elsewhere, but whose work and lives will nevertheless

confront them with dilemmas and responsibilities for which a university education should prepare them. EPL aims to enrich existing departments with courses that are intellectually and practically fruitful at the same time. It offers a minor in Law and Society (see separate listing under "Special Programs and Interdisciplinary Studies").

For information about the Program on Ethics and Public Life, visit the program's web site, www.arts.cornell.edu/epl.

PROGRAM IN REAL ESTATE

114 West Sibley Hall
255-7110

The two-year master of professional studies in real estate (M.P.S./RE) degree program is an interdisciplinary program that combines courses from nearly every college at Cornell University. The degree is designed for aspiring real estate professionals who are in the initial or early stages of their careers. The Program in Real Estate at Cornell University is home to the graduate program in real estate as well as the Cornell Real Estate Council, which is the centerpoint of academic and industry-related real estate activities on and off campus. The real estate field faculty is composed of 23 faculty members selected from several different colleges that are directly involved in and responsible for the design, delivery, and administration of the real estate curriculum.

The professional study of real estate is concerned with the design, development, finance, law, management, marketing, transactions, deal structuring, and many other aspects of the real estate business. Real estate professionals also contribute an understanding of the long-range social, political, ethical, and environmental implications of decisions about real estate. The 62 credit hours of course work needed to earn the degree provide a comprehensive and lasting foundation for professional careers in real estate.

Students take core courses in principles of real estate, the real estate development process, real estate finance and investments, communication in real estate, managerial finance, residential development, real estate law, construction planning and operations, design in real estate development, transactions and deal restructuring, and real estate marketing and management, along with a weekly industry seminar. Elective courses are taken in a chosen area of concentration and to fulfill a leadership and management distribution requirement. Many concentration options are possible and may be structured from the hundreds of related courses taught at Cornell University. Areas of concentration include development, finance, investments, real estate consulting, sustainable development, property and asset management, real estate marketing and market analysis, international real estate concentrations, and others. Students complete real-world, semester-long project workshops during their second and fourth semesters.

Admissions

Applicants to the Program in Real Estate must have completed a bachelor's degree with a good academic record. Applicants must submit a résumé plus two letters of recommendation either from faculty members familiar with the

applicant's academic work or, if appropriate, professional recommendations based on work experience. Competitive scores for the GMAT are required. Extensive and relevant work experience will receive favorable consideration. International students for whom English is a second language will need to achieve a minimum TOEFL score set by the Cornell Graduate School. There is no work experience required for admission; however, it is strongly preferred that applicants have at least some industry-related work experience, with three to five years' experience typical. Applications are reviewed on a rolling basis. The financial aid priority and dual-degree applicant deadline is January 15, and the regular application deadline is March 15; otherwise, applications will be accepted until June 1. For more information, contact the admissions coordinator at 255-7110 or real_estate@cornell.edu.

SCIENCE OF EARTH SYSTEMS: AN INTERCOLLEGE MAJOR

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, sufficient natural resources to meet the needs of a rapidly growing world population, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. Our society is challenged to identify the best path for achieving a sustainable balance between human actions and the natural Earth system. To meet this challenge and to withstand the fundamental process of the Earth system, modern Earth sciences probe the interconnections of the biosphere, hydrosphere, atmosphere, and lithosphere.

The Science of Earth Systems (SES) major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges of modern science and as the necessary foundation for the future management of our home planet. In this program, Cornell's strengths across a broad range of earth and environmental sciences have been coalesced to provide students with the tools to engage in what will be the primary challenge of the 21st century.

Graduates of Cornell's SES program are well prepared for several career and advanced study options:

- Graduate studies leading to the M.S. and/or Ph.D. in any of the earth science sub-disciplines (e.g., atmospheric science, geological sciences/geophysics, biogeochemistry, hydrology, oceanography).
- Employment in environmentally oriented careers in both the private and public sector at the B.S. or B.A. level such as environmental consulting and science writing.
- Employment in natural resources industry, including fossil fuels and water. These fields usually require an M.S. degree.
- Graduate degree in environmental law or policy. These fields value students with an understanding of the science behind legal and policy decisions.

- Advanced degree in teaching, for example, earth science at the middle or high school level.
- Medical school. The emphasis on basic sciences in the SES curriculum makes the SES major a suitable springboard for a career in medicine.

The SES major is available for students in the College of Agriculture and Life Sciences, the College of Engineering, and the College of Arts and Sciences. The SES major has its home in the Department of Earth and Atmospheric Sciences and includes collaboration with several departments across the university.

The SES Curriculum

The SES curriculum provides strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences.

The requirements for the major are as follows:

1. Basic Math and Sciences
 - a. MATH 1110–1120, or MATH 1910–1920
 - b. PHYS 2207–2208, or PHYS 1112–2213
 - c. CHEM 2070–2080 or CHEM 2090–2080 (or 2070–1570)
 - d. one year of biology: BIOG 1101/1103 and 1102/1104 (or 1105–1106) or BIOG 1109 and 1110, or BIOEE/EAS 1540, or EAS 1700
2. Required introductory course: EAS 2200 The Earth System
3. Science of Earth Systems Core Courses

The core courses emphasize the interconnectedness of the Earth system. These courses are founded on the most modern views of the planet as an interactive and ever-changing system, and each crosses the traditional boundaries of disciplinary science. Three courses selected from the following four core courses are required for the major:

 - EAS 3010 Evolution of the Earth System
 - EAS 3030/NTRES 3030 Introduction to Biogeochemistry
 - EAS 3040 Interior of the Earth
 - EAS 3050 Climate Dynamics

4. Concentration Courses

Four intermediate to advanced-level courses (3000 level and up) are selected that build on the core courses and have prerequisites among the "Basic Math and Sciences" courses listed above. Note that additional basic math and science courses may be required as prerequisites for courses chosen for the concentration. These concentration courses build depth and provide the student with specific expertise in some facet of earth system science. Four concentrations are defined for the major: atmospheric sciences, biogeochemistry, geological sciences, and ocean sciences (see EAS web site for details). Other concentrations can be tailored to a student's interests in concert with the student's advisor and upon approval of the SES curriculum committee. Examples include sustainable Earth and environmental systems, earth system science and policy, hydrology, planetary science, and soil science.

5. Field/observational/laboratory experience

Exposure to the basic observations of earth science, whether directly outdoors in the field, or indirectly by various techniques of remote sensing, or in the laboratory, is necessary to understand fully the chosen area of concentration in the major. A minimum of 3 credits of course work of an observational nature is required. Possibilities include:

Courses given in the Hawaii Environmental Semester program;

Courses given by the Shoals Marine Laboratory;

EAS 2500 Meteorological Observations and Instruments;

EAS 3520 Synoptic Meteorology I;

EAS 4170 Field Mapping in Argentina;

EAS 4370 Geophysical Field Methods;

EAS 4910 and/or 4920 Undergraduate Research, total 3 credits with appropriate choice of project;

Field courses taught by another college or university (3-credit minimum)

Cornell Field Program in Earth and Environmental Systems: Semester in Hawaii

Cornell University offers a spring-semester program of environmental and Earth systems study on the Big Island of Hawaii. The Hawaiian Islands are an outstanding natural laboratory where students can explore a variety of ecosystems, examine their development over time, witness human influences on plant and animal communities, and experience geologic processes such as active volcanism and seismicity. Students spend most of their time in the field, gaining hands-on experience probing the interaction between earth, ocean, atmosphere, and biosphere. This is an ideal opportunity to apply fundamental concepts of geology, chemistry, and biology in a real-world setting. Students enrolled in the Environmental Semester Program will complete 19 credit hours of course work during the spring semester. For Cornell students majoring in Science of Earth Systems, EAS 3220, EAS 3400, and EAS 3510 satisfy degree requirements for the major.

For more information contact Professor John Cisne, Department of Earth and Atmospheric Science, john.cisne@cornell.edu, and visit www.eas.cornell.edu.

Business and Preprofessional Study

UNDERGRADUATE BUSINESS STUDY

Cornell offers a highly ranked accredited general undergraduate business degree program as well as world-renowned business-related programs in five other colleges and schools. Because the choices are so broad, students are encouraged to explore the offerings carefully to identify the program that best matches their business career goals. (Graduate study is available in the Johnson Graduate School of Management as well as in

graduate fields associated with each of the undergraduate options.)

Applied Economics and Management The Department of Applied Economics and Management (AEM) in the College of Agriculture and Life Sciences is home to Cornell's only undergraduate degree that is accredited by AACSB International—The Association to Advance Collegiate Schools of Business. AEM's undergraduate program offers a broad, flexible curriculum that reflects the department's analytical, applied economics approach. Students choose among 10 specializations: finance, marketing, strategy, accounting, entrepreneurship, agribusiness management, food industry management, environmental and resource economics, international trade and development, and applied economics (aem.cornell.edu).

Arts and Sciences Many of the liberal arts majors offered by the College of Arts and Sciences provide students with a background for a successful business career. In particular are majors in economics, mathematics, sociology, and psychology. Economics focuses on the production, distribution, and consumption of goods and services; monetary systems; and economic theories. Students interested in the human dimensions of business can choose sociology or psychology. Mathematics majors can choose concentrations in computer science, operations research, statistics, or economics to prepare for careers in areas such as actuarial science or finance (www.arts.cornell.edu).

Engineering Many of today's business managers hold engineering degrees. Each of the College of Engineering's 13 majors prepares students for business careers. Operations Research and Engineering and Information Science, Systems and Technology are the most business-oriented engineering degree programs, preparing graduates for careers in areas such as investment banking and process engineering. Engineering students in any major can take a business-oriented minor in areas such as industrial systems and information technology, and operations research and management science. A new business minor for engineering students is also offered by the Department of Applied Economics and Management (www.engineering.cornell.edu).

Hotel Administration The School of Hotel Administration offers the world's premier hospitality management program. Its rigorous core business curriculum includes courses in finance and accounting; real estate development; facilities management, planning, and design; food and beverage management; marketing, tourism, and strategy; information systems; operations; managerial and organizational behavior; human resource management; managerial communication; and law. The school's 153-room conference hotel gives students the opportunity to apply what they learn in a real-world business and its Practice Credit requirement further ensures a balance between classroom learning and real-world practice (www.hotelschool.cornell.edu).

Human Ecology The College of Human Ecology offers three business-oriented majors. The fiber science and apparel design major prepares students for careers in the fashion industry, for example, as a retail executive or merchandise buyer. Students majoring in design and environmental analysis can choose the facility planning and management option to prepare for careers as facility planners and

workplace strategists in consulting and real estate firms and large corporations. The policy analysis and management major offers concentrations focusing on health, consumer policy, and family and social welfare, and its graduates pursue careers as policy makers, analysts, and managers in both the public and private sectors (www.human.cornell.edu).

Industrial and Labor Relations The School of Industrial and Labor Relations (ILR) focuses on the "people" side of business. Its professional-level curriculum provides a strong social science foundation in organizational behavior; human resource studies; collective bargaining, labor law, and labor history; labor economics; international and comparative labor; and social statistics. Most ILR graduates begin careers in management, consulting, and public policy; four out of 10 graduates go on to law school or other graduate programs (www.ilr.cornell.edu).

Related Areas

Entrepreneurship@Cornell This university-wide program is open to all Cornell students interested in eventually starting their own businesses or working for venture capital firms. Entrepreneurship-related courses are offered by all seven of Cornell's undergraduate colleges and schools as well as by the Johnson Graduate School of Management, the Law School, and the College of Veterinary Medicine (eship.cornell.edu).

International Programs Several additional programs allow business students to focus on a particular geographic area. Majors and concentrations are offered in Latino Studies, French Studies, German Studies, China and Asia-Pacific Studies, Asian Studies, Near Eastern Studies, and Africana Studies (all in the College of Arts and Sciences). The College of Agriculture and Life Sciences offers an interdepartmental program in international agriculture and rural development.

PRELAW STUDY

Law schools do not prescribe any particular prelaw program, nor do they require any specific undergraduate courses as do medical schools. Law touches nearly every phase of human activity, and there is practically no subject that cannot be considered of value to the lawyer. Therefore, no undergraduate course of study is totally inappropriate. Students contemplating legal careers should be guided by certain principles, however, when selecting college courses.

1. Interest encourages scholarship, and students will derive the greatest benefit from those studies that stimulate their interest.
2. Of first importance to the lawyer is the ability to express thoughts clearly and cogently in both speech and writing. First-year writing seminars, required of nearly all Cornell first-year students, are designed to develop these skills. English literature and composition, and communication courses, also serve this purpose. Logic and mathematics develop exactness of thought. Also of value are economics, history, government, and sociology, because of their close relation to law and their influence on its development and ethics, and philosophy, because of the influence of philosophic reasoning on legal reasoning

and jurisprudence. Psychology and human development lead to an understanding of human nature and mental behavior. Some knowledge of the principles of accounting and of the sciences such as chemistry, physics, biology, and engineering is recommended and will prove of practical value to the lawyer in general practice in the modern world.

3. Cultural subjects, though they may have no direct bearing on law or a legal career, will expand students' interests; help cultivate a wider appreciation of literature, art, and music; and make better-educated and well-rounded persons.
4. Certain subjects are especially useful in specialized legal careers. For some, a broad scientific background—for example, in agriculture, chemistry, physics, or engineering—when coupled with training in law, may furnish qualifications necessary for specialized work with the government, for counseling certain types of businesses, or for a career as a patent lawyer. A business background may be helpful for those planning to specialize in corporate or tax practice. Students who anticipate practice involving labor law and legislation might consider undergraduate study in the School of Industrial and Labor Relations. Whatever course of study is chosen, the important goals are to acquire perspective, social awareness, and a critical cast of mind; to develop the ability to think logically and analytically; and to express thoughts clearly and forcefully. These are the crucial tools for a sound legal education and a successful career.

The presence of the Cornell Law School on campus provides the opportunity for a limited number of highly qualified undergraduates registered in the College of Arts and Sciences at the university to apply and be admitted to the Law School. At the time of entry they must have completed 105 of the 120 credits required for the bachelor of arts degree, including 92 credits of course work in the College of Arts and Sciences.

It may be possible for exceptionally well-qualified students in other Cornell undergraduate colleges to apply to enter the Law School after three years. In addition, members of the Cornell Law School faculty sometimes offer undergraduate courses such as *The Nature, Functions, and Limits of Law*, which are open to all undergraduates.

PREMEDICAL STUDY

Medical and dental schools, while not requiring or recommending any particular major course of study, do require that particular undergraduate courses be completed. These courses usually include general chemistry and organic chemistry, biology, and physics, and all must be taken with a lab. A year of English composition (or a first-year writing seminar) is also required. In addition, many medical schools require or recommend mathematics and at least one advanced biological science course, such as biochemistry, genetics, embryology, histology, or physiology.

There is no major that is the best for those considering medical or dental school, and students are therefore encouraged to pursue their own intellectual interests. Students are more likely to succeed at, and benefit from,

subjects that interest and stimulate them, and there is no evidence that medical colleges give special consideration to any particular undergraduate training beyond completion of the required courses. In the past, successful Cornell applicants to medical and dental schools have come from the Colleges of Arts and Sciences, Agriculture and Life Sciences, Human Ecology, and Engineering. The appropriate choice depends to a great extent on the student's other interests.

PREVETERINARY STUDY

There is no specific preveterinary program at Cornell, and students interested in veterinary medicine as a career should select a major for study that fits their interests while at the same time meeting the entrance requirements for veterinary college as listed below. Most preveterinary students at Cornell are enrolled in the College of Agriculture and Life Sciences, which offers several applied science majors, including animal science, that can lead to related careers if the student does not go to veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests or the desire for a broad liberal arts curriculum.

The college-level prerequisite courses for admission to the College of Veterinary Medicine at Cornell are English composition, biology or zoology, physics, inorganic chemistry, organic chemistry, biochemistry, and microbiology. All science courses must include a laboratory. These requirements, necessary for admission to the College of Veterinary Medicine at Cornell, may vary at other veterinary colleges.

For information on additional preparation, including work experience and necessary examinations, students should consult the brochure, Admissions Information, obtained by writing to the Office of D.V.M. Admissions, College of Veterinary Medicine, Cornell University, S2-009 Schurman Hall, Ithaca, NY 14853-6401. Information on the Guaranteed Admissions Program is available from the same address.

Qualified students in the College of Agriculture and Life Sciences may apply for acceptance in a double-registration program arranged between Cornell University and the College of Veterinary Medicine at Cornell. This program allows registered students to save one year in pursuit of the bachelor's and D.V.M. degrees. Further information about this program is available from the Office of Multicultural and Diversity Programs, College of Agriculture and Life Sciences, 140 Roberts Hall, Ithaca, NY 14853.

COLLEGE OF AGRICULTURE AND LIFE SCIENCES

INTRODUCTION

College Focus

The College of Agriculture and Life Sciences offers men and women broad-based educational programs to provide them with technical, management, and leadership skills in four primary areas of focus. These areas were developed in response to the global challenges of the 21st century. They are fluid, overlapping, and interdependent and represent agriculture and life sciences at its broadest and most dynamic meaning. These four areas are:

- Land-grant, or agricultural sciences
- Applied social sciences
- Environmental sciences
- New life sciences

Faculty members challenge students with educational programs that promote problem-solving, basic and applied research, extension, and outreach. The programs are geared to the discovery and dissemination of knowledge for the purpose of advancing agriculture and food systems, health and nutrition, food security, biological sciences, education, communication, natural resources and environmental quality, and community, urban, and rural development throughout New York State, the nation, and the world.

Administration

Susan A. Henry, dean

Barbara A. Knuth, senior associate dean

Jan P. Nyrop, senior associate dean

Margaret H. Ferguson, associate dean for finance and administrative services

Michael P. Riley, associate dean for alumni affairs, development, and communications

Donald R. Viands, associate dean and director of academic programs

Mark W. Wysocki, associate director of academic programs

Jeffrey J. Doyle, director of undergraduate biology

Michael P. Hoffmann, associate dean and director of the Cornell University Agricultural Experiment Station

Helene R. Dillard, associate dean and director of cooperative extension

Christopher B. Watkins, associate director of cooperative extension

Glenn J. Applebee, associate director of cooperative extension

W. Ronnie Coffman, director of international programs

James E. Haldeman, senior associate director of international programs

Terry W. Tucker, associate director of international programs

Alice Pell, director of Cornell International Institute for Food, Agriculture, and Development

Department Chairs

Animal science: W. Ronald Butler, 149 Morrison Hall

Applied economics and management: Loren W. Tauer, 154 Warren Hall

Biological and environmental engineering: Daniel J. Aneshansley, 104 Riley-Robb Hall; Beth A. Ahner, associate chair, 202 Riley-Robb Hall

Biological statistics and computational biology: James Booth, 1178 Comstock Hall

Communication: Geri K. Gay, 339 Kennedy Hall

Crop and soil sciences: Harold van Es, 235 Emerson Hall

Development sociology: Max Pfeffer, 133A Warren Hall

Earth and atmospheric sciences: Larry D. Brown, 3120 Snee Hall; Arthur T. DeGaetano, associate chair, 1119 Bradfield Hall

Ecology and evolutionary biology: Nelson G. Hairston, Jr., E345 Corson Hall

Education: Arthur L. Wilson, 435 Kennedy Hall

Entomology: Jeffrey G. Scott, 2130 Comstock Hall

Food science: Kathryn J. Boor, 114 Stocking Hall

Horticulture: Marvin P. Pritts, 134A Plant Science Bldg.

Landscape architecture: Peter J. Trowbridge, 443 Kennedy Hall

Microbiology: William C. Ghiorse, B76C Wing Hall

Molecular biology and genetics: Kenneth J. Kempthues, 107A Biotechnology Bldg.

Natural resources: Marianne E. Krasny, 118 Fernow Hall

Neurobiology and behavior: Kraig Adler, W363A S. G. Mudd Hall

Plant biology: William L. Crepet, 412 Mann Library

Plant breeding and genetics: Mark E. Sorrells, 241 Emerson Hall

Plant pathology and plant-microbe biology: George W. Hudler, 334 Plant Science Bldg.

Statistical sciences: Martin T. Wells, 1190 Comstock Hall

Student Services

Office of Academic Programs

The College of Agriculture and Life Sciences (CALS) provides a variety of services for students, faculty, and alumni. The hub of these services is the Office of Academic Programs in Roberts Hall, including the

director, associate director, the Admissions Office, the Career Development Office, the Counseling and Advising Office, the Multicultural and Diversity Office, and the Registrar's Office. Although most of the student services are in the Office of Academic Programs, services also are located across the college in the Office of Undergraduate Biology and in various departments. Faculty members in the College of Agriculture and Life Sciences consider advising to be an important and integral part of the undergraduate program. Each student enrolled in the college is assigned to a faculty advisor in his or her major field of study for assistance and guidance in developing a program of study and to enhance the student's academic experience.

The Counseling and Advising Office coordinates the faculty advising program, serves as the college's central undergraduate advising office, coordinates the college international exchange programs, and offers consultation and support for personal issues. Two counselors with expertise in college policies and guidelines provide confidential consultation and support appropriate to each student's academic circumstances. Students seek advising, consultation, and support on a variety of issues including academic problems, course problems and college procedures, graduation requirements, personal and family problems, stress management, and time management.

Academic advising is available for students who are interested in international study, need to file petitions, wish to waive college academic regulations, have disability concerns, are experiencing academic difficulties, take or return from leave of absence, or have requests for tutoring.

The staff coordinates new student orientation, award ceremonies, commencement activities, and the activities of Ho-Nun-De-Kah, the college's honor society.

The staff is available on a walk-in basis as well as by appointment in 140 Roberts Hall. Visit www.cals.cornell.edu/advising. Counseling and Advising staff: Lisa Ryan, Bonnie Shelley, Pamela Torelli, and Christine Potter.

The Office of Multicultural and Diversity Programs serves to monitor, support, and influence policy on behalf of all underrepresented students within the College of Agriculture and Life Sciences. This population is defined as encompassing, but not limited to, all African American, Latin American, Asian American, and Native American students. Its constituency includes students, faculty, and the general public. In the past academic year this represented approximately 20 percent of the college's undergraduate population. Additionally, the office is charged with monitoring and programming for the Educational Opportunity Program (EOP). EOP is a state-supported program intended to assist New York State students who meet economic and academic criteria set by the college, State Programs

Office, and New York State Board of Regents. For further information, please contact Catherine Thompson in 140 Roberts Hall.

Within the university, the Office of Multicultural and Diversity Programs is charged with acting as the college liaison with the central Office of Minority Education Affairs, Learning Strategies Center, and the State Programs Office. Other university connections include the University Career Center and the Office of Financial Aid regarding concerns of the underrepresented student population. The director provides support for the CALS Diversity Committee. The director together with peer advisors carries out the duties of the office. The staff acts as a major advocacy group as well as an information and referral center.

Given the college's policy on nonexclusionary programming, the Office of Multicultural and Diversity Programs is also responsible for some functions that serve the college's entire population. At present, that includes general college diversity activities, serving as the college prehealth advisor, and providing ongoing support at all levels for the Office of Counseling and Advising.

The CALS Registrar's Office ensures the accuracy, confidentiality, and reliability of student records and serves as an important link between the university's and college's policies, procedures, and the student. The Registrar's Office maintains student records and reviews degree progress on a semester basis, maintains the Dean's List, evaluates and applies non-Cornell credit (transfer credit, study abroad credit, and advanced placement credit), provides registration and enrollment information, consults individually with students on college graduation requirements, and schedules all CALS courses. Specific information can be found at www.cals.cornell.edu/current/registrar.

The CALS Registrar's Office holds walk-in hours to assist students with any registrar-related issue. Walk-in hours are Tuesdays from 9:00 to 11:00 A.M. and Wednesdays from 2:00 to 4:00 P.M. in 140 Roberts Hall. No appointment is necessary during these times. Registrar's Office staff: Torrey Jacobs, Shawna Lockwood, and Adrienne Wilson.

The Office of Career Development offers a variety of helpful services to all students and alumni of the college. Career development includes self-assessment, career exploration, decision making, and transition to employment or further study. Services are designed to assist students and alumni with those activities and to help them develop the career planning and job search skills they will find useful as their career paths progress and change.

The Career Library contains an extensive collection of current and useful material, including web sites, career information books, extensive internship files, employer directories, and job listings. Alumni Career Link is a database of more than 500 college alumni who have offered to help students and alumni with their career development in a variety of ways. Job search talks on topics such as résumé writing, cover letter writing, and interview skills are presented throughout the semester and are available on DVD. An active on-campus recruiting program brings more than 50 employers to campus each year to interview students for full-time and

summer jobs. Additionally, the office provides information on hundreds of internships.

The office, in conjunction with a network of college faculty and staff members, assists students throughout their undergraduate years and beyond. For further information, students should contact Amy Benedict-Augustine, Laurie Gillespie, Jennifer DeRosa, Jo-Lynn Buchanan, or Derek Trulson in 177 Roberts Hall.

The CALS Admissions Office is responsible for admitting and enrolling a talented and diverse class of students each year. The process and outcome must reflect and support the college mission and help to meet college and institutional enrollment goals. This includes freshman, transfer, and intra-university transfer student processes. The office hosts on- and off-campus information sessions for prospective students, evaluates and makes decisions on more than 5,000 applications each year, and coordinates events for admitted students. The Admissions Office staff advises and supports the CALS Ambassador program. The office is located in 177 Roberts Hall. Staff members include Ann LaFave, Cathy Sheils, Tara Bubble, Jared Rivers, Jeri Nyrop, Erica Walters, Victoria Watts, and Victoria Parker.

Students

Undergraduate enrollment is approximately 3,200, with about 57 percent in the upper division. Each year about 850 students graduate, while 648 freshmen and 275 new transfer students enroll. College faculty members serve as chairs of the Special Committees of roughly 1,000 graduate students.

Admission

A significant factor taken into consideration by the CALS admissions committee is how well a student's academic interests relate to the mission of the college. If you decide to apply for admission to the College of Agriculture and Life Sciences, we'll ask you to choose from more than 20 major fields of study. As a part of the application process, you'll be asked to write about your academic interests and to articulate how you see your interests blending into our programs that contribute to the mission of the college. Majors fall within these broad areas: life sciences, environment, social sciences, and agriculture and food. Appropriateness for the college must also align with high academic achievement. While approximately 60 percent of CALS students come from New York State, about 40 percent come from other parts of the United States or abroad. Slightly more than half of the undergraduates are women. Approximately 26 percent are self-identified as members of ethnic groups.

The CALS Admissions Office is in 177 Roberts Hall (255-2036; www.cals.cornell.edu/admissions; e-mail: als_admissions@cornell.edu).

Transfer Students

All accepted transfer credit must be from an accredited college or university. Transfer credit is awarded based on review of official transcripts. Additional course information may be required. Contact the CALS Registrar's Office for information. A maximum of 60 non-Cornell credits may be transferred.

Approximately 30 percent of CALS undergraduate students are transfers who have completed part of their collegiate work at community colleges, two- and four-year institutions. Detailed information on transfer admission is available on the CALS Admissions web site.

Intra-University Transfer

A Cornell student in good standing may apply for an intra-university transfer to pursue an academic program unavailable in his or her current college. Guidelines are available on the CALS Admissions web site. The procedure involves attending an information session, meeting with a faculty member in the proposed area of study, and submitting an application and essay.

Consideration is given to students who have demonstrated an interest in their proposed new field of study by taking appropriate prerequisite courses. Academic achievement is also considered. Students need to spend two semesters in their home college before applying. In certain cases, a student may be referred to the Internal Transfer Division (ITD) to study for one semester before entering the college. During this trial semester, the student must achieve a predetermined grade point average and take approved courses to assure acceptance.

Special Students

A limited number of nondegree candidates who want to take courses in the college are admitted each year. Applicants should complete the Cornell transfer application process. For more information and guidelines, students should contact the CALS Admissions Office.

Off-Campus Students

Programs in which students study off campus but enroll for Cornell credit include SEA semester, Semester in Environmental Science with the Marine Biology Laboratory, field study in Human Ecology or Industrial and Labor Relations, Capital Semester, Cornell in Washington, and IPM internship.

Facilities

The College of Agriculture and Life Sciences is located on the upper campus on land that was once part of the Ezra Cornell family farm.

Buildings around the area commonly known as the Ag Quad house classrooms, offices, and laboratories. Flanking them are the greenhouses, gardens, and research facilities. Nearby orchards, barns, field plots, forests, and streams extend as far as the Animal Science Teaching Research Center at Harford and the New York State Agricultural Experiment Station at Geneva.

Roberts Hall serves as headquarters for the administrative units, including offices of the deans and directors of academic programs, Cornell University Agricultural Experiment Station, and Cornell Cooperative Extension. Included in the Office of Academic Programs are the director and associate director, the Admissions Office, the Career Development Office, the Counseling and Advising Office, the Office of Multicultural and Diversity Programs, and the Registrar's Office.

Mann Library, with its extensive collections of materials in the agricultural and life sciences,

is at the east end of the Ag Quad. The student lounge and service center, known as the Alfalfa Room, and many of the college classrooms are in Warren Hall. Public computer facilities are available in Mann Library.

DEGREE PROGRAMS

The College of Agriculture and Life Sciences offers programs leading to the degrees bachelor of science, master of science, and doctor of philosophy. Professional degrees include the master of professional studies, master of landscape architecture, and master of arts in teaching. Some registered professional licensing and certification programs are also available.

Each curriculum in the college creditable toward a degree is registered with the New York State Education Department.

Bachelor of Science Degree

Departments in the College of Agriculture and Life Sciences sponsor study for the B.S. degree in 24 major programs. To qualify for the degree, students must fulfill requirements established by the faculty of the college and administered through the Office of Academic Programs. Students are admitted into a single major but afterwards may pursue and graduate with two or more majors within the College of Agriculture and Life Sciences. Students need an advisor in each major. Course requirements for double majors may overlap. The Counseling and Advising Office (140 Roberts Hall) and department representatives have a form for students to complete to officially recognize the double major. The following units offer major fields of study for undergraduates. A faculty advising coordinator is listed for each unit. Students should consult with the faculty coordinator regarding requirements and opportunities for concentrations in the major.

Majors

Agricultural sciences: Antonio DiTommaso, 903 Bradfield Hall, ad97@cornell.edu

Agricultural science education: William Camp, 416 Kennedy Hall, wgc4@cornell.edu

Animal science: W. Bruce Currie, 434 Morrison Hall, wbc1@cornell.edu

Applied economics and management: Dale Grossman, 114 Warren Hall, dag14@cornell.edu

Atmospheric science: Mark Wysocki, 1114 Bradfield Hall, mww3@cornell.edu

Biological engineering: Michael Walter, 207 Riley-Robb Hall, mfw2@cornell.edu

Biological sciences: Jeffrey Doyle, 404 Mann Library, jid5@cornell.edu; Bonnie Comella, 216 Stimson Hall, bec3@cornell.edu

Biology and society: Brian Chabot, 102 Little Rice, bfc1@cornell.edu

Biometry and statistics: Steven Schwager, 1194 Comstock Hall, sjs5@cornell.edu

Communication: Danielle Dean, 334 Kennedy Hall, dyd1@cornell.edu

Crop and soil sciences: Antonio DiTommaso, 903 Bradfield Hall, ad97@cornell.edu

Development sociology: Tom Hirschl, 333 Warren Hall, tah4@cornell.edu

Entomology: John Losey, 4126 Comstock Hall, jel27@cornell.edu

Environmental engineering: Michael Walter, 207 Riley-Robb Hall, mfw2@cornell.edu

Food science: Alicia Orta-Ramirez, 107 Stocking Hall, ao98@cornell.edu

Information science: Christine Stenglein, 303 Upson Hall, cms242@cornell.edu

Interdisciplinary studies: Lisa Ryan, 140 Roberts Hall, lar4@cornell.edu

International agriculture and rural development: Terry Tucker, 16 Warren Hall, twt2@cornell.edu

Landscape architecture: Peter Trowbridge, 443 Kennedy Hall, pjt4@cornell.edu

Natural resources: Tim Fahey, 12 Fernow Hall, tfj5@cornell.edu

Nutritional sciences: Charles McCormick, 223 Savage Hall, ccm3@cornell.edu

Plant sciences (crop science; horticulture; plant biology; plant breeding and genetics; plant pathology/protection): Peter Davies, 255 Plant Sciences Bldg., pjd2@cornell.edu

Science of earth systems: John Cisne, 2102 Snee Hall, john.cisne@cornell.edu

Science of natural and environmental systems: Tim Fahey, 12 Fernow Hall, tfj5@cornell.edu

Viticulture and enology: Ian Merwin, 118 Plant Sciences Bldg., im13@cornell.edu

Minors

Students in the College of Agriculture and Life Sciences may pursue one or more minor fields of study in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the student's major. Minor fields of study do not require an academic advisor, but each minor field has a contact person who will provide information and verify on the application to graduate that the student will successfully complete the requirements of the minor by graduation. Students may complete as many minors as they wish; the requirements of minors may overlap. Minors are described along with the majors later in the CALS section of this catalog. Not all majors or departments offer minors. Minors available in CALS can be found on the CALS counseling and advising web site (cals.cornell.edu/cals/current/advising/options/doubmaj.cfm). For minors outside of CALS, please consult with the specific department.

Early Enrollment in Cornell Graduate Programs

The College of Veterinary Medicine may accept students who are then permitted to double-register in their seventh and/or eighth semester and complete requirements for the bachelor of science degree in the College of Agriculture and Life Sciences. Students should consult with the college registrar, 140 Roberts Hall, to file an application for dual-enrollment and to ensure that degree requirements have been fulfilled.

Students who have been offered admission to the S. C. Johnson Graduate School of Management may take management courses in their senior year if approved by their college faculty advisor as part of their undergraduate program. Students

may consult with the college registrar, 140 Roberts Hall, to verify degree requirements and endowed credits earned.

The Department of Landscape

Architecture offers a first professional degree curriculum in landscape architecture at both undergraduate (BSLA) and graduate levels (MLA I) as well as a second professional graduate degree program (MLA II). The curricula for both the undergraduate and graduate programs are accredited by the Landscape Architecture Accreditation Board (LAAB). The graduate program is cosponsored by the Department of Landscape Architecture in the College of Agriculture and Life Sciences and by the College of Architecture, Art, and Planning.

Graduate Fields of Study

Graduate study is organized by fields that generally coincide with the academic departments but may draw faculty from several disciplines in the various colleges of the university. The following graduate fields have primary affiliation in Agriculture and Life Sciences. Current directors of graduate studies are also listed. For more information on graduate programs, please refer to the Graduate Bulletin, or www.gradschool.cornell.edu. Information following this list refers to undergraduate studies.

Agriculture and life sciences [M.P.S. (agr.)]: Don Viands, 151 Roberts Hall, drv3@cornell.edu

Agricultural economics: David Just, 254 Warren Hall, drj3@cornell.edu

Animal breeding: John Pollak, B-47 Morrison Hall, ejp6@cornell.edu

Animal science: Richard Quaas, B-47 Morrison Hall, rlq1@cornell.edu

Atmospheric sciences: Daniel Wilks, 1113 Bradfield Hall, dsw5@cornell.edu

Biochemistry, molecular, and cell biology: Volker Vogt, 358 Biotechnology Bldg., vmv1@cornell.edu

Biological and environmental engineering: Antje Baeumner, 306 Riley-Robb Hall, ajb23@cornell.edu

Biometry: Robert Strawderman, 1172 Comstock Hall, rls54@cornell.edu

Biophysics: Gerald W. Feigenson, 201 Biotechnology Bldg., gwf3@cornell.edu

Communication: Jeff Hancock, 320 Kennedy Hall, jth34@cornell.edu

Development sociology: acting DGS, Charles Geisler, 237 Warren Hall, ccg2@cornell.edu

Ecology and evolutionary biology: Monica Geber, E413 Corson Hall, mag9@cornell.edu

Education [also M.A.T.]: John Sipple, 421 Kennedy Hall, jws28@cornell.edu

Entomology: Cole Gilbert, 6136 Comstock Hall, cg23@cornell.edu

Environmental toxicology: Andrew Yen, Stocking Hall, ay13@cornell.edu

Food science and technology: Martin Wiedmann, 412 Stocking Hall, mw16@cornell.edu

Genetics and development: Bik Tye, 325 Biotechnology Bldg., bt16@cornell.edu

Horticulture: Nina Bassuk, 33 Plant Science Bldg., nlb2@cornell.edu

International agriculture and rural development [M.P.S. (agr.)]: Steven Kyle, 249 Warren Hall, sck5@cornell.edu

International development: Norman Uphoff, 33A Warren Hall, ntu1@cornell.edu

Landscape architecture [M.L.A.]: Dan Krall, 440 Kennedy Hall, dwk5@cornell.edu

M.P.S. agriculture with Peace Corps option (offered by most agriculture fields with M.P.S. programs): Jim Haldeman, 36 Warren Hall, or see director of graduate studies for chosen field, jeh5@cornell.edu

Microbiology: James Shapleigh, 257A Wing Hall, jps2@cornell.edu

Natural resources: Clifford Kraft, 206H Fernow Hall, cek7@cornell.edu

Neurobiology and behavior: Joseph Fetcho, W103 Mudd Hall, jrf49@cornell.edu

Nutritional sciences: Charles McCormick, 223 Savage Hall, ccm3@cornell.edu

Physiology: Robin Davison, T9-014C Vet Research Tower, rld44@cornell.edu

Plant biology: Klaas van Wijk, 332 Emerson Hall, kv35@cornell.edu

Plant breeding: Walter DeJong, 309 Bradfield Hall, wsd2@cornell.edu

Plant pathology: Michael Milgroom, 357 Plant Science Bldg., mgm5@cornell.edu

Plant protection [M.P.S. (agr.)]: William Reissig, Barton Laboratory, Geneva Campus, whr1@cornell.edu

Soil and crop sciences: Dan Buckley, 705 Bradfield Hall, dhh28@cornell.edu

Statistics: Robert Strawderman, 1172 Comstock Hall, rls54@cornell.edu

Zoology: Susan Suarez, T5002B Vet Research Tower, sss7@cornell.edu

OPPORTUNITIES IN RESEARCH

Undergraduate Research

A multitude of opportunities to be engaged in research exists across the College of Agriculture and Life Sciences and the university.

Students may be able to work on a faculty member's research project for pay. Opportunities can be explored by contacting individual faculty members; departmental offices; the CALS Career Development Office, in 177 Roberts Hall; or Cornell Career Services, in 103 Barnes Hall. Another option is to receive credit through a 4990-level course within a department by conducting your own research project under a faculty mentor. More than 600 students each year conduct research for credit. Upperclass students usually have the course background to engage in research, but freshmen and sophomores also may be equipped to do some types of research. Off-campus research experiences are also available for pay or as internships.

The following web sites provide information about research and internships:

CALS Career Development Office:
www.cals.cornell.edu/cals/current/career

CALS Undergraduate Research Opportunities:
www.cals.cornell.edu/cals/current/student-research/undergrad (information on how to explore research opportunities)

CALS Research Honors Program:
www.cals.cornell.edu/cals/current/student-research/honors

CALS Undergraduate and Graduate Student Grants Proposal Development:
www.cals.cornell.edu/cals/current/student-research/grants

CALS Undergraduate Minority Research:
www.cals.cornell.edu/cals/current/student-research/minority

CALS Internship Guidelines:
www.cals.cornell.edu/cals/current/student-research/internship

Undergraduate Research @ Cornell:
www.research.cornell.edu/undergrad

Cornell Undergraduate Research Board:
www.research.cornell.edu/curb (student organization to promote and facilitate undergraduate research)

Biological Sciences:
www.biology.cornell.edu

Research Honors Program

The Research Honors Program provides students with a special opportunity to work with a faculty mentor to experience the research process. Successful completion requires a thesis written in the style of a master's thesis or scholarly journal article. Original honors research may be suitable for publication in a professional journal. Students may volunteer to publish their theses in the Internet-First University Press if it does not interfere with other plans, such as patenting or publishing in another journal. During each summer the *CALS Research Honors Abstracts* is published (on the web beginning 2009) as a compilation of honors theses abstracts.

The bachelor of science degree with "distinction in research" is conferred upon those students who, in addition to having completed the requirements for the B.S. degree, have satisfactorily completed the honors program and have been recommended for the degree by the honors committee.

Research may be done in these program areas: animal sciences, biological sciences, biology & society, entomology, information science, landscape studies, natural resources, nutritional sciences, physical sciences, plant sciences, and social sciences. Each program area has its own requirements in addition to the college requirements. After reviewing the requirements of each program area (below), students' questions may be directed toward the appropriate program area chair.

Consult "Undergraduate Research Opportunities" on the web (cals.cornell.edu/cals/current/student-research/undergrad) for information about identifying a research topic, conferring with a faculty member, and undergraduate funding opportunities.

Honors Program Requirements

An undergraduate wishing to enroll in the honors program must have completed at least 55 credits, at least 30 of those 55 at Cornell. In addition, the student must have attained a cumulative Cornell GPA of at least 3.0 (unless otherwise noted by a particular program) at the time of entry.

Interested students must submit a written application and thesis proposal early in the first semester of their senior year; however, they are encouraged to make arrangements with a faculty member during the second semester of their junior year. Several program areas require students to submit their applications and thesis proposal to the program area honors committee chair by the end of the third week, while other program areas have students submit the application and proposal to the CALS Registrar's office by the end of the sixth week. *It is the student's responsibility to know the deadlines and submission procedures for the particular program area of interest.* Application forms are available from the CALS Registrar in 140 Roberts Hall or from the web at www.cals.cornell.edu/cals/current/student-research/honors. Applications for biological sciences students can be picked up at 200 Stimson Hall, and for biology & society students at 306 Rockefeller Hall.

Before the completed application is submitted, signatures of approval are required in the following order: faculty research mentor, academic advisor, and research honors program area chair. After the college registrar verifies the student's GPA, the student will be officially enrolled in the honors program. *Additional requirements for application and completion of the program are described under each program area.*

Academic credit also may be earned by enrolling in an appropriate independent research course (required by some program areas). When applying for admission to the program, the student may, if appropriate, submit a budget and a modest request for research funds (up to \$350). If approved, the funding will be transferred to a departmental account of the student's research advisor to support the student's research. This funding is not to be used as a student salary. Additional funding opportunities are described at cals.cornell.edu/cals/current/student-research/undergrad.

Unless otherwise indicated in the following program area descriptions, the research report in the form of a thesis or journal article should be submitted to the research program committee no later than four weeks before the end of classes of the semester in which the student expects to graduate. Students in the College of Agriculture and Life Sciences wishing to participate in the Research Honors Program are not eligible for distinction in research by participating in a program offered by another college or administrative unit.

The research honors committee for each program area recommends to the college registrar those students who qualify for honors. Only those who maintain a GPA of at least 3.0 will be graduated with "distinction in research."

At or near the completion of their research, students are required to give an oral presentation or poster session during an

appropriate event. Some departments have seminar series when presentations may be given. The Cornell Undergraduate Research Board (CURB) Forum is another venue for presentations.

For more information, go to www.cals.cornell.edu/cals/current/student-research/honors.

The following are the honors program areas:

Animal Sciences

Faculty committee: S. M. Quirk, chair; Y. R. Boisclair, J. R. Giles, J. Gavalchin, P. A. Johnson, T. R. Overton

The objective of the animal sciences research honors program is to provide outstanding undergraduates with the opportunity to pursue supervised independent research and to develop an awareness of the scientific process. It is expected that the research will require significant effort and creative input by the student in its design and execution and in the reporting of the results.

Those students with majors in animal sciences who are interested in doing a research project should consult with their faculty advisors by their junior year. All students are expected to meet the college requirements in qualifying for the program and to complete the following:

- Identify a potential research honors project sponsor (i.e., a faculty member working in the animal sciences) and secure that faculty member's commitment to sponsor the student in the research project. This should be accomplished by the second semester of the junior year. Students are encouraged to implement some research during the junior year and/or summer before the senior year.
- Register for ANSC 4991 Undergraduate Research.
- Participate in ANSC 4020 Seminar in Animal Sciences during the spring semester and report on and discuss the project and results.
- Submit a written thesis to the Animal Sciences Research Honors Committee by the scheduled deadline. Specific information regarding deadlines, format, and organization for the thesis will be provided.
- Meet with the Animal Sciences Research Honors Committee for a short oral defense of the thesis following a review of the thesis by the student's sponsor and the research committee.
- Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow a thesis to be made available online at Mann Library can be obtained from the honors committee chair.
- In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor's name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is

published (on the web beginning 2009) as a compilation of research honors thesis abstracts.

Details pertaining to the specific requirements of the program can be obtained from the administrative office of the Department of Animal Science, 149 Morrison Hall.

Biological Sciences

Students interested in the Research Honors Program in the biological sciences should consult with their faculty advisors and with potential faculty research sponsors early in their junior year. See "Independent Research and Honors Program" in the Biological Sciences section of this catalog for complete details. Information on faculty research, applications, and program requirements may be obtained from the Office of Undergraduate Biology, 216 Stimson Hall, or at www.biology.cornell.edu/research/honors.html.

Biology & Society

Faculty committee: B. Chabot, chair

The Research Honors Program in Biology & Society is designed to provide independent research opportunities for academically talented undergraduate students in biology & society. Students who enroll in this program are expected, with faculty guidance, to do independent study and research dealing with issues in biology and society. Students participating in the program should find the experience intellectually stimulating and rewarding whether or not they intend to pursue a research career.

Biology & Society students are considered for entry into the research honors program at the end of the second semester of the junior year. Application forms for the program are available in the Biology & Society office, 306 Rockefeller Hall. To qualify for the Biology & Society Research Honors Program, a student must have an overall Cornell cumulative GPA of at least 3.3, have formulated a research topic, and have found a project supervisor (with a Cornell academic appointment) and a Biology & Society faculty member willing to serve as his or her advisor. The director of undergraduate studies will appoint a third reader of the completed research thesis. Applications will be reviewed by a committee headed by the director of undergraduate studies, who will notify students directly of the outcome. Students will be permitted to register for the research honors program only by permission of the biology & society program. Students must enroll for two semesters for 4 credits each in BSOC, ALS, or HE 4991-4992, Honors Project I and II. More information on the honors program is available in the Biology & Society office, 306 Rockefeller Hall (255-6047).

Important Deadlines

Note: If the following dates fall on a weekend, the deadline is the preceding Friday.

- Last week of second semester of the junior year: Application for honors program submitted to 306 Rockefeller Hall.
- April 11: Thesis completed in a form satisfactory for evaluation and submitted to the three readers.
- April 25: Thesis defense accomplished.

- May 9: Two bound copies of completed and defended thesis submitted to director of undergraduate studies.

Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.

In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor's name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts.

Entomology

Faculty committee: C. Gilbert, chair

The Program. A research honors program in entomology may be pursued by any qualified student in the College of Agriculture and Life Sciences. The student need not be majoring in entomology. Insects, because of their variety, small size, and easy availability, are convenient subjects for studying a wide array of problems dealing with living systems. Short life cycles, unique physiologies and developmental patterns, and species with easily managed colony requirements and a wide range of behavioral traits provide the raw material for research honors study. Cornell's diverse faculty interests and extensive collections and library in entomology are also major assets if a student selects entomology as the area for research honors study.

Research honors students have the option of earning academic credit by enrolling in ENTOM 4991 Honors Research in Entomology during any semester while working toward a research honors thesis. Credits and grade option for satisfying requirements of ENTOM 4991 should be discussed with the thesis advisor (following page.)

Note: Enrolling in independent study course, either ENTOM 4970, 4990, or 4991, is not a requirement for graduating with distinction in research honors in entomology.

Sequence of Requirements The Entomology Research Honors Committee requires that an undergraduate who is interested in embarking on a research honors project proceed with the following steps:

1. Discuss the matter with his or her academic advisor, preferably in the junior year. This schedule makes it possible to carefully plan a research project and implement some research during the junior year and/or summer before the senior year.
2. Select an appropriate faculty member in the Department of Entomology who can serve as a supervisor to oversee the honors research. This need not be the student's academic advisor. The academic advisor will be of assistance in determining which faculty entomologist has expertise most compatible with the interests of the student.

3. Prepare a brief, tentative plan for the project for discussion and approval of the honors project supervisor. The plan should include a statement of objectives or hypotheses, proposed methods for testing hypotheses, needs for laboratory space or shared equipment, and a budget outlining financial support needed for travel and supplies.
4. Submit a completed application and proposal approved by the honors project supervisor to the chair of the Entomology Research Honors Committee no later than the end of the fifth week of the first semester of the senior year. Earlier submission is encouraged. Applications are available from the CALS registrar, 140 Roberts Hall. These applications include an opportunity to request a modest amount of funding from the CALS honors program. These funds are distributed only one time per year (in late fall).
5. Submit a brief progress report, approved by the project supervisor, to the Entomology Research Honors Committee by midterm of the semester in which the student will complete his or her graduation requirements.
6. Present a formal seminar reporting the significant findings of the research to the Department of Entomology (as a Jugatae seminar) in the last semester of the senior year.
7. Submit two copies of the final honors thesis (as approved by the thesis supervisor) to the chair of the Entomology Research Honors Committee no later than two weeks before the last day of classes in the semester in which the student anticipates graduation. The thesis will be reviewed by the faculty honors project supervisor and one other referee selected by the chair of the honors committee.
8. Referees will return the thesis to the student one week before the last day of classes. If reviewers indicate that changes must be made, the revised thesis should be submitted to the Entomology Research Honors Committee chair no later than the last day of classes. Referees should include a recommendation to the Entomology Research Honors Committee chair regarding acceptability of the honors thesis. The approved honors theses will be bound and housed in the Entomology Library in Comstock Hall.
9. Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.
10. In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor's name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009)

as a compilation of research honors thesis abstracts.

The complete text of this section can be found at www.entomology.cornell.edu/public/IthacaCampus/EduTraining/Undergrad/EntomHonors.html.

Information Science

Students should follow the CALS social sciences guidelines to obtain research honors in information science.

Landscape Studies

Faculty committee: P. J. Trowbridge, chair

The research honors program in landscape studies offers outstanding undergraduates in CALS the opportunity to work with a member of the landscape architecture faculty to pursue supervised independent research in design, the cultural landscape, landscape archaeology, environmental design, and community-based planning and design. The student need not be a major in the landscape architecture professional design curriculum. The subject matter and nature of the research experience may be quite varied. Students participating should find the experience intellectually stimulating and rewarding, whether or not they intend to pursue a research career. The guidance and supervision of a faculty member with substantial interest and expertise in the subject is essential to the success of the project. It is expected that the research will require significant effort and creative input by the student in its design and execution and in reporting the results.

Students who consider this option should be aware that honors research is undertaken above and beyond any of the requirements for graduation in the major of landscape architecture. It involves a number of deadlines and a considerable time commitment. Before signing on for research honors, students need to consult with their academic advisor to make sure that honors research projects will not interfere with other academic or professional objectives, such as job applications, preparation of portfolios, or application to graduate school. These may need to be deferred until the thesis is complete. Students are responsible for meeting deadlines and being prepared for presentations and other meetings.

Although honors research credits for spring semester junior year and both semesters senior year are designated a letter grade, individual mentors may choose the R grade for work in progress until the project has been fully completed. Grade is determined by each student's mentor. The designation of "distinction in research" on the diploma is awarded at the recommendation of the faculty advisor and other referees to the honors committee chair. An outline of activities for both years is given below.

The Landscape Studies Research Honors Committee requires that an undergraduate who is interested in embarking on a research honors project proceed with the following steps:

1. Junior year: Identify a potential research honors project sponsor and secure that faculty member's commitment to sponsor the student in the research project. This should be accomplished early in the second semester of the junior year and

be finalized by the end of the spring semester. Pre-register during the spring for the research honors program (LA 4991).

2. Work with a faculty advisor to identify and formulate a research problem. If the faculty advisor is not in the Department of Landscape Architecture, select a co-advisor from the department to ensure that the research is consistent with the field.
3. Submit a completed application and proposal (approved by the honors project supervisor and the chair of the research honors committee) no later than the end of the fourth week of the first semester of the senior year. Earlier submissions are encouraged. These will be reviewed by ad hoc committee members, and successful thesis proposals will be submitted to the college honors committee by the sixth week.
4. Carry out an independent research effort that is original and separate from the work of others who may be investigating similar subjects.
5. Submit an outline of the thesis to the chair of the committee by the end of January for a May graduation.
6. Submit a draft to the readers by April 15. Describe and summarize the work within the range of formats used in the master's thesis program or professional journals in design or research. This version will be reviewed by the faculty supervisor and two *ad hoc* reviewers, and the student will be able to incorporate the committee's comments and suggestions into the final version, which will be due the last day of classes. Referees prepare a recommendation to the honors committee chair regarding the acceptability of the honors thesis.
7. Give two oral presentations to the group of other honors research students and invited faculty members. Both presentations are during the student's senior year.
8. Send two bound copies of the completed and defended thesis to the honors committee chair by May 13.
9. Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.
10. In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor's name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts.

Natural Resources

Faculty director: J. B. Yavitt, chair

The research honors program in natural resources involves original, independent research that generates novel findings in applied ecology and resource policy and management. Students learn how to design and carry out research under the direct supervision and guidance of a faculty member or senior research associate in the department. Most students in the program begin their research before the start of the senior year, often in the summer after their junior year. Students may enroll and receive credit in independent study (NTRES 4991 Honors Research in Natural Resources) during their honors research. The research findings are presented in a written thesis that is reviewed by two experts in the field. Many theses have been published in leading journals in the disciplinary area of the research. Although the format is not prescribed, the thesis usually consists of a short introduction, relevant materials and methods, a concise presentation of the meaningful data, a discussion, and the student's interpretation of the conclusions. Students also give an oral presentation of their research findings in a special symposium hosted by the department in early May.

Students should adhere to the following schedule.

Junior Year

1. File an informal application with the faculty director. The application includes a project description and advisor information.

Senior Year

1. Register for NTRES 4991 before the add deadline (fall and spring).
2. Sixth week of fall semester: Submit formal application to faculty director (16 Fernow Hall).
3. March 31: Thesis should be close to completion.
4. April 15: Submit two copies of the thesis to the faculty director for *ad hoc* reviews.
5. May 4: Pick up *ad hoc* reviewers' comments from the faculty director.
6. May 15: Submit two copies of the final thesis: one for the college, one for the program director.
7. Week of May 25: Students will be notified of the decision, and the faculty director will recommend that each approved student graduate with "Distinction in Research."
8. Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.

9. In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor's name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts.

Nutritional Sciences

Faculty committee: J. T. Brenna

The research honors program in the Division of Nutritional Sciences is a structured experience that requires (1) successful completion of NS 3980, (2) conducting a research project through which the student becomes intellectually engaged in the whole research process, (3) completing a written thesis that reports the research, and (4) giving an oral presentation of the project at the undergraduate honors symposium. Students must maintain a minimum grade point average to graduate with honors in research.

The research honors program is an excellent opportunity for students who are highly interested in research and wish to commit substantial time and intellectual energy to a project that will span about four semesters of their undergraduate experience. Honors students experience the excitement of participating in a project that interests them and reporting the project findings. By working with faculty mentors and other researchers, they develop skills in research methods and data analysis. Students also learn that research projects are labor intensive and that writing research reports, such as the honors thesis, is a vital, but time-consuming, aspect of the research process. This intensive research experience is not suitable for all students, and those who wish a less intensive research experience may conduct research with a faculty member under NS 4010.

Students interested in the program should take NS 3980 as early in their program as possible. Students may review program requirements at the DNS Honors Research Program web site (www.nutrition.cornell.edu/dns7_undergradhonres.html) or contact Professor Brenna. Acceptance into the research honors program occurs when the student (1) is accepted into a faculty member's research program and (2) submits a research proposal abstract that is approved by the director of the research honors program.

Students interested in the program typically spend the spring sophomore semester and fall junior semester exploring honors project opportunities with prospective faculty mentors. Students are responsible for contacting faculty members and applying to their research programs, although some guidance in this process will be provided in NS 3980. By the fall of the junior year, the student is expected to have identified their faculty member and be working with him or her on a proposal abstract, which is due early in the spring junior semester.

Students receive academic credit for work on their honors project under NS 4990. The 6 required credits may be taken over several semesters. How much time is spent on the project each semester will be the decision of the student and the faculty mentor. For each three to four hours of work per week, the faculty mentor usually will assign one hour of

academic credit. This applies to the preparation of the research plan and necessary library research (usually completed during the junior year) as well as the carrying out of the research itself and preparation of the thesis.

The research honors project is the major component of the research honors program. It should be well defined and sufficiently circumscribed to give the student the opportunity to develop the research plan, execute the research, and write an acceptable thesis within the limited time available to students carrying full academic loads. Typically, the project is designed early in the junior year and conducted in the spring junior semester and fall senior semester. Students may arrange with their faculty mentor to work on the project during the summer. The spring senior semester is usually devoted to writing the thesis (at least 25 pages). The student works with the faculty mentor to prepare a draft of the thesis, which is submitted before spring break to a second faculty member for evaluation. When comments are received from the reader, the student must revise the thesis to meet the criteria for acceptance. The student presents the thesis at the Honors Student Symposium at the end of the semester.

Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.

In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor's name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts.

Physical Sciences

Faculty committee: S. J. Mulvaney, chair; C. D. Bustamante

The research honors program in physical sciences provides outstanding students with an opportunity to do independent research under the supervision of a faculty member in the Departments of Biological and Environmental Engineering, Food Science, Earth and Atmospheric Sciences, or Biological Statistics and Computational Biology.

In addition to meeting the requirements of the college, the student is expected to:

1. Identify a thesis advisor and thesis topic before the end of the junior year.
2. Work with the thesis advisor to prepare a budget, short research proposal (2-3 pages), and application form. These materials must be received by the Physical Sciences committee chair by the end of the third week of senior year.
3. Enroll in the program for a minimum of two semesters.
4. Enroll in the appropriate departmental undergraduate research course for a total of at least 6 credits.

5. Submit an outline of the thesis to the chair of the committee by the end of January (for a May graduation).
6. Submit a draft of the thesis to the thesis advisor with sufficient lead-time for a revision to be prepared.
7. Submit three copies of the thesis and names of recommended reviewers to the chair of the honors committee by four weeks before the end of classes in the semester in which graduation is expected.
8. Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.
9. In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor's name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts.

There is no required format, but the thesis is usually written in the form of a research journal article or a master's thesis.

Further details of the program can be obtained from the chair of the Physical Sciences Research Honors Committee.

Plant Sciences

Faculty committee: R. L. Obendorf, chair; I. A. Merwin, E. B. Nelson, F. S. Rossi, A. DiTommaso, M. E. Smith-Einarson

Students perform independent scientific research under the guidance of faculty members in the fields of horticultural, agronomic, and soil sciences; plant biology; plant genetics and breeding; and plant pathology. For admission to the program, students must meet college requirements and submit to the Plant Sciences Research Honors Committee a project proposal (two to three pages) that includes a title; a brief background of the problem (justification and literature review); a clear statement of objective(s) and hypotheses to be tested; methodology and experimental plan, necessary space, equipment and supplies; and a project budget. The proposal must be accompanied by a letter from the faculty supervisor stating that he or she has approved the project plan and that its completion within the remainder of the student's undergraduate tenure is feasible.

A brief progress report will be made to the committee usually during the third week of the spring semester. Research presentations are recommended (e.g., Cornell Undergraduate Research Board Spring Forum, department seminars, professional meetings).

Successful completion of the research honors program requires acceptance by the honors committee of two copies of a research report. The report should be written in the format of

a research publication in the appropriate scientific field. The acceptable report must have been reviewed and corrected according to the recommendations of the research supervisor before the report is submitted to the honors committee. The report must be received by the honors committee at least two weeks before the last day of classes of the semester in which the degree is sought and must be accompanied by a letter from the research supervisor evaluating the research and, if appropriate, recommending graduation with distinction in research.

The research honors committee will review the report within one week and may accept it or return it to the student with specific recommendations for revisions. A suitably revised version must be submitted to the committee before the second day of the examination period. When the committee accepts an honors report, the chair will recommend to the associate dean and director of academic programs and to the college registrar that the student be graduated with distinction in research. One copy of the accepted report will be returned to the student with review comments from the committee.

Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.

In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor's name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts.

Additional guidelines may be found at www.css.cornell.edu/Programs/PlantSciHon.

Social Sciences

Social Sciences Program Area Faculty Committee: N. Chau, chair (NetID: hyc3); A. A. Gonzales, T. D. Park, and C. W. Scherer

Overview

Research projects in the social sciences include applied economics and management, communication, development sociology, education, and information science. Students are accepted into the social sciences research honors program of the College of Agriculture and Life Sciences after meeting all the college criteria described above, after evaluation of the student's written application, and on approval of a detailed thesis proposal.

The program provides an excellent opportunity for students to pursue independent study and research under the guidance/mentorship of a faculty member. Previously approved theses covered a wide range of topics and methodologies. A complete list can be found at <http://ecommons.library.cornell.edu/handle/1813/2937>.

Guidelines and Due Dates

A. Application and Proposal:

Students must submit one hard copy of the completed application and proposal to the social science program area faculty committee chair two semesters before their prospective graduation date (see deadlines below). Late applications will not be considered.

Graduation Date	Proposal Due Date
December 2009	February 16, 2009
May 2010	September 15, 2009
December 2010	February, 15, 2010
May 2011	September 15, 2010
December 2011	February 15, 2011

Students are strongly encouraged to meet with faculty during their junior year in order to identify someone to serve as their honors thesis advisor. Honors thesis faculty advisors must be members of the graduate faculty. Exceptions may be granted for persons with special expertise pending petition to the committee.

Working with their honors thesis advisor, students should begin developing their thesis proposal during the second semester of their junior year. The purpose of the proposal is twofold. First, it formalizes a plan of study and establishes a set of expectations between the student and the faculty advisor. Second, the honors committee reviews the proposal to determine whether it is consistent with honors thesis requirements and to make suggestions for improvement.

The proposal should be 5 to 10 typed, double-spaced pages and include the following:

1. **Research Topic:** State the problem to be studied or the topic of interest. Review the basic literature and the background of the problem or topic; include a more extensive bibliography to be consulted.
2. **Research Questions/Empirical Hypotheses:** Specify the proposed questions to be answered or hypotheses to be tested empirically via collection of data and a mode of analysis accepted in the social sciences.
3. **Research Methods:** Discuss the models to be constructed (if any), sampling procedures, data collection procedures (including measurement instruments and survey or experimental designs, if appropriate), and proposed methods of analysis.
4. **Expected Significance:** State what new knowledge or information is likely to be forthcoming and why it is important. State any practical applications expected as a result of the research.

Students accepted into the honors program should register for credit directed by the honors thesis faculty advisor (e.g., AEM 4991, COMM 4991, DSOC 4991, EDUC 4991).

B. Final Submission for Review and Approval Requirements:

Honors theses should be written according to the form of any standard journal within the appropriate field. Distinction in research is awarded upon approval of the research honors thesis by the committee. Both the results of the research and the methodology (or the logical argument by which the results were achieved) must be reported. Reviews of

the literature, practical conclusions or applications, or broad characterizations of an area of inquiry may constitute part of the research report but are not themselves sufficient as research.

The committee recommends the submission of the thesis draft to the research advisor two months before graduation to permit sufficient time for revision.

Completed theses are due approximately one month before graduation:

Graduation Date	Thesis Due Date
December 2009	November 16, 2009
May 2010	April 15, 2010
December 2010	November 15, 2010
May 2011	April 15, 2011
December 2011	November 15, 2011

One electronic copy of the final thesis (in pdf or Word format) should be sent by email to the Social Sciences program area faculty committee chair no later than the due date. A supporting letter from the faculty member supervising the work also must be submitted either electronically or as a hard copy.

The thesis will be independently reviewed typically by two faculty committee members within about two weeks. If further revisions are required, students will be informed and a revised draft will be requested. Students will be notified of the committee's decision by the week of May 25.

Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.

In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor's name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts.

OFF-CAMPUS OPPORTUNITIES

Study off campus is of two types: (1) credit may be earned at another institution and transferred to Cornell, or (2) credit may be earned in Cornell courses that require off-campus activity.

Students who plan to enroll in courses at another institution should refer to the non-Cornell credit policies on p. 37. Information about enrolling at another institution outside of the United States can be found under "Study Abroad."

Albany Programs

Study off campus in Albany, the New York State capital, provides a unique opportunity to combine career interests with academic and legislative concerns. Two formalized opportunities are available. The Assembly Intern Program is offered in the spring semester and provides placement with a staff member of the New York State Assembly. The

Senate Assistants Program also occurs during the spring semester and has placements with New York State senators and selected staff. Each program has an academic component as well. Check the individual folders in the internship files in the CALS Career Development Office, 177 Roberts Hall.

Applications are collected and processed by the CALS Career Development Office, 177 Roberts Hall, in the semester before assignments. Those accepted should plan a program of study in consultation with their faculty advisor. At least 12 credits must be carried to meet the full-time residency requirement. To receive academic credit for the Assembly Intern Program, students enroll in ALS 3920. To receive academic credit for the Senate Assistants Program, students enroll in ALS 4960. Information and applications are available in the CALS Career Development Office, 177 Roberts Hall.

Cornell in Washington

The Cornell in Washington program offers students in all majors an opportunity to earn full academic credit for a semester in Washington, D.C. Students take part in a public policy or humanities seminar, serve as externs in federal agencies, congressional offices, or nongovernmental organizations, carry out individual research projects, and take one or two electives. The required externships and all course enrollments are arranged through, and approved by, the Cornell in Washington program. Students in the College of Agriculture and Life Sciences must register for ALS 4998 and cannot receive credit for the externship experience alone. For further information, see p. 22, inquire at M101 McGraw Hall, 255-4090, or visit ciw.cornell.edu.

Marine Biological Laboratory's (MBL) Semester in Environmental Science

The Marine Biological Laboratory's (MBL) Semester in Environmental Science is a semester-long program held each fall in Woods Hole, Mass. This is a multi-university and college program run by the staff of the Ecosystems Center of the MBL. Approximately 15-20 students interact intensively with the world-class research staff of the Ecosystems Center in a mixture of classroom, laboratory, and field-research activities. The major foci of the program are on biogeochemistry, ecosystem science, and the impacts of land use and global change on the environment. Students spend about 20 hours each week conducting intensive, hands-on field and lab work in coastal forests, freshwater ponds, and estuaries, and complete an independent research project as part of the curriculum. The MBL is one of the oldest (founded in 1888) and most distinguished biological field stations in North America. Cornell credit for up to 16 credits is offered. More information on the program can be obtained from the Cornell faculty liaison (Prof. Bob Howarth, E309 Corson Hall, 255-6175) or from the director of the program (Dr. Ken Foreman, MBL Ecosystems Center, 508-289-7777; courses.mbl.edu/SES).

SEA Semester

The Sea Education Association is a nonprofit educational institution offering ocean-focused academic programs and the opportunity to live, work, and study at sea. Science, the humanities, and practical seamanship are

integrated in small, personal classes. The 17-credit program is 12 weeks in length. Courses are directly transferrable and listed in *Courses of Study* under BIOSM. Six weeks are spent in Woods Hole, Mass., and the following six weeks are spent on either one of SEA's two sailing research vessels: the *SSV Robert Seamans* or the *SSV Corwith Cramer*. SEA offers four unique programs. SEA Semester: Ocean Exploration, SEA Semester: Oceans and Climate, SEA Semester: Documenting Change in the Caribbean, and SEA Semester: Sustainability in Polynesian Island Cultures and Ecosystems. SEA Semester: Ocean Exploration is also offered as a 12-credit, eight-week summer program. For more information, contact Sea Education Association, P.O. Box 6, Woods Hole, MA 02543 (1-800-552-3633 x 770) or visit www.sea.edu. CALS students should file an intent to study off campus form with the college registrar as early as possible to ensure proper registration and enrollment in courses.

Shoals Marine Laboratory (SML)

The Shoals Marine Laboratory, run cooperatively by Cornell University and the University of New Hampshire, is a seasonal field station located on 95-acre Appledore Island off the coast of Portsmouth, N.H., in the Gulf of Maine. SML provides a unique opportunity to study marine science in a setting noted for its biota, geology, and history. Please refer to "Courses in Marine Science," in the section Shoals Marine Laboratory (BIOSM), for a list of courses offered.

For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, 255-3717, or visit www.sml.cornell.edu.

Internships

Several departments in the college offer supervised internships for academic credit. Internships may be granted for pay and/or credit with a limit of up to 3 credits per internship and no more than 6 credits total allowed for internships consisting of off-campus work experiences that do not have the continued presence of a Cornell faculty member. The number of credits awarded should reflect the amount of knowledge gained per internship and/or following the CALS guidelines for assigning credits. The 6-credit allotment includes transfer credit and credit from other internships in other colleges at Cornell. The 6-credit limit does not apply to secondary, post-secondary, and Cooperative Extension teaching internships in the Department of Education. The awarding of credit will not be allowed in cases where a student brings to the college or to a professor a description of a past experience and requests credit. Note that a maximum of 15 (prorated for transfer students) of the 120 credits required for the degree may be taken in internships, independent study courses, and undergraduate teaching or research. For internships not governed by an established internship course, the student must enroll in a 4970-level course for the number of credits assigned.

To ensure a fair and manageable system to deal with internships, the College of Agriculture and Life Sciences has set forth guidelines to serve as minimum requirements for a student to receive internship credit.

1. Credit will be assigned or accepted only in cases in which a Cornell faculty member is directly involved in determining both the course content and in evaluating the student's work.
2. The internship should be purposeful, provide opportunities for reflection, present a continual challenge to the student, and incorporate active learning, with the student an active participant in all stages of the experience from planning to evaluation.
3. Before a student begins the internship, a learning contract needs to be written between the Cornell faculty internship advisor on campus, the supervisor at the location, and the student. This contract should state the conditions of the work assignments, supervisor, learning goals, number of credits, and methods of evaluation of the work. A contract form can be obtained from the college Registrar's Office, or departments may have their own.
4. Students should further develop the internship experience based on the college Experiential Learning Criteria, which can be found at cals.cornell.edu/cals/teaching/elr.
5. Students need to keep their faculty internship advisor updated on the progress of the internship while away from campus.

Arrangements should be made with the offering department for assignment of a faculty mentor for planning the program of work and for evaluating student performance. Individual departments may add more requirements to the internship based on specific needs such as time constraints, faculty workloads, and the relationship of the internship to the goals of the department. The specific terms of the contract should be recorded, using the independent study, research, teaching, and internship form, available in 140 Roberts Hall.

Pay and Credit for Undergraduate Research, Teaching, and Internships

Research: students can receive pay or credit or they can partition it so that they receive pay for part of the research and credit for the other as long as the work does not overlap.

Undergraduate Teaching Assistant: students can receive either pay or credit, but they cannot partition it.

Internships: students may receive both pay and credit for the same internship experience.

Study Abroad

Each year almost 200 CALS undergraduates spend a semester or year studying abroad. Students enroll directly in universities in Australia, participate in fieldwork in Africa, or explore the wonders of a foreign city while participating in an internship. CALS recognizes that students study abroad for a variety of reasons and, as a result, offers a great deal of choice for its students. Students may want to study abroad to broaden their worldview, boost employment prospects, learn a new language, gain independence, discover a new educational system, or all of the above! A variety of options is available. Students can choose from:

- a CALS exchange program in a variety of universities around the world that have been created especially for CALS students. For a list of the programs available, visit www.cals/current/abroad-exchange/index.cfm;
- a study abroad program through the Cornell Abroad office;
- an international study tour as part of a CALS course, or a summer program.

CALS exchange programs are unique agreements created with other prestigious universities around the world. CALS students participating in an exchange program pay only their Cornell tuition, with no additional administrative fees.

Study abroad opportunities offered through the Cornell Abroad office are vast, ranging from a traditional university in London to field study in Africa. For information about specific programs, costs, and more, visit their office in 300 Caldwell Hall or go to www.cuabroad.cornell.edu.

Whether participating in a CALS exchange or a program through Cornell Abroad, all CALS students interested in studying abroad must receive approval from their faculty advisor and meet with the college study abroad advisor to review the college policies and to receive college approval. College policies can be viewed at www.cals.cornell.edu/cals/current/abroad-exchange/index.cfm.

Study abroad advising hours are held in the Counseling and Advising Office, 140 Roberts Hall.

Ithaca College and Wells College Exchange Programs

The Cornell University-Ithaca College Exchange Program is a reciprocal arrangement that allows matriculated full-time students, with prior approval and within stated stipulations, to cross-register at the other institution. No additional tuition is charged except in the case of undergraduate students enrolled during any one semester for a total of more than 18 credits (Cornell and Ithaca College combined). Those students are subject to additional tuition charges on a per-credit basis. This arrangement is available during the fall and spring semesters only and is contingent upon space availability. A maximum of 12 credits may be taken through this program.

Cornell University also has a reciprocal arrangement with Wells College in Aurora, N.Y. For further information, contact the Cornell School of Continuing Education office, B20 Day Hall, 255-4987, or on the web at www.sce.cornell.edu/exmu.

GRADUATION REQUIREMENTS FOR THE BACHELOR OF SCIENCE

Graduation Requirements

1. Credit Requirements

- A. Minimum total credits: 120 academic credits are required for graduation.

Important Exceptions:

- Repeated courses increase the number of credits required for graduation by the number of credits in the course. These credits *do* count toward the minimum 12 credits required for full-time status.
 - Review or supplemental courses (e.g., 1000- to 1099-level) increase the number of credits required for graduation by the number of credits in the course. These credits *do not* count toward the minimum 12 credits required for full-time status.
 - Physical education courses *do not* count toward 120 credits for graduation. They *do not* count toward the minimum 12 credits required for full-time status.
- B. Minimum credits at Cornell: 60 academic credits must be completed at Cornell.
 - C. Maximum non-Cornell credits: 60 non-Cornell credits (AP, CASE, transfer, Cornell Abroad, and exchange credits) can be applied toward degree requirements.
 - D. Minimum credits from College of Agriculture and Life Sciences: 55 CALS credits are required for graduation. CALS credits include all courses from departments within CALS and courses offered in the Biological Sciences, Earth and Atmospheric Sciences, Information Science, and Nutritional Sciences Departments. Specifically, courses offered under the following subject prefixes count as CALS credits: AGSCI, AIS, ALS, AEM, ANSC, BEE, BIOG, BIOAP, BIOBM, BIOEE, BIOGD, BIOMI, BIOMS, BIONB, BIOPL, BIOSM, BTRY, COMM, CSS, DSOC, EAS, EDUC, ENTOM, FDSC, HORT, IARD, INFO, LA, NS, NTRES, PLBR, PLPA, SNES, VIEN.
 - E. Maximum 55 endowed credits: CALS students are limited to 55 credits from the endowed colleges. If an academic program requires additional credit, permission may be requested by contacting the CALS Registrar's Office (607-255-2017, 140 Roberts Hall, cals_registrar@cornell.edu).
 - F. Minimum letter-graded credits: 100 (prorated based on non-Cornell credits).*
 - G. Maximum credits earned through independent study, research, teaching assistantships, and/or internships: 15 credits of "unstructured" course work can be applied toward graduation requirements (prorated based on non-Cornell credits) (i.e., a minimum of 100 "structured" credits are required for graduation).

*The prorated formula is available at www.cals.cornell.edu/current/registrar.

2. Physical Education Requirement

- A. Pass two PE courses with a satisfactory grade.
Exception: External transfer students are credited with one course of physical education for each semester previously enrolled full-time (12 or more credits) at another college before matriculation.
- B. Pass a required swim test, administered during orientation. External transfer students who are exempt from PE are exempt from the swim test.

- C. Students are expected to complete the physical education requirement in their first two semesters at Cornell.

3. Residency Requirements

- A. Eight semesters of full-time study are expected. Transfer students are credited with one semester in residence for each 15 credits earned at another institution.
- B. Internal transfer students must be enrolled in CALS for at least two semesters, not including residency in the Internal Transfer Division.
- C. The final semester before graduation must be completed in a Cornell program as a full-time student in continued good academic standing.
- D. Students in the ninth and final semester may apply for prorated tuition. The eligibility criteria are listed below. The student will be charged the full administrative fee and student service charge, plus one-fifteenth of the remaining full tuition per credit hour.

All of the following conditions must be met in order for a student to be considered for prorated tuition:

1. The prorated semester is the ninth and final semester of study.
2. The student is in good academic standing with the college and the major.
3. Maximum of 11 credit hours of course work are allowed under prorated tuition. Students cannot exceed the number of credits approved or full tuition will be charged, and no refund will be allowed if fewer credits than applied for are completed.
4. Approval of the student's faculty advisor, the college registrar, and the university registrar is required for all requests. Note that approval is conditional until grades are finalized at the end of the semester immediately preceding the prorated semester. Should those grades indicate that more than the requested number of prorated tuition credits are required for graduation, prorated tuition will be adjusted accordingly.
5. Students applying to be prorated in the fall semester are encouraged to submit the application by May 1. The final deadline is June 1. Students applying to be prorated in the spring semester are encouraged to submit the application by December 15. The final deadline is January 15.

Please be advised that prorated tuition may impact the student's financial aid, student loans, scholarships, non-Cornell health insurance programs, athletic eligibility, or other considerations. It is the responsibility of the student to resolve and rectify these situations prior to submitting this petition.

4. Grade-Point Average (GPA) Requirements

Minimum cumulative GPA: 2.00 or above must be maintained. The cumulative GPA includes all grades earned at Cornell.

5. Schedule Requirements

- A. Students are expected to enroll in at least one CALS course each semester until 55 CALS credits have been earned.

- B. Freshmen may not enroll in more than 18 credits, not including physical education.
- C. Freshmen are limited to one S-U course per semester.
- D. PE and supplemental course work do not count toward the 12-credit minimum required for full-time status.
- E. To add more than 18 academic credits to a student's schedule, advisor permission must be obtained through an add/drop slip to add more course work.

6. Distribution Requirements

The purpose of the distribution requirement is to provide a broad educational background and to ensure a minimum level of competency in particular skills. Through study of the physical and life sciences, students develop their understanding and appreciation of the physical sciences, enhance their quantitative reasoning skills, and gain an appreciation of the variability of living organisms. The social sciences and humanities give students perspective on the structure and values of the society in which we live, and prepare them to make decisions on ethical issues that will affect their work and role in society. Written and oral expression is designed to help students become competent and confident in the use of oral and written communication to express themselves and their ideas.

Please note: Credits received for independent study, field, teaching, research, work experience, and internships cannot be used to fulfill the distribution requirement. Courses judged to be review or supplemental in the discipline, such as 1000- to 1099-level courses, will not be counted in the distribution areas.

Physical and Life Sciences. 18 credits in at least three disciplines of which 6 credits must be introductory biology and 3 credits in chemistry or physics.

Introductory Biology: BIOG 1101-1104, 1105-1106, 1107-1108, 1109-1110, BIOSM 1110 (summer)

Beginning fall 2008, students majoring in Applied Economics and Management, Communication, Development Sociology, Information Science, and Landscape Architecture have the option of fulfilling 6 credits of introductory biology by either taking courses listed above or newly developed courses. See www.cals.cornell.edu/cals/current/registrar/current-students/cals-graduation/biology.cfm for the most up-to-date list of courses. Students should consult with their advisors to clarify major requirements.

Social Sciences and Humanities. Students must complete four courses of 3 or more credits each from the following seven categories of courses in the humanities and social sciences.

- At least one course must be completed from three different categories.
- No more than two courses in the same department will be counted toward the distribution requirement.
- For freshmen entering in fall 2008 or later, one course MUST be in the human diversity (D) category.

Categories:

- Cultural Analysis (CA)
- Human Diversity (D)
- Historical Analysis (HA)
- Knowledge, Cognition, and Moral Reasoning (KCM)
- Literature and the Arts (LA)
- Social and Behavioral Analysis (SBA)
- Foreign Language (FL)

Detailed descriptions follow.

Social Sciences and Humanities: Category Descriptions

Cultural Analysis (CA)

These courses study human life in particular cultural contexts through interpretive analysis of individual behavior, discourse, and social practice. Topics include belief systems (science, medicine, religion), expressive arts and symbolic behavior (visual arts, performance, poetry, myth, narrative, ritual),

identity (nationality, race, ethnicity, gender, sexuality), social groups and institutions (family, market, community), power and politics (states, colonialism, inequality).

Historical Analysis (HA)

These courses interpret continuities and changes—political, social, economic, diplomatic, religious, intellectual, artistic, scientific—through time. The focus may be on groups of people, dominant or subordinate, a specific country or region, an event, a process, or a time period.

Knowledge, Cognition, and Moral Reasoning (KCM)

These courses investigate the bases of human knowledge in its broadest sense, ranging from cognitive faculties shared by humans and animals such as perception, to abstract reasoning, to the ability to form and justify moral judgments. Courses investigating the sources, structure, and limits of cognition may use the methodologies of science, cognitive psychology, linguistics, or philosophy. Courses focusing on moral reasoning explore ways of reflecting on ethical questions that concern the nature of justice, the good life, or human values in general.

Literature and the Arts (LA)

These courses explore literature and the arts in two different but related ways. Some courses focus on the critical study of artworks and on their history, aesthetics, and theory. These courses develop skills of reading, observing, and hearing and encourage reflection on such experiences; many investigate the interplay among individual achievement, artistic tradition, and historical context. Other courses are devoted to the production and performance of artworks (in creative writing, performing arts, and media such as film and video). These courses emphasize the interaction among technical mastery, cognitive knowledge, and creative imagination.

Social and Behavioral Analysis (SBA)

These courses examine human life in its social context through the use of social scientific methods, often including hypothesis testing, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to interpersonal relations between individuals (e.g., in friendship, love, conflict) to larger social organizations (e.g., the family, society, religious or educational or civic institutions, the economy, government) to the relationships and conflicts among groups or individuals (e.g., discrimination, inequality, prejudice, stigmas, conflict resolution).

Foreign Language (FL)

These courses are taught by the following departments: Africana Studies and Research Center (ASRC—language only), Asian Studies (BENGL, BURM, CHIN, HINDI, INDO, JAPAN, KHMER, KOREA, SANSK, TAG, THAI, and VIET), Classics (CLASS—language only), German Studies (GERST—language only, DUTCH, and SWED), Linguistics (LING—languages only), Near Eastern Studies (NES—languages only), Romance Studies (CATAL, FREN, ITAL, PORT, QUECH, and SPAN), and Russian Studies (RUSSA, HUNGR, POLSH, SEBCR, and UKRAN).

Human Diversity (D)

These courses address several of the college's stated goals for undergraduate education, specifically, the expectation that in the course of earning a degree, students will enhance their abilities to communicate with people of different cultural perspectives; to listen carefully and respectfully to the views of others, especially views with which they disagree; and to employ ethical reasoning in judging ideas, actions, and their implications. These courses explore the challenges of building a diverse society, and/or examine the various processes that marginalize people and produce unequal power relations in terms of race, nationality, ethnicity, sexuality, religion, gender, age, or economic status.

Written and Oral Expression. 9 credits total, of which at least 6 must be in written expression. Oral expression is not required by the college (it may be for some majors); all 9 credits may be in written expression. Courses in written and oral expression may be selected from the following:

Oral Expression

COMM 2010, 2030

ENTOM 3350

Written Expression

First-Year Writing Seminars

AEM 2000

COMM 1310, 2630, 3520, 3600

ENGL 2800, 2810, 2880, 2890, 3820–3850, 3880, 3890

LA 2150

7. Quantitative Literacy Requirement

Faculty legislation requires minimum competency in quantitative literacy to complete a degree in the College of Agriculture and Life Sciences. This requirement can be satisfied in one of three ways:

- Earning a score of 4 or 5 on the AP Calculus exam; or
- Transferring an approved calculus or statistics course with a grade of “C” or better; or
- Taking an approved math or statistics course at Cornell.

A complete listing of approved math and statistics courses is available online at www.cals.cornell.edu/current/registrar. Pre-approval forms are available in CALS Registrar's Office.

Non-Cornell Credit Policies

1. Non-Cornell credit includes:

- advanced placement credit (see p. 8 for further details);
- credit earned at an accredited college or university;
- credit earned through the Ithaca College and Wells College Exchange Programs;
- credit earned through a Cornell Abroad or CALS exchange program.

2. Non-Cornell credit is accepted by CALS when:

- the credits are earned at an accredited institution;

- the credits do not duplicate course work already completed at Cornell;
- the credits are earned before matriculating into CALS or during the summer or winter session or through Cornell Abroad or an approved exchange program;
- the credits have not been applied toward high school graduation requirements (except for AP exam credit, see p. 8);
- the grade earned is “C-” or better; and
- an official transcript is sent directly to the CALS Registrar's Office from the college/university where the credits were completed.

*Please note: Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the college provides a transcript for such work. Students who have taken such courses may, however, earn credit by taking an appropriate examination as described on pp. 9–12 of this catalog. For CALS-specific policies, see *College Credit Earned While in High School*.*

3. A student may apply a maximum of 60 non-Cornell credits toward his or her graduation requirements.

- If more than 60 non-Cornell credits have been completed, the CALS Registrar's Office will work with the student to determine which credits best fulfill CALS graduation requirements.
- Advanced placement credits are limited to 30 credits.
- Cornell Abroad (not CALS exchange) credits are limited to 15 credits per semester, 30 per academic year.

4. Non-Cornell credits are recorded on the graduation summary and can be applied toward CALS credits, distribution requirements, and major requirements.

- Non-Cornell courses that are similar to courses offered in CALS are recorded as CALS credits on the graduation summary and count toward the minimum of 55 CALS credits required for graduation.
- Non-Cornell courses that are equivalent to Cornell courses that fulfill distribution requirements are recorded under the appropriate distribution area on the graduation summary.

- Non-Cornell courses that are equivalent to endowed courses can be applied toward distribution requirements or general electives; however, these credits do not count against the maximum of 55 endowed credit hours.
- If a course has no comparable course at Cornell, staff in the CALS Registrar's Office determine how the credit should be applied.

- Faculty advisors determine how non-Cornell credit will be applied toward major requirements; the CALS Registrar's Office determines how non-Cornell credit will be applied toward CALS graduation requirements.

5. Students who have already matriculated into CALS and are planning to take courses at another institution should

complete a transfer credit pre-approval form before completing the course work. Pre-approval forms are available in the CALS Registrar's Office in 140 Roberts Hall.

- During the regular academic year, students can be enrolled in courses at both Cornell and another institution only if the student is taking a course not offered at Cornell. (Schedule conflicts or unavailability of courses in a given semester do not constitute valid rationales for concurrent enrollment at another institution.)

College Credit Earned While in High School

If a student is enrolled in a college or university course during his or her high school years, transfer credit will be given only if all the following criteria are met:

- Course cannot be used to fulfill high school graduation requirements.
- Course/section must be a standard course available to all students registered in the college.
- If taught in a high school, the high school must be a satellite location, one of several options available to all students taking the course.
- Instructor must be a faculty member (includes adjunct) at the offering college.
- An official transcript must be sent to the CALS Registrar's Office by the offering institution. It is the student's responsibility to request an official transcript.
- Both the college form and high school form must be provided to confirm that all credit earned in high school meets these criteria. It is the student's responsibility to request that the college and high school complete these forms. Forms are available in the CALS Registrar's Office, 140 Roberts Hall.

Each condition must be met for credit to be accepted.

Appropriate AP exams identifying a student's understanding of the material indicated by achieving the scores outlined in *Courses of Study*, may be used to gain credit for course work that does not meet the criteria outlined above. In addition, students who have taken such courses may earn credit by taking an appropriate examination as described on page 8.

Graduation Procedures

- The progress of each student toward meeting the degree requirements is recorded each semester in the CALS Registrar's Office on a graduation summary. Students can review their graduation summary online at <https://dust.cals.cornell.edu> under degree progress.
- Students who have been in residence for eight semesters and who have met the graduation requirements will be graduated. Students are expected to attend for the full eight semesters even if they have completed the graduation requirements in fewer semesters. A student who wishes to either graduate

early or delay graduation must complete an additional application with the CALS Registrar's Office.

- Application to graduate. In the first semester of their senior year, students must complete and file an application to graduate with the CALS Registrar's Office.

Deadlines to File the Application to Graduate:

January graduates: October 16

May graduates: December 18

Failure to meet these deadlines could result in a student's name being omitted from the commencement program and/or a diploma not being available for pickup on commencement Sunday.

Student Responsibilities: It is the student's responsibility to complete Part I of the Application to Graduate available online at <https://dust.cals.cornell.edu>; schedule a meeting with your faculty advisor(s) to complete Part II of the application; submit Part II of the application to the CALS Registrar's Office, 140 Roberts Hall; seek clarification from your advisor and/or CALS Registrar's Office staff if graduation requirements are unclear; and retain a copy of the Application to Graduate for your records.

Note: If a student is completing more than one major and/or a minor, the student must meet with and complete Part II of the Application to Graduate with **all** advisors.

Faculty Advisor Responsibilities: It is the faculty advisor's responsibility to complete Part II of the Application to Graduate with the student, listing any outstanding requirements on the application (including courses in which the student is currently enrolled); and answer any student questions regarding major requirements.

CALS Registrar's Office Responsibilities: It is the responsibility of the CALS Registrar's Office to update the graduation summary of seniors before each student's final fall semester. The CALS Registrar's Office staff is available to review degree requirements during walk-in hours and by appointment.

Commencement Information: Commencement information will be provided to all graduating seniors directly by the Commencement Office. Information is also available at www.commencement.cornell.edu.

ACADEMIC POLICIES AND PROCEDURES

Registration

All students must register with the university at the beginning of each semester. In order to be considered a registered student by the university, a student must:

- complete course enrollment according to individual college requirements;
- settle all financial accounts, including current semester tuition;
- clear any holds, whether these are from the Bursar's Office, Gannett Health Center, the judicial administrator, or the dean of your college; and

- satisfy New York State health requirements.

Students can check their registration status using *Student Center*. The first screen in *Student Center* will indicate whether you are registered and will list any holds that need to be cleared, including the correct office to visit to have the holds removed. Students are expected to register by the fifth week of the semester. Failure to register may result in termination of your Cornell services such as, but not limited to, library access, meal plans, door access, Blackboard, and bus service. You may be considered withdrawn by the college. Only registered students are entitled to attend classes and have access to services.

Course Enrollment

Students will receive course enrollment information from the university registrar. After planning a schedule of courses in consultation with their faculty advisor, students pre-enroll by computer.

To enroll in courses that involve independent study, teaching, internships, or research, a student must file an independent study form, available in the CALS Registrar's Office, 140 Roberts Hall.

Repeated Courses

Students may enroll again for a course in which they received a grade of F in a previous semester. Both grades will be recorded and calculated as part of their cumulative GPA. If a student retakes a course in which a passing grade was earned, both grades will be recorded and calculated as part of their cumulative GPA. However, repeating a course increases the number of credits required for graduation by the number of credits in the course.

Incompletes

Students must *not* enroll again for a course in which they received an incomplete. Instead, work for that course should be completed without further enrollment. The instructor files a manual grade form with the college registrar when a grade has been assigned. An incomplete not made up by the end of two successive semesters of residence reverts to a failure. In the case of a graduating senior, incompletes revert to failures at the time of graduation.

Enrollment Changes

A student is held responsible for and receives a grade for those courses in which he or she enrolls unless the student officially changes such enrollment. All changes in courses or credit, grading options, or sections must be made by the student using the online add/drop through *Student Center* or the official course drop and add form at the CALS Registrar's Office, 140 Roberts Hall. Approval of the faculty advisor may be required to change course enrollment. Department or course instructor approval may be required for select courses.

Students may add courses and change grading options or credit hours where applicable during the first three weeks of the semester, and may drop courses until the end of the seventh week.

Academic Integrity Policy

The College of Agriculture and Life Sciences faculty, students, and administration support and abide by the university Code of Academic Integrity. Its principle is that absolute integrity is expected of every student in all academic undertakings: students must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity.

The maintenance of an atmosphere of academic honor and the fulfillment of the provisions of the code are the responsibility of the students and the faculty. Therefore, all students and faculty members shall refrain from any action that would violate the basic principles of this code.

1. Students assume responsibility for the content and integrity of their submitted work, such as papers, examinations, or reports.
2. Students are guilty of violating the code if they
 - knowingly represent the work of others as their own.
 - use or obtain unauthorized assistance in any academic work.
 - give fraudulent assistance to another student.
 - fabricate data in support of laboratory or field work.
 - forge a signature to certify completion or approval.
 - submit the same work for two different courses without advance permission.
 - knowingly deprive other students of library resources, laboratory equipment, computer programs, or similar aids.
 - in any other manner violate the principle of absolute integrity.
3. Faculty members assume responsibility to make clear to students and teaching assistants specific regulations that apply to scholarly work in a discipline.
4. Faculty members fulfill their responsibility to
 - maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor.
 - make clear the conditions under which examinations are to be given.
 - make clear the consequences of violating any aspects of the code.
 - provide opportunities for students to discuss the content of courses with each other and help each other to master that content and distinguish those activities from course assignments that are meant to test what students can do independently.
 - state explicitly the procedures for use of materials taken from published sources and the methods appropriate to a discipline by which students must cite the source of such materials.

- approve in advance, in consultation with other faculty members, which work submitted by a student and used by a faculty member to determine a grade in a course may be submitted by that student in a different course.
- monitor the work and maintain such records as will support the crucial underpinning of all guidelines: the students' submitted work must be their own and no one else's.

Cornell's Code of Academic Integrity spells out how individuals who have allegedly violated Cornell standards for academic integrity are to be confronted and, if found to be in violation of those standards, sanctioned. The code provides informal resolution of most perceived violations through a primary hearing between the faculty member, the student involved, and an independent witness. If necessary, a hearing before a hearing board follows. The full code may be found at <http://cuinfo.cornell.edu/Academic/AIC.html>.

The Academic Integrity Hearing Board for the College of Agriculture and Life Sciences consists of three elected faculty members, three elected student members, a chair appointed by the dean, and the director of counseling and advising, who serves as a nonvoting record keeper. Professor Dale Grossman is the current chair.

Individuals who observe or are aware of an alleged violation of the code should report the incident to the faculty member in charge of a course or to the chair of the hearing board. General information and details on procedures for suspected violations or hearings are available from the Counseling and Advising Office, 140 Roberts Hall.

Academic Honors

The college encourages high academic achievement and recognizes outstanding students in several ways:

1. **Dean's List.** Each semester, students are recognized for academic excellence by inclusion on the Dean's List. Eligibility for the Dean's List in the College of Agriculture and Life Sciences is determined by the following criteria:
 - a. a minimum course load for the semester of 12 letter-graded credits;
 - b. completion of at least one CALS course;
 - c. achievement of a semester GPA of at least 3.50; and
 - d. achievement of an S grade, or a C- or better grade in each course (including physical education), with no incompletes. Dean's List will be granted retroactively if students meet all the requirements after successful course completion to make up INC grades.
2. **Bachelor of Science with Honors**
 - a. Students receiving a cumulative GPA of 4.00 or greater (based on the cumulative Cornell GPA) will graduate "summa cum laude."
 - b. Students receiving a cumulative GPA of greater than or equal to 3.75 and less than 4.00 (based on the cumulative Cornell GPA) will graduate "magna cum laude."
3. **Bachelor of Science with Distinction in Research.** Students will graduate with a bachelor of science degree with distinction in research when, in addition to having completed all the graduation requirements, they have satisfactorily completed the research honors program in their area of interest and have been recommended for the degree by the honors committee of that area. Special requirements are given in the section on the Research Honors Program.
4. **Ho-Nun-De-Kah**, founded in 1929, is the undergraduate honor society of the College of Agriculture and Life Sciences. Members are recruited from the top 20 percent of the senior class and top 15 percent of the junior class. In keeping with the ideals of encouraging scholarship, leadership, and citizenship, members provide free tutoring and a variety of service activities to both the college and the community. Visit Ho-Nun-De-Kah's web site at www.rso.cornell.edu/hndk.
5. **Golden Key** is an international honor society that recognizes and encourages scholastic achievement and excellence in all undergraduate fields of study. Juniors and seniors in the top 15 percent of their class are invited to membership. Visit Golden Key's web site at www.rso.cornell.edu/gkihs.

c. Students receiving a cumulative GPA of greater than or equal to 3.50 and less than 3.75 (based on the cumulative Cornell GPA) will graduate "cum laude."

Academic Standing

At the end of each semester, the Committee on Academic Achievement and Petitions reviews the records of those students who in any respect are failing to meet the academic requirements of the college or who persistently fail to attend classes. For students not making satisfactory progress, the committee takes appropriate action, including, but not limited to, issuing warnings, placing students on probation, granting students leaves of absence, advising students to withdraw, or suspending or expelling students.

Specifically, the committee considers as possible cause for action failure to attend and participate in courses on a regular basis or, at the end of any semester, failure to attain one or more of the following:

- semester GPA of at least 2.00
- cumulative GPA of at least 2.00
- satisfactory completion of 12 or more credits per semester
- reasonable progress toward completion of major and distribution requirements

In general terms, regular participation in course work with academic loads at a level sufficient to assure graduation within eight semesters and grades averaging C (2.00) or higher are prima facie evidence of satisfactory progress and good academic standing.

Petitions Procedures

The Committee on Academic Achievement and Petitions is a college committee of six faculty and two student members. On behalf of the faculty, the committee

- reviews, at the end of each semester and at other times as shall seem appropriate to the committee, the progress of students toward meeting graduation requirements.
- receives and acts on petitions from individual students asking for exceptions from particular academic regulations or requirements of the college, or for reconsideration of action previously taken by the committee.
- acts on readmission requests from persons whose previous enrollment was terminated by the committee.
- notifies the petitioner in writing of the action taken by the committee.

A petition for exemption from a college academic requirement or missed deadline may be filed by any student who has grounds for exemption. A petition is usually prepared with the assistance of a student's faculty advisor, whose signature is required. The advisor's recommendation is helpful to the committee. The committee reviews the written petition and determines whether there is evidence of mitigating and unforeseen circumstances beyond the control of the student that would warrant an exemption or other action.

Students wishing to withdraw from a course after the end of the seventh week must petition. Requests for course changes are approved only when the members of the committee are convinced that unusual circumstances are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total workload, and scheduling prior to stated deadlines. A grade of W (for "withdrawal") is recorded on the transcript if a petition to drop a course is approved after the end of the seventh week of classes and if an approved drop results in fewer than 12 credits.

Forms are available in the Counseling and Advising Office, 140 Roberts Hall. Counselors are available to assist with the process.

Leave of Absence

A student taking a break from studies in a future semester or who finds it necessary to leave the university before the end of a semester should submit a written petition for a leave of absence. Such action serves as appropriate notification to university offices and corrects the student's transcript.

An approved leave is considered a voluntary interruption in study and holds the student's place in the college without requiring reapplication to the university. Voluntary leaves are issued in two ways: unrestricted for students in good academic standing (no restrictions placed on length of leave up to five years, or activities pursued, and simple notification by student of intent to return), and restricted (length of leave and activities pursued may be specified, and a petition to return must be approved by the Committee on Academic Achievement and Petitions). A leave exceeding five years will require additional paperwork.

Information and petition forms are available in the Counseling and Advising Office, 140 Roberts Hall.

Withdrawal

A student who wishes to leave the university permanently should file a petition for withdrawal. Such petitions are approved if the student is in good academic standing. Students who have withdrawn and who later decide to return must apply to the CALS Admissions Office.

MAJOR FIELDS OF STUDY

The college curriculum consists of 24 major program areas that reflect the departmental academic effort in the college. Faculty curriculum committees in each area identify a sequence of courses appropriate to all students studying in that field. Courses of study are designed to provide systematic development of basic skills and concepts as well as critical thinking. Opportunity for concentration in an area of particular interest is usually available.

Programs are planned with considerable flexibility, allowing students to prepare for careers, graduate work, professional opportunities, and the responsibilities of educated citizens. Course requirements in each program area are different, but all students must meet the minimum distribution requirements of the college.

Agricultural Sciences

Agriculture is an exciting and dynamic field involving a wide range of disciplines. The Agricultural Sciences major trains students to be broad thinkers who are scientifically skilled and knowledgeable about socioeconomic issues related to agriculture and the environment. This interdisciplinary program is for students wishing to pursue a general education in agriculture to prepare for careers that require knowledge of food systems and natural resources. Such careers may include the production and marketing of plant/animal foods, agricultural education in secondary schools, organic farming, cooperative extension, and crop consultation. By providing students with focused categories of courses from which to choose, the Agricultural Sciences program is designed to allow students to work with their advisor in developing a curriculum that best fits the needs of each individual. The program allows students to focus on one or two areas of concentration while gaining a broad exposure to the agricultural courses across the college.

All students are required to take the core courses in sustainable agriculture, soil science, and integrated pest management, as well as gain practical experience by completing an internship and a "hands-on" experiential learning capstone course addressing real problems in agricultural science. Concentrations requiring at least 12 credits are available in Animal Science, Applied Economics and Management, Education and Communication, Crop Production and Management, and Sustainable Agriculture.

Students graduating with an Agricultural Sciences major will be trained to address complex global agricultural issues of today and will have a knowledge base that leads to employment in a variety of fields. The required emphasis on one or two concentration areas also allows students to

become experts in the area of agriculture that is most exciting to them.

Since students in the Agricultural Sciences program come from across the college, we create a family of students who take courses, study, learn, and discuss together as a group. We do this by organizing activities that facilitate learning in an interdisciplinary setting, such as inviting guest speakers from various sectors of the agricultural industry to lead discussions, offering professional development workshops to train students for the workforce, and hosting social events for students in the major. Opportunities are also available in research and outreach experiences, and in summer employment, which serve to enrich the students' practical experience.

Animal Sciences

The Animal Sciences program area offers a coordinated group of courses dealing with the principles of animal genetics, nutrition, physiology, management, and growth biology. Emphasis in subject matter is directed toward domestic animal species, dairy and beef cattle, horses, poultry, pigs, and sheep, while laboratory, companion, and exotic animal species are also included in research and teaching programs. The Department of Animal Science has extensive facilities for animal production and well-equipped laboratories and classrooms, including a teaching barn, in which students can gain practical experience in the care and management of large animals.

The program focuses on the application of science to the efficient production of animals for food, fiber, and pleasure and easily accommodates a variety of interests and goals. Beyond a core of basic courses (suggested minimum, 15 credits) students select production and advanced courses to fulfill an individually tailored program worked out in consultation with their advisor. In this way it is possible to concentrate by species as well as by subject matter (nutrition, physiology, growth biology, breeding, management). For each subject area, supporting courses in other departments are readily available and strongly encouraged. Many science-oriented students elect a program emphasizing supportive preparation in the physical and biological sciences appropriate to graduate, veterinary, or professional study following graduation. Dairy management is a popular program among students who may be preparing to manage a dairy business or enter a related career. Other students may elect a program oriented toward economics and business in preparation for a career in the poultry, dairy, meat-animal, horse, feed, or meats industry. These are examples of the flexibility within these programs that can be developed to meet a student's career interest related to animals.

It is recommended that students obtain appropriate fieldwork or animal experience during summers. Several special training opportunities exist for highly motivated students. Juniors and seniors whose academic records warrant it may, by arrangement with individual faculty members, engage in research (either for credit or honors) or assist with teaching (for credit). The Dairy Management Fellows Program offers an equally challenging but different type of experience for a select group of students.

Students declaring a minor in animal science will arrange for a formal academic advisor in animal science at least three semesters before graduating. It is expected that the minor will be satisfied by completing at least 12 credit hours of animal science courses (at least 6 of which must be taken at Cornell), the makeup of which will be determined in consultation with the advisor. For example, it is recommended that students completing the minor will assemble courses (or demonstrate having the equivalent from elsewhere) including some basic and applied biology of animals (anatomy, physiology, nutrition, genetics) along with a selection of intermediate or advanced offerings from the animal science curriculum. Satisfactory completion of minor requirements will be verified by the minor advisor's signature on the petition to graduate.

For information, contact Deloris Bevins in 149 Morrison Hall, dgb1@cornell.edu.

Applied Economics and Management

The Department of Applied Economics and Management (AEM) offers programs in general business, agribusiness, and applied economics. Its undergraduate degree is accredited by AACSB International—The Association to Advance Collegiate Schools of Business. Ten areas of specialization are offered in AEM: Accounting, Agribusiness Management, Applied Economics, Entrepreneurship, Environmental and Resource Economics, Finance, Food Industry Management, International Trade, and Development Marketing and Strategy.

Minors

Through the Department of Applied Economics and Management, CALS students may complete a minor program of study in one of eight different subject areas: Agribusiness Management, Business, Environmental and Resource Economics, Finance, Marketing, Food Industry Management, Applied Economics, and International Trade and Development. The minors consist of at least 18 credits of required course. Students should contact the Department of Applied Economics and Management for more detailed information and to enroll in one of these minor programs of study. These minors are not open to students outside CALS. For those lacking time to incorporate all the minor requirements during the regular school year, up to three of the required courses can be taken during summer session.

Atmospheric Science

Atmospheric science is the study of the atmosphere and the processes that shape weather and climate. The curriculum emphasizes the scientific study of the behavior of weather and climate, and applications to the important practical problems of weather forecasting and climate prediction. Students develop a fundamental understanding of atmospheric processes and acquire skill and experience in the analysis, interpretation, and forecasting of meteorological events. All students are required to complete a minimum of four semesters of calculus, two semesters of physics, and a semester each of chemistry, computer science, and statistics.

Atmospheric science courses are offered through the Department of Earth and Atmospheric Sciences (EAS). The requirements for the B.S. in atmospheric science through the College of Agriculture and Life Sciences are as follows:

1. **Atmospheric science:**
 - a. EAS 3410, 3420, 3520, 4470, 4510
 - b. See tracks listed below for additional required courses
2. **Mathematics, statistics, and computer science:**
 - a. MATH 1110, 1120, (1920 or 2130), 2930
 - b. AEM 2100 or equivalent
 - c. EAS 2900 or equivalent
3. **Basic physical sciences:**
 - a. PHYS 2207, 2208, or equivalent
 - b. CHEM 1560
4. **Tracks**

Operational required	Education required	Broadcasting required
EAS 2500	EAS 1310	EAS 1310
EAS 2960	EAS 1330	EAS 1330
EAS 4560	EAS 2500	EAS 2500
EAS 4700		EAS 2960
		EAS 4700
		COMM 2010

suggested	suggested	suggested
EAS 1310	EAS 1340	EAS 2680
EAS 1330	Courses in	EAS 1340
EAS 1340	(ASTRO, EAS)	
EAS 2680		minor in communication
EAS 3050	minor in	
EAS 4350	education	

Business required	Environmental required
EAS 1310	CHEM 2070
EAS 1330	CHEM 2080
EAS 2680	EAS 3340
	EAS 4570

suggested	suggested
minor in business	EAS 1310
	EAS 1330
	EAS 1340
	EAS 2500
	EAS 2680
	EAS 3050
	EAS 4350
	EAS 4830

It is recommended that students who are interested in graduate study in atmospheric science should take additional courses in mathematics and physics.

A student may minor in atmospheric science by completing any four of the following EAS courses*: 1310, 2500, 2680, 3050, 3340, 3410, 3420, 3520, 4350, 4470, 4510, 4560, 4570, 4700, 6510, 6520, or 6660.

*(two of the courses must be taken at Cornell.)

Courses satisfying the requirements for a major or minor in atmospheric science may not be taken S–U.

Biological Sciences

Biology is a popular subject at many universities for a variety of reasons: it is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology; and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The Office of Undergraduate Biology in 216 Stimson Hall provides student services that are available to students from either college.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a specific area of biology. Programs of study include either general biology or one of the following concentrations: animal physiology, biochemistry, computational biology, ecology and evolutionary biology, genetics and development, insect biology, molecular and cell biology, microbiology, neurobiology and behavior, nutrition, plant biology, and systematics and biotic diversity. Students interested in the marine sciences should consult the Shoals Marine Laboratory office, G14 Stimson Hall, 255-3717, for academic advising. For more details about the biology curriculum see the section in this catalog on biological sciences or visit www.biology.cornell.edu. For details regarding the minor in biological sciences, please refer to the Biological Sciences section of this catalog.

Biological and Environmental Engineering

The Department of Biological and Environmental Engineering (BEE) offers majors in biological engineering and environmental engineering. BEE faculty and students address three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world's natural resources, including water, soil, air, biodiversity, and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The undergraduate engineering majors in the Department of Biological and Environmental Engineering have a unique focus on biological systems and the environment that is realized through a combination of fundamental engineering sciences, biology, engineering applications and design courses, and liberal studies. The program leads to a bachelor of science degree in biological engineering or environmental engineering, which is awarded jointly by the Colleges of Engineering and Agriculture and Life Sciences.

Engineering students take courses in mathematics, statistics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (solid mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and engineering design. They may select upper-level engineering courses in subjects that include bioprocessing, soil and water management, biotechnology applications, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal. Students may further strengthen their programs by completing an engineering minor. Students preparing for medical school take additional lab-based courses in biology, biochemistry, and organic chemistry.

Throughout the curriculum, emphasis is placed on communication and teamwork skills and collaborative problem-solving.

Specific course requirements and other information for the biological engineering major and the environmental engineering major are described in the College of Engineering section of this publication.

Further information is also available at the undergraduate program office in BEE Student Services, 207 Riley-Robb Hall, or at www.bee.cornell.edu.

The department also offers technology concentrations in biological engineering technology and environmental engineering technology within the Interdisciplinary Studies Major in CALS. The technology concentrations emphasize technical applications of biological, environmental, physical, and life sciences. Students take courses in basic biological and physical sciences and mathematics, and choose electives in engineering and technology, agriculture, business, social sciences, and liberal studies.

Many engineering and technology students participate in undergraduate teaching and research, internships, independent study, project teams, and study abroad. Students should have a strong aptitude for the physical and life sciences and mathematics and an interest in the complex social issues that surround technology.

Career opportunities cover the spectrum of self-employment, private industry, public agencies, educational institutions, and graduate programs in engineering and science, as well as the professional fields like medicine, business, and law.

The living world is all around us and within us. The biological revolution continues and it has given rise to a growing demand for technical people who have strong math and science skills, who can communicate effectively, who are sensitive to the needs of people, and who are interested in the challenges facing society. The Department of Biological and Environmental Engineering is preparing the next generation to meet these challenges.

Specific course distribution requirements for the concentrations in biological engineering technology and environmental engineering technology include the following:

1. Basic Subjects	Credits
a. Calculus	8
b. Chemistry	7
c. Physics	8

d. Computer applications	4
e. Statistics or probability	3
f. Introductory biological sciences*	6-8
g. Written and oral expression*	9
h. Social sciences and humanities*	12

*Required of CALS majors.

2. *Advanced and Applied Subjects*

a. Five courses (15 credits) in the biological, environmental, or agricultural sciences	15
---	----

b. Five courses (15 credits) in technology. Three courses from the list of approved technology courses.**	
---	--

One course must be chosen from the list of approved laboratory courses.**

The lab course cannot double count as one of the three required technology courses	15
--	----

**Contact department for a list of approved courses.

3. *Electives*

Additional courses to complete College of Agriculture and Life Sciences requirements

4. *Total (minimum)* 120

For further details on the biological and environmental technology concentrations, contact the BEE department undergraduate programs office at 207 Riley-Robb Hall, 607-255-2173 or at www.bee.cornell.edu.

Biology & Society

The Biology & Society program area is designed for students who wish to combine the study of biology with perspectives from the social sciences and humanities. Many of the most critical social issues of our time, from the implications of genetic engineering to the impact of global climate change, have biological processes at their core. At the same time these issues are inherently social, involving complex relationships among people, institutions, laws, and beliefs. The Biology & Society field of study provides the skills and perspectives necessary to confront problems with biological, social, and ethical dimensions. In consultation with a faculty member, students are expected to select their courses in the field to meet their own goals and interests. For a description of the Biology & Society requirements and courses, see "Biology & Society" under the College of Arts and Sciences in this publication or visit www.sts.cornell.edu.

Students who elect Biology & Society as their major field of study graduate from Cornell with well-developed writing and analytical skills and a knowledge base that can lead to employment in a variety of fields. Many graduates have accepted positions as health counselors, writers, or policy analysts and researchers for government organizations, medical institutions, consumer or environmental groups, or scientific research institutes. Students have found that Biology & Society is also excellent preparation for professional training in medicine, law, and health services administration and for graduate programs in such fields as genetic counseling, nutrition, clinical psychology, public health,

environmental studies, anthropology, sociology, and other related fields.

Admissions

Students in CALS may be admitted provisionally into this field of study when they apply to the college. Full admission depends on completing introductory biology and completing an application. Students transferring into this field of study will need to complete introductory biology and to submit an application during their sophomore year.

The application includes

1. a one- to two-page statement explaining the student's intellectual interests in Biology & Society and why it is consistent with his or her academic goals and interests.
2. a selected theme.
3. a tentative plan of courses fulfilling Biology & Society requirements, including courses taken and those planned.
4. a transcript of work taken at Cornell University and/or elsewhere, current as of the date of application.

The faculty admissions committee reviews applications twice a year, once each during the fall and spring semesters. A faculty advisor is assigned on admittance to the field. Approximately 60 faculty members from three colleges serve as advisors to Biology & Society students. The major program is coordinated for students in all colleges through the Biology & Society Office, 306 Rockefeller Hall, where students can get information, specific course requirements, and application forms. Faculty advisors are available to discuss the Biology & Society requirements.

Requirements for the program are listed below. A full description and listings of courses that satisfy the requirements can be obtained in 306 Rockefeller Hall or at www.sts.cornell.edu. See also "Biology & Society" in the College of Arts and Sciences section of this publication.

Biology & Society requirements:

1. Introductory biology (1101-1104, 1105-1106, or 1107-1108)
2. College calculus (one course)
3. Ethics (one course)
4. Two social sciences/humanities foundation courses
5. Three biology foundation courses
6. One biology depth course
7. Statistics (one course)
8. Core course
9. Five theme courses (a coherent group of five courses relevant to the student's special interest in Biology & Society, including a senior seminar that serves as a capstone course for the program).

Students should develop their theme and select their courses in consultation with a member of the Biology & Society faculty. A list of the faculty is available in 306 Rockefeller Hall. Further information may be obtained at www.sts.cornell.edu.

Biometry and Statistics

Quantitative prediction and interpretation are increasingly essential components of biological, physical, and social sciences. Complex patterns, structures, and interactions raise fundamental and fascinating questions that can be addressed only using mathematical, statistical, and computational methods. The wealth of data that can be acquired using modern methodologies to address these questions, in turn, requires substantive quantitative approaches to make possible appropriate analysis and interpretation. Computational power, meanwhile, continues to increase exponentially, providing the means for sophisticated analysis of complex phenomena.

The Biometry and Statistics major, in the Department of Biological Statistics and Computational Biology, focuses on the application of statistical and mathematical techniques to the sciences. Biometry applies statistics and mathematics to problems with a biological component, as seen in agricultural, environmental, biological, and medical science. Statistics is concerned with quantitative aspects of scientific investigation: design, measurement, summarization of data, and reaching conclusions based on probability statements. Students with ability in mathematics and an interest in its applications will find this a rewarding and challenging major.

The work of an applied statistician or computational biologist can encompass research, teaching, consulting, and computing in almost any combination and in a wide variety of fields of application. Opportunities for employment are abundant in academics, government, and businesses ranging from large corporations to small firms; salaries are usually excellent. Experience gained through summer employment, undergraduate research, or work as an undergraduate teaching assistant is highly recommended. For further details on the Biometry and Statistics major/minor, please contact the Director of Undergraduate Studies, Professor Steven J. Schwager (1194 Comstock Hall), at sjs5@cornell.edu or go to www.bsbc.cornell.edu.

Requirements for the Major (beyond the college requirements)

Nine core courses, plus either the Statistics or the Statistical Genomics concentration. Only courses for which the student receives a grade of C- or better will count toward the major in biometry and statistics.

Core Courses:

BTRY 3010 Biological Statistics I or
 BTRY 6010 Statistical Methods I
 BTRY 3020 Biological Statistics II or
 BTRY 6020 Statistical Methods II
 BTRY 4080 Theory of Probability
 BTRY 4090 Theory of Statistics
 MATH 1110 Calculus I
 MATH 1120 or 1220 or 1910 Calculus II
 MATH 2210 or 2230 or 2310 or 2940 Linear Algebra
 MATH 1920 or 2130 or 2220 or 2240 Multivariable Calculus

CS 1112 Introduction to Computer Programming or

BEE 1510 Introduction to Computing

Statistics concentration: Students must complete three advanced courses in statistics, computer science, operations research, or computational biology, including at least two from the list below (for complete list, go to www.bsbc.cornell.edu/majReq.php):

BTRY/ILRST 3100 Statistical Sampling

BTRY/ILRST 4100 Multivariate Analysis

BTRY 4790/CS 4782 Probabilistic Graphical Models

BTRY 4820 Statistical Genomics

BTRY 4830 Quantitative Genomics and Genetics

BTRY 4840 Computational Genomics

BTRY 4940 Special Topics (as appropriate)

BTRY 6030/ILRST 4110 Statistical Methods III: Categorical Data Analysis

BTRY 6040/ILRST 4140 Statistical Methods IV: Applied Design

BTRY 6150 Applied Functional Data Analysis

ILRST 6140 Structural Equations

ILRST 6190 Hierarchical Linear Models

NTRES 4110 Quantitative Ecology and Management of Fisheries Resources

NTRES 4120 Wildlife Population Analysis

NTRES 6700 Spatial Statistics

ORIE 3510 and 4520 Stochastic Processes

ORIE 4740 Statistical Data Mining

ORIE 5550 Applied Time-Series Analysis

Statistical genomics concentration: Students must complete two courses from BTRY 4820 Statistical Genomics, BTRY 4830 Quantitative Genomics and Genetics, and BTRY 4840 Computational Genomics; BIOGD 2810 Genetics; and in addition, they must complete one course from the advanced courses previously listed (for complete list go to www.bsbc.cornell.edu/majReq.php).

Supplementary concentration: Each biometry and statistics major is strongly encouraged to supplement the required courses with a concentration in an area of interest to the student, consisting of a cohesive set of courses chosen by the student. It is the student's responsibility to develop this concentration, with advice from the faculty, particularly the student's faculty advisor. It will be helpful to discuss the selection of courses with the director of undergraduate studies or undergraduate advising coordinator of a department closely linked with the chosen concentration.

The Minor

A minor in biometry and statistics is available to all undergraduate students in CALS. To complete the program, students must submit a minor program of study form, available in 1198 Comstock Hall. Each student will retain a copy of the form and will be responsible for planning the minor program of study in conjunction with the advisor in the student's major and a BSCB faculty advisor. Students and advisors in other departments should contact the director of undergraduate studies in the Department of Biological Statistics and

Computational Biology if they have general questions about Biometry and Statistics courses or the minor. A BSCB faculty member will supervise and assist each minor in course selection.

Requirements for the minor

BTRY 3010 Biological Statistics I or BTRY 6010 Statistical Methods I

BTRY 3020 Biological Statistics II or BTRY 6020 Statistical Methods II

BTRY 4080 Theory of Probability

BTRY 4090 Theory of Statistics

MATH 1110 Calculus I

MATH 1120 or 1220 or 1910 Calculus II

MATH 1920 or 2130 Multivariable Calculus or

MATH 2210–2220 or 2230–2240 Linear Algebra and Multivariable Calculus

One additional statistics elective from the advanced statistics course list given above.

A minimum of 31 credits is needed to complete the minor. Only courses for which the student receives a grade of C- or better will count toward the minor in biometry and statistics.

Communication

Communication majors at Cornell study communication in three main areas: science, media, and technology. Students gain a strong core in the theory of communication processes, including attitude, knowledge, and behavior change, public opinion, and information systems. They develop applied oral and written communication skills; they learn how communication systems work in society and in their personal and professional lives; they apply their understanding of communication to solving problems, sustaining the environment, reaching the public with new knowledge, and managing intricate networks of technologies.

Communication majors learn how

- communication influences attitudes, opinions, and behaviors
- mass media work in our society
- to use, evaluate, and design communication technologies
- to apply their understanding of communication to solving problems in science, the environment, government, industry, health, and education

The communication major is a program with a strong core of contemporary communication knowledge, theory, and practice.

Required freshman courses

Fall semester

COMM 1101 Cases in Communication

Spring semester

COMM 1300 Visual Communication

COMM 1310 Writing about Communication

This set of courses provides students with a basic understanding of communication and communication processes.

Required sophomore courses

COMM 2010 Oral Communication

COMM 2820 Research Methods in Communication Studies

Two of the four Focus Area introductory courses:

COMM 2200 Media Communication

COMM 2450 Communication and Technology

COMM 2760 Persuasion and Social Influence

COMM 2850 Communication, Environment, Science, and Health

After completing the courses in the core curriculum, all majors take an additional 18 credits in communication distributed among advanced writing and presentation courses, electives, and focus area requirements. Students must also complete 3 credits of college-level statistics. In consultation with their advisers, students concentrate in one of four defined focus areas appropriate to specific educational and career goals.

1. *Communication, environment, science, and health (CESH)*: Students focusing in CESH will investigate how communication influences public understanding of science, health, environmental, and risk-related issues. While exploring conceptual and theoretical issues, students will learn specific skills for communicating science, health, environmental, and risk information to a variety of audiences. Possible career paths include public information officer, science writer, environmental educator/outreach specialist, environmental or health-risk communicator, and business, legal, and other graduate study.
2. *Communication media studies (CMS)*: Students focusing in CMS will investigate the forces that shape media in contemporary society, investigating how what we see and hear comes to be. They will also analyze and understand the psychological, social, and cultural processes that are in turn affected by media, from politics to entertainment to news to the very question of what we understand as real about ourselves and true about the world around us. Students may pursue careers in the media industries, in designing the laws and policies regarding media, in business, legal, or other graduate study, or in the service of making media better; most of all, they will be more informed and astute citizens in a highly mediated world.
3. *Communication and information technologies (CIT)*: Students focusing in CIT will explore the social and psychological dimensions of the design, use, and evaluation of communication and information technologies, how people form and manage impressions and relate to each other in cyberspace, the uses of language in online interaction, and how people coordinate work in virtual teams, as well as people's interface and information needs. Possible career paths include information systems designer, research analyst, user interface designer, software designer, usability

specialist, technology writer, and business, legal, and other graduate study.

4. *Communication and social influence (CSI)*: Students focusing in CSI will use communication principles to analyze issues and situations involving groups, organizations, and selected audiences to design, implement, and evaluate appropriate communication programs. Courses stress the positive, ethical, and effective uses of communication in human affairs. This focus area would be appropriate for students interested in using communication to bring about change at the individual and societal level. Possible career paths include public relations, marketing communications, polling, human resources, governmental affairs, and business, legal, and other graduate study.

Detailed information on the distribution of courses is available from the department.

In designing the communication major, the faculty of the department has considered students' need to understand contemporary research-based knowledge about communication as well as their need to be competent communicators in the workplace and in society at large.

Through the Department of Communication, CALS students may **complete a minor program of study in communication or a minor program of study in information science or both.**

The **minor in communication** consists of four required courses: COMM 1101, 1300, 2010 and either 2200, 2450, 2760, or 2850; Students also complete three elective courses totaling 9 credit hours, at least two of which must be at the 3000-4000 level, excluding the advanced writing and presentation courses and COMM 3030, 3530, 4050, 4960, and 4980.

The minor in information science is a cross-disciplinary program requiring one prerequisite statistics course, two courses from the information systems component area (primarily computer science), two courses from the human-centered systems component area (human-computer interaction and cognitive science), one course from the social systems component area (social, economic, political, and legal issues), and one additional course from any component area. A list of specific courses is available through the Department of Communication.

Students should contact the Department of Communication to enroll in either of these programs of study.

Crop and Soil Sciences

The Department of Crop and Soil Sciences provides instruction in the subject matter areas of crop science, soil science, environmental information science, and agronomy. Agronomy integrates the first three subjects and is a part of the Agricultural Sciences major (crop production and management concentration). A specialization in crop science is a part of the plant science major. A focus on soil science is possible in two majors, the Science of Natural and Environmental systems (SNES) or the Science of Earth Systems (SES). The Agricultural Sciences major is an interdisciplinary program for students wishing to pursue a general education in agriculture to prepare for careers

that require a scientific and integrative understanding of agriculture and food systems. Students can concentrate in one or more areas, including Animal Science, Agriculture Economics and Management, Education and Communication, Crop Production and Management, and Sustainable Agriculture. The SNES major is a biophysical science-based major that addresses the interface of environmental science and human systems involved in environmental management. Within the SNES major, students can concentrate in environmental agriculture, environmental biology, environmental economics, environmental information science, and sustainable development. The SES major places emphasis on the basic disciplines of chemistry, physics, and mathematics.

A minor in crop management is also available for students with any major at Cornell University. In summary, it requires at least two courses and at least 7 credits in each of crop science (CSS 2110 or 4050, 3170, or 4140) and plant protection (CSS 3150, 4440, ENTOM 2410, or PLPA 3010) plus at least three courses and at least 12 credits in soil science (CSS 2600, 3210, 3650, 3720, 4120, or 4660). Equivalent transferred courses can be substituted. This minor helps prepare students for the Certified Crop Advisor examination, which provides an important credential for jobs in agriculture and environmental management.

A minor in soil science requires 15 credits in soil science, but an additional 12 credits in biological, physical, and earth sciences are recommended to qualify the student for the Civil Service classification as Soil Scientist (GS-0470). In addition to 15 credits in soil science, Civil Service classification as Soil Conservationist (GS-0457) requires 12 credits in natural resources and agriculture and 3 credits in applied plant science. The soil science minor is also available to students with any major at Cornell University and transfer credit can be used to meet requirements. Students wishing to pursue either the crop management or soil science minor should contact the Department of Crop and Soil Sciences (255-5459).

Development Sociology

Technological, economic, demographic, and environmental changes are social processes. Each has major impacts on individuals, social groups, societies, and the international order. At Cornell, development sociology students study these and other facets of social change in both domestic and international settings. The development sociology major provides an opportunity for in-depth study of the interactions among development processes, environmental and technological contexts, demographic structures and processes, and the institutionalized and grassroots social movements through which people seek change in these dimensions. Courses offered by the department cover topics such as the impact of changes in agricultural systems on rural development and rural labor markets; community and regional development; environmental sociology; technology; the political economy of globalization; women in development; and ethnic stratification and integration. Most courses provide background in both domestic and international aspects of the subject matter. Students can develop a specialization with a domestic, international,

or global emphasis by choosing appropriate elective courses. All students learn the theory and methodology of sociology and how to apply both to research and policy in their subject areas.

Majors in development sociology are required to successfully complete seven core courses: introductory sociology (DSOC 1101), international development (DSOC 2050), population dynamics (DSOC 2010), methods (DSOC 3130 or 3140), theory (DSOC 3010), social stratification (DSOC 3700), and a course in statistics. Four additional development sociology courses are also required of all majors, at least two of which must be at the 3000 level or higher. The elective courses allow students to focus their major on particular themes such as the sociology of development; the social processes linking the environment, population, and development; and more general areas such as ethnic and class stratification, social movements, social policy, and gender and development. In each of these focus areas, students can choose to concentrate on domestic or international situations. Students are encouraged to complement courses in the department with course work in the history and economics of development, area studies, and the policy sciences.

Recognizing that students are concerned with future career opportunities, the development sociology major emphasizes acquisition of skills as well as general knowledge in preparation for jobs or post-graduate study. Accordingly, students are expected to become involved in the application of theory, methodology, and principles and concepts in the analysis of practical problems. Development sociology offers degree programs at both the undergraduate and graduate levels (B.S., M.S., and Ph.D.). The department and graduate field are recognized as top programs in the area. The department is particularly well known for providing instruction in international as well as domestic aspects of community and rural development, environmental sociology, sociology of agriculture, population studies, and the interactions among these dimensions. Development sociology faculty are committed to both quality instruction and cutting-edge research programs.

The department offers a general DSOC minor and a minor in Globalization, Ethnicity, and Development. For a complete list of requirements for either minor, please go to our web site: <http://devsoc.cals.cornell.edu> or visit 133 Warren Hall.

The department maintains strong ties with technical fields in CALS as well as with programs dealing with a range of issues of importance to international and domestic development. These include the International Agriculture Program, the Biology and Society Program, the Cornell Institute for Social and Economic Research, the Center for the Environment, the Polson Institute for Global Development, the Community and Rural Development Institute, the Gender and Global Change Program, the Bronfenbrenner Life Course Institute, and the Center for International Studies. Nearly half of the department faculty is associated with one or more area and ethnic studies programs including the American Indian Program, Latino Studies Program, Asian American

Studies Program, Southeast Asia Program, South Asia Program, Latin American Studies Program, East Asia Program, and the Institute for African Development. Department members also maintain working relations with faculty members in the Department of Sociology and social science units located in other colleges at Cornell. Students are encouraged to supplement their development sociology course work by electing courses in these other departments.

Education

The Department of Education builds on strong academic disciplines such as sociology, psychology, anthropology, biological and political sciences, political thought, and philosophy and is grounded in empirical and theoretical studies of educational practice in order to address education in diverse contexts and across the life span. The department has two foci to meet societal demands for teachers, researchers, and learners. The Learning, Teaching, and Social Policy (LTSP) concentration, which includes the Cornell Teacher Education Program (CTE), concentrates on teacher education in science, mathematics and agricultural science education, diversity, critical pedagogy, the study of school-age children and their families, and policy related to formal education. The Adult and Extension Education (AEE) concentration prepares scholars and practitioners for adult and extension education leadership and professional development roles in domestic and international community-based, nonformal, and formal organizations and focuses on community development and organizing, adult education, public scholarship, university extension/outreach, learning in adulthood, educational planning and program development, and international adult and extension education. These two programs of study, largely at the graduate level, prepare leaders who will both engage in professional practice and improve educational processes through their scholarship and practice. Our undergraduate program leads to initial certification in agricultural science education. An undergraduate minor in education is also available for students across all colleges at Cornell. For the latest information on program developments, go to education.cornell.edu.

Adult and Extension Education (AEE).

Creating a livable world requires more than just new knowledge and technology; it also requires sustained and expert practice in learning and education. The AEE program provides opportunities for graduate students to investigate participatory educational and organizing practices that link learning to the challenge of facilitating global sustainability. As public universities focus their research, teaching, and extension on domestic and global environmental, political, and social problems, the AEE program focuses on creating opportunities for critical reflection on adult, extension, and international education by connecting action and research. We seek to move beyond procedural questions of "how to do it" to critical institutional questions of who does and who should benefit from our adult, extension, and international educational work. The aim is to engage practitioners and graduate students in

critical reflection on practice to create practical theory from and for action.

Participation in the AEE program helps scholars and practitioners prepare for adult and extension educational leadership and professional roles in domestic and international community-based, nongovernmental, and governmental organizational settings. Areas of expertise and inquiry include participatory practices in research, community development, and adult education; public scholarship, university extension/outreach, and community organizing in the United States; international adult and extension education; learning in adulthood; educational planning and program development; continuing professional education; staff development; and health issues related to the education of adults.

Learning, Teaching, and Social Policy (LTSP). This program is designed to foster the development of educational leaders, researchers, and practitioners who approach issues and challenges in education from multiple perspectives, and seek to construct an integrated knowledge base upon which the practice of teaching, learning, and social policy is based. The impacts of implementation and practice are explored for creating new theories, approaches, and policies to improve teaching, learning, and community life.

Drawing on the dynamic nature of teaching and learning, this program challenges students to create and apply research-based, critically reflective analysis of cognitive, intellectual, personal, social, moral, and institutional dimensions of learning, teaching, and educational policy in a variety of contexts and at multiple governance levels. Students engage in critically reflective practice to address pressing problems and issues in formal and nonformal educational contexts across a variety of national and cultural settings.

The program is philosophically grounded in the perspective that learning and teaching is a lifelong process vital to individual development, the development of democratic communities, and the implementation of democratic values in educational policy and practice. Context, gender, and social and economic diversity underlie the design and implementation of curriculum, teaching and learning theory, and social interactions and are lenses for examining educational practice, theory, and policy.

Faculty members and graduate students in research programs in Learning, Teaching, and Social Policy (LTSP) engage in research that investigates factors that contribute to scientific and quantitative literacy; curriculum design and evaluation in science, mathematics, and agricultural science; effectiveness of teacher professional development; educational policy in rural schools; and sociomoral development, action, and reflective thought in schools and communities. Our mission is to contribute to an educated, global society of leaders and citizens who are prepared to respond to emerging social, technological, and scientific issues, with ethical and critically reflective judgment.

The Cornell Teacher Education (CTE) program is a unique interdisciplinary cohort-based program that certifies teachers for secondary teaching in agricultural science,

science, and mathematics. Students in the CTE program develop a solid mastery of their content areas and an understanding of the issues in education, and interact with and learn from each other. Undergraduates accepted into the CTE program major in a mathematics, agriculture, or science field in any Cornell college and complete a minor in education. With a CTE minor and a bachelor's degree, students can complete the Master of Arts in Teaching (MAT) in one year. CTE teachers are prepared as scholars of teaching and learning, able to help all their students achieve the scientific and quantitative literacy and ethical decision making skills needed for participation in a democracy.

Agricultural Science Education is taught at the middle and high school levels in New York State and nationally. Building on strong academic disciplines in the agricultural sciences, and with a solid grounding in the psychological, social, empirical, and theoretical bases of educational practice, the department offers two programs that lead to professional certification in Agricultural Science Education. The undergraduate degree in Agricultural Science Education and the agriculture option in the Master of Arts in Teaching are both offered under the Cornell Teacher Education umbrella. In addition, the undergraduate degree offers a non-certification option for persons with interests in instruction in nonschool settings such as extension, 4-H, arboretums, and state and national parks. All three of these programs prepare educators for leadership and professional roles in the broad fields of agriculture and natural resources.

Minor in Education

The minor in education gives students a planned core of courses to provide them with an overview of education as a field. One option prepares students to move into the graduate segment of the Cornell Teacher Education (CTE) program. Other options provide preparation for admission into other graduate teacher certification programs or a background for professional venues such as extension, business, and industry. Any undergraduate student in the university may enroll subject to availability in courses required for the minor. Students who wish to pursue a minor in Education must complete and submit an application. Applications are available in 426 Kennedy Hall, the CALS Office of Academic Programs, or by e-mailing cu_teacher_ed@cornell.edu.

Effective College Teaching Series. The Center for Learning and Teaching, under the auspices of the Department of Education, offers a series of courses, both credit and noncredit, for the improvement of teaching at Cornell, designed for Cornell faculty members and graduate students who are either currently teaching or intending to teach. For details, contact the Center for Learning and Teaching, 255-6130, or www.clt.cornell.edu.

Current offerings include:

EDUC 5480 Effective College Teaching
Spring and one-week summer session. 1-3 credits. For faculty and graduate students who intend to pursue an academic career.

EDUC 5780 ITADP Cross-Cultural Classroom Dynamics, Language, and Teaching Practicum

Fall and spring. 2 credits. For international graduate students who have, or will have, teaching assistantships.

EDUC 5790 ITADP Further Training for International Teaching Assistants

Fall and spring. Noncredit course for international teaching assistants who have completed EDUC 5780 but need or desire continued work in classroom instructional and communication skills.

Graduate Teaching Development Workshops

Offered early in each fall and spring semester, this daylong series offers an array of workshops in teaching effectiveness, from teacher-student interactions to developing a teaching portfolio. Noncredit, open to all Cornell faculty members and graduate teaching assistants.

EDUC 6200 Internship in Education

Fall and spring. 1 credit. Prerequisite: CALS Graduate Student Professional Development Workshop. For CALS graduate teaching assistants or CALS teaching personnel who wish to extend their workshop experience through reflective practice and consultation with an instructional support specialist.

Entomology

The entomology curriculum provides students with a basic background in biological and natural sciences, with a special emphasis on the study of insects. Majors may pursue graduate studies in entomology or related sciences upon completion of the B.S. degree. Alternatively, students may immediately begin careers in various aspects of basic or applied insect biology, including integrated pest management, insect pathology, environmental assessment, medical or veterinary entomology, insect toxicology, apiculture, insect systematics, or insect ecology. Because of the diversity of career options, the major includes flexibility among the core requirements and electives that can be selected by students in consultation with their advisors.

Requirements

General Requirements for CALS (see Graduation Requirements for Bachelor of Science) Basic Science and Math Requirements

- One year of college mathematics, may substitute statistics or biometry
- One semester of physics (may need two depending on future plans)
- CHEM 1570 Introduction to Organic and Biological Chemistry or CHEM 3570 and 3580 Organic Chemistry for the Life Sciences (for students planning on medical school)
- Introductory biology (1101-1104 recommended, even if AP credit received)
- BIOGD 2810 (genetics)
- BIOEE 2780 (Evolutionary Biology)
- Choose one of the following two courses:
BIOEE 2610 (Ecology and the Environment)
BIOBM 3300, 3310, or 3320 (Principles of Biochemistry)

(Choice depends on student interest in organismal vs. cellular/molecular aspects of biology)

Entomology Requirements (15-21 credits)

- ENTOM 2120 Insect Biology—4 cr
- Group A (core courses). Choose two of the following six courses:
ENTOM 3310/3311 Insect Systematics—4 cr
ENTOM 3330 Larval Insect Biology—3 cr
ENTOM 3520/3521 Medical and Veterinary Entomology—4 cr
ENTOM 4440 Integrated Pest Management—4 cr
ENTOM 4550 Insect Ecology—4 cr
ENTOM 4630 Invertebrate Pathology—4 cr
ENTOM 4830 Insect Physiology—4 cr
- Two additional entomology courses from Groups A or B (see link to Entomology Course Spreadsheet for a complete list of entomology courses, www.entomology.cornell.edu)

Food Science

The food science program prepares students for careers in the food industry or research organizations and for graduate study in food science or related disciplines. Food scientists enjoy satisfying careers that help ensure the sustainable availability of a safe, nutritious, affordable, and high-quality food supply for people throughout New York State, the nation, and the world.

Students in the food science program can choose from one of three specialization options in the major: (1) food science; (2) food operations and management; or (3) food biotechnology. The first option meets the curriculum standards set by the Institute of Food Technologists (IFT), the premier professional society for food scientists, allowing students to compete for IFT scholarships and awards. Students choose an option based on their individual interests and career goals.

The first two years of the undergraduate food science program are intended to establish a solid background in the physical and biological sciences, math and statistics, and communication skills. Required courses include chemistry (introductory and organic), biology, microbiology, calculus, physics, first-year seminar, introductory food science courses, and nutrition. The last two years emphasize the application of these basic sciences and technology to the manufacturing, sensory evaluation, storage, distribution, and safety of foods and food ingredients. Examples of food science core courses include Food Engineering Principles, Physical Principles of Food Manufacturing, Food Safety Assurance, Food Chemistry, Sensory Evaluation of Foods, and Food Microbiology; many elective courses are offered as well. Students choose electives to satisfy both college distribution requirements and their individual interests within the major and beyond.

Students are also strongly encouraged to participate in undergraduate research supervised by a faculty member and/or complete an internship in a food company during their program of study. Most teaching

faculty in the department also have active research programs and welcome participation by undergraduate students. Students may receive academic credit or wages for faculty-directed undergraduate research. Several food companies recruit on campus for their internship programs. These internships provide an excellent opportunity for students to gain hands-on experience in their chosen field of interest and to establish contacts for future employment. A modern food processing and development pilot plant, an operational dairy plant, and well-equipped laboratory facilities are available to support the teaching and research needs of undergraduates.

Information Science

Information Science (IS) is an interdisciplinary field that studies the design and use of information systems in a social context: the field studies the creation, representation, organization, application, and analysis of information in digital form. The focus of Information Science is on systems and their use, rather than on the computing and communication technologies that underlie and sustain them. Moreover, Information Science examines the social, cultural, economic, historical, legal, and political contexts in which information systems are employed, both to inform the design of such systems and to understand their impact on individuals, social groups, and institutions.

The Information Science major organizes its courses into three area-based tracks:

- *Human-Centered Systems.* This area examines the relationship between humans and information, drawing from human-computer interaction and cognitive science.
- *Information Systems.* This area examines the computer science problems of representing, organizing, storing, manipulating, and accessing digital information.
- *Social Systems.* This area studies the cultural, economic, historical, legal, political, and social contexts in which digital information is a major factor.

Students must complete a set of 11 core courses: one introductory course, four courses in math and statistics, and two courses from each of the three IS areas. Students must also obtain depth in two tracks—a primary and a secondary track—that together best represent their interests. In particular, completion of the major requires four advanced courses from the selected primary track and three advanced courses from the secondary track.

Note: All INFO courses will count as in-college credit.

Requirements

Core (11 courses)

1. Introductory (one course):

INFO 1300 Introductory Design and Programming for the Web

Note: INFO 1301 and 1302 (no longer offered) may count together in place of 1300.

2. Math and Statistics (four courses):

- MATH 1110 Calculus I
- one course chosen from: MATH 1710 Statistical Theory and Application in the Real World; HADM 2201 Hospitality Quantitative Analysis; AEM 2100 Introductory Statistics; PAM 2100 Introduction to Statistics; ENGRD 2700 Basic Engineering Probability and Statistics; BTRY 3010 Statistical Methods I; SOC 3010 Evaluating Statistical Evidence; CEE 3040 Uncertainty Analysis in Engineering; ILRST 3120 Applied Regression Methods; ECON 3190 Introduction to Statistics and Probability; PSYCH 3500 Statistics and Research Design
- either MATH 2310 Linear Algebra with Applications or MATH 2210 Linear Algebra
- INFO 2950 Mathematical Methods for Information Science or CS 2800 Discrete Structures

3. Human-Centered Systems (two courses):

INFO 2140 Cognitive Psychology

INFO 2450 Communication and Technology

4. Information Systems (two courses):

CS 2110 Object-Oriented Programming and Data Structures*

INFO 2300 Intermediate Design and Programming for the Web

*CS 2110 is an intermediate programming course that requires prior knowledge of Java. Students who have not learned Java can take CS 1130 after completing INFO 1300 and 2300, or they can take CS 1110.

5. Social Systems (two courses):

- either ECON 3010 Microeconomics or ECON 3130 Intermediate Microeconomic Theory
- one course chosen from: INFO 2921 Inventing an Information Society; INFO 3551 Computers: From the 17th Century to the Dotcom Boom; or INFO 3561 Computing Cultures; or INFO 3200 New Media and Society

Where options in the core courses exist, the choice will depend on the student's interests and planned advanced courses for the selected primary and secondary tracks.

Tracks

Students must complete four advanced courses in their selected primary track and three advanced courses in their selected secondary track.

Courses taken to satisfy the core-course requirements may not be used to fulfill the track requirements.

All courses used toward the major must be taken for a letter grade. Students must earn a C- or better in all courses used for the major.

Additional information on Information Science courses can be found below and in the CIS section of *Courses of Study*. Course information for all other courses in the major can be found in the relevant departments (e.g., AEM, CS, and STS).

1. Human-Centered Systems

INFO 3400 Psychology of Social Computing

PSYCH 3420 Human Perception: Applications to Computer Graphics, Art, and Visual Display*

INFO 3450 Human-Computer Interaction Design

PSYCH 3470 Psychology of Visual Communications

INFO 3650 Technology and Collaboration

PSYCH 3800 Social Cognition*

PSYCH 4160 Modeling Perception and Cognition

INFO 4400 Advanced Human-Computer Interaction Design

INFO 4450 Seminar in Computer-Mediated Communication

INFO 4500 Language and Technology

DEA 4700 Applied Ergonomic Methods

*Students who take PSYCH 3420 may also count its prerequisite, PSYCH 2050, toward the Human-Centered Systems primary/secondary track requirements. Similarly, students who take PSYCH 3800 may also count PSYCH 2800 toward the Human-Centered Systems primary/secondary track requirements. At most, one of PSYCH 2050 or 2800 can be counted toward the primary/secondary track requirements.

2. Information Systems

INFO 3300 Data-Driven Web Applications

CS 4450 Computer Networks

LING 4424 Computational Linguistics

INFO 4300 Information Retrieval

INFO 4302 Web Information Systems

CS 4320 Introduction to Database Systems

LING 4474 Introduction to Natural Language Processing

CS 4620 Introduction to Computer Graphics

CS 4700 Foundations of Artificial Intelligence

ORIE 4740 Statistical Data Mining I

CS 4780 Machine Learning

ORIE 4800 Information Technology

CS 5150 Software Engineering

INFO 5300 Architecture of Large-Scale Information Systems

CS 5430 System Security

CS 5780 Empirical Methods in Machine Learning and Data Mining

The Minor

A minor in Information Science is also available to students in AAP (Architecture and Planning students only), Arts and Sciences, CALS, Engineering, Hotel, Human Ecology, and ILR. The minor has been designed to ensure that students have substantial grounding in all three of the human-centered systems, information systems, and social systems areas. Detailed information about the minor can be found in the CIS section of *Courses of Study*. Students should visit www.infosci.cornell.edu/ugrad for the most up-to-date description of the concentration and its requirements.

International Agriculture and Rural Development

International agriculture and rural development provides students with an understanding of the special problems of applying basic knowledge to the processes of agricultural and rural development in low-income countries. The student chooses an area of concentration within the major and works with an advisor to plan an individualized program of study. Areas of concentration include (1) social development and livelihoods, (2) food systems, and (3) environment and ecosystems. The core curriculum and areas of concentration are designed to acquaint students with relevant socioeconomic factors, the physical and biological aspects of tropical crops and animal production, and issues of resource management and sustainability in low-income countries.

Requirements

In addition to the college distribution requirements, students in international agriculture and rural development must take a minimum of 50 credits toward the major. A minimum of 18 credits from a core curriculum (in addition to foreign language) are required, 8 of which should be in international agriculture and rural development (IARD). The foreign language requirement for the IARD major is identical to that of the College of Arts and Sciences (see p. 445). Other course work is drawn from a wide range of disciplines, consistent with the student's chosen concentration. Students are expected to complete an overseas field study experience of a minimum of six weeks. The objective is to familiarize students with the many facets of agricultural and rural development in low-income countries.

International Studies Minor

Preparing for leadership in an increasingly interconnected and dynamic world, CALS undergraduates need knowledge, skills, and attitudes that build "global competencies." The minor for CALS students not majoring in international agriculture and rural development will recognize an international concentration of course work and experiences.

Requirements

1. Five courses with significant international content, as recommended by students' major departments (three should be from CALS).

Highly recommended

1. Foreign language course work.
2. An approved overseas experience (exchange, study abroad program, internship, or faculty-led short course).

For more information, contact the academic programs coordinator in the CALS International Programs Office, 255-3811.

Landscape Architecture

Landscape architecture focuses on the art of landscape design as an expression of the cultural values and the natural processes of the ambient environment. The program's unique place within the university promotes interaction among the areas of horticulture, environmental science, architecture, and city and regional planning.

The course of study prepares students for the practice of landscape architecture. The curriculum focuses on graphic communication, basic and advanced design methods, landscape history and theory, plant materials, construction and engineering technology, and professional practice. Design studios deal with the integration of cultural and natural systems requirements as applied to specific sites at varying scales. Projects may include garden design, parks design, housing design, historic preservation, environmental rehabilitation, and urban design.

Landscape architecture offers two professional degree alternatives: a four-year bachelor of science degree administered through the College of Agriculture and Life Sciences and a three-year master of landscape architecture degree administered through the Graduate School for those who have a four-year undergraduate degree in another field. Both of these degrees are accredited by the

Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects. The major in each degree is composed of core courses related to professional education in landscape architecture, a concentration in a subject related to the core courses, and free electives.

The department also offers a two-year master of landscape architecture advanced degree program administered through the Graduate School for those with accredited degrees in landscape architecture or architecture. The program entails core courses in the discipline and the development of a concentration in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

In addition, an undergraduate minor in cultural landscape studies is available for nonmajors.

Dual-Degree Options

Graduate students can earn a master of landscape architecture and a master of science (Horticulture) or a master of city and regional planning simultaneously. Students need to be accepted into both fields of study to engage in a dual-degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Study Abroad

The faculty encourages study abroad and has two formally structured programs. The *Denmark International Study* (DIS) program is available primarily to senior undergraduates and third-year graduate students in the fall semester and is administered through Cornell Abroad. The *Rome Program* is made available to undergraduates and graduate students through the College of Architecture, Art, and Planning.

Bachelor of Science Landscape

Architecture Degree Sequence (Note: Each semester, the studio classes require payment of a supply and field trip fee, and all landscape architecture majors are required to pay an annual technology fee.):

First Year

<i>Fall Semester</i>	<i>Credits</i>
*LA 1410 Grounding in Landscape Architecture	4
†Biological sciences elective	3
†Physical sciences elective	3
†Social sciences or humanities elective	3
†Written or oral expression elective	3
	<hr/> 16

Master of Landscape Architecture Advanced Degree Program.

The two-year master of landscape architecture (M.L.A./A.D.) program serves to broaden and enrich undergraduate education in design by providing an expanded educational experience to those who are technically skilled. Applicants must hold a bachelor's degree in landscape architecture or architecture from an accredited program. The objective of the two-year (M.L.A./A.D.) program is to develop specializations for individuals who may wish to teach, practice, or conduct applied research in landscape architecture.

Students admitted to the two-year M.L.A./A.D. program are required to complete 60 credits of course work as approved by the members of their graduate committee. For landscape architects, this must include at least two advanced studios, a graduate seminar, a concentration, and a thesis. For architects, the curriculum requires three advanced studios, two courses in plants and planting design, two courses in the history of landscape, two courses in site engineering, a seminar in design theory, a course in professional practice, a concentration, and electives.

Undergraduate Minor for Nonmajors

Students outside the professional program may choose the undergraduate minor (five courses, 15 credits) in cultural landscape studies to complement their major. A variety of courses consider the cultural landscape as an object, something to be studied for its own sake, and as a subject, as a means to understand society's relationship to natural systems. The study of cultural landscapes also includes perceptions of landscapes, cultural ideas and values, and visible elements. Direct inquiries to Professor A. Hammer, Department of Landscape Architecture, 440 Kennedy Hall.

Courses: choose five for a total of 15 credits

- +LA 3600 Pre-Industrial Cities and Towns of North America (3 credits) offered alternate years
- +LA 2610 Fieldwork in Urban Archaeology (4 credits)
- +LA 2620 Laboratory in Landscape Archaeology (3 credits)
- +LA 2820 Photography and the American Landscape (3 credits)
- +LA 4180 Audio Documentary: Stories from the Land (3 credits)
- +LA 4830 Seminar in Landscape Studies (3 credits)
- LA 4970 Independent Study (1–5 credits)
- LANAR 5240 History of European Landscape Architecture (3 credits)
- LANAR 5250 History of American Landscape Architecture (3 credits)
- LA 5450 The Parks and Fora of Imperial Rome (3 credits)
- LA 7920 Landscape Preservation: Theory and Practice (3 credits)

+ Distribution elective

Natural Resources

Natural Resources is an interdisciplinary major focusing on the fundamental knowledge and analytical tools required to conserve, restore, and manage the Earth's biodiversity and ecosystem services in sustainable ways. The curriculum draws on relevant knowledge from biology, ecology, chemistry, mathematics, sociology, economics, law, and ethics. A large number of field courses provide direct experience working in forests, wetlands, streams, lakes, and policy-making arenas. Courses address pressing environmental issues such as global climate change, landscape transformation, endangered and invasive species, human alteration of biogeochemical cycles, "green" markets and other environmental strategies, environmental justice, bio-cultural and biological diversity, and international conservation. Concentrations include applied ecology, resource policy and management, and environmental studies.

The major allows students flexibility to pursue a variety of paths to understand the biological, ecological, ethical, and societal basis for biodiversity conservation, sound resource management, and sustainable development.

The Future for Natural Resources Majors

Most students entering the major have a strong interest in the natural world and in contributing to greater harmony between society and the environment. An undergraduate degree in natural resources gives students the concepts and tools needed to participate intelligently and effectively in decisions that determine the future of our environment, either as professionals within a diverse array of environmental careers, or as informed citizens working in other professions.

Graduates with a major in natural resources have the flexibility to pursue a number of different careers because of the interdisciplinary nature of the curriculum. The major prepares students for graduate school in numerous fields, and for entry-level positions in natural resources and environmental management agencies at local, state, federal, and international levels, or for jobs in the private for-profit (e.g., environmental consulting firms) or nonprofit (e.g., conservation organizations) sectors. Many students ultimately pursue graduate studies in environmentally related fields including the biological, physical, and chemical sciences; forest, wetland, stream, wildlife, or fisheries management; and environmental law and public policy. Graduates often assume leadership positions in government, colleges and universities, national and international conservation organizations, environmental consulting firms, environmental divisions of private industry, and organizations involved in environmental education or communication.

Curriculum

Natural resources is a flexible major, and free electives can account for as many as 40 credits out of the total of 120 required for graduation. Students complete a set of courses in biology, ecology, chemistry, mathematics, economics, ethics, and written and oral expression; many of these courses also meet the college's distribution requirements for graduation. *Freshmen and sophomores* complete a series of four foundation courses in the major: Introduction to the Field of Natural Resources, Environmental Conservation, Introductory

Field Biology, and Society and Natural Resources. Juniors complete three core courses: Applied Population Ecology, General Ecology, and Natural Resources Management and Planning. These foundation and core courses introduce the critical environmental and natural-resource issues confronting society, and develop the conceptual and methodological tools that students will use in upper-division courses.

Juniors and seniors may specialize in one of three areas of concentration: applied ecology, resource policy and management, or environmental studies. Through course work in these concentrations, students gain an in-depth understanding of key principles, concepts, and practices. All students also have the flexibility to gain exposure to a wide variety of environment-related courses offered by Natural Resources and other departments throughout Cornell. Many students elect to conduct a research honors thesis.

Areas of Concentration within the Major

Applied ecology is designed as a foundation for those who wish to pursue careers or advanced study in science-based conservation or management of fish and wildlife populations and their habitats, conservation biology, control of invasive and overabundant species, watershed and landscape management, quantitative population dynamics, resource inventory and information management, global ecology, or applied ecology and biogeochemistry of forests and wetlands. This concentration also may interest students seeking a biologically based approach to environmental science or global studies. Students who select this concentration typically focus their course work in the areas of species biology and applied ecosystem ecology, including quantitative analysis of fish, wildlife, and plant populations, ecosystems, and landscapes. They complement their course work within the department with courses in other departments, such as Ecology and Evolutionary Biology, Microbiology, Geology, Crop and Soil Science, Atmospheric and Earth Sciences, and Plant Biology.

Resource policy and management

provides a foundation for students who wish to pursue careers or advanced study in the social science or policy aspects of natural resource conservation and management, environmental sociology, international conservation, environmental law, environmental policy analysis, or environmental communication. Students who select this concentration typically focus on courses related to the development of environmental policy, management strategies for particular species or ecosystems, natural resource planning, resource economics, or programs in environmental communication and education. They complement their course work within the department with courses in other departments such as Government, Ecology and Evolutionary Biology, Development Sociology, Communication, Applied Economics and Management, City and Regional Planning, and Policy Analysis and Management.

Environmental studies is intended for those who wish to pursue a broad and synthetic approach to understanding and participating in (re)structuring the interactions between society and environment. The concentration's

emphasis is on developing an ability to think critically about these interactions. Building on a foundation of courses required for the natural resources major, during years 3 and 4, each student will design a cohesive sequence of six upper-division courses with help from their departmental advisor. These six courses should include two courses from each of three categories: (1) natural science; (2) social science and analytic skills, e.g., economics, political economy, logic, computer programming, GIS, statistics; and (3) humanities, e.g., history, philosophy, literature, arts, foreign language. This self-defined environmental theme ensures development of specific competencies linked to personal and professional ambitions of the individual student. Example themes include environmental law, environmental education, "green" business, sustainable agriculture, and environmental communication. Students are expected to take advantage of internship, independent study, and honors thesis opportunities, as appropriate.

Research and Work Opportunities for Undergraduates

The department offers many opportunities for field-oriented studies, independent research, internships, and jobs. These include several field-based courses and access for research at the Arnot Teaching and Research Forest near Ithaca, the Little Moose Field Station in the Adirondacks, the Cornell Biological Field Station on Oneida Lake near Syracuse, and the Hubbard Brook Experimental Forest in New Hampshire, as well as numerous natural areas near campus. Part-time jobs in the research and extension programs of many faculty members offer students opportunities for career-related work experience. A research honors program is available for qualified students.

For a comparison of the natural resources major with other environmental majors, see www.dnr.cornell.edu/teaching/ugrad/faq/cals_env.pdf.

Nutritional Sciences

Nutritional sciences draws upon chemistry, biology, and the social sciences to understand complex relationships among human health and well-being, food and lifestyle patterns, food and agricultural systems, and social and institutional environments.

The program in nutritional sciences provides students with strong training in human nutrition in the context of an understanding and appreciation of the agricultural and life sciences. The program responds to the growing and important interrelationships among human nutrition and the agricultural and life sciences. Growing public interest in health and nutrition has placed new demands upon food producers, processors, and retailers. The problems of hunger and malnutrition in the United States and abroad require that nutritionists work with specialists in areas such as agricultural economics, food production, and development sociology. Advances in biotechnology provide researchers with new ways to understand human nutritional requirements and the regulation of human metabolism.

Nutritional sciences majors complete a core set of requirements and choose elective courses in the areas of their particular interest. The core curriculum includes

introductory chemistry and biology, organic chemistry, biochemistry, physiology, and mathematics. Students complete five courses in nutritional sciences: NS 1150 Nutrition, Health, and Society; NS 2450 Social Science Perspectives on Food and Nutrition; NS 3450 Introduction to Physicochemical and Biological Aspects of Foods; NS 3310 Physiological and Biochemical Bases of Nutrition; and NS 3320 Methods in Nutritional Sciences. In addition, students select a minimum of three advanced courses in nutritional sciences as well as elective courses in the broad areas of food production and processing, food and agricultural policy, the life sciences, environment and natural resources, communication, and education.

All majors have faculty advisors in the Division of Nutritional Sciences with whom they meet regularly. Advisors help students plan course schedules and help find opportunities for special study or experiences outside the classroom.

Many students engage in laboratory or field research with a faculty member for academic credit. The research honors program is designed for academically talented students who are interested in research. Honors students conduct independent research projects under the guidance of a faculty member and prepare an honors thesis. Many students participate in field experiences for credit during the academic year or summer. Placements in laboratories, industries, or community agencies are possible.

The major in nutritional sciences can lead to many different career paths. By supplementing the core requirements with courses in different areas, students can prepare for jobs in industry, government, or community agencies in the United States or abroad. The major is excellent preparation for graduate study in a variety of fields.

The Division of Nutritional Sciences is affiliated with both the College of Agriculture and Life Sciences and the College of Human Ecology. Most of the division faculty members work in Savage Hall, Kinzelberg Hall, and Martha Van Rensselaer (MVR) Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities.

For additional information about the nutritional sciences program, contact the Division of Nutritional Sciences Academic Affairs Office, B21 Savage Hall, 255-4410, aadns@cornell.edu.

The minor in **nutrition and health** in the College of Agriculture and Life Sciences allows students to choose from courses concerned with economic influences on human nutrition, epidemiology and public health, food quality and food service management, human health and nutrition, nutritional biochemistry, and the psychological and social influences on human nutrition. The minor consists of NS 1150 Nutrition, Health, and Society plus 9 credits of 2000-level or above didactic NS courses. Several NS courses are excluded from use toward the minor. Please check www.nutrition.cornell.edu/undergrad/calsminr.html for details. Enrollment is limited in some courses.

Plant Sciences

Plant sciences prepares students for careers that meet the challenges of providing a safe, nutritious, and abundant food supply for a growing world population and using plants to enhance the beauty of our landscapes. It is a multidisciplinary program administered by faculty in the Departments of Crop and Soil Sciences, Horticulture, Plant Biology, Plant Breeding and Genetics, and Plant Pathology and Plant-Microbe Biology, representing one of the strongest groups of plant scientists in the world. Students in the program share a common interest in learning about topics associated with plant growth and development in the broadest sense, but beyond that common thread, individual career goals vary widely. Some have their sights set on careers in applied agriculture, others plan to contribute to advancements of our knowledge by way of teaching or research, and still others see study in plant science as a stepping-stone to specialized training in business, government, or law. In addition to the college distribution requirements, Plant Science majors must take at least one course in each of several areas, including botany, plant physiology, ecology, taxonomy/systematics, genetics, statistics, plant-pest interactions, crop production, and soil science, for a total of 40 credits.

Students who begin with well-defined interests or who identify certain areas of interest after several semesters of course work may choose a specialization within one of the five cooperating departments. Each specialization has additional requirements beyond the basic core courses. However, students who are uncertain about the breadth of their interests or who are seeking as much flexibility as possible may choose to design their course of study in plant sciences without declaring a specialization. Those students develop a strong background in plant science but have fewer required courses so that they can explore other areas of interest.

More than 140 courses that deal directly with some area of plant science are offered by the cooperating departments, and other courses relating to plant science are offered elsewhere in the university. There are also ample opportunities for internships, undergraduate teaching, and research experience. Qualified students, especially those expecting to go on for graduate degrees, are encouraged to avail themselves of such opportunities. Students who are planning to enter the workforce immediately upon completion of the B.S. degree are encouraged to obtain practical experience. This may involve summer employment in research or in a plant production or maintenance-related industry such as a lawn and tree care company, commercial greenhouse, nursery, orchard, vineyard or winery, botanical garden or arboretum, crop production farm, or with Cooperative Extension. Plant sciences faculty members also encourage students to avail themselves of opportunities to work and/or study abroad.

In addition to classrooms and laboratories in five buildings on the Cornell campus proper, research and teaching facilities adjacent to the campus are freely available to students for hands-on practice, technical training, independent research projects, and internships. These facilities include research

orchards and vineyards, golf courses and a turf research facility, the Cornell Plantations (including arboretum and natural areas), and vegetable and field crop farms. Demonstration/research facilities in Aurora (Cayuga County), Geneva (Ontario County), Highland (Ulster County), Lake Placid (Essex County), Middletown (Orange County), Odessa (Tioga County), and Riverhead (Suffolk County) are also sites administered by departments in the Plant Sciences consortium and are available for undergraduate and graduate field study.

For more information about this major, see www.cals.cornell.edu/cals/hort/teaching/plant-sci-undergrad/index.cfm

Crop science is a specialization that focuses on the major food and feed crops of the world, such as wheat, corn, rice, soybeans, and alfalfa. In addition to 15 credits in applied crop science, students in this program take at least 6 credits in plant protection (weed science, entomology, and plant pathology) and at least 6 credits in soil science. The crop science specialization can be focused on preparation for graduate school or be combined with a crop management minor for those planning to be certified crop advisors.

Horticulture. Derived from the Latin word "hortus," meaning garden, horticulture is a blend of science and culture involving knowledge of plants grown in farms and gardens, parks and landscapes, and athletic and recreational facilities; indoor plants; greenhouse and nursery plant production; and crops used for wines, herbs and spices, medicinal purposes, and coffee and teas. The knowledge and skills essential to grow, maintain, process, and market horticultural plants are in high demand in a world increasingly concerned with environmental quality, recreation, and health.

The 40 faculty members in horticulture specialize in almost every aspect of horticultural science, with active research and outreach programs regionally, nationally, and internationally.

Students choosing a concentration in horticulture must complete a minimum of 40 credits of core courses for the plant sciences major, plus the following courses:

HORT 1101 Horticultural Science and Systems (4 credits)

HORT 4000 Plant Propagation (3 credits)

Two HORT courses in plant production or management at the 4000 level (6 credits)

One additional course of integrated pest management (plant pathology, entomology, or weed science) beyond the 3-credit plant sciences core requirement (3 credits)

Students transferring into Cornell from other colleges can petition to waive or adjust these requirements, in consultation with their faculty advisors.

Plant biology stresses a basic, rather than applied, understanding of how plants function, grow, and develop, as well as a study of their genome, evolution, and relationships to humans. It provides undergraduates with a thorough preparation for graduate study in plant sciences. In cooperation with an advisor each student plans a curriculum with a concentration in basic sciences, supplemented by more advanced courses in plant biology. Students

specializing in plant biology within the plant sciences major should take a minimum of four courses beyond the core of plant sciences courses. Options include plant molecular biology, plant cell biology, biochemistry, ethnobotany, and further courses in the function, growth, genetics, systematics, ecology, and evolution of plants. Individual research under professorial guidance is encouraged. Different options within plant biology afford a flexible curriculum.

Plant breeding and genetics relates information about genetics/genomics of plants to the improvement of cultivated plant species. Agriculturally important genes are identified, characterized, and deployed through combinations of molecular studies and sexual crosses. This area of study integrates genetic information with plant physiology/biochemistry, plant pathology, entomology, conservation biology, international agriculture, and related areas to create crops that meet the needs of modern society. In addition to the core plant sciences courses, students should take PLBR 2010, 4030, 4040, and BIOPL 3430. Other courses may be included after consultation with the advisor. Students are encouraged to participate in research projects and take advantage of opportunities for internships in industry.

Plant pathology and plant-microbe biology faculty study interactions of plants with pathogenic and beneficial microorganisms and with toxic elements in air and water. Some specialists in the field choose to focus their attention on the cause and management of plant diseases and others employ contemporary tools of molecular biology to answer fundamental questions about the nature of host-pathogen interactions. Working together, they advance the frontiers of science to ensure rapid deployment of new strategies for growing healthy crops with maximum yields and minimal impacts on the surrounding environment. For most students, a concentration in Plant Pathology and Plant-Microbe Biology is preparation for graduate study in the field. However, graduates may also be employed as sales or technical representatives with agribusiness firms, Cooperative Extension educators, state or federal regulatory officials, and laboratory technicians. Suggested courses beyond the Plant Science core include organic chemistry, biochemistry, calculus, introductory plant pathology, mycology, entomology, and plant breeding.

Plant protection is offered to students who are interested in the management of plant pests. It includes the study of insects, diseases, weeds, vertebrate pests, and other factors that prevent maximum crop production. Although designed as a terminal program for students desiring practical preparation for careers in pest management, the specialization can also provide an adequate background for graduate work in entomology, plant pathology, or weed science.

Science of Earth Systems (SES)

The EARTH SCIENCES have never been more critical to society than they are today. Global warming, dwindling energy resources, inadequate water supplies, political strife over

strategic minerals, and megadisasters threatened by volcanic eruptions, earthquakes, tsunamis, and hurricanes: these are but a few of the headlines that appear with increasing frequency. The Department of Earth and Atmospheric Sciences at Cornell is a global leader in research directed toward understanding the fundamental processes that have shaped our planet, and is committed to providing Cornell students with the earth literacy needed to serve as informed citizens and wise stewards of the Earth. EAS faculty members and graduate students carry out frontier research on both basic and applied aspects of subjects as diverse as satellite monitoring of volcanic activity, the deep structure of the Andes and Tibetan Plateau, the nature of the earth's ionosphere, and the impact of aerosols on global climate.

The Science of Earth Systems (SES) major is the undergraduate program offered by EAS to Cornell students in the Colleges of Engineering, Arts and Sciences, and Agriculture and Life Sciences. Students in this program can pursue education and research that prepares them to compete for careers or graduate study at leading institutions in this country and abroad. Students may choose to focus on one of a number of disciplinary specialties, such as geophysics or tectonics, or develop the broad expertise needed to understand the interactions between the diverse elements of Earth and life in the past, present, and future. By analyzing the complex relations among the ocean, solid earth, atmosphere, and biosphere, students can help meet society's growing demand for energy, minerals, and clean water as well as contribute to mitigating the negative impacts related to global warming, rising sea level, natural hazards, and decreasing biodiversity.

The SES program is intrinsically interdisciplinary, involving many branches of science and engineering. Examples include archaeology, astronomy, biological and environmental engineering, civil and environmental engineering, and ecology and evolutionary biology. The SES program is unique in that it incorporates the fundamentals of earth science with the emergence of a new and more complete approach that encompasses all components of the earth system—air, life, rock, and water—to gain a new and more comprehensive understanding of the world as we know it.

To achieve a complete understanding of these important issues, students must have a desire to take a very hands-on approach. An abundance of opportunities exist for geological, oceanographic, and meteorological research in the field and for nationwide and international travel as well as paid research experience. Students have worked with faculty members in the Andes, the Aleutians, the Rockies, the Atacama Desert, the Caribbean, Tibet, and Hawaii, and have spent a semester at sea in the Woods Hole Ocean Studies Program. Students are also able to probe the ionosphere of Earth and the surface of Mars by utilizing techniques in remote sensing.

The SES major provides a strong preparation for graduate school in any one of the earth sciences, such as atmospheric sciences, geological sciences, geophysics, geochemistry, oceanography, hydrology, and biogeochemistry. Students seeking employment with the B.S. degree will have

many options in a wide variety of careers related to energy, the environment, and critical resources in both the private sector and government. Students with strong science background provided by the SES major are also highly valued by graduate programs in environmental law, public affairs, economics, and public policy.

Requirements for the Major

1. Basic Math and Sciences

This part of the SES curriculum builds a strong and diverse knowledge of fundamental science and mathematics, providing the student with the basic tools needed in upper-level science classes.

- MATH 1910–1920 (or MATH 1110–1120)
- PHYS 2207–2208 (or PHYS 1112–2213)
- CHEM 2070–2080 or 2070–1570 or 2090–2080
- BIOLOGY—there are three options (CALS students must choose within option 1):

- one year of biology, choosing from the introductory biology sequences of courses: BIOG 1101/1103–1102/1104, or 1105/1106, or BIOG 1109/1110
- one semester from the introductory biology sequences of courses (listed in option 1) and EAS/BIOEE 1540 or EAS 1700
- students may substitute (with written permission of their advisor) one semester of biology with an additional semester of chemistry, math, or physics.

- Required Introductory Course: EAS 2200 The Earth System
- Science of Earth Systems Core Courses

These courses are founded on the most modern views of the planet as an interactive and ever-changing system, and each crosses the traditional boundaries of disciplinary science. Three courses selected from the following four core courses are required for the major.

- EAS 3010 Evolution of the Earth System
- EAS/NTRES 3030 Biogeochemistry
- EAS 3040 Interior of the Earth
- EAS 3050 Climate Dynamics

4. Concentration Courses

Four intermediate to advanced-level courses (3000 level and up) that build on the core courses and have prerequisites in the basic sciences and mathematics courses are required. Note that additional basic math and science courses may be required as prerequisites for courses chosen for the concentration. The concentration courses build depth and provide the student with a specific expertise in some facet of Earth system science. The concentration should be chosen during the junior year or before in consultation with an SES advisor whose interests match those of the student. Four concentrations are defined for the major: atmospheric sciences, biogeochemistry, geological sciences, and ocean sciences (see EAS web site for details). Other concentrations can be tailored to a student's interests in concert with the student's

advisor and upon approval of the SES curriculum committee. Examples include sustainable Earth and environmental systems, earth system science and policy, hydrology, planetary science, and soil science.

5. Field/Observational/Laboratory Experience

Exposure to the basic observations of earth science, whether directly in the field, or indirectly by various techniques of remote sensing, or in the laboratory, is necessary to understand fully the chosen area of concentration in the major. A minimum of 3 credits of course work of an observational nature is required. Possibilities include

Courses in the Hawaii Environmental Semester program;

Courses given by the Shoals Marine Laboratory;

EAS 2500 (Meteorological Observations and Instruments);

EAS 3520 (Synoptic Meteorology I);

EAS 4170 (Field Mapping in Argentina);

EAS 4370 (Geophysical Field Methods);

EAS 4910 and/or 4920 (Undergraduate Research, total 3 credits) with appropriate choice of project

Field courses taught by another college or university (3-credit minimum), if approved by advisor.

For more information, contact Professor John Cisne, Department of Earth and Atmospheric Sciences, john.cisne@cornell.edu, or visit www.eas.cornell.edu.

Students may minor in Science of Earth Systems as well. See the EAS web site for more information.

Science of Natural and Environmental Systems

Environmental stewardship and sustainability are increasingly recognized as human and planetary imperatives. This environmental science major will provide you with a strong foundation in the basic sciences, and an introduction to the relationships between the biophysical and social sciences.

Concentrations include environmental agriculture, environmental biology, environmental economics, environmental information science, and sustainable development.

The curriculum comprises an intensive foundation in the sciences; an environmental core with courses covering earth, biotic, social, and economic systems; and several disciplinary programs of study. This major emphasizes inter- and multidisciplinary work, independent thinking and analysis, and development of competency in writing and speaking.

The SNES major is an excellent preparation for careers in governmental or non-governmental organizations responsible for environmental evaluation and policy; professional programs in law, business, journalism; and graduate programs in a variety of environmental science fields (earth science, ecology, environmental engineering, marine biology, soil science).

Foundation Courses

The purpose of this component of the program is to provide a strong foundation in the basic sciences and an introduction to the relationships between the biophysical and social sciences. Many of these courses (listed below) will also contribute to completion of CALS distribution requirements.

- two semesters of college-level biology
- two semesters of college-level calculus
- four semesters of college-level chemistry and physics (at least one semester of each)
- one semester of college-level statistics
- DEA 1500 Introduction to Human-Environment Relationships
- NTRES 2010 Environmental Conservation

The freshman and sophomore years are designed to provide a strong scientific basis for future advanced study and to become engaged in environmental studies through DEA 1500 and NTRES 2010. Depending on student interest and available time, other courses in environmental study may be taken as electives early in the schedule. Advanced placement credit will be accommodated in the program through consultation with the student's faculty advisor.

Environmental Core

The environmental core consists of six courses. Its purpose is to provide a rigorous, integrated understanding of the environment, broadly defined. This core recognizes that knowledge of the environment encompasses physical and biological sciences, social sciences, and human behavior. SNES 1101, required in the freshman year, provides a unifying overview of the goals, depth, and breadth of the major.

Core courses are to provide integration (among areas, disciplines, methodologies, topics, and issues); systems emphasis; basic, rigorous presentation of core material; root competencies for understanding the environment; a framework for further advanced courses; and a new way of thinking that enables innovative solutions to difficult problems.

Biotic Systems: BIOEE 2610 Ecology and the Environment

Colloquium Series: SNES 2000 Environmental Sciences Colloquium

Earth Systems: CSS 3650 Environmental Chemistry: Soil, Air, and Water

Economic Systems: AEM 2500 Environmental and Resource Economics

Environmental Science: SNES 1101 Intro to the Science and Management of Environmental and Natural Resources

Social Systems: DSOC 3240 (STS 3241/SOC 3240) Environment and Society

Programs of Study

Programs of study that focus in one or more areas of environmental science have been established to provide disciplinary expertise sufficient for entry-level professional proficiency. Each student in the major will be required to take four courses at the 3000 level or above in at least one program of study.

Programs of study do not replace or duplicate current majors. Rather, they provide the basic

core of knowledge essential for an introductory understanding of the area—the concepts, basic science, methodologies, and major applications. Programs of study include

Environmental Agriculture

Environmental Biology

Environmental Economics

Environmental Information Science

Sustainable Development

For more information about this major or minor, see <http://snes.eas.cornell.edu>, visit the undergraduate program office in 12 Fernow Hall, or send e-mail to sw38@cornell.edu.

Viticulture and Enology

The juice and wine grape industry is expanding rapidly in New York State, creating opportunities for experts in grape-growing (viticulture), wine-making (enology), wine marketing, and other related scientific fields. In recent years there has been a shortage of qualified personnel to manage vineyards and wineries.

Cornell's new Viticulture and Enology major is creating the next generation of leaders for the wine-grape industry in New York, nationally, and internationally. Its primary focus is on cool climate grapes and wines, addressing the unique challenges of climates, soils, new and traditional grape varieties, and marketing estate-grown wines. The major offers two concentrations: (1) the Viticulture concentration is for those primarily interested in grape growing, and (2) the Enology concentration emphasizes wine production. The curriculum for both concentrations includes many courses in common, and the major provides a strong foundation in the physical and biological sciences. College distribution requirements ensure a broad educational background for all students.

The Viticulture and Enology Program maintains extensive research/teaching vineyards near the Ithaca campus, providing students with hands-on experience producing grapes for juice or fermentation in the enology courses. A new teaching winery is located at the Cornell Orchards next to the Ithaca campus, and at the New York State Agricultural Experiment Station in Geneva, enabling students to learn grape processing, wine-making, and chemical analysis of grapes and wines. Our vineyards include more than 30 wine and table grape varieties, including native American grapes, French-American hybrid grapes, and most of the major European vinifera-type grapes.

The major is closely linked with the New York wineries throughout the state, and student internships at these vineyards and wineries are an integral part of the curriculum. Most of our classes have fewer than 20 students, providing ample opportunities for student/faculty interactions and involvement of undergraduate students in faculty research and outreach programs. In addition, students have access to extension and research activities in viticulture and enology at several research stations, academic departments, and facilities at Cornell University.

Special highlights of this major include:

- Regional focus on the special challenges and opportunities of viticulture and enology in New York and cool-climate areas worldwide

- Hands-on teaching vineyards and student winery near the Ithaca campus
- Flexibility to add electives from the Department of Applied Economics and Management, the School of Hotel Administration, and other Cornell units
- The program draws on the resources of Cornell's Geneva Campus at the New York State Agriculture Experiment Station. The Station includes the USDA-ARS germplasm repository for cool-climate grapes and Cornell's state-of-the-art vinification and brewing technology laboratory

For more information, please see www.grapesandwine.cals.cornell.edu/undergraduate.

Foundation Courses

The purpose of this component of the major is to provide a strong foundation in the basic sciences. Many of these courses (listed below) will also contribute to completion of CALS distribution requirements.

- Two semesters of biology with lab
- Microbiology
- Introductory botany
- Plant function and growth
- Food analysis
- General inorganic and organic chemistry with lab
- Statistics

Core Viticulture and Enology Courses

Several VIEN or Viticulture and Enology major courses including:

- VIEN 1104 Introduction to Wines and Vines
- VIEN 2400 Grape Composition and Analysis
- VIEN 3400 Winemaking Technology
- VIEN 4400 Wine and Grape Flavor Development
- VIEN 4430 and 4440: Viticulture and Vineyard Management I and II
- VIEN 4444 Grapevine Biology

All students are encouraged to complete internships in the wine or grape industry during the summers and to participate in undergraduate research programs on campus. In New York State alone, more than 220 wineries and 600 vineyards are enthusiastic about working with students and hosting interns.

The Minor

Through a minor in Viticulture and Enology, students will learn the essential natural history and biology of wine grapes, systems, and technologies of grape and wine production, as well as the basic chemistry of grape and wine analysis. Those interested in pursuing a minor in Viticulture and Enology need to complete at least 13 credits.

Required Introductory Core Course (4 cr)

VIEN 1104 Wines and Vines (3 cr)

VIEN 1105 Wines and Vines, Lab (1 cr)

Required Upper Level Core Courses (7 cr)

VIEN 3400 Winemaking Practices and Principles (3 cr)

VIEN 3410 Winemaking Lab (1 cr)

VIEN 4430 Viticulture and Vineyard Management I (3 cr)

A minimum of one additional class and 2 additional credits in any course(s) with a "VIEN" designation except 1104, 3400, 3410, 4300, 4430, 4960 must also be taken.

Recommended courses include:

VIEN 2400 Wine and Grape Analysis and Composition (2 cr)

VIEN 4200 Grape Pest Management (3 cr)

VIEN 4400 Wine and Grape Flavor Development (3 cr)

VIEN 4440 Viticulture and Vineyard Management II (3 cr)

VIEN 4444 Grapevine Biology (3 cr)

Any undergraduate student in the college may enroll, subject to availability, in courses required for the minor. Several courses in VIEN have suggested prerequisites, but these requirements may be waived at the discretion of the instructor. Only courses for which a grade of "C" or better is received will count toward the minor in Viticulture and Enology (courses taken with an S-U option will not count).

Special Programs in Agriculture and Life Sciences

Interdisciplinary Studies. The opportunity to develop an independent major in interdisciplinary studies is available for students interested in pursuing a general education in agriculture and life sciences. In consultation with a faculty advisor, students plan a sequence of courses suited to their individual interests, abilities, and objectives. In addition to the distribution and other college requirements, this major may include a concentration of courses in one of several academic units of the college or university. A course of study for interdisciplinary studies must be planned with and approved by a college faculty advisor. Information on the options and names of faculty advisors prepared to advise in special programs are available in the Counseling and Advising Office, 140 Roberts Hall.

DESCRIPTIONS OF COURSES

Undergraduate and graduate courses in the college are offered through the academic departments and units and also through the biological sciences undergraduate program and the Division of Nutritional Sciences.

Descriptions of undergraduate and graduate courses are arranged by department, in alphabetical order.

Graduate study is organized under graduate fields, which generally coincide with the departments. Graduate degree requirements are described in the *Announcement of the Graduate School*. Courses for graduate students are described in the section on the academic department that offers them.

NONDEPARTMENTAL COURSES

ALS 1140 Explorations in Biology Research and Health Professions

Summer. 1 credit. Not for Biological Sciences majors. K. Gellman.

We will explore biology as it pertains to research, health-care professions, and the world at large. This seminar is designed for students with a strong interest in medicine and biological research. Discussions and laboratory exercises will allow students to interact with faculty and guest speakers. We will also learn to read and evaluate scientific publications on current biological topics. Course grade will be based upon a final paper.

ALS 1340/1341 N.Y.S. Emergency Medical Technician—Basic

Fall and spring. 6 credits awarded at completion of course. Full academic-year course requiring fall and spring enrollment. Recommended: basic or advanced first aid. S-U or letter grades. D. A. Grossman, R. Kniffen, and A. E. Gantert.

Intensive 170-hour course taught throughout the fall and spring semesters. Includes training in C.P.R. and defibrillation for the professional rescuer, oxygen administration, airway management, fracture management, bleeding control, spinal immobilization, patient assessment, emergency pharmacology, and the use of medical antishock trousers. Students qualify for the New York State E.M.T.—Basic certification process. Examinations upon successful completion of the course.

ALS 1350 Advanced N.Y.S. Emergency Medical Technician—Intermediate

Fall. 4 credits. Prerequisite: current certification as N.Y.S. Basic E.M.T. or have applied for reciprocity. S-U or letter grades. D. Grossman and staff.

Includes topics such as emergency pharmacology, patient assessment, advanced cardiac life support, emergency hypoperfusion management, and basic trauma life support. Uses classroom, lab, hospital, and field sessions to teach skills such as intubation, emergency IV access, electro-cardioversion and defibrillation, and patient assessment and pharmacological intervention. Requires extensive out of classroom time.

ALS 3920 New York State Government Affairs (also HE 3920)

Spring. 15 credits. Prerequisite: junior or senior standing; minimum GPA of 2.3. R. Canfield.

For description see HE 3920.

ALS 4000 Community Service Learning Project

Fall and spring. 3 credits. Prerequisite: none. Letter grades only. B. Chabot.

Students will develop an independent community-based project that will achieve both service and learning objectives. Learning objectives include skills in research, critical thinking, and leadership. Students will gain knowledge in community needs assessment, project planning, design, implementation, and evaluation. Faculty members will mentor students in developing community partnerships, research, and project planning.

ALS 4770 Environmental Stewardship in the Cornell Community

Spring. 2–4 credits, variable; may be taken more than once. J. M. Regenstein. Each student or team of students undertakes an original project to improve the environment at Cornell or in Tompkins County. Often the projects will involve working with the Cornell infrastructure (generally campus life and/or facilities). Through class discussions, students learn how to be more effective at developing environmental programs in the future, both during and after college. Students present a final oral report at a public forum to which senior Cornell administrators are invited. The final written report will be made public.

ALS 4940 Special Topics in Agriculture and Life Sciences

Fall or spring. 4 credits max. S–U or letter grades.

The college teaches “trial” or temporary courses under this number. Offerings vary by semester and are advertised by the college before the beginning of the semester. The same course is not offered more than twice under this number.

ALS 4960 Internship

Fall, spring, or summer. 6 credits max. Not open to students who have earned internship credits elsewhere or in previous semesters. S–U grades only.

Students may register only for internships in the New York State Assembly Intern Program, the New York State Senate Session Assistant’s Program, and the Albany Semester Program. A learning contract is negotiated between the student and the faculty supervisor(s), stating conditions of the work assignment, supervision, and reporting. Requires participation in any structured learning activities associated with the internship.

ALS 4991/4992 Honors Project I and II (also BSOC/STS/HE 4991/4992)

Fall and spring (yearlong). 8 credits (register for 4 credits each semester; total credits awarded is 8). Prerequisite: biology & society seniors and permission of department; overall GPA of 3.3. Apply in 306 Rockefeller Hall.

Students who are admitted to the honors program are required to complete two semesters of honors project research and to write an honors thesis. The project must include substantial research and the completed work should be of wider scope and greater originality than is normal for an upper-level course.

ALS 4998 Politics and Policy: Theory, Research, and Practice (also AMST/PAM/GOVT 4998)

Students in CALS must register for ALS 4998. S. Jackson and staff.

This course, taught in Washington, D.C., forms the core of the public policy option of the Cornell in Washington program. The central objective is to provide students with the instruction and guidance necessary to analyze and evaluate their own chosen issue in public policy. Toward that end, the course has three components: (1) weekly lectures providing background on the structures and processes of national politics and policy as well as training in research methodology; (2) student externships; and (3) individual research papers or projects. All three components interrelate to provide students with a strategy and framework for integrating

classroom-based learning, field experience, and individual research. Students apply through the Cornell in Washington office, M101 McGraw Hall, or online at ciw.cornell.edu.

ALS 5100 Leadership Development for Life Scientists

Spring. 3 credits. Prerequisite: invitation or permission of instructor. S–U grades only. M. Pritts, C. Warzynski, and L. Gasser.

Formal training and practice of skills required for leading people in an academic or business environment. Skills include coaching, feedback, managing conflict, fostering teamwork, creating vision, and developing diversity. A significant portion is devoted to understanding one’s own strengths and weaknesses and how to recognize and use strengths in others.

ALS 5800 International Teaching Assistant Development Program Course 3

Fall or spring. 2 credits. Prerequisite: EDUC 5790. ITADP staff.

Specifically designed for international graduate students who plan to assume teaching assistant responsibilities that range from lab introductions to individual tutoring sessions. Participants address English-language issues relating to phonemes, grammar, and suprasegmentals. Activities in these areas target communicative functions such as presenting concepts, initiating and sustaining conversation, and interpreting information in academic settings.

ALS 5810 International Teaching Assistant Development Program Course 4

Fall or spring. 2 credits. Prerequisite: ALS 5800. ITADP staff.

Specifically designed for international graduate students who have completed ALS 5800 and who plan to assume teaching assistant responsibilities that range from lab introductions to individual tutoring sessions. Participants develop skills in self-monitoring, critical listening, and language fluency with attention to time frame usage, academic terminology, extended discourse, and compensatory speech strategies.

ALS 6610–6611 Environmental Policy (also BSOC 4611–4612, BIOEE 6610–6611)

6610, fall; 6611, spring. 3 credits each semester; students must register for 6 credits each semester since “R” grade is given at end of fall semester. Limited to 12 students. Prerequisite: permission of instructor. D. Pimentel.

For description, see BIOEE 6610.

AGRICULTURAL SCIENCES

D. Brown, D. Buckley, W. Camp, D. Cherney, P. Dewey, A. DiTommaso, L. Drinkwater, G. Fick, B. Gloy, R. Gravani, P. Hobbs, Q. Ketterings, W. Knoblauch, J. Losey, R. Nelson, T. Park, T. Setter, M. Smith, M. Van Amburgh, D. Viands, C. Wien

The Agricultural Sciences major is an interdisciplinary program for students wishing to pursue a general education in agriculture to prepare for careers that require a scientific and integrative understanding of agriculture and food systems. Students can concentrate in one or more areas including: Animal

Science, Agriculture Economics and Management, Education and Communication, Crop Production and Management, and Sustainable Agriculture.

AGSCI 2940 Introduction to Agricultural Machinery (also CSS/HORT 2940)

Fall. 2 credits. B. Flannigan and A. DiTommaso.

For description, see CSS 2940.

AGSCI 3800 Organic Food and Agriculture (also CSS/HORT 3800)

Fall. 3 or 4 credits. Prerequisites: CSS 1900, CSS 2600, HORT 1101 recommended, or permission of instructor. Staff.

For description, see CSS 3800.

AGSCI 4010 Seminar in Agricultural Sciences

Fall or spring. 1 credit. S–U grades only. A. DiTommaso.

Students in this weekly seminar series will learn about current debates and hot issues in the agricultural sciences today from both local and global perspectives. It will include both Agricultural Sciences majors presenting on internship and capstone experiences, and invited guest speakers. The target audience is Agricultural Sciences majors. Students are required to prepare a weekly reflection on each presentation. This course creates a weekly forum in which majors in our interdepartmental program can gather to learn and discuss important issues in agricultural sciences, while at the same time building community within our Agricultural Sciences major program.

AGSCI 4940 Special Topics in Agricultural Sciences

Fall or spring. 4 credits max. A. DiTommaso.

The department teaches “trial” courses, and special topics not covered in other courses, at the undergraduate level, under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

AGSCI 4960 Internship in Agricultural Sciences

Fall, spring, or summer. 1–3 credits variable, 6 credits maximum. Prerequisite: permission of student’s advisor in advance of participation in internship programs. S–U or letter grades. Staff.

In this experiential learning opportunity, students will participate in structured, on-the-job learning under supervision of qualified professionals in a cooperating external organization. Internships and learning goals are arranged by the student in conjunction with an internship advisor and the internship host. Course may be taken multiple times for up to 6 credits. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

AMERICAN INDIAN STUDIES

The American Indian Program offers a minor in American Indian Studies to undergraduate students. The minor is earned upon the completion of five courses: AIS 1100 and AIS 1110, plus at least three other courses from the

AIS curriculum, for a minimum total of 15 credit hours. The three additional courses must include one course from Group A (arts and humanities) and one course from Group B (social and natural sciences) as listed below. One of the courses offered toward the minor must be at the 3000 or 4000 level. Only one 3-credit independent study (AIS 4970) may be counted toward the minor. Only program-listed courses for which the student has earned a letter grade of C or better will be counted toward the minor. No courses taken for S-U credit will be counted toward the minor. A number of older courses no longer offered by AIP do count toward the minor, as do courses with the same title that were numbered using the old three-digit system. Students seeking to minor in American Indian studies or determining the eligibility of a course are encouraged to contact Professor Kurt Jordan, associate director for academic development, at kj21@cornell.edu. Application materials for the minor may also be obtained from the AIP office, 4th floor, Caldwell Hall. Students are also advised to consult www.aip.cornell.edu/academic.htm for the most up-to-date listings of course offerings.

Minor in American Indian Studies

Required Courses

AIS 1100 Introduction to American Indian Studies I: Indigenous North America to 1890

AIS 1110 Introduction to American Indian Studies II: Contemporary Issues in Indigenous North America

Electives

(Group A, Arts and Humanities)

AIS 2360 Native Peoples of the Northeast

AIS 2390 Seminar in Iroquois History

AIS 2600 Survey of Native American Literatures in the United States

AIS 2660 Introduction to Native American History

AIS 3860 Contemporary American Indian Fiction of the United States

AIS 4300 Native American Philosophies

AIS 4860 American Indian Women's Literature

AIS 4900 New World Encounters, 1500-1800

(Group B, Social and Natural Sciences)

AIS 2200 Field Course in Iroquois Archaeology

AIS 2350 Archaeology of North American Indians

AIS 3110 Social Movements

AIS 3330 Ways of Knowing

AIS 3400 Contested Terrain: Hawaii

AIS 3480 Iroquois Archaeology

AIS 4000 Critical Approaches to American Indian Studies

AIS 4600 Field and Analytical Methods in American Indian Archaeology

AIS 4720 Historical Archaeology of Indigenous Peoples

(Independent Study)

AIS 4970 Independent Study

AIS 6970 Individual Study in American Indian Studies

E. Cheyfitz, director; K. Kassam, C. Andronicos, L. Donaldson, C. Geisler, A. Gonzales, K. Jordan, J. Mt. Pleasant, J. Parmenter, T. Richardson, J. Rickard

AIS 1100 Introduction to American Indian Studies I: Indigenous North America to 1890 (CA) (HA)

Fall. 3 credits. P. Nadasdy.

Provides an interdisciplinary introduction to American Indian cultures and histories from Precolumbian times to 1890, emphasizing the current relevance of traditional values and the ways the deep past continues to affect present-day Indian peoples. Course materials draw on perspectives from the humanities, social sciences, and expressive arts.

AIS 1110 Introduction to American Indian Studies II: Contemporary Issues in Indigenous North America (CA) (HA)

Spring. 3 credits. K. Kassam.

Interdisciplinary exploration of contemporary issues in American Indian country north of Mexico after 1890. Examines Indian sovereignty, nationhood, agency, and engagement through time using the perspective of American Indian studies. Course materials are drawn from the humanities, social science, and expressive arts.

AIS 2200 Field Course in Iroquois Archaeology (also ANTHR/ARKEO 2200) (HA) (SBA)

Summer. 3 credits. Letter grades only. K. Jordan.

This course provides hands-on-training in archaeological field methods through survey and excavation at historic-period Iroquois (Haudenosaunee) sites in the Finger Lakes region. Most class time will consist of supervised excavation of past residential and domestic areas, supplemented by lectures on archaeological methods and Iroquois history and material culture.

AIS 2350 Archaeology of North American Indians (also ANTHR 2235) (CA) (HA)

Next offered 2010-2011.]

AIS 2360 Native Peoples of the Northeast, Pre-Contact to the Present (also HIST/AMST 2360) (CA) (HA)

Spring. 4 credits. Next offered 2011-2012. J. Parmenter.

For description, see HIST 2360.]

AIS 2390 Seminar in Iroquois History (also HIST 2390) (CA) (HA)

Fall. 4 credits. Next offered 2011-2012. J. Parmenter.

For description, see HIST 2390.]

AIS 2600 Survey of American Indian Literatures in the United States (also ENGL 2600) (LA) (CA)

Spring. 4 credits. Next offered 2011-2012. E. Cheyfitz.

For description, see ENGL 2600.]

AIS 2660 Introduction to Native American History (also HIST/AMST 2660) (CA) (HA) (D)

Spring. 4 credits. Next offered 2010-2011. J. Parmenter.

For description, see HIST 2660.]

[AIS 3110 Social Movements (also DSOC/LSP 3110)]

Fall. 3 credits. Prerequisites: DSOC/SOC 1101 or permission of instructor. S-U or letter grades. Next offered 2010-2011. A. Gonzales.

This course examines the transnational dimensions of social movements to assess the implications of globalization for political mobilization and the ways that social movement actors engage the global political process to effect social change.]

AIS 3330 Ways of Knowing: Indigenous and Local Ecological Knowledge (also NTRES 3330) (CA, SBA) (D)

Fall. 3 credits. Prerequisite: junior, senior, or graduate standing. Letter grades only. K. Kassam.

For description, see NTRES 3330.

AIS 3400 Contested Terrain: Hawaii (also SOC 3420) (CA) (SBA)

Spring. 3 credits. Prerequisite: introductory or intermediate-level social sciences or history. M. M. Hamabata.

This course, offered through Earth and Atmospheric Sciences' program in Hawaii, draws from the fields of history, political science, and sociology to present an historical understanding of contemporary Hawaiian society. Topics include Western contact, establishment of Western institutions, overthrow of a sovereign government, annexation, integration into the United States. Direct experience with Hawaiian leaders and institutions are incorporated to address contemporary issues: sovereignty, economic development/dependency, social change, and land use as a sociopolitical and cultural struggle. Students should consult www.eas.cornell.edu/cals/eas/academics regarding the status of this course.

AIS 3422/6422 Culture, Politics, and Environment in the Circumpolar North (also ANTHR 3422/6422) (CA)

Spring. 4 credits. Prerequisite: none. Letter grades only. P. Nadasdy.

For description, see ANTHR 3422/6422.

[AIS 3480/6480 Iroquois Archaeology (also ANTHR 3480/6480) (CA) (HA)]

Fall. 4 credits. S-U or letter grades. Next offered 2011-2012. K. Jordan.

For description, see ANTHR 3248/6248.]

[AIS 3860 Contemporary American Indian Fiction (also ENGL 3670) (LA) (CA)]

Fall. 4 credits. Next offered 2011-2012.

Examines contemporary American Indian fiction as a response to the colonial structure of federal Indian law. Beginning with Mourning Dove's *Cogewea*, a novel of the Allotment Era, students read works by a range of Native fiction writers (from a list that includes McNickle, Welch, Silko, Vizenor, Hogan, Alexie, Walters, Glancy, and Red Corn) that respond critically to U.S. federal Indian policy.]

AIS 4000 Critical Approaches to American Indian Studies (also AIS 6000) (CA) (HA)

Fall. 4 credits. Prerequisite: advanced undergraduates or graduate students; permission of instructor. Course requirements differ at 4000 and 6000 levels. S-U or letter grades. Staff.

An interdisciplinary survey of the literature in Native American Studies. Readings engage themes of indigeneity, coloniality, power, and "resistance." The syllabus is formed from

some "classic" and canonical works in Native American Studies but also requires an engagement with marginal writings and theoretical and historical contributions from scholars in other disciplines.

AIS 4300 Native American Philosophies (also ENGL/AMST 4300) (KCM) (LA)

Fall. 4 credits. Prerequisite: permission of instructor. E. Cheyfitz.

This course will focus on American Indian, Native Alaskan, and Native Hawaiian social, spiritual, legal, political, aesthetic, scientific, environmental, and historical thought from the pre-invasion period (before 1492) to the present as it is contained in both oral narratives and written texts (nonfiction, fiction, and poetry).

[AIS 4600 Field and Analytical Methods in American Indian Archaeology (also ANTHR/ARKEO 4260) (SBA) (HA)]

Next offered 2011–2012.]

AIS 4720/7220 Historical Archaeology of Indigenous Peoples (also ANTHR/ARKEO 4272/7272) (CA) (HA)

Fall. 4 credits. K. Jordan.

Seminar examining the responses of indigenous peoples across the world to European expansion and colonialism over the past 500 years. Archaeological case studies from North America, Africa, and the Pacific provide a comparative perspective on Postcolumbian culture contact and illustrate how archaeology can both supplement and challenge document-based histories.

[AIS 4860 American Indian Women's Literature (also ENGL 4860) (LA) (CA)]

Spring. 4 credits. Next offered 2010–2011. For description, see ENGL 4860.]

[AIS 4900 New World Encounters, 1500 to 1800 (also HIST/AMST 4990) (CA) (HA)]

Next offered 2011–2012.]

AIS 4970 Independent Study

Fall or spring. 1–4 credits. Staff.

Topic and credit hours TBA between faculty member and student. The American Indian Program office must approve independent study forms.

AIS 6000 Critical Approaches to American Indian Studies (also AIS 4000)

Fall. 4 credits. Staff.

For description, see AIS 4000.

AIS 6010 American Indian Studies Proseminar

Fall and spring. 1 credit. Staff. graduate-level course that introduces students to ongoing research in the field of American Indian Studies in a proseminar/colloquium format. Advanced graduate students are expected to present their work in progress; all are expected to attend each seminar and provide presenters with critical and constructive commentary on papers.

[AIS 6350 Indigenous Peoples and Globalization (also DSOC/LATA 6350)]

Fall. 3 credits. Next offered 2010–2011. A. Gonzales.

Explores ways in which processes of globalization affect indigenous peoples worldwide and the strategies indigenous peoples are using to deal with those

pressures. At issue are the lands, resources, traditional knowledge, and indigenous struggles for recognition and self-determination.]

[AIS 6610 Colonial American Literatures (also ENGL/AMST 6610)]

Spring. 4 credits. Next offered 2010–2011. E. Cheyfitz.

For description, see ENGL 6610.]

[AIS 6710 Law and Literature in the Antebellum United States (also ENGL 6710)]

Spring. 4 credits. Next offered 2010–2011. E. Cheyfitz.

For description, see ENGL 6710.]

AIS 6970 Individual Study in American Indian Studies

Fall, spring, or summer. 1–3 credits. S–U or letter grades. Staff.

A student may, with approval of a faculty adviser, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of interest in American Indian Studies.

APPLIED ECONOMICS AND MANAGEMENT

L. W. Tauer, chair (154 Warren Hall, 255 4576); C. B. Barrett, J. Bennett, A. Bento, N. L. Bills, G. Blalock, V. L. Bogan, R. N. Boisvert, N. H. Chau, R. D. Christy, J. M. Conrad, R. T. Curtis, H. Daouk, H. deGorter, B. O. Earle, B. A. Gloy, C. Gomes, M. Gomez, D. A. Grossman, D. R. Just, H. M. Kaiser, S. M. Kanbur, W. A. Knoblauch, S. C. Kyle, D. R. Lee, A. E. Leiponen, W. H. Lesser, E. E. Lewis, J. W. Lippitt, J. E. Little, E. W. McLaughlin, T. D. Mount, D. T. Ng, C. F. Nicholson, A. M. Novakovic, P. D. Perez, D. J. Perosio, G. L. Poe, E. Prasad, J. T. Prince, C. K. Ranne, T. M. Schmit, W. D. Schulze, D. H. Simon, M. W. Stephenson, D. H. Streeter, W. G. Tomek, C. G. Turvey, C. L. vanEs, B. Wansink, A. Wessels, G. B. White

AEM 1101 Introduction to Applied Economics and Management

Fall. 1 credit. Required of and limited to freshmen in AEM. S–U grades only.

D. A. Grossman and A. M. Novakovic.

The purpose of this course is to acquaint first-year students in AEM with their new department and better enable them to make academic and early-career decisions. A cross-section of faculty will lead discussions that introduce most of the major academic subjects taught in AEM. In addition, there are presentations on student organizations and course planning and an assignment on the use of library resources.

AEM 1102 Personal Evaluation and Development

Spring. 1 credit. Required of and limited to first-year majors in AEM. S–U grades only. A. M. Novakovic.

This course is designed to help students better understand their personal and professional skills and attributes and enhance their abilities in areas such as teamwork, leadership, trust, ethics, and diversity and what this means for interpersonal relationships. The weekly meeting will either be one plenary lecture or a smaller lab.

Students will learn by experience and have guest lecturers from the business community.

AEM 1200 Introduction to Business Management

Fall, spring, summer. 3 credits. Two evening prelims. P. D. Perez.

Provides an overview of management and business. Human resource, marketing, finance, and strategy concerns are addressed with consideration paid to current issues such as technological innovation and its impact on operations, globalization, ethics, teamwork, leadership, and entrepreneurship. Opportunity to deliver an integrative group project.

AEM 1210 Entrepreneurship Speaker Series

Fall. 1 credit. P. D. Perez.

Course consists of guest lectures by faculty members engaged in the study and practice of entrepreneurship and by prominent entrepreneurs associated with the entrepreneurship@Cornell program, with a view to inform and inspire students. Evaluation includes attendance, book reports, and written feedback on lectures.

AEM 1220 Entrepreneurship in the Life Sciences

Spring. 1 credit. W. Lesser.

Seminars and guest lectures by faculty members and entrepreneurs engaged in the study and practice of entrepreneurship in the life sciences. Emphasis on the process of turning scientific discovery into business opportunity and success. Evaluation includes attendance and written feedback on lectures. Intended as a follow-up to AEM 1200 and AEM 1210 but may be taken independently.

AEM 1230 Foundations of Entrepreneurship and Business

Fall and spring. 2 credits. P. D. Perez.

Introductory course providing a sound base to both the understanding of entrepreneurial activity and possibilities and the study and practice of entrepreneurship at Cornell. Emphasis on the identification and elaboration of business opportunities (i.e., business ideas). Extensive use of IT-based learning and presentation tools.

[AEM 2000 Contemporary Controversies in the Global Economy]

AEM 2100 Introductory Statistics

Spring. 4 credits. Prerequisite: college algebra. Two evening prelims. C. van Es.

Introduces statistical methods. Topics include the descriptive analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, and correlation analysis. Includes an introduction to Minitab, a statistical software package.

AEM 2190 Introduction to Applied Portfolio Management

Summer. 4 credits. Special program. D. Dase.

Based in New York City's Financial District. Topics include capital markets; the impact of the economy and the Federal Reserve System; recent stock market history; regulation; investment banking and management principles of both institutional and individual portfolios. Industry guest speakers provide unique perspectives. An individualized internship is required of all students.

AEM 2210 Financial Accounting

Fall, summer. 3 credits. Not open to freshmen. Priority given to CALS majors. Two evening prelims. J. Little.

Comprehensive introduction to financial accounting concepts and techniques, intended to provide a basic understanding of the accounting cycle, elements of financial statements, underlying theory of GAAP, and financial statement interpretation. Topics include methods of recording inventory, receivables, depreciation, bonds, and equity. Requires two evening prelims and a comprehensive final; weekly homework assignments.

AEM 2240 Principles of Finance

Summer. 3 credits. R. Curtis.

This course focuses on the mathematics of finance, the economics of managerial decisions, corporate financial policy, risk management, and investments. Topics include time value, bonds, stock valuation, capital budgeting, financing alternatives, costs of capital, the capital structure decision, distribution policy, mergers and acquisitions, options, forward and futures contracts, market efficiency and market anomalies, strategies of successful investors, and personal finance.

AEM 2250 AEM Certificate in Business Management Consulting Project

Summer 1 credit. R. Curtis and P. Perez.

Student teams consult with local organizations in central New York and suggest solutions to problems those organizations are currently facing. Students will apply business principles they have learned during their AEM Certificate in Management summer immersion program. Each team will prepare a written report and will give a presentation to AEM Certificate faculty and representatives of the organization the team is working with.

AEM 2260 AEM Certificate Activities

Summer. 1 credit. Staff.

Students participate in special activities as part of the AEM Certificate in Business Management summer immersion program. While activities may vary from year to year, in the past these activities have included a field trip to corporate sites in New York City, Cornell Outdoor Education team building and leadership exercises, a career services résumé/job search presentation, and a talk on the evolution of a local small business by its founder. Student participation in all activities is mandatory and a paper focusing on "take-aways" from each activity is required.

AEM 2270 Introduction to International Business

Summer. 4 credits. D. Ng.

Based in the global finance center of Hong Kong, students will gain a fundamental understanding of how some of the most powerful multinational firms in the world make and implement financial decisions, how they manage risk and gain competitive advantage, how they interact with governments, and what the risks and returns are in conducting such international business. Students will be assigned to internships in order to experience firsthand how such corporations function.

AEM 2300 International Trade and Finance (also ECON 2300) (SBA)

Spring. 3 credits. Prerequisites: ECON 1110 or equivalent. Recommended: ECON 1120 or equivalent. S-U or letter grades. One evening prelim. D. R. Lee.

One-semester introduction to international economic principles and issues. Begins by

surveying key topics such as the elements of comparative advantage, tariff and nontariff barriers, and multilateral institutions. The second part of the course treats selected topics in international finance, including exchange rates, balance of payments, and capital markets. Discusses current issues such as the effects of trade liberalization, trade and economic growth, and instability in international capital markets. Designed as a less technical introduction to concepts developed at a more advanced level in AEM 4300 and ECON 3610-3620.

AEM 2400 Marketing

Fall, summer. 3 credits. E. W. McLaughlin.

Provides a broad introduction to the fundamentals of marketing. Explores the components of an organization's strategic marketing program, including how to price, promote, and distribute goods and services. Industry guest lectures and current marketing applications from various companies are presented and analyzed.

AEM 2410 Marketing Plan Development

Fall, spring. 2 credits. Requirement for and limited to AEM majors. Prerequisite: AEM 2400. D. J. Perosio.

Offers student teams the opportunity for an intense, hands-on application of basic marketing concepts through research and development of a marketing plan. Guided by a series of assignments, teams develop key components that are integrated into a comprehensive written plan for a local business.

AEM 2500 Environmental and Resource Economics (SBA)

Fall. 3 credits. S-U or letter grades.

G. Poe.

Introduces fundamental economic principles and the "economic approach" to policy issues, and demonstrates how these concepts underpin contemporary environmental and natural resource issues and policy solutions. Subjects include valuation, benefit-cost analysis, policy design, property rights, and ecological economics. Uses these tools to explore major current policy issues such as economic incentives in environmental policy, endangered species protection, air and water pollution, depletion of renewable and nonrenewable resources, and global warming.

AEM 3020 Farm Business Management

Fall. 4 credits. Not open to freshmen.

Prerequisite for AEM 4050 and 4270.

W. A. Knoblauch.

Intensive study of planning, directing, organizing, and controlling a farm business, with emphasis on the tools of managerial analysis and decision making. Topics include financial statements, business analysis, budgeting, and acquisition, organization, and management of capital, labor, land, buildings, and machinery.

AEM 3200 Business Law I (also NBA 5600)

Fall and summer. 3 credits. Prerequisite: junior, senior, or graduate standing. One evening prelim. D. A. Grossman.

Examines legal problems of particular interest to persons who expect to engage in business. Emphasizes the law of contracts, sales, agency, and property.

AEM 3210 Business Law II (also NBA 5610)

Spring. 3 credits. Prerequisite: junior, senior, or graduate standing; business law course or permission of instructor.

D. A. Grossman.

The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited-liability companies. The second portion reviews selected topics in business law, like employment discrimination, debtor/creditor relations, product liability, unfair competition, e-commerce law, and international business law.

[AEM 3220 Internet Strategy]

AEM 3230 Managerial Accounting

Spring. 3 credits. Priority given to CALS majors. Prerequisite: AEM 2210 or

equivalent. One evening prelim. J. Little.

Introduction to cost accounting emphasizing the application of accounting concepts to managerial control and decision making. Major topics include product costing, standard costing, cost behavior, cost allocation, budgeting, variance analysis, and accounting systems in the manufacturing environment. Requires use of electronic spreadsheets. Includes an evening prelim, a second exam, weekly homework.

AEM 3240 Finance (also PAM 5620)

Fall and spring. 4 credits. Priority given to CALS majors. Prerequisites: AEM 2100, 1200, and 2210, or equivalents. Three evening prelims. R. Curtis.

Focuses on the mathematics of finance, valuation, and the economics of managerial decisions, corporate financial policy, risk management, and investments. Topics include the time value of money, bond and stock valuation, capital-budgeting decisions, financing alternatives, the cost of capital and the capital-structure decision, distribution policy, mergers and acquisitions and restructuring, options, forward and futures contracts, market efficiency and market anomalies, strategies of successful investors, and personal finance.

AEM 3250 Personal Enterprise and Small Business Management

Spring. 4 credits. Prerequisites: junior or senior standing; AEM 1200 and 2210 or permission of instructor. Absolutely no adds or drops after second class meeting. Cost of term project: approx. \$100 per team. D. Streeter.

Focuses on the activities involved in planning a start-up business, including the exploration of strategic dimensions, performance of marketing research, and planning of financial aspects related to the new company. Lectures and hands-on clinics include visits by real-world entrepreneurs, who discuss the start-up process and the challenges of managing growth in a small business. Term project is the development of a business plan, completed in teams of no fewer than three students.

AEM 3280 Innovation and Dynamic Management (also HADM 4443)

Spring. 3 credits. Prerequisite: junior or senior standing. Staff.

For description, see HADM 4443.

[AEM 3290/3291 International Agribusiness Study Trip

3291, fall; 3290, spring. 2 credits. Prerequisites: AEM 1200 or 3020, and 2400. Open by application before March 1 of spring semester before course is offered. Approximately 12 students are selected with preference given to sophomores and juniors in CALS. Field study co-payment: \$800. B. Gloy and T. Schmit.

Gives students interested in agribusiness management exposure to the managerial practices essential to the success of agriculture, agribusiness, and food companies competing in the global marketplace. Involves a two-week international field study trip that takes place after the final exam period of the spring semester before the course is offered. The course meets for a few sessions in advance of the field study trip. A paper analyzing an aspect of the field study is required.]

AEM 3300 Managerial Economics and Decision Making

Spring. 3 credits. Prerequisite: ECON 1110. D. Simon.

Focuses on tools for making various decisions managers encounter in the real world, including decisions of pricing, output, advertising expenditures, and new product introductions. Considers issues such as how to estimate a firm's demand and cost functions as considered in making such decisions. Compares standard microeconomic models with more realistic approaches to making decisions. Emphasizes considering decisions that are less stylized and more similar to those managers face on a regular basis.

AEM 3310 Economics of Business Regulation

Spring. 3 credits. Prerequisites: ECON 1110, 3130, and AEM 1200. S-U or letter grades. J. Prince.

Studies the economics and other factors (e.g., politics, lobbying) that determine regulation policy along with firm strategies in regulated or potentially regulated markets. Major topics include antitrust, economic regulation, and environmental regulation. Applications to the current business environment are emphasized.

[AEM 3330 European Business Institutions]**AEM 3340 Women, Leadership, and Entrepreneurship**

Fall. 1 credit. Prerequisite: junior or senior standing. D. Streeter.

Seminar that uses lectures, guest panels, and readings to focus on issues facing women (and their partners) in their business careers. Topics include status of women in business leadership, pathways and strategies for leadership development, family/life balance issues, gender issues in the workplace, and resources for emerging leaders.

AEM 3350 International Technology Marketing of Biotechnology

Spring. 3 credits. Prerequisites: ECON 1110 and BIOG 1109 or equivalents. S-U or letter grades. W. H. Lesser.

Explores international technology marketing from an economics perspective using biotechnology as an example. Topics include technology theories, products, risk (health

and environmental) regulation, industry structure, labeling uses and regulations, public perceptions, patents, trade, and international conventions. The course is of interest to students of biotechnology, public technology policy, and international technology marketing.

AEM 3360 Intermediate Accounting I

Fall. 3 credits. Prerequisites: AEM 2210 and 3230. Staff.

Includes an overview of Generally Accepted Accounting Principles, balance sheet valuation, and income measurement and recognition. Other topics include accounting for pensions, earnings per share, and special financial reporting issues.

AEM 3370 Intermediate Accounting II

Spring. 3 credits. Prerequisite: AEM 3360 Intermediate Accounting I. Staff.

Continuation of the in-depth study of accounting theory, generally accepted accounting principles, and the techniques involved in measuring, recording, summarizing, and reporting financial data for business organizations. Learn the GAAP accounting for equities, revenue, investments, accounting changes, and statement of cash flows. Understand accounting alternatives within GAAP and accounting alternatives to GAAP for the topics covered so that students are prepared to understand and use future changes in GAAP.

AEM 3380 Social Entrepreneurs, Innovators, and Problem Solvers

Fall. 4 credits. A. Wessels.

This course introduces students to the social entrepreneurs, innovators, and visionaries who are creating new strategies for solving society's problems. The course highlights innovative case studies of success in restoring the environment, resolving conflicts, curing diseases, overcoming poverty, and addressing other problems of social injustice. At the end of the course, each student develops an original blueprint for social innovation: a creative proposal for solving a societal problem.

[AEM 3420 Integrated Marketing Communication]**AEM 3440 Consumer Behavior**

Fall. 3 credits. Prerequisites: AEM 2400 or equivalent. Preference given to AEM majors. B. Wansink.

Develops a useful, conceptual understanding of the problems and strategies associated with psychology behind consumer behavior. In doing so, the course provides frameworks that enable students to address these issues responsibly, systematically, and creatively.

AEM 3460 Dairy Markets and Policy

Spring. 3 credits. Prerequisites: junior, senior, or graduate standing. ECON 1110 or equivalent. S-U or letter grades. A. Novakovic.

Survey of topics related to the structure and performance of U.S. dairy markets and federal and state policies that regulate market activities.

AEM 4020/4021 Food and Brand Lab Workshop

Fall and spring. 6 credits total. Prerequisite: permission of instructor. B. Wansink.

The purpose of the Food and Brand Lab Workshop is to provide students with an advanced opportunity to develop an

advanced understanding of consumers by involving them in collaborative, theory-based research related to food. This course is focused on asking and answering the "why" questions behind consumer behavior. Fall-semester students will receive an "R" grade and then receive their grade for course in the spring semester.

AEM 4030 Farm Management Study Trip

Spring. 1 credit. Prerequisite: AEM 3020.

Open by application only.

W. A. Knoblauch and B. Gloy.

Special program to study production and management systems in diverse agricultural regions of the United States. Includes a trip (usually taken during spring break) to the region being studied. A different region is visited each year. The course meets in advance of the study trip and upon return from the trip. Students must write a paper that further explores an aspect of the trip.

AEM 4040 Financial Management for Agriculture and Agribusiness

Spring. 3 credits. Prerequisites: AEM 4050 or equivalent; permission of instructor.

C. Turvey.

To expand students' knowledge base of finance as it relates to agriculture and agricultural business. The course will follow three main themes: Capital Budgeting and Project Valuation; Cost of Capital; Risk Management.

AEM 4050 Agricultural Finance

Spring. 3 credits. Prerequisite: AEM 3020 or equivalent. Recommended: calculus and statistics. C. Turvey.

Discusses the principles and practices used in financing agricultural businesses, from the perspectives of the business owner and the lender. Topics include sources of capital, financing entry into agriculture, financial analysis of a business, capital management, financial statements, credit instruments, loan analysis, financial risk, and leasing.

AEM 4100 Business Statistics

Fall. 3 credits. Prerequisite: AEM 2100 or equivalent. C. van Es.

Focuses on techniques used to analyze data from marketing research, business, and economics. Topics include experimental design and ANOVA, contingency-table analysis, quality-control methods, time-series analysis and forecasting. Also includes brief introductions to nonparametric methods and multivariate analysis. Involves a research project designed to give experience in collecting and interpreting data.

AEM 4110 Introduction to Econometrics

Fall. 3 credits. Prerequisite: AEM 2100 and either ECON 3130 or PAM 2000 or equivalents. D. Just.

Introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression are discussed as are simultaneous equation models, simulation, and forecasting techniques.

AEM 4120 Computational Methods for Management and Economics

Fall. 3 credits. Primarily for juniors, seniors, and M.S. degree candidates. Prerequisite: AEM 2100 or equivalent. C. Gomes.

Course in applied mathematical programming. Emphasizes formulation of and interpretation of solutions to mathematical models of problems in economics and business. Studies blending, resource allocation, capital budgeting, transportation and financial planning, and inventory management. Introduces integer and nonlinear programming.

AEM 4130 Business Strategy Research

Fall. 3 credits. Prerequisite: AEM 2100 or equivalent statistics course; permission of instructor. G. Blalock.

AEM 4130 introduces empirical microeconomic research methods applied primarily to questions of business strategy. The course objective is to familiarize students with the potential problems of business strategy research and the methods employed to overcome those problems. Students will read and discuss peer-reviewed academic journal articles in business and economics.

AEM 4140 Behavioral Economics and Managerial Decisions

Fall. 3 credits. Prerequisites: junior or senior standing; ECON 3130 or PAM 2000. Lab fee: \$40. D. Just and W. Schulze.

Behavioral economics integrates psychology and economics by identifying systematic anomalies in decision-making. These are now recognized to be an important source of error in business decisions, and they provide the foundation for both behavioral marketing and finance. The course compares rational choice theory with behavior both in lecture and through a series of economics experiments in which students face situations that are likely to lead to anomalies such as "the winner's curse," the status quo bias, hyperbolic discounting, and bias in assessing risks. Students have the opportunity to evaluate their own decision-making.

AEM 4150 Price Analysis

Fall. 3 credits. Prerequisites: AEM 2100 or equivalent, ECON 3130 or PAM 2000 or equivalent. H. M. Kaiser.

Focuses on the analysis of supply and demand characteristics of commodities with particular attention to agricultural products. Pays special attention to empirical analysis. Includes institutional aspects of pricing, temporal and spatial price relationships, price forecasting, and the economic consequences of pricing decisions.

AEM 4170 Decision Models for Small and Large Businesses

Fall. 3 credits. Prerequisites: junior or senior standing (priority given to AEM majors); AEM 2100 or equivalent. No F lec in weeks labs are held. C. L. van Es.

Focuses on economic and statistical models of decision analysis and their applications in large and small business settings. Demonstrates how use of models can improve the decision-making process by helping the decision maker. Emphasizes the importance of sensitivity analysis and the need to combine both quantitative and qualitative considerations in decision making. Draws cases from small business scenarios, the public policy arena, and corporate settings. Lab sessions focus on implementing decision models with computers.

AEM 4180 Introduction to System Dynamics Modeling

Fall. 4 credits. Prerequisites: MATH 1106 or higher and upper-level standing or permission of instructor. C. Nicholson.

Introduction to concepts of system dynamics modeling, including the modeling process, fundamental modes of dynamic behavior and the stock-flow-feedback structures that generate them, system mapping tools, and modeling human behavior. Emphasis on examples from agriculture, natural resource management, and international development. Lab develops skills in the use of dynamic modeling software.

AEM 4190 Strategic Thinking

Spring. 3 credits. Prerequisite: PAM 2000 or ECON 3130. S-U or letter grades. N. H. Chau.

The art of thinking strategically puts outdoing one's adversary at the core of the decision-making process, while anticipating that the adversary is doing exactly the same thing. Businesses make investment decisions and innovate products in anticipation of the reaction of their rivals; managers make pay contingent on peer performance, taking into account the reaction of their subordinates and superiors; national trade policies are formulated based on whether trading partners are committed to make credible concessions. This course introduces and explores the use of game theory to understand these interactions; students are expected to work with a balanced dose of both theory and relevant case studies. The objective of the course is to facilitate students' ability to think strategically on firm level issues (e.g., pricing, advertising wars, product differentiation, and entry deterrence) and strategic policy interaction in international economic relations (e.g., trade wars and the arms race).

[AEM 4200 Investments]

[AEM 4210 Derivatives and Risk Management]

AEM 4220 Estate Planning (also NBA 5620)

Fall. 1 credit. Prerequisite: junior, senior, or graduate standing. S-U grades only. D. A. Grossman.

Fourteen sessions on the various aspects of estate planning techniques. Covers the law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and substitutes for probate procedures.

AEM 4230 Contemporary Topics in Applied Finance

Fall. 3 credits. Prerequisites: ECON 1110, MATH 1110 or equivalent, AEM 2100 or equivalent, AEM 3240. Letter grades. V. Bogan.

Stimulates critical thinking about contemporary topics that attract attention in the press and among key finance decision-makers. This analytical course draws on the theory of modern finance to facilitate the understanding of real-world issues. Covers traditional topics in financial markets such as security trading, derivatives, fixed income, IPOs, portfolio formation, and market efficiency. Also explores newer issues such as technology and financial markets.

AEM 4240 Management Strategy

Fall and spring. 3 credits. Prerequisite: AEM seniors. Fall, G. Blalock; spring, D. Simon.

Capstone course designed to integrate what students have learned in other AEM courses with an emphasis on strategic decision making. Approaches issues from the standpoint of the board of directors, chief executive officer, and business unit managers. Focuses on what should be considered and how strategic decisions should be made.

AEM 4260 Fixed-Income Securities

Fall. 3 credits. Prerequisites: MATH 1110 or equivalent, AEM 2100 or equivalent, AEM 3240. Letter grades. V. Bogan.

This course focuses on fixed-income securities including corporate bonds, default-free bonds, and floating rate notes. Other topics include related financial instruments such as forwards and futures on fixed-income securities, interest rate swaps, bond options, and mortgage-backed securities. In addition to the analysis of specific types of fixed-income securities, there will be an examination of the tools used in bond portfolio management.

AEM 4270 Agribusiness Strategy

Fall. 3 credits. Prerequisite: AEM 1200 or 3020. B. Gloy.

Intended for students with an interest in agribusiness and designed to integrate previous course work and enhance problem identification and solving skills. Focuses on the evaluation, formulation, and implementation of strategy designed to create and sustain competitive advantage for agribusiness firms. Covers industry analysis, firm analysis, market analysis and selection, risk analysis, strategy development, organizational design and structure, and leadership for agribusiness firms. Designed as a capstone course for the agribusiness management specialization.

AEM 4280 Valuation of Capital Investment

Spring. 3 credits. Prerequisites: AEM 1200 and 3240 or equivalents. D. T.-C. Ng.

Focuses on the analysis of financial information—particularly firms' financial reports—for making decisions to invest in businesses. The primary focus is on equity (share) valuation, with some attention given to credit analysis. Examines various valuation models in detail and applies them in cases and projects involving listed companies. Topics include models of shareholder value, discounted cash flow approaches to valuation, the analysis of profitability, growth, and valuation generation in a firm, forecasting earnings and cash flows, proforma analysis for strategy and planning, analysis of risk, and the determination of price/earnings and market-to-book ratios.

AEM 4290 International Finance

Spring. 3 credits. Prerequisites: AEM 2100 and 3240. S-U or letter grades. D. T.-C. Ng.

Teaches students about issues in international financial management and international investment. The major issues discussed include exchange rate volatility, the benefit of international diversification, and the analysis of international capital budgeting decisions. Specific topics include the determination of the cost of capital for foreign investments, the determination and management of foreign exchange risks and country risks, and the use

of innovative financing for the multinational corporation.

AEM 4300 International Trade Policy

Spring. 3 credits. Prerequisites: ECON 1110–1120 or equivalents and intermediate microeconomics course. S–U or letter grades. N. H. Chau.

Examines the economic principles underlying international trade and monetary policy, and the policies, practices, and institutions that influence trade and foreign exchange markets. Also emphasizes applications to current topics in international trade policy, to trade in primary commodities, and to both developed and developing countries.

AEM 4310 Agricultural and Food Policy

Fall. 3 credits. Prerequisites: junior, senior, or graduate standing; PAM 2000, ECON 3010, 3130, or equivalent. S–U or letter grades. A. Novakovic.

Acquaints students with current and historically important U.S. policies related to agriculture and food, including subsidies and regulations related to markets, production, and the environment. The approach combines historical, political, and economic interpretation and analysis.

AEM 4320 Public Private Sector Economics Linkages

Spring. 3 credits. Prerequisite: intermediate microeconomics course. C. K. Ranney.

This course examines the role of government tax and expenditure policies in the United States using tools from microeconomic theory. Given that the government sector is almost 40 percent of total U.S. economic activity, we analyze two related questions: First, when and why should some economic activities be undertaken in the public rather than private sector? Second, what are the implications of governmental economic activity on private sector decision makers? An array of tax and expenditure policies are investigated with particular foci changing from year to year based on current events and student interests.

AEM 4350 Political Economy of the WTO

Spring. 3 credits. Prerequisite: intro microeconomics. H. deGorter.

The politics of the WTO and trade policy are explored. We examine what the WTO is, how it operates, how much power it really has, why it was created, incentives for governments to cooperate. How WTO rules affect domestic politics and foreign policy goals and how WTO rules and agreements are enforced. We also debate the effect of trade on growth and poverty.

AEM 4360 Entrepreneurial Leadership

Fall, weeks 7–14. 1 credit. Prerequisite: permission of instructor. D. Streeter.

Participants learn about concepts and practice skills important to becoming an entrepreneurial leader in startup or small business, corporate environment, and/or the public sector. Set in a global context, issues-related entrepreneurial leadership are covered: vision, opportunity identification, engagement of teams in resource-constrained situations, and tolerance for ambiguity and risk.

[AEM 4370 Innovation Strategy]

AEM 4420 Emerging Markets

Fall. 3 credits. Prerequisites: senior or graduate standing; AEM 2400 and PAM 2000 or ECON 3130. R. D. Christy.

Provides a framework for examining the effectiveness of marketing strategies in economies in transition and identifying the challenges and opportunities for firms in low-income economies to access industrial markets. Appraises the risk of entering markets in low-income economies and assesses the political, legal, cultural, and economic forces. Analyzes and discusses case studies of companies.

AEM 4430 Food-Industry Strategy

Fall. 2 credits. Prerequisite: AEM juniors, seniors, or graduate students; AEM 2400 or 4480; or permission of instructor. Staff.

Examines the decisions that businesses must make, such as what to sell, where to invest, when to outsource, and how to market—all in a changing and competitive environment. While the principles are applicable to any competitive environment, the focus is on one industry, the food industry, to allow an in-depth look at how the various players (manufacturers, retailers, and others) both cooperate and compete in the process of supplying food to consumers. Students learn how such issues as globalization, industry consolidation, new technologies, and health concerns add to their challenges and opportunities.

[AEM 4440 Managing for Market-Driven Growth]

Fall. 3 credits. Prerequisite: AEM 2400; junior or senior standing. Staff.

A sound marketing strategy is essential for the long-term success of a firm. This requires an understanding of how customer needs evolve, how product-market boundaries shift, and how competitors are likely to react. The strategic roles of existing and new products need to be assessed, appropriate resource allocations made, and strategies developed to ensure sustained growth. The course is designed to provide opportunities to learn about the theoretical and applied perspectives of marketing strategy from readings, case analyses, and guest speakers.]

AEM 4450 Food Policy for Developing Countries (also NS 4450) (SBA)

Fall. 3 credits. Prerequisites: 6 credits in economics, applied economics, or sociology and 6 credits in nutrition and/or agricultural sciences. P. Pinstrup-Andersen.

Comprehensive presentation and discussion of policy options for a sustainable global food system, with focus on developing countries. Topics include economic policy related to nutrition, health, consumption, production, natural resource management, trade, markets, gender roles, armed conflict, and ethics. A social entrepreneurship approach based on case studies and active participation by students will be used.

[AEM 4460 Food Marketing Colloquium]

AEM 4470 Retail Speaker Series

Spring. 1 credit. D. J. Perosio.

Seminars and guest lectures by faculty and guest lecturers engaged in the study and practice of retailing. This class provides a unique opportunity for successful industry leaders to share their experiences with Cornell students. Speakers share their view about successful management styles, possible

career paths, critical industry-related issues, and qualities conducive to successful business leadership. Students have an unprecedented opportunity to learn and question how retail leaders view the current and future status of retailing, the largest sector in the U.S. economy.

AEM 4480 Food Merchandising

Spring. 3 credits. Prerequisite: junior or senior standing; AEM 2400. D. J. Perosio.

Covers merchandising principles and practices as they apply to food industry situations. Examines the various elements of merchandising such as buying, pricing, advertising, promotion, display, store layout, profit planning and control, and merchandising strategy. Considers the consequences of food industry trends and initiatives for other industry members, public policy makers, and consumers.

AEM 4500 Resource Economics (also ECON 4500) (SBA)

Fall. 3 credits. Prerequisites: MATH 1110, ECON 3130, and familiarity with Excel. J. M. Conrad.

Constructs dynamic models of renewable, nonrenewable, and environmental resources to examine market allocation and optimal resource management.

AEM 4510 Environmental Economics (also ECON 4090) (SBA)

Spring. 3 credits. Prerequisites: undergraduate standing; intermediate microeconomics course and calculus. S–U or letter grades. Staff.

Explores the economic foundations for public decision making about environmental commodities and natural resources, using tools from intermediate microeconomics. Emphasizes the welfare economic approach for allocating public goods, with specific emphasis on market failure, externalities, benefit-cost analysis, nonmarket valuation techniques, and cost-effective policy instruments. Also examines property rights/institutional perspectives and ecological economic concepts.

AEM 4520 Accounting for Mergers and Acquisitions

Fall. 3 credits. Prerequisite: AEM 3360 Intermediate Accounting I. E. Lewis.

Detailed analytical study of special issues and situations in financial accounting. Continuous emphasis is placed on the relationship between theory and practice to reflect the latest professional pronouncements. Highly technical topics related to corporation, partnership, government, and not-for-profit organizations, with a focus on business combinations and the particular accounting challenges that they present.

AEM 4530 Risk Management, Internal Control and Assurance

Fall. 3 credits. Prerequisite: AEM 3360 Intermediate Accounting I. J. Lippitt.

Theory and practice of independent examination of financial statements. Discussion of relationships with clients; working papers, assurance procedures, including evaluations of internal controls; accounting principles; risk assessment; liability and professional ethics.

AEM 4540 China's and India's Growth Miracles (also ECON 4540)

Fall. 2 or 3 credits. Prerequisites: basic course in macroeconomics, international economics, and econometrics/statistics. E. Prasad.

This is an advanced undergraduate course that will cover topics in international finance and open economy macroeconomics. The course will be organized around a detailed examination of the growth experiences of China and India as a device for illustrating and delving into key analytical concepts.

AEM 4620 Technology and Financial Markets

Fall. 2 credits. Prerequisites: AEM 3240 and one 4000-level AEM finance course; permission of instructor. V. Bogan.

The course focuses on issues involving technology and financial markets. It is designed to equip future finance professionals with the knowledge of key finance systems (Bloomberg) skills and technologies. The lectures and labs will teach students to apply their theoretical finance knowledge in real-world situations for the purpose of optimizing their future job performance and increase their marketability. Lectures will explore topics on the effects of technology on financial markets. The lab component of the course will require students to complete the 30-hour, self-paced Bloomberg certification process.

AEM 4640 Economics of Agricultural Development (also ECON 4640)

Fall. 3 credits. Prerequisite: ECON 1110-1120 or permission of instructor. R. D. Christy.

Provides an understanding of the economics of the agricultural sector in low-income countries. Also covers more general issues of economic development beyond the agricultural sector to provide the necessary context for an understanding of rural problems. Topics include the nature of development and technical change, welfare and income distribution, land reform, food and nutrition policy, food security and food aid, competition with more developed countries and international markets, the effect of U.S. policy on agricultural development, and the role of international institutions. Uses examples from a wide variety of developing countries to illustrate the basis for economic analysis.

AEM 4940 Undergraduate Special Topics in Applied Economics and Management

Fall or spring. 4 credits max. S-U or letter grades. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the beginning of the semester.

AEM 4970 Individual Study in Applied Economics and Management

Fall or spring. Variable credit. S-U or letter grades. Students must register using independent study form (available in undergraduate program office in Warren Hall). Staff.

Used for special projects designed by faculty members.

AEM 4980 Supervised Teaching Experience

Fall or spring. 1-4 credits. Students must register using independent study form (available in undergraduate program office in Warren Hall). Staff.

Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty. Students cannot receive both pay and credit for the same hours of preparation and teaching.

AEM 4990 Undergraduate Research

Fall, spring, or summer. 1-4 credits. Prerequisite: GPA of at least 2.7. Students must register using independent study form (available in undergraduate program office in Warren Hall). S-U or letter grades. Staff.

Permits outstanding undergraduates to carry out independent study of suitable problems under appropriate supervision. Students cannot receive both pay and credit for the same hours of work.

AEM 4991 Independent Honors Research in Social Science

Fall or spring. 1-6 credits. Prerequisite: requirements for honors program met (see "Honors Program" under CALS).

Provides qualified students an opportunity to conduct original research under supervision. Information is available in the AEM undergraduate program office in Warren Hall.

AEM 6050 Agricultural Finance

Fall. 3 credits. Prerequisite: AEM 3240 or 4050 or equivalent B. A. Gloy.

Covers advanced topics in agricultural finance, including investment analysis, capital budgeting under uncertainty, decision analysis, risk management, capital structure, and financial intermediaries.

AEM 6080 Production Economics (also ECON 4080)

Fall. 3 credits. Prerequisite: ECON 3130 and MATH 1110 or equivalents. R. Boisvert.

Studies the theory of production economics with emphasis on applications to agriculture and natural resources. Topics include the derivation, estimation, and use of production, cost, profit, revenue, demand, and supply functions. Discusses the concepts of efficiency and productivity. Introduces production response over time and under risk.

AEM 6120 Applied Econometrics

Fall. 1 credit. Corequisite: AEM 4110. D. Just.

Designed for M.S. and Ph.D. students who do not meet the prerequisites for other graduate-level econometrics courses. Complements AEM 4110, providing greater depth of understanding of econometric methods and exposure to applied econometric literature. Focuses on preparing students to conduct their own applied economic research.

AEM 6180 System Dynamics Applications

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. C. Nicholson.

This course provides more detailed discussion of SD concepts and further develops skills in system dynamics modeling through application to a project chosen by the student. Iterative writing assignments and peer review are used to refine problem

statements, causal hypotheses, simulation models, model evaluation, and policy analysis. Final project includes development and application of a simulation model.

AEM 6300 Policy Analysis: Welfare Theory, Agriculture, and Trade (also ECON 4300)

Spring. 4 credits. Prerequisites: AEM 6080 or PAM 6030, ECON 3130, or equivalent intermediate micro theory course incorporating calculus. H. de Gorter.

The first half of the course surveys the theory of welfare economics as a foundation for public policy analysis. Major issues addressed include the problem of social welfare measurement, the choice of welfare criteria, and the choice of market or nonmarket allocation. Basic concepts covered include measurement of welfare change, including the compensation principle, consumer and producer surplus, willingness-to-pay measures, externalities, and the general theory of second-best optima. The second half focuses on public policy analysis as applied to domestic agricultural policy and international trade. The domestic policy component examines major U.S. farm commodity programs and related food and macroeconomic policies and analyzes their effects on producers, consumers, and other groups. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy analysis, and the principal trade policies employed by countries in international markets.

AEM 6320 Open Economy Analysis: Theory and Applications

Spring. 2 credits. Prerequisites: ECON 3130/3140 or permission of instructor. S-U or letter grades. N. Chau.

Explores both recent theoretical and methodological advances as well as practical applications in analyzing current topics and issues in open economies. Brings together research methods pertinent to open economy macroeconomics and international trade policies to give students a basic understanding of how different aspects of contemporary debates are analyzed in practice.

AEM 6400 Analysis of Agricultural Markets (also ECON 4400)

Fall. 3 credits. Prerequisites: AEM 4110 and 4150 or equivalents. Offered even-numbered years. H. M. Kaiser.

Focuses on the unique features of agricultural commodity markets. Emphasizes government and private institutions that affect these markets, as well as on models of price behavior including marketing margins and imperfect competition. Also covers empirical tools to evaluate market characteristics.

AEM 6410 Commodity Futures Markets

Spring, weeks 8-14. 2 credits. Prerequisites: AEM 4110 and 4150 or equivalents. Recommended: AEM 6400. W. G. Tomek.

Focuses on markets for agricultural futures contracts. Emphasizes models of price behavior on futures markets including relationships among cash and futures prices. These principles provide a foundation for a discussion of hedging, speculation, and public policy issues.

AEM 6420 Globalization, Food Safety, and Nutrition (also NS 6420)

Fall. 2 credits. Prerequisites: permission of instructor, graduate standing, and basic understanding of economics and nutrition. Letter grades only. P. Pinstруп-Andersen.

Directed readings course with a weekly 50-minute discussion session. The course is aimed at graduate students in nutrition, agricultural economics, and other relevant fields, who wish to explore how globalization may affect poverty, food security, and nutrition in developing countries and how national policies and international agreements and institutions may influence the outcome. The discussion sessions are based on assigned readings for each week.

AEM 6510 Environmental and Resource Economics

Spring. 4 credits. Core course for environmental management concentration/option. Prerequisite: graduate standing. Open to graduate students outside economics. G. L. Poe.

Review of welfare economics, environmental externalities, and common property resources, and a survey of current environmental and natural resource policy. Covers techniques for measuring benefits and costs—including property value and wage hedonic approaches, travel cost models, and contingent evaluation. Describes survey/data collection methods in detail. Explores innovative market mechanisms for resolving public good, common property, and externality problems. Students are required to complete a paper describing their own formal economic analysis of a natural resource or environmental problem.

AEM 6550 Electric Systems Engineering and Economics (also ECE 5510)

Fall. 2 credits. Prerequisites: basic calculus and microeconomics courses. T. D. Mount. For description, see ECE 5510.

AEM 6600 Agroecosystems, Economic Development, and the Environment

Spring. 3–4 credits. Prerequisite: graduate standing. Open to graduate students outside economics; additional sec TBA for economics majors. S–U or letter grades. D. R. Lee.

Examines selected topics in agricultural and economic development, technology assessment, ecosystem management and the environment, with a focus on developing countries. Topics include production, poverty, and environmental tradeoffs; sustainable technology development; trade and environment linkages; economics of conservation and development; and alternative methodologies for analyzing these interactions. Readings emphasize the economic literature, but also draw from the biophysical sciences, ecosystem management, and the broader social sciences.

AEM 6670 Topics in Economic Development (also ECON 7770)

Spring. 3 credits. Targeted to second- and third-year graduate students. Prerequisite: basic first-year courses in ECON or AEM or permission of instructor. S–U or letter grades. R. Kanbur.

Topics vary from year to year but may include poverty, inequality, intra-household allocation, structural adjustment, and debt. Examination is by term paper.

[AEM 6700 Economics of Consumer Demand (also PAM 6080)]

Fall. 3 credits. Prerequisites: ECON 3110 or 3130 and two semesters of calculus. S–U or letter grades. Next offered 2009–2010. C. K. Ranney.

Graduate-level introduction to theory and empirical research on household demand, consumption, and saving. Emphasizes the use of the theory in empirical research. Topics include neoclassical theory of demand, duality, complete demand systems, conditional demand, demographic scaling and translating, consumption, and savings. As time allows, Becker and Lancaster models of demand may be introduced.]

AEM 6840 Economics of Biofuels: Implications for the Nexus of Agricultural, Energy, and Environmental Policies

Fall. 2 to 3 credits. Prerequisite: knowledge of microeconomics. S–U or letter grades. H. deGorter.

Topics include feedstock–biofuel–oil price linkages, profitability, tax credits versus mandates, sub-optimal environmental and energy policies, policy interactions, international trade models, import tariffs, ‘subsidy’ component of biofuel policies and the WTO, life-cycle accounting and sustainability standards, developing countries and poverty, food-versus-fuel debate, and implications for technology and farm subsidies.

AEM 6900 Biofuels: The Economic and Environmental Interactions (also BEE 4900)

Spring. 2 credits. Prerequisites: senior or graduate standing, others by permission of instructor. S–U or letter grades. P. G. Hess. For description, see BEE 4900.

AEM 6940 Graduate Special Topics in Applied Economics and Management

Fall or spring. 4 credits max. S–U or letter grades. Staff.

The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the beginning of the semester.

AEM 6980 Supervised Graduate Teaching Experience

Fall or spring. 1–4 credits; max. 4 credits during graduate program. Prerequisite: graduate standing; permission of instructor. Undergraduates should enroll in AEM 4980. Students must register using independent study form (available in undergraduate program office in Warren Hall). S–U or letter grades. Staff.

Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching lectures and laboratories, and tutoring. Students are expected to actually teach at least one hour per week for each credit awarded. Students may not receive both pay and credit for the same hours of preparation and teaching.

AEM 6990 M.P.S. Research

1–6 credits. Prerequisite: M.P.S. students. Credit granted for M.P.S. project report. Staff.

AEM 7000 Individual Study in Applied Economics and Management

Fall or spring. Prerequisite: graduate standing. S–U or letter grades. Credit, class hours, and other details TBA with faculty member. Staff.

Used for special projects designed by faculty members. More than one topic may be given each semester in different sections. Student must register in section appropriate to topic being covered; section number is provided by instructor.

AEM 7010 Applied Microeconomics I

Fall. 3 credits. Required for all second-year AEM Ph.D. students. Prerequisites: Ph.D. students only; ECON 6090 and 6100, and AEM 7100 or equivalent. W. D. Schulze and R. N. Boisvert.

This course covers economic models and empirical applications in consumer demand and production economics.

AEM 7020 Applied Microeconomics II

Spring. 3 credits. Required for all second-year AEM Ph.D. students. Prerequisites: Ph.D. students only; ECON 6090 and 6100, and AEM 7100 or equivalent. H. DeGorter, D. R. Just, and J. Prince.

This course covers economic models and empirical applications in welfare economics, risk analysis and industrial organization.

[AEM 7080 Advanced Production Economics]**AEM 7100 Econometrics I**

Spring. 3 credits. Prerequisites: matrix algebra and statistical methods courses at level of ILRST 3110 or ECON 6190. T. D. Mount.

Provides (together with AEM 7110) a graduate sequence in applied econometrics that is suitable for M.S. and Ph.D. students. Covers linear-regression models and the associated estimation and testing procedures.

AEM 7110 Econometrics II

Fall. 3 credits. Prerequisite: AEM 7100 or equivalent. T. D. Mount.

Coverage beyond AEM 7100 of dynamic models, including single-equation ARIMA, vector ARIMA, Kalman filtering, structural dynamic models, and regime switching. Topics include endogeneity, stability, causality, and cointegration.

AEM 7120 Quantitative Methods I

Fall. 4 credits. Prerequisite: some formal training in matrix algebra. Highly recommended: course at level of BTRY 4170. R. N. Boisvert.

Comprehensive treatment of linear programming and its extensions, including postoptimality analysis. Topics include nonlinear programming, including separable, spatial equilibrium, and risk programming models. Discusses input-output models and their role in social accounting matrices and computable general equilibrium models. Makes applications to agricultural, resource, and regional economic problems.

AEM 7130 Dynamic Optimization

Spring. 3 credits. Prerequisite: ECON 6090 and ECON 6170. Letter grades only. J. M. Conrad.

Concerned with the solution of dynamic allocation problems. Objectives are to (1) pose prototype optimization problems in discrete and continuous time, (2) introduce the common methods for solving prototype problems, (3) present a set of numerical problems, and thereby (4) equip students

with basic theory and methods to perform applied research on dynamic allocation problems.

AEM 7140 Experimental Economics

Fall. 4 credits. Prerequisite: ECON 6090.
Offered alternate years. W. D. Schulze.
Surveys both experimental economics methods and research as an approach to test economic theory. Students participate as subjects in a series of illustrative computerized experiments ranging from double auctions to public goods provision. Topics include experimental methods; decisions and games; markets (testing auction institutions); market power (monopoly, oligopoly); bargaining, compensation, and performance; public goods; externalities and voting; information and uncertainty; and economic anomalies. Students must design and write a paper describing their own experiment.

AEM 7170 Research Methods in Agricultural Economics

Spring. 2 credits. Prerequisite: graduate standing. R. N. Boisvert.
Discusses the research process and scientific method as applied in agricultural economics. Topics include problem identification, hypotheses, sources of data, sampling concepts and designs, methods of collecting data, questionnaire design and testing, field organization, and analysis of data. During the semester, each student develops a research proposal that may be associated with his or her thesis.

AEM 7300 Seminar on International Trade Policy: Agriculture, Resources and Development

Spring. 3 credits. Prerequisite: graduate standing; AEM 6300 or equivalent.
D. R. Lee.
Examines selected topics in the professional literature on international trade policy, focusing on agricultural trade and related topics, including trade liberalization, trade and environmental linkages, technological change and trade policy, and agricultural trade and development.

AEM 7350 Public Finance: Resource Allocation and Fiscal Policy (also ECON 7350)

Spring. 4 credits. Prerequisite: ECON 6090.
R. Kanbur.
For description, see ECON 7350.

AEM 7400 Empirical Analysis of Industrial Organization

Spring. 3 credits. Prerequisites: ECON 6090, ECON 6100, and AEM 7100.
J. Prince.
This course will analyze in detail leading papers in the empirical industrial organization (IO) literature. In doing so, the objective will be to develop students' skills in determining appropriate theoretical and corresponding econometric models for applied research, and to improve students' proficiencies with a variety of econometric models (e.g., OLS, IVs, MLE, GMM, discrete choice).

AEM 7440 Advanced Consumer Research

Fall. 3 credits. Prerequisite: graduate standing; priority given to CALS Ph.D. students, especially in AEM, nutritional science, or food technology. B. Wansink.
Workshop providing students with a unique opportunity to develop an advanced theory-based understanding of consumers by using

innovative methods and new research techniques. Class sessions alternate theory with implementation.

AEM 7500 Resource Economics

Fall. 3 credits. Prerequisites: ECON 6090 and 6180, or AEM 7130. J. M. Conrad.
Uses optimal control and other methods of dynamic optimization to study the allocation and management of natural resources.

AEM 7510 Environmental Economics

Spring. 4 credits. Prerequisites: ECON 6090 and graduate-level econometrics course. S-U or letter grades. G. L. Poe.
The objective of this course is to provide a graduate-level survey of the two prevailing contemporary themes in environmental economics: the measurement of the demand for environmental resources as input into benefit-cost analyses, and the design of incentive-based, cost-effective policy instruments to achieve environmental goals. Core topics include market failure, conceptual foundations for valuing changes in environmental quality, empirical applications of nonmarket valuation methods, and cost-effective market mechanism design for reducing pollution. Additional topics include information asymmetries and mechanism design for nonpoint source pollution, and international/global environmental issues.

[AEM 7620 Microeconomics of International Development

Fall. 3 credits. Prerequisite: completion of first-year Ph.D. course sequence in AEM or ECON or permission of instructor. S-U or letter grades. Offered even years; next offered 2010-2011. C. B. Barrett.
Focuses on models of individual, household, firm/farm, and market behavior in low- and middle-income developing economies. Topics include agricultural land, labor, and financial institutions; technology adoption; food security and nutrition; risk management; intra-household analysis; reciprocity networks; and product/factor markets analysis. Emphasizes empirical research.]

AEM 7650 Development Microeconomics Graduate Research Seminar

Spring and fall. 1-3 credits. Prerequisite: graduate standing and permission of instructor. C. B. Barrett.
Graduate students and the instructor present draft research proposals, papers, and preliminary thesis results for group review and discussion. Students who actively participate by offering written and oral comments on others' work receive 1 credit. Students who also present their own proposal or paper receive 2 credits. Presentations last 75 minutes and thus represent a substantial investment of time. Students who present a second proposal or paper receive 3 credits.

AEM 7670 Topics in International Finance

Fall. 3 credits. Prerequisite: ECON 7620 or equivalent. E. Prasad.
This course will provide a selective overview of topics at the cutting edge of academic research and policy debates about the international financial system. Main areas will include the effects of financial globalization on growth, volatility, and the transmission of business cycles. We will also examine the determinants of the direction and composition of capital flows, and analyze the implications of the rising prominence of

hedge funds, sovereign wealth funds, and other institutional investors. This course is intended for advanced Ph.D. students, especially those in search of thesis topics, and will require extensive student involvement in preparing research proposals and critiques of existing literature.

AEM 7900 Graduate-Level Thesis Research

Fall or spring. 1-9 credits. Prerequisite: permission of graduate committee chair. For Ph.D. students only **before** "A" exam has been passed. S-U grades only. Graduate faculty.

AEM 8900 Master's-Level Thesis Research

Fall or spring. 1-9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty. For students admitted specifically to a master's program.

AEM 9900 Doctoral-Level Thesis Research

Fall or spring. 1-9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty. For Ph.D. students only **before** "A" exam has been passed.

ANIMAL SCIENCE

W. R. Butler, chair (149 Morrison Hall, 255-2862); R. E. Austic, D. E. Bauman, Y. R. Boisclair, S. A. Brooks, D. L. Brown, L. E. Chase, D. J. R. Cherney, W. B. Currie, H. N. Erb, D. M. Galton, J. Gavalchin, I. Imumorin, P. A. Johnson, Q. M. Ketterings, X. G. Lei, Q. M. Long, T. R. Overton, J. E. Parks, A. N. Pell, E. J. Pollak, R. L. Quaas, S. M. Quirk, R. D. Smith, M. L. Thonney, M. E. Van Amburgh

[ANSC 1100 Domestic Animal Biology I

Fall. 4 credits. S-U or letter grades. Staff.
Introduction to the biology of economically important species (morphology, anatomy, and physiology) and its application to the management of animals in major livestock industries. Topics include domestication and origins of animal science, anatomy, quantitative cell biology, regulatory mechanisms, public domain genetic databases, major life support systems, and digestion. Students undertake the care and management of several species of farm animals. Laboratory exercises include animal handling, examining aspects of anatomy, and small group discussions of contemporary biotechnologies. Living farm animals are used noninvasively, and fresh organs from dead animals are examined.]

ANSC 1105 Contemporary Perspectives of Animal Science

Spring. 1 credit. Prerequisite: freshmen, sophomores, or first-year transfer standing. J. Gavalchin.
A forum to discuss the students' career planning and the contemporary and future role of animals in relation to human needs.

ANSC 1120 Sustainable Animal Husbandry

Summer. 3 credits. S–U or letter grades. D. L. Brown.

Students completing this course will understand the many roles of domestic animals and the importance of their interdependence with humans; appreciate the scope, diversity, and problems related to domestic animal systems; be able to design and operate simple sustainable animal systems; and know how to continue learning about sustainable animal systems. This intensive summer course includes 25 hours of lecture and 39 hours of hands-on laboratory/demonstrations at various field sites and facilities all within a three-week period. Topics include domestication, sustainability, dogs, cats, rabbits, sheep, genetics, swine, nutrition, beef cattle, grazing, dairy cattle, dairy products, goats, poultry, aquaculture, camelids, horses, draft animals, animal systems modeling, Third World limited-resource animal systems, toxicology, lab animals, toxicology, veterinary medicine, and ethics of human interactions with domestic animals.

ANSC 1160 Animal Agriculture and Society—From Food to Medicine

Fall. 4 credits. Letter grades only. D. L. Brown, J. R. Giles, X. Lei, and M. E. Van Amburgh.

The course is designed to integrate concepts of physiology, immunology, growth biology, lactation, and pregnancy with current production systems, cultural and societal aspects of animal food production and use, and the current economic forces driving some of the production system evolution. The course is intended for majors and nonmajors with an emphasis on integrating animal biology with our current production and food systems from an Animal Science perspective. Topics include Domestication, Pre-technology Agriculture, Production Systems and Economics, Food Systems and Safety, Environmental Issues and Perspectives, Animal-Derived Food in Human Health, and Use of Animals in Biomedicine.

ANSC 2120 Animal Nutrition

Fall. 4 credits. Prerequisite: CHEM 2080 or equivalent. Recommended: ANSC 1100 and 1160. D. J. R. Cherney.

Introduction to animal nutrition, including digestive physiology and metabolism of domestic animals and other species; nutrient properties and requirements for different aspects of animal production and performance; principles of feed evaluation and ration formulation. Laboratory classes include gastrointestinal tract dissections and nutritional experiments performed on laboratory or farm animal species.

ANSC 2140 Captive Raptor Management and Propagation

Summer. 3 credits. Prerequisites: high school chemistry and biology. J. E. Parks.

This course is an introduction to the natural history and the care and management of raptors (birds of prey). Approaches to captive care and maintenance, restraint, training, and captive breeding with potential for reducing pressures on wild populations of avian species will be included. A major objective is to present and discuss the scientific basis and merit of avian husbandry and breeding practices in species relevant to the course.

Hands-on opportunities in basic raptor handling techniques are included.

ANSC 2150 Exotic Avian Husbandry and Propagation

Fall. 2 credits. Prerequisite: ANSC 1100, 1160, or one year introductory biology.

J. Parks and D. Muscarella.

Natural history, care, management, health, and breeding of exotic avian species with emphasis on psittacines (parrots and related species) and raptors (birds of prey). Includes lectures, demonstrations, and local field trips.

ANSC 2210 Introductory Animal Genetics

Spring. 3 credits. Prerequisite: one year of college biology. I. Imumorin.

Examination of basic genetic principles and their application to the improvement of domestic animals, with emphasis on the effects of selection on animal populations.

ANSC 2250 Fertilization and New Life Technologies

Summer 3 credits. Prerequisite: high school biology. J. E. Parks.

Course covers the biology of fertilization in mammals and birds including production of gametes (sperm and ova), the physiological events required for fertilization *in vivo*, early embryo development, and associated reproductive technologies (in vitro fertilization, intracytoplasmic sperm injection, cloning, cryopreservation, etc.).

ANSC 2400 Animal Reproduction and Development

Spring. 3 credits. Prerequisite: one year introductory biology. J. E. Parks.

Comparative anatomy and physiology of mammalian and avian reproduction, with emphasis on domestic and laboratory animals; fertilization through embryonic development, pregnancy, and growth to sexual maturity; emphasis on physiological mechanisms and application to fertility regulation. Separate laboratory is offered to demonstrate fundamental aspects of reproduction and reproductive technology.

ANSC 2410 Animal Reproduction and Development Lab

Spring. 1 credit. Limited to 30 students per lab. Pre- or corequisite: ANSC 2400.

J. E. Parks.

Demonstrates fundamental principles and applied aspects of mammalian and avian reproduction. A limited number of live animals are used in some demonstrations. Dissection and examination of tissues from vertebrate animals are included in selected laboratories.

ANSC 2500 Dairy Cattle Principles

Fall. 3 credits. Prerequisite for ANSC 2510, 3510, 3540, and 3550. S–U or letter grades. D. M. Galton.

Introduction to the background and scientific principles relating to dairy cattle production. Laboratories are designed to provide an understanding of dairy cattle production.

ANSC 2510 Applied Dairy Cattle Genetics

Spring. 2 credits. Prerequisite: ANSC 2500. S–U or letter grades. D. M. Galton.

Application of scientific principles of genetic programs in herds with different breeding programs. Emphasizes economical traits to be used to improve genetic progress and herd performance.

ANSC 2650 Equine Biology and Management

Fall. 3 credits. Prerequisites: ANSC 1100 and 1160 or permission of instructor. S–U or letter grades. S. A. Brooks.

This course is designed to provide the basics of equine form, function, care, management, and handling. Students will learn the basic biology of the horse and how to apply this knowledge to solve problems in horse care. Hands-on labs will include safe handling techniques, basic groundwork, and daily care of class horses. Short trips and tours will illustrate applied concepts in horse industry and health care.

[ANSC 2900 Meat Science (also FDSC 2900)]

Fall. 2 credits. D. Shaw.

Introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Also study properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation.]

ANSC 3100 Introduction to Animal Welfare

Fall. 2 credits. S–U or letter grades. Staff.

Animal welfare issues will be discussed, mainly for farm animals, but companion animals will also be considered. Both animal specific and general areas of animal welfare will be discussed.

ANSC 3200 Comparative Animal Nutrition and Toxicology: Horses, Dogs, Cats, and More

Spring. 4 credits. Suggested prerequisites: one year college biology and ANSC 2120 Animal Nutrition or equivalent. S–U or letter grades. One weekend field trip. D. Brown.

At the end of this course, students will (1) be able to match feed resources to the physiological needs of horses, dogs, cats, rabbits, deer, reindeer, birds, reptiles, and a variety of other animals found at home, in zoos, rehabilitation centers, on ranches and farms, (2) understand the intellectual processes by which a successful, science-based feeding strategy should be developed for animals without a history of domestication, (3) understand the evolutionary and physiological basis for some of the diversity in nutritional strategies and toxicological vulnerabilities found among animals.

ANSC 3410 Biology of Lactation

Spring. 2 credits. Prerequisites: ANSC 1100–1160 or animal physiology course. Y. R. Boisclair.

Comprehensive survey of the biology of the mammary gland. Lectures cover (1) basic aspects such as anatomy and development of the mammary gland, biochemistry and hormone regulation of milk synthesis and regulation of gene expression in the mammary cells; (2) practical aspects such as the impact of lactation on nutrition, reproduction, and diseases. Information used comes from a variety of species, including the mouse for developmental aspects, the dairy cow for production aspects, and the human for health issues.

ANSC 3510 Dairy Herd Management

Spring. 4 credits. Prerequisite: ANSC 2500 or permission of instructor. Recommended: AEM 3020. D. M. Galton.

Application of scientific principles to practical herd management with components of reproduction, milking, housing, records, and production economics. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

ANSC 3540 Dairy Cattle Herd Health

Fall. 3 credits. Prerequisite: ANSC 2500 or permission of instructor. S-U or letter grades. T. R. Overton.

Application of scientific principles to practical herd management with emphasis on herd health and animal well-being. Laboratory emphasizes practical applications of herd health management.

ANSC 3550 Dairy Cattle Nutrition

Spring. 3 credits. Prerequisite: ANSC 2500 or permission of instructor. Letter grades only. T. R. Overton and L. E. Chase.

Application of scientific principles to practical herd nutrition relating to herd production and feeding management. Laboratory emphasizes practical applications and field trips.

ANSC 3600 Beef Cattle

Spring. 3 credits. Offered even-numbered years. M. L. Thonney.

Emphasizes the management of reproduction, nutrition, and selection in beef cattle enterprises. Laboratories acquaint students with management skills through computerized simulations and working with cattle.

ANSC 3700 Immunology in Animal Health and Disease

Spring. 2 credits. Prerequisite: introductory biology. S-U or letter grades. J. Gavalchin. Course covers basic immunological concepts, including inflammation, and mechanisms of innate and acquired immunity. Focus will be on diseases of companion animals and livestock. Topics include pathogenetic mechanisms, immunodiagnostics, therapeutics, and vaccine development.

[ANSC 3800 Sheep

Spring. 3 credits. Offered odd-numbered years; next offered 2010-2011. M. L. Thonney.

Emphasizes breeding, feeding, management, and selection of sheep from a production-system approach. Lec/labs offer practical knowledge and scientific background for improved management practices.]

ANSC 3920 Mechanisms of Animal Growth and Development

Spring. 2 credits. Prerequisites: ANSC 1100-1160 or equivalent introductory physiology courses. Letter grades only. Q. Long and Y. Boisclair.

A course on the basic biology of animal growth and development. The course employs model systems (cell culture, fish, and mice) to examine cellular and molecular mechanisms of animal growth and development, and farm animals to discuss whole-animal growth patterns and applications of new technologies. Lectures cover (1) patterns of whole-animal growth during fetal and postnatal life; (2) molecular and cellular basis of formation and development of skeletal muscle, adipose tissue, and bone; (3) regulation of growth and development by hormones and growth factors; (4) emerging molecular technologies and whole-genome approaches for improving growth and meat quality.

[ANSC 3980 Animals in Biomedical Research

Fall. 2 credits. Prerequisites: one year introductory biology; ANSC 1100 or equivalent introductory physiology course. Offered alternate years; next offered 2010-2011. Letter grades only. X. Lei.

This course introduces features and applications of various animal models for biomedical research on human health, diseases, and nutritional deficiencies.]

ANSC 4010 Dairy Production Seminar

Spring. 1 credit. Prerequisite: junior or senior standing. T. R. Overton.

Capstone course in which students, with the help of faculty members, complete a study of the research literature on topics of current interest in the dairy industry. Students then make an oral and a written report on their topic with emphasis on integrating theory and practice.

ANSC 4020 Seminar in Animal Sciences

Spring. 1 credit. Prerequisite: students engaged in undergraduate honors research projects. S-U or letter grades. S. Quirk.

Reports of undergraduate honors research projects. Students present oral reports of their work for class discussion.

ANSC 4050 Molecular and Cellular Approaches to Reproductive Physiology

Fall. 3 credits. Prerequisites: one year introductory biology and introductory physiology (ANSC 1100 and ANSC 2400 or BIOAP 3110) or equivalent. S. Quirk.

Lectures on selected topics in reproductive biology of male and female mammals with a focus on how research questions are formulated, addressed and influenced by previous discoveries. Concepts introduced apply to investigation of all areas of animal physiology. Laboratory exercises provide experience in cellular and molecular methods used to study reproductive function.

[ANSC 4100 Nutritional Physiology and Metabolism

Fall. 3 credits. Prerequisites: biochemistry and physiology courses. Next offered 2010-2011. Staff.

Fundamental approach to nutrition focusing on the metabolic fate of nutrients and the interrelationships among nutrients, nutritional state, and metabolic processes. The overall goal is to increase understanding of metabolism and metabolic regulation through an integration of nutrition, biochemistry, and physiology.]

ANSC 4110 Integrated Cattle Nutrition

Fall. 4 credits. Designed for juniors, seniors, and entering graduate students. Prerequisites: ANSC 1100 and 2120 (or equivalent). Highly recommended: ANSC 3550. M. E. Van Amburgh.

Integrates concepts of cattle nutrition and farm nutritional management to help students understand and appreciate factors influencing the performance of cattle under diverse conditions. Topics covered include the effect of environment on maintenance costs; the nutrient requirements for various stages of growth, lactation, and pregnancy; rumen function, feed composition and chemistry, nutrient partitioning and the environmental impacts of cattle and how to minimize them. Computer models (Cornell Net Carbohydrate and Protein System) are used in the laboratory to actualize the information presented in lectures. Herd case studies are

used in lab and there are field trips to farms to evaluate the nutritional management.

ANSC 4120 Whole-Farm Nutrient Management (also CSS 4120)

Spring. 4 credits. Prerequisite: junior, senior, or graduate standing; ANSC 4110 preferred but not required. M. E. Van Amburgh and Q. M. Ketterings.

This course provides students with an understanding of the concepts and practices underlying whole-farm nutrient management planning of livestock and dairy farms. Improving profitability and efficiency are key factors considered while improving air and water quality associated with dairy production. Students learn about nutrient management on Confined Animal Feeding Operations (CAFO's) and conduct their own Comprehensive Nutrient Management Plan on a case-study farm. This course integrates crop and manure management with nutrition and herd management to provide a broad but focused and action-oriented approach. The course utilizes two software programs developed at Cornell for nutrient management planning and herd nutritional management, the Cornell Nutrient Management Planning System and the Cornell Net Carbohydrate and Protein System. Current topics are also discussed, such as greenhouse gas emissions and impacts of dairy and livestock production and local versus global food production and environmental impacts.

ANSC 4140 Ethics and Animal Science

Spring. 2 credits. Prerequisite: junior or senior standing. D. J. R. Cherney.

Explores the place of humans in the biological world, origins of ethics and morality, speciesism, the use of animals for research and agricultural purposes, transgenic animals. A book review, participation in discussion in class and online, and a project of the student's choice are used to evaluate the performance of each student.

ANSC 4250 Gamete Physiology and Fertilization (also BIOAP 4250)

Fall. 2 credits. Limited to 50 students. Prerequisite: ANSC 2400 or equivalent. Offered alternate years. J. E. Parks.

Study of the formation, growth, differentiation, and maturation of mammalian sperm and oocytes; gamete transport and interaction with male and female reproductive tracts; and cytological, physiological, and molecular changes required for fertilization. Lecture, discussion, and aspects of gamete physiology and in vitro technologies such as cryopreservation, oocyte maturation, and fertilization are covered.

ANSC 4270 Fundamentals of Endocrinology (also BIOAP 4270)

Fall. 3 credits. Prerequisite: animal or human physiology course or permission of instructor. P. A. Johnson.

Physiology and regulation of endocrine secretions. Emphasizes neuroendocrine, reproductive, growth, and metabolic aspects of endocrinology. Examples are selected from many animals, including humans.

ANSC 4510 Dairy Herd Business Management

Fall. 3 credits. Corequisite: ANSC 4560. J. Karszes and D. M. Galton.

Emphasizes dairy herd business management with application to herd management analysis. Laboratory includes farm tours and analysis.

ANSC 4560 Dairy Management Fellowship

Spring. 2 credits. Prerequisites: senior standing; ANSC 3510; permission of instructor. S–U grades only. D. M. Galton. Designed for undergraduates who have a sincere interest in dairy farm management. Objective is to gain further understanding of the integration and application of dairy farm management principles and programs with respect to progressive dairying and related industries.

ANSC 4570 Introductory Spanish for Dairy Producers

Spring. 3 credits. Prerequisite: ANSC 2500 or permission of instructor. S–U or letter grades. Staff.

Students with a focus on dairy management learn to communicate with the increasingly Spanish-speaking workforce to assure that the knowledge of cutting-edge dairy management and observations from the field are exchanged accurately. This is the first of a sequence of two courses developed to meet these goals.

ANSC 4580 Advanced Spanish for Dairy Producers

Fall. 3 credits. Prerequisite: ANSC 4570 or permission of instructor. S–U or letter grades. Staff.

Students with a focus on dairy management need to be able to communicate with the Spanish-speaking workforce, and upward mobility of that workforce depends on knowledge of cutting-edge dairy management. This is the second course of a two-sequence program that will further develop the students' skills to be able to communicate in Spanish higher-level dairy production tasks and principles to Spanish-speaking dairy workers.

ANSC 4700 Merchandising Beef Cattle

Fall. 2 credits. S–U or letter grades. M. J. Baker.

Introduction to the merchandising of replacement beef heifers. Topics of study will include budgeting, advertising, animal preparation, cataloging, clerking, and reporting. Students will gain practical knowledge through lecture as well as hands-on experience by planning, organizing, and conducting a sale of bred beef heifers from the Empire Heifer Development Program.

ANSC 4940 Special Topics in Animal Science

Fall or spring. 4 credits max. Prerequisite: undergraduate standing. S–U or letter grades. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

ANSC 4960 Internship in Animal Science

Fall or spring. 1–3 credits, variable; 6 credits max. during undergraduate career. Students must register using independent study form (available in 140 Roberts Hall). S–U grades only. Staff.

Structured, on-the-job learning experience under supervision of qualified professionals in a cooperating organization (e.g., farm, agribusiness, pharmaceutical company, zoo, educational institution). Internships are

arranged by the student and must be approved in advance by the student's academic advisor. The internship should provide a professionally supervised experience with at least 60 hours on the job per credit required. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

ANSC 4970 Individual Study in Animal Science

Fall or spring. 1–3 credits, variable; may be repeated for credit. Intended for students in animal sciences. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S–U or letter grades. Staff.

May include individual tutorial study or a lecture topic selected by a professor. Because topics may change, the course may be repeated for credit.

ANSC 4980 Undergraduate Teaching

Fall or spring. 1–3 credits, variable; limited to two experiences during undergraduate career. Prerequisite: GPA of at least 2.7.

Students must register using independent study form (available in 140 Roberts Hall). Designed to consolidate the student's knowledge. A participating student assists in teaching a course allied with his or her education and experience. The student is expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

ANSC 4990 Undergraduate Research

Fall or spring. 6 credits max. during undergraduate career. Prerequisite: junior or senior standing; GPA of at least 2.7. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Students must register using independent study form (available in 140 Roberts Hall).

Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

ANSC 4991 Undergraduate Honors Research in Animal Science

Fall and spring. 1–6 credits; max. 6. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall).

Intended for qualified students pursuing the research honors program in animal science.

[ANSC 6030 Mineral Nutrition: Metabolic, Health, and Environmental Aspects (also NS 6030)]

Fall. 2 credits. Prerequisites: biochemistry, physiology, and nutrition courses. Letter grades only. Offered alternate years; next offered 2010–2011. X. G. Lei and C. C. McCormick.

Emphasizes metabolism, gene regulation, antioxidation, and genetic defects related to mineral nutrition. Discusses effective approaches to improve global mineral nutrition by agriculture and food systems.]

[ANSC 6060 Ruminant Nutrition: Microbial Ecology and Forage Chemistry]

Spring. 4 credits. Prerequisites: ANSC 2120, biochemistry course; senior or graduate standing or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. Staff.

Provides an overview of ruminant nutrition with an emphasis on microbial ecology, forage chemistry, and rumen function.]

ANSC 6100 Animal Science Seminar

Fall and spring. 1 credit. Prerequisite: graduate standing. S–U grades only. R. E. Austic.

Weekly seminar on topics related to animal science. The requirement for an S grade is regular attendance at seminars during the semester.

ANSC 6190 Field of Nutrition Seminar (also NS 6190)

Fall and spring. 0 credits. No grades given. For description, see NS 6190.

ANSC 6210 Reproductive Physiology/Endocrinology Seminar

Fall and spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S–U grades only. W. R. Butler and staff.

Current research in reproductive physiology is presented by faculty and staff members, graduate students, and invited speakers.

ANSC 6220 Seminar in Animal Metabolism

Fall and spring. 1 credit. Prerequisite: permission of instructor. S–U grades only. Y. R. Boisclair and D. E. Bauman.

Current issues in metabolism are discussed as they relate to productivity, well-being, and diseases of animals. Students present research proposals for new initiatives, progress reports on ongoing projects and recent peer-reviewed publications of high significance.

ANSC 6940 Special Topics in Animal Science

Fall or spring. 4 credits max. Prerequisite: graduate standing. S–U or letter grades.

The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

ANSC 7900 Graduate-Level Thesis Research

Fall or spring. Credit TBA, max. 12 per semester. Prerequisite: permission of advisor. S–U grades only. Graduate faculty.

For students in a Ph.D. program *only before* "A" exam has been passed.

ANSC 8900 Master's-Level Thesis Research

Fall or spring. Credit TBA, max. 12 per semester. Prerequisite: permission of advisor. S–U grades only. Graduate faculty.

For students admitted specifically to a master's program.

ANSC 9900 Doctoral-Level Thesis Research

Fall or spring. Credit TBA, max. 12 credits per semester. Prerequisite: permission of advisor. S-U grades only. Graduate faculty. For students admitted to candidacy after "A" exam has been passed.

Walter. Lecturers: C. L. Anderson, L. D. Geohring

BEE 1200 The BEE Experience

Spring. 1 credit. Requirement for CALS BEE freshmen. Not required for students who have completed ENGRG 1050. Prerequisite: BEE majors or permission of instructor. Letter grades only. M. F. Walter.

Forum covering the career opportunities for engineering students and the activities and curricula that lead to these opportunities. A series of seminars are given by practicing engineers, Cornell faculty members, alumni, staff from Cornell career services offices, and students. Students develop their undergraduate course plans, complete a web search assignment to locate jobs and internships, and select future courses to meet their academic objectives and career goals.

BEE 1510 Introduction to Computer Programming

Fall. 4 credits. Limited to 18 students per lab and rec. No previous programming experience assumed. Pre- or corequisite: MATH 1910 or equivalent. Letter grades only. C. L. Anderson.

Introduction to computer programming and concepts of problem analysis, algorithm development, and data structure in an engineering context. The structured programming language MATLAB is used, implemented on interactive personal computers and applied to problems of interest in biological and environmental engineering.

BEE 2220 Bioengineering Thermodynamics and Kinetics

Spring. 3 credits. Prerequisites: MATH 1920, BIOG 1110, PHYS 2213, and chemistry course completed or concurrent. Letter grades only. J. B. Hunter.

Living systems rely on chemical and phase equilibria, precise coordination of biochemical pathways, and the release of chemical energy as heat, all of which are governed by the laws of thermodynamics and the rates of chemical reactions. The course covers concepts and laws of thermodynamics as applied to phase transformations, work, heat, and chemical reactions; and reaction kinetics applied to industrial processes and living systems, all with a focus on biological examples.

BEE 2510 Engineering for a Sustainable Society (also ENGRD 2510)

Fall. 3 credits. Pre- or corequisite: MATH 2930. Letter grades only. B. A. Ahner. Case studies of contemporary environmental issues including pollutant distribution in natural systems, air quality, hazardous waste management, and sustainable development. Emphasis is on the application of math, physics, and engineering sciences to solve energy and mass balances in environmental sciences. Introduces students to the basic chemistry, ecology, biology, ethics, and environmental legislation relevant to the particular environmental problem. BEE students must complete either BEE 2510 or BEE 2600 according to their academic plan. BEE students who complete both BEE 2510 and BEE 2600 receive engineering credit for only one of these courses.

BEE 2600 Principles of Biological Engineering (also ENGRD 2600)

Fall. 3 credits. Pre- or corequisite: MATH 2930, BIOG 1101-1104 or 1105/1106. Letter grades only. A. J. Baeumner.

Focuses on the integration of biological principles with engineering, math, and physical principles. Students learn how to formulate equations for biological systems in class and practice in homework sets. Topics range from molecular principles of reaction kinetics and molecular binding events to macroscopic applications such as energy and mass balances of bioprocessing and engineering design of implantable sensors. BEE students must complete either BEE 2510 or BEE 2600 according to their academic plan. BEE students who complete both BEE 2510 and BEE 2600 receive engineering credit for only one of these courses.

BEE 3050 Principles of Navigation (also NAVS 3050)

Spring. 4 credits. Three classes each week (lec-rec-project work). Letter grades only. Lt. Raineault.

Introduction to the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. Covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, star identification, use of the nautical almanac, tides, and currents. Also *briefly* discusses electronic navigation systems.

BEE 3299 Sustainable Development: A Web-Based Course

Spring, summer. 3 credits. Prerequisite: at least sophomore standing. S-U or letter grades. M. F. Walter and N. R. Scott. Sustainable development is the dominant economic, environmental, and social issue of

the 21st century. This course develops the concepts of sustainable development as an evolutionary process, demanding the integration of the physical sciences and engineering with the biological and social sciences for design of systems. Topics include the nature of ecosystems, global processes, sustainable communities, and industrial ecology, renewable energy, and life cycle analysis.

BEE 3310 Bio-Fluid Mechanics

Fall. 4 credits. Prerequisites: ENGRD 2020 and engineering math sequence. Letter grades only. K. G. Gebremedhin. Properties of Newtonian and non-Newtonian fluids; hydrostatic and dynamic forces; principles of continuity, conservations of mass, energy and momentum and their applications; laminar and turbulent flows and boundary layer, introduction to Navier Stokes; dimensional analysis and similarity; blood flow in the cardiovascular system; gas exchange in the pulmonary system; blood flow and sodium transport in the kidney. The major concepts are covered by case studies.

BEE 3500 Biological and Environmental Transport Processes

Fall. 3 credits. Pre- or corequisites: MATH 2930 and fluid mechanics course. Letter grades only. A. K. Datta.

Focuses on understanding the principles of heat and mass transfer in the context of biological (biomedical/bioprocessing/bioenvironmental) systems. Emphasizes physical understanding of transport processes and simple reaction rates with application examples from plant, animal, and human biology in the bioenvironment (soil/water/air), and industrial processing of food and biomaterials.

BEE 3600 Molecular and Cellular Bioengineering (also BME 3600)

Spring. 3 credits. Prerequisite: BEE 2600, biochemistry, linear algebra, ordinary differential equations, or permission of instructor. Letter grades only. J. C. March. Biotechnology viewed at the cellular and molecular level. Advances in biotechnology will be broken down to their functional parts using the tools of biological engineering (thermodynamics, transport, kinetics, etc.) to understand how and why they work with an emphasis on design. Particular attention paid to gene therapy, synthetic biology, protein engineering, and nucleic acid engineering. Case studies in biomedical, bioprocess, and bioenvironmental engineering.

BEE 3650 Properties of Biological Materials

Spring. 3 credits. Satisfies BE laboratory experience requirement. Pre- or corequisite: ENGRD 2020. Letter grades only. J. A. Bartsch.

Mechanics and structural properties of biological materials; mechanical testing of animal, plant, and food products. Laboratory exercises involve quasistatic and dynamic testing of materials and interpretation of test results. Uses experimental techniques to determine engineering properties of these materials.

BEE 3680 Biotechnology Applications: Animal Bioreactors

Fall. 3 credits. Prerequisite: biochemistry course or permission of instructor. Letter grades only. Offered alternate years. J. B. Hunter.

Introduces students to the biotechnological applications of animals; their organs, tissues, and cells as bioreactors for the production of substances such as pharmaceuticals; growth factors, anti-tumor proteins, antibodies, and vaccines. Exposes students to various design issues, technical constraints, societal concerns, and ethical considerations of this biotechnology.

[BEE 3710 Physical Hydrology for Ecosystems]

Spring. 3 credits. Prerequisite: MATH 1920 or permission of instructor. Letter grades only. Offered alternate years; next offered 2010–2011. M. T. Walter.

This is an introduction to physical hydrology with an emphasis on roles and interactions between hydrological processes and ecological, biogeochemical, and human systems. <http://hive.bee.cornell.edu/faculty/walter/BEE371Index.htm>

BEE 4010 Renewable Energy Systems

Spring. 4 credits. Prerequisite: college physics. Letter grades only. L. D. Albright. Introduces energy systems with emphasis on quantifying costs and designing/optimizing renewable energy systems to convert environmental inputs into useful forms of energy. Covers solar energy, small-scale hydropower, wind, bio-conversion processes, house energy balances. Focuses on the technologies and small-scale system design, not policy issues. Use of spreadsheets is extensive.

BEE 4270 Water Measurement and Analysis Methods

Fall. 3 credits. Satisfies BE and EnvE laboratory experience requirement. Prerequisites: fluids or hydrology course and MATH 1910. Letter grades only. L. D. Geohring and T. S. Steenhuis. Get wet and muddy learning how to monitor and characterize water and soil management problems in the natural environment. This is a field-based lab course that integrates science and engineering technologies, using various measurement equipment and analytical techniques to quantify water flow and quality parameters in surface and subsurface environments. Measurement accuracy, water sampling quality assurance protocols, and interpretation of watershed contaminants are addressed.

BEE 4350 Principles of Aquaculture

Spring. 3 credits. Prerequisite: at least junior standing. Letter grades only. No-one is allowed to add course after 2nd lec. Two required field trips require class to return to campus at 7 p.m. M. B. Timmons.

An in-depth treatment of the principles of aquaculture: fish biology, waste treatment, engineering design, fish health, nutrition, processing, etc. This course is intended to build upon the undergraduate's previous course background and interests. Includes supervised "hands-on" laboratory experiences.

BEE 4500 Bioinstrumentation

Spring. 4 credits. Satisfies both BE laboratory experience and BE capstone design requirement. Prerequisites: MATH 2940, introductory computing, two semesters of physics, statistics, or permission of instructor. Letter grades only. D. J. Aneshansley.

Bioinstrumentation applications are emphasized in this laboratory-based course.

Electronic instruments from sensor to computer are considered. Static and dynamic characteristics of components and systems are examined theoretically and empirically. General analog and digital signal condition circuits are designed, constructed, and tested. A variety of biological applications of instrumentation are discussed.

BEE 4530 Computer-Aided Engineering: Applications to Biomedical Processes (also MAE 4530)

Spring. 3 credits. Satisfies BE capstone design requirement. Satisfies College of Engineering technical writing requirement. Prerequisite: heat and mass transfer (BEE 3500 or equivalent). Letter grades only. A. K. Datta.

Introduction to simulation-based design as an alternative to prototype-based design; analysis and optimization of complex real-life processes for design and research, using industry-standard physics-based computational software. Emphasis is on problem formulation, starting from a real process and developing its computer model. Covers biomedical processes in thermal therapy and drug delivery that involve heat transfer, mass transfer, and fluid flow. Computational topics introduce the finite-element method, pre- and post-processing, and pitfalls of using computational software. Students choose their own semester-long biomedical project, which is the major part of the course (no final exam).

[BEE 4540 Physiological Engineering]

Fall. 3 credits. Satisfies BE laboratory experience requirement. Prerequisites: differential equations, 2 semesters of physics, introductory biology, statistics. Letter grades only. Next offered 2010–2011. D. J. Aneshansley.

Measurements of biological systems are integrated with mathematical models of animal physiology. Laboratory experiments and problem sets examine membrane transport, senses, and interacting physiological systems.]

BEE 4590 Biosensors and Bioanalytical Techniques

Fall. 3 credits. Prerequisites: biochemistry course and permission of instructor. Letter grades only. A. J. Baemumner.

Provides students with an understanding of the scientific and engineering principles of biosensors and bioanalytical techniques. Addresses selected topics from simple biosensors to micro/nanofabricated Micro Total Analysis Systems (MicroTAS). Biosensor and MicroTAS applications in environmental analysis, food safety, and medical diagnostics are explored. Students give oral presentations in lecture, analyze biosensors published in literature, and theoretically design a biosensor based on criteria discussed in class. Undergraduate students work together in teams of two to three. Meets concurrently with BEE 6590. BEE 6590 students work independently on individual biosensor projects.

BEE 4600 Deterministic and Stochastic Modeling in Biological Engineering

Fall. 3 credits. Prerequisites: MATH 2930, MATH 2940, BEE 3500 or equivalent, Mass and Energy Balances, or permission of instructor. Letter grades only. J. C. March.

This course covers modeling biological systems from an engineering standpoint. Starting with deterministic approaches, the

class will functionally decompose and mathematically model systems important to biological engineers (including bioprocessing, biomedicine, and microbial ecology). Mechanistic aspects of biology will be handled using stochastic (probabilistic) approaches in the second half of the semester.

BEE 4640 Bioseparation Processes

Fall. 3 credits. Prerequisites: introductory biochemistry, physics, MATH 1920, BEE 2600 or equivalent, or permission of instructor. Offered alternate years. S–U or letter grades. J. B. Hunter.

Bioseparation is the science and engineering of fractionating and purifying biological materials: DNA, proteins, living cells, antibiotics, biofuels, and even foods. This course covers separation methods used in the biotechnology industry, principles governing these methods, approaches to improving bioseparation performance, and the special challenges of scale-up. Key topics (centrifugation, filtration, extraction, membrane methods, ion exchange, chromatography, electrophoresis) are supplemented with student presentations. Intended for seniors and graduate students in engineering, chemistry, biology, and food science.

[BEE 4710 Introduction to Groundwater (also EAS 4710)]

Spring. 3 credits. Prerequisites: MATH 2930, fluid mechanics or hydrology course. S–U or letter grades. Field trip. Offered alternate years; next offered 2010–2011. L. M. Cathles, M. T. Walter, and T. S. Steenhuis.

Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.]

BEE 4730 Watershed Engineering

Fall. 4 credits. Satisfies BE and EnvE capstone design requirement. Satisfies College of Engineering technical writing requirement. Satisfies BE laboratory experience requirement. Prerequisite: CEE 3310 or hydrology course. Letter grades only. M. T. Walter.

This course teaches basic design and analysis as practiced for water control and nonpoint source pollution prevention. We will discuss the origins of design approaches including their theoretical bases but this is not a theory course. Most of the course is dedicated to practicing applied design. Assignments are generally representative of real-life engineering problems and will involve as much hands-on experience as possible. Some example topics include risk analysis, water conveyance, nonpoint source pollution control, stream restoration, stormwater management, and erosion control.

BEE 4740 Water and Landscape Engineering Applications

Spring. 3 credits. Satisfies BE capstone design requirement. Prerequisites: fluids or hydrology course or permission of instructor. Letter grades only.

L. D. Geohring and T. S. Steenhuis. This course will focus on how water moves in soil and the implications for design of drainage and irrigation systems in the landscape. The course addresses aspects of soil physics, flow in porous media, water quality and water supply or disposal in regard to drainage and irrigation applications. Emphasis is on problem solving of actual

situations, and a major site-design project is required.

BEE 4750 Environmental Systems Analysis

Fall. 3 credits. Prerequisites: computer programming and one year of calculus. Letter grades only. D. A. Haith.

Applications of mathematical modeling, simulation, and optimization to environmental-quality management. Fate and transport models for contaminants in air, water, and soil. Optimization methods (search techniques, linear programming) to evaluate alternatives for solid-waste management and water and air pollution control. Introduction to hydrologic simulation (runoff and streamflow). Software packages for watershed analyses of point and nonpoint source water pollution.

BEE 4760 Solid Waste Engineering

Spring. 3 credits. Prerequisites: one semester of physics and chemistry. Letter grades only. D. A. Haith.

Planning and design of processes and facilities for management of municipal solid wastes. Source characterization and reduction; collection and transport systems; waste-to-energy combustion; sanitary landfills; composting; recycling and materials recovery facilities; and hazardous waste management. Emphasizes quantitative analyses.

BEE 4800 Our Changing Atmosphere: Global Change and Atmospheric Chemistry (also EAS 4800)

Fall. 3 credits. Prerequisites: CHEM 2090, MATH 1920, PHYS 1112 or equivalent, or permission of instructor. S-U or letter grades. P. G. Hess.

This course investigates the science behind changes in our atmosphere's composition and its relation to global change. We will examine the chemistry and physics that determines atmospheric composition on global scales including the effects of biogeochemistry and atmospheric photochemistry.

BEE 4810 LRFD-Based Engineering of Wood Structures (also CEE 4810)

Spring. 3 credits. Satisfies BE capstone design requirement when co-registered in BEE 4960. Prerequisite: ENGRD 2020. Letter grades only K. G. Gebremedhin.

Computer-aided and manual computation procedures of Load and Resistance Factor Design (LRFD)-based engineering of wood structures. National design codes and standards; estimation of factored design loads and load combinations; mechanical properties of wood and wood products; designs of beams, columns, trusses, frames, arches, bridges, diaphragms; connections and wood structural systems. Also discusses engineering design judgment as an integral component of the quantitative design procedure.

BEE 4840 Metabolic Engineering

Spring. 3 credits. Prerequisite: biochemistry course or permission of instructor. Letter grades only. R. M. Spanswick.

The principles of metabolic engineering as they relate to the regulation of metabolic pathways, including membrane transport, are considered in terms of enzyme kinetics and metabolic control analysis. Case studies, reflecting the interests of the instructor, include examples involving higher plants. Each student is expected to investigate one topic in depth and make a short class presentation.

BEE 4860 Industrial Ecology of Agriculturally Based Bioindustries

Spring. 3 credits. Prerequisites: one year of calculus, some knowledge of MATLAB. Letter grades only. L. P. Walker.

Agricultural-based biofuels and bioproducts systems are very complex and highly integrated. Each of these subsystems are composed of a number of biological, chemical, and physical processes that can be interconnected to a multitude of ways to generate the essential material and energy flows for the production of biofuels and bioproducts. For this course an input/output modeling methodology is employed to develop and manipulate the structure of complex agriculturally based bio-industries and to generate the material, energy, and monetary flows. Students will use linear algebra and state space tools in the MATLAB toolbox to simulate static and dynamic behavior of these complex webs of connected processes and to conduct life-cycle analysis of these complex webs.

BEE 4870 Sustainable Energy Systems

Fall. 3 credits. Satisfies BE capstone design requirement. Intended for upper-level undergraduates and graduate students.

Prerequisites: BEE 3500 and thermodynamics course. Letter grades only. L. T. Angenent and N. R. Scott.

Offers a systems approach to understanding renewable energy systems (solar, wind, and biomass) and their conversion processes, from various aspects of biology, physics, engineering, environmental impacts, economics, and sustainable development.

BEE 4890 Entrepreneurial Management for Engineers

Fall. 4 credits. Satisfies College of Engineering technical writing requirement. Prerequisites: junior standing; ENGRD 2700 or CEE 3040 or equivalent highly recommended. Letter grades only. No one allowed to add course after second week. M. B. Timmons.

The course focuses on how to start a new company centered on engineering or biological technologies. Course objectives include coverage of entrepreneurship principles, fundraising, negotiation, financial calculations (internal rate of return, time value of money, pro forma statements); legal structures of businesses; project management; and to develop an awareness of issues related to professional ethics; and technical writing and communication. Majority of work done in teams including a complete business plan that is presented to angel investors. Business plans must require less than \$100K in startup funding and may result in actual investment by the angel investor group.

BEE 4900 Biofuels: The Economic and Environmental Interactions (also AEM 6900)

Spring. 2 credits. Prerequisites: senior or graduate standing, others by permission of instructor; course in microeconomics. S-U or letter grades. P. G. Hess.

This course surveys the latest research on the science and economics of biofuels. Questions addressed include the environmental and economic impacts of biofuel use and whether the use of biofuels justifies public policy intervention. The class will consist of a colloquium, discussion with the colloquium speaker, and an in-class discussion section.

BEE 4930 Technical Writing for Engineers

Fall, spring. 1 credit. Meets College of Engineering technical writing requirement. Letter grades only. Staff.

Covers communication skills necessary for oral and written technical project reports. Also considers outlines, style, audience, and general presentation mechanics.

BEE 4940 Special Topics in Biological and Environmental Engineering

Fall or spring. 4 credits max. S-U or letter grades. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under this number will be approved by the department curriculum committee and the same course will not be offered twice under this number. Each 4940 has a unique course ID for enrollment.

BEE 4960 Capstone Design in Biological and Environmental Engineering

Spring. 1 credit. Corequisite: BEE 4810. Letter grades only. Staff.

Involves capstone design experience, including a team project incorporating analysis, design, evaluation, synthesis, and a written and oral report of the end product.

BEE 4970 Individual Study in Biological and Environmental Engineering

Fall and spring. 1-4 credits. Prerequisite: written permission of instructor and adequate ability and training for work proposed; normally reserved for seniors in upper two-fifths of their class. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall). Letter grades only. See department office for course ID specific to your project advisor. Staff.

Special work in any area of biological and environmental engineering on problems under investigation by the department or of special interest to the student, provided, in the latter case, that adequate facilities can be obtained.

BEE 4980 Undergraduate Teaching

Fall and spring. 1-4 credits. Prerequisite: written permission of instructor. Letter grades only. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall). See department office for course ID specific to your project advisor. Staff.

The student assists in teaching a biological and environmental engineering course appropriate to his or her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses objectives and techniques with the faculty member in charge of the course.

BEE 4990 Undergraduate Research

Fall and spring. 1-4 credits. Prerequisites: normally reserved for seniors in upper two-fifths of their class; adequate training for work proposed; written permission of instructor. Letter grades only. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall). See department office for course ID specific to your project advisor. Staff.

Research in any area of biological or environmental engineering on problems under investigation by the department or of special interest to the student, provided that

adequate facilities can be obtained. The student must review pertinent literature, prepare a project outline, carry out an approved plan, and submit a formal final report.

BEE 4991-4992 BEE Honors Research

Fall and spring. 1-6 credits, variable. Prerequisite: enrollment in BEE research honors program. Students must be eligible for Latin honors and complete honors program application by third week of fall semester, senior year. Letter grades only. Staff.

Intended for students pursuing the research honors program in BEE.

BEE 5010 Bioengineering Seminar (also BME 5010)

Fall, spring. 1 credit. Prerequisite: junior, senior, or graduate standing. S-U grades only. Staff.

To give you, the engineer-in-training, a *broad* overview of different aspects of biological and biomedical engineering including business, legal, and clinical issues. To give the students a working knowledge of how abstracts are written and revised.

BEE 5330 Engineering Professionalism

Spring. 1 or 2 credits*. Prerequisite: graduate student with accredited engineering degree or senior who will graduate with accredited engineering degree. Must register to take Fundamentals of Engineering Exam.** S-U or letter grades. Lec only 1st 10 weeks of semester. M. B. Timmons, J. R. Stedinger, other Engineering Faculty.

Presentations address engineering professionalism and ethics and provide preparation for the general NY FE Examination taught in a team-based format. The second-credit ethics portion emphasizes the engineer's professional responsibilities for the health and welfare of the public and the guiding principles for a professional engineer. Case histories on engineering ethics will be examined and students will write their own personal statement addressing integrity. Homework addresses FE exam preparation, and students complete the formal comprehensive review of engineering subjects associated with the Fundamentals of Engineering Exam.

*1-credit option includes FE review only.

**Students must file their N.Y. FE Exam application by either November 1 of the previous year or by May 1 of the spring semester to be enrolled in BEE 5330. The FE exam registration and sitting fees total \$205 and are paid to the N.Y. State Education Department and the testing service, not to Cornell. The N.Y. FE Exam is offered in April and October; the April exam may be taken at Cornell and other N.Y. locations; the October exam is not offered at Cornell.

BEE 5901-5902 M.P.S. Project

Fall and spring. 1-6 credits. Requirement for each M.P.S. candidate in field. Letter grades only. BEE graduate faculty.

Comprehensive project emphasizing the application of agricultural technology to the solution of a real problem.

BEE 5951-5952 Master of Engineering Design Project

Fall and spring. 3-6 credits. Prerequisite: admission to M.Eng. degree program. Letter grades only. BEE graduate faculty.

Comprehensive engineering design projects relating to the candidate's area of specialization. Projects are supervised by faculty members on an individual basis. A formal project report and oral presentation of the design project are required for completion of the course(s). A minimum of 3 to a maximum of 12 credits of 5951-5952 is required for the M.Eng. degree.

BEE 6430 Veterinary Perspectives on Pathogen Control in Animal Manure (also VTMED/BIOIMI 6430)

Spring, eight weeks. 2 credits. Prerequisite: third- and fourth-year veterinary students; graduate students, advanced undergraduate students interested in agricultural engineering as related to animal manure management. D. D. Bowman.

In-depth look at the management of pathogens in animal manures. Reviews the pathogens involved, the role of governing agencies, the survival of pathogens in the field, and methods of pathogen destruction. Discusses commercial methods of manure processing for the control of these pathogens for the protection of other animals and the human population. Concludes with class discussions with major stakeholders representing the dairy, beef, pork, and poultry industries and their understanding of the problem as it relates to veterinary students.

BEE 6470 Water Transport in Plants (also BIOPL 6510)

Fall. 2 credits. Letter grades only. Offered alternate years. R. M. Spanswick.

Topics include water relations of plant cells and tissues using water potential terminology; permeability of plant cells to water and the role of aquaporins; transport of water through whole plants, including transpiration, stomatal physiology, and the modifications due to plant communities; water status and plant growth in relation to water stress.

[BEE 6490 Solute Transport in Plants (also BIOPL 6490)]

Fall. 3 credits. Letter grades only. Offered alternate years; next offered 2010-2011. R. M. Spanswick.

A fundamental treatment of the transport of ions and small organic molecules in plants.]

[BEE 6510 Bioremediation: Engineering Organisms to Clean Up the Environment]

Spring. 3 credits. Prerequisites: BIOIMI 2900 or BIOBM 3310 or permission of instructor. Letter grades only. Next offered 2010-2011. B. A. Ahner.

Through lectures and current literature, students evaluate the benefits as well as the current obstacles to effective bioremediation; includes examples of genetically engineered organisms.]

BEE 6550 Thermodynamics and Its Applications

Fall. 3 credits. Prerequisite: MATH 2930 or equivalent; for undergraduates, permission of instructor. Letter grades only. Offered alternate years. J.-Y. Parlange.

Thermodynamics and its applications to problems in engineering and agriculture. Topics include basic concepts (equilibrium, entropy, processes, systems, potentials, stability, phase transitions) and applications (soil and water processes, dilute solutions, electromagnetism, surface phenomena, heat and mass transport, and structure of organizations).

BEE 6590 Biosensors and Bioanalytical Techniques

Fall. 3 credits. Prerequisites: biochemistry course and permission of instructor. Letter grades only. A. J. Baeumner. For description, see BEE 4590.

[BEE 6710 Analysis of the Flow of Water and Chemicals in Soils]

Fall. 3 credits. Prerequisites: four calculus courses and fluid mechanics course; for undergraduates, permission of instructor. Letter grades only. Offered alternate years; next offered 2010-2011. J.-Y. Parlange. Describes the chemical and water flows on a soil surface, in the vadose zone, and through the aquifer. Discusses current analytical, semi-analytical, and computer-based techniques.]

BEE 6720 Drainage

Spring. 4 credits. Prerequisites: BEE 4710 or BEE 4730. Letter grades only. Offered alternate years. T. S. Steenhuis and L. D. Geohring.

Discusses the theory of water and solute flow in aquifers, hill slopes, and the vadose zone as it relates to artificial drainage. Critically reviews drainage design as it relates to agricultural land, landfills, and land application sites. Examines the importance of preferential flow and matrix flow on water quality of drainage waters. Laboratories provide hands-on experience with measuring soil parameters and for actual drainage design.

BEE 6740 Ecohydrology

Spring. 3 credits. Prerequisite: ecology or hydrology course. Offered alternate years. Letter grades only. M. T. Walter.

The objective of this course is to investigate novel topics that involve the interactions between physical hydrological processes and ecosystem processes, including the impacts of human activities on the ecohydrological system. The course is designed to encourage teams of students from historically disparate disciplines to collaboratively combine their unique skills and insights to answer multidisciplinary ecohydrological questions. This course will consider a broad range scales from a stomate and a soil pore to a forest, watershed, and region, with emphasis placed on those scales and systems most appropriate to student interests. Through course work we will clarify the current understanding of various topics, identify knowledge gaps, develop hypotheses, and test them quantitatively by creating models and analyzing available data. The goal of this course is to identify the basic principles of ecohydrology and become familiar and comfortable with a range of quantitative tools and approaches for answering ecohydrological questions.

BEE 6870 The Science and Engineering Challenges to the Development of Sustainable Bio-Based Industries

Fall. 1 credit. Prerequisite: graduate standing. S-U grades only. L. P. Walker.

Environmentally sustainable alternatives for our energy and chemical needs are critical. This seminar series explores challenges facing the development of industries that use biologically derived materials to produce useful chemicals and energy for society. Topics include natural products from biological systems, conversion of biomass to fuel and other commodities, and the use of

biological systems for environmental bioremediation.

BEE 6940 Graduate Special Topics in Biological and Environmental Engineering

Fall or spring. 4 credits max. S-U or letter grades. BEE graduate faculty. The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number. Each 6940 has a unique course ID number.

BEE 6970 Graduate Individual Study in Biological and Environmental Engineering

Fall or spring. 1-6 credits. Prerequisite: permission of instructor. S-U or letter grades. BEE graduate faculty. Topics are arranged by the staff at the beginning of the semester.

BEE 7000 Orientation to Graduate Study

Fall, first seven weeks. 1 credit. Prerequisite: new graduate students in BEE. S-U grades only. A. J. Baemmer. Introduction to BEE research policy, programs, methodology, resources, and degree candidates' responsibilities and opportunities.

BEE 7010 BEE Seminar Series

Spring. 1 credit. S-U or letter grades. J. C. March and M. T. Walter. Presentation and discussion of research and special developments pertinent to biological and environmental engineering and related fields.

BEE 7540 Water and Culture in the Mediterranean: A Crisis

Spring. 3 credits. Prerequisite: graduate standing or permission of instructors. S-U or letter grades. T. S. Steenhuis, G. Holst-Warhaft, et al. The course addresses the crisis of water in the Mediterranean region, through case studies situated in watershed basins, especially the Nile. It focuses on attitudes, conflicts, and relationships of local people and nations toward water, expressed in culture, environmental laws, and watershed management practices.

BEE 7600 Nucleic Acid Engineering (also BME 7600)

Spring. 2 credits. Prerequisite: graduate standing; seniors by permission of instructor. S-U or letter grades. D. Luo. Nucleic acid engineering focuses on manipulating nucleic acid molecules in a true engineering sense as well as in the "genetic engineering" sense by treating nucleic acids (including DNA, RNA, PNA, and TNA) as both genetic and generic materials. Both biomedical and nonbiomedical applications of nucleic acid engineering, including tool kits for nucleic acid engineering and current examples of DNA-based engineering, DNA nanotechnology, and DNA-based medicine are introduced. Efficient and effective literature reading and evaluation are emphasized.

BEE 7710 Soil and Water Engineering Seminar

Fall and spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U or letter grades. T. S. Steenhuis, J.-Y. Parlange, M. F. Walter, and M. T. Walter. Study and discussion of research or design procedures related to selected topics in watershed management, erosion control, hydrology, colloid transport, and water quality.

BEE 8900 Master's-Level Thesis Research

Fall and spring. 1-15 credits. Prerequisite: permission of advisor. S-U grades only. BEE graduate faculty. Variable credit for M.S. research.

BEE 9900 Doctoral-Level Thesis Research

Fall and spring. 1-15 credits. Prerequisite: permission of advisor. S-U grades only. BEE graduate faculty. Variable credit for Ph.D. research.

BIOLOGICAL SCIENCES

The program of study in biology is coordinated by the Office of Undergraduate Biology. For course descriptions, see the separate section "Biological Sciences."

BIOLOGY & SOCIETY

The undergraduate major field of study in biology & society is offered through the Department of Science and Technology Studies. For a full description of courses that fulfill field requirements, see "Biology & Society" under the College of Arts and Sciences.

BIOMETRY AND STATISTICS

J. Booth, chair (1178 Comstock Hall, 254-6505, 255-5488), C. Bustamante, G. Hooker, J. Mezey, S. J. Schwager, A. C. Siepel, R. Strawderman, M. Wells

The Department of Biological Statistics and Computational Biology offers the following courses in Biometry and Statistics. Students must register under Course Listings: College of Agriculture and Life Sciences—Biometry and Statistics.

BTRY 1150 Introduction to Quantitative Methods

Spring. 4 credits. Review of basic algebra concepts, the equation of a line, and systems of linear equations; properties of functions and applications, including polynomial, exponential, and logarithmic functions; basic probability laws, counting principles, discrete probability distributions, expected value; frequency distributions, measures of central tendency and variation; the binomial and normal distributions.

BTRY 3010 Biological Statistics I (also NTRES 3130, STSCI 2200)

Fall. 4 credits. Develops and applies statistical methods to problems encountered in the biological and environmental sciences. Methods include data visualization, population parameter estimation, sampling, bootstrap resampling, hypothesis testing, the Normal and other probability distributions, and an introduction to modeling. Carries out applied analysis in a statistical computing environment.

BTRY 3020 Biological Statistics II (also NTRES 4130, STSCI 3200)

Spring. 4 credits. Prerequisite: BTRY 3010 or 6010. Applies linear statistical methods to quantitative problems addressed in biological and environmental research. Methods include linear regression, inference, model assumption evaluation, the likelihood approach, matrix formulation, generalized linear models, single-factor and multifactor analysis of variance (ANOVA), and a brief foray into nonlinear modeling. Carries out applied analysis in a statistical computing environment.

BTRY 3100 Statistical Sampling (also ILRST/STSCI 3100)

Fall. 4 credits. Prerequisites: two semesters of statistics. Applied methodology and theory of statistical sampling, with particular emphasis on sampling methods, sample design, cost, estimation of population quantities, and error estimation. Assessment of nonsampling errors. Discussion of application to social and biological sciences and business. Includes an applied project.

BTRY 4070 Principles of Probability and Statistics (also ILRST 4070)

Fall. 4 credits. Cannot be taken for credit after completion of BTRY 4080/4090 or MATH 4710/4720 sequence. Prerequisites: one year of calculus. Course is prerequisite for upper-division statistical genomics courses. Recommended: some knowledge of multivariate calculus and statistics. S-U or letter grades. A one-semester version of the BTRY 4080/4090 sequence. Topics include combinatorial probability, conditional probability and independence, random variables (and their moments), standard distributions (multinomial, Poisson, normal, gamma, beta, etc.) and their properties. The second half of the course focuses on parametric inference using maximum likelihood and Bayesian approaches. Computational methods are emphasized using the R programming language. The course is a prerequisite for upper-division statistical genomics courses.

BTRY 4080 Theory of Probability (also STSCI 4080)

Fall. 4 credits. Prerequisites: MATH 1110, 1120, at least concurrent enrollment in 2130 or 2220 or equivalents. Recommended: at least one introductory course in statistical methods. Introduction to probability theory: axiomatic foundations; combinatorics and equally likely events; conditional probability and independence; discrete and continuous random variables, their distributions and moments; generating functions; transformations; extensions to problems involving two or more random variables;

random samples. Can serve as either one-semester introduction or a foundation for a course in statistical theory.

BTRY 4090 Theory of Statistics (also STSCI 4090)

Spring. 4 credits. Prerequisites: BTRY 4080 or equivalent and at least one introductory statistics course.

Introduction to classical theory of parametric statistical inference that builds on the material covered in BTRY 4080. Topics include sampling distributions, principles of data reduction, likelihood, parameter estimation, hypothesis testing, interval estimation, and basic asymptotic theory.

BTRY 4100 Multivariate Analysis (also ILRST/STSCI 4100)

Spring. 4 credits. Prerequisites: BTRY 3010, some knowledge of matrix algebra. S-U or letter grades.

Application of classical multivariate methods to data from a variety of fields using a statistical software package. Topics include the multivariate normal distribution, multivariate regression, and MANOVA; principal components and factor analysis; canonical correlation; discriminant analysis and clustering.

[BTRY 4790 Probabilistic Graphical Models (also CS 4782)]

Fall. 4 credits. Prerequisites: probability theory (BTRY 4080 or equivalent), programming and data structures (CS 2110 or equivalent). Recommended: course in statistical methods (BTRY 4090 or equivalent). Next offered 2010–2011.

A thorough introduction to graphical models, a flexible and powerful framework for machine learning and probabilistic modeling that combines graph theory and probability theory.]

BTRY 4820 Statistical Genomics

Fall. 4 credits. Prerequisites: MATH 1110 and BTRY 4070. Highly recommended: at least one previous course in statistical methods and one in biology. S-U or letter grades.

A course on the statistical analysis of genetic, molecular, and genomic data. The first module of the course presents a thorough treatment of important probability distributions and the concepts of likelihood and Bayesian inference. We then focus on how statistical models are developed for linkage analysis, basic Quantitative Trait Locus mapping, analysis of pedigrees, molecular population genetics and genomics, and phylogenetic inference.

BTRY 4830 Quantitative Genomics and Genetics

Spring. 4 credits. Prerequisites: BTRY 4070 and introductory statistics or equivalent. S-U or letter grades.

A rigorous treatment of analysis techniques used to understand complex genetic systems. This course will cover both the fundamentals and advances in statistical methodology used to analyze disease, agriculturally relevant, and evolutionarily important phenotypes. Topics will include mapping quantitative trait loci (QTLs), application of microarray and related genomic data to gene mapping, and evolutionary quantitative genetics. Analysis techniques will include association mapping, interval mapping, and analysis of pedigrees for both single and multiple QTL models. Application of classical inference and Bayesian analysis approaches will be covered

and there will be an emphasis on computational methods. Meets concurrently with BTRY 6830.

BTRY 4840 Computational Genomics

Fall. 4 credits. Prerequisites: BTRY 4070 and at least one course in statistical methods and at least one in algorithms. S-U or letter grades.

A rigorous treatment of important computational principles and methods for the analysis of genomic data, emphasizing comparative and evolutionary genomics. Topics include sequence alignment, gene and motif finding, phylogeny reconstruction, and inference of gene regulatory networks. Covers both maximum likelihood and Bayesian principles, and both exact and approximate algorithms for inference. Draws heavily on general concepts from probabilistic graphical models. Meets concurrently with BTRY 6840.

BTRY 4940 Undergraduate Special Topics in Biometry and Statistics

Fall or spring. 1–3 credits. S-U or letter grades.

Course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 4970 Undergraduate Individual Study in Biometry and Statistics

Fall and spring. 1–3 credits. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).

Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 4980 Undergraduate Supervised Teaching

Fall and spring. 1–3 credits. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).

Students assist in teaching a course appropriate to their previous training. Students meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

BTRY 4990 Undergraduate Research

Fall or spring. 1–3 credits. Prerequisite: statistics and biometry undergraduates; permission of faculty member directing research. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).

BTRY 6010 Statistical Methods I (also ILRST 6100)

Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.

Develops and uses statistical methods to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one- and two-way analysis of variance, comparisons among population means, analysis of categorical data, and correlation and regression analysis. Introduces interactive computing through statistical software. Emphasizes basic principles and criteria for selection of statistical techniques.

BTRY 6020 Statistical Methods II

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor; BTRY 6010 or equivalent.

Continuation of BTRY 6010. Emphasizes the use of multiple regression analysis, analysis of variance, and related techniques to analyze data in a variety of situations. Topics include an introduction to data collection techniques; least squares estimation; multiple regression; model selection techniques; detection of influential points, goodness-of-fit criteria; principles of experimental design; analysis of variance for a number of designs, including multi-way factorial, nested, and split plot designs; comparing two or more regression lines; and analysis of covariance. Emphasizes appropriate design of studies before data collection, and the appropriate application and interpretation of statistical techniques. Practical applications are implemented using a modern, widely available statistical package.

BTRY 6030 Statistical Methods III: Categorical Data (also ILRST/STSCI 4110)

Spring. 4 credits. Prerequisite: BTRY 6010 and 6020 or permission of instructor.

Offered alternate years.

Categorical data analysis, including logistic regression, log-linear models, stratified tables, matched pairs analysis, polytomous response, and ordinal data. Applications in biomedical and social sciences.

BTRY 6040 Statistical Methods IV: Applied Design (also STSCI 4120)

Spring. 4 credits. Prerequisites: BTRY 6010 and 6020 or permission of instructor.

Applications of experimental design including such advanced designs as split plots, incomplete blocks, fractional factorials. Stresses use of the computer for both design and analysis, with emphasis on solutions of real data problems.

BTRY 6070 Principles of Probability and Statistics

Fall. 4 credits. Prerequisite: one year of calculus. Recommended: some knowledge of multivariate statistics. S-U or letter grades.

For description, see BTRY 4070.

[BTRY 6150 Applied Functional Data Analysis]

Fall. 3 credits. Prerequisites: BTRY 6010 and 6020 or permission of instructor. Next offered 2010–2011.

Functional data analysis studies data that may be thought of as continuously sampled smooth curves. The course focuses on extensions of standard statistical techniques to these data.]

BTRY 6520 Computationally Intensive Statistical Inference

Spring. 4 credits. Prerequisite: ORIE 6700 and at least one course in probability. S-U or letter grades. Offered alternate years.

Modern applications in statistics often require intensive computation not handled by “off-the-shelf” software. This course covers topics in statistical computing, including numerical optimization and finding zeros (likelihood and related techniques including generalized estimating equations and robust estimation), kernel density estimation, resampling methods (randomization and bootstrap tests and confidence intervals), and statistical simulation (random number generation, heuristic search methods, Bayesian estimation, and Monte Carlo Markov Chain methods for tests and interval estimation). Programming is done in MATLAB. Focuses on the use of numerical analysis methods for

solving problems in statistical inference and estimation.

[BTRY 6790 Probabilistic Graphical Models (also CS 6782)]

Fall. 4 credits. Prerequisites: probability theory (BTRY 4080 or equivalent), programming and data structures (CS 2110 or equivalent). Recommended: course in statistical methods (BTRY 4090 or equivalent). Next offered 2010-2011.

For description, see BTRY 4790.]

BTRY 6820 Statistical Genomics

Fall. 4 credits. Prerequisites: MATH 1110 and BTRY 6070. Highly recommended: at least one previous course in statistical methods and one in biology. S-U or letter grades.

For description, see BTRY 4820.

BTRY 6830 Quantitative Genomics and Genetics

Spring. 4 credits. Prerequisites: BTRY 4070 and introductory statistics course or equivalent. S-U or letter grades.

For description, see BTRY 4830.

BTRY 6840 Computational Genomics

Fall. 4 credits. Prerequisites: BTRY 4070 and at least one previous course in statistical methods and at least one in algorithms. S-U or letter grades.

For description, see BTRY 4840.

BTRY 6890 Topics in Population Genetics and Genomics

Fall. 1 credit; may be repeated for credit. Prerequisite: BTRY 6820 or permission of instructor.

This course is a graduate seminar on current topics in population genetic data analysis. Topics this semester may include detecting signatures of natural selection, estimating demographic parameters, and recombination rate variation from whole-genome data; statistical methods for association mapping; efficient methods for disease gene mapping; use of comparative genomic data for population genetic inference. Readings will be chosen primarily from current literature.

BTRY 6940 Graduate Special Topics in Biometry and Statistics

Fall or spring. 1-3 credits. S-U or letter grades.

Course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 6970 Individual Graduate Study in Biometry and Statistics

Fall, spring, or summer. 1-3 credits. S-U or letter grades.

Individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

[BTRY 7170 Theory of Linear Models

Fall. 3 credits. Prerequisites: BTRY 4090, 6020, or equivalents. S-U or letter grades. Next offered 2010-2011.

Properties of the multivariate normal distribution. Distribution theory for quadratic forms. Properties of least squares and maximum likelihood estimates. Methods for fixed-effect models of less than full rank. Analysis of balanced and unbalanced mixed-effects models. Restricted maximum likelihood estimation. Some use of software packages and illustrative examples.]

BTRY 7180 Generalized Linear Models

Fall. 3 credits. Prerequisites: primarily for Ph.D. students in statistics; BTRY 6020, BTRY 4090, or equivalent. S-U or letter grades.

A theoretical development of generalized linear models and related topics including generalized estimating equations, and generalized linear mixed models.

BTRY 7200 Topics in Computational Genomics

Spring. 1 credit. Prerequisite: BTRY 4840/6840 or permission of instructor. Weekly seminar series on recent advances in computational genomics. A selection of the latest papers in the field will be read and discussed. Methods will be stressed, but biological results and their significance will also be addressed.

BTRY 7210 Topics in Quantitative Genomics

Fall. 1 credit. Prerequisites: BTRY 4830/6830 or permission of instructor. Weekly seminar series on recent advances in quantitative genomics. A selection of the latest papers in the field will be read and discussed. Methods will be stressed, but biological results and their significance will also be addressed.

[BTRY 7270 Advanced Survival Analysis

Spring. 3 credits. Prerequisites: at least one graduate-level course in probability, mathematical statistics, and regression modeling. S-U or letter grades. Next offered 2010-2011.

This course focuses on the rigorous development of nonparametric, semiparametric, and parametric modeling and statistical inference procedures appropriate for analyzing right censored data.]

BTRY 7900 Graduate-Level Dissertation Research

Fall or spring. 1-9 credits. Prerequisite: Ph.D. candidates; permission of graduate field member concerned. S-U grades only. Research at the Ph.D. level.

BTRY 7950 Statistical Consulting

Fall and spring. 2-3 credits. Pre- or corequisites: BTRY 6020 and 4090 and permission of instructor. S-U or letter grades.

Participation in the Cornell Statistical Consulting Unit (CSCU): faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions are held for joint consideration of literature and selected consultations encountered during previous weeks.

BTRY 7980 Graduate Supervised Teaching

Fall and spring. 2-4 credits. Prerequisites: permission of instructor and chair of special committee plus at least two advanced courses in statistics and biometry. S-U grades only. Students assist in teaching a course appropriate to their previous training. Students meet with a discussion section, prepare course materials, and assist in grading. Credit hours are determined in consultation with the instructor, depending on the level of teaching and the quality of work expected.

BTRY 8900 Master's-Level Thesis Research

Fall or spring. 1-9 credits. Prerequisite: M.S. candidates; permission of graduate field member concerned. S-U grades only. Research at the M.S. level.

BTRY 9900 Doctoral-Level Dissertation Research

Fall or spring. 1-9 credits. S-U grades only.

COMMUNICATION

G. K. Gay, chair; K. L. Berggren, J. P. Birnholtz, S. E. Byrne, S. R. Fussell, T. L. Gillespie, D. A. Grossman, J. T. Hancock, L. M. Humphreys, L. C. Levitan, B. V. Lewenstein, K. A. McComas, P. L. McLeod, S. M. Nelson, J. D. Niederdeppe, C. W. Scherer, M. A. Shapiro, L. P. Van Buskirk, Y. C. Yuan

COMM 1101 Cases in Communication (SBA)

Fall. 3 credits. T. Gillespie. Through analysis of cases, this course introduces students to key principles and theories in the study of human communication. Cases cover personal situations, entertainment, national crises, business situations, new technologies, and other contexts. The goal is to understand the links between these daily activities, "mid-range" theories of human behavior, and broad social concepts of modernity and post-modernity.

COMM 1300 Visual Communication (SBA)

Spring. 3 credits. C. Scherer. Introduction to visual communication theory. Examines how visuals influence our attention, perspectives, and understanding. Uses examples of visuals drawn from advertising, TV news, documentaries, entertainment movies, print, and interactive media to develop a theoretical framework for becoming more visually aware and for thinking more critically about how visuals influence us.

COMM 1310 Writing about Communication

Spring. 3 credits. Corequisite: COMM 1300. L. Van Buskirk and staff. Students develop skill in various writing styles and genres. This course explores communication practices and theories as they are observed and studied in personal and professional contexts. Assignments polish students' ability to gather information, analyze information, integrate ideas about communication, and express those ideas clearly and cogently. Several assignments focus on visual communication theories explored in COMM 1300 as well as ideas from COMM 1101.

COMM 2010 Oral Communication

Fall, winter, spring, or summer. 3 credits. Limited to 24 students per sec (fall and spring) or 15 students per sec (summer). Priority given to juniors and seniors, then sophomores. Fluency in spoken English assumed. Sections meet beginning first day of instruction; may precede lecture. Students absent twice during first week of class are dropped from course roster. Enrolled students must drop by end of second week to allow wait-listed students to add course. K. Berggren and staff.

Through theory and practice, students develop self-confidence and competence in researching, organizing, and presenting material to audiences. Students give four graded speeches, write short papers, perform speaker evaluations, and engage in other speech-related activities.

COMM 2030 Argumentation and Debate
Fall, spring, and summer. 3 credits.
S. Nelson.

Students learn the principles of argumentation and debate. Topics emphasize Internet database research, synthesis of collected data, policy analysis of evidentiary quality, refutation of counter claims, identification of logical fallacies, risk evaluation, framing of issues, and coherent storytelling. Prepares students to work with a great range of opinion and evidence. Emphasizes different viewpoints, including those of different cultures. Assumptions are interrogated.

COMM 2200 Media Communication (SBA)

Fall. 3 credits. S. Byrne.
Introduction to media history, industry, content, policy, process, and effects.

COMM 2450 Communication and Technology (also INFO 2450) (SBA)

Fall. 3 credits. J. Hancock and J. Birnholtz.
This course introduces students to the Communication and Information Technologies focus area of the communication department and the Human Systems track for information science. It examines several approaches to understanding technology and its role in human behavior and society. Topics include psychological aspects of computer-mediated communication; how design plays a role in the way we interface with technology and collaborate with each other; and the ways in which communication technology is situated inside social and institutional structures and cultural formations.

COMM 2630 Organizational Writing

Fall, winter, spring, or summer. 3 credits.
Limited to 25 students per sec.
Prerequisite: junior, senior, or graduate standing; college-level writing course.
L. Van Buskirk and staff.

Students write from the point of view of various organizations, including businesses, government agencies, and nonprofit organizations. This course emphasizes appropriate representation of the writer's organization, audience analysis, and clear and effective written presentation of detailed content. Assignments include text for web sites, reports, proposals, memoranda, letters, and e-mail.

COMM 2720 Principles of Public Relations and Advertising

Winter and summer. 3 credits. Not open to freshmen. Staff.
Survey of the fields of public relations and advertising. Describes organizations, jobs, and functions in the industry. Covers the roles of public relations and advertising in society, the economic system, and organizations; psychological and sociological principles as bases for appeals; strategies for media selection and message execution. Introduction to research and regulation.

COMM 2760 Persuasion and Social Influence (SBA)

Spring. 3 credits. Prerequisite: COMM 1101. P. McLeod.

Social influence and persuasion are the most basic and important functions of communication. The course covers characteristics of persuasive messages, message sources, and targets; interpersonal influence; influence in groups, organizations, and institutions. Special emphasis is given to topics in health, science, risk, media, and technology. This course is taught with a case-study format with strong emphasis on class attendance and participation. Supplementing the cases are interactive lectures and in-class activities and demonstrations. A semester-long field research project done in groups is a major component of the course. Exams and short individual homework assignments are also part of the student evaluation.

COMM 2820 Research Methods in Communication Studies (SBA)

Spring. 3 credits. Pre- or corequisite: sophomore standing. J. Niederdeppe.
The course covers social scientific methods to solve communication research problems empirically. Topics include basic principles of social scientific research, random sampling, questionnaire design, experimental research design, focus group techniques, content analysis, and basic descriptive and inferential statistics. Students will also learn basic data manipulation, presentation, and analysis techniques using SPSS and EXCEL.

COMM 2840 Sex, Gender, and Communication (also FGSS 2840) (SBA)

Fall. 3 credits. Not open to freshmen.
L. Van Buskirk.
Explores the personal, career, social, and economic implications of male and female gender categories. Topics include theories of male and female gender construction, self-identity, social structures, personal relationships, and gender concerns in the workplace. The course devotes equal time to men and to women and focuses on important contemporary communication issues.

COMM 2850 Communication, Environment, Science, and Health (also STS 2851) (SBA)

Spring. 3 credits. B. Lewenstein and staff.
Environmental problems, public health issues, scientific research—in each of these areas, communication plays a fundamental role. From the mass media to individual conversations, from technical journals to textbooks, from lab notes to the web, communication helps define scientifically based social issues and research findings. This course examines the institutional and intellectual contexts, processes, and practical constraints on communication in the life sciences.

[COMM 3010 Speech Communication in Context

Fall and spring. 3 credits. Prerequisite: COMM 2010; second-semester sophomore, junior, or senior standing. Staff.
This course introduces students to advanced theories of speech communication and then demonstrates the uses of these theories in several different contexts, including business and professional, small groups, interpersonality, and intercultural settings. Grades are based on a combination of in-class presentation, tests, and a final paper.]

COMM 3030 Speech and Debate Practicum

Fall and spring. 2 credits. Prerequisite: Program in Speech and Debate members; permission of instructor; completion of one year in program. Travel fee: \$200.
S. Nelson and staff.

Students learn how to prepare for CEDA (Cross Examination Debate Association) debate, Lincoln-Douglas debate, or individual speaking events. The class is divided into four groups according to level of experience; therefore, it may be repeated to a maximum of 8 credits.

COMM 3100 Communication and Decision Making in Groups (SBA)

Spring. 3 credits. Prerequisite: junior or senior standing; priority given to COMM majors. P. McLeod.

This course will provide students with a greater understanding of information sharing, persuasion, and decision development in small work groups. Through practical exercises, class discussions, and lectures, students will learn firsthand how tools such as decision structuring process can affect group performance. The course will be taught in an interactive hands-on format that emphasizes application of tested theory.

COMM 3200 New Media and Society (also INFO 3200) (CA)

Spring. 3 credits. T. Gillespie.
This course builds on mass communication research and the study of culture and technology to investigate the social, political, and technological dynamics of contemporary media. We investigate how new media frame our experience of the world and shape our political involvement in it, and how new media intersect with our sense of identity and involvement in culture.

COMM 3300 Media and Human Development (SBA)

Spring. 3 credits. Prerequisite: COMM 2200. S. Byrne.
Provides a developmental perspective on how children and adolescents interact with, interpret, and respond to media content. Major areas of consideration include the effects of media violence, health and pro-social messages, educational programming, advertising, video games, sexual media, and content children find frightening. Students will evaluate the strategies that have been proposed to mitigate negative effects of the media on children.

[COMM 3400 Psychology of Social Computing (also INFO 3400) (SBA)

Fall. 3 credits. Prerequisite: COMM/INFO 2450. J. Birnholtz.
Course focuses on understanding online communication through principles of cognitive and social psychology and aspects of the Internet that defy traditional psychology understandings. Topics include impression formation and management, deception and trust, group dynamics, social support, "Internet addiction," online pornography, and organizational impacts of new communication technology.]

COMM 3450 Human-Computer Interaction Design (also INFO 3450) (SBA)

Fall. 3 credits. Pre- or corequisite: COMM/INFO 2450. D. Cosley, F. Guimbretière, and staff.
Gives students insight into the design of computer interfaces and software from the

user's point of view. Students come to understand how hardware and software design influence the interaction between people and computers. Using assigned readings, demonstrations, and projects, students examine issues and trade-offs in interaction design and invent and evaluate alternative solutions.

COMM 3490 Media Technologies (also STS/INFO 3491) (CA)

Spring. 3 credits. Offered odd-numbered years. T. Gillespie.

Our efforts to communicate, share culture, and drive social agendas depend on the tools we've developed. However, our commonplace notions of communication and media regularly overlook the role of the material technologies that are so crucial to them. This course considers the technologies of media (including printing, photography, film, telegraph, telephone, radio, television, and computer networks) as an opportunity to think about the intersection of technology, communication, and its social context.

[COMM 3520 Science Writing for the Mass Media (also STS 3521)

Fall. 3 credits. Limited to 24 students. Not open to freshmen. Prerequisite: college-level writing course. Next offered 2010-2011. B. Lewenstein.

How to write about science, technology, and medicine for the media. Writing assignments focus on writing news for web sites, blogs, magazines, and other media.]

[COMM 3530 Science Writing Practicum

Spring. 1 credit. Prerequisite: COMM/STS 3520, ENGR 3500, or permission of instructor. Next offered 2010-2011. B. Lewenstein.

Students cover the annual meeting of the American Association for the Advancement of Science. Students are responsible for all costs of travel, lodging, and meals.]

[COMM 3551 Computers: From the 17th Century to the Dotcom Boom (also STS 3551)

Fall. 4 credits. Next offered 2010-2011. J. Ratcliff.

For description, see STS 3551.]

COMM 3561 Computing Cultures (also STS 3561)

Spring. 4 credits. R. Prentice.

For description, see STS 3561.

COMM 3600 Writing for New Media: Theory, Analysis, and Practice

Fall and spring. 3 credits. Prerequisites: sophomore standing and at least one college-level writing course. F. Joseph.

This advanced-level writing course emphasizes academic, analytical, and practical writing skills. Students will research and write analyses of texts that appear in new media outlets, including independent wikis and blogs and those linked to conventional journalistic sources. The first three or four class essays will analyze style, content, reliability, and readability of such texts. In the second half of the course, students will write their own blogs and wikis on approved communication and social science topics.

COMM 3650 Technology and Collaboration (also INFO 3650) (SBA)

Spring. 3 credits. Prerequisite: COMM 2450. J. Birnholtz.

Course focuses on understanding the use of communication technologies in groups, with a particular focus on the unique and sometimes difficult issues raised by groups that are geographically distributed. Topics include theories of group and organizational behavior, interpersonal awareness, privacy, trust, technology-mediated communication, and technology evaluation and adoption.

COMM 3760 Planning Communication Campaigns (SBA)

Fall. 3 credits. Pre- or corequisites: COMM 2820 or equivalent social research course and one semester of introductory statistics. J. Niederdeppe.

Provides a theoretical and practical overview of the audiences, messages, and evaluation of communication campaigns. Includes principles of planning and evaluation relevant to several kinds of campaigns. Topics include discussion of campaign goals, objectives, strategies, and tactics; research design and implementation; audience segmentation; message construction; and techniques of evaluation. Considers common methods of data collection (e.g., focus groups, experiments, surveys) and analysis of campaign-related data sources.

[COMM 3980 Issues in Teaching Communication (KCM)

Fall and spring. 1 credit. Pre- or corequisite: junior or senior standing; present or past undergraduate teaching assistant for COMM course. K. Berggren.

Seminar bringing together novice educators to discuss ideas, experiences, and practice. Integration of the theory into actual education efforts is challenging for professional educators. Novice teachers are not aware of their common experiences, much less of a theoretical component to education. In discussions of actual teaching experiences, literature reviews, research reports, textbook chapters, curriculum, and evaluation tools, students examine new ideas and practices. The primary goal of the seminar is to enrich and deepen the novice teaching experience.]

COMM 4050 Speech and Debate in the Community

Fall and spring. 1 credit; may be repeated once for credit. Meets one hour weekly. S. Nelson and staff.

Students share their communication talents in structured experiences in which they design and implement a speech or debate project in local schools or the community.

COMM 4100 Organizational Communication: Theory and Practice (CA)

Spring. 3 credits. Prerequisite: junior, senior, or graduate standing; COMM 1101 or permission of instructor. C. Yuan.

Study of management communication processes in formal organizations. Applies relevant organizational behavior and communication principles in today's business environment; examines formal and informal communication networks.

[COMM 4200 Public Opinion and Social Process (SBA)

Spring. 3 credits. Prerequisite: COMM 2820. Offered even-numbered years. Next offered 2010-2011. Staff.

The course provides a scientific and applied overview of the concept of "public opinion" and its implications for macrosocial processes.]

COMM 4210 Communication and the Environment (SBA)

Spring. 3 credits. Offered odd-numbered years. K. McComas.

Students investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus is mass media's impact on public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content.

COMM 4220 Psychology of Entertainment Media (SBA)

Fall. 3 credits. Prerequisites: introductory psychology or COMM 1101 or 2200. M. Shapiro.

Every media format uses entertainment including video games, advertising, television, movies, sports, and news. This course examines the psychology (conscious and unconscious) of entertainment, including why people like entertainment, what makes a story entertaining, how people mentally process entertainment, what makes things frightening or funny, and can entertainment persuade.

COMM 4280 Communication Law

Spring. 3 credits. Prerequisite: junior, senior, or graduate standing or permission of instructor. D. Grossman.

This course deals with the law governing communication media. Topics include First Amendment concepts, restraints on newsgathering and dissemination, libel, invasion of privacy, copyright protection, regulation of broadcast and nonbroadcast electronic media, advertising law, and current legal issues unique to online communication.

COMM 4290 Copyright in the Digital Age (also INFO 4290) (CA)

Fall. 3 credits. Offered odd-numbered years. T. Gillespie.

This course looks at recent legal and cultural battles about digital copyright, to investigate how participation in a digital world is structured: who speaks, what they can say, who hears, and with what consequences. We use these cases to look at the collision of authorship and the market, technology and law, individual and institution, culture and power.

COMM 4400 Advanced Human-Computer Interaction Design (also INFO 4400) (SBA)

Spring. 3 credits. Prerequisite: COMM/INFO 3450 or permission of instructor. D. Cosley, G. Gay, and staff.

Focuses on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

COMM 4450 Seminar in Computer-Mediated Communication (also INFO 4450) (SBA)

Spring. 3 credits. Prerequisite: COMM/INFO 2450. S. Fussell.

Focuses on reading and evaluating the theories and research methodologies used to investigate communication via computer systems. Assignments include student

collaborations using electronic conferencing and other advanced communication technologies, as well as reflections on and evaluations of these collaborations in light of current theories and research findings. Topics include virtual teams, videoconferencing, and others as they emerge.

COMM 4500 Language and Technology (also INFO 4500) (SBA)

Spring. 3 credits. J. Hancock and staff. Examines how new communication technologies affect the way we produce and understand language and modify interaction with one another. Focuses on the collaborative nature of language use and how Internet technologies affect the joint activities of speakers and listeners during the construction of meaning in conversation.

[COMM 4560 Community Involvement in Environmental Decisions (SBA)]

Spring. 3 credits. Prerequisite: junior or senior standing or permission of instructor. Offered odd-numbered years. K. McComas.

Community involvement is an essential part of environmental decision making, but it is also one of the most challenging aspects of the decision-making process. Through selected readings and course activities, this class will examine both traditional and contemporary methods of community involvement. When evaluating the methods, the class will discuss how social structures work to define criteria for success.]

COMM 4650 Mobile Communication in Public Life (CA)

Fall. 3 credits. Prerequisites: COMM/INFO 2450. L. Humphreys.

Mobile technology is an increasingly prominent tool for modern communication. This course will critically explore the role of mobile communication and its impact on public life. The course is divided into three main areas: social and political uses of mobile communication, mobility and sense of place, and mobile social software.

COMM 4660 Public Communication of Science and Technology (also STS 4661) (SBA)

Spring. 3 credits. Prerequisite: COMM 2850, or 3520, ENGR 3500, or permission of instructor. Offered even-numbered years. B. Lewenstein.

Explores the structure, meanings, and implications of "public communication of science and technology" (PCST). Examines the contexts in which PCST occurs, looks at motivations and constraints of those involved in producing information about science for nonprofessional audiences, and analyzes the functions of PCST. Ties existing ideas about PCST to general communication research, and leads to developing new knowledge about PCST. Format is primarily seminar/discussion.

COMM 4860 Risk Communication (SBA)

Fall. 3 credits. C. Scherer.

Examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Concentrates on social theories related to risk perception and behavior. Examines case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors. Emphasizes understanding, applying, and developing theories.

COMM 4940 Special Topics in Communication

Fall, spring, or summer. 1–3 credits, variable. Prerequisite: permission of instructor. S–U or letter grades.

Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

COMM 4960 Communication Internship

Fall or spring. Work component and variable. 1 credit; may be repeated once for a total of 2 credits. Prerequisite: COMM major or minor (first-, second-, third-, or fourth-year) for 1 credit (minimum 60 hours). K. Berggren.

Students receive a structured, on-the-job learning experience under the supervision of communication professionals in cooperating organization. A minimum of 60 hours of on-the-job work is required; the number of work hours beyond 60 is left to the discretion of the intern and the supervising company. A final paper linking communication theory to practical work experience is required. All internships must be approved before the work experience segment by the internship coordinator. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

COMM 4970 Individual Study in Communication

Fall or spring. 1–3 credits; may be repeated to 6 credits with different supervising faculty member. Prerequisite: 3.0 GPA. Students must register using independent study form (available in 140 Roberts Hall).

Individual study under faculty supervision. Work should concentrate on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic. Attempts to implement this knowledge in a practical application are desirable.

COMM 4980 Communication Teaching Experience

Fall or spring. 1–3 credits; may be repeated to 6 credits with different courses. Intended for undergraduates desiring classroom teaching experience. Prerequisite: junior or senior standing; 3.0 GPA (2.7 if teaching assistant for skills development course); permission of faculty member who supervises work and assigns grade. Students must register using independent study form (available in 140 Roberts Hall).

Periodic meetings with the instructor cover realization of course objectives, evaluation of teaching methods, and student feedback. In addition to aiding with the actual instruction, each student prepares a paper on some aspect of the course.

COMM 4990 Independent Research

Fall or spring. 1–3 credits; may be repeated to 6 credits. Prerequisites: senior standing; 3.0 GPA. Students must register using independent study form (available in 140 Roberts Hall).

Permits outstanding students to conduct laboratory or field research in communication under appropriate faculty supervision. The research should be scientific: systematic, controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

COMM 4991 Independent Honors Research in Social Science

Fall or spring. 1–6 credits. Prerequisite: undergraduate standing; requirements met for honors program. Staff.

Intended for students pursuing the research honors thesis in communication. Students must complete the CALS Honors program application by the third week of the fall semester of their senior year. Students should select a faculty advisor and begin proposal development during their junior year.

COMM 5660 Workshop in Science Communication for Scientists

Spring. 2 credits. Prerequisite: graduate standing. B. Lewenstein.

This workshop will train researchers in the sciences (including natural sciences, engineering, experimental social sciences, etc.) to communicate effectively with non-scientists such as policy makers, political stakeholders, the media, and the general public. Training activities may include role-play, reading/discussion, writing press releases and other outreach materials, and discussion with invited speakers. Outside of the regularly scheduled time, additional activities may include field trips to newsrooms and a training session with a professional media trainer.

COMM 6100 Seminar in Social Networks

Fall. 4 credits. Prerequisite: graduate standing. Offered even-numbered years. C. Yuan.

Examination of the structures and processes of group, organizational, and social networks. Review of research literature in communication and social networks. Survey of network methods with an emphasis on quantitative analysis using relevant software. Application of graph theory, matrix algebra, and sociometry techniques. Analysis and social interpretation of extant network datasets.

COMM 6180 Media Influence and Persuasion

Spring. 3 credits. Prerequisite: graduate standing. Offered odd-numbered years. S. Byrne.

This graduate seminar covers classic, influential, and disruptive theories of media influence and mediated persuasion. Readings include cutting-edge empirical tests of those theories across communication contexts. Students develop skills in operationalizing theoretical concepts in preparation for empirical test.

COMM 6210 Advanced Communication and the Environment

Spring. 3 credits. Offered odd-numbered years. K. McComas.

Students investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus is mass media's impact on public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content. Lectures concurrent with COMM 4210; graduate students should enroll in COMM 6210.

COMM 6220 Advanced Psychology of Entertainment Media

Fall. 3 credits. Prerequisites: graduate standing and permission of instructor. M. Shapiro.

Graduate seminar examining the psychology (conscious and unconscious) of entertainment media (including video games, advertising, television, movies, sports, and news). Specific topics examined will vary. Depending on preparation, students may be asked to attend COMM 4220 lectures and take exams.

COMM 6400 Human-Computer Interaction Design (also INFO 6400)

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.
D. Cosley, G. Gay, and staff.

Graduate-level readings and research supplementing COMM/INFO 4400. Focuses on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

COMM 6450 Seminar in Computer-Mediated Communication (also INFO 6450)

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.
S. Fussell.

Graduate-level readings and research supplementing COMM/INFO 4450. Through close reading and research in communication and technology, and participation in projects using these technologies, students enhance experiential, theoretical, and critical understanding of contemporary computer-mediated communication systems and uses. Topics include virtual teams, videoconferencing, and others.

COMM 6500 Language and Technology (also INFO 6500)

Spring. 3 credits. J. Hancock and staff. Graduate-level readings and research supplementing COMM/INFO 4500. Examines how new communication technologies affect the way we produce and understand language and modify interaction with one another. Focuses on the collaborative nature of language use and how Internet technologies affect the joint activities of speakers and listeners during the construction of meaning in conversation.

COMM 6660 Public Engagement in Science (also STS 6661)

Spring. 3 credits. Offered even-numbered years. B. Lewenstein.

In recent years, the scientific community has increasingly referred to "public engagement in science." This seminar explores the scholarly literature addressing that move; the links between "public engagement" and earlier concerns about sciences literacy, public understanding of science, and outreach; and the intersections between literature in communication and in science studies on issues involving the relationships among science(s) and public(s).

COMM 6760 Public Health Communication

Spring. 3 credits. Prerequisite one graduate-level research methods course. Offered even-numbered years.
J. Niederdeppe.

This graduate course provides an overview of theory and research on public communication related to health behavior and policy change. Topics include theories of behavior change

and message effects; formative and evaluative research; campaigns related to cancer, AIDS, obesity, smoking, nutrition, and drug use; and heterogeneity in campaign effects between populations.

COMM 6800 Studies in Communication

Fall. 3 credits. Prerequisite: communication graduate students or permission of instructor. S. Fussell.

Reviews classical and contemporary readings in communication, including key concepts and areas of investigation. Explores the scope of the field, the interrelationships of its various branches, and examines the role of theory in the research process.

COMM 6810 Advanced Communication Theory

Spring. 3 credits. Prerequisite: COMM 6800 or graduate standing and permission of instructor. M. Shapiro.

Development of, and contemporary issues in, communication theory. Discusses the interaction between communication and society, social groupings, and mental processing.

COMM 6820 Methods of Communication Research

Fall. 3 credits. Recommended: familiarity with basic statistical concepts. J. Birnholz. Analyzes methods of communication research based on a social science foundation. Goals will be to understand processes and rationales for qualitative, textual, survey, and experimental methods and to experience each method through modest individual or group research projects. Critiques of selected contemporary communication studies.

COMM 6830 Qualitative Research Methods in Communication

Spring. 3 credits. Prerequisite: COMM 6820 and graduate standing. L. Humphreys.

Course will review qualitative methods used in communication research, including interviews, focus groups, fieldwork (ethnography), and case studies. Students will practice the various methods so they can learn to apply them to their own research. Course will also discuss how researchers analyze qualitative data and build theories from their observations.

COMM 6840 Theory and Research in Group Communication and Decision Making

Fall. 3 credits. Offered odd-numbered years. P. McLeod.

This graduate seminar will focus on theory and research in communication and decision-making in small groups. Emphasis will be on task-oriented groups. Topics will include information exchange, decision-making processes, types of tasks, social influence, group development processes, group support systems, intergroup processes, and leadership. Special attention will be given to methodological challenges in group research.

[COMM 6860 Risk Communication

Spring. 3 credits. Next offered 2010-2011.
K. McComas and C. Scherer.

Examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks.]

COMM 6910 Seminar: Topics in Communication

Fall and spring. 0 credits. Staff.

Scholars from a wide variety of fields present varied topics in theory or research as it relates to communication.

COMM 6940 Special Topics in Communication

Fall, spring, or summer. 1-3 credits, variable. Prerequisite: permission of instructor.

Study of topics in communication not otherwise provided by a department course and determined by the interest of faculty members and students.

COMM 6950 Structural Equation Modeling Techniques in Social Science Research

Spring. 3 credits. Prerequisite: course in multiple regression; graduate standing.
C. Yuan.

This is an advanced research methods class for graduate students in the social sciences with an emphasis on data analysis using structural equation modeling (SEM). The class will cover both its basic principles and practical applications (e.g., multi-group models, growth curve models) using LISREL/PRELIS software.

COMM 7810 Seminar in Psychology of Communication

Spring. 3 credits. Prerequisite: COMM 6800 and 6810 or equivalent graduate-level theory in psychology or social psychology. Offered odd-numbered years.
M. Shapiro.

Discusses and analyzes selected current issues in the psychology of communication. Students discuss and synthesize current research and theory in the mental processing of communication.

COMM 7940 Seminar in Communication Issues

Fall, spring, or summer. 1-3 credits. Prerequisite: permission of instructor.

Small group study of topical issue(s) in communication not otherwise examined in a graduate field course.

COMM 7970 Graduate Independent Study

Fall, spring, or summer. 1-3 credits. Prerequisite: permission of instructor.

Individual study concentrating on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic.

COMM 7980 Communication Teaching Laboratory

Fall and spring. 1-3 credits each semester; may be repeated once. Prerequisite: graduate standing and permission of faculty member who will supervise work and assign grade. (Students must use faculty member's section number to register.) Graduate faculty.

Designed primarily for graduate students who want experience in teaching communication courses. Students work with an instructor in developing course objectives and philosophy, planning, and teaching.

COMM 7990 Graduate Research

Fall, spring, or summer. 1-3 credits. Prerequisite: appropriate communication graduate course work or permission of instructor.

Small-group or individual research based on original, empirical, data-based designs regarding topical issues in communication not otherwise examined in a graduate field course.

COMM 8900 Master's-Level Thesis Research

Fall or spring. 1–6 credits; may be repeated for max. of 6 credits.

Prerequisite: permission of committee chair.

Thesis research for M.S. (communication) students.

COMM 9900 Doctoral-Level Dissertation Research

Fall or spring. 1–9 credits; may be repeated for max. of 9 credits.

Prerequisites: completion of "A" exam; permission of committee chair.

Dissertation research for Ph.D. candidates.

CROP AND SOIL SCIENCES

H. M. van Es, chair (232 Emerson Hall, 255-5459); D. Buckley, J. H. Cherney, W. J. Cox, A. DiTommaso, J. M. Duxbury, G. W. Fick, R. R. Hahn, P. Hobbs, L. V. Kochian, J. Lehmann, M. B. McBride, R. L. Obendorf, J. M. Russell-Anelli, T. L. Setter, J. E. Thies, O. Vatamaniuk, R. M. Welch

Courses by Subject

Crop Science: 2110, 3150, 3170, 4030, 4050, 4140, 4260, 4440, 4551–4555, 6080, 6100, 6120, 6140, 6420, 6941, 7910, 8900, 9910

Environmental Information Science: 3970, 4100, 4110, 4200, 4650, 6200, 6210, 6600, 6740, 6750, 6943, 7920, 8910, 9920

Soil Science: 1120, 2600, 3210, 3620, 3630, 3650, 3720, 4120, 4660, 4720, 4830, 6630, 6660, 6690, 6710, 6720, 6840, 6942, 7900, 8920, 9900

General Courses**CSS 1900 Sustainable Agriculture: Food, Farming, and the Future**

Fall. 3 credits. Limited to 60 students. G. W. Fick.

Designed to introduce basic food production resources in the context of the human aspects of farming. The information is of general value for nonmajors and students new to the field. Several field trips enhance appreciation for the diversity of agriculture.

CSS 2940 Introduction to Agricultural Machinery (also AGSCI/HORT 2940)

Fall. 2 credits. B. Flannigan and A. DiTommaso.

This course is an overview of agricultural machinery used in the production of field crops. Information will be presented in a lecture and field laboratory format, stressing "hands-on" equipment demonstrations and use, particularly of tractors. Successful completion will provide a broad understanding of agricultural machinery operation and design rationale.

CSS 3800 Organic Food and Agriculture (also AGSCI/HORT 3800)

Fall. 3 or 4 credits. Prerequisites: CSS 1900, CSS 2600, HORT 1101

recommended, or permission of instructor.

Discussion of techniques and methods of organic food production, including vegetables, orchard crops, grains and animal systems. Critically evaluates relevant issues that affect the environment, consumers, and the industry. Optional lab includes interaction with experts, field trips to farms, and living laboratory at Dilmun Hill.

CSS 4910 Food, Farming, and Personal Belief (also IARD 4910)

Spring. 1 credit. Recommended: Sustainable Agriculture (CSS 1900) or equivalent. G. Fick.

Reading and discussion course focusing on the relationship between agricultural sustainability and religious faith, especially the linkage between the motivation to adopt practices of sustainability and personal value systems of farmers and consumers. Principles of scientific agriculture are examined with the holistic view of sustainable development.

[CSS 4940 Biotechnology and Development (also GOVT 4300)

Spring. 2 credits. Sec 2. J. E. Thies and R. J. Herring.

Class discussions, presentations, and scholarly and popular articles are used to introduce students to the dominant contentions around biotechnology in the context of international development.]

CSS 4940 Special Topics in Crop and Soil Sciences (undergraduate level)

Fall or spring. 4 credits max.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester begins. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

CSS 4970 Individual Study in Crop and Soil Sciences

Fall or spring. 1–6 credits. Students must register using independent study form (available in 140 Roberts Hall).

Topics in soil science, crop science, or environmental information science are arranged at the beginning of the semester for individual study or for group discussions.

CSS 4980 Teaching Experience in Crop and Soil Sciences

Fall or spring. 1–5 credits. Students must register using independent study form (available in 140 Roberts Hall).

Teaching experience in soil science, crop science, or environmental information science is obtained by assisting in the instruction of a departmental course. This course should not be taken by teaching assistants.

CSS 4990 Undergraduate Research

Fall or spring. Credit TBA. Students must register using independent study form (available in 140 Roberts Hall).

Independent research on current problems selected from any phase of crop science, soil science, or environmental information science.

CSS 6900 Scientific Method in Practice

Spring. 1 credit. Prerequisite: junior, senior, or graduate standing. H. G. Gauch, Jr., and G. W. Fick.

Students in this course study Hugh Gauch's book *Scientific Method in Practice*, which is designed to help scientists become better scientists through deeper understanding of common themes that extend across the disciplines. Topics include the history and philosophy of science, reliance on evidence, deductive and inductive logic, probability, parsimony, and hypothesis testing.

CSS 6950 Planning and Reporting Research

Summer, six-week session. 3 credits. P. Hobbs.

This course is designed to help graduate students improve their technical writing skills for various scientific outputs. Students will be guided through written output that includes review articles, scientific papers, thesis, research and funding proposals, manuscripts, and Power Point and slide presentations. The goal will be to increase proficiency in writing that will improve the chances of acceptance of research outputs in good quality, refereed publications. The students will also review ways to present data in tables and figures with proper statistical analysis. Professional ethics in the conduct and communication of science will also be covered. Much of the course will have students using their own research data in preparation of various good quality publications and outputs. Special attention will be given to M.P.S. students who need to complete a problem-solving or applied project.

CSS 6960 Agroecological Perspectives for Sustainable Development

Fall and spring. 1 credit. S–U grades only. L. Buck, L. Fisher, and P. Hobbs.

Agroecological perspectives for sustainable development.

CSS 6970 Seminar in Crop and Soil Sciences

Fall and spring. 1 credit. S–U grades only. H. van Es.

Covers current research and selected topics in the crop and soil sciences and related fields.

CSS 6980 Graduate Teaching or Extension Experience

Fall. 1–12 credits. S–U or letter grades. Staff.

Planning and teaching courses or extension programs under the supervision of departmental faculty. This may include lectures, laboratories, discussion sessions, workshops, in-service training events, etc.

CSS 7970 Graduate Individual Study in CSS

Fall and spring. 1–6 credits.

Crop Sciences**CSS 2110 Field Crop Systems**

Fall. 4 credits. Prerequisite: none. Two to four field trips during lab periods (until 5 p.m. or on weekends). R. L. Obendorf.

Principles of field-crop growth, development and maturation, species recognition, soil and climatic adaptations, tillage systems, liming and mineral nutrition, cropping sequences, management systems, nutrition and health, and crop improvement are considered. Grain, protein, oil, fiber, biofuel and forage crops are emphasized. Laboratory utilizes living plants, extensive crop garden, and computer simulation.

CSS 3150 Weed Biology and Management

Fall. 4 credits. Prerequisite: introductory course in biology or botany.

A. DiTommaso.

Examines principles of weed science. Emphasizes (1) weed biology and ecology; (2) weed-management strategies used in agricultural and natural ecosystems; and (3) chemistry of herbicides in relation to effects on plant growth and the environment. Hands-on laboratory sessions cover weed identification and ecology, crop-weed interactions, herbicide application, selectivity, and symptomatology.

CSS 3170 Seed Science and Technology (also HORT 3170)

Fall. 3 credits. Prerequisite: BIOPL 2410 or equivalent. Two all-day field trips. Next offered 2011-2012. A. G. Taylor, Geneva Experiment Station. (Ithaca contact, R. L. Obendorf.)

The principles and practices involved in the production, harvesting, processing, storage, testing, quality management, certification, and use of high-quality seed from improved cultivars. Information is applicable to various kinds of agricultural seeds. Hands-on laboratory experience.

CSS 4030 Traditional Agriculture in Developing Nations (also IARD 4030)

Fall. 1 credit. S-U grades only. P. Hobbs. Half the world's arable land is farmed by traditional farmers who have produced food and fiber for millennia with few outside inputs. Many of these practices are forgotten but some are still used by farmers in developing countries. This course examines the pros and cons of some of these traditional systems.

CSS 4050 Field Crop Systems

Fall. 4 credits. Prerequisite: none. Two to four field trips during lab periods (until 5 p.m. or on weekends). R. L. Obendorf. Principles of field-crop growth, development and maturation, species recognition, soil and climatic adaptations, tillage systems, liming and mineral nutrition, cropping sequences, management systems, nutrition and health, and crop improvement are considered. Grain, protein, oil, fiber, biofuel, and forage crops are emphasized. Laboratory utilizes living plants, extensive crop garden, and computer simulation. Lab report and term paper on contemporary field crop systems required. Designed for professional students or advanced undergraduates. Credit for both CSS 4050 and CSS 2110 (or CSS 3110) not permitted.

CSS 4130 Physiology and Ecology of Yield

Spring. 3 credits. Prerequisites: coursework in plant physiology or molecular biology or biochemistry, or advanced plant science. T. L. Setter.

Study of processes involved in the conversion of solar energy into harvested plant products and environmental constraints on crop productivity. Topics include photosynthesis and essential processes that utilize photosynthetic energy, including nitrogen assimilation, phloem translocation and partitioning; canopy-scale influences on solar radiation use efficiency; regulation of growth processes in leaf, root, and floral/fruit/grain sinks in response to environment; seed and fruit set; water transport and stomatal regulation; root architecture and function, and behavior in water-limited situation. Examples will be from the full spectrum of crops and model-plant systems. Students will develop an ability to identify processes that could be improved through optimization of crop cultural practices or genetic change.

CSS 4140 Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts (also IARD 4140)

Fall. 3 credits. Prerequisite: introductory crop science or soil science or biology course or permission of instructor. P. Hobbs.

Characterizes and discusses traditional shifting cultivation; lowland rice-based systems; upland cereal-based systems; smallholder mixed farming including root crops and livestock; plantation fruit and oil crop systems; and agroforestry. In addition to species diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. Evaluates the impact of tropical cropping systems on the environment.

CSS 4260 Practicum in Forest Farming as an Agroforestry System (also HORT/NTRES 4260)

Fall. 2 credits. K. W. Mudge, L. E. Buck, and P. Hobbs.

For description, see HORT 4260.

CSS 4440 Integrated Pest Management (also ENTOM 4440)

Fall. 4 credits. Prerequisites: biology course or permission of instructor. J. E. Losey and A. DiTommaso.

For description, see ENTOM 4440.

CSS 4551-4555 Mineral Nutrition of Crops and Landscape Plants (also HORT 4551-4555)

Spring. 5 modules, 1 credit each. Next offered 2011-2012. Coordinator: H. C. Wien.

For description, see HORT 4551-4555.

CSS 6080 Water Status in Plants and Soils

Fall. 1 credit. Prerequisite: permission of instructor. S-U grades only. Next offered 2011-2012. T. L. Setter.

This is a lecture and lab course that introduces students to techniques for field appraisal of the status of water in plants and soil, including methods used in physiological studies, such as the psychrometer, pressure chamber, gas exchange analyzer, soil water content analyzers, sap flow instrumentation, and abscisic acid analysis with ELISA.

[CSS 6100 Physiology of Environmental Stresses

Fall. 3 credits. Prerequisite: course work in plant physiology and/or plant molecular biology or permission of instructor. Next offered 2010-2011. T. L. Setter and O. Vatamaniuk.

Study of the responses of plants to environmental stresses, including drought, high temperature, salinity, chilling, freezing, hypoxia, and toxic elements. Emphasizes the physiological and biochemical basis of injury and plant resistance mechanisms at the whole-plant, cellular, and molecular levels.]

CSS 6120 Seed Biology

Fall. 3 credits. Prerequisite: plant physiology course or permission of instructor. R. L. Obendorf.

Describes the molecular, biochemical, physiological, environmental, and genetic regulation of seed development, maturation, and germination events, including the deposition and mobilization of seed reserves with illustrations from the world's major food and feed seeds. Illustrations extend the principles to practical situations, industrial uses, and food systems for improved health.

[CSS 6140 Weed Ecology and Management

Spring. 3 credits. Prerequisite: CSS 3150 or equivalent. Next offered 2010-2011.

A. DiTommaso.

Examination of plant ecological principles governing weed population dynamics and weed-crop competitive interactions in crop and noncrop ecosystems. Development of sustainable weed management strategies.]

[CSS 6420 Mineral Nutrition: From Plants to Humans (also BIOPL 6420)

Spring. 3 credits. Prerequisite: BIOPL 3410 or equivalent. Next offered 2010-2011.

O. Vatamaniuk, L. V. Kochian, and R. M. Welch.

The course explores the molecular, biochemical, biophysical, and physiological mechanisms of acquisition, translocation, and utilization of mineral nutrients by plants for growth and development.]

CSS 6941 Special Topics in Crop Science

Fall or spring. 1-6 credits. Staff.

Study of topics in crop science that are more specialized or different from other courses. Special topics to be offered depend on staff and student interests.

CSS 7910 Graduate-Level Thesis Research in Crop Science

Fall or spring. Credit TBA. S-U grades only. Graduate faculty.

Thesis research for Ph.D. students before "A" exam has been passed.

CSS 8900 Master's-Level Thesis Research in Crop Science

Fall or spring. Credit TBA. S-U grades only. Graduate faculty.

Thesis research for M.S. candidates.

CSS 9910 Doctoral-Level Dissertation Research in Crop Science

Fall or spring. Credit TBA. S-U grades only. Graduate faculty.

Dissertation research for Ph.D. candidates after "A" exam has been passed.

Environmental Information Science**CSS 3970 Environmental Microbiology (also BIOMI 3970)**

Spring. 3 credits. Prerequisite: BIOMI 2900. Recommended: BIOEE 2610, NTRES 3030, or permission of instructor. Offered alternate even-numbered years. E. L. Madsen.

Discusses the biology, behavior, and function of microorganisms in natural environments in relation to past and present environmental conditions on Earth. Also considers the role of microorganisms in ecologically and environmentally significant processes through discussion of specific topics such as elemental cycles, nutrient cycling, transformation of pollutant chemicals, wastewater treatment, and environmental biotechnology.

CSS 4100 The GMO Debate: Science and Society

Spring. 3 credits. Prerequisite: BIOG 1109 or equivalent. J. Thies and P. Hobbs.

Biotechnology is causing global changes in agricultural production systems. Social movements have arisen to contest the adoption of transgenic or genetically modified organisms. Students will assess the science behind this debate and examine the interplay among science, society, and politics. We introduce the history of the GMO debate, how GMOs are developed, and their potential impacts on agriculture, the environment, and the food system. Social movements contest deployment of biotech products on grounds of food sovereignty, intellectual property,

social justice, and environmental and human health concerns. Scientific evidence is used in a variety of ways in these debates. We integrate concepts from diverse fields to promote understanding of how the use of scientific evidence in social and political contexts impacts the assessment of agricultural biotechnologies.

CSS 4110 Environmental Information Science (also CEE 4110)

Spring. 3 credits. Prerequisite: permission of instructor. S. DeGloria and S. Hoskins. Survey of geo-spatial data and information applied to the science of natural and environmental systems. Experiential approaches emphasize use and integration of maps, spatial databases, aerospace imagery, field data, and the global positioning system (GPS) to discriminate, measure, inventory, and monitor agricultural and environmental resources and processes.

CSS 4200 Geographic Information Systems

Fall. 4 credits. Prerequisite: CSS 4110 or equivalent or permission of instructor. S. DeGloria. Principles and applications of geographic information systems for characterizing and assessing agronomic and environmental systems. Emphasizes accessing, updating, analyzing, and mapping geo-spatial data and information. Considers information needs assessment; spatial data accession; coordinate systems; spatial database design, construction, and maintenance; modeling and analysis; map accuracy assessment; and digital cartography.

[CSS 4650 Global Positioning System

Spring, 3 hrs/wk. 1 credit. Prerequisite: CSS 4110 or 4200, or equivalent, or permission of instructor. S. DeGloria. Introduction to navigation-grade GPS instruments used in agricultural and environmental science. Topics include instrument familiarization; field-data collection and processing; real-time and post-differential correction; and GPS-GIS integration and mapping of geo-positional data.]

[CSS 6200 Spatial Modeling and Analysis

Spring. 3 credits. Prerequisites: CSS 4110 or CSS 4200, or equivalent or permission of instructor. Next offered 2011–2012. S. DeGloria.

Theory and practice of applying geo-spatial data for resource inventory and analysis, biophysical process modeling, and land surveys. Emphasizes use and evaluation of spatial analytical methods applied to agronomic and environmental systems and processes. Laboratory section is used to process, analyze, and visualize geo-spatial data of interest to the student.]

[CSS 6210 Applications of Space-Time Statistics

Spring. 2 credits. Prerequisite: BTRY 6010 or equivalent. S–U grades only. Offered alternate years; next offered 2010–2011. H. Van Es.

Introduction to space-time statistics with applications in agriculture and environmental management. Topics include geostatistics, temporal statistics, sampling, experimental design, state-space analysis, data mining, and fuzzy logic. Focuses on landscape-scale processes and a user's perspective.]

CSS 6600 Remote Sensing Fundamentals (also CEE 6100)

Fall. 3 credits. Prerequisite: permission of instructor. W. D. Philpot. Introduction to the principles, equipment, and methods used in obtaining information about earth resources and the environment from aircraft or satellite sensors. Topics include basic interactions of electromagnetic radiation with the earth, sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design in the form of a proposal to use remote sensing for a specific application.

CSS 6740 Environmental Genomics

Spring. 2 credits. D. Buckley. Genomics opens new avenues for exploring interactions between organisms and their environment. Through lectures and discussion of current research we will learn how genomic tools can provide insight on processes occurring at individual, population, and ecosystem scales that govern the response of biological systems to environmental change. Emphasis will be placed on microbial systems, but this course will also be useful to those interested in the other applications of environmental genomics. The course will provide students with experience in writing and reviewing grant proposals by culminating in the creation of the short research proposals to be reviewed by the class in the style of an NSF panel.

CSS 6750 Modeling the Soil-Plant-Atmosphere System (also EAS 6750)

Spring. 3 credits. Prerequisite: EAS/CSS 4830 or equivalent. S. J. Riha. Introduction to the structure and use of soil-plant-atmosphere models. Topics include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability; plant-plant competition; and land surface processes as well as model data requirements, validation, and scale. Discusses use of soil-plant-atmosphere models for teaching, research, extension, and policy formation.

CSS 6943 Special Topics in Environmental Information Science

Fall or spring. 1–6 credits. Staff. Study of topics in environmental science that are more specialized or different from other courses. Special topics covered depend on staff and student interests.

CSS 7920 Graduate-Level Dissertation Research in Environmental Information Science

Fall or spring. TBA. S–U grades only. Graduate faculty.

Dissertation research for Ph.D. students before “A” exam has been passed.

CSS 8910 Master's-Level Thesis Research in Environmental Information Science

Fall or spring. Credit TBA. S–U grades only. Graduate faculty. Thesis research for master's students.

CSS 9920 Doctoral-Level Dissertation Research in Environmental Information Science

Fall or spring. Credit TBA. S–U grades only. Graduate faculty. Dissertation research for Ph.D. candidates after “A” exam has been passed.

Soil Science

CSS 1120 Microbes, the Earth, and Everything (also BIOMI 1120)

Fall. 3 credits. D. Buckley and E. Angert. We live on a microbial earth. If we happen to consider microbes in our daily lives most people conjure images of disease, but in reality we depend on microbes to sustain our world. This course will showcase the vast microbial world that hides in plain sight all around us and use microbial examples to explore both fundamental biological principles and the scientific method. Course modules will emphasize basic concepts from: evolution, molecular biology and genetics, diversity, and ecology. Learn about the tiny titans and miniature monsters that are the life support system of our planet, how they have shaped human civilizations, and how they reveal the unifying principles of life.

CSS 2600 Soil Science

Fall. 4 credits. J. Russell-Anelli. Designed for students interested in a comprehensive introduction to soil science from both an environmental and plant management perspective. Divided into three units: (1) soil information unit introduces students to soil characterization, testing, mapping, classification, GIS, and land evaluation; (2) soil management unit addresses fertility, pest management, water, and microclimate, as well as erosion, conservation, pollution, and soil health; (3) unit on the role of soils in ecosystems considers topics such as biodiversity, soils as sinks and sources of greenhouse gases, and the impact of soils on land use. Labs are initially field-oriented with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs focus on accessing, interpreting, and applying soil information.

CSS 3210 Soil Management for Sustainability

Spring. 2 credits. Prerequisites: CSS 2600 or equivalent. H. van Es, J. Lehmann, and J. Thies.

Integrated perspectives on the physical, biological, and chemical aspects of soil management in the broader context of agroecosystems. Understanding of the interactions between soil, water, organisms, and chemical inputs forms the basis for discussions on conventional and organic cropping systems, soil health, water quality and quantity, bioenergy, greenhouse gases, and sustainability. Lab sessions elaborate through case studies and discussion of current topics.

[CSS 3620 Soil Morphology

Fall, spring. 1 credit. Prerequisite: undergraduate standing. Recommended for sophomores and juniors. One all-day field trip required. Next offered 2010–2011. J. Russell-Anelli.

Presents the principles for field identification of soil properties, profiles, and landscapes. A series of soil pits are examined, described, classified, and interpreted in the field.]

CSS 3630 Soil Genesis, Classification, and Survey

Fall. 4 credits. Prerequisite: CSS 2600. One all-day field trip required. J. Russell-Anelli. Discusses factors and processes of soil formation on which soil survey is based. Practices principles of field identification, classification, survey, and interpretation in a field setting. Provides an overview of soil databases, their content, development, and use for site evaluation and land classification.

CSS 3650 Environmental Chemistry: Soil, Air, and Water

Spring. 3 credits. Prerequisites: CHEM 2070-2080 or CHEM 1560. M. B. McBride. Overview of the chemistry of the biosphere and biogeochemical processes that control the fluxes, concentrations, and bioavailability of essential elements and pollutants in soil, air, and water. Gives particular attention to soil's function as a filter for contaminants. Describes the history of environmental contamination by xenobiotics and heavy metals, with emphasis on behavior and properties of pollutants that pose the greatest risk to human and ecological health.

CSS 3720 Nutrient Management in Agroecosystems

Spring. 4 credits. Prerequisite: CSS 2600 or permission of instructor. Graduate students should enroll in CSS 4720. J. Lehmann.

Familiarizes students with the basic concepts of soil fertility and biogeochemistry and how soil and environmental properties affect nutrient availability and cycling. Discussion focuses on the way organic farming and soil conservation affect the fate of nutrients in agroecosystems. Emphasizes how nutrient management can be improved without creating environmental hazards. Students have hands-on training in analytical procedures and expand knowledge in discussion groups and through oral as well as poster presentations.

CSS 4660 Soil Ecology (also HORT 4660)

Spring. 4 credits, with lab. Prerequisite: one year of biology or ecology and CSS 2600 or permission of instructor. J. E. Thies.

Discover the wonder of life underground. In this course, you will study the amazing diversity of soil organisms along with their multifaceted functions in terrestrial ecosystems. The fundamental principles and features of biologically mediated processes in the soil and the functions of soil biota in both managed and unmanaged ecosystems will be highlighted. Special topics include beneficial symbioses, biological control of plant pathogens, biogeochemistry of unique habitats, bioremediation and composting of organic wastes, among others. Laboratory focuses on molecular activities and traditional methods for assessing the abundance, activity, and diversity of soil organisms.

CSS 4720 Nutrient Management and Research in Agroecosystems

Spring. 4 credits. Prerequisite: CSS 2600 or permission of instructor. J. Lehmann. Familiarizes students with the basic concepts of soil fertility and biogeochemistry and how soil and environmental properties affect nutrient availability and cycling. Discussion focuses on the way organic farming and soil conservation affect the fate of nutrients in agroecosystems. Emphasizes the way nutrient management can be improved without

creating environmental hazards. Gives students hands-on training in analytical procedures and expands knowledge in discussion groups and through oral as well as poster presentations. The laboratory experiments conclude with a final paper.

[CSS 4830 Land, Water, Agriculture, and Environment (also EAS 4830)]

Fall. 3 credits. Prerequisites: CSS 2600 or equivalent, calculus. Next offered 2010-2011. H. van Es and S. J. Riha. Discussion of energy and mass transfer in the soil-plant-atmosphere system, and their relevance to important environmental processes. Covers water, heat and gas flow, energy budgets, and nutrient dynamics. Discussion of management approaches to sustainable crop production, soil and water conservation, greenhouse gas mitigation, as well as research methods and instrument design for monitoring soil processes. Domestic and international perspectives are covered.]

[CSS 6630 Pedology]

Spring. 3 credits. Prerequisite: CSS 3610 or permission of instructor. Next offered 2010-2011. J. Russell-Anelli. Weathering, reactions, and processes of soil genesis; principles of soil classification and the rationale and use of soil taxonomy; development and significance of major groups of soils of the world.]

CSS 6660 Applied Plant-Microbe Interactions

Fall. 3 credits. Prerequisite: CSS 4660 or equivalent or permission of instructor. Offered alternate years. J. E. Thies. Study and discussion course on the nature of microbial interactions with plant roots aimed at helping students improve their professional practice within the content area.

CSS 6690 Organic Matter—Soils, Sediments, and Waters

Spring. 3 credits. Prerequisites: CSS 2600 and CHEM 3570-3580 or equivalent. J. M. Duxbury. Discussion of current concepts on the chemical nature, dynamics, and properties of natural organics and organo-mineral associations in terrestrial and aquatic environments. Includes a modeling project of soil carbon dynamics in natural or agricultural ecosystems.

CSS 6710 Soil Chemistry

Fall. 3 credits. Prerequisite: one year of physical chemistry or permission of instructor. M. B. McBride. Detailed examination of the structure and surface chemistry of colloidal particles important to the function of soils. Emphasizes ion exchange; mineral-solution equilibria; and adsorption reactions of silicate clays, oxides, and organic matter. Describes the sorption behavior of environmental contaminants in soils, particularly metals and xenobiotics.

[CSS 6720 Nutrient Cycling in Natural and Managed Ecosystems]

Fall. 3 credits. Prerequisite: CSS 3720 or NTRES 3210 or BIOEE 4780, or permission of instructor. Next offered 2010-2011. J. Lehmann. Examines the biogeochemistry and cycles of nutrients in terrestrial ecosystems, and the interface with the biosphere, atmosphere, and hydrosphere, using hands-on field experimentation and research proposals.]

[CSS 6840 Topics in Soil Microbial Ecology]

Fall. 1 credit. Disc. S-U grades. Next offered 2010-2011. D. Buckley. Seminar and discussion course dealing with current topics in soil microbial ecology, including community ecology and diversity, microbial biogeography, biogeochemistry, plant-microbe interactions, microbial feedbacks on plant communities, gene exchange and evolution in soils, soil microbial genomics, and relationships between structure and function of microbial communities in soil systems.]

CSS 6942 Special Topics in Soil Science

Fall, spring, or summer. 1-6 credits. Study of topics in soil science that are more specialized or different from other courses. Special topics covered depend on staff and student interests.

CSS 7900 Graduate-Level Dissertation Research in Soil Science

Fall or spring. Credit TBA. S-U grades only. Graduate faculty. Dissertation research for Ph.D. students before "A" exam has been passed.

CSS 8920 Master's-Level Thesis Research in Soil Science

Fall or spring. Credit TBA. S-U grades only. Graduate faculty. Thesis research for master's students.

CSS 9900 Doctoral-Level Dissertation Research in Soil Science

Fall or spring. Credit TBA. S-U grades only. Graduate faculty. Dissertation research for Ph.D. candidates after "A" exam has been passed.

DEVELOPMENT SOCIOLOGY

M. J. Pfeffer, chair (133A Warren Hall, 255-1676); A. Basu, D. L. Brown, P. Eloundou-Enyegue, S. Feldman, J. D. Francis, C. C. Geisler, A. Gonzales, D. T. Gurak, T. A. Hirschl, F. Makki, P. D. McMichael, R. L. Mize, L. B. Williams

DSOC 1101 Introduction to Sociology (SBA) (KCM)

Fall or spring. 3 credits. Students may not take both DSOC 1101 and SOC 1101 for credit. Fall, T. Hirschl; spring, A. Gonzales.

Introduction to theory and research in sociology. Demonstrates how the insights, theories, and methods of sociological analysis can be brought to bear on major issues of social life. A primary goal is to convey a sense of the manner in which sociologists formulate theories and how the collection and analysis of data are used to evaluate those theories. Provides "hands-on" experience in analyzing sociological issues. Students undertake guided research exercises that involve using computers to analyze actual data. No prior background is

presumed; necessary skills are covered in class and section meetings.

DSOC 1200 Development Sociology First-Year Writing Seminar (SBA)

Fall, spring. 3 credits. Staff.

The department offers first-year writing seminars on a wide range of development sociology topics. Consult John S. Knight Writing Seminar Program brochures for instructors and descriptions.

DSOC 2010 Population Dynamics (also SOC 2202) (SBA)

Spring. 3 credits. ALS students must enroll in DSOC 2010. S–U or letter grades.

A. Basu and D. Brown.

This course provides an introduction to population studies. The primary focus is on the relationships between demographic processes (fertility, mortality, and immigration) and social and economic issues. Discussion will cover special topics related to population growth and spatial distribution, including marriage and family formation, population aging, changing roles and statuses of women, labor force participation, immigrations, urban growth and urbanization, resource allocation, and the environment.

DSOC 2050 International Development (also SOC 2206) (SBA) (HA)

Spring. 3 credits. P. McMichael.

Examines new questions concerning development models in the post–Cold War era from a comparative and global perspective on North–South relations. While the focus is the “Third World,” the issues confronting it are often global, even when they concern the most basic issue of food security. Using films and various theoretical perspectives, the course examines Southern societies (economies, ecologies, class/gender relations) and the impact of global forces on Southern resources. Such forces include global food systems, new forms of export production, development agencies, multilateral institutions, local bureaucracies, transnational corporations, the debt crisis, and new technologies. Also examines the new global justice movements, such as environmentalism, feminism, and landless workers, peasant, and grassroots activism.

DSOC 2070 Problems of Contemporary Society (also SOC 2070) (SBA)

For description, see SOC 2070.

DSOC 2090 Social Inequality (also SOC 2208) (SBA)

For description, see SOC 2208.

DSOC 2150 Introductory Organizations (also SOC 2150) (SBA)

For description, see SOC 2150.

DSOC 2200 Sociology of Health of Ethnic Minorities (also LSP 2200) (SBA) (D)

Fall. 3 credits. S–U or letter grades.

P. A. Parra.

Discusses the health status of minorities in the United States. Explores intragroup diversity such as migration, economic status, and the influence of culture and the environment on health status and access to health care. Although special attention is given to Latino populations, discussion encompasses other minorities who face similar problems.

DSOC 2201 Society and Natural Resources (also NTRES 2201) (SBA)

For description, see NTRES 2201.

DSOC 2220 Controversies About Inequality

For description, see SOC 2220.

DSOC 2650 Latinos in the United States (also SOC 2650, LSP 2010) (SBA)

For description, see SOC 2650.

DSOC 2750 Immigration and a Changing America (SBA) (HA)

Spring. 3 credits. S–U or letter grades.
D. Gurak.

Immigration helped America become the nation that it is today. While many experts thought that immigration’s contribution to American history ended in the early 1900s, immigration surged to historic highs in the second half of the 20th century and shows no signs of diminishing in the 21st century. This course examines the economic, social, and policy forces that underlie contemporary U.S. immigration and the impacts that immigrants are having on the American economy and society today. It looks in detail at who the new immigrants are, why they come to America, where they live, and what roles they fill in America.

DSOC 3010 Theories of Society and Development (SBA) (KCM)

Spring. 3 credits. Prerequisite: development sociology or sociology course. S–U or letter grades. F. Makki.

Introduction to the “classical” sociological theorists (Marx, Weber, Durkheim) of the late 19th and early 20th century. Also addresses the dramatic social upheavals of the industrialization, capitalism, and rise of bureaucracy to which these thinkers reacted and the inspiring (and conflicting) visions for the future which they offered. Emphasizes the intellectual history, the influence of the theorists on subsequent sociology, and the potential for relevance to contemporary society.

DSOC 3050 Education, Inequality, and Development (SBA)

Spring. 3 credits. Prerequisite: introductory social science course or permission of instructor. Letter grades. P. Eloundou-Enyegue.

The main goal of this course is to examine the functions of education institutions, as they affect individual welfare, inequality, and development. It begins with a review of basic definitions and measures of education, inequality, and development, it then examines the individual and societal functions of education, from theoretical perspectives drawn from sociology, economics, and demography. The insights from these various perspectives are examined critically. The course also reviews studies that have examined how investments in education appear to affect selected outcomes.

DSOC 3060 Farmworkers: Contemporary Issues and Their Implications (SBA)

Fall. 1 credit. S–U or letter grades.

M. J. Dudley.

Introduction to contemporary issues of farmworkers in the United States. Examines issues related to unauthorized immigrant workers, farmworker demographics, farmworker access to health services, labor concerns, farmworker needs, and integration into new home communities. Will include guest lectures by faculty members from throughout the university currently engaged in related research.

DSOC 3130 Social Indicators and Introduction to Social Science Research (SBA)

Spring. 3 credits. P. Eloundou-Enyegue.

This course is an introduction to social science research. It reviews the general process through which social scientists derive credible answers to important questions about social change and social influences on individual behavior. It covers all steps in the research process, from the formulation of a research question to the final presentation of findings. The course is designed as a preparation for future work in social science research, but it is also intended for students who simply want to sharpen their capacity to evaluate the claims made by researchers. The course combines theory and application. A real-life research project on campus is used to apply the concepts and ideas from the textbook and lectures.

DSOC 3140 Spatial Thinking, GIS, and Related Methods (SBA) (KCM)

Fall. 4 credits. Letter grades only.

J. Francis.

Everything occurs in space. Knowing where organizations are located and events occur in space provides clues to understanding social order and processes not revealed by traditional social analysis techniques. At the same time, spatial thinking and methods are becoming increasingly used in the social sciences. The purpose of this course is to introduce the undergraduate to both aspects of spatial patterns, trends, and themes but also to methodologies for bringing spatial considerations into their research. The course will provide a practical introduction to GIS via lab assignments.

DSOC 3240 Environment and Society (also STS 3241, SOC 3240) (SBA)

Spring. 3 credits. G. Gillespie.

The main objective is to develop a critical understanding of the dominant trends in modern U.S. environmental thought, such as preservationism, conservationism, deep ecology, social ecology, NIMBYism, risk assessment, ecological modernization, and environmental equity. A second objective is to familiarize students with some major contemporary substantive environmental problems and policies. These topics include air and water quality, public lands management, biodiversity, deforestation, climate change, and ozone depletion. A sociological framework is applied to evaluate interrelationships of substantive and philosophical/theoretical issues.

DSOC 3290 Latin American Politics, Economy, and Society (also GOVT 3992, LATA 3290)

Spring. 3 credits. Prerequisite: introductory sociology recommended. S–U or letter grades. G. Flores-Macias.

This course is designed as an introduction to political, economic, and social issues in 20th-century Latin America. In the first section of the course the region is analyzed through a political lens, focusing on issues including state formation, populism and corporatism, revolutions, the breakdown of democracy, military rule, and democratization. We then turn to issues under the heading of economic perspectives including dependency theory, import-substitution industrialization, the debt crisis, market reform, and the period of the post-Washington Consensus. The third section of the course presents a selection of the region’s

central social issues including class structures, civil-military relations, church-state relations, social movements, and both internal and international migration. Throughout the semester, we will make reference to specific countries to illustrate each topic. Knowledge of Spanish or Portuguese is not required.

[DSOC 3311 Environmental Governance]

DSOC 3360 Rural Areas in Metropolitan Society (SBA)

Spring. 3 credits. Prerequisite: social science course. D. Brown.

Analyzes the changing structure and role of small towns and rural areas in developed nations. Focuses on adaptation of rural communities and populations to major trends, including increased societal differentiation and complexity; increased societal interdependence; and rapid social, economic, technological, and ecological change. Considers alternative policies to ameliorate rural problems and/or enhance rural contributions to national development. Students participate in group research projects in rural communities.

DSOC 3400 Agriculture, Food, and Society (SBA) (KCM)

Fall. 3 credits. S-U or letter grades. G. W. Gillespie.

Changing food and agricultural systems reflect the development patterns and social organization of an increasingly global society. Sociological questions include: What are major trends? What drives them? What benefits and costs accrue to people, communities, and ecosystems? How can we evaluate issues in such a way as to promote problem-solving? What development strategies might better manifest shared values?

DSOC 3550 Latinos, Law, and Identity (also LSP/AMST 3550) (SBA)

Fall. 3 credits. Prerequisite: DSOC 1101 or permission of instructor. R. Mize.

Critical exploration of the critical justice movement and Latina/o identities. Legal cases, federal and state laws, and constitutional issues that impact Latina/os residing in U.S. highlighted. Theoretical contributions of law and society, critical race theory, LatCrit, and outsider jurisprudence perspectives applied to precedent-setting cases and current attempts at marginalizing/empowering Latina/o communities.

DSOC 3700 Comparative Social Inequalities (also SOC 3710) (SBA)

Fall and spring. 3 credits. Prerequisite: introductory social science course. Fall, R. Mize; spring, T. Hirschl.

Reviews both classical and contemporary issues in the comparative study of social inequality. Employing a global perspective, the course examines various relations of inequality—in the labor market and the reorganization of work and employment and in relation to questions of difference—of race, gender, ethnicity, sexuality, and ability—as these pattern unequal access to resources, differentially provide economic and social security, and shape life chances and lived experiences. Throughout the course special attention is given to the importance of understanding patterns of change in relation to the reconfiguration of global production, consumption, and migration.

DSOC 3750 Comparative U.S. Racial and Ethnic Relations (also AMST/ LSP 3750) (SBA) (HA)

Spring. 3 credits. Prerequisite: DSOC 1101 or permission of instructor. Letter grades only. R. L. Mize.

A comparative historical study of the social construction of race. Examines structures of racism as they influence Latina/o, African American, Native American, and Asian American experiences. Does a critical interrogation of whiteness and ethnic identities. Focuses on historical legacy of institutional and interpersonal racism and its contemporary relevance in terms of political economic, residential, legal, educational, cultural, health, and social-psychological inequalities.

DSOC 4100 Health and Survival Inequalities (also SOC 4100) (SBA)

Fall. 4 credits. Letter grades only. A. Basu.

Historical inequalities in health and survival continue to exist today. This course will cover some of the markers of such inequalities, including region, class, race, gender, and age and examine some of the biological, socioeconomic, and political determinants of these differences. Macro as well as individual and family level determinants will be examined. Policy prescriptions will be evaluated and new innovative approaches proposed.

DSOC 4210 Theories of Reproduction (also SOC 4210) (SBA)

Spring. 4 credits. Letter grades only. A. Basu.

Examines the contentious debate of what makes women have any, few, and many children. It covers theories of population growth and changing fertility in both historical and contemporary populations. Demographic concepts like “the demographic transition” and “natural fertility” are discussed. Primary attention is given to “sociocultural” and “gender-based” explanations of reproductive behavior. The course also looks at theories about the place of the state in women’s lives.

DSOC 4300 Human Migration: Internal and International (SBA)

Fall. 3 credits. S-U or letter grades. D. Brown.

This course analyzes the determinants and consequences of internal and international migration in developed and developing nations. Multilevel and multidisciplinary approaches are emphasized. Public policy implications of the volume and composition of migration for origin and destination communities are examined. Techniques and measurement issues are discussed.

[DSOC 4320 Environmental Strategies]

DSOC 4380 Population and Development (also DSOC 6380, SOC 4370) (SBA)

Spring. 3 credits. D. Gurak.

Examines major historical and recent demographic transitions in mortality, fertility, age structure, and composition and explores the relationships between these transitions and the social, or economic, and cultural changes being experienced by diverse societies prior to, during, and following the onset and conclusions of the demographic shifts. Case studies from diverse historical periods and geographic locations are used. Graduate students also meet with the instructor every

other week to discuss graduate readings and topics relevant to their papers.

DSOC 4630 Islam in Africa and Its Diaspora

For description, see ASRC 4630.

DSOC 4810 Global Conflict and Terrorism (SBA) (KCM)

Spring. 3 credits. C. Geisler.

Reviews and discusses issues concerning global development and its relationship to conflict and terrorism. Each class session focuses on a specific topic presented by either a faculty member or a guest speaker leading the discussion and actively engaging the students. The weekly discussion section focuses on discussing in greater depth the reading assignments.

DSOC 4940 Special Topics in Development Sociology (SBA)

Fall or spring. 4 credits max. S-U or letter grades.

The department teaches “trial” courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

DSOC 4960 Internship in Development Sociology

Fall and spring. 1-3 credits. Prerequisite: permission of student’s advisor in advance of participation in internship program. Staff.

Students must register using individual study form (available in 140 Roberts Hall) signed by faculty member who will supervise study and assign grade. All 4960 internship courses must adhere to the CALS guidelines on the web site at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

DSOC 4970 Independent Study in Development Sociology (SBA)

Fall or spring. 3 credits, variable; may be repeated for credit. Students must register using independent study form (available in 140 Roberts Hall). S-U or letter grades.

Informal study may include a reading course, research experience, or public service experience.

DSOC 4991 Independent Honors Research in Social Science (SBA) (KCM)

Fall and spring. 1-6 credits; 6 credits max. may be earned in honors program.

Prerequisite: requirements for honors program met. A. Gonzales.

Students should select a faculty advisor and begin proposal development during the junior year. Students must submit written proposals by the third week of the semester of their senior year to the departmental honors committee representative.

DSOC 5600 Analytical Mapping and Spatial Modeling (also CRP 6290) (SBA) (KCM)

Fall. 4 credits. Prerequisite: one course in statistics. J. Francis.

The goal of this course is to introduce students in the social sciences and related fields to geographic information systems and spatial statistics as a set of tools to complement traditional analysis methods. Spatial relationships have become increasingly recognized as important in

socioeconomic, political, and demographic analysis. Recent research in these fields has demonstrated that understanding spatial relationships, in addition to other factors that account for differences and similarities between people and organizations, significantly increase our explanatory power. The first part of the course focuses on various features of GIS that are most useful to social scientists in their endeavors. The second part of the course introduces spatial statistics that further this understanding as well as control for spatial autocorrelation when it exists.

DSOC 6001 The Empirics of Development and Social Change (SBA)

Spring. 3 credits. Prerequisite: graduate standing. P. Eloundou-Enyegue. The purpose of this course is to review, critique, and apply several analytical approaches for measuring and explaining societal change. As such, it serves as a complement to theories of development. More broadly, the course critically examines the empirical record on global development, drawing from several methodological approaches, both quantitative and qualitative.

DSOC 6030 Classical Sociological Theory

Fall. 4 credits. Prerequisite: graduate students only. M. J. Pfeffer. Reviews the main streams of classical sociological thought, focusing on the work of Weber, Durkheim, Marx, and Simmel. Course materials include original texts and secondary literature used to examine the concepts, methods, and explanation in classical sociological thought. Important objectives are to identify the philosophical and conceptual core of the discipline and to critically evaluate the relevance of the classical theories to contemporary social change and development.

DSOC 6060 Sociological Theories of Development

Spring. 3 credits. Prerequisite: DSOC 6030 or permission of instructor. F. Makki. Critical examination of a historical range of theories and research in the sociology of development from the postwar period through the present. Major topics include modernization theory, dependency theory, world-system theory, the developmental state, global commodity chains, and globalization. Throughout the course, the concept of development itself is questioned and critiqued both theoretically and in terms of practical challenges from environmental, indigenous, and other social movements.

DSOC 6080 Demographic Techniques (also PAM 6060)

Spring. 3 credits. Prerequisite: multivariate statistics or permission of instructor. S-U or letter grades. D. Lichter. Introduction to the methods, measures, and data used in the analysis of human populations. Topics include demographic rates, life-table analysis, cohort vs. period analysis, sources and quality of demographic data, population estimation and projection, and stable population models.

[DSOC 6150 Qualitative Research Methods]

DSOC 6170 Foundations in Social Research: Comparative Epistemologies

Fall. 3 credits. Letter grades only. G. Menon.

Seminar designed to introduce graduate students in the social sciences to the variety of epistemological approaches used by social scientists to analyze social change and development. Examines both positivist and nonpositivist approaches. Relates the relationship of quantitative and qualitative methodologies to different epistemologies.

DSOC 6190 Quantitative Research Methods

Spring. 4 credits. Prerequisite: statistics course. Letter grades only. D. Gurak.

Graduate-level course in measurement and analysis of survey, demographic, and observational data. Topics include linear regression, analysis of variance, and analysis of covariance with both continuous and categorically coded variables. Introduces logistic regression and some nonlinear models. Gives special attention to handling ordered and unordered categorical data as these are prevalent in social/demographic data sets. Analyzes data from real surveys like the American National Election Studies and the General Social Surveys using programs like SAS and SPSS. Includes labs and writing programs to analyze these data. Students familiarize themselves with data cleaning, missing data estimation, transformations, subsetting, and other data handling procedures.

[DSOC 6200 Sociology of the Community (SBA)]

DSOC 6210 Foundations of Environmental Sociology (SBA)

Fall. 3 credits. Graduate students only. C. Geisler.

Foundations of environmental sociology provide graduate students with a broad survey of the literature in this disciplinary specialty area. Students review the history of thought in environmental sociology as well as key literature in the various substantive foci of this specialty. The principle objective of this course is to provide graduate students specializing in environmental sociology with a firm grasp of the content, controversies, and trends in the area. Sessions are conducted in a seminar style, and discussions are focused on close review of assigned readings.

[DSOC 6250 State, Economy, and Society (SBA) (HA)]

DSOC 6300 Human Migration: Internal and International (also DSOC 4300)

For description, see DSOC 4300.

[DSOC 6320 Environmental Governance]

DSOC 6380 Population and Development (also DSOC 4380)

[DSOC 6400 Community and Changing Property Institutions (SBA)]

DSOC 6630 Islam in Africa and Its Diaspora

For description, see ASRC 4630.

DSOC 6940 Special Topics in Development Sociology

Fall or spring. 4 credits max. Prerequisite: graduate standing. S-U or letter grades. The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the

semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

[DSOC 7001 The Historical Sociology of Modernity (KCM) (HA)]

Fall. 3 credits. Graduate students only. F. Makki.

The notion of modernity as a postulated relationship between social change and institutional form, and as a conceptual schema for making sense of large-scale social transformations, supplies the deep structure for much present-day social theory. Conceived as a uniquely European phenomenon that spread to the rest of the world through the impact of colonial empires and the world market, it also provides the normative framework for contemporary theories of development. This conception of modernity, and the meta-theory that legitimates it, has increasingly been the subject of heated controversy. In this course, we will explore the distinct debates that animate this field of historical sociology, alternating between substantive historical studies and critical analysis of how these studies are shaped by the adoption of particular epistemologies.]

DSOC 7190 Advanced Regression and Spatial Statistics (SBA) (KCM)

Spring. 4 credits. Prerequisite: graduate students or permission of instructor and two courses in statistics and one in methods. J. Francis.

This course will cover two topics, logistic regression and spatial linear regression. The course opens with a brief review of multiple regression theory and procedures. Then a little more than half the semester is devoted to logistic regression modeling. Spatial linear regression will be covered in five weeks of the semester. As both of these techniques are based on maximum likelihood procedures, some time will be devoted to an overview of maximum likelihood procedures.

DSOC 7250 Theories of State, States of Theory (SBA)

Fall. Graduate students only. S. Feldman. This course examines how processes of political, economic, and social restructuring reshape state capacities and processes of state formation. The animating question: How have new patterns of "globalization"—transnational corporatist alliances, social movements, and new hegemonic relations—altered how we understand the meanings, activities, and power of rule? Critical to these discussions are the contours of nationalisms and fundamentalisms as these emerge and reconfigure national, regional, and global alliances and practices, as well as shape interpretations of current processes of resistance, change, and terms of intervention and exchange. The course engages historical, poststructural, postcolonial, and comparative theories particularly as these have emerged and been refined by current debates in South Asia, Latin America, and Africa.

DSOC 7300 Sociology of Global Change (SBA)

Spring. 3 credits. Graduate students only. P. McMichael.

Analyses of social change and development are increasingly sensitive to global context. They include the sociology of the world economy as a multilayered entity anchored in

an evolving international division of labor and the system of nation states, and the sociology of transnational political, economic, and cultural processes (e.g., food regimes, commodity chains, diasporas and transnational identities, the new regionalism, and transnational social movements). The seminar examines the substantive and methodological questions generated by research on these global processes, including questions of relevant units of analysis, situating global process in local events and subjectivities and vice versa, and examining the ways in which national structures and cultures interact with global structures and cultures.

DSOC 7600 Environment and Social Transitions: Graduate Seminar in Environmental Sociology (also NTRES 7600)

Spring or fall. 3 credits. Graduate Students Only. Graduate faculty.

Graduate seminar on advanced sociology-of-environment themes. We seek to focus analysis on contemporary socioecological transitions and their implications, theoretical and applied. Attention will be directed toward ecological, social, political, and technological dimensions of policy regimes, conventions, and governance. The seminar aims to understand and advance social science responses to prevailing paradigms in domains of conservation, energy, climate, agriculture, and natural resource conservation; the emphasis will rotate according to year and instructor.

DSOC 7900 Graduate-Level Thesis Research

Fall or spring. Credit TBA. Prerequisite: DSOC graduate standing and permission of instructor. S-U or letter grades. Graduate faculty.

Thesis research for Ph.D. students **only before** "A" exam has been passed.

DSOC 7910 Teaching Experience

Fall or spring. 1-3 credits. Prerequisite: DSOC graduate standing. S-U grades only. Graduate faculty.

Participation in the ongoing teaching program of the department.

DSOC 8720 Development Sociology

Prerequisite: master's and doctoral degree candidates, permission of graduate field member concerned. S-U or letter grades. Graduate faculty.

DSOC 8900 Master's-Level Thesis Research

Fall or spring. Credit TBA. Prerequisite: DSOC graduate standing and permission of instructor. S-U or letter grades. Graduate faculty.

Thesis research for master's students.

DSOC 9900 Doctoral-Level Thesis Research

Fall or spring. Credit TBA. Prerequisite: DSOC graduate standing and permission of instructor. S-U or letter grades. Graduate faculty.

Thesis research for Ph.D. candidates **after** "A" exam has been passed.

Related Courses in Other Departments

(Others may be added)

Population Dynamics (SOC 2050)

Gender Relations, Gender Ideologies, and Social Change (FGSS 5240)

EARTH AND ATMOSPHERIC SCIENCES

L. D. Brown, chair (2116 Snee Hall, 255-6346); A. T. DeGaetano, assoc. chair; director of undergraduate studies: J. L. Cisne (Science of Earth Systems); M. W. Wysocki (Atmospheric Science), R. W. Allmendinger, W. D. Allmon, C. Andronicos, L. M. Cathles, S. J. Colucci, L. A. Derry, M. Goman, C. H. Greene, D. L. Hysell, T. E. Jordan, R. W. Kay, S. Mahlburg Kay, R. Lohman, N. Mahowald, B. Monger, A. Moore, J. Phipps Morgan, M. Pritchard, S. J. Riha, W. M. White, D. S. Wilks

General Courses

EAS 1150 Severe Weather Phenomena

Summer. 3 credits. S-U or letter grades. M. W. Wysocki.

A description of the structure of the Earth's atmosphere and forces that govern its motion will be presented and then applied to understanding the aspects of severe weather including snowstorms/lake effect snow, windstorms, tornadoes, thunderstorms, tropical cyclones, El Niño, floods, drought, and heat waves.

EAS 1400 Freshman Writing Seminar "Writing in the Sciences: Environmental Perspectives"

Spring. 3 credits. S. Jessup.

This course is a Freshman Writing Seminar in which students examine interactions between humans and the natural environment from individual, societal, and scientific perspectives. Readings include a brief historical survey of humanity's role within the natural world and short readings about current environmental issues. Includes a research project where each student explores a current environmental issue.

EAS 2900 Computer Programming and Meteorology Software

Spring. 3 credits. Prerequisites: EAS 1310; MATH 1110 or equivalent. N. Mahowald and B. Belcher.

Introduction to Fortran computer programming and visual software packages specifically tailored for meteorological application usage. Topics include basic FORTRAN 90 programming (this includes problem analysis, algorithm development, and program writing and execution), data manipulation, and instruction in the use of GrADS, and GEMPACK visual display tools.

EAS 4960 Internship Experience

Fall or spring. 1-2 credits. S-U grades only. Staff. See individual units for requirements.

All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

EAS 4980 Teaching Experience in Earth and Atmospheric Sciences

Fall, spring. 1-4 credits. S-U grades only. Students must register using independent study form. Staff.

The student assists in teaching an EAS course appropriate to his or her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses course objectives and teaching techniques with the faculty member in charge of the course.

Atmospheric Science

EAS 1310 Basic Principles of Meteorology

Fall. 3 credits. M. W. Wysocki.

Simplified treatment of the structure of the atmosphere: heat balance of the Earth; general and secondary circulations; air masses, fronts, and cyclones; and hurricanes, thunderstorms, tornadoes, and atmospheric condensation. The optional 1-credit laboratory for the course is offered as EAS 1330.

EAS 1330 Basic Meteorology Lab

Fall. 1 credit. Corequisite: EAS 1310. M. W. Wysocki.

This course is required for atmospheric science majors but is optional for other students taking EAS 1310.

EAS 1340 Weather Analysis and Forecasting

Spring. 1 credit. Prerequisites: EAS 1310 and EAS 1330. S-U grades only. M. W. Wysocki and staff.

This course will serve as an extension of the EAS 1330 first-year majors lab. It will provide opportunity for formal weather briefings, explore specific atmospheric storms (synoptic and mesoscale, including the climatology of each storm type), through assigned readings, map analysis, and weather discussions.

EAS 2500 Meteorological Observations and Instruments

Fall. 4 credits. Prerequisite: EAS 1310. M. W. Wysocki.

Covers methods and principles of meteorological measurements and observations including surface, free-air, and remote systems. Also covers instrument siting, mounting, and protection; instrument response characteristics, calibration, and standardization; and recorders and data logging systems. Laboratory exercises are in observation and data analysis.

EAS 2680 Climate and Global Warming

Spring. 3 credits. Prerequisite: basic college math. S-U or letter grades. A. T. DeGaetano.

Familiarizes students from a range of disciplines with such contemporary issues in climatology as global warming and El Niño. Introduces the natural greenhouse effect, past climates, and observed and projected climate changes and impacts. Also covers natural climate variations (e.g., El Niño) and their consequences and predictability. Readings focus on recent scientific findings related to climate change.

EAS 2960 Forecast Competition

Fall and spring. 1 credit; students enroll for two consecutive semesters; credit awarded after second semester; may be repeated for credit. Prerequisite: undergraduate standing in atmospheric science or permission of instructor. S–U grades only. D. S. Wilks.

Two-semester course providing daily exercise in probabilistic weather forecasting, in which students compete to forecast local weather most skillfully.

EAS 3050 Climate Dynamics

Fall. 3 credits. Prerequisites: two semesters of calculus and one semester of physics. N. Mahowald.

Discusses processes that determine climate and contribute to its change, including atmospheric radiation, ocean circulation, and atmospheric dynamics. Investigates contemporary climate change issues and discusses them in the context of natural variability of the system.

EAS 3340 Microclimatology

Spring. 3 credits. Prerequisite: physics course. D. S. Wilks.

The relationship of radiant energy, temperature, wind, and moisture in the atmosphere near the ground. The interplay between physical processes of the atmosphere, plant canopies, and soil is examined with emphasis on the energy balance.

EAS 3410 Atmospheric Thermodynamics and Hydrostatics

Fall. 3 credits. Prerequisites: one year of calculus and one semester of physics. M. W. Wysocki.

Introduction to the thermodynamics and hydrostatics of the atmosphere and to the methods of description and quantitative analysis used in meteorology. Topics include thermodynamic processes of dry air, water vapor, and moist air, and concepts of hydrostatics and stability.

EAS 3420 Atmospheric Dynamics (also ASTRO 3342)

Spring. 3 credits. Prerequisites: familiarity with multivariate calculus (e.g., MATH 2930, 2130, or 2220 or equivalent); one semester of university physics. Staff.

Introduction to the basic equations and techniques used to understand motion in the atmosphere, with an emphasis on the space and time scales typical of storm systems (the synoptic scale). Derives the governing equations of atmospheric flow from first principles and applies them to middle latitude and tropical meteorology. Topics include balanced flow, atmospheric waves, circulation, and vorticity.

EAS 3520 Synoptic Meteorology I

Spring. 3 credits. Prerequisite: EAS 3410. Corequisite: EAS 3420. M. W. Wysocki.

Study of weather map analysis and forecasting techniques by applying the principles of fluid and heat flow. Strengthens previously introduced meteorological concepts that are applied to forecasting midlatitude synoptic scale weather systems, such as cyclones, anticyclones, jet streams, fronts, and waves.

EAS 4350 Statistical Methods in Meteorology and Climatology

Fall. 3 credits. Prerequisites: one introductory course each in statistics (e.g., AEM 2100) and calculus. D. S. Wilks.

Statistical methods used in climatology, operational weather forecasting, and selected meteorological research applications. Includes statistical characteristics of meteorological data including probability distributions and correlation structures. Covers operational forecasts derived from multiple regression models, including the MOS system and forecast evaluation techniques.

EAS 4470 Physical Meteorology

Fall. 3 credits. Prerequisites: one year each of calculus and physics. Offered alternate years. A. T. DeGaetano.

Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include an introduction to atmospheric radiation processes; atmospheric optics and electricity; microphysical cloud processes; and principles of radar probing of the atmosphere.

EAS 4510 Synoptic Meteorology II

Fall. 3 credits. Prerequisites: EAS 3410 and 3420. S. J. Colucci.

Structure and dynamics of large-scale midlatitude weather systems, such as cyclones, anticyclones, and waves, with consideration of processes that contribute to temperature changes and precipitation. Lab sessions involve real-time weather forecasting and the computer application of a numerical model of the atmosphere to study selected large-scale midlatitude weather events.

EAS 4560 Mesoscale Meteorology

Spring. 3 credits. Prerequisites: EAS 3410 and 3420 or permission of instructor. S. J. Colucci.

Structure and dynamics of midlatitude mesoscale weather systems such as fronts, jets, squall lines, convective complexes, precipitation bands, downslope windstorms, mountain breezes, sea breeze circulations, and lake effect snowstorms. The course also considers tropical weather systems and mesoscale modeling.

[EAS 4570 Atmospheric Air Pollution

Fall. 3 credits. Prerequisites: EAS 3410 or one course in thermodynamics, and one semester of chemistry, or permission of instructor. Offered alternate years; next offered 2010–2011. M. W. Wysocki.]

EAS 4700 Weather Forecasting and Analysis

Spring. 3 credits. Prerequisites: EAS 3520 and 4510. M. W. Wysocki.

Applied course focusing on weather forecasting and analysis techniques for various regions around the world. Lectures emphasize the application of student's knowledge of atmospheric dynamics, thermodynamics, and computer data analysis, to forecast the development and movement of multiscale weather systems. Students participate in weekly forecast discussions; write daily forecasts that include a synoptic discussion, quantitative precipitation forecasts, and severe weather outlook for the forecast region; and lead class discussion on assigned readings.

EAS 4800 Our Changing Atmosphere: Global Change and Atmospheric Chemistry (also BEE 4800)

Fall. 3 credits. Prerequisites: CHEM 2090, MATH 1920, PHYS 1112 or equivalent, or permission of instructor. S–U or letter grades. P. G. Hess.

For description, see BEE 4800.

EAS 4820 Atmospheric Modeling

Spring. 3 credits Prerequisite: differential equations, introductory computer background, junior standing or above or permission of instructor. N. Mahowald. Climate and numerical weather prediction models are important tools for policy and science. This course describes the basic principle of the numerics in these models, including dynamical cores and subgrid-parameterization. Included will be a discussion of evaluation of models and effective presentation of model results.

[EAS 4830 Land, Water, Agriculture, and Environment (also CSS 4830)

Fall. 3 credits. Next offered 2010–2011. H. van Es and S. J. Riha.

For description, see CSS 4830.]

EAS 4840 Inverse Methods in the Natural Sciences

Fall. 3 credits. Prerequisites: MATH 2940. D. L. Hysell.

An exploration of solution methods for inverse problems with examples taken from geophysics and related fields, with particular attention to making inferences from inaccurate, incomplete, or inconsistent physical data. Applications include medical and seismic tomography, earthquake location, image processing, and radio/radar imaging. Linear algebra (including condition numbers) and probability and statistics (including error analysis, Bayes theorem, Gibbs distribution, and Markov chains) will be reviewed. Methods to be covered include nonlinear least-squares, maximum likelihood methods, and local and global optimization methods, including simulated annealing and genetic algorithms.

EAS 4870 Introduction to Radar Remote Sensing (also ECE 4870)

Spring. 3 credits. Prerequisite: PHYS 2208 or 2213 or equivalent, or permission of instructor. D. L. Hysell.

Fundamentals of radar, antennas, and remote sensing. Exposes students to the principles underlying the analysis and design of antennas used for communication and for radar-related applications. Students also encounter both a mathematical and a practical description of how radars function, how their performance can be optimized for different applications, and how signals acquired by them can be processed. The objective is to familiarize students with a wide variety of radars rather than to turn them into practicing radar engineers. Each topic is developed from basic principles so students with a wide variety of backgrounds are able to take the course. Emphasizes radar applications in geophysics, meteorology and atmospheric sciences, and astronomy and space sciences. Gives special attention to radar remote sensing of the Earth from spacecraft.

EAS 4940 Special Topics in Atmospheric Science (undergraduate level)

Fall or spring. 8 credits max. S–U or letter grades. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. The same course is not offered more than twice.

EAS 4970 Individual Study in Atmospheric Science

Fall or spring. 1–6 credits. S–U grades only. Students must register using independent study form. Staff.

Topics are arranged at the beginning of the semester for individual study or for group discussions.

EAS 4990 Undergraduate Research in Atmospheric Science

Fall or spring. Credit TBA. S–U grades only. Students must register using independent study form. Staff.

Independent research on current problems in atmospheric science.

EAS 5050 Fluid Dynamics in the Earth Sciences

Spring. 3 credits. Prerequisites: MATH through 2940, PHYS through 2208 or 2214, or permission of instructor.

L. Cathles and M. Wysocki.

The Earth System provides many fascinating examples of fluid dynamics phenomena that are also of societal importance. Turbulent convection in the outer core generates the earth's magnetic field. The viscous mantle (outer half of the Earth) is slowly but vigorously convecting, and consequently the Earth's surface is dynamic. Viscosity is not important in the oceans and atmosphere, but the flow there is fast enough for the rotation of the Earth to become dominant control. Electromagnetic effects again dominate in the solar wind and magnetosphere. This course will investigate the Earth using fluid dynamics. For students in the Earth sciences it will provide an opportunity to learn the insights that can be provided by fluid dynamics. For students who know fluid dynamics from other fields it will provide some spectacular applications and an opportunity to learn about the Earth system in a different and unusually fundamental way.

[EAS 5750 Planetary Atmospheres (also ASTRO 6575)]

Fall. 4 credits. Next offered 2010–2011. P. Gierasch.

For description, see ASTRO 6575.]

EAS 5840 Inverse Methods in the Natural Sciences

Fall. 3 credits. Prerequisite: MATH 2940. D. L. Hysell.

An exploration of solution methods for inverse problems with examples taken from geophysics and related fields, with particular attention to making inferences from inaccurate, incomplete, or inconsistent physical data. Applications include medical and seismic tomography, earthquake location, image processing, and radio/radar imaging. Linear algebra (including condition numbers) and probability and statistics (including error analysis, Bayes theorem, Gibbs distribution, and Markov chains) will be reviewed. Methods to be covered include nonlinear least-squares, maximum likelihood methods, and local and global optimization methods, including simulated annealing and genetic algorithms. Students in EAS 5840 will be expected to complete and present a substantial class project to be negotiated with the instructor.

EAS 6480 Air Quality and Atmospheric Chemistry (also MAE 6480)

Fall. 3 credits. Prerequisites: freshman chemistry, fluid mechanics or equivalent, thermodynamics. S–U or letter grades. K. M. Zhang.

Factors determining air quality and effects of air pollutants on public health, ecological systems and global climate change.

[EAS 6520 Advanced Atmospheric Dynamics (also ASTRO 7652)]

Spring. 3 credits. Prerequisites: EAS 3410 and 3420 or equivalents. Next offered 2010–2011. S. J. Colucci.

Covers quasigeostrophic theory, atmospheric waves, hydrodynamics instability, general circulation of the atmosphere, and other topics selected from among numerical weather prediction and tropical mesoscale, and middle atmosphere processes according to student interest.]

[EAS 6660 Applied Multivariate Statistics]

Spring. 3 credits. Prerequisites: multivariable calculus, matrix algebra, two statistics courses. Offered alternate years; next offered 2010–2011. D. S. Wilks.]

EAS 6750 Modeling the Soil-Plant-Atmosphere System (also CSS 6750)

Spring. 3 credits. Prerequisite: EAS/CSS 4830 or equivalent. S. J. Riha.

Introduction to the structure and use of soil-plant-atmosphere models. Topics include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability; plant-plant competition; and land surface processes as well as model data requirements, validation, and scale. Discusses use of soil-plant-atmosphere models for teaching, research, extension, and policy formation.

EAS 6920 Special Topics in Atmospheric Science

Fall or spring. 1–6 credits. S–U or letter grades. Staff.

Study of topics in atmospheric science that are more specialized or different from other courses. Special topics covered depend on staff and student interests.

EAS 7110 Upper Atmospheric and Space Physics

Fall or spring. 1–6 credits. Seminar course. D. L. Hysell.

EAS 8500 Master's-Level Thesis Research in Atmospheric Science

Fall or spring. Credit TBA. S–U grades only. Graduate faculty.

This research for atmospheric science master's students.

EAS 9500 Graduate-Level Dissertation Research in Atmospheric Science

Fall or spring. Credit TBA. S–U or letter grades. Graduate faculty.

Dissertation research for atmospheric science Ph.D. students only *before* "A" exam has been passed.

EAS 9510 Doctoral-Level Dissertation Research in Atmospheric Science

Fall or spring. Credit TBA. S–U or letter grades. Graduate faculty.

Dissertation research for atmospheric science Ph.D. candidates *after* "A" exam has been passed.

Science of Earth Systems**Field Study in Hawaii**

Field study is a fundamental aspect of earth system science. Students wishing to increase their field experience may fulfill some of the

requirements for the SES major by off-campus study through the Cornell Earth and Environmental Semester program (EES). The EES program is offered during the spring semester and emphasizes field-based education and research. It is based on the island of Hawaii, an outstanding natural laboratory for earth and environmental sciences. Courses that may be applied to the SES major include EAS 3400, 3220, and 3510. The EES program also offers opportunities for internships with various academic, nonprofit, and government organizations. Typically students participate in the EES program during their junior year, although exceptions are possible. For further information on the EES program see www.geo.cornell.edu/geology/classes/hawaii/course.html.

EAS 1101 Introductory Geological Sciences (To Know Earth)

Fall. 3 credits. C. Andronicos and R. Allmendinger.

Designed to enhance an appreciation of the physical world for nonscientists and science majors. Emphasizes natural environments, surface temperatures, dynamic processes such as mountain belts, volcanoes, earthquakes, glaciers, and river systems. Covers interactions of the atmosphere, hydrosphere, biosphere, and lithosphere (Earth system science). Examines water, mineral, and fuel resources and environmental concerns.

EAS 1108 Earth in the News

Summer. 3 credits. S. L. Losh.

Introduction to physical geology and Earth system science and explores the scientific basis for informed decision making regarding many timely environmental issues including global warming; water pollution and use; geologic hazards such as floods, earthquakes, and volcanoes; fossil fuel distribution and use; and land use. A field trip is taken in the Ithaca area.

EAS 1109 Dinosaurs

Fall. 1 credit. J. L. Cisne.

Introductory survey course for anyone interested in dinosaurs. Lectures examine the fossil evidence and illustrate how various geological and biological disciplines contribute to understanding dinosaurs and their world.

EAS 1190 Fossil Preparation

Fall, 1 credit. Prerequisite: EAS 1109 or related EAS course. W. Allmon and J. Cisne.

Hands-on experience in the preparation and curation of fossils in laboratories at the Paleontological Research Institution (PRI). Students provide own transportation to the Museum of the Earth via public transit or other means. Activities include preparation and study of vertebrate, invertebrate, and plant specimens; sorting of bulk material such as field collections and mastodon dung, and curation of prepared specimens.

EAS 1220 Earthquake! (also ENGR 1220)

Spring. 3 credits. L. D. Brown.

Explores the science of natural hazards, their societal impacts, and means of mitigation. The focus is on earthquakes, volcanoes and tsunamis, but hurricanes, severe weather, climate change, landslides, wildfires and the threat of extinction from a future impact by an extraterrestrial body are also considered.

EAS 1540 Introductory Oceanography—Lecture (also BIOEE 1540)

Fall, summer. 3 credits; optional 1-credit lab offered as EAS/BIOEE 1550. S–U or letter grades. Fall: C. H. Greene and B. Monger; summer: B. Monger.

Intended for both science and nonscience majors. Cover the basic workings of the ocean including its physics, chemistry, and biology. Following this basic description, the course examines threats to the health of the ocean and the important role the ocean plays in global climate change. Nonscience majors should pay particular attention to this course to fulfill a science requirement, because they learn broadly how the Earth works (physically, chemically, and biologically) in a single nonquantitative class.

EAS 1550 Introductory Oceanography—Laboratory (also BIOEE 1550)

Fall. 1 credit. Corequisite: EAS/BIOEE 1540. B. Monger and C. H. Greene.

Laboratory course covering topics presented in EAS/BIOEE 1540.

EAS 1551 Introduction to Oceanography Lab (also BIOSM 1151)

Summer. 1 credit. Prerequisite: college-level science course, or EAS 1540, or marine science course or permission of instructor. B. Monger and C. Greene.

For description, see BIOSM 1151.

EAS 1700 Evolution of the Earth and Life

Spring. 3 credits. J. L. Cisne.

Earth systems and their evolution; Earth history's astronomical context; plate tectonics, continental drift, and their implications for climate and life; coevolution of life and the atmosphere; precedents for ongoing global change; dinosaurs, mass extinctions, and human ancestry. Includes laboratories on reconstructing geological history and mapping ancient geography. Fossil-collecting on field trips.

EAS 2130 Marine and Coastal Geology

Summer. 4 credits. Prerequisite: introductory geology or ecology course or permission of instructor. Staff.

Special two-week course offered at Cornell's Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. For more details, including estimated cost and an application, contact SML office, G14 Stimson Hall, or visit www.sml.cornell.edu.

EAS 2200 The Earth System

Fall, spring. 4 credits. Prerequisites: MATH 1110/1910. Letter grades only. W. M. White and A. Moore.

An integrated introduction to the earth system stressing the biological, chemical, geological, and physical interactions among the atmosphere, ocean, and solid earth. Topics will include biogeochemical cycles, climate dynamics, and the evolution of the atmosphere, biosphere, cryosphere (ice), hydrosphere (oceans and inland waters), and lithosphere (solid earth).

EAS 2220 Seminar: Hawaii's Environment

Fall. 1 credit. S–U grades only. A. Moore.

A seminar for students interested in the unique environmental systems of the Hawaiian Islands. This course is designed to bring together students returning from field studies in Hawaii with students interested in going there to study. Through reading and discussion we will explore the geology,

biology, ocean, atmosphere, and culture of the Hawaiian environment.

EAS 3010 Evolution of the Earth System

Fall. 4 credits. Prerequisites: EAS 2200, MATH 1110 or 1910 and one course in chemistry (college or high school) Two Sat field trips. T. Jordan, S. Riha, and W. Allmon.

Life activities alter the physical and chemical environment and are altered by that environment. This interaction over very long times constitutes a co-evolution of earth and life. Course uses modern systems, tens of thousand year old systems, and hundreds of million year old systems to illustrate principles, methods of reconstructing deep history, and the context of natural change inherent to life and earth.

EAS 3030 Introduction to Biogeochemistry (also NTRES 3030)

Fall. 4 credits. Prerequisites: CHEM 2070 or equivalent, MATH 1120, and biology and/or geology course. J. Yavitt.

Control and function of the Earth's global biogeochemical cycles. Begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers, and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, bio-active metals, the use of isotopic tracers, controls on atmospheric carbon dioxide, and mathematical models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.

EAS 3040 Interior of the Earth

Spring. 3 credits. Prerequisite: EAS 2200 or permission of instructor. C. Andronicos.

This class will investigate the geology of the solid earth with emphasis on igneous and metamorphic petrology, structure of the continents and ocean basins, and large-scale tectonics. Interaction between deformation, melt generation, and metamorphism will be examined as mechanisms by which the crust is differentiated from the underlying mantle. Geophysical and geochemical techniques for probing the deep interior of the earth will be investigated. Plate tectonics will be used as a unifying theme to understand processes operating in the solid earth.

EAS 3060 Evolution of Ancient and Modern Oceans (also BIOSM 3060)

Summer. 6 credits. Prerequisites: introductory biology (two semesters) and college-level course in Earth science, or permission of instructor. W. Allmon.

For description, see BIOSM 3060.

EAS 3220 Biogeochemistry of the Hawaiian Islands

Spring. 4 credits. Prerequisites: enrollment in EES semester in Hawaii; EAS 2200, EAS 3030 or permission of instructor.

L. A. Derry.

A field-oriented study biogeochemistry course held on the island of Hawaii. Field, class, and laboratory work focus on how landscape age and climate strongly control biogeochemical cycling and ecosystem development in Hawaii. Other topics include succession of ecosystems, evolution of nutrient cycles, and impacts of invasive species. The course is structured around field projects, carried out both as groups and individually.

EAS 3400 Field Study of the Earth System

Spring. 6 credits. Prerequisites: enrollment in EES Semester in Hawaii, one semester of calculus (MATH 1910/1920 or 1110/1120), and two semesters of any of the following: PHYS 2207/2208 or 1112/2213; CHEM 2070/2080 or 2090/2080; BIOG 1101/1103–1102/1104 or 1105/1106 or 1109/1110 or equivalent course work. A. Moore.

Interdisciplinary field course covering fundamental concepts of the Earth system. Topics include global circulation patterns in the solid Earth, atmosphere and ocean; energy and mass transfer; change and variability of Earth atmosphere and ocean systems; the temporal record of change preserved in the geologic record; Earth/ocean/atmospheric controls on ecosystem processes. The course is project-based with students engaged in hands-on, active learning that takes advantage of local resources.

EAS 3500 Dynamics of Marine Ecosystems (also BIOEE 3500)

Fall. 3 credits. Prerequisites: one year of calculus and one semester of oceanography (i.e., BIOEE/EAS 1540) or permission of instructor. Offered alternate years. C. H. Greene and R. W. Howarth.

Lecture course covering the interactions of physical and biological processes in marine ecosystems.

EAS 3510 Conservation Oceanography (also BIOEE 3510)

Spring. 4 credits. Prerequisite: EAS 3400. Recommended: oceanography course. C. H. Greene and C. D. Harvell.

Covers the interactions of physical and biological processes in marine ecosystems. Begins by looking at these processes on ocean-basin to regional scales and works down to the smaller scales relevant to individual organisms. Introduces students to modern techniques of marine-ecosystems research, including remote sensing, oceanographic-survey methods, and experimental marine ecology. This course is field and laboratory intensive with students engaged in hands-on, active learning that takes advantage of local resources.

[EAS 3530 Physical Oceanography

Fall. 3 credits. Prerequisites: MATH 1120 or 1920, or one year of physics, or permission of instructor. Offered alternate years. B. Monger.

The course covers thermohaline and wind-driven circulation and surface-ocean boundary-layer dynamics. Mathematical expressions for describing conservation of momentum, mass, and heat in a fluid are used to explain the ocean's responses to wind and buoyancy forcing.]

EAS 4010 Fundamentals of Energy and Mineral Resources

Fall. 3 credits. Recommended: previous course in geology. L. Cathles.

The Earth's energy and mineral resources reflect some of the most important changes and dramatic events that have punctuated earth history. Course provides an overview of resource types in the context of the Earth's atmospheric evolution, rifting, mantle convection, and hydrologic cycle. The processes of resource accumulation are described in terms of simple chemical and physical principles and in the societal

contexts of supply, demand, and sustainability.

[EAS 4040 Geodynamics]

Spring. 3 credits. Prerequisite: calculus and calculus-based physics courses or permission of instructor. Offered alternate years; next offered 2010–2011. J. Phipps-Morgan.

Quantitative study of the deformation, heat transport, and melting processes that have shaped the evolution of the solid Earth. Familiar physical and chemical principles and concepts are applied to the study of plate tectonics, fluid dynamics, mantle convection, melting, and mountain building.]

[EAS 4050 Active Tectonics]

Spring. 3 credits. Recommended: mechanical background equivalent to EAS 4260/4880. Offered alternate years. R. Lohman.

Develops the ideas and methods necessary to understand how the Earth deforms—from individual earthquakes to the construction of mountain ranges. Discusses the driving forces of deformation, and how these forces interact with different geologic materials to cause deformation.

[EAS 4060 Marine Geology and Geophysics]

Spring. 4 credits. Prerequisite: EAS 2200 or comparable courses. Recommended: completion of some EAS classes. Offered alternate years. J. Phipps-Morgan.

This course will use geological, geochemical, and geophysical approaches to explore the geology of the ocean floor. We will begin by discussing in depth the mid-ocean ridge system where the basaltic seafloor is created by plate spreading. This complex system involves a rich interplay of volcanism, hydrothermal flow, mantle flow, and lithosphere deformation, and is responsible for both the architecture of the ocean crust and the chemical composition of seawater. After this, we will discuss the evolution of the seafloor during its residence at Earth's surface. We end up by discussing the complex faulting, melting, and fluid flow processes at subduction zones where seafloor is transmuted into mantle and crust. There will be a lab section focusing on the use of GMT to make maps of relevant geological and geophysical information.]

[EAS 4170 Field Mapping in Argentina]

Summer. 4 credits. Prerequisite: introductory EAS course and EAS 4260 or EAS 3040. S. Mahlburg Kay.

Field mapping course in Argentina that fulfills field requirement for majors with interests in geological sciences and provides a field geological experience for others. Course consists of lectures in Buenos Aires followed by field exercises in the Sierras Pampeanas, Precordillera, and Main Cordillera Ranges of the Argentine Andes in the provinces of San Juan and Mendoza. A variety of exercises use modern techniques in the field mapping of a broad range of variably deformed sedimentary, metamorphic, and igneous rocks. The course further provides an introduction to the tectonics and magmatic processes of the central Andes with emphasis on comparable processes in the United States. Exercises are done in combination with students and faculty of the University of Buenos Aires.

[EAS 4250 European Discovery of Impacts and Explosive Volcanism]

Spring. 2 credits. Prerequisite: junior, senior, or graduate students with background in geology and permission of instructor. Letter grades only. Meets one day per week plus field trip during spring break. Fee probably charged for required weeklong field trip. Offered alternate years; next offered 2010–2011. J. Phipps Morgan.]

[EAS 4260 Structural Geology]

Spring. 4 credits. Prerequisite: one semester of calculus plus introductory geology course, or permission of instructor. One weekend field trip. C. Andronicos.

[EAS 4340 Exploration Geophysics]

Fall. 3 credits. Prerequisites: MATH 1920 and PHYS 2208, 2213, or equivalent. Offered alternate years; next offered 2010–2011. L. D. Brown.

Fundamentals of subsurface imaging by geophysical methods as used in oil exploration and environmental investigations.]

[EAS 4370 Geophysical Field Methods (also ARKEO 4370)]

Fall. 3 credits. Prerequisites: PHYS 2208 or 2213, or permission of instructor. Offered alternate years. L. D. Brown.

Field exercises using geophysical techniques to probe the subsurface.

[EAS 4400 Seminar on Climate Change Science, Impacts, and Mitigation]

Fall. 2 credits. Prerequisites: junior or higher standing. Offered alternate years; next offered 2010–2011. N. Mahowald.

The course will focus on reading, understanding, and evaluating the IPCC report (2007 version).]

[EAS 4530 Mineralogy]

Fall. 4 credits. Prerequisite: CHEM 2070 or 2090 or permission of instructor. S. Mahlburg Kay.

Chemical and physical properties and identification of minerals with emphasis on the rock-forming minerals that are the principal constituents of the Earth and nearby planets. Topics include internal and external crystallography, crystal chemistry, introductions to x-ray crystallography and optical mineralogy, and a systematic examination of the structures, chemistry, and occurrence of the rock-forming minerals. Independent project includes use of electron microprobe (EPMA) and x-ray facilities.

[EAS 4540 Petrology and Geochemistry]

Spring. 3–4 credits. Prerequisite: EAS 4530. Offered alternate years; next offered 2010–2011. R. W. Kay.

Principles of phase equilibrium as applied to igneous and metamorphic systems. Distribution of trace elements and isotopes as used to define processes and chronologies. Kinetics, reaction pathways, and textural and mineralogical characterization. Geochemistry, origin, and dating of igneous and metamorphic rocks as applied to the formation and evolution of the earth, terrestrial planets, and meteorites.]

[EAS 4550 Geochemistry]

Fall. 4 credits. Prerequisites: CHEM 2070 or 2090 and MATH 1920 or equivalent. Recommended: EAS 3040. Offered alternate years. W. M. White.

The Earth from a chemical perspective.

[EAS 4580 Volcanology]

Fall. 3 credits. Prerequisite: EAS 3040 or equivalent. Offered alternate years; next offered 2010–2011. R. W. Kay.

Causes of volcanism, melting in the Earth, and the origin of magmas. Physical volcanology, nature, and types of volcanic eruptions and associated deposits, and eruption mechanisms. Volcanic plumbing systems, magma chamber processes, evolution of magma. Volcanism and impact phenomena in the solar system. Volcanic hazard assessment and volcano monitoring. Ore deposits associated with volcanism.]

[EAS 4600 Late Quaternary Paleocology]

Fall. 4 credits. Offered alternate years; next offered 2010–2011. M. Goman.

Explores topics in Late Quaternary paleocology. Broadly divides into sections: (1) lectures that cover a variety of topics, such as philosophy of paleocology, radiometric dating methods, and paleoenvironmental proxies; (2) field- and laboratory-based research. The field research provides students with hands-on experience in sediment core collection; while in the laboratory students learn the basics of core description, pollen, and macrofossil analysis.]

[EAS 4610 Paleoclimate: Since the Last Ice Age]

Fall. 3 credits. Prerequisites: EAS 2200 or permission of instructor. Offered alternate years. M. Goman.

This course examines changes and variability in climate for the last 21,000 years.

[EAS 4620 Marine Ecology (also BIOEE 4620)]

Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE 2610. Offered alternate years; next offered 2010–2011.

C. D. Harvell and C. H. Greene.

For description, see BIOEE 4620.]

[EAS 4710 Introduction to Groundwater (also BEE 4710)]

Spring. 3 credits. Prerequisite: MATH 2930, fluid mechanics or hydrology course.

Offered alternate years; next offered 2010–2011. L. M. Cathles and T. S. Steenhuis.

Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.]

[EAS 4750 Special Topics in Oceanography]

Fall, spring, summer. 2–6 credits, variable.

Prerequisites: one semester of oceanography and permission of instructor. Fall, spring: C. H. Greene; summer: B. Monger.

Undergraduate instruction and participation in advanced areas of oceanographic research. Topics change from semester to semester. Contact instructor for further information.

[EAS 4760 Sedimentary Basins]

Spring. 3 credits. Prerequisite: EAS 3010 or permission of instructor. Offered alternate years. T. E. Jordan.

The focus is on the physical characteristics of sedimentary basins, which host fossil fuels and groundwater, and can potentially store CO₂.

EAS 4780 Advanced Stratigraphy

Fall. 3 credits. Prerequisite: EAS 3010 or permission of instructor. Offered alternate years; next offered 2010–2011.
T. E. Jordan.

Covers modern improvements on traditional methods of the study of ages and of genetic relations among sedimentary rocks, emphasizing 3-D relationships. Introduces techniques and applications of sequence stratigraphy.]

EAS 4790 Paleobiology (also BIOEE 4790)

Spring. 4 credits. Prerequisites: one year of introductory biology and BIOEE 2740 or 3730 or EAS 3010, or permission of instructor. W. D. Allmon.

Surveys the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of Earth and atmospheric science students concerning the nature and significance of the fossil record for their respective studies.

EAS 4840 Inverse Methods in the Natural Sciences

Fall. 3 credits. Prerequisites: MATH 2940. D. L. Hysell.

An exploration of solution methods for inverse problems with examples taken from geophysics and related fields, with particular attention to making inferences from inaccurate, incomplete, or inconsistent physical data.]

EAS 4870 Introduction to Radar Remote Sensing (also ECE 4870)

Spring. 3 credits. Prerequisite: PHYS 2208 or 2213 or equivalent or permission of instructor. D. L. Hysell.

Fundamentals of radar, antennas, and remote sensing. Exposes students to the principles underlying the analysis and design of antennas used for communication and for radar-related applications. Students also encounter both a mathematical and a practical description of how radars function, how their performance can be optimized for different applications, and how signals acquired by them can be processed. The objective is to familiarize students with a wide variety of radars rather than to turn them into practicing radar engineers. Each topic is developed from basic principles so students with a wide variety of backgrounds are able to take the course. Emphasizes radar applications in geophysics, meteorology and atmospheric sciences, and astronomy and space sciences. Gives special attention to radar remote sensing of the Earth from spacecraft.

EAS 4880 Global Geophysics

Spring. 3 credits. Prerequisites: MATH 1920 (or 1120) and PHYS 2208 or 2213. Offered alternate years. M. Pritchard and R. Lohman.

Covers global tectonics and the deep structure of the solid Earth as revealed by investigations of earthquakes, earthquake waves, the Earth's gravitational and magnetic fields, and heat flow.

EAS 4910–4920 Undergraduate Research

Fall, spring. 1 to 4 credits. Fill out form at 2124 Snee Hall. Staff (J. L. Cisne, coordinator).

Introduction to the techniques and philosophy of research in geological sciences and an opportunity for undergraduates to participate in current faculty research

projects. Topics chosen in consultation with, and guided by, a faculty member. A short written report is required, and outstanding projects are prepared for publication.

EAS 4960 Internship Experience

Fall, spring. 2 credits. Prerequisite: enrollment in EES semester in Hawaii and EAS 3400. S–U grades only. A. Moore.

During the last 3.5 weeks of the semester students carry out a service-learning project with a local NGO, environmental business, government agency, research lab, or educational facility. Projects are carefully designed with the student, sponsoring agency, and faculty member. A final report is required.

EAS 4980 Teaching Experience in Earth and Atmospheric Sciences

Fall, spring. 1–4 credits. S–U grades only. Students must register using independent study form. Staff.

EAS 5000 Design Project in Geohydrology

Fall, spring. 3–12 credits. Alternative to industrial project for M.Eng. students choosing geohydrology option. May continue over two or more semesters. L. M. Cathles.

EAS 5020 Case Histories in Groundwater Analysis

Spring. 4 credits. L. M. Cathles.

Groundwater flow in a specific area, such as a proposed nuclear-waste disposal site, is analyzed in depth. Geological and resource data on the area are presented early in the course. Then the material is analyzed by students working as an engineering analysis team. Each student makes a weekly progress report and writes part of a final report. Results are presented in a half-day seminar at the end of term.

EAS 5050 Fluid Dynamics in the Earth Sciences

Spring. 3 credits. Prerequisites: MATH through 2940, PHYS through 2208 or 2214, or permission of instructor. Offered alternate years. L. Cathles and M. Wysocki.

The Earth system provides many fascinating examples of fluid dynamic phenomena that are also of societal importance. Turbulent convection in the outer core generates the earth's magnetic field. The viscous mantle (outer half of the Earth) is slowly but vigorously convecting, and consequently the Earth's surface is dynamic. Viscosity is not important in the oceans and atmosphere, but the flow there is fast enough for the rotation of the Earth to become a dominant control. Electromagnetic effects again dominate in the solar wind and magnetosphere. This course will investigate the Earth using fluid dynamics. For students in the Earth sciences it will provide an opportunity to learn the insights that can be provided by fluid dynamics. For students who know fluid dynamics from other fields it will provide some spectacular applications and an opportunity to learn about the Earth system in a different and unusually fundamental way.

EAS 5110 Earth System Interactions

Fall. 1 credit (S–U grades) or 2 credits (includes paper, letter grades).

Prerequisite: permission of instructor. J. L. Cisne.

New ways of conceptualizing, characterizing, and measuring phenomena can be as

important as new instruments or empirical discoveries in opening new areas to exploration or established ones to more rigorous investigation. This seminar aims to prepare seniors and beginning graduate students for independent research on Earth systems by analyzing examples ranging from epoch-making classics to work now appearing in the literature.

EAS 5220 Advanced Structural Geology I

Fall. 3 credits. Prerequisites: EAS 4260 and permission of instructor. Offered alternate years. R. W. Allmendinger and C. Andronicos.

Stress-strain theory and application. Advanced techniques of structural analysis. Topics include finite and incremental strain measurement; microstructure, preferred orientation, and TEM analysis; pressure solution and cleavage development; and experimental deformation. Applications to deformation of unconsolidated sediments, brittle and brittle-ductile deformation of supracrustal strata, and ductile deformation of high-grade metamorphic rocks. Kinematic analysis of shear zones and folds in these regimes.

EAS 5240 Advanced Structural Geology II

Fall. 3 credits. Prerequisites: EAS 4260 and permission of instructor. Offered alternate years. R. W. Allmendinger.

Geometry, kinematics, and mechanics of structural provinces.

EAS 5530 Advanced Petrology

Fall. 3 credits. Prerequisite: EAS 4540. Offered alternate years R. W. Kay.

EAS 5540 Advanced Mineralogy

Spring. 3 credits. Prerequisites: EAS 4530 or permission of instructor. Offered alternate years. S. Mahlburg Kay.

Advanced crystallography and crystal chemistry of minerals and methods of their study. Intended to follow EAS 4530 or equivalent. Includes X-ray diffraction, optical and electron microprobe methods and can include other more advanced techniques. Concentration is on chemistry and structures of minerals and their use in understanding the thermal and pressure structure and evolution of the Earth and other planets. Includes an individual research project.

EAS 5750 Planetary Atmospheres (also ASTRO 6575)

Fall. 4 credits. Prerequisites: undergraduate physics, vector calculus. Offered alternate years; next offered 2010–2011. P. Gierasch.

Introduction to radiative transfer in emitting and scattering atmospheres in the solar system. Introduction to motions in atmospheres. Planetary examples of balanced flows. Mesoscale waves, wave absorption and wave accelerations. Planetary waves. The influence of wave accelerations on thermal structure and composition. Introduction to atmospheric chemistry. Dynamical transports. Observation. At the level of Andrews, *Atmospheric Physics*.]

EAS 5770 Planetary Surface Processes (also ASTRO 6577)

Spring. 3 or 4 credits. Offered alternate years. J. Bell.

[EAS 5780 Planet Formation and Evolution (also ASTRO 6578)]

Fall. 4 credits. Prerequisites: familiarity with elementary physics and math or permission of instructor. Offered alternate years. J-L. Margot and M. Pritchard. For description, see ASTRO 6578.]

[EAS 5840 Inverse Methods in the Natural Sciences]

Fall. 3 credits. Prerequisites: MATH 2940. ((Next offered ???)) D. L. Hysell. An exploration of solution methods for inverse problems with examples taken from geophysics and related fields, with particular attention to making inferences from inaccurate, incomplete, or inconsistent physical data.]

EAS 5880 Advanced Methods in Radar

Fall. 3 credits. Prerequisite: EAS 4870 or permission of instructor. D. Hysell. This course will address the theory and practice of advanced radar techniques used for remote sensing, with emphasis placed on studying the upper atmosphere and ionosphere. Roughly the first half of the course will be devoted to incoherent scatter theory, the theory that relates the statistics of the signals scattered from an ionospheric plasma to the state variables that describe the plasma. The second half of the course will examine methods for measuring ionospheric parameters using incoherent scatter theory in concert with advanced radar modes and data analysis techniques. Students taking this course should be familiar with radar fundamentals and plasma kinetic theory.

EAS 6280 Geology of Orogenic Belts

Spring. 3 credits. Prerequisite: permission of instructor. S. Mahlburg Kay. Seminar course in which students study specific geologic topics of an orogenic belt selected for study during the semester.

[EAS 6410 Analysis of Biogeochemical Systems]

Spring. 2 credits. Prerequisite: MATH 2930 or permission of instructor. Offered alternate years; next offered 2010-2011. L. A. Derry. Covers dynamics of biogeochemical systems; kinetic treatment of biogeochemical cycles; box models, residence time, response time; analytical and numerical solutions of model systems.]

[EAS 6560 Isotope Geochemistry]

Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 4550 or permission of instructor. Offered alternate years; next offered 2010-2011. W. M. White. Nucleosynthetic processes and the isotopic abundance of the elements; geochronology and cosmochronology using radioactive decay schemes.]

EAS 6930 Special Topics in Geological Sciences

Fall or spring. 1-3 var. credits. S-U or letter grades. Staff. Study of specialized advanced topics in the Earth sciences through readings from the scientific literature, seminars, and discussions.

EAS 7000-7990 Seminars and Special Work

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff. Advanced work on original investigations in earth and atmospheric sciences. Topics change from semester to semester. Contact appropriate professor for more information.

EAS 7220 Advanced Topics in Structural Geology

R. W. Allmendinger.

EAS 7310 Advanced Topics in Remote Sensing and Geophysics

M. Pritchard.

EAS 7330 Advanced Topics in Geodynamics

Spring. J. Phipps Morgan.

EAS 7500 Satellite Remote Sensing in Biological Oceanography

Summer. 3 credits. B. C. Monger.

EAS 7510 Petrology and Geochemistry

R. W. Kay.

EAS 7550 Advanced Topics in Tectonics and Geochemistry

J. Phipps Morgan.

EAS 7570 Current Research in Petrology and Geochemistry

S. Mahlburg Kay.

EAS 7620 Advanced Topics in Paleobiology

W. D. Allmon.

EAS 7650 Topics in Paleoecology

Fall. 1 credit. S-U grades. G. Dietl.

EAS 7710 Advanced Topics in Sedimentology and Stratigraphy

T. E. Jordan.

EAS 7730 Paleobiology

J. L. Cisne.

EAS 7750 Advanced Topics in Oceanography

C. H. Greene.

EAS 7800 Earthquake Record Reading

Fall. M. Barazangi and R. Lowman.

EAS 7810 Advanced Topics in Exploration Geophysics

L. D. Brown.

EAS 7930 Andes-Himalaya Seminar

S. Mahlburg Kay, R. W. Allmendinger, T. E. Jordan, and M. Pritchard.

EAS 7950 Low Temperature Geochemistry

L. A. Derry.

EAS 7960 Geochemistry of the Solid Earth

W. M. White.

EAS 7970 Fluid-Rock Interactions

L. M. Cathles.

EAS 7990 Soil, Water, and Geology Seminar

Spring. L. M. Cathles and T. S. Steenhuis.

EDUCATION

A. Wilson, chair (435 Kennedy Hall, 255-2207); G. Applebee, R. Caffarella, W. Camp, M. Constas, B. Crawford, T. Park, S. Peters, T. Richardson, R. Ripple, V. Rockcastle, D. Schrader, J. Sipple, D. Trumbull, T. Tucker, S. Villenas

[EDUC 1110/1111 Exploring Agricultural Education and Research]

Fall and spring. 2 credits. Year-long course. Letter grades only. Next offered 2010-2011. W. Camp. Educational, career, and research opportunities; independent research; CALS

admissions, career, student services; interview agricultural professionals; participate in team projects; write papers; a research project for presentation.]

EDUC 2200 Community Learning and Service Partnership (CLASP)

Fall only. 2 credits. Prerequisite: permission of instructor. Students must commit to taking EDUC 2210 the following spring. S-U or letter grades. A. Wilson.

In this service-learning course, students partner with Cornell service staff to accomplish a variety of learning goals selected by the employees. Students are introduced to the field of adult basic education and the principles of the Community Learning and Service Partnership (CLASP). Seminars examine the issues of learning through service and reflection, adult teaching philosophy and practice, and empowerment through education. Students must commit to continuing their service by taking EDUC 2210 the following spring semester.

EDUC 2210 Community Learning and Service Partnership (CLASP)

Spring only. 2-4 credits, variable. Prerequisites: EDUC 2200 and permission of instructor. S-U or letter grades. A. Wilson.

Continues the field experience and curriculum begun in EDUC 2200. Students work with Cornell service staff to accomplish a variety of learning goals selected by the employees. Students receive in-service training and support. Seminars examine the impact of gender, race, and social class on learning and educational opportunity.

EDUC 2400 The Art of Teaching (CA)

Fall and spring. 3 credits. T. Richardson and D. Trumbull.

This exploratory course is designed for students of all backgrounds and interests who have a desire to learn more about education and teaching. Teaching takes place in a variety of contexts from the family to the workplace, and this course endeavors to examine the elements of teaching that transcend the typical school-teaching environment. Designed to guide students in reflecting upon their experiences to help them better understand the decisions they make as teachers. Students have the opportunity to pursue their own interests through a teaching fieldwork assignment. Possible field experiences range from large group to tutorial situations, from preschool to adult education, from traditional school subject matters to recreational and occupational areas, and from school-based to nonformal situations. The course work and readings are designed to build on these experiences throughout the semester and provide concepts and skills to apply in the field.

EDUC 2710 Social and Political Context of American Education (also SOC/AMST 2710) (HA) (SBA)

Fall. 4 credits. Disc. J. Sipple. Examines the goals, roles, inputs, and outcomes of schooling in American society and the policy environment in which schools operate. Analyzes controversies and tensions (e.g., equity, market forces, state control) surrounding public education at local, state, and federal levels. Includes current and historical, urban and rural issues and problems.

EDUC 3110 Educational Psychology (also HD 3110) (KCM) (CA)

Fall. 4 credits. Prerequisite: PSYCH 1101 or permission of instructor. S–U or letter grades. Additional disc sec TBA. D. Schrader.

Educational psychology is the application of psychological concepts to educational settings. This course examines the dynamic interaction between people as teachers and learners, schools as social and learning environments, and the sociocultural contexts that influence learning. The focus is on those interactions in cognitive, epistemic, social, moral, and personal domains in educational contexts.

[EDUC 3310 Careers in Agriculture, Extension, and Adult Education]

Fall. 3 credits. Letter grades only. Next offered 2010–2011. G. Applebee.

Designed to examine program development, methodologies, leadership, evaluation, and implementation in three areas of teaching: adult education, cooperative extension, and agricultural education.]

EDUC 3350 Youth Organizations (CA)

Fall. 3 credits. T. Park.

Visionary, creative, and competent leaders are essential for youth organizations. Class participants learn how to facilitate both youth and adult volunteer leadership development. They examine factors affecting membership, purposes, design, operation, and administration of youth organizations. The course provides students with in-depth learning-by-doing experience of how youth organizations function. Requires field experience with a recognized youth organization.

EDUC 4040 Learning and Teaching I

Fall. 4 credits. Prerequisite: admission to Cornell Teacher Education program or permission of instructor. Letter grades. D. Trumbull.

Designed to foster development of pedagogical and reflective understanding crucial to good teaching. Students explore what it means to understand and teach through examining key disciplinary topics, which requires rethinking disciplinary knowledge, assessment of learning, and motivation. Required fieldwork (4 hours weekly) focuses on students' understandings of pupils and classroom structures.

EDUC 4050 Learning and Teaching II

Spring. 4 credits. Prerequisite: admission to Cornell Teacher Education program or permission of instructor. Letter grades. B. Crawford.

Important part of a sequence of courses and experiences intended to lead to excellence in science, agricultural science, and mathematics teaching. Prospective teachers develop understanding and skills in effective planning, instruction, and assessment of students studying agricultural science, mathematics, and science in middle and high school. The course is intended to integrate theory and practice associated with learning and teaching in school classroom settings and includes a minimum of 40 hours of fieldwork in area classrooms.

EDUC 4200 Field Experience

Fall or spring. 1–4 credits. Undergraduates must attach to their course enrollment material written permission from faculty member who will supervise work and assign grade. S–U or letter grades. Staff.

Students may engage in planned, semiprofessional, or professional practice in an educational enterprise. Each student prepares a plan of action including rationale, purposes, and procedures and arranges with a faculty member to supervise and evaluate their field experience.

EDUC 4410 Language, Literacy, and Schooling (KCM)

Spring and summer. 3 or 4 credits. Lab TBA. T. Park.

Foundation for literacy activities in secondary education. Examines current research, policy, and practice relating to the acquisition of first and second languages, the dynamics of literacy in school contexts, and the development of academic language proficiency. The fourth credit hour requires a research project based on fieldwork.

EDUC 4510 Multicultural Issues in Education (also AMST/LSP 4510)

Fall. 3 credits. Letter grades. S. Villenas.

This course explores research on race, ethnicity, and language in American education. It examines historical and current patterns of minority school achievement and the cultural premises undergirding educational practices in diverse communities and schools. Policies, programmatic and pedagogical responses to diversity, including multicultural and bilingual education, are addressed.

EDUC 4590 Educational Innovations in Africa and the Diaspora (also ASRC 4601)

Fall. 3 credits; 4 in College of Arts and Sciences. N. Assié-Lumumba.

For description, see ASRC 4601.

EDUC 4630 Policies, Practices, and Critical Issues of Distance Learning in Developing Countries

Summer. 3 credits. S–U or letter grades. N. Assié-Lumumba.

Distance learning is increasingly being adopted to respond to the high demand for education in developing countries. This course critically analyzes distance education for the general population as well as specific social and professional categories. A typology of the ICTs (information and communication technologies) used and the different forms of virtual learning institutions are examined. Case studies include single-mode and dual-mode institutions in Africa, Asia, and Latin American countries and also eLearning programs designed in industrial countries for developing countries.

EDUC 4720 Philosophy of Education

Fall. 3 credits. Advanced undergraduates permitted. Letter grades only. T. Richardson.

Discussions for this course will be organized around a wide variety of philosophical positions which have influenced scholarly approaches to philosophy of education during the 20th century. We will be concerned primarily with the development of John Dewey's humanist approach to educational philosophy and the post-humanist philosophical positions from Continental post-colonial and feminist philosophies that have emerged in response to it.

EDUC 4940 Special Topics in Education

Fall, spring, or summer. 4 credits max. Prerequisite: permission of instructor. S–U or letter grades. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and

will be advertised by the department before the semester starts. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

EDUC 4970 Individual Study in Education

Fall, spring, or summer. 1–3 credits. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff.

A student may, with approval of a faculty advisor, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest.

EDUC 4980 Undergraduate Teaching

Fall or spring. 1 or 2 credits; 4 credits max. during undergraduate career.

Prerequisite: GPA of at least 2.7. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff.

Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

EDUC 4990 Undergraduate Research

Fall, spring, or summer. 6 credits max. during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Prerequisite: junior or senior standing; GPA of at least 2.7. Students must register using independent study form (available in 140 Roberts Hall). Staff.

Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

EDUC 4991 Independent Honors Research in Social Science

Fall or spring. 1–6 credits; max. 6 credits may be earned in honors program. Prerequisite: requirements for honors program met. S–U or letter grades. Staff.

EDUC 5020 Education and Development in Africa (also ASRC 5020)

Spring. 3 credits; 4 in College of Arts and Sciences. S–U or letter grades. N. Assié-Lumumba.

For description, see ASRC 5020.

EDUC 5030 Diversity in the Classroom

Spring or summer. 2–4 credits. Prerequisite: enrollment in CTE program or permission of instructor. S–U or letter grades. S. Villenas.

Builds on knowledge of cultural diversity gained from prior course work and field activities. With a focus on classroom teaching, topics include learning and inequality, multiple literacies across home and school, culturally relevant teaching, and English-language learners. A service learning component is optional for 3 or 4 credits.

EDUC 5320 Educational Programs in Agricultural Science

Fall. 3 credits. Next offered 2011-2012. W. Camp.

Organization and planning processes for public school agricultural education. Local needs assessments, advisory committees, community-partnering, course development, sequencing instruction, professional development. Fieldwork required.]

EDUC 5350 Youth Organizations for Agricultural Science Education

Spring. 3 credits. Prerequisite: senior or graduate standing in Agricultural Science Education. Letter grades only. T. Park.

Provides future agriculture educators a comprehensive overview of the components of an agriculture education program including supervised agricultural experience (SAE) and FFA. Students examine factors affecting membership, purpose, design, operation, and administration of career and technical student organizations and FFA organization, structure, and functions on national, state, and local levels.

EDUC 5440 Curriculum and Instruction

Spring. 3 credits. S-U or letter grades. Next offered 2010-2011. Staff.

The focus of this curriculum and instructional planning course will be on the concepts and principles for developing curriculum and the processes for delivering curriculum.]

EDUC 5710 Social and Political Context of American Education (also SOC/AMST 5710) (HA) (SBA)

Fall. 4 credits. Prerequisites: admission to Cornell Teacher Education Program or permission of instructor. J. Sipple.

Examines the goals, roles, inputs, and outcomes of schooling in American society, and the policy environment in which schools operate. Analyzes controversies and tensions (e.g., equity, market forces, state control) surrounding public education at local, state, and federal levels. Includes current and historical, urban and rural issues and problems.

EDUC 5780 International Teaching Assistant Development Program (ITADP) Training Course: Cross-Cultural Classroom Dynamics, Pronunciation, and Language, Video Teaching Practicum

Fall and spring. 2 credits. S-U grades only. TBA. ITADP staff.

Designed for first-time international teaching assistants from countries in which English is not the first language. Focuses on three areas: cross-cultural classroom dynamics, video teaching practicum, and language—enhancing communicative competence in English. Through small-group seminars and individual conferences, the ITADP helps international teaching assistants develop their linguistic and pedagogical skills as they gain sensitivity to the dynamics of U.S. classrooms.

EDUC 5790 Further Training for International Teaching Assistants

Fall, spring, summer. 2 credits. Prerequisite: EDUC 5780. S-U or letter grades. Lec, three contact hours per week. ITADP staff.

Designed for international teaching assistants from countries in which English is not the first language and who have completed EDUC 5780, the ITADP follow-up course provides further instruction and practice in oral English and pedagogical skills.

EDUC 6010 Secondary Agriculture, Science, and Mathematics Teaching Practicum

Fall or spring. 6 credits. Prerequisite: graduate students enrolled in Cornell Teacher Education Program. S-U grades only. D. Trumbull, B. Crawford, W. Camp, and T. Park.

Supervised student teaching in agriculture, mathematics or science at the secondary level. Program includes teaching in a local school for 14 weeks.

EDUC 6020 Practicum Seminar

Fall or spring. 9 credits. Prerequisite: EDUC 6010 or permission of instructor. W. Camp, B. Crawford, D. Trumbull, and T. Park.

Begins with full-day sessions of intensive consideration of classroom practice relevant to all aspects of student teaching. Assignments and an online seminar during the semester require students to use theories to develop and evaluate teaching materials and practices. Students also complete an extensive portfolio documenting their work.

EDUC 6140 Gender, Context, and Epistemological Development (also FGSS 6240)

Fall. 3 credits. Prerequisite: EDUC/HD 3110 or senior status. S-U or letter grades. Offered alternate years; next offered 2010-2011. D. Schrader.

We explore how our thinking and view of the nature of knowledge is influenced by gender and culture. Awareness shapes decisions, actions, and educational practices.]

EDUC 6160 Moral Psychology and Education (also FGSS 6060)

Fall. 3 credits. Prerequisites: EDUC 3110, graduate standing or permission of instructor. S-U or letter grades. Offered alternate years. D. Schrader.

This seminar examines questions of the psychological development of knowing what is right, just, good, and of value. We study moral development from cognitive-developmental, social-contextual, normative, and gendered perspectives. Topics vary by semester but include the relationship between judgment and action, moral education, social aggression, moral leadership, and integrity.

EDUC 6170 Psychology of Adolescence in Case Study (also FGSS 6180)

Spring. 3 credits. Prerequisite: any one of the following: EDUC 3110, HD 6170, or permission of instructor. S-U or letter grades. D. Schrader.

Adolescent psychological development is examined from the perspective of the individual subject and the researcher. Using a case study approach we explore classic and contemporary theories of adolescence, relying on primary source readings and first-person accounts to give us insight into adolescent issues, such as identity, values, and behaviors.

EDUC 6180 Learning in Adulthood: An Introduction

Fall. 3 credits. S-U or letter grades. R. Caffarella.

An introduction of learning in adulthood is provided with emphasis on understanding adult learning in contemporary society, reviewing key seminal and current theory and research, and exploring how this knowledge relates to practice. Students from other disciplines, in addition to education, who work with adults in formal and informal learning settings are welcomed.

EDUC 6200 Internship In Education

Fall or spring. 1-6 credits. Each student, before course enrollment, must obtain approval of faculty member who will assume responsibility for supervising work. S-U or letter grades. Staff.

Opportunity for practical experience in educational professions development.

EDUC 6330 Program Planning in Adult and Extension Education

Spring. 3 credits. S-U or letter grades. Offered alternate years. A. Wilson.

Examines current social and economic conditions affecting agricultural, extension, and adult education. Applies principles, objectives, strategies, and sources of information to program planning. Participants have an opportunity to observe ongoing programs in agricultural, extension, and adult education and to pursue individual interests in program development and improvement.

EDUC 6470 Innovative Teaching in the Sciences

Spring. 3 credits. S-U or letter grades. B. Crawford.

This seminar on innovative ways to teach is designed for doctoral and master's-level students in education, sciences, math, and possibly other disciplines, including extension and outreach. Readings will include issues of gender and underrepresented populations in science, math, and engineering. Students will design inquiry-based instruction in their field.

EDUC 6510 Anthropology and Education

Spring. 3 credits. Letter grades. Lec. S. Villenas.

A study of schooling and education from anthropological perspectives and ethnographic methodology. Participants examine teaching and learning in families, communities, and schools as cultural processes. Some topics include the differential school achievements of racial/ethnic minorities, school reform efforts, youth culture and identities, and literacy in adult learning spaces.

EDUC 6610 Administrative Leadership and Organizational Change

Fall. 3 credits. J. Sipple.

Perspectives on the administration of educational organizations. Considers social science, legal and ethical theories, and their application to both public schools and higher education. Intended for students who are considering careers as educational administrators, as well as for those who want to further their understanding of educational organizations.

EDUC 6620 Evaluation Design

Spring. 3 credits. Prerequisite: survey of research methods (or other graduate-level class in research methods), statistics. S-U grades only. M. Constas.

This course is designed to introduce graduate students to the principles and practices of program evaluation. It addresses practical realities and political features of a range of evaluation designs that may be used to support decision making related to educational, social, and community-based programs. Students who enroll in the class will become familiar with the technical characteristics, practical realities, and political features of a range of evaluation designs that may be used to support decision making related to educational, social, and community-based programs. Course readings, class

discussions, and assignments will support the development of the proposal.

EDUC 6640 Methods for Interpretive Research

Spring. 3 credits. Prerequisites: course in research methods/research design. S–U or letter grades. D. Trumbull.

Studies interpretive qualitative research, which attends to the complex interactions between researcher, researched, and contexts and accepts the centrality of interpretation in research.

[EDUC 6670 Discourse Analysis in Education

Spring. 3 credits. S–U or letter grades. Next offered 2010–2011. A. Wilson.

Course functions as an advanced study in the theory and practice of conducting discourse analysis in education. Discourse analysis is one of the preferred analytical approaches in cultural studies, but “discourse analysis” means different things to different people. Participants will examine a range of those differences.]

[EDUC 6680 Narrative Inquiry in Social Science and Action Research

Spring. 3 credits. S–U or letter grades. Next offered 2010–2011. S. Peters.

Provides an introduction to the theory and practice of narrative inquiry in action-oriented social science research.]

EDUC 6710 American School Reform: Organizational and Sociological Perspectives

Spring. 3 credits. S–U or letter grades. J. Sipple.

For individuals interested in the role of schools in society and in organizational behavior and public policy. This seminar investigates the sociological functions of schooling, including the stability of school organization given the long history of policy initiatives designed to reform schools. The focus is American K–12 public education, though issues of pre-K, private, and post-secondary education are covered.

EDUC 6720 Philosophy of Education

Fall. 3 credits. Letter grades only. T. Richardson.

Discussions for this course will be organized around a wide variety of philosophical positions that have influenced scholarly approaches to philosophy of education during the 20th century. We will be concerned primarily with the development of John Dewey’s humanist approach to educational philosophy and the post-humanist philosophical positions from Continental Post-Colonial and Feminist philosophies which have emerged in response to it. Advanced undergraduates will be permitted.

EDUC 6800 Foundations of Adult and Extension Education

Fall. 3 credits. Limited to 20 students. S–U or letter grades. Offered alternate years. A. Wilson.

Analysis of alternative purposes, nature, and scope of extension, adult, and continuing education programs in the United States and abroad, with emphasis on the relationship of programs to historical, cultural, political, and social settings. Examines definitions, conceptual controversies, philosophical issues, and current research directions through a seminar approach.

[EDUC 6810 Democracy, Science, and Education

Spring. 3 credits. S–U or letter grades. Next offered 2010–2011. S. Peters.

Explores the actual and potential connections between democracy, science, and education in both formal and non-formal education, both historically and in contemporary society.]

[EDUC 6820 Community Education and Development

Fall. 3 credits. Limited to 25 students. Letter grades only. Next offered 2010–2011. S. Peters.

Reviews traditions of community education and development in their historical, cultural, social, and political contexts, examining implications for practice in a range of settings.]

EDUC 6850 Training and Development: Theory and Practice (also IARD 6850)

Spring. 4 credits. Limited to 20 students. S–U or letter grades. R. Caffarella.

Provides practitioners and researchers conceptions from different perspectives of training and development, primarily in international settings. Engages students in critical and reflective analysis related to adults as learners, training and education at the instructional and program levels, major development issues at national and global levels, and ethical practice. Examines two major themes that drive training and development: the impact of context and the role of power.

EDUC 6940 Special Topics in Education

Fall, spring, or summer. 1–3 credits.

Prerequisite: permission of instructor. S–U or letter grades. Staff.

Topics TBA.

EDUC 6970 Graduate Individual Study in Education

Fall, spring, or summer. 1–3 credits.

Prerequisite: graduate standing; permission of instructor. S–U or letter grades. Staff.

A graduate student may, with approval of a faculty advisor, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest.

EDUC 6980 Graduate Supervised Teaching in Education

Fall or spring. 1–2 credits. Prerequisite: graduate standing; permission of instructor. S–U or letter grades. Staff.

Participating graduate students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

EDUC 7000 Directed Readings

Fall, spring, or summer. 6 credits, variable.

Prerequisite: graduate standing; permission of instructor. S–U or letter grades. Staff.

For study that predominantly involves library research and independent study.

EDUC 7010 Empirical Research

Fall, spring, or summer. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S–U or letter grades. Staff.

For study that primarily involves collection and analysis of research data.

EDUC 7020 Practicum

Fall, spring, or summer. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S–U or letter grades. Staff.

For study that predominantly involves field experience in community settings.

EDUC 7030 Teaching Assistantship

Fall, spring, or summer. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S–U or letter grades. Staff.

For students assisting faculty with instruction. Does not apply to work for which students receive financial compensation.

EDUC 7040 Research Assistantship

Fall, spring, or summer. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S–U or letter grades. Staff.

For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

EDUC 7050 Extension Assistantship

Fall, spring, or summer. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S–U or letter grades. Staff.

For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

EDUC 7620 Comparative and International Education

Summer. 3 credits. S–U or letter grades. N. Assié-Lumumba.

Seminar that critically analyzes education conceived both as a universal social institution and a reflection of cultural, economic, and political dynamics of the local and global contexts. The analysis focuses on policies, organization, and the functioning of education in industrial, new/emerging economies, and developing countries. Specific case studies are drawn from different countries.

EDUC 7830 Farmer-Centered Research and Extension (also IARD 7830)

Fall. 3 credits. S–U or letter grades. T. Tucker.

For description, see IARD 7830.

EDUC 8900 Master’s-Level Thesis Research

Fall or spring. Credit TBA. Each student, before course enrollment, must obtain approval of faculty member who will assume responsibility for guiding work. S–U or letter grades. Times TBA. Staff.

EDUC 9900 Doctoral-Level Thesis Research

Fall or spring. Credit TBA. Each student, before course enrollment, must obtain approval of faculty member who will assume responsibility for guiding work. S–U or letter grades. Times TBA. Staff.

Doctoral or other research and development projects for Ph.D. students.

ENTOMOLOGY

J. G. Scott, chair (2130 Comstock Hall, 255-7723); A. Agrawal, N. W. Calderone, B. N. Danforth, A. DiTommaso, A. Douglas, C. Gilbert, A. E. Hajek, L. C. Harrington, B. P. Lazzaro, J. K. Liebherr, J. E. Losey, J. P. Nyrop, L. S. Raylor, J. S. Thaler, W. M. Tingey

Courses by Subject

Apiculture: 2600, 2640
 Behavior: 2150, 3150, 3250, 3940, 6620
 Ecology: 3690, 4550, 4700, 6900
 Introductory courses: 2010, 2011, 2100, 2120, 2150, 2410
 Medical and veterinary entomology: 2100, 3520, 4100, 4101
 Outreach: 3350, 3360, 7090
 Pathology: 4630, 6700
 Pest management: 2410, 4200, 4440, 6700
 Physiology, development, and toxicology: 3070, 3940, 4830, 4900, 6850
 Systematics: 3310, 3311, 3330, 4400, 6340, 6550

ENTOM 2010/2011 Alien Empire: Bizarre Biology of Bugs

Spring, 2 (2010) or 3 (2011) credits. S-U or letter grades. Optional field trips. Staff. Insects are the most abundant and diverse animals on earth. This course explores the bizarre biology of insects and their interaction with humans. We will examine both the detrimental roles insects play (e.g., pests and vectors of disease) as well as their beneficial roles (e.g., pollination, edible insects, insect products such as waxes, dyes, and silk). We will also explore the symbolic representation of insects in art, literature, and religion. Students taking the course for 3 credits will meet once per week (on Friday) for discussion and documentary films on the biology of insects.

ENTOM 2020 Invasions

Spring, 3 credits. S-U or letter grades. A. E. Hajek and J. P. Nyrop. The purpose of this course is for students to learn about the biology and ecology of invasions by plants, animals, and microbes. We will discuss the expanding problems caused by invasive species and how invasions are prevented, mitigated, and managed. These topics are grounded in biology; however, they have social, economic and philosophical implications. Invasive species impact agriculture, forestry, natural systems, and human health. Local, national, and international examples of invaders in diverse systems will be included in investigations of invasive species.

ENTOM 2100 Plagues and People (also BSOC 2101)

Fall, 2 or 3 credits. Prerequisites: introductory biology or permission of instructor. Offered alternate years. L. C. Harrington. Human diseases transmitted by insects and related forms (arthropods) have affected human lives and society through history. This course focuses on the pathogens, parasites, and arthropods causing human plagues. Those plagues that have had the greatest impact on human culture and expression are emphasized. Lectures are supplemented with readings and films. Also addresses emerging diseases, bioterrorism, and future plagues. Students taking the course for 3 credits participate in readings, presentations/discussions each week (on Fridays), weekly

readings, and quizzes and have a comprehensive final project.

ENTOM 2120 Insect Biology

Fall, 4 credits. Pre- or corequisites: BIOG 1101-1102 or equivalent. Lec, lab. Lab fee: \$50. J. K. Liebherr. Introduces the science of entomology by focusing on basic principles of systematics, morphology, physiology, behavior, and ecology of insects. The laboratory in early fall includes field trips to collect and study insects in the natural environment. Requires a collection emphasizing ecological, behavioral, and taxonomic categories.

ENTOM 2150 Spider Biology: Life on a Silken Thread

Fall, 2 credits. Prerequisite: introductory biology or permission of instructor. S-U or letter grades. Lec. L. S. Raylor. Introduction to the fascinating world of spiders. Explores evolution, ecology, behavior, and physiology of spiders and their close kin from a modern perspective. Topics include identification of major spider families, spiders' unique use of silk, risky courtship, predatory behavior, diverse life styles, social spiders, and potential use in IPM.

ENTOM 2410 Insect Pest Management for Practitioners

Spring, 3 credits. Limited to 18 students. Prerequisites: BIOG 1101-1102 or equivalent. Lec, lab/disc. W. M. Tingey. Introduction to insect pest management in plant or animal protection for those preparing for careers in extension, service, and production. Emphasizes pest monitoring, sight identification, diagnosis, decision-making, and management tactics for the major groups of insect and arthropod pests affecting field, forage, and vegetable crops; floriculture, woody ornamentals, and turf; urban environments and public health; veterinary, dairy, livestock, and poultry. Five off-campus laboratory field trips with demonstrations of pest management decision-making, pest-monitoring tools, and pesticide-application equipment.

[ENTOM 2600 Biology of the Honey Bee

Fall, 2 credits. Lec. Offered alternate years; next offered 2010-2011. N. W. Calderone. Introduces students to the life history, physiology, ecology, and behavior of honey bees. Reviews classical and contemporary research on the dance language, chemical communication, behavioral genetics, division of labor, and evolution of social behavior.]

[ENTOM 2640 Practical Beekeeping

Fall, 1 credit. Limited to 20 students. Pre- or corequisite: ENTOM 2600. Lab. Offered alternate years; next offered 2010-2011. N. W. Calderone. Consists of 14 laboratory sessions that acquaint students with practical methods of colony management. Laboratories involve hands-on work with honey bee colonies and equipment.]

[ENTOM 3070 Pesticides, the Environment, and Human Health (also TOX 3700)

Fall, 2 credits. Prerequisites: BIOG 1101-1102 or equivalent. Lec. Offered alternate years; next offered 2010-2011. J. G. Scott. Survey of the different types of pesticides, their uses, properties, and effects on the environment. Discusses the risks, benefits, regulation, politics, and current controversies

associated with pesticide use and genetically modified crops.]

ENTOM 3150 Spider Biology

Fall, 3 credits. Prerequisite: introductory biology or permission of instructor. Letter grades only. Lec. L. S. Raylor. In-depth introduction to the fascinating world of spiders and their relatives. Meets concurrently with ENTOM 2150 (2 credits). Students in ENTOM 3150 meet for another hour with additional coverage of current topics in arachnology and developing spider identification skills. Entomology majors and biology majors in the Insect Biology program of study should take ENTOM 3150 rather than 2150. Students may not take both ENTOM 2150 and 3150 for credit.

ENTOM 3250 Insect Behavior (also BIONB 3250)

Spring, 3 credits. Prerequisite: introductory biology and either ENTOM 2120 or BIONB 2210. Lec. Offered alternate years. L. S. Raylor.

Insects are the most diverse organisms on earth, with equally diverse behavior. This course explores the behavior of insects, ranging from the individual sensory and physiological mechanisms that are the basis of insect behavior, to the behavioral dynamics of foraging, courtship, parental care, and social behavior. Topics include insect learning, perceptual abilities, host finding strategies, predation, pollination, and examination of current issues in insect behavior.

ENTOM 3310 Insect Phylogeny and Evolution

Fall, 3 credits. Prerequisite: ENTOM 2120. Corequisite: ENTOM 3311. Offered alternate years. B. N. Danforth.

This course will provide a broad overview of insect diversity, morphology, phylogeny, evolution, and fossil history. Evolution of the insects will be discussed in light of real data sets based on morphology and/or DNA sequence data. Basic principles of phylogeny reconstruction using both morphological and DNA sequence data will be presented using published data sets. Analytical methods such as parsimony, maximum likelihood, and Bayesian methods will be discussed and compared. We will also cover how phylogenies are used to analyze evolutionary patterns, such as historical biogeography, co-evolution, and host-parasite relationships.

ENTOM 3311 Insect Phylogeny and Evolution Laboratory

Fall, 1 credit. Prerequisite: ENTOM 2120 lab. Lab fee: \$40. Corequisite: ENTOM 3310. B. N. Danforth. Introduction of the diversity, phylogeny, evolution, and fossil history of insects. Includes lab practice in insect morphology, insect diversity, and phylogenetic analysis. Entomology undergraduates wishing to count this course toward their Group A requirement are required to take the laboratory, as well as the lecture for a total of 4 credits.

ENTOM 3330 Maggots, Grubs, and Cutworms: Larval Insect Biology

Spring, 3 credits. Prerequisites: ENTOM 2120 or permission of instructor. S-U or letter grades. Offered alternate years. J. K. Liebherr.

The evolutionary history of the Holometabola has been greatly informed by attributes of their larvae. This course introduces students to the biology, anatomy, and natural history

of holometabolous insect larvae. The lab includes field sampling, curation of field-collected specimens, and identification of unknowns. Development of a small larval collection required.

ENTOM 3350 Naturalist Outreach Practicum

Fall. 3 credits. Prerequisite: introductory biology. S–U or letter grades. L. S. Rayor. Learn the skills to do effective scientific outreach. This interdisciplinary course combines lectures on topics relevant to teaching about natural history, with more pedagogic lectures on developing and presenting scientific inquiry-based presentations. The course emphasizes developing different approaches to effectively communicate science at different scales from classroom settings, through museum programs, to large outreach events. Students participate in the Naturalist Speakers Bureau to provide lively multimedia presentations in classrooms throughout the region. With feedback from peers and instructors, students develop their own biological presentations, display materials, and teacher resource guides.

ENTOM 3360 Naturalist Outreach in Biology

Fall. 1–2 credits, variable. Prerequisite: ENTOM 3350. S–U or letter grades. L. S. Rayor. For students who have already taken Naturalist Outreach Practicum (ENTOM 3350) who wish to continue doing scientific outreach through the Naturalist Outreach Speakers Bureau. This course can be taken twice.

[ENTOM 3520 Medical and Veterinary Entomology

Fall. 3 credits. Prerequisites: BIOG 1101–1102 or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. L. C. Harrington. This course explores the impact of vector-borne disease and provides a comprehensive overview of the fields of medical and veterinary entomology. Undergraduate and graduate students from entomology as well as other disciplines including pre-medical and veterinary students are encouraged to enroll.]

[ENTOM 3521 Lab in Medical and Veterinary Entomology

Fall. 1 credit. Prerequisites: ENTOM 3520 concurrently or have taken another medical/veterinary entomology course. S–U or letter grades. Offered alternate years; next offered 2010–2011. L. C. Harrington.

The laboratory compliments the lecture course ENTOM 3520. Includes field trips, collection and identification and arthropods of medical/veterinary importance, and hands-on experience with modern laboratory research methods.]

ENTOM 3690 Chemical Ecology (also BIOEE/BIONB 3690)

Spring. 3 credits. Prerequisites: one semester of introductory biology for majors or nonmajors and one semester of introductory chemistry for majors or nonmajors or equivalents, or permission of instructor. S–U or letter grades. Lec. A. Agrawal, G. Jander, A. Kessler, and J. Thaler.

For description, see BIOEE 3690.

ENTOM 4100–4101 Malaria Interventions in Ghana

4100, fall; 4101, spring. 2 credits each semester. S–U grades only. R grade given at end of fall semester and final grade at end of spring semester. L. C. Harrington. This service learning class will educate students about malaria, Ghanaian culture, and general public health intervention strategies. During the fall semester, students will hear from a variety of speakers and will read and discuss key papers. Students in the class will travel to Ghana over winter break and create a malaria needs indicator to evaluate intervention strategies in partnership with the Ghana Health and Education Initiative. After returning from the service trip, students will evaluate their survey and intervention plan.

ENTOM 4200 Grape Pest Management (also PLPA/VIEN 4200)

ENTOM 4400 Phylogenetic Systematics (also BIOPL 4400)

ENTOM 4440 Integrated Pest Management (also CSS 4440)
Fall. 4 credits. Prerequisite: introductory biology or permission of instructor. S–U or letter grades. Lec. J. E. Losey and A. DiTommaso. Lectures integrate the principles of pest control, ecology, and economics in the management of pests across multiple systems. Labs consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

[ENTOM 4550 Insect Ecology (also BIOEE 4550)

Fall. 4 credits. Recommended: ENTOM 2120 or BIOEE 2610 or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. J. S. Thaler. Focuses on individual and population aspects of insect ecology as well as some topics in community and ecosystem ecology. Laboratory includes indoor and outdoor field trips illustrating the major concepts in insect ecology as well as experimental techniques.]

[ENTOM 4630 Invertebrate Pathology

Fall. 4 credits. Prerequisites: one year introductory biology. S–U or letter grades. Lec, lab. Offered alternate years; next offered 2010–2011. A. E. Hajek. Lecture and lab cover pathology and ecology of infectious diseases of invertebrates.]

[ENTOM 4700 Ecological Genetics (also BIOEE 4800)

Spring. 4 credits. Prerequisite: BIOEE 2780. Recommended: introductory course in genetics and/or statistics. S–U or letter grades. Offered alternate years; next offered 2010–2011. B. P. Lazzaro. Focuses on the application of population genetic concepts in ecological or applied contexts. Emphasizes measuring adaptation in natural populations, detecting the effects of population demography, and determining the genetic basis of quantitative traits.]

[ENTOM 4830 Insect Physiology

Spring. 4 credits. Prerequisite: ENTOM 2120 or permission of instructor. Lec, lab. Offered alternate years; next offered 2010–2011. C. Gilbert and A. Douglas. Introduction to the often unique ways in which insects have met their basic needs. Examines each organ system with emphasis

on basic principles and specific examples. Also introduces students to some common methods used in physiological research and to the critical reading of scientific literature.]

[ENTOM 4900 Toxicology of Insecticides (also TOX 4900)

Spring. 3 credits. Prerequisite: general chemistry course. S–U or letter grades. Lec. Offered alternate years. J. G. Scott. History, metabolism, and mechanism of action of genetically modified, synthetic, and naturally occurring insecticides. Discusses insecticide resistance, resistance management, and new approaches to insect control with genetically modified organisms.]

ENTOM 4940 Special Topics in Entomology

Fall or spring. 4 credits max. S–U or letter grades. Staff. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

ENTOM 4970 Individual Study in Entomology

Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Staff.

ENTOM 4980 Undergraduate Teaching

Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Staff. Undergraduate teaching assistance in an entomology course by agreement with the instructor. Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

ENTOM 4990 Undergraduate Research

Fall and spring. Credits TBA. S–U or letter grades. Staff. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall).

ENTOM 4991 Undergraduate Honors Research

Fall and spring. Credit TBA. For students who enroll under this number, but do not complete an Honors Thesis, course credit reverts to ENTOM 4990 Undergraduate Research. Students must register using an Independent Study Form (available in 140 Roberts Hall). Staff. This course is intended for students doing independent research that will lead to Honors with Distinction in Research.

ENTOM 6340 Special Topics in Systematic Entomology

Fall or spring; on demand. 2–4 credits. Prerequisite: permission of instructor. Staff. Lectures on the classification, evolution, and bionomics of selected taxa, with accompanying laboratory studies on identification and comparative morphology. Collections sometimes required.

[ENTOM 6550 Nomenclature Seminar]
Spring. 1 credit. S-U or letter grades. Lec. Offered alternate years; next offered 2010-2011. J. K. Liebherr.

This seminar will expose you to the rules of zoological nomenclature supported by the International Trust for Zoological Nomenclature.]

[ENTOM 6620 Insect Behavior Seminar]
Spring. 2 credits. Prerequisite: permission of instructor or ENTOM 2120 and BIONB 2210 or equivalents. S-U or letter grades. Offered alternate years; next offered 2010-2011. C. Gilbert.]

[ENTOM 6700 Seminar on Biological Control]
Fall. 1 credit. Prerequisite: ENTOM 2770, 4400, or 4630 or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2010-2011. A. E. Hajek. Seminar series covering topics in biological control chosen by participating students and faculty.]

[ENTOM 6850 Seminar in Insect Physiology]
Spring. 1 credit. Prerequisite: permission of instructor. S-U or letter grades. Offered alternate years; next offered 2010-2011. C. Gilbert.]

ENTOM 6900 Seminar in Ecology and Evolution of Infectious Diseases
Fall and spring. 1 credit. B. Lazzaro and A. Hajek.
Graduate-level discussion of the ecology, epidemiology, genetics, and evolution of infectious disease in animal and plant systems. Weekly discussion of research papers published in the primary scientific literature. Participation in discussion and presentation of at least one paper required for course credit.

ENTOM 7070 Individual Study for Graduate Students
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Not for thesis research. Staff.

ENTOM 7090 Teaching Entomology
Credit TBA. Staff.
Teaching entomology or for extension training.

ENTOM 7670 Current Topics in Entomology
Fall and spring. 1 or 2 credits. Requirement for first- and second-year entomology graduate students. S-U grades only. Staff.
This course provides first- and second-year graduate students with an overview of the field of entomology. The course format changes from year to year but generally involves attendance at the weekly entomology seminar as well as a one-hour meeting TBA with faculty from the department or with visiting speakers. Additional readings may be required. Graduate students in entomology are required to attend the class for a total of two semesters (ideally in the first year of their graduate program). The 2-credit option is for students attending the Jugatae seminar and a one-hour meeting following the seminar. The 1-credit option is for attendance at the seminar only.

ENTOM 8900 Master's-Level Thesis Research
Fall and spring. 15 credits per semester if taking no classes; if taking other courses, use ENTOM 8900 to bring yourself up to a total of 15 credits. Prerequisite: permission of instructor. S-U or letter grades. Staff. Research at the master's level.

ENTOM 9900 Doctoral-Level Thesis Research
Fall and spring. 15 credits per semester if taking no classes; if taking other courses, use ENTOM 9900 to bring yourself up to a total of 15 credits. Prerequisite: permission of instructor. S-U or letter grades. Staff. Research at the doctoral level.

Jugatae Seminar
Fall and spring.
Seminar conducted by Jugatae, the entomology club of Cornell University, to discuss topics of interest to its members and guests. All interested undergraduate and graduate students are encouraged to attend.

ENVIRONMENTAL TOXICOLOGY

B. A. Ahner, A. J. Baemumner, K. W. Beyenbach, S. E. Bloom, K. J. Boor, P. R. Bowser, D. L. Brown, J. W. Casey, E. Cooch, R. Davison, R. R. Dietert, R. A. Durst, J. W. Gillett, A. G. Hay, A. Hedge, J. H. Hotchkiss, L. V. Kochian, W. L. Kraus, A. T. Lemley, L. W. Lion, R. H. Liu, E. L. Madsen, M. B. McBride, C. McCormick, A. Nikitin, B. U. Pauli, R. Richardson, M. Roberson, E. Rodriguez, J. G. Scott, M. L. Shuler, S. M. Snedeker, D. A. Soderlund, J. R. Stedinger, B. J. Strupp, D. Tumbar, O. K. Vatamaniuk, D. A. Weinstein, R. S. Weiss, D. B. Wilson, A. Yen

There is both breadth and depth in many facets of environmental toxicology and related disciplines. The program offers a combination of research and didactic training that is designed to prepare students for solving the problems of modern toxicology. The graduate student may choose from three degree options: M.S., M.S./Ph.D., or Ph.D. Concentrations include cellular and molecular toxicology; nutritional and food toxicology; ecotoxicology and environmental chemistry; and risk assessment, management, and public policy. Research by the faculty associated with the program focuses on the interactions of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) as well as the ecosystems with which these organisms are associated. General information is available through the Environmental Toxicology office in 116 Stocking Hall, or at toxicology.cornell.edu.

[TOX 3070 Pesticides and the Environment (also ENTOM 3070)]
Fall. 2 credits. Prerequisites: BIOG 1101-1102 or equivalent. Offered alternate years; next offered 2010-2011. J. G. Scott. For description, see ENTOM 3070.]

TOX 4370 Eukaryotic Cell Proliferation (also BIOBM 4370)
Spring. Variable credit; students may take lec for 2 credits, or lec and disc for 3 credits. Limited to 20 students per disc; priority given to graduate students. Prerequisite: BIOG 1101-1102 or 1105-1106 and BIOBM 3300 or 3310/3320. Recommended: BIOGD 2810 and BIOBM 4320. S. Lee.
For description see BIOBM 4370.

TOX 4900 Insect Toxicology and Insecticidal Chemistry (also ENTOM 4900)
Spring. 3 credits. Prerequisite: general chemistry course. Offered alternate years. J. G. Scott.
For description, see ENTOM 4900.

TOX 5970 Risk Analysis and Management (also CEE 5970)
Spring. 3 credits. Prerequisite: introduction to probability and statistics course (e.g., CEE 3040, ENGRD 2700, ILRST 2100, BTRY 2610 or AEM 2100); two semesters of calculus. Prerequisite: senior or graduate standing or permission of instructor. J. R. Stedinger.
For description, see CEE 5970.

[TOX 6100 Introduction to Chemical and Environmental Toxicology (also BIOMI 6100)]
Fall. 3 credits. Prerequisite: graduate standing in field or permission of instructor. Offered alternate years; next offered 2010-2011. A. G. Hay.
For description, see BIOMI 6100.]

[TOX 6110 Molecular Toxicology (also NS 6110)]
Spring. 3 credits. Prerequisites: TOX 6100 or permission of instructors. Offered alternate years; next offered 2010-2011. S. Bloom, R. Dietert, D. Muscarella, and B. Strupp.
For description, see NS 6110.]

TOX 6990 Environmental Toxicology Journal Club (also BIOMI 6990)
Spring only. 1 credit. Requirement for env. tox. students until post-A exam. A. G. Hay.
For description, see BIOMI 6990.

TOX 7010 Mouse Pathology and Transgenesis (also VTBS 7010)
Fall, meets during second half of fall semester and relies on background information from NS/BIOGD 4900. Manipulating the Mouse Genome, which meets during first half. Students interested in both courses must register for them separately. 1 credit. Prerequisites: permission of instructor. Highly recommended: NS/BIOGD 4900 and basic course in histology (BIOAP 4130 or equivalent). A. Niktin.
For description, see VTBS 7010.

TOX 7020 Seminar in Toxicology (also NS 7020)
Fall or spring. 1 credit.
For description, see NS 7020.

TOX 7130 Cell Cycle Analysis (also VTBS 7130)
Spring. 1 credit. S-U grades only. Offered alternate years. A. Yen.
For description, see VTBS 7130.

TOX 8900 Master's Thesis and Research

Fall/spring. Credit TBA. Prerequisite: permission of chair of graduate committee and instructor.

TOX 9900 Doctoral Thesis and Research

Fall/spring. Credit TBA. Prerequisite: permission of chair of graduate committee and instructor.

K. J. Boor, chair (114 Stocking Hall, 255-7912); T. E. Acree, K. J. Arnink, D. M. Barbano, C. A. Batt, J. W. Brady, R. B. Gravani, J. H. Hotchkiss, H. T. Lawless, C. Y. Lee, R. H. Liu, D. D. Miller, R. de Mira Orduña, C. I. Moraru, S. J. Mulvaney, A. Orta-Ramirez, J. M. Regenstein, S. S. H. Rizvi, G. Sacks, K. J. Siebert, M. Wiedmann

FDSC 1101 Science and Technology of Foods

Fall. 1 credit. S–U grades only.

J. H. Hotchkiss and staff.

Explores the application of science and technology to foods. Lectures elucidate the role of engineering, biotechnology, chemistry, biochemistry, nutrition, toxicology, and microbiology in supplying the world with safe and nutritious food. An overview of food science as a discipline and career choice is given. A laboratory exercise in food development will be undertaken.

FDSC 1102 Leadership and Career Skills in Food Science

Spring. 2 credits. Prerequisite: FDSC 1101; limited to freshman Food Science majors.

Letter grades only. R. Gravani and J. Hotchkiss.

This course will provide students with opportunities to learn more about their personality type and apply this information to leadership and team building skills, diversity and ethics issues, as well as career skills in the field of food science. Topics and concepts addressed in the course will be reinforced through presentations, interactive exercises and activities, case studies, and networking with food science alumni. Students will be required to participate in a project using the Food Science Alumni Career Link network.

FDSC 1104 Introduction to Wines and Vines (also HORT/VIEN 1104)

Spring. 3 credits. Prerequisite: students must be 21 years of age, or taking this course to fulfill requirements for their degree program. Letter grades only.

K. Arnink and I. Merwin.

Introduction to grape cultivation, wine fermentation and composition, and wine sensory evaluation. Topics include history and culture of wines, viticultural regions, vineyard and winery practices, wine chemistry and microbiology, and wine flavor development and perception. Wines are used to illustrate the components and processes that determine wine quality.

FDSC 1105 Lab/Field Practice in Wines and Vines (also HORT/VIEN 1105)

Spring. 1 credit. Limited to 25 students; preference given to students in CALS enology/viticulture or Hotel School food and beverage programs. Prerequisites: students must be 21 years of age or taking course to fulfill requirements for their degree program; concurrent or previous enrollment in HORT/FDSC/VIEN 1104 and permission of instructor. Letter grades only. K. Arnink and I. Merwin.

Hands-on laboratory work, wine sensory and chemical analysis, and practical experience in viticulture and wine-making.

FDSC 1500 Food Choices and Issues

Spring. 2 credits. S–U or letter grades.

R. B. Gravani and D. D. Miller.

The goal of this course is to help students develop improved strategies for making healthier food choices. Concepts and principles that form the bases for current dietary guidelines and food safety regulations are discussed. Topics include the U.S. food system, relationships between diet and health, food processing, food safety, and selected contemporary issues relating to nutrition, food quality, and safety. Students conduct nutritional analyses of their diets using a computer software program.

FDSC 2000 Introduction to Physicochemical and Biological Aspects of Food (also NS 3450)

Fall. 3 credits. Prerequisite: college-level courses in chemistry and biology. Letter grades only. Two evening prelims are given. J. H. Hotchkiss and R. S. Parker.

Comprehensive introduction to the physical, chemical, and nutritional properties of foods and to the principles and practice of food science and technology. Topics include chemistry and functionality of commodities and ingredients, chemical and physical phenomena that affect food quality, techniques of processing and preservation, microbiology and fermentation, food safety, and regulation.

FDSC 2100 Food Analysis

Spring. 3 credits. Limited to 24 students. Prerequisite: CHEM 2080 or equivalent.

Lec, lab. R. H. Liu and A. Orta-Ramirez.

Introduces basic analytical techniques for food analysis and other biological analysis. Emphasizes fundamental principles of analytical chemistry, basic laboratory techniques, and modern instrumental methods. Discusses gravimetric, volumetric, and spectrophotometric methods, gas chromatography (GC), high-performance liquid chromatography (HPLC), infrared spectra (IR), and atomic absorption spectrometry.

FDSC 2300 Chef's Chemistry

Spring. 1 credit. S–U or letter grades.

J. Regenstein.

Do you understand scientifically what takes place when you cook food? Learn the science behind some of your favorite foods and foods from around the world. Working with chefs from Cornell Dining, food scientist faculty members will explain the underlying principles of the foods that are prepared in the class. The final EXAM (!) will be an Iron Chef cooking contest.

FDSC 2400 Wines and Grapes: Composition Analysis (also VIEN 2400)

Fall. 2 credits. Prerequisite: one semester of chemistry. Preference given to Enology and Viticulture and Food Science majors. Letter grades only. G. Sacks.

This course will investigate the composition of grapes and wine and the most common analytical tools used in their evaluation. Both the theoretical and practical aspects of grape and wine analyses will be considered.

FDSC 2500 Kosher and Halal Food Regulations

Spring. 2 credits. Prerequisite: at least sophomore standing. S–U or letter grades. J. M. Regenstein.

Comprehensive introduction to kosher and halal foods in the American food industry with some coverage of home practices. Examines the kosher food laws, their origin, and their application in modern food processing. Describes the nature of the kosher supervision industry in America. Also examines Halal laws and explores the interactions between the two communities. Reviews current food-related issues in both communities, including recent court decisions. May also consider some aspects of ethnic foods.

FDSC 2900 Meat Science (also ANSC 2900)

Fall. 2 credits. Letter grades only.

D. E. Shaw.

For description, see ANSC 2900.

FDSC 3210 Food Engineering Principles

Fall. 3 credits. Prerequisites: FDSC 2000 and introductory physics. Letter grades only. S. S. H. Rizvi.

Introduces the engineering principles underlying food processes and equipment. Topics include thermodynamics, mass and energy balance, fluid mechanics, heat and mass transport, refrigeration, and psychrometrics.

FDSC 3400 Microbiology and Technology of Winemaking (also VIEN 3400)

Fall. 3 credits. Limited to 30 students. Prerequisite: introductory microbiology or permission of instructor. Priority given to enology or viticulture students for whom lab is required. Letter grades only. K. Arnink.

This course provides a systematic overview of the microbiological technological and organizational fundamentals of winemaking considering differences among winemaking regions.

FDSC 3410 Microbiology and Technology of Winemaking Lab (also VIEN 3410)

Fall. 1 credit. Limited to 20 students; preference given to students in enology and viticulture programs in Food Science and Plant Science (Horticulture). Prerequisite: permission of instructor. Letter grades only. K. Arnink.

Laboratory practice in winemaking microbiology and technology. Students will produce grape wines from several grape varieties and according to different vinification protocols. The laboratory includes introductory lectures, grape handling, and vinification practices as well as chemical and sensorial grape must and wine analysis.

FDSC 3510 Milk Quality

Fall. 1 credit. Prerequisite: ANSC 2500 or equivalent or permission of instructor.

Letter grades only. M. Wiedmann.

Focuses on the effects of on-farm and animal husbandry practices on milk and dairy food quality and safety. Significant parts of class focus on discussion and critical analysis of the assigned reading materials, questions, and hot topics.

FDSC 3940 Applied and Food Microbiology (also BIOMI 3940)

Fall. 3 credits. Prerequisites: BIOMI 2900-2910. C. A. Batt.

Microorganisms play a central role in a variety of food, agricultural, and environmental processes. This course presents a comprehensive survey of the roles that microorganisms play in industrial/biotechnological processes as well as their importance in the safety and production of foods. A focus on the impact of genomics and the emerging understanding of the microbiome provides an underlying foundation for the course. A 2-credit core section on food microbiology is complemented by a 1-credit section on industrial/biotechnological applications.

FDSC 3950 Food Microbiology Laboratory

Fall. 3 credits. Prerequisite: BIOMI 2910 or equivalent. Letter grades only. A. Orta-Ramirez.

Work includes study of the physiological characteristics of representative food microorganisms, practice in using general and rapid methods for microbiological testing and control of food products, and practice in the application of a systematic approach to controlling the safety of foods, or addressing a food safety issue.

[FDSC 3960 Food Safety Assurance]**FDSC 4000 Current Topics in Food Science and Technology**

Spring. 1 credit. S-U grades only.

S. J. Mulvaney and staff.

Discussion of current topics in food science. Topics vary and are chosen from scientific literature and popular press.

[FDSC 4010 Concepts of Product Development]**FDSC 4020 Agriculture in Developing Nations I (also IARD 4020)**

Fall. 2 credits. K. V. Raman and W. R. Coffman.

For description, see IARD 4020.

[FDSC 4050 Managing Food Waste Without Trashing the Environment]**FDSC 4060 Dairy and Food Fermentations**

Fall. 2 credits. Prerequisite: BIOMI 2900. Letter grades only. M. Wiedmann.

Lecture course covering the basic principles of fermentation, the microbiology of food fermentations (including the physiology and genetics of fermentative microorganisms), starter cultures and their preparations and applications, as well as specific examples of food fermentations. Selected textbook readings are supplemented with papers from peer-reviewed journals. Significant parts of class focus on discussion and critical analysis of the assigned reading materials.

FDSC 4100 Sensory Evaluation of Food

Fall. 2-3 credits; 1 lab credit. Lec and lab required for undergraduate food science majors. Prerequisite: statistics course.

Letter grades only. H. T. Lawless.

Topics include the sensory evaluation methods used to test the flavor, appearance, and texture of foods by quantitative description and simple difference testing; consumer testing for product acceptability; sensory tests in quality control; strategic product research; and product development. Presents the psychological principles in sensory testing and statistical methods for sensory data analysis. The lab provides first-hand experience in organizing and conducting sensory tests and an introduction to online data collection and analysis.

FDSC 4150 Principles of Food Packaging

Spring. 3 credits. Letter grades only.

Offered alternate years. J. H. Hotchkiss.

Discusses the chemical and physical properties and manufacture of the basic materials used to construct packaging. Presents the influence of packaging on shelf life. Emphasizes newer packaging technologies and materials. Briefly presents economics, design, and regulation of food packaging.

FDSC 4170 Food Chemistry I

Spring. 3 credits. Prerequisites: CHEM 1570 or BIOBM 3300 or 3310. S-U or letter grades. J. W. Brady.

Covers the chemistry of foods and food ingredients. Discusses the chemical and physical properties of water, proteins, lipids, carbohydrates, and other food components and additives in the context of their interactions and functional roles in foods.

FDSC 4180 Food Chemistry II

Fall. 3 credits. Prerequisite: FDSC 4170.

S-U or letter grades. C. Y. Lee,

C. I. Moraru, and J. M. Regenstein.

Discusses the chemical composition of several food groups (meats, fruits, vegetables, and dairy) and describes the chemical reactions and changes that take place during processing and storage, as well their effects on the quality and nutritional characteristics of these foods.

FDSC 4190 Food Chemistry Laboratory

Fall. 2 credits. Prerequisites: BIOBM 3300 or 3310 or CHEM 1570 or equivalent.

Corequisite: FDSC 4170. D. D. Miller and A. Orta-Ramirez.

Deals with the chemical properties of food components and changes they undergo in processing and storage. Stresses relationships between the chemical composition of foods and functional, nutritional, and sensory properties. Introduces lab techniques commonly used in food research. Requires a lab research project that involves writing a research proposal for the project, conducting laboratory research to test hypotheses described in the proposal, analyzing the data, and writing a paper following the format used by the *Journal of Food Science*.

[FDSC 4220 Functional Foods and Nutraceuticals]

Spring. 2 credits. Prerequisites: Basic biochemistry course or permission of instructor. Letter grades only. Offered alternate years; next offered 2010-2011. R. H. Liu.

Covers functional foods and nutraceuticals, bioactive compounds, antioxidants and dietary supplements, micronutrient fortification, botanicals, and herbs in disease prevention and health promotion. Emphasizes the mechanisms of action and scientific evidence of efficacy. Biomarkers, safety and efficacy testing, and regulations for functional foods and nutraceuticals will be discussed.]

FDSC 4230 Physical Principles of Food Preservation and Manufacturing

Fall. 3 credits. Prerequisite: FDSC 3210.

Letter grades only. Lec, disc.

S. J. Mulvaney.

Emphasizes the fundamental principles that underlie much of food preservation and manufacturing. Uses a systems analysis approach to make connections between the chemical and physical changes that occur in food processing and their impact on food quality. Topics include materials properties of foods, heat processing, freezing, concentration, and drying. Selected products serve as case studies for more complex manufactured foods.

FDSC 4250 Unit Operations and Dairy Foods Processing

Spring. 3 credits. Prerequisites: FDSC 3210, 3940, 4170, 4180, and 4230 or permission of instructor. Letter grades only. Lec, lab. C. I. Moraru.

Combined lecture-laboratory course focusing on principles and practices fundamental to modern dairy foods processing. Structured in two parts. The first part deals with the main unit operations used in dairy processing (i.e., pasteurization, sterilization, centrifugal separation, homogenization, membrane separation, concentration, and drying) and the second part focuses on the science and technology that underpins the manufacture of main classes of dairy products (i.e., fluid milk, milk powder, ice cream, butter, and cheese). Laboratories are conducted in a food processing pilot plant facility, which allows students to gain hands-on experience in operating pilot plant equipment and the manufacture of safe, high-quality dairy products. One field trip to operating dairy plants in the area is scheduled during the semester.

FDSC 4300 Understanding Wine and Beer (also VIEN 4300)

Spring. 3 credits. Prerequisites:

introductory biology and chemistry or permission of instructor; age 21 by first day of class (Jan. 25, 2010). S-U or letter grades. T. E. Acree, K. J. Siebert, G. L. Sacks, and R. Mira de Orduña.

Introduction to wine and beer appreciation through the study of fermentation biology, product composition, and sensory perception. Uses samples of wines and beers to illustrate the sensory properties, microbiological processes, and chemical components that determine quality. Students learn to recognize the major features of wine and beer that determine sensory quality and know the processes that produced them. Topics include the psychology and chemistry of bouquet, taste, and aroma; the microbiology of fermentation and spoilage; the sensory properties of wines from different grape varieties, viticultural practices, and wine-making techniques; and the effects of brewing raw materials and processing procedures on beer quality.

FDSC 4400 Wine and Grape Flavor Development (also VIEN 4400)

Spring. 3 credits. Limited to 30 students; preference given to students in the enology or viticulture program. Prerequisites: at least one semester of general chemistry and one semester of organic chemistry required. Prior coursework in or knowledge of viticulture and enology recommended. FDSC 1104 and CHEM 2570. Letter grades only. G. Sacks.

This course will use a (bio)-chemical perspective to investigate viticulture and enological factors that impact flavor and other quality attributes (mouthfeel, color, stability) of wine and wine grapes.

FDSC 4500 Fundamentals of Food Law

Spring. 2 credits. Letter grades only.

Offered alternate years. J. M. Regenstein. Introduction to the complex array of federal and state statutes and regulations that control the processing, packaging, labeling, and distribution of food, including aspects of safety and nutritive value. Emphasizes the Food and Drug Administration and U.S. Department of Agriculture regulations but also refers to other regulatory agencies. Emphasizes how a food or agricultural professional interacts with the U.S. legal system during legislative action, regulatory rule making, and with respect to compliance.

[FDSC 4560 Advanced Concepts in Sensory Evaluation]**FDSC 4666 U.S. Food Industry and Food Science Research**

Summer. 1 credit. Prerequisite: enrollment in Food Science summer scholars program or M.P.S. in Food Science and Technology. S-U grades only. M. Wiedmann.

This course will introduce students to the U.S. food industry and food science research. Students will participate in weekly meetings to cover topics such as food science research methods, ethics in food science and research; field trips to food processing plants and R&D facilities, and panel discussions on food science careers in the United States. Students will be required to keep journals with weekly entries that reflect critical thinking on the challenges and opportunities in the discipline of food science.

FDSC 4800 Global Seminar: Building Sustainable Environments and Secure Food Systems for a Modern World (also NTRES/IARD 4800)

Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. J. Lassoie and D. Miller.

For description, see NTRES 4800.

FDSC 4910 Viticulture and Enology Research Practices (also VIEN 4910)

Fall. 3 credits. Prerequisite: VIEN/FDSC/HORT 1105 or permission of instructor. Letter grades only. K. Arnink.

Collaborative wine research project for students in the Viticulture and Enology major. Original research experience, including critical evaluation of literature, experimental protocols and analytical procedures, data collection and evaluation, and scientific research writing. Emphasis on practical winemaking and laboratory methods, with sufficient lecture and discussion time to support student learning of relevant scientific concepts.

FDSC 4940 Special Topics in Food Science

Fall or spring. 4 credits max. S-U or letter grades. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

FDSC 4960 Undergraduate Internship in Food Science

Fall or spring. 1-6 credits. Prerequisite: permission of instructor. Students must submit a CALS independent study, research, teaching, or internship form signed by faculty member who will supervise study and assign credits and grade. S-U grades only. Staff.

On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and students, stating the conditions of the work assignment, supervision, and reporting. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

FDSC 4970 Individual Study in Food Science

Fall or spring. 3 credits max. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S-U or letter grades. Staff.

May include individual tutorial study, a special topic selected by a professor or a group of students, or selected lectures of a course already offered. Since topics vary, the course may be repeated for credit.

FDSC 4980 Undergraduate Teaching Experience

Fall or spring. 3 credits max. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S-U grades only. Staff.

Students assist in teaching a course appropriate to their previous training and experience. Students meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

FDSC 4990 Undergraduate Research in Food Science

Fall or spring. 4 credits max; may be repeated for credit. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff.

Students conduct original research directed by a food science faculty member.

FDSC 4991 Food Science Honors Research

Fall. 1 to 4 credits, variable. Prerequisite: enrollment in Food Science research honors program. Students must be eligible for Latin honors and complete honors program application by third week of fall semester, senior year. S-U or letter grades. Staff.

Intended for students pursuing the research honors program in Food Science.

FDSC 4992 Food Science Honors Research

Spring. 1 to 4 credits, variable.

Prerequisite: enrollment in Food Science research honors program. Students must be eligible for Latin honors and complete honors program application by third week of fall semester, senior year. S-U or letter grades. Staff.

Intended for students pursuing the research honors program in Food Science.

FDSC 5000 Master of Professional Studies (Agriculture) Project

Fall, spring, summer. 1-6 credits. Requirement for M.P.S. students in graduate field of Food Science and Technology. S-U or letter grades. Staff. Problem solving project involving analysis and/or active research to the field of Food Science and Technology.

FDSC 5200 Advanced Food Processing and Engineering

Summer. 2 credits. Prerequisites: M.P.S. standing or permission of instructor. Letter grades only. S. Rizvi and S. Mulvaney.

This course is intended primarily for M.P.S. students in the field of Food Science and Technology enrolled in the dual Cornell-TNAU M.P.S. degree program. An intensive overview of the principles of food polymer science and rheology and analysis of current and emerging processes for food manufacturing.

FDSC 5990 Research for Lausanne Exchange Students

Fall/spring. 10 credits max. Prerequisite: permission of instructor. S-U or letter grades. Staff.

Undergraduate senior thesis research for Lausanne exchange students only. Students conduct original research directed by a food science faculty member, then write and present a final report to the faculties of both Cornell University and the University of Lausanne.

FDSC 6000 Seminar in Food Science

Fall and spring. 1 credit. Requirement for all graduate students in field of food science and technology; highly recommended for graduate students minoring in food science and technology. S-U grades only. Staff.

Weekly seminar series on contemporary topics and issues in the field of food science and technology. Representatives from academia, industry, and government provide presentations on a wide variety of topics. Graduate students in the field of food science and technology may use the forum to present their required thesis research seminar.

FDSC 6020 Agriculture in Developing Nations II (also IARD 6020)

Spring, field trip to Asia during Jan. intersession. 3 credits. Prerequisites: IARD 4020 and (or) permission of instructors. Cost of field-study trip is \$4,000 (including airfare, local transportation, and lodging). Some merit and need-based financial aid may be available. K. V. Raman and W. R. Coffman.

For description, see IARD 6020.

FDSC 6040 Chemistry of Dairy Products]**FDSC 6070 Advanced Food Microbiology**

Spring, 2 credits. Prerequisites: BIOMI 2900, FDSC 3940. Letter grades only. Offered alternate years. M. Wiedmann.

Explores advanced topics in food microbiology. Places major emphasis on critical evaluation of current literature and on microbiological concepts that affect food microbiology. Specific areas covered include microbial ecology of foods, rapid detection and typing methods for foodborne pathogens, microbial modeling, pathogenesis of foodborne diseases, and food applications of genetic engineering. Some guest lectures may be arranged to provide an introduction to other advanced food microbiology topics (e.g., risk assessment).

FDSC 6080 Chemometric Methods in Food Science]**FDSC 6160 Flavors—Analysis and Applications**

Spring, 2 credits. S–U or letter grades. Lec, disc. Offered alternate years. H. T. Lawless and T. E. Acree.

Advanced course in sensory and instrumental analysis of flavors, flavor chemistry, and flavor applications in foods for food scientists and those in related fields concerned with human food perception and consumption. Surveys taste, aroma and volatile flavors, and trigeminal stimuli from the perspectives of chemical structures, methods of analysis, uses and interactions in food systems. Also discusses recent advances in the physiology of taste and smell.

FDSC 6210 Food Lipids

Spring, 2 credits. Prerequisite: basic biochemistry course. Letter grades only. Offered alternate years. R. H. Liu.

Describes the physical, chemical, biochemical, and functional properties of lipids. Emphasizes lipid oxidation, lipids and human health, and functional foods associated with lipids.

FDSC 6220 Functional Foods and Nutraceuticals

Spring, 2 credits. Prerequisites: basic biochemistry course or permission of instructor. Letter grades only. Offered alternate years; next offered 2010–2011. R. H. Liu.

Covers functional foods and nutraceuticals, bioactive compounds, antioxidants and dietary supplements, micronutrient fortification, botanicals and herbs in disease prevention and health promotion. Emphasizes the mechanisms of action and scientific evidence of efficacy. Biomarkers, safety and efficacy testing, and regulations for functional foods and nutraceuticals will be discussed.]

FDSC 6640 Food Polymer Science: Principles and Applications

Spring, 2 credits. Prerequisites: introductory chemistry and physics. Offered alternate years. S. J. Mulvaney.

Integrates polymer science, chemistry, and materials science principles as the basis for characterization of the physical properties of biopolymer materials of interest to the food industry. Emphasizes unique aspects of food materials, e.g., plasticization by water, physical gelation, transient networks, and effects of thermal treatments on material properties. Problems and case studies based

on proteins, starches, gelatin, and other hydrocolloids relevant to food systems.

FDSC 6650 Food and Bioprocessing Systems]**FDSC 6940 Special Topics in Food Science**

Fall or spring, 4 credits max. S–U or letter grades. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

FDSC 6950 Current Readings in Food Science

Fall and spring, 1 credit; may be taken multiple times. Graduate students in food science strongly encouraged to enroll. Prerequisite: 3000- to 4000-level course relevant to chosen topic. S–U grades only. Staff.

Seminar series on current topics chosen by participating faculty members and students on a rotating basis. Format consists of weekly discussion groups with each participant presenting at least one oral report based on independent reading. Multiple sections focusing on different topics may be taught in any given semester. Topics include food microbiology and food safety; food chemistry; packaging; food engineering. Interested students should contact the designated instructor(s) for each semester.

FDSC 6960 Graduate Internship in Food Science

Fall or spring, 1–6 credits. Prerequisite: permission of instructor. S–U grades only. Staff.

On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and students, stating the conditions of the work assignment, supervision, and reporting. All 6960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

FDSC 6970 Graduate Individual Study in Food Science

Fall or spring, 1 to 3 credits. S–U or letter grades. Staff.

FDSC 6980 Graduate Teaching Experience

Fall and spring, 1 to 3 credits. S–U grades only. Staff.

Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of field faculty members. The experience may include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring.

FDSC 8900 Master's-Level Thesis Research

Fall or spring. Credit TBA; max. 12. Prerequisite: master's candidates; permission of Special Committee chair. S–U grades only. Graduate faculty.

FDSC 9900 Doctoral-Level Thesis Research

Fall or spring. Credit TBA. Maximum of 12 credits. Prerequisite: doctoral students who have passed "A" exam; permission of Special Committee chair. S–U grades only. Graduate faculty.

HORTICULTURE

M. P. Pritts, chair (134A Plant Science Bldg., 255-1778); N. L. Bassuk, T. L. Bauerle, R. R. Bellinder, M. P. Bridgen, L. J. Bushway, L. Cheng, P. Cousins, L. E. Drinkwater, M. Eames-Sheavly, S. Gan, M. C. Goffinet, D. E. Halseth, A. N. Lakso, N. S. Mattson, I. A. Merwin, W. B. Miller, J. Mt. Pleasant, K. W. Mudge, C. Owens, A. M. Petrovic, D. A. Rakow, A. Rangarajan, B. I. Reisch, F. S. Rossi, J. E. Vanden Heuvel, C. B. Watkins, T. H. Whitlow, H. C. Wien, D. W. Wolfe

HORT 1101 Horticultural Science and Systems

Fall, 4 credits. I. A. Merwin.

Science and technology of horticultural plants grown for foods and beverages and ornamental, landscape, or recreational purposes. Lectures, labs, and field trips involve natural history and evolution of horticultural plants, botany and physiology, sustainable management of soil, water and plant nutrition, breeding and propagation, ecological and landscape functions, and integrated design and management of horticultural plantings and production systems.

HORT 1102 Hands-On Horticulture

Spring, 2 credits. Not for seniors or plant science majors. Nominal materials fee. M. P. Pritts.

The objective is to instill in students a lifelong appreciation for how gardening can enhance individual well-being through aesthetics, culinary experiences, and mastery of techniques. Emphasizes hands-on learning and practice of key gardening skills and techniques in the greenhouse and the field, such as landscape management, garden design, propagation, pruning, grafting, pest management, and flower arrangement. There is one Saturday field trip at the end of the semester to visit gardens in the local area.

HORT 1104 Introduction to Wines and Vines (also FDSC/VIEN 1104)

Spring, 3 credits. Letter grades only. K. J. Arnink and I. A. Merwin.

For description, see FDSC 1104.

HORT 1105 Lab/Field Practice in Wines and Vines (also FDSC/VIEN 1105)

Spring, 1 credit. K. J. Arnink and I. A. Merwin.

For description, see FDSC 1105.

HORT 1110 Collaboration, Leadership, and Career Skills in the Plant Sciences

Fall, 2 credits. Prerequisite: permission of instructors. M. P. Pritts and M. Eames-Sheavly.

For all new plant sciences students; seminar will provide opportunities to meet other students and faculty, develop collaboration, leadership, and career skills in the discipline, and to make connections with the world beyond the campus.

HORT 1160 Nature Writing

Spring. 3 credits. Letter grades only.
D. W. Wolfe.

Today more than ever we need individuals who not only enjoy or study nature, but also can write effectively about it so that others will know what they know, and feel what they feel. We will begin by reading and writing about the technique of others, from Thoreau and Whitman, to Edward Abbey and Wendell Berry, to emerging new voices in this genre. We will critique essay structure, literary creativity, and evidence of careful research and observation. Nature writing is more than a desk job, and in that spirit we will have at least two shared field trips. Students will develop their unique "voice" for expressing their views, expertise, and passion for nature by research and revision of essay topics of personal interest.

HORT 2010 The Art of Horticulture

Fall. 2–3 credits. Fee for materials: \$35.
M. Eames-Sheavly.

Experiential survey course, two distinct units: plants used in/as art; plants as a subject of art. Unit 1: sculpture methods, such as turf-works, tree sculpture, Unit 2: drawing, botanical illustration, watercolor/pastel painting. Required: attendance; critical reflection in journals; original, creative final project. Optional third credit: pursue proficiency in drawing.

HORT 2200 Practicing Sustainable Land Care

Fall. 2–3 credits; 1 additional credit for student projects by permission of instructor. Offered odd-numbered years.
L. E. Drinkwater.

Experiential course emphasizing interdisciplinary, ecosystem-based approaches to land management and food production. Covers concepts from biological and environmental sciences and includes hands-on activities in organic agriculture, agroforestry, and ecosystem restoration. Classes are held at Dilmun Hill Organic Farm and the MacDaniels Nut Grove.

HORT 2350 Plants and Human Well-Being (CA) (HA)

Spring. 3 credits. Offered even-numbered years. J. Mt. Pleasant and S. M. Skelly.

Examines the beneficial effects of plants on human cultures, communities, and individuals. Areas of focus include impacts of community gardens, green space, and farmer's markets; use of plants for pollution control, economic development, conflict resolution, and tourism; how plants benefit individuals in terms of adult cognition, K–12 education, mental health, and personal empowerment. Laboratories include field trips and exercises to allow students to analyze and evaluate plant-based initiatives in many phases of contemporary life.

HORT 2400 Exploring the Small Farm Dream

Spring. 1 credit. Prerequisite: permission of instructors. S–U grades only. J. Green and A. Rangarajan.

Explore opportunities and challenges involved in starting up and managing a small farm. Weekly presentations and discussion with innovative farmers and others. Topics include diversified farming, high-value horticulture, grass-based farming, agroforestry, dairy and livestock opportunities, community-supported agriculture, farm business planning, access to

land, marketing strategies, juggling jobs, family-farming, and more.

[HORT 2430 Taxonomy of Cultivated Plants (also BIOPL 2430)]

Fall. 4 credits. Prerequisite: one year introductory biology or written permission of instructor. May not be taken for credit after BIOPL 2480. Offered even-numbered years; next offered 2010–2011.
M. A. Luckow.

For description, see BIOPL 2430.]

HORT 2940 Introduction to Agricultural Machinery (also CSS/AGSCI 2940)

Fall. 2 credits. B. Flannigan and A. DiTommaso.

For description, see CSS 2940.

HORT 3000 Herbaceous Plant Materials

Fall. 3 credits. Cost of field trip: \$75.
W. B. Miller.

Identification, use, characteristics, and garden cultural requirements of annual and herbaceous perennial plants, especially those used in northern climates. Practical gardening experiences at selected campus locations. Field trips to nearby specialty nurseries.

[HORT 3100 Production and Marketing of Greenhouse Crops]

Spring. 4 credits. Prerequisites: HORT 1101 and any other horticulture course; junior standing preferred. Letter grades only. Cost of required three-day field trip: approx. \$130. Offered odd-numbered years; next offered 2010–2011.
W. B. Miller.

Covers basics of establishing a greenhouse operation, growing crops in optimized environments and serving niche or mass market. Discusses technology basics and production management.]

HORT 3170 Seed Science and Technology (also CSS 3170)

Fall. 3 credits. Prerequisite: BIOPL 2410 or equivalent course approved by instructor. Letter grades only. Offered odd-numbered years. A. G. Taylor, Geneva Experiment Station.

For description, see CSS 3170.

[HORT 3300 Golf and Sports Turf Management I]

Spring. 3 credits. Prerequisite: CSS 2600 or permission of instructor. Letter grades only. Offered odd-numbered years; next offered 2010–2011. F. S. Rossi and A. M. Petrovic.

Proposal, siting, specification, installation, establishment, and management of turfgrass areas. Emphasizes commercial locations including lawns, sports fields, and golf courses.]

HORT 3400 Golf and Sports Turf Management Techniques

Fall. 2 credits. Prerequisite: HORT 3300. Letter grades only. Offered odd-numbered years. F. S. Rossi.

A course designed to provide hands-on learning of essential turfgrass management skills including mower set-up, sprayer calibration, calibration mathematics, budget development, etc.

HORT 3800 Organic Food and Agriculture (also CSS/AGSCI 3800)

Fall. 3–4 credits. Prerequisite: CSS 1900, CSS 2600, HORT 1101, or permission of instructor. Staff.

For description, see CSS 3800.

HORT 3910 Woody Plant Identification and Use I

Fall. 2 credits. Limited enrollment. Prerequisite: permission of instructor. Letter grades only. N. L. Bassuk.

Module of HORT/LA 4910 covering the identification of approximately 200 woody trees, shrubs, and vines in leaf and their use in the landscape. Students desiring a more comprehensive course that covers site assessment, soil modification, design, plant specifications and landscape establishment principles and techniques should take HORT/LA 4910 or the 4910–4920 sequence.

HORT 3920 Woody Plant Identification and Use II

Spring. 2 credits. Limited enrollment. Prerequisite: permission of instructor. Letter grades only. N. L. Bassuk.

Module of HORT/LA 4920 covering the identification of approximately 160 evergreen trees and shrubs and deciduous plants using winter identification. HORT 3910 (fall module) need not be taken before taking HORT 3920 (spring module). Students also assist in the establishment of a new landscape on campus.

HORT 4000 Principles of Plant Propagation

Spring. 3 credits. Prerequisites: BIOPL 2420 and 2421 or another plant physiology course or permission of instructor.
K. W. Mudge.

Asexual (vegetative) propagation including cuttage, graftage, tissue culture, layering, and specialized vegetative reproductive structures and sexual (seed) propagation. Stresses physiological, environmental, and anatomical principles and industry applications in lecture, and hands-on skills in laboratories. Examples include both temperate and tropical horticultural, agronomic, and forestry crops.

HORT 4030 Plant Cell and Tissue Culture (also PLBR 4010)

Fall. 3 credits. Letter grades only.
E. D. Earle.

For description, see PLBR 4010.

HORT 4040 Plant Tissue Culture Laboratory (also PLBR 4011)

Fall. 1 credit. E. D. Earle.

For description, see PLBR 4011.

HORT 4200 Nursery-Crop Production

Fall. 3 credits. Prerequisite: HORT 4000 or permission of instructor. Cost of field trips: \$75. Offered odd-numbered years.
K. W. Mudge.

Principles and practices of commercial nursery crop production. Term project required. Includes field trips to commercial nurseries.

HORT 4250 Postharvest Biology of Horticultural Crops

Fall. 2 credits. Offered odd-numbered years. S. Gan.

Study of the biological processes controlling physical and chemical changes in harvested yet living horticultural crops or their parts. Discusses the theoretical principles and fundamental processes underlying these changes. Also covers strategies and practical handling requirements/conditions for storage, transportation, and quality monitoring of harvested horticultural crops.

HORT 4251 Postharvest Biology of Horticultural Crops Lab

Fall. 1 credit. Pre- or corequisite: HORT 4250. Offered odd-numbered years. S. Gan.

Laboratory exercises are intended to supplement/complement HORT 4250 lectures. Labs, taught by scientists who are experts in their respective subject areas, will involve some experimental manipulations and physiological and biochemical analysis of harvested fruits, vegetables and flowers, data analysis, and oral and written discussion of the results. Lab periods will also provide time for formal discussion of research papers and topics. May include one field trip during regularly scheduled lab.

HORT 4260 Practicum in Forest Farming as an Agroforestry System (also NTRES/CSS 4260)

Fall. 2 credits. Prerequisite: junior, senior, or graduate standing or permission of instructor. K. W. Mudge, P. Hobbs, and L. E. Buck.

Students actively take part in the restoration of a 70-year-old nut grove. The MacDaniel's Nut Grove is being developed as a multipurpose forest-farming teaching, research, and extension site. Hands-on activities include site evaluation and planning, temperate-nut harvest and variety evaluation, mushroom culture, small-fruit and fruit-tree culture, and medicinal-herb culture. Outdoor activities are integrated with selected readings via an online discussion board.

HORT 4400 Restoration Ecology

Fall. 5 credits. Prerequisite: upper-division or graduate standing and permission of instructor. Letter grades only. Lec, lab, plus several weekends. T. H. Whitlow.

Draws concepts from ecology, hydrology, soil science, and conservation biology and applies these in both principle and practice to the rapidly evolving field of restoration ecology. Through lectures, reading, and discussion, site visits to active restoration sites, and a real-world class project, students learn and practice skills needed to develop restoration plans for a variety of situations.

[HORT 4420 Berry Crops: Culture and Management

Fall. 3 credits. Offered even-numbered years; next offered 2010-2011. M. P. Pritts. Study of the evolution, breeding history, and physiology of strawberries, raspberries, blackberries, blueberries, and other small fruit crops. Frequent field trips.]

HORT 4430 Viticulture and Vineyard Management—I (also VIEN 4430)

Fall. 3 credits. Prerequisite: any two-semester college biology course. Letter grades only. J. E. Vanden Huevel and P. Cousins.

First-semester course in commercial grape production with an emphasis on the problems of production in cold climates. Students examine environmental factors favoring production and quality, soils, and the anatomical and physiological basis for vineyard management decision-making. Laboratory exercises and field trips offer hands-on experience.

HORT 4440 Viticulture and Vineyard Management—II (also VIEN 4440)

Spring. 3 credits. Pre- or corequisites: HORT 4430 or permission of instructor. Letter grades only. J. E. Vanden Huevel.

Second-semester course in commercial grape production with an emphasis on the problems of production in cold climates. Students examine the genetics of the vine and learn principles of vineyard establishment, propagation, pruning and training, and conservation. Laboratory exercises and field trips offer hands-on experience.

HORT 4444 Grapevine Biology (also VIEN 4444)

Spring. 3 credits. Prerequisite: introductory botany; BIOPL 2420 or equivalent. Letter grades only. Offered odd-numbered years. A. N. Lakso, M. C. Goffinet, B. I. Reisch, P. S. Cousins, and C. L. Owens.

Focuses on the whole-plant biology of the grapevine that underpins grape-growing. Major topics include vine structure and its organization, vegetative and reproductive development, biomass and carbon balance, water and mineral nutrition, grapevine species and taxonomy, grape scion varieties, rootstocks, breeding and genetic improvement, and genomics.

HORT 4450 Ecological Orchard Management

Spring. 3 credits. Prerequisite: introductory biology. Recommended: previous horticulture/plant science courses. S-U or letter grades. Offered even-numbered years. I. A. Merwin.

The ecology and technology of deciduous tree-fruit production. Topics include basic tree and fruit physiology; orchard renovation and design systems; nutrition, irrigation, and freeze protection practices; tree pruning and training; post-harvest fruit storage; marketing and economic spreadsheet models; monitoring and decision-making systems for integrated pest management; and efficient use of orchard equipment. Emphasizes the agroecology of perennial crop systems, with labs providing hands-on experience in orchard management.

HORT 4490 Green Signals and Triggers—The Plant Hormones (also BIOPL 4490)

Spring. 2 credits. Prerequisites: introductory biology and BIOPL 2420 or 3420 or permission of instructor. S-U or letter grades. Offered even-numbered years. P. J. Davies.

For description, see BIOPL 4490.

[HORT 4500 Principles of Vegetable Production

Fall. 3 credits. Prerequisite: HORT 1101, CSS 2600, or equivalent. Letter grades only. Two Sat. field trips; students responsible for cost of their meals. Offered even-numbered years; next offered 2010-2011. R. R. Bellinder and S. Reiners.

Commercial vegetable production from variety selection to postharvest. Topics include: crop physiology and culture, soil and pest management, stand establishment, marketing, and history of production.]

HORT 4551-4555 Mineral Nutrition of Crops and Landscape Plants (also CSS 4551-4555)

Spring. 5 modules, 1 credit each. Prerequisite: CSS 2600 and BIOPL 2420. Offered even-numbered years.

Coordinator: H. C. Wien.

Students learn the principles of mineral nutrient function in crop plants, are able to diagnose deficiencies by symptoms and tissue tests, and can devise organic and

conventional nutrient management schemes that maximize productivity and mineral nutrient quality.

HORT 4551 Crop Nutrition Principles (also CSS 4551)

Spring, weeks 1-3. 1 credit. Prerequisite: CSS 2600 and BIOPL 2420, or equivalent. Offered even-numbered years. H. C. Wien.

Required module to be taken in addition to at least two, or up to four other modules.

HORT 4552 Agronomic Crop Nutrition (also CSS 4552)

Spring, weeks 4-6. 1 credit. Prerequisite: CSS 2600 and BIOPL 2420, or equivalent. Offered even-numbered years.

J. M. Duxbury.

Must be taken with the required Crop Nutrition Principles module—HORT 4551—and at least one other module.

HORT 4553 Vegetable Crop Nutrition (also CSS 4553)

Spring, weeks 7-9. 1 credit. Prerequisite: CSS 2600 and BIOPL 2420, or equivalent. Offered even-numbered years. S. Reiners.

Must be taken with the required Crop Nutrition Principles module—HORT 4551—and at least one other module.

HORT 4554 Landscape Plant Nutrition (also CSS 4554)

Spring, weeks 10-12. 1 credit. Prerequisite: CSS 2600 and BIOPL 2420, or equivalent. Offered even-numbered years.

A. M. Petrovic.

Must be taken with the required Crop Nutrition Principles module—HORT 4551—and at least one other module.

HORT 4555 Fruit Crop Nutrition (also CSS 4555)

Spring, weeks 13-14. 1 credit. Prerequisite: CSS 2600 and BIOPL 2420, or equivalent. Offered even-numbered years. L. Cheng.

Must be taken with the required Crop Nutrition Principles module—HORT 4551—and at least one other module.

HORT 4600 Cropping Systems Ecology

Spring. 3 credits. Prerequisite: any crop production or plant ecology course or permission of instructor. Offered even-numbered years. D. W. Wolfe.

Course utilizes the basic principles of plant population biology, environmental physiology, and ecology to evaluate the management, productivity, and environmental impact of various cropping systems. Emphasis is on agricultural systems, but the role of plant-plant interactions and biodiversity in succession and productivity of natural ecosystems will also be discussed.

[HORT 4620 Physiology of Vegetables and Flowers

Spring. 4 credits. Prerequisite: BIOPL 2420 or equivalent. Offered odd-numbered years; next offered 2010-2011. H. C. Wien.

Study of the physiological principles that govern growth, development, and production of reproductive structures of vegetable crops and herbaceous ornamental plants. Hands-on greenhouse experiments.]

HORT 4660 Soil Ecology (also CSS 4660)

Spring. 4 credits, with lab. Prerequisite: one year of biology or ecology and CSS 2600 or permission of instructor.

J. E. Thies.

For description, see CSS 4660.

[HORT 4730 Ecology of Agricultural Systems (also BIOEE 4730)

Fall. 3 credits. Prerequisite: BIOEE 2610 or permission of instructor. S–U or letter grades. During first six weeks, R meetings may run later due to field trips. Offered even-numbered years; next offered 2010–2011. L. E. Drinkwater and A. G. Power. For description, see BIOEE 4730.]

HORT 4800 Plantations Lecture Series

Fall, 12 weeks, 6 lec. 1 credit. S–U grades only. Meets alternate W evenings. D. A. Rakow.

Covers a range of subjects related to the plant and natural sciences, and human-cultural themes. On non-lecture Wednesdays, the class meets to discuss content from the previous week. Students are required to write a reaction paper for each lecture.

HORT 4850 Public Garden Management

Spring. 3 credits. Prerequisites: HORT 3000; HORT 4910 or 4920. Cost of two-and-a-half-day field trip to botanical gardens and arboreta: approx. \$85. Offered even-numbered years.

D. A. Rakow.

Explores the history of public gardens, types of contemporary public gardens, and the operation of public gardens including botanical gardens and arboreta. Includes separate units on administration and business management of gardens, collections curatorship, collections design, educational programs, research, and management of landscapes and natural areas.

HORT 4900 Golf and Sports Turf Management II

Spring. 2 credits. Prerequisite: HORT 3300. Offered even-numbered years. F. S. Rossi.

Designed for students familiar with turfgrass science and a strong interest in the design, construction, and maintenance of golf courses and sports fields. This course focuses on current and emerging issues concerning the scientific, economic and environmental aspects of golf courses and sports fields.

HORT 4910 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 4910)

Fall. 4 credits. Limited to 48 students. Prerequisite: horticulture or landscape architecture majors or permission of instructor. Preregistration required. N. L. Bassuk and P. J. Trowbridge.

Focuses on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, students can critically assess potential planting sites, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details is produced to implement these practices. A project where students implement what they have learned by creating a new landscape serves to integrate theory, principles, and practices. No prior design experience necessary.

HORT 4920 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 4920)

Spring. 4 credits. Limited to 48 students. Prerequisite: passing grade in HORT/LA 4910; horticulture or landscape architecture majors or permission of instructors. Preregistration required.

N. L. Bassuk and P. J. Trowbridge.

Second half of course focusing on the winter identification, uses, and establishment of woody plants in urban and garden settings. Issues of site assessment and soil remediation are emphasized in addition to soil volume calculations, drainage and surface detailing, and planting techniques. Students critically assess potential planting sites and select appropriate trees, shrubs, vines, and ground covers for a given site. Design for specific sites followed by written specifications and graphic details are produced to implement these proposals. Students implement, in a hands-on manner, site remediation and planting techniques they have learned by creating new landscapes that serve to integrate theory, principles, and practices. Together, HORT/LA 4910 and 4920 constitute an integrated course.

HORT 4940 Special Topics in Horticulture

Fall or spring. 4 credits max. S–U or letter grades. Staff.

The department teaches “trial” courses under this number. Offerings may vary by semester and will be advertised before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

HORT 4950 Undergraduate Seminar—Current Topics in Horticulture

Fall and spring. 1 credit; may be taken four times for 1 credit per semester. Graduate students should enroll in HORT 6000. S–U grades only. L. Cheng.

Undergraduate participation in weekly departmental seminar series.

HORT 4960 Internship in Horticulture

Fall or spring. Variable credit. Prerequisite: permission of student's advisor **in advance of participation** in internship programs. S–U or letter grades. Students must register using individual study form (available in 140 Roberts Hall) signed by faculty member who will supervise study and assign grade. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm. Staff.

HORT 4970 Individual Study in Horticulture

Fall or spring. Variable credit. Prerequisite: permission of instructor(s). S–U or letter grades. Students must register using individual study form (available in 140 Roberts Hall). Staff.

Undergraduate individual study in horticultural sciences under the direction of one or more faculty members.

HORT 4980 Undergraduate Teaching Experience

Fall or spring. Variable credit.

Prerequisites: previous enrollment in course to be taught or equivalent, and written permission of instructor. S–U or letter grades. Students must register using individual study form (available in 140 Roberts Hall). Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and teaching horticultural sciences courses under the supervision of departmental faculty members. May include leading discussion sections; preparing, assisting in, or teaching laboratories; and tutoring.

HORT 4990 Undergraduate Research

Fall or spring. Variable credit. Prerequisite: permission of instructor. S–U or letter grades. Students must register using individual study form (available in 140 Roberts Hall.) Staff.

Undergraduate research projects in horticultural sciences.

HORT 5900 Master of Professional Studies (Agriculture) Project

Fall or spring. 1–6 credits; 6 credits max. toward M.P.S. (agriculture) degree.

Requirement for M.P.S. (agriculture) candidates in respective graduate fields of horticulture. S–U or letter grades. Staff.

Comprehensive project emphasizing the application of principles and practices to professional horticultural teaching, extension, and research programs and situations.

HORT 6000 Seminar in Horticulture

Fall and spring. 1 credit. Requirement for graduate students majoring or minoring in horticulture. Undergraduate students enroll in HORT 4950. S–U grades only. L. Cheng.

Weekly seminars consisting of graduate student research project reports, faculty research topics, as well as guest speakers from other universities and/or industry.

[HORT 6100 Extension Volunteer Development in Garden-based Learning

Fall. 2 credits. Prerequisite: course work in horticulture and related fields.

Undergraduate plant sciences students by permission of instructor. Offered even-numbered years; next offered 2010–2011. L. J. Bushway.

Extension/outreach training course for graduate entomology, pathology, and horticulture students. Learn skills to effectively develop knowledge of adult volunteers in garden-based learning programs.]

[HORT 6110 Field Experience in Extension Volunteer Development in Garden-based Learning

Spring. 1 credit. Prerequisite: HORT 6100. Offered odd-numbered years; next offered 2010–2011. L. J. Bushway.

Lead introductory horticultural science training sessions for Master Gardener Volunteers and/or other volunteer groups associated with garden-based learning outreach.]

HORT 6150 Quantitative Methods in Horticultural Research

Spring, weeks 1–7. 2 credits. Prerequisite: BTRY 6010, 6020, or permission of instructor. S–U grades only. Offered even-numbered years. D. W. Wolfe.

Provides experience in applying statistics principles to real-world agricultural research problems. Uses examples of lab, greenhouse, and field studies from the published literature. Explores other quantitative methods. Topics include approaches to controlling and analysis of variation; common block and incomplete block designs; selecting an appropriate significance level; designing on-farm experiments and demonstration plots; regression methods in relation to mechanistic models and path and principal components analysis; and plant growth analysis techniques.

[HORT 6170 Advanced Analytical Methods for Plant Systems

Spring. 2 credits. Prerequisite: one year of general chemistry, one semester of organic chemistry, plant physiology. Letter grades only. Offered odd-numbered years; next offered 2010-2011. L. Cheng.

Principles and practical applications of selected laboratory methods in the plant and environmental sciences. Emphasizes enhancement of laboratory technique and problem-solving skills.]

HORT 6180 Breeding for Pest Resistance (also PLBR 6180)

Fall. 2 credits. Prerequisites: BIOGD 2810 and PLBR 4030 or equivalents. Highly recommended: introductory plant pathology and/or entomology course. Letter grades only. Offered even-numbered years. P. D. Griffiths.

For description, see PLBR 6180.

HORT 6251 Advanced Postharvest Biology: Postharvest Physiology

Fall. 1 credit (12 lec). Offered even-numbered years. S. Gan.

Emphasizes the physiological and biochemical aspects of growth and maturation, ripening, and senescence of harvested horticulture plant parts.

HORT 6252 Advanced Postharvest Biology: Plant Senescence (also BIOPL 4836)

1 credit. (12 lec). S. Gan.

Introduces molecular, genetics, and genomics approaches in plant senescence and postharvest research.

HORT 6253 Advanced Postharvest Biology: Postharvest Technology

1 credit. (12 lec). C. B. Watkins.

Emphasizes advanced existing and emerging technology and practice for handling, monitoring, and storage of horticultural crops after harvest.

HORT 6350 Tools for Thought

Fall. 1 credit. Prerequisite: graduate standing. S-U grades only. T. H. Whitlow. Discusses readings from Kuhn, Waddington, Wilson, Lewontin, and others emphasizing application of the philosophy of science to the real-world practices of scientists.

HORT 6450 Advanced Viticultural Topics (also VIEN 6450)

Spring. 2 credits. Prerequisite: HORT 4430 or equivalent. Letter grades only. Offered even-numbered years. A. N. Lakso.

In-depth lecture/discussion of complex topics of viticulture that have important impacts on fruit composition and wine quality. These include crop load effects, canopy management, water relations, vineyard efficiency, and vineyard variability/precision viticulture.

HORT 6940 Special Topics in Horticulture

Fall or spring. 4 credits max. S-U or letter grades. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committees, and the same course is not offered more than twice under this number.

HORT 6970 Graduate Individual Study in Horticulture

Fall or spring. Variable credit. Prerequisite: permission of instructor(s). S-U or letter grades. Staff.

Graduate individual study in horticultural sciences under the direction of one or more faculty members.

HORT 7000 Graduate Teaching Experience

Fall or spring. Variable credit. Prerequisite: permission of instructor; graduate standing. Undergraduates should enroll in HORT 4980. S-U or letter grades. Staff.

Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. May include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring.

HORT 8900 Thesis Research, Master of Science

Fall or spring. Variable credit. S-U grades only.

HORT 9900 Thesis Research, Doctor of Philosophy

Fall or spring. Variable credit. S-U grades only.

INFO 4470 Social and Economic Data (also ILRLE 4470)

Fall. 4 credits. Prerequisites: one semester of calculus, IS statistics requirement, at least one upper-level social science course, or permission of instructor.

For description, see INFO 4470 in CIS section.

INFO 4500 Language and Technology (also COMM 4500) (SBA)

Spring. 3 credits. Prerequisites: INFO 2450 or permission of instructor.

For description, see COMM 4500.

INFO 4900 Independent Reading and Research

Fall, spring. 1–4 credits.

Independent reading and research for undergraduates.

INFO 4910 Teaching in Information Science, Systems, and Technology

Fall, spring. Variable credit.

Involves working as a TA in a course in the information science, systems, and technology major.

[INFO 5150 Culture, Law, and Politics of the Internet (SBA)]**INFO 5300 The Architecture of Large-Scale Information Systems (also CS 5300)**

Spring. 4 credits. Prerequisite: INFO 3300 or CS 4320.

For description, see INFO 5300 in CIS section.

INFO 6140 Cognitive Psychology (also COGST/PSYCH 6140)

Spring. 4 credits.

For description, see PSYCH 6140.

INFO 6300 Advanced Language Technologies (also CS 6740)

Fall, spring. 3 credits. Prerequisite: permission of instructor. Neither INFO 4300 nor CS 4740 are prerequisites.

For description, see CS 6740 in CIS section.

INFO 6341 Information Technology in Sociocultural Context (also STS 6341)

Spring. 4 credits.

For description, see INFO 6341 in CIS section.

[INFO 6350 Seminar on Applications of Information Science (also INFO 4350)]**INFO 6400 Human-Computer Interaction Design (also COMM 6400)**

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.

For description, see COMM 6400.

INFO 6450 Seminar in Computer-Mediated Communication (also COMM 6450)

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.

For description, see COMM 6450.

[INFO 6648 Speech Synthesis by Rule (also LING 6648)]

Spring. 4 credits. Prerequisite: LING 4401, 4419, or permission of instructor. Next offered 2010–2011.

For description, see LING 6648.]

INFO 6500 Language and Technology (also COMM 6500)

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.

For description, see COMM 6500.

[INFO 6850 The Structure of Information Networks (also CS 6850)]**INFO 7090 IS Colloquium**

Fall, spring. 1 credit. For staff, visitors, and graduate students interested in information science.

INFO 7900 Independent Research

Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.

Independent research for M.Eng. students and pre-A exam Ph.D. students.

INFO 9900 Thesis Research

Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.

Thesis research for post-A exam Ph.D. students.

INTERNATIONAL AGRICULTURE AND RURAL DEVELOPMENT

IARD 2020 Perspectives in International Agriculture and Rural Development

Fall. 3 credits. R. Nelson, R. Herdt, and L. Harrington.

The course is designed to enable students to gain an understanding of major issues in international agricultural development. It provides an overview of world poverty and hunger and of varying perspectives on approaches being taken to address these and related problems. Students will characterize the state of agriculture and rural livelihoods in selected developing countries, and will analyze how innovations in agriculture in these countries can contribute to rural development.

IARD 4010 Experience Latin America: Rural and Urban Realities I (also LATA 4010)

Fall. 2 credits. T. Tucker and D. Castillo.

Acquaints students with fundamental cultural, historical, socio-political, literary, anthropological, health, agricultural, and development issues in southern Mexico. The lectures/discussions establish the global and regional contexts for better transcultural understanding. This course may be taken as a stand-alone survey course in international agriculture and rural development or in Latin American studies. However, it is primarily a preparatory course for participants selected to participate in the spring-semester course Experience Latin America II: Chiapas Edition (IARD or LATA 6010), which includes a field-study trip to southern Mexico (Chiapas during the January intersession).

IARD 4020 Agriculture in Developing Nations I (also FDSC 4020)

Fall. 2 credits. K. V. Raman and W. R. Coffman.

Acquaint students with the major issues and problems in international agriculture and rural development and to demonstrate how problems in development are being addressed in India and Thailand. The lectures/discussions establish the global and regional contexts for sustainable agricultural development and focus on development challenges in Asia through cases in India and Thailand. This course may be taken as a stand-alone survey course in international agriculture and rural development. However, it is primarily a preparatory course for participants selected to participate in the spring-semester course Agriculture in the Developing Nations II (IARD 6020), which includes a field trip to Asia during the January intersession.

IARD 4030 Traditional Agriculture in Developing Countries (also CSS 4030)

Fall. 1 credit. S–U grades only. P. Hobbs.

For description, see CSS 4030.

IARD 4040 Crop Evolution, Domestication, and Diversity (also PLBR/BIOPL 4040)

Fall. 2 credits. Prerequisite: BIOGD 2810 or PLBR 2250 or permission of instructor. S–U or letter grades. S. Kresovich.

For description, see PLBR 4040.

IARD 4050 Patents, Plants, and Profits: Intellectual Property Management for Scientists and Entrepreneurs (also PLBR 4050)

Spring. 3 credits. Prerequisite: senior or graduate standing. S–U or letter grades. A. F. Krattiger and S. Kowalski.

For description, see PLBR 4050.

IARD 4140 Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts (also CSS 4140)

Fall. 3 credits. Prerequisite: introductory crop science, soil science, or biology course or permission of instructor. P. Hobbs.

For description, see CSS 4140.

IARD 4800 Global Seminar: Building Sustainable Environments and Secure Food Systems for a Modern World (also FDSC/NTRES 4800)

Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. J. Lassoie and D. Miller.

For description, see NTRES 4800.

IARD 4910 Food, Farming, and Personal Belief (also CSS 4910)

Spring, 1 credit. Prerequisites: Sustainable Agriculture (CSS 1900) or equivalent recommended. S-U grades only. G. Fick. For description, see CSS 4910.

IARD 4940 Special Topics in International Agriculture and Rural Development (also LATA 4940)

Fall, spring, summer. 1-3 credits. S-U or letter grades. Staff.

The department teaches "trial" courses, and special topics not covered in other courses, at the undergraduate level, under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

IARD 4960 International Internship

Fall, spring. 1-6 credits. Prerequisite: submission of approved internship form (see CALS internship policy guidelines). S-U or letter grades. Staff.

International internship, supervised by a faculty member who is directly involved in determining both the course content and in evaluating a student's work. The student researches and initiates an appropriate international internship and negotiates a learning contract with the faculty supervisor, stating the conditions of the work assignment, supervision, and reporting. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

IARD 4970 Independent Study in IARD

Fall and spring. 1-3 credits. Prerequisite: permission of instructor. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff.

Allows students the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the direction of a faculty member.

IARD 5980 International Development M.P.S. Project Paper

Fall and spring. 1-6 credits; max. 6 credits may be applied toward M.P.S. degree. Prerequisite: M.P.S. candidates in field of international development (ID). S-U grades only. N. Uphoff.

Problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international development.

IARD 5990 International Agriculture and Rural Development M.P.S. Project Paper

Fall and spring. 1-6 credits; maximum of 6 credits may be applied toward M.P.S. degree requirements. Prerequisite: M.P.S. candidates in field of international agriculture and rural development (IARD). S-U grades only. S. Kyle.

Problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international agriculture and rural development.

IARD 6010 Experience Latin America II (Chiapas Edition) (also LATA 6010)

Spring, 3 credits. Prerequisite: IARD or LATA 4010. T. Tucker and D. Castillo.

Designed to provide students with an opportunity to observe the rich living cultures, environments, ecologies, rural and urban communities, and development issues in tropical southern Mexico. Also designed to promote interdisciplinary exchange among faculty, staff, and students and their Mexican hosts and counterparts. A two-week field-study trip in January is followed by discussions, written projects, and oral presentations dealing with a range of topics pertinent to the target cultures of Chiapas. Optional 1-credit discussion in Spanish can be taken concurrently (SPAN 3020).

IARD 6020 Agriculture in Developing Nations II (also FDSC 6020)

Spring, field trip to Asia during Jan. intersession. 3 credits. Prerequisites: IARD 4020 and (or) permission of instructors. Cost of field-study trip is \$4,000 (including airfare, local transportation, and lodging). Some merit and need-based financial aid may be available. K. V. Raman and W. R. Coffman.

Designed to provide students with an opportunity to observe agricultural development in Asia and to promote interdisciplinary exchange among faculty, staff, students and their Indian and Thai counterparts. A three-week field-study trip in January is followed by discussions, written projects, and oral presentations dealing with problems in food, agriculture, and livestock production in the context of social and economic conditions of India and Thailand.

IARD 6030 Planning and Management of Agriculture and Rural Development (also GOVT 6927)

Spring, 4 credits. N. T. Uphoff and T. W. Tucker.

Reviews experience and approaches in agricultural and rural development in a range of developing countries, with particular attention to contemporary issues of participation, decentralization, local institutions, capacity-building, civil society, social capital, and empowerment. Case studies from Asia, Africa, and Latin America.

IARD 6850 Training and Development: Theory and Practice (also EDUC 6850)

Spring, 4 credits. S-U or letter grades. R. Caffarella.

For description, see EDUC 6850.

IARD 6940 Graduate Special Topics in IARD

Fall or spring. 1-4 credits. S-U or letter grades. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

IARD 6960 Agroecological Perspectives for Sustainable Development (also NTRES/CSS 6960)

Fall, spring, 1 credit. S-U grades only. L. Fisher, L. Buck, and P. Hobbs.

A variety of speakers present seminars on agroecological topics relating to sustainable development throughout the world. Students

are required to prepare a synopsis of each seminar.

IARD 6970-6980 International Development M.P.S. Seminar

Fall, spring. 1 credit. S-U grades only. N. Uphoff.

For M.P.S. students to discuss important issues in international development and to prepare them to write their project papers. Specific content varies.

IARD 6990 International Agriculture and Rural Development M.P.S. Project Seminar

Fall, spring. 1 credit. Prerequisite: required for, and limited to, M.P.S. IARD students or permission of instructor. S-U grades only. S. C. Kyle.

Provides students with the opportunity to develop and present their special projects. Also serves as a forum for discussion of current issues in international agricultural and rural development, with particular attention to interdisciplinary complexities.

IARD 7830 Farmer-Centered Research and Extension (also EDUC 7830)

Fall, 3 credits. S-U or letter grades. T. Tucker.

Introduction to participatory traditions in farming systems research, extension, evaluation of rural development, technology generation, gender analysis, participatory rural appraisal, and documentation of local and indigenous knowledge of community-based development. Case studies of farmer-centered research and extension provide a focus for analysis. Appropriate roles of researchers and extensionists as partners with farmers are examined. A major contribution of farmer-centered research and extensions is its potential to legitimize people's knowledge by enhancing their capacity to critically analyze their own problems, conduct their own research and empower them to take direct action to solve those problems.

LANDSCAPE ARCHITECTURE

P. J. Trowbridge, chair (443 Kennedy Hall, 255-2738); S. Baugher, J. Foster, K. L. Gleason, A. Hammer, P. H. Horrigan, D. W. Krall, L. J. Mirin, A. Okigbo, D. Ruggeri

LA 1410 Grounding in Landscape Architecture

Fall, 4 credits. Limited to 15 students. Letter grades only. Fee for required package of drafting equipment plus materials for projects: approx. \$300.

Introduction to the representation and design of landscapes and to working in a studio setting. Uses freehand drawing, measured drawing, and model making to understand design principles of the landscape within a cultural and ecological paradigm.

LA 1420 Grounding in Landscape Architecture

Spring, 4 credits. Limited to approx. 20 students. Prerequisite: freshman landscape architecture majors or permission of instructor. Required drafting equipment plus project supplies: approx. \$250.

Applies fundamentals of landscape design to small-scale site-planning projects. Work in the studio introduces students to the design process, design principles, construction materials, planting design, and graphics.

LA 2010 Medium of the Landscape

Fall. 5 credits. Prerequisite: landscape architecture majors. Required drafting equipment, supplies, and fees: approx. \$200; field trip: approx. \$250.

Studio course emphasizing the design process and principles involved in organizing and giving form to outdoor space through the use of structures, vehicular and pedestrian circulation systems, earthforms, water, and vegetation.

LA 2020 Medium of the Landscape

Spring. 5 credits. Prerequisite: LA 2010 with grade of C or better. Supplies and fees: approx. \$250; field trip: approx. \$250.

Focuses on the role of materials in design, design theory, and design vocabulary associated with landscape architecture projects.

[LA 2150 Writing Seminar: Engaging Places

Fall. 4 credits. Lec. Next offered 2010–2011. A. Hammer.

Explores how places come to be what they are, how they shape—and are shaped by—the people who live in them, how they become coordinates for plotting both a culture's biography and the meaning of a life. While the course serves as an introduction to cultural landscape studies, or the interaction of people and place, its focus is on writing: how do we represent the complexity of a place and our relation to it?

[LA 2610 Fieldwork in Urban Archaeology (also CRP/ARKEO 2610) (CA) (LA)]**[LA 2620 Laboratory in Landscape Archaeology (also ARKEO 2620)]****LA 2820 Photography and the American Landscape (CA) (LA)**

Fall. 3 credits. A. Hammer.

Interdisciplinary study of the relationship between photography, the American landscape, and cultural meaning. Topics include representation and perception, photography and painting in the 19th century, expeditionary surveys and national identity, pictorialism, the American sublime, photography and tourism, modernism and postmodernism, the industrial landscape and American ruins, and contemporary practice.

LA 3010 Integrating Theory and Practice I

Fall. 5 credits. Prerequisite: LA 2020 with grade of C or better. Supplies and fees: approx. \$250; field trip: approx. \$250.

This studio engages participants in the art and science of design as well as focusing on site-scaled projects that consider significant cultural and natural landscapes. This course explores theories of landscape design, restoration, sustainable design, and landscape representation through projects that derive form from a specific site and place.

LA 3020 Integrating Theory and Practice II

Spring. 5 credits. Supplies and fees: approx. \$250; field trip: approx. \$250; international studios: \$500.

Studio building on prior course work with an expectation that participants can creatively manipulate the program and conditions of a site, with increased emphasis on contemporary construction technology. Focuses on the expression of design solutions that grow from and affirm an explicit sense

of site and place. Social, cultural, physical, and historical factors and their relationship to site design and planning are critically explored through theory and practice.

LA 3160 Site Engineering

Fall. 5 credits.

Lectures and studio projects dealing with earthwork estimating; storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 3180 Site Construction

Spring. 5 credits. Prerequisite: permission of instructor. P. Trowbridge.

This course emphasizes detail design and use of landscape materials in project implementation. It explores construction materials, including specifications, cost estimates, and methods used by landscape architects in project implementation. It includes lectures, studio problems, and development of drawings leading to construction documentation for one or more comprehensive projects.

[LA 3600 Pre-Industrial Cities and Towns of North America (also ARKEO 3600, CRP 3600/6660, LA 6660) (CA) (LA)]**LA 4010 Urban Design Studio**

Fall. 5 credits.

This studio focuses on the integration of theory and practice in landscape architecture at the urban scale. Urban design methods and strategies are introduced and applied to city-scaled projects including community engagement.

LA 4020 Integrating Theory and Practice II

Spring. 5 credits. Supplies and fees: approx. \$250; field trip: approx. \$250.

Studio focusing on the expression of design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical, and historic factors and their relationships to site design and planning are critically explored through theory and practice in this studio.

LA 4030 Directed Study: The Concentration

Fall, spring. 1 credit. Prerequisite: landscape architecture undergraduates in final year of study.

Working with their advisor, students create a written and visual paper that documents the concentration intent.

LA 4100 Computer Applications in Landscape Architecture

Fall or spring. 3 credits. Limited to 15 students. Prerequisite: landscape architecture students. S. Curtis.

Designed to develop a working knowledge of various computer software applications with emphasis on Autocad. Explores other applications relative to land-use planning and the profession of landscape architecture.

LA 4120 Professional Practice

Fall. 1 credit.

This course presents the student with an understanding of the emerging role of the professional landscape architect. The course helps students choose a type of practice and introduces the problems and opportunities one may encounter in an office or in other professional situations. Topics include job-seeking preparation, practice diversity, marketing professional services, office and

project management, construction management, computers in the profession, and ethics.

LA 4180/7900 Audio Documentary: Stories from the Land (CA) (LA)

Spring. 3 credits. Limited to 15 students.

Letter grades only. A. Hammer.

Offers hands-on experience in basic audio documentary. Students create aural portraits of New York landscapes and communities undergoing critical change. Encourages projects appropriate for podcasting, webcasting, and radio. Explores relationship between sound and the still or moving image.

LA 4830 Seminar in Landscape Studies (CA) (LA)

Spring. 3 credits. Prerequisite: senior or graduate standing in any major or field.

Topical seminar with a different subject and method each time it is offered.

LA 4860/7910 Placemaking by Design

Fall. 3 credits. Limited to 20 students.

Priority given to juniors, seniors, and graduate students. S–U or letter grades. P. Horrigan.

Seminar providing an understanding of contemporary planning and landscape architecture design strategies that reaffirm and reclaim a sense of place. Readings and discussions focus on the theory and practice of placemaking as represented in the literature and in built works. Addresses the following questions: What constitutes a place-based design approach and what distinguishes it from other more conventional design approaches? Who are the key players shaping the theory and practice of placemaking?

LA 4910 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 4910)

Fall. 4 credits. Limited to 48 students.

Prerequisite: horticulture or landscape architecture majors or permission of instructors. Preregistration required. Supplies: approx. \$50; field trips: approx. \$25. P. Trowbridge and N. Bassuk.

Focuses on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, students are able to critically assess potential planting sites; select appropriate trees, shrubs, vines, and ground covers for a given site; and learn about the principles and practices of site remediation and plant establishment. Design followed by written specifications and graphic details is produced to implement these practices.

LA 4920 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 4920)

Spring. 4 credits. Limited to 48 students.

Prerequisite: horticulture or landscape architecture majors or permission of instructors; passing grade in HORT/LA 4910. Preregistration required. Supplies: approx. \$50; field trips: approx. \$25. P. Trowbridge and N. Bassuk.

Second half of course focusing on winter identification, uses, and establishment of woody plants in urban and garden settings. Issues of site assessment and soil remediation are emphasized in addition to soil volume calculations, drainage, surface detailing, and planting techniques. Students critically assess

potential planting sites and select appropriate trees, shrubs, vines, and groundcovers for a given site. Designs for specific sites are followed by written specifications and graphic details that are produced to implement these proposals. Students are engaged in a hands-on manner in site remediation and planting techniques they have learned by creating new landscapes that serve to integrate theory, principles, and practices. Together, HORT/LA 4910 and 4920 constitute an integrated course.

LA 4940 Special Topics in Landscape Architecture

Fall or spring. 1-3 credits; may be repeated for credit. S-U or letter grades. Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

LA 4950 Green Cities: The Future of Urban Ecology (also CRP 3840/5840)

Fall. 4 credits. R. Young. Explores the history and future of the ecology of cities and their role in solving the present global ecological crisis. Examines the politics, design, and economics of "green cities" in terms of transportation, renewable energy, solid waste and recycling, land use, and the built environment.

LA 4970 Individual Study in Landscape Architecture

Fall or spring. 1-5 credits; may be repeated for credit. Students must register using independent study form (available in 140 Roberts Hall). S-U or letter grades. Work on special topics by individuals or small groups.

LA 4980 Undergraduate Teaching

Fall or spring. 1-2 credits. Prerequisites: previous enrollment in course to be taught and permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty members.

LA 4990 Undergraduate Research

Fall or spring. 1-5 credits. Students must register using independent study form (available in 140 Roberts Hall). Permits outstanding undergraduates to carry out independent research in landscape architecture under academically appropriate faculty supervision. Research goals should include description, prediction, and explanation, and should generate new knowledge in the field of landscape architecture.

LA 4991 Undergraduate Honors Research in Landscape Architecture

Fall or spring. 1-5 credits. Students must register using independent study form (available in 140 Roberts Hall). Permits outstanding students to carry out independent research in landscape architecture under appropriate faculty supervision. Research goals should include description, prediction, and explanation and should generate new knowledge in the field of landscape architecture.

LA 5010 Composition and Theory

Fall. 5 credits. Prerequisite: graduate standing. Drafting supplies and fees: approx. \$250; field trip: approx. \$250. Basic principles of natural and cultural processes that form "places" in the landscape. Projects focus on design applied to the practice of landscape architecture: particularly the relationship between measurement, process, experience, and form at multiple scales of intervention.

LA 5020 Composition and Theory

Spring. 5 credits. Prerequisite: graduate standing. Drafting supplies and fees: approx. \$250; field trip: approx. \$250. Studio focusing on the spatial design of project-scale site development. Students develop their expertise in applying the design theory, vocabulary, and graphic expression introduced in LA 5010.

LA 5050 Landscape Representation I

Fall. 3 credits. Corequisite: LA 5010 or permission of instructor. Introduces students to both conventional and unconventional modes of landscape architectural design representation. Teaches drafting, orthographic drawing, axonometric project, lettering, analysis, and concept drawing alongside more expressive modes of direct site study and representation.

LA 5060 Graphic Communication II

Spring. 3 credits. Prerequisite: LA 5050. Corequisite: LA 5020 or permission of instructor. Intermediate-level course focusing on modes of landscape representation from ideation to presentation. Representation modes may include freehand, process drawing, analysis and orthographic drawing; concept modeling; composite drawings; and visual books.

LA 5240 History of European Landscape Architecture*

Fall. 3 credits. L. Mirin. *Offered through College of Architecture, Art, and Planning.

LA 5250 History of American Landscape Architecture*

Spring. 3 credits. L. Mirin. *Offered through College of Architecture, Art, and Planning.

LA 5450 The Parks and Fora of Imperial Rome

Spring. 3 credits. Prerequisites: advanced standing in a design field, classics, or history of art, other disciplines, or permission of instructor. K. Gleason. Advanced seminar seeking an interdisciplinary group of students in classics, art history, archaeology, landscape architecture, horticulture, and architecture to bring their knowledge of Latin, Greek, Italian, archaeology, drawing, design, or computer modeling to a collaborative study of the ancient forums and public parks of the ancient Roman world. Seminar involves students in current research and publication in this emerging area of archaeology and landscape history.

LA 5820 Photography and the American Landscape

Fall. 3 credits. A. Hammer. Interdisciplinary study of the relationship between photography, the American landscape, and cultural meaning. Topics include representation and perception, photography and painting in the 19th century,

expeditionary surveys and national identity, pictorialism, the American sublime, photography and tourism, modernism and postmodernism, the industrial landscape and American ruins, and contemporary practice.

LA 5900 Theoretical Foundations

Spring. 2 credits. Prerequisite: senior or graduate standing. A. Hammer. This seminar is intended to provide students in the Department of Landscape Architecture with an overview of the theories and discourses related to the field. Topics may include, but not be limited to, environmental perception, issues of language and representation, pertinent debate in cultural geography, developments in ecological design, landscape urbanism, infrastructure, etc. Weekly readings, discussion, short papers.

LA 5970 Graduate Individual Study in Landscape Architecture

Fall or spring. 1-5 credits; may be repeated for credit. Work on special topics by individual or small groups.

LA 5980 Graduate Teaching

Fall or spring. 1-3 credits. Prerequisite: permission of instructor. Staff. Designed to give qualified students experience through involvement in planning and teaching courses under the supervision of faculty members. The experience may include leading discussion sections, preparing, assisting in desk critiques, and presenting lectures. There are assigned readings and discussion sessions on education theory and practice throughout the semester. (Credit hours are determined by the formula: 2 hours per week = 1 credit hour.)

LA 6010 Integrating Theory and Practice I

Fall. 5 credits. Prerequisite: graduate standing or permission of instructor. Supplies and fees: approx. \$250. This studio focuses upon site-scaled projects that consider significant cultural and natural landscapes. Explores theories of landscape restoration, sustainable design, and landscape representation. These are explored through projects that derive form from specific site and place. The integration of site history, ecology, and site construction supports an understanding and relationship between theory and practice.

LA 6020 Integrating Theory and Practice II

Spring. 5 credits. Prerequisite: graduate standing. Drafting supplies and fees: approx. \$250; field trip: approx. \$250. This studio builds on prior course work with an expectation that participants can creatively manipulate the program and conditions of a site, with increased emphasis on contemporary construction technology. Projects focus upon the expression of design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical, and historic factors and their relationship to site design and planning are critically explored through theory and practice.

LA 6030 Directed Study: The Concentration

Fall, spring. 1 credit. Prerequisite: landscape architecture graduate students in final year of study.

Working with their advisor, students create a written and visual paper that documents the concentration intent.

LA 6160 Site Engineering

Fall. 5 credits.

Lectures and studio projects dealing with earthwork estimating, storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 6180 Site Construction

Spring. 5 credits. Prerequisite: permission of instructor. P. Trowbridge.

This course emphasizes detail design and use of landscape materials in project implementation. It explores materials, including specifications, cost estimates, and methods used by landscape architects in project implementation. It includes lectures, short studio problems, and the development of drawings leading to construction documentation for one or more comprehensive projects.

LA 6660 Pre-Industrial Cities and Towns of North America (also CRP 6660)

Spring. 3 credits.

LA 6900 Methods of Landscape Architectural Inquiry

Spring. 3 credits. Prerequisite: graduate standing. S–U or letter grades.

This class builds on the theoretical foundations provided in LA 5900 with an investigation of the variety of methods used in landscape architectural and urban design research and practice. These methods may include, but are not limited to, physical analysis, mapping, site inventory, behavioral observations, cultural landscape investigations, surveys, and interviews. The format of the class combines weekly lecture and applied research.

LA 6940 Special Topics in Landscape Architecture

Fall or spring. 1–3 credits; may be repeated for credit. S–U or letter grades.

Topical subjects in landscape architectural design, theory, history, or technology. Includes group study of topics not considered in other courses.

LA 7010 Urban Design and Planning

Fall. 5 credits. Prerequisite: graduate standing. Supplies and fees: approx. \$250; required field trip: approx. \$50.

This studio explores the application of urban design and landscape urbanism techniques to the problems and opportunities of contemporary city making. The studio investigates the social, cultural, natural, and infrastructural systems of urban environments, and develops integrated spatial design strategies involving streets, built form, and open space networks. The course introduces three-dimensional computer modeling and digital design media as tools for urban design.

LA 7020 Advanced Design Studio

Spring. 5 credits.

This advanced design studio provides students in the final year of the graduate program in Landscape Architecture with the opportunity to work on complex, real-time projects. The overarching goal of this class is to test the student's theoretical, methodological, technical, and representational competency and ability to engage with a range of scales and issues.

Through intensive studio work, seminar sessions, independent research, and site visits students will gain the knowledge and skills necessary to develop sound and creative solutions to environmental design problems.

LA 7900 Audio Documentary: Stories from the Land

Spring. 3 credits. Letter grades only. A. Hammer.

Offers hands-on experience in basic audio documentary. Students create aural portraits of New York landscapes and communities undergoing critical change. Encourages projects for podcasting, webcasting, and radio. Explores relationship between sound and the still or moving image.

LA 7910 Placemaking by Design

Fall. 3 credits. Limited to 20 students. S–U or letter grades. P. Horrigan.

Seminar providing an understanding of contemporary planning and landscape architecture design strategies that reaffirm and reclaim a sense of place. Readings and discussions focus on the theory and practice of placemaking as represented in the literature and in built works. Addresses the following questions: What constitutes a place-based design approach and what distinguishes it from other more conventional design approaches? Who are the key players shaping the theory and practice of placemaking?

LA 7920 Landscape Preservation: Theory and Practice

Fall. 3 credits. Prerequisite: junior, senior, or graduate standing. D. Krall.

Examines the evolving practice of landscape preservation in the United States. Topics include the recent history of the discipline, methodology in documentation of historic landscapes, and important practitioners and notable projects. Format is assigned readings and discussion, invited speakers, lectures, and a project documenting a local site.

LA 8900 Master's Thesis in Landscape Architecture

Fall or spring. 9 credits.

Independent research, under faculty guidance leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture. Work is expected to be completed in final semester of residency.

NATURAL RESOURCES

M. E. Krasny, chair (118 Fernow Hall, 255-2822); M. B. Bain, B. L. Bedford, B. Blossey, S. R. Broussard-Allred, L. E. Buck, E. Cooch, P. Curtis, D. J. Decker, J. Dickinson, T. J. Fahey, W. Fisher, G. Goff, M. P. Hare, J. R. Jackson, K. Kassam, B. A. Knuth, C. Kraft, J. P. Lassoie, B. Lauber, S. Morreale, L. Rudstam, R. Schneider, R. Sherman, P. J. Smallidge, C. R. Smith, R. C. Stedman, K. Sullivan, P. Sullivan, J. Tantilillo, D. Weinstein, S. Wolf, J. B. Yavitt

NTRES 1101 Intro to the Science and Management of Environmental and Natural Resources (also SNES 1101)

Fall. 3 credits. Prerequisite: first-year students accepted to Natural Resources, Science of Natural and Environment Systems, or Environmental Undecided majors in CALS. J. Yavitt and E. Madsen.

This course provides an overview of the science and management of natural and environmental resources. Material highlights facts and principles from the physical, biological, social, and economic sciences. The focus is on identifying knowledge required to enhance intelligent and sustainable management of the Earth's ecological and environmental systems. Case studies, guided readings, multi-media presentations, videos, discussions, and field and laboratory exercises are used to introduce students to the interdisciplinary basis for understanding the complexities of such systems within the text of modern society. Active student participation in all phases of the course is expected.

NTRES 1102 Introduction to Environmental Studies

Summer. 3 credits. S–U or letter grades. R. J. McNeil.

Discussion-centered course examining the interrelationships between the sciences, arts, and humanities as they relate to our environment. Students explore how we manage nature and negotiate with each other to meet our needs. Emphasis is on principles of ecology, economics, aesthetics, ethics, and law.

NTRES 1103 Science Fiction and Environment

Summer. 3 credits. S–U or letter grades. R. J. McNeil.

This course is intended to be primarily for Summer College students (high school rising seniors), new freshmen, Cornell staff, and other people with an interest in, but little formal background in, environmental studies. Science fiction short stories and two books will be used as vehicles for illustrating environmental predicaments and to enable easy discussion of environmental principles that may be helpful to us in choosing ways to live. Some extra attention to studying and learning may be helpful to new college students.

NTRES 2010 Environmental Conservation

Spring. 3 credits. T. Fahey.

Our lives increasingly are touched by questions about environmental degradation at local, regional, and global scales. Business as usual is being challenged. This course stimulates students to go beyond the often simplistic portraits of the environmental dilemma offered by the mass media to gain a firmer basis for responsible citizenship and action on environmental issues.

NTRES 2100 Introductory Field Biology

Fall. 4 credits. Limited to 60 students. Prerequisite: sophomore or junior standing with advisor in natural resources or permission of instructor; BIOG 1101–1102 or equivalent. Cost of two required overnight weekend field trips: approx. \$20. C. Smith.

Introduction to methods of inventorying, identifying, and studying plants and animals. Students are required to learn taxonomy, natural history, and how to identify approximately 170 species of vertebrates and 80 species of woody plants. Stresses selected aspects of current ecological thinking. Emphasizes the interaction of students with biological events in the field and accurate recording of those events.

NTRES 2201 Society and Natural Resources (also DSOC 2201) (SBA)

Spring. 3 credits. Letter grades only. R. Stedman.

The actions of people are crucial to environmental well-being. This course addresses the interrelationships between social phenomena and the natural (i.e., biophysical) environment. It is intended to: (1) increase student awareness of these interconnections in their everyday lives; (2) introduce students to a variety of social science perspectives, including sociology, economics, psychology, and political science, that help us make sense of these connections; (3) identify the contributions of each of these perspectives to our understanding of environmental problems; and (4) discuss how natural resource management and environmental policy reflect these perspectives.

NTRES 2320 Nature and Culture (HA) (CA)

Spring. 3 credits. S-U or letter grades. J. Tantillo.

We will examine the history of human-environment relationships, the diversity of environmental values and ethics, cultural manifestations of nature, and the role of society in forming natural resource and environmental policy. The history of natural resource conservation and management in North America, including the history and philosophy of ecology, will be introduced.

NTRES 2830 DNA, Genes, and Conserving Genetic Diversity

4 credits. Prerequisites: introductory biology or equivalent or permission of instructor. Letter grades only. Lec/lab. M. Hare.

This course is designed to provide a broad understanding of molecular, Mendelian, and population genetic principles relating to genetic diversity and its conservation. This class is recommended as a preliminary to upper-level ecology, evolution, and conservation biology courses. We will focus on eukaryotes and cover a broad range of molecular and cellular genetic concepts including DNA replication, recombination, and gene expression. Mendelian inheritance and linkage mapping also will be covered in depth before expanding the scope to population genetics and quantitative genetics. A laboratory section will be devoted to problem solving, computer exercises, and discussions.

NTRES 3030 Introduction to Biogeochemistry (also EAS 3030)

Fall. 4 credits. Prerequisites: college-level chemistry and a biology and/or geology course. J. B. Yavitt and L. A. Derry. For description, see EAS 3030.

NTRES 3100 Applied Population Ecology

Fall. 3 credits. Prerequisite: completion of calculus (MATH 1106, 1110, or equivalent). Highly recommended: background in biology or ecology. Letter grades only. E. Cooch.

In-depth analysis of the ecological factors influencing the natural fluctuation and regulation of animal population numbers. Examines models of single- and multi-species population dynamics, with emphasis on understanding the relationship between ecological processes operating at the individual level and subsequent dynamics at the population level. Significant emphasis is

placed on principles as applied to conservation and management. Computer exercises are used to reinforce concepts presented in lecture.

[NTRES 3110 Fish Ecology, Conservation, and Management]**[NTRES 3111 Fish Ecology Laboratory]****NTRES 3130 Biological Statistics I (also BTRY 3010, STS 2200)**

Fall. 4 credits. Prerequisite: one semester of calculus. P. Sullivan. Develops statistical methods and applies them to problems encountered in the biological and environmental sciences. Methods include data visualization, population parameter estimation, sampling, bootstrap resampling, hypothesis testing, the Normal and other probability distributions, and an introduction to modeling. Applied analysis is carried out in the Splus statistical computing environment.

[NTRES 3140 Conservation of Birds

Spring, summer. 2 credits. Prerequisite: NTRES 2100 or permission of instructor. Offered alternate years. Next offered 2010-2011. C. R. Smith.

A course for majors and nonmajors, focusing on science-based bird conservation and management at the organism, population, community, and landscape levels.]

[NTRES 3141 Conservation of Birds Laboratory

Spring, summer. 1 credit. Corequisite: NTRES 3140. Offered alternate years; next offered 2010-2011. C. R. Smith.

A field-oriented course designed to teach skills of bird observation and identification based on the integration of field marks, songs and calls, and habitat cues.]

NTRES 3220 Global Ecology and Management

Spring. 3 credits. Prerequisites: college-level biology and general ecology course. J. B. Yavitt.

The subjects of biogeography, ecology, and biodiversity have patterns and processes that emerge only at the global scale. Recognizing the global importance of these patterns and processes is even more imperative in light of the tremendous increase in the human population size and the effects of humans on the Earth. This course is an introduction to the field of global ecology. Topics include comparative ecology and biogeography, community ecology, island biogeography, and ramifications of global climatic change.

NTRES 3240 Ecological Management of Water Resources

Spring. 3 credits. Prerequisites: introductory ecology and introductory chemistry or permission of instructor. R. Schneider.

In-depth analysis of those ecological and biological principles relevant to the management of fresh and marine water resources, with emphasis on the effects of water management on community ecology. Lectures and discussion integrate scientific literature with current management issues. Topics include linkages between hydrologic variability and communities; groundwater-surface connections, flow paths for dispersal, patchily distributed water resources, and water quality controls on organisms.

[NTRES 3250 Forest Management and Maple Syrup Production]**NTRES 3260 Applied Conservation Ecology**

Spring. 3 credits. Prerequisite: BIOEE 2610 or permission of instructor. S. Morreale. Field and lab course designed to provide direct experience with some of the most important field methods and analytical techniques used to examine ecosystem and community function, structure, and value, especially within the context of contemporary conservation ecology and evolutionary theory. Tools include field sampling techniques, resource and conservation mapping, spatial referencing, GIS, measures of biodiversity, and manual and automated techniques for studying soil, stream, and forest biota and related physical factors.

NTRES 3300 Natural Resources Planning and Management

Fall. 3 credits. Prerequisite: junior standing. T. B. Lauber. Focuses on terrestrial and aquatic resources. Emphasizes the comprehensive planning process and human dimensions of resource management. Students integrate biological, social, and institutional dimensions of management through case studies. Grades are based on individual and group performance.

[NTRES 3311 Environmental Governance (also STS/BSOC/DSOC 3311) (SBA)]**NTRES 3320 Introduction to Ethics and Environment (KCM)**

Fall. 4 credits. J. Tantillo. Introduction to ethics, aesthetics, and epistemology as related to the environment. Asks the question "How should I live?" and explores the implications of different answers to that question for our treatment of nature. Also examines the various approaches to ethics theory; the relations between art, literature, religion, and mortality; the objective nature of value judgments; and the subjective nature of nature.

NTRES 3330 Ways of Knowing: Indigenous and Local Ecological Knowledge (also AIS 3330) (CA, SBA) (D)

Fall. 3 credits. Prerequisites: junior, senior, or graduate standing. K-A. Kassam. Based on indigenous and local "ways of knowing," this course: (1) presents a theoretical and humanistic framework from which to understand generation of ecological knowledge; (2) examines processes by which to engage indigenous and local knowledge of natural resources, the nonhuman environment, and human-environment interactions; and (3) reflects upon the relevance of this knowledge to climatic change, resource extraction, food sovereignty, and issues of sustainability and conservation.

NTRES 4100 Advanced Conservation Biology: Concepts and Techniques

Fall. 3 credits. Limited to 30 students. Prerequisite: CALS math requirement; NTRES 3100 or equivalent or permission of instructor. E. G. Cooch. A thorough analysis of the ecological and quantitative dimensions for decision making in modern conservation biology and management. Emphasis is on formal analysis of variation and maintenance of biological diversity, and will focus on principles and quantitative techniques, including

demographic viability analysis of populations, genetic analysis, and adaptive management.]

[NTRES 4110 Quantitative Ecology and Management of Fisheries Resources]

Spring. 4 credits. Prerequisites: NTRES 3130 recommended or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. P. J. Sullivan.

Examines the dynamics of marine and freshwater fisheries resources with a view toward observation, analysis, and decision making within a quantitative framework.]

[NTRES 4120 Wildlife Population Analysis: Techniques and Models]

Spring. 3 credits. Prerequisites: NTRES 3100 or 4100 (or equivalent or permission of instructor), NTRES statistics requirement. Lec/lab. Offered alternate years; next offered 2010–2011. E. Cooch.

This course will explore the theory and application of a variety of statistical estimation and modeling techniques used in the study of wildlife population dynamics.]

NTRES 4130 Biological Statistics II (also BTRY 3020, STS 3200)

Spring. 4 credits. Prerequisite: NTRES 3130 or BTRY 3010. P. Sullivan.

Applies linear statistical methods to quantitative problems addressed in biological and environmental research. Methods include linear regression, inference, model assumption evaluation, the likelihood approach, matrix formulation, generalized linear models, single-factor and multifactor analysis of variance (ANOVA), and a brief foray into nonlinear modeling. Applied analysis is carried out in the Splus statistical computing environment.

NTRES 4200 Forest Ecology

Fall. 3 credits. Prerequisite: introductory biology. T. J. Fahey.

Comprehensive analysis of the distribution, structure, and dynamics of forest ecosystems. Topics include paleoecology of forests; ecophysiology of forest trees; disturbance, succession, and community analysis; primary productivity; and nutrient cycling.

NTRES 4201 Forest Ecology Laboratory

Fall. 1 credit. Corequisite: NTRES 4200.

Weekend trip: approx. \$30. T. J. Fahey. Field trips designed to familiarize students with the nature of regional forests and to provide experience with approaches to quantifying forest composition and its relation to environmental factors. Optional weekend field trips to Adirondacks and to the White Mountains, New Hampshire. Includes group research projects in local forests.

NTRES 4220 Wetland Ecology Lecture

Fall. 3 credits. Prerequisite: BIOEE 2610. B. L. Bedford.

Examination of the structure, function, and dynamics of wetland ecosystems with an emphasis on ecological principles required to understand how human activities affect wetlands. Topics include geomorphology, hydrology, biogeochemistry, plant and animal adaptations to wetland environments, and vegetation dynamics of freshwater and saline wetlands. Biodiversity conservation, state and federal wetland regulations, and other approaches to wetland protection are considered.

NTRES 4221 Wetland Ecology Laboratory

Fall. 1 credit. Optional. Corequisite: NTRES 4220. One all-day Sat field trip required. B. L. Bedford.

Integrated set of field and laboratory exercises designed to expose students to the diversity of wetland ecosystems; the vegetation, soils, water chemistry, and hydrology of wetlands in the region; methods of sampling wetlands vegetation, soils, and water; and methods of wetland identification and delineation.

NTRES 4240 Landscape Impact Analysis

Spring. 3 credits. Prerequisites: junior, senior, or graduate standing; one introductory and one advanced course in ecology, natural resources, or soil ecology. Offered alternate years. B. L. Bedford.

Advanced course in applied ecology focusing on environmental impact analysis within the context of watersheds, landscapes, and regions rather than individual development projects. The course seeks to critically examine the different temporal and spatial scales at which human impacts operate to alter natural resources and ecosystem services. This expanded perspective forces consideration of the ways in which different components of the environment, the patterning of those components in space and time, and past and present human actions interact to produce environmental effects. Lecture topics include an introduction to the environmental impact assessment process, ecosystem functions versus ecosystem services, the problem of determining “significant” impacts, fundamental concepts of scale, defining assessment boundaries in space and time, current conceptual frameworks for impact analysis of large geographic areas, tools available on-line for impact analysis, and detailed analysis of specific case studies. Students will work in teams to develop an integrated ecological assessment of a specific, large geographic area of the Earth.

NTRES 4260 Practicum in Forest Farming as an Agroforestry System (also HORT/CSS 4260)

Fall. 2 credits. Prerequisite: junior, senior, or graduate standing or permission of instructor. K. W. Mudge, L. E. Buck, and P. Hobbs.

For description, see HORT 4260.

[NTRES 4280 Principles and Practices of Applied Wildlife Science]

Spring. 3 credits. Prerequisites: NTRES 3100 or equivalent; permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011.

The course covers the theory and practice of solving wildlife-related resource issues. Differences between basic and applied wildlife science will be discussed.]

NTRES 4300 Environmental and Natural Resources Policy Processes

Spring. 3 credits. Prerequisites: junior standing; special application process. Lec, Wash., D.C., during winter session, approx. Jan. 6–16; three two-hour orientation sessions in fall semester and four two-hour sessions in Feb. and March. Fee: approx. \$500. Completed applications due by Oct. 15. Applications available by contacting map10@cornell.edu or at

www.dnr.cornell.edu/teaching/ugrad/courses. B. A. Knuth.

Intensive field-based exploration of the environmental policy process and its conceptual framework. Defining environmental problems; aggregating interests; agenda-setting; formulating and selecting alternative solutions; implementation and evaluation stages; roles of lobbyists, legislature, executive branch, and other actors. Case studies; discussion with about 20 prominent Washington policy makers who appear as guest panelists. Self-selected research topic requires conducting independent interviews with Washington experts, policy analysis paper, and oral presentation.

[NTRES 4310 Environmental Strategies (also DSOC 4320) (SBA)]

[NTRES 4320 Human Dimensions of Natural Resource Management]

NTRES 4330 Applied Environmental Philosophy (KCM)

Spring. 3 credits. Recommended: NTRES 3320. J. Tantillo.

Special topic for 2010: Environmental justice. Focuses on environmental philosophy and environmental ethics considered as an academic field. Major themes include anthropocentrism versus non-anthropocentrism, intrinsic value, monism versus pluralism, animal rights versus environmental ethics, and various approaches to environmental ethics, including deep ecology, ecofeminism, and pragmatism.

NTRES 4340 International Conservation: Communities and the Management of the World's Natural Resources

Fall. 4 credits. Prerequisite: junior, senior, or graduate standing. Letter grades only. J. Lassoie.

This course builds an interdisciplinary understanding of the conservation and management of protected areas and fragile landscapes around the world. It uses lectures, readings, library assignments, and multi-media information, including a new Internet-based platform linking students to conservation practitioners, to examine the role of local communities in protecting biodiversity and ecosystem services. Stakeholder analyses of case studies from Africa, Latin America, Asia, and the United States explore conservation science and management issues from different geopolitical perspectives.

NTRES 4440 Resource Management and Environmental Law (also CRP 4440)

Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. S–U or letter grades. R. Booth.

For description, see CRP 4440.

NTRES 4560 Stream Ecology (also BIOEE 4560)

Fall. 4 credits. Prerequisite: BIOEE 2610 or permission of instructor. S–U or letter grades. One Sat field trip. Offered alternate years. C. Kraft and A. Flecker.

Lecture examines patterns and processes in stream ecosystems, including geomorphology and hydrology, watershed–stream interactions, trophic dynamics, biogeochemistry, disturbance, and conservation and management. Field and laboratory exercises focus on experimental and analytical

techniques used to study stream ecosystems, including techniques to measure stream discharge, physical habitat, water chemistry, and stream biota. Field project with lab papers.

NTRES 4800 Global Seminar: Building Sustainable Environments and Secure Food Systems for a Modern World (also FDSC/IARD 4800)

Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. J. Lassoie and D. Miller.

Modernization has led to development pressures that have increasingly disrupted natural systems leading to widespread concerns about the long-term viability of important environmental and ecosystem services, including those critical to food security worldwide. This interdisciplinary course uses case studies to explore interrelationships among social, economic, and environmental factors basic to sustainable development. Cases examine contemporary issues identified by participants (i.e., population growth, genetically modified foods, biodiversity, sustainable resource management, global warming, and global responsibility). Cornell faculty members lead discussions in each of the major topic areas. In addition, students participate in discussions and debates with students from Sweden, Costa Rica, Honduras, and Australia through live interactive videoconferences and electronic discussion boards.

NTRES 4940 Special Topics in Natural Resources

Fall or spring. 4 credits max. S-U or letter grades.

The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

NTRES 4960 Internship in Natural Resources

Fall or spring. Credit TBA. Prerequisite: permission of instructor (academic staff in major). S-U or letter grades. Students must register using the CALS Course Enrollment Form for Undergraduates (available in 140 Roberts Hall).

On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and the student, stating the learning objectives, conditions of the work assignment, nature of on-the-job supervision, and reporting requirements, including the formal basis on which the faculty supervisor will assign a grade. All 4960 internship courses must adhere to the CALS guidelines at <http://www.cals.cornell.edu/cals/current/student-research/internship/index.cfm>.

NTRES 4970 Individual Study in Environmental Social Science and Resource Policy

Fall, spring, or winter. Credit TBA. Prerequisite: permission of instructor. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). S. R. Broussard, T. Brown, L. E. Buck, D. J. Decker, J. Enck, K. Kassam, B. Knuth, J. Lassoie, T. B. Lauber, R. Stedman, J. Tantillo, and S. Wolf.

Individual study under faculty supervision. Topics in environmental social science resource policy are arranged depending on the interests of students and availability of staff.

NTRES 4971 Individual Study in Applied Ecology and Conservation Biology

Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). M. Bain, E. Cooch, P. Curtis, T. Gavin, M. Hare, J. R. Jackson, C. Kraft, J. Lassoie, S. Morreale, M. Richmond, L. Rudstam, C. Smith, and P. Sullivan.

Individual study under faculty supervision. Topics in applied ecology or conservation biology are arranged depending on the interests of students and availability of staff.

NTRES 4972 Individual Study in Ecosystem Science and Biochemistry

Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). B. Bedford, B. Blossy, T. Fahey, M. Krasny, R. Schneider, R. Sherman, P. Smallidge, and J. Yavitt.

Individual study under faculty supervision. Topics in ecosystem science and biogeochemistry are arranged depending on the interests of students and availability of staff.

NTRES 4980 Undergraduate Teaching in Natural Resources

Fall and spring. 1-4 credits. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S-U or letter grades.

Designed to give students an opportunity to obtain teaching experience by assisting in labs, field trips for designated sections, discussions, and grading. Students gain insight into the organization, preparation, and execution of course plans through application and discussions with instructor.

NTRES 4991 Honors Research in Natural Resources

Fall or spring. 1-6 credits, variable; may be repeated for credit. Prerequisite: enrollment in NTRES honors research program; students must register using independent study form (available in 140 Roberts Hall). NTRES Staff.

Intended for qualified students pursuing the research honors program in natural resources. Students must complete the CALS Honors program application by the third week of the fall semester of their senior year. The research supervisor should be a faculty member or senior research associate within NTRES.

NTRES 5900 Professional Projects—M.P.S.

Fall and spring. Credit TBA. Prerequisite: M.P.S. graduate students working on professional master's projects. S-U grades only.

NTRES 6000 Introduction to Graduate Study in Natural Resources

Fall. 2 credits. Prerequisite: beginning graduate students whose faculty advisors are in Natural Resources. S-U grades. C. E. Kraft.

Includes discussions of the role of science in natural resource management and conservation, with a particular focus on how scientists pursue career paths toward effective participation in this realm. Discussions focus on the practices of scientists and institutions that provide a framework for scientific endeavors.

NTRES 6010 Seminar on Selected Topics in Environmental Social Science and Resource Policy

Fall or spring. 1-4 credits. S-U grades only. Check with department for availability. Staff.

Selected readings and discussions of research and/or current issues in environmental social science and resource policy. Offering varies by semester and is subject to availability of staff.

NTRES 6040 Seminar on Selected Topics in Resource Policy and Management

Fall or spring. 1-4 credits. S-U grades only. Check with department for availability. Staff.

Special topics seminar on subjects related to resource policy and management. Offering varies by semester and is subject to availability of staff.

[NTRES 6110 Quantitative Ecology and Management of Fisheries Resources

Spring. 4 credits. Prerequisite: NTRES 3130 or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2010-2011. P. J. Sullivan.

Taught in conjunction with NTRES 4110 (see description above). Students taking the course for graduate credit are asked, in addition to the 4000-level projects and homework, to construct and document a model of population or community dynamics that reflects and extends the concepts covered in the course.]

[NTRES 6120 Wildlife Population Analysis: Techniques and Models

Spring. 3 credits. Prerequisites: NTRES 3100 (or equivalent or permission of instructor), college-level math and statistics course. Offered alternate years; next offered 2010-2011. E. Cooch.

For description, see NTRES 4120.]

NTRES 6140 Seminar on Selected Topics in Applied Ecology and Conservation Biology

Fall and spring. 1-4 credits. Prerequisite: permission of instructor. S-U grades only. Check with department for availability. Staff.

Discussion of individual research, current problems, and current literature in applied ecology and conservation biology. Offering varies by semester and subject to availability.

NTRES 6160 Seminar on Selected Topics in Ecosystem Science and Biogeochemistry

Fall or spring. 1–4 credits. Prerequisite: upper-level undergraduate or graduate standing. S–U grades only. Check with department for availability. Staff.

Reviews current literature, student research, and selected topics of interest.

NTRES 6280 Principles and Practices of Applied Wildlife Science (also NTRES 4280)

Spring. 3 credits. Prerequisites: NTRES 3100 or equivalent; permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011.

For description, see NTRES 4280. Students taking the course for graduate credit are required to participate, read supplemental materials, and complete an additional out-of-class assignment.]

NTRES 6340 International Conservation: Communities and the Management of the World's Natural Resources

Fall. 4 credits, variable. Prerequisite: graduate students; seniors by permission of instructor. Letter grades only; S–U grades by permission of instructor. J. P. Lassoie.

For description, see NTRES 4340. Students taking the course for graduate credit are required to read supplemental materials, undertake more complex assignments, and participate in a seminar discussion once a week (TBA) with the instructor and other staff members, in addition to fully participating in NTRES 4340.

NTRES 6360 Systems in the Environment

Spring. 2 credits. Prerequisite: graduate student standing. S–U grades only. M. Bain.

Ecosystems are posed as human-natural entities that can be understood, managed, and conserved. Systems theory provides principles for analyzing ecosystems and ecosystem research provides practices and methods for conservation. Both perspectives will be developed to investigate ecosystems as units of management and study. Examples will range from sand to society with an emphasis on plants and animals.

NTRES 6700 Spatial Statistics

Spring. 3 credits. Prerequisites: BTRY 6010 and 6020. Highly recommended: introductory GIS course. S–U or letter grades. Offered alternate years. P. J. Sullivan.

Develops and applies spatial statistical concepts and techniques to ecological and natural resource issues. Topics include visualizing spatial data and analysis and modeling of geostatistical, lattice, and spatial point processes. Students should consider taking this course simultaneously with CSS 6200.

NTRES 6940 Special Topics in Natural Resources

Fall or spring. 4 credits max. S–U or letter grades.

The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course

is not offered more than twice under this number.

NTRES 6960 Agroecological Perspectives for Sustainable Development (also IARD/CSS 6960)

Fall and spring. 1 credit. S–U grades only. L. Buck, L. Fisher, and S. DeGloria.

For description, see IARD 6960.

NTRES 6970 Graduate Individual Study in Natural Resources

Fall or spring. Credit TBA. Prerequisite: permission of instructor. S–U or letter grades. NTRES graduate faculty.

Study of topics in natural resources more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

NTRES 7330 Social-Cultural and Ecological Role of Diversity (D)

Spring. 3 credits. Prerequisites: seniors and graduate students. K-A. Kassam and B. Blossey.

Given the dramatic and coupled nature of environmental and social change as well as the current limitations on understanding the implications of these changes for adaptation and resilience, this research seminar explores the roles of and linkages between biological and cultural diversity. The graduate seminar will: (1) examine the concepts of biological and cultural diversity; (2) explore empirical research that elaborates upon the relationship between biological and cultural diversity; and (3) determine the relevance of these coupled concepts to issues of sustainability and conservation.

NTRES 7600 Environment and Social Transitions: Graduate Seminar in Environmental Sociology (also DSOC 7600)

Fall or spring. 3 credits. Graduate students only. C. Geisler, S. Wolf, and R. Stedman.

For description, see DSOC 7600.

NTRES 7800 Graduate Seminar in Ornithology (also BIOEE 7800)

Fall or spring. 1 credit. S–U grades only. Undergraduates must have permission of instructor. J. Dickinson, W. Koenig, I. Lovette, A. Dhondt, and D. Winkler.

Group intensive study of current research in ornithology. Topics vary from semester to semester. Course may be repeated for credit.

NTRES 7900 Graduate-Level Thesis Research

Fall and spring. Credit TBA. Prerequisite: Ph.D. students **before** “A” exam has been passed. S–U grades only.

NTRES 8900 Master's Thesis Research

Fall and spring. Credit TBA. Prerequisite: graduate students working on master's thesis research. S–U grades only.

NTRES 9900 Doctoral-Level Thesis Research

Fall and spring. Credit TBA. Prerequisite: Ph.D. candidates **after** “A” exam has been passed. S–U grades only.

Related Courses in Other Departments

Courses in many other departments are relevant to students majoring in natural resources. The following list includes some of the most closely related courses but is not exhaustive.

Ecology and Biology (ENTOM 4550, 4700; BIOEE 2610, 2630, 2740, 2780, 3630, 4500, 4570, 4620, 4660, 4690, 4700, 4730, 4750, 4760, 4780; BIOMI 2900–2920, 3970, 4180; BIONB 2210, 2220; BIOPL 2410, 2470, 2480, 3420, 4480; CSS 4660, 4720; EAS 1540, 2200, 3010, 3030, 3500, 3510, 4400)

Environment and Society (DSOC 2010, 3240, 3400, 4100)

Environmental Law, Ethics, and Philosophy (STS 2061, CRP 3840, 4440, 4510, PHIL 2410, 2460, 3810)

Human Systems and Communication (COMM 2850, 3520, 4210, 4560, 4660; ENTOM 3350; CRP 3840)

Physical Sciences (BEE 1510, 2510, 3710, 4010, 4270, 4350, 4710, 4730, 4750; CSS 2600, 3650, 3720, 3970, 4110, 4200, 4830; EAS 1101, 1540, 3050; CEE 4320, 4510)

Public Policy and Politics (GOVT 2947, 3071, 3131, 4281; BSOC 4616)

Resource Economics (AEM 2500, 4310, 4500, 4510)

Spatial Data Interpretation (CSS 4110, 4200, 4650, 6200, 6600; DSOC 3140)

PLANT BREEDING AND GENETICS

T. Brutnell, E. S. Buckler, W. R. Coffman, W. De Jong, J. J. Doyle, E. D. Earle, V. Gracen, P. Gregory, O. Hoekenga, M. M. Jahn, J. L. Jannink, A. F. Krattiger, S. Kresovich, D. Matthews, L. Li, S. R. McCouch, M. A. Mutschler, R. J. Nelson, W. Pawlowski, K. V. Raman, T. L. Setter, F. Shotkoski, M. E. Smith, M. E. Sorrells, S. D. Tanksley, D. R. Viands. Emeritus: R. E. Anderson, H. M. Munger, R. P. Murphy, W. D. Pardee, R. L. Plaisted

PLBR 2010 Plants, Genes, and Global Food Production

Fall. 3 credits. May be used for partial fulfillment of CALS distribution requirement Physical and Life Sciences.

Prerequisite: one year introductory biology or permission of instructor. S. McCouch.

Introduction to plant breeding; offers a sense of the importance of the field, tracing its evolution from the pre-scientific days of crop domestication to modern applications of biotechnology. Offers examples of how breeding objectives are realized and raises questions about the environmental, social, and economic consequences of intensive food production systems. Emphasizes the connection between the genetics of plants, modern scientific research, and the potential to respond to the growing human demand for food, fiber, fuel, and environmental sustainability.

PLBR 2250 Plant Genetics

Spring. 3 or 4 credits; 2 credits if taken after BIOGD 2810. Prerequisites: one year of introductory biology or equivalent; permission of instructor for students who have taken BIOGD 2810. Staff.

Surveys the fundamentals of plant genetics and shows how this information is used in plant biology and allied agricultural sciences

and provides a basis for understanding the complex issues related to modern crop genetics. Topics include simple inheritance; linkage analysis; polyploidy; analysis of nuclear, chloroplast and mitochondrial genomes; pollination controls; and methods for analysis and manipulation of genes, chromosomes, and whole genomes. Examples and materials are drawn from diverse crops and plant species.

PLBR 2990 Introduction to Research Methods in Plant Breeding and Genetics

Fall, spring, or summer. 1-3 credits, variable. S-U grades only. Staff. Intended for students who are new to undergraduate research. Students may be reading scientific literature, learning research techniques, or assisting with ongoing research. Students must identify a faculty supervisor who determines the work goals and the form of the final report.

PLBR 4010 Plant Cell and Tissue Culture (also HORT 4030)

Fall. 3 credits. Prerequisite: plant biology or genetics course or permission of instructor. E. D. Earle. Provides broad coverage of techniques of plant tissue, cell, protoplast, embryo, and anther culture and the applications of those techniques to biological and agricultural studies. Examples include horticultural, agronomic, and endangered species. Genetic modification of plants via gene transfer and other manipulations of cultured cells is a major topic.

PLBR 4011 Plant Tissue Culture Laboratory (also HORT 4040)

Fall. 1 credit. Limited enrollment. Pre- or corequisite: PLBR 4010 or permission of instructor. S-U or letter grades. E. D. Earle. Provides hands-on experience in plant tissue culture and complements PLBR 4010. Lab work includes cell, tissue and organ culture techniques related to plant propagation, germplasm storage, and genetic manipulations. Experiments use a broad range of plant materials and include protoplast culture and *Agrobacterium*-mediated gene transfer.

PLBR 4030 Genetic Improvement of Crop Plants

Fall. 3 credits. Prerequisites: BIOGD 2810, PLBR 2250, or other standard genetics course and course in crops or horticulture. V. Gracen. Genetic enhancement of crop value to humans began with domestication and continues with farmers' variety development and scientifically trained plant breeders' applications of Mendelian, quantitative, and molecular genetics. This course examines crop genetic improvement methods by discussing the history and current practice of plant breeding, tools available to breeders, choices and modifications of those tools to meet specific objectives, and challenges plant breeders face in developing varieties for the future.

PLBR 4040 Crop Evolution, Domestication, and Diversity (also BIOPL/IARD 4040)

Fall. 2 credits. Prerequisite: BIOGD 2810 or PLBR 2250 or permission of instructor. S-U or letter grades. S. Kresovich.

Evolution, domestication, and breeding of crop plants have affected the current diversity we conserve and use. Based on advances in genetics, systematics, and crop improvement, this course presents an integrated approach to understanding and describing diversity of agricultural and horticultural species. Also addressed are underlying ethical, legal, and social issues affecting crop conservation and use.

PLBR 4050 Patents, Plants, and Profits: Intellectual Property Management for Scientists and Entrepreneurs (also IARD 4050)

Spring, eight weeks. 3 credits. Prerequisite: senior or graduate standing. S-U or letter grades. A. F. Krattiger and S. Kowalski. Covers statutory protection (copyright, trademarks, patents, plant variety protection), contracts (from material transfer to licensing), management of IP (e.g., freedom-to-operate, valuation, genetic resources, trade, and marketing), and negotiation. Emphasizes technology transfer and international aspects. The course is particularly relevant to students interested in science management, technology transfer, international agriculture, and business.

PLBR 4060 Methods of Plant Breeding Laboratory

Fall. 2 credits. Pre- or corequisite: PLBR 4030 or equivalent. S-U or letter grades. M. E. Sorrells. Field trips to plant breeding programs involve discussion of breeding methods used, overall goals, selection and screening techniques, and variety and germplasm release. Additional labs include selection techniques for various traits, intellectual property issues, genetically modified crops, and international agriculture. For a term project, each student designs a comprehensive breeding program on a chosen crop.

PLBR 4070 Nutritional Quality Improvement of Food Crops

Spring. 1 credit. Prerequisite: one year introductory biology or permission of instructors. S-U or letter grades. L. Li, L. Kochian, and R. Welch. Introduction to biofortification of crop plants for enhancing their nutritional quality and health-promoting properties. The course discusses strategies to increase the contents of micronutrients, vitamins, phytochemicals, as well as the qualities of proteins and lipids with regard to improving food crops for human nutrition and health.

PLBR 4075 Evolution of Plant Breeding and Genetics

Spring. 2 credits. Prerequisite: permission of instructors. Letter grades only. O. Hoekenga and T. Brutnell. We will discuss seminal research papers that advanced the fields of basic and applied plant genetics. We will juxtapose the original discovery with a recent report that speaks to our present understanding of the same phenomenon. Participation in discussion, a presentation, and end of term paper will determine the grade.

PLBR 4080 QTL Analysis: Mapping Genotype to Phenotype in Practice

Spring. 1 credit. Prerequisite: BTRY 6010 or 4070 or permission of instructor. J. L. Jannink and E. Buckler. Discussion of mating designs and populations as well as statistical models to identify genetic

loci that affect the phenotype and to predict breeding and genotypic value using DNA polymorphisms. Practical application to real datasets.

PLBR 4460 Plant Cytogenetics Laboratory

Spring, two-week module. 1 credit. Prerequisite: genetics course or permission of instructor. Check with department for further information. S-U grades only. W. Pawlowski. Aims to provide fundamental knowledge and techniques in plant cytogenetics. Emphasizes applications to research on plant genetics and plant breeding. Plant materials involve a wide range of crop species. Covers basic techniques for examination of plant chromosomes.

PLBR 4826 Plant Biotechnology (also BIOPL 4826)

Spring. 1 credit. Prerequisite: BIOPL 4831 or permission of instructor. S-U or letter grades. 12 lec. E. D. Earle. Current and proposed use of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, or have improved nutritional or processing characteristics. Other topics are use of transgenic plants for production of valuable products and for environmental remediation. Biosafety, social, legal, and international issues relating to plant biotechnology are discussed.

PLBR 4831 Concepts and Techniques in Plant Molecular Biology (also BIOGD/BIOPL/PLPA 4831)

Fall, eight weeks. 2 credits. Prerequisites: see BIOPL 4830. S-U or letter grades. Two lec and one day of disc per week. M. Hanson, T. Owens, and M. Scanlon. For description, see BIOPL 4831.

PLBR 4832 Proteomics and Protein Mass Spectrometry in Biology (also BIOPL/PLPA 4832)

Fall. 1 credit. Prerequisites: BIOGD 2810, BIOBM 3300 or 3320, or equivalent. Recommended: BIOBM 3310. S-U or letter grades. Offered alternate years. K. van Wijk. For description, see BIOPL 4832.

[PLBR 4833 Plant Genome Organization (also BIOPL 4833)]

PLBR 4835 Molecular Breeding (also BIOPL 4835)

Fall. 1 credit. S-U or letter grades. Offered alternate years. S. Tanksley. For description, see BIOPL 4835.

PLBR 4940 Special Topics in Plant Breeding

Fall or spring. 4 credits max. S-U or letter grades. The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PLBR 4960 Internship in Plant Breeding

Fall or spring. Variable credit; may be repeated to max. of 6; minimum 60 on-the-job hours per credit granted. Prerequisites: junior or senior in plant breeding; minimum GPA of 3.0 in plant breeding courses; permission of advisor and enrollment during pre-enrollment period of semester before internship. S–U grades only. Students must attach to their course enrollment materials a CALS independent study, research, teaching, or internship form signed by faculty member who will supervise study and assign credits and grade. Staff.

On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and student, stating the conditions of the work assignment, supervision, and reporting. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

PLBR 4970 Individual Study in Plant Breeding

Fall or spring. Variable credit; may be repeated to max. of 6. Prerequisite: permission of instructor. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff.

PLBR 4980 Undergraduate Teaching

Fall or spring. Variable credit; may be repeated to max. of 6. Prerequisites: permission of instructor and previous enrollment in course to be taught or equivalent. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff. Undergraduate teaching assistance in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

PLBR 4990 Undergraduate Research

Fall or spring. Variable credit. Prerequisite: permission of instructor. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff.

Undergraduate research projects in plant breeding.

PLBR 6060 Advanced Plant Genetics

Spring. 3 credits. Prerequisites: BIOGD 2810 or equivalent and permission of instructor. S–U or letter grades. W. Pawlowski.

Advanced survey of genetics in higher plants including selected topics in transmission genetics, epigenetics, and chromosome biology. Emphasizes development of critical analytical skills through reading of current literature and a class project.

[PLBR 6180 Breeding for Pest Resistance (also HORT 6180)]**PLBR 6220 Seminar**

Fall or spring. 1 credit. S–U grades only. Staff, graduate students, and visitors.

PLBR 6500 Special Problems in Research and Teaching

Fall or spring. 1 or more credits. Prerequisite: permission of instructor supervising research or teaching. Staff.

PLBR 6940 Special Topics in Plant Breeding

Fall or spring. 4 credits max. S–U or letter grades.

The department teaches “trial” courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

[PLBR 7160 Perspectives in Plant Breeding Strategies]**PLBR 7170 Quantitative Genetics in Plant Breeding**

Spring. 3 credits. Prerequisites: PLBR 4030 and BTRY 6010 or equivalent. Letter grades only. Offered even-numbered years. D. R. Viands.

Discussion of quantitative genetics for more effective plant breeding. Specific topics include population genetics, linkage, components of variance (estimated from various mating designs); heritability; theoretical gain from selection; and genotypic and phenotypic correlation coefficients. During one period, plants in the greenhouse are evaluated to provide data for computing quantitative genetic parameters.

PLBR 7900 Graduate-Level Dissertation

Fall or spring. Variable credit. Prerequisite: doctoral students who have not passed “A” exam; permission of instructor. S–U grades. Graduate faculty.

PLBR 8900 Master’s-Level Thesis Research

Fall or spring. Variable credit. Prerequisite: master’s candidates; permission of instructor. S–U grades. Graduate faculty. For students working on a master’s thesis.

PLBR 9900 Doctoral-Level Dissertation Research

Fall or spring. Variable credit. Prerequisite: doctoral students who have passed “A” exam; permission of instructor. S–U grades. Graduate faculty. For students admitted to candidacy **after** “A” exam has been passed.

PLANT PATHOLOGY AND PLANT-MICROBE BIOLOGY

G. W. Hudler, chair (331 Plant Science Bldg., 255-7848); S. V. Beer, G. C. Bergstrom, S. Cartinour, A. R. Collmer, W. E. Fry, S. M. Gray, K. T. Hodge, S. G. Lazarowitz, K. Lee, J. W. Lorbeer, R. Loria, G. B. Martin, M. T. McGrath, M. G. Milgroom, E. B. Nelson, R. J. Nelson, T. Pawlowska, K. L. Perry, B. G. Turgeon, X. Wang, T. A. Zitter

PLPA 1100 Symbiotic Associations in Nature

Fall or spring. 3 credits. Letter grades only. E. B. Nelson.

This course is a Freshman Writing Seminar where students will explore symbiotic biology and the nature of science and written scientific communication through discussions of a broad range of symbiotic relationships. Students will be exposed to a broad range of writing styles in scientific communication. Students will gain experience writing in a number of styles common in the biological

sciences. Additionally, students will learn to use evidentiary and inferential reasoning, articulate their thoughts and ideas through writing, make logical and systematic arguments, learn to revise their own writing, and effectively critique others’ writing content, organization, and style.

PLPA 1200 Evolution: Evaluating the Public Debate

Fall or spring. 3 credits. Letter grades only. R. Loria.

Though we live in a world infused with science and technology, most of the general public and a significant number of Cornell students do not believe in evolution. Evolution, the theory that organisms are connected by genealogy and change over time, is well supported and accepted as true by the scientific community. Nevertheless, there is an emotional debate outside scientific circles about the legitimacy of evolution as an explanation for the diversity of life on earth, and the existence of humans in particular. Readings will include books and articles that address the evidence for evolution. We will also analyze the writings of proponents of “Intelligent Design” and study descriptions of the controversy in the popular press, both current and historical.

PLPA 2010–2015 Magical Mushrooms, Mischievous Molds

Spring. 2 or 3 credits. S–U or letter grades. G. W. Hudler and B. G. Turgeon.

The Department of Plant Pathology and Plant-Microbe Biology offers several course options for students who want to learn about the kingdom FUNGI. All three courses (PLPA 2010, 2013, and 2015) have the same two-lecture-per-week core, and students wanting only the core should enroll in PLPA 2010 for 2 credits. Students interested in additional exposure to the FUNGI can enroll in PLPA 2013 or 2015 (each for 3 credits). See individual course descriptions below for more detail.

PLPA 2010 Magical Mushrooms, Mischievous Molds

Spring. 2 credits. S–U or letter grades. G. W. Hudler.

Presentation of the fungi and their roles in nature and in shaping past and present civilizations. Emphasizes the historical and practical significance of fungi as decayers of organic matter, as pathogens of plants and animals, as food, and as sources of mind-altering chemicals.

PLPA 2013 Mushrooms, Molds, and More

Spring. 3 credits. Fulfills 3 credits of introductory biology for non-life science majors. Limited to 24 students per sec.

Letter grades only. G. W. Hudler. Lectures and exams for this course are the same as those in PLPA 2010. However, students in PLPA 2013 will also participate in a weekly 55-minute discussion section where they will grow mushrooms and other fungi in culture, learn about contemporary classification of fungi, see examples of major taxa growing on natural substrates, and determine whether suspect pathogens really can kill agricultural crops. Students also teach their peers about the fungus world with presentations of their own creation. (CALS non-life science majors can receive college physical/life science distribution credits upon completion of this course but they must register for a letter grade.)

PLPA 2015 Mushrooms, Molds, and Molecules

Spring. 3 credits. Fulfills 3 credits of introductory biology for non-life science majors. Limited to 30 students per sec. Letter grades only. B. G. Turgeon.

Lectures and exams for this course are the same as those in PLPA 2010. However, students in PLPA 2015 will also participate in a weekly 55-minute discussion section to provide more in-depth exposure to some of the issues raised in 2010 lecture. Experts will emphasize that fungi produce myriads of molecules that are beneficial to other organisms (e.g., antibiotics, immunosuppressants, biocontrol agents) or to themselves (e.g., for development, reproduction, nutrient gathering, stress reduction), or detrimental to other organisms (e.g., toxins, poisons, allergens, hallucinogens). (CALS non-life science majors can receive college physical/life science distribution credits upon completion of this course but they must register for a letter grade.)

PLPA 3010 Biology and Management of Plant Diseases

Fall. 4 credits. Prerequisite: one year of biology. Letter grades only. W. E. Fry.

Introduction to the biology of the pathogens that cause plant diseases, and the diagnosis and management of plant diseases. Topics include the biology of bacteria, fungi, oomycetes, viruses, and nematodes; disease cycles, plant disease epidemiology, and the principles and practices of plant disease management. Intended for students who want a practical knowledge of plant diseases and their control, as well as for students preparing for advanced courses in plant pathology and plant-microbe biology.

[PLPA 3090 Fungi

Fall. 3 credits. Prerequisite: one year of biology. Recommended: concurrent enrollment in PLPA 3190. S-U or letter grades. K. T. Hodge.

A thorough introduction to the astounding kingdom of fungi, including mushrooms, molds, yeasts, athlete's foot, histoplasmosis, and the blue stuff in blue cheese. We cover fungal biodiversity, how fungi work, and their roles in the environment and in human affairs. Students work with living and preserved fungi and learn basic lab and identification skills.]

PLPA 3190 Mushrooms of Field and Forest

Fall, weeks 1-8. 2 credits. Letter grades only. K. T. Hodge.

Students learn to identify mushrooms and other macrofungi on a series of eight field trips to local forests. Mushrooms are collected during afternoon lab field trips. During the evening labs, students use keys and microscopes to identify mushrooms they've collected, and brief lectures introduce fungal ecology and diversity. Students must attend both lab times.

PLPA 3290 Medical and Veterinary Mycology (also VETMI 3290)

Spring. 2 credits. Prerequisite: introductory biology. Letter grades only. K. T. Hodge.

Introduction to fungi that cause human and animal disease. Lectures introduce topics including important fungi and the diseases they cause, which range from athlete's foot to equine guttural pouch aspergillosis. We cover the ecology and epidemiology of animal

pathogenic fungi, mycotoxins, mushroom poisoning, disease management, and clinical diagnosis.

[PLPA 3940 Circadian Rhythms (also ENTOM/BIOGD/BIONB 3940)

Fall. 2 credits; optional 3rd-credit lab.

Prerequisite: 2000-level biology. S-U or letter grades. K. Lee.

Explores a fundamental feature of living organisms from all kingdoms: how the cellular 24-hour biological clock operates and influences biological activities. Covers fundamental properties of biological rhythms and cellular and molecular structure of circadian oscillators in many organisms including cyanobacteria, fungi, insects, plants, reptiles, birds, and mammals (including humans.)

PLPA 4090 Principles of Virology (also VETMI/BIOMI 4090)

Fall. 3 credits. Prerequisites: BIOMI 2900, 2910 or permission of instructor.

Recommended: BIOBM 3300-3320, 4320.

Letter grades only. S. G. Lazarowitz, J. S. L. Parker, and N. Osterrieder.

For description, see VETMI 4090.

PLPA 4161 Microbes and Food: Contemporary Issues Affecting Humanity

Spring. 4 credits. Prerequisite: senior standing. S-U or letter grades. S. Beer.

Addresses the all-encompassing role that microbes play in contemporary life. How do microbes affect food production, processing, preservation, safety, and waste disposal? Assesses the role of microbes in industrial and environmental processing. Deals with origins of agriculture, GMOs, and high-input versus sustainable food production. Intense seminar/discussion format.

PLPA 4190 Agricultural Application of Plant Disease Concepts

Fall. 2 credits. Eight sessions. Prerequisite: PLPA 3010 and permission of instructor.

S-U or letter grades. H. S. Aldwinckle and B. Nault.

Addresses real-world problems in plant pathology and entomology through the application of research. Students tour fields of diverse fruit and vegetable field crops, a nursery, forests, and a golf course that have been impacted by diseases and arthropod pests. Strategies for managing diseases and pests based on research and the interface between Research and Extension are emphasized. **This course is taught at Geneva. Free transportation available.**

PLPA 4200 Grape Pest Management (also ENTOM/VIEN 4200)

Fall. 3 credits. Prerequisite: PLPA 3010, ENTOM 2410, or permission of instructors.

S-U or letter grades. W. Wilcox, G. Loeb, and A. Landers.

The course emphasizes general integrated pest management concepts, the biology and specific management practices pertaining to the major diseases and arthropod pests of grapes, and modern spray application technologies. Laboratories emphasize field illustrations of classroom concepts. Team taught by a plant pathologist, entomologist, and agricultural engineer.

PLPA 4330 Ecology of Infectious Diseases

Fall. 3 credits. Prerequisites: at least two semesters of introductory biology or equivalent. Letter grades only. E. Nelson. Introduction to the ecology of plant, animal, and human diseases. The course will emphasize a science-based approach for understanding the nature of disease development, the behavior of infectious agents and hosts, the ecological principles influencing disease emergence, transmission, and resurgence, and the general approaches to disease prediction, detection, and management.

[PLPA 4430 Pathology of Trees and Shrubs

Fall. 4 credits. Limited to 30 students.

Prerequisites: PLPA 3010 or equivalent.

S-U or letter grades. Offered even-

numbered years; next offered 2010-2011.

G. W. Hudler.

For students preparing for careers in horticulture, urban forestry, natural resources, and pest management. Deals with identification, impact, assessment, biology, and management of insects and diseases that damage trees and shrubs. Emphasizes pests of northeastern flora but examples from other parts of the country and the world are also used. Considers forest, shade, and ornamental plants.]

PLPA 4480 Evolution and Ecology of Symbiotic Associations (also BIOMI 4480)

Spring. 2 credits. Prerequisites: BIOG 1101-1102 or equivalent. Letter grades only. T. Pawlowska.

Symbiosis, a living together of two organisms in close associations, encompasses a spectrum of interactions ranging from mutually detrimental to mutually beneficial. We will focus on a selection of ecologically important symbiotic interactions, consider their evolutionary origins, and explore conditions that would favor their establishment and maintenance.

PLPA 4821-4822 Molecular Plant-Pathogen Interactions I and II (also BIOPL 4821-4822)

Spring, 4 weeks. 1 credit. Prerequisites: BIOGD 2810, BIOBM 3300 or 3310, and BIOPL 4831. A. R. Collmer and

B. G. Turgeon (odd years); S. G. Lazarowitz and G. B. Martin (even years).

Examines the molecular and cellular factors that control pathogen-plant interactions from the perspectives of pathogen biology and plant responses to pathogen infection. Beginning spring 2004, alternate years will focus on (1) plant perception of microbial pathogens and the interplay of plant defenses and pathogen counterstrategies that result in resistance or susceptibility to disease production, with topics including the genetic nature of dominant and recessive resistance, induction of pathogen defense genes, apoptotic responses that limit infection, and RNA interference; and (2) the genetic and molecular mechanisms of microbial pathogenesis, with an emphasis on fungal and bacterial virulence proteins, toxins, and their deployment systems.

PLPA 4823 Molecular Plant-Microbe Interactions (also BIOPL/BIOIM 4823)

Spring, weeks 1–4. 1 credit. Prerequisites: BIOGD 2810, BIOBM 3300 or 3310 or 3330, and BIOPL 483.1 or equivalents. S–U or letter grades. Offered even-numbered years. S. C. Winans.

For description, see BIOPL 4823.

PLPA 4831 Plant Molecular Biology I—Concepts and Techniques in Plant Molecular Biology (also BIOGD/BIOPL/PLBR 4831)

Fall, weeks 1–4. 2 credits. Prerequisites: BIOGD 2810, BIOBM 3300, or 3310. S–U or letter grades. M. Hanson, T. Owens, and M. Scanlon.

For description, see BIOPL 4831.

PLPA 4832 Proteomics and Protein Mass Spectrometry in Biology (also BIOPL/PLBR 4832)

Fall. 1 credit. Prerequisites: BIOGD 2810, BIOBM 3300 or 3320, or equivalent. Recommended: BIOBM 3310. S–U or letter grades. Offered alternate years. K. van Wijk.

For description, see BIOPL 4832.

PLPA 4940 Undergraduate Special Topics in Plant Pathology and Plant-Microbe Biology

Fall or spring. 4 credits max. S–U or letter grades. Staff.

The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PLPA 4970 Independent Study in Plant Pathology and Plant-Microbe Biology

Fall or spring. 1–5 credits. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).

An opportunity for independent study of a special topic in mycology or plant pathology under the direction of a faculty member.

PLPA 4980 Undergraduate Teaching Experience

Fall or spring. 1–5 credits. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).

Undergraduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor.

PLPA 4990 Undergraduate Research

Fall or spring. 3–5 credits. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).

Opportunity for research experience under the direction of a faculty member.

PLPA 6010 Concepts of Plant Pathology and Plant-Microbe Biology

Spring. 3 credits. Prerequisite: PLPA 3010 or equivalent. S–U or letter grades. A. R. Collmer.

Concepts in plant-pathogen relationships uniting molecular and population biology approaches, with emphases on molecular/cellular investigations of model pathosystems and population biology studies integrating

host-pathogen evolution, genetics, and ecology. The discussion section is used for examining current research literature and other exercises complementary to lecture topics; emphasis is on critical thinking in science. Students prepare and review mock grant proposals.

PLPA 6020 Biology of Plant Pathogens

Spring. 3 credits. Prerequisite: PLPA 3010. S–U or letter grades. K. L. Perry and M. M. Milgroom.

Biology and ecology of four major groups of plant pathogens: fungi, bacteria, viruses, and oomycetes. Model plant pathogens are used to illustrate concepts of pathogen diversity, evolution, reproduction, life cycles, movement, diagnosis, and control. Lecture and laboratory topics are coordinated with PLPA 6010 to provide students with a comprehensive treatment of pathogen–host interactions at all levels from molecular to ecological. Laboratory periods are used for hands-on demonstration of pathogen diagnosis and manipulation or to discuss current literature relevant to lecture topics.

[PLPA 6080 Genomics of Bacterium–Host Interactions (also BIOIM 6080)]

Fall, weeks 2–5. 1 credit. Prerequisite: BIOIM 2900 or equivalent or permission of instructor. S–U or letter grades. Offered even-numbered years; next offered 2010–2011. A. Collmer, S. C. Winans, and D. Schneider.

Introduction to genomic approaches, tools, and discoveries involving the study of bacterial interactions with plant and animal hosts. Topics include the TIGR Comprehensive Microbial Resource and Artemis tools, the pathogens *Yersinia pestis*, *V. enterocolitica*, *Pseudomonas syringae*, *Ralstonia solanacearum*, and *Agrobacterium tumefaciens*, and the symbiont *Simorhizobium meliloti*.

[PLPA 6380 Filamentous Fungal Genomics and Development (also BIOGD 6380)]

Spring, weeks 9–12. 1 credit. Prerequisite: BIOGD 2810 or equivalent. S–U or letter grades. Offered odd-numbered years; next offered 2010–2011. B. G. Turgeon.

Molecular genetic and genomic approaches to the study of fungal biology. Applications of contemporary methodology to genetic dissection of developmental processes, such as pathogenesis and reproduction, are described and experimental data are evaluated. Examples are chosen from investigations of model plant pathogenic fungi such as *Cochliobolus heterostrophus*, *Fusarium graminearum*, *Magnaporthe grisea*, and *Ustilago maydis* and from well-known genetic models such as *Aspergillus nidulans* and *Neurospora crassa*.

PLPA 6420 Pathogen Population Biology

Fall. Prerequisite: permission of instructor. S–U grades only. M. G. Milgroom.

Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PLPA 6440 Current Topics in Oomycete Biology

Fall. Prerequisite: permission of instructor. S–U grades only. E. B. Nelson.

Weekly discussions of current topics in special areas of plant pathology and

mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PLPA 6450 Plant Virology

Fall. Prerequisite: permission of instructor. S–U grades only. S. M. Gray.

Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PLPA 6490 Fungal Biology

Spring. 1 credit. Recommended: some background in mycology or plant pathology. S–U grades only. K. T. Hodge and B. G. Turgeon.

Weekly meeting to discuss current scientific articles on the biology of fungi. Primarily directed at graduate students, but undergraduates, postdocs, staff, and guests who have an interest in fungi are welcome.

PLPA 6500 Diseases of Vegetable Crops

Fall. 1 credit. Prerequisite: permission of instructor. S–U grades only. J. W. Lorbeer and T. A. Zitter.

Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PLPA 6520 Field Crop Pathology

Spring. 1 credit. Prerequisite: permission of instructor. S–U grades only. W. G. C. Bergstrom.

Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PLPA 6600 Special Topics in Plant Disease Management

Fall and spring. 1 credit. S–U grades only. C. D. Smart.

Weekly discussions of current topics in plant disease management. These include not only management practices, but also factors that influence management strategies. Students are required to read current literature and present oral reports on a topic. **Offered only at the Geneva campus. Students provide their own transportation.**

PLPA 6610 Diagnostic Lab Experience

Fall and spring. 1 or 2 credits. Priority given to graduate students in plant pathology and plant protection. Recommended: course work or experience in diagnostic techniques. S–U grades only. Requires 3 hours per week per credit hour. T. A. Zitter.

For graduate students and advanced undergraduates with a special interest in diagnosing plant diseases. Students work in the Diagnostic Laboratory (plant pathology department) under supervision of the diagnostician.

PLPA 6810 Plant Pathology and Plant-Microbe Biology Seminar

Fall and spring. 1 credit. Requirement for all plant pathology and plant-microbe biology majors. S–U grades only. B. G. Turgeon.

PLPA 6820 Graduate Student Research Updates

Spring and fall. 1 credit. Requirement for all plant pathology and plant-microbe biology graduate students. S-U grades only. S. Cartinhour and H. Aldwinckle. Weekly graduate student seminar series. Guests with an interest in plant pathology research are welcome to attend. Classes meet simultaneously in Geneva and Ithaca and are linked by teleconference.

PLPA 6940 Graduate Special Topics in Plant Pathology and Plant-Microbe Biology

Fall or spring. 4 credits max. S-U or letter grades. Staff. The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PLPA 7880 Research in Molecular Plant Pathology

Fall and spring. 2, 4, or 6 credits. Prerequisite: permission of instructor before beginning research. S-U grades only. S. V. Beer. Guided research experiences in laboratories addressing questions concerning the interaction of pathogens (bacteria, fungi, viruses) and plants at the molecular level. Intended for beginning graduate students with a concentration in molecular plant pathology and sufficient theoretical background and practical laboratory experience. Students submit plans and reports on each research experience.

PLPA 7970 Special Topics Independent Study

Fall or spring. 1-5 credits. S-U or letter grades. Staff. Opportunity for independent study of a special topic.

PLPA 7980 Graduate Teaching Experience

Fall or spring. 1-5 credits. S-U grades. Staff. Graduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor. This experience may include, but is not limited to, preparing, assisting in, and teaching laboratories, preparing and delivering lectures, leading discussion sessions, and tutoring.

PLPA 7990 Graduate-Level Thesis Research

Fall or spring. Credit TBA. S-U or letter grades. Prerequisite: permission of advisor. Graduate faculty. For Ph.D. students who have not passed "A" exam.

PLPA 8900 Master's-Level Thesis Research

Fall or spring. Credit TBA. S-U or letter grades. Prerequisite: permission of advisor. Graduate faculty. For students working on a master's degree.

PLPA 9900 Doctoral-Level Thesis Research

Fall or spring. Credit TBA. S-U or letter grades. Prerequisite: permission of advisor. Graduate faculty. For Ph.D. candidates who have passed "A" exam.

SCIENCE OF NATURAL AND ENVIRONMENTAL SYSTEMS

B. Chabot, S. J. Colucci, J. Conrad, A. DiTommaso, L. Drinkwater, J. Elliot, G. W. Evans, T. J. Fahey, A. S. Flecker, C. C. Geisler, C. Goodale, C. J. Lehmann, E. L. Madsen, I. Merwin, E. B. Nelson, M. J. Pfeffer, G. P. Poe, J. Regenstein, S. J. Riha, C. W. Scherer, R. Schneider, W. D. Schulze, N. R. Scott, J. Thies, P. J. Trowbridge, M. F. Walter, M. T. Walter, D. W. Wolfe, J. B. Yavitt

SNES 1101 Intro to the Science and Management of Environmental and Natural Resources (also NTRES 1101)

Fall. 3 credits. Prerequisite: first-year students in Natural Resources, Science of Natural and Environment Systems, or other Environmental Undecided majors in CALS. J. Yavitt and E. Madsen. For description, see NTRES 1101.

SNES 2000 Environmental Sciences Colloquium

Fall. 1 credit. S-U grades only. S. Riha and J. Lehmann. This colloquium consists of a series of lectures on an annually changing theme central to the Environmental Sciences, which poses biophysical, economic, and political challenges to modern society. Participants will become familiar with contemporary issues of environmental degradation and opportunities for their mitigation. The colloquium is mandatory for SNES majors and is open to the public.

SNES 4960 Internships in Environmental Science

Fall, spring, summer. 1 credit; may be repeated once for a total of 2 credits. S-U grades only. Student internships involving on- or off-campus supervised, structured work experience. Member of SNES faculty must serve as mentor and complete the term grade report. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

SNES 4970 Individual Studies in Environmental Sciences

Fall, spring, or summer. 1-6 credits, variable. S-U or letter grades. Individual studies are arranged under the supervision of one or several SNES faculty members. They provide opportunity to design a course that fills the need of an individual student and addresses pertinent issues in the environmental sciences.

STATISTICAL SCIENCE

The university-wide Department of Statistical Science coordinates undergraduate and graduate study in statistics and probability. A list of suitable courses can be found in the CIS section of this catalog.

VITICULTURE AND ENOLOGY

T. E. Acree, K. Arnink, T. Bates, P. Cousins, M. Goffinet, A. N. Lakso, A. Landers, G. English-Loeb, A. K. Mansfield, I. A. Merwin, R. Mira de Orduña, C. Owens, B. I. Reisch, G. Sacks, K. Siebert, J. Vanden Heuvel, W. Wilcox

VIEN 1104 Introduction to Wines and Vines (also FDSC/HORT 1104)

Spring. 3 credits. Lec (VIEN 1104) and lab (VIEN 1105) required for Viticulture and Enology majors. Letter grades only. K. Arnink and I. Merwin. For description, see FDSC 1104.

VIEN 1105 Lab/Field Practice in Wines and Vines (also FDSC/HORT 1105)

Spring. 1 credit. Limited to 30 students. Priority given to Viticulture and Enology majors. Prerequisite: concurrent or previous enrollment in VIEN 1104. Letter grades only. K. Arnink and I. Merwin. For description, see FDSC 1105.

VIEN 2400 Wines and Grapes: Composition and Analysis (also FDSC 2400)

Fall. 2 credits. Prerequisite: one semester of chemistry. Preference given to Enology and Viticulture and Food Science majors. Letter grades only. G. Sacks. For description, see FDSC 2400.

VIEN 3400 Microbiology and Technology of Winemaking (also FDSC 3400)

Fall. 3 credits. Prerequisite: introductory microbiology or permission of instructor. Priority given to Viticulture and Enology majors for whom lab is required. Letter grades only. K. Arnink. For description, see FDSC 3400.

VIEN 3410 Microbiology and Technology of Winemaking: Lab (also FDSC 3410)

Fall. 1 credit. Limited to 20 students; preference given to Viticulture and Enology majors. Prerequisite: permission of instructor. Letter grades only. K. Arnink. For description, see FDSC 3410.

VIEN 4200 Grape Pest Management (also PLPA/ENTOM 4200)

Fall. 3 credits. Prerequisites: PLPA 3010, ENTOM 2410, or permission of instructor. S-U or letter grades. W. Wilcox, G. Loeb, and A. Landers. For description, see PLPA 4200.

VIEN 4300 Understanding Wine and Beer (also FDSC 4300)

Spring. 3 credits. Prerequisites: introductory biology and chemistry or permission of instructor; age 21 by first day of class. S-U or letter grades. T. Acree and K. Siebert, G. Sacks, and R. Mira de Orduña. For description, see FDSC 4300.

VIEN 4400 Wine and Grape Flavor Development (also FDSC 4400)

Spring. 3 credits. Limited to 30 students. Required: at least one semester of general chemistry and one semester of organic chemistry. Prior course work in or knowledge of viticulture and enology recommended. FDSC 1104 and CHEM 2570. Letter grades only. G. Sacks.

For description, see FDSC 4400.

VIEN 4430 Viticulture and Vineyard Management I (also HORT 4430)

Fall. 3 credits. Prerequisites: any two-semester college biology course. Letter grades only. J. Vanden Huevel and P. Cousins.

For description, see HORT 4430.

VIEN 4440 Viticulture and Vineyard Management II (also HORT 4440)

Spring. 3 credits. Prerequisite or corequisite: HORT 4430 or permission of instructor. Letter grades only. J. Vanden Huevel.

For description, see HORT 4440.

VIEN 4444 Grapevine Biology (also HORT 4444)

Spring. 3 credits. Prerequisite: introductory botany; BIOPL 2420 or equivalent. Letter grades only. Offered odd-numbered years. A. N. Lakso, M. C. Goffinet, B. I. Reisch, P. S. Cousins, and C. L. Owens.

For description, see HORT 4444.

VIEN 4910 Viticulture and Enology Research Practices (also FDSC 4910)

Fall. 3 credits. Prerequisite: FDSC/HORT/VIEN 1105. Letter grades only. K. Arnink.

For description, see FDSC 4910.

VIEN 4960 Viticulture and Enology Internship

Fall, spring, summer. Variable credit. Prerequisite: VIEN/FDSC 1105. S–U grades only. K. Arnink and staff.

Internships provide experiential learning opportunities in real-life winery and vineyard circumstances where classroom knowledge is applied and evaluated. Students are able to master new skills, compare pilot-scale with commercial-scale winemaking practices, solve problems, interact in workplace situations, and build networks for future career opportunities. While working with industry mentors, students apply classroom knowledge, critical thinking, and self-directed learning skills to work effectively. Limit of 3 credits per internship and no more than 6 credits total for all internships. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

VIEN 6450 Advanced Viticulture Topics (also HORT 6450)

Spring. 2 credits. Prerequisite: HORT 4430 or equivalent. Letter grades only. Offered even-numbered years. A. Lakso.

For description, see HORT 6450.

FACULTY ROSTER

Abawi, George S., Ph.D., Cornell U. Prof., Plant Pathology and Plant-Microbe Biology (Geneva)
 Acree, Terry E., Ph.D., Cornell U. Prof., Food Science, and Technology (Geneva)

Adleman, Marvin I., M. L. A., Harvard U. Prof., Landscape Architecture
 Agnello, Arthur M., Ph.D., North Carolina State U. Prof., Entomology (Geneva)
 Ahner, Beth A., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Biological and Environmental Engineering

COLLEGE OF ARCHITECTURE, ART, AND PLANNING

ADMINISTRATION

Kent Kleinman, dean

Barry Perlus, associate dean

Peter Turner, assistant dean of administration and finance

to be announced, chair, Department of Architecture

Patricia C. Phillips, chair, Department of Art

Kieran Donaghy, chair, Department of City and Regional Planning

Deborah Durnam, director, admissions

Michael Moyer, director, alumni affairs and development

M. Susan Lewis, director, career services

Melanie Holland Bell, registrar

FACULTY ADVISORS

Architecture students are assigned faculty advisors and are also invited to share concerns with and seek advice from the most appropriate faculty member or college officer, including the registrar, the department chair, and the dean.

Students in the fine arts department are assigned a faculty advisor for the first year. After the first year, students may select their advisors. Students are required to have an advisor throughout their program in their area of concentration.

Undergraduate students in the program of Urban and Regional Studies are assigned faculty advisors.

All students in the college are invited to share concerns and seek advice from the volunteer student advisors (EARS) at any time.

DEGREE PROGRAMS

	<i>Degree</i>
Architecture	B.Arch.
	B.F.A.
Fine Arts	B.F.A.
History of Architecture and Urbanism	B.S.
Urban and Regional Studies	B.S.

The college offers programs leading to the bachelor's degree—the five-year program in architecture leads to the bachelor of architecture; four-year programs in art and architecture lead to the bachelor of fine arts. In addition, four-year programs with a concentration in either urban and regional studies or history of architecture lead to the bachelor of science.

Graduate-level programs are offered in art, architectural design and urban design, architectural science, history of architecture and urbanism, historic preservation planning,

city and regional planning, regional science, and landscape architecture.

Students in most of these programs work in physical proximity to one another and thus gain a broader understanding of their own special area of interest through contact with students and faculty from other disciplines.

Early in its development, the college set a limit on the number of students it would enroll and devised a selective method of admission. There are now more than 670 students and a full-time teaching staff of over 60, supplemented by visiting professors and critics, part-time lecturers, and assistants. Teachers and students mix freely, and much instruction and criticism is on an individual basis.

The college's courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the university. The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curricula, the methods of teaching, and the extracurricular life of teachers and students.

FACILITIES

The college occupies Sibley Hall, Olive Tjaden Hall, Rand Hall, and the Foundry, as well as space at 531 Esty Street in downtown Ithaca. Facilities for architecture and city and regional planning, as well as college administrative offices, and the Fine Arts Library, are located in Sibley Hall. The Department of Art is housed in Olive Tjaden Hall. Sculpture facilities are in the Foundry and architecture design studios and shop facilities are in Rand, Sibley, and at Esty Street. The Green Dragon Café, a student eatery and lounge, is located in the lower level of Sibley Dome. Darkrooms in the Department of Art are available for general use by students in the college and are used primarily as laboratories for the photography courses. Each user must pay a darkroom fee. Information about darkroom rules and regulations, hours, and equipment is available at the darkroom circulation desk.

Through the generosity of the late Lillian P. Heller, the college also owns the Miller-Heller House, home of William H. Miller, the first student to enroll for the study of architecture at Cornell, and later a practicing architect in Ithaca. This building is used to house visiting teachers and guests of the college and for occasional receptions and social events.

Libraries

The Fine Arts Library in Sibley Hall serves the College of Architecture, Art, and Planning through its collections on architecture, fine arts, city and regional planning, and

landscape architecture. The library, with more than 207,000 books, is capable of supporting undergraduate, graduate, and research programs. Some 1,400 serials are currently received and maintained.

The facilities of the libraries of other schools and departments on campus and the John M. Olin Library, designed primarily as a research library for graduate students, are also available.

Museums and Galleries

The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to academic programs of the university, the museum has no administrative affiliation with any department. In this way, its programs freely cross academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Cornell. Throughout the year, works of students, faculty, and staff in the College of Architecture, Art, and Planning and of guest artists may be viewed in the John Hartell Gallery in Sibley Dome and in the Olive Tjaden Gallery in Olive Tjaden Hall. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held.

Cornell in Rome

Cornell in Rome is a semester-long study-abroad program of Cornell University's College of Architecture, Art, and Planning. Educating students in Italy for 20 years, the program has provided a transformative experience for young, developing artists, architects, urbanists, and scholars. The program is open to students in and outside Cornell in the disciplines of architecture, visual art, and urban studies, as well as related fields like art history, classics, European studies, medieval studies, and sociology.

Drawing upon the historical and cultural resources of Rome, its museums, art, and architecture, and the city's beauty and complexity as an ancient and yet modern world capital, a semester in Rome has proven to be a pivotal semester for both intellectual and personal growth. The program provides extensive studio work, onsite classes, and a rich field trip itinerary.

Courses are offered in both fall and spring terms in architecture, architecture history, art, art history, drawing, photography, architecture theory, contemporary Italian culture, European politics, and Italian language. Courses in urban studies are offered in the spring semester only. Weekly classes use the city and its wealth of museums and galleries, archaeological sites, villas, churches, and remarkable public spaces for onsite study, as well as Rome's many neighborhoods, for field-based learning activities.

Cornell in Rome's resident faculty members, chosen from the best local and internationally known scholars, critics, architects, and artists, are all expert at using the city as an unparalleled resource for instruction and inspiration. Additionally, distinguished Cornell professors from the Departments of Architecture, Art, and City and Regional Planning live and teach in Rome for the entire term.

The program is based at Palazzo Lazzaroni, a handsomely restored 17th-century palazzo in the historic center of Rome. All participants are housed in large, completely furnished apartments with wireless Internet access, all within walking distance of studio and classroom space. Students enjoy daily contact with the urban life of a major, European city and its nearly 3,000 years of history and extraordinary backdrop of art and architecture.

Application is made in the academic year before participation. The deadline for both fall and spring semesters is November 1 for AAP students and January 15 for all out-of-college applicants. Accepted students must confirm their enrollment by February 15. Detailed course and program information may be found at www.rome.cornell.edu. Students are also welcome to stop by the Cornell in Rome office at 149 East Sibley Hall.

AAP NYC

The College of Architecture, Art, and Planning's rapidly expanding studio and classroom facility in New York City offers undergraduate and graduate students a unique opportunity to live and study in one of the most culturally vital urban centers in the world, while gaining valuable professional experience at design firms, studios, and innovative public, private, and nonprofit organizations throughout the city. Located on 17th Street near Union Square, in the vibrant Chelsea neighborhood of Manhattan, AAP NYC's loft provides expansive studio and seminar space for short-term and semester-long use by the entire college. The location is an ideal base for the study of urban and social policy, for museum and gallery visits, or for exposure to a wealth of art and architectural history and practice.

AAP NYC offers a full roster of courses enriched by New York City's unique artistic, historical, and cultural resources and by AAP's extensive alumni network of noted metropolitan professionals, who frequently teach and serve as guest critics and mentors. The programming expands opportunities for AAP's undergraduates, allowing them to now take advantage of study in two world capitals—New York City and Rome—while easily meeting graduation requirements.

Application is made in the academic year prior to participation. The deadline is November 1 for AAP students and January 15 for all out-of-college applicants. Detailed program information can be found at www.aap.cornell.edu/aap/nyc.

COLLEGE ACADEMIC POLICIES

Ownership of Student Work

All drawings, models, paintings, graphic art, and sculpture done in the studios and drafting

rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. Certain works may be selected by the college for retention for academic purposes.

Exhibitions of Student Work

Exhibitions of student work are held each semester as part of the yearly schedule of the Olive Tjaden Gallery and the John Hartell Gallery in Sibley Dome. These galleries display work from a specific course or exhibit examples of recent work by individual faculty members, students, and visitors.

Minors

Students may pursue minors in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the students' major. Completed minors will appear on the student's transcript. Not all departments offer minors. Consult the appropriate section in this catalog or contact the appropriate department for information on minors offered and how to pursue a minor.

Scholastic Standards

Semester by semester, a candidate for an undergraduate degree in this college is required to successfully complete a minimum of 12 academic credit hours with a minimum grade point average for the semester of C+ (2.3). The record of each student who falls below the standard will be reviewed by the college's Academic Records Committee for appropriate action, among those described below:

1. The student is issued a **Warning**. This means the student's performance does not meet expectations. Unless improvement is shown in the subsequent semester, the student may be placed on **Final Warning** or given a **Required Leave of Absence** from the college.
2. The student is issued a **Final Warning**. This indicates the student's record is unsatisfactory. Unless considerable improvement is shown in the subsequent semester, the student may be given a **Required Leave of Absence** from the college.
3. The student is placed on a **Required Leave of Absence**. The student is dismissed from the college and may not continue studies in the college. A student who has been placed on a required leave of absence may request to resume studies after a leave of absence of at least two semesters. This request is made by letter addressed to the college registrar, B1 W. Sibley Hall, Ithaca, NY 14853-6702. The student must submit evidence that time has been well used, and if employed, the student must submit a letter from the employer(s). Students on required leave are not allowed to register extramurally at Cornell, as the intention of the required leave is to insist upon a break from study at Cornell. If a student chooses to enroll in courses at another institution while on a required leave, credit is not granted automatically. Upon receiving permission to return, a student must petition the department and include an official transcript to request credit for courses

taken. A return to study in the college after a required leave of absence is at the discretion of the college's Academic Records Committee. Requests for spring-semester return must be made by October 1 and requests for fall-semester return must be made by March 1. The second required leave of absence is a de facto dismissal and the student will be permanently withdrawn from the college.

4. The student is placed on a **Required Withdrawal**. The student may not reregister in the College of Architecture, Art, and Planning and is dismissed from the college and is permanently prohibited from continuing studies in it.

The required withdrawal action does not prevent the student from applying for admission to another division of the university.

The above actions are not necessarily sequential. A student who has received a warning may be placed on a required leave of absence at the end of the next semester if the performance during that semester is deemed to be grossly deficient.

It is necessary to have a cumulative grade point average of at least 2.0 (C) for graduation.

Leaves of Absence

The College of Architecture, Art, and Planning adopted the following leave of absence policy effective in the fall of 2006:

Leaves of absence will be of four types:

1. **Voluntary leaves of absence for personal reasons** may be granted for a variety of reasons. The student may request a voluntary leave of absence no later than the third week of class in the affected term. The department may set conditions for completion of work, new and incomplete course work, community service, or internships while the student is on leave. The student may not attend classes at Cornell through the School of Continuing Education and Summer Sessions. The term limit of this type of leave is five years. Following the end of the fifth year, the student will be automatically withdrawn from the college.
2. **Voluntary leaves of absence with conditions** may be granted for students desiring to take a voluntary leave for personal reasons but who are not in good academic standing or they wish to take a leave during the current term. Conditional leaves are at least two semesters in length. The department will set conditions for completion of work, new and incomplete course work, community service, or internships while the student is on leave. Students may be granted conditional leaves of absence after the 12th week of the term only in highly extenuating circumstances and with the approval of the student's department and the Academic Records Committee (ARC). The student may not attend classes at Cornell through the School of Continuing Education and Summer Sessions. The student's academic status is subject to review at the time of the leave and upon the student's return.

3. **Voluntary leaves of absence for health reasons** may be granted by the college upon the recommendation of Counseling and Psychological Services (CAPS) or Gannett Health Services. They are usually no less than six months in duration. The department may set conditions for completion of work, new and incomplete course work, community service, or internships while the student is on leave. The college may impose additional conditions appropriate to the individual situation. The student may not attend classes at Cornell through the School of Continuing Education and Summer Sessions. The student's academic status is subject to review at the time of the leave and upon the student's return. Students must receive approval to return from this type of leave, both from CAPS or Gannett as well as the student's department and the ARC.
4. **Required leaves of absence for academic reasons.** The ARC may vote for a required leave if the student is not making satisfactory progress in the degree program (defined by completion of a minimum of 12 academic credits with a minimum GPA of 2.3 each term unless there are special circumstances). The department may set conditions for completion of work, new and incomplete course work, community service, or internships while the student is on leave. The college may impose additional conditions appropriate to the individual situation. The student may not attend classes at Cornell through the School of Continuing Education and Summer Sessions. The student's academic status is subject to review at the time of the leave and upon the student's return.

Return from Leave of Absence

Students who desire to return from any of these leaves shall submit a written request to the AAP Registrar's Office. Requests for spring-semester return must be made by October 1 and requests for fall-semester return must be made by March 1. The request will be reviewed and approved first by the department. The recommendation of the department will be forwarded to the college ARC for its review and action. If the student request to the department results in a "no pass" outcome, the student may appeal in writing to the ARC within two weeks of receipt of the department decision. The final decision then rests with the ARC. No appeals will be considered following the decision of the ARC.

It is expected that the department and college committees will review and act on requests to return to study by April 15 for requests to return to study in the fall term and by November 15 for requests to study in the spring term.

ARCHITECTURE

to be determined, interim chair (137 East Sibley Hall, 255-5236); L. Chi, M. Cruvellier, M. Curry, W. Goehner, D. P. Greenberg, G. Hascup, K. Hubbell, D. M. Lasansky, B. G. MacDougall, A. B. Mackenzie, L. Mirin, V. Mulcahy, J. Ochshorn, C. F. Otto, A. Ovaska, K. Pratt, H. W. Richardson, M. Silver, A. Simitch, V. K. Warke, J. Wells, M. Woods, J. Zissovici

Department of Architecture Program Mission

If one could identify a singular philosophy for the architecture program at Cornell, it would be that architecture is a conceptual problem-solving discipline. The goal of the program is to produce conceptual thinkers, versed in the skills, history, theory, and science of their field. In part, the success of the program can be attributed to the quality of students and faculty members combined with their dedication and enthusiasm. Companion undergraduate and graduate programs in the fine arts and in city and regional planning have also greatly contributed to the department's strength. The influence of these programs has created a philosophy that is unique to Cornell: that the individual work of architecture is thought of as part of a greater whole and exists in a determinate physical context. Furthermore, the students and their work are also placed in a historical context, creating a sense of the continuity of architectural thought.

The intention has always been to instruct architecture students in issues of basic and more sophisticated formal principles, developing an aptitude for functional and programmatic accommodation, structural and technological integration, energy-conscious design, and materials and methods of construction. Virtually every architecture school does this. Cornell, however, differs from most schools in the way it teaches students about architecture: we do not teach architecture; instead we try to teach students how to learn about architecture (witness, for example, the inordinate number of Cornell alumni teaching in architecture programs). Rather than train architects who think of buildings as autonomous objects frozen in an assigned ideology, our goal is to produce architects who are capable of making independent judgments rooted in an ever-changing context of architectural thought.

To affect these goals, design at Cornell is taught as an intellectual discipline steeped in societal and cultural values. Architecture is taught as the integration of thought, form, and structure. Design problems frequently are located within real physical contexts and are evaluated in relation to those motivations that shaped the environment over time. Architecture, it is assumed, resides in the integration of idea and fact.

The development of form and space is critical to architectural design. Equally significant is the responsible resolution of functional requirements integrated with actual and perceived structure. The excellence of architectural art, however, derives from the exploration and refinement of ideas, upon which form, purpose, and structure are dependent. Deemed essential at Cornell is that the student grapple not only with fact, but with the substance of fact. Consequently,

the investigation of architectural content is pursued in protracted and continuous study. Architecture studios extend into the classroom and the library; they embrace the humanities and sciences, tradition and innovative effort.

Professional Degree Programs

Note on Professional Accreditation

In the United States, most state registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit U.S. professional degree programs in architecture, recognizes three types of degrees: the Bachelor of Architecture, the Master of Architecture, and the Doctor of Architecture. A program may be granted a six-year, three-year, or two-year term of accreditation, depending on the extent of its conformance with established educational standards.

Doctor of Architecture and Master of Architecture degree programs may consist of a pre-professional undergraduate degree and a professional graduate degree that, when earned sequentially, constitute an accredited professional education. However, the pre-professional degree is not, by itself, recognized as an accredited degree.

Cornell University, College of Architecture, Art, and Planning, Department of Architecture offers a NAAB-accredited bachelor of architecture degree program.

B. Arch. (176 undergraduate credits)

Next accreditation visit for the B.Arch. program: 2010

The NAAB grants candidacy status to new programs that have developed viable plans for achieving initial accreditation. Candidacy status indicates that a program should be accredited within six years of achieving candidacy, if its plan is properly implemented. In order to meet the education requirement set forth by the National Council of Architectural Registration Boards, an applicant for an NCARB Certificate must hold a professional degree in architecture from a program accredited by the NAAB; the degree must have been awarded not more than two years prior to initial accreditation.

Cornell University, College of Architecture, Art, and Planning, Department of Architecture was granted candidacy status for the Professional Master of Architecture in 2004.

M.Arch I (pre-professional degree + 115 graduate credits)

Continuation of candidacy granted: 2007

Projected year of initial accreditation: 2010

Bachelor of Architecture

The undergraduate professional program is normally five years in length and is designed particularly for people who, before they apply, have established their interest and motivation to enter the field. It therefore incorporates both a general and professional educational base.

The program is oriented toward developing the student's ability to deal creatively with architectural problems on analytical, conceptual, and developmental levels. The sequence courses in design, consisting of studio work augmented by lectures and seminars, are the core of the program. Sequences of studies in the history of architecture and cities, culture and society, architectural theory, visual studies, environmental control, structures, construction, and computer applications provide a base for the work in design.

In the first three years, the student has the opportunity to establish a foundation in the humanities and sciences through electives. During the fourth and fifth years, this base may expand through further detailed studies in these areas. Within the professional program a basis for understanding architecture in its contemporary and historical cultural contexts is established.

The structure of the program incorporates considerable flexibility for the individual student to pursue his or her particular interest in the fourth and fifth years. By carefully planning options and electives in the fifth year, it is possible for a qualified student to apply the last year's work for the bachelor of architecture degree to the post-professional M. Arch. II program. Some students are then able to complete the requirements for the master's degree in one additional year.

Professional Master of Architecture (M. Arch. I)

Cornell's graduate professional degree program (in NAAB candidacy status) is a 3½-year course of study dedicated to preparing graduate students from diverse disciplines and backgrounds for careers in architecture. The program builds on the excellence and distinction of Cornell's renowned B.Arch. degree, but is specifically crafted to engage the unique strengths and needs of the graduate student. Committed to the view that the question of appropriate practice must be continually investigated and reassessed in today's globally expansive and technologically dynamic context, the program places this concern at the center of the learning process, seeking to empower the student's sense of inquiry, responsibility, and creativity. Teaching in the program complements basic skills and knowledge essential to the profession with engagement in emergent social, cultural, technical, and environmental concerns that characterize architecture's expanded field in the 21st century.

The curriculum comprises a rich offering of courses in visual representation, history and theory of architecture, building technology, and professional practice, complemented by six semesters of design studios. The design studio is the core of the curriculum, with the design project serving as a negotiating platform between diverse practices, technologies, and fields of knowledge. The intensive course of study encourages the development of individual research trajectories at the upper levels, and culminates in a one-semester design thesis. Making full use of Cornell University's excellent resources across all disciplines, the professional Master of Architecture situates itself globally, drawing upon distinguished national and international visitors as well as the AAP in New York City studio. The professional Master of Architecture is open to applicants possessing a four-year bachelor's degree in any area.

Cornell in Rome

Cornell in Rome has been an integral part of architectural study at Cornell University for 20 years. Architecture students traditionally look forward to this semester abroad for first-hand experience of buildings and urban spaces previously studied only in classes and lectures. Rome, with its unparalleled complexity of historical layers, presents the student of architecture with the challenge of visualizing architecture in a city where the intensity of history pervades.

The city teaches students to understand that history can become a critical foundation for understanding architectural design as an integral component of the urban context. Complete immersion in this distinctive and complex milieu presents students with new and different problems and decisions; through analysis and understanding of historic examples, experience and insight are gained for future design challenges.

Design studios, complemented by visits to important buildings, museums, and monuments both in Rome and throughout Italy, emphasize onsite observation, measuring, drawing, and projection, while history courses and theory seminars encourage students to engage in analytical thinking, direct study, and cultural interpretation.

Italian and European architects and educators complement faculty members from Cornell in teaching the 6-credit studio and assist in formulating and contributing to a rich variety of seminars, lectures, and field trip programs.

Architecture Requirements

Fourth-year architecture students in good academic standing who have completed the requirements of the first three years of the five-year B.Arch curriculum are eligible for participation in Cornell in Rome.

The program also is open to third-year students by petition, if space permits.

AAP in NYC

AAP NYC provides the opportunity for architecture students to study, work, and live in one of the world's most dynamic urban contexts. With its pivotal location, the architecture program at AAP NYC attracts guest faculty members not only from the city but from international locales as well. The program allows students to build on the core curricular foundations of their Ithaca-campus experience in a more directly applied format, using the city as a classroom and world-class professionals as their critics and faculty.

Additionally, undergraduate students are encouraged to take advantage of the wealth of architectural practices in New York by working two days per week in selected offices while pursuing their studies. As a result, AAP NYC serves as a bridge from school to the profession—one that allows students to consider their own future trajectories and the possible paths toward achieving them.

B.Arch. Curriculum

Please refer to the *AAP Student Handbook* at www.aap.cornell.edu/aap/student-services/ for the most up-to-date B. Arch. curriculum information.

First Year

<i>Fall Semester</i>	<i>Credits</i>
1101 Design I	6
1801 History of Architecture I	3
1501 Drawing I: Freehand Drawing	2
MATH 1110 Calculus or out-of-college elective	3-4
Out-of-college elective	3
	<hr/> 18-19

Spring Semester

1102 Design II	6
1802 History of Architecture II	3
1502 Drawing II: Drawing Systems	2
MATH 1106 or 1110 or out- of-college elective	3-4
Out-of-college elective (first-year writing seminar suggested)	3
	<hr/> 17-18

Second Year

<i>Fall Semester</i>	<i>Credits</i>
2101 Design III	6
2603 Structural Concepts	4
2301 Architectural Analysis I	2
2602 Building Technology, Materials, and Methods	3
ARCH 2503 Drawing III: Digital Media in Architecture or out-of-college elective	2-3
	<hr/> 17-18

Spring Semester

2102 Design IV	6
2302 Architectural Analysis II	2
2601 Environmental Systems—Site Planning	3
2604 Structural Elements	3
ARCH 2503 Drawing III: Digital Media in Architecture or college elective	2-3
	<hr/> 16-17

Third Year

<i>Fall Semester</i>	<i>Credits</i>
3101 Design V	6
3402 Architecture as a Cultural System	3
3601 Environmental Systems II— Thermal Environmental Systems	3
Departmental elective	3
Out-of-college elective	3
	<hr/> 18

Spring Semester

3102 Design VI	6
3603 Structural Systems	3
3602 Environmental Systems III— Building Systems Integration	3
Departmental elective	3
College or out-of-college elective	3
	<hr/> 18

Fourth Year

<i>Fall Semester</i>	<i>Credits</i>
4101 Design VII	6
Departmental elective	3
Departmental elective	3
College elective	3
Out-of-college elective	3
	18

<i>Spring Semester</i>	<i>Credits</i>
4102 Design VIII	6
5201 Professional Practice	3
Departmental elective	3
College or out-of-college elective	3
Out-of-college elective	3
	18

Fifth Year

<i>Fall Semester</i>	<i>Credits</i>
5101 Design IX	6
Departmental elective	3
ARCH 5110 Thesis Proseminar	2
Out-of-college elective	3
Out-of-college elective	3
	17

<i>Spring Semester</i>	<i>Credits</i>
5901 Design X	8
Departmental elective	3
Out-of-college elective	3
College or out-of-college elective	3
	17

Required Departmental Courses

<i>Semesters</i>	<i>Subject</i>	<i>Course Numbers</i>	<i>Credits</i>
10	design	1101-5902	62
1	mathematics	MATH 1110, MATH 1106, or approved equivalent	3-4
3	structures	2603, 2604, 3603	10
4	technology	2601, 2602, 3601, 3602	12
2	architectural theory	2301, 2302	4
2	history of architecture	1801, 1802	6
1	architecture, culture, and society	3402	3
1	professional practice	5201	3
1	proseminar	5110	2
3	drawing	1501, 1502, 2503	6
			109-110

Electives

<i>Departmental Semesters</i>		<i>Credits</i>
3	history of architecture: 3000 level	9
1	visual representation in architecture	3
2	architectural theory or 6000-level design-related course	6
1	architectural structures, construction, or environmental systems and conservation	3
		21

<i>College Semesters</i>		<i>Credits</i>
2	art: any studio courses (ART 2104 will fulfill)	6

<i>Out-of-College Semesters</i>		<i>Credits</i>
1	first-year writing seminar	3
1	mathematics, or physical or biological sciences	3
1	humanities	3
		9

<i>Free</i>		<i>Credits</i>
Of the electives, 15 credits are to be taken outside the College of Architecture, Art, and Planning, and 15 credits may be taken either in or outside the college.		15
Total credits		176

Architecture Concentrations for Majors

The Department of Architecture recognizes any concentration earned within the university but outside of the department (using standards set by those departments) on the transcripts of its students.

It is often advantageous for undergraduates to concentrate in specific subdisciplines of architecture, especially if they anticipate application to specialized graduate programs; therefore, the following concentrations in architecture are offered within the department for B. Arch. and B.F.A. in architecture candidates only:

Architecture, Culture, and Society 3402 (or equivalent), plus 9 credits in this area.

Architectural Science and Technology 2601, 2602, 2603, 2604, 3601, 3602, 3603, distribution requirement (3 credits), plus 6 credits in this area.

History of Architecture 1801, 1802, distribution requirements (9 credits), plus 7 credits (including a 4-credit seminar course) in this area.

Theory of Architecture 2301, 2302, distribution requirements (6 credits), plus 6 credits in this area.

Visual Representation in Architecture 1501, 1502, distribution requirement (3 credits), plus 9 credits in this area.

Students wishing to receive recognition for a concentration must submit a concentration request form to the Architecture Department office. For a course to count toward a concentration, the student must receive a grade of C or better.

Transfer Students

Although the program leading to the bachelor of architecture is directed specifically to those

who are strongly motivated to begin professional study when entering college, it is sufficiently flexible to allow transfers for students who have not made this decision until after they have been in another program for one or two years. Individuals who have already completed a nonprofessional undergraduate degree may apply to the professional M. Arch. I program.

Transfer students are responsible for completing that portion of the curriculum which has not been covered by equivalent work. Applicants who have had no previous work in architectural design must complete the 10-semester design sequence. Since this sequence may be accelerated by attending summer semesters, seven or eight regular semesters and two or three summer terms are typically required.

Admission is offered to a limited number of transfer applicants who have completed a portion of their architecture studies in other schools. Each applicant's case is considered individually. Transfer students must complete a minimum of 70 credits and four semesters in residence, taking 35 of the 70 credits (including four semesters of design) in the Department of Architecture. Placement in the design sequence is based on a review of a representative portfolio of previous work.

For those who would benefit from an opportunity to explore the field of architecture before deciding on a commitment to professional education, the department offers an introductory summer program that includes an introductory studio in architectural design, lectures, and other experiences designed to acquaint participants with opportunities, issues, and methods in the field of architecture.

Alternative Programs

Bachelor of Fine Arts

After completing the first four years of B. Arch. requirements, the student may choose to receive the degree of bachelor of fine arts (B.F.A.) in architecture, *which is not a professional degree*.

A student wishing to receive this degree must submit a petition to the Petition Committee, verified by the college registrar, that the first eight semesters of required B.Arch. courses can be satisfactorily completed and that the following minimum distribution requirements will be met:

- 1 Art studio course (3 credits)
- 1 Mathematics course: MATH 1110, 1106, or approved equivalent (3-4 credits)
- 1 First-Year Writing Seminar (3 credits)
- 1 Mathematics or physical or biological sciences course (3 credits)
- 1 Humanities course (3 credits)

Students are admitted to this degree program only via the B.Arch. degree track. Students who are awarded a B.F.A. in Architecture degree may not reregister in the B.Arch. program.

Bachelor of Science in History of Architecture

The history of architecture major leads to a bachelor of science degree, conferred by the College of Architecture, Art, and Planning. The major is intended for transfer students from other programs at Cornell and from

colleges and universities outside Cornell. Students in the Department of Architecture and the College of Arts and Sciences may take the major as part of a dual-degree program. The course of study in this major, available to students from a variety of academic backgrounds, offers the opportunity for a vigorous exploration of architecture and its history.

Admission requirements. Two years of undergraduate study, ARCH 1801 and 1802 or the equivalent. Students transferring from a B. Arch. program must be in good standing in their design sequence.

Procedure. Students from Cornell may transfer to the program at the beginning of the fall semester of their third or fourth year of study. They submit a short application as prospective internal transfer students. Before applying, all prospective internal transfer students meet with a history of architecture faculty member to discuss scheduling for the program.

All students who wish to enter the program, either from Cornell or other institutions, must apply by November 15 for spring admission or by March 31 for fall admission. Applications for both internal and external transfer students are available from the Admissions Office, College of Architecture, Art, and Planning, Cornell University, B-1 West Sibley Hall, Ithaca, NY 14853-6702. Completed applications must be submitted to the Admissions Office.

Curriculum. A student entering the program is assigned an advisor from the history of architecture faculty in the Department of Architecture. Advisor and student together prepare an appropriate two-year course of study according to the following guidelines:

1. 24 credits of 3000-level courses in architectural history: ARCH 3800 through 3819
2. 12 credits in 6000-level architectural history seminars: ARCH 6800 through 6819; or 8 credits in a 6000-level seminar plus ARCH 4901, offered for honors candidates only
3. One 3000-, 4000-, or 6000-level course in architectural theory
4. 24 credits in electives selected in consultation with the student's advisor
5. Language requirement, to be met in the manner specified for students enrolled in the College of Arts and Sciences

Honors program. Students graduate with honors if, during their two years of study in the program, they have a cumulative average of B or better in all courses, have no grade lower than A- in all history of architecture courses taken at the 3000 level, and have completed an honors thesis (ARCH 4901) deemed to be of distinguished quality by the history of architecture faculty.

Dual-Degree Options

Students can earn both the B.S. and B. Arch. degrees either simultaneously or sequentially. Students who have transferred into the B. Arch. program at Cornell may find this to be a special opportunity for an enlarged and enriched program of study.

Students currently enrolled in the College of Arts and Sciences at Cornell can earn a B.A. in an arts college major and a B.S. in the history of architecture in five years. In this

option, students complete a minimum of 150 credits, which includes the B.S. prerequisites and curriculum requirements and 100 credits of the usual distribution and major requirements in the College of Arts and Sciences. Further information about this option is available at the Admissions Office, B-1 West Sibley Hall, and at the Academic Advising Center of the College of Arts and Sciences, 172 Goldwin Smith Hall.

Students may also elect to continue toward a master of arts degree in the history of architecture. The M.A. ordinarily requires a minimum of two years of graduate work beyond the bachelor's degree; with this special sequential degree arrangement that time is shortened to one year.

Summer Term in Architecture

The summer term offers students the opportunity of a concentrated period of design work; the term is six to eight weeks in duration.

Undergraduate design sequence courses, excluding 1101 and 5902, are offered in Ithaca. Normally there is also a design program abroad for third-, fourth-, and fifth-year students.

Students from schools of architecture other than Cornell are welcome to enroll in any summer program.

Other department courses may be offered as elective courses, contingent upon student interest, faculty availability, and departmental approval.

The department offers a Career Explorations in Architecture Program for high school students and college-level students considering a professional education in architecture.

Minor in Architecture for Nonmajors

A special minor has been formulated specifically for those students not enrolled in the Department of Architecture but who are interested in complementing their current academic program with an introduction to various facets of architectural studies. Some students may wish to use the Minor in Architecture for Nonmajors as a means of investigating possible graduate studies in architecture. Some may wish to develop architectural specialties within other disciplines. Students meeting the requirements for this minor should complete a minor form, which is available in the architecture department office. This form, when validated by the architecture department, serves as evidence of completion of the minor requirements.

The curriculum for students in the Minor in Architecture Program totals 14 credit hours minimum, including 8 credits of required courses and 6 credits of elective courses. Grades earned must be C or better in all courses.

Required courses. A minimum of 8 credits, including one design studio, one visual studies course (e.g., drawing), and one history of architecture course. For example,

ARCH 1110 Introduction to Architecture Design Studio (offered summer only) 3 credits

or

ARCH 1103 Elective Design Studio (offered fall only, not offered every year) 6 credits

(ARCH 1103 may substitute for ARCH 1110; students who complete ARCH 1103 must take all other course requirements for the concentration.)

ARCH 1501 Drawing I (fall only) 2 credits

ARCH 1801 or 1802 History of Architecture I or II (ARCH 1801, fall; ARCH 1802, spring) 3 credits

Departmental elective courses: A minimum of 6 credits, including two departmental elective courses, are required.

Professional Master of Architecture (in NAAB candidacy status)

Mission Statement

Consistent with the broader mission of the Department of Architecture, the Master of Architecture program (in NAAB candidacy status) is dedicated to preparing graduate students from diverse disciplines and backgrounds for careers in architecture. The program is committed to the view that the nature of contemporary practice must be continually investigated and reassessed in today's globally expansive and technologically dynamic context. The program places the question of practice at the center of the learning process. It posits alternative models and methods of research and seeks to empower the student's sense of inquiry, responsibility, and creativity as she or he formulates her or his unique professional trajectory. The program aims in particular to engage the unique strengths and needs of the graduate student: her or his maturity, commitment to architecture, and the wealth and variety of academic and life experiences she or he brings to the discipline. The pedagogy sets skills and knowledge essential to the profession in a context of emergent cultural, technical, and environmental concerns that characterize the expanded field of architecture in the 21st century.

Curriculum

Term One	Units/Credit Hours	
ARCH 5111	Core Design Studio I	6
ARCH 5511	Techniques in Vis Rep I: Freehand and Analytical Drawing	3
ARCH 5301	Theories and Analyses of Architecture I	3
ARCH 5603	Structural Concepts	4
ARCH 5801	History of Architecture I	3
		<hr/> 19
Term Two		
ARCH 5112	Core Design Studio II	6
ARCH 5512	Techniques in Vis Rep II: Analog/Digital Constructed Drawing	3
ARCH 5302	Theories and Analyses of Architecture II	3
ARCH 5604	Structural Elements	3
ARCH 5802	History of Architecture II	3
		<hr/> 18

Term Three	
ARCH 5113 Core Design Studio III	6
ARCH 6601 Environmental Systems II: Thermal Environmental Systems	3
ARCH 5602 Building Technology, Materials, and Methods	3
History Elective or Theory Elective*	3
Visual Representation Elective	3
	<hr/> 18
Term Four	
ARCH 5114 Core Design Studio IV	6
ARCH 6602 Environmental Systems III: Building Systems Integration	3
ARCH 6603 Structural Systems	3
ARCH 5402 Architecture, Culture, Society	3
Open Elective	3
	<hr/> 18
Term Five	
ARCH 5115 Core Design Studio V: Integrative Design Practices	6
ARCH 5201 Professional Practice	3
ARCH 8911 Proseminar in Design Research	3
History or Theory or Visual Representation Elective*	3
	<hr/> 15
Term Six	
ARCH 5116 Vertical Design Studio	6
Visual Representation Elective	3
Open Elective	3
History or Theory or Visual Representation Elective*	3
	<hr/> 15
Term Seven	
ARCH 8912 Independent Design Thesis	9
Open Elective	3
	<hr/> 12
Total Units/Credit Hours	115

* Total required for graduation:

- 1 Theory elective
- 1 History elective
- 1 Theory or History elective
- 2 Visual Representation electives

Course Information

Courses in brackets are not offered this year.

A \$350 fee is charged to all registered architecture students (undergraduates, graduate students, and New York City Program and Rome Program participants) and is used to generate funds for the upkeep of computer and fabrication facilities.

Architectural Design

Sequence Courses

ARCH 1101 Design I

Fall, spring. 6 credits. Prerequisite: department students. Staff. Introduction to design as a conceptual discipline directed at the analysis, interpretation, synthesis, and transformation of the physical environment. Exercises are

aimed at developing an understanding of the issues, elements, and processes of environmental design.

ARCH 1102 Design II

Spring. 6 credits. Prerequisite: department students; ARCH 1101 and 1501. Staff. Continuation of ARCH 1101. Covers human, social, technical, and aesthetic factors related to space and form. Design problems range from those of the immediate environment of the individual to that of small social groups.

ARCH 2101-2102 Design III and IV

Fall and spring. 6 credits each semester. Prerequisites: department students; ARCH 1501-1502; for ARCH 2101, ARCH 1102 and 1502; for 2102, ARCH 2101. Corequisite: ARCH 2301-2302. Staff.

ARCH 3101 Design V

Fall and spring. 6 credits. Prerequisites: department students; ARCH 2102. Staff.

ARCH 3102 Design VI

Fall and spring. 6 credits. Prerequisites: department students; ARCH 3101. Staff. One of the key design experiences during this semester will be the dialogic interaction of architectural conceptions and building subsystems as simulated in the design studio. The requirements of building subsystems are seen to both support and inform architectural concepts and form. Questions of passive architectural responses versus active technical responses, as well as issues of thermal comfort, energy efficiency, sustainability, structure, and life safety will be addressed.

ARCH 4101-4102 Design VII and VIII

Fall and spring. 6 credits each semester. Prerequisite: department students; for ARCH 4101, ARCH 3102 and 3602; for 4102, ARCH 4101. Staff. Programs in architectural design, urban design, or architectural technology and environmental science and topical studies.

ARCH 5101 Design IX

Fall or spring. 6 credits. Prerequisite: department students; ARCH 4102. Staff. Programs in architectural design, building typology investigations, and research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis.

ARCH 5902 Design X—Thesis

Fall or spring. 8 credits. Requirement for B. Arch. candidates who must satisfactorily complete a thesis. Prerequisite: ARCH 5101. Staff.

Graduate Courses

ARCH 5111 Core Design Studio I

Fall. 6 credits. Introduction to fundamental concepts of architectural design and representation, including preliminary notions of site, program, and context. Emphasis on interpretive, analytical, and generative uses of drawing, physical modeling, and digital media in the design process.

ARCH 5112 Core Design Studio II

Spring. 6 credits. Prerequisite: ARCH 5111. Continuation of subjects developed in the first term. Focus on issues of program and architectonics in the design of a building type in context; introduction to site planning.

ARCH 5113 Core Design Studio III

Fall. 6 credits. Prerequisite: ARCH 5112. Focus on issues of program and architectonics in the design of a complex building type. Emphasis on interpretive, analytical, and generative uses of digital media.

ARCH 5114 Core Design Studio IV

Spring. 6 credits. Prerequisite: ARCH 5113. Focus on architecture's expanded sites: social, cultural, material, and/or environmental considerations of building in a complex urban landscape.

ARCH 5115 Core Design Studio V: Integrative Design Practices

Fall. 6 credits. (New York City). Prerequisites: ARCH 5114, 5602, 5604, 6601, 6602, 6603. Focus on the development of architectural ideas in constructed, material form. The studio explores emergent topics and constructive methods in contemporary architectural practice. Design study includes the creation of a comprehensive set of representations that describes an architectural project in detail. Students work in collaborative groups and in consultation with advisors drawn from professional practice to develop a project that engages a complex range of topical areas, including: structural and environmental systems, building envelope systems, materiality and construction, life-safety planning, and sustainability.

ARCH 5116 Vertical Design Studio

Spring. 6 credits. Prerequisite: ARCH 5115. Open to professional and post-professional M. Arch. students. The vertical studios are topical in nature and engage contemporary issues in architectural practice and research.

ARCH 7111 Design A

Fall. 6 credits. Staff. Exploration of themes, methods, and technologies in contemporary design.

ARCH 7912 Design B: Topics Studio

Spring. 6 credits. Staff. Graduate vertical research studio.

ARCH 8901 Thesis or Research in Architectural Design

Fall or spring. 9 credits. Prerequisite: ARCH 7111-7912. Staff. Second-year design course for M. Arch. II students whose major concentration is architectural design.

ARCH 8902 Thesis or Research in Urban Design

Fall or spring. 9 credits. Prerequisite: ARCH 7111-7912. Staff. Second-year design course for M. Arch. II students whose major concentration is urban design.

ARCH 8911 Proseminar in Design Research

Spring. 3 credits. Prerequisites: ARCH 5301 and 5302.

ARCH 8911 offers a synthesis of design and research methods for the development of an independent thesis proposal. Course work includes exposure to different theories and practices of design inquiry, explorations of critical positions for individual development, and preparation of a document encapsulating research leading to a thesis proposition. Successful completion of the course, which includes approval of the thesis document, is a prerequisite for advancement into ARCH 8912 Independent Design Thesis.

ARCH 8912 Independent Design Thesis

Fall. 9 credits. Prerequisites: ARCH 8911, 5116.

An independent design project on a topic selected and developed by the student and researched in ARCH 8911. Marking the transition between academic and professional practices, the thesis project is an opportunity for each student to define an individual position with regard to the discipline of architecture.

ARCH 8913 Design C: ADR Project

Summer. 9 credits. Staff.

Development of a design project in the student's territory of investigation.

Elective Design Courses**ARCH 1103-1104 Elective Design Studio**

1103, fall; 1104, spring. 6 credits each semester. Prerequisite: nonarchitecture students; for ARCH 1103, permission of instructor; for ARCH 1104, ARCH 1103 and permission of instructor. Staff.

ARCH 2100, 3100, 4100, 5100 Elective Design Studio

Fall, spring, or summer. 6 credits. For transfer students and students who are not architecture majors at Cornell. Prerequisite: permission of instructor. Each student is assigned to a class of appropriate level. Staff.

Nonsequence design used as temporary placement of transfer students, non-Cornell architecture students, off-campus foreign programs for third-year students (summer and Rome), and for incompletes in design sequence. In some cases student must petition to convert elective design into sequence design.

ARCH 5103 Design IXa

Fall, spring, or summer. 6 credits. Limited to department students. Prerequisites: ARCH 4102 and passing, but nonadvancing, grade in ARCH 5101.

Structured studio for those needing to retake ARCH 5101. The course operates within the fourth-year design studios.

ARCH 5104 Design Xa

Fall, spring, or summer. 6 credits. Limited to department students. Prerequisite: ARCH 5103 and passing, but nonadvancing, grade in ARCH 5902.

A structured studio for those needing to take an alternative to design thesis. This course operates within the fourth-year design studio.

Related Courses and Seminars**ARCH 1110 Introduction to Architecture: Design Studio**

Summer. 3 credits. Open to non-architecture majors in college, high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. S-U or letter grades. Not offered every year. Staff.

Designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major semester project, students explore the architectural concepts of space, form, function, and technology. Instruction is via highly personalized critiques of individual student work by assigned department faculty members, as well as periodic reviews of the group by invited

faculty and guest critics. The grade is based on the overall performance in the studio with special emphasis on the quality of a major studio project.

[ARCH 1111 Concentration in Architecture: Design Studio

Summer only. 3 credits. Subject to enrollment. Prerequisite: non-architecture students. Not offered 2009-2010. Staff.

Designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the interrelationship of the architectural concepts of space, form, function, and technology. Instruction includes critiques of individual student work by department faculty, as well as by periodic reviews by guest critics.]

ARCH 3103 Special Problems in Architectural Design

Fall or spring. Variable credit; max. 3.

Does not count for design sequence credit. Prerequisite: permission of instructor and approved independent study form. Staff.

Independent study.

ARCH 3106 Praxis: Community Design Workshop (also ARCH 6106)

Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year.

Workshop-based, hands-on course directed to underserved local and global communities that seek to improve the quality of life for all citizens. It is an interdisciplinary, service-learning course that challenges the usual definition and separation of practice and theoretical research. Services are provided collaboratively to not-for-profit agencies, civic and governmental groups, as well as community-action groups to support sustainable design solutions. The course teaches professional work proficiency, and emphasizes teamwork as well as written, verbal, and graphic communication skills to negotiate the public realm.

ARCH 3113 Furniture Design

Fall or spring. 3 credits. Limited enrollment. Students who wish to earn arch visual representation credit must enroll in sec 01; arch technology credit, sec 02; and in-college elective credit, sec 03. Prerequisite: permission of instructor. Not offered every year. G. Hascup.

Explores the history, design, and materiality of furniture. Analyses of materials and joinery-connective systems are developed in parallel with ergonomic restraints. Design transformation occurs through cycles of conceptual alternatives (models and drawings), increasing in scale as the idea evolves. Full-scale prototypes and detailed tectonic drawings are required on three pieces.

ARCH 3117 Contemporary Italian Culture

Fall or spring. Variable credit; max. 3. Prerequisite: Rome Program participants. Staff.

Provides a broad view of the culture and social structure of Italy, drawing from Italian literature, history, and current events.

ARCH 5110 Thesis Proseminar

Fall and spring. 2 credits. Prerequisite: ARCH 4101. ARCH 5110 is a prerequisite for ARCH 5902 Design X Thesis. Failure to earn grade of C in ARCH 5110 requires automatic registration in ARCH 5104 Design Xa—an option studio. Staff.

Lectures, seminars, and independent research leading to the production of the student's thesis program. General instruction in the conceiving, programming, and development of a thesis.

ARCH 5201 Professional Practice

Fall or spring. 3 credits. Staff.

Examination of organizational and management theories and practices for delivering professional design services. Includes a historic overview of the profession and a review of the architect's responsibilities from the pre-contract phase through cost estimating and specifications to construction. Application of computer technology in preparing specifications.

ARCH 5202 Professional Seminar

Fall or spring. 3 credits. Prerequisite: ARCH 5201. Staff.

Visits to public and private agencies and architectural firms. Discussions relative to the various aspects of each firm's practice and the identification of agency roles.

ARCH 5203 Curricular Practical Training

Fall or spring. 1 credit. Open to B. Arch. and M. Arch. students only. Approved independent study form required. S-U grades only.

Independent study promotes an understanding of cultural differences within architectural practice. Course project involves writing a 10-page paper relating the experience of the internship to one or more texts approved by the instructor. Course may be taken more than once, but a maximum of 1 credit may be used to fulfill the in-college "free elective" distribution requirement. Students with summer internships enroll in the course during the spring semester prior to the internship and after obtaining an internship offer. Students with part-time fall or spring internships enroll in the course immediately after obtaining an internship offer.

ARCH 6105 Special Problems in Design

Fall and spring. Variable credit; max. 3.

Does not count toward design sequence credit. Prerequisite: permission of instructor. Staff.

Independent study.

ARCH 6106 Praxis: Community Design Workshop (also ARCH 3106)

Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year.

For description, see ARCH 3106.

ARCH 6110 Graduate Design Seminar

Fall. 3 credits. Intended for, but not limited to, graduate students in Architectural Design and Urban Design Program. Not offered every year. Staff.

A companion seminar developing themes explored in ARCH 7111.

ARCH 6111–6112 Urban Housing Developments

6111, fall; 6112, spring. 3 credits each semester. Prerequisite: fourth- and fifth-year students in architecture and graduate students; permission of instructor. Not offered every year. Staff.

ARCH 6113 Transportation

Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

The effect of various transportation forms on the environment is considered from the perspectives of architects, engineers, planners, and human ecologists. Readings and discussions of past, current, and future transportation modes focus on aesthetic and physical aspects.

ARCH 6114 Low-Cost Housing

Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

Aspects of low-cost housing involving engineering technology, architecture, physical planning, economics, and sociology.

Architectural Theory**ARCH 1300 An Introduction to Architecture: Lectures**

Summer. 3 credits. Open to non-architecture majors in college, high school students in 11th and 12th grades, and anyone with minimum of a high school diploma interested in exploring the field of architecture. S–U or letter grades. Not offered every year. Staff.

Survey course that covers the many facets of architecture: history, design principles, preservations, landscape architecture, building technology, and cultural factors. Course format comprises lectures, demonstrations, films, and field trips. Evaluation is based on quizzes and a final exam.

ARCH 1301 An Introduction to Architecture

Fall. 3 credits. Open to out-of-department students only. ARCH 1301 is not a prerequisite for ARCH 1302. Staff.

Intended to familiarize non-architecture students with the art and science of architecture. The fundamentals of plan, section, and elevation, the primary elements that comprise an architectural form; basic organizational principles; the ways in which we perceive architectural space; and the various concepts of function in relation to form will be included among the topics to be covered, using examples from numerous times and cultures as well as from contemporary Cornell campus.

ARCH 2301 Architectural Analysis I

Fall. 2 credits. Corequisite: for architecture students, ARCH 2101. Staff.

Introduction to analysis of the object of study in the interest of broadening one's understandings of the ways in which architecture can connote and denote meanings.

ARCH 2302 Architectural Analysis II

Spring. 2 credits. Corequisite: for architecture students, ARCH 2102. Staff.

Advanced analytical studies focusing on complex architectural spaces, objects, images, and representations.

ARCH 3304 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 6304)

Fall or spring. 3 credits. Prerequisite: third-year students and above. J. Wells.

Field and figure relationships (interrelation of parts dominated by the general character of the whole) are the general themes for studying numerous issues relevant to the design of elevations and facades. The first part of the semester is a lecture/seminar format. Students are required to research and present a paper for discussion. In the latter part of the semester, students do exercises to demonstrate their understanding of the issues addressed.

ARCH 3307 Special Investigations in the Theory of Architecture I

Fall or spring. Variable credit, max. 3. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 3308 Special Topics in the Theory of Architecture I

Fall or spring. 3 credits. Prerequisite: ARCH 2301–2302 or permission of instructor. Not offered every year. Staff. Topic TBA.

ARCH 3309 Elements, Principles, and Theories in Japanese Architecture

Spring. 3 credits. Not offered every year. L. Mirin.

Examination of Japanese architecture (buildings and gardens) and their contexts: landscapes, settlements, and cities. The course is addressed to those interested in Japanese architecture as a manifestation of Japanese culture and as a subject for analysis. Emphasis is on underlying concepts, ordering principles, formal typologies, space and its representation, perceptual phenomena, and symbolic content. Readings focus on theoretical treatments of these aspects by Japanese and western writers.

ARCH 4302 Theory of Architecture

Fall or spring. 3 credits. Prerequisite: upper-level students. Not offered every year. Staff.

Development of urban form, urban intervention, contextualism, ideal cities, historic new towns, streets, piazzas, fortifications, public buildings and social housing types, site planning, and transportation.

ARCH 4305 Architecture and Representation

Fall or spring. 3 credits. Prerequisite: degree candidates in architecture; successful completion of ARCH 2301–2302. Not offered every year. Staff.

Study of architecture as it functions as a representational art, referring to its past while inferring its present.

ARCH 5301 Theories and Analyses of Architecture I

Fall. 3 credits.

Introduces students to influential critical and creative themes in modern architecture. Topics cover influential 20th-century discourses and practices prior to the 1960s, the questions and contexts that they engage, and their implications for contemporary thinking and design. Discussions and assignments aim at developing critical and graphical readings of both works and writings.

ARCH 5302 Theories and Analyses of Architecture II

Spring. 3 credits. Prerequisite: ARCH 5301. Continuation of ARCH 5301 focusing on themes in architectural discourse, design, and inquiry from the 1960s to the present, and their creative/critical implications.

ARCH 6301 Design Research

Fall. 3 credits. Staff. Introduction to themes of inquiry in contemporary architecture, including critical motives in research, topical “problems,” and materials and tactics of investigation.

ARCH 6304 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 3304)

Fall or spring. 3 credits. Prerequisite: third-year students and above. J. Wells. For description, see ARCH 3304.

ARCH 6305 Theory and Criticism in Architecture

Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

Inquiry into the fundamental principles of architectural criticism in theory and practice, with emphasis on the structures of criticism in the 20th century.

ARCH 6307 Special Investigations in the Theory of Architecture II

Fall or spring. Variable credit; max. 4. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 6308 Special Topics in the Theory of Architecture II

Fall or spring. 3 credits. Prerequisite: ARCH 5301–5302, permission of instructor. Not offered every year. Staff. Topic TBA.

Architecture, Culture, and Society**ARCH 3402 Architecture as a Cultural System (also ARCH 5402)**

Fall or spring. 3 credits. Can substitute ARCH 4405 or 4407 by permission of instructor. B. MacDougall.

What have been the major issues in the theory and practice of architectural design through time and across cultures, and how is aesthetic judgment related to more general systems of ordering within a particular society or group? This course draws on concepts, methods, and findings from the broad field of cultural anthropology to address these questions. Case studies and examples are drawn from a wide range of architectural traditions around the world for which there is significant ethnographic literature, with special emphasis on sub-Saharan Africa, India, and the United States. Topics include the ideational and formal relationships between folk and monumental traditions in complex societies; the structure of the ideal social order and its refraction in the material world; cosmological models and architectural form; geometries of non-Western traditions; and the relationship between indigenization and culture change.

ARCH 3409 Undergraduate Investigations in Architecture, Culture, and Society

Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. B. MacDougall. Independent study.

ARCH 4405 Architecture and the Mythic Imagination

Fall. 3 credits. Prerequisite: ARCH 3402 or permission of instructor. Not offered every year. B. MacDougall.

ARCH 4407 Architectural Design and the Utopian Tradition

Fall. 3 credits. Prerequisite: ARCH 3402 or permission of instructor. Not offered every year. Staff.

ARCH 4408-4418 Special Topics in Architecture, Culture, and Society

Fall and spring. 3 credits each semester. Prerequisite: permission of instructor. B. MacDougall.

Topic TBA.

ARCH 5402 Architecture, Culture, and Society

Spring. 3 credits.

What have been the major issues in the theory and practice of architectural design through time and across cultures, and how is aesthetic judgment related to more general systems of order within a particular society or group? This course draws on concepts, methods, and findings from the broad field of cultural anthropology to address these questions. Case studies and examples are drawn from a wide range of architectural traditions around the world for which there is significant ethnographic literature, with special emphasis on sub-Saharan Africa, India, and the United States. Topics include the ideational and formal relationships between folk and monumental traditions in complex societies; the structure of the ideal social order and its refraction in the material world; cosmological models and architectural form; geometries of non-Western traditions; and the relationship between indigenization and culture change.

ARCH 6401-6402 Architecture in Its Cultural Context I and II

6401, fall; 6402, spring. 4 credits each semester. Prerequisite: permission of instructor. Not offered every year. B. MacDougall.

ARCH 6409 Graduate Investigations in Architecture, Culture, and Society

Fall or spring. Variable credit; max. 4. Prerequisite: permission of instructor and approved independent study form. B. MacDougall.

Independent study.

Visual Representation**ARCH 1501 Drawing I: Freehand Drawing**

Fall. 2 credits. Prerequisite: department student or permission of instructor. Staff. Freehand drawing with emphasis on line as a means of visualizing form and space in architecture.

ARCH 1502 Drawing II: Drawing Systems

Spring. 2 credits. Prerequisite: ARCH 1501 or permission of instructor. Staff.

Concepts and methods of visualization and representational drawing systems used in architecture. Orthogonal projection, line weight, paraline projection, shade and shadow, and perspective.

ARCH 2503 Drawing III: Digital Media in Architecture

Fall or spring. 2 credits. Prerequisite: ARCH 1502 or permission of instructor. Letter grades only.

Introduction to two- and three-dimensional digital media in architecture and its potential for visualization, representation, and analysis.

ARCH 4500 Architectural Publications

Fall or spring. Variable credit; max. 3. May be repeated for credit. Not offered every year. Staff.

Colloquy and practicum on issues related to the production of an architectural journal, as well as other theoretical and practical production issues related to the exchange of architectural ideas. Exercises cover both theoretical as well as hands-on aspects of architectural publication.

ARCH 4508 Special Investigations in Visual Representation

Fall or spring. Variable credit; max 3. Prerequisites: permission of instructor and approved independent study form. Staff.

Independent study.

ARCH 4509 Special Topics in Visual Representation I

Fall or spring. 3 credits. Prerequisite: ARCH 1501, 1502, and 2503, or permission of instructor. Staff.

Topics TBA.

ARCH 5511 Techniques in Visual Representation I: Freehand and Analytical Drawing

Fall. 3 credits.

Focuses on hand drawing and sketching as vehicles for design thinking and perception. Observational, analytical, and transformational exercises develop creative proficiency in freehand line drawing and orthographic projection.

ARCH 5512 Techniques in Visual Representation II: Analog/Digital Constructed Drawing

Spring. 3 credits. Prerequisite: ARCH 5511 or approved equivalent.

Develops understanding of, and proficiency in, projective drawing, including paraline and perspective representation in both analog and digital forms. Students are also introduced to a variety of digital representation applications, including modeling, rendering, and animation.

ARCH 6508 Special Investigations in Visual Representation II

Fall or spring. Variable credit; max. 4. Prerequisites: permission of instructor and approved independent study form. Staff.

Independent study.

ARCH 6509 Special Topics in Visual Representation II

Fall or spring. 3 credits. Prerequisite: ARCH 5511-5512 or permission of instructor. Staff.

Topics TBA.

Architectural Science and Technology**Structures****ARCH 2603 Structural Concepts**

Fall. 4 credits. Prerequisite: MATH 1110 or approved equivalent. M. Cruvellier. Fundamental concepts of structural behavior. Statics and strength of materials. Introduction to and analysis of simple structural systems.

ARCH 2604 Structural Elements

Spring. 3 credits. Prerequisite: ARCH 2603. J. Ochshorn or staff.

Concepts and procedures for the design of individual structural components (e.g., columns, beams) in steel, concrete, and timber construction.

ARCH 3603 Structural Systems

Fall or spring. 3 credits. Prerequisite: ARCH 2604. M. Cruvellier.

Concepts and procedures for the design of overall structural framing systems in steel, concrete, and timber construction.

ARCH 3604 Vertigo Structures (also ARCH 6604)

Fall or spring. 3 credits. Prerequisite: ARCH 3603 or equivalent. Limited enrollment. Not offered every year. M. Cruvellier.

ARCH 3605 Bridge Design (also ARCH 6605)

Fall or spring. 3 credits. Limited enrollment. Prerequisite: ARCH 3603 or equivalent. Not offered every year. M. Cruvellier.

The major visual impact of bridges on the built environment cannot be denied. And yet, during the past century, architects have virtually abandoned their historical role in the design of these structures. Engineers, on the other hand, have claimed bridge design as their responsibility and have hailed it as evidence of structural art. Are the basic principles of bridge design such that this situation makes sense for our society? Or is a rethinking of the manner in which bridges are designed called for? Students examine and experiment with the design of bridge structural forms, not only in terms of what is technically feasible but also, with equal emphasis, in the context of aesthetic, historical, and social considerations. Weekly meetings include lectures, discussion seminars, and studio-type design reviews.

ARCH 4603 Special Topics in Structures

Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 2603, 2604, and 3603 or permission of instructor. Not offered every year. Staff.

Topics TBA.

ARCH 4609 Special Investigations in Structures

Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. Staff.

Independent study.

ARCH 5603 Structural Concepts

Fall or spring. 3 credits. Prerequisite: M. Arch. 1 students or permission of instructor. M. Cruvellier.

For description, see ARCH 2603.

ARCH 5604 Structural Elements

Fall or spring. 3 credits. Prerequisite: M. Arch. 1 students or permission of instructor. J. Ochshorn.

For description, see ARCH 2604.

ARCH 6603 Structural Systems

Fall or spring. 3 credits. Prerequisite: M. Arch. 1 students or permission of instructor. M. Cruvellier.

For description, see ARCH 3603.

ARCH 6604 Vertigo Structures (also ARCH 3604)

Fall or spring. 3 credits. Prerequisite: ARCH 5603 or equivalent. Limited enrollment. Not offered every year. M. Cruvellier.

For description, see ARCH 3604.

ARCH 6605 Bridge Design (also ARCH 3605)

Fall or spring. 3 credits. Limited enrollment. Prerequisite: ARCH 3603 or equivalent. Not offered every year. Staff.

For description, see ARCH 3605.

Construction**ARCH 2602 Building Technology, Materials, and Methods (also ARCH 5602)**

Fall. 3 credits. J. Ochshorn.

Building construction is examined from the following standpoints: life safety (construction types, occupancy, assemblies, egress); accessibility (ramps, doors, etc.); sustainability; conveying systems (stairs, elevators, escalators); structural materials (properties, manufacturing strategies, typical applications, and connections); envelope theory (insulation, condensation, vapor and air barriers, pressure-equalization, movement, tolerances); cladding systems (masonry, precast, metal, glass); interior systems (walls, floors, and ceilings); and technical documentation (detail drawings).

ARCH 3607 Working Drawings (also ARCH 6607)

Fall or spring. 3 credits. Prerequisite: ARCH 2602 or equivalent. Limited enrollment. Not offered every year. J. Ochshorn.

ARCH 4604 Special Investigations in Construction

Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. Staff.

Independent study.

ARCH 4605 Special Topics in Construction

Fall or spring. 3 credits. Limited to 30 students. Prerequisite: ARCH 2602 or permission of instructor. Not offered every year. Staff.

Topics TBA.

ARCH 5602 Building Technology, Materials, and Methods (also ARCH 2602)

Fall. 3 credits. Prerequisite: M.Arch. I students or permission of instructor. J. Ochshorn.

For description, see ARCH 2602.

ARCH 6607 Working Drawings (also ARCH 3607)

Fall or spring. 3 credits. Prerequisite: ARCH 2602 or equivalent. Limited enrollment. Not offered every year. J. Ochshorn.

Environmental Systems and Conservation**ARCH 2601 Environmental Systems I—Site Planning**

Spring. 3 credits. Staff.

Basic principles involved in design in the outdoor environment. A brief historical perspective. A development of inventory including grading and drainage. Foundations, surfacing, and construction.

ARCH 3601 Environmental Systems II—Thermal Environmental Systems

Fall. 3 credits. Prerequisites: ARCH 2601. Corequisite: ARCH 3101. Letter grades only. Staff.

The first semester of this yearlong course addresses the design of the indoor thermal environment, including the appropriate application of building envelope materials and assemblies, and an introduction to the principles of sustainability. Beginning with the basics of human thermal comfort, followed by the concept and practice of solar heating, passive cooling, indoor air quality, and human health, students will learn how to shape the form of a building to respond to climate and the needs of an occupant. In the second half of the semester, students address the design of mechanical, electrical, and plumbing systems, including heating, ventilation and air-conditioning (HVAC) equipment, vertical transportation, communication, security, and fire protection systems.

ARCH 3602 Environmental Systems III—Building Systems Integration

Spring. 3 credits. Prerequisites: ARCH 2602, 2603, 3101 and 3601. Corequisite: ARCH 3102. Letter grades only. Staff.

The second semester of this yearlong course addresses the design of the visual and acoustical environments of buildings. Beginning with the basics of vision, followed by the concept and practice of daylighting, electric lighting sources, and human health, this course will provide students with a working understanding of light and sound as architectural media.

The objective of this yearlong course is to engage students to produce a comprehensive architectural project based on a building program and site. To do this, students will be required to select a design from a prior design studio project to develop in this course. In the comprehensive design project, students will be required to demonstrate an understanding of structural systems, environmental systems, building envelope systems, life-safety provisions, wall sections, building assemblies and the basic principles of sustainability.

ARCH 4601 Ecological Literacy and Design (also DEA 4220)

Spring. 3 credits. Letter grades only. Cost of field trips: approx. \$25. J. Elliott.

Lecture/seminar course for advanced (junior or senior) students interested in learning about the effects of designing the built environment of the biophysical world. Course objectives are to develop sensitivities to environmental issues, construct conceptual frameworks for analysis, and demonstrate how ecological knowledge can be applied to the practice of design through participatory approaches to learning. Visit <http://courses.cit.cornell.edu/dea4220/ARCH>.

ARCH 4618 Special Investigations in Environmental Systems and Conservation

Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. Staff.

Independent study.

ARCH 4619 Special Topics in Environmental Systems and Conservation

Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 2601, 3601, and 3602 or permission of instructor. Not offered every year. Staff.

Topics TBA.

ARCH 6601 Environmental Systems II—Thermal Environmental Systems

Fall. 3 credits. Prerequisite: second-year M. Arch. I students or permission of instructor. Letter grades only. Staff.

For description, see ARCH 3601.

ARCH 6602 Environmental Systems III—Building Systems Integration

Spring. 3 credits. Prerequisite: second-year M. Arch. I students or permission of instructor. Letter grades only.

For description, see ARCH 3602.

Computer Applications**ARCH 3702 Imaging and the Electronic Age**

Fall or spring. 3 credits. For undergraduate non-computer scientists. Not offered every year. D. Greenberg.

Historical technological advances that created major paradigm shifts for communications as well as advances in computer technology are presented. Technical fundamentals of computer graphics capabilities are emphasized. The latter half of the course covers the effect of these scientific advances on many discipline-specific areas including architecture, art and animation, photography and the film industry, medicine, engineering design, the corporate structure, and education. The course is heavily supplemented with pictorial content consisting of slides, movies, and live interactive demonstrations.

ARCH 3704 Computer Graphics I (also CS 4620)

Fall. 4 credits. Prerequisite: CS/ENGRD 2110. Staff.

For description, see CS 4620.

ARCH 4706 Special Topics in Computer Applications

Fall or spring. 3 credits. Limited to 30 students. Prerequisite: ARCH 3704 or permission of instructor. Not offered every year. Staff.

Topics TBA.

ARCH 4707-4708 Special Projects in Computer Graphics

Not offered every year.

ARCH 4709 Advanced Computer Graphics: Virtual Reality (also ARCH 6709)

Fall. 3 credits. Prerequisites: introductory computer graphics or computer science course, or permission of instructor; upper-level undergraduate or graduate standing. Not offered every year. H. Richardson.

Explores the role of synthetic imaging and computer graphics in architectural design. The first half of the course examines the new possibilities that information technologies offer for multimedia visualization of architecture, from abstract conceptual drawings, to sketching, photorealistic rendering, and multimodal representation, including motion and sound. The second half explores the uses of information technologies to model and simulate the creative design

process. These explorations include developing a library of design ideas as building blocks for design; creating multimodal, multidimensional, immersive, virtual environments; interactive transformation and synthesis of design concepts; and "reverse architecturing" of canonical works. The emphasis of this course is on concepts as well as methods and techniques of computer graphics and their application to simulating the creative design process in architecture.

Graduate Courses

ARCH 6709 Advanced Computer Graphics: Virtual Reality (also ARCH 4701)

Fall. 3 credits. Prerequisite: introductory computer graphics or computer science course or permission of instructor; upper-level undergraduate or graduate standing. H. Richardson.

For description, see ARCH 4709.

ARCH 7701-7702 Architectural Science Laboratory

7701, fall; 7702, spring. 6 credits each semester. Prerequisite: architectural science graduate students. D. Greenberg.

Projects, exercises, and research in the architectural sciences.

ARCH 7903-7904 Thesis or Research in Architectural Science

7903, fall; 7904, spring. Variable credit; max. 12. Prerequisite: architectural science graduate students. Staff.

Independent study.

Architectural History

The history of the built domain is an integral part of all aspects of the architecture curriculum, from design and theory to science and technology. Incoming students take ARCH 1801-1802 in the first year, and three additional courses from the 3800-3819 series, preferably in the third and fourth years. Seminars are intended for advanced undergraduate and graduate students and do not satisfy undergraduate history requirements. Courses with the same number may be taken only once to satisfy history of architecture or in-college requirements.

Sequence Courses

ARCH 1801 History of Architecture I

Fall. 3 credits. Requirement for first-year architecture students; open to all students in other colleges interested in the history of the built domain. Staff.

The history of the built environment as social and cultural expression from the earliest to more recent times. Themes, theories, and ideas in architecture and urban design are explored, beginning with the earliest written records.

ARCH 1802 History of Architecture II

Spring. 3 credits. Requirement for first-year architecture students; open to all students in other colleges interested in the history of the built domain; may be taken independently of ARCH 1801. Staff.

The history of the built environment as social and cultural expression from more recent times to the present. Architecture and urban design themes, theories, and ideas are addressed in greater detail leading to the present time.

Directed Electives

ARCH 3800 History of Theory

Fall or spring. 3 credits. Prerequisites: ARCH 1801-1802 or permission of instructor. Not offered every year. Staff.

This course, in which classroom discussion and debate play a central role, explores the history of important theoretical issues involving art and architecture. The readings, which span from the Greeks to today, focus on more than just questions of aesthetics and include theories of ethics, origins, imagination, nature, society, and pedagogy.

ARCH 3801 From Utopia to the Ghetto: Renaissance Urban Form

Fall or spring. 3 credits. Prerequisites: ARCH 1801-1802 or permission of instructor. Not offered every year. M. Lasansky.

Significant developments in European urban design from 1300 to 1600. Particular attention is given to Italy and Spain. Focuses on a series of case studies: entire towns, specific urban spaces, and individual building types. Weekly discussions contextualize the city within a larger cultural framework. This course considers how civic, economic, social, political, legislative, technical, and material concerns have had a significant impact on the form, function, and patronage of these places, spaces, and structures. The relevance of Renaissance theory to contemporary practice is also emphasized through the discussion of several 20th-century urban plans and built projects.

ARCH 3802 The Cinematic City

Fall. 3 credits. Prerequisite: ARCH 1801-1802 or permission of instructor. Not offered every year. M. Lasansky.

Examines the relationship between cinematic forms of mass media and architecture. Explores the representation, perception, and understanding of architecture as it has been mediated by various cinematic genres including film, television, and documentaries. Considers how cinema has been deployed as a tool in architectural production, how it has influenced the experience and design of space, the extent to which it has been used as a vehicle for critical commentary on the urban condition, and the way it is imbedded in the historical development of architecture and urbanism.

ARCH 3803 The Construction of Modern Life: The Politics of Memory and the Commodification of Architecture

Fall or spring. 3 credits. Prerequisite: ARCH 1801-1802 or permission of instructor. Not offered every year. M. Lasansky.

Examines the complex relationship between the built environment, the construction and definition of cultural heritage, collective memory and civic identity, and the commodification or commercial celebration of specific buildings, sites, and urban events. Focuses on late 18th-, 19th-, and 20th-century Europe. Particular attention is awarded to the discourse surrounding the restoration of buildings (and figures such as Ruskin, Viollet-le-Duc, and Giovannoni); political agendas guiding restoration and urban renewal projects; newly defined venues of modern urban spectacle (e.g., the World's Fair, department stores, morgues, and panoramas); and the role played by tourism in the commodification of local and foreign sites.

ARCH 3804 The Urban Landscape of Renaissance Rome: 1450 to 1600

Fall or spring. 3 credits. Prerequisites: ARCH 1801-1802 or permission of instructor. Not offered every year. M. Lasansky.

Exploration into the urban morphology, architecture, and civic life of Renaissance Rome. The city was a thriving center for architectural practice. It drew practitioners from throughout the peninsula and served as an important theoretical model for architects elsewhere. The course surveys the important issues, individuals, and building projects of the city between 1450 and 1600 with particular emphasis on the intellectual and physical rediscovery and re-appropriation of Antiquity; the role of the Vatican with its large population of pilgrims, tourists, resident church officials, foreign bankers, and dignitaries that made specific demands of the built environment; and the unique topography and natural resources of the city's location. The last portion of the course addresses the legacy of the Renaissance during the period of Italian unification and the Fascist regime.

ARCH 3805 Magnificent Utility—Architecture and the Arts of Persuasion

Fall or spring. 3 credits. Prerequisites: ARCH 1801-1802 or permission of instructor. Not offered every year. C. Otto.

Architects put revolutionary attitudes about form, space, light, and the arts into practice during the course of the 17th century. Focusing on the urban centers of Rome and Paris and the cultural landscapes of Spain, England, and Central Europe, this course explores how architecture, urban design, and the arts were employed to promote state and church.

ARCH 3806 The Architecture of India and Its Interpretation

Spring. 3 credits. Not offered every year. B. MacDougall.

Surveys the architectural record of ancient and medieval India with an emphasis on stupa and temple traditions. Devotes attention to European efforts to write a Western-style architectural history for India and to the British fascination with explaining Indian ethnology and history over two centuries. Attempts to evaluate the claim made by the historian James Fergusson that architecture provided the basis for reconstructing an imperfectly known Indian history. Also examines the notion that scholarly enterprises were closely entwined with strategies for domination. To this end, students read 19th-century firsthand reports on architecture in antiquarian English-language journals alongside more modern accounts. They are compared with indigenous architecture writings that were often unacknowledged by Europeans.

ARCH 3807 19th Century: Tales of the City

Fall or spring. 3 credits. Prerequisite: ARCH 1801-1802 or permission of instructor. Not offered every year. M. Woods.

Focuses on 19th-century cities as settings for modernisms and modernities, new visions and experiences of modern life. The relationship between urbanism and creativity that emerges during the 19th century engages students in Berlin, Havana, Miami, London, Bombay, Paris, Harlem, and other cities.

Issues of center and periphery, nation and locality, capital and colony also emerge. Urban pleasures and dangers for men, women, and the other as revealed through histories of the built environment but also through literature, painting, photography, and film are examined.

ARCH 3808 Modernism

Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. C. Otto. Precursors and proponents of the modern movement from the late 19th century into the 1940s are considered in this course. The cultural intents of the modern are examined in architectural and urban design for individuals, groups, and institutions, from Mies van der Rohe, Le Corbusier, and Frank Lloyd Wright to de Stijl, the Bauhaus, and design education. Attention is paid to the politics of design serving the state in the 1930s.

ARCH 3809 Architecture, Revolution, and Tradition

Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. C. Otto. From early 18th to early 19th century, European society underwent profound change. Political absolutism—the doctrine of unlimited governmental control—was challenged; enlightenment attitudes—commitments to human reason, science, and education—gained ascendancy. This course considers architectural and urban design in these times of tumult. It begins with efforts to foment architectural revolution within inherited traditions and ends with attempts to establish design traditions within revolutionary settings.

ARCH 3810 American Architecture and Building I (also AMST 3810)

Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Woods. Review of architecture, building, and responses to the landscape from the prehistoric period to the Civil War. Architecture and building as social and collaborative arts are emphasized and thus the contributions of artisans, clients, and users as well as professional architects and builders are examined. The architectural expressions of Native Americans, African Americans, women, and others are treated in addition to those of European colonists and settlers.

ARCH 3811 American Architecture and Building II (also AMST 3811)

Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Woods. Continuation of ARCH 3810 but may be taken independently. An account of American architecture, building, and responses to the environment from the post–Civil War period to the present day. Particular attention is paid to the processes of industrialization, professionalization, and urbanization as well as to the manifestations of gender, class, race, and ethnicity in the built and architectural environments.

ARCH 3812 Modern Architecture on Film

Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Woods.

Exploration of certain themes deemed critical to modern architecture and urbanism through their representation in both commercial and avant-garde films from the medium's birth until the present day. The focus varies each semester with particular emphases to include the modern house and housing, the modern city, technology and visions of the future, and finally the image of the architect. Representations of these themes in other forms such as painting, photography, theater, literature, and advertising also are examined. The course includes selected readings in modern architecture and film, screenings in class, class discussions, presentations, and papers.

ARCH 3813 The Cumulative City

Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. C. Otto. Well-established cities were transformed by radical and unimagined change in the 19th and 20th centuries. Politics and economies were recast, population exploded, and new technologies reshaped transportation, communication, and building. This course explores transformation historically in the cumulative city, focusing on specific cities in America and Europe, Africa and Asia. The cultural context of each city is examined to understand how it changed and how meanings became associated with evolving urban forms.

ARCH 3815 History of the Present—Contemporary Architecture and Urbanism

Fall or spring. 3 credits. Prerequisite: ARCH 1801–1802 or permission of instructor. C. F. Otto. Theory and practice in architecture and urbanism are investigated from later Modernism to contemporary positions. Built work, theoretical texts and graphics, and the nature of design practice in locations worldwide (such as the United States and the Pacific Rim) raise issues of globalization and the specificity of place and cultural identity. By engaging the immediate past using methods of cultural and design history, the course problematizes the relationship (and relevance) of history to architectural practice and experience.

ARCH 3816 Special Topics in the History of Architecture and Urbanism

Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. Staff. Topics TBA.

ARCH 3817 Special Topics in the History of Architecture and Urbanism

Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. Staff. Topics TBA.

ARCH 3818 Special Topics in the History of Architecture and Urbanism

Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. Staff. Topics TBA.

ARCH 3819 Special Topics in the History of Architecture and Urbanism

Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. Staff. Topics TBA.

ARCH 3820 The Topography and Urban History of Rome in Antiquity and the Middle Ages

Fall or spring. 3 credits. Rome Program only. J. Gadeyne. Rome is a prisoner of its past. The entire city confronts the student with almost 30 centuries of urban and architectural history. This course intends to reconstruct the urban history of Rome from its origins through the Middle Ages (10th century BC–12th century AD). The purpose of this course will be to discover the layers of Rome, combining archaeology with literature, architecture, and urban history with art history. The goal is a thorough and direct knowledge of the Roman and Medieval urban landscape and the way this landscape has sometimes survived until today. Special attention will be given to Roman and Medieval building typology, both private and public, and the development of the urban infrastructure (street system, water supply, fortifications, etc.). Strong emphasis will be placed upon continuity, use/reuse, and transformation of buildings and spaces, etc. Every week one or two different “regions” will be explored that are typical for a particular moment of the urban history. Visits to sites outside Rome also will be used to address the issue of urban history in Italy in antiquity and the Middle Ages.

Special attention will be given to Roman and Medieval building typology, both private and public, and the development of the urban infrastructure (street system, water supply, fortifications, etc.). Strong emphasis will be placed upon continuity, use/reuse, and transformation of buildings and spaces, etc. Every week one or two different “regions” will be explored that are typical for a particular moment of the urban history. Visits to sites outside Rome also will be used to address the issue of urban history in Italy in antiquity and the Middle Ages.

ARCH 3904 Toward the Millennium

Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. C. Otto. Theory and practice in architecture and urbanism are investigated from the 1950s to the present. From the Americanized International Style to the more recent internationalism of design attitudes, the immediate past is explored historically to probe the matrix of meanings associated with contemporary form, urbanism, and technology.

ARCH 5801 History of Architecture I

Fall. 3 credits. Staff. The history of the built environment as social and cultural expression from the earliest times to the beginning of the modern period is studied through selected examples from across the world. Themes, theories, and ideas in architecture and urban design are explored through texts, artifacts, buildings, cities, and landscapes.

ARCH 5802 History of Architecture II

Spring. 3 credits. Prerequisite: ARCH 5801 or approved equivalent. Staff. The history of the built environment as social and cultural expression from the modern period to the present day is studied through selected examples from across the world. Architecture and urban design themes, theories, and ideas are explored through texts, artifacts, buildings, cities, and landscapes.

Graduate Seminars in the History of Architecture and Urbanism

All topics for ARCH 6802 to 6819 TBA before the start of the semester.

ARCH 6800 State of the Discipline

Fall or spring. 4 credits. Staff.
This seminar will provide a survey of architectural historiography paying particular attention to the paradigm shifts of recent decades. Through the critical readings of important texts we will discuss the current state of the field while simultaneously reconsidering our position in it. The course will address how we apply theory to practice, develop research strategies that maximize methodological alliances, imbue the study of the past with contemporary relevance, and contribute as much to other disciplines as we borrow from them.

ARCH 6801 Foundations of the Discipline

Fall or spring. 4 credits. Staff.
Explorations of seminal positions that established the disciplinary praxis of the history of architecture and urbanism, based on case studies.

ARCH 6802 Seminar in Urban History

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6803 Seminar in History of Theory

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6804 Seminar in Italian Renaissance: Architecture, Politics, and Urbanism

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. M. Lasansky.

ARCH 6805 Practicum

Fall or spring. 4 credits. Staff.
This course exercises history of architecture and urbanism's capacities for affecting contemporary events through critical associations with the past. The workshop culminates in an exhibition, publication, symposium, curricular initiative, or other public occasion. Enrollment of qualified graduate students from associated fields is encouraged.

[ARCH 6806 Seminar in 17th- and 18th-Century Architecture and Urbanism]

[ARCH 6808 Seminar in 20th-Century Architecture and Urbanism]

ARCH 6809 Seminar in History of Cities

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

[ARCH 6810 Seminar in American Architecture, Building, and Urbanism]

[ARCH 6812 Seminar in 19th-Century Architecture, Building, and Urbanism]

ARCH 6816 Seminar in Special Topics in the History of Architecture and Urbanism

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6817 Seminar in Special Topics in the History of Architecture and Urbanism

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6818 Seminar in Special Topics in the History of Architecture and Urbanism

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6819 Seminar in Special Topics in the History of Architecture and Urbanism

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

Independent Study, Thesis, Dissertation

ARCH 2809 Undergraduate Independent Study in the History of Architecture and Urbanism

Fall or spring. Variable credit; max. 3. May not be taken by students in design to satisfy undergraduate history requirements. Prerequisite: permission of instructor. Staff.

Independent study for undergraduate students.

ARCH 4901 Undergraduate Thesis in the History of Architecture and Urbanism

Fall or spring. 4 credits. Prerequisite: B.S. honors candidates in history. Staff.

ARCH 7809 Graduate Independent Study in the History of Architecture and Urbanism

Fall or spring. Variable credit; max. 12. Prerequisite: permission of instructor. Staff.

Independent study for graduate students only.

ARCH 8920 M.A. Essay Research

Fall. 4 credits. Prerequisite: permission of instructor and approved independent study form. Staff.

Independent research for the M.A. essay.

ARCH 8921 M.A. Essay in the History of Architecture and Urbanism

Fall or spring. 6 credits. Staff.
Independent preparation of the M.A. essay.

ARCH 9901 Ph.D. Dissertation in the History of Architecture and Urbanism

Fall or spring. Variable credit; max. 12. Staff.
Independent study for the doctoral degree.

ART

P. Phillips, chair (224 Tjaden Hall, 255-3558); M. Ashkin, director of graduate studies; R. Bertoia, J. Locey, T. McGrain; E. Meyer, G. Page, M. Park, B. Perlus, J. Rickard, B. Spector, W. S. Taft, and visiting artists and critics.

Undergraduate Program

The curriculum in art is a program of study within the College of Architecture, Art and Planning, as well as other colleges at Cornell.

The undergraduate curriculum in art is an excellent background for a career in the

visual arts. Past graduates have found it also to be preparation for careers in applied art, although no specific technical courses are offered in such areas as interior design, fashion, or commercial art.

The undergraduate curriculum in art, leading to the degree of bachelor of fine arts, provides an opportunity for the student to combine a general liberal education with the studio concentration required for a professional degree. During the first four semesters, all students follow a common course of study designed to provide a broad introduction to the arts and a basis for the intensive studio experience of the last two years. Beginning with the third year, students concentrate in electronic imaging, painting, photography, printmaking, sculpture, or combined media.

Studio courses occupy approximately one-half of the student's time during the four years at Cornell; the remaining time is devoted to a diversified program of academic subjects with a generous provision for electives.

All members of the faculty in the Department of Art are practicing, exhibiting artists, whose work represents a broad range of expression.

A candidate for the B.F.A. degree may also earn a bachelor of arts degree from the College of Arts and Sciences or the College of Human Ecology, or a bachelor of science degree from the College of Engineering, in a five-year dual degree program. This decision should be made early in the candidate's career (no later than the third semester) so that he or she can apply to be registered in both colleges simultaneously. Each student is assigned an advisor in both colleges of their dual-degree program to provide needed guidance. Candidates for two degrees must satisfy all requirements for both degrees. At least 62 of the total credits must come from courses offered in the Department of Art. In addition, all Department of Art requirements for first-year writing seminars, art history, and distribution must be met.

It is expected that a dual-degree candidate will complete the pre-thesis and thesis requirements for the B.F.A. degree during the fourth and fifth year.

Bachelor of Fine Arts Degree Requirements

Credits and Distribution

The B.F.A. degree requires 130 academic credits. A minimum of 59 are taken in the Department of Art.

Curriculum

Students are expected to take an average course load of 16 credits per semester during their four years. Students wishing to take more than three studio courses in any one semester must file a petition. All students must take at least one studio course a semester unless there are exceptional circumstances expressed in the form of a petition. **Any deviation from the standard curriculum must be petitioned to the department before the act. No student in the first year of the B.F.A. program will be permitted to deviate from the required curriculum.**

Specific Course Requirements

By the end of the second year, students must have completed an introductory course in each of the areas of painting, sculpture, printmaking, photography, electronic imaging, and four drawing courses. By the end of the third year, all students must have completed an additional 12 credits beyond the introductory level in three of the four areas.

Concentration

Students must plan their programs to complete 26–27 credits in one of the studio areas of electronic imaging, painting, photography, printmaking, or sculpture. Declaration of the area of concentration must be made by the second semester of the sophomore year. Students concentrating in combined media must also submit an approved projected course plan. B.F.A. students complete a senior thesis in one area of concentration and are required to participate in the Senior Exhibition in the semester the Thesis II is taken.

Concentration Requirements (27 credits total; 26 in printmaking)

The required courses for each concentration are as follows:

Electronic Imaging: ART 1701; 2304/2702 (1 of 2); 2703; 3703/3704 (1 of 2), 4001, 4002 (senior thesis)

Painting: ART 1201, 2201, 3201, 3202, 4001, 4002 (senior thesis)

Photography: ART 1601, 2601, 2603; 2604, 2605, 3601 (1 of 3); 4001, 4002 (senior thesis)

Printmaking: ART 1301/1302/1303/1304 (2 of 4); 2301/2302/2303/2304 (1 of 4); 3301, 4001, 4002 (senior thesis)

Sculpture: ART 1401, 2401, 3401, 3402, 4001, 4002 (senior thesis)

Dual Concentration

Students interested in studying in more than one area may choose to do a dual concentration. The dual concentration requires a first area, in which the thesis is conducted, and a nonthesis second area. Thesis I and Thesis II must be taken in the first area of concentration. Students take 23 credits in the first area of concentration (22 for printmaking) and 15 credits in the second area of concentration (14 for printmaking). Drawing is available only as a second area of concentration.

The required courses for the dual concentration are:

First Area of Concentration Total Credits

Electronic Imaging: ART 1701, 2304/2702 (1 of 2); 2703/3703/3704 (1 of 3), 4001/4002 23

Painting: ART 1201, 2201, 3201, 4001, 4002 23

Photography: ART 1601, 2601, 2603/2604/2605/3601 (1 of 4), 4001, 4002 23

Printmaking: ART 1301/1302/1303 (2 of 3), 2301/2302/2303/2304 (1 of 4), 4001, 4002 22

Sculpture: ART 1401, 2401, 3401, 4001, 4002 23

Second Area of Concentration Total Credits

Drawing: ART 1501, 1502, 2501, 2502, independent study 15

Electronic Imaging: ART 1701, 2304/2702 (1 of 2), 2703, 3703/3704 (1 of 2) 15

Painting: ART 1201, 2201, 3201, 3202 15

Photography: ART 1601, 2601, 2603/2604/2605/3601 (2 of 4) 15

Printmaking: ART 1301/1302/1303 (2 of 3), 2301/2302/2303 (1 of 3), 3301 14

Sculpture: ART 1401, 2401, 3401, 3402 15

Note: The total number of out-of-college elective credits required will be adjusted to allow for the additional credits required of the dual concentration.

Combined Media Concentration

The combined media concentration enables students to fulfill concentration requirements by combining several studio disciplines, including out-of-department studio courses such as those offered in the departments of music and theatre, film, and dance.

Students must file an approved "area of concentration" form. In addition to the courses required of all B.F.A. majors during their first and second year (see B.F.A. curriculum), students must take two studios at the 2000 or 3000 level, a minimum of two "out of college" studio electives (OCE studio) of 3–4 credits each, ART 4001 Thesis I and ART 4002 Thesis II.

Note: The total number of in- and out-of-college elective credits required will be adjusted to allow for additional credits required of the combined media concentration.

Cornell in Rome

The studio art component of the Cornell in Rome program draws upon the historical and cultural resources of Rome, its museums, art, and architecture, and its beauty and complexity. It provides an experience unparalleled for artistic, intellectual, and personal growth.

The program provides close individual instruction and studios that are structured but flexible enough to accommodate personal interests. Students are given the freedom to generate their own ideas and may work in any medium that compels them to investigate their personal relationship to Rome. Student projects include paintings, photo essays, collages, performance installation, sculptures, drawings, and books.

Artists resident in Rome visit and lecture. Day trips to the studios of Rome-based artists and artisans provide further inspiration. Workshops on papermaking, fresco, mosaics, egg tempera, and watercolor are frequently available.

Visitors from the various academies in Rome give student artists contact with their contemporaries and with those representing international art movements. An extensive and varied field-trip program balances great historic collections with modern and contemporary art, and the best of Italy's notable cities, towns, and landscapes.

The Rome Studio (ART 4000) may be taken for course credit in all Department of Art concentrations, and additional studio courses expose students to a wide variety of art-making modes. Each Cornell art student receives the equivalent of one semester's advanced study in his or her concentration.

The inspiration of travel and cultural encounter fuels the studio experience, and many students keep sketchbooks and journals, which they will refer to in the art they make after their return from Rome.

Art Requirements

Students in good academic standing who have completed the requirements of the first two years of a fine arts program are eligible for participation in Cornell in Rome. Students are admitted to the program by application and review of their record. Students must register for a full semester of credits.

Students may enroll in the first or second semester of their junior year or for the full academic year. Under special circumstances, first-semester seniors also may attend Cornell in Rome. Serious studio art students from outside Cornell also are encouraged to apply. A portfolio is required.

Sample Rome Curriculum

ART 4000	Rome Studio Requirement for Rome B.F.A. students, fulfills 4 credits in a studio concentration	4
ART 2009	Site-Specific Processes	3
ART 3102*	Modern Art in Italy	3
ART 3107	History of Art in Rome: Early Christian to the Baroque Age	4
or		
ART 3108	History of Art in Rome: Renaissance in Rome and Florence	4
or		
ART 3702	Special Topics in Art History (Spring only)	4

ART 3702	Special Topics: Intermediate and Advanced Drawing	3
ITALA		
1110/1120	Italian Language	4
[ARCH 3107	Contemporary Italian Film 1**]	

**Students may add by approved petition to take 19 credits in Rome.

17–18 Total

Other electives available to B.F.A. students include courses in architectural history, visual studies, and urban studies.

Students may petition to take more than 16 credits per semester in the Rome Program. Students may study in Rome for one or two academic semesters.

*Fulfills 3000-level theory and criticism requirement.

AAP NYC

AAP NYC is a dynamic site from which to explore contemporary art and visual culture and to create art that is responsive to urban issues and life. The Department of Art offers distinctive programs for B.F.A. students from Cornell and other colleges and universities during a January Winter Session and spring semester.

New York is a vast and diverse laboratory with extraordinary museums and galleries, countless studios of artists and designers, dynamic public art, and cultural sites and organizations that offer exceptional opportunities for students to learn first-hand about the production and presentation of art. Scheduled annually, the spring semester is a

collaboratively developed and conceptually linked plan of study with studio and theory courses, independent studies, and internships that all use the remarkable resources and opportunities of the city. Faculty members include practicing artists, theorists, critics, and curators.

The spring semester is planned for art majors in their sophomore year, but students at other levels may participate. The Winter Session is open to all students who seek an intensive, thematically organized immersion in contemporary art theory and practice. In addition to the department's Rome junior-year semester, all undergraduate art majors are encouraged to participate in at least one of these unique New York-based opportunities.

Sample AAP NYC Curriculum

The focus of these courses may vary from year to year.

- ART 2000 New York City Studio
- ART 2001 New York City Seminar
- ART 2003 Art/Architecture History in NYC
- ART 2004 Drawing Projects (Studio)
- ART 2019 Independent Study/Studio in NYC
- ART 2109 Art Practicum in NYC (Field Studies)

Out-of-College Requirements

A minimum of 61 elective credits must be taken outside of the college. In the first year, students must take two first-year writing seminars. Students are required to take courses from among three groups, which include physical and biological sciences (minimum of two courses, of at least 3 credits each); social sciences (minimum of three courses, of at least 3 credits each); and humanities and expressive arts (minimum of three courses, of at least 3 credits each). All B.F.A. students are required to take 20 credits in the history of art. One course must be taken in each of the following areas:

Modern

BFA students can satisfy the modern art history requirement with any of these courses without petition.

- ARTH 2600 Intro to Art History: The Modern Era
- ARTH 2700 Mapping America
- ARTH 3170 Visual Culture
- ARTH 3550 Modern and Contemporary Latin American Art
- ARTH 3600 Intro to Art History: Contemporary Art: 1960 to Present
- ARTH 3605 U.S. Art from FDR to Reagan
- ARTH 3650 History and Theory of Digital Art
- ARTH 3660 Conceptual Art
- ARTH 3740 Painting 19th-Century America
- ARTH 3760 Impressionism in Society
- ARTH 4047 Aesthetic Theory: The End of Art
- ARTH 4505 Contemporary African Diaspora Art
- ARTH 4508 Exhibiting Cultures: Museums, Monuments, Rep, and Display

- ARTH 4525 Rastafari Race and Resistance
- ARTH 4578 African Cinema
- ARTH 4600 Studies in Modern Art
- ARTH 4861 Modern Chinese Art
- ARTH 4917 Modern Art and Popular Culture

Non-Western

BFA students can satisfy the non-Western art history requirement with any of these courses without petition.

- ARTH 2350 Introduction to Art History: Islamic Art and Culture
- ARTH 2880 Introduction to Art History: Approach to Asian Art
- ARTH 3510 Introduction to African Art
- ARTH 3550 Modern and Contemporary Latin American Art
- ARTH 3611 Art of South Asia, 1500–Present
- ARTH 3800 Introduction to Arts of China
- ARTH 3805 Representation and Meaning of Chinese Painting
- ARTH 3820 Introduction to Arts of Japan
- ARTH 3850 The Arts of Southeast Asia
- ARTH 3855 The House and the World: Architecture of Asia
- ARTH 4311 The Multicultural Alhambra
- ARTH 4505 Contemporary African Diaspora Art
- ARTH 4578 African Cinema
- ARTH 4850 Art and Collecting: East and West
- ARTH 5571 African Aesthetics
- ARTH 5850 Dancing the Stone
- Three electives: any art history elective at the 3000 level or above or any architectural history elective. Also, the following 2000-level art history courses have been approved to count toward the art history elective requirement:
- ARTH 2019 Thinking Surrealisms
- ARTH 2109 Immigrant Imagination
- ARTH 2200 Introduction to Art History: the Classical World
- ARTH 2247 Art and Archaeology/Ancient Medieval World
- ARTH 2300 Monuments of Medieval Art
- ARTH 2400 Introduction to Art History: Renaissance and Baroque Art
- Note:** Offerings may vary each semester. Students are encouraged to consult the History of Art Department. In addition, students may petition to substitute courses of similar content.

The university requirement of two semesters in physical education must be met.

A candidate for the B.F.A. degree at Cornell is required to spend the last two semesters of candidacy in residence at the university, subject to the conditions of the Cornell faculty legislation of November 14, 1962. No student may study in absentia for more than two semesters.

Students who transfer into the undergraduate degree program in art must complete a minimum of four semesters in residence at Cornell and a minimum of 60 credits at the

university, of which 30 credits must be taken in the Department of Art, including four semesters of studio work.

For those students matriculating in fall of 2009:

Students are required to take ART 1103 Introductory Art Seminar; ART 1201 Introductory Painting; ART 1401 Introductory Sculpture; ART 1501 Drawing I; Art History elective; and a first-year writing seminar during the fall semester of the freshman year. ART 1301/1302/1303 Introductory Printmaking; ART 1502 Drawing II; Art History elective; and an additional first-year writing seminar must be taken during the spring semester of the freshman year. Two 3000-level courses in theory and criticism must be taken sometime between the sophomore and senior years.

Courses that will fulfill the theory and criticism requirement (Note: Offerings may vary from year to year. Check the current course catalog.):

- ART 1700 Visual Imaging in the Electronic Age
- ART 3101 Issues in Contemporary Art
- ART 3102 Modern Art in Italy: Contemporary Issues (Rome Program only)
- ARTH 3170 Visual Culture and Social Theory
- ARTH 3500 African American Art
- ARTH 3660 Conceptual Art
- ARTH 4322 The Late Medieval Devotional Image in Iberia
- ARTH 4600 Studies in Modern Art
- ARTH 4610 Women Artists
- ARTH 4663 Studies in Modern Art (IV)
- ARTH 5571 African Aesthetics
- ARTH 5993–5994: Supervised Reading
- ANTHR 3202 Arts of the Roman Empire
- ANTHR 3420 Myth, Ritual, and Symbol
- ARCH 4407 Architectural Design and the Utopian Tradition
- ASRC 3500 African American Art
- ASRC 6506 African Aesthetics

	<hr/> 16

Spring Semester

Thesis II	6
In/OCE (three courses)	9
	<hr/> 15

The M.F.A. Program

The master of fine arts program requires four semesters of full-time study, equal to a minimum of 60 credits. Graduate work done elsewhere or in the summer session is not applicable to the M.F.A. degree. The curriculum leading to the master's degree is flexible to accommodate the needs of the individual student and to enable the student to partake of the greater Cornell community. The ratio of graduate faculty to students allows an exceptional opportunity for individual mentoring. Graduate students are provided individual studios and have 24-hour access to studios and labs.

Graduate students in art may enroll in introductory or advanced courses in any field of study offered at the university. Fifteen credits are required in each semester; of these, 9 credits are in studio work, and 3 credits are in graduate seminar. Students are required to take at least 12 credits of academic work outside the Department of Art during their four semesters in residence. Candidates for the master of fine arts degree must have completed 18 credits in the history of art in the course of their graduate and/or undergraduate study. Prior undergraduate art history course work may apply toward this requirement and will be evaluated by the director of graduate studies. Any remaining credit toward this requirement must be taken at Cornell. Every M.F.A. candidate must prepare a written statement, offer a thesis exhibition of studio work completed during residency, and give an oral defense of the written statement and visual thesis. Gallery space is provided for a one-week solo thesis exhibition during the final spring semester.

Course Information

Most courses in the Department of Art are open to students in any college of the university who have fulfilled the prerequisites or have permission of the instructor. Priority is given to B.F.A. majors and AAP students.

Fees are charged for all studio courses. See the specific course description for course fees.

To take advantage of the special opportunities afforded by summer study, several courses are offered during summer session.

Guidelines for Independent Study

A student who wishes to undertake an independent study must be a junior and in good academic standing. Fine arts students must have completed two years of the curriculum, **including all first- and second-year studios and four semesters of drawing.** Students must have prior approval to have an independent study count as a drawing requirement. All students must have taken a minimum of one Cornell art department course in the area of the proposed independent study. It is recommended that the student take the independent study with a professor with whom they have previously studied. Out-of-department students may be exempt from the studio sequence requirement at the discretion of the supervising professor. Independent studies must be petitioned to count toward required studio courses. Credit hours are variable up to a maximum of 4.

Courses in Theory and Criticism

ART 1103 Introductory Art Seminar

Fall. 3 credits. Prerequisite: B.F.A. students. Letter grades only. Staff. This course links theory and practice through a study of issues of contemporary art with a first-semester drawing course. The course is an opportunity for new B.F.A. students to explore issues and questions of contemporary art and culture that have particular relevance for students and artists in the early 21st century. The objectives of the course are to help B.F.A. students develop a keener understanding of issues in contemporary art; create an open forum and exploratory studio environment; and introduce first semester/first year Art majors to the intellectual community and aesthetic environment of a university art department and Cornell at large.

Through a series of coordinated activities, readings, projects, and discussions, first-year/first-semester B.F.A. students jointly and dynamically explore ideas of vision, visuality, perception, representation, and contemporary visual culture through both studio-based drawing projects, readings in art history and contemporary art criticism and theory, and close examination of selected artists' practices. Taught by a faculty member in cooperation with Drawing I faculty members, the course seeks to make meaningful connections between practice and theory in students' thinking and creative work and serves as a cohesive first-year experience shared by all new Art majors.

ART 1701 Visual Imaging in the Electronic Age

Fall or spring. 3 credits. D. Greenberg. Interdisciplinary survey course designed to introduce students in the creative arts, science, and engineering to the concepts of digital pictorial representation and display. It is a concept and theory course that concentrates on "why" rather than "how." Topics include perspective representations, display technology, how television works, bandwidth concepts, digital photography, computer graphics modeling and rendering, matting and compositing, color perception, data acquisition, volumetric imaging, and historical precedents, primarily from the art world. Also included are other modes of imaging.

ART 2001 New York City Seminar

Spring. 4 credits. Staff. This seminar involves readings, discussion, writing, trips to museums and galleries, artists, studios, other field trips, and presentations by leading critics and scholars who present and examine issues of contemporary art in one of the leading art centers of the world. The seminar is developed to conceptually connect to the studio and art/architecture history course in which students are enrolled. This course fulfills a Theory and Criticism course for B.F.A. majors.

[ART 2104 Art and the Multicultural Experience

Fall. 3 credits. R. Dalton. Investigates selected topics related to art and the multicultural experience. Students study the basic vocabulary and tools used in the expression of art. Students question the nature of the visual arts as a discipline and survey art created by underrepresented American minority cultural groups.]

ART 3101 Issues in Contemporary Art

Fall or spring. Lab fee: \$35. Staff.
Students will be exposed to the ideas, issues, and methods of contemporary visual art by combining studio practice with discussions of critical and theoretical concerns in visual culture. The course combines lectures, readings, discussions, project work, and critiques. Students will make art by using a variety of mediums, with projects structured in relation to issues and artists covered in the lecture component. Discussions of historical movements and artists since the 1980s will be stressed. Studio assignments are designed to familiarize students with a number of ways of making art and in encouraging the understanding of the connections between the conceptual and the technical in art making.

ART 3102 Modern Art in Italy

Fall or spring. 3 credits. Fulfills 3000-level theory and criticism requirement for fine arts majors. Prerequisite: Rome Program participants. Staff.
Introduces students to contemporary art in Rome through studio visits, gallery exhibitions, and museum collections. Lectures by artists, critics, and others. Traces art from idea to realization and explores the gallery and its relationship to artists and to promotion of art, the role of the art critic and museum, and art collecting.

Related Courses**ART 2003 Art/Arch History in NYC**

Spring. 3 credits. Staff.
This course uses New York as a site to study developments in modern and contemporary art, architecture, and design. With students in architecture and other fields, art students study in a seminar format the historical connections of art and architectural innovations in the context of one of the world's most complex and vibrant urban environments. The course includes reading, lectures, and presentations, as well as field trips and walking tours. This course fulfills a 3000-level art history elective requirement for BFA majors.

ART 3107 History of Art in Rome: Early Christian to the Baroque Age

4 credits. Rome Program. Not offered every year. Staff.
General survey of the early Christian period to the fantastic vision of Piranesi in the 18th century. Special emphasis will be placed on the developments of the Renaissance and Baroque periods. Weekly lecture and field trips.

ART 3108 History of Art in Rome: Renaissance in Rome and Florence

Not offered every year. Staff.
Surveys art from the beginning of the 15th century to Michelangelo's death (1564) with field trips to important churches, collections, and villas. Emphasis is given to sculpture and painting, and in the case of fresco, mosaics, and stucco decoration, the relationship with architecture and environment is a key element.

ART 4109 Independent Study/Supervised Readings in Art

Fall, spring, or summer. 4 credits, variable. Prerequisite: juniors in good academic standing and written permission of instructor. Staff.
Independent reading and research allows a student the opportunity to investigate special

interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the supervision of a faculty member.

Graduate Studio and Theory Courses**ART 6101 Professional Skills for the Visual Artist**

Spring. 3 credits. Prerequisite: M.F.A. students. Staff.
This seminar helps fine arts graduate students build professional skills that will assist them in their careers as practicing artists and in their work at art-related employment. Students complete a resource notebook that will be useful to them in the years after they graduate. Topics include funding resources, exhibition opportunities, employment options, documentation of work, health, safety, and legal issues.

ART 6102 Recent Practice in the Visual Arts

Fall. 3 credits. Prerequisite: M.F.A. students. Staff.
This seminar is designed to provide graduate students with an overview of recent visual artwork. Students study work from a wide range of artists who have received significant recognition within the visual arts community. Reviews of major exhibitions such as "Documenta," "La Biennale di Venezia," and the "Whitney Biennial" are discussed. Students are encouraged to travel to nearby cities to look at contemporary work.

ART 6103 Online Publication for the Visual Artist

Fall. 3 credits. Prerequisite: M.F.A. students. Staff.
Seminar designed to introduce graduate students to the basic principles of electronic imaging. As a major project, each student interviews a contemporary visual artist. These interviews are illustrated with digital images of each artist's work and combined in an online magazine. Additionally each student learns to create a home page on the web.

ART 6104 Contemporary Theory in the Visual Arts

Spring. 3 credits. Prerequisite: M.F.A. students. Staff.
Seminar exploring selected writings on the current issues represented within the visual arts. Designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary visual practice. Topics vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

ART 6203 Contemporary Theory and Visual Culture

Fall. 3 credits. Prerequisite: M.F.A. students. Staff.
Seminar exploring selected writings on current issues in the visual arts. Designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary practice in the visual arts. Topics vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

ART 6204 Current Criticism in the Visual Arts

Spring. 3 credits. Prerequisite: M.F.A. students. Staff.
Seminar designed to introduce graduate students to critical writing in the visual arts,

both in print and in digital format. As a major project, each student interviews a contemporary visual artist. These interviews are illustrated with digital images of each artist's work and combined in an online magazine. Additionally, each student learns to create a home page on the web.

Graduate Studio Courses**ART 7001-7002 Graduate Studio I and II**

7001, fall; 7002 spring. 9 credits.
Prerequisite: first-year M.F.A. students. Staff.

Required for all M.F.A. students. Course instructor is the chair of student's Special Committee. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they work. All members of the faculty are available for individual consultation.

ART 8001-8002 Graduate Studio III and IV

8001, fall; 8002, spring. 9 credits. Second-year M.F.A. students. Staff.
Required for all MFA students. Course instructor is the chair of student's Special Committee. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they work. All members of the faculty are available for individual consultation.

Undergraduate Studio Courses in Drawing

Fees for all drawing courses: \$25

ART 1500 Summer Drawing I

Summer, three-week session. 3 credits.
Course does not fulfill studio credit for ART 1501 Drawing I requirement. Staff.
General course introduces students to principles and techniques of representation. Emphasis is on creating the illusion of space and form through line, the rendering of light and shade, and studies in perspective. Students have the opportunity to explore various media such as charcoal, chalk, pencil, pen, ink, and wash.

ART 1501 Drawing I

Fall, spring. 3 credits. Preference given to B.F.A. students. Staff.
General course introducing students to principles and techniques of representation. Emphasis is on creating the illusion of space and form through line, the rendering of light and shade, and studies in perspective. Students have the opportunity to explore various media such as charcoal, chalk, pencil, pen, ink, and wash.

ART 1502 Drawing II

Spring. 3 credits. Prerequisite: ART 1501. Preference given to B.F.A. students. Staff.
General course in drawing that emphasizes figure study and life drawing. Builds on the foundation of ART 1501 and concentrates on the analytical study of the figure. Students explore a variety of materials, traditional and contemporary.

ART 1503 Summer Drawing II

Summer, three-week session. Course does not fulfill studio credit for ART 1502 Drawing II requirement. Staff.
General course in drawing that emphasizes figure study and life drawing. Builds on the foundation of ART 1500 and concentrates on the analytical study of the figure. Students

explore a variety of materials, traditional and contemporary.

ART 1507 Observation and Conception: Drawing

Summer, six-week session. 3 credits. Staff. Experimental investigations related to various properties of drawing relevant to contemporary artistic practices. Working from the imagination as well as studies from life serve as the basic structure for this course. These practices range from pictorial representation to conceptual strategies. The team-taught aspect of this course allows for a critical discourse and an intensive approach to learning skills and developing sensibilities, building a foundation for all further advanced visual media studies.

ART 1508 Conceptual Drawing

Summer, six-week session. 3 credits. Staff. Emphasizes drawing from the imagination. Stresses the generation of ideas and their development in sketches. The intent is not to produce finished art but rather to experience a series of problems that require image and design concepts different from those of the artist working directly from nature.

ART 1509 Life and Still-Life Drawing

Summer, six-week session. 3 credits. Staff. Studies the human figure and still life both as isolated phenomena and in relation to their environment. Focuses on helping the student observe and discover.

ART 2004 Drawing Projects (Studio)

Spring. 3 credits. Prerequisite: ART 1502, Drawing II. This course fulfills ART 2501 Drawing III for B.F.A. majors. Staff.

In this course, drawing is explored in its multiple forms and capacities to explore, experience, and represent ideas of the city—its physical forms and diverse neighborhoods and inhabitants. Drawing is developed as a connective tool, navigational device, and research strategy that considers the dynamic conditions of the urban context through the independent vision of artists. Students pursue both experimental and more developed individual, serial, and collaborative drawing projects using a generous range of materials and formats. The boundaries and conventions of drawing are challenged and questioned.

ART 2501 Drawing III

Fall. 3 credits. Prerequisite: ART 1502.

Preference given to B.F.A. students. Staff. Intermediate drawing course in which students study composition, the articulation of form, and the illusion of space in a variety of materials. Expressive content, conceptualization, and the exploration of materials are stressed.

ART 2502 Advanced Drawing Workshop

Fall or spring. 3 credits. Prerequisite: ART 2501. Corequisite: B.F.A. Thesis I studio. Staff.

This advanced studio workshop focuses on the use of drawing for the development and refinement of complex visual expression. Using both traditional and nontraditional drawing approaches, students work to clarify their conceptual concerns and develop a pertinent visual vocabulary. This course begins with assignments structured to identify the conceptual and formal considerations central to each student's individual artistic intentions. Once identified, these artistic intentions become the basis for a rigorous investigation. The resulting body of work informs and supports advanced thesis work across the

visual art and design disciplines. This course includes faculty and student presentations on historical and contemporary art, as well as regular critiques focusing on peer evaluation.

ART 4509 Independent Studio in Drawing

Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff.

Independent studio in drawing that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

Undergraduate Studio Courses in Electronic Imaging

Course fees:

1701, 3702, 4709	\$250
2304, 2701, 2702	\$105
3703/3704	\$250
4001, 4002	\$ 70

ART 1701 Electronic Imaging in Art

Fall or spring. 3 credits. Preference given to B.F.A. students. Staff.

This is an introductory studio course using the computer for contemporary art making. Students approach software programs by researching historical and contemporary art issues, with emphasis on the constructed image, motion, virtuality, and interactivity.

ART 2304 Large-Format Digital Printing

Fall and spring. 4 credits. Prerequisite: ART 1701. Preference given to B.F.A. students. Staff.

Focuses on the use of digital printing and its use in combination with traditional forms of printmaking. Students explore various approaches to image making while also using traditional materials and media, including relief, monotype, lithography, screen printing, intaglio, transfers, collage, and photomechanical processes. Students use appropriate software, including Adobe Photoshop, QuarkXPress, Final Cut Pro, and Adobe Illustrator to draw from both still and video-based sources. Students work with large-format inkjet printers.

ART 2702 Digital Video and Sound

Fall or spring. 4 credits. Prerequisite: ART 1701. Preference given to B.F.A. students. Not offered every year. Staff.

Studio course that introduces students to digital video including capture stills, animation, video, and sound with an introduction to interactive presentation and CD-ROM production. This course concentrates on the web.

ART 2703 Computer Animation (also CIS 5640)

Fall. 4 credits. Preference given to B.F.A. students. D. Greenberg.

Focuses on techniques of computer animations. Combines critical readings with studio projects that employ a variety of animation software. Topics include modeling, storyboarding, 2-D and 3-D key frame animation, motion and kinematics, lighting effect and shading, texturing and material properties, physical simulation, and cinematography.

ART 3703 Advanced Projects in Time-Based Art

Fall. 4 credits. Prerequisites: ART 1701 and one of the following: ART 2304, 2702, 2703, or permission of instructor.

Preference given to B.F.A. students. Letter grades only. Staff.

This course teaches advanced techniques for creating nonlinear moving images with digital sound. Projects include integrating key frame-based animation, layering animated text, still, and video images made with 3D software applications, field recording, and sound mixing. Emphasis will be placed on ways of integrating and manipulating time-based images and sound to make multimedia art projects and installations for public spaces.

ART 3704 Interactive Digital Media

Spring. 4 credits. Prerequisites: ART 1701 and one of the following: ART 2304, 2702, 2703, or permission of instructor. Letter grades only. Staff.

This is a project-centered studio course designed to encourage students to integrate computer-aided and time-based media (video, sound, motion graphics, and text) using physical materials and space. The course will challenge students to develop a theoretical understanding of the relationship between body and technology in a social and cultural context. Students will use digital technologies to create projects using interactive CD-ROM/web art, sensor and micro-controller aided interactive video and sound installations, real-time performance, and public space. The course encourages integrative approaches to studio production.

ART 4001 Thesis I

Fall and spring. 6 credits. Prerequisites: ART 1701, 2304 or 2702; 2703; 3703 or 3704. Staff.

This course prepares students for the final semester of thesis when they fully develop and complete a final exhibition/project of a new distinctive body of work. During Thesis I, students begin to research, develop, clarify, and sharpen and deepen their thesis proposal through dialogues, critiques, reading, and other activities with members of a Core Thesis Faculty. Thesis I encourages independent, critical thinking and requires students to reflect on their work to date—and their work in the future—with an understanding of historical, theoretical, and conceptual contexts.

ART 4002 Thesis II

Fall and spring. 6 credits. Prerequisite: ART 4001. Staff.

This course is the final semester when B.F.A. students continue to develop, refine, and produce their final capstone work, which may take the form of an exhibition or some other project. Thesis II involves the creation of new work in consultation with Core Thesis Faculty members and other faculty advisors.

Undergraduate Studio Courses in Painting

Fees for painting courses (1201, 2201, 3201, 3202, 4001, 4002, 4209): \$40

ART 1201 Introductory Painting

Fall, spring, or summer. 3 credits.

Preference given to B.F.A. students. Staff.

Studies the language of painting through color, form, materials, and techniques. Aspects of traditional and modern pictorial composition are studied including proportion, space, and color theory through the representation of a variety of subjects.

ART 2201 Painting II

Fall or spring. 4 credits. Prerequisite: ART 1201 or permission of instructor.

Preference given to B.F.A. students. Staff. Continuation of the study of aspects of pictorial composition initiated in ART 1201, focusing on problems relating to the depiction of the figure, space, and light. Topics are explored within the context of historical and contemporary artistic expression.

ART 3201 Painting III

Fall or spring. 4 credits. Prerequisite: ART 2201 or permission of instructor. Staff.

Intensive study of painting materials and techniques to express pictorial ideas. A variety of traditional painting techniques are explored including egg tempera, fresco, gouache, encaustic, and oil. In addition, paints and associated techniques developed in the 20th century are used as well as developing technologies applicable to the painting process.

ART 3202 Painting IV

Fall or spring. 4 credits. Prerequisite: ART 3201 or permission of instructor. Staff.

Advanced course centered on issues of artistic expression. A variety of painting media are used to address conceptual issues through representation as well as abstraction.

ART 4001 Thesis I

Fall or spring. 6 credits. Prerequisite: ART 3202. Staff.

This course prepares students for the final semester of thesis when they fully develop and complete a final exhibition/project of a new distinctive body of work. During Thesis I, students begin to research, develop, clarify, and sharpen and deepen their thesis proposal through dialogues, critiques, reading, and other activities with members of a Core Thesis Faculty. Thesis I encourages independent, critical thinking and requires students to reflect on their work to date—and their work in the future—with an understanding of historical, theoretical, and conceptual contexts.

ART 4002 Thesis II

Fall or spring. 6 credits. Prerequisite: ART 4001. Staff.

This course is the final semester when B.F.A. students continue to develop, refine, and produce their final capstone work, which may take the form of an exhibition or some other project. Thesis II involves the creation of new work in consultation with Core Thesis Faculty members and other faculty advisors.

ART 4209 Independent Studio in Painting

Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and permission of instructor. Staff.

Independent studio in painting that allows students the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate results.

Undergraduate Studio Courses in Photography

Darkroom fees for photography courses:

Black-and-white courses: \$135

Color courses: \$215

Additional black-and-white course taken the same semester: \$55

Additional color course taken the same semester: \$135

ART 1601 Photography I

Fall, spring, or summer. 3 credits. Preference given to B.F.A. students. Course fee: \$135. Staff.

Basic lecture-studio course in black-and-white photography for beginners. Emphasis is on basic camera skills, darkroom techniques, and understanding of photographic imagery.

ART 1608 Black-and-White Photography

Summer, three-week session only. 3 credits. Course fee: \$135. Preference given to B.F.A. students. Staff.

Intended for students at all levels, from introductory to advanced. Emphasis is on camera skills, darkroom techniques, and the content of black-and-white photographic imagery.

ART 1609 Color Photography

Summer, three-week session only. 3 credits. Preference given to B.F.A. students. Course fee: \$215. Staff.

Intended for students at all levels, from introductory to advanced. Emphasis is on camera skills, darkroom techniques, and the content of color photographic imagery.

ART 2601 Photography II

Fall, spring, or summer. 4 credits. Prerequisite: ART 1601 or ARCH 2501, or permission of instructor. Preference given to B.F.A. students. Course fee: \$135. Staff. Continuation of Photography I, concentrating on black-and-white photographic processes, history and theory of creative practice, and individual projects.

ART 2603 Color Photography

Fall and summer. 4 credits. Prerequisite: ART 1601 or ARCH 2501, or permission of instructor. Preference given to B.F.A. students. Course fee: \$215. Staff.

Studio course in color photography with emphasis on camera skills, darkroom techniques, and the content of color photography.

ART 2604 Photo Processes

Fall, spring, or summer. 4 credits. Prerequisite: ART 1601 or ARCH 2501, or permission of instructor. Preference given to B.F.A. students. Staff.

Studio course in alternative and nonsilver photographic processes. Emphasis is on camera skills, basic techniques and processes, image content, and creative use of photo processes.

ART 3601 Photography III

Fall, spring, or summer. 4 credits. Prerequisite: ART 1601, 2601, or permission of instructor. Preference given to B.F.A. students. Staff.

Continued study of creative use of photography, with emphasis on specialized individual projects.

ART 3605 Studio Photography

Fall or spring. 4 credits. Prerequisite: ART 1601 or ARCH 2501, and ART 2601 or 2603, or permission of instructor.

Preference given to B.F.A. students. Staff. Course in the use of medium- and large-format cameras that explores technique, lighting, and the use of larger-format cameras for personal expression both in the studio and outdoors.

ART 4001 Thesis I

Fall or spring. 6 credits. Prerequisite: ART 2601, 2603. Course fee will depend on what process the student is using. Staff.

This course prepares students for the final semester of thesis when they fully develop and complete a final exhibition/project of a new distinctive body of work. During Thesis I, students begin to research, develop, clarify, and sharpen and deepen their thesis proposal through dialogues, critiques, reading, and other activities with members of a Core Thesis Faculty. Thesis I encourages independent, critical thinking and requires students to reflect on their work to date—and their work in the future—with an understanding of historical, theoretical, and conceptual contexts.

ART 4002 Thesis II

Fall or spring. 6 credits. Prerequisite: ART 4001. Course fee will depend on what process the student is using. Staff.

This course is the final semester when B.F.A. students continue to develop, refine, and produce their final capstone work, which may take the form of an exhibition or some other project. Thesis II involves the creation of new work in consultation with Core Thesis Faculty members and other faculty advisors.

ART 4609 Independent Studio in Photography

Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Course fee will depend on what process the student is using. Staff.

Independent studio in photography that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

Undergraduate Studio Courses in Printmaking

Fees for printmaking courses:

Intaglio (1301, 2301, 4001, 4002, 4309): \$95

Screenprinting (1302, 2302, 4001, 4002, 4309): \$45

Lithography (1303, 2303, 4001, 4002, 4309): \$95

Expanded Print Forms (1304, 2304): \$95

ART 1301 Introductory Intaglio

Fall and spring. 3 credits. Preference given to B.F.A. students. Staff.

Basic introduction to etching techniques, with emphasis on engraving, lift ground, relief printing, monotypes, and experimental techniques.

ART 1302 Introductory Graphics

Fall and spring. 3 credits. Preference given to B.F.A. students. Staff.

Introduces the two-dimensional thought process and the language of vision. Students

explore design projects and the use of graphic materials, including collage, pochoir, and screen printing.

ART 1303 Introductory Lithography

Fall and spring. 3 credits. Preference given to B.F.A. students. Staff.

Study of the theory and practice of lithographic printing, using limestone block and aluminum plate. Basic lithographic techniques of crayon, wash, and transfer drawing are studied.

ART 1304 Expanded Print Forms

Spring. 3 credits. Prerequisite: one of the following: ART 1301, 1302, 1303, 1601, 1701, 2501, or permission of instructor.

Preference given to B.F.A. students. Staff. Intensive experimental studio designed to introduce students to various ideas and processes of making artists' books. Encourages the integration of studio practice (photography, printmaking, drawing, and painting) with new digital strategies (digital photography/ink jet print, video/sound, CD-ROM/digital book making). Presents both concept and process as related to the visual book form. An introduction to digital publication as an expanded print form helps students investigate how the book is reinvented or reshaped within an electronic context.

ART 2301 Intaglio II

Spring. 4 credits. Prerequisite: ART 1301. Preference given to B.F.A. students. Staff.

Studio course in advanced etching techniques. Refinement of processes and ideas through the uses of aquatint, spit bite, lift ground, soft ground, and dry point in black and white with an introduction to multiple-plate color printmaking.

[ART 2302 Advanced Screen Printing]

ART 2303 Lithography II

Spring. 4 credits. Prerequisite: ART 1303. Preference given to B.F.A. students. Staff.

Theory and practice of lithographic printing using lithographic stones and aluminum plates. Traditional techniques in crayon, tusche wash, and color printing as well as photolithography using kodalith and computer-generated transparencies.

ART 2304 Large-Format Digital Printing

Fall and spring. 4 credits. Prerequisites: ART 1601, 1701, and one of the following: ART 1301, 1302, 1303, 1304 or permission of instructor. Preference given to B.F.A. students. Staff.

Focuses on the use of digital printing and its use in combination with traditional forms of printmaking. Students explore various approaches to image making while also using traditional materials and media, including relief, monotype, lithography, screen printing, intaglio, transfers, collage, and photo-mechanical processes. Students use appropriate software, including Adobe PhotoShop, QuarkXPress, Final Cut Pro, and Adobe Illustrator to draw from both still and video base sources. Students work with large-format inkjet printers.

ART 3301 Printmaking III

Fall or spring. 4 credits. Prerequisite: ART 2301, 2302, or 2303 or permission of instructor. Staff.

Study of the art of graphics through both assigned and independent projects. Work may concentrate in any one of the graphic media or in a combination of media.

ART 3302 Printmaking IV

Fall. 4 credits. Prerequisite: ART 3301 or permission of instructor. Staff. Continuation and expansion of ART 3301.

ART 4001 Thesis I

Fall or spring. 6 credits. Prerequisite: ART 3302. Staff.

This course prepares students for the final semester of thesis when they fully develop and complete a final exhibition/project of a new distinctive body of work. During Thesis I, students begin to research, develop, clarify, and sharpen and deepen their thesis proposal through dialogues, critiques, reading, and other activities with members of a Core Thesis Faculty. Thesis I encourages independent, critical thinking and requires students to reflect on their work to date—and their work in the future—with an understanding of historical, theoretical, and conceptual contexts.

ART 4002 Thesis II

Fall or spring. 6 credits. Prerequisite: ART 4001. Staff.

This course is the final semester when B.F.A. students continue to develop, refine, and produce their final capstone work, which may take the form of an exhibition or some other project. Thesis II involves the creation of new work in consultation with Core Thesis Faculty members and other faculty advisors.

ART 4309 Independent Studio in Printmaking

Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff.

Independent studio in printmaking that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

Undergraduate Studio Courses in Sculpture

Fees for sculpture courses:

1401:	\$50
2401, 3401, 3402, 3403, 4001, 4002, 4009:	\$75

ART 1401 Introductory Sculpture

Fall, spring, or summer. 3 credits. Preference given to B.F.A. students. Staff.

Series of studio problems introducing the student to the basic principles of artistic expression in three-dimensions, i.e., clay modeling, direct plaster, plaster casting, and construction in wood, metal, and other materials.

ART 2401 Sculpture II

Fall or spring. 4 credits. Prerequisite: ART 1401, or architecture design studio, or permission of instructor. Preference given to B.F.A. students. Staff.

Various materials, including clay, plaster, wood, stone, and metal, are used for exercises involving figurative modeling, abstract carving, and other aspects of three-dimensional form and design. Beginning in the second year, students are encouraged to explore bronze/metal casting processes. The sculpture program, which is housed in its own building, contains a fully equipped bronze-casting foundry.

ART 3401 Sculpture III

Fall or spring. 4 credits. Prerequisite: ART 2401 or permission of instructor. Staff. Continued study of the principles of sculpture and conceptual development. Each student explores the selection and expressive use of materials, media, scale, and content. Group discussions and individual criticism. Experimentation is encouraged.

ART 3402 Sculpture IV

Fall or spring. 4 credits. Prerequisite: ART 3401 or permission of instructor. Staff. Continuation and expansion of ART 3401. Special projects may include site-specific and/or large-scale installations.

ART 3403 Sculpture V

Fall or spring. 4 credits. Prerequisite: ART 3402 or permission of instructor. Staff. Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 4001 Thesis I

Fall or spring. 6 credits. Prerequisite: ART 3402. Staff.

This course prepares students for the final semester of thesis when they fully develop and complete a final exhibition/project of a new distinctive body of work. During Thesis I, students begin to research, develop, clarify, and sharpen and deepen their thesis proposal through dialogues, critiques, reading, and other activities with members of a Core Thesis Faculty. Thesis I encourages independent, critical thinking and requires students to reflect on their work to date—and their work in the future—with an understanding of historical, theoretical, and conceptual contexts.

ART 4002 Thesis II

Fall or spring. 6 credits. Prerequisite: ART 4001. Staff.

This course is the final semester when B.F.A. students continue to develop, refine, and produce their final capstone work which may take the form of an exhibition or some other project. Thesis II involves the creation of new work in consultation with Core Thesis Faculty members and other faculty advisors.

ART 4409 Independent Studio in Sculpture

Fall, spring, or summer. 4 credits variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff.

Independent studio in sculpture that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

Special Studio Courses

ART 1109 Internship Practicum

Fall, spring, and summer. Variable credit. S–U grades only.

Students serving as interns with art-related businesses or institutions may receive 1 academic credit upon receipt of a letter from the internship sponsor confirming successful performance of internship responsibilities. Students may earn up to 3 hours of nongraded credit for internships and these credits may not be used to fulfill or waive department of art academic and studio requirements.

ART 1505 Drawing Rome

Summer. 3 credits. Letter grades only.
Staff.

The course introduces students to methods of representing space and form through a study and application of perspective and the effects of light and shade. Uses of line, tone, and color will be investigated. The subject is the city of Rome: its public spaces, churches, museums, archaeological zones, and the residents and visitors who occupy it. A variety of materials are used including pencil, ink, charcoal, pastel and collage. With the exception of one or two in-studio sessions, all work will be done onsite in Rome. Course meets four weeks, five times per week.

ART 2000 New York City Studio

Spring. 4 credits. This course fulfills a 2000-level studio for BFA majors. Staff. This interdisciplinary course is thematically and topically organized. Through a series of research-based assignments and independent and collaborative arts projects, students actively engage the city as a site of open investigation and critical engagement. The thematically based studio encourages and allows students to work with a range of media. Students are encouraged to participate not as painters, printmakers, or sculptors, but as artists who pursue and use a range of materials and methodologies as part of a creative process. Students work in the AAP NYC space, as well as other sites in New York City.

ART 2019 Independent Study/Studio in NYC

Spring. 2-4 credits, variable. Staff. In consultation with a faculty member, students may pursue a thoughtfully developed and rigorous independent study that utilizes the context and content of New York to create an innovative research project, performance, intervention, installation, or other body of work. Student must complete an ART Independent Study/Studio form.

ART 2109 Art Practicum in NYC

Spring. 1-6 credits, variable. This course fulfills an IN/OUT college elective for B.F.A. majors. The credit amount will be determined by and in consultation with the department chair. Students choose an internship with an arts, cultural, or civic organization that has an established relationship with AAP NYC or another organization or venue. Students have direct, hands-on experience and receive academic credit for their work.

ART 3702 Special Topics in Art Studio

Fall, spring, or summer. 4 credits, variable. Staff. Exploration of a particular theme or project. For example, Special Topics in Art History, offered spring 2009 for Rome Program participants.

ART 3709 Independent Studio in Rome

Fall and spring. 4 credits, variable. Prerequisites: Rome Program participants; juniors in good academic standing and written permission of instructor. Staff. Independent studio in Rome that allows non-art majors the opportunity to pursue special interests in fine arts not treated in regularly scheduled courses. The student plans a course of study or projects that meet the approval of the faculty member selected to guide his or her progress and evaluate the results.

ART 3809 Independent Study/Cornell in NYC

Fall, winter, spring, or summer. 4 credits variable. Prerequisite: student in good academic standing and written permission of instructor on an approved independent study form. Staff. Independent study or studio allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

ART 4000 Rome Studio

Fall or spring. 4 credits. Fulfills 4 credits of concentration requirement. Prerequisites: Rome Program participants; permission of instructor. Content for Rome studio determined by instructor. Lab fee: \$60; additional fees for photography and printmaking. Staff. Emphasis is divided between work accomplished in the studio and work executed outdoors in the environs of Rome. Media consist primarily of painting, drawing, sculpture, and photography, or those assigned by the instructor.

ART 4709 Independent Studio in Electronic Imaging

Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff. Independent studio in electronic imaging that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

ART 4809 Independent Studio in Combined Media

Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Lab fee: \$70. Staff. An independent studio in combined media that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

CITY AND REGIONAL PLANNING

K. Donaghy, chair (106 W. Sibley Hall, 254-5378); S. Baugher, L. Benería, R. S. Booth, director, URS program; N. Brooks, S. Christopherson, J. Chusid, P. Clavel, M. Drennan, J. F. Forester, A. Forsyth, W. W. Goldsmith, R. Kiely, director, Urban Scholars Program, N. Kudva, C. Lai, D. Lewis, B. Lynch, P. Olpadwala, R. Pendall, K. Reardon, S. Saltzman, M. A. Tomlan, M. Warner. Emeriti: S. Czamanski, W. Isard, J. W. Repts, S. Schmidt, S. W. Stein, R. T. Trancik. Visiting: I. Azis, T. Vietorisz

The department offers several programs of study at both the undergraduate and graduate levels.

The Undergraduate Program in Urban and Regional Studies

The program in Urban and Regional Studies (URS) is a four-year academic program aimed at assessing the problems of human communities and regions. Graduates from the program receive a Bachelor of Science degree. The program provides both an excellent liberal arts education and a strong concentration of studies addressing urban and regional issues. Courses in the program provide students with a broad understanding of urban issues, the ability to assess those issues, and skills technical analysis. The URS program is truly interdisciplinary: students learn to evaluate urban and regional problems by using wide ranges of analytic tools and disciplinary perspectives.

URS Statement of Purpose

The URS program encompasses an interdisciplinary, liberal arts course of study focused on the forces that shape the social, economic, and political character and physical form of cities, suburbs, and their surrounding regions. Students pursue knowledge in a range of disciplines, acquire significant writing skills, quantitative and non-quantitative analytical skills, and develop the capacity to think broadly and deeply regarding the past, present, and future of urbanized communities and their inhabitants.

Like many quality liberal arts programs, the URS program requires students to develop a broad academic base in the physical and biological sciences, quantitative methods and mathematics, social sciences and history, humanities and the arts, and writing. The major requires students to complete a series of four introductory courses and encourages them to develop expertise in looking at cities, suburbs, and metropolitan regions through a series of lenses. Students use theory to examine social dynamics, politics, economics, history, design and land use patterns, and environmental problems.

Graduates pursue a wide variety of advanced studies and careers in city and regional planning, historic preservation, real estate, architecture, landscape architecture, public administration and law; and positions in the public sector: teaching, not-for-profit institutions, and consulting firms.

Advanced Placement Credit

Students may apply up to two courses of approved advanced placement credit in calculus, computer science, and science toward satisfaction of the distribution requirement in Groups 1 and 2 previously established by the College of Arts and Sciences or in the groups Physical and Biological Sciences (PBS) and Mathematics and Quantitative Reasoning (MQR) currently used by the College of Arts and Sciences, provided that they must complete at least one science course during their undergraduate career. They may apply no advanced placement credit toward the distribution requirements in categories currently established by the College of Arts and Sciences in Cultural Analysis (CA); Historical Analysis (HA); Knowledge, Cognition, and Moral Reasoning (KCM); Literature and the Arts (LA); and Social and Behavioral Analysis (SBA).

Basic Degree Requirements for Students in the Graduating Classes of 2011 and Subsequent Years

URS requirements for graduation include (a) eight semesters of residence; (b) 120 credits; (c) General Education Requirements consisting of writing seminars, qualification in one foreign language, and a series of distribution requirements; (d) required courses for the major; (e) area requirements for the major; (f) free electives; (g) a minimum of 34 courses; and (h) completion of the university physical education requirement. Note: Physical education credit does not count toward graduation or toward the 12-credit minimum required for good academic standing each semester. No course may satisfy more than one requirement.

More specifically these requirements include

1. General Education

- First-year writing seminars*: two courses. Students earning a score of 5 on both English literature and English language exams will receive 3 credits (in out-of-college electives) and place out of one first-year writing seminar.
- Foreign language*: qualification in one foreign language can be demonstrated by completing three courses in one foreign language in high school, **or** by taking the Cornell Advanced Standing Examination (CASE), **or** by successfully completing two to three college-level foreign language courses.
- Distribution Requirements*: nine courses. Students must successfully complete nine courses for the distribution requirement. A total of four courses must be completed in the categories of Physical and Biological Sciences (PBS-AS) and Mathematics and Quantitative Reasoning (MQR-AS). Of those four courses, **at least two** must be classified as PBS **and at least one** course must be classified as MQR course. The fourth course can be classified as either PBS or MQR. The remaining five courses must be courses identified by the College of Arts and Sciences in the categories of Cultural Analysis (CA-AS), Historical Analysis (HA-AS), Knowledge, Cognition, and Moral Reasoning (KCM-AS), Literature and the Arts (LA), and Social and Behavior Analysis (SBA). These five courses must be selected from at least four of these five categories (i.e., CA-AS, HA-AS, KCM-AS, LA-AS, and SBA-AS). No more than three of these five courses can be taken in any one department. URS students may petition to substitute equivalent courses from the Colleges of Agriculture and Life Sciences, Engineering, Human Ecology, Industrial and Labor Relations, and Architecture, Art, and Planning. Grades of S–U cannot be applied toward the distribution requirement.

URS students may not apply college credit earned before entering Cornell as a freshman to satisfy any distribution course requirement. However, they may petition to have that credit counted toward the 120 total credits required for graduation.

2. Required Courses for the Major: seven courses

CRP 1100 The American City (fall, 3 credits)

CRP 1101 The Global City: People, Production, and Planning in the Third World (spring, 3 credits)

CRP 1106 URS First-Year Seminar (fall, 1 credit)

CRP 2000 The Promise and Pitfalls of Contemporary Planning (fall, 3 credits)

CRP 2010 People, Planning and Politics in the City (spring, 3 credits)

Microeconomics: one course from a list of microeconomics courses (fall or spring, 3 or 4 credits)

Statistics: one course from a list of statistics courses (fall or spring, 3 or 4 credits)

3. Area Requirements: six CRP courses

The program requires that students take courses in six areas:

- Design and Land Use (one course from designated list of courses)
Students understand cities, suburbs, and regions in terms of aesthetic perspectives (both historically and in the present) and patterns of human use of land that shape physical, social, ecological, and economic character.
- Urban History, Society, and Politics (one course from designated list of courses)
Students examine the growth, development, and character of today's urbanized areas and their resident populations, in light of a complicated and constantly evolving interplay of historical forces, social and economic concerns, and political constituencies, ideas, and choices.
- Environment (one course from designated list of courses)
Students become aware of the past, present, and future influence of the natural environment (including both living and nonliving elements) as modified by humans, in shaping, and in many instances substantially limiting the growth and development of cities/suburbs and regions.
- Regional Development and Globalization (one course from designated list of courses)
Students learn to recognize how the economic health and general well-being of particular cities/suburbs and regions, and their inhabitants, is dramatically influenced by far-flung social and economic forces whose impacts are felt throughout whole regions, nations, and even the world at large.
- Methods for Planning and Urban Studies (one course in qualitative/field methods from designated list of courses).
Students gain knowledge and skills regarding use of interview, survey, participant observation, and other nonquantitative methods in analyzing attitudes, behaviors, trends, and other information pertinent to the growth and development of cities/suburbs and regions, and the well-being of their inhabitants.

- Methods for Planning and Urban Studies (one course in quantitative methods from designated lists of courses).
Students understand, develop, and apply tools used in analyzing economic, sociological, and other quantitative data relevant to the development, implementation, and assessment of public and private actions that influence the growth and development of cities/suburbs and regions, and the well-being of their inhabitants.

Basic Degree Requirements for Students in the Graduating Class of 2010

Students in the class of 2010 should refer to the distribution requirements specified in *Courses of Study* for the year in which they matriculated.

Honors Program

Each year a few well-qualified seniors may join the honors program at the beginning of their senior year. Each honors student develops and writes an honors thesis under the guidance of his or her faculty advisor.

Urban Studies Minor (non-URS majors)

The Urban and Regional Studies minor has been formulated specifically for those students not enrolled in the Program of Urban and Regional Studies who are interested in complementing their current academic program with an introduction to various facets of urban studies (domestic, environmental, international, professional, urban affairs).

To complete the Urban and Regional Studies (URS) minor, students must take at least six courses (minimum total of 18 credits) in the Department of City and Regional Planning (CRP). Courses must be completed with letter grade of C or above, as follows:

1. Nine (9) credits of required core courses:

CRP 1100 The American City (3 credits)

CRP 1101 The Global City: People, Production, and Planning in the Third World (3 credits)

CRP 2000 The Promise and Pitfalls of Contemporary Planning (3 credits)

2. Nine (9) credits of elective department courses at the 3000 level or higher.

(Please consult department course listings.)

Students meet with their home college faculty advisor. Upon completion of course requirements, students complete a URS minor application form, available in 106 W. Sibley Hall. The URS program director (who also serves as URS minor advisor) verifies completion of the minor, signs the form, and sends a letter (on department letterhead) to the student's home college. The home college will record completion of the URS minor on the student's transcript.

URS Students in Minors Offered by Other Departments

The department recognizes minors earned within the university (accepting standards set by various colleges). URS students may apply for minors in any college (e.g., Africana Studies, Architecture, Latino Studies, Southeast Asian Studies, and Feminist,

Gender, and Sexuality Studies). When a student satisfies the requirements for a minor, and formal notification is received by the AAP registrar, the concentration will be recorded on the student's official transcript at the time of graduation.

Off-Campus Opportunities

Cornell in Rome. The urban studies component of Cornell in Rome is offered during the spring semester for students interested in the economic, political, cultural, and social life of contemporary European cities and regions. It is open to urban studies majors and related disciplines.

By living and studying in the center of one of the world's most historic, beautiful, and dynamic cities, students gain a deeper understanding of the powerful local, regional, and global forces that are reshaping urban communities abroad and at home.

In addition to taking classes with architecture and art students, participants engage in field research and assist civic leaders and municipal officials in developing workable solutions to challenging problems confronting contemporary Roman neighborhoods.

Students meet with professional planners, government officials, community activists, leading architects, researchers, and others responsible for urban policy-making in the areas of economic development, neighborhood stabilization, urban design, regional planning, city management, agricultural development, tourism, historic preservation, and immigration.

Students complement their classes and fieldwork with travel to Italy's most important artistic, economic, and political centers. Participants have the opportunity to see Italy and its European neighbors work together to form a more powerful regional economy and political alliance through the increasingly influential European Union.

The program's cultural immersion and community-based research experience significantly strengthen application for graduate or professional school, and also enhance the effectiveness of young professionals employed in increasingly global workplaces.

Graduate planning and international studies students gain invaluable work experience as full-time interns with one of the United Nations agencies headquartered in Rome (such as the Food and Agricultural Organization or the International Commission on Objects and Monuments), in an Italian city planning agency (fluent Italian required), or in a nongovernmental agency. Rome faculty members help graduate students individually to arrange intern positions. An updated résumé and internship questionnaire must be submitted with the program application.

AAP NYC. AAP NYC provides an exciting off-campus semester with courses and professors that engages students with New York City's economics and politics, housing and transportation, and art and design. Participants study the use of streets and public spaces, and faculty and guest lecturers guide students through the astonishing variety of the world's premier city.

Studying and living in New York City complements classroom-based coursework in Ithaca with the chance to learn onsite. The

New York program is envisioned to fit well with both Ithaca and Rome allowing students to apply ideas first encountered in Ithaca courses to the big-city laboratories off campus. The CRP faculty has identified a diverse set of educational partners, connected to both the public and private sectors, to provide high-quality site visits, guidance in professional internships, and special events.

During a semester in New York City, Urban and Regional Studies (URS) juniors and seniors can learn how such a complex system functions, how its elements interact, how new businesses set up and prosper while others fail, and how City Hall, the Port Authority, and various other state and local agencies try to manage things.

The internship course combines work experience two days each week with formal Friday lunchtime discussions. Every other Friday experienced professionals from across the metropolitan region join students to discuss their current work in planning, design, and development. On alternate Fridays students report on their work, meeting with faculty and fellow interns.

Students enjoy opportunities to gain work experience on issues ranging from arts and culture to planning, public policy, housing, and economic development through CRP's internship program. Students may select work with private firms, public agencies, neighborhood-based groups, or NGOs. The list of possible internships is extensive and individually tailored. Interns take full advantage of the special resources of New York, working with people in AAP's broad network of alumni and friends in a range of professional fields. Placements are matched to students' study areas and career interests. *Students with the appropriate academic background from other colleges at Cornell or outside Cornell may be eligible to attend.*

Cornell in Washington Program (CiW). Students in good standing may earn degree credits through course work and an externship in Washington, D.C. Students at CiW may work as externs with congressional offices, executive-branch agencies, interest groups, research institutions, and other organizations involved in politics and public policy. Students take an 8-credit research course and select one or two seminars from such fields as government, history, economics, human development, architectural history, natural resources, and social policy. Cornell faculty members teach these seminars, which provide credit toward fulfillment of major, distribution, and other academic requirements.

Cornell Abroad. Qualified undergraduates are encouraged to study abroad because exposure to foreign cultures can be an eye-opening aspect of a university education. In an increasingly interdependent world, the experience of living and learning in a foreign country is invaluable. Study-abroad opportunities are continually being developed, and programs are available in many countries. The department encourages URS students to explore these opportunities.

Research and fieldwork. Students are welcome to work with department faculty members on research or other opportunities that are appropriate to their particular interests. Fieldwork and community-service

options also exist for students in the Urban and Regional Studies Program.

Additional Degree Options

Linked degree options. URS students may earn both a bachelor of science degree and a master of regional planning (M.R.P.) degree in a fifth year of study. Ordinarily the professional M.R.P. degree requires two years of work beyond that for the bachelor's degree. Under this option, a minimum of 30 credits and a master's thesis or thesis project are required for the M.R.P. degree. Interested students apply to the Graduate School, usually in the senior year.

Dual-degree options. A student accepted in Cornell's College of Arts and Sciences may earn both a B.A. in a College of Arts and Sciences major and a B.S. in Urban and Regional Studies in a total of five years. A student accepted in Cornell's College of Agriculture and Life Sciences (CALs) may earn both a B.S. in Landscape Architecture and a B.S. in URS in a total of five years. Special requirements have been established for these dual-degree programs. Cornell students interested in pursuing the dual-degree program should contact either the director of the Urban and Regional Studies Program or the appropriate dean of the College of Arts and Sciences or of CALs for further information.

Admissions Requirements and Procedures

Among the most important criteria for admission to the Urban and Regional Studies Program are intellectual potential and commitment—a combination of ability, achievement, motivation, diligence, and use of educational and social opportunities. Nonacademic qualifications are important as well. The department encourages students with outstanding personal qualities, initiative, and leadership ability. Above all, the department seeks students with a high level of enthusiasm and depth of interest in the study of urban and regional issues. Applicants must complete a university admission application. Although an interview is not required, applicants are urged to visit the campus if that is possible. Applicants who want further information regarding the Urban and Regional Studies Program may contact Professor Richard Booth, program director, Urban and Regional Studies, Cornell University, 106 West Sibley Hall, Ithaca, NY 14853-6701, 607-255-4025).

Transfer Students

In most cases, transfer applicants should no longer be affiliated with a high school and should have completed no fewer than 12 credits of college or university work at the time of application. High school students who have completed graduation requirements at midyear and are taking college courses for the rest of the academic year should apply as freshmen. Prospective candidates who believe that their circumstances are exceptional should consult with the director of admissions in the Cornell division of interest to them before filing an application.

Forms for transfer application and financial aid are available from the Cornell University Office of Admissions, 410 Thurston Avenue, Ithaca, NY 14850-2488. Official transcripts of all high school and college work must be

submitted along with SAT or ACT scores and letters of recommendation.

Prospective transfer students should have taken at least 6 credits in English. In addition, students should have taken basic college-level courses distributed across the natural and social sciences, humanities, and mathematics. Applicants whose previous course work closely parallels the "General Education" requirements of the Urban and Regional Studies curriculum will have relative ease in transferring. Nevertheless, students with other academic backgrounds, such as engineering, architecture, fine arts, management, and agriculture, are eligible to apply.

Although an interview is not required, applicants are urged to visit the campus if that is possible. Applicants who want further information regarding the Urban and Regional Studies Program may contact Professor Richard Booth, program director, Urban and Regional Studies, Cornell University, 106 West Sibley Hall, Ithaca, NY 14853-6701, 607-255-4025.

The Graduate Program in City and Regional Planning

There are five graduate degree programs in the city and regional planning department. The master of regional planning program (M.R.P.) stresses skills basic to professional planning practice and responds to individual needs and interests. The faculty strongly recommends that students concentrate in one of three areas of planning. The Land Use and Environmental Planning concentration focuses on the forces and actions that directly affect the physical character, transformation, rehabilitation, and preservation of cities and regions. Economic Development Planning: Communities and Regions focuses on the economies of neighborhoods, cities, and regions with the intent of producing more informed and effective economic development policy. International Studies in Planning (ISP) focuses on urban, regional, and international development processes and their implications for people's lives and livelihoods in diverse international contexts.

The master of professional studies in international development (M.P.S./I.D.) degree is administered jointly with the Cornell International Institute for Food, Agriculture, and Development (CIIFAD). It is intended to meet the specific training needs of experienced planners or midcareer professionals in related fields.

The 60-credit master of arts (M.A.) in historic preservation planning prepares students for professional work in the creative preservation and use of our physical heritage.

The master of science (M.S.) or master of arts (M.A.) degree in regional science is the study of regional economies and their interactions with each other. Central issues include capital flows, trade, location of economic activity, growth, and regional conflicts. Graduates are positioned for careers as researchers and policy analysts at the highest levels in national governments, corporations, and international organizations.

The doctor of philosophy (Ph.D.) program is for those who seek advanced, specialized education for a career in teaching, research, or policy making.

Off-Campus Opportunities

Cornell in Rome. Graduate students have the opportunity to spend one or two semesters in Rome, studying at Cornell's center at the Palazzo Lazzaroni. Instruction is given by Cornell professors-in-residence and by other faculty. The program is structured to include work assignments in one of the international development organizations headquartered in Rome.

Course Information

Most courses in the Department of City and Regional Planning are open to students in any college of the university who have fulfilled the prerequisites and have the permission of the instructor.

The department attempts to offer courses according to the information that follows. However, students should check with the department at the beginning of each semester for late changes.

Undergraduate Program in Urban and Regional Studies

CRP 1100 The American City

Fall. 3 credits. S-U or letter grades for out-of-department students only. Staff. Introductory course on the evolution of urban problems and opportunities facing the majority of this country's population as we enter the first decade of the 21st century. Readings, discussions, and brief papers explore topics ranging from suburban development to central city poverty, from environmental threats to downtown revitalization, and from municipal finance to the new position of women in the urban economy.

CRP 1101 The Global City

Spring. 3 credits. S-U or letter grades for out-of-department students only. A. Forsyth. Critical look at the physical and social development of giant cities in the Third World. Their origins, roles, contributions, and shortcomings are examined. Their place in world political economy is evaluated. Policy prescriptions for their principal problems are discussed.

CRP 1106 URS First-Year Seminar

Fall. 1 credit. S-U grades only. R. Booth. Introduces students to substantive issues of the diverse disciplines that make up the planning profession through weekly interaction with CRP and other faculty members in the department. Students have the opportunity to engage in open discussions.

CRP 2000 The Promise and Pitfalls of Contemporary Planning

Fall. 3 credits. Prerequisite: CRP 1100. A. Sanchez. Introduction to the historical origins and evolution of the city planning profession in the United States. The theoretical foundation, core values, primary methods, and key challenges facing contemporary planners are examined through a combination of readings, lectures, films, guest speakers, and field trips. Students acquire a deeper understanding of professional practice by working with local officials to develop community development profiles for several Ithaca neighborhoods.

CRP 2010 People, Planning, and Politics in the City

Spring. 3 credits. Prerequisites: CRP 1100 and 1101. P. Olpadwala. Seminar examining various bases of political and professional power. What do professionals who want to serve the public need to know about power and decision-making processes in the institutional settings in which they operate? How and why can professionals make a difference when facing problems characterized by great complexity and severe inequalities among affected groups? The course addresses these and others questions.

CRP 2300 Community Service Fieldwork

Fall or spring. 4 credits, variable. Prerequisite: permission of instructor. Staff. Undergraduate students work under the direction of a faculty member in the CRP department on a project that assists a public or nonprofit organization. Projects involve urban and regional issues as defined by a client and agreed upon by the faculty member.

CRP 3010 Public Administration (also CRP 6010)

Fall. 3 credits. Not offered every year. R. Schwarting. This course prepares students to work within government departments and agencies, state and local authorities, and nonprofit public benefit corporations; and with private firms working in the public interest at the interface with governments and public benefit corporations. While the emphasis is on local and mid-size organizations, some material will address international and domestic national level organizations. As a first-year graduate program course it prepares students to conduct research on public organizations leadership and management and to be effective in public careers. It also prepares upper-level undergraduate students for internships and entry into public-sector careers.

CRP 3011 Ethics, Development, and Globalization (also CRP 6011)

Fall or spring. 4 credits. K. Donaghy. This seminar surveys some of the most important recent contributions to the literatures of development ethics and global ethics and examines their power to illuminate such issues as the nature of development, poverty and human rights, globalization and local autonomy, environmentalism and consumerism, and humanitarian intervention and just wars.

CRP 3072 Land Use, Environmental Planning, and Urban Design Workshop (also CRP 5072)

Fall or spring. 4 credits. A. Forsyth. Land Use and Environmental Planning workshop courses focus on the forces and actions that directly affect the physical character, transformation, rehabilitation, and preservation of natural landscapes, cities, and regions. Topics of study include, among others, development of land use and natural conservation plans, design and implementation of "smart growth" policies, evaluation of infrastructure requirements, strategies for making cities more environmentally sustainable, design and analysis of public spaces, and strategies for increasing housing opportunities.

CRP 3090 Community Development Seminar (also CRP 5090)

Spring. 3 credits. Letter grades.
K. Reardon.

Introduction to the theory, method, and practice of contemporary community development. Topics include the role community-based organizations are playing in promoting sustainable development in distressed communities; the contribution planners are making to enhancing the organizational capacity of community-based organizations; and the interplay between neighborhood-based community development activities and regional economic development policy-making.

CRP 3101 Race, Space, Place (also AAS/AMST 3950/6950, CRP 6101)

Fall or spring. 3 credits. C. Lai.

This seminar examines critical theories of race and space and investigates key sites where racial formation and spatial production intersect. These multiscalar sites include the neoliberal city, the prison industrial complex, and the Mississippi Delta. We analyze not only the fatal coupling of difference, power, and space, but also the spatial politics of resistance and refusal.

CRP 3102 Asian American Politics and Public Policy (also AAS 3900, AMST 3102/6102, CRP 6102)

Fall or spring. 3 credits. C. Lai.

United States political institutions have shaped Asian American immigration, community formation, and political expression. They have also influenced legal rights and racial formation processes. This course examines public policy and political issues that affect Asian Pacific Americans, including electoral politics, social justice/grassroots movements, affirmative action, and multiracial/interracial coalitions. We investigate both the interaction between state institutions and political movements and how this dialectic frames political issues and accommodates political challenges. Particular attention will be paid to different means of political organization and different strategies toward political empowerment. The course will be situated within the broader context of post civil-rights racial politics and postwar political economic restructuring.

CRP 3105 Urban Political Economy Seminar: Property and Expropriation (also CRP 6105)

Fall or spring. 3 credits. C. Lai.

This course deals with current topics in urban political economy and examines past and present-day seizure of land, resources, and ways of life as well as resistance against such seizures. We begin with an examination of colonial conquest and the expropriation of the English commons in the 17th and 18th centuries and conclude with contemporary anti-globalization struggles against privatization. Our reading will come from social history, political geography, and ethnic studies.

CRP 3111 Immigrant Entrepreneurship Markets and the U.S. City: The Latino(a) Case (also CRP 6111, LSP 3111/6111)

Spring. 3 credits. A. Sanchez.

The rise in urban entrepreneurship among certain immigrant groups, and the variable forms of neo-liberal economic and spatial restructuring in U.S. cities, require that we view immigrant businesses from a critical and

transdisciplinary perspective. This course will foreground how distinct ethnic entrepreneurial patterns and socially constructed immigrant labor markets are framed by both difference and policy regimes.

CRP 3180 Politics of Community Development (also CRP 5180, LSP 3180/5180)

Spring. 3 credits. Letter grades. Staff.
Seminar on city economic development and community institutions. Attention to issues of local politics, planning, housing, and economics. Term papers on field investigations are encouraged. Topics vary from year to year.

CRP 3201 Qualitative Research and Design Methods (also CRP 6201)

Fall or spring. 3 credits. J. Forester.
This course focuses on theoretical and practical dimensions of qualitative research design and methods. The course covers qualitative designs, ethics including Cornell University's Committee on Human Subjects (UCHS), data-gathering methods including interviews, focus groups, surveys, field observation, and archival research, sampling rationales, data analysis procedures, quality criteria, representation, and reporting.

CRP 3202 Visual Methods in Planning (also CRP 6202)

Spring. 3 credits. Staff.
Visual representation and urban design analysis methods in planning. Topics include design thinking, visual communication of spatial ideas, visual analysis, and graphic techniques in public participation.

CRP 3210 Introduction to Quantitative Methods for the Analysis of Public Policy

Spring. 3 credits. K. Donaghy.
Introduction to the role and use of quantitative methods in the study of urban and regional issues. Focuses on various types of models commonly used to analyze urban and regional policy, including regression models, cost-benefit analysis, simulation, and others. Strengths and weaknesses of those methods are also considered.

CRP 3301 Urban Mentorship Initiative

Fall and spring. 3 credits. Staff.
A service-learning initiative between Cornell and middle/high school students. The course focuses on history, urban education, and social justice in order to prepare students for mentoring of middle/high school students at the school via web-based dialogue and field trips.

CRP 3308 New York City Professional Internships

Fall. 6 credits, variable. Offered in New York City. Staff.
Students will work with program faculty in devising a detailed learning plan that identifies the new knowledge, skills, and capacities they seek to gain through their New York City-based professional internship experience. Students will be placed in public, private, and nonprofit organizations where they will engage in challenging professional activities designed to assist them in acquiring these new competencies. Students will participate in a weekly reflective seminar where they will systematically reflect upon their field-based learning experiences to prepare them to complete a detailed learning portfolio and capstone project through which

they can demonstrate their mastery of the theoretical, conceptual, methodological, and policy content identified in their individualized learning plans. Students will be introduced to key concepts and methods in adult learning, experiential education, field-based research methods, and organizational behavior to empower them to function as both self-directed and reciprocal learners.

CRP 3310 Social Justice and the City: Preparation for Urban Fieldwork

Spring. 3 credits. Prerequisite: Urban Scholar status or permission of instructor. Letter grades only. Staff.

Students are introduced to key sociological, economic, historical, and cultural issues embedded in planning for social justice in urban America. Topics include local realities and micro and macro policies affecting housing, education, immigration, health, legislation, legal affairs, community development, and organizing in a large urban setting. In preparation for field-based learning and research experiences, the challenges of experiential education, public scholarship, and reflective practice will also be addressed both from the perspective of nonprofit organizations and local government agencies serving under-resourced urban communities, and the undergraduate student as learner and worker. Students will be exposed to the principles of participant observation, informal/formal interviewing skills, managing field relations, professional ethics, and ethnographic report-writing.

CRP 3320 Post-Fieldwork Writing Seminar in Urban Policy (also CRP 5220)

Fall. 3 credits. Prerequisite: successful completion of Cornell Urban Scholars, Adult Literacy, or Urban Semester Programs or permission of instructor(s). S-U or letter grades. Staff.

Designed to enhance students' research, writing, analytical, and organizational skills for producing policy-oriented articles that examine vital issues confronting the urban poor. Students will build on prior fieldwork with nonprofit organizations and public agencies.

CRP 3430 Affordable Housing Policy and Programs (also CRP 6430)

Fall. 3 credits. S-U or letter grades.
R. Pendall.

Overview of federal, state, and local policies and programs to deliver affordable housing to low-income people; public housing, vouchers, inclusionary zoning, rent control, and much more. Lectures, debates, short papers, and term paper.

CRP 3502 Suburbia (also CRP 6502)

Fall or spring. 3 credits. A. Forsyth.
Cultural commentators love to hate suburbia but the suburban parts of metropolitan areas are expanding around the globe. Readings, films, and lectures cover topics including suburban history, design planning, ecology, social organization, politics, and culture. Students will use photography, mapping, discussions, and brief papers to develop their own views of suburbia.

CRP 3504 Comparative Urban Development (also CRP 6504)

Fall or spring. 3 credits. S. Schmidt.
This course examines the changing structural and institutional landscape urban planning

and development as practiced in cities and regions in specific areas outside the United States, with a particular focus placed on how these institutional arrangements and conditions compare with the United States

CRP 3506 Environmental Planning Seminar: Wilderness and Wildlands (also CRP 6506)

Fall or spring. 2–3 credits, variable.
E. Thorndike.

This course deals with current topics in environmental planning. Wilderness and wildland resources have been under assault by the Congress, the “Wise Use” movement, property-rights activists, pollutants, and the actual users. This seminar considers historical and philosophical foundations and political factors that affect decisions about environmental policies, planning, acquisition, protection, and management. The roles of government, professional planners and managers, organized special interests, the legal system, citizens, and user groups are examined.

CRP 3508 Urban Transformations in NYC

Fall. 3 credits. Letter grades only. Offered in New York City. Staff.

Students will investigate the structural changes taking place in the New York regional economy and the impact these changes are having on the spatial structure of the city. This background information will be used to identify the major environmental, economic, and social policy issues confronting local civic leaders. Special attention will be given to policy questions that affect economic growth, income and wealth distribution among social groups, environmental sustainability, and citizen participation in policy-making.

CRP 3540 Introduction to Environmental Planning (also CRP 5540)

Fall. 3 credits. S. Schmidt.

Introduction to problems facing planners and decision-makers as they attempt to manage and preserve environmental quality in urban and rural settings. Case studies are used to discuss issues related to sustainability, quality of life, environmental hazards, and environmental justice. Students are also introduced to the basic regulatory and institutional aspects of environmental planning and tools and techniques for environmental impact assessment, inventorying, and risk analysis.

[CRP 3601 Museum and the Public (also CRP 6601)]

Spring. 3 credits. Next offered 2010–2011.
J. Chusid.

Evaluates different types of museums (art, science, history, arboreta, etc.), and their constantly evolving missions in contemporary societies. The material is addressed through site visits, lectures by faculty and guests, readings, case studies and a team semester-long project. Issues covered include the nature of collections; the nature of the audience; the purpose and role of museums; political and cultural questions about collecting, history and interpretation; governance and management; and the core ethical and intellectual values and positions implied or expressed by the institutions. Students will also undertake a comprehensive planning project for a local museum, to be

presented to the client at the end of the semester.]

CRP 3602 American Planning History (also CRP 6602)

Fall. 3 credits. P. Clavel.

This lecture and discussion course covers the 20th-century growth of city and regional planning. Related institutions and individual planners are put in the context of social movements and legislative innovation. Students will also have the opportunity to work with practicing planners, other scholars, and Cornell University Library’s Division of Rare and Manuscript Collections.

CRP 3608 The Built Environment of New York City

Fall. 3 credits. Letter grades only. Offered in New York City. Staff.

Students will learn about the history, culture, politics, and social life of New York City’s newest immigrant communities through an immersion in the contemporary art, poetry, stories, and dance being produced by its most prolific young artists. Weekly visits to the studios, galleries, and performance spaces of these communities will be a central aspect of this experientially based course.

CRP 3610 Seminar in American Urban History (also CRP 6610)

Fall or spring. 3 credits. Prerequisite: permission of instructor. M. Tomlan.

Seminar in the historical evolution of the American city. Emphasizes factors in urban growth, the process of urbanization, the urban reform movement, and intellectual and social responses to the city.

CRP 3650 Gender and Globalization (also FGSS 3600)

Fall. 3 credits. L. Benería.

For description, see FGSS 3600.

CRP 3700 The Regional Question: The Case of Italy

Spring. 4 credits, variable. Prerequisite: Rome Program participants; majors in urban and regional studies. Staff.

The “regional problem” in Italy has long interested regional planners, economists, sociologists, and political scientists. This course makes use of field trips to the Italian Mezzogiorno and the North to explore theoretical and practical aspects of regional inequality. The question of how Italy’s integration into the European Union affects and is affected by its regional issues will be considered.

CRP 3720 20th-Century Italy: Politics and Society

Spring. 3 credits. S–U or letter grades for out-of-department students only. Staff.

Comprehensive survey of Italian society today, starting with Italy’s geography and the historical forces that shaped the nation. Discussion includes north-south tensions and such broad features of Italian social life as community structure, urban development, and family forms. The course also reviews selected institutional issues, such as gender, the system of education, problems of criminality and justice, economic reform, social class, religion, and politics.

CRP 3721 Italy and the European Union (also CRP 6711)

Spring. 4 credits. M. Cremaschi.

The main objective of this course is to develop an advanced understanding of how urban policies are changing in Italy. A great

deal of policy innovation is due to the pressure exerted directly or indirectly by the European Union.

CRP 3760 Latin American Cities (also CRP 6760, LSP 3760/6760)

Fall. 3 credits. A. Sanchez.

This course offers students an opportunity to understand urban dynamics in a rapidly changing region of the world. We ask how colonial powers, the nation-state, and global economic forces have shaped Latin American urban landscapes and the patterns of daily life in the city. The first part of this course explores the social, political, and spatial rural-urban flows, socio-spatial segregation, housing environment and employment. The second half of the course focuses on responses to these social and economic transformations; violence and repression, coping strategies, social movement, and transmigration.

CRP 3801 Asian American Urban Experience (also AAS/AMST 3801/6801, CRP 6801)

Fall or spring. 3 credits. C. Lai.

This seminar uses the case of Asian Americans in the United States to examine the intersection of race, space, and power from a social geographical and ethnic studies framework. The course includes both an introduction to spatial theory and racial theory and history of Asian immigrant communities in the 19th and 20th centuries.

CRP 3810 Principles of Spatial Design and Aesthetics (also CRP 5810)

Fall. 3 credits. Limited to 15 students.

J. Foster.

A lecture projects course that introduces the spatial and visual design vocabularies of cities. Aesthetic principles and theories of design are investigated for different types of urban spaces drawn from a variety of international examples, historic and modern. Included in the course are design methods and applications in the contemporary urban context of Europe and North America.

CRP 3840 Green Cities (also CRP 5840, LA 4950)

Fall. 4 credits. S–U or letter grades. Not offered every year. S. Schmidt.

For the first time in history, a majority of human beings live in cities. As a result, any realistic solution to the global ecological crisis will need to include strategies for urban life that are ecologically sound. This course examines the history and future of urban ecology and the technology and politics that shape it. Alternative transportation, renewable energy, urban design, recycling and resource management, and sustainable economics are explored as means toward transforming cities to become the basis of a new, ecological society. Open to both graduate and undergraduate students. Graduate students have additional research requirements.

CRP 3860 Planning for Sustainable Transportation (also CRP 6860)

Spring. 3 credits. S–U or letter grades. Not offered every year. Staff.

Explores issues related to sustainable transportation policy and practice. The course (1) provides an overview of current transportation trends and their impacts; (2) reviews themes such as planning history and politics, the problems with auto-dominated systems, and key challenges to development sustainable transport systems; and (3) looks

at regulatory, design, and market-based approaches to reducing automobile-dependency, introducing creative sustainable solutions from around the world.

CRP 3900 Professional Planning Colloquium I (also CRP 7850)

Fall. 1 credit. Staff.

Visiting lecturers address problems and opportunities in the practice of planning. Topical focus to be announced. The only formal requirements for the course are attendance and a three- to five-page paper about the lecture series.

CRP 4080 Introduction to Geographic Information Systems (GIS) (also CRP 5080)

Spring. 4 credits. S. Schmidt.

Geographic Information Systems (GIS) have revolutionized the way we manage, analyze, and present spatial information. This course focuses on GIS in the social sciences. Many of the exercises and examples are based on planning issues, but the concepts can be applied to many other disciplines such as government, economics, natural resources, and sociology. Some of the issues covered include fundamentals of spatial analysis; overview of GIS technology and applications; designing a GIS project; gathering and analyzing data; and creating thematic maps.

CRP 4120 Devolution, Privatization, and the New Public Management (also CRP 6120, AEM 4330/6330, FGSS 4110/6110)

Fall. 4 credits. Prerequisite: ECON 1110 or equivalent. S-U or letter grades. Offered every other year. M. Warner.

Addresses devolution and decentralization of government services in a national and international context and then focuses on the local public-sector response in the United States. Privatization, intermunicipal cooperation, and internal restructuring are reviewed, including changing roles for the private sector, nonprofit sector, and unions. Implications for policy, program design, public advocacy, and citizen involvement are addressed. A special topic may include welfare reform. Graduate students are expected to write a major research paper in addition to short papers throughout the semester.

CRP 4160 European City: The Public Sphere and Public Space

Spring. 6 credits, variable. Enrollment may be limited by instructor. Prerequisite: junior or senior standing; Rome Program participants. S-U or letter grades for nonmajors. Staff.

Examination of the social, economic, and political life of the European city, particularly Italian cities, especially Rome. Study of the socioeconomic underpinnings of the city. How are cities organized, and how do citizens relate to the state; the city to the nation; the nation to the global market? How and where do different groups of people live? How do they travel, inside the city and from city to city? How are new parts of the city developed and old ones preserved, transformed, or destroyed? What public services do people expect, and how are they delivered? What is the role of private business? How do Italians/Europeans confront problems of the urban environment, poor neighborhood services, and impoverished immigrants? In all these cases, how do Italian (or European) conditions and policies differ from those in the United States (or elsewhere)?

CRP 4170 Economic Development: Firms, Industries, and Regions (also CRP 5170)

Fall. 4 credits. Not offered every year. S. Christopherson.

Economic development policy in the United States has focused historically on the provision of subsidies to individual firms. As the limitations of this strategy have become more apparent, alternative approaches including multifirm and workforce development are being implemented. This comparative course draws on cases from a variety of industries and national contexts. Particular attention is paid to economic development issues and policies in New York State.

CRP 4440 Resource Management and Environmental Law (also CRP 5440, NTRES 4440)

Spring. 4 credits. Prerequisite: junior, senior, or graduate standing and permission of instructor. R. Booth.

Introduces the application of legal concepts and processes to the management of natural resources and natural-resource areas. Explores the role of the common law, statutory law, administrative regulations, and judicial decisions in managing these resources. Particular focus is given to the management of wildlife, wetlands, and critical resources on public lands, and to the conflicts inherent in government attempts to regulate important natural resources on private lands.

CRP 4590 Legal Aspects of Land Use Planning (also CRP 5590)

Spring. 4 credits. R. Booth.

Survey of leading cases and legal concepts in land-use planning, with particular attention to zoning, subdivision control, condemnation, and growth-control issues.

CRP 4770 Issues in African Development (also CRP 6770)

Fall and spring. 1 credit. S-U grades only. M. Ndulo.

Examines a broad range of critical concerns in contemporary Africa including food production, human resource development, migration, urbanization, environmental resource management, economic growth, and policy guidance. The weekly presentations are made by invited specialists. Students are required to write a term paper.

CRP 4900 Student-Faculty Research

Fall or spring. 4 credits, variable. Prerequisite: undergraduates in Urban and Regional Studies Program. S-U grades only. Staff.

Research, reading, and/or writing project in which a student and faculty member choose a topic related to urban and regional studies.

CRP 4920 Honors Thesis Research

Fall or spring. 4 credits. Prerequisite: Urban and Regional Studies Program majors who have been selected as honor students by department faculty. Staff.

Each selected student works with his or her thesis advisor.

CRP 4930 Honors Thesis Writing

Fall or spring. 4 credits. Prerequisite: CRP 4920. Staff.

Each selected student works with his or her thesis advisor.

CRP 4970 Independent Study

Fall or spring. 4 credits, variable. Prerequisite: junior or senior standing; permission of instructor. Staff.

Special Topics Courses

Fall or spring. Variable credit. Staff.

Typical topics are:

CRP 3850 Special Topics in Planning

CRP 3851 Special Topics in Design and Land Use

CRP 3852 Special Topics in Urban History, Society and Politics

CRP 3853 Special Topics in Environment

CRP 3854 Special Topics in Regional Development and Globalization

CRP 3855 Special Topics in Qualitative and Field Methods

CRP 3856 Special Topics in Quantitative Methods

Graduate Courses and Seminars

Courses numbered from 5000 to 5990 and 6000 to 6990 are generally considered introductory or first-year courses; those numbered from 7000 to 7990 and 8000 to 8990 are generally considered more advanced. Upper-level undergraduate courses are numbered from 3000 to 4990.

(Undergraduate students with the necessary prerequisites and permission of the instructor may enroll in courses numbered 5000 and above.)

CRP 5071 City and Regional Planning Workshop

Fall or spring. 4 credits. Staff.

City and Regional Planning workshop courses focus on planning issues and problems that combine several of the topics undertaken in the various workshop categories. Topics may include public policy issues regarding land use, transportation, public space, municipal services, environmental impact, housing and economic development, and public participation.

CRP 5072 Land Use, Environmental Planning, and Urban Design Workshop

Fall or spring. 4 credits. Staff.

For description, see CRP 3072.

CRP 5073 Historic Preservation Planning Workshop

Fall or spring. 4 credits. Staff.

Historic Preservation Planning workshop courses take students into the field to engage in a range of problems, from conducting a historic resources survey working in a city, town, or village in the region, to developing a scheme for revitalization of an entire neighborhood, to a site-specific economic analysis for the renovation of a surplus school.

CRP 5074 Economic and Community Development Workshop

Fall or spring. 4 credits. Staff.

Economic and Community Development workshop courses focus on the economics of neighborhoods, cities, and regions with the intent of producing more informed and effective economic development policy. Topics of study include, among others, the application of analytical tools needed to produce first-rate economic development

plans, the special needs of excluded, poor and segregated communities, use of quantitative and qualitative methods to address social inequalities, the politics of planning, relationships between economic development and community development.

CRP 5075 Real Estate Workshop

Fall or spring. 4 credits. Staff.
Student are asked to undertake the preparation of reports analyzing various aspects of real estate activity. Individual and team working relationships are required. A range of types of problems that may be encountered in the real estate field are addressed, including project feasibility, marketing, planning and design, legal constraints and concerns, and others. Projects focus on real-world case studies and require professional-level reports suitable for oral and written presentations.

CRP 5076 International Planning and Development Workshop

Fall or spring. 4 credits. Staff.
International Planning and Development courses focus on urban, regional, and international development processes and their implications for people's lives and livelihoods in diverse international contexts. Particular attention is paid to critical assessment of programs that reflect a commitment to environmental sustainability, economic vitality, and social justice.

CRP 5080 Introduction to Geographic Information Systems (GIS) (also CRP 4080)

Spring. 4 credits. S. Schmidt.
For description, see CRP 4080.

CRP 5090 Community Development Seminar (also CRP 3090)

Spring. 3 credits. K. Reardon.
For description, see CRP 3090.

CRP 5120 Public and Spatial Economics for Planners

Spring. 3 credits. No prior knowledge of economics necessary. N. Brooks.
Covers basic microeconomic theory and some topics in macroeconomics. What distinguishes it from foundation courses in economics is that the context of every topic is both spatial and public. The concept of space is central to city and regional planning. The perspective of the public and nonprofit sectors is the same as that of city and regional planning. Both space and the public-nonprofit sectors are peripheral to (or absent from) the usual graduate foundations courses in economics. The course also covers the economic theory necessary to understand the many applications of economics presented in subsequent courses in city and regional planning.

CRP 5130 Introduction to Planning Practice and History

Fall. 4 credits. J. Forester.
Introductory graduate seminar on the theory and history of planning, administration, and related public intervention in urban affairs. Topics are analyzed from the perspective of the political economy of the growth and development of cities. Students improve their understanding of the planning process and of the urban application of the social sciences, get practice in writing, and explore one research topic in depth.

CRP 5170 Economic Development: Firms, Industries, and Regions (also CRP 4170)

Fall. 4 credits. S. Christopherson.
For description, see CRP 4170.

CRP 5180 Politics of Community Development (also CRP 3180)

Spring. 3 credits. A. Sanchez.
For description, see CRP 3810.

CRP 5190 Urban Theory and Spatial Development

Spring. 3 credits. W. Goldsmith.
Surveys theories on the existence, size, location, and functioning of cities and their metropolitan areas in rich and poor regions of the world. Considers orthodox/conservative treatments as well as critical/left-wing perspectives of planners, geographers, economists, sociologists, and political economists. These theories are indispensable for understanding the origins of cities, the persistence of urban and regional spatial patterns, and the distinctive nature of urban problems.

CRP 5250 Introductory Methods of Planning Analysis

Fall. 4 credits. R. Pendall.
Quantitative and qualitative analysis of neighborhoods, cities, and regions. Focus is on data from various regions of the United States, but tools are applicable throughout the world. They include descriptive and inferential statistics, mapping, and observation. Required lab exposes students to essential microcomputer applications and builds skills in writing and analysis.

CRP 5320 Real Estate Development Process

Fall. 3 credits. Letter grades. Fee for case studies packet. B. Olson.
Examination of various forms of development as well as the role of major participants in the processes. Reviews issues in residential, retail, industrial, office, and low-income housing projects. Guest speakers and case studies included.

CRP 5330 Real Estate Marketing and Management

Fall. 3 credits. Staff.
Focuses on the tenant or user as the basic source of the value of real estate. Students explore the characteristics and needs of tenants, and how the ownership and management of buildings respond to these needs. Multifamily residential and office buildings are the principal focus of the course. Topics include marketing research, examination of tenant types, locations, building services and operations, negotiation of lease agreements, marketing campaigns, and governmental regulations. Guest speakers and case studies included.

CRP 5370 Real Estate Seminar Series

Fall and spring. 0.5 credit each semester.
Prerequisite: M.P.S./R.E. students. S-U grades only. D. Funk.
Designed to bring students weekly into direct contact with real-estate professionals mainly through the use of videoconferences originating from locations around the world.

CRP 5440 Resource Management and Environmental Law (also CRP/NTRES 4440)

Spring. 4 credits. R. Booth.
For description, see CRP 4440.

CRP 5450 Inferential Statistics for Planning and Public Policy

Fall or spring. 3 credits. N. Brooks.
This course is an introduction to the inferential statistical methods and econometrics/regression analysis needed to understand empirical public policy and planning research and to do basic applied public policy analysis. The statistical concepts are illustrated using data and examples primarily from the fields of public policy and planning.

CRP 5460 Introduction to Community and Environmental Dispute Resolution

Fall or spring. 3 credits. J. Forester.
Explores the theories and techniques of dispute resolution as they apply to community, environmental, and related public-policy disputes. Analysis complements skill-building. Issues of power, participation, and strategy are central to our examinations of negotiation and mediation practice.

CRP 5530 Land-Use Regulations

Spring. 3 credits. R. Pendall.
This seminar covers the essentials of "smart growth," zoning, and subdivision and the main tools for implementing a land-use plan. Also covers agriculture and open-space preservation, infrastructure-timing controls, redevelopment, and planned-unit development.

CRP 5540 Introduction to Environmental Planning (also CRP 3540)

Fall. 3 credits. S. Schmidt.
For description, see CRP 3540.

CRP 5560 Design in Real Estate Development

Spring. 3 credits. S-U or letter grades. H. Richardson.
Provides a basic understanding of the importance of design in real estate development. The role of the architect and other design professionals is considered from the initial needs assessment through project implementation. Fundamentals involved in defining, stimulating, and recognizing quality in design are addressed. The analysis of case-study presentations by guest speakers examine the methods and procedures employed to achieve quality design and how this can create added value to development.

CRP 5590 Legal Aspects of Land Use Planning (also CRP 4590)

Spring. 4 credits. R. Booth.
For description, see CRP 4590.

CRP 5600 Documentation for Preservation

Fall. 3 credits. M. Tomlan.
Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

CRP 5610 Historic Preservation Planning Workshop: Surveys and Analyses

Fall. 4 credits. J. Chusid.
Covers techniques for the preparation of surveys of historic structures and districts; identification of American architectural styles, focusing on upstate New York; and explorations of local historical resources, funding sources, and organizational structures. Lectures and training sessions. Emphasizes fieldwork with individuals and community organizations.

CRP 5620 Perspectives on Preservation

Fall. 3 credits. J. Chusid.
Introductory course for preservationists. A survey of the historical development of preservation activity in Europe and America leading to a contemporary comparative overview. Field trips to notable sites and districts.

CRP 5630 Problems in Contemporary Preservation Practice

Spring. Variable credit. J. Chusid.
Review and critique of ongoing preservation projects and an investigation of areas of expertise currently being developed. Presented by staff and guest lecturers.

CRP 5640 Building Materials Conservation

Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. J. Chusid.
Survey of the development of building materials in the United States, chiefly during the 19th and early 20th centuries, and a review of the measures that might be taken to conserve them.

CRP 5650 Fieldwork or Workshop in History and Preservation

Fall or spring. Variable credit. Staff.
Work on applied problems in history and preservation planning in a field or laboratory setting or both.

CRP 5660 Planning and Preservation Practice

Fall. 1 credit. Prerequisite: graduate standing in CRP programs or M.P.S./R.E. or permission of instructors. S-U grades only. R. Pendall and M. Tomlan.
Students participate in field study of city planning, historic preservation, economic and community development, and real estate issues in large eastern U.S. cities.

CRP 5670 Measured Drawing

Spring. 3 credits. Prerequisite: undergraduate architecture students and graduate students in history and preservation. J. Chusid.
Combines study of architectural drawing as historical documents with exercises in preparing measured drawings of small buildings. Presents the basic techniques of studying, sketching, and measuring a building and the preparation of a finished drawing for publication.

CRP 5810 Principles of Spatial Design and Aesthetics (also CRP 3810)

Spring. 3 credits. J. Foster.
For description, see CRP 3810.

CRP 5840 Green Cities (also CRP 3840, LA 4950)

Fall. 4 credits. S-U or letter grades. Not offered every year. S. Schmidt.
For description, see CRP 3840.

CRP 6010 Public Administration (also CRP 3010)

Fall. 3 credits. Not offered every year. R. Schwarting.
For description, see CRP 3010.

CRP 6011 Ethics, Development, and Globalization (also CRP 3011)

Fall or spring. 4 credits. K. Donaghy.
For description, see CRP 3011.

CRP 6012 Legal Aspects of Public Agency Decision-Making

Fall. 4 credits. R. Booth.

This course introduces the application of legal concepts to decision-making processes conducted by governmental agencies, particularly at the federal level. It explores how constitutional law, statutory law, and judge-made law shape agency decisions. Attention is given, for example, to roles agencies play in American government, differences between rule-making proceedings and adjudications, rights of parties to obtain judicial review of agency decisions, how judges review factual and legal determinations by agency officials, and the rights of parties appearing before agencies.

CRP 6050 Urban Public Finance

Fall. 4 credits. Prerequisite: exposure to microeconomics. Not offered every year. Staff.

Overview of neoclassical public-economics theory, particularly those aspects of the theory that are central to urban public finance. The unusual three-tiered fiscal system of the United States is described along with the evolving fiscal and economic role of large municipal governments. Also presented is the public-finance theory of taxation. Major taxes and other revenue sources used by large municipalities are described and analyzed. The heart of the matter is the measurement and analysis of the fiscal condition of cities.

CRP 6101 Race, Space, and Place (also CRP 3101)

Fall or spring. 3 credits. C. Lai.
For description, see CRP 3101.

CRP 6102 Asian American Politics and Public Policy (also AAS 3900, CRP 3102)

Fall or spring. 3 credits. C. Lai.
For description, see CRP 3102.

CRP 6105 Urban Political Economy Seminar (also CRP 3105)

Fall or spring. 3 credits. C. Lai.
For description, see CRP 3105.

CRP 6111 Immigrant Entrepreneurship Markets and the U.S. City: The Latino(a) Case (also CRP 3111)

Spring. 3 credits. A. Sanchez.
For description, see CRP 3111.

CRP 6120 Devolution, Privatization, and the New Public Management (also CRP 4120, AEM 4330/6330, FGSS 4110/6110)

Fall. 4 credits. Prerequisite: ECON 1110 or equivalent. S-U or letter grades. Offered every other year. M. Warner.
For description, see CRP 4120.

CRP 6201 Qualitative Research and Design Methods (also CRP 3201)

Fall or spring. 3 credits. J. Forester.
For description, see CRP 3201.

CRP 6202 Visual Methods in Planning (also CRP 3202)

Spring. 3 credits. Staff.
For description, see CRP 3202.

CRP 6210 Quantitative Techniques for Policy Analysis and Program Management

Spring. 4 credits. D. Lewis.
Examines selected analytical techniques used in the planning and evaluation of public policy and public investments. Topics include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

CRP 6220 Planning Policy and Analysis

Spring. 3 credits. I. Azis.
The course is designed to familiarize students with the essence of planning models and equip them with analytical tools to undertake a practical quantitative policy and planning analysis. Two categories of models to be discussed are: (1) economy-wide models that capture complete interactions between economic and social indicators such as income distribution and poverty; and (2) non-Bayesian decision-making models that combine intangibles and subjective judgments with statistical data and other tangible actors, and that can also capture feedback influences.

CRP 6302 Economics of Financial Crises (also NBA 5950)

Spring. 3 credits. I. Azis.
Understanding the causes, nature, and consequences of financial crises is of interest to both the public and private sector. The purpose of this course is to help students with such understanding, and to familiarize them with the relevant tools for analyzing the phenomena of financial crises. While crisis is often multidimensional, the focus of this course is on economics.

CRP 6311 Consulting for Nonprofit and Government Organizations

Fall and spring. 4 credits. L. Haas-Manley.
This class teaches practical skills that will enable students to work with clients in the local community, learn about organizational structure and culture, and gain real-world experience as they complete a public-service project. Students receive instruction on topics such as organizational development, program evaluation, project management, professional communication, and strategic planning. A significant portion of the course will focus on project management.

CRP 6320 Methods of Regional Science and Planning I

Spring. 4 credits, variable. K. Donaghy.
Introduction to some of the major methods and models used in regional science and planning. Topics related to the structure and assumptions of the models, model development, and their applications in regional science and planning are discussed. Where appropriate, computer implementation emphasizing statistical, econometric models is considered.

CRP 6390 Economics of Financial Crises (also NBA 5950)

Spring. 3 credits. I. Azis.
Understanding the causes, nature, and consequences of financial crises is of interest to both the public and private sector. The purpose of this course is to help students with such understanding, and to familiarize them with the relevant tools for analyzing the phenomena of financial crises. While crisis is often multidimensional, the focus of this course is on economics.

CRP 6430 Affordable Housing Policy and Programs (also CRP 3430)

Fall. 3 credits. S-U or letter grades. R. Pendall.
For description, see CRP 3430.

CRP 6502 Suburbia (also CRP 3502)

Fall or spring. 3 credits. Staff.
For description, see CRP 3502.

CRP 6503 Comparative Land Use Policy

Fall or spring. 3 credits. Staff.

Graduate seminar in which students conduct guided, often collaborative, research on contemporary land-use planning and policy issues in comparative international perspective. Topics may include sustainable development, conservation, revitalization of urban cores, and land use-transportation connections, among others.

CRP 6504 Comparative Urban Development (also CRP 3504)

Fall or spring. 3 credits. S. Schmidt.
For description, see CRP 3504.

CRP 6506 Environmental Planning Seminar: Wilderness and Wildlands (also CRP 3506)

Fall or spring. 2–3 credits, variable.
E. Thorndike.
For description, see CRP 3506.

CRP 6560 Real Estate Transactions and Deal Structuring (also LAW 6792)

Spring. 3 credits. S–U or letter grades.
D. Funk.

Real estate transactions and deal structuring examines real estate deals through a practitioner perspective within a case study and transactional approach. The course looks at the transactional components and structuring of real estate deals and related parties at each step in creating value from real estate, including acquisition and assemblage; due diligence; sourcing and financing; structuring the venture/parties; operation; disposition; and tax consequences. Additional issues within deal structuring that may be included are negotiation, managing risk including litigation and environmental issues, analysis of financing techniques, and consequences when deals go bad, including work out and bankruptcy. The case study format will address deals from the perspectives of investment fund manager, banker/lender, developer, REIT, joint venture partner/investor, and owner.

CRP 6570 Real Estate Law

Spring. 3 credits. Letter grades.
A. Klausner.
Examination of major legal concepts pertaining to acquisition, use, management, and transfer of real estate. Particular focus is on important legal considerations pertaining to property rights, contracts, and public controls on the use of land. Consideration of important case law, statutory law, and rules and regulations. Current legal issues affecting the real estate industry are discussed.

CRP 6580 Residential Development

Spring. 4 credits. Letter grades. Fee for mandatory field trip. B. Olson.
Explores the residential-development process from site acquisition through delivery of the finished product. Topics include market feasibility, land planning and acquisition, product selection and design considerations, project financing and feasibility, schedule and budgetary controls, contracting and construction issues, marketing, and sales activities. Current issues in providing competitive housing products in today's markets are also explored. Composition of the residential-development project team is discussed. Classes are supplemented by presentations from visiting professionals. The course includes a semester-long project based on an actual property and market opportunity.

[CRP 6601 Museum and the Public (also CRP 3601)]

Spring. 3 credits. Next offered 2010–2011.
J. Chusid.
For description, see CRP 3601.]

CRP 6602 American Planning History (also CRP 3602)

Fall. 3 credits. P. Clavel.
For description, see CRP 3602.

CRP 6610 Seminar in American Urban History (also CRP 3610)

Fall or spring. 3 credits. Prerequisite: permission of instructor. M. Tomlan.
For description, see CRP 3610.

CRP 6630 Historic Preservation Law

Spring. 3 credits. Offered every other year.
Staff.

Covers law of historic district and landmark designation; tools for preservation (e.g., police power, taxation, eminent domain); and recent developments in state and federal historic preservation.

CRP 6650 Preservation Planning and Urban Change

Fall. 3 credits. M. Tomlan.
Examination of fundamental planning concepts and issues as they relate to historic preservation. Neighborhood revitalization, federal housing programs, the role of public and private institutions, displacement, and other social issues are among the primary topics.

CRP 6700 Regional Planning and Development in Developing Nations

Fall or spring. 4 credits. Prerequisite: second-year graduate standing.
M. Gonzalez.

Extensive case studies of development planning are analyzed. Focus is on the political economy of the process of regional development through urbanization and in particular on the concepts of equity and efficiency, external economies, export linkages, and internal self-sufficiency and integration. Resource development, national integration, human development, and migration problems are discussed.

CRP 6710 Seminar in International Planning

Spring. 1 credit. S–U grades only.
W. Goldsmith.
The international planning lecture series sponsors lectures by visiting scholars or professionals in the field of international development and planning. The only formal requirement for the course is a brief evaluation of the series at the end of the semester.

CRP 6711 Italy and the European Union (also CRP 3721)

Spring. 4 credits. M. Cremaschi.
For description, see CRP 3721.

CRP 6720 International Institutions

Fall. 3 credits. L. Benería and M. Gonzales.
Focuses on the growth and transformation of international institutions since World War II. The first part includes a discussion of the Bretton Woods institutions and of the U.N. system up to the early 1970s, and how these function and have evolved over time. The second part examines some of the crises and tensions within the international system since the 1980s and how these have affected institutional change and current debates on reform and global governance.

CRP 6760 Latin American Cities (also CRP 3760)

Fall. 3 credits. A. Sanchez.
For description, see CRP 3760.

CRP 6770 Issues in African Development (also CRP 4770)

Fall or spring. 1 credit. S–U grades only.
M. Ndulo.
For description, see CRP 4770.

CRP 6801 Asian American Urban Experience (also CRP 3801)

Fall or spring. 3 credits. C. Lai.
For description, see CRP 3801.

CRP 6860 Planning for Sustainable Transportation (also CRP 3860)

Spring. 3 credits. S–U or letter grades. Not offered every year. Staff.
For description, see CRP 3860.

CRP 6901 Real Estate Review

Fall and spring. Variable 1–2 credits.
D. Funk.
Real Estate Review is for students undertaking a research project culminating in an article worthy of publication in the *Cornell Real Estate Review*.

CRP 7770 Theories of Development and Underdevelopment

Fall or spring. 4 credits. P. Olpadwala.
Various theories attempting to analyze and explain the phenomena of underdevelopment are examined. Although a range of thought and approaches are considered, the accent is on aspects of political economy revolving around concepts of class and exploitation. Topics include the transition of capitalism; dependent and uneven development; various issues of growth and fluctuation under contemporary capitalism, including crisis; rural and industrial development in less developed countries, and planning for development.

CRP 7850 Professional Planning Colloquium I (also CRP 3900)

Fall. 1 credit. Staff.
For description, see CRP 3900.

CRP 7940 Planning Internships

Fall, spring, or summer. 12 credits, variable. Staff.
Combines a professional planning internship in a metropolitan area with academic study to provide experience and understanding of the planner's role in formulating and implementing plans and policies. Salaried internships in federal or state agencies, legislative offices, and comparable settings include development of research, analysis, and other technical skills. Weekly seminars draw on student field experiences, assigned readings, and guest speakers to examine current issues of federal, urban, and regional policy from the perspective of planning practice.

CRP 7970 Graduate Independent Study

Fall or spring. 4 credits, variable.
Prerequisites: graduate student standing, permission of instructor. Staff.
For description, see department coordinator, 106 West Sibley Hall.

CRP 8000 Advanced Seminar in Urban and Regional Theory I

Fall. 3 credits. S. Christopherson.
Introduction to key conceptual and empirical literature in urban theory. Focuses on the relationship between political and economic processes and their joint influence on urban spatial form.

CRP 8010 Advanced Seminar in Urban and Regional Theory II

Fall or spring. 3 credits. K. Donaghy.
This course will survey traditional and more recent explanations of the location, aggregation, and fragmentation of economic activities in space under different assumptions about the mobility of factors, transportation (or more generally, transaction) costs, economies of scale, and the competitiveness of markets. The relationship between theories of trade and location will be considered, as will the effects on spatial economies of policy interventions.

CRP 8100 Advanced Planning Theory

Fall. 3 credits. Staff.
A survey of the works of scholars who have contributed to current thinking about planning theory. Alternative assumptions concerning models of man and theoretical concepts concerning the nature of planning today are considered.

CRP 8300 Seminar in Regional Science, Planning, and Policy Analysis

Fall or spring. 4 credits, variable. S-U grades only. K. Donaghy.
CRP 8300 is a weekly seminar at which faculty, students, and visitors present their research on topics of current interest. Presentations usually involve formal or quantitative analyses of developments in regional economies and policy or planning implications.

CRP 8900 Planning Research Seminar I

Fall or spring. 2 credits. Staff.
Intended for doctoral candidates in city and regional planning; other students welcome. Presentation and discussion of current problem areas and research by advanced doctoral students, faculty members, and visitors.

CRP 8910 Master's Thesis in Regional Science

Fall or spring. 12 credits, variable. S-U or letter grades. Hours TBA. Regional Science faculty. Staff.

CRP 8920 Master's Thesis, Project, or Research Paper

Fall or spring. 10 credits, variable. S-U or letter grades. Staff.

CRP 8950 Master's Thesis in Preservation Planning

Fall or spring. 6 credits, variable. Staff.

CRP 9920 Doctoral Dissertation

Fall or spring. 12 credits, variable. Staff.

Special Topic Courses

Fall or spring. Variable credit. Staff.
Typical topics are:

CRP 6090 Urban and Regional Theory**CRP 6190 Planning Theory and Politics****CRP 6290 Quantitative Methods and Analysis****CRP 6390 Regional Development Planning****CRP 6490 Social-Policy Planning****CRP 6590 Urban Development Planning****CRP 6690 History and Preservation****CRP 6790 Planning and Developing Regions****CRP 6890 Environmental Planning****CRP 6990 Regional Science****CRP 7190 Planning Theory and Politics****LANDSCAPE ARCHITECTURE**

Landscape Architecture at Cornell is jointly sponsored by the College of Agriculture and Life Sciences and the College of Architecture, Art, and Planning.

The Program

Program faculty: P. J. Trowbridge, chair (443 Kennedy Hall, 255-2738); S. Baugher, K. L. Gleason, A. Hammer, P. Horrigan, D. W. Krall, L. J. Mirin, A. Okisbo, D. Ruggeri.

Landscape Architecture offers a three-year master of landscape architecture license qualifying degree, administered through the Graduate School, for those who have a four-year undergraduate degree in another field. The major is composed of several parts: core courses related to professional education in landscape architecture; a concentration in a subject related to the core courses; and free electives. Requirements of the three-year M.L.A. curriculum include 90 credits, six resident units, satisfactory completion of the core curriculum courses, and a thesis or a capstone studio.

The department also offers a two-year master of landscape architecture advanced degree program, administered through the Graduate School, for those with accredited degrees in landscape architecture or architecture. The two-year program entails core courses in the discipline and the development of concentrations in subject-matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects.

Dual-Degree Options

Graduate students can earn a master of landscape architecture and a master of science (horticulture) or a master of city and regional planning simultaneously. Students need to be accepted into both fields of study to engage in a dual-degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Course Information

Note: Landscape Architecture courses are offered through the College of Agriculture and Life Sciences except LANAR 4970, 5240, and 5250. For complete course offerings, see Landscape Architecture course listings on pages 110-113 of this catalog.

LANAR 4970 Individual Study in Landscape Architecture

Spring. 1-5 credits; may be repeated for credit. S-U or letter grades. L. J. Mirin.
Work on special topics by individuals or small groups.

LANAR 5240 History of European Landscape Architecture

Fall. 3 credits. L. Mirin.

Survey from classical times to the present, emphasizing design principles and techniques that have established the landscape architecture tradition in Europe. Particular reference is made to the manner in which gardens, streets, plazas, parks, and new towns reflect in their built form, a range of responses to demands of culture, economics, technology, security, the law, and ecology.

LANAR 5250 History of American Landscape Architecture

Spring. 3 credits. L. Mirin.
Landscape architecture in the United States from Jefferson to the present is examined as a unique expression of the American experience. Influences exerted by the physical landscape, the frontier and utopian spirit, and the cultural assumptions of democracy and capitalism are traced as they affect the forms of urban parks, private and corporate estates, public housing, transportation planning, national parks, and other open-space designs.

FACULTY ROSTER

Ashkin, Michael, M.F.A., The School of the Art Inst. of Chicago. Asst. Prof., Art
Azis, Iwan, Ph.D., Cornell U. Visiting Prof., City and Regional Planning.
Baugher, Sherene, Ph.D., SUNY, Stony Brook. Visiting Prof., City and Regional Planning
Benería, Lourdes, Ph.D., Columbia U. Prof., City and Regional Planning

DEPARTMENT OF ATHLETICS AND PHYSICAL EDUCATION

ADMINISTRATION

Alan E. Gantert, director

COURSES

The courses and fees described in this catalog are subject to change or cancellation at any time by official action of Cornell University. For current fee information on physical education courses, call 255-4286; for outdoor education courses, call 255-6183 or visit www.coe.cornell.edu.

Enrollment in any course is limited by the space available. Other restrictions are included in the course description. Most courses are coeducational. The specific time and place of class meetings, as well as information about fees, are available at the physical education course registration or may be found on "Bear Access," a package of software for accessing a variety of network services at Cornell. Course fees are billed through the Office of the Bursar.

Additional course offerings may be listed at registration, as the curriculum is frequently reviewed and changed. Drop deadlines for outdoor education courses are earlier than university deadlines, and often earlier than physical education deadlines. Cornell Outdoor Education (COE) courses may be added any time by calling 255-6183, or registering at www.coe.cornell.edu.

Aquatic Courses

PE 1100 Swimming, Beginning

Fall, spring, and summer (six weeks). Instruction and practice in skills leading to passing the basic swimming proficiency test.

PE 1101 Swimming, Advanced Beginning

Spring. Ideal for all who have taken one semester of Beginning Swimming, regardless of whether the test was successfully completed. Areas of special emphasis are the crawl stroke and rotary breathing, back crawl, elementary backstroke, diving, treading water, and underwater swimming. The primary objective is to strengthen the student's confidence and competence.

PE 1102 Swimming, Intermediate

Fall and spring. Practice of basic skills and five basic strokes: front crawl, back crawl, elementary backstroke, breaststroke, sidestroke.

PE 1103 Swimming, Advanced

Fall and spring. Practice of nine strokes: front crawl, back crawl, elementary backstroke, breaststroke, inverted breaststroke, sidestroke, overarm sidestroke, trudgeon, and butterfly.

PE 1104 Swimming Conditioning

Fall and spring. Prerequisite: reasonable swimming ability. Introduction to, and practice of, different training methods. Final objective: to swim 2,500 yards during class period. Primarily a conditioning and not an instructional course.

PE 1105 Springboard Diving

Fall and spring. Introduction on the safe and effective use of a diving board to and practice of the five basic dives: forward dive, back dive, inward dive, reverse dive, and 1/2 twist dive.

PE 1110 Lifeguard Training

Fall and spring. Fee charged. Prerequisite: swimming test consisting of 500 yards, demonstrating three strokes, treading water without the use of hands, and retrieving a brick from 7 feet of water. Three classes per week.

American Red Cross certification course. Practice and execution of lifeguarding first aid and CPR skills and techniques. Certification is awarded in lifeguarding, first aid, O₂, AED, and CPR upon satisfactory completion of the course.

PE 1111 Lifeguard Training Instructor

Spring. Fee charged. Prerequisites: current Red Cross ICT or instructor card, written and skill tests in lifeguarding, first aid, and CPR techniques. Students must not miss first class. 2 classes a week.

American Red Cross lifeguarding instructor and CPR-FPR certifications are awarded upon successful completion.

PE 1120 Water Safety Instructor

Spring. Fee charged. Prerequisite: passing of written and skill water tests given on first day. American Red Cross water safety instructor certification is awarded upon satisfactory completion of the course. This is not a course for a casual participant. Approximately 45 hours of work is required.

PE 1130 Scuba, Open-Water

Fall, spring, and summer (six weeks). Fee charged. Program includes classroom work, skill training in a pool, and open-water training in Cayuga Lake. P.A.D.I. open-water certification awarded upon successful completion.

PE 1131 Scuba, Advanced Open-Water

Fall and spring. For those who have completed open-water course. Fee charged. Advanced-level open-water training in Cayuga Lake.

PE 1132 Rescue Diver

Fall and spring. For those who have completed Advanced Open-Water Scuba certification. Fee charged. Advanced course for scuba divers interested in learning rescue and safety techniques.

PE 1133 Dive Master

Fall and spring. Open only to those who have completed Rescue Diver course. Fee charged. Advanced-level scuba course. Note: This is a long, time-consuming course, which requires the student to be in good physical and swimming shape.

PE 1134 Scuba Diving Trips

Spring, offered during spring intersession period. Fee charged.

Scuba trips to various destinations such as the Bahamas. Locations change from year to year. See the information sheet at the registration table.

PE 1135 Specialty Scuba Diving

Fall and spring. Fee charged. Courses offered in the following specialty diving areas: navigation, search and recovery, night diving, deep diving, underwater photography, wreck, multi-level, boat, tropical fish identification and buoyancy control, and underwater naturalist.

Bowling Courses

PE 1300 Bowling

Fall and spring. Fee includes shoe rental. For the beginning and intermediate bowler.

PE 1301 Intermediate Bowling

Fall and spring. Fee charged. For players with previous bowling experience (e.g., bowling classes, YABA, tournament). Skills emphasized are timing, balance, and release.

Dance Courses

Develop flexibility, coordination, and the ability to perceive and reproduce phrases of dance movement with rhythmic accuracy, clarity of body design, and fullness of feeling. Auditions are required for admission to all advanced courses, since they require the mental and physical ability to perform more complex phrases in various styles.

PE 1150 Ballroom Dancing

Fall, spring, and summer. Fee charged. Students and their partners must sign up at course registration. Includes instruction in the waltz, swing, cha cha, calypso, tango, and others.

PE 1151 Intensive Ballroom Dance

Fall and spring. Fee charged. Ballroom Intensive class examines three social dance styles in depth each semester. The course is geared to students who enjoy a challenge, and who are seeking more depth and breadth than offered in a survey course. No dance experience is necessary to enroll; the basics are covered each semester.

PE 1155 Belly Dancing I

Fall and spring. Fee charged. Belly dancing is an exciting Middle Eastern folk art that can help in the development of flexibility, body awareness, and overall body tone. The class begins with warm-ups and continues with basic movements and rhythms, then puts them together in a dance to music of the Middle East.

PE 1156 Belly Dancing II

Spring. Fee charged.

Advanced belly dance movements and combinations that include putting basic and advanced movements to the Beledi, Masmouodi, and Karsilma dance rhythms of the Middle East. A drum solo, taqsim (fluid, graceful movements of the arms and hands), floor work (level changes with the dance), and techniques in playing finger cymbals are also a part of this class.

PE 1160 Latin Dance

Fall and spring. Fee charged. Partner sign-in required. This is an introductory course that teaches salsa, mambo, Latin, and meringue. Emphasis on listening, feeling, and expressing Latin rhythms with precise detail and technique.

PE 1161 Latin-Israeli Dance

Fall and spring. Covers some of the hundreds of dances that make up Latin-Israeli dancing and the thousands of dances that make up Israeli dancing, with a clear emphasis on the dances of the past 10 years.

PE 1162 Intermediate Salsa and Rueda de Casino Dance

Fall and spring. Prerequisite: Latin Dance or permission of instructor. The first half of the course will concentrate on more complex open step patterns and partnered and non-partnered combinations. The second will transition into a "Dancing Wheel."

PE 1165 International Ethnic Dance

Fall and spring. This class covers the popular traditional dances from around the world, including line, circle, partner and individual forms. Now is your chance to move to the exotic beats from the Balkans and Near East, whirl to Scandinavian tunes, sway with sultry Latin American sounds, swing to historic and contemporary American folk rhythms, and much more. No experience or partner necessary.

PE 1166 Spanish Folk Dance

Fall and spring. The Sevillanas is danced in pairs—man and woman or two women. It is a popular dance mainly at fairs and festivals and it is the dance usually taught first when learning the Flamenco.

PE 1167 Introduction to Tango

Fall and spring. Introduction to the fundamentals of Tango dancing and its origins. Focus is on movement on the dance floor and how to be connected to your partner. Other aspects include learning to differentiate between the genres of Tango music (Tango, Milonga, Candombe, and Vals).

PE 1170 Introduction to Swing Dance

Fall and spring. Fee charged. No partners are needed. Beginners can expect to develop significant capacity for enjoyment of two forms of swing dance: jitterbug and street boogie. Partners are rotated throughout the course. Effort are made at registration to equalize male and female ratios.

PE 1171 Swing Dance II

Fall and spring. Fee charged. For those who have taken the introductory course.

PE 1172 Swing Dance III

Spring. Fee charged. A solid Lindy Hop I & II sequence in the tradition of Frankie Manning and Steven Mitchell (includes Intermediate Charleston, Jazz, and Fast Lindy). Dancing more deeply into the music, styling for leaders and followers, improvisation skills. Partner recommended, but not necessary.

PE 1180 Dance Technique I (also THETR 1240)

Fall and spring.

PE 1181 Exploration in Movement and Performance (also DANCE 2410)

Fall and spring.

PE 1182 Dance Technique II (Classical) (also DANCE 2210)

Fall and spring.

PE 1183 Dance Technique II (Modern) (also DANCE 2220)

Fall and spring.

PE 1184 Dance Technique III (Classical) (also DANCE 2310)

Fall and spring.

PE 1185 Dance Technique III (Modern) (also DANCE 2320)

Fall and spring.

PE 1186 Dance Technique IV (Classical) (also DANCE 2410)

Fall and spring.

PE 1187 Dance Technique IV (Modern) (also DANCE 2420)

Fall and spring.

PE 1188 Dance Technique Workshop (also DANCE 2240)

Fall and spring.

PE 1189 Hip Hop Hollywood (also DANCE 2430)

Fall and spring.

PE 1190 Indian Dance (also DANCE 1320)

Fall and spring.

First Aid/CPR Courses**PE 1202 Certified First Responder**

Fall. Fee charged. CFR is an intensive 52-hour course that requires studying and examinations. Course includes training in basic patient assessment, CPR for the Professional Rescuer, and automatic external defibrillation, oxygen administration, basic airway management, bleeding control, and spinal immobilization. Students will qualify for the New York State CFR Certification Exam upon successful completion of the course.

PE 1203 NYS EMT Refresher

Spring. Fee charged. EMT-B refresher is an intensive course that will renew your certification upon successful completion of all NYS DOH requirements. Students will have the opportunity to challenge the NYS Practical Skills Examination and the course written examination at the beginning of the class. All students must pass a CPR for the Professional Rescuer course within the class. To complete the class and renew certification, students must also pass the NYS Practical Skills Examination and the NYS written examination.

PE 1210 NYS Emergency Medical Technician—Basic

Two-semester course. Fee charged. Intensive 130-hour course taught throughout both the fall and spring semesters. Includes training in CPR for the Professional Rescuer, oxygen administration, airway management, fracture management, bleeding control, expanded patient assessment, spinal immobilization, medical anti-shock trousers, and defibrillation. Students qualify for the NYS EMT Certification Exam upon successful completion of this course. Rigid attendance and participation requirements are strictly enforced.

PE 1211 NYS Emergency Medical Technician—Critical Care

Two-semester course. Prerequisite: current certification as NYS EMT. Fee charged. Intensive 160-hour course taught throughout both fall and spring semesters. Includes training in CPR for the Professional Rescuer, oxygen administration, airway management, fracture management, bleeding control, expanded patient assessment, spinal immobilization, medical anti-shock trousers, manual defibrillation, EKG interpretation, pharmacology, and IV administration. Clinical rotations, in the field and hospital, are also required. Students qualify for the New York State AEMT-CRITICAL CARE certification exam upon successful completion of the course. Attendance and participation requirements are strictly enforced.

Fishing Courses**PE 1310 Introduction to Freshwater Angling**

Fall. Fee charged. Acquaints the student with freshwater spinning, casting, and fly fishing equipment; tackle; and techniques through on-the-water experiences. It also seeks to promote an awareness of the angling opportunities that exist close to Cornell and in the Finger Lakes region of New York. The course consists of an orientation and outings to various locations around the area such as Cayuga Lake and the Susquehanna River.

PE 1311 Fly Fishing and Basic Fly-Tying Techniques

Fall and spring. Fee charged. Learn the art of tying several of your own artificial flies while you learn the art of fly casting. Students must have a valid NYS fishing license and their own wader boots. All other materials provided.

Fitness Courses**PE 1230 Cardio Combo**

Fall, spring, and summer (six weeks). Fee charged. Dance program designed to keep the cardiovascular system in top shape by making the body demand increased amounts of oxygen.

PE 1231 Aerobic Instructor

Fall. Fee charged. Helps prepare the student to teach aerobics and prepares them for the AFAA Primary Aerobic Instructor or Step Certification. Topics include the theory behind all basic components of a good class, applications, and practical uses in the class settings.

PE 1232 Aerobic Instructor Apprentice

Spring. Fee charged. Prerequisite: Aerobic Instructor course.

This class is a necessary component to finishing the Aerobic Instructor certification.

PE 1233 Bootcamp

Fall and spring. Fee charged. Designed as a modern military-style workout program with an emphasis on both aerobic and anaerobic fitness.

PE 1235 8 O'Clock Rock

Fall and spring. Fee charged. Combines the best of the principles of weight training and cardio training.

PE 1240 Pilates Mat Work

Fall and spring. Fee charged. Conditioning program designed to increase body awareness, improve alignment and breathing, and build endurance, flexibility, coordination, and strength through a highly focused flow of movement.

PE 1245 Spinning

Fall and spring. Fee charged. Indoor stationary cycling class that combines basic cycling movements with motivational coaching, breathing awareness, and heart rate training.

PE 1260 Cardio Kickboxing

Fall and spring. Fee charged. Cardio kickboxing is a series of movements that consists of kicks, punches, and blocks done to music. It is similar to a typical aerobics class except the moves consist of martial arts techniques.

PE 1261 Fitness and Conditioning

Fall and spring. Physical fitness program that embodies features of stretching exercises, weight lifting, and jogging. Students work on their individual training needs.

PE 1262 Fitness for Women

Fall and spring. Includes both lecture and physical activity. Students are presented with a variety of topics and information that involves physical fitness and health. Each student will learn to design a fitness program that is geared toward her own interests and abilities. Topics include: nutrition, time management, relaxation techniques, and stress management. Activities will include aerobic dance, walking, jogging, weight training, flexibility exercises, relaxation and stress management routines, and yoga techniques.

PE 1265 Wellness and Fitness

Fall and spring. Fee charged. "Here's to a Healthier You"—a wellness experience for the busy student. This course assesses the student's physical fitness status, blood-cholesterol levels, and overall lifestyle health habits. Each student receives an individual exercise prescription and has access to the Wellness Program fitness room in Helen Newman Hall. Lectures on nutrition and stress management are also presented. This course has been made possible through the generosity of the Bateman family in memory of Ms. Dorothy Bateman, Cornell's first director of women's sports and physical education (1920 to 1962).

PE 1270 Jogging

Fall and spring. Covers running and stretching techniques. It comprises a conditioning program with the objective to develop the capacity to run 3 miles after 12 weeks of training.

PE 1271 Jogging Tours—Distance Running

Fall. Designed for the intermediate runner who can run an average of 3 miles in 30 minutes. Most tours are 3–4 miles long and go through campus and nearby countryside.

PE 1272 Walking Tours

Fall and spring. A series of walking tours around the Cornell campus and beyond.

PE 1273 Walking Meditation

Fall and spring. This course combines walking and meditation, two life enhancing activities that can help students create balance in their hectic lives. Walking is the optimum exercise for optimum health and meditation one the chance to calm an active and busy mind.

PE 1275 Triathlon

Fall and spring. Designed to acquaint students with the components of, and conditioning for, triathlon (running, swimming, and bicycling).

Equitation Courses**PE 1305 Basic, Intermediate, Advanced**

Fall, spring, and summer (six weeks). Fee charged. All riding classes are held at the Cornell Equestrian Center located on Pine Tree Road near East Hill Plaza. Detailed information will be offered by the equitation staff at the registration sign-up table. Basic—never ridden; Intermediate I—completed basic with knowledge of walk/trot/canter; Intermediate II—walk/trot/canter with control over two-foot-high jumping course; Advanced—strong jumping/dressage skills with experience hunting/showing/eventing. Students must fill out a release form to participate in any riding class.

Golf Courses**PE 1320 Golf, Instructional**

Fall and spring. Fee charged. Equipment furnished.

PGA program of instruction geared to all levels of experience and ability. The objective is to give beginners enough skill to play, and to give more advanced players direction in their thinking, practice, and play, through a thorough understanding of fundamentals.

PE 1321 Golf, Recreational

Fall and spring. Prerequisite: experienced golfers. Fee covers a semester's membership. Students must provide clubs. Students must play a minimum of 10 rounds of nine holes to receive credit.

Gymnastics Courses**PE 1290 Introduction to Gymnastics**

Fall and spring. Open to both male and female participants. Deals with a majority of the Olympic events. Focuses on beginner-level skills.

Ice Skating Courses**PE 1540 Introduction to Skating**

Fall and spring. For beginning to intermediate skaters. Fee charged; students provide skates or rent them at Lynah Rink. Covers forward and backward skating, turns, and stops.

PE 1545-1547 Figure Skating, Beginning, Intermediate, and Advanced Levels

Fall and spring. Fee charged; students provide skates or rent them at Lynah Rink. Instruction and practice in basic figure-skating techniques: forward, backward, crossovers, turns, and spirals.

Martial Arts—Self-Defense Courses**PE 1345-1346 Boxing, Introduction to, Intermediate**

Fall and spring. Fee charged. Covers the basic skills of footwork, defensive, and offensive techniques. Skipping rope, shadow boxing, and heavy bag work are taught as methods for individual aerobic conditioning.

PE 1350 Chi Gong

Fall and spring. Chi Gong, or "the art of breathing," is an ancient Taoist exercise system from China. Like Tai Chi, Chi Gong is an internal martial art that links movement, breathing, and visualization to enhance physical strength and mental clarity. In ancient times, this gentle system was used by warriors preparing for battle. They believed it would make their bodies impervious to weapons of the day. The movements used in Chi Gong are generally less complex than those of Tai Chi and can be learned more quickly. Meditation is an important element of the practice.

PE 1355 Judo, Introduction to

Fall and spring. Fee charged. Conditions and increases suppleness. Continues to develop skills in the two parts of judo: standing techniques (throws and trips) and mat techniques.

PE 1356 Judo, Intermediate

Fall and spring. Fee charged. Conditions and increases suppleness. Continues to develop skills in the two parts of judo: standing techniques (throws and trips) and mat techniques.

PE 1360 Jeet Kune Do/MMA

Fall and spring. Fee charged. Blended system of martial arts. Developed by the late Bruce Lee and taught to his personal apprentice at the time, Dan Inosanto, Jun Fan Gung Fu is the foundation from which Jeet Kune Do eventually evolved. The system emphasizes footwork and agility, economy of motion, counter ability, and strong practical self-defense. This realistic, modern training approach cultivates strong physical, mental, and emotional development in the student.

PE 1365 Karate, Introduction to

Fall and spring. Fee charged. Beginning course taught by professional black-belt instructors. Involves mastery of basic blocks, kicks, and punches.

PE 1366 Karate, Advanced

Fall and spring. Fee charged. Open to those who have taken basic karate or the equivalent.

PE 1370 Kung Fu

Fall and spring. Fee charged. Explores conditioning and fitness procedures used in the major martial arts, such as karate or judo. Covers circular movement for generating strong blocks, kicks, and punches.

PE 1375 Tae Kwon Do, Introduction to

Fall and spring. Fee charged. Korean martial art distinguished by emphasis on high and powerful kicks. Basic kicking, punching, and blocking emphasized.

PE 1376 Tae Kwon Do, Intermediate

Fall and spring. Fee charged. Korean martial art distinguished by its emphasis on high and powerful kicks. Intermediate-level kicking, punching, and blocking are emphasized.

PE 1380-1381 T'ai Chi Chuan, Introduction to, and Intermediate

Fall and spring. Fee charged. Introduction to T'ai Chi, a system of graceful exercises that aims at nurturing relaxation, deep breathing, and improved circulation.

PE 1385 Thai Boxing

Fall and spring. Fee charged. Martial art system developed from the unique culture of Thailand that is a blend of art, science, and sport.

PE 1390 Self-Defense and Empowerment for Women

Fall and spring. Fee charged. Basic methods of physical protection for women.

PE 1395 Self-Defense and Personal Safety in the Modern World

Fall and spring. Fee charged. Provides students an opportunity to learn a system of practical, proven self-defense techniques and educates the individual in the strategies of personal safety and awareness.

PE 1396 Filipino Kali

Fall and spring. Fee charged. A method of increasing your coordination and fitness, keeping both your mind and your body sharp! Kali/Escrima addresses empty hand and kicking, grappling, and tools of the jungle warrior.

PE 1525 Fencing, Classical

Fall and spring. Fee charged. Martial art that uses the practice of the sword to cultivate self-mastery.

PE 1526 Renaissance Fencing

Fall and spring. Prerequisite: Introduction to Fencing or permission of instructor. Fee charged.

Focuses on the fundamental techniques of 16th- to 17th-century fencing with an emphasis on safety, balance, line, focus, and distance.

PE 1527 Olympic Fencing

Fall and spring. Fee charged. Equipment furnished. Includes warm-up exercises and offensive and defensive moves.

PE 1528 Olympic Fencing II

Spring. Prerequisite: Olympic Fencing or equivalent. Fee charged. Equipment furnished.

Interclass competition is stressed.

PE 1529 Epee de Guerre

Fall and spring. Fee charged. This course focuses on "the most noble weapon" of the Ideal Knight: the "epee de guerre" ("sword of war") also sometimes

called the longsword, the bastard sword, or, most accurately, "the-hand-and-a-half sword" because the weapon was designed to be wielded with equal effectiveness either with one hand or two. Since the practice of the longsword is inextricably linked with the ideals and tenets of chivalry, this beginning level course may include philosophical discussion and reflection as well as techniques, tactics, and strategy.

Outdoor Education Program

For further information, class schedules, or to register at any time, call 255-6183 or visit www.coe.cornell.edu.

Climbing Courses**PE 1640 Basic Rock Climbing**

Fall, spring, and summer. Fee charged. Six or 10 indoor climbing sessions at the Lindseth Climbing Wall.

PE 1642 Women's Basic Rock Climbing

Fall, spring. Fee charged. Six indoor climbing sessions at the Lindseth Climbing Wall taught by and for women.

PE 1643 High Adventure

Fall, spring. Fee charged. Six sessions combining rappelling, rope traverses, tree climbing, and a 400-foot zipline.

PE 1644 Basic Outdoor Rock Climbing

Fall. Fee charged. Includes fall break trip. Two indoor classes and a four-day climbing trip to the Shawangunks introduce basic safety, techniques, equipment, and methods for outdoor rock climbing.

PE 1645 Basic Rock Climbing for 24 and Over

Fall. Fee charged. Noncredit course. Four indoor climbing sessions at the Lindseth Climbing Wall for people age 24 and older.

PE 1646 Wellness Rock Climbing

Fall. Fee charged. Noncredit course. Nine one-hour climbing sessions at the Lindseth Climbing Wall for Wellness Program members only.

PE 1650 Performance Rock Climbing

Fall, spring. Fee charged. Six indoor sessions at the Lindseth Climbing Wall that introduce and practice more advanced climbing techniques.

PE 1651 Introduction to Outdoor Rock Climbing

Fall, spring. Fee charged. One class and a weekend trip to the Shawangunks will introduce you to outdoor climbing and top rope anchor building.

PE 1652 Shawangunks Rock Climbing

Fall. Fee charged. Includes fall-break or senior-week trip. Two indoor classes and a four-day advanced climbing camp at the Shawangunks introduce advanced climbing techniques and systems for outdoor multi-pitch rock climbing.

PE 1653 Intro to Traditional Lead Climbing

Spring. Fee charged. Enjoy world-class rock climbing at one of the premier areas in the United States, the Shawangunks. We will travel to the 'Gunks for a three-day rock camp that will teach you the skills to do multi-pitch climbs.

PE 1654 Ice Climbing

Spring. Fee charged. Basic top-rope ice climbing instruction.

PE 1657 Tree Climbing

Fall, spring. Fee charged. All equipment is included in course fee. No experience necessary.

Whether you are a rain forest canopy researcher, an arborist, or just a kid at heart, everyone loves to climb trees. Recall the excitement and your sense of adventure when you first crawled into the branches to look inside a bird's nest. Then you swung from limb to limb without a thought of ropes and harnesses. But what about that big tree down the street you always wanted to climb, but couldn't reach the first branch? Cornell Outdoor Education's Tree Climbing course will teach you how to get up into the canopy of any tree, to move around, even to climb from one tree to another without touching the ground.

PE 1658 Costa Rica Tree Climbing

Fall with winter break trip. Fee charged. Spend ten days in Costa Rica, traveling to the Rio Guabo valley to explore the canopy of a lowland tropical rainforest. Learn how to use ropes and technical gear to get into the canopy of any tree, to move around, and to climb from one tree to another, 100 feet in the air, without coming back to the ground. Learn some local ecology and experience the culture of a Spanish-speaking rural community. A desire for experiencing a new culture is a must. All equipment is included in the course fee. No climbing experience necessary. Students must provide their own transportation to and from San Jose, Costa Rica.

Backpacking Courses**PE 1610 Backpacking in the Finger Lakes**

Fall, spring. Free with 100 percent attendance, otherwise fee charged. Escape from campus on day outings and weekend trips to explore the glens, forests, waterfalls, vistas, and trails in the local area. This fantastic introduction to backpacking skills covers basic outdoor living skills, including hiking, navigation, camping, equipment selection and use, back-country cooking, and safety. No experience necessary. Fee charged for personal rental equipment.

PE 1611 Backpacking in the Finger Lakes—Fall Break

Fall. Fee charged. Includes fall break trip. Travel to the heart of the Finger Lakes to learn and practice the skills of outdoor leadership and education. This is an introductory leadership course, focusing on wilderness skills, minimum impact travel, communication, judgement, and decision-making.

PE 1612 Southwest Backpacking

Spring. Fee charged. Includes spring break trip. Spend spring break exploring the wide open spaces of the Southwest. Destination changes year to year. Trip heads to either Utah's stunning and remote Escalante Canyon country or Arizona's Sonoran Desert wilderness of the Superstition Mountains. Visit www.coe.cornell.edu for trip destination and full details.

PE 1613 Wilderness Survival Skills

Fall. Fee charged.

Hands-on course covers principles of survival, shelter building, navigation, fire starting, and water procurement as well as nature observation skills and local natural history. Evening and weekend outings.

PE 1615 Trekking in Peru

TBA. Fee charged.

Come to Peru to hike through worlds highest mountains outside of Asia. Pristine high alpine lakes, spring wildflowers, and white glaciers dominate this rugged Andean landscape. The Santa Cruz Trek takes us 50 km beside turquoise glacial lakes and over high mountain passes.

PE 1616 Introduction to Winter Camping

Spring. Fee charged. Prerequisite: some backpacking experience; permission of instructor.

Learn the fundamentals of winter travel and camping. Course covers trip planning, equipment selection, snowshoe travel, snow shelter construction, and winter safety.

PE 1617 Surfing in San Diego

Spring. Fee charged.

Whether students are catching a wave or spotting dolphins, this class is sure to excite! Students will spend their nights overlooking the ocean from their cliffside campsite and their days catching a wave. Participants will learn the basics of how to surf, ocean safety, and basic outdoor living skills.

Biking Courses**PE 1664 Mountain Biking**

Fall, spring. Fee charged. Participants provide own mountain bike.

Explore local bike trails and develop off-road riding skills. Course covers essential cycling skills for riding single track, managing steep terrain, and negotiating obstacles, as well as bike repair, riding etiquette, navigation, and outdoor safety.

Canoeing Courses**PE 1670 Adirondack Canoe Camping**

Fall. Fee charged. Includes fall-break trip.

Learn basic canoeing and wilderness camping skills. Experience the blazing Adirondack autumn foliage as this fall-break trip explores lakes and rivers of upstate New York.

PE 1671 Recreational Canoeing

Fall. Fee charged.

Spend afternoons on Beebe Lake learning the art of canoeing. Class culminates in a trip exploring Dryden Lake applying your new-found skills. Course covers equipment, basic paddling techniques, deep water rescues, and considerations for day trips.

PE 1672 River Canoeing

Spring. No prerequisites. Fee charged.

Explore local rivers by canoe. Learn skills to safely navigate quick-moving currents and class I to easy class II water. Course covers strokes, braces, eddy turns, peel outs, ferrying, river dynamics, self-rescue, and river safety. Culminates with a weekend river trip.

Caving Courses**PE 1630 Caving**

Fall, spring. Fee charged.

Learn about the basic safety, techniques, and equipment for caving, finishing with a weekend caving trip.

Hiking Courses**PE 1602 Outdoors 101**

Spring. Fee charged.

From the gorges of Ithaca, to the lakes of Cornell, this course will give you a taste of it all. This multi-activity class is aimed at the beginner who would like a taste of many different outdoor pursuits. The class will provide an introduction to day hiking, indoor rock climbing, canoeing, and camping.

PE 1603 Snowshoeing and Winter Travel

Spring. Fee charged.

Outings in the local state forests build skills and confidence in the winter. Learn winter safety; snowshoe history; equipment selection, care, and use; navigation; and natural history—all while enjoying a great workout.

PE 1604 Snowshoeing and Winter Travel, for 24 and Over

Spring. Noncredit course. Fee charged.

Learn basic winter travel and snowshoe skills while exploring some local winter hiking destinations.

PE 1605 Day Hiking

Fall, spring. Fee charged.

Hike and explore Ithaca's spectacular gorges, state forests, and extensive trail system. Course covers planning and packing for a hike, dressing for the outdoors, map reading, outdoor safety, navigation, and natural history of the area.

PE 1606 Outdoor Birding Basics

Spring. Fee charged (fee waived upon successful completion of course and if needed for PE credit requirement).

Learn to identify and understand the behaviors of the birds in our area. This course is offered as a collaboration of COE and the Lab of Ornithology. Sibley's guide to Eastern Birds is included in the course fee, and optics will be available to use during each outing.

PE 1607 Back-Country Photography

Fall, spring. Fee charged. Includes fall break trip. Must have own camera.

Take your photography skills way beyond snapshots in "auto" mode? This fun introduction to camping and outdoor photography includes two pre-trip classes on the basics of photography. Spend Fall Break in the Adirondack wilderness, taking in the beautiful autumn colors. Plan to bring home images as awesome as the trip itself.

PE 1608 Trail Running

Fall, spring. Fee charged.

Covers stretching, basic trail-running techniques, navigation, injury prevention, training tips, and a scenic tour of local trails. Develop a training routine, learn to stay found, set running goals. Prerequisite: ability to jog two consecutive miles easily.

PE 1609 Trail Maintenance

Fall. Fee charged.

Widen your awareness and appreciation of our gorgeous local backcountry and its network of public trails. Come swing a pulaski and give something back as you learn and implement basic trail construction skills, as well as enjoy leisurely hikes. Possible projects include designing and creating a new trail; switchback construction; building bridges, waterbars and steps, erosion control, and clearing overgrown trails.

Kayaking Courses**PE 1674 Sea Kayak Touring**

Fall, spring. Fee charged.

Learn basic sea kayaking skills and enjoy a weekend trip to the Adirondacks. Course covers equipment, safety, paddling techniques, rescues, trip planning, navigation, considerations for overnight trips, and camping and travel skills.

PE 1680 Pool Paddling

Fall, spring. Free if taken for credit and successful completion of course; otherwise fee charged.

Learn a broad range of kayaking skills in the warm comfort and calm waters of the pool. Course introduces whitewater kayaks, canoes, and sea kayaks, while covering strokes, leans, braces, effective boat-handling skills, kayak Eskimo rolls, and rescues. Pool games, slalom gate courses, and video taping are used to hone an understanding of skills and refine techniques.

PE 1681 Whitewater Kayaking

Fall, spring. Prerequisite: ability to swim with comfort in deep water without a flotation aid. Fee charged.

Basic kayaking techniques and equipment use, culminating in a full weekend of whitewater paddling. Pool sessions and local outings develop skills to read water, scout, ferry, brace, power stroke, and execute eddy turns, peel outs, and Eskimo rolls.

PE 1682 Intermediate Whitewater Kayaking

Spring. Prerequisites: graduate of a COE whitewater kayak class or equivalent experience, comfortable swimming and self-rescuing in class II water and permission of instructor.

Designed for paddlers with some whitewater experience who are motivated to work on perfecting basic skills as well as developing more advanced techniques. Pool sessions to review the fundamentals. Learn more advanced paddling techniques and concepts, and develop skills by paddling increasingly challenging whitewater (up to class II+) during two day trips.

PE 1683 1,000 Islands Sea Kayaking

Fall. Fee charged. Includes fall break trip. International travel documentation to Canada required.

Learn fundamental sea kayak touring skills in the Thousand Islands region of the St. Lawrence River. Course covers equipment, safety, paddling techniques, rescues, trip planning, navigation, considerations for overnight trips, camping, cooking, and travel skills.

PE 1684 Cayuga Lake Dragon Boating

Fall. Fee charged.

Get in shape, stay in shape! Get out on the lake without buying your own boat. Paddle with twenty other people in a 40 foot wooden boat with a dragon head and tail! Romance, adventure, and fresh air!

PE 1685 Kayak Rolling Seminar

Fall, spring. Noncredit course. Fee charged. Learn kayak rolling techniques in two evening sessions. Classes take place at the Helen Newman pool.

PE 1686 Introduction to Sea Kayaking Seminar

Fall, spring. Fee charged. Noncredit course. Class covers equipment, basic paddling techniques, deep water rescues, and considerations for day trips.

Outdoor Leadership**PE 1619 Introduction to Outdoor Leadership**

Fall. Fee charged.

Take advantage of fall break in the Finger Lakes region to learn and practice the skills of outdoor leadership and education. This is an introductory leadership course, focusing on wilderness skills, minimum impact travel, judgement, and teaching beginners. Ideal for those who aspire to be Outdoor Odyssey Guides, COE instructors, as well as anyone interested in being better prepared to lead friends in the outdoors.

PE 1618 Outdoor Leadership

Spring. Prerequisite: backpacking and camping experience; approval of program coordinator. Fee charged. Includes spring break trip.

Learn and practice the skills of outdoor leadership and education. Focus is on refining wilderness skills, outdoor judgment, group facilitation, decision making, and teaching skills. Course culminates in spring-break trip where participants plan and lead portions of the trip.

Emergency Care Courses**PE 1625 Wilderness First Aid**

Fall, spring. Fee charged.

Full weekend of wilderness first aid. Includes CPR certification.

PE 1626 Wilderness First Responder

Fall, spring. Offered over winter break and late May/early June. Fee charged.

Eight days of instruction and practical application of backcountry first aid. Participants earn nationally recognized CPR and Wilderness First Responder certifications. Taught by Wilderness Medical Associates.

[PE 1627 WFR Recertification

Spring. Fee charged.

This three-day (24 hour) course is a recertification course open to graduates of ALL wilderness medical training courses of 64 hours or longer with a current certification. Upon successful completion of this course you will receive Wilderness Medical Associates WFR, Anaphylaxis and BLS-level CPR certifications.]

[PE 1627 CPR for the Professional Rescuer

Fall, spring. Not for credit.

This American Red Cross class teaches students to respond to breathing and cardiac emergencies in adults, children, and infants; use an AED on an adult or child victim of cardiac arrest; and use personal protective equipment to stop blood-borne pathogens and other diseases from spreading. It is the required level of CPR to keep WFR certification current. Includes ARC certification.]

[PE 1628 CPR Recertification

Spring. Not for credit.

The CPR Challenge Class is set up to re-certify at the Professional Rescuer level. Prerequisite is recent CPR training. There is no formal review at the beginning of the class; however, the instructor will answer questions for at least

the first half hour before beginning testing. The assumption is that students come prepared to take the challenge, so it is crucial to have taken a recent CPR class, to check out the textbook from COE, and to review it carefully before class. This class fulfills requirements to keep WFR certification current. Includes American Red Cross certification.]

Skiing Courses**PE 1690 Cross-Country Skiing**

Spring. Fee charged.

Four sessions learning basic cross-country skiing skills and exploring local forests in winter.

PE 1693 Basic Telemark Skiing

Spring. Fee charged.

Four classes at Greek Peak ski area.

PE 1694 Backcountry Telemark Skiing

Spring. Fee charged.

A cross between downhill and cross country skiing, telemark involves a graceful free-heel turn that opens up alpine and steep terrain to lightweight backcountry touring gear. We will ski together locally before shifting to our primary classroom in the mountains

Personal Growth Courses**PE 1400 Body-Mind**

Fall and spring.

Activities are drawn from ancient Eastern practices as well as modern Western psychology, and are designed to give the student first-hand experience of the interaction between their own bodies and minds.

PE 1401 Well-Being in the Modern World

Fall and spring. Fee charged.

Teaches students to use the wisdom of the body, movement, and voice. Each class provides an opportunity to increase mindfulness of the present moment. By cultivating openness and respect, students provide the necessary foundation for working with others. Students practice processing and exploring spontaneous experiences of their own and others with precision, gentleness, and curiosity.

PE 1402 Moving into the Moment

Fall and spring. Meets twice a week.

We will focus on getting in touch with the power of our own life force. Each class will begin with movement and stretching and end with a meditation exercise designed to reinforce the power of one's own presence.

PE 1403 Art of Living—Youth Empowerment Seminar

Fall. Fee charged.

An innovative and dynamic life-skills program that empowers you with tools to eliminate stress, increase energy, handle negative emotions, increase mental focus, heighten awareness, and develop strong social and leadership skills.

PE 1405 Living Routines

Fall and spring.

Provides the opportunity to explore a variety of ancient and modern methods designed to bring one to the state of meditation.

PE 1410 Introduction to Massage

Fall, spring, and summer. Fee charged.

Provides an experiential introduction to several types of massage. Included are Swedish, shiatsu, polarity, and sports massage. Class members participate in group exercises

and practice on each other during class time. All exercises and techniques can be done while wearing street clothing.

PE 1411 Shiatsu Massage

Fall and spring. Fee charged.

Gain an experimental understanding of your body and learn certain shiatsu massage techniques.

PE 1412 Swedish Massage

Fall, spring, and summer. Fee charged.

Learn to give a relaxing, stress-reducing Swedish massage. Students master the basic strokes of Swedish massage and learn about their application to the different parts of the body. Students use oils and lotions as a part of their training.

PE 1413 Swedish Massage II

Fall and spring. Fee charged.

Students build on skills learned in Swedish massage as they participate in instruction practice sessions every week. Additional massage techniques and applications are added to basic skills. Some techniques from other types of massage are also introduced.

PE 1414 Thai Massage

Fall and spring. Fee charged.

Thai massage is a holistic, intuitive style of healing from the East. It encourages the flow of energy through the receiver's body that promotes good health. The person giving Thai massage uses his or her hands and feet supported by body weight to apply pressure along the energy channels that run through the receiver's body.

PE 1415 Weekend Massage Workshop

Fall and spring. Fee charged.

This introductory course in massage is taught in an intensive, weekend workshop format. It includes sessions on Friday evening and Saturday and Sunday during the day. Students are introduced to massage skills and techniques and then practice on each other in a structured and supervised format. Basics of touch awareness, palpation skills, and techniques from Swedish and oriental (shiatsu) massage are taught. Students learn to massage the back, shoulders, neck, legs, feet, arms, and hands to reduce stress. Professional massage tables are used.

PE 1420 Introduction to Meditation

Fall and spring. Fee charged.

Provides the opportunity to explore a variety of ancient and modern methods designed to bring one to the state of meditation. The methods serve to evoke the deep relaxation from which heightened awareness and creativity arise.

PE 1421 Relaxation and Stress Management

Fall and spring.

Introduction to basic relaxation techniques for the reduction of everyday stress. Teaches techniques that can be used in normal everyday living situations.

PE 1422 Meditation and Relaxation

Fall and spring. Fee charged.

Designed to assist students in learning to meditate, or to deepen an existing practice. As students learn to practice meditation and relaxation exercises, they find that as little as 15 minutes a day can benefit physical, mental, emotional, and spiritual health.

PE 1425 The Winning Mindset

Fall and spring. Fee charged. Contains a wealth of knowledge and experience to guide athletes of all levels and abilities to achieve outstanding levels of performance. Students learn the principles to help them achieve success, whether it be tapping inner strength or overcoming the obstacles that limit performance.

PE 1430 Yoga, Introduction to

Fall, spring, and summer (six weeks). Fee charged. Fundamentals of hatha yoga. Covers basic postures, breathing techniques, and deep relaxation. Introduces chanting.

PE 1431 Intermediate Yoga

Fall and spring. Prerequisite: previous yoga experience. Fee charged. The course covers more of the fundamentals of Hatha Yoga, including basic postures, breathing techniques, and deep relaxation and chanting techniques.

PE 1432 Extreme Yoga

Fall and spring. Prerequisite: membership on a team, participation in daily routine, or minimum of 40 hrs. of yoga practice in past 3 months. Fee charged. This class is designed for serious participation only. Advanced warm-up sets, handstands, shoulderstands, spinal twists, and more. You will experience briskly paced transitions from one posture to the next emphasizing form and alignment with attention to the hamstrings to prevent injury.

Racquet Sports Courses**PE 1440 Badminton, Introduction to**

Fall and spring. Helen Newman Hall. Fundamental shots, scoring, and general play.

PE 1441 Badminton, Intermediate

Fall and spring. Helen Newman Hall. Review of fundamental shots, scoring, and general play.

PE 1445 Tennis, Introduction to

Fall, spring, and summer. Fee charged. Basic skills taught include forehand, backhand, serve, and volley. Scoring methods taught.

PE 1446 Tennis, Intermediate

Fall, spring, and summer. Fee charged. Review basic strokes plus topspin and underspin. Doubles strategy emphasized.

PE 1447 Tennis, Advanced

Fall, spring. Fee charged. Advanced strokes and doubles play emphasized. Recommended for tournament players or those with previous team experience.

PE 1453 Tennis, Indoor-Recreational

Fall and spring. Fee charged. Prerequisite: high school or college tournament experience or a rating of 3.5 or higher from USTA. NO BLACK-SOLED SHOES ALLOWED ON COURTS!

Play is conducted at the new Reis Tennis Center. Matches are played in both doubles and singles. Equipment furnished.

PE 1460 Racquetball, Introduction to

Fall, spring, and summer. Fee charged; equipment furnished. Protective eyewear required. Instruction for beginners.

PE 1465-1466 Squash, Introduction to, Intermediate

Fall, spring, and summer. Fee charged. Equipment furnished. Protective eyewear required. Classes for appropriate level of play.

Sailing Courses**PE 1335 Water Skiing**

Fall and summer. Fee charged. Introductory course for beginning water skiers. Classes are conducted from East Shore Marina.

PE 1480 Small-Boat Sailing, Introduction to

Fall, spring, and summer (six weeks). Fee charged. Learn basic skills necessary to sail small sailboats and basic keelboats safely.

PE 1481 Small-Boat Sailing, Competitive

Fall and spring. Fee includes one-year membership in university sailing team program. Vanguard 420 sailboat used for the course. USYRA Rules Book used as a text for the course.

PE 1482 Introduction to Large-Boat Sailing

Fall. Fee charged. Students learn how to sail on 24- and 26-foot sailboats. Skills learned include sailing terminology, safety and etiquette, boat handling, sail trimming, use of spinnakers, and heavy wind selection and ship systems.

PE 1483 Recreational Sailing

Fall. Fee charged. A course for those who already know how to sail. Students may go to the sailing facility during the listed times and days and take boats out to sail when they are not being used for instructional sailing. Students must pass knowledge test before they are allowed to take boats out.

PE 1484 Large-Boat Competitive Sailing

Fall. Fee charged. Prerequisite: sailing experience. This course teaches the basic skills necessary to sail and crew large boats safely and competitively. Twenty-three- to twenty-six-foot sailboats will be used to teach this course. The USYRU rules book will be the text for the course.

Skiing and Snow Boarding**PE 1330, 1331 Downhill Skiing and Snowboarding**

Spring. Fee charged. Transportation, instruction, ski-lift fees, and skiing time are offered in a package deal. Greek Peak and Song Mountain personnel are present at registration to explain the program and accept fees. Bus transportation to Greek Peak is provided six afternoons a week for six weeks.

Cross-Country Skiing—See Outdoor Program.

Target Shooting Courses**PE 1505 Trap and Skeet**

Fall, spring, and summer (six weeks). Fee charged. Guns and shells furnished. Includes lectures and shooting at the Tompkins County Rod and Gun Club range.

PE 1510 Riflery

Fall and spring. Fee charged. Instruction and practice in the techniques of target riflery from various shooting positions.

PE 1515 Handgun Safety, Introduction to

Fall, spring, and summer (six weeks). Fee charged. Instruction in use of pistol in the three modes of 50-foot competitive target shooting—slow fire, timed fire, and rapid fire. Emphasis on safety and responsibility while firing.

PE 1520 Archery, Introduction to

Fall and spring. Fee charged. Two classes a week. Instruction in the care of equipment; seven basic steps for shooting; scoring; practice shooting at 20, 30, and 40 yards.

Team Sports Courses**PE 1550 Ice Hockey, Introduction to**

Fall and spring. Prerequisite: basic skating ability. Fee charged. Students provide own skates and sticks; all other equipment furnished. Stick handling, passing, and shooting are stressed. Some scrimmaging.

PE 1551 Ice Hockey, Intermediate

Fall and spring. Fee charged. Prerequisite: beginning hockey or previous participation in organized hockey. This course is designed for the intermediate hockey player. Advanced techniques taught include positioning, power play, penalty killing, and offensive and defensive attack. Each session emphasizes game situations and scrimmaging. Skates and hockey sticks must be supplied by the participants.

PE 1560 Basketball

Fall and spring. Fundamental drills in passing, shooting, and dribbling. Scrimmages each class session.

PE 1565 Soccer

Fall and spring. Introduction to the game. Includes basic individual skills (passing, trapping, shooting) and team play and strategy.

PE 1570 Volleyball, Beginning/Intermediate

Fall and spring. Fundamentals of ball handling, serves, defensive blocks, and position play are stressed. Classes scrimmage.

PE 1571 Volleyball, Advanced

Fall and spring. Offensive and defensive team strategy is emphasized in class scrimmages.

PE 1575 Introduction to Competitive Rowing

Fall. This is an introduction to Division I rowing. Students with no prior rowing experience are accepted and encouraged. The class will involve significant physical activity and students are expected to be in good physical condition. Instruction on the basics of the rowing stroke, use of indoor tanks, ergometers, weight training, stretching, calisthenics and on-the-water work will be part of this class.

Weight Training Courses

PE 1580 Principles of Weight Training

Fall and spring. Fee charged.

Introduces the proper use of Olympic weights for improving physical condition and muscular strength. Instruction with focus on the relation between high-rep light weight lifting, low-rep heavy lifting, and the development of bulk, strength, and endurance.

PE 1581 Weight Training for Women

Fall and spring. Fee charged.

This class will focus on the basics of weight lifting. Topics will include toning vs. building, theory of program design, training with dumbbells, selectorized equipment, free weight exercises for all muscle groups, flexibility, and proper nutrition for weight training.

Independent Study

PE 1999 Independent Study

Fall and spring.

Designed for those who have difficulty fitting any of the regularly scheduled courses into their academic program. Class activities are based on personal fitness programs. A term paper is required. Permission to enter this program must be granted by the program director.

BIOLOGICAL SCIENCES

The biology major provides a unified curriculum for undergraduates enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Cornell.

Graduate study in the biological sciences is administered by 30 specialized fields within the Graduate School, as described in the Fields of Study catalog at www.gradschool.cornell.edu/?p=38.

ORGANIZATION

Many different departments participate in the biology major.

Student services are provided by the Office of Undergraduate Biology (OUB), www.biology.cornell.edu. Located in Stimson Hall, the professional and student advisors provide academic and career advising, as well as help undergraduates find research opportunities on campus. Advisors in the OUB also follow the progress of biology majors and work closely with faculty advisors. Additional services and resources of the Biology Center include tutoring, examination files, and extensive information on summer research opportunities and graduate programs. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its main administrative office in Stimson Hall provides academic advising for students interested in the marine sciences.

DISTRIBUTION REQUIREMENT

In the College of Agriculture and Life Sciences, the Physical and Life Sciences distribution requirement is a minimum of 18 credits, including at least 6 credits of introductory biology satisfied by BIOG 1109–1110, 1105–1106, or 1101 and 1103 plus 1102 and 1104, or 1107–1108.

For Students in the College of Arts and Sciences, most biology (“BIO”) courses can be used toward fulfillment of the biological sciences distribution requirement. Please see the Arts and Sciences “Distribution Requirements” section of this catalog for further details.

In the College of Human Ecology, the natural sciences distribution requirement is for at least 6 credits selected from BIOG 1109–1110, 1101 and 1103 plus 1102 and 1104, 1105–1106 or 1107–1108 or from specified courses in chemistry or physics.

Switching between BIOG 1109–1110 and either BIOG 1101–1104 or 1105–1106 at midyear may not be possible because of variation in presentation of topics. Students must receive permission of the instructor to

switch sequences. Taking sequences in reverse order is strongly discouraged in BIOG 1101–1104 but allowed in BIOG 1105–1106.

USE OF ANIMALS IN THE BIOLOGICAL SCIENCES CURRICULUM: CORNELL UNIVERSITY

Students wishing to enroll in biology (“BIO”) courses should know and understand the following criteria relative to the use of animals in the teaching program, as passed by the faculty of the Division of Biological Sciences in 1988 and reaffirmed in 1997:

1. “Live animals will be used for teaching in certain courses in the biological sciences. Some animals will require humane euthanasia after they have been used for teaching.
2. Courses bearing the “BIO” description conform to the rules for the care of such animals as outlined in *Guiding Principles in the Care and Use of Animals* (as approved by the Council of the American Physiological Society), the *Guide for the Care and Use of Laboratory Animals* (DHEW publication 86–23, revised 1996; see p. 7, *Courses of Study*), the Animal Welfare Act, and the New York State Public Health Law. Within these regulations, and in keeping with the principle of Academic Freedom of the Faculty, the use of animals to aid in teaching any biological sciences discipline is at the discretion of the professor in charge.
3. Each course, as well as research projects, in which animals are used receives a formal review annually by the Cornell University Institutional Animal Care and Use Committee (IACUC).
4. Any concerns regarding the use of live animals in teaching should be addressed first to the faculty member responsible for that course. He or she is required to be in compliance with all applicable regulations and guidelines. Alternatively, students may choose to address their concerns to the director of the Cornell Center for Research Animal Resources, Dr. Michele Bailey, at 253–3523. The director may initiate discussion with the faculty member responsible for a particular course without involving the student if he or she would prefer to remain anonymous.
5. Enrollees in those courses in the biological sciences in which animal use is a component may, at the professor's discretion, be asked to sign copies of this statement (USE OF ANIMALS . . .) at the first meeting of the course.”

ADVANCED PLACEMENT

For information on credit for advanced placement in biological sciences, see www.biology.cornell.edu/advising/ap.html.

THE MAJOR

The major of biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The undergraduate program is coordinated for students in both colleges by the Office of Undergraduate Biology. By completion of the sophomore year, all students who intend to major in biological sciences must declare the major and a program of study through the Office of Undergraduate Biology, in 216 Stimson Hall.

Whenever possible, students should include the introductory biology, chemistry, and mathematics sequences in their freshman schedule and complete the organic chemistry lecture course in their sophomore year. Biology majors should regularly monitor their progress in the major, and should assess as realistically as possible the likelihood of achieving at a level that is consistent with their academic and personal goals. Weak performance in core courses, particularly after the freshman year, may indicate a need to reevaluate aptitude and genuine interest in the major. Students with questions, particularly with concerns about their ability to complete the major, are encouraged to consult with their biology advisor and to take advantage of the professional advising services available in the Office of Undergraduate Biology as well as those of the university and their college.

The requirements for the biological sciences major are listed below. Requirements 1–9 must be taken for a letter grade. Students are required to complete all three biology core courses (biochemistry, evolution, and genetics) at Cornell or during an approved Study Abroad semester. Courses taken for the program of study should be taken for a letter grade unless the course is offered for S–U grades only or if the student's advisor grants permission.

1. **Introductory biology for majors** (one year): BIOG 1101 and 1103 plus 1102 and 1104, or 1105–1106. BIOG 1107–1108 or BIOSM 1110, offered during the eight-week Cornell summer session for 8 credits, also satisfies the introductory biology requirement for majors.
2. **General chemistry**: CHEM 2070–2080 or 2150. Students who, via advanced placement, take only CHEM 2080 or only 2150 should be aware that some professional and graduate schools require 8 credits of general chemistry. These students may wish to take both CHEM 2150 and 2080 or 2150 and 2160. Students may wish to consult with their faculty advisor or advisors in the Office of Undergraduate Biology for further clarification.

3. **College mathematics** (one year): one semester of calculus (MATH 1106, 1110, 1910, or their equivalent) plus one semester selected from the following:
 - a. a second semester of calculus (MATH 1120, 1920, or their equivalents).
 - b. a course in finite mathematics (MATH 1105).
 - c. a course in statistics (BTRY 3010, MATH 1710, AEM 2100, ILR 2100, PSYCH 3500, PAM 2100, ECON 3190, ECON 3210, SOC 3010).
4. **Organic chemistry:** CHEM 1570 and 2510, or 3570–3580 and 2510, or 3570–3580 and 3010, or 3590–3600 and 2510, or 3590–3600 and 3010.
5. **Physics:** PHYS 1101–1102, 2207–2208, or 1112–2213. Those who take PHYS 1112–2213 are advised to complete PHYS 2214 as well.
6. **Genetics:** BIOGD 2810.
7. **Biochemistry:** BIOBM 3300, or 3310 and 3320, or 3330.
8. **Evolutionary biology:** BIOEE 2780 or BIOPL 4480. Note: BIOPL 2410 Botany is a prerequisite course to BIOPL 4480.
9. **A program of study** selected from the outline below.

Although not required for the biological sciences major, a course in statistics is recommended for all biology students. Students should consult their faculty advisors when choosing appropriate courses in statistics.

Note: Core courses cannot count toward the program of study requirements.

Programs of Study and Requirements

As noted in the list of requirements above, students accepted into the biological sciences major must choose a program of study (POS). Whereas the core requirements of the biology curriculum provide the common foundation deemed essential for all biology majors, the role of the program of study is to provide either a concentration in a particular area of biology or, in the case of the general biology program of study, a survey of biology that is broad but not superficial. The program of study requirement can be met by taking 13 to 15 credit hours of courses chosen by the student in consultation with his or her biology advisor. Programs of study for particular subject areas are designed by faculty members specializing in the subject. Typically, the program of study consists of one or more courses that provide foundation in the subject and a list of optional courses from that area or related areas, many of which are at an advanced level (3000 or higher). Because biology is an experimental science, most programs of study require one or more laboratory courses. The laboratory requirement in some programs of study can be met by participation in the independent research course (BIOG 4990). The possible programs of study and their requirements are following:

1. **Animal Physiology:** BIOAP 3110 Introductory Animal Physiology, BIOAP 3160 Cellular Physiology, plus a minimum of 7 credit hours selected from the following lecture and laboratory courses,

of which at least 4 credit hours must be a laboratory course.

- a. Lecture courses: BEE 4540 Physiological Engineering; ANSC 3000 Animal Reproduction and Development; ANSC 4100 Nutritional Physiology and Metabolism; ANSC 4270 Fundamentals of Endocrinology; BIOG 3050 Basic Immunology; BIOAP 2140 Biological Basis of Sex Differences; BIOAP 4580 Mammalian Physiology; BIOAP 4750 Mechanisms Underlying Mammalian Developmental Defects; BIOAP 4890 Mammalian Embryology; BIOBM 4070 Nature of Sensing and Response: Signal Transduction in Biological Systems; BIOBM 4370 Eukaryotic Cell Proliferation; BIOBM 4834 Molecular Aspects of Development; BIOGD 3850 Developmental Biology; BIOGD 4000 A Genomics Approach to Studying Life; BIOGD 4010 Genomic Analysis; BIOGD 6100 Genomes as Chromosomes; BIOGD 6120 Overview of Model Genetic Organisms; BIONB 3220 Hormones and Behavior; BIONB 3260 The Visual System; BIONB 4920 Sensory Function; NS 3310 Physiological and Biochemical Bases of Human Nutrition.
 - b. Laboratory courses: BEE 4540 Physiological Engineering; ANSC 3010 Animal Reproduction and Development; BIOG 4010 Introduction to Scanning Microscopy; BIOG 4030 Transmission Electron Microscopy for Biologists; BIOAP 4130 Histology: The Biology of the Tissues; BIOAP 3190 Animal Physiology Laboratory; BIOAP 4160 Cellular Physiology and Genomics Laboratory; BIOBM 4400 Laboratory in Biochemistry and Molecular Biology; BIONB 4910 Principles of Neurophysiology.
2. **Biochemistry:** Students electing this program of study should be sure to complete CHEM 2070–2080 or CHEM 2150–2160 during their freshman year. BIOBM 4400 Laboratory in Biochemistry and Cell Biology; physical chemistry* (CHEM 2870–2880 or 3890–3900 or 3890–2880); 6 credits of organic chemistry (CHEM 3570–3580 or CHEM 3590–3600); BIOBM 4320 Survey of Cell Biology; and at least one other course with a biochemical or biophysical orientation selected from the following list: BIOBM 4380 RNA World; BIOBM 6310 Protein Structure, Dynamics, and Function; BIOBM 7300 Protein NMR Spectroscopy; CHEM 3000 Quantitative Chemistry; CHEM 4510 Structural Chemical Biology; CHEM 7380 Macromolecular Crystallography.
- Notes:**
- * Students interested in graduate work in biochemistry should take PHYS 2207–2208 and should consider taking CHEM 3890–3900 and its prerequisites.
 - Biology majors in the College of Agriculture and Life Sciences who select the biochemistry program of study are allowed to take up to 61 credit hours in the endowed colleges because of the high number of endowed courses required for this program.

3. **Computational Biology:** Computation has become essential to biological research. Genomic databases, protein databanks, MRI images of the human brain, and remote sensing data on landscapes contain unprecedented amounts of detailed information that is transforming almost all of biology.

Problems investigated by computational biologists include topics as diverse as the genetics of disease susceptibility; comparing entire genomes to reveal the evolutionary history of life; predicting the structure, motions, and interactions of proteins; designing new therapeutic drugs; modeling the complex signaling mechanisms within cells; predicting how ecosystems will respond to climate change; and designing recovery plans for endangered species. The computational biologist must have skills in mathematics, statistics, and the physical sciences as well as in biology. A key goal in training is to develop the ability to relate biological processes to computational models. Cornell faculty work primarily in four subareas of computational biology: biomolecular structure, bioinformatics and data mining, ecology and evolutionary biology, and statistical and computational methods for modeling biological systems. Specific topics of study include DNA databases, protein structure and function, computational neuroscience, biomechanics, population genetics, and management of natural and agricultural systems.

Beyond core skills in mathematics, physical sciences, and biology, the computational biology program of study requires additional course work in mathematics and computer programming, a “bridging” course aimed at connecting biology to computation, and an advanced course where the theoretical/computational component of one aspect of biology is studied. Students should enroll in the more rigorous courses in the physical and mathematical sciences and may wish to take additional courses in these areas.

Computational biology has applications as broad as biology itself. The problems of interest and the tools available to study them are constantly evolving, so students are encouraged to gain fundamental skills that will serve them throughout their careers. There is great, and increasing, demand for research scientists and technical personnel who can bring mathematical and computational skills to the study of biological problems. The program is also an excellent preparation for graduate study in any area of biology or computational biology.

Required Courses for Program of Study in Computational Biology

- a. One course in computer programming (CS 1110, CS 1112, CS 1113, CS 1114) Introduction to Computer Programming, or BEE 1510 Introduction to Computer Programming.
- b. One additional course in mathematics (MATH 2210 Linear Algebra; or MATH 2310 Linear Algebra with Applications; or MATH 2940 Linear Algebra for Engineers; or MATH 4200 Differential Equations and

- Dynamical Systems; or BTRY 4070 Principles of Probability and Statistics; or BTRY 4080 Theory of Probability; or BTRY 4210 Matrix Computation).
- c. One of the following bridging courses, i.e., a course in mathematical modeling applied to biology:
- BIOEE 3620 Dynamic Models in Biology
 - BIOEE 4600 Theoretical Ecology
 - BIONB 3300 Introduction to Computational Neuroscience
 - BTRY 4820 Statistical Genomics
 - BTRY 4830 Quantitative Genomics
 - BTRY 4840 Computational Genomics
 - CS 4520 Introduction to Bioinformatics
 - NTRES 3100 Applied Population Ecology
 - NTRES 4110 Quantitative Ecology and Management of Fisheries Resources
- d. One course from the following list of advanced courses, or an additional "bridging" course numbered 4000 or above:
- BIOBM 6310 Protein Structure and Function
 - BIOGD 4810 Population Genetics
 - BIOGD 4840 Molecular Evolution
 - BIOGD 4870 Human Genomics
 - BIONB 4220 Modeling Behavioral Evolution
 - BIOPL 4400 Phylogenetic Systematics
 - BTRY 4070 Principles of Probability and Statistics
 - BTRY 4080 Theory of Probability
 - BTRY 4090 Theory of Statistics
 - BTRY 4790 Probabilistic Graphical Models (also CS 4782)
 - BTRY 6520 Computationally Intensive Statistical Inference
 - CS 2110 Object-Oriented Programming and Data Structures
 - CS 4210 Numerical Analysis and Differential Equations
 - CS 4220 Numerical Analysis: Linear and Non-Linear Problems
 - CS 6522 Biological Sequence Analysis
 - MATH 4200 Differential Equations and Dynamical Systems
 - NTRES 4120 Wildlife Population Analysis: Techniques and Models
 - NTRES 6700 Spatial Statistics
 - ORIE 3500 Engineering Probability and Statistics II
 - ORIE 3510 Introductory Engineering Stochastic Processes

Notes:

1. It is strongly recommended that students in this POS use PHYS 2207/2208 to satisfy the core physics requirement.
2. It is strongly recommended that students complete the core organic chemistry requirement using the CHEM 1570/2510 option, and that the time saved be used to take either CS 2110 or a second mathematics course from the list above.

3. MATH 2210 Linear Algebra, MATH 2310 Linear Algebra with Applications, or MATH 4200 Differential Equations and Dynamical Systems is recommended for bridging course BIOEE 4600.
4. One course may not be used to satisfy two different requirements simultaneously. For example, BTRY 4080 can be used to satisfy either requirement (2) or requirement (4), but not both.
5. Students who use BTRY 4080 to fulfill the additional mathematics requirement should not use ORIE 3500 Engineering Probability and Statistics II to fulfill the requirement for an advanced course.
6. Biology majors in the College of Agriculture and Life Sciences who select this program of study are allowed to take up to 61 credit hours in the endowed colleges due to the high number of required endowed courses for this program of study.
4. **Ecology and Evolutionary Biology:** BIOEE 2610 Ecology and the Environment. Students must also complete 10 credits from the following lists: (a) Principles, (b) Organisms, and (c) Ecological and Evolutionary Processes. One course must be chosen from list (a) and a second either from list (b) or (c). The remaining credits can be satisfied with courses from all three lists. Students are encouraged to take at least one course from each list.
 - a. Principles: BIOEE 4530 Speciation; BIOEE 4580 Community Ecology; BIOEE 4600 Theoretical Ecology; BIOEE 4640 Macroevolution; BIOEE 4800/ENTOM 4700 Ecological Genetics; BIOEE 4780 Ecosystem Biology; NTRES 3100 Applied Population Ecology.
 - b. Organisms: BIOEE 2740 The Vertebrates: Structure, Function, and Evolution; BIOEE 3730 Biodiversity and Biology of the Marine Invertebrates or BIOSM 3760 Marine Invertebrate Zoology; BIOEE 4500 and 4501 Mammalogy, lec and lab; BIOEE 4700 and 4701 Herpetology lec and lab; BIOEE 4750 Ornithology; BIOEE 4760 Biology of Fishes; ENTOM 2120 Insect Biology; BIOPL 2410 Introductory Botany; BIOPL 4480 Plant Evolution and the Fossil Record; PLPA 3090 Fungi; BIOSM 4490 Marine Botany.
 - c. Ecological and Evolutionary Processes: BIOEE 2630 Field Ecology; BIOEE 2650 Tropical Field Ecology and Behavior; NS/ANTHR 2750 Human Biology and Evolution; BIOEE/BIONB/ENTOM 3690 Chemical Ecology; BIOEE/EAS 3500 Dynamics of Marine Ecosystems; BIOEE/MATH 3620 Dynamic Models in Biology; BIOEE 4460 Plant Behavior—Induced Plant Responses to Biotic Stresses; BIOEE/ENTOM 4550 Insect Ecology; BIOEE/NTRES 4560 Stream Ecology; BIOEE 4570 and 4571 Limnology: Ecology of Lakes, lec and lab; BIOEE/EAS 4620 Marine Ecology; BIOEE 4660 and 4661 Physiological Plant Ecology, lec and lab; BIOEE/HORT 4730 Ecology of Agricultural Systems; NTRES 4200 Forest Ecology; BIOSM 4130 Research

in Marine Biology; NTRES 4220 and 4221 Wetland Ecology and Management, lec and lab; BIOMI 4180 Microbial Ecology; CSS/HORT 4660 Soil Ecology; BIOPL/ENTOM 4400 Phylogenetic Systematics; BIOPL 4470 Molecular Systematics; BIOPL/ENTOM 4530 Principles and Practice of Historical Biogeography; BIOEE/EAS 4790 Paleobiology; BIOGD 4840 Molecular Evolution.

Note: Students also are encouraged to gain experience in some aspect of field biology through course work at a biological field station and can apply up to 6 credits in the place of courses from lists (b) or (c). For example, students may apply 6 credits from the following courses taken at the Shoals Marine Laboratory (BIOSM): BIOSM 3080 Field Microbial Ecology; BIOSM 3090 Coastal Ecology and Bioclimates; BIOSM 3210 Anatomy and Function of Marine Vertebrates; BIOSM 3740 Field Ornithology; BIOSM 3770 Diversity of Fishes; BIOSM 4770 Marine Vertebrates; and BIOSM courses in lists b and c. The Ecology and Evolutionary Biology program of study offers a specialization in Marine Biology and Oceanography (for a description, see "Courses in Marine Science"). The Organization for Tropical Studies (OTS) offers an Undergraduate Semester Abroad Program, featuring two courses (Fundamentals in Tropical Biology and Field Research in Tropical Biology) that can count as two 3-credit courses toward the concentration. Six credits can be applied from the 15-week fall "Semester in Environmental Science" program offered by the Woods Hole Marine Biological Laboratory.

5. **General Biology:** The program of study in general biology requires a minimum of 13 credit hours in addition to courses counted toward requirements 1–9 on pages 155–6. These 13 credits must include:
 - a. One course from each of three different programs of study in biology. Only those courses specifically listed as fulfilling a program of study requirement are acceptable without permission of advisor.
 - b. A course with a laboratory.
 - c. A minimum of two upper-level (3000 and above) courses of 2 or more credits each.

1000-level courses are not acceptable for meeting any of these requirements. BIOG 4980 may not be used to fulfill the requirements of this program of study. BIOG 4990 (minimum of 2 credits, but no more than 3 credits) may count as one of the upper-level courses and may count as the laboratory course with approval of the advisor, but it cannot count as a course representing a program of study. Students must use three or more biological sciences courses to fulfill the requirements of this program of study.

Note: It is possible to use a single course to fulfill more than one requirement. For example, BIOAP 4130 Histology could count in all three areas: as a course in the Animal Physiology program of study, as

an upper-level course, and as a course with a lab.

6. **Genetics and Development:** A minimum of 13 credits, usually chosen from the following courses: BIOGD 3850 Developmental Biology; any BIOGD course of 3000 level or higher; BIOMI 4200 Microbial Genomics; BIOAP 4750 Mechanisms Underlying Mammalian Developmental Defects; BIONB 4930 Developmental Neurobiology; BIONB 4950 Molecular and Genetic Approaches to Neuroscience; BIOBM 6330 Biosynthesis of Macromolecules; BIOBM 6390 The Nucleus; BIOEE 4530 Speciation; PLBR 4030 Genetic Improvement of Crop Plants; PLBR 6060 Advanced Plant Genetics; BIOPL 3430 Molecular Biology and Genetic Engineering of Plants; BIOPL 4821 Molecular Plant-Pathogen Interactions I; BIOPL 4822 Molecular Plant-Pathogen Interactions II; BIOPL 4823 Molecular Plant-Microbe Interactions; BIOPL 4824 Plant Gene Evolution and Phylogeny; BIOPL 4825 Molecular Biology of Plant Organelles; BIOPL 4826 Plant Biotechnology; BIOPL 4827 Plant Cell Walls: Structure to Proteome; BIOPL 4829 Light Signal Transduction in Plants; BIOPL 4831 Concepts and Techniques in Plant Molecular Biology; BIOPL 4832 Proteomics in Plant Biology; BIOPL 4833 Plant Genome Organization and Function; BIOPL 4834 Molecular Aspects of Plant Development; BIOPL 4835 Molecular Breeding; BIOPL 4836 Plant Senescence; BIOPL 6410 Laboratory in Plant Molecular Biology. Up to 3 credits for this program of study may be chosen from other biological sciences courses, including BIOGD 3990 Research Practicum in Molecular and Cellular Biology, or BIOG 4990 Independent Undergraduate Research in Biology, with approval from the faculty advisor.
7. **Insect Biology:** ENTOM 2120 Insect Biology plus a minimum of three additional courses totaling at least 9 credits selected from the following two groups. At least one of the three additional courses must be selected from group a.
- Group a:** ENTOM 3310 Insect Phylogeny and Evolution; ENTOM 3330 Larval Insect Biology; ENTOM 3520 Medical and Veterinary Entomology; ENTOM 4440 Integrated Pest Management; ENTOM 4550 Insect Ecology; ENTOM 4630 Invertebrate Pathology; ENTOM 4830 Insect Physiology
- Group b:** ENTOM 3150 Spider Biology; ENTOM 3250 Insect Behavior; ENTOM 3440 Insect Conservation Biology; ENTOM 3690 Chemical Ecology; ENTOM 3070 Pesticides, Environment, and Human Health; ENTOM 4530 Principles and Practice of Historical Biogeography; NTRES 4560 Stream Ecology; ENTOM 4700 Ecological Genetics; ENTOM 4770 Biological Control; ENTOM 4900 Insect Toxicology
8. **Microbiology:** The program of study in microbiology requires a minimum of 13 credit hours in addition to the biology requirements. The introductory lecture and lab course, BIOMI 2900 General Microbiology Lecture and BIOMI 2911 General Microbiology, Lab, ARE

REQUIRED. The remaining 8 credits must be completed by taking at least ONE of the courses from the list below, although more than one may be taken to reach the required credit level: BIOMI 3910 Advanced Microbiology Laboratory; BIOMI 4140 Prokaryotic Diversity; BIOMI 4160 Bacterial Physiology; BIOMI 4180 Microbial Ecology; BIOMI 4200 Microbial Genomics; BIOMI 4850 Bacterial Genetics. Other courses that can be used to fulfill the remaining credits are BIOMI 3940 Applied and Food Microbiology; BIOMI 4040 Pathogenic Bacteriology and Mycology; BIOMI 4090 Principles of Virology; BIOMI 4310 Medical Parasitology.

9. **Molecular and Cell Biology:** Students electing this program of study should be sure to complete CHEM 2070–2080 or CHEM 2150–2160 during their freshman year. CHEM 3570–3580 or 3590–3600; BIOBM 4320 Survey of Cell Biology; BIOBM 4400 Laboratory in Biochemistry and Molecular Biology, or BIONB 4300 Experimental Molecular Neurobiology; and at least 7 additional credits of courses that have a cell biological or molecular biological orientation. The 7 additional hours should include at least two 2-credit or above courses from the following list: any BIOBM course at the 4000 level or above; any BIOGD course at the 3000 level or above (**Note:** graduate-level BIOBM and BIOGD courses are acceptable with permission of your advisor); BIOMS 3150 Basic Immunology; BIOMI 4090 Principles of Virology; BIOMI 4200 Microbial Genomics; BIOMI 4850 Bacterial Genetics; BIONB 4250 Molecular Neurophysiology; BIONB 4950 Molecular and Genetic approaches to the Neurosciences; BIOPL 3420 Plant Physiology; BIOPL 3430 Molecular Biology and Genetic Engineering of Plants; BIOPL 4220 Plant Development; BIOPL 4440 Plant Cell Biology; BIOPL 4490 Green Signals and Triggers—The Plant Hormones; BIOPL 4620 Plant Biochemistry.
10. **Neurobiology and Behavior:** The two-semester introductory course sequence Neurobiology and Behavior I and II (BIONB 2210 and 2220) with discussion section (4 credits per semester) and 7 additional credits. The 7 additional credits must include at least one advanced course from the BIONB offerings. “Topics” courses (BIONB 4200s and 7200s), independent study (BIOG 4990), and PSYCH 4230 may be used as supplemental credits but **do not** qualify as advanced courses.
- Note:** Students who declare the program of study in Neurobiology and Behavior after taking BIONB 2210 or 2220 for only 3 credits must still take the 1-credit discussion section in BIONB 2210 and 2220. To arrange this, the student should consult the professors in charge of the two courses.
11. **Nutrition:** NS 3310 Physiological and Biochemical Bases of Human Nutrition (4 credits) and at least 9 credits of additional course work in the biological aspects of nutrition, such as NS 1220 Nutrition and the Life Cycle; NS 3150 Obesity and the Regulation of Body Weight; NS 3220

Maternal and Child Nutrition; NS 3320 Methods in Nutritional Sciences; NS 3410 Human Anatomy and Physiology; NS 3470 Human Growth and Development; NS 4210 Nutrition and Exercise; NS 4310 Mineral Nutrition and Chronic Disease; NS 4410 Nutrition and Disease; NS 4900 Manipulating the Mouse Genome; NS 6080 Epigenetics; NS 6100 Proteins and Amino Acids: Nutritional Regulation; NS 6110 Molecular Toxicology; NS 6140 Topics in Maternal and Child Nutrition; NS 6310 Micronutrients: Function, Homeostasis, and Assessment; and NS 6320 Regulation of Macronutrient Metabolism.

Note: For students in the College of Agriculture and Life Sciences, credits in NS courses count toward the required 55 CALS credits. For students in the College of Arts and Sciences, NS credits count toward the 100 hours required in A&S if those credits fulfill major requirements.

12. **Plant Biology:** Students choose one area of study from the following two options: Option (a) Botany: Students are required to take BIOPL 2410 Introductory Botany. Students should then choose, with the aid of their faculty advisor, a minimum of three of the following courses, for a total of at least 10 additional credits, to round out their botanical training: BIOPL 2420 and 2421 Plant Function and Growth, Lec and Lab; BIOPL 2430 Taxonomy of Cultivated Plants; BIOPL 2450 Plant Biology; BIOPL 2470 Ethnobiology; BIOPL 2480 Taxonomy of Vascular Plants; BIOPL 3420 and 3421 Plant Physiology, Lec and Lab; BIOPL 3430 and 3431 Molecular Biology and Genetic Engineering of Plants, Lec and Lab; BIOPL 3450 Plant Anatomy; BIOPL 3480 The Healing Forest; BIOPL 3590 Biology of Grasses; BIOPL 3800 Strategies and Methods in Drug Discovery; BIOPL 4040 Crop Evolution, Domestication, and Diversity; BIOPL 4220 Plant Development; BIOPL 4400 Phylogenetic Systematics; BIOPL 4420 Current Topics in Ethnobiology; BIOPL 4440 Plant Cell Biology; BIOPL 4470 Molecular Systematics; BIOPL 4480 Plant Evolution and the Fossil Record; BIOPL 4490 Green Signals and Triggers—The Plant Hormones; BIOPL 4520/4521 Systematics of Tropical Plants and Field Lab; BIOPL 4530 Principles and Practice of Historical Biogeography; BIOPL 4620 Plant Biochemistry; or BIOEE 4660 and 4661 Physiological Plant Ecology, Lec and Lab.
- Option (b) Plant Biotechnology: Students are required to take BIOPL 3430 and 3431 Molecular Biology and Genetic Engineering of Plants, Lec and Lab. Students choose, in consultation with their faculty advisor, a minimum of 10 additional credits from the following list: BIOEE 4460 Plant Behavior—Induced Plant Responses to Biotic Stresses; BIOPL 2410 Introductory Botany; BIOPL 2420 and 2421 Plant Function and Growth, Lec and Lab; BIOPL 3420 and 3421 Plant Physiology, Lec and Lab; BIOPL 3800 Strategies and Methods in Drug Discovery; BIOPL 4220 Plant Development; BIOPL 4440 Plant Cell Biology; BIOPL 4470 Molecular Systematics; BIOPL 4490 Green Signals and Triggers—The Plant Hormones; BIOPL 4620 Plant

- Biochemistry; courses in the 482x and 483x module series, as follows (note that BIOPL 4831 is a prerequisite for all other courses in this series); BIOPL 4821 Molecular Plant-Pathogen Interactions I; BIOPL 4822 Molecular Plant-Pathogen Interactions II; BIOPL 4823 Molecular Plant-Microbe Interactions; BIOPL 4824 Plant Gene Evolution and Phylogeny; BIOPL 4825 Molecular Biology of Plant Organelles; BIOPL 4826 Plant Biotechnology; BIOPL 4827 Plant Cell Walls: Structure to Proteome; BIOPL 4828 Plant Imaging; BIOPL 4829 Light Signal Transduction in Plants; BIOPL 4831 Concepts and Techniques in Plant Molecular Biology; BIOPL 4832 Proteomics in Plant Biology; BIOPL 4833 Plant Genome Organization and Function; BIOPL 4834 Molecular Aspects of Plant Development; BIOPL 4835 Molecular Breeding; BIOPL 4836 Plant Senescence; PLBR 4010 Plant Cell and Tissue Culture; PLBR 4020 Plant Tissue Culture Laboratory; PLBR 4030 Genetic Improvement of Crop Plants; PLBR 4070 Nutritional Quality Improvement of Food Crops; or PLPA 4190 Agricultural Application of Plant Disease Concepts.
13. **Systematics and Biotic Diversity:** A minimum of 13 credits from the following two groups, including at least 7 credits from group a and 3 from group b and at least two laboratory courses (marked with *). BIOG 4990 Independent Undergraduate Research in Biology, with approval of the advisor, can be used in fulfillment of up to 4 credits in group (a) and can count as one laboratory course if it has a laboratory component of 2 or more credits.
- a. *BIOEE 2640 Tropical Field Ornithology; *BIOEE 2740 The Vertebrates: Structure, Function, and Evolution; BIOEE 3710 Human Paleontology; *BIOEE 3730 Biology of the Marine Invertebrates; BIOEE 4050 Biology of the Neotropics; BIOEE 4500 Mammalogy, Lec; *BIOEE 4501 Mammalogy, Laboratory; BIOEE 4700 Herpetology, Lec; *BIOEE 4701 Herpetology, Lab; *BIOEE 4750 Ornithology; *BIOEE 4760 Biology of Fishes; BIOEE 4770 Marine Invertebrates Seminar; BIOMI 2900 General Microbiology, Lec; *BIOMI 2910 General Microbiology, Lab; *BIOMI 2911 General Microbiology Lab; BIOMI 3310 General Parasitology; BIOMI 4140 Prokaryotic Diversity, Lec; *BIOPL 2410 Introductory Botany; *BIOPL 2430 Taxonomy of Cultivated Plants; *BIOPL 2450 Plant Biology; BIOPL 2470 Ethnobiology; *BIOPL 2480 Taxonomy of Vascular Plants; BIOPL 3480 The Healing Forest; BIOPL 3590 Biology of Grasses; BIOPL 4520 Systematics of Tropical Plants; *BIOPL 4521 Systematics of Tropical Plants: Field Laboratory; *ENTOM 2120 Insect Biology; ENTOM 2150 Spider Biology: Life on a Silken Thread; ENTOM 3150 Spider Biology; ENTOM 3310 Insect Phylogeny and Evolution; *ENTOM 3311 Insect Phylogeny and Evolution Laboratory; *ENTOM 3330 Maggots, Grubs, and Cutworms: Larval Insect Biology; PLPA 3090 Fungi; *PLPA 3190 Mushrooms of Field and Forest.
- b. BIOEE 4530 Speciation; BIOEE 4640 Macroevolution; BIOEE 4790 Paleobiology; *BIOPL 4400 Phylogenetic Systematics; BIOPL 4470 Molecular Systematics; *BIOPL 4480 Plant Evolution and the Fossil Record; *BIOPL 4530 Principles and Practices of Historical Biogeography.

The Minor in Biological Sciences

The minor in biological sciences has been designed to provide students with a broad background in biology while allowing them some flexibility to choose courses of interest. Students must have completed one full year of introductory biology (or its equivalent) to declare the minor. Students will complete 12 to 15 credits by taking either all three biology core course requirements or two biology core course requirements and 5 or more biology credits from the lists of approved program of study courses found on pages 159–162 of this catalog.

Biology core courses

1. Biochemistry: BIOBM 3300, 3330, or 3310–3320; one year of general chemistry and organic chemistry lecture (CHEM 1570 or 3570–3580) are prerequisites
 2. Evolutionary biology: BIOEE 2780 or BIOPL 4480
 3. Genetics: BIOGD 2810
- *BIOG 4990 Independent Research may not be used to fulfill any requirement for the minor. No course substitutions are allowed. With the exception of transfer and study abroad students, no biology courses taken at other institutions will count toward the minor.

Notes:

- External transfer students must complete the core biology courses at Cornell. Students who are fulfilling the minor requirements under Option 2 must complete a minimum of one program of study course of at least 3 credits at Cornell.
- All courses for the minor must be taken for a letter grade unless a course is offered S–U only.
- Applications for the minor are located in 216 Stimson Hall and on the OUB web site. See Bonnie Comella, Jeff McCaffrey, or Wendy Aquadro for academic advising and for certifying completion of the minor.

Independent Research and Honors Program

Biology majors are encouraged to consider participating in individual research under the direction of a Cornell faculty member. Students interested in beginning research should contact faculty members who have compatible research interests. Information about faculty research interests and undergraduate research opportunities is available in the Office of Undergraduate Biology, 216 Stimson Hall, and at www.biology.cornell.edu.

Faculty members may consider the student's previous academic accomplishments, interests and career goals, and the availability of space and equipment when agreeing to supervise a student in their laboratory. Students conducting research for the first time must enroll in BIOG 2990, an S–U course designed to introduce students to research. After the

first semester, students enroll in BIOG 4990. Registration for both of these classes is done in the Office of Undergraduate Biology in 216 Stimson Hall. Students may work with faculty in any department on campus as long as the research topic is biological. Students may not earn credit for research done off campus, unless supervised by a Cornell faculty member. Up to 3 credits of research may be used to complete the programs of study in general biology, genetics and development, systematic and biotic diversity, as well as 4 credits in neurobiology and behavior.

The honors program in biological sciences is designed to offer advanced training in life science research through the performance of an original research project under the direct guidance of a member of the Cornell faculty. Biology majors planning on graduating with honors must apply to the Biology Honors Program in the spring of their junior year. Applications and information are available in the Office of Undergraduate Biology, 216 Stimson Hall, or at www.biology.cornell.edu/research/honors.html. To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 30 credits at Cornell, and have a cumulative Cornell grade point average (GPA) of at least 3.0. In addition, students must have at least a 3.0 cumulative Cornell GPA in all biology, chemistry, mathematics, and physics courses. (Grades earned in courses in other departments that are used to fulfill biology major requirements are included in this computation.) In addition, candidates must find a Cornell faculty member to supervise their research. An honors candidate usually enrolls for credit in BIOG 4990 Undergraduate Research in Biology under the direction of the faculty member acting as honors supervisor, although the honors program does not require enrollment for credit. Students accepted into the honors program are required to participate in honors research seminars during their senior year; submit an acceptable honors thesis; complete all major requirements; and maintain a 3.0 Cornell cumulative and science GPA through graduation. Recommendation to the faculty that a candidate graduate with honors and at what level of honors is the responsibility of the Honors Program Committee. The student's final GPA and quality of his or her thesis are factors in determining the level of honors recommended.

Students interested in the honors program are strongly encouraged to begin their research projects in their junior year and to consider spending the following summer at Cornell engaged in full-time research on their honors project.

Biology majors who are considering study abroad and graduating with honors are encouraged to meet with their academic and research advisor during their sophomore year to carefully plan their academic schedule to meet the requirements of the honors program.

Application forms, requirements, deadline dates for the honors program and the Hughes Scholars Program, and information pertaining to faculty research may be obtained at the Office of Undergraduate Biology, 216 Stimson Hall, and at www.biology.cornell.edu.

CURRICULUM COMMITTEE

Many decisions pertaining to the curriculum and to the programs of study are made by the Biology Curriculum Committee, which meets monthly during the academic year. The committee consists of faculty and elected student members and welcomes advice and suggestions from all interested parties.

ADVISING

Students in need of academic advice are encouraged to consult their advisors or see an academic advisor in the Office of Undergraduate Biology, 216 Stimson Hall.

Students interested in marine biology should visit the Shoals Marine Laboratory Office, G14 Stimson Hall.

Students interested in the Biology and Society major should see pages 498–505 in the College of Arts and Sciences section of this catalog.

TRANSFERRING CREDIT

Biology majors are required to complete all three biology core courses (biochemistry, evolution, and genetics) at Cornell.

External transfer students are limited to transferring one core biology course and one course of up to 3 credits toward their program of study. See the Office of Undergraduate Biology for approval procedures.

Students who matriculated to Cornell as freshmen and Study Abroad students may transfer program of study courses at the discretion of their advisor. Study Abroad students must obtain approval from the Office of Undergraduate Biology, Director of Advising, to transfer biology core courses.

Online course credit is not acceptable to transfer for any biology course.

GENERAL COURSES (BIOG)

Three introductory biology course sequences are taught during the academic year: BIOG 1101–1104, 1105–1106, and 1109–1110; and two during the eight-week summer session: BIOG 1107–1108 and BIOSM 1110. BIOG 1101–1104, 1105–1106, 1107–1108, and BIOSM 1110 are intended for biological sciences majors and other students needing 8 credits from an introductory sequence for majors (e.g., students in a premedical curriculum). Any of these sequences meet the prerequisite for upper-level courses listing “one year of introductory biology for majors” as a prerequisite. BIOG 1109–1110 is a course sequence intended for nonmajors and meets the prerequisite for many, but not all, upper-level courses listing “one year of introductory biology” as a prerequisite. Students can earn a maximum of 8 credits in introductory biology (including advanced placement credits).

Other Introductory Biology Courses for Non-Biological Sciences Majors

The courses listed below are intended primarily for non-biological sciences majors.

Please see the full course description for more details.

BIOPL 1120 Issues in Social Biology: From Diet to Disease, DNA to Deforestation

BIOPL 2400 Green World/Blue Planet

BIOPL 2490 Hollywood Biology

BIOG 1109–1110 Biological Principles

CSS/BIOMI 1120 Microbes, the Earth, and Everything

Please see the CALS Registrar's Office web site for the most recent course additions.

BIOG 1101–1102 Biological Sciences, Lectures

1101, fall; 1102, spring. 2 credits each semester. Corequisite: BIOG 1103 (fall) or 1104 (spring). Prerequisite: for 1102, D or better in 1101 or permission of instructor. May not be taken for credit after BIOG 1105–1106 or 1109–1110. S–U or letter grades by permission of instructor. First lec of fall semester, F Aug. 28. No admittance after second week of classes. Evening prelims: fall, Sept. 24 and Nov. 3; spring, Feb. 25 and April 6. Fall, staff; spring, staff.

Designed for students who intend to specialize in biological sciences. The fall semester covers the chemical and cellular basis of life, energy transformations, physiology, neurobiology, and behavior. The spring semester covers genetics, development, evolution, and ecology. Each topic is considered in terms of modern evolutionary theory, and discussions of plant and animal systems are integrated.

BIOG 1103–1104 Biological Sciences, Laboratory

1103, fall; 1104, spring. 2 credits each semester. Corequisite: BIOG 1101 (fall) or 1102 (spring). Prerequisite: for 1104, D or better in 1103 or permission of instructor. Students registered for lab courses who are more than 10 minutes late for first meeting of lab forfeit registration in that course; no admittance after second week of classes. First lab of fall: week of Aug. 31; first lab of spring: week of Jan. 18. S–U or letter grades by permission of instructors. K.-C. Chen and L. L. Hester.

Designed to provide lab experience with major biological phenomena to support an understanding of the important concepts, principles, and theories of modern biology. A second objective is to help students gain expertise in the methods used by biologists to construct new knowledge. Students are exposed to basic concepts, research methods, including laboratory and data transformation techniques, and instrumentation in the major areas of biology. First-semester topics include biochemistry, physiology, plant biology, and scientific method and poster development. In the second semester, laboratory experience is provided in genetics, biotechnology, invertebrate diversity, plant and animal development, and ecology. During the first semester, students dissect a doubly pithed frog (pithing is done by the staff). Students dissect several invertebrates during the second semester. For those students who object to animal dissection, alternative materials are available for study. However, testing involves identification of important structures in real organisms.

BIOG 1105–1106 Introductory Biology

1105, fall; 1106, spring. 4 credits each semester; 2 credits by permission of instructor. Limited to 200 students. Taking 1105–1106 in sequence preferred but not required. May not be taken for credit after BIOG 1101–1104 or 1109–1110. No admittance after first week of classes. First lec of fall semester R Aug. 27, 9:05; additional study and lab. D. Campbell.

Designed primarily for biology majors, preprofessionals, and other students who desire a challenging, broad introduction to fundamental concepts of biology. Cell biology, physiology, anatomy, and biochemistry are strongly emphasized in BIOG 1105. BIOG 1106 covers genetics, development, ecology, evolution, behavior, and the diversity of organisms. Students who plan to concentrate in anatomy and physiology should consider taking this course because of the strong emphasis on organismal biology. Because some testing involves the use of pre-dissected specimens, students who object to dissections should take BIOG 1101–1104. The course uses an autotutorial format and offers considerable flexibility in scheduling. Completion of the course requires mastery of a group of core units. Testing on these units is primarily by oral examination. Students who elect to take the course must be able to meet deadlines. Four formal laboratory sessions are offered each semester; additional laboratory work is included in the core units. Evaluation is based on written reports on experimental work, practical exams, and a comprehensive final exam. Web site: www.biog1105-1106.org.

BIOG 1107–1108 General Biology

Summer, 8-week session; 1107, weeks 1–4; 1108, weeks 5–8. 4 credits each. 1107–1108 fulfills introductory biology requirement for majors and forms suitable introductory biology course sequence for students intending to go to medical school. Prerequisite: one year of college or permission of instructor; for BIOG 1108, grade of D or better in prerequisite courses (BIOG 1101, 1103, 1105, or 1107). Fee for weeks 1–4: \$25; for weeks 5–8, \$25. Staff.

Designed for students who plan further study in biology. 1107 covers biological metabolism, first at the molecular level and then progressively to the organ system level. The laboratory work involves an introduction to some major techniques, vertebrate dissection, and a survey of plant organization. 1108 seeks to integrate the topics of genetics, developmental biology, population biology, and ecology in a general consideration of biological evolution. The laboratory work is a continuation of the material covered in 1107 and involves more techniques, a survey of animal organization, and the design and performance of a field study. For those students who object to animal dissection, alternative materials are available for study. However, testing involves identification of important structures in real organisms.

BIOG 1109–1110 Biological Principles

1109, fall; 1110, spring. 3 credits each semester includes lecture and lab. Limited to 500 students. Nonmajors survey course, not appropriate for major in biological science or premed requirement. Both BIOG 1109 and 1110, taken in either order, are required to fulfill distribution requirement in CALS and Human Ecology. Either course fulfills Arts and Sciences

distribution requirement. Students with transfer credit must consult with course instructors for appropriate course placement. Due to overlap in content. Note: This course may not satisfy prerequisite for upper-level courses in biology. Letter grades only. Prelims: fall (2 in class); spring (2 in class). H. Greene, R. Wayne, E. Balko, and staff.

Both semesters of Biological Principles are intended to appeal to anyone who seeks an overview of general biology topics and current biological issues. BIOG 1109 is offered during fall semester and introduces students to the diversity of biological organisms, Mendelian genetics, behavior, and ecology and culminates by tying together the information covered during the semester with current issues involving global climate change and biomimetic research. BIOG 1110 integrates instruction about cells, organ systems, metabolic processes, reproduction, sexually transmitted infections, contraception, and bioengineering with the students' understanding of human biology. The culminating activities for spring semester includes hands-on activities involving some of the techniques used by health care professionals and forensic scientists, plus student-led debates about bioengineering. Laboratory sessions meeting alternate weeks (total of 6 labs per semester) are used for problem-solving experiments, demonstrations, discussions, and dissections (preserved vertebrate, invertebrate, and plant materials). For those students who object to dissection, alternative materials are available for study without grade penalty. Testing on dissection labs involves identification of important structures in real organisms. Registration for the lab section is required at the time of course registration. All students must enroll in lecture and lab using electronic course enrollment.

BIOG 1115 Biology Summer Bridge

Summer. 4 credits. Letter grades only.
R. Booker.

This is an inquiry-based course intended for prefreshmen who intend to major in life sciences or pursue a career in the health professions. Topics include the molecular and cellular basis of life, genetics, physiology, and natural selection. The course includes an intensive six-hour-per-week laboratory, writing and math workshops, and a study skills session. All students will be required to be part of the Biology Summer Bridge Living-Learning community.

BIOG 1200 Biology Scholars Program Freshman Seminar

Spring. 1 credit. Prerequisite: membership in Biology Scholars Program. S-U grades only. J. McCaffrey and J. J. Doyle.

This course is designed to help freshman biology majors make the transition to Cornell's science courses, give exposure to career options in research and medicine, provide opportunities to meet and network with faculty, and to facilitate students' pursuit of research on campus.

BIOG 1250 Biology Seminar

Fall and spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S-U grades only. Staff.

A first-year seminar designed for students with Biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

BIOG 2000 Special Studies in Biology

Fall, spring, or summer. 1-3 credits. Prerequisite: written permission from Office of Undergraduate Biology. Students must register in 216 Stimson Hall. S-U or letter grades by permission of instructor. Staff.

Registration device for students who want to take only a portion of a regular biological sciences course—for example, only the lectures or only the laboratory in a course that includes both. Only students who have already had training equivalent to the portion of the regular course that is to be omitted may register in this manner. This course may not be substituted for 1000-level courses and may not be used to fulfill college distribution requirements except by permission from the Office of Undergraduate Biology.

BIOG 2200 Biology Scholars Program Sophomore Seminar

Fall. 1 credit. Prerequisite: membership in Biology Scholars Program. S-U grades only. J. McCaffrey and J. J. Doyle.

The first half of the semester will focus on interpreting and evaluating scientific literature. Students will do group presentations on a primary research or review paper. The second half will cover careers in science, personal and professional development, on-campus research, and summer opportunities.

BIOG 2990 Introduction to Research Methods in Biology

Fall, spring, or summer. Variable credit; max. 3 suggested. S-U grades only. Recommended for freshmen and sophomores. Students must register for credit in Office of Undergraduate Biology, 216 Stimson Hall. Applications available in OUB and at www.bio.cornell.edu. **Add deadline is three days before university deadline.** Any Cornell faculty member whose research field is biological in nature may serve as a supervisor for this course. Non-Cornell supervisors not acceptable.

Intended for students who are new to undergraduate research. Students enrolled in BIOG 2990 may be reading scientific literature, learning research techniques, or assisting with ongoing research. The faculty supervisor determines the work goals and the form of the final report.

BIOG 4000 Undergraduate Seminar in Biology

Fall or spring. Variable credit; 1-3 assigned for individual seminar offerings; participation in Weill Cornell Medical College in Qatar required. S-U or letter grades. Staff.

Specialized seminars on topics of interest to undergraduates studying at Weill Cornell Medical College in Qatar.

BIOG 4040 Planning for Graduate Study in Biology

Fall. 1 credit. S-U grades only. L. Southard. For students who plan to pursue a graduate degree leading to a research career. Selected topics include information on academic and industrial research careers, selecting appropriate graduate programs, and options for funding. Features faculty, graduate student, and outside speakers. Students write and receive feedback on personal statements.

BIOG 4080 Presentation Skills for Biologists

Spring. 1 credit. Prerequisite: research experience. Priority given to students accepted into Biology Honors Program.

S-U grades only. L. Southard and G. Hess. Covers oral and written communication skills used in presenting research to other scientists. Topics include organization and writing of scientific papers, presentation tips for research seminars, and preparation of visual aids using Microsoft PowerPoint. All students present a 10-minute seminar on their research and evaluate other presentations.

BIOG 4100 Teaching High School Biology

Fall. 3 credits. Prerequisite: one year introductory biology; permission of instructor. S-U or letter grades. Offered alternate years. L. Southard.

Gives students the opportunity to experience teaching high school science. Students select an important biological concept, then develop inquiry-based teaching plans appropriate for high school students. The first part of the course consists of lectures, discussion, and laboratory experiments, which familiarize the students with the scientific content. Students then work in teams with high school teachers to develop their curriculum. The final part of the course includes practice presentations and teaching at regional high schools.

BIOG 4940 Special Topics in Biological Sciences

Fall or spring. 1-4 credits, variable. S-U or letter grades.

Biological Sciences offers "trial" courses or seminars under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under this number will be approved by the Biological Sciences Curriculum Committee, and the same course is not to be offered more than twice under this number.

BIOG 4980 Teaching Experience

Fall or spring. 1-4 credits. Limited enrollment. Prerequisite: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 *other* credits and remain in good standing. This would affect Dean's List eligibility but not eligibility for graduating with distinction. S-U or letter grades by permission of instructor. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

BIOG 4990 Independent Undergraduate Research in Biology

Fall, spring, or summer. Variable credit. S-U or letter grades. Note: Arts students may not register for more than 6 credits per semester with one supervisor or 8 credits per semester with more than one supervisor. Students in CALS may use up to 15 credits of independent study (BIOG 4990, 4980) toward graduation. Up to 3 credits of research may be used to complete programs of study in General Biology, Genetics and Development, and Systematics and Biotic Diversity, and 4 credits of research in Neurobiology and Behavior. Prerequisite: one semester of

BIOG 2990 or equivalent or permission of instructor and Office of Undergraduate Biology.

For students with previous undergraduate experience conducting biological research at Cornell. Students enrolled for this credit should be doing independent work on their own project. Registration forms are available in OUB and on the web at www.bio.cornell.edu. **Add deadline is three days before university deadline.** Each student must submit proposed research project description during course registration. Any Cornell faculty member whose research field is biological in nature may serve as supervisor for this course. Non-Cornell supervisors not acceptable.

BIOG 6000 Graduate Seminar in Biology

Fall or spring. Variable credit (1–3 credits assigned for individual seminar offerings); may be repeated for credit. S–U or letter grades. Staff.

Specialized seminars on topics of interest to graduate students presented by biology faculty including visiting faculty.

ANIMAL PHYSIOLOGY (BIOAP)

BIOAP 1250 Biology Seminar

Fall and spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S–U grades only. Staff.

A first-year seminar designed for students with Biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

[BIOAP 2140 The Biological Basis of Sex Differences (also BSOC 2141, BIOMS/FGSS 2140)]

Fall. 3 credits. Prerequisite: one year introductory biology. S–U or letter grades. Offered alternate years; next offered 2010–2011. J. E. Fortune.

Examines the structural and functional differences between the sexes. Emphasizes mechanisms of mammalian reproduction; where possible, special attention is given to studies of humans. Current evidence on the effects of gender on nonreproductive aspects of life (behavior, mental, and physical capabilities) is discussed. This course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.]

BIOAP 3110 Introductory Animal Physiology (also BIOMS 3110, VTBMS 3460)

Fall. 3 credits. Prerequisites: one year college biology, chemistry, and mathematics. Recommended: previous or concurrent physics course. S–U or letter grades by permission of instructor. Evening prelims. E. R. Loew.

General course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems from the cellular to the organismal level. Structure/function relationships are stressed along with underlying physico-chemical mechanisms.

BIOAP 3160 Cellular Physiology (also BIOMS 3160)

Spring. 3 credits. Pre- or corequisite: BIOBM 3300 or 3310 and 3320 or 3330. Letter grades only. Evening prelims. A. Quaroni.

A comprehensive course covering the general characteristics of eukaryotic cells; the structure, composition, and function of subcellular organelles; and the major signal transduction pathways regulating a variety of physiological cell activities. Among the main subjects covered are absorption and transport processes, mechanism of action of signaling molecules (hormones), the cell cycle and regulation of cell proliferation, cell-cell communication, extracellular matrix, and carcinogenesis.

BIOAP 3190 Animal Physiology Experimentation (also BIOMS 3190)

Fall. 4 credits. Prerequisite: BIOAP 3110 or permission of instructor. For pre-med, pre-vet juniors and seniors and graduate students interested in biomedical science. Letter grades only. E. R. Loew, N. A. Lorr, and staff.

Student-conducted in vitro and in vivo experiments designed to illustrate basic physiological processes, physiological research techniques, instrumentation, experimental design, and interpretation of results. Techniques include anesthesia, surgical procedures, dissection, and real-time computer recording and analysis. Experiments with isolated living tissues or live anesthetized animals examine properties of membranes and epithelia, blood, nerves, skeletal and smooth muscle; cardiovascular, respiratory, renal, and reproductive function and their regulation by the nervous and endocrine systems.

BIOAP 4130 Histology: The Biology of the Tissues (also BIOMS 4130)

Spring. 4 credits. Prerequisite: one year introductory biology. Recommended: BIOBM 3300 or 3310, or equivalent. S–U or letter grades. S. Suarez and L. Mizer.

Provides students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates (primarily mammals), as well as methods of analytic morphology at the cell and tissue levels. Emphasizes dynamic interrelations of structure, composition, and function in cells and tissues.

BIOAP 4160 Cell Physiology and Genomics Laboratory (also BIOMS 4160)

Spring. 4 credits. Limited to 24 students. Pre- or corequisite: BIOAP 3160 or BIOBM 4320 or permission of instructor. For pre-med, pre-vet, juniors, seniors, and graduate students interested in biomedical science. Letter grades only. H.–H. Chuang, N. A. Lorr, and staff.

The course emphasizes the application of molecular biology and analytical methods, including microscopy, to investigation of physiological mechanisms of cellular excitability. Students learn manipulation of nucleic acids including molecular cloning RT-PCR, qRT-PCR and microarray analysis, heterologous expression systems including *Xenopus* oocytes and cultured mammalian cells, characterization of proteins using antibodies, and analysis of ion channels, receptors, and signal transduction pathways by measuring ionic currents and membrane potentials in the *Xenopus* oocyte expression system. Students also learn critical reading of original research articles. Students will conduct an independent project in the latter part of the

semester using methods and systems introduced during the course.

BIOAP 4250 Gamete Physiology and Fertilization (also ANSC 4250)

Fall. 2 credits. Prerequisite: ANSC 2400 or equivalent. Letter grades only. Offered alternate years. Lec. J. E. Parks. For description, see ANSC 4250.

BIOAP 4270 Fundamentals of Endocrinology (also ANSC 4270)

Fall. 3 credits. Prerequisite: animal or human physiology course or permission of instructor. Letter grades only. Lec. P. A. Johnson.

For description, see ANSC 4270.

BIOAP 4580 Mammalian Physiology (also BIOMS 4580)

Spring. 3 credits. Auditors allowed. Prerequisite: BIOAP 3110 or equivalent. Recommended for biological sciences majors, pre-med and pre-vet students, and beginning graduate students in physiology, nutrition, and animal science. Letter grades only. Evening prelims. K. W. Beyenbach.

The course offers a treatment of selected topics in vertebrate and human physiology that emphasizes concepts and a working knowledge of physiology. The first course half surveys biological design and the functional strategies of multicellular animals. Topics include mammalian fluid compartments, homeostasis, and membrane and epithelial transport. The second half examines the mechanism and the regulation of cardiovascular, gastrointestinal, and renal systems. Course-concluding lectures aim to illustrate the integration of systems in the regulation of acid/base balance. Clinical examples of dysfunction will underscore the role of normal function, and some diseases will be traced to the deepest roots of their molecular etiology. Weekly problem sets count 50 percent of the final grade.

BIOAP 4750 Mechanisms Underlying Mammalian Developmental Defects (also BIOMS/NS 4750)

Spring. 3 credits. Prerequisites: BIOBM 3300, 3310–3320, or 3330 (may be taken concurrently). S–U or letter grades. Offered alternate years. D. Noden and P. Stover.

Focuses on the causes of developmental defects and how genetic changes or teratogenic insults disrupt developmental regulatory and metabolic pathways.

BIOAP 4890 Mammalian Embryology (also BIOGD/BIOMS 4890)

Spring. 3 credits. Prerequisite: introductory biology. S–U or letter grades. Evening prelims. Offered alternate years. D. M. Noden.

Examines the early formation of the mammalian body and placenta, emphasizing comparative aspects, and morphogenesis and histogenesis of each organ system.

BIOAP 4980 Teaching Experience

Fall or spring. 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility but not eligibility for graduating with distinction. S–U or letter grades by permission of instructor. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

[BIOAP 7140 Cardiac Electrophysiology

Fall. 1 credit. S-U grades only. Offered alternate years; next offered 2010-2011.

R. Gilmour.

Survey of cardiac potentials, passive membrane properties, ion channels, and cardiac arrhythmias. Emphasizes nonlinear dynamic aspects of cardiac electrophysiology and cardiac arrhythmias.]

BIOAP 7200 Animal Physiology and Anatomy Seminar

Fall and spring. 1 credit each semester; may be repeated for credit. Prerequisite: admission to graduate field of physiology. S-U or letter grades. R. Davison.

Designed to train graduate students in the field of physiology to become professional scientists. Students are required to give a seminar on their research. Advice and feedback are provided. Throughout the semester, advice is provided on subjects such as preparation of manuscripts, seminars, and grant proposals.

BIOAP 7570 Current Concepts in Reproductive Biology

Fall. 3 credits. Limited to 20 students.

Prerequisites: undergraduate degree in biology and strong interest in reproductive biology. S-U or letter grades. Offered alternate years. J. E. Fortune, P. A. Johnson, and staff.

Team-taught survey course in reproductive physiology/endocrinology. Lectures by a number of reproductive biologists on various aspects of male reproductive function (endocrine regulation, testis function, spermatogenesis, sperm physiology/function); female reproductive function (endocrinology, ovarian development and function, oocyte physiology/function); fertilization and gamete transport; pregnancy; parturition; lactation; aging; reproductive technology. Student participation in the form of discussions and/or presentations.

BIOAP 7940 Special Topics in Physiology

Fall or spring. 1 or 2 credits per topic; may be repeated for credit. Enrollment in each topic may be limited. S-U or letter grades by permission of instructor. Staff.

Lectures, laboratories, discussions, and seminars on specialized topics.

BIOCHEMISTRY, MOLECULAR AND CELL BIOLOGY (BIOBM)

BIOBM 1250 Biology Seminar

Fall and spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S-U grades only. Staff.

A first-year seminar designed for students with biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

BIOBM 1320 Orientation Lectures in Molecular Biology and Genetics (also BIOGD 1320)

Spring, weeks 1-3. 0 credits. Primarily for freshmen, sophomores, and transfer students. S-U grades only. J. Blankenship.

Six professors discuss their research and promising new areas for research in the future.

BIOBM 3300-3320 Principles of Biochemistry

Introductory biochemistry is offered in three formats: individualized instruction (3300) and lectures (3310 and 3320) during the academic year, and lectures (3330) during the summer. *Lectures are given fall semester (3310), spring semester (3320), and summer (3330).*

BIOBM 3300 Principles of Biochemistry, Individualized Instruction

Fall or spring. 4 credits. Prerequisites: one year introductory biology and one year general chemistry and CHEM 1570 or 3570-3580 (CHEM 3580 may be taken concurrently) or equivalent, or permission of instructor. Recommended: concurrent registration in BIOBM 3340. May not be taken for credit after BIOBM 3310, 3320, or 3330. S-U or letter grades. Evening prelims: fall, Oct. 1 and Nov. 3; spring, Feb. 25 and April 6. J. E. Blankenship, P. C. Hinkle, and staff.

Fourteen units that cover protein structure and function, enzymes, basic metabolic pathways, DNA, RNA, protein synthesis, and an introduction to gene cloning. No formal lectures, autotutorial format.

BIOBM 3310 Principles of Biochemistry: Proteins and Metabolism

Fall. 3 credits. Prerequisites: one year introductory biology, one year general chemistry, and CHEM 1570 or 3570-3580 (CHEM 1570 or 3570 should not be taken concurrently) or equivalent, or permission of instructor. May not be taken for credit after BIOBM 3300 or 3330. S-U grades by permission of instructor. Lec; evening prelim Oct. 22. G. W. Feigenson.

The chemical reactions important to biology, and the enzymes that catalyze these reactions, are discussed in an integrated lecture format. Topics include protein folding, enzyme catalysis, bioenergetics, and key reactions of synthesis and catabolism.

BIOBM 3320 Principles of Biochemistry: Molecular Biology

Spring. 2 credits. Prerequisites: one year introductory biology and previous or concurrent registration in organic chemistry, or permission of instructor. May not be taken for credit after BIOBM 3300 or 3330. S-U or letter grades by permission of instructor. Lec. B. K. Tye.

Comprehensive course in molecular biology that covers the structure and properties of

DNA, DNA replication and repair, synthesis and processing of RNA and proteins, the regulation of gene expression, and the principles and applications of recombinant DNA technologies, genomics, and proteomics.

BIOBM 3330 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology

Summer, eight-week session. 4 credits.

Prerequisites: one year introductory biology, one year general chemistry, and CHEM 1570, or 3570-3580, or equivalents, or permission of instructor. May not be taken for credit after BIOBM 3300, 3310, or 3320. H. Nivison.

Topics include the structure and function of proteins, enzyme catalysis, metabolism, and the replication and expression of genes.

BIOBM 3340 Computer Graphics and Molecular Biology

Fall or spring. 1 credit. Prerequisite:

BIOBM 3330 or 3310-3320 (BIOBM 3320 may be taken concurrently) or Corequisite:

BIOBM 3300. J. E. Blankenship, P. C. Hinkle, and staff.

Visualization of complex biomolecules using Silicon Graphics computers. Group presentations on current topics in molecular biology.

BIOBM 3990 Research Practicum in Molecular and Cellular Biology

Fall or spring. 4 credits. Limited to 12 students.

Prerequisites: genetics (BIOGD 2810) or biochemistry (BIOBM 3300 or BIOBM 3310 or BIOBM 3320 or BIOBM 3330) and permission of instructor. Lec.

Letter grades. Taught occasionally; check with Dept. of MBG for scheduling. Staff.

Organizational meeting to schedule open lab times on first day of class. A laboratory course that integrates ongoing faculty research to introduce students to a project-based research environment. Students will engage in the practice of doing science by direct participation in current projects using a variety of experimental methodologies from molecular and cellular biology, biochemistry, genetics, genomics, and computational biology. Students will work in collaborative research groups to approach and solve scientific problems through rigorous inquiry and exchange. Credit may be awarded to a maximum of two consecutive semesters.

BIOBM 4310 Frontiers in Biophysics

Fall, full day of lec, S, Sept. 12, 9 a.m.-4 p.m., Racker Room, Biotechnology Bldg. 0.5 credit. S-U grades only. G. Feigenson and staff.

Overview of current research in biophysics at Cornell by faculty from different departments across the university. Designed for undergraduates considering a career in biophysics and for graduate students interested in biophysics research opportunities at Cornell.

BIOBM 4320 Survey of Cell Biology

Spring. 3 credits. Prerequisite: BIOBM 3300, 3330, or 3310, and previous or concurrent registration in 3320, or equivalent. Recommended: BIOGD 2810.

Lec. Undergraduate students must enroll in this course for letter grade; graduate students may enroll either for letter grade or S-U. Evening prelims Mar. 9 and Apr. 22. V. M. Vogt.

Survey of a wide array of topics focusing on the general properties of eukaryotic cells. Topics include methods used for studying cells, the structure and function of the major

cellular organelles, and analyses of cellular processes such as mitosis, endocytosis, cell motility, secretion, cell-to-cell communication, gene expression, and oncogenesis. Some of the material is covered in greater depth in BIOBM 4370, BIOGD 4830, BIOBM 6360, and 6390.

BIOBM 4340 Applications of Molecular Biology to Medicine, Agriculture, and Industry

Fall. 3 credits. Prerequisites: BIOBM 3300 or 3330 or 3310/3320. Recommended: BIOBM 4320. Letter grades. Lec. S. Ely. Lecture topics emphasize transgenic animal and plant systems that constitute marketed or near-market applications such as production of pharmaceuticals in milk, edible and nucleic acid vaccines, gene therapy, and high-tech agricultural products. Additional topics may include cancer treatments and relevant aspects of the human genome projects. An overview of human immunology and its relationship to drug development will be provided. Students will also explore relevant scientific literature.

BIOBM 4350 Undergraduate Biochemistry Seminar

1 credit; may be repeated. Prerequisites: upper-class standing; BIOBM 3300, 3330, or 3310–3320, or written permission of instructor. S–U grades only. D. Wilson. Selected papers from the literature on a given topic are evaluated critically during 12 one-hour meetings.

BIOBM 4370 Regulation of Cell Proliferation, Senescence, and Death (also BIOGD/TOX 4370)

Spring. Variable credit; students may take lec for 2 credits or lec and disc for 3 credits. Limited to about 20 students per disc; priority given to graduate students. Prerequisite: BIOG 1101–1102 or 1105–1106 and BIOBM 3300 or 3310–3320. Recommended: BIOGD 2810 and BIOBM 4320. S–U or letter grades. S. Lee.

Covers a wide spectrum of issues related to cell proliferation in eukaryotes. Lectures include various aspects of the regulation of cell division cycle and signal transduction pathways, with additional topics on oncogenesis, cell aging, and cell death. The facts as well as concepts and logics behind findings are presented in the lectures. Research articles are analyzed and discussed in depth during discussion section.

BIOBM 4380 The RNA World

Spring. 3 credits. Prerequisites: BIOBM 3300 or 3310/3320 or 3330, or permission of instructor. A. Ke. Part of the excitement about “the RNA world” stems from the recognition that RNA is ancient and that the evolution of life as we know it depended upon RNA evolving both informational and catalytic capabilities. This course explores these ideas but more generally provides a comprehensive introduction to RNA biology. Many of the most interesting topics in the RNA biology, such as the mechanism of the RNA interference and its widespread applications, will be covered in detail. Other topics require consideration of essential RNA-protein complexes such as ribosomes, spliceosomes, telomerase, and Signal recognition particles. Classical experiments as well as up-to-date research are covered in this course. A portion of each class is devoted to discussion and questions.

BIOBM 4390 Molecular Basis of Human Disease (also BIOGD 4390)

Fall. 3 credits. Prerequisites: biochemistry and molecular biology (e.g., BIOBM 3300, 3310–3320, or 3330) and genetics (e.g., BIOGD 2810) or permission of instructor. Recommended: cell biology (e.g., BIOBM 4320 or BIOAP 3160) and physiology (e.g., BIOAP 3110 or 4580). S–U or letter grades. Lec. W. L. Kraus.

This course examines how changes in the normal expression, structure, and activity of gene products caused by genetic mutations, epigenetic phenomena, and environmental agents lead to human diseases. The material focuses on how these changes lead to alterations in normal cellular processes, as well as the resulting physiological consequences. Topics are selected from hormone insensitivity syndromes, inborn errors of metabolism, gene fusions resulting in hybrid proteins, gene amplification, gene inactivation, disruption of signaling pathways, disruption of metabolic pathways, and the molecular actions of infectious agents and environmental toxins. Examples of diseases are selected to emphasize various aspects of genetics, molecular biology, cell biology, physiology, immunology, and endocrinology that have been presented in other courses. In addition, the methods used to identify the underlying biochemical and genetic basis of the diseases, as well as possible pharmaceutical and genetic therapies for treating the diseases, are presented. A portion of the lecture periods will be devoted to discussion and practice questions.

BIOBM 4400 Laboratory in Biochemistry and Molecular Biology

Fall, spring, or summer (six-week session). 4 credits. Limited enrollment. Priority given to undergraduate biology majors in Biochemistry or Molecular and Cell Biology programs of study and to graduate students with minor in field of biochemistry. Prerequisites: BIOBM 3300 or 3330 or 3310–3320 (at least one of 3310–3320 completed but one may be taken concurrently). S. Ely and H. Nivison.

Experiments related to molecular biology (includes PCR, DNA cloning, hybridization analysis, restriction mapping, and DNA sequence analysis), protein purification and analysis (salt fractionation, ion exchange chromatography, affinity chromatography, SDS-PAGE, and immunoblotting), and determination of enzyme kinetic parameters.

BIOBM 4430 Experimental Molecular Neurobiology (also BIONB 4300)

Spring. 4 credits. Limited to 12 students. Letter grades only. Disc, lab. Offered alternate years. D. L. Deitcher. For description, see BIONB 4300.

BIOBM 4500 Principles of Chemical Biology (also CHEM 4500)

Fall. 3 credits. Prerequisites: CHEM 3570–3580 or 3590–3600 or equivalent. Staff. For description, see CHEM 4500.

[BIOBM 4510 Structural Chemical Biology (also CHEM 4510)]

Spring. 3 credits. Prerequisites: CHEM 2880 and 3580 or equivalent. Next offered 2010–2011. S. Ealick. For description, see CHEM 4510.]

[BIOBM 4834 Molecular Aspects of Plant Development I (also BIOPL 4834)]

Fall. 1 credit. 12 lec. Offered alternate years; next offered 2010–2011. J. B. Nasrallah. For description, see BIOPL 4834.]

BIOBM 4850 Bacterial Genetics (also BIOMI/BIOGD 4850)

Fall. 2 or 3 credits; optional credit for registered students with permission of instructor to review literature. Prerequisite: BIOGD 2810. Recommended: BIOMI 2900 and BIOBM 3300 or 3310 and 3320 or 3330. Lec. J. E. Peters. For description, see BIOMI 4850.

BIOBM 4980 Teaching Experience

Fall or spring. 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility but not eligibility for graduating with distinction. S–U or letter grades by permission of instructor. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

BIOBM 6310 Protein Structure, Dynamics, and Function

Fall. 3 credits. Prerequisites: BIOBM 3300 or 3330 or 3310–3320 and organic chemistry. Recommended: physical chemistry course. S–U or letter grades. Lec. L. Nicholson.

Presentations on the basic principles of protein structure, dynamics, and function. Specific topics include protein stability, dynamics, evolution, molecular recognition, basic enzyme kinetics, and spectroscopic tools for studying proteins.

BIOBM 6330 Biosynthesis of Macromolecules

Fall. 2 credits. Prerequisite: BIOBM 3300 or 3330 or 3310–3320. Recommended: BIOGD 2810. Lec. J. W. Roberts and D. B. Wilson. Synthesis of DNA, RNA, and proteins, and regulation of gene expression.

BIOBM 6360 Functional Organization of Eukaryotic Cells

Spring. 3 credits. Prerequisites: BIOBM 3300 or 3330 or 3310–3320, and 4320, or equivalents. Lec. W. J. Brown and A. Bretscher.

Aims to provide an integrated view of eukaryotic cell organization as elucidated using biochemical molecular, genetic, and cell biological approaches. Major topics include the cytoskeleton, membrane traffic, and cell polarity. Together with BIOBM 4370 and 6390, this course provides broad coverage of the cell biology subject area.

BIOBM 6390 The Nucleus

Spring. 2 credits. Prerequisite: BIOBM 3300 or 3330 or 3310–3320, or equivalent. Recommended: BIOGD 2810. Lec. J. T. Lis and J. Pleiss.

Lectures on topics of eukaryotic genome organization, chromatin structure, regulation of gene expression, RNA processing, the

structure and movement of chromosomes, and nuclear export and import. Covers the structure and function of the nucleus at the molecular and cell biological levels.

BIOBM 6410 Laboratory in Plant Molecular Biology (also BIOPL 6410)

Fall. 4 credits. Prerequisites: BIOGD 2810 or equivalent, BIOBM 3300 or 3310 or equivalent, and permission of instructor. S-U grades by permission of instructor. Lab. M. R. Hanson, J. Nasrallah, K. Van Wijk, and staff.

For description, see BIOPL 6410.

BIOBM 7300 Protein NMR Spectroscopy (also VETMM 7070)

Spring. 2 credits. Prerequisites: CHEM 3890 and 3900, or 2870 and 2880, or permission of instructor. S-U or letter grades. Offered alternate years. Lec. L. K. Nicholson and R. E. Oswald.

Students acquire the tools necessary for understanding multidimensional NMR of proteins. NMR fundamentals and schemes for magnetization transfer, water suppression, decoupling, and others are presented.

BIOBM 7380 Macromolecular Crystallography (also CHEM 7880)

Spring. 3 credits. Prerequisite: permission of instructor. Lec. S. E. Ealick.

For description, see CHEM 7880.

BIOBM 7510 Ethical Issues and Professional Responsibilities

Spring. 1 credit. Prerequisite: graduate students beyond first year. S-U grades only. Organizational meeting first W of semester. Sem. P. Hinkle.

Ethical issues in research and the professional responsibilities of scientists are discussed based on readings and occasional lectures. The topics are intended to cover the requirements for ethical training of graduate students on training grants and follow the recommendations of the Office of Research Integrity.

BIOBM 7940 Current Topics in Biochemistry

Fall or spring. 0.5 or 1 credit for each topic; may be repeated for credit.

Prerequisite: BIOBM 3300 or 3330 or 3310-3320 or equivalent. S-U grades only. Staff.

Lectures and seminars on specialized topics. Topics for fall and spring to be announced in the course and time roster published at the beginning of each semester or the department mini-courses web site, www.mbg.cornell.edu/cals/mbg/about/courses/mini-courses.cfm.

BIOBM 8300 Biochemistry Seminar

Fall or spring. 0 credits. Prerequisite: graduate students majoring in field of biochemistry, molecular and cell Biology. Lec open to everyone. V. Vogt.

Lectures on current research in biochemistry, presented by distinguished visitors and staff members.

BIOBM 8310 Advanced Biochemical Methods I

Fall. 6 credits. Requirement for, and limited to, first-year graduate students in field of biochemistry, molecular and cell biology. S-U grades only. Lab and disc. Organizational meeting first F of semester 10:10. T. C. Huffaker and J. Pleiss.

The first half of this course comprises an intensive laboratory covering fundamental aspects of modern molecular biology and cell biology. The second half comprises research in the laboratory of a professor chosen by the

student (see BIOBM 8320). Students must enroll separately for each half.

BIOBM 8320 Advanced Biochemical Methods II

Spring. 6 credits. Requirement for, and limited to, first-year graduate students in field of biochemistry, molecular and cell biology. S-U grades only. Lab. V. Vogt.

Research in the laboratories of two different professors chosen by the student. Arrangements are made jointly between the director of graduate studies and the research advisor.

BIOBM 8330 Research Seminar in Biochemistry

Fall or spring. 1 credit each semester; may be repeated for credit. Requirement for, and limited to, second-, third-, and fourth-year graduate students majoring in field of biochemistry, molecular and cell biology. S-U grades only. W. L. Kraus and V. M. Vogt.

Each student presents one seminar per year on his or her thesis research and then meets with instructors and thesis committee members for evaluation.

BIOBM 8360 Methods and Logic in Biochemistry, Molecular and Cell Biology, Part I

Spring. 1 credit. Prerequisite: first-year graduate students majoring in field of biochemistry, molecular and cell biology.

S-U grades only. Sem and disc. G. P. Hess. Seminar with critical discussion by students of original research papers selected by faculty members of the field of biochemistry, molecular and cell biology.

BIOBM 8380 Scientific Communication and Quantitation in Biochemistry, Molecular and Cell Biology (BMCB)

Spring. 2 credits. Prerequisite: second-year graduate students majoring in field of biochemistry, molecular and cell biology or field of genetics and development. S-U grades only. D. Shalloway.

Interactive seminar to develop the general skills needed to support a career in scientific research: experimental design, writing scientific papers and grants, oral presentation, basic statistical and computational methods, and managing a research laboratory. Exercises focus on the preparation of a mock research grant proposal.

Related Courses in Other Departments

Lipids (NS 6020)

Undergraduate Research in Biology (BIOG 4990)

ECOLOGY AND EVOLUTIONARY BIOLOGY (BIOEE)

BIOEE 1250 Biology Seminar

Fall or spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S-U grades only. Staff.

A first-year seminar designed for students with Biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

BIOEE 1540 Introductory Oceanography, Lectures (also EAS 1540)

Fall. 3 credits; optional 1-credit laboratory offered as BIOEE/EAS 1550. S-U or letter grades. B. C. Monger.

For description, see EAS 1540.

BIOEE 1550 Introductory Oceanography, Laboratory (also EAS 1550)

Fall. 1 credit. Corequisite: BIOEE/EAS 1540. S-U or letter grades. B. C. Monger.

For description, see EAS 1550.

BIOEE 2070 Evolution (also HIST 2870, STS 2871)

Fall or summer (six-week session). 3 credits. Intended for students with no background in college biology. May not be taken for credit after BIOEE 2780. Does not meet evolutionary biology requirement for biological sciences major. S-U or letter grades. W. B. Provine.

Evolution is the central concept in biology. This course examines evolution in historical and cultural contexts. This course aims to understand the major issues in the history and current status of evolutionary biology and explore the implications of evolution for culture. Issues range from controversies over mechanisms of evolution in natural populations to the conflict between creationists and evolutionists.

BIOEE 2610 Ecology and the Environment

Fall or summer (three-week session). 4 credits. Prerequisite: one year introductory biology. S-U or letter grades. Fall: J. Sparks; summer: A. T. Vawter.

Fall: Explores interactions between the environment and organisms in the context of individuals, populations, communities, and ecosystems. Emphasizes basic ecological principles and processes intrinsic to understanding the world around us and in more advanced studies in the environmental sciences, including management-oriented disciplines. Major topics include adaptive strategies of organisms, population dynamics, species interactions, community structure and ecosystem function, biodiversity, biogeochemistry, productivity, human influences on ecosystems, and sustainable practices.

Summer: Introduction to principles of ecology, concerning the interactions between organisms and their environment. Deals with both terrestrial and aquatic ecology, drawing examples from both plant and animal studies. Phenomena that occur at the individual, population, community, and ecosystem levels of organization are examined through classroom lectures and discussion and through a series of lab and field experiences in natural habitats around Ithaca. Ecological principles are applied extensively to current environmental problems and issues.

BIOEE 2630 Field Ecology

Fall. 3 credits. Pre- or corequisite: BIOEE 2610. Letter grades only. One weekend field trip. A. Kessler.

Field exercises designed to give students direct experience with fieldwork, with emphasis on developing observational skills, journal keeping, and a landscape perspective. Topics include plant succession, niche relationships of insects, influence of herbivores and competition on plant performance, decomposition of soil litter, foraging behavior, census methods, and use of scientific collections.

BIOEE 2640 Tropical Field Ornithology

Winter, two-week, full-time course. 3 credits. Limited to 14 students; minimum of 8. Prerequisite: permission of instructor. Intended for students with limited or no bird knowledge. S-U or letter grades. Fee: \$250. Daily fieldwork, disc, reading, and individual project. A. A. Dhondt.

Provides students with the opportunity to study birds intensively in a neotropical environment. Students learn observational and field techniques, participate in group research projects and in daily seminars. The group is housed in the Biodiversity Center at Punta Cana. One or two field trips are taken to national parks in the Dominican Republic.

BIOEE 2650 Tropical Field Ecology and Behavior

Winter, field course based in Kenya, Africa. 4 credits. Limited to 15 students. Prerequisites: one introductory biology course and permission of instructors. Letter grades only. I. J. Lovette and D. Rubenstein.

Gives students a broad hands-on understanding of tropical biology, ecology, and behavioral ecology. Students gain experience with experimental design and data collection, field methods, basic statistics, interpretation and evaluation of primary scientific literature, and scientific paper writing. Students pay separately for their international airfare and there may also be a small supplementary laboratory fee.

BIOEE 2670 Introduction to Conservation Biology

Fall. 2 or 3 credits, 3 credits with disc sec, two Sat a.m. field trips, and two essays. Intended for both science and nonscience majors. May not be taken for credit after NTRES 4100. Completion of BIOEE 2670 not required for NTRES 4100. S-U or letter grades. Offered alternate years. J. W. Fitzpatrick.

Broad exploration of biological concepts and practices related to conserving the earth's biodiversity; integrates ecological, evolutionary, behavioral, and genetic principles important for understanding conservation issues of the 21st century. Topics include species and ecosystem diversity, values of biodiversity, causes of extinction, risks facing small populations, simulation modeling, design of nature preserves, the Endangered Species Act, conservation priority-setting, species recovery, ecosystem restoration and management, implications of climate change, and our ecological footprint.

BIOEE 2740 The Vertebrates: Structure, Function, and Evolution

Spring. 4 credits. Prerequisite: one year introductory biology. Fee: \$25. S-U or letter grades. B. A. McGuire.

Introductory course in vertebrate organismal biology that explores the structure and function of vertebrates with an emphasis on trends in vertebrate evolution. Lectures cover topics such as the origin and evolution of various vertebrate groups, sensory systems, thermoregulation, life history, locomotion, feeding, size, and scaling. Laboratories include dissections of preserved vertebrate animals and noninvasive live animal demonstrations.

BIOEE 2780 Evolutionary Biology

Fall or spring. 3 or 4 credits; 4-credit option involves writing component and two disc per week; 4-credit option limited to 20 students per sec each semester. (Students may not preregister for 4-credit option; interested students complete application form on first day of class.) Limited to 300 students. Prerequisite: one year introductory biology or permission of instructor; first-semester freshmen by permission of instructor. S-U or letter grades. One all-day Sat. field trip. Evening prelims: spring, Mar. 4 and April 6. Fall, I. Lovette; spring, staff.

Considers explanations for patterns of diversity and for the apparent good fit of organisms to the environment. Topics include the genetic and developmental basis of evolutionary change, processes at the population level, the theory of evolution by natural selection, levels of selection, concepts of fitness and adaptation, modes of speciation, long-term trends in evolution, rates of evolution, and extinction. Students taking the 4-credit option read additional materials from the primary literature and write a series of essays in place of the regular prelims.

BIOEE 3500 Dynamics of Marine Ecosystems (also EAS 3500)

Fall. 3 credits. Limited to 25 students. Prerequisites: one year of calculus and semester of oceanography (i.e., BIOEE/EAS 1540), or permission of instructor. S-U or letter grades. Offered alternate years. C. H. Greene and R. W. Howarth.

For description, see EAS 3500.

BIOEE 3510 Conservation Oceanography (also EAS 3510)

Spring, full-time, three-week course. 4 credits. Limited to 25 students. Prerequisites: enrollment in Cornell Abroad Earth and Environmental Sciences Semester in Hawaii; one semester of calculus and two semesters of biology or permission of instructor. Letter grades only. C. H. Greene, C. D. Harvell, and B. C. Monger.

For description, see EAS 3510.

[BIOEE 3620 Dynamic Models in Biology (also MATH 3620)]

Spring. 4 credits. Prerequisites: two semesters introductory biology (BIOG 1101-1102, 1105-1106, 1107-1108, 1109-1110 or equivalent) and completion of mathematics requirements for Biological Sciences major or equivalent. S-U or letter grades. Offered alternate years; next offered 2010-2011. S. P. Ellner and J. M. Guckenheimer.

Introductory survey of the development, computer implementation, and applications of dynamic models in biology and ecology. Case-study format covering a broad range of current application areas such as regulatory networks, neurobiology, cardiology, infectious disease management, and conservation of endangered species. Students also learn how to construct and study biological systems models on the computer using a scripting and graphics environment.]

[BIOEE 3630 Field Methods in Ornithological Research

Summer (eight-week session). 5 credits. Limited to 15 students. Prerequisites: introductory biology or equivalent, interest and ability to spend all day in the field under variable weather conditions, including intense sun and periods of rain, and permission of instructor. S-U or letter

grades. Next offered 2011-2012. D. W. Winkler and staff.]

BIOEE 3690 Chemical Ecology (also BIONB/ENTOM 3690)

Spring. 3 credits. Prerequisites: one semester of introductory biology for majors or nonmajors and one semester of introductory chemistry for majors or nonmajors or equivalents, or permission of instructor. S-U or letter grades. J. S. Thaler, A. Kessler, A. Agrawal, and R. Raguso.

Why are chilies so spicy? This course examines the chemical basis of interactions between species and is intended for students with a basic knowledge of chemistry and biology. Focuses on the ecology and chemistry of plants, animals, and microbes. Stresses chemical signals used in diverse ecosystems, using Darwinian natural selection as a framework. Topics include plant defenses, microbial warfare, communication in marine organisms, and human pheromones.

[BIOEE 3710 Human Paleontology (also ANTHR 3710)]

Fall. 4 credits. Limited to 18 students. Prerequisite: one year introductory biology or ANTHR 1300 or permission of instructor. Letter grades only. Occasional field trips. Next offered 2011-2012. K. A. R. Kennedy.]

BIOEE 3730 Biodiversity and Biology of the Marine Invertebrates

Fall (but course must be taken previous summer at Shoals Marine Laboratory [SML]), three-week, full-time course. 5 credits (students enroll for credit during fall semester). Limited to 24 students. Prerequisites: one year introductory biology for majors; permission of faculty because off campus. Letter grades only. Daily and evening lec, lab, and fieldwork. Total cost for room, board, and overhead at SML: \$2,426. Offered alternate years. C. D. Harvell.

Introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. In addition to the evolution of form and function, lectures cover aspects of ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. SML exposes students to a wealth of marine and terrestrial invertebrates in their natural habitats. Regular field excursions allow an excellent opportunity to study freshly collected and in situ representatives of most of the major phyla.

BIOEE 4460 Plant Behavior—Induced Plant Responses to Biotic Stresses, Lectures (also BIONB 4460)

Spring. 3 credits. Prerequisite: BIOEE 2610 or permission of instructor. S-U or letter grades. A. Kessler and R. Raguso.

How do plants respond to herbivore attack? What are the molecular, plant hormonal, metabolic mechanisms of these responses? What ecological consequences do these responses have for the fitness of the plants and their attackers? The course provides an overview of the plant's myriad responses to herbivores and compares them with responses to pathogens. It gives an introduction to the study of induced plant responses in the lectures as well as practical independent and group-intensive work.

BIOEE 4461 Plant Behavior—Induced Plant Responses to Biotic Stresses, Laboratory (also BIONB 4461)

Spring. 1 credit. Limited to 12 students. Pre- or corequisite: BIOEE 4460 or BIONB 4460. S-U or letter grades. A. Kessler and R. Raguso.

Laboratory course covering topics presented in BIOEE 4460/BIONB 4460.

[BIOEE 4500 Mammalogy, Lectures

Spring. 3 credits. Recommended: BIOEE 2740. Letter grades; S-U grades by permission of instructor. Offered alternate years; next offered 2010-2011. B. A. McGuire.]

[BIOEE 4501 Mammalogy, Laboratory

Spring. 1 credit. Limited to 16 students. Pre- or corequisite: BIOEE 4500. Letter grades; S-U grades by permission of instructor. Fee: \$20. Travel to Cornell University Museum of Vertebrates (CUMV) at the Laboratory of Ornithology is necessary. One all-day field trip may be scheduled. Offered alternate years; next offered 2010-2011. B. A. McGuire.]

[BIOEE 4530 Speciation

Spring. 4 credits. Limited to 40 students. Prerequisites: BIOEE 2780 and BIOGD 2810 or equivalents, or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2010-2011. R. G. Harrison.]

[BIOEE 4550 Insect Ecology (also ENTOM 4550)

Fall. 4 credits. Recommended: ENTOM 2120 or BIOEE 2610 or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2010-2011. J. S. Thaler.

For description, see ENTOM 4550.]

BIOEE 4560 Stream Ecology (also NTRES 4560)

Fall. 4 credits. Prerequisite: BIOEE 2610 or permission of instructor. S-U or letter grades. Field project with lab papers. One Sat. field trip. Offered alternate years.

A. S. Flecker and C. E. Kraft.

For description, see NTRES 4560.

BIOEE 4570 Limnology: Ecology of Lakes, Lectures

Spring. 3 credits. Prerequisite: BIOEE 2610 or written permission of instructor. Recommended: introductory chemistry. Letter grades; S-U grades by permission of instructor only. Offered alternate years. N. G. Hairston, Jr.

Limnology is the study of fresh waters and other inland, nonmarine environments. This course focuses on lakes and ponds, which are discussed as distinct aquatic environments with clear terrestrial boundaries, and within which ecological interactions are especially evident. In lakes, interactions between organisms are often strong and adaptations easily recognized. Physical and chemical properties of the environment impact organisms in important ways and organisms, likewise, influence physics and chemistry. As a result, lakes provide excellent systems for understanding the links between physical (thermal and mixing), chemical (dissolved elements and compounds), and organismal dynamics. Lakes are exciting environments for study in their own right and for gaining perspective on ecological and evolutionary processes in general.

BIOEE 4571 Limnology: Ecology of Lakes, Laboratory

Spring. 2 credits. Pre- or corequisite: BIOEE 4570. Letter grades; S-U grades by permission of instructor only. One weekend field trip. Fee for food on field trip: \$15. Offered alternate years. N. G. Hairston, Jr. and staff.

Laboratories and field trips devoted to studies of the biological, chemical, and physical properties of lakes and other freshwater environments. Exercises focus on understanding the freshwater environment, on experimentation, and on understanding ecological processes within lakes. Optional vertebrate dissection (fish) during one laboratory exercise and during a portion of the weekend field trip.

BIOEE 4580 Community Ecology

Spring. 4 credits. Prerequisites: BIOEE 2610, 2780, or permission of instructor. S-U or letter grades. Offered alternate years. M. A. Geber and A. Agrawal.

Intersection between ecology and evolution of species interactions. Covers historical and current views on community structure and diversity. Topics include impacts of species interactions on ecology and evolution of community players, multispecies webs, and natural selection in complex communities. Approach is empirical and methodological.

[BIOEE 4600 Theoretical Ecology

Spring. 4 credits. Limited enrollment. Prerequisites: completion of Biological Sciences mathematics requirement or equivalent, and either one additional semester of mathematics, statistics, or modeling (e.g., BEE 2600/4530/4750, NTRES 3100/4110, BIONB 4220) or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2011-2012. S. P. Ellner.]

[BIOEE 4620 Marine Ecology (also EAS 4620)

Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE 2610. Letter grades; S-U grades by permission of instructor only. Offered alternate years; next offered 2010-2011. C. D. Harvell and C. H. Greene.]

BIOEE 4640 Macroevolution

Spring. 4 credits. Limited to 35 students. Prerequisite: BIOEE 2780 or permission of instructor. Interested graduate students strongly encouraged to preregister. Letter grades; S-U grades by permission of instructor only. Offered alternate years. A. R. McCune.

Advanced course in evolutionary biology centered on large-scale features of evolution. Areas of emphasis include phylogeny reconstruction, patterns and processes of speciation, the origin of evolutionary novelty, causes of major evolutionary transitions, and patterns of diversification and extinction in the fossil record. Discussion of these problems involves data and approaches from genetics, morphology, systematics, paleobiology, development, and ecology.

[BIOEE 4660 Physiological Plant Ecology, Lectures

Spring. 3 credits. Limited to 30 students. Prerequisite: BIOEE 2610 or introductory plant physiology. Letter grades; S-U grades by permission of instructor only. Offered alternate years; next offered 2010-2011. J. P. Sparks.]

[BIOEE 4661 Physiological Plant Ecology, Laboratory

Spring. 2 credits. Limited to 15 students. Pre- or corequisite: BIOEE 4660. Letter grades only. Offered alternate years; next offered 2010-2011. J. P. Sparks.]

BIOEE 4670 Seminar in the History of Biology (also HIST 4150, BSOC/STS 4471)

Fall or summer (six-week session). 4 credits. Limited to 18 students. S-U or letter grades. W. B. Provine.

Specific topics change each year.

[BIOEE 4690 Food, Agriculture, and Society (also BSOC/STS 4691)

Spring. 3 credits. Limited to 20 students. Prerequisite: introductory ecology course or permission of instructor. S-U or letter grades. Next offered 2010-2011. A. G. Power.]

[BIOEE 4700 Herpetology, Lectures

Spring. 2 credits. Limited to 50 students. Recommended: BIOEE 2740 and concurrent enrollment in BIOEE 4701. Letter grades; S-U grades by permission of instructor only. Offered alternate years; next offered 2010-2011. H. W. Greene.]

[BIOEE 4701 Herpetology, Laboratory

Spring. 2 credits. Limited to 35 students. Pre- or corequisite: BIOEE 4700. Letter grades; S-U grades by permission of instructor only. Fee: \$30. Occasional field trips and special projects. Offered alternate years; next offered 2010-2011. H. W. Greene.]

[BIOEE 4730 Ecology of Agricultural Systems (also HORT 4730)

Fall. 3 credits. Limited to 45 students. Prerequisite: BIOEE 2610 or permission of instructor. S-U or letter grades. During first six weeks of class, Thurs. meetings may run later because of field trips. Next offered 2010-2011. L. E. Drinkwater.]

BIOEE 4750 Ornithology

Spring. 4 credits. Limited to 35 students. Prerequisite: permission of instructor by preregistering in E141 Corson Hall. Recommended: BIOEE 2740. Letter grades; S-U grades by permission of instructor only. Carpooling to Lab of Ornithology necessary. Fee: \$15. Occasional field trips and special projects. Offered alternate years. D. W. Winkler.

Lectures cover various aspects of the biology of birds, including anatomy, physiology, systematics, evolution, behavior, ecology, and biogeography. Laboratory includes dissection of dead material, studies of skeletons and plumages, and specimen identification of avian families of the world and species of New York.

[BIOEE 4760 Biology of Fishes

Fall. 4 credits. Limited to 24 students. Recommended: BIOEE 2740 or equivalent experience in vertebrate zoology. Letter grades; S-U grades by permission of instructor only. Small lab fee may be required. Two field trips. Offered alternate years; next offered 2010-2011. A. R. McCune.]

BIOEE 4770 Marine Invertebrates Seminar

Fall. 1 credit. Prerequisite: BIOEE 3730 or permission of instructor. S-U grades only. Offered alternate years. C. D. Harvell.

Discussions and directed readings center on current research themes in invertebrate biology. Designed as an on-campus companion course to the field-based BIOEE 3730 Biodiversity and Biology of the Marine Invertebrates. Students write individual research essays based on projects done in the field.

[BIOEE 4780 Ecosystem Biology

Spring, 4 credits. Prerequisite: BIOEE 2610 or equivalent. S-U or letter grades. Offered alternate years; next offered 2010–2011. C. L. Goodale and R. W. Howarth.]

BIOEE 4790 Paleobiology (also EAS 4790)

Spring, 4 credits. Prerequisites: one year introductory biology for majors and either BIOEE 2740, 3730, EAS 3010, or permission of instructor. S-U or letter grades. W. D. Allmon.

For description, see EAS 4790.

[BIOEE 4800 Ecological Genetics (also ENTOM 4700)

Spring, 4 credits. Prerequisite: BIOEE 2780. Recommended: introductory course in genetics and/or statistics. S-U or letter grades. Offered alternate years; next offered 2010–2011. B. P. Lazzaro.

For description, see ENTOM 4700.]

[BIOEE 4900 Topics in Marine Biology

Spring, 2 credits; may be repeated for credit. Limited to 15 students. Prerequisite: permission of instructor. Primarily for undergraduates. S-U or letter grades. Offered alternate years. J. G. Morin.

Seminar courses on selected topics in marine biology; may include laboratory or field trips. Topics and time of organizational meeting are shown in departmental course offerings listed on the web site.]

BIOEE 4980 Teaching Experience

Fall or spring, 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility but not eligibility for graduating with distinction. S-U or letter grades by permission of instructor. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

BIOEE 6600 Field Studies in Ecology and Evolutionary Biology

Fall or spring. Variable credit. Prerequisites: BIOEE 2610, taxon-oriented course, and permission of instructor. Letter grades; S-U grades by permission of instructor only. Lec and field trips TBA. Estimated costs: TBA. Staff.

Provides students with opportunities to learn field techniques and new biota by participating in an intensive series of field exercises. Extended field trips may be scheduled during fall break, intercession, or spring break. The regions visited, trip objectives, and other details are announced by the various instructors at an organizational meeting held at the beginning of the semester.

Meetings on campus are devoted to orientation and reports on completed projects.

[BIOEE 6601 Tropical Field Ecology

Spring, 2 credits. Prerequisite: for undergraduates, experience or course work with terrestrial, marine, or freshwater organisms. Extended field trip over winter break. Letter grades only. Fee to cover transportation and housing: TBA. Offered alternate years; next offered 2010–2011. C. D. Harvell, J. P. Sparks, and N. G. Hairston, Jr.]

BIOEE 6602 Graduate Field Course in Ecology

Spring, 3 credits. Prerequisite: graduate standing. Letter grades only. Fee charged to help cover food and lodging for trip to Florida. Offered alternate years. J. P. Sparks and H. W. Greene.

Designed to give graduate students experience in defining questions and designing field investigations. The course is based at the Archbold Biological Station in central Florida over spring break and during the following week. The class visits several ecosystems including sand pine scrub, cattle ranches, cypress swamps, and the Everglades.

BIOEE 6610–6611 Environmental Policy (also ALS 6610–6611, BSOC 4611–4612)

6610, fall; 6611, spring, 3 credits each semester; students must register for 6 credits each semester since R grade given at end of fall semester. Limited to 12 students. Prerequisite: permission of instructor. Letter grades only. D. Pimentel.

Focuses on complex environmental issues. Ten to 12 students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in *Science* or *BioScience*. Thus far, every study has been published.

BIOEE 6680 Principles of Biogeochemistry

Spring, 4 credits. Limited to 20 students. Prerequisite: solid background in ecology, environmental chemistry, or related environmental science; for undergraduates, permission of instructor. S-U or letter grades. Offered alternate years. R. W. Howarth and C. L. Goodale.

Lectures cover the biotic controls on the chemistry of the environment and the chemical control of ecosystem function. Emphasis is on cycles of major elements and minor elements globally and in selected ecosystems, stressing the coupling of element cycles. A comparative approach is used to illustrate similarities and differences in element cycling among ecosystems. Analysis of both theoretical and applied issues, including global atmospheric changes and factors controlling the acidification of lakes and soils.

[BIOEE 6710 Palaeoanthropology of South Asia (also ANTHR 6371, ASIAN 6671)

Fall, 3 credits. Limited to 15 students. Letter grades only. Next offered 2011–2012. K. A. R. Kennedy.]

[BIOEE 6730 Human Evolution: Concepts, History, and Theory (also ANTHR 6373)

Spring, 3 credits. Prerequisite: one year introductory biology or ANTHR 1300 or permission of instructor. Letter grades only. Next offered 2011–2012. K. A. R. Kennedy.]

[BIOEE 6750 Current Topics in Plant Molecular Ecology

Fall, 1 credit; may be repeated for credit. Limited to 20 students. Prerequisite: graduate standing or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2010–2011. A. Kessler.]

BIOEE 7600 Special Topics in Evolution and Ecology

Fall or spring, 1–3 credits; may be repeated for credit. Limited enrollment. Letter grades; S-U grades by permission of instructor only. Staff.

Independent or group-intensive study of special topics of current interest. Content varies each semester.

[BIOEE 7610 Microsatellite DNA: Techniques

Fall, 1 credit; may be repeated for credit. Limited to 12 students. Prerequisite: permission of instructor. Primarily for graduate students; undergraduates admitted only under exceptional circumstances. E-mail S. M. Bogdanowicz (smb31) by end of Aug. if interested. S-U grades only. Fee: TBA. Next offered 2010–2011. R. G. Harrison and S. M. Bogdanowicz.]

BIOEE 7640 Plant-Insect Interactions Seminar

Fall or spring, 1 credit; may be repeated for credit. Prerequisite: for undergraduates, permission of instructor. S-U grades only. A. Agrawal, J. S. Thaler, and A. Kessler.

Group intensive study of current research in plant-insect interactions. Topics vary from semester to semester but include chemical defense, coevolution, insect community structure, population regulation, biocontrol, tritrophic interactions, and mutualism.

BIOEE 7670 Current Topics in Ecology and Evolutionary Biology

Fall, 4 credits. Prerequisite: for undergraduates, permission of instructor. S-U grades only. Staff.

Critical evaluation and discussion of theory and research in ecology and evolutionary biology. Lectures by faculty and student-led discussions of topics in areas of current importance.

BIOEE 7700 Workshop in Biogeochemistry

Fall or spring, 1–3 credits; may be repeated for credit. Limited to 15 students. Prerequisite: BIOEE 6680. S-U grades only. Staff.

Workshop-forum in which graduate students interact with invited world leaders in biogeochemistry. Workshop topics change each semester. A one-week workshop is preceded by seven one-hour preparatory discussions of readings.

BIOEE 7800 Graduate Seminar in Ornithology (also NTRES 7800)

Fall or spring, 1 credit; may be repeated for credit. Prerequisite: for undergraduates, permission of instructor. S-U grades only. I. J. Lovette, A. A. Dhondt, D. W. Winkler, and J. L. Dickinson.

Group intensive study of current research in ornithology. Topics vary from semester to semester.

BIOEE 8990 M.S. Thesis Research

Fall or spring, 1–15 credits. Prerequisite: admission to field of ecology and evolutionary biology. S-U or letter grades. E&B field faculty.

Thesis research conducted by an M.S. student in the field of ecology and evolutionary biology with advice and consultation of a major professor who is a member of the field.

BIOEE 9990 Ph.D. Dissertation Research

Fall or spring, 1–15 credits. Prerequisite: admission to field of ecology and evolutionary biology as Ph.D. student. S–U or letter grades. E&EB field faculty. Dissertation research conducted by a Ph.D. student in the field of ecology and evolutionary biology with advice and consultation of a major professor who is a member of the field.

BIOGD 1250 Biology Seminar

Fall and spring, 1 credit. Prerequisite: first-year standing or permission of instructor. S–U grades only. Staff.

A first-year seminar designed for students with Biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

BIOGD 1320 Orientation Lectures in Molecular Biology and Genetics (also BIOBM 1320)

Spring, weeks 1–3. 0 credits. Primarily for freshmen, sophomores, and transfer students. S–U grades only. J. Blankenship. For description, see BIOBM 1320.

BIOGD 2800 Lectures in Genetics

Fall, spring, or summer (eight-week session). 3 credits. Lec component of BIOGD 2810. Not open to students majoring in biological sciences; may not be used to fulfill requirements for biological sciences major. Prerequisites: one year introductory biology or equivalent, or permission of instructor. Highly recommended: problem-solving sessions. T. D. Fox, M. L. Goldberg, and D. Nero. For description, see BIOGD 2810.

BIOGD 2810 Genetics

Fall, spring, or summer (eight-week session). 5 credits. Not open to freshmen fall semester. Prerequisite: one year introductory biology or equivalent. Lec, lab. Fall and spring classes planned T, W, R, F, 2:30–4:30. Lab sign-ups done in first lec. Highly recommended: problem-solving sessions. T. D. Fox, M. L. Goldberg, and D. Nero.

General introduction to the fundamental principles of genetics in eukaryotes and prokaryotes. Topics include gene transmission, linkage, recombination, structure, mutations, and manipulation, as well as analysis of genomes in individuals and populations.

BIOGD 2820 Human Genetics

Spring. 2 or 3 credits; 2 credits if taken after BIOGD 2810. Prerequisite: one year introductory biology or equivalent. S–U or letter grades. Lec. M. L. Goldberg and D. Nero.

Designed for nonmajors. Lectures provide the technical background needed to understand controversial personal, social, and legal implications of modern genetics that are discussed in section meetings.

BIOGD 3850 Developmental Biology

Fall. 3 credits. Prerequisite: BIOGD 2810. Lec. K. Liu.

Introduction to the morphogenetic, molecular and cellular, and genetic aspects of the developmental biology of animals.

BIOGD 3940 Circadian Rhythms (also ENTOM/BIONB/PLPA 3940)

Fall. 2–3 credits. Prerequisite: ENTOM 2120 or BIOGD 2810 or BIONB 2210 or 2220 or permission of instructor. S–U or letter grades. Lec. K. Lee.

This course will explore a fundamental feature of living organisms found in all kingdoms: how the cellular 24-hour biological clock operates and influences the biological activities. The course will cover fundamental properties of biological rhythms and cellular and molecular structure of circadian oscillators of model organisms including cyanobacteria, fungi, insects, plants, and mammals. One-credit (optional) lab module offered in conjunction with lec.

BIOGD 3990 Research Practicum in Molecular and Cellular Biology

Fall or spring. 4 credits. Limited to 12 students. Prerequisites: genetics (BIOGD 2810) or biochemistry (BIOBM 3300 or BIOBM 3310 or BIOBM 3320 or BIOBM 3330) and permission of instructor. Lec. Letter grades. Taught occasionally. Check with Dept. of MGB for scheduling.

Organizational meeting to schedule open lab times on first day of class. Staff.

A laboratory course that integrates ongoing faculty research to introduce students to a project-based research environment. Students will engage in the practice of doing science by direct participation in current projects using a variety of experimental methodologies from molecular and cellular biology, biochemistry, genetics, genomics, and computational biology. Students will work in collaborative research groups to approach and solve scientific problems through rigorous inquiry and exchange. Credit may be awarded to a maximum of two consecutive semesters.

BIOGD 4000 Genomics

Fall. 3 credits. Prerequisites: one year introductory biology plus BIOGD 2810 or 3300 or 3330 or 3310/3320 or permission of instructor. S–U or letter grades. Lec. J. Schimenti.

Introduction to principles underlying the organization of genomes and the methods of studying them, emphasizing genome-wide approaches to research. Covers the application of genomics methodologies for addressing issues including gene regulation, evolution, complex systems, genetics, and gene: phenotype relationships. Landmark and timely genomics papers and other research developments will be discussed. Basic bioinformatics tools will be incorporated.

BIOGD 4010 Genomic Analysis

Spring. 3 credits. Prerequisite: BIOGD 4000 or permission of instructor. Lec. T. P. O'Brien.

Overview of approaches and tools used in genomics research. Covers experimental and computational technologies as well as theoretical concepts important for the study of genomes and their function. Topics include genome sequencing and assembly, high-throughput sequencing, comparative genomics, genetic variation and complex traits, expression profiling and proteomics, genome modification and transgenesis, modeling network structure and dynamics. Discussions will explore how genomic tools and approaches can be integrated to study biological systems.

BIOGD 4370 Regulation of Cell Proliferation, Senescence, and Death (also BIOBM/TOX 4370)

Spring. Variable credit; students may take lec for 2 credits or lec and disc for 3 credits. Limited to about 20 students per disc; priority given to graduate students. Prerequisites: BIOG 1101–1102 and BIOBM 3300 or 3310/3320. Recommended: BIOGD 2810 and BIOBM 4320. S–U or letter grades. S. Lee.

For description, see BIOBM 4370.

BIOGD 4390 Molecular Basis of Human Disease (also BIOBM 4390)

Fall. 3 credits. Prerequisites: biochemistry and molecular biology (e.g., BIOBM 3300, 3310/3320, or 3330) and genetics (e.g., BIOGD 2810) or permission of instructor. Recommended: cell biology (e.g., BIOBM 4320 or BIOAP 3160) and physiology (e.g., BIOAP 3110 or 4580). S–U or letter grades. Lec. W. L. Kraus.

For description, see BIOBM 4390.

BIOGD 4400 Stem Cell Biology: Basic Science and Clinical Applications

Spring. 3 credits. Limited to 40 students. Prerequisites: BIOBM 4320 or BIOGD 3850 or permission of instructor. S–U grades by permission of instructor. Lec, disc. T. Tumber.

This course will cover basic aspects of tissue morphogenesis and homeostasis with emphasis on the biological role of embryonic and adult stem cells in development, and their possible clinical applications. The focus will be placed on mouse and human stem cells. The discussion will be structured around relevant research papers that allow more in-depth analysis of the material taught during lectures.

BIOGD 4500 Vertebrate Development

Fall. 3 credits. Prerequisites: BIOGD 2810, and either BIOBM 4320 or BIOGD 3850. S–U or letter grades. M. J. Garcia-Garcia.

This course explores the developmental mechanisms employed by vertebrate organisms. Topics include the detailed analysis of the genetic, molecular, and cellular events underlying development in frogs, fish, mice, and humans. Course readings include original research articles. Students are encouraged to participate in class discussions.

[BIOGD 4610 Development and Evolution

Spring. 3 credits. Prerequisites: BIOEE 2780, BIOGD 2810, BIOBM 3320 or 3300 or 3330. Recommended: BIOGD 3850. Lec. Offered alternate years; next offered 2010–2011. M. F. Wolfner.]

BIOGD 4810 Population Genetics

Fall. 4 credits. Prerequisite: BIOGD 2810, BIOEE 2780, or equivalents. Lec, disc. C. F. Aquadro.

Population genetics is the study of the transmission of genetic variation through time and space. This course explores how to quantify this variation, what the distribution of variation tells us about the structure of natural populations, and about the processes that lead to evolution. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and fitness, genetic drift, migration and population structure, mutation, multilocus models, the genetics of speciation, quantitative traits, and the maintenance of molecular variation. Emphasis is placed on DNA sequence variation and the interplay between theory and the data from experiments and natural populations. Specific case studies include the population genetic issues involved in DNA fingerprinting, personalized medicine, the genetic structure and evolution of natural and domesticated populations, and the study of adaptation at the molecular level. Examples are drawn from studies of animals, plants, and microbes.

BIOGD 4820 Human Genetics and Society

Fall. 4 credits. Limited to 24 students. Prerequisite: biological sciences majors; BIOGD 2810 and BIOBM 3300 or 3330 or 3310 and 3320. Taught occasionally. Check with Dept. of MBG for scheduling. M. Inada.

Presentation of science and technology of human genetics, plus discussion of the ethical, social, and legal implications of recent advances in the field. Topics include assisted reproductive strategies, genetic counseling, genetic screening (pre-implantation, prenatal, pre-symptomatic, carrier, and workplace), therapy for genetic diseases, human cloning, genetics and behavior, forensic uses of genetics and eugenics. Students lead discussions. There is a major writing component.

[BIOGD 4825 Molecular Biology of Plant Organelles (also BIOPL 4825)

Spring. 1 credit. Prerequisites: BIOPL 4831 or BIOGD 2810 and permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. M. R. Hanson and D. B. Stern.

For description, see BIOPL 4825.]

BIOGD 4831 Concepts and Techniques in Plant Molecular Biology (also BIOPL/PLPA/PLBR 4831)

Fall. 2 credits. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. Lec. S–U or letter grades. M. Scanlon, M. Hanson, and T. Owens.

For description, see BIOPL 4831.

BIOGD 4840 Molecular Evolution

Spring. 3 credits. Prerequisites: BIOGD 2810. Lec. D. Barbash.

Explores the various processes by which DNA and protein sequences evolve over time, and how this evolution at the molecular level relates to changes in the morphology, behavior, and physiology of organisms that have occurred over time scales ranging from thousands to billions of years. After developing basic principles the course discusses the evolution and organization of genomes from microbes to higher eukaryotes, including humans, and the relationship between molecular evolution at the sequence level and the evolution of developmental pathways and systems.

BIOGD 4850 Bacterial Genetics (also BIOBI/BIOBM 4850)

Fall. 2 or 3 credits; optional 1 credit for registered students with permission of instructor to review literature. Prerequisite: BIOGD 2810. Recommended: BIOBI 2900 and BIOBM 3300 or 3310 and 3320 or 3330. J. E. Peters.

For description, see BIOBI 4850.

BIOGD 4860 Eukaryotic Genetics

Spring. 4 credits. Enrollment may be limited to 50 students. Prerequisites: BIOGD 2810, BIOBM 3300 or 3330 or 3310 and 3320. S–U or letter grades. E. Alani.

Develops fundamental skills in eukaryotic genetic analysis through lectures and by reading, analyzing, and presenting research articles. Concepts are presented within the context of a well-studied field, such as chromosome segregation. The basic tools that have been developed to study this field are used to analyze other topics such as vegetative and meiotic cell cycle control, embryonic development, pathogen resistance in plants, and human genetics.

BIOGD 4870 Human Genomics

Fall. 3 credits. Prerequisite: BIOGD 2810. Lec. A. G. Clark.

Applies fundamental concepts of transmission, population, and molecular genetics to the problem of determining the degree to which familial clustering of diseases in humans has a genetic basis. Emphasizes the role of full genome knowledge in expediting this process of gene discovery. Stresses the role of statistical inference in interpreting genomic information. Population genetics, and the central role of understanding variation in the human genome in mediating variation in disease risk, are explored in depth. Methods such as homozygosity mapping, linkage disequilibrium mapping, and admixture mapping are examined. The format is a series of lectures with classroom discussion. Assignments include a series of problem sets and a term paper.

BIOGD 4890 Mammalian Embryology (also BIOAP/BIOIMS 4890)

Spring. 3 credits. Prerequisite: introductory biology. Offered alternate years. D. M. Noden.

Examines the early formation of the mammalian body and placenta, emphasizing comparative aspects, and morphogenesis and histogenesis of each organ system.

BIOGD 4900 Manipulating the Mouse Genome (also NS 4900)

Fall. 1 credit. Course meets during first half of semester (planned R 1:25-3:20; Aug. 27-Oct. 8) and provides background information for VTBMS 7010/TOX 7010 Mouse Pathology and Transgenesis, which meets during second half. Students interested in both courses must register for them separately. Prerequisites: BIOGD 2810 and BIOBM 3300, 3320, or 3330 or NS 3200. Letter grades only. P. D. Soloway.

Functional genomic analysis has benefited enormously from experimental manipulation of the genomes of many organisms. The mouse has been the model of choice for such studies in mammals. This course explores the tools available for experimental manipulation of the mouse genome, including transgenesis, gene targeting, gene trapping, chemical mutagenesis, and cloning by nuclear transplant. Also discussed are use of recombinant inbred mice for complex trait analysis. Readings from the scientific literature focus on seminal applications of these methods.

BIOGD 4980 Teaching Experience

Fall or spring. 1-4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility but not eligibility for graduating with distinction. S-U or letter grades by permission of instructor. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

BIOGD 6080 Epigenetics (also NS 6080)

Fall. 2 credits. Prerequisites: BIOGD 2810 and BIOBM 3300, 3320, or 3330 or NS 3200. Letter grades only. Planned W F 11:15-12:05; occasional evening meetings for student presentations. P. D. Soloway. Epigenetic effects refer to reversible alterations in chromatin structure that can stably and heritably influence gene expression. These changes include covalent modifications to DNA itself or to proteins bound to DNA as well as noncovalent remodeling of chromatin. This course examines selected epigenetic phenomena described in several eukaryotes, mechanisms regulating these effects, and their phenotypic consequences when normal regulation is lost. Reading materials are from current literature, and participation in class discussion is required.

BIOGD 6100 Genomes as Chromosomes

Fall. 3 credits. Limited to 15 students. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3330 or 3310/3320 or equivalent by permission of instructor. Letter grades only. Offered alternate years. T. P. O'Brien and P. E. Cohen.

The eukaryotic genome is partitioned into discrete structural units, the chromosomes. The course examines how chromosome

organization is related to chromatin structure, gene expression, DNA replication, repair, and stability. Special emphasis is placed on how the linear arrangement of sequence features along the chromosome, such as genes and regulatory modules, relate to the functional organization of the genome in the nucleus. Experimental and computational approaches used to address chromosome structure and function are studied.

BIOGD 6110 Genome Maintenance Mechanisms

Fall. 1 credit. Meets only during first half of semester. Limited to 25 students. Prerequisites: BIOGD 2810, as well as BIOBM 3300, or 3330, or 3310/3320 (or equivalents). S-U or letter grades. R. Weiss.

The course focuses on the molecular mechanisms utilized by eukaryotic cells to preserve genomic integrity. Topics to be discussed include endogenous and exogenous sources of mutation, DNA repair pathways, and cell cycle checkpoint mechanisms. Also addressed will be how genome maintenance impacts genome plasticity and evolution, as well as the relationship between genomic instability and disease, especially cancer.

BIOGD 6120 Overview of Model Genetic Organisms

Spring, 2nd 6 weeks of semester. 1 credit. Limited to 20 students. Prerequisites: BIOGD 2810 or 4000 or permission of instructor. S-U or letter grades. Offered alternate years. J. Schimenti and staff.

Presents the features of various model organisms and their relative merits for conducting various types of genomics/genetics research. Model systems discussed include yeast, *Arabidopsis*, *Drosophila*, *C. elegans*, zebrafish, and mice.

BIOGD 6130 Genomics and Society

Spring, weeks 10-13. 1 credit. Prerequisite: BIOGD 2810 or BIOGD 4000 or permission of instructor. S-U or letter grades. Disc. S. Kresovich and S. Tanksley.

A multidisciplinary examination of four to six selected topics that relate to the applications of biological insights derived from genomic analysis. Technical, scientific, ethical, political, legal, and/or social aspects of each topic will be considered from various perspectives.

BIOGD 6200 Evolutionary Genomics of Bacteria

Spring. 1 credit. M. Stanhope. Comparative genomics of bacteria is a valuable approach to deriving information on pathogenesis, antibiotic resistance, host adaptation, and genome evolution. This course provides an evolutionary perspective on comparative bacterial genomics, focusing in particular on pathogens of human and agricultural importance. The course will include lectures, discussion of relevant scientific literature, and a bioinformatics session.

BIOGD 6380 Filamentous Fungal Genomics and Development (also PLPA 6380)

Spring, last four weeks of semester. 1 credit. Prerequisite: BIOGD 2810 or equivalent, or permission of instructor. S-U or letter grades. Lec. Offered alternate years. B. G. Turgeon.

For description, see PLPA 6380.

BIOGD 6820 Fertilization and the Early Embryo

Spring. 2 credits. Prerequisites: BIOGD 2810; BIOBM 3320, 3300 or 3330; and BIOGD 3850 or permission of instructor. Lec. Offered alternate years. M. F. Wolfner. We explore the latest molecular/cell/genetic findings about the biology of gametes, fertilization, and early development—and their application to fertility modulation, “cloning,” and stem cells.

[BIOGD 6870 Developmental Genetics

Fall. 2 credits. Limited to 20 students. Prerequisites: BIOGD 2810 and 3850 or equivalents. S-U or letter grades. Lec TBA. Offered alternate years; next offered 2010-2011. K. J. Kemphues. Course focuses on methods of genetic analysis of fruitflies, nematodes, mice, and fish to understand mechanisms of development. No text. Lectures and problems from literature.]

[BIOGD 6890 Cellular Basis of Development

Fall. 2 credits. Limited to 20 students. Prerequisites: BIOGD 2810, 3850, and either BIOBM 3300 or 3310-3320. Lec. S-U or letter grades. Next offered 2010-2011. J. Liu. Focuses on the integration of different cellular processes in various developmental contexts. Topics include cell polarity, cell migration, cell adhesion and fusion, cell growth and proliferation, cell-cell communication, and cell death. Students are required to read current literature and participate in discussions in class.]

BIOGD 7800 Current Topics in Genetics and Development

Fall and spring. 1 credit; may be repeated for credit. Limited to 20 students. Primarily for graduate students; priority given to majors in field of genetics. Prerequisite: for undergraduates, written permission of instructor. No auditors. S-U grades only. Staff.

BIOGD 7810 Problems in Genetics and Development

Fall. 2 credits. Prerequisite: first-year graduate students in field of genetics and development. Disc TBA. Staff. Introduction to the research literature in selected areas through weekly problem sets and discussions.

BIOGD 7820 Current Genetics/Development Topics

Spring. 0.5 or 1 credit for each topic; may be repeated for credit. S-U grades only. Lec and sem on specialized topics. Staff.

BIOGD 7840 Introduction to Quantitative Analysis

Fall. 1 credit. Letter grades only. M. L. Goldberg. The goal of this course is to introduce bioinformatic and probability/statistical tools at an intuitive level that will be meaningful to first-year graduate students in Genetics and Development.

BIOGD 7860 Research Seminar in Genetics and Development

Fall and spring. 1 credit. Requirement for, and limited to second-year and beyond graduate students in genetics and development. S-U grades only. Staff. Each graduate student presents one seminar per year based on his or her thesis research. The student then meets with the thesis

committee members for an evaluation of the presentation.

BIOD 7870 Seminar in Genetics and Development

Fall and spring. 1 credit. Prerequisite: graduate students in Genetics and Development. S–U grades only. Sem, TBA. Staff.

Seminars in current research in genetics and developmental biology conducted by distinguished visitors and staff.

Fall. 3 credits. D. Buckley and E. Angert. For description, see CSS 1120.

BIOMI 1250 Biology Seminar

Fall and spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S–U grades only. Staff.

A first-year seminar designed for students with Biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

BIOMI 1720 Bioscientific Terminology (also CLASS 1692)

Summer and winter. 3 credits. Letter grades only.

For description, see CLASS 1692.

BIOMI 2900 General Microbiology Lectures

Fall, spring, or summer (six-week session). 3 credits. Prerequisites: one year introductory biology for majors and one year college chemistry, or equivalent. Highly recommended: concurrent registration in BIOMI 2910. W. C. Ghiorse.

Comprehensive overview of the biology of microorganisms, with emphasis on bacteria. Topics include microbial cell structure and function, physiology, metabolism, genetics, diversity, and ecology. Also covers applied aspects of microbiology such as biotechnology, the role of microorganisms in environmental processes, and medical microbiology. 4-credit option involves one discussion per week led by faculty in the Department of Microbiology and will involve readings and a writing assignment. Students may not pre-register for 4-credit option: Interested students complete an application form on first day of class (enrollment will be limited to 20 students).

BIOMI 2910 General Microbiology Laboratory

Summer (six-week session). 2 credits. Pre- or corequisite: BIOMI 2900. S. M. Merkel. Study of the basic principles and techniques of laboratory practice in microbiology, and fundamentals necessary for further work in the subject.

BIOMI 2911 General Microbiology Laboratory

Fall or spring. 2 credits. Pre- or corequisite: BIOMI 2900. S. M. Merkel.

Study of the basic principles and techniques of laboratory practice in microbiology, and fundamentals necessary for further work in the subject.

BIOMI 2920 General Microbiology Discussion

Spring. 1 credit. Pre- or corequisite: BIOMI 2900. S–U grades only. Staff.

Series of discussion groups in specialized areas of microbiology to complement BIOMI 2900.

BIOMI 3080 Field Microbial Ecology (also BIOSM 3080)

Summer. 4 credits.

For description, see BIOSM 3080.

BIOMI 3310 General Parasitology (also BIOMS 3310)

Spring. 2 credits. Prerequisites: zoology or biology course; any of the following: BIOEE 2610, 2640, 2670, 2740, 2780; NS 2750; EAS 1700; BIOG 1101, 1102, 1103, 1104, 1106, 1107, 1108, 1109, 1110; BIOMI 2900, or equivalent courses. Letter grades only. D. D. Bowman.

For description, see BIOMS 3310.

BIOMI 3910 Advanced Microbiology Laboratory

Fall. 3 credits. Prerequisites: BIOMI 2900, 2910, and BIOBM 3300 or 3310 or 3330. Priority given to biological sciences students in microbiology program of study. E. R. Angert, J. P. Shapleigh, and S. H. Zinder.

An introduction to advanced experimental methods in microbiology. Students will gain experience with a variety of cutting-edge technologies used to characterize genetic, physiological, and structural aspects of microbes. These skills will be utilized during the isolation and characterization of bacteria isolated from diverse habitats as well as during isolation of mutants of an environmental isolate.

BIOMI 3940 Applied and Food Microbiology (also FDSC 3940)

Fall. 2–3 credits. Prerequisites: BIOMI 2900–2910. C. A. Batt.

For description, see FDSC 3940.

BIOMI 3970 Environmental Microbiology (also CSS 3970)

Spring. 3 credits. Prerequisites: BIOMI 2900. Recommended: BIOEE 2610, NTRES 3030, or permission of instructor. Offered alternate even-numbered years. E. L. Madsen.

Discusses the biological properties, evolution, and behavior of microorganisms in natural systems in relation to past and present environmental conditions on Earth. Also considers the functional role of microorganisms in ecologically and environmentally significant processes through discussion of specific topics such as nutrient and toxic elemental cycles, transformation of pollutant chemicals, wastewater treatment, environmental biotechnology, and astrobiology.

BIOMI 4040 Pathogenic Bacteriology (also BIOMS 4040)

Spring. 2 or 3 credits; 3 credits with lec and sem. Seminar required for graduate students. Maximum enrollment for seminar portion 15. Prerequisites: BIOMI 2900 and 2910; for undergraduates, permission of instructor. Highly recommended: BIOG 3050. Offered alternate even years. Letter grades only. D. Debbie.

For description, see BIOMS 4040.

BIOMI 4090 Principles of Virology (also BIOMS/PLPA 4090)

Fall. 3 credits. Prerequisites: BIOMI 2900, 2910 or permission of instructor. Recommended: BIOBM 3300–3320, 4320. Letter grades only. S. G. Lazarowitz, N. Osterrieder, and J. Parker.

For description, see BIOMS 4090.

[BIOMI 4140 Prokaryotic Diversity

Spring. 3 credits. Prerequisites: BIOMI 2900 and 2910. Recommended: BIOBM 3300 or 3310 or 3330. Offered alternate odd-numbered years; next offered 2010–2011. S. H. Zinder.

Consideration of the evolutionary biology, physiology, ecology, genetics, and practical potential of important groups of prokaryotes. Topics include prokaryotic phylogeny, the evolution of diverse mechanisms of energy conservation, fixation of carbon and nitrogen, and adaptation to extreme environments.]

BIOMI 4160 Bacterial Physiology

Spring, 3 credits. Prerequisites: BIOMI 2900, 2910, and BIOBM 3300 or 3310, or equivalents. Offered alternate even years. J. P. Shapleigh.

Course will cover the basic structures and metabolic processes common to most bacteria. Emphasis will be on structural organization of bacteria and understanding physiological adaptations to different growth conditions.

[BIOMI 4180 Microbial Ecology

Spring, 3 credits. Prerequisites: BIOMI 2900 and 2910, or 3970 and permission of instructor, and BIOBM 3300 or 3310 and 3320. Next offered 2010–2011. E. R. Angert. Understanding the role of microorganisms in natural environments is one of the greatest challenges facing microbiologists. This course introduces current methods to assess community diversity in a variety of ecosystems.]

[BIOMI 4200 Microbial Genomics

Spring, 2 credits. Prerequisites: BIOMI 2900, BIOGD 2810, BIOBM 3300, or equivalent. Offered alternate odd-numbered years; next offered 2010–2011. J. P. Shapleigh and J. D. Helmann. Genomic information is revolutionizing biology. This course discusses the impact of genomic information on the study of microbial physiology, evolution, and biotechnology. Topics include both techniques (automated DNA sequencing, assembly, annotation, DNA chips) and applications (genome-wide analysis of transcription, functional genomics).]

BIOMI 4310 Medical Parasitology (also BIOMS 4310)

Fall, 2 credits. Prerequisites: zoology or biology course; any of the following: BIOEE 2070, 2610, 2630, 2640, 2670, 2740, 2780; NS 2750; BIOG 1101, 1102, 1103, 1104, 1105, 1106, 1107, 1108, 1109, 1110; BIOMI 2900, 3970; EAS 1700 or equivalent course. Letter grades only. D. D. Bowman. For description, see BIOMS 4310.

BIOMI 4480 Symbiotic Associations: Evolution and Ecology (also PLPA 4480)

Spring, 3 credits. Prerequisites: two semesters of introductory biology (BIOG 1101–1102, BIOG 1105–1106, BIOG 1107–1108, or BIOG 1109–1110), and BIOMI 2900 or permission of instructor. Letter grades only. T. E. Pawlowska. For description, see PLPA 4480.

BIOMI 4823 Molecular Plant-Microbe Interactions (also BIOPL/PLPA 4823)

Spring, 1 credit. Prerequisites: BIOGD 2810, BIOBM 3300 or 3310 or 3330, and BIOPL 4830 or equivalents. S–U or letter grades. Offered alternate even years. S. C. Winans.

For description, see BIOPL 4823.

BIOMI 4850 Bacterial Genetics (also BIOGD/BIOBM 4850)

Fall, 2 or 3 credits; optional 1 credit for registered students with permission of instructor to review literature. Prerequisite: BIOGD 2810. Recommended: BIOMI 2900 and BIOBM 3300 or 3310 and 3320 or 3330. J. E. Peters.

Students gain a detailed understanding of how bacteria maintain and pass on genetic information with a strong focus on the bacterium *Escherichia coli*. They discover the processes by which bacteria evolve through different mutations and the exchange of genetic information. The course explores how genes are regulated efficiently through negative and positive regulation and by global regulatory mechanisms. Upon completion of the course students should understand the tools used to manipulate bacterial genomes for the understanding of bacteria and other living organisms.

BIOMI 4980 Teaching Experience

Fall or spring, 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility but not eligibility for graduating with distinction. S–U or letter grades by permission of the instructor. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

[BIOMI 6080 Genomics of Bacterium-Host Interactions (also PLPA 6080)

Fall, second half of semester, 1 credit. Prerequisites: BIOMI 2900 or equivalent or permission of instructor. S–U or letter grades. Offered alternate even years; next offered 2010–2011. A. Collmer and S. Winans.

For description, see PLPA 6080.]

[BIOMI 6100 Introduction to Chemical and Environmental Toxicology (also TOX 6100)

Fall, 3 credits. Prerequisite: graduate standing in field or permission of instructor. Letter grades. Offered alternate years; next offered 2010–2011. A. Hay.

Introduction to the general principles of toxicology including the sources, mechanisms, and targets of toxic agents. Gives special attention to the interaction between toxic agents and biological systems at both the organismal and ecological level. The effects of both anthropogenic and natural toxins are examined with respect to genetic and developmental toxicity as well as carcinogenesis and specific organ toxicity.]

BIOMI 6430 Veterinary Perspectives on Pathogen Control in Animal Manure (also VTMED/BEE 6430)

Spring, eight weeks, 2 credits. Prerequisite: third- and fourth-year veterinary students. Letter grades only. D. D. Bowman.

For description, see VTMED 6430.

BIOMI 6901 Prokaryotic Biology: Microbial Structure and Function

Fall, 4 weeks/8 lec. 1 credit. J. P. Shapleigh. Discusses those macromolecules and assemblages of macromolecules that together define the structure of the prokaryotic cell. This includes external structures, such as cell wall, flagella, pili, and peptidoglycan and internal structures such as specialized vesicles and other large complexes.

BIOMI 6902 Prokaryotic Biology: Environmental Microbiology

Fall, 4 weeks/8 lec. 1 credit. E. L. Madsen. Core course of concepts, methods, and current literature that reveals the multidisciplinary nature of environmental microbiology and its relationship to prokaryotic biology. Discusses the crucial roles that microorganisms play in catalyzing biogeochemical reactions throughout the biosphere.

BIOMI 6903 Prokaryotic Biology: Microbial Physiology/Diversity

Fall, 4 weeks/8 lec. 1 credit. S. H. Zinder. Reviews the major energy-conserving modes of metabolism and their phylogenetic distributions among both bacteria and archaea. Topics include phylogenetic analysis, fermentation, respiration, photosynthesis, pathways of carbon and nitrogen fixation, and evolution of the three domains of life.

BIOMI 6904 Prokaryotic Biology: Microbial Genetics

Spring, 4 weeks/8 lec. 1 credit. J. D. Helmann.

Reviews the fundamental concepts of microbial genetics including mutations and their analysis, plasmids, conjugation, transformation, transduction, transposition, recombination, repair, and mutagenesis.

BIOMI 6905 Prokaryotic Biology: Microbial Pathogenesis

Spring, 4 weeks/8 lec. 1 credit. S. C. Winans.

Introduction to the fundamental concepts of bacterial pathogenesis including the normal flora, pathogen entry and colonization, the production and regulation of toxins, horizontal transfer of pathogenesis determinants, and the roles of both specific and nonspecific host defenses. Examples include bacterial pathogens of both animals and plants.

BIOMI 6990 Toxicology Journal Club Sec 01—Environmental Toxicology (TOX 6990)

Spring, 1 credit. Required for toxicology students until post A exam. A. G. Hay.

BIOMI 7250 Mechanisms of Microbial Pathogenesis (also VETMI 7250)

Spring, 3 credits. Prerequisites: for undergraduates, written permission of instructor; BIOMI 4040, 4090, or equivalent. Highly recommended: completion of two of the three courses. D. Debbie, M. Hesse, H. Marquis, J. Parker, M. Scidmore, and G. Whittaker. For description, see VETMI 7250.

BIOMI 7910 Advanced Topics in Microbiology

Fall or spring, 1 credit; may be repeated for credit. Prerequisite: graduate standing in microbiology. S–U grades only. E. R. Angert.

Reading and presentation by graduate students of current literature in selected areas of modern microbiology.

BIOMI 7960 Current Topics in Microbiology

Fall and spring, 0.5 or 1 credit for each topic; may be repeated for credit. Primarily for graduate students in microbiology.

Prerequisite: upper-level courses in microbiology. S–U grades only. Lec. Staff.

Lectures and seminars on special topics in microbiology.

BIOMI 7970 Scientific Communication Skills

Fall and spring, 1 credit each semester. Requirement for graduate students in graduate field of microbiology for first two semesters; third semester optional. S–U grades only. Staff.

The ability to communicate effectively is essential for success as a scientist. The primary goal of this course is to provide students with an opportunity to develop self-confidence and refine their formal oral presentation skills. Students are asked to present topical seminars that are critically evaluated by the instructor. Feedback for improving the presentation and peer evaluations are emphasized.

BIOMI 7980 Graduate Research Seminar in Microbiology

Fall and spring, 1 credit each semester. Requirement for graduate students in graduate field of microbiology. S–U grades only. Staff.

All graduate students in the field of microbiology are required to attend and present a seminar concerning their research at least once each year.

BIOMI 7990 Microbiology Seminar

Fall and spring. Requirement for all graduate students in graduate field of microbiology. Open to all who are interested. Staff.

Principles of Biogeochemistry (BIOEE 6680)

MEDICAL SCIENCE (BIOMS)**[BIOMS 2140 The Biological Basis of Sex Differences (also BSOC 2141, BIOAP/FGSS 2140)]**

Fall, 3 credits. Prerequisite: one year introductory biology. S–U or letter grades. Offered alternate years; next offered 2010–2011. J. E. Fortune.

For description, see BIOAP 2140.]

BIOMS 3110 Introductory Animal Physiology (also BIOAP 3110, VTBMS 3460)

Fall, 3 credits. Prerequisites: one year college biology, chemistry, and mathematics. Recommended: previous or concurrent physics course. S–U or letter grades by permission of instructor. Evening prelims. E. R. Loew.

For description, see BIOAP 3110.

BIOMS 3150 Basic Immunology

Fall, 3 credits. Highly recommended: basic courses in microbiology, genetics, and biochemistry. S–U or letter grades.

J. A. Appleton.

Survey of immunology, with emphasis on the cellular and molecular bases of the immune response.

BIOMS 3160 Cellular Physiology (also BIOAP 3160)

Spring, 3 credits. Pre- or corequisite: BIOBM 3300 or 3310 and 3320 or 3330. Letter grades only. Evening prelims.

A. Quaroni.

For description, see BIOAP 3160.

BIOMS 3190 Animal Physiology Experimentation (also BIOAP 3190)

Fall, 4 credits. Prerequisite: BIOAP 3110 or permission of instructor. For pre-med, pre-vet juniors and seniors, and graduate students interested in biomedical science. Letter grades only. E. R. Loew, N. A. Lorr, and staff.

For description, see BIOAP 3190.

BIOMS 3310 General Parasitology (also BIOMI 3310)

Spring, 2 credits. Prerequisites: zoology or biology course; any of the following: BIOEE 2610, 2640, 2670, 2740, 2780; NS 2750; EAS 1700; BIOG 1101, 1102, 1103, 1104, 1106, 1107, 1108, 1109, 1110; BIOMI 2900, or equivalent courses. Letter grades only. D. D. Bowman.

This course is an introduction to the basic animal parasites, stressing systematics, taxonomy, general biology, ecological interactions, and behavior of non-medically important groups. Introduces the major animal parasite groups: protozoan, nematode, platyhelminth, acanthocephalan, annelid, and arthropod.

BIOMS 4040 Pathogenic Bacteriology (also BIOMI 4040)

Spring, 2 or 3 credits; 3 credits with lec and sem. Seminar required for graduate students. Maximum enrollment for seminar portion 15. Prerequisites: BIOMI 2900 and 2910. Letter grades only. D. P. Debbie.

Course in medical microbiology, presenting the major groups of bacterial and mycotic pathogens important to human and veterinary

medicine. Emphasizes infection and disease pathogenesis. Topics include disease causality; interactions of host, pathogen, and environment, including immunity to bacteria; and principles of antimicrobial therapy and drug resistance. A companion seminar addresses the current and classic literature related to microbial pathophysiology on the cellular and molecular levels.

BIOMS 4090 Principles of Virology (also BIOMI/PLPA 4090)

Fall, 3 credits. Prerequisites: BIOMI 2900 and 2910 or permission of instructor.

Recommended: BIOBM 3300–3320, 4320. S. Lazarowitz, N. Osterrieder, and J. Parker.

Covers the principles of virology, focusing mainly on animal viruses but also including plant viruses and bacteriophage. Topics include the classification of viruses, virus entry, genome replication and assembly, and virus pathogenesis. Particular emphasis is placed on virus–host cell interactions and common features between different viral families.

BIOMS 4130 Histology: The Biology of the Tissues (also BIOAP 4130)

Spring, 4 credits. Prerequisite: one year introductory biology. Recommended:

BIOBM 3300 or 3310, or equivalent. S–U or letter grades. S. Suarez and L. Mizer.

For description, see BIOAP 4130.

BIOMS 4160 Cell Physiology and Genomics Laboratory (also BIOAP 4160)

Spring, 4 credits. Limited to 24 students.

Pre- or corequisite: BIOAP 3160 or BIOBM 4320 or permission of instructor. For pre-med, pre-vet, juniors, seniors, and graduate students interested in biomedical science. Letter grades only. H.–H. Chuang, N. A. Lorr, and staff.

For description, see BIOAP 4160.

BIOMS 4310 Medical Parasitology (also BIOMI 4310)

Fall, 2 credits. Prerequisites: zoology or biology course; any of the following: BIOEE 2070, 2610, 2630, 2640, 2670, 2740, 2780; NS 2750; BIOG 1101, 1102, 1103, 1104, 1105, 1106, 1107, 1108, 1109, 1110; BIOMI 2900, 3970; EAS 1700 or equivalent course. Letter grades only. D. D. Bowman.

Systematic study of arthropod, protozoan, and helminth parasites of public health importance, with emphasis on epidemiologic, clinical, and zoonotic aspects of these parasitisms.

BIOMS 4580 Mammalian Physiology (also BIOAP 4580)

Spring, 3 credits. Auditors allowed.

Prerequisite: BIOAP 3110 or equivalent.

Recommended for biological sciences majors, pre-med and pre-vet students, and beginning graduate students in physiology, nutrition, and animal science. Letter grades only. Evening prelims. K. W. Beyenbach.

For description, see BIOAP 4580.

BIOMS 4750 Mechanisms Underlying Mammalian Developmental Defects (also BIOAP/NS 4750)

Spring, 3 credits. Prerequisites: BIOBM 3300, 3310–3320, or 3330 (may be taken concurrently). S–U or letter grades. Offered alternate years. D. Noden and P. Stover.

For description, see BIOAP 4750.

BIOMS 4890 Mammalian Embryology (also BIOAP/BIOGD 4890)

Spring. 3 credits. Prerequisite: introductory biology. S-U or letter grades. Evening prelims. Offered alternate years. D. M. Noden.

For description, see BIOAP 4890.

BIOMS 7050 Advanced Immunology (also VETMI 7050)

Spring. 3 credits. Prerequisite: basic immunology course or permission of instructor. Letter grades only. Offered even-numbered years. C. Leifer and staff.

For description, see VETMI 7050.

[BIOMS 7190 Immunology of Infectious Diseases (also VETMI 7190)]

Spring. 2 credits. Prerequisite: basic immunology course or permission of instructor. S-U or letter grades. Offered odd-numbered years; next offered 2010-2011. M. Bynoe and staff.

For description, see VETMI 7190.]

NEUROBIOLOGY AND BEHAVIOR (BIONB)**BIONB 1110 Brain Mind and Behavior (also PSYCH/COGST 1110)**

Spring. 3 credits. Prerequisite: none. Intended for freshmen and sophomores in humanities and social sciences; not open to juniors and seniors. Not recommended for psychology majors; biology majors may not use for credit toward major. Letter grades only. Planned M W F 9:05. E. Adkins-Regan and R. R. Hoy.

For description, see COGST 1110.

[BIONB 1220 FWS: Special Topics in Neurobiology and Behavior]

Fall and spring. 3 credits. Prerequisite: permission of Knight Writing Program; freshman standing. Letter grades only. Staff.

For description, see John S. Knight Institute for Writing in the Disciplines. First-Year Writing Seminars.]

BIONB 1250 Biology Seminar

Fall and spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S-U grades only. Staff.

A first-year seminar designed for students with Biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

BIONB 2210 Neurobiology and Behavior I: Introduction to Behavior

Fall. 3, 4, or 5 credits; 4 credits with one disc per week; 5 credits with two disc per week and participation in Writing in the Majors program; 4- or 5-credit option required of students in neurobiology and behavior program of study. Limited to 15 students per 4-credit disc. Priority given to students studying neurobiology and behavior. Limited to 12 students in 5-credit option (students may not preregister for 5-credit option; interested students complete application form on first day of class). Not open to freshmen. Prerequisite: one year introductory biology for majors. May be taken independently of BIONB 2220. S-U or letter grades. Planned M W F 12:20; disc TBA. K. L. Shaw and staff.

General introduction to the field of animal behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, orientation and navigation, and hormonal mechanisms of behavior.

BIONB 2213 Neurobiology and Behavior I: Introduction to Behavior

Summer, six-week session. 3 or 4 credits; 4 credits with one disc per week. Limited to 30 students. Prerequisite: one year introductory college biology. S-U or letter grades. Course fee: none. Planned M-F TBA. Staff.

General introduction to the field of animal behavior. Topics include evolution and behavior via natural selection, genes and behavior, behavioral ecology, sociobiology, communication, cognition, hormonal mechanisms of behavior, and topics in Darwinian medicine.

BIONB 2220 Neurobiology and Behavior II: Introduction to Neurobiology

Spring. 3, 4, or 5 credits; 4 credits with one disc per week and written projects; 5 credits with two disc per week and participation in Writing in the Majors program; 4- or 5-credit option required of students in neurobiology and behavior program of study. Limited to 15 students per 4-credit disc. Priority given to students studying neurobiology and behavior. Limited to 12 students in 5-credit option (students may not preregister for 5-credit option; interested students complete application form on first day of class). Not open to freshmen. Prerequisite: one year introductory biology for majors and one year of chemistry. May be taken independently of BIONB 2210. S-U or letter grades. Planned M W F 12:20; disc TBA. Staff.

General introduction to the field of cellular and integrative neurobiology. Topics include neural systems, neuroanatomy, developmental neurobiology, electrical properties of nerve cells, synaptic mechanisms, neurochemistry, motor systems, sensory systems, learning, and memory. Some discussion sections include dissections of preserved brains.

[BIONB 3220 Hormones and Behavior (also PSYCH 3220/7220)]

Fall. 3 credits. Limited to 60 students. Prerequisites: junior or senior standing; any one of the following: PSYCH 2230 or BIONB 2210 or 2220 or one year introductory biology plus psychology course. Two lec plus sec in which students read and discuss original papers in the field, give oral presentation, and write term paper. Letter grades only. Graduate students, see PSYCH 7220. Planned M W F 11:15. Next offered 2010-2011. E. Adkins-Regan.

For description, see PSYCH 3220.]

[BIONB 3230 Methods in Animal Behavior]

Fall. 4 credits. Limited to 24 students. Prerequisite: BIONB 2210. Letter grades only. Offered alternate years; next offered 2010-2011. Planned M W 1:25-4:25. Staff.

Hands-on lab/field course in methods for studying animal behavior. Topics include sound recording, videography radio-tracking, mapping, capture/marketing methods, and behavioral statistics.]

BIONB 3240 Biopsychology Laboratory (also PSYCH 3240)

Fall. 4 credits. Limited to 20 students. Prerequisites: junior or senior standing; PSYCH 2230 or BIONB 2210 or 2220, and permission of instructor. Planned T R 1:25-4:25. Letter grades only. T. J. DeVoogd.

For description, see PSYCH 3240.

[BIONB 3250 Insect Behavior (also ENTOM 3250)]

Spring. 3 credits. Limited to 50 students. Prerequisite: ENTOM 2120 or BIONB 2210. Intended for juniors, seniors, and beginning graduate students. S-U or letter grades. Planned T R 10:10-11:25. Offered alternate years; next offered 2010-2011. L. S. Rayor.

For description, see ENTOM 3250.]

BIONB 3280 Biopsychology of Learning and Memory (also PSYCH 3320/6320)

Spring. 3 credits. Limited to 65 students. Prerequisites: one year of biology and either a biopsychology course or BIONB 2220. S-U or letter grades. Graduate students, see PSYCH 6320. Planned M W F 11:15. T. J. DeVoogd.

For description, see PSYCH 3320.

BIONB 3290 Ecology of Animal Behavior (also BIOSM 3290)

Summer. 4 credits. Limited to 18 students. Prerequisite: one year introductory college biology. Recommended: ecology, psychology, or behavior course. S-U or letter grades. Special two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. For more details and an application, contact SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for two weeks. SML faculty.

For description, see BIOSM 3290.

[BIONB 3300 Introduction to Computational Neuroscience (also PSYCH/COGST/BME 3300)]

Fall. 3 or 4 credits; 4 credits includes lab providing additional computer simulation exercises. Prerequisites: BIONB 2220 or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2010-2011. Planned M W 2:55-4:10, lab TBA. C. Linster.

Covers the basic ideas and techniques involved in computational neuroscience. Surveys neural dynamics of networks of cells, neural coding, learning, memory models, sensory coding.]

BIONB 3310 Human Social Behavior and Evolution

Spring. 3 credits. Limited to 100 students. Prerequisite: BIONB 2210 or permission of instructor. S-U or letter grades. Planned M W 2:55-4:10. P. Barclay.

Lecture-based course drawing on research in evolutionary biology and animal behavior to investigate various aspects of human social behavior. Findings are presented from areas such as evolutionary psychology, anthropology, human behavioral ecology, and evolutionary game theory. Topics may vary slightly from year to year, but include mating, cooperation (with kin and nonkin), conflict and aggression, parental behavior, costly signaling, and culture.

[BIONB 3400 Animal Orientation and Navigation]

Spring. 2 credits. Pre- or corequisite: BIONB 2210 and BIONB 2220 or permission of instructor. S-U or letter grades. Planned: T R 9:05. Offered alternate years; next offered 2011–2012. K. Adler.

In-depth coverage of the topic, including sensory cues and receptors, physiological basis, ecological context, and evolutionary aspects, with emphasis on current research.]

[BIONB 3690 Chemical Ecology (also BIOEE/ENTOM 3690)]

Spring. 3 credits. Prerequisites: one semester of introductory biology for majors or nonmajors and one semester of introductory chemistry for majors or nonmajors or equivalents, or permission of instructor. S-U or letter grades. Planned M W F 11:15. J. Thaler, A. Kessler, A. Agrawal, and R. Raguso.

For description, see BIOEE 3690.

[BIONB 3920 Drugs and the Brain]

Fall. 4 credits. Limited to 90 students. Prerequisites: BIONB 2220 or equivalent course in neurobiology by permission of instructor. Recommended: knowledge of biochemistry. S-U or letter grades. Planned T R 10:10–11:25; disc TBA. Offered alternate years. R. M. Harris-Warrick.

Introduction to neuropharmacology, with an emphasis on the neural mechanisms of psychoactive drugs. Topics include a brief introduction to neuropharmacology and a discussion of the major neurotransmitter families. The rest of the course covers the major psychoactive drugs, including cocaine, heroin, psychedelics, marijuana, and alcohol, as well as pharmaceuticals for the treatment of anxiety, schizophrenia, and depression. Includes a term paper in the form of a grant proposal to study a current problem in neuropharmacology.

[BIONB 3940 Circadian Rhythms (also BIOGD/ENTOM/PLPA 3940)]

Fall. 2 or 3 credits (for optional lab see PLPA 3941). Prerequisite: 2000-level biology course. S-U or letter grades. Planned T R 10:10–11; additional lab R 1:25–4:25 for 3-cr. option. K. Lee.

For description, see PLPA 3940.

[BIONB 3960 Introduction to Sensory Systems (also PSYCH 3960/6960)]

Spring. 4 credits. Limited to 25 students. Prerequisites: introductory biology or biopsychology, plus second course in behavior, biopsychology, cognitive science, neuroscience, or perception; knowledge of elementary physics, chemistry, and behavior. S-U or letter grades. Planned T R 10:10–11:25. Offered alternate years; next offered 2010–2011. B. P. Halpern.

For description, see PSYCH 3960.]

[BIONB 4130 Molecules of Social Behavior and Emotion]

Spring. 3 credits. Limited to 25 students. Prerequisite: permission of instructor. Letter grades only. Planned T R 10:10–11:25. Offered alternate years. D. P. McCobb.

Active-learning course with specific topics to be determined by students. Focuses on molecular, neural, and endocrine mechanisms underlying innate and learned behavior patterns, and their relationship to social, ecological, and evolutionary context. Neurotransmitters, hormones and receptors governing such behaviors as parental care,

territoriality, cooperativity, courtship, and stress responses are examples of topics of interest. Format includes library research, oral and written presentations, teamwork, and peer review.

[BIONB 4200 Topics in Neurobiology and Behavior]

Fall and spring. Variable credit; may be repeated for credit. Primarily for undergraduates. S-U or letter grades. Staff.

Courses on selected topics in neurobiology and behavior; can include lecture and seminar courses. See department office (W363 Mudd Hall) for offerings.

[BIONB 4205 Topics in Neurobiology and Behavior: Darwinian Medicine Seminar]

Summer, 6-week session. 3 credits. Pre- or corequisite: BIONB 2210. S-U or letter grades. Planned: M-F 3–4:15. Next offered summer 2011. J. Shellman Sherman.

We explore how and why a Darwinian approach to medicine can provide us with important insights and a more complete understanding of health and disease than that offered solely by a traditional approach to medicine.]

[BIONB 4210 Effects of Aging on Sensory and Perceptual Systems (also PSYCH 4310/6310)]

Fall. 3 or 4 credits. 4-credit option involves term paper or creation of relevant web site. Limited to 35 students. Prerequisites: introductory course in biology or psychology, plus second course in perception, neuroscience, cognitive science, or biopsychology. S-U or letter grades. Planned T R 10:10–11:25. B. P. Halpern.

For description, see PSYCH 4310.

[BIONB 4220 Modeling Behavioral Evolution]

Fall. 4 credits. Limited to 25 students. Prerequisites: BIONB 2210, one year of calculus, course in probability or statistics, and permission of instructor; advanced undergraduates and graduate students. S-U or letter grades. Planned T R 2:55–4:10; computer lab TBA. Offered alternate years. H. K. Reeve.

Intensive lecture and computer lab course on modeling strategies and techniques in the study of behavioral evolution. Population-genetic (including quantitative-genetic), static optimization, dynamic programming, and game-theoretic methods are emphasized. These approaches are illustrated by application to problems in optimal foraging, sexual selection, sex ratio evolution, animal communication, and the evolution of cooperation and conflict within animal social groups. Students learn to critically assess recent evolutionary theories of animal behavior, as well as to develop their own testable models for biological systems of interest or to extend pre-existing models in novel directions. The Mathematica software program is used as a modeling tool in the accompanying computer lab (no prior experience with computers required).

[BIONB 4230 Cognitive Neuroscience (also PSYCH 4250/6250)]

Fall. 4 credits. Limited to 20 students. Prerequisites: introductory biology; biopsychology or neurobiology (e.g., PSYCH 2230 or BIONB 2210); and introductory course in perception,

cognition, or language (PSYCH 1200, 2090, 2140, or 2150 essential). S-U or letter grades. Graduate students, see PSYCH 6250. Planned M W F 9:05. One lab in sheep brain dissection. Offered alternate years; next offered 2010–2011. B. L. Finlay. For description, see PSYCH 4250.]

[BIONB 4240 Neuroethology (also PSYCH 4240)]

Fall. 4 credits. Limited to 50 students. Prerequisites: BIONB 2220 or equivalent with permission of instructor. S-U or letter grades. Planned M W F 10:10; disc TBA. Offered alternate years. C. D. Hopkins.

Neuroethologists take a comparative and evolutionary approach to study the nervous system. They ask, how do brains of animals compare and how did they come about through the process of evolution? How are neural circuits adapted to species-typical behavior? What is the hope and interest in the study of a large diversity of animals, compared to a specialized look at just a few mammalian species? Can we hope to understand how animals with specialized behaviors have specialized nervous systems? What is the sensory world of a real animal and how does it vary from species to species? These and other questions derive this introductory survey of neuroethology, including exotic senses, amazing motor programs, surprising integration.

[BIONB 4250 Molecular Neurophysiology]

Fall. 3 credits. Limited to 20 students. Prerequisite: BIONB 2220 or permission of instructor. S-U or letter grades. Planned T R 2:55–4:10. Offered alternate years. D. P. McCobb.

Focuses on ion channels, the primary proteins generating cellular electrical signals in nerve cells and other excitable cells (e.g., muscle, heart, glands). Reviews the latest electrophysiological and molecular genetic experiments. Diversity of electrophysiology deriving from channel structure and expression patterns is considered in the contexts of behavior and behavioral plasticity (learning), neural development, and channel evolution. Format includes written and oral presentations, reviewing scientific literature in selected areas, and proposing new experiments.

[BIONB 4260 Animal Communication]

Spring. 4 credits. Limited to 50 students. Prerequisite: BIONB 2210. Letter grades only. Planned T R 2:55–4:10; disc TBA.

Offered alternate years. S. L. Vehrencamp. Communication is the “glue” that holds societies together. This course examines how and why animals communicate. Topics include the role of the environment in shaping animal signals, whether animals tell the truth to each other, why some bird songs are simple and others complex, and what kinds of signals might be exchanged between species.

[BIONB 4270 Darwinian Medicine]

Fall. 4 credits. Limited to 30 students. Prerequisites: BIONB 2210 and BIOEE 2610 or 2780, and permission of instructor. Letter grades only. Planned T R 2:30–4:25. Offered alternate years; next offered 2010–2011. P. W. Sherman.

Writing-intensive advanced course for upper-division students. Lectures, discussions, student presentations examine topics in health and disease from an evolutionary perspective.]

[BIONB 4280 Clinical Neurobiology]

Fall. 3 credits. Limited to 20 students. Prerequisites: two courses from BIONB 2220, BIOGD 2810, BIOBM 3300 or 3310; co-registration in one of the two is acceptable by permission of instructor. Open to advanced undergraduates. S-U or letter grades. Planned M W 2:30-4:25. Offered alternate years; next offered 2010-2011. R. Booker.

This course focuses on the etiology, epidemiology, cellular and molecular basis, and strategies for treating a number of neurodiseases (e.g., Alzheimer's disease, depression, and ADHD).

[BIONB 4290 Olfaction and Taste: Structure and Function (also PSYCH 4290)]

Spring. 3 or 4 credits; 4-credit option requires term paper. Priority given to junior and senior psychology and biology majors and graduate students. Graduate students, see PSYCH 6290. Prerequisite: one 3000-level course in biopsychology or equivalent. S-U or letter grades. Planned T R 10:10-11:25. Offered alternate years; next offered 2010-2011. B. P. Halpern.

For description, see PSYCH 4290.]

[BIONB 4300 Experimental Molecular Neurobiology]

Spring. 4 credits. Limited to 12 students. Prerequisites: BIOBM 3300 or 3310. Recommended: BIOGD 2810. Letter grades only. Lab T (for times see www.nbb.cornell.edu/bionb430.shtml). Offered alternate years; next offered 2010-2011. D. L. Deitcher.

Experiments include PCR, cloning of DNA fragments, RNA purification, restriction digests, bacterial transformation, DNA sequencing, protein interactions. Emphasis on molecular techniques to study neurobiological problems.]

[BIONB 4310 Genes and Behavior]

Spring. 3 credits. Limited to 50 students. Prerequisite: BIONB 2220. S-U or letter grades. Planned T R 2:55-4:10. Offered alternate years. J. R. Fetcho.

Our genes influence how we behave. This lecture course explores the current understanding of how genes influence the behavior of a variety of animals, including humans. Topics include the genetic basis of hearing, movement, learning, memory, intelligence, sexual behavior, aggression, sleep, and diseases of behavior. The focus is on the unprecedented insight that modern molecular and genetic tools are providing into the genetic basis of behavior.

[BIONB 4320 Genetics and Evolution of Behavior]

Spring. 3 credits. Limited to 20 students. Prerequisite: BIONB 2210. Letter grades only. Planned T R 2:55-4:10. Offered alternate years; next offered 2011-2012. K. Shaw.

The astounding diversity of animal behaviors provides an endless source of fascination. This multidisciplinary course examines our current understanding of the evolution of such behavior, focusing on how and why behaviors evolve.]

[BIONB 4330 Consciousness and Free Will (also COGST 4310, PSYCH 5310)]

Spring. 4 credits. Limited to 15 students. Prerequisite: PSYCH 2140. Planned M 2-4:25. S. Edelman.

For description, see COGST 4310.

[BIONB 4340 Advanced Behavioral Ecology]

Spring, 8 weeks. 3 credits. Limited to 25 students. Prerequisites: BIONB 2210, BIOEE 2610 or 2780, permission of instructor. S-U or letter grades. Planned M W 12:20-2:15; disc F 12:20-2:15. Offered alternate years; next offered 2010-2011. W. D. Koenig.

An intensive course for upper-division students interested in behavioral ecology and sociobiology. Lectures, discussions, and student presentations examine topics including adaptation, communication, mating systems, sexual selection, sex ratios, inbreeding and outbreeding, altruism, kin recognition, and conflict and cooperation in animal societies.]

[BIONB 4350 Mechanisms of Animal Behavior]

Spring. 4 credits. Limited to 30 students. Prerequisites: BIONB 2210. Letter grades only. Planned M W F 2:30-3:20; lab R 2:30-4:25. Offered alternate years. T. D. Seeley.

Examination of the mechanisms underlying the adaptive behaviors of animals as revealed by whole-organism studies. After reviewing the sensory abilities of animals, we will look at how they find their way, communicate, learn and think, find food, choose mates, build nests, and live in societies.

[BIONB 4440 Neural Computation (also PSYCH 4440)]

Spring. 3 credits. Limited to 10 students. Prerequisites: PSYCH 2230 or BIONB 2220 required or permission of instructor. Recommended: BIONB 3300 or equivalent experience. S-U or letter grades. Planned T R 2:30-3:20, lab T R 3:35-4:25. Offered alternate years; next offered 2010-2011. T. A. Cleland.

For description, see PSYCH 4440.]

[BIONB 4460 Plant Behavior—Induced Plant Responses to Biotic Stresses, Lectures (also BIOEE 4460)]

Spring. 3 credits. Prerequisite: BIOEE 2610 or permission of instructor. S-U or letter grades. Planned M W F 2:30-3:20. A. Kessler and R. Raguso.

For description, see BIOEE 4460.

[BIONB 4461 Plant Behavior—Induced Plant Responses to Biotic Stresses, Laboratory (also BIOEE 4461)]

Spring. 1 credit. Limited to 12 students. Pre- or corequisite: BIOEE 4460 or BIONB 4460. S-U or letter grades. Planned R 2:30-4:25. A. Kessler and R. Raguso.

For description, see BIOEE 4461.

[BIONB 4700 Biophysical Methods (also AEP/VETMM 4700)]

Fall. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through sophomore level. Recommended: knowledge of cellular biology. Letter grades only. Planned M W 2:45-4:15. M. Lindau.

For description, see AEP 4700.

[BIONB 4910 Principles of Neurophysiology (also BME 4910)]

Spring. 4 credits. Limited to 20 students. Prerequisite: BIONB 2220 or written permission of instructor. S-U or letter grades for students outside the Neurobiology and Behavior concentration and graduate students, by permission of instructor. Planned M W 10:10; lab planned M or T 12:20-4:25. B. R. Johnson.

Laboratory-oriented course designed to teach the theory and techniques of modern cellular neurophysiology including computer acquisition and analysis of laboratory results. Lecture time is used to introduce laboratory exercises and discuss results, to supplement laboratory topics, and to discuss primary research papers. Extracellular and intracellular recording and voltage clamp techniques explore motor neuron and sensory receptor firing properties, and examine the cellular basis for resting and action potentials and synaptic transmission. Invertebrate preparations are used as model systems. See <http://courses.cit.cornell.edu/bionb491/index.html>.

[BIONB 4920 Sensory Function (also PSYCH 4920/6920)]

Spring. 4 credits. Limited to 25 students. Prerequisite: 3000-level course in biopsychology, or BIONB 2220, or BIOAP 3110, or equivalent; knowledge of elementary physics, chemistry, and behavior. S-U or letter grades. Graduate students, see PSYCH 6920. Planned M W F 10:10. Offered alternate years; next offered 2011-2012. B. P. Halpern.

For description, see PSYCH 4920.]

[BIONB 4930 Developmental Neurobiology]

Fall. 3 credits. Limited to 20 students. Prerequisite: BIONB 2220 or permission of instructor. S-U or letter grades by permission of instructor. Planned M W 2:55-4:10. Offered alternate years. R. Booker.

Lectures covering the development of the nervous system, taking examples from both vertebrates and invertebrates. Emphasis is on cellular and molecular issues, that is, how do nerve cells differentiate both morphologically and biochemically? The role of cues such as hormones and developmental genes in neural development is discussed. Readings are taken from original journal articles.

[BIONB 4940 Brain Evolution and Behavior]

Fall. 3 credits. Limited to 50 students. Intended for juniors, seniors, and graduate students. Prerequisite: BIONB 2220 or equivalent. S-U or letter grades. Offered alternate years; next offered 2010-2011. A. H. Bass.

Organization and evolution of neuroanatomical pathways as substrates for species-typical vertebrate behaviors.]

[BIONB 4950 Molecular and Genetic Approaches to Neuroscience]

Fall. 3 credits. Limited to 25 students. Prerequisites: junior, senior, or graduate standing; BIONB 2220 and BIOBM 3300 or 3320. Letter grades only. Planned T R 2:55-4:10. Offered alternate years; next offered 2010-2011. D. L. Deitcher.

Focuses on how molecular and genetic approaches have led to major advances in neuroscience. Lectures, student presentations, and discussions examine research articles.]

[BIONB 4960 Bioacoustic Signals in Animals and Man]

Fall. 3 credits. Limited to 12 students. Prerequisites: junior, senior, or graduate standing; one year introductory biology, PHYS 1101-1102 or 2207-2208, and permission of instructor. S-U or letter grades. Planned M W 9:05; lab R 3-5. Offered alternate years; next offered 2010-2011. C. W. Clark and R. R. Hoyt.

Teaches students about animal acoustic signaling by introducing them to various animal acoustic systems.]

BIONB 4980 Teaching Experience

Fall and spring. 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility but not eligibility for graduating with distinction. S–U or letter grades by permission of the instructor. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

BIONB 7200 Advanced Topics in Neurobiology and Behavior

Fall and spring. Variable credit; may be repeated for credit. Prerequisite: graduate standing or permission of instructor. S–U or letter grades. Staff.

Designed to provide several study groups each semester on specialized topics. A group may meet for whatever period is judged adequate to enable coverage of the selected topics. Ordinarily, topics are selected and circulated during the preceding semester. Discussion of current literature is encouraged. See department office (W363 Mudd Hall) for offerings.

BIONB 7201 Research Design in the Study of Animal Social Behavior

Fall and spring. 1 credit; may be repeated for credit. Graduate students only. S–U grades only. Staff.

A weekly journal club–style discussion. Graduate students may be expected to present a summary of their research or a summary of research in the literature related to their thesis once per year.

BIONB 7202 Current Topics in Neuroethology

Fall and spring. 1 credit; may be repeated for credit. Graduate students only. S–U grades only. Staff.

A weekly journal club–style discussion. Graduate students may be expected to present a summary of their research or a summary of research in the literature related to their thesis once per year.

BIONB 7203 Research Design in Cellular and Molecular Neurobiology

Fall and spring. 1 credit; may be repeated for credit. Graduate students only. S–U grades only. Staff.

A weekly journal club–style discussion. Graduate students may be expected to present a summary of their research or a summary of research in the literature related to their thesis once per year.

BIONB 7210 Introductory Graduate Survey in Neurobiology and Behavior

Fall and spring. 2 credits. Requirement for graduate students majoring in neurobiology and behavior. Concurrent registration in BIONB 2210 and 2220 required. S–U grades only. Planned W 4:30–6:00. J. R. Fetcho and staff.

A year-long, graduate-level seminar with presentations from lecturers in BIONB 2210 and 2220. Discussions of current research in the area of neurobiology or behavior that have been presented in the lecture class. A lab project and/or a writing component each week could be assigned to ensure engagement with the material.

The Brain and Sleep (PSYCH 4400/6400)

Independent Undergraduate Research in Biology (BIOG 4990)

OTS Undergraduate Semester Abroad Programs

Shoals Marine Laboratory Program

Spider Biology: Life on a Silken Thread (ENTOM 2150)

Navigation, Memory, and Context: What Does the Hippocampus Do? (PSYCH 4230/6230)

PLANT BIOLOGY (BIOPL)

BIOPL 1120 Issues in Social Biology: from Diet to Diseases, DNA to Deforestation

Spring or summer, 3-week session. 3 credits. S–U or letter grades. P. J. Davies.

An analysis of current issues of biological relevance and the biological science behind these issues. Topics will include issues such as food and nutrition, antioxidants, organic produce, disease prevention, athletic enhancers, genetic testing, cancer, stem cells and animal cloning, genetically modified crops, bacteria and antibiotics, viruses, risk, statistics and epidemiology, photosynthesis and global warming, extinction and overpopulation, invasive species, resource over-utilization. The topics will vary according to current issues.

BIOPL 1250 Biology Seminar

Fall and spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S–U grades only. Staff.

A first-year seminar designed for students with Biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

BIOPL 2210 Natural Remedies in Ethnohealth

Fall. 2 credits. Prerequisites: course work in biology and sociology and health or related area, or permission of instructor. E. Rodriguez.

This course is an introduction to two aspects of ethnomedicine/ethnohealth: (1) the study of biology of health disparities like diabetes, cancer, and infectious diseases in Latinos/as, African Americans and American Indians in the United States, (2) and the botany, culture, and medical anthropology of plants and other natural remedies used by ancient cultures in the Americas and also currently used throughout the United States and the Americas.

BIOPL 2400 Green World/Blue Planet

Fall or summer, 6-week session. 3 credits. S–U or letter grades. Lec. and disc. T. Silva.

Focuses on helping individuals understand how scientific information relates to the issues they face as citizens, in management decision making, and in public policy. To what extent should genetic engineering of crop plants be permitted? Should we place limits on fossil fuel consumption as a means of limiting global warming and global climate change? Must human endeavors be restricted in certain areas to maintain diversity? The format of this course is interactive, with lectures and discussions about how we as a society deal with controversial issues.

BIOPL 2410 Introductory Botany

Fall. 3 credits. Lec. lab. K. J. Niklas.

Introductory botany for those interested in the plant sciences. Emphasizes structure, reproduction, and classification of angiosperms and the history of life on earth. Laboratory emphasizes development of skills in handling plant materials, including identification. First and second weeks of laboratory are field trips, starting with the first day of classes. *Those who register for an evening laboratory are still required to attend the afternoon field trips.*

BIOPL 2420 Plant Function and Growth Lectures

Spring. 3 credits. Primarily for undergraduates in agricultural sciences but also for any biological sciences students wanting to know about plant function; suitable as second-level course for nonmajors to satisfy biology distribution requirement. Prerequisites: one year introductory biology and/or BIOPL 2410. Corequisite for plant science undergraduates (and highly recommended for other science majors): BIOPL 2421. Recommended: one year introductory chemistry. May not be taken for credit after BIOPL 3420 except by written permission of instructor. S–U or letter grades. Evening prelims. P. J. Davies.

How plants function and grow. Examples deal with crop plants or higher plants where possible, though not exclusively. Topics include cell structure and function; plant metabolism, including photosynthesis; light relations in crops; plant-water relations; water uptake, transport, and transpiration; irrigation of crops; sugar transport; mineral nutrition; growth and development—hormones, responses to light, flowering, fruiting, dormancy, and abscission; stress; tissue culture; and genetic engineering of plants.

BIOPL 2421 Plant Function and Growth, Laboratory

Spring. 2 credits. Limited to 14 students per sec. Corequisite: BIOPL 2420. May not be taken for credit after BIOPL 3440. Disc and lab; students must take lab and disc on same day. T. Silva.

Experiments exemplify concepts covered in BIOPL 2420 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level.

[BIOPL 2430 Taxonomy of Cultivated Plants (also HORT 2430)]

Fall. 4 credits. Prerequisite: one year introductory biology or written permission of instructor. May not be taken for credit after BIOPL 2480. Lec, lab. Offered alternate years; next offered 2010-2011. M. A. Luckow.

Study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.]

BIOPL 2450 Plant Biology

Summer, six-week session. 3 credits.

Limited to 24 students. Lec, lab. T. Silva.

Introductory botany, including plant identification. Emphasizes structure, reproduction, and classification of flowering plants. Much of the laboratory work is conducted outdoors taking advantage of several outstanding natural areas available for study. Those who lack college-level biology are expected to work closely with the instructor on supplemental instructional materials.

[BIOPL 2470 Ethnobiology]**BIOPL 2480 Vascular Plant Systematics**

Spring. 4 credits. Prerequisite: introductory course in biology or botany or permission of instructor. May not be taken for credit after BIOPL 2430. S-U or letter grades. Lec, lab. Offered alternate years. J. I. Davis.

Introduction to the classification of vascular plants, with attention to the goals of taxonomy, the processes of plant evolution, and the means of analyzing evolutionary relationships among plants. The laboratory presents an overview of vascular plant diversity, with particular attention to the flowering plants.

BIOPL 2490 Hollywood Biology: Science in Cinema

Spring. 3 credits. Lec. Letter grades. M. Scanlon.

Biological subjects presented in Hollywood films. Lecture topics include the scientific method, Darwinism, development, paleobiology, animal cloning, genome sequencing, forensic DNA, artificial intelligence, eugenics, and epidemiology as background to discussions of their presentation in selected films. Themes: Genetics/Genomics; Evolution; Development; Epidemiology; Physical Anthropology; and Genetic Engineering. Does not fulfill any requirement of the biology major.

BIOPL 3420 Plant Physiology, Lectures

Spring. 3 credits. Prerequisites: one year introductory biology. Corequisite: BIOPL 3440 or written permission of instructor. May not be taken for credit after BIOPL 2420 unless written permission obtained from instructor. Lec. T. G. Owens.

Integrated and interdisciplinary study of the processes that contribute to the growth, competition, and reproduction of plants.

Topics include, but are not limited to, plant-water relations, membrane properties and processes, photosynthesis, plant respiration, mineral and organic nutrition, stress physiology, control of growth and development, and responses to the environment. Emphasis is on the relationship between structure and function from the molecular to the whole-plant level.

BIOPL 3421 Plant Physiology, Laboratory

Spring. 2 credits. Corequisite: BIOPL 3420. May not be taken for credit after BIOPL 2440. Similar to BIOPL 2440 but at more advanced level. Lab, disc. T. Silva.

Experiments exemplify concepts covered in BIOPL 3420 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level, with emphasis on experimental design.

BIOPL 3430 Molecular Biology and Genetic Engineering of Plants

Spring. 2 credits. Prerequisite: one year general biology or permission of instructor. S-U or letter grades. Lec. M. E. Nasrallah.

Introduction to current studies involving recombinant DNA technology and its application to the improvement of plants. Emphasizes genetic transformation methodology, gene expression systems, and strategies for increasing productivity. The course is directed toward undergraduates who wish to become familiar with the theory and practice of plant biotechnology.

BIOPL 3431 Laboratory in Molecular Biology and Genetic Engineering of Plants

Spring. 2 credits. Limited to 24 students. Prerequisite: BIOPL 3430 or permission of instructor. Recommended: concurrent enrollment in BIOPL 3430. S-U or letter grades. Lab. M. E. Nasrallah.

Companion to BIOPL 3430 with laboratory activities that focus on the practice of plant biotechnology. Students transfer genes to plants by a variety of methods and analyze their expression in the host genome by use of reporter gene assays and by the preparation and analysis of nucleic acids.

BIOPL 3450 Plant Anatomy

Fall. 4 credits. Limited to 15 students. Prerequisite: introductory course in biology or botany or permission of instructor. May not be taken for credit after BIOPL 3470. Lec, lab. A. Gandolfo.

Descriptive course with equal emphasis on development and mature structure. Lecture, laboratory, and reading are integrated in a study guide. The laboratory offers the opportunity to develop the practical skills required to make anatomical diagnoses and to write anatomical descriptions.

[BIOPL 3480 The Healing Forest

Spring. 2 credits. Prerequisites: introductory biology or plant biology or permission of instructor. Lec/disc. Offered alternate years. Staff.]

[BIOPL 3590 Biology of Grasses

Spring. 2 credits. Prerequisite: one year introductory biology or course in plant systematics or permission of instructor. S-U or letter grades. Lec. Lab. Offered alternate years; next offered 2010-2011. J. I. Davis.

Systematics and related aspects of the biology of the graminoid plant families (grasses, sedges, and rushes), with the principal emphasis on grasses. Major topics include phylogenetics, taxonomy, physiology, reproductive biology, speciation, and biogeography. The roles of graminoid plants in natural and human-disturbed environments are discussed, as are the origins of cultivated species.]

BIOPL 3800 Strategies and Methods in Drug Discovery

Spring. 2 credits. Prerequisite: one year introductory biology and organic chemistry course or permission of instructor. S-U or letter grades. M. A. Aregullin.

Covers strategies and methodologies in chemotaxonomy, chemical ecology, and ethnobotany, as they are used in chemical prospecting for new pharmaceuticals. Discusses the biosynthesis and distribution of plant secondary metabolites, the use of techniques in isolation and structure elucidation of natural products, and biological assays in the discovery of chemicals with pharmacological activity.

[BIOPL 4010 Introduction to Scanning Electron Microscopy]**[BIOPL 4030 Transmission Electron Microscopy for Biologists]****BIOPL 4040 Crop Evolution, Domestication and Diversity (also PLBR/IARD 4040)**

Fall. 2 credits. Prerequisites: BIOGD 2810 or PLBR 2250 or permission of instructor. S-U or letter grades. Lec. S. Kresovich.

For description, see PLBR 4040.

[BIOPL 4220 Plant Development

Fall. 2 credits. Lec. Prerequisites: course work in molecular biology (e.g., BIOBM 3300, 3310/3320, or 3330), and genetics (e.g., BIOGD 2810), or permission of instructor. S-U or letter grades. J. Hua. Introduction to plant development, studying the mechanisms of morphogenesis and cell fate determination at the organismal, cellular, and molecular levels.]

[BIOPL 4400 Phylogenetic Systematics (also ENTOM 4400)]

Spring. 4 credits. Limited to 24 students. Prerequisite: introductory biology or permission of instructor. Lec, lab. Offered alternate years; next offered 2010-2011. K. C. Nixon.

Basic and advanced theory and methods of phylogenetic analysis. Introduces students to cladistic analysis using parsimony and gain experience with computer-aided analysis of taxonomic data, including both morphological and molecular data sources. Topics include applications of phylogenetic methods to biogeography and evolutionary studies.]

[BIOPL 4420 Current Topics in Ethnobiology

Fall. 2 credits. Limited to 12 students. Prerequisite: permission of instructor. S-U or letter grades. Lec/disc. Offered alternate years. Staff.]

BIOPL 4430 Topics and Research Methods in Systematics

Fall or spring. 1–2 credits; 1 credit per sec.
Prerequisite: written permission of instructor. S–U or letter grades.
K. C. Nixon.

Series of 1-credit modules on specialized topics in systematics. Topics and instructors vary each semester. May not be taught every semester. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester.

BIOPL 4440 Plant Cell Biology

Fall. 4 credits. Limited to 24 students.
Prerequisites: one year introductory biology or permission of instructor. Lec, lab. R. O. Wayne.

Uses evidence from microscopy, physiology, biochemistry, and molecular biology to try to unravel the mystery of the living cell. Studies the dynamics of protoplasm, membranes, and the various organelles. The mechanisms of cell growth and division, the relationship of the cytoskeleton to cell shape and motility, the interaction of the cell with its environment, and the processes that give rise to multicellular differentiated plants are investigated.

BIOPL 4450 History of Systematic Botany

Fall. 3 credits. S–U or letter grades. Lec.
Offered alternate years. J. Reveal.

An historical overview from early man to the present day of systematic botany concentrating on nomenclature and classification with an emphasis of botanical explorations and their impact on plant taxonomy.

BIOPL 4470 Molecular Systematics

Fall. 3 credits. Prerequisites: BIOEE 2780 or BIOGD 2810 or BIOBM 3300, or BIOBM 3320, or written permission of instructor.
Lec. Offered alternate years. J. J. Doyle.

Theory and practice of using molecular evidence, particularly DNA sequence data, for addressing diverse systematic and evolutionary questions. Emphasis is on phylogeny reconstruction, particularly in eukaryotic systems. The organization and evolution of nuclear and organellar genomes is described from the standpoint of their suitability for systematic and evolutionary studies.

BIOPL 4480 Plant Evolution and the Fossil Record

Spring. 3 credits. Prerequisite: BIOPL 2410 or equivalent, or permission of instructor.
Lec, lab. Offered alternate years.
K. J. Niklas and W. L. Crepet.

Introduction to evolution, surveying major changes in plants from the origin of life to the present. Emphasizes plant form and function, adaptations to particular ecologic settings, and evolutionary theory as it relates to plants.

BIOPL 4490 Green Signals and Triggers—The Plant Hormones (also HORT 4490)

Spring. 2 credits. Prerequisite: one year introductory biology and plant physiology (BIOPL 2420 or 3420) or permission of instructor. S–U or letter grades. Offered alternate years. P. J. Davies.

Study of plant hormones and how they regulate plant growth and development. Topics include the discovery, role in growth and development, mode of action, and practical uses of the plant hormones auxin, gibberellins, cytokinins, abscisic acid, ethylene, and brassinosteroids.

BIOPL 4500 Light and Video Microscopy for Biologists

Fall. 3 credits. Limited to 12 students.
Prerequisites: one year introductory biology and permission of instructor. Lec, lab. R. O. Wayne.

Students learn the relationship between reality and the image using philosophy, mathematics, and physical theory. Next they apply these tools theoretically and in practice to understand and become experts at image formation and analysis using brightfield, darkfield, phase-contrast, fluorescence, polarization, interference, differential interference, and modulation contrast microscopes. They build upon our knowledge and experience to understand how analog image processors and digital image processors can influence, enhance, and analyze the images gathered by the microscope. Last they learn about many other kinds of microscopes, including confocal, near field, x-ray, acoustic, nuclear magnetic resonance, infrared, centrifuge, atomic force, and scanning tunneling microscopes.

[BIOPL 4520 Systematics of Tropical Plants

Fall. 3 credits. Prerequisite: BIOPL 2430 or 2480. Letter grades only. Lec, lab. Offered every three years. K. C. Nixon.

The families of plants encountered solely or chiefly in tropical regions are considered in a phylogenetic context in lectures, discussions, and laboratory, with the aim of providing basic points of recognition for, and an understanding of, diversity and relationships in these families.]

[BIOPL 4521 Systematics of Tropical Plants: Field Laboratory

Spring. 1 credit. Limited to 15 students.
Prerequisite: BIOPL 4520 or permission of instructor. Letter grades only. For more details and application, contact L. H. Bailey Hortorium, 467 Mann Library. Offered every three years. K. C. Nixon.

Intensive orientation to families of tropical flowering plants represented in forests of the American Tropics. Emphasis is on field identification combined with laboratory analysis of available materials in a "whole-biology" context. Two-week field trip over winter break.]

[BIOPL 4530 Principles and Practice of Historical Biogeography (also ENTOM 4530)

Fall. 3 credits. Prerequisite: systematics course or permission of instructors. S–U or letter grades. Lec, lab. Offered alternate years. J. K. Liebherr and M. A. Luckow.

For description, see ENTOM 4530.]

BIOPL 4620 Plant Biochemistry

Spring. 3 credits. Prerequisites: BIOPL 2420 or 3420 or equivalent and BIOBM 3300 or 3310 or equivalent or permission of instructor. Letter grades only. Lec. J. Rose and K. Van Wijk.

Focuses on biochemistry of plant specific processes, with the aim to obtain an integrative overview of plant biochemistry. Examples include processes such as cell wall biochemistry, pigment biosynthesis and degradation, secondary metabolism, senescence, defense mechanisms, amino acid biosynthesis, and small molecule transport. Genomics-based experimental tools such as proteomics and metabolomics are discussed.

BIOPL 4821–4822 Molecular Plant-Pathogen Interactions I and II (also PLPA 4821)

Spring. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOB 3310. S–U or letter grades. A. Collmer and B. G. Turgeon, odd years; S. G. Lazarowitz and G. Martin, even years.

For description, see PLPA 4821 and 4822.

BIOPL 4823 Molecular Plant-Microbe Interactions (also BIOMI 4640, PLPA 4822)

Spring. 1 credit. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. S–U or letter grades. 12 lec. Offered alternate years. S. C. Winans.

Focuses on the interactions of *Agrobacteria* and *Rhizobia* with plants. Topics on *Agrobacterium*-plant interactions include plant-microbe recognition mechanisms, T-DNA transfer process, oncogenesis, and use of *Agrobacterium* to produce transgenic plants. Topics on *Rhizobium*-plant interactions include regulation of nitrogenase activity and expression, organization and function of the *sym* plasmid, nodule development, and plant genetics involved in plant-microbe interaction.

[BIOPL 4824 Plant Gene Evolution and Phylogeny

Spring. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. Offered alternate years; next offered 2010–2011. J. J. Doyle.

Practical applications of molecular systematics/evolution for plant molecular biologists and other non-systematists. The course focuses on two basic issues: methods and principles for inferring relationships among genes and the use of data to hypothesize relationships among plants. Evolutionary patterns and processes of genes and gene families are discussed, as well as rates of sequence evolution, paralogy and orthology, the effects of recombination and concerted evolution of gene phylogenies, and the implications of using gene or allele phylogenies to infer organismal evolutionary patterns.]

[BIOPL 4825 Molecular Biology of Plant Organelles (also BIOGD 4825)

Spring. 1 credit. 12 lec. Prerequisites: BIOPL 4831 or BIOGD 2810 and permission of instructor. Recommended: BIOBM 3310 or equivalent. Letter grades or S–U grades with permission of instructor. Offered alternate years; next offered 2010–2011. M. R. Hanson and D. B. Stern.

Plants contain three different genomes—in the nucleus, chloroplasts, and mitochondria. This course examines the organization, expression, and evolution of plant organelle genomes. Special topics include RNA editing and stability, effects of organelle mutations on plant reproduction and photosynthesis, and chloroplast transformation for expression of useful foreign proteins.]

BIOPL 4826 Plant Biotechnology (also PLBR 4826)

Spring. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. S–U or letter grades. E. D. Earle.

Deals with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene

introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

BIOPL 4827 Plant Cell Walls: Structure to Proteome

Spring. 1 credit. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. S-U or letter grades. 12 lec. Offered alternate years. J. Rose.

Examines the structure and function of plant cell walls, exploring their dynamic nature and fundamental contribution to numerous aspects of plant growth and development. Topics include wall biosynthesis; wall structure and composition; regulation of cell expansion and differentiation; defense against pathogens and signaling; the apoplast as a metabolically active subcellular compartment; and analytical techniques: from biochemistry to proteomics.

BIOPL 4829 Light Signal Transduction in Plants

Spring. 1 credit. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. S-U or letter grades. 12 lec. Offered alternate years. T. Brutnell.

In addition to providing plants with energy for photosynthesis, light plays an essential role in the development of higher plants. Light quality and intensity is carefully monitored by the plant to avoid neighboring vegetation, set the circadian clock, and adjust photosynthesis rates. This course focuses on recent studies that have illuminated the molecular basis of light signal transduction networks in higher plants. Readings are assigned from current literature with an emphasis on those that use genomics tools such as microarray analysis to address fundamental questions in red/far-red and blue light signal transduction.

BIOPL 4831 Concepts and Techniques in Plant Molecular Biology (also PLPA/BIOGD/PLBR 4831)

Fall. 2 credits. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. Lec. S-U or letter grades. M. Scanlon, M. Hanson, and T. Owens.

Introductory module that provides a broad overview of molecular biology concepts relevant to the plant sciences. Serves as a prerequisite to other modules in the BIOPL 4830 (fall) and BIOPL 4820 (spring) classes. Course covers genetic concepts relevant to molecular markers, map-based cloning, insertional mutagenesis, forward and reverse mutant screens, analysis of transcriptomes, organelle and nuclear genome structure, and transformation. Techniques include nucleic acid manipulation, blot and in situ hybridization, chromatin immunoprecipitation, high throughput sequencing, PCR, microscopy, laser microdissection, microarrays, metabolomic profiling, proteomics, protein-protein interactions, electrophoresis, and immunological methods.

BIOPL 4832 Proteomics and Protein Mass Spectrometry in Biology (also PLPA/PLBR 4832)

Fall. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. S-U or letter grades. Offered alternate years. K. van Wijk.

Introduction to proteomics and mass spectrometry and its application in plant biology. Includes discussion of protein separation, protein tagging and visualization techniques; principles of biological mass spectrometry and interpretation of spectra; bioinformatics tools in proteomics; comparative proteomics; phosphorylation mapping. Discusses limitations and possibilities of proteomics on plants for which little sequence information is available and experimental papers involving plant proteomics.

[BIOPL 4833 Plant Genome Organization and Function (also PLBR 4833)]

Fall. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. S-U or letter grades. Offered alternate years; next offered 2010-2011. S. D. Tanksley.

Covers the structure and variation of plant nuclear genomes, including changes in genome size, centromere/telomere structure, DNA packaging, transposable elements, genetic and physical mapping, positional gene cloning, genomic sequencing and comparative genomics.]

[BIOPL 4834 Molecular Aspects of Plant Development I (also BIOBM 4834)]

Fall. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. Offered alternate years; next offered 2010-2011. J. B. Nasrallah.

Focuses on the molecular genetics of plant development with an emphasis on plant reproductive biology. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral cells and organs are discussed. Topics include cell-cell signalling in the establishment of pattern and functional differentiation of specialized cell types, and the control of developmental pathways by endogenous and external cues. It is a companion to BIOPL 4823 (Molecular Plant-Microbe Interactions).]

BIOPL 4835 Molecular Breeding (also PLBR 4835)

Fall. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. S-U or letter grades. Offered alternate years. S. D. Tanksley.

Application of DNA markers to the identification, manipulation, and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students learn how to design and execute experiments to identify quantitative trait loci (QTLs), as well as how to apply molecular markers to plant and animal breeding programs.

[BIOPL 4836 Plant Senescence (also HORT 6252)]

Fall. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. S-U or letter grades. (12 lec). Offered alternate years; next offered 2010-2011. S. Gan.

Introduces molecular, genetics, and genomics approaches in plant senescence and postharvest research. Topics include gene expression, regulation, and function associated with physiological and biochemical changes in senescing, maturing, and/or ripening plants or parts. Genetic manipulation of senescence/ripening processes are also discussed.]

BIOPL 4980 Teaching Experience

Fall or spring. 1-4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility but not eligibility for graduating with distinction. S-U or letter grades by permission of the instructor. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

BIOPL 6410 Laboratory in Plant Molecular Biology (also BIOBM 6410)

Fall. 4 credits. Prerequisites: BIOGD 2810 or equivalent, BIOBM 3300 or 3310 or equivalent, and permission of instructor. S-U grades by permission of instructor. Lab. M. R. Hanson, H. Wang, T. Brutnell, G. Jander, J. Hua, M. Scanlon, and K. van Wijk.

Includes selected experiments on gene expression, biolistic transformation, confocal microscopy, laser capture microdissection, microarray analysis, genetic mapping and mutant analysis, transposon tagging, proteomics, and metabolite analysis.

[BIOPL 6420 Plant Mineral Nutrition (also CSS 6420)]

Spring. 3 credits. Prerequisite: BIOPL 3420 or equivalent. Lec. Offered alternate years; next offered 2010-2011. O. K. Vatamaniuk, L. V. Kochian, and R. M. Welch.

For description, see CSS 6420.]

BIOPL 6470 Systematic Biology Journal Club

Fall or spring. 1 credit; may be repeated for credit. Intended for graduate students and advanced undergraduates in systematic biology. S-U grades only. Disc TBA. Bailey Hortorium staff.

Discussions led by staff, visitors, and students on topics of current importance to systematic biology.

[BIOPL 6490 Solute Transport in Plants (also BEE 6490)]

Fall. 3 credits. Letter grades only. Lec. Offered alternate years; next offered 2010-2011. R. M. Spanswick.

For description, see BEE 6490.]

BIOPL 6510 Water Transport in Plants (also BEE 6470)

Fall. 2 credits. Letter grades only. Lec. Offered alternate years. R. M. Spanswick.

For description, see BEE 6470.]

[BIOPL 6540 Botanical Nomenclature

Fall. 3 credits. Prerequisite: written permission of instructor. S-U or letter grades. Lec and disc. Offered alternate years; next offered 2010-2011. J. Reveal. Analysis of the International Code of Botanical Nomenclature and its application to various plant groups.]

[BIOPL 6560 Topics in Plant Evolution

Spring. 1 credit. Prerequisite: BIOPL 4480 or equivalent background in evolution, or written permission of instructor. Lab and disc. Offered alternate years; next offered 2010-2011. K. J. Niklas.

Series of selected topics to provide a background in plant evolution, paleobotanical literature, and evolutionary theory. Among the topics discussed are the origin of a terrestrial flora, the evolution of the seed plants, and the origin and adaptive radiation of the angiosperms.]

BIOPL 7400 Plant Biology Seminar

Fall and spring. 0 credits. Requirement for graduate students doing work in plant biology. W. L. Crepet.

Lectures on current research in plant biology, presented by visitors and staff.

BIOPL 7410 Problems in Plant Cell and Molecular Biology

Spring. 2 credits. Prerequisite: first- and second-year graduate students in Plant Cell and Molecular Biology Program. Disc.

Introduction to the research literature in plant molecular and cellular biology through weekly problem sets and discussions.

BIOPL 7420 Current Papers in Plant Biology

Fall or spring. 1 credit. Limited enrollment. Primarily for graduate students, with priority given to majors or minors in plant molecular biology. Prerequisite: for undergraduates, written permission of instructor. S–U grades only. Sem. Staff.

BIOPL 7430 Faculty Research in Plant Cell and Molecular Biology

Fall. 1 credit. Prerequisite: graduate standing or written permission from member of Plant Cell and Molecular Biology Program or from coordinator for undergraduates. Disc TBA. Staff.

Introduction for graduate students to the research being conducted by Cornell faculty in the Plant Cell and Molecular Biology Program.

BIOPL 7440 Graduate Research in Plant Cell and Molecular Biology

Fall or spring. 1 credit. Requirement for, and limited to, all graduate students in the Field of Plant Biology. Sem. Staff.

After the first year, each student presents one seminar per year on his or her thesis research and then meets with the thesis committee members for evaluation. First-year students only attend the seminar series, they do not present. Second-year students give a 25-min. seminar, while students in their third and higher years present a 50-min. seminar.

BIOPL 7450 Seminar in Systematic Botany

Fall. 1 credit. Prerequisite: graduate standing or permission of instructor. S–U grades only. Sem. Bailey Hortorium staff.

Seminar with student presentations of current topics in systematics.

BIOPL 7460 Seminar in Systematic Botany: Student Research

Spring. 1 credit. Prerequisite: graduate standing or permission of instructor. Letter grades only. Sem. Bailey Hortorium staff.

Student-led seminar presentation based on his or her thesis research or a related topic.

BIOPL 7490 Graduate Research in Botany

Fall or spring. Variable credit, may be repeated for credit. S–U or letter grades. Staff.

Similar to BIOG 4990 but intended for graduate students who are working with faculty members on an individual basis.

COURSES IN MARINE SCIENCE

Cornell offers an extensive listing of undergraduate courses in marine science. Undergraduates interested in pursuing studies in marine science are encouraged to explore the undergraduate specialization in marine biology, the undergraduate specialization in ocean sciences, and the summer program of courses offered by the Shoals Marine Laboratory. For further information on all of these programs, contact the Shoals Marine Laboratory Office, G14 Stimson Hall, or at www.sml.cornell.edu.

Undergraduate Specialization in Marine Biology

Biological Sciences majors who are concentrating in Ecology and Evolutionary Biology have the option of specializing their studies in the area of Marine Biology. This specialization is intended for students with interests in understanding the unique aspects of organismal biology in the marine environment. Students specializing in Marine Biology are expected to spend significant time at the Shoals Marine Laboratory, Cornell's marine field station on Appledore Island, Maine, where they may take introductory and advanced courses for Cornell credit, do an independent research project, and complete a paid internship. See www.sml.cornell.edu for details.

Undergraduate Specialization in Ocean Sciences

Science of Earth Systems majors have the option of specializing their program of study in the area of ocean sciences. This interdisciplinary specialization is intended for students with interests in understanding the interaction of biological, chemical, geological, and physical processes in ocean systems. In addition to fulfilling the Science of Earth Systems general requirements (see the SES program description in Interdisciplinary Centers, Programs, and Studies section of catalog), students in ocean sciences are required to take four courses from the following list to fulfill their major.

BIOSM 3060 Evolution of Ancient and Modern Oceans

BIOSM 3080 Field Microbial Ecology

BIOSM 3090 Coastal Ecology and Bioclimates

BIOSM 3100 Marine Symbiosis

BIOSM 3120 Biology of the Lobster

BIOSM 3200 Functional Morphology of Marine Organisms

BIOSM 3210 Anatomy and Function of Marine Vertebrates

BIOSM 3220 Ecology of Biological Invasions

BIOSM 3290 Ecology of Animal Behavior

BIOSM 3640 Field Marine Science

BIOSM 3650 Underwater Research

BIOSM 3740 Field Ornithology

BIOSM 3750 Field Marine Biology and Ecology

BIOSM 3760 Marine Invertebrate Zoology (Note: Not same as BIOEE 3730)

BIOSM 3770 Diversity of Fishes

BIOSM 3820 Comparative Embryology and Life History Strategies

BIOSM 4100 Animal Social Behavior

BIOSM 4130 Research in Marine Biology

BIOSM 4450 Forensics Science for Wildlife Biologists

BIOSM 4490 Marine Botany

BIOSM 4650 Sharks: The Biology, Evolution, and Conservation of Sharks and Their Allies

BIOSM 4720 Genetics of Marine Diversity

BIOSM 4770 Marine Vertebrates

BIOEE 3730 Biology and Biodiversity of the Marine Invertebrates

BIOEE 4570 Limnology

BIOEE 4571 Limnology: Ecology of Lakes, Laboratory

BIOEE 4620 Marine Ecology

BIOEE 4780 Ecosystem Biology

BIOEE 4900 Topics in Marine Biology

BIOEE 6680 Principles of Biogeochemistry

EAS 3060 Evolution of Ancient and Modern Oceans

EAS 3220 Biogeochemistry of the Hawaiian Islands

 SEA courses must be taken concurrently. This program is run by SEA Education Association (SEA) in Woods Hole, Mass. Contact SEA at 800 552-3633 and see www.sea.edu.

SHOALS MARINE LABORATORY (BIOSM)

G14 Stimson Hall, 255-3717

Shoals Marine Laboratory (SML) provides a unique opportunity to explore marine sciences on Appledore Island, Maine, an island noted for its biota, geology, and history. SML has established a national reputation for excellence and is North America's largest marine field station focusing on undergraduate education.

The summer population of Appledore Island is limited to one hundred people at any one time. Students and faculty literally and figuratively immerse themselves in their explorations, free from distractions common to most academic institutions. Because SML is a residential facility, a sense of community develops that makes courses and seminars at SML outstanding educational and intellectual experiences. Participants learn from and exchange ideas with a wide range of specialists whose primary interests are in marine sciences but whose perspectives often differ, providing fertile ground for lively discussions.

Credit courses at Shoals Marine Laboratory are full-time, intensive learning experiences. Courses may be taken sequentially, but **not** concurrently. A typical day combines lecture sessions, laboratory and field work, field trips to nearby islands or the mainland, and collecting and research excursions aboard the laboratory's 47-foot research vessel, *John M. Kingsbury*, or the 36-foot research vessel, *John B. Heiser*. Field experience is integral to all courses, using Appledore's extensive intertidal and subtidal zones and seabird colonies. Faculty, drawn from Cornell University, the University of New Hampshire, and other leading academic institutions, are selected based not only on their academic excellence but also on their ability to teach in the field. Many guest lecturers including engineers, coastal planners, and specialists from private industry, government, as well as the academic community visit Appledore during the season. The SML main administrative office is located at Cornell's Ithaca campus, G14 Stimson Hall. The office serves as an advising center for students interested in the marine sciences, maintains updated information on graduate study and career opportunities as well as on marine programs at other institutions.

The following marine sciences courses are currently administered by the Shoals Marine Lab. (Not all of these courses are offered each semester; consult the SML web site for current offerings: www.sml.cornell.edu.)

BIOSM 1110 A Marine Approach to Introductory Biology

Summer. 8 credits. Prerequisite: permission of instructor. Letter grades only. A four-week course for pre-freshmen at Shoals Marine Lab (SML) on Appledore Island in the Gulf of Maine. W. E. Bemis, J. B. Heiser, and D. Taylor.

Course includes daily fieldwork, boat trips, outdoor adventure, and practices for sustainable living. Intensive lectures, laboratory, and fieldwork occur in a learning environment emphasizing individual skill building, project design and execution, and collaboration with faculty and peers. We explore four major themes—ecology, behavior, development, and genomics—and connect them using examples from evolution. Social issues discussed range from global environmental change to sustainable fisheries, emerging infectious diseases, and stem cell research.

[BIOSM 1230 Ocean Sciences

Summer. 4 credits. Prerequisite: permission of instructor. Letter grades only. Next offered 2011-2012. D. Taylor.]

BIOSM 1551 Introduction to Oceanography (also EAS 1551)

Summer. 1 credit. Prerequisite: college-level science course, EAS 1540, marine science course, or permission of instructor (any of these). S-U or letter grades. B. Monger and C. Greene. For description, see EAS 1551.

BIOSM 1600 The Oceanography of the Gulf of Maine

Summer. 2 credits. Limited to 24 students. S-U or letter grades. A two-week course offered aboard a SEA vessel and at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. For more details or an application, contact SML office, G14 Stimson Hall or web site (www.sml.cornell.edu) or Sea Education Association office, P.O. Box 6, Woods Hole, MA 02543, 800-552-3633 X 770 or web site: www.sea.edu. Daily lec, lab, and fieldwork for two weeks. S. Rensselaer, and SEA and SML staff.

Exciting opportunity to explore the offshore and near-coastal environments of the Gulf of Maine for advanced high school students. Students spend 10 days aboard the Sea Education Association's sailing vessels round trip between Woods Hole, Mass., and the Isles of Shoals via Georges Bank and the Gulf of Maine. Besides operating the ship, students study the many characteristics of this unique ocean environment. Following the sea component, students spend seven days at the Shoals Marine Laboratory collecting data characteristic of the Isles of Shoals coastal environment.

[BIOSM 1610 Introduction to Marine Science

Summer. 4 credits. S-U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for two weeks. Next offered 2011-2012.]

BIOSM 1620 Marine Environmental Science

Summer. 4 credits. Prerequisite: open to high school rising junior and senior students who have successfully completed two high school science courses. S-U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for 14 days. M. Johnson.

Environmental studies have become an integral component of high school programs all around the country; however, opportunities to apply this course work to the marine environment are limited. Marine Environmental Science focuses on coastal marine habitats, with an emphasis on issues as they relate to global habitats and concerns. Laboratory exercises and fieldwork include explorations along Appledore Island's rocky intertidal zone and excursions to neighboring islands to observe harbor seal and seabird colonies. Offshore cruises include oceanographic sampling exercises and field trips to seabird and whale foraging grounds. Lectures and discussions expose MES students to topics ranging from fishes to fisheries, seaweeds to lobsters, and plankton to whales. Fundamental scientific research methods and equipment are introduced, and each student has the opportunity to be involved in group research projects.

BIOSM 2040 Biological Illustration

Summer. 2 credits. Prerequisite: none. S-U or letter grades. A one-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. B. Ober, C. Garrison, and J. Gibson. General discussion of scientific publishing, illustration labeling, color techniques, and printing processes. Provides the scientist or science student a chance to experience several illustration techniques with the goal of obtaining an overview of scientific and wildlife illustrations. The student may choose a single technique to explore in depth. Course size is limited so that individual attention can be emphasized.

BIOSM 2100 Boats for Biologists

Summer. 2 credits. Prerequisite: open to all undergraduate and graduate students. S-U or letter grades. A one-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. W. E. Bemis.

Marine and freshwater biologists rely on boats—small and large—for transportation, environmental sampling, data collection, and other tasks. This course offers biologists at all stages of their careers a chance to learn basic boat handling, piloting, navigation, and common sampling techniques to enhance their opportunities for research and education. This course meets all certification requirements for basic small boat handling by state-specific agencies and National Association of Boating Law Administrators.

[BIOSM 2250 Sustainability in the 21st Century

Summer. 4 credits. Prerequisite: open to all undergraduate and graduate students. Letter grades only. A two-week course offered at Shoals Marine Laboratory (SML) on Appledore Island in the Gulf of Maine. Next offered 2010-2011. Cornell, UNH, SML faculty and staff.]

BIOSM 2760 Seabird Ecology and Conservation

Summer. 2 credits. Prerequisite: one year college-level biology. S-U or letter grades. A one-week course offered at Shoals Marine Laboratory (SML) on Appledore Island in the Gulf of Maine. J. Ellis.

Combines lectures from specialists (e.g., ecologists and wildlife veterinarians) with a variety of field-based activities related to seabird ecology and conservation. Topics will include: seabird identification, behavioral studies, census techniques, population threats (e.g., fisheries bycatch, pollution), and restoration. A field trip to a nearby seabird restoration island will be included.

BIOSM 2770 Introduction to Marine Conservation Biology

Summer. 4 credits. Prerequisite: two semesters of college-level introductory biology or equivalent. S-U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. H. Weeks and K. Flessa.

Students will study introduction to the examination and analysis of marine biological resource conservation and management issues. Class will address principles and problems through readings, laboratory modeling exercises and lectures, including guests from the New England region, and explore potential pathways to success through readings and field trip.

BIOSM 3060 Evolution of Ancient and Modern Oceans (also EAS 3060)

Summer. 6 credits (students will have the opportunity to continue their studies during the fall semester on campus at Cornell for another 2 credits of independent study). Prerequisite: one semester of oceanography and /or marine biology or permission of instructor. Letter grades only. W. Allmon.

For description, see EAS 3060.

BIOSM 3080 Field Microbial Ecology (also BIOMI 3080)

Summer. 4 credits. Prerequisite: introductory biology or permission of instructor. S-U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. E. Zettler and L. A. Zettler.

The microbial world dominates the biosphere in terms of biomass, diversity, and metabolic flexibility. This course will introduce students to collecting, observing, and identifying live representatives of these fascinating microbial organisms including bacteria, protists, fungi, and microscopic animals. Taxonomy and ecology of the basic groups of microorganisms will be covered while students learn to collect in the field for observation, experimentation and isolation.

[BIOSM 3090 Coastal Ecology and Bioclimates

Summer. 4 credits. Prerequisite: one year college-level biology; background preferred in physics/physical geography. S-U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for two weeks. Next offered 2010–2011. G. Courtin.]

[BIOSM 3100 Marine Symbiosis

Summer. 4 credits. Prerequisite: one full year college-level biology. Recommended: background in microbiology or cell biology. S-U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lecs and fieldwork for two weeks. Next offered 2011–2012. SML faculty.]

BIOSM 3110 Science Writing

Summer. 2 credits. Prerequisite: introductory-level science course. One-week course offering students an introduction to science writing at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. S-U or letter grades. C. Zimmer.

Students will learn about the business of science writing (including career opportunities in newspapers, television, and the Internet). They will also have the opportunity to become familiar with the craft of making complex scientific research understandable and exciting for the general public. Students should be prepared to complete several short-deadline writing exercises.

BIOSM 3120 Biology of the Lobster

Summer. 2 credits. Prerequisite: one year of college level biology. S-U or letter grades. A one-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. J. Factor.

An introduction to the biology of the American lobster, *Homarus americanus*. The course will include an overview of this ecologically and economically important species, as well as cover several major topics in depth, each taught by a lobster biologist expert in that field. Topics may include life history, larval development and metamorphosis, anatomy, physiological adaptation, fisheries and fishing methods, feeding mechanisms, ecology, and behavior. Course will include lecture, laboratory, discussion, and the natural field environment of Appledore Island.

[BIOSM 3200 Functional Morphology of Marine Organisms

Summer. 4 credits. Prerequisite: one year introductory biology or one semester introductory biology, general zoology, and general botany. Letter grades only. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Next offered 2010–2011. F. Fish.]

BIOSM 3210 Anatomy and Function of Marine Vertebrates

Summer. 4 credits. Prerequisite: college-level introductory biology or equivalent. S-U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. W. E. Bemis, EE&B faculty, and F. Fish.

Course includes introductions to vertebrate systematics, paleontology and evolution, vertebrate development, and functional morphology. Students will do comparative study of the anatomy of marine vertebrates, including: hagfishes; lampreys; sharks, skates, rays and chimaeras; ray finned fishes; lobe-finned fishes; marine reptiles, birds, and mammals. All 10 organ systems of vertebrates will be detailed in lecture and laboratory exercises. Dissection is required. Grades will be based on quizzes, essay exams, practical exams, class participation, and research projects.

BIOSM 3220 Ecology of Biological Invasions

Summer. 4 credits. Prerequisite: full year (two semesters) of introductory biology. One-week field course examining marine and terrestrial invasions in the field using facilities at Shoals Marine Laboratory (SML) on Appledore Island in the Gulf of Maine and at Creek Farm in Portsmouth, N.H. S-U or letter grades. R. Hadlock Seeley and J. Dijkstra.

The course includes both a thorough review of theory of invasions (and their ecological and evolutionary sequelae) and field time with invited experts in invasive insect, plant, marine invertebrate and bird species.

BIOSM 3290 Ecology of Animal Behavior (also BIONB 3290)

Summer. 4 credits. Prerequisite: one year introductory college biology. Recommended: course work in ecology, psychology, or behavior. S-U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for two weeks. H. Weeks, J. Waldvogel, and W. Kimler.

The ecological significance of behaviors of coastal organisms, with emphasis on field and laboratory research methods. Lectures and readings address the major subareas of behavior (communication, orientation, social behavior, foraging, predator avoidance, and sensory mechanisms). Each student engages in short-term behavioral observation and prepares a research proposal for studying a problem within the course subject area.

BIOSM 3640 Field Marine Science (FMS)

Summer. 8 credits. Prerequisite: one year college-level biology. S-U or letter grades. A four-week course offered twice each summer at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Students may not take FMS after taking FMBE (BIOSM 3750). Daily lec, lab, and fieldwork for four weeks. Three core faculty members assisted by up to 15 visiting lecturers, including representatives of governmental agencies. J. Factor, R. Zechman, S. Morris, W. E. Bemis, and E. Zettler.

Designed for the student who desires an initial overview of the marine sciences, this course emphasizes living material in natural habitats. Most of the course work is concerned with the biology of intertidal plants and animals, biological oceanography, ichthyology, and fisheries. Attention is also given to introductory physical and chemical oceanography and marine geology. Marine ecology and the effects of human activity on the marine environment are included. Students apply this knowledge by conducting a transect study toward the end of the course. FMS places emphasis on ichthyology, fisheries biology, general oceanography (biological, physical, and chemical), and marine geology. FMBE (BIOSM 3750) places an additional emphasis on ecology, especially in the intertidal zone; ecological, evolutionary and physiological adaptations of marine organisms; and field experiments.

BIOSM 3650 Underwater Research

Summer. 4 credits. Prerequisites: one year college-level biology, recognized SCUBA certification, and medical exam. S-U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec and fieldwork for two weeks.

J. Coyer, J. Grabowski, and E. Calvert.

Covers the philosophy of research, hypothesis testing and experimental design, sampling methods, various underwater techniques, diving physics and physiology, and use of dive tables. Emphasizes subtidal ecological research. Requirements include critical evaluation of several journal articles and production of a research proposal.

BIOEE 3730 Biology and Biodiversity of the Marine Invertebrates

Fall (but course must be taken previous summer at Shoals Marine Laboratory [SML]), three-week, full-time course. 5 credits (students enroll for credit during fall semester). Limited to 24 students. Prerequisites: one year introductory biology for majors; permission of faculty because off campus. Letter grades only. Daily and evening lec, lab, and fieldwork. Offered alternate years. C. D. Harvell.

BIOSM 3740 Field Ornithology

Summer. 4 credits. Prerequisite: one year college-level biology. S-U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec and fieldwork for two weeks. D. Bonter.

Introduction to field ornithology focusing on the biology, ecology, and behavior of the avifauna on the Isles of Shoals. Focuses on fieldwork designed to observe and study many concepts frequently taught in the classroom setting including territoriality, breeding biology, and survivorship. Students learn and apply numerous ornithological field methods including various census techniques, territory mapping, banding, behavioral observations, and creating a field notebook.

BIOSM 3750 Field Marine Biology and Ecology (FMBE)

Summer. 8 credits. Prerequisites: one full year college-level biology. S-U or letter grades. A four-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for four weeks. K. A. Miller and C. Siddon.

Designed for students seeking an introduction to the marine sciences and marine ecology; FMBE emphasizes fieldwork in natural habitats. Examines aspects of the biology and ecology of marine organisms, including intertidal plants and invertebrates, fishes, marine mammals and birds, biological oceanography, and human impacts on the marine environment. FMBE places a special emphasis on the ecology of the intertidal zone and ecological, evolutionary, and physiological adaptations of marine organisms. Students may not take FMBE after taking FMS (BIOSM 3640).

[BIOSM 3760 Marine Invertebrate Zoology

Summer. 6 credits. Prerequisite: one year introductory biology and permission of instructors. Students may not take BIOSM 3760 after taking BIOEE 3730. S-U or letter grades. A three-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for three weeks. Offered alternate years; next offered 2011-2012. J. Morin.]

BIOSM 3770 Diversity of Fishes

Summer. 6 credits. Prerequisite: one full year college-level biology. Recommended: background in vertebrate biology. S-U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lecs and fieldwork for two weeks. B. Collette.

Intensive lecture, laboratory, and field course. Lectures cover the basic anatomy and physiology of fishes with examples drawn from a wide variety of fishes from throughout the world. The course emphasizes the diversity of fishes in two aspects, diversity of evolutionary solutions to problems faced by fishes and the great diversity of different types of fishes that inhabit the world. Laboratory exercises cover the anatomy and osteology of teleost fishes and identification of local species. Each student selects a different local species of teleost fish to study and dissect and prepares a comprehensive paper on its morphology, soft anatomy, and osteology.

[BIOSM 3820 Comparative Embryology and Life History Strategies

Summer. 2 credits. Prerequisite: introductory biology or equivalent. S-U or letter grades. A one-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Next offered 2010-2011. W. E. Bemis, EE&B faculty.]

[BIOSM 4100 Animal Social Behavior

Summer. 2 credits. Prerequisite: introductory biology. Letter grades only. A one-week course offered at Shoals Marine Laboratory (SML) on Appledore Island in the Gulf of Maine. Next offered 2010-2011. T. Seeley, P. Sherman, and J. Sherman Sherman.]

BIOSM 4130 Research in Marine Biology

Summer. 4 credits. Prerequisite: one year college-level biology. Recommended: experience in ecology or physiology. S-U or letter grades. A three-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for two weeks. D. Taylor, D. Fudge, A. Todgham, and J. Lim.

A hands-on course in which students explore the marine environment around Appledore Island via field and laboratory experiments of their own design. This course is unique in that students learn practical skills that are required of all biologists, such as generating hypotheses, experimental design, data collection, statistical analysis, group decision-making, writing scientific papers, and communicating results to others. The class will work together on several experiments inspired by student observations, primary literature, lectures, and data collected by previous classes. Phenomena investigated in previous years include: predator-prey interactions, vertical migration in zooplankton,

biomechanical design, foraging behavior, photosynthesis, and adaptation to intertidal stressors such as desiccation, temperature, and wave action. Students will gain practical experience with laboratory, field, and remote sensing equipment, and may work with a diverse range of marine organisms including vertebrates, invertebrates and algae. Each student will take responsibility for writing up the results from one experiment and will present the results in a scientific symposium at the end of the course. This course is highly recommended for undergraduates interested in independent research or considering graduate education in biology, as well as science educators seeking experience in inquiry-based learning.

BIOSM 4450 Forensic Science for Wildlife Biologists (also VTMED 6435)

Summer. 2 credits. Prerequisite: satisfactory completion of college-level course in biology, ecology, or marine science. S-U or letter grades. A one-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. W. Lord, R. Haebler, R. Kenney, W. Rodriguez, and I. Sidor.

Forensic science represents the unique merging of scientific insight and the law. Forensic Science for Marine Biologists provides a field-oriented introduction to the forensic science domain and the utilization of marine biology within the justice system. Students receive comprehensive instruction concerning the recognition, documentation, collection, and preservation of physical evidence. Additionally, students develop practical incident response, scene management, and forensic teamwork skills.

[BIOSM 4490 Marine Botany

Summer. 4 credits. Prerequisite: BIOSM 3640 or one year introductory biology. S-U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for two weeks. Next offered 2010-2011. R. Zechman.]

BIOSM 4650 Sharks: The Biology, Evolution, and Conservation of Sharks and Their Allies

Summer. 3 credits. Prerequisite: vertebrates or comparative anatomy and ichthyology or permission of SML director. S-U or letter grades. A one-and-a-half-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. D. Dagit and W. E. Bemis.

The last 30 years have produced an explosion of new information on the biology of the approximately 1,000 living species of sharks, skates, rays, and chimaeras, which collectively make up the group Chondrichthyes. This course will cover advanced topics in the evolution, diversity, anatomy, functional morphology, neurobiology, sensory systems, behavior, reproduction, development, and conservation of cartilaginous fishes.

BIOSM 4720 Genetics of Marine Diversity

Summer. 4 credits. Prerequisite: one year introductory biology. Recommended: genetics and/or cell biology with laboratory components. Helpful: evolutionary biology, ecology vertebrate/invertebrate zoology. Letter grades only. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. A. Shedlock.

An introduction to basic concepts in systematic biology, evolutionary genetics, molecular ecology, and conservation biology emphasizing the natural history of marine organisms. Students integrate field sampling techniques, taxonomy, and curation of specimens from Appledore Island and surrounding waters with molecular diagnostics completed in the laboratory. Standard methods for DNA purification, amplification, sequencing, and genotyping are used to address questions about population structure, kinship, and species phylogeny.

[BIOSM 4770 Marine Vertebrates

Summer. 6 credits. Prerequisites: vertebrate biology course or equivalent course at level from which applicant can demonstrate knowledge of basic vertebrate anatomy, physiology, and systematics, or permission of instructor. S–U or letter grades. A three-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for three weeks. Next offered 2010–2011. J. Heiser.]

[BIOSM 4950 Research Methods in Marine Biology

Summer. 1 credit. Corequisite: BIOSM 4990 or permission of instructor. Primarily for undergraduates. An eight-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Weekly sem for eight weeks. Next offered 2011–2012. SML faculty.]

BIOSM 4990 Research in Biology

Summer. Variable credit; 2 credits per seven days on site. A three-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. SML faculty.

Section A: Independent Biological

Research: Independent study with a member of the Shoals Marine Laboratory core faculty, based on student faculty interest and available facilities. A short proposal of research must be sent with application materials.

[BIOSM 6500 Field Marine Ecology and Environmental Science for Teachers

Summer. 2 credits. Prerequisites: one year college-level biology. Recommended: teaching experience. A one-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec and fieldwork for one week. Next offered 2011–2012. SML faculty.]

[BIOSM 6990 Research in Biology for Teachers

Summer. 2 credits per week. Prerequisite: BIOSM 6500. One-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Next offered 2011–2012.]

SEA Semester

Sea Education Association (SEA) offers a semester-length sequence of courses designed to provide college undergraduates with a thorough academic, scientific, and practical understanding of the sea. *This sequence is repeated approximately once every two months throughout the year.* Students spend the first half of SEA Semester (a six-week shore component) in Woods Hole, Mass., receiving instruction in oceanography, nautical science, and maritime studies. The second half of SEA Semester (a six-week sea component) is spent at sea aboard the SSV *Robert C. Seamans* or

the SSV *Corwith Cramer*. Enrollment is open to both men and women judged capable of benefiting from SEA semester; a student must have successfully completed **at least one college-level laboratory science course** (or its equivalent) in order to be admitted to SEA Semester or SEA Summer Session. **No prior sailing experience is necessary.** Cornell students enrolled in the SEA Semester must take the entire sequence.

For more information, contact Sea Education Association, P.O. Box 6, Woods Hole, MA 02543 or call 800–552–3633 ext. 770. Program costs are to be paid in place of regular Cornell tuition and fees.

Instructors for the SEA Semester include faculty of the Sea Education Association and the Woods Hole Oceanographic Institution and others.

SEA Basic Semester

SEA 3660 Introduction to Oceanography
3 credits. Corequisites: BIOSM 3670 and 3680.

Survey of the characteristics and processes of the global ocean. Introduces oceanographic concepts and develops them from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent cruise. Guest lecturers from the Woods Hole research community interpret current trends and activities in this rapidly evolving field. Students develop individual projects to be carried out at sea.

SEA 3670 Introduction to Maritime Studies

3 credits. Corequisites: BIOSM 3660 and 3680.

Interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

SEA 3680 Introduction to Nautical Science

3 credits. Corequisites: BIOSM 3660 and 3670.

An introduction to the technologies of operation at sea. The concepts of navigation (piloting, celestial and electronic), naval architecture, ship construction, marine engineering systems, and the physics of sail are taught from their bases in astronomy, mathematics, and physics. Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.

SEA 3690 Practical Oceanography I

4 credits. Prerequisite: BIOSM 3660.

Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment; in the methodologies involved in the collection, reduction, and analysis of oceanographic data; and in the attendant operations of a sailing oceanographic research vessel.

SEA 3700 Practical Oceanography II

4 credits. Prerequisites: BIOSM 3680 and 3690.

Building on the experience of Practical Oceanography I, students assume increasing responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student is ultimately responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operations of the vessel. Each student undertakes an individual research project designed during the shore component.

SEA 3720 Practical Oceanography III

Summer. 3 credits. Prerequisites: BIOSM 3660, 3670, and 3680.

Theories and problems raised in class are tested in the practice of oceanography at sea. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment, in the methodologies involved in the collection, analysis, and reduction of oceanographic data, and in the attendant operations of sailing an oceanographic research vessel. Group research projects are completed.

SEA Oceans and Climate Semester

SEA 3680 Introduction to Nautical Science

SEA 3780 Oceans and Climate: Oceans in the Global Carbon Cycle

Fall, spring. 4 credits. Prerequisite: 3 lab science courses or permission of instructor. SML faculty.

This course examines the role of the oceans in the climate system, addressing topics such as the global carbon cycle, the thermohaline circulation, and aspects of global change including warming and sea level rise.

SEA 3790 Ocean Science and Public Policy (HA)

Fall, spring. 3 credits. SEA faculty.

This course seeks to provide students with a fundamental understanding of the intersection between climate change and governmental policy and the interrelationship between science and governmental policy. After an introduction to the development of maritime law and sovereignty on the high seas, students will examine why societies funded oceanic research.

SEA 3800 Oceanographic Field Methods

Fall, spring. 3 credits. Prerequisite: successful completion of BIOSM 3780. SEA faculty.

This course introduces students to all aspects of oceanographic fieldwork. Students learn practical skills in the operating principles and safe deployment of oceanographic instrumentation. Skills acquired enable students to carry out an independent research project.

SEA 3810 Independent Research in Oceans and Climate

Fall, spring. 4 credits. Prerequisite: successful completion of BIOSM 3780. SEA faculty.

This course provides upper-level study focused on oceanography and climate, including the design and completion of an independent research project that is comparable in scope to an undergraduate senior research thesis.

SEA: Documenting Change in the Caribbean Semester**SEA 3620 Maritime History and Culture (CA) (HA)**

Fall, spring. 4 credits. SEA faculty.

In this course, students will explore political, cultural and social changes in the Caribbean since just before Europeans arrived at the end of the 15th century. Student will see how the physical nature of the region has influenced patterns of settlement and development and the impact of European expansion.

SEA 3660 Practical Oceanography I**SEA 3680 Introduction to Nautical Science****SEA 3700 Practical Oceanography II****SEA 3710 Marine Environmental History (CA) (LA)**

Fall, spring. 4 credits. SEA faculty.

This course is designed to explore the interaction of ecological factors in ocean, coastal and island environments; the impact of human actions on those environments; and the need for local, regional and international responses and strategies to mitigate and manage that impact.

COMPUTING AND INFORMATION SCIENCE

ADMINISTRATION

Robert Constable, dean

Juris Hartmanis, senior associate dean

Jennifer Wofford, assistant dean for educational programs

INTRODUCTION

Computing and Information Science (CIS) offers courses and programs campuswide in various academic disciplines in which computing is integral. It is home to the Department of Computer Science, the Department of Statistical Science, the program in Information Science, and interdisciplinary programs in computational biology, computational science and engineering, game design, and computing in the arts. The faculty members associated with CIS programs hold joint appointments with CIS and another Cornell academic unit.

Computing and Information Science is a rapidly changing area. Please consult the CIS web site, www.cis.cornell.edu, for the most current news of programs and courses, or visit the CIS undergraduate office in 303 Upson Hall.

ACADEMIC PROGRAMS

Computing and Information Science offers the following academic programs through its corresponding colleges. See the departmental listings for details of the programs.

Computational Biology

Undergraduate students interested in computational biology can pursue study in the field through a variety of academic programs within their major. Programs in computational biology are available to students majoring in biology, biological statistics and computational biology (BSCB), and mathematics. Students majoring in computer science should review the vector in computational science.

A concentration in computational biology is available to biological sciences majors in the College of Agriculture and Life Sciences and the College of Arts and Sciences and is coordinated by the Office of Undergraduate Biology. It provides core training in biology and the supporting physical and computer sciences.

The concentration in statistical genomics is offered by the Department of Biological Statistics and Computational Biology to students enrolled in the College of Agriculture and Life Sciences. It provides training in statistics, biology, and computer science. It is designed for students who want to emphasize statistics and bioinformatics.

The concentration in mathematical biology is offered by the Department of Mathematics

and is open to students enrolled in the College of Arts and Sciences. It provides training in mathematics, biology, and computer science. It is designed for students who want to emphasize mathematics.

Computational Science and Engineering

The CIS program in Computational Science and Engineering (CSE) spans several dozen departments and research areas. The field is application-driven and involves a mix of applied mathematics, numerical analysis, and computer science. Numerous courses are taught throughout the university. Go to www.cis.cornell.edu/cse for a list of courses and associated faculty members.

Computer Science

All CIS programs have connections to computer science, the study of computation in all of its forms. The curriculum covers the theory of algorithms and computing and its many applications in science, engineering, and business. Students learn the algorithmic method of thinking and how to bring it to bear on a wide range of problems. They also study the elements of computing and information technology such as system design, problem specification, programming, system analysis and evaluation, and complex modeling. Research areas include artificial intelligence, bioinformatics, computational logic, computer architecture, computer graphics, computer vision, computing systems, databases and digital libraries, natural language processing, networks, programming languages and compilation, scientific computing, security, and theory of algorithms.

The Department of Computer Science offers the computer science major to students in the College of Arts and Sciences and the College of Engineering, the computer science minor to students across colleges, and the Master of Engineering (M.Eng.) degree in computer science.

Computing in the Arts

An undergraduate minor in Computing in the Arts offers students opportunities to use computers to realize works of art, to study the perception of artistic phenomena, and to think about new, computer-influenced paradigms and metaphors for the experiences of making and appreciating art. Faculty from several departments across the university offer courses toward the minor, drawing on disciplines in the arts, computing, the social sciences, the humanities, and the physical sciences. Tracks are available for students pursuing this minor in: computer science, music, psychology, dance, and film. This minor is offered through the College of Arts and Sciences and coordinated by the Department of Computer Science. Students across colleges are eligible to pursue this program of study.

Game Design

The undeniable popularity of games draws the attention of academia, industry, and even the government on areas of design, development, and social impact. The game industry, like the film industry, is an unmistakable force in entertainment. Like filmmaking, game design can thrive and evolve only with the support of a strong academic foundation. The Game Design minor is offered by the Department of Computer Science for students who anticipate that game design will have a prominent role to play in their academic and professional career. Visit www.cs.cornell.edu/degreeprogs/ugrad/CSMinor/GameDesignMinor/index.htm for minor requirements. To learn about the Game Design Initiative at Cornell (GDIAC), visit gdiac.cis.cornell.edu. Students across colleges are eligible to pursue the Game Design minor.

Information Science

The interdisciplinary program Information Science studies the design and use of information systems in a social context. It integrates the study of three aspects of digital information systems. First, information science studies computing systems that provide people with information content; this study overlaps with parts of computer science, stressing the design, construction, and use of large information systems such as the World Wide Web and other global information resources. The second aspect of information science examines how people engage these information resources and how they can be integrated into everyday life. This area is also called "human-centered systems" because it is concerned with systems that hundreds of millions of people will use in daily life. The third aspect deals with understanding how information systems are situated in social, economic, and historical contexts. It explores the economic value of information, the legal constraints on systems, their social impact, and the cultural aspects of their construction. These are synergistic topics, and the next generation of scientists, scholars, business leaders, and government workers will need to understand them and how they relate.

Specific topics emphasized in the information science program include information networks; information discovery; knowledge organization; interaction design; interface design and evaluation; collaboration within and across groups, communities, organizations, and society; computational linguistics; computational techniques in the collection, archiving, and analysis of social science data; information privacy; methods of collecting, preserving, and distributing information; information system design; cognition and learning; social informatics; and cultural studies of computation.

The Information Science (IS) major is offered by the College of Agriculture and Life Sciences and the College of Arts and Sciences. Students in the College of Engineering may major in Information

Science, Systems, and Technology (ISST), which is offered jointly by the Department of Computer Science and the School of Operations Research and Information Engineering. For details about the IS and ISST majors, please refer to the respective colleges.

The minor in information science is available to students in all undergraduate colleges. Go to www.infosci.cornell.edu/ugrad/concentrations.html for details.

Statistical Science

The university-wide Department of Statistical Science coordinates activities in statistics and probability at the undergraduate, graduate, and research levels.

The department comprises four groups: Biological Statistics in the Department of Biological Statistics and Computational Biology, Engineering Statistics in the School of Operations Research and Information Engineering, Mathematical Statistics and Probability in the Department of Mathematics, and Social Statistics in the Department of Social Statistics. The areas covered include, but are not limited to, agricultural statistics, biostatistics, economic and social statistics, epidemiology, manufacturing statistics, quality control and reliability, probability theory, sampling theory, statistical computing, statistical design, statistical theory, and stochastic processes and their applications.

The department offers an undergraduate major and minor in Biometry and Statistics through the Department of Biological Statistics and Computational Biology in the College of Agriculture and Life Sciences. It also offers a minor in Engineering Statistics through the School of Operations Research and Information Engineering in the College of Engineering. Undergraduate majors and minors are under development for other colleges. For information, contact the undergraduate coordinator, 301 Malott Hall, 255-8066.

The department offers a Master of Professional Studies (MPS) in applied statistics for students pursuing careers in business, industry, and government. The MPS program has three main components: a two-semester core course, STSCI 5010 and 5020, covering a wide range of statistical applications, computing, and consulting; an in-depth statistical analysis MPS project supported by the core course; and required course work, including a two-semester course sequence in mathematical probability and statistics, and elective course work selected from offerings in this and other departments at Cornell. The M.P.S. program offers two options: Statistical Analysis and Data-Centered Statistics. A third option, Bioinformatics, is under development.

Students interested in graduate study in statistics and probability can apply to the graduate field of statistics or to one of the other graduate fields of study that offer related course work. Students in the field of statistics plan their graduate programs with the assistance of their special committee. For detailed information on opportunities for graduate study, contact the director of graduate studies, 301 Malott Hall.

A statistical consulting service is offered by the faculty of DSS and the Cornell Statistical Consulting Unit (CSCU), www.cscu.cornell.edu.

THE INFORMATION SCIENCE MINOR

A minor in information science is available to students in the Colleges of Agriculture and Life Sciences; Architecture, Art, and Planning (available to Architecture and Planning students only); Arts and Sciences; Engineering; Human Ecology; and the Schools of Hotel Administration and Industrial and Labor Relations. Because of small differences in regulations between the colleges, the requirements may vary slightly, depending on a student's college and, in a few cases, a student's major. Students interested in pursuing the information science minor must initiate the process by sending an e-mail message with their name, college, year of study (e.g., second-semester sophomore), expected graduation date, and (intended) major to minor@infosci.cornell.edu. See www.infosci.cornell.edu/ugrad.html for the most up-to-date description of the minor and its requirements.

Information science is an interdisciplinary field covering all aspects of digital information. The program has three main areas: human-centered systems, social systems, and information systems. Human-centered systems studies the relationship between humans and information, drawing from human-computer interaction and cognitive science. Social systems examines information in its economic, legal, political, cultural, and social contexts. Information systems studies the computer science problems of representing, storing, manipulating, and using digital information.

The minor has been designed to ensure that students have substantial grounding in all three of these areas, as well as in statistics. To this end, the requirements for the undergraduate minor are as follows: All courses must be chosen from the course lists below. In addition, a letter grade of at least C is required; S-U courses are not allowed.

Note: Course credits from institutions other than Cornell may not be counted toward the IS minor. Engineering students must use ENGRD 2700 or CEE 3040. Hotel students must use HADM 2201.

- **Statistics:** one course.
- **Human-centered systems** (human-computer interaction and cognitive science): two courses (for all colleges except Engineering and Hotel); one course (Engineering and Hotel).
- **Social systems** (social, economic, political, cultural, and legal issues): one course.
- **Information systems** (primarily computer science): two courses for all colleges except Hotel. Hotel students need to take one course in this area. Engineering students may not use INFO 1300. CS 2110 may not be used by students who are required to take it for their major.
- **Elective:** one additional course from any component area. Hotel students must take three courses in this category, from the following: HADM 3374, HADM 4474, or AEM 3220. (Engineering students and all computer science majors must select a course from human-centered systems or social systems. Communication majors must select a course outside Communication. Students in other majors

should check with their advisors to make sure there are no special departmental restrictions or requirements.)

Statistics

An introductory course that provides a working knowledge of basic probability and statistics and their application to analyzing data occurring in the real world.

Engineering students must take one of the following:

- ENGRD 2700 Basic Engineering Probability and Statistics
- CEE 3040 Uncertainty Analysis in Engineering

Hotel students must take:

- HADM 2201 Hospitality Quantitative Analysis

All other students can meet this requirement with any one of the following:

- MATH 1710 Statistical Theory and Application in the Real World
- STSCI 2010 Introductory Statistics
- AEM 2100 Introductory Statistics
- PAM 2100 Introduction to Statistics
- HADM 2201 Hospitality Quantitative Analysis
- ENGRD 2700 Basic Engineering Probability and Statistics
- BTRY 3010 Statistical Methods I
- SOC 3010 Evaluating Statistical Evidence
- CEE 3040 Uncertainty Analysis in Engineering
- ILRST 3120 Applied Regression Methods
- ECON 3190 Introduction to Statistics and Probability
- PSYCH 3500 Statistics and Research Design

Human-Centered Systems

- COGST 1101 Introduction to Cognitive Science
- PSYCH 2050 Perception
- INFO 2140 Cognitive Psychology
- INFO 2450 Communication and Technology
- PSYCH 2800 Introduction to Social Psychology
- PSYCH 3420 Human Perception: Applications to Computer Graphics, Art, and Visual Display
- INFO 3400 Psychology of Social Computing
- INFO 3450 Human-Computer Interaction Design
- PSYCH 3470 Psychology of Visual Communications
- INFO 3650 Technology and Collaboration
- PSYCH 3800 Social Cognition
- PSYCH 4160 Modeling Perception and Cognition
- INFO 4400 Advanced Human-Computer Interaction Design
- INFO 4450 Seminar in Computer-Mediated Communication

- INFO 4500 Language and Technology
- DEA 4700 Applied Ergonomic Methods

Social Systems

- INFO 2040 Networks
- STS 2501 Technology in Society
- INFO 2921 Inventing an Information Society
- ECON 3010 Microeconomics*
- SOC 3040 Social Networks and Social Processes
- ECON 3130 Intermediate Microeconomic Theory*
- INFO 3200 New Media and Society*
- AEM 3220 Internet Strategy
- INFO 3490 Media Technologies
- INFO 3551 Computers: From the 17th Century to the Dotcom Boom
- INFO 3561 Computing Cultures
- INFO 3660 History and Theory of Digital Art
- ECON 3680 Game Theory*
- INFO 3871 The Automatic Lifestyle: Consumer Culture and Technology
- STS 4111 Knowledge, Technology, and Property
- INFO 4144 Responsive Environments
- SOC 4150 Internet and Society*
- ECON 4190 Economic Decisions Under Uncertainty
- COMM 4280 Communication Law
- INFO 4290 Copyright in the Digital Age
- ORIE 4350 Introduction to Game Theory*
- INFO 4470 Social and Economic Data
- HADM 4489 The Law of the Internet and E-Commerce
- ECON 4760 Decision Theory I
- ECON 4770 Decision Theory II
- INFO 4850 Computational Methods for Complex Networks
- INFO 5150 Culture, Law, and Politics of the Internet

*Only one of ECON 3010 and 3130 can be taken for IS credit. Only one of ORIE 4350 and ECON 3680 can be taken for IS credit. Only one of INFO 3220 and SOC 4150 may be taken for IS credit.

Information Systems

- INFO 1300 Introductory Design and Programming for the Web

Note: INFO 1301 and 1302 (no longer offered) may count together in place of INFO 1300.

- CS 2110 Object-Oriented Programming and Data Structures*
- INFO 2300 Intermediate Design and Programming for the Web*
- CIS 3000 Introduction to Computer Game Design
- INFO 3300 Data-Driven Web Applications
- INFO 4300 Information Retrieval
- INFO 4302 Web Information Systems

- CS 4320 Introduction to Database Systems
- LING 4424 Computational Linguistics
- LING 4474 Introduction to Natural Language Processing
- CS 4620 Introduction to Computer Graphics
- CS 4700 Foundations of Artificial Intelligence
- ORIE 4740 Statistical Data Mining I
- CS 4780 Machine Learning
- ORIE 4800 Information Technology
- ORIE 4810 Delivering OR Solutions with Information Technology
- ORIE 4850 Application of Operations Research and Game Theory to Information Technology
- CS 5150 Software Engineering
- INFO 5300 Architecture of Large-Scale Information Systems
- CS 5430 System Security
- ECE 5620 Fundamental Information Theory
- CS 5780 Empirical Methods in Machine Learning and Data Mining

*The following exceptions apply:

- INFO 1300: Engineering students and Computer Science majors may not use this course for the minor.
- INFO 2300: Computer Science majors may not use this course for the minor.
- CS 2110: Students for whom this is a required major course may not use it for the minor, e.g., Computer Science or Operations Research and Information Engineering majors.

COMPUTING AND INFORMATION SCIENCE (CIS) COURSES

CIS 1121 Introduction to MATLAB (also EAS 1121)

Fall, spring, 2 credits. Corequisite: MATH 1110, 1910, or equivalent. No programming experience assumed.

Introduction to elementary computer programming concepts using MATLAB. Topics include problem analysis, development of algorithms, selection, iteration, functions, and arrays. Examples and assignments are chosen to build an appreciation for computational science. The goal is for each student to develop a facility with MATLAB that will be useful in other courses whenever there is a need for computer problem solving or visualization.

CIS 1610 Computing in the Arts (also CS/ENGR 1610, DANCE 1540, FILM 1750, MUSIC 1465, PSYCH 1650)

Fall, 3 credits.

For description, see CS 1610.

CIS 1620 Visual Imaging in the Electronic Age (also ARCH 3702, ART 1700, CS/ENGR 1620)

Fall, 3 credits.

For description, see ART 1700.

CIS 3000 Introduction to Computer Game Design

Spring, 4 credits. Prerequisites: students must satisfy at least one of the following, according to their area of interest (art, music, or programming): Art: ART 2501 or equivalent; Music: CS 111x or INFO 1301–1302, MUSIC 1421 or equivalent; Programming: CS/ENGR 2110 or equivalent.

Investigates the theory and practice of developing computer games from a blend of technical, aesthetic, and cultural perspectives. Technical aspects of game architecture include software engineering, artificial intelligence, game physics, computer graphics, and networking. Aesthetic and cultural aspects of design include art and modeling, sound and music, history of games, genre analysis, role of violence, gender issues in games, game balance, and careers in the industry. Programmers, artists, and musicians collaborate to produce an original computer game.

CIS 4002 Advanced Projects in Game Design

Fall, 3 credits. Prerequisites: CIS 3000 or permission of instructor.

Project-based follow-up course to CIS 3000. Students work in a multidisciplinary team to develop an original computer game or an application that explores innovative game technology. Students have the goal of submitting their work to a contest or conference. Grading is based on completion of project plans and documentation, teamwork, presentations and demonstrations, class participation, and quality of final projects. Instructional meetings are arranged based on student and instructor schedules.

CIS 4205 Effective Use of High-Performance Computing

Spring, usually weeks 1–7. 2 credits. Prerequisites: proficiency in C, C++, Fortran, or Fortran 90.

A hands-on introduction to high-performance computing (HPC) for graduate students or advanced undergraduate students who will use HPC as a tool in their work. Various HPC architectural platforms are described with a focus on computational clusters. Students learn how to identify and exploit parallelism in algorithms and legacy applications; how to measure parallel speedup and efficiency; and how to diagnose bottlenecks affecting performance. Parallel programming with MPI, OpenMP, and task-farming techniques (for web services and grid computing) is covered in depth. Examples and assignments are taken from typical application areas such as matrix and Monte Carlo computations. The goal of the class is for students to gain practical HPC experience for use in their specific fields of research.

CIS 4206 Introduction to Scripting in Python and Perl

Spring, usually weeks 1–8. 2 credits. Prerequisites: basic computer programming skills or permission of instructor.

Scientific computing today requires heterogeneous systems, software, and data to be used together in many different ways, based on desired results. Researchers commonly develop work-flows that control the processing of data and/or experiments from beginning to the desired results. The “glue” that often links the various stages of these work-flows is scripting languages. In

this course we explore scripting with two of the most popular scripting languages, Perl and Python, from the basics to specific types of functions/capabilities that are useful in the development and maintenance of scientific work-flows. Examples are provided for Microsoft Windows, Mac OS X and Red Hat Linux. Best-of-breed modules and tools are covered for each platform based on student interest.

CIS 4999 Independent Reading and Research

Fall, spring. 1-4 credits.
Independent reading and research for undergraduates.

CIS 5040 Applied Systems Engineering (also CEE 5040, SYSEN 5100, ECE/ ORIE 5120, MAE 5910)

Fall. 3 credits. Prerequisites: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor.
For description, see SYSEN 5100.

CIS 5050 Systems Analysis Architecture, Behavior, and Optimization (also CEE 5050, ECE/ ORIE 5130, MAE 5920, SYSEN 5200)

Spring. 3 credits. Prerequisite: Applied Systems Engineering (CEE 5240, ECE 5120, MAE 5910, ORIE 5120, or SYSEN 5100).
For description, see SYSEN 5200.

CIS 6229 Computational Methods for Nonlinear Systems (also PHYS 7682)

Fall. 4 credits. Enrollment may be limited.
For description, see PHYS 7682.

CIS 7999 Independent Research

Fall, spring. Variable credit. Prerequisite: permission of CIS faculty member.
Independent research or master of engineering project.

COMPUTER SCIENCE

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science. The department is also part of CIS. Its courses are an integral part of CIS's several educational programs.

Consult the following web site for updates made after the publication of *Courses of Study*: www.cs.cornell.edu/courses/listofscourses/index.htm.

CIS 1109 Fundamental Programming Concepts

Summer. 2 credits. Prerequisite: pre-freshman standing or permission of instructor. Credit may not be applied toward engineering degree. S-U grades only.
Designed for students who intend to take CS 111x but are not adequately prepared for it. Basic programming concepts and problem analysis are studied. An appropriate high-level programming language is used. Students with previous programming experience and students who do not intend to take CS 111x should not take this course.

CS 1110 Introduction to Computing Using Java

Fall, spring, summer. 4 credits. Assumes basic high school mathematics (no calculus) but no programming experience. Programming and problem solving using Java. Emphasizes principles of software development, style, and testing. Topics include object-oriented concepts, procedures and functions, iteration, arrays, strings, algorithms, exceptions, GUIs (graphical user interfaces). Weekly labs provide guided practice on the computer, with staff present to help. Assignments use graphics and GUIs to help develop fluency and understanding.

CS 1112 Introduction to Computing Using MATLAB

Fall, spring. 4 credits. Corequisite: MATH 1110, 1910, or equivalent. Assumes student is comfortable with mathematics (at level of one semester of calculus) but has no prior programming experience. Programming and problem solving using MATLAB. Emphasizes the systematic development of algorithms and programs. Topics include iteration, functions, arrays, and MATLAB graphics. Assignments are designed to build an appreciation for complexity, dimension, fuzzy data, inexact arithmetic, randomness, simulation, and the role of approximation.

CS 1114 Introduction to Computing Using MATLAB and Robotics

Spring. 4 credits. Prerequisite: some programming experience.
Honors-level introduction to computer science using camera-controlled robots using MATLAB. Emphasis is on modular design of programs and on fundamental algorithms. Extensive laboratory experiments with cameras and robots, including Sony Aibo. Example projects include controlling a robot by pointing a light stick and making a robot recognize simple colored objects.

CS 1130 Transition to Object-Oriented Programming

Fall, spring. 1 credit. Prerequisite: one course in programming. S-U grades only.
Introduction to object-oriented concepts using Java. Assumes programming knowledge in a language like MATLAB, C, C++, or Fortran. Students who have learned Java but were not exposed heavily to OO are welcome.

CS 1132 Transition to MATLAB

Fall, spring. 1 credit. Prerequisite: one course in programming. S-U grades only.
Introduction to MATLAB and scientific computing. Covers the MATLAB environment, assignment, conditionals, iteration, scripts, functions, arrays, scientific graphics, and vectorized computation. Assumes programming knowledge in a language like Java, C, C++, or Fortran.

CS 1300 Introductory Design and Programming for the Web (also INFO 1300)

Fall. 4 credits.
For description, see INFO 1300.

CS 1610 Computing in the Arts (also CIS/ENGRI 1610, DANCE 1540, FILM 1750, MUSIC 1465, PSYCH 1650)

Fall. 3 credits. Recommended: good comfort level with computers and some of the arts.
Over the centuries, artists in a wide variety of media have employed many approaches to the creative process, ranging from the

philosophical to the mechanical to the virtual. This course unravels some of the mysteries going on inside software used for art and music. It looks at ways of breaking things apart and sampling and ways of putting things together and resynthesizing, and explores ideas for creation. This course does not teach software packages for creating art and music. The course complements ART 1701+ and MUSIC 1421+.

CS 1620 Visual Imaging in the Electronic Age (also ARCH 3702, ART 1700, CIS/ENGRI 1620)

Fall. 3 credits.
For description, see ART 1700.

CS 1710 Introduction to Cognitive Science (also COGST 1101, LING 1170, PHIL 1910, PSYCH 1102)

Fall, summer. 3 credits.
For description, see COGST 1101.

CS 2022 Introduction to C

Fall, spring, usually weeks 1-4. 1 credit.
Prerequisite: one programming course or equivalent programming experience.
Credit granted for both CS 2022 and 2024 only if 2022 taken first. S-U grades only.
Brief introduction to the C programming language and standard libraries. Unix accounts are made available for students wishing to use that system for projects, but familiarity with Unix is not required. Projects may be done using any modern implementation of C. CS 2024 (C++ Programming) includes much of the material covered in 2022. Students planning to take CS 2024 normally do not need to take 2022.

CS 2024 C++ Programming

Fall. 2 credits. Prerequisite: one programming course or equivalent programming experience. Students who plan to take CS 2022 and 2024 must take 2022 first. S-U grades only.

An intermediate introduction to the C++ programming language and the C/C++ standard libraries. Topics include basic statements, declarations, and types; stream I/O; user-defined classes and types; derived classes, inheritance, and object-oriented programming; exceptions and templates. Recommended for students who plan to take advanced courses in computer science that require familiarity with C++ or C. Students planning to take CS 2024 normally do not need to take CS 2022; 2024 includes most of the material taught in 2022.

CS 2026 Introduction to C#

Spring, usually weeks 5-8. 1 credit.
Prerequisite: CS/ENGRD 2110 or equivalent experience. S-U grades only.
Introduces students to building applications in the .NET environment using the C# language.

CS 2042 Unix Tools

Fall, usually weeks 5-8. 1 credit.
Prerequisite: one programming course or equivalent programming experience. S-U grades only.
Introduction to Unix, emphasizing tools for file management, communication, process control, managing the Unix environment, and rudimentary shell scripts. Projects assume no previous knowledge of Unix or expertise in any particular language.

CS 2044 Advanced UNIX Programming and Tools

Spring, usually weeks 5–8. 1 credit.
Prerequisite: CS 2042 or equivalent. S–U grades only.

Focuses on Unix as a programming environment for people with a basic knowledge of Unix and experience programming in at least one language. Projects cover advanced shell scripts (sh, ksh, csh), Makefiles, programming and debugging tools for C and other languages, and more modern scripting languages such as Perl and Python. Students with little or no experience with Unix should take CS 2042 first.

CS 2110 Object-Oriented Programming and Data Structures (also ENGRD 2110)

Fall, spring, summer. 3 credits.
Prerequisite: CS 1110, CS 1130, or CS 1113 or (CS 1112 if completed before fall 2007) or equivalent course in Java or C++.

Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, object-oriented programming (classes, objects, types, sub-typing), graphical user interfaces, algorithm analysis (asymptotic complexity, big “O” notation), recursion, data structures (lists, trees, stacks, queues, heaps, search trees, hash tables, graphs), simple graph algorithms. Java is the principal programming language.

CS 2300 Intermediate Design and Programming for the Web (also INFO 2300)

Spring. 3 credits. Prerequisite: CS 1300 strongly recommended. Must be taken before CS 3300.

For description, see INFO 2300.

CS 2800 Discrete Structures

Fall, spring. 3 credits. Pre- or corequisite: one programming course or permission of instructor.

Covers the mathematics that underlies most of computer science. Topics include mathematical induction; logical proof; propositional and predicate calculus; combinatorics and discrete mathematics; basic probability theory; basic number theory; sets, functions, and relations; partially ordered sets; and graphs. These topics are discussed in the context of applications to many areas of computer science, including game playing, the RSA cryptosystem, data mining, load balancing in distributed systems, properties of the Internet and World Wide Web, and web searching.

CS 2850 Networks (also ECON/INFO 2040, SOC 2090)

Spring. 4 credits. Prerequisites: none.
For description, see ECON 2040.

CS 3110 Data Structures and Functional Programming

Fall, spring. 4 credits. Prerequisite: CS 2110 and 2111 or equivalent programming experience. Pre- or corequisite: CS 2800. Should not be taken concurrently with CS 3410 or 3420.

Advanced programming course that emphasizes functional programming techniques and data structures. Programming topics include recursive and higher-order procedures, models of programming language evaluation and compilation, type systems, and polymorphism. Data structures and algorithms covered include graph algorithms,

balanced trees, memory heaps, and garbage collection. Also covers techniques for analyzing program performance and correctness.

CS 3220 Introduction to Scientific Computation (also ENGRD 3220)

Spring, summer. 3 credits. Prerequisites: CS 1112 or 1132 and MATH 2220, 2230, or 2940.

Introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The MATLAB computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Includes special lectures on computational statistics.

CS 3300 Data-Driven Web Applications (also INFO 3300)

Spring. 3 credits. Prerequisite: CS/ENGRD 2110 and (CS 2300 or permission of instructor). CS majors may use only one of the following toward their degree: CS/INFO 3300 or CS 4321.

For description, see INFO 3300.

CS 3410 Systems Programming

Spring. 4 credits. Prerequisite: CS 2110 or equivalent programming experience. Should not be taken concurrently with CS 3110.

Introduction to systems programming, computer organization, and the hardware/software interface. Topics include representation of information, machine and assembly languages, processor organization, memory management, input/output mechanisms, and basic network programming. Also covered are techniques for analyzing program performance and optimization.

CS 3420 Computer Organization (also ECE 3140)

Spring. 4 credits. Prerequisite: CS 2110 or ENGRD 2300. Should not be taken concurrently with CS 3110.

For description, see ECE 3140.

CS 3740 Computational Linguistics (also COGST 4240, LING 4424)

Fall. 4 credits. Recommended: CS 2042.

For description, see LING 4424.

CS 3810 Introduction to Theory of Computing

Fall, summer. 3 credits. Prerequisite: CS 2800 or permission of instructor.

Introduction to the modern theory of computing: automata theory, formal languages, and effective computability.

CS 4120 Introduction to Compilers

Fall. 3 credits. Prerequisites: CS 3110 or permission of instructor and CS 3410 or 3420. Corequisite: CS 4121.

Introduction to the specification and implementation of modern compilers. Topics include lexical scanning, parsing, type checking, code generation and translation, an introduction to optimization, and the implementation of modern programming languages.

CS 4121 Practicum in Compilers

Fall. 2 credits. Corequisite: CS 4120.

Compiler implementation project related to CS 4120.

CS 4210 Numerical Analysis and Differential Equations (also MATH 4250)

Fall. 4 credits. Prerequisites: MATH 2210 or 2940 or equivalent, one additional mathematics course numbered 3000 or above, and knowledge of programming. For description, see MATH 4250.

CS 4220 Numerical Analysis: Linear and Nonlinear Problems (also MATH 4260)

Spring. 4 credits. Prerequisites: MATH 2210 or 2940 or equivalent, one additional mathematics course numbered 3000 or above, and knowledge of programming. Introduction to the fundamentals of numerical linear algebra: direct and iterative methods for linear systems, eigenvalue problems, singular value decomposition. In the second half of the course, the above are used to build iterative methods for nonlinear systems and for multivariate optimization. Strong emphasis is placed on understanding the advantages, disadvantages, and limits of applicability for all the covered techniques. Computer programming is required to test the theoretical concepts throughout the course.

CS 4300 Information Retrieval (also INFO 4300)

Fall. 3 credits. Prerequisite: CS 2110 or equivalent.

For description, see INFO 4300.

CS 4302 Web Information Systems (also INFO 4302)

Spring. 3 credits. Prerequisites: CS 2110 and some familiarity with web site technology.

For description, see INFO 4302.

CS 4320 Introduction to Database Systems

Fall. 3 credits. Prerequisites: CS 3110 (or CS 2110, 2111, and permission of instructor).

Introduction to modern database systems. Concepts covered include storage structures, access methods, query languages, query processing and optimization, transaction management, recovery, database design, XML, and XQuery. The course focuses on the design and internals of modern database systems.

CS 4321 Practicum in Database Systems

Fall. 2 credits. Pre- or corequisite: CS 4320. CS majors may use only one of the following toward their degree: CS/INFO 3300 or CS 4321.

Students build part of a real database system in C++.

CS 4410 Operating Systems

Fall. 3 credits. Prerequisite: CS 3410 or 3420.

Introduction to the logical design of systems programs, with emphasis on multiprogrammed operating systems. Topics include process synchronization, deadlock, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.

CS 4411 Practicum in Operating Systems

Fall. 2 credits. Corequisite: CS 4410. Studies the practical aspects of operating systems through the design and implementation of an operating system kernel that supports multiprogramming, virtual memory, and various input-output devices. All the programming for the project is in a high-level language.

CS 4420 Computer Architecture (also ECE 4750)

Fall. 4 credits. Prerequisites: ENGRD 2300 and CS 3420/ECE 3140. For description, see ECE 4750.

CS 4620 Introduction to Computer Graphics (also ARCH 3704)

Fall. 3 credits. Prerequisite: CS/ENGRD 2110. Introduction to the principles of computer graphics in two and three dimensions. Topics include digital images, filtering and anti-aliasing, 2-D and 3-D affine geometry, ray tracing, perspective and 3-D viewing, the graphics pipeline, curves and surfaces, and human visual perception. Homework assignments require some Java programming. May be taken with or without concurrent enrollment in CS 4621.

CS 4621 Computer Graphics Practicum

Fall. 2 credits. Pre- or corequisite: CS 4620. Provides CS 4620 students with hands-on experience in computer graphics programming on modern graphics hardware. A semester-long project involves building a substantial interactive 3D system. The course uses Java and OpenGL for code development.

CS 4700 Foundations of Artificial Intelligence

Fall. 3 credits. Prerequisites: CS/ENGRD 2110 and CS 2800 (or equivalent). Challenging introduction to the major subareas and current research directions in artificial intelligence. Topics include knowledge representation, heuristic search, problem solving, natural-language processing, game-playing, logic and deduction, planning, and machine learning.

CS 4701 Practicum in Artificial Intelligence

Fall. 2 credits. Pre- or corequisite: CS 4700. Project portion of CS 4700. Topics include knowledge representation systems, search procedures, game-playing, automated reasoning, concept learning, reinforcement learning, neural nets, genetics algorithms, planning, and truth maintenance.

CS 4740 Introduction to Natural Language Processing (also COGST 4740, LING 4474)

Spring. 4 credits. Prerequisite: CS 2110. Computationally oriented introduction to natural language processing, the goal of which is to enable computers to use human languages as input, output, or both. Possible topics include parsing, grammar induction, information retrieval, and machine translation.

CS 4780 Machine Learning

Spring. 4 credits. Prerequisites: CS 2100, CS 2800, or basic probability theory and basic knowledge of linear algebra. Machine learning is concerned with the question of how to make computers learn from experience. The ability to learn is not only central to most aspects of intelligent behavior, but machine learning techniques

have become key components of many software systems. For example, machine learning techniques are used to create spam filters, to analyze customer purchase data, and to explore new domains of science. This course introduces the fundamental set of techniques and algorithms that constitute machine learning as of today, including classification methods like decision trees and support vector machines, parametric Bayesian learning and hidden Markov models, as well as unsupervised learning and reinforcement learning. The course discusses algorithms and methods and provides an introduction to the theory of machine learning.

[CS 4782 Probabilistic Graphical Models (also BTRY 4790)]

Fall. 4 credits. Prerequisites: probability theory (BTRY 4080 or equivalent), programming and data structures (CS 2110 or equivalent); course in statistical methods recommended but not required (BTRY 4090 or equivalent). Next offered 2010-2011.

For description, see BTRY 4790.]

CS 4812 Quantum Computation (also PHYS 4481/7681)

Spring. 2 credits. Prerequisite: familiarity with theory of vector spaces over complex numbers.

For description, see PHYS 4481.

CS 4820 Introduction to Analysis of Algorithms

Spring, summer. 4 credits. Prerequisites: CS 2800 and 3110. Develops techniques used in the design and analysis of algorithms, with an emphasis on problems arising in computing applications. Example applications are drawn from systems and networks, artificial intelligence, computer vision, data mining, and computational biology. This course covers four major algorithm design techniques (greedy algorithms, divide-and-conquer, dynamic programming, and network flow), computability theory focusing on undecidability, computational complexity focusing on NP-completeness, and algorithmic techniques for intractable problems (including identification of structured special cases, approximation algorithms, and local search heuristics).

[CS 4830 Introduction to Cryptography

Fall. 4 credits. Prerequisites: CS 2800 (or equivalent), mathematical maturity, or permission of instructor. Next offered 2010-2011. Introductory course in cryptography. Topics include one-way functions, encryption, digital signatures, pseudo-random number generation, zero-knowledge and basic protocols. Emphasizes fundamental notions and constructions with proofs or security based on precise definitions and assumptions.]

CS 4850 Mathematical Foundations for the Information Age

Spring. 4 credits. Prerequisite: mathematical maturity. Covers the mathematical foundation underlying modeling and searching of the web and other complex networks, discovering trends, data mining, and making recommendations based on user behavior. Topics include random graphs; tail bounds; branching processes; spectral analysis; clustering; learning mixtures of distributions; extracting information from large, high dimensional, and noisy data; VC

dimension; latent semantic indexing; and collaborative filtering.

CS 4860 Applied Logic (also MATH 4860)

Fall. 4 credits. Prerequisites: MATH 2220 or 2940, CS 2800 or equivalent (e.g., MATH 3320, 4320, 4340, 4810), and some additional course in mathematics or theoretical computer science. Propositional and predicate logic, compactness and completeness by tableaux, natural deduction, and resolution. Equational logic. Herbrand Universes and unification. Rewrite rules and equational logic, Knuth-Bendix method, and the congruence-closure algorithm and lambda-calculus reduction strategies. Topics in Prolog, LISP, ML, or Nuprl. Applications to expert systems and program verification.

CS 4999 Independent Reading and Research

Fall, spring. 1-4 credits. Independent reading and research for undergraduates.

CS 5150 Software Engineering

Fall. 4 credits. Prerequisite: CS 2110 or equivalent experience programming in Java or C++. Introduction to the practical problems of specifying, designing, and building large, reliable software systems. Students work in teams on projects for real clients. This work includes a feasibility study, requirements analysis, object-oriented design, implementation, testing, and delivery to the client. Additional topics covered in lectures include professionalism, project management, and the legal framework for software development.

CS 5220 Applications of Parallel Computers

Spring. 4 credits. Prerequisites: course in numerical methods at level of CS 3220 or higher. Models for parallel programming and survey of parallel machines. Existing parallel programming languages, vectorizing compilers, and parallel libraries and toolboxes. Techniques for data partitioning, synchronization, and load balancing. Performance tuning for serial and parallel codes. Applications to scientific problems. Work includes detailed study and programming of medium-sized representative applications.

CS 5300 The Architecture of Large-Scale Information Systems (also INFO 5300)

Spring. 4 credits. Prerequisite: CS/INFO 3300 or CS 4320. For description, see INFO 5300.

CS 5410 Intermediate Computer Systems

Fall or spring. 4 credits. Prerequisite: CS 4410 or permission of instructor. Next offered fall 2009. Focuses on practical issues in designing and implementing distributed software. Topics vary depending on instructor. Recent offerings have covered object-oriented software development methodologies and tools, distributed computing, fault-tolerant systems, and network operating systems or databases. Students undertake a substantial software project. Many students obtain additional project credit by co-registering in CS 4999 or 7999.

CS 5420 Parallel Computer Architecture (also ECE 5720)

Fall. 4 credits. Prerequisite: ECE 4750.
For description, see ECE 5720.

CS 5430 System Security

Fall or spring. 4 credits. Prerequisites: CS 4410 or 4450 and familiarity with JAVA, C, or C# programming languages. Next offered spring 2010.

Discusses security and survivability for computers and communications networks. Includes discussions of policy issues (e.g., the national debates on cryptography policy) as well as discussions of the technical alternatives for implementing the properties that comprise "trustworthiness" in a computing system. Covers mechanisms for authorization and authentication as well as cryptographic protocols.

CS 5620 Interactive Computer Graphics

Fall. 4 credits. Prerequisite: CS 4620.0. Methods for interactive computer graphics, targeting applications including games, visualization, design, and immersive environments. Topics include programming graphics processing units (GPUs), shading models, advanced texturing, shadow algorithms, advanced lighting, hierarchical acceleration structures, and animation.

CS 5643 Physically Based Animation for Computer Graphics

Spring. 4 credits. Prerequisites: CS/ENGRD 3220 and/or CS 4620 or permission of instructor.

Modern computer animation and interactive digital entertainment are making increasingly sophisticated use of tools from scientific and engineering computing. This course introduces students to common physically based modeling techniques for animation of virtual characters, fluids and gases, rigid and deformable solids, and other systems. Aspects of interactive simulation and multi-sensory feedback are also discussed. A hands-on programming approach is taken, with an emphasis on small interactive computer programs.

CS 5722 Heuristic Methods for Optimization (also CEE 5290, ORIE 5340)

Fall. 3 or 4 credits. Prerequisites: CS/ENGRD 2110 or 3220 or CEE/ENGRD 3200, or graduate standing, or permission of instructor.

For description, see CEE 5290.

CS 6110 Advanced Programming Languages

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Study of programming paradigms: functional, imperative, concurrent, and logic programming. Models of programming languages, including the lambda calculus. Type systems, polymorphism, modules, and other object-oriented constructs. Program transformations, programming logic, and applications to programming methodology.

CS 6210 Matrix Computations

Fall. 4 credits. Prerequisites: MATH 4110 and 4310 or permission of instructor. Offered alternate years.

Stable and efficient algorithms for linear equations, least squares, and eigenvalue problems. Direct and iterative methods are considered. The MATLAB system is used extensively.

[CS 6240 Numerical Solution of Differential Equations

Spring. 4 credits. Prerequisites: exposure to numerical analysis (e.g., CS 4210 or 6210) and differential equations, and knowledge of MATLAB.]

CS 6320 Database Management Systems

Spring. 4 credits. Prerequisite: CS 4320 or permission of instructor. Covers a variety of advanced issues ranging from transaction management to query processing to data mining. Involves extensive paper reading and discussion. Development of a term project with research content is required.

CS 6322 Advanced Database Systems

Fall. 4 credits. Covers advanced topics in database systems and data mining. The exact set of topics changes with each offering of the course.

CS 6410 Advanced Systems

Fall or spring. 4 credits. Prerequisite: CS 4410 or permission of instructor. Offered fall 2009.

Advanced course in systems, emphasizing contemporary research in distributed systems. Topics may include communication protocols, consistency in distributed systems, fault-tolerance, knowledge and knowledge-based protocols, performance, scheduling, concurrency control, and authentication and security issues.

CS 6460 Peer-to-Peer Systems

Spring. 4 credits. Recommended: CS 6410. Peer-to-peer (P2P) systems, in which clients not only consume resources but also provide their own resources for the use of other clients, have emerged as a new architectural paradigm in distributed computing. This course examines peer-to-peer systems and discusses existing and new applications. Students are expected to perform extensive reading on P2P and build a peer-to-peer system as part of this course.

CS 6464 Advanced Distributed Storage Systems

Spring. 4 credits. Prerequisite: CS 4410 or permission of instructor. Broadly examines distributed storage systems in their many manifestations. Explores how to harness and maintain the collective storage capabilities in storage systems from global-scale enterprises and cloud computing to peer-to-peer, ad hoc, and home networks. Teaches abstractions, design, and implementation techniques that allow the building of the kind of scalable high-performance distributed systems that can deal with real-world workload. Students read recent research papers on server design, network programming, naming, various storage systems, security, and fault tolerance.

[CS 6620 Advanced Interactive Graphics

Fall or spring. 4 credits. Prerequisites: CS 4620 and 4621 or 5620 or permission of instructor. Next offered 2010–2011. State-of-the-art techniques for high-quality rendering techniques used in simulation, games, and movies. Focus is on practical rendering algorithms for graphics applications.]

CS 6630 Realistic Image Synthesis

Fall or spring. 4 credits. Prerequisites: CS 4620 or equivalent and undergraduate-level understanding of algorithms, probability and statistics, vector calculus, and programming. Offered fall 2009. Advanced course in realistic image synthesis, focusing on the computation of physically accurate images. Topics include radiometry; Monte Carlo methods, models for light reflection from surfaces and scattering in volumes, and algorithms for global illuminations.

[CS 6650 Computational Motion

Fall. 4 credits. Prerequisites: undergraduate-level understanding of algorithms, and some scientific computing. Offered alternate years; next offered 2010–2011.

Covers computational aspects of motion, broadly construed. Topics include the computer representation, modeling, analysis, and simulation of motion. Students implement several of the algorithms covered in the course and complete a final project.]

CS 6670 Computer Vision

Fall or spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATH 2210 or equivalent. Offered fall 2009. Introduction to computer vision, with an emphasis on discrete optimization algorithms and on applications in medical imaging. Topics include edge detection, image segmentation, stereopsis, motion and optical flow, active contours, and the Hausdorff distance. Students are required to implement several of the algorithms covered in the course and complete a final project.

CS 6700 Advanced Artificial Intelligence

Spring. 4 credits. Prerequisites: CS 4700 or permission of instructor. Artificial intelligence (AI) provides many computational challenges. This course covers a variety of areas in AI, including knowledge representation, automated reasoning, learning, game-playing, and planning, with an emphasis on computational issues. Specific topics include stochastic reasoning and search procedures, properties of problem encodings, issues of syntax and semantics in knowledge representation, constraint satisfaction methods and search procedures, and critically constrained problems and their relation to phase-transition phenomena. In addition, connections between artificial intelligence and other fields, such as statistical physics, operations research, and cognitive science are explored.

CS 6740 Advanced Language Technologies (also INFO 6300)

Fall, spring. 3 credits. Prerequisite: permission of instructor. Neither CS 4300 nor CS 4740 are prerequisites. Graduate-level introduction to technologies for the computational treatment of information in human-language form, covering modern natural-language processing (NLP) and/or information retrieval (IR). Possible topics include latent semantic analysis (LSA), clickthrough data for web search, language modeling, text categorization and clustering, information extraction, computational syntactic and semantic formalisms, grammar induction, and machine translation.

CS 6764 Reasoning about Knowledge

Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic. Next offered 2010–2011.

Knowledge plays a crucial role in distributed systems, game theory, and artificial intelligence. The course considers formal models of knowledge and applications in these areas.]

CS 6780 Advanced Topics in Machine Learning

Fall or spring. 4 credits. Prerequisites: CS 4780 or equivalent, or CS 5780 or equivalent, or permission of instructor. Offered fall 2009.

Extends and complements CS 4780 and 5780, giving in-depth coverage of new and advanced methods in machine learning. In particular, we connect to open research questions in machine learning, giving starting points for future work. The content of the course reflects an equal balance between learning theory and practical machine learning, making an emphasis on approaches with practical relevance. Topics include support vector machines, clustering, Bayes nets, boosting, model selection, learning orderings, and inductive transfer.

CS 6782 Probabilistic Graphical Models (also BTRY 6790)

Fall. 4 credits. Prerequisites: probability theory (BTRY 4080 or equivalent), programming and data structures (CS 2110 or equivalent); a course in statistical methods is recommended but not required (BTRY 4090 or equivalent). Next offered 2010–2011.

For description, see BTRY 6790.]

CS 6810 Theory of Computing

Fall or spring. 4 credits. Prerequisites: CS 3810 and CS 4820 or 6820 or permission of instructor. Next offered 2010–2011.

Advanced treatment of theory of computation, computational-complexity theory, and other topics in computing theory.]

CS 6820 Analysis of Algorithms

Fall. 4 credits. Prerequisite: CS 4820 or graduate standing.

Methodology for developing and analyzing efficient algorithms. Understanding the inherent complexity of natural problems via polynomial-time algorithms, advanced data structures, randomized algorithms, approximation algorithms, and NP-completeness. Additional topics may include algebraic and number theoretic algorithms, circuit lower bounds, online algorithms, or algorithmic game theory.

CS 6822 Advanced Topics in Theory of Computing

Fall or spring. 4 credits. Prerequisite: CS 6810, 6820, or 6830 recommended, depending on the topic. Next offered 2010–2011.

An advanced study of current topics in the theory of computing. Topics may include algorithms, complexity, logic, cryptography, or theories of networks, information, and learning. Course may be repeated for credit.]

CS 6830 Cryptography

Fall. 4 credits. Prerequisites: general ease with algorithms and elementary probability theory, maturity with mathematical proofs (ability to read and write mathematical proofs).

Graduate introduction to cryptography. Topics include encryption, digital signatures, pseudo-random number generation, zero-knowledge, and basic protocols. Emphasizes fundamental concepts and proof techniques.

CS 6840 Algorithmic Game Theory

Fall or spring. 4 credits. Prerequisite: background in algorithms and graphs at level of CS 4820. No prior knowledge of game theory or economics assumed. Offered fall 2009.

Algorithmic game theory combines algorithmic thinking with game-theoretic or, more generally, economic concepts. This course focuses on problems arising from, and motivated by, the Internet and other decentralized computer networks. The most defining characteristic of the Internet is that it was not designed by a single central entity, but emerged from the complex interaction of many economic agents, such as network operators, service providers, designers, and users, in varying degrees of collaboration and competition. The course focuses on some of the many questions at the interface between algorithms and game theory that arise from this point of view. Topics include Nash equilibrium and general equilibrium, the price of anarchy, market equilibrium, social choice theory, mechanism design, and multicast pricing.

CS 6850 The Structure of Information Networks (also INFO 6850)]**CS 6860 Logics of Programs**

Spring. 4 credits. Prerequisites: CS 4810, 6810, and (MATH 4810 or CS/MATH 4860).

Topics in logics of programs and program verification. Possible topics include: Floyd/Hoare logic, modal logic, dynamic logic, temporal logic, process logic, automata on infinite objects and their relation to program logics, the Rabin tree theorem, the modal mu-calculus, games and alternating automata, applications to type inference, set constraints, Kleene algebra.

CS 7090 Computer Science Colloquium

Fall, spring. 1 credit. For staff, visitors, and graduate students interested in computer science. S–U grades only.

Weekly meeting for the discussion and study of important topics in the field.

CS 7190 Seminar in Programming Languages

Fall, spring. 1 credit. Prerequisite: CS 6110 or permission of instructor. S–U grades only.

CS 7192 Seminar in Programming Refinement Logics

Fall, spring. 4 credits. Prerequisite: permission of instructor.

Topics in programming logics, possibly including type theory, constructive logic, decision procedures, heuristic methods, extraction of code from proofs, and the design of proof-development and problem-solving systems.

CS 7320 Topics in Database Systems

Fall, spring. 4 credits. S–U grades only.

CS 7390 Database Seminar

Spring. 1 credit. Prerequisite: CS 6322 or permission of instructor. S–U grades only.

CS 7490 Systems Research Seminar

Fall, spring. 1 credit. S–U grades only.

CS 7690 Computer Graphics Seminar

Fall, spring. 3 credits.

[CS 7726 Evolutionary Computation and Design Automation (also MAE 6500)

Spring. 4 credits. Prerequisite: programming experience or permission of instructor. Next offered 2010–2011.

Seminar course in evolutionary algorithms and their application to optimization and open-ended computational design. Genetic algorithms, genetic programming, co-evolution, arms races and cooperation, developmental representations, learning, and symbiosis are covered. Topics include artificial life, evolutionary robotics, and applications in a variety of domains in science and engineering. Suitable for students interested in computational techniques for addressing open-ended design problems and in computational models of evolutionary discovery.]

CS 7790 Seminar in Artificial Intelligence

Fall, spring. 4 credits. Prerequisite: permission of instructor. S–U grades only.

CS 7794 Seminar in Natural Language Understanding

Fall, spring. 2 credits.

Informal weekly seminar in which current topics in natural language understanding and computational linguistics are discussed.

CS 7860 Introduction to Kleene Algebra

Spring. 4 credits. Prerequisites: CS 4810 and (CS 4860 or MATH 4810).

Kleene algebra is an algebraic system for describing and reasoning about sequential processes. Topics will include some subset of the following: Model theory, including language, relational, and trace models; matrix algebras and automata as matrices; formal power series in noncommuting variables; Salomaa's completeness theorem and Redko's theorem; deductive completeness; related structures including Conway's S-algebras and closed semirings; ideal completion; PSPACE completeness of the equational theory; Kleene algebra with tests; guarded strings and automata on traces; reduction of the Hoare theory to the equational theory; program schematology; commutative Kleene algebra; Brzozowski derivatives and Taylor's theorem; algebraic closure and Parikh's theorem; applications in program verification; coalgebraic theory.

CS 7890 Seminar in Theory of Algorithms and Computing

Fall, spring. 4 credits. Prerequisite: permission of instructor. S–U grades only.

CS 7893 Cryptography Seminar

Fall, spring. 1 credit.

Seminar for discussing recent or classical papers in cryptography.

CS 7999 Independent Research

Fall, spring. Prerequisite: permission of a computer science advisor.

Independent research or master of engineering project.

CS 9999 Thesis Research

Fall, spring. Prerequisite: permission of a computer science advisor. S–U grades only.
Doctoral research.

INFORMATION SCIENCE (INFO)

INFO 1300 Introductory Design and Programming for the Web (also CS 1300)

Fall. 4 credits.

The World Wide Web is both a technology and a pervasive and powerful resource in our society and culture. To build functional and effective web sites, students need technical and design skills as well as analytical skills for understanding who is using the web, in what ways they are using it, and for what purposes. In this course, students develop skills in all three of these areas through the use of technologies such as XHTML, Cascading Stylesheets, and PHP. Students study how web sites are deployed and used, usability issues on the web, user-centered design, and methods for visual layout and information architecture. Through the web, this course provides an introduction to the interdisciplinary field of information science.

INFO 2040 Networks (also ECON 2040, SOC 2090)

Spring. 4 credits.

For description, see ECON 2040.

INFO 2140 Cognitive Psychology (also COGST/PSYCH 2140)

Spring. 4 credits. Limited to 175 students.

Prerequisite: sophomore standing.
Graduate students, see INFO 6140.

For description, see PSYCH 2140.

INFO 2300 Intermediate Design and Programming for the Web (also CS 2300)

Spring. 3 credits. Prerequisite: INFO 1300 strongly recommended. Must be taken before INFO 3300.

Web programming requires the cooperation of two machines: the one in front of the viewer (client) and the one delivering the content (server). INFO 1300 concentrates almost exclusively on the client side. The main emphasis in INFO 2300 is learning about server side processing. Students begin with a short overview of the PHP server-side scripting language, then look at interactions with databases, learning about querying both on paper and via SQL. Through a succession of projects, students learn how to apply this understanding to the creation of an interactive data-driven site via PHP and the MYSQL database. Also considered are technologies such as Javascript and Ajax; techniques to enhance security, privacy, reliability, and ways of incorporating other programs. Toward the end of the course, students are shown how these development tools are working. Design and usability issues are emphasized. A major component of the course is the creation of a substantial web site.

[INFO 2310 Topics in Web Programming and Design]**INFO 2450 Communication and Technology (also COMM 2450)**

Fall, summer. 3 credits.

For description, see COMM 2450.

INFO 2921 Inventing an Information Society (also AMST/ECE/ENGRG 2980, HIST 2920, STS 2921)

Spring. 3 credits.

For description, see ENGRG 2980.

INFO 2950 Mathematical Methods for Information Science

Fall. 4 credits. Corequisite: MATH 2310 or equivalent.

Teaches basic mathematical methods for information science. Topics include graph theory, discrete probability, Bayesian methods, finite automata, Markov models, and hidden Markov models. Uses examples and applications from various areas of information science such as the structure of the web, genomics, natural language processing, and signal processing.

INFO 3200 New Media and Society (also COMM 3200)

Spring. 3 credits.

For description, see COMM 3200.

INFO 3300 Data-Driven Web Applications (also CS 3300)

Fall. 3 credits. Prerequisite: CS 2110 and (INFO 2300 or permission of instructor).

Introduces students to modern database systems and three-tier application development with a focus on building web-based applications using database systems. Concepts covered include the relational model, relational query languages, data modeling, normalization, database tuning, three-tier architectures, Internet data formats and query languages, server- and client-side technologies, and an introduction to web services. Students build a database-backed web site.

[INFO 3400 Psychology of Social Computing (also COMM 3400)]

Fall. 3 credits. Prerequisite: INFO 2450.
Next offered 2010–2011.

For description, see COMM 3400.]

INFO 3450 Human-Computer Interaction Design (also COMM 3450)

Fall. 3 credits. Prerequisite: INFO 2450.
May be taken concurrently with INFO 2450.

For description, see COMM 3450.

[INFO 3490 Media Technologies (also COMM 3490, STS 3491)]

Spring. 3 credits. Offered odd-numbered years. Next offered 2010–2011.

For description, see COMM 3490.]

[INFO 3551 Computers: From the 17th Century to the Dotcom Boom (also STS 3551)]**INFO 3561 Computing Cultures (also STS 3561)**

Spring. 4 credits. No technical knowledge of computer use presumed or required.
INFO 3551 and 3561 may be taken separately or in any order.

For description, see STS 3561.

INFO 3650 Technology and Collaboration (also COMM 3650)

Spring. 3 credits. Prerequisite: INFO 2450.

For description, see COMM 3650.

[INFO 3660 History and Theory of Digital Art (also ARTH 3650)]

Fall. 4 credits. Next offered 2010–2011.

For description, see ARTH 3650.]

INFO 4290 Copyright in the Digital Age (also COMM 4290)

Fall. 3 credits. Offered odd-numbered years.

For description, see COMM 4290.

INFO 4300 Information Retrieval (also CS 4300)

Fall. 3 credits. Prerequisite: CS/ENGRD 2110 or equivalent.

Studies the methods used to search for and discover information in large-scale systems. The emphasis is on information retrieval applied to textual materials, but there is some discussion of other formats. The course includes techniques for searching, browsing, and filtering information and the use of classification systems and thesauruses. The techniques are illustrated with examples from web searching and digital libraries.

INFO 4302 Web Information Systems (also CS 4302)

Spring. 3 credits. Prerequisites: CS 2110 and some familiarity with web site technology.

Examines the architecture of web information systems such as distributed digital libraries and electronic publishing systems. Many of the topics presented are the subject of current research and development at Cornell, other universities, and in standards organizations such as the World Wide Web Consortium. Course content mixes exploration of current tools for building web information systems such as XML, XSLT, and RDF with broader concepts such as techniques for knowledge representation and description, object models for content representation, and legal and economic impacts of web information. A theme that runs throughout the course is the relationship between traditional information environments, exemplified by libraries, and the distributed information environment of the web.

[INFO 4350 Seminar on Applications of Information Science (also INFO 6350)]**INFO 4400 Advanced Human-Computer Interaction Design (also COMM 4400)**

Spring. 3 credits. Prerequisites: INFO 2450.

For description, see COMM 4400.

INFO 4450 Seminar in Computer-Mediated Communication (also COMM 4450)

Spring. 3 credits. Prerequisite: INFO 2450.

For description, see COMM 4450.

INFO 4470 Social and Economic Data (also ILRLE 4470)

Fall. 4 credits. Prerequisites: calculus, IS statistics requirement, and one upper-level social science course, or permission of instructor.

Social and economic data drive decisions in public and private organizations, and quality decisions require quality data. This course focuses on data quality—conceptual fit, sampling and nonsampling error, timeliness, geographic detail, and dissemination—as well as legal and ethical issues in the data manufacturing process. Major emphasis is placed on public use microdata files of the U.S. Census Bureau and their role in the allocation of federal funds. These files include the Census of Population and Housing, Current Population Survey, American Housing Survey, Consumer Expenditure Survey, and American

Community Survey. The course is appropriate for upper-level undergraduate, professional master's, and doctoral students who will be users of data products, from the public and private sectors; and/or producers of data products for their organizations, working with existing data products from public and proprietary sources, as well as administrative or survey data collected by their organization.

INFO 4500 Language and Technology (also COMM 4500)

Spring. 3 credits. Prerequisite: INFO 2450 or permission of instructor.
For description, see COMM 4500.

INFO 4900 Independent Reading and Research

Fall, spring. 1-4 credits.
Independent reading and research for undergraduates.

INFO 4910 Teaching in Information Science, Systems, and Technology

Fall, spring. Variable credit.
Involves working as a T.A. in a course in the information science, systems, and technology major.

[INFO 5150 Culture, Law, and Politics of the Internet]

INFO 5300 The Architecture of Large-Scale Information Systems (also CS 5300)

Spring. 4 credits. Prerequisite: INFO/CS 3300 or CS 4320.
Deals with the architecture of large-scale information systems, with special emphasis on Internet-based systems. Topics include three-tier architectures, edge caches, distributed transaction management, web services, workflows, performance scalability, and high-availability architectures. The course includes a substantial project in the context of three-tier architectures, involving web servers, application servers, and database systems. Students study and use technologies such as Web Services, .Net, J2EE, ASPs, Servlets, XML, and SOAP.

INFO 6140 Cognitive Psychology (also COGST/PSYCH 6140)

Spring. 4 credits.
For description, see PSYCH 6140.

INFO 6300 Advanced Language Technologies (also CS 6740)

Fall or spring. 3 credits. Prerequisites: permission of instructor. Neither INFO/CS 4300 nor CS 4740 are prerequisites.
For description, see CS 6740 in CIS section.

INFO 6341 Information Technology in Sociocultural Context (also STS 6341)

Spring. 4 credits.
Analyzes information technology using historical, qualitative, and critical approaches. Discusses questions such as: In what ways is information technology—often portrayed as radically new—actually deeply historical? How do information technologies represent and intervene in debates and struggles among people, communities, and institutions? How is the design of information technology tools entangled in the realms of law, politics, and commerce? In what ways are the social consequences of information technologies produced as much by the claims we make about the technologies as about the raw functionality of the tools themselves? This course investigates these issues through the

lenses of long-standing debates and current controversies.

[INFO 6350 Seminar on Applications of Information Science (also INFO 4390)]

INFO 6400 Human-Computer Interaction Design (also COMM 6400)

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 6400.

INFO 6450 Seminar in Computer-Mediated Communication (also COMM 6450)

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 6450.

[INFO 6648 Speech Synthesis by Rule (also LING 6648)]

Spring. 4 credits. Prerequisite: LING 4401, 4419, or permission of instructor. Next offered 2010-2011.
For description, see LING 6648.]

INFO 6500 Language and Technology (also COMM 6500)

Spring. 3 credits.
For description, see COMM 6500.

[INFO 6850 The Structure of Information Networks (also CS 6850)]

INFO 7050 Graduate Seminar

Fall, spring. 2 credits.
Graduate seminar on new research in the field of Information Science.

INFO 7090 IS Colloquium

Fall, spring. 1 credit.
For staff, visitors, and graduate students interested in information science.

INFO 7900 Independent Research

Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.
Independent research for M.Eng. students and pre-A exam Ph.D. students.

INFO 9900 Thesis Research

Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.
Thesis research for post-A exam Ph.D. students.

DEPARTMENT OF STATISTICAL SCIENCE

301 Malott Hall
255-8066

M. T. Wells, chair (301 Malott Hall, 255-4388); R. L. Strawderman, director of graduate studies; J. A. Bunge, director of professional programs; J. Abowd, T. Apanosovich, J. Booth, C. Bustamante, T. DiCiccio, R. Durrett, E. Dynkin, T. Fine, X. Guo, Y. Hong, G. Hooker, J. T. G. Hwang, N. Kiefer, G. Lawler, P. Li, F. Molinari, M. Nielsen, M. Nussbaum, P. Protter, S. Resnick, D. Ruppert, G. Samorodnitsky, S. J. Schwager (undergraduate coordinator), B. Turnbull, P. Velleman

STSCI 2010 Introductory Statistics

Fall or spring. 4 credits.
Introduction to the basic concepts of probability, statistics and data analysis. Descriptive methods, normal theory models, and inferential procedures are considered. Topics include basic statistical designs, an introduction to probability, estimation, confidence intervals, tests of significance for a single population mean and proportion, the difference in two population means and proportions, ANOVA, multiple linear regression, and contingency tables.

STSCI 5010-5020 Applied Statistical Analysis

Two-semester core course for students in master of professional studies (M.P.S.) degree program in applied statistics in Department of Statistical Science.
Prerequisite: enrollment in M.P.S. program.
Consists of a series of modules on various topics in applied statistics. Some modules include guest lectures from practitioners. Parallel with the course, students complete a yearlong, in-depth data analysis project.

Fall (STSCI 5010). 4 credits. Letter grades only.

Topics include but are not limited to: statistical computing systems, statistical software packages, data management, statistical graphics, and simulation methods and algorithms.

Spring (STSCI 5020). 4 credits. Letter grades only.

Topics include but are not limited to: sample surveys and questionnaire design, data sources, experimental design, and data mining.

STSCI 6000 Statistics Seminar

Fall and spring. 1 credit. Pre- or corequisite: BTRY 4090 or permission of instructor. S-U grades only.

SCHOOL OF CONTINUING EDUCATION AND SUMMER SESSIONS

The School of Continuing Education and Summer Sessions (SCE) provides outstanding educational opportunities throughout the year for people of all ages and interests.

We present programs in a wide variety of formats on campus, online, and around the world.

Join us to prepare for your future, enhance your studies, improve your job skills, have fun learning something new, or introduce someone else to the wonders of Cornell.

For information about the following programs, visit www.sce.cornell.edu, e-mail cusce@cornell.edu, call 607 255-4987, or write to B20 Day Hall, Ithaca, NY 14853-2801.

SCHOOL ADMINISTRATION

Glenn C. Altschuler, dean

Charles W. Jermy, Jr., associate dean, and director, Cornell University Summer Session

Diane E. Sheridan, director, finance and administration

Ruby D. Brown, assistant director, finance and administration

School Program Directors and Managers

Mary E. Adie, director, Special Programs and Executive Education

Robert Hutchens, director, Cornell in Washington Program

Abby H. Eller, director, Summer College Programs for High School Students

Catherine Penner, director, Cornell's Adult University and Cornell CyberTower

School Support Services

Graham Dobson, manager, information technologies

Ann L. Morse, manager, media services

Cathy M. Pace, registrar, and coordinator, continuing education information service

CORNELL'S ADULT UNIVERSITY

Believing that learning shouldn't end once you've earned your degree, Cornell's Adult University (CAU) offers weeklong noncredit courses on campus in the summer for adults and families. During the fall, winter, and spring, CAU offers weekend seminars and longer domestic programs as well as international study tours. Developed and led by distinguished members of the Cornell faculty, all programs are inspired by the conviction that one of the roles of a great university is to provide a bridge between traditional formal education and informal, noncredit study. For information, visit www.cau.cornell.edu, e-mail cauinfo@cornell.edu, call 607 255-6260, or write to Cornell's

Adult University, 626 Thurston Avenue, Ithaca, NY 14850-2490.

CONTINUING EDUCATION INFORMATION SERVICE

If you know someone who has been out of school for several years and who wants to resume his or her education, you may want to mention Cornell's Continuing Education Information Service, which provides counseling, referral, and news about short courses, workshops, professional updates, and executive programs offered by the university. For information, e-mail cusce@cornell.edu, call 607 255-4987, or write to Continuing Education, B20 Day Hall, Ithaca, NY 14853-2801.

CORNELL CYBERTOWER: FREE FACULTY LECTURES AND INTERVIEWS ONLINE

Meet Cornell faculty members and explore fascinating topics for free at Cornell CyberTower, which features three online program series:

- **Study Rooms** contain video-streamed lectures, links to specially selected web sites, reading lists, and discussion boards with Cornell faculty members and fellow CyberTower users.
- **Forums** are informal video-streamed conversations with leading faculty members. Discussion boards enable you to trade comments and questions with each month's featured guest.
- **Views and Reviews** are brief, unabashedly opinionated commentaries by faculty members on books, films, articles, and topics in the news.

To explore CyberTower, simply log on to www.cybertower.cornell.edu. It's a great way to see some of what Cornell has to offer! In fact, why not share it with your family and friends?

CORNELL IN WASHINGTON PROGRAM

If you want to combine the strengths of Cornell with all of the best parts of living and learning in Washington, D.C., consider the Cornell in Washington program. Students take courses in the fall, spring, or summer for credit, work as externs, and complete substantial research projects while enjoying the rich opportunities available in the nation's capital. For information, visit www.ciw.cornell.edu, e-mail cwash@cornell.edu, call 607 255-4090, or write to Cornell in Washington, M101 McGraw Hall, Ithaca, NY 14853-4601.

DISTANCE LEARNING

Need a flexible schedule? Planning to travel or work during winter break or during the summer? Don't let that stop you from taking a class, earning credits, or learning something new. Wherever you are, whatever your schedule, Cornell distance learning courses are just a keyboard away. Distance learning courses feature web-based components and/or related materials. You'll interact with the instructor and other students by phone or e-mail. Most assignments and examinations are completed within a scheduled time frame, just as in on-campus courses, but you'll have the option of getting a head start on readings and lectures. For information, visit www.sce.cornell.edu/dl, e-mail cusce@cornell.edu, call 607 255-4987, or write to Distance Learning, B20 Day Hall, Ithaca, NY 14853-2801.

If you are a faculty member interested in developing credit or noncredit distance learning courses, the school offers a broad range of services, including determining technological needs, resolving copyright issues, creating a marketing plan, and fulfilling administrative duties related to your course. Visit www.sce.cornell.edu/dl to see what's possible.

EXECUTIVE AND PROFESSIONAL PROGRAMS

Once you're out in the work world (or if you know folks who already are), you may be interested in the short, high-level executive education programs that the school presents on campus, online, and in locations worldwide. These courses are taught by Cornell faculty and senior research staff members in many fields. Programs also can be designed to respond to the specific needs and interests of corporations, professional societies, and other groups. For information, visit www.sce.cornell.edu/exec, e-mail culp@cornell.edu, call 607 255-7259, or write to Executive Education, B20 Day Hall, Ithaca, NY 14853-2801.

EXTRAMURAL/PART-TIME STUDY

If you find your studies interrupted for any reason, you may find it useful to take classes on a part-time basis. The school is also dedicated to offering part-time study to staff and faculty members, area residents, and anyone else interested in taking courses at the university, improving their job skills, continuing their education, or simply having fun learning something new.

Thanks to the school's Extramural Study program, anyone may (with few exceptions) enroll in any course in the university during the fall and spring semesters if space is available. Part-time study at Cornell is a great opportunity to take fascinating course offerings and study with world-renowned faculty members. If you'd like to take advantage of Cornell's extensive course offerings but don't need college credit, you

may register through the Visitors Program and receive a 90 percent discount on tuition. For information, visit www.sce.cornell.edu/exmu, e-mail cusce@cornell.edu, call 607 255-9697, or write to Extramural Study, B20 Day Hall, Ithaca, NY 14853-2801.

SPECIAL PROGRAMS

If you want to immerse yourself in a particular subject, consider enrolling in a special program. Programs are offered on and off campus, may include an internship, and may be combined with other courses. For information, visit www.sce.cornell.edu/sp, e-mail culp@cornell.edu, call 607 255-7259, or write to Special Programs, B20 Day Hall, Ithaca, NY 14853-2801.

On-Campus Special Programs Roster

AEM Certificate in Business Management
 Architecture
 Art in the Modern World
 Asian Language Programs: Chinese, Japanese, Nepali, Sinhala, Tibetan
 Astronomy for Teachers
 Biological Sciences Undergraduate Research Program
 CCMR Institute for Chemistry Teachers (CICT)
 CNS Institute for Physics Teachers (CIPT)
 Cornell Institute for Biology Teachers (CIBT)
 Ecological Design in Paris and London Education
 Engineering Cooperative Education Program
 English for International Students and Scholars
 Field Course in Iroquois Archaeology
 Freshman Summer Start
 Frontiers of American History
 Industrial and Labor Relations: Strategic Corporate Research
 Intensive Arabic Program
 Landscape Architecture: Site Grading
 Leadership Program for Veterinary Students
 Nanobiotechnology Institute for Teachers
 Prefreshman Summer Program
 Satellite Remote Sensing Applications in Biological Oceanography
 Teaching Writing

Off-Campus Special Programs Roster

Art Studio and Creative Writing Workshop in Rome, Italy
 Theatre, Film, and Dance in Europe: Dublin/Paris/Rome
 High Technology Entrepreneurship Program
 Human Ecology: Urban Semester Program—Fieldwork in Diversity, Professional Practice, and Service: The Culture of Medicine/Community and Public Service/Business and Finance
 International Business Experience
 Investment Management Program
 Latin American Studies: Quechua

Marine Science: Shoals Marine Laboratory, Maine

Prelaw Program in New York City

Summer in Washington

Campus to Careers

The job market's tough. The economy's tight. You've been thinking it's time to get serious about your future

The School of Continuing Education and Summer Sessions invites you to join us for one of our highly regarded programs linking classrooms and careers. No matter what your major is, you can:

- Expand your career opportunities
- Strengthen your résumé and skills
- Develop professional contacts
- Take focused, intensive classes
- Learn from distinguished professors, alumni, practitioners, and executives
- Study in Washington, D.C., New York City, Silicon Valley, Europe, or on the Cornell campus in Ithaca
- Enrich your personal, academic, and professional life

For more information, visit www.sce.cornell.edu/sp.

Campus-to-Careers Programs Roster

AEM Certificate in Business Management
 High Technology Entrepreneurship Program
 International Business Experience

 Prelaw Program in New York City
 Summer in Washington

SUMMER COLLEGE PROGRAMS FOR HIGH SCHOOL STUDENTS

If you know any high school students, be sure to tell them about Summer College. This award-winning program offers three- and six-week courses for talented sophomores, juniors, and seniors from around the world.

Participants live on our beautiful campus, take college classes with leading Cornell faculty members, earn an average of 6 credits, and explore careers and academic majors.

The program is a wonderful opportunity for high school students to experience college life and make some great friends. At the end of the program, students often say it's been the best summer of their life.

For information, visit www.summercollege.cornell.edu, e-mail summer_college@cornell.edu, call 607 255-6203, or write to Summer College, B20 Day Hall, Ithaca, NY 14853-2801.

WINTER SESSION

You can earn up to 4 credits between the fall and spring semesters by enrolling in the winter session. During this quiet time on campus, you'll enjoy generally smaller classes and be able to concentrate on intensive study with a faculty member. Our winter session

roster appears below. If a course is also offered through distance learning, the course title will be followed by **DL**.

For information, visit www.sce.cornell.edu/ws, e-mail cusce@cornell.edu, call 607 255-4987, or write to Winter Session, B20 Day Hall, Ithaca, NY 14853-4987.

CORNELL UNIVERSITY SUMMER SESSION

Summer at Cornell is an excellent time to get a world-class education while enjoying all of the pleasures of summer in the Finger Lakes.

Summer Session features open admissions and outstanding instructors, nearly all of whom are regular Cornell faculty members. Courses are offered on and off campus and via distance learning.

During our three-, six-, or eight-week sessions, you can actually get to know your professors and are sure to be surrounded by intriguing people of all ages from all over the world. And you'll still have time left over for travel or a summer job!

During Summer Session you can fulfill requirements, accelerate your degree, gain personal satisfaction, grow professionally, and/or ease your fall/spring course load. It's also the perfect time to take advantage of the area's stunningly beautiful gorges, waterfalls, lakes, and parks. Hike, swim, sail, picnic, or enjoy a sunset concert on the Arts Quad. However you look at it, spending a summer at Cornell is a great way to enjoy the best of the university and the best of summer!

For information, visit www.summer.cornell.edu, e-mail cusce@cornell.edu, call 607 255-4987, or write to Summer Session, B20 Day Hall, Ithaca, NY 14853-4987.

Summer Session Course Roster

The Cornell University Summer Session offers a wide variety of courses. The list that follows includes those courses that are usually offered every summer. The list is not exhaustive; many new courses or courses offered only occasionally are not listed. For complete information, contact the Summer Session office. Courses are posted on the web (www.summer.cornell.edu) in the fall as the roster is developed. If a course also is offered through distance learning, the course title will be followed by **DL**.

Africana Studies

- ASRC 1100-1101 Elementary Swahili
- ASRC 1104-1105 Elementary Arabic
- ASRC 1106-2101 Intermediate Arabic
- ASRC 1900 Research Strategies
- ASRC 2300 African Cultures and Civilizations
- ASRC 4505 Black Arts Movement **DL**
- ASRC 4606 The Family and Society in Africa

American Indian Studies

- AIS 2220 Field Course in Iroquois Archaeology

American Studies

- AMST 1240 Democracy and Its Discontents: Political Traditions in the United States
- AMST 2020 Popular Culture in the United States, 1950 to Present **DL**
- AMST 2525 Islam in America
- AMST 2820 Photography and the American Landscape
- AMST 3128 America's Changing Faces

- AMST 3140 History of American Foreign Policy, 1912 to the Present

- AMST 3141 Prisons **DL**

- AMST 4509 Black Arts Movement **DL**

Animal Science

- ANSC 1120 Sustainable Animal Husbandry
- ANSC 2140 Captive Raptor Management and Propagation
- ANSC 2250 Fertilization and New Life Technologies

Anthropology

- ANTHR 1300 Human Evolution: Genes, Behavior, and the Fossil Record **DL**
- ANTHR 2112 Cosmology of Native North America
- ANTHR 2220 Field Course in Iroquois Archaeology
- ANTHR 3305 Anthropology of Parenting **DL**
- ANTHR 3415 Art in the Modern World
- ANTHR 3799 Women in Asia: Sex and Gender in Cross-Cultural Perspective

Applied Economics and Management

- AEM 1200 Introduction to Business Management
- AEM 2190 Introduction to Applied Portfolio Management
- AEM 2210 Financial Accounting
- AEM 2240 Principles of Finance
- AEM 2260 AEM Certificate in Business Management Special Activities
- AEM 2270 Introduction to International Business
- AEM 2400 Marketing **DL**
- AEM 3200 Business Law I

Archaeology

- ARKEO 2220 Field Course in Iroquois Archaeology
- ARKEO 3003 Island Archaeology
- ARKEO 3302 Archaeology Under Water

Other field study opportunities are usually available through this department.

INDEPENDENT STUDY

Have a special interest you'd like to pursue?
 Want to do research and get credit for it?
 Need a particular course to graduate on time?
 Consider independent study.

Independent study encompasses courses of your own design, special topics courses, undergraduate research, or any regular course from the fall and spring semesters not being offered. If you can find a professor willing to supervise your study, all you need to do is pick up the application for independent study (available on the web at www.summer.cornell.edu or from the Summer Session office) and register in B20 Day Hall at least two weeks prior to beginning the independent study course. Also, please let the Summer Session office know if there are courses you would like to see offered next summer (e-mail cusce@cornell.edu or call 607 255-4987).

COLLEGE OF ENGINEERING

ADMINISTRATION

Christopher K. Ober, interim dean

David Gries, associate dean for undergraduate programs

Marjolein van der Meulen, interim associate dean for research and graduate studies

Richard Allmendinger, associate dean for diversity

Betsy East, assistant dean for student services

Cathy Dove, associate dean for administration

James Mazza, interim assistant dean for alumni affairs and development

FACILITIES AND SPECIAL PROGRAMS

Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr. Engineering Quadrangle. The School of Applied and Engineering Physics is located in Clark Hall on the College of Arts and Sciences campus, the Department of Biological and Environmental Engineering is in Riley-Robb Hall on the campus of the New York State College of Agriculture and Life Sciences, and the Department of Biomedical Engineering is in Weill Hall.

Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers, institutes, and programs contribute to opportunities for study and research.

Cornell programs and centers of interest in engineering include the following:

Center for Advanced Computing. CAC is a supercomputer facility used for advanced research in engineering and the physical and biological sciences.

Center for Applied Mathematics. This cross-disciplinary center administers a graduate program.

Center for Nanoscale Systems. The mission of this National Science Foundation Nanoscience and Technology Center is to develop innovative nanoscale systems to revolutionize information technology and to further nanoscience technology. The facilities for this center are distributed between Clark Hall and the Engineering Quadrangle, and especially in Duffield Hall.

Center for Radiophysics and Space Research. This interdisciplinary unit facilitates research in astronomy and the space sciences.

Cornell Center for Materials Research. CCMR is an interdisciplinary center that performs state-of-the-art materials research and provides sophisticated scientific measurement and characterization equipment.

Cornell Center for a Sustainable Future. This center promotes and advances collaborations across Cornell and with selected external partners, leveraging Cornell's resources to help build a sustainable future for the world.

Cornell High Energy Synchrotron Source. CHESS is a high-energy synchrotron radiation laboratory operated in conjunction with the university's high-energy storage ring. Current research programs at CHESS are in areas of structural biology, chemistry, materials science, and physics.

Cornell Nanoscale Science and Technology Facility (part of the National Science Foundation-funded National Nanofabrication Users Network). This center provides equipment and services for research in the science, engineering, and technology of nanometer-scale structures for electronic, chemical, physical, and biological applications.

CU-ADVANCE. The NSF ADVANCE program's goals are to increase the recruitment, retention, and promotion into leadership positions of women in engineering and the sciences, and to institutionalize best practices, policies, and programs across colleges as they pertain to women faculty.

Institute for Biotechnology and Life Sciences Technologies. This institute was established to promote the new discipline of modern biotechnology and the education and training of biologists, engineers, agricultural personnel, and medical scientists.

Institute for the Study of the Continents. This interdisciplinary organization promotes research in deep seismic exploration of the structure and geologic evolution of the continents.

Intelligent Information Systems Institute. IISI seeks to stimulate research in compute- and data-intensive methods for intelligent decision-making systems, to foster collaboration, and to play a leadership role in the research and dissemination results in its core areas.

KAUST-Cornell Center for Energy and Sustainability. This center investigates organic-inorganic hybrid nanomaterials for applications in water desalination, carbon capture and sequestration, oil and gas production, and solar energy.

Kavli Institute at Cornell for Nanoscale Science. KIC addresses challenges and opportunities for the science of very small structures and fosters collaborative multidisciplinary research in this area.

Laboratory of Atomic and Solid State Physics. This is a major center for research in the area of condensed matter physics and other related areas.

Laboratory of Plasma Studies. LPS is a center for research in plasma physics.

MCEER. This facility was established by the National Science Foundation and a group of universities to study the response and design of structures in earthquake environments.

Nanobiotechnology Center. The mission of this National Science Foundation Science and Technology Center is to develop nanoscale technologies and science applied to the life sciences. The facilities of this center are distributed between Clark Hall and Duffield Hall.

National Astronomy and Ionosphere Center. NAIC is the world's largest radio-radar telescope facility, operated by Cornell in Arecibo, Puerto Rico, focusing on radio and radar astronomical studies and investigations of the Earth's ionosphere.

National Institutes of Health/National Science Foundation Developmental Resource in Biophysical Imaging and Optoelectronics. This resource develops novel measurement and optical instrumentation for solving biophysical problems.

National Nanotechnology Infrastructure Network. NINN, a partnership of 13 university-based labs, provides access to infrastructure to enable the national science and engineering community to pursue research, education, and technology development dealing with nanotechnology.

National Science Digital Library. The NSDL project at Cornell, part of the NSF's national effort in developing resources and tools for digital libraries, hosts the production services for NSF's NSDL and designs and implements technical infrastructure.

Network for Earthquake Engineering Simulation (NEES). A system of nationwide experimental facilities linked by high-performance Internet for laboratory and computational simulation of structures under earthquake loads.

Northeast Regional Climate Center. This center monitors and reports on current climate conditions in the region.

Northeast Sun Grant Institute of Excellence. Partners in this initiative are involved in addressing energy needs and revitalizing rural communities with land-grant university research, education, and extension programs.

Power Systems Engineering Research Center. A National Science Foundation cooperative center between university and industry centered on addressing the challenges faced by the evolving electric power industry.

Program of Computer Graphics. This interdisciplinary research center operates one of the most advanced computer-graphics laboratories in the United States.

Program on Science, Technology, and Society. This cross-disciplinary unit sponsors courses and promotes research on the interaction of science, technology, and society.

Transportation Infrastructure Research Consortium. Cornell is the lead institution in this consortium of 12 institutions in New York State. It brings together the research expertise in a cross-disciplinary fashion to solve problems in cooperation with the staff of the New York State Department of Transportation, its principal sponsor.

The programs listed above are sponsored by College of Engineering units, and several are industry affiliated.

DEGREE PROGRAMS

Cornell programs in engineering and applied science lead to the degrees of bachelor of science (B.S.), master of engineering (M.Eng.), master of science (M.S.), and doctor of philosophy (Ph.D.).

General academic information concerning the B.S. degree is given below under "Undergraduate Study." The student pursues the degree in one of 13 majors. The majors are described under "Engineering Majors."

Many students stay a fifth year in the College of Engineering to pursue a professional degree, the master of engineering (M.Eng.) degree. Joint enrollment in the B.S. and M.Eng. degrees is possible for students in their last semester who lack only 1 to 8 credits for the B.S.

M.Eng. degrees are awarded in most of the major areas. In addition, the following M.Eng. degrees are awarded: aerospace engineering, biomedical engineering, electrical engineering, engineering mechanics, nuclear engineering, operations research and industrial engineering, and systems engineering. For full details on M.Eng. degrees, see "Master of Engineering Degree Programs."

Programs leading to the M.S. and Ph.D. degrees are administered by the Graduate School. They are described in the *Announcement of the Graduate School* and the special announcement *Graduate Study in Engineering and Applied Science*.

UNDERGRADUATE STUDY

Students in the College of Engineering spend most of their first two years of undergraduate studies in the Common Curriculum, which is administered by the College Curriculum Governing Board (CCGB) through the associate dean for undergraduate programs and Engineering Advising. At the end of their third semester, they affiliate with one of these majors.*

biological engineering (BE)†
 chemical engineering (ChemE)
 civil engineering (CE)
 computer science (CS)
 electrical and computer engineering (ECE)
 engineering physics (EP)
 environmental engineering (EnvE)
 independent major (IM)
 information science, systems, and technology (ISST)—with options in information science and management science
 materials science and engineering (MSE)
 mechanical engineering (ME)
 operations research and engineering (ORE)
 science of earth systems (SES)

Criteria for affiliation with the majors are described under "Affiliation with a Major." The majors are described under "Undergraduate Engineering Majors."

Most of the majors have a corresponding minor, in which the student can pursue a secondary interest. In addition, there are minors in applied mathematics, biomedical engineering, civil infrastructure, engineering

management, engineering statistics, game design, industrial systems and information technology, information science, and business. See the main section, "Engineering Minors."

*The majors biological engineering, chemical engineering, civil engineering, electrical and computer engineering, materials science and engineering, and mechanical engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

†Students may major in biological engineering through the College of Engineering or the College of Agriculture and Life Sciences (CALS). Students who do so through the College of Agriculture and Life Sciences are jointly enrolled with the College of Engineering for their last two years.

There is no undergraduate major in nuclear science and engineering. Students who intend to enter graduate programs in this area are encouraged to begin specialization at the undergraduate level. This may be done by choice of electives within the major (e.g., engineering physics, materials science and engineering, civil engineering, chemical engineering, and the independent major). Contact a faculty member in the graduate field of nuclear science and engineering who is most directly concerned with the curriculum, including K. B. Cady, D. A. Hammer, R. W. Kay, and V. O. Kostroun.

Graduation Requirements

To receive the bachelor of science degree, students must meet the requirements of the common curriculum (outlined below) as set forth by the College of Engineering, including the requirements of their chosen major, as established by the school or department that administers the major. (Further explanation of the revised common curriculum and major flow charts are provided in the 2009-2010 edition of the *Engineering Undergraduate Handbook*.)

Course Category	Credits
1. Mathematics (major-specific)	15-16
2. Physics (major-specific)	8-12
3. Chemistry (major-specific)	4-8
4. First-year writing seminar	6
5. Technical writing*	3
6. Computing	5
7. Introduction to engineering (ENGRI)	3
8. Two engineering distributions (ENGRD)	6-8
9. Liberal studies distribution (6 courses min.)	≥ 18
10. Advisor-approved electives	6
11. Major program	
a. Major-required courses	≥ 30
b. Major-approved electives	9
c. Courses outside the major	9
12. Two semesters of physical education in the freshman year and demonstration of proficiency in swimming (university requirement)	

From 124 to 134 credits are required for graduation, depending on the major (see "Engineering Majors").

*Technical-writing courses may simultaneously fulfill another requirement.

Mathematics

The normal program in mathematics includes MATH 1910, 1920, 2930 or 2940 (depending on the major), and a major-specific math course. At least C- must be attained in these courses; if not, the course must be repeated immediately before the next course in the sequence is taken. Failure to achieve at least C- the second time will result in withdrawal from the College of Engineering. Courses that are taken a second time do not yield additional credit toward a degree.

Physics

The normal program in physics includes PHYS 1112, 2213, and 2214 or the corresponding honors courses (PHYS 1116, 2217, and 2218). Engineering students must attain at least C- in each math prerequisite of a physics course before taking the physics course (e.g., C- in MATH 1910 before taking PHYS 1112 and C- in MATH 1920 before taking PHYS 2213). The following substitutions are allowed for PHYS 2214: CHEME, CE, CS, ISST, and SES majors: CHEM 2080. BE and EnvE majors: CHEM 1570 or 3570. ORE majors: CHEM 2080, CS 2800, or MATH 3040, 3110, or 3360.

Chemistry

CHEM 2090 is required. The content is the same as that of CHEM 2070, but Engineering students are expected to take 2090.

Typically, CHEM 2090 is taken during the freshman year, but students who wish to complete the physics program (PHYS 1112, 2213, and 2214) first may postpone CHEM 2090 until the sophomore year.

Students considering chemical engineering or a health-related career such as medicine must take CHEM 2090 in the fall of their freshman year and CHEM 2080 in the spring semester.

Computing

Students learn about computing using two programming languages by taking one of two sequences: (1) CS 1110 and CS 1132 or (2) CS 1112 (BE majors may take BEE 1510 instead) and CS 1130. The first course is taken in the first year. The second course, a 1-credit S-U course, is taken as soon as possible thereafter but no later than the fourth semester.

First-Year Writing Seminars

Each semester of their freshman year, students choose a first-year writing seminar from over 100 courses offered by over 30 different departments in the humanities, social sciences, and expressive arts. These courses offer the student practice in writing English prose. They also ensure beginning students the benefits of a small class.

Technical Writing

Students can fulfill the upper-level technical-writing requirement using one of the six alternatives below. See www.engineering.cornell.edu/ECP for more information.

1. ENGR 3500 or 3350
2. The Writing-Intensive Co-op—an opportunity to combine work and academics. Some co-op students do a significant amount of writing on the job; under certain circumstances, this writing will satisfy the technical-writing requirement.

3. An officially designated Writing-Intensive (W-I) engineering course:
 - ENGRD/AEP 2640
 - CHEME 4320
 - MSE 4030 and 4040 (both)
 - MSE 4050 and 4060 (both)
 - MAE 4272
 - BEE 4530
 - BEE 4730 with co-registration in BEE 4930
 - BEE 4890
4. ENGRD 3020, a 1-credit attachment to an engineering course that is not one of the officially designated W-I courses (see #3 above). An instructor may wish to extend the writing in their course for a given semester so that it will fulfill the technical-writing requirement. With the approval of the CCGB's Subcommittee on Technical Writing, the instructor may have students co-register in ENGRD 3020, which may be taken more than once with different courses by permission of the engineering instructor.
5. COMM 2600, 2630, or 3520, taught by the Department of Communication (in the College of Agriculture and Life Sciences).
6. Petition. Occasionally, a student will be doing a significant amount and variety of technical writing elsewhere in the College of Engineering. It may be appropriate to petition the CCGB's Subcommittee on Technical Writing for permission to use this forthcoming writing (not past writing) to meet the technical-writing requirement.

Introduction-to-Engineering Course

An introduction-to-engineering course (designated ENGRD) must be taken during the freshman year. This course introduces students to the engineering process and provides a substantive experience in an open-ended problem-solving context. See the Introduction-to-Engineering course listing for current course offerings.

Engineering Distribution

Two engineering distribution (ENGRD) courses (6–8 credits) must be selected from two different categories listed below. A student may use any one of the possible substitutions described.

1. *Scientific computing*
 - ENGRD 2110 Object-Oriented Programming and Data Structures
 - ENGRD 3200 Engineering Computation
 - ENGRD 3510 Numerical Methods in Computational Molecular Biology
 - ENGRD 3220 Introduction to Scientific Computation
2. *Materials science*
 - ENGRD 2610 Introduction to Mechanical Properties of Materials: From Nanodevices to Superstructures
 - ENGRD 2620 Electronic Materials for the Information Age
3. *Mechanics*
 - ENGRD 2020 Mechanics of Solids
 - ENGRD 2030 Dynamics

- Majors in Engineering Physics may substitute AEP 3330 for ENGRD 2030.
- 4. *Probability and statistics*
 - ENGRD 2700 Basic Engineering Probability and Statistics
 - Majors in Electrical and Computer Engineering may substitute ECE 3100 for ENGRD 2700. Majors in Engineering Physics may substitute ECE 3100 or MATH 4710 for ENGRD 2700. Majors in Civil Engineering, Biological Engineering, and Environmental Engineering may substitute CEE 3040 for ENGRD 2700.
- 5. *Electrical sciences*
 - ENGRD 2100 Introduction to Circuits for Electrical and Computer Engineers
 - ENGRD 2300 Introduction to Digital Logic Design
 - ENGRD 2640 Computer-Instrumentation Design
- 6. *Thermodynamics and energy balances*
 - ENGRD 2190 Mass and Energy Balances
 - ENGRD 2210 Thermodynamics
- 7. *Earth and life sciences*
 - ENGRD 2010 Introduction to the Physics and Chemistry of the Earth
 - ENGRD 2510 Engineering for a Sustainable Society
 - ENGRD 2600 Principles of Biological Engineering
- 8. *Biology and chemistry*
 - ENGRD 2520/AEP 2520 The Physics of Life
 - BIOG 1101 and 1103 Biological Sciences, Lec and Lab
 - BIOG 1105 Introductory Biology
 - BIOG 1107 General Biology (summer only)
 - CHEM 3890 Physical Chemistry I

Some majors require a specific engineering distribution course as a prerequisite for the upper-class course sequence. These requirements are as follows:

- Biological Engineering: ENGRD 2020
- Chemical Engineering: ENGRD 2190
- Civil Engineering: ENGRD 2020
- Computer Science: ENGRD 2110
- Electrical and Computer Engineering: ENGRD 2300
- Environmental Engineering: ENGRD 2020
- Geological Sciences: ENGRD 2010
- Information Science, Systems, and Technology: ENGRD 2700
- Materials Science and Engineering: ENGRD 2610 or ENGRD 2620
- Mechanical Engineering: ENGRD 2020
- Operations Research and Engineering: ENGRD 2700

Some majors require additional distribution courses after affiliation.

Liberal Studies Distribution

Global and diverse societies require that engineers have an awareness of historical patterns, an appreciation for different cultures, professional ethics, the ability to

work in multifaceted groups, and superior communications skills. Cornell has a rich curriculum in the humanities, arts, and social sciences, enabling every engineering student to obtain a truly liberal education. At least six courses (totaling at least 18 credits) are required, and they should be chosen with as much care and foresight as courses from technical areas.

- The six courses must be chosen from at least three of the following six groups.
- At least two of the six courses must be at the 2000 level or higher.

Utilize the current *Courses of Study* as the master list of approved Liberal Studies courses. Additional approved courses and unacceptable courses can be viewed at www.engineering.cornell.edu/programs/undergraduate-education/degree-requirements/liberal-studies.cfm.

Group 1. Cultural Analysis (CA)

Courses in this area study human life in particular cultural contexts through interpretive analysis of individual behavior, discourse, and social practice. Topics include belief systems (science, medicine, religion), expressive arts and symbolic behavior (visual arts, performance, poetry, myth, narrative, ritual), identity (nationality, race, ethnicity, gender, sexuality), social groups and institutions (family, market, community), and power and politics (states, colonialism, inequality).

Group 2. Historical Analysis (HA)

Courses in this group interpret continuities and changes—political, social, economic, diplomatic, religious, intellectual, artistic, and scientific—through time. The focus may be on groups of people, dominant or subaltern, a specific country or region, an event, a process, or a time period.

Group 3. Literature and the Arts (LA)

Offerings in this area explore literature and the arts in two different but related ways. Some courses focus on the critical study of artworks and on their history, aesthetics, and theory. These courses develop skills of reading, observing, and hearing and encourage reflection on such experiences; many investigate the interplay among individual achievement, artistic tradition, and historical context. Other courses are devoted to the production and performance of artworks (in creative writing, performing arts, and media such as film and video). These courses emphasize the interaction among technical mastery, cognitive knowledge, and creative imagination.

Group 4. Knowledge, Cognition, and Moral Reasoning (KCM)

Offerings in this area investigate the bases of human knowledge in its broadest sense, ranging from cognitive faculties shared by humans and animals such as perception, to abstract reasoning, to the ability to form and justify moral judgments. Courses investigating the sources, structure, and limits of cognition may use the methodologies of science, cognitive psychology, linguistics, or philosophy. Courses focusing on moral reasoning explore ways of reflecting on ethical questions that concern the nature of justice, the good life, or human values in general.

Group 5. Social and Behavioral Analysis (SBA)

Courses in this area examine human life in its social context through the use of social-scientific methods, often including hypothesis testing, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to interpersonal relations between individuals (e.g., in friendship, love, conflict) to larger social organizations (e.g., the family, society, religious or educational or civic institutions, the economy, government) to the relationships and conflicts among groups or individuals (e.g., discrimination, inequality, prejudice, stigmas, conflict resolution).

Group 6. Foreign Languages (not literature courses)

Courses in this area teach language skills, inclusive of reading, writing, listening, and spoken non-English languages, at beginning to advanced levels.

Electives

- **Advisor-approved electives:** 6 credits required (approved by the academic advisor). Because these courses should help develop and broaden the skills of the engineer, advisors generally accept the following as approved electives:
 1. One introduction-to-engineering course (ENGR1)
 2. Engineering distribution courses
 3. Courses stressing written or oral communication
 4. Upper-level engineering courses
 5. Advanced courses in mathematics
 6. Rigorous courses in the biological and physical sciences
 7. Courses in business, economics, or language (when they serve the student's educational and academic objectives)
 8. Courses that expand the major or another part of the curriculum.
 9. Up to 6 credits of advisor-approved electives may come from ROTC courses at the 3000 level or higher.
- **Major-approved electives:** 9 credits (approved by the major and faculty advisors in the major). Refer to the major curricula for descriptions of courses in this category.
- **Outside-the-major electives:** 9 credits of courses outside the major to ensure breadth of engineering studies

Social Issues of Technology

It is important for engineers to realize the social and ethical implications of their work. Consequently, in selecting their liberal studies distribution courses and approved electives, students are urged to consider courses listed in the "Science and Technology Studies" undergraduate area of concentration (see "Interdisciplinary Centers and Programs"). These courses may provide students with important perspectives on their studies and their future careers.

Engineering Advising

Entering first-year students are assigned a faculty advisor (who may or may not be in their intended major), who remains their advisor until affiliation with a major (normally

during the fourth semester). The students are also under the administration of Engineering Advising in 167 Olin Hall, which implements the academic policies of the College Curriculum Governing Board. Engineering Advising serves as the primary resource center for undergraduate students in the college, offering general and academic advising. Other student services offices located in Olin Hall are Engineering Learning Initiatives and Diversity Programs in Engineering (DPE), which are primary resources for academic advising, support, tutoring, and networking opportunities.

First-Year Requirements

During the first year, engineering students are expected to complete (or receive credit for) the following core requirements:

- MATH 1910 and 1920
- Two of: CHEM 2090, 2080, PHYS 1112, 2213, 2214* (or the Honors equivalent)
- One of: CS 111X
- Two first-year writing seminars
- One introduction to engineering (ENGR1) course
- Two physical education courses

*Students interested in chemical engineering, pre-med, or other health-related careers should enroll in the CHEM 2090-2080 sequence during their first year.

Affiliation with a Major

Students must apply for affiliation with a major during the first semester of their sophomore year, although earlier affiliation may be granted at the discretion of the major. This is done by visiting the undergraduate major office and completing the application for major affiliation form. To affiliate, students must (1) make good progress toward completing required courses in the common curriculum, (2) have a GPA ≥ 2.0 , and (3) have satisfied the major's course and grade requirements as specified below:

(Majors may impose alternative affiliation requirements for students applying for affiliation later than the first semester of the sophomore year.)

Major	Courses and Minimum Grade Requirements
Biological Engineering	GPA ≥ 2.5 and at most one grade below C- in math, science, and engineering courses. Completion of ENGRD 2600 (or 2510) and Intro Biology Sequence by end of the sophomore year. (Also applies to transfer students.)
Chemical Engineering	At most one grade below C- in chemistry, math, physics, and chemical engineering courses. GPA ≥ 2.2 in math, science, and engineering courses.
Civil Engineering	GPA ≥ 2.0 in all engineering and science courses. At least C in ENGRD 2020 (or ENGRD 2510, for students who do not take ENGRD 2020 before affiliation).

Computer Science At least C in all completed CS and math courses. GPA ≥ 2.5 in CS 2110 and 2800. GPA ≥ 2.5 in MATH 1920 and CS 2800. Visit the CS undergraduate web site for alternative affiliation criteria.

Electrical and Computer Engineering At least C+ in MATH 2930, PHYS 2213, and one of ECE/ENGRD 2100, ECE 2200, or ECE/ENGRD 2300. Must have a GPA ≥ 2.5 in (if completed): MATH 1920, 2930, 2940, PHYS 2213, ENGRD 2110, ECE/ENGRD 2300, ECE/ENGRD 2100, ECE 2200.

Engineering Physics At least B- in all required math and physics courses.

Environmental Engineering GPA ≥ 2.0 in all engineering and science courses. At least C- in BEE/ENGRD 2510.

Independent Major GPA ≥ 2.0 .

Information Science Systems, and Technology At least C in two of MATH 2940, CS 2110, and ENGRD 2700. Courses must be taken for a letter grade. GPA ≥ 2.3 in completed engineering math, engineering distribution, and ISST major courses, which must be taken at Cornell. For a repeated course, the most recent grade will be used.

Materials Science and Engineering A cumulative GPA ≥ 2.0 in the required Math, Physics, and Chemistry courses and at least C in ENGRD 2610 or 2620. Alternatively, at least B- in MATH 2930, PHYS 2213, CHEM 2090, and ENGRD 2610 or 2620.

Mechanical Engineering At least C- in ENGRD 2020, ENGRD 2210*, and all completed required math, science, and computer science courses. GPA ≥ 2.5 in MATH 2930, PHYS 2213, ENGRD 2020, and ENGRD 2210. *If ENGRD 2210 was taken.

Operations Research and Engineering At least C in each of ENGRD 2700 and MATH 2940. GPA ≥ 2.2 in math, science, and engineering courses (both overall and in the term immediately before affiliation). At least C- in all ORIE courses completed thus far. Good academic standing in the College of Engineering.

Science of Earth Systems Good academic standing in the College of Engineering.

Students must be affiliated or conditionally affiliated with a major by the end of their fourth semester or they will be withdrawn

from the College of Engineering, unless allowed to participate in a terminal semester.

SPECIAL PROGRAMS

Dual-Degree Program

The dual-degree program, intended for superior students, allows both a bachelor of science and either a bachelor of arts (B.A.) or bachelor of fine arts (B.F.A.) degree to be earned in about five years. Students registered in the College of Engineering, the College of Arts and Sciences, or the College of Architecture, Art, and Planning may apply and, after acceptance of their application, begin the dual-degree program in their second or third year. For information, contact the appropriate coordinators of dual-degree programs at 55 Goldwin Smith Hall (for Arts and Sciences), B-1 West Sibley Hall (for Architecture, Art, and Planning), and Engineering Advising, 167 Olin Hall.

Double Major in Engineering

The double-major option, which makes it possible to develop expertise in two allied engineering majors, generally requires at least one semester beyond the usual four years. Students affiliate with one major following normal procedures and then petition to enter a second major before the end of their junior year. All requirements of both majors must be satisfied. Further information is available from Engineering Advising, 167 Olin Hall, and the individual major offices.

Independent Major

Students whose educational objectives cannot be met by one of the regular majors may affiliate with the independent major. Often, the desired curriculum is in an interdisciplinary area.

This major consists of a primary area (≥ 32 credits), which may be any subject area offered by a school or department of the college, and an educationally related secondary area (≥ 16 credits), which may be in a second engineering subject area or in a logically connected nonengineering area. The combination must form an engineering education in scope and substance and should include engineering design and synthesis as well as engineering sciences. See the discussion of this major in "Undergraduate Engineering Majors."

Engineering Minors

Students may pursue minors in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the students' major. Completed minors will appear on the student's transcript. Not all departments offer minors. Consult the appropriate section in *Courses of Study* or contact the appropriate department for information on minors offered and how to pursue a minor.

Most engineering majors have a corresponding minor, requiring six courses (18 credits), in which the student can pursue a secondary interest. In addition, there are minors in applied mathematics, biomedical engineering, civil infrastructure, engineering management, engineering statistics, game design, industrial systems and information technology,

information science, and business. See "Engineering Minors."

Engineering Communications Program

424 Hollister Hall, 255-8558, www.engineering.cornell.edu/ECP

The Engineering Communications Program (ECP) provides instruction in technical writing, oral presentation, and the use of graphics in both. The ECP is a recipient of the Engineering Dean's Prize in Excellence and Innovation in Teaching.

ECP courses give students experience with the difficult task of explaining technical information to audiences that have various levels of technical expertise. Students improve their writing style, become more comfortable with and effective at oral presentation, use standard forms and formats for presenting technical information, perform library and Internet research on engineering topics, and study real engineering situations in which ethics may have been breached.

Enrollment in ECP courses is typically 20 students per section; like writing seminars elsewhere at Cornell, those taught by the ECP are discussion classes. Students' work receives abundant written comments, and conferences are frequent.

ECP members are available to consult with the faculty teaching writing-intensive technical courses and anyone else interested in including writing in their courses. They oversee the communications component of the Writing-Intensive Co-op and occasionally give talks to alumni and student groups.

Diversity Programs in Engineering

146 Olin Hall, 255-6403

The Diversity Programs in Engineering (DPE) office operates programs at the undergraduate, graduate, and faculty levels to facilitate the outreach, recruitment, retention, and overall success of underrepresented minorities, women, and other underrepresented groups in Engineering. DPE serves as a resource center for academic support, career placement, graduate school preparation, and overall student success.

The office participates in a university-wide pre-freshman summer program (Engineering Summer Scholars Program) for admitted students, coordinates two summer program initiatives for high school students, CURIE (www.engineering.cornell.edu/curie) and CATALYST (www.engineering.cornell.edu/catalyst), and also provides specialized instruction, in collaboration with Engineering Advising and Engineering Learning Initiatives, each semester in subjects such as math, computer science, and English composition.

The DPE office sponsors networking events throughout the academic year that allow company representatives from all over the United States to meet students from diverse populations. Summer internships and permanent jobs frequently result from these events.

In addition, the DPE office coordinates various trips, recreational activities, seminars, lectures, and workshops on a wide range of topics that are relevant to academic and extracurricular life in the university setting.

Engineering Learning Initiatives

167 Olin Hall, 255-9622, www.engineering.cornell.edu/learning

The office of Engineering Learning Initiatives offers programs designed to enhance the undergraduate academic experience through peer education, collaborative learning, research opportunities, and leadership development.

Academic Excellence Workshops (AEWs) offered through Engineering Learning Initiatives are taken in conjunction with core engineering courses in math, computer science, and chemistry. The 1-credit AEWs are weekly two-hour collaborative learning sessions. Designed to enhance student understanding, they feature peer-facilitated group work on problems at or above the level of course material.

Undergraduate Research Grants offered through Engineering Learning Initiatives provide opportunities for students to obtain hands-on research experience with a faculty mentor. Students and faculty may apply for funding to cover student stipend and expense costs for the fall, spring, and summer terms.

Tutors-on-Call, through Engineering Learning Initiatives, offers one-on-one peer tutoring free of charge for engineering students in many first- and second-year core courses, including math, chemistry, physics, computer science, and distribution courses.

LeaderShape, offered through Engineering Learning Initiatives, provides opportunities for our students to engage in the dynamic process of personal discovery and leadership development at a weeklong retreat held in May of each year.

Engineering Cooperative Education and Career Services

201 Carpenter Hall, 255-5006, www.engineering.cornell.edu/careerservices

This office assists engineering students (freshmen through Ph.D.) on issues related to career development and the job search through individual advising and group seminars. It also administers the Engineering Cooperative Education Program. Each year, more than 200 national employers visit the office to recruit technical interns and graduates; additional job opportunities are posted on Cornell's electronic job posting service. Both undergraduate and graduate students can use these resources to pursue permanent, summer, or co-op employment; however, students seeking co-op opportunities must meet specific requirements.

The Engineering Cooperative Education Program (Co-op) provides an opportunity for students to gain practical experience in engineering-related organizations before they graduate. By supplementing course work with carefully monitored, paid positions, Co-op students can explore their own interests and acquire a better understanding of engineering as a profession—and still graduate in four years.

To be eligible, a student must have been enrolled in the College of Engineering an equivalent of five semesters before starting the first work term. (Exceptions may be made for transfer students and others pursuing an accelerated curriculum.) Students majoring in computer science or biological engineering,

but not registered in the College of Engineering, are also eligible. In most cases, a GPA ≥ 2.7 is required. Applicants interview with participating employers in February of the sophomore year. Those who receive offers and join the program usually complete their fifth-semester course work on campus during the summer after sophomore year and begin the first Co-op work term the following fall. They complete the sixth semester on campus with their classmates and then return to their Co-op employer (but not necessarily to the same department or location) the following summer to complete a second work term. Students then spend the senior year on campus, graduating on schedule with their class. Students who have flexible course curriculums may prefer to complete one 28-week spring/summer or summer/fall Co-op work term during the junior year.

International Programs

An international perspective, sensitivity to other cultures, and the ability to read and speak a second language are increasingly important for today's engineers. The College of Engineering encourages students to study or work abroad during their undergraduate years. Currently, the college has study abroad agreements with École Centrale Paris, France; Cantabria, Spain; and the Hong Kong University of Science and Technology, and is also working with IIT Kanpur, India, and the National University of Singapore. The college is working to facilitate study abroad in Dresden, Germany; and Guadalajara, Mexico. Students who plan to study abroad apply through Cornell Abroad; see the Cornell Abroad program description in the introductory section of *Courses of Study*. Visit www.engineering.cornell.edu/studyabroad and Engineering Advising, 167 Olin Hall, for the latest information. In addition, the college is working on developing international Co-op and internship work experiences. For information, visit the Engineering Cooperative Education and Career Services Office, 201 Carpenter Hall.

Cooperative Program with the Johnson Graduate School of Management

Undergraduates may be interested in a cooperative program at Cornell that leads to both master of engineering and master of business administration (M.B.A.) degrees. See "Master of Engineering Degrees" for details.

Lester Knight Scholarship Program

The Lester Knight Scholarship Program is designed to assist and encourage Cornell Engineering students and alumni interested in combining their engineering education with a business degree. See www.engineering.cornell.edu/Knightscholarships for details.

ACADEMIC PROCEDURES AND POLICIES

Advanced Placement Credit

The College of Engineering awards a significant amount of advanced placement (AP) credit to entering first-year students who demonstrate proficiency in the subject areas of introductory courses. Students can earn AP

credit by receiving qualifying scores on any of the following:

1. Advanced placement examinations given and scored by the College Entrance Examination Board (CEEB);
2. General Certificate of Education (GCE) Advanced ("A") Level Examinations;
3. International Baccalaureate (IB) Higher Level Examinations; or
4. Cornell Advanced Standing Examinations (CASE), given during orientation week before the beginning of fall-semester classes.

Advanced placement credit is intended to permit students to develop more challenging and stimulating programs of study. Students who receive AP credit for an introductory course may use it in three different ways. They may:

1. enroll in a more advanced course in the same subject right away.
2. substitute an elective course from a different area.
3. enroll in fewer courses, using the AP credit to fulfill basic requirements.

Acceptable Subjects and Scores for CEEB or CASE AP Exams

The most common subjects for which AP credit is awarded in the College of Engineering, and the scores needed on qualifying tests, are listed below. AP credit is awarded only for courses that meet engineering curriculum requirements.

Mathematics: MATH 1910, 1920 are required.

First-semester math (MATH 1910). AP credit may be earned by:

- a score of 4 or 5 on the CEEB BC exam, or
- a passing score on the CASE exam for first-semester math.

First-year math (through MATH 1920). AP credit may be earned by:

- a passing score on the CASE exam for first-year math.

Physics: PHYS 1112 and 2213 are required.

PHYS 1112. AP credit may be earned by:

- a score of 4 or 5 on the mechanics portion of the CEEB C exam, or
- a score of 5 on the CEEB B exam with successful completion of a high school-level calculus course, or
- a passing score on the CASE exam for PHYS 1112.

Note: MATH 2930 is a prerequisite for PHYS 2214.

PHYS 2213. AP credit may be earned by a score of 5 on the Electricity and Magnetism portion of the AP C exam.

PHYS 1116, 2217, and 2218 (honors sequence). This sequence is designed for students with strong experience in physics and calculus, e.g., a 5 on one or both Physics C AP tests and the equivalent of at least one semester of university calculus. Students interested in PHYS 2217 or 2218 are strongly advised to start with PHYS 1116. Even for a student with a 5 on both Physics C AP tests, 1116 will not be boring. Students may not

simultaneously receive credit for PHYS 1116 and AP credit for PHYS 1112, or credit for PHYS 2217 and AP credit for PHYS 2213. For advice or more information, contact the departmental representative at 255-6016.

Chemistry: CHEM 2090 is required.

CHEM 2090. AP credits may be earned by:

- a score of 5 on the CEEB AP exam, or
- a passing score on the CASE exam for chemistry.

Note: Students who obtain AP credit for CHEM 2090 and who are considering a major in chemical engineering or materials science and engineering should consider enrolling in CHEM 2150. Those who are offered AP credit for CHEM 2090 and then elect to take CHEM 2150 will also receive academic credit for CHEM 2090. Students may want to discuss this option with their faculty advisor.

Computing: CS 1110 or CS 1113 or CS 1112 or CS 1114, together with CS 1132 or CS 1130, are required. AP credit may be earned for CS 1110 by:

- a score of 5 on the CEEB A or a score of 4 or 5 on the AB exam, or
- a passing score on the CASE exam for CS 1110.

Biology: Biology is not required as part of the core curriculum, although it is a popular elective, especially for students who intend to pursue health-related careers. AP credit may be earned as follows:

- 8 credits will be offered to students who receive a 5 on the CEEB AP exam;
- 4 credits will be offered to students who receive a 4 on the CEEB AP.

Those who want to study more biology should contact the Office of Undergraduate Biology, 200 Stimson Hall, to discuss proper placement.

First-year writing seminar: Two first-year writing seminars are required.

- AP credit for one first-year writing seminar may be earned by a score of 5 on either of the CEEB AP English exams.

Students who earn a score of 4 on the AP English Literature and Composition exam or the AP English Language and Composition exam will be offered 3 credits, which may be applied toward the Literature and Arts (LA) category of the Liberal Studies distribution requirement.

Liberal studies distribution: Six courses beyond two first-year writing seminars are required. Students may earn AP credit toward the liberal studies distribution by taking CEEB AP tests. AP credit earned in the liberal studies distribution cannot be used to fulfill the "upper-level" liberal studies requirements.

Languages: Students may earn AP credit for competence in a foreign language by taking the CEEB AP test or by taking the CASE. Those who score 4 or 5 on the CEEB AP test in French, German, Italian, and Spanish are entitled to 3 credits. To qualify for the CASE exam (in any language), the student must score at least 65 on a college placement test (taken either in high school or at Cornell during Orientation Week). A passing score on the CASE entitles the student to 3 credits. Language credit, earned via AP or CASE, may be used to satisfy part of the foreign language

category of the liberal studies distribution or may meet an approved elective requirement, contingent on discussions with the faculty advisor.

Advanced Placement and Credit for International Credentials

Students who have successfully completed either a General Certificate of Education (GCE) Advanced ("A") Level Examination or an International Baccalaureate (IB) Higher Level Examination may be eligible for advanced placement credit in the College of Engineering as follows:

General Certificate of Education Advanced Level Examination (GCE "A")

Hong Kong Advanced Level examinations and the joint examination for the Higher School Certificate and Advanced Level Certificate of Education in Malaysia and Singapore—principal passes only—are considered equivalent in standard to GCE "A" Levels.

Subject	Marks	Credit
Biology	A or B	8 credits
Chemistry	A	8 credits (CHEM 2090 and 2080)
	B	4 credits (CHEM 2090)
Mathematics or Pure Mathematics	A, B, or C	4 credits (MATH 1910)
Physics	A or B	4 credits for PHYS 1112; 4 additional credits for PHYS 2213 are granted to a combination of grades of A or B and a minimum of 4 AP (or advanced standing) credits in mathematics.

International Baccalaureate (IB) Higher Level Examination

Subject	Marks	Credit
Biology	7	8 credits
	6	6 credits
Chemistry	6 or 7	4 credits (CHEM 2090)
Computer Science	6 or 7	4 credits (CS 1110)
Physics	6 or 7	4 credits (PHYS 1112)

Mathematics: No credit is given for the IB exam; students are encouraged to take the Engineering Mathematics Advanced Standing exam during orientation.

Note: Advanced placement credit based on GCE or IB results may also be awarded for courses that satisfy the liberal studies requirement in the College of Engineering. In such cases, the College of Engineering follows the AP guidelines found earlier in this publication under "General Information."

General Policies for Advanced Placement

The general policies in the College of Engineering governing awards of AP credit are as follows:

1. AP credit will not be offered in any subject area without a documented examination.
2. All AP examinations are normally taken and scored before fall-semester classes begin. Students who take CEEB AP tests in high school should have an official report of their scores sent directly to Cornell as soon as possible. Students who have completed either GCE "A" Level or IB Higher Level Examinations must present the original or a certified copy of their examination certificate to Engineering Advising, 167 Olin Hall. Those who wish to take CASE examinations should do so during Orientation Week.

A more detailed description of the college's policies concerning advanced placement credit and its use in developing undergraduate programs is available online at www.engineering.cornell.edu/student-services/academic-advising/academic-information/ap-credit/index.cfm.

General Policies for Transfer Credit

Undergraduate students who have completed courses at recognized and accredited colleges may, under certain conditions, have credits for such courses transferred to Cornell. Such courses must represent academic work in excess of that required for the secondary school diploma and must be documented as such in writing by the secondary institution. Courses deemed acceptable for transfer credit must be equivalent in scope and rigor to courses at Cornell. Transfer credit will not be awarded for courses taken during a semester in which the student is enrolled at Cornell.

- To apply for transfer credit, submit a transfer credit form (one form for each request), accompanied by a course description. (Forms are available from Engineering Advising or the Registrar's office and should be submitted before enrollment in the course to be transferred.) An official transcript from the offering institution (bearing the institutional seal and Registrar's signature) must be sent to the Engineering Registrar's office before official transfer credit will be awarded.
- Applications for transfer credit to satisfy requirements in math, science, engineering courses, or first-year writing seminars require approval from the department offering an equivalent course at Cornell. The department may require course materials, textbooks used, etc., in addition to the course description before approving the course.
- Departmental approval is not required for transfer credit that satisfies liberal studies distribution requirements. The course will be reviewed for approval by a representative of the Committee on Academic Standards, Petitions, and Credit (ASPAC) in Engineering Advising.
- Cornell does not award credit for courses in which a student has earned a grade less than C; schools and departments may stipulate a higher minimum grade.
- College courses completed under the auspices of cooperative college and high school programs will be considered for advanced placement credit only if students demonstrate academic

proficiency by taking the appropriate AP or Cornell departmental placement examination (CASE), as described in the "Advanced Credit" section.

- Following matriculation, students may apply up to 18 credits of transfer and/or Cornell extramural credit toward B.S. degree requirements.
- At most 72 total transfer credits (taken both before and after matriculation) may be used to meet graduation requirements.
- Summer session courses taken at Cornell are not considered transfer credit.

A more detailed description of the college's regulations governing transfer credit is available online at www.engineering.cornell.edu/student-services/academic-advising/index.cfm.

Transfer Credit for Transfer Students

Transfer students may transfer up to 36 credits for each year spent in full-time study at another institution, provided that the courses are acceptable for meeting graduation requirements. Transfer credit awards are determined by the majors/departments. Students must complete the transfer credit award process by the end of their first semester at Cornell, or their registration will be blocked for the next semester until the process is completed.

Academic Standing

Full-time students are expected to remain in good academic standing. The criteria for good standing change somewhat as a student progresses through the four years of the engineering curriculum. At all times, the student must be making adequate progress toward a degree, but what this means depends on the major.

Engineering students not yet affiliated with a major must meet the following standards at the end of each semester to be considered in good academic standing. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC), and the actions of warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. At least 12 credits passed, including *at least* two courses from math, science, and/or engineering (phys. ed. courses and courses below the 1100 level do not count)
2. At least C– in the math course
3. Semester GPA \geq 2.0
4. No F, U, or INC grades

Academic Progress

The total number of credits required for graduation range from 124 to 134, depending on the major. Therefore, an average semester credit load ranges from 15 to 17 credits.

Because math is pivotal to the study and practice of engineering, students must earn at least C– in their four required math courses. If at least C– is not attained, the course must be repeated immediately. Failure to achieve at least C– the second time will generally result in withdrawal from the College of Engineering. Physics and advanced math courses often have math prerequisites, and having to repeat the prerequisite course may

delay progress in the physics and math curricula. Students are expected to continue the core engineering math courses each semester until completed.

Dean's List

Dean's List citations are presented each semester to engineering students who have exemplary academic records. The dean of the college determines the criteria for this honor. For 2009-2010, the requirement is a semester GPA ≥ 3.5 (without rounding); no failing, unsatisfactory, missing, or incomplete grades (even in physical education); and at least 12 letter-grade credits (not S-U). Students may earn Dean's List status retroactively if they meet these criteria after making up incomplete grades. Students who earn Dean's List status receive certificates from the Engineering Registrar's office, and the honor is noted on the transcript.

Graduating with Distinction and Honors

Graduating with Distinction

Meritorious students graduating with a B.S. degree from the College of Engineering may also be designated *cum laude*, *magna cum laude*, or *summa cum laude*.

- Cum laude will be awarded to engineering students with a GPA ≥ 3.5 . Cum laude will also be awarded to engineering students who received a semester GPA ≥ 3.5 in each of the last four semesters at Cornell; in each of these semesters, at least 12 letter-graded credits must be taken with no failing, unsatisfactory, missing, or incomplete grades. If the student is an engineering co-op student, then the engineering co-op summer term will count as one of the last four. Students who were approved for prorated tuition in their final semester will be awarded cum laude if they received a semester GPA ≥ 3.5 in their last semester and meet the conditions above in the prior four semesters.
- Magna cum laude will be awarded to engineering students with a GPA ≥ 3.75 (based on all credits taken at Cornell).
- Summa cum laude will be awarded to engineering students with a GPA ≥ 4.0 (based on all credits taken at Cornell).

Note: All GPA calculations are minimums and are not rounded.

Major Honors Program

To be eligible to enter a major honors program, a student must be on track to graduate with distinction. A student must be in the program for at least two semesters before graduation. If the student's major has an approved honors program and the requirements for (1) distinction, (2) Bachelor of Science degree, and (3) major honors program are fulfilled, the faculty of the major may recommend that the student graduate with the additional diploma and transcript notation of "With Honors."

S-U Grades

Many courses may be taken either for a letter grade or for an S-U (satisfactory or unsatisfactory) grade designation. Under the S-U option, students earning the letter grade

equivalent of at least C- in a course will receive a grade of S; those earning less than C- receive U. A course in which a U grade is received does not count toward graduation requirements.

Engineering students may choose to receive an S-U grade option under the following conditions:

- The course in question must be offered with an S-U option.
- The student must previously have completed at least one full semester of study at Cornell.
- The proposed S-U course must count as either a liberal studies distribution or an advisor-approved elective in the engineering curriculum.
- Students may enroll S-U in only one course each semester in which the choice between letter grade and S-U is an option. (Additional courses offered "S-U grades only" may be taken in the same semester as the elected S-U course.)

The choice of grading option for any course is made initially during the pre-enrollment period and may be changed until the end of the third week of classes. After this deadline, the grading option may not be changed, nor will a student be permitted to add a course in which he or she was previously enrolled (in the current semester) under a different grade option. (Grading options may be changed online for most courses. A properly completed add/drop form must be used to change a grade option for a permission-only course.)

Residence Requirements

Candidates for an undergraduate degree in engineering must spend at least four semesters or an equivalent period of instruction as full-time students at Cornell, including at least three semesters affiliated with an engineering major.

Students on a voluntary leave of absence may register for courses extramurally only with the approval of their major (or the college, for unaffiliated students). No more than 18 credits earned through extramural study or acquired as transfer credit (or a combination thereof) after matriculation may be used to satisfy the requirements for the B.S. degree in engineering. Students may not complete their last semester extramurally.

Degree candidates may spend periods of time studying away from the Cornell campus with appropriate authorization. Information on programs sponsored by other universities and on procedures for direct enrollment in foreign universities is available at the Cornell Abroad office, 474 Uris Hall. Programs should be planned in consultation with the staff of Engineering Advising, who can provide information on credit-evaluation policies and assist in the petitioning process.

Transferring within Cornell

It is not uncommon for students to change their academic or career goals after matriculation in one college and decide that their needs would be better met in another college at Cornell. While transfer between colleges is not guaranteed, efforts are made to assist students in this situation.

The Internal Transfer Division office is responsible for assisting students with the transfer process. Students who wish to transfer out of the College of Engineering to another college at Cornell should consult initially with Engineering Advising.

Students who wish to transfer into the College of Engineering can apply at Engineering Advising, 167 Olin Hall. It is preferred that students apply in the semester in which they are completing affiliation criteria for the desired major. Transfer students who would enter the college must be accepted by a major as part of the admission process.

Students who wish to transfer into engineering should take courses in math, chemistry, computer science, physics, and engineering that conform to the requirements of the Common Curriculum. Students should discuss their eligibility with an advisor in Engineering Advising, 167 Olin Hall.

Leave of Absence

A leave of absence may be voluntary, health-related, or required. A description of each follows:

Voluntary leave: Students sometimes find it necessary to suspend their studies. To do this, they must petition for a leave of absence for a specified period of time and receive written approval.

Affiliated students request leave through their majors. Unaffiliated students request leave through Engineering Advising; the first step is an interview to establish conditions for the leave and subsequent return. Those who take a leave before affiliating with a major and while not in good standing may be given a "conditional leave." This requires them to meet specific conditions, established at the time the leave is granted, before they will be reinstated.

A leave of absence is granted for at least six months and not more than two years. A leave of absence granted during a semester goes into effect on the day it is requested. If a leave is requested after the 12th week of a semester, the courses in which the student was registered at the time of the request are treated as having been dropped (i.e., a "W" will appear on the transcript for each course). Students who owe money to the university are ineligible for a leave of absence. Courses taken during a leave to satisfy Cornell degree requirements must be approved *in advance* through a formal transfer petition. (See previous section, "Transfer Credit," for details.)

Students who intend to take a leave of absence should check with the Office of Financial Aid and Student Employment to discuss financial implications; this is especially true for those who have educational loans. Medical insurance eligibility may also be affected.

To return after a leave of absence, the conditions established when the leave was granted must be satisfied, and the college must be notified in writing at least six weeks before the beginning of the semester in which the student plans to return.

Health leave: Health leaves are granted by the college only upon recommendation by a physician or therapist from Gannett Health Center. Although circumstances may vary, such leaves are generally granted for at least one full academic year with the understanding that the student may return at the beginning

of any semester after the medical condition in question has been corrected. Students must satisfy the Gannett Health Center that the condition has been corrected before they may return. The student's academic standing will also be subject to review both at the time the leave is granted and upon the student's return.

Required leave: A required leave of absence is imposed in cases in which the academic progress of a student is so poor that continuing into the next semester does not appear prudent. An example of this might be failure in key engineering courses in a semester. Unless the student is ahead in the curriculum, returning later to repeat the semester makes better academic sense than continuing without the necessary background. In many cases, the leave is dictated by courses that are offered only in the fall or spring semester. Leaves are given when the probability of success is increased substantially by deferring the student's return by one semester (or, in unusual circumstances, one year). Required leaves take precedence over voluntary leaves.

Rejoining the College

Students wishing to rejoin the college who have not yet affiliated with a major should request permission to rejoin in a letter to Engineering Advising; affiliated students should contact their major office. This must be done at least six weeks before the beginning of the semester in which the student wishes to return. The letter should describe the student's activities while away from Cornell, detail any academic work completed during this time, and specify the courses the student intends to take upon return.

Withdrawal from the College

A withdrawal from the College of Engineering may be voluntary or required. Following is a description of each:

Voluntary withdrawal: Students who voluntarily withdraw from the college sever all connection with the college. Unaffiliated students who wish to withdraw should do so through Engineering Advising. Affiliated students should contact their major office. If a withdrawal is requested during the semester, courses in which the student is enrolled must be dropped in accordance with applicable regulations.

A student who fails to register in the first three weeks of the semester, without benefit of a leave of absence or permission for study in absentia, will be deemed to have withdrawn.

Students who withdraw from the College of Engineering are eligible to apply for admission to one of the other six colleges at Cornell. The intrauniversity transfer process should be followed.

A student who has withdrawn and subsequently wishes to return must make a formal application for readmission. This is rarely granted. It is subject to a review of the student's academic background and depends on available space in the college and in the student's major.

Required withdrawal: Students are required to withdraw from the college only when their overall record indicates that they are either incapable of completing the program or not sufficiently motivated to do so. This action withdraws them only from the College of Engineering and does not, in and of itself,

adversely affect their ability to transfer and complete a degree in one of the other colleges in the university. Required withdrawals take precedence over voluntary withdrawals.

ENGINEERING MAJORS

This section describes the majors in the College of Engineering; the programs in which an undergraduate can study to obtain a B.S. degree.

A basic requirement of any major is a GPA \geq 2.0. Most majors have a higher GPA requirement and may have other requirements.

Honors Program within Majors

Many of the engineering majors supplement the major with an honors program.

Eligibility

The B.S. degree with honors is granted to engineering students who, *in addition* to having completed the requirements for a B.S. degree in a major, satisfactorily complete the honors program in the major and are recommended for the degree by the honors committee of that major. To enter an honors program, the student must be on track to graduate with distinction, and a student who does not stay on track to graduate with distinction is dropped from the honors program.

Courses taken to satisfy the honors requirement may not be used to satisfy B.S. degree requirements. At least 9 extra credit hours are required, and a student must be in the program for at least two semesters before graduation.

No research, independent study, or teaching for which the student is paid may be counted toward the honors program.

Procedures

An applicant to the honors program in a major must have an honors advisor: a faculty member from that major who will supervise the honors program and direct the research or project. The honors advisor need not be the student's advisor in the major.

The application for the honors program should be a letter from the student that describes the proposed honors program in detail and includes the explicit approval of the honors advisor.

Students must complete a written application no later than the beginning of the first semester of their senior year, but they are encouraged to make arrangements with the honors advisor during the second semester of their junior year. Each major may place further constraints on timing.

Major-Specific Information

Each major defines the content of the honors program and may also place other requirements on the program, in terms of timing, content, and procedures. Information is given within the description of the individual majors.

BIOLOGICAL ENGINEERING

Offered by the Department of Biological and Environmental Engineering

Contact: 207 Riley-Robb Hall, 255-2173, www.bee.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

Biological and environmental engineering (BEE) programs address three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world's natural resources, including water, soil, air, biodiversity, and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The biological engineering (BE) major has a unique focus on biological systems, including the environment, which is realized through a combination of fundamental engineering sciences, biology, engineering applications and design courses, and liberal studies.

Students interested in the BE major should have a strong aptitude for the sciences and math and an interest in the complex social issues that surround technology.

Students take courses in math, engineering, statistics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), and engineering design. Students select upper-level engineering courses in subjects that include bioprocessing, soil and water management, biotechnology applications, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, sustainable energy, and waste management and disposal. Students may further strengthen their programs by completing a minor or a second engineering major. Students planning for medical school also take additional lab-based courses in chemistry and biology. Throughout the curriculum, emphasis is placed on communications and teamwork skills, and all students complete a capstone design project.

Career opportunities cover the spectrum of self-employment, private industry, public agencies, educational institutions, and graduate and professional programs in engineering and science, as well as professional fields like medicine, business, and law. In recent years, graduates have pursued careers in consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management, and international development.

The living world is all around us and within us. The biological revolution continues, and it has given rise to a growing demand for engineers who have studied biology, who have strong math and science skills, who can communicate effectively, and who are sensitive to the needs of people and interested in the challenges facing society. The Biological Engineering major is designed to educate the next generation of engineers to meet these challenges.

The academic requirements* for students majoring in Biological Engineering are outlined below.

<i>Basic Subjects</i>	<i>Credits</i>
MATH 1910**, 1920, 2930, 2940	
Calculus for Engineers and Engineering Mathematics	16
PHYS 1112, 2213	8
CHEM 2090* General Chemistry	4
CHEM 1570 or 3570* Organic Chemistry	3
BEE 1510 Introduction to Computer Programming or CS 1112, and CS 1130	5
Biological Sciences*	15
Introductory (BIOG 1101-1104 recommended)	8
Biological science electives at or above 2000 level to complete 15 credits	
Biochemistry or Microbiology required	
<i>Major-required courses</i>	46
BEE 1200 The BEE Experience or ENGRG 1050 (counted as an advisor-approved elective)	1
ENGRD 2020 Mechanics of Solids	4
BEE 2600 Biological Engineering Analysis or BEE 2510 Environmental Engineering Analysis	3
BEE 3500 Biological and Environmental Transport Processes	3
BEE 2220 or ENGRD 2210 Thermodynamics	3
ENGRD 2700 or CEE 3040 Engineering Statistics and Probability	3-4
BEE 3310 or CEE 3310 Fluid Mechanics	4
Concentration courses (three courses, minimum of 9 credits, chosen from one of the following BE concentrations): Biomedical Engineering, Bioprocess Engineering, or Bio-Environmental Engineering.**	
Major-approved Engineering Electives*** (Engineering courses at or above 2000 level to bring the number of credits to 46.) One course must be a BEE Capstone course and one must be a BEE lab experience course.	
Liberal studies (two first-year writing seminars and six liberal studies electives)	24
Advisor-approved electives	6
Total (minimum)	127

*Basic accredited curriculum. See also the section on minors. Information on preprofessional study for medicine, dentistry, and veterinary medicine is available at www.career.cornell.edu.

** Students must have a competency in calculus equivalent to MATH 1110 before they attempt MATH 1910.

*** See department web page for a current list of approved courses.

Students must satisfy the College of Engineering Technical Writing requirement by including one of the approved courses in their program of study.

Biological Engineering Honors Program

The B.S. degree with honors is granted to biological engineering majors who graduate with distinction from the College of Engineering and satisfy the Honors requirements given at the beginning of the section "Engineering Majors."

The Honors program requires completion of 9 credits beyond the B.S. degree requirements drawn from the following, with at least 6 credits in the first category:

1. A significant research experience or honors project under the supervision of a BEE faculty member using BEE 4991-4992 BE Honors Research completed in their senior year. A written senior honors thesis must be submitted as part of this component.
2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the department under BEE 4980 Undergraduate Teaching.
3. Advanced or graduate courses. These additional courses must be technical in nature, i.e., in engineering, math, biology, chemistry, and physics at the 4000+ and graduate level.

CHEMICAL ENGINEERING

Offered by the School of Chemical and Biomolecular Engineering

Contact: 120 Olin Hall, 255-8656, www.cheme.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

The undergraduate major in chemical engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year.

Students who plan to enter the major take CHEM 2080 during the freshman year. The program for the last three years is as follows:

<i>Semester 3</i>	<i>Credits</i>
MATH 2930 Engineering Mathematics	4
PHYS 2213 Physics II, Heat/Electromagnetism	4
CHEM 3890 Physical Chemistry I (engineering distribution)	4
ENGRD 2190 Mass and Energy Balances (engineering distribution)	3
Liberal Studies Distribution	3
<i>Semester 4</i>	
MATH 2940 Linear Algebra for Engineers	4
CHEME 3230 Fluid Mechanics	3
CHEM 3900 Honors Physical Chemistry II (major)	
CHEM 2900 Introductory Physical Chemistry Laboratory (major)	6
Biology elective*	3
Liberal Studies Distribution	3

Semester 5

CS 1130 Transition to OO Programming or CS 1132 Transition to MATLAB	1
CHEM 3570 Organic Chemistry for the Life Sciences	3
CHEM 2510 Introduction to Experimental Organic Chemistry	2
CHEME 3130 Chemical Engineering Thermodynamics	3
CHEME 3240 Heat and Mass Transfer	3
Liberal Studies Distribution	3

Semester 6

Advanced science elective**	3
CHEME 3010 Nonresident Lectures	1
CHEME 3320 Analysis of Separation Processes	3
CHEME 3720 Introduction to Process Dynamics and Control	2
CHEME 3900 Chemical Kinetics and Reactor Design	3
Liberal Studies Distribution	3

Semester 7

CHEME 4320 Chemical Engineering Laboratory	4
Electives***	9
Liberal Studies Distribution	3

Semester 8

CHEME 4620 Chemical Process Design	4
Liberal Studies Distribution	3
Electives***	3
Approved elective	3

*Every student must complete one of the five following options for the biology elective: (1) CHEME 2880 Biomolecular Engineering: Fundamentals and Applications. (2) advanced placement: a score of 5 on the CEEB AP exam or a score of 7 on the IB Higher Level exam. (3) 4 credits of a pre-med biology sequence: BIOG 1101 Biological Sciences, Lec (fall, 2 credits) and BIOG 1103 Biological Sciences, Lab (fall, 2 credits), BIOG 1102 Biological Sciences, Lec (spring, 2 credits) and BIOG 1104 Biological Sciences, Lab (spring, 2 credits), BIOG 1105 Introductory Biology (fall, 4 credits), BIOG 1106 Introductory Biology (spring, 4 credits), BIOG 1107 General Biology (summer, first half of eight-week session, 4 credits) or BIOG 1108 General Biology (summer, second half of eight-week session, 4 credits). (4) 3 credits of microbiology: BIOMI 2900 General Microbiology (fall, spring, or summer six-week session, 3 credits). (5) 4 credits of biochemistry: BIOBM 3300 Principles of Biochemistry, Individual Instruction (fall or spring, 4 credits) or BIOBM 3330 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology (summer six-week session, 4 credits). (6) 5 credits of biochemistry: BIOBM 3310 Principles of Biochemistry: Proteins and Metabolism (fall, 3 credits) and BIOBM 3320 Principles of Biochemistry: Molecular Biology (spring, 2 credits).

**Advanced science electives include BIOMI 2900 General Microbiology Lectures; BIOBM 3300, 3310, 3320, and 3330 Principles of Biochemistry; BME 3010 (CHEME 4010) Molecular Principles of Biomedical

Engineering; BME 3020 (CHEME 4020) Cellular Principles of Biomedical Engineering; CEE 4510 Microbiology for Environmental Engineering; CEE 6540 Aquatic Chemistry; CHEME 4700 Process Control Strategies; CHEME 4800 Chemical Processing of Electronic Materials; CHEME 4810 (BME 4810) Biomedical Engineering; CHEME 4840 Microchemical and Microfluidic Systems; CHEME 5200 An Overview of Chemical Processing; CHEME 5201 Introduction to Biomedical Engineering Module; CHEME 5202 Introduction to Electronic Materials Processing Module; CHEME 5203 Introduction to Polymer Processing; CHEME 5204 Turbo Machinery Applications; CHEME 5205 Chemical Engineering Tools and Equipment; CHEME 5207 Introduction to Petroleum Refining; CHEME 5208 Renewable Resources from Agriculture; CHEME 5430 Bioprocess Engineering; CHEME 5640 Design of Chemical Reactors; CHEME 6310 (BME 6310) Engineering Principles for Drug Delivery; CHEME 6400 Polymeric Materials; CHEME 6440 Aerosols and Colloids; CHEME 6610 Air Pollution Control; FDSC 4170 Food Chemistry I; MAE 4231 Intermediate Fluid Dynamics; MSE 2060 Atomic and Molecular Structure of Matter; MSE 3050 Electronic, Magnetic, and Dielectric Properties of Materials; MSE 5210 Properties of Solid Polymers; MSE 5240 Materials Chemistry of Synthetic Polymeric Materials; MSE 5310 Introduction to Ceramics; MSE 5410 (ECE 5360) Nanofabrication for M. Eng.; TAM 3100 Advanced Engineering Analysis I; TAM 3110 Advanced Engineering Analysis II; any AEP course numbered 3330 or above; any CHEM course numbered 3010 or above; any PHYS course numbered 3000 or above.

***The electives in semesters 7 and 8 comprise 6 credits of major-approved electives and 6 credits of advanced CHEME electives. Advanced CHEME electives include any CHEME course at the 4000+ level except CHEME 4900, 4990, 5200–5209, and 5720.

CIVIL ENGINEERING

Offered by the School of Civil and Environmental Engineering

Contact: 221 Hollister Hall, 255-3412, www.cee.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

While it is not necessary to do so, students may concentrate in environmental engineering, environmental fluid mechanics and hydrology, geotechnical engineering, structural engineering, transportation, or water resource systems.

Admission Requirements

Students planning to affiliate with this major must complete ENGRD 2020 Mechanics of Solids (or, ENGRD 2510 for students who do not take ENGRD 2020 before affiliation) with at least C. It is strongly recommended that ENGRD 2020 be taken as an engineering distribution during the first semester of the sophomore year.

Engineering Distribution Courses

Majors are required to take ENGRD 2020 Mechanics of Solids as an engineering

distribution course. For the second engineering distribution course, one of the following is recommended:

ENGRD 2610 Introduction to Mechanical Properties of Materials, for students interested in structural engineering and geotechnical engineering.

ENGRD 2210 Thermodynamics, for students interested in fluid mechanics and hydraulics/hydrology.

ENGRD 2110 Object Oriented Programming and Data Structures, for students interested in transportation.

ENGRD 2510 Engineering for a Sustainable Society, for students interested in environmental engineering.

Major Program

Students may substitute CHEM 2080 or CHEM 1570 for PHYS 2214. The following nine courses are required in addition to those required for the Common Curriculum.

Core Courses	Credits
ENGRD 2030 Dynamics* or CEE 4780 Structural Dynamics	3
ENGRD 3200 Engineering Computation*	3
CEE 3040 Uncertainty Analysis in Engineering†	4
CEE 3230 Engineering Economics and Management	3
CEE 3310 Fluid Mechanics	4
CEE 3410 Introduction to Geotechnical Engineering and Analysis	4
CEE 3510 Environmental Quality Engineering**	3
CEE 3610 Introduction to Transportation Engineering**	3
CEE 3710 Structural Modeling and Behavior	4

Additional requirements include a set of two major-approved electives and three design electives from a list of approved courses that is available in the school office. In addition, students must complete one technical communications course from among the courses designated ENGRD or approved communications courses. If the technical communications course also fulfills another requirement (liberal studies major-approved elective, etc.), then an additional advisor-approved elective must be taken.

*ENGRD 2030 and ENGRD 3200 can be used to satisfy a major requirement. If a student elects to use one of these courses as a second distribution course, the student must take an additional major-approved elective to fulfill the core course requirements.

†ENGRD 2700 may be substituted (by petition) for CEE 3040 in the major, but only if ENGRD 2700 is taken before affiliation, or in some special cases where co-op or study abroad programs necessitate such a substitution.

**Students may substitute CEE 3720 or CEE 4710 for either CEE 3510 or 3610, if they also complete either CEE 4730 or 4740. However, CEE 3720 or CEE 4710 then counts as a core course only and not as a CEE design course or major-approved elective.

Civil Engineering Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the

requirements given at the beginning of the section "Engineering Majors" as well as the following requirements.

The 9 credits beyond the B.S. degree requirements shall be drawn from the following components (with no fewer than 2 credits in any selected component):

1. A significant research experience or honors project under the direct supervision of a CEE faculty member using CEE 4000 Senior Honors Thesis (1–6 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component. Letter grades only.
2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the College of Engineering, i.e., CEE 4010 Undergraduate Teaching in CEE (1–3 credits per semester).
3. Advanced or graduate courses at the 5000 level or above.

Procedures

Application to the program shall be a registration form for CEE 4000 and a letter from the student describing the specific proposed honors program and including the explicit approval of the major advisor and the honors advisor. Each program must be approved by the CEE Curriculum Committee, although the committee may delegate approval authority to the associate director for all but unusual proposals.

COMPUTER SCIENCE

Offered by the Department of Computer Science

Contact: 303 Upson Hall, 255-0982, www.cs.cornell.edu

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science.

Computer science majors take courses covering algorithms, data structures, logic, programming languages, systems, and theory. Electives include artificial intelligence, computer graphics, computer vision, cryptography, databases, networks, and scientific computing. Requirements include

- MATH 1910, 1920, and 2940
- three courses in introductory computing; either CS 1110, CS 1132, CS 2110 or CS 1112, CS 1130, CS 2110. CS 1114 is an honors-level substitute for CS 1112.
- a five-course computer science core (CS 2800, 3110, 3410 or 3420, 4410, and 4820)
- three 4000+ level computer science electives (CS 4999 not allowed; CS 3220 and CS 3810 allowed). If CS 2800 was taken prior to spring 2009, CS 3810 or CS 4810 must be either one of these electives or one of the technical electives (see below).
- a computer science project course (CS 4121, 4321, 4411, 4450, 4621, 4701, 5150, 5410, or 6670)

- three 3000+ level courses (only one of ENGRD 2700 or MATH 2930 accepted) that are technical in nature, as determined by the major.
- a three-course "external specialization" in a topic area other than computer science, all numbered at the 3000+ level
- one of BTRY 4080, ECE 3100, ECON 3190, ENGRD 2700, MATH 4710. CS majors in the College of Engineering can use ECE 3100 as a substitute for ENGRD 2700 to satisfy the engineering distribution requirements.
- an elective requirement consisting of a single 3+ credit course or a combination of courses coming to 3+ credits total. Roughly speaking, all academic courses (inside or outside of CS) count. No PE courses, courses numbered 10xx, or ROTC courses below the 3000 level are allowed.

All the major electives described above must be courses of at least 3 credits, with the exception of the CS project course, which is at least 2 credits, or as otherwise specified.

Additionally, students' course selections must satisfy the requirements of at least one "vector" or CS-centric specialization, defined by the department. The set of vectors includes artificial intelligence, computational science and engineering, data-intensive computing, graphics, human-language technologies, network science, programming languages, security and trustworthy systems, software engineering/code warrior, systems, theory, and a broad "Renaissance" vector. See www.cs.cornell.edu/ugrad for the requirements of each vector and updates.

The program is broad and rigorous, but it is structured in a way that supports in-depth study of outside areas. Intelligent course selection can set the stage for graduate study or employment in any technical area or any professional area such as business, law, or medicine. With the advisor, the computer science major is expected to put together a coherent program of study that supports career objectives and is true to the aims of a liberal education.

Computer Science Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" with a set of coherent courses and research activities that satisfy the following requirements.

1. at least one CS course (at least 3 credit hours) at or above the 5000 level with a grade of A- or better (no seminars)
2. at least two 3-credit semesters of CS 4999 (independent research), with grades of A- or better each semester

Honors determinations are made during the senior year. Students wanting to be considered for the honors program should notify the undergraduate office in the Department of Computer Science at ugrad@cs.cornell.edu. The subject line for this message should read "HONORS TRACK". Address related questions to the same e-mail address; call or stop by 303 Upson Hall, 255-0982; or visit www.cs.cornell.edu/ugrad for more information on eligibility.

ELECTRICAL AND COMPUTER ENGINEERING

Offered by the School of Electrical and Computer Engineering

Contact: Student Services Office, 223 Phillips Hall, 255-4309, www.ece.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

The Electrical and Computer Engineering major (ECE), leading to a B.S. degree, provides a foundation that reflects the broad scope of this engineering discipline.

Concentrations include computer architecture and organization, digital systems and computer vision; power systems control; communications, networks, information theory and coding, signal processing and optimization; electronic circuits, VLSI, solid state physics and devices, MEMs, nanotechnology, lasers and optoelectronics; electromagnetics, radiophysics, space sciences, and plasmas.

ECE majors must take ECE/ENGRD 2300 as an engineering distribution course and are encouraged, but not required, to take ENGRD 2110 as the other engineering distribution course. The major normally begins in the spring of the sophomore year. Of the courses listed below, only ENGRD/ECE 2100 and ECE/ENGRD 2300 are currently taught in both the fall and spring semesters.

Course	Credits
Major-required courses	
ECE/ENGRD 2100 Introduction to Circuits for Electrical and Computer Engineers	4
ECE 2200 Signals and Information	4
ECE 2400 Practice and Design	4
ECE 3030 Electromagnetic Fields and Waves	4
ECE/ENGRD 3100 Introduction to Probability and Random Signals	4
ECE 3140/CS 3420 or 3410 Computer Organization	4
ECE 3150 Introduction to Microelectronics	4

Major-approved electives (29-credit minimum in the following categories)

Advanced ECE electives† (six lecture courses)	
Outside ECE electives‡	9 minimum credits
Total minimum major credits	53
ECE 3100 satisfies the major requirement of probability and statistics.	

†These electives must include two 4000-level Electrical and Computer Engineering culminating design experience (CDE) courses and at least two additional courses at the 4000 level or above. The remaining electives may not include independent project courses, such as ECE 3910, 3920, 4910, or 4920, and must be at the 3000 level or above in Electrical and Computer Engineering.

Courses that meet the CDE requirement are described in the *Engineering Undergraduate Handbook*. The list changes frequently. An updated list of courses that meet the CDE requirements will be posted each semester on the bulletin board outside 222 Phillips Hall. All courses must have a college-level prerequisite.

‡Must include one course at the 3000 level or above (see the online *Electrical and Computer Engineering Undergraduate Handbook* for details).

Undergraduate concentration is achieved through the various Electrical and Computer Engineering elective courses, as well as other courses in related technical fields within engineering, math, the physical sciences, and the analytical biological sciences. The School of Electrical and Computer Engineering offers more than 30 courses that are commonly taken as electives by undergraduates.

Academic Standards

Majors in Electrical and Computer Engineering are expected to meet the following academic standards:

1. GPA \geq 2.3 every semester.
2. At least C- in all courses used to satisfy degree requirements in the major or that serve as a prerequisite for a subsequent Electrical and Computer Engineering course.
3. Satisfactory completion of MATH 2940, PHYS 2214, and at least two of ENGRD/ECE 2100, ECE 2200, and ENGRD/ECE 2300 by the end of the sophomore year and adequate progress toward the degree in subsequent semesters.

ENGINEERING PHYSICS

Offered by the School of Applied and Engineering Physics

Contact: 212 Clark Hall, 255-5198, www.aep.cornell.edu

The engineering physics (EP) major is designed for students who want to pursue careers of research or development in applied science or advanced technology and engineering. Its distinguishing feature is a focus on the physics and math fundamentals, both experimental and theoretical, that are at the base of modern engineering and research and have a broad applicability in these areas. By choosing areas of concentration within this major, students may combine this physics base with a good background in a conventional area of engineering or applied science.

The industrial demand for EP B.S. graduates is high, and many students go directly to industrial positions where they work in a variety of engineering or developmental areas that either combine, or are in the realm of, various more conventional areas of engineering. Recent examples include bioengineering, computer technology, electronic-circuit and instrumentation design, energy conversion, environmental engineering, geological analysis, laser and optical technology, microwave technology, nuclear technology, software engineering, solid-state-device development, technical management, and financial consulting. A number of EP graduates go on for advanced study in all areas of basic and applied physics as well as in a diverse range of areas in advanced science and engineering. Examples include applied physics, astrophysics, atmospheric sciences, biophysics, cell biology, computer science and engineering, electrical engineering, environmental science, fluid mechanics, geotechnology, laser optics, materials science and engineering,

mathematics, mechanical engineering, medical physics, medicine, nuclear engineering, plasma physics, oceanography, and physics. The major can also serve as an excellent preparation for medical school, business school, or specialization in patent law.

The EP major fosters this breadth of opportunity because it both stresses the fundamentals of science and engineering and gives the student direct exposure to the application of these fundamentals. Laboratory experimentation is emphasized, and ample opportunity for innovative design is provided. Examples are ENGRI/AEP 1110 Lasers and Photonics; ENGRI/AEP 1200 Introduction to Nanoscience and Nanoengineering; ENGRD/AEP 2640 Computer-Instrumentation Design (a recommended sophomore engineering distribution course); AEP 3330 Modern Experimental Optics (a junior/senior course); AEP 3630 Electronic Circuits (a sophomore/junior course); PHYS 4410 Advanced Experimental Physics; and AEP 4380 Computational Engineering Physics (a senior computer laboratory).

Students who plan to affiliate with the EP major are advised to arrange their common curriculum with their developing career goals in mind. They are encouraged to take PHYS 1112 or 1116 during their first semester (if AP credits permit) and to satisfy the technical writing requirement with the engineering distribution course ENGRD 2640. EP students need to take only one engineering distribution course, since AEP 3330, taken in the junior year, counts as the second one. EP students are advised to take AEP 3630 (taking ECE 2100 and 2300, 4 credits each, can satisfy AEP 3630. Count ECE 2100 as an approved elective and ECE 2300 as AEP 3630) in the spring semester of the sophomore year. Students with one semester of advanced placement in math and who have received at least A- in MATH 1920 may wish to explore accelerating their math requirements so as to enroll in AEP 3210 and 3220 in the sophomore year. For advice on this option, consult with the AEP associate director.

In addition to the requirements of the Engineering Common Curriculum,* the major requirements are as follows:

Course	Credits
AEP 3330 Mechanics of Particles and Solid Bodies	4
AEP 3550 Intermediate Electromagnetism	2
AEP 3560 Intermediate Electrodynamics	4
AEP 3610 Introductory Quantum Mechanics	2
AEP 3620 Intermediate Quantum Mechanics	4
AEP 3630 Electronic Circuits	4
AEP 4230 Statistical Thermodynamics	4
AEP 4340 Continuum Physics	4
PHYS 4410 Advanced Experimental Physics	4
AEP 3210 Mathematical Physics I	4
AEP 3220 Mathematical Physics II	4

Six major-approved electives (18–23 credits), of which five must be technical upper-level courses (3000 or above).

Total major credits=58 credit hours minimum

*The Engineering Common Curriculum suggests that freshmen take only four courses each semester. This course load is fully consistent with the requirements of the EP

major, but freshmen with strong preparation are encouraged to consider taking an additional course during one or both semesters so that they may have additional flexibility in developing a strong, individualized educational program in their later years and for allowing options such as a semester or year abroad or early graduation.

Two of the 4 credits of PHYS 4410 required for the B.S. degree in EP can be satisfied by completing AEP/PHYS 3330 or ASTRO 4410. The remaining 2 credits of PHYS 4410 can then be satisfied by taking PHYS 4400 for 2 credits, provided that the experiments completed in PHYS 4400 do not overlap with those in AEP/PHYS 3330 or ASTRO 4410. (A list of experiments that are not appropriate will be prepared by AEP faculty and made available in the AEP office.) If a student chooses this option, AEP/PHYS 3330 or ASTRO 4410 may also count as a technical elective, provided the remaining three technical electives are 4 credits each.

Choosing elective courses. The EP major provides the students with a strong opportunity to develop individualized programs of study to meet their particular educational and career goals. These can include the pursuit of a dual major or the development of a broad expertise in a number of advanced technical and scientific areas. With at least seven electives in the sophomore, junior, and senior years, EP majors are encouraged to work closely with their advisor to develop a coherent academic program that is consistent with those goals. For students who look toward an industrial position after graduation, the electives should be chosen to widen their background in a specific area of practical engineering. A different set of electives can be selected as preparation for medical, law, or business school. For students who plan on graduate studies, the electives provide an excellent opportunity to explore upper-level and graduate courses and to prepare for graduate study in any one of a number of fields. Various programs are described in a special brochure available from the School of AEP, Clark Hall. Students are advised to consult with their EP advisor, a professor active in their area of interest, or the associate director of the school.

Electives need not be all formal course work; qualified students are encouraged to undertake independent study under the direction of a member of the faculty (AEP 4900). This may include research or design projects in areas in which faculty members are active.

Up to three “4900” courses may be used as a major approved electives. These courses must be taken during the student’s last four semesters as an undergraduate. Any additional “4900” credits may be used as “advisor-approved electives.”

The variety of course offerings and many electives provide flexibility in scheduling. If scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses.

Academic Standing

Students are expected to pass every course in which they are registered, to earn at least C- in specifically required courses, and to attain a semester GPA ≥ 2.3 each semester. Students are required to take a minimum of 12 credit hours per semester.

Engineering Physics Honors Program Requirements

Eligibility

The Bachelor of Science degree with honors will be conferred upon those students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in the School of Engineering Physics and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA ≥ 3.5 or must be eligible for one of the cum laude distinctions at the time of graduation.

Content

The student must

1. Complete at least 8 credits of field-approved electives at the 4000 level or higher and receive a minimum grade of an A- in each of the courses taken to fulfill this 8-credit requirement. These 8 credits are in addition to the credits obtained by completing the senior thesis or special project requirement as discussed in item 2.
2. Enroll in AEP 4900 or an equivalent course over two semesters for the purpose of completing an independent research project or senior thesis under the supervision of a Cornell engineering or science faculty member. For a 4900 project to satisfy the research component of an honors project, it must have substantial physical science content. The minimum enrollment is to be 2 credits in the first semester and 4 credits in the second. The level of work required for a successful completion of this project or thesis is to be consistent with the amount of academic credit granted.

Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation. Most often, these 4900 courses are taken during the student’s senior year, after completion of the EP junior-year curriculum. Students may apply for honors after early completion of AEP 3210 and AEP 3220. However, for the project to be considered for honors, the proposal must be approved within three weeks of the start of the semester.

Procedures

Before enrolling in AEP 4900, or the equivalent, the honors candidate must submit a brief proposal outlining the topic and scope of the proposed project or thesis and a faculty supervisor’s written concurrence to the associate director for undergraduate studies. This proposal will be reviewed by the AEP Honors Committee and either approved or returned to the candidate to correct deficiencies in the proposal. The proposed research project or senior thesis is to consist of a research, development, or design project and must go beyond a literature search. This proposal must clearly describe a self-contained, independent project that can be

completed within two semesters. The final steps in completing the honors project are a written and oral report. The written report is to be in the form of a technical paper with, for example, an abstract, introduction, methods section, results section, conclusions section, references, and figures. This report will be evaluated by the faculty supervisor and the chair of the AEP Honors Committee and at least one other departmental faculty member, along with the other honors candidates. The final research project course grade will be assigned by the faculty supervisor, following the oral presentation and after consultation with the chair of the honors committee. A minimum grade of A- is required for successful completion of the honors requirements.

ENVIRONMENTAL ENGINEERING

Offered jointly by the Department of Biological and Environmental Engineering and the School of Civil and Environmental Engineering.

Contact: 207 Riley-Robb Hall, 607 255-2173, www.bee.cornell.edu, or 221 Hollister Hall, 607 255-3412, www.cee.cornell.edu.

Environmental Engineering is the study and practice of analyzing, designing, and managing natural and engineered systems in ways consistent with the maintenance or enhancement of environmental quality and sustainability. It requires the ability to predict multiple interactions and impacts among natural and engineering-system components at various spatial and temporal scales in response to alternative design and management policies. It requires a thorough understanding of the interactions among the natural environment, the constructed environment, and human activities.

Students matriculating in the College of Engineering (CoE) may affiliate with this major in their second year. Students matriculating in the College of Agriculture and Life Sciences (CALS) may enroll in this major in their first semester. Students planning to graduate with this major will be taking the following courses:

Mathematics-science core requirements

Course	Credits
MATH 1910, 1920, 2930, 2940	16
PHYS 1112, 2213	8
CHEM 2090 and 1570	7

CS 1110, CS 1112, or BEE 1510^a followed by CS 1132 or CS 1130

Introduction to engineering^b

ENGR 1130 Sustainable Design for Appledore Island (recommended), or

BEE 1200 The BEE Experience^a (required for students matriculating in CALS)

Engineering distribution courses[†]

BEE/ENGRD 2510 Engineering for a Sustainable Society (required)	3
ENGRD 2020, 3200, or 2210 are recommended ^c (BIOG 1101-1103, BIOG 1105, or BIOG 1107 may be used)	3-4

Major-required courses

Major Courses	Credits
Introductory Biology ^d (select from BIOG 1101-1103, BIOG 1102-1104, BIOG 1105, BIOG 1106, BIOG 1107, BIOG 1109, or BIOG 1110 to satisfy the biology requirement)	3-4
ENGRD 2020 Mechanics of Solids ^d	4
ENGRD 3200 Engineering Computation ^d	3
or	
ENGRD 2210 Thermodynamics ^d	3
CEE 3040 Uncertainty Analysis in Engineering ^e	4
CEE 3310 Fluid Mechanics	4
Earth Science (one from the following list):	3-4
EAS 2200 The Earth System	
or	
EAS 2680 Climate and Global Warming	
or	
EAS 3030 Introduction to Biogeochemistry	
or	
CSS 3650 Environmental Chemistry: Soil, Air, and Water	
CEE 3510 Environmental Quality Engineering	3
CEE 4510 Microbiology for Environmental Engineering ^f	3
Laboratory Course (one from the following list):	3
CEE 4530 Lab Research in Environmental Engineering	
or	
BEE 4270 Water Measurement and Analysis Methods	
or	
CEE 4370 Experimental Methods in Fluid Dynamics	
BEE 4750 Environmental Systems Analysis	3
Engineering Economics:	3-4
CEE 3230 Engineering Economics and Management	
or	
BEE 4890 Entrepreneurial Management for Engineers	
Electives	
Technical communications course ^g (ENGR 3350 or 3500 in liberal studies category; COMM 2600, 2630, or 3520; or BEE 4730, or BEE 4890)	
Three environmental design electives: at least one from list of capstone design courses and the remainder from list of design courses 9-credit minimum ^h	
Two major-approved engineering electives to complete total credit requirement ⁱ	6
First-year writing seminar	6
Two approved electives	6
Liberal studies	18
Total credits (minimum)	126
a. BEE 1510 and 1200 together (5 credits) satisfy the ENGR 1130 requirement for CALS-	

matriculated first-year students. Students using BEE 1200 and BEE 1510 to satisfy the ENGR 1130 requirement must make up the 2-credit difference with engineering course work.

- COE matriculated students must complete one ENGR 1XXX course their first year. CALS matriculated students may complete BEE 1510 and BEE 1200 to meet the requirement.
- Students must complete two ENGRD courses.
- Students using this course as a second engineering distribution must take an additional major-approved elective. Note: Some Intro to Biology courses do not count as an engineering distribution course.
- ENGRD 2700 (f,s,3) may be accepted (by petition) to substitute for CEE 3040 if taken prior to affiliation with the Environmental Engineering major or if necessary because of scheduling conflicts caused by co-op or study abroad.
- Students may take BIOMI 2900 Introduction to Microbiology in place of CEE 4510.
- If the course fulfilling the technical writing requirement also fulfills another requirement (e.g., liberal studies, major-approved elective), then it may be used to satisfy both requirements.
- To be chosen from a list of design courses. Students are encouraged to take CEE 4520, CEE 4540, or BEE 4730.
- The list of suggested courses covers the areas of environmental engineering, hydraulics/hydrology, environmental systems engineering, geotechnical engineering, remote sensing, air pollution, and renewable energy systems. The respective lists are available at the departmental offices.

Environmental Engineering Honors Program

Students interested in pursuing an honors program should contact the undergraduate program director of Biological and Environmental Engineering or the associate director of Civil and Environmental Engineering for information on the program requirements.

INDEPENDENT MAJOR

Offered by the Independent Major Committee

Contact: Associate Dean for Undergraduate Programs, 167 Olin Hall, 255-8240

The independent major is designed for students whose educational objectives cannot be met by one of the regular majors. This major consists of an engineering primary area (32 credits) and an educationally related secondary area (16 credits). The primary area may be in any subject area offered by schools or departments of the college; the secondary area may be in a second engineering subject area or in a logically connected non-engineering area. The combination must form an engineering education in scope and substance and should include engineering design and synthesis as well as engineering sciences. Each program includes the normally required common-

curriculum requirements and approved electives.

Students should apply to the independent major during the sophomore year. A student should seek assistance in developing a coherent program from professors in the proposed primary and secondary areas (an advisor in each area is required). The program must also be approved by the Independent Major Committee. If approved, the program is the curricular contract to which the student must adhere.

Because no single standardized curriculum exists, the independent major is not accredited by ABET. Independent major students who intend to seek legal licensing as a Professional Engineer should be aware that this nonaccredited degree program will require additional education, work, and/or experience to qualify for eligibility to take the Fundamentals of Engineering examination and may affect acceptance into engineering graduate programs.

INFORMATION SCIENCE, SYSTEMS, AND TECHNOLOGY

Offered jointly by the Department of Computer Science and the School of Operations Research and Information Engineering

Contact: 303 Upson Hall, 255-9837, www.infosci.cornell.edu, or 202 Rhodes Hall, 255-5088, www.orie.cornell.edu

Digital information technologies have become pervasive in science, engineering, manufacturing, business, finance, culture, law, and government, dramatically changing the way people work and live. The proliferation and significance of these new technologies demands a new focus in engineering education—one that remains rigorous and technically oriented but is simultaneously devoted to integrating engineering design, theory, and practice within the social and organizational contexts in which these complex digital information systems are employed.

The information science, systems, and technology (ISST) major studies the design and management of complex information systems. Just as structural engineers and nanofabricators use physics at radically different scales, so also there is a scale difference between the focus of the ISST major and the more traditional, look-under-the-hood majors in computer science and operations research and industrial engineering. Rather than focusing on the computing and communication technologies that underlie digital information systems, the ISST major emphasizes information systems engineering in broad application contexts, where issues at the confluence of information science, technology, and management are the primary concerns.

The ISST major has two options. The management science option educates students in methods for quantitative decision making and their application to information technology as well as the broader role that information technology plays in making these methods effective. Students in the information science option will obtain advanced training in methods for the creation, representation, organization, access, and analysis of information in digital form.

Note: Students may not double major in both CS and ISST or ORIE and ISST.

Engineering distribution courses

Majors are required to take ENGRD 2700 Basic Engineering Probability and Statistics as an engineering distribution course. ENGRD 2110 Object-Oriented Programming and Data Structures is required for the major and is recommended as the second engineering distribution course.

Major program

<i>Core courses</i>	<i>Credits</i>
Probability, Statistics, and Optimization	
ORIE 3300 Optimization I	4
ORIE 3500 Engineering Probability and Statistics II	4
Information Systems	
INFO 2300 Intermediate Design and Programming for the Web	3
ORIE 3800 Information Systems and Analysis	4
INFO 3300 Data-Driven Web Applications	3
Economic, Organizational, and Social Context	
ECON 3010 or 3130 Microeconomics	4
One of:	
ILROB 1750 Behavior, Values, and Performance	3
INFO 2450 Communication and Technology	3
ENGRD 3350 Communications for Engineering Majors	3

Requirements for the information science option:

1. Three courses from Information Systems (Area II below).
2. One course from Mathematical Modeling in IT (Area III).
3. Three electives, all from either Human-Centered Systems (Area V) or Social Systems (Area VI).
4. Two electives from any of the six areas totaling at least 6 credits (INFO 4900 may be used to fulfill one of these electives).

Requirements for the management science option:

1. Four courses from Mathematical Models in Management Science (Area I).
2. Three electives, one from Information Systems (Area II) and two from the union of Mathematical Modeling in IT (Area III) and Information Technology Management Solutions (Area IV).
3. Two electives from any of the six areas totaling at least 6 credits (INFO 4900 may be used to fulfill one of these electives).

Area I. Mathematical Models in Management Science

- ORIE 3150 Financial and Managerial Accounting
- ORIE 3510 Introductory Engineering Stochastic Processes I
- ORIE 4580 Simulation Modeling and Analysis
- ORIE 4800 Information Technology

Area II. Information Systems

- CS 4450 Computer Networks
- INFO 4300 Information Retrieval
- INFO 4302 Web Information Systems
- CS 4320 Introduction to Database Systems
- CS 4620 Introduction to Computer Graphics
- CS 4700 Foundations of Artificial Intelligence
- CS 4740 Introduction to Natural Language Processing
- CS 5150 Software Engineering
- CS 5430 System Security
- INFO 5300 Architecture of Large-Scale Information Systems
- CS 5780 Empirical Methods in Machine Learning and Data Mining

Area III. Mathematical Modeling in IT

- ORIE 4330 Discrete Models
- ORIE 4740 Statistical Data Mining I
- CS 4780 Machine Learning
- ORIE 4850 Applications of Operations Research and Game Theory to IT
- ECE 5620 Fundamental Information Theory

Area IV. IT Management Solutions

- ORIE 4810 Delivering OR Solutions with Information Technology
- ORIE 5126 Supply Chain Management

Area V. Human-Centered Systems

- INFO 3400 Psychology of Social Computing
- PSYCH 3420 Human Perceptions: Applications to Computer Graphics, Art, and Visual Display*
- INFO 3450 Human-Computer Interaction Design
- PSYCH 3470 Psychology of Visual Communications
- INFO 3650 Technology and Collaboration
- PSYCH 3800 Social Cognition*
- PSYCH 4160 Modeling Perception and Cognition*
- INFO 4400 Advanced Human-Computer Interaction Design
- INFO 4450 Seminar in Computer-Mediated Communication
- INFO 4500 Language and Technology
- DEA 4700 Applied Ergonomic Methods

*Students who take PSYCH 3420 or 4160 may also count their prerequisite, PSYCH 2050 or 2140. Students who take PSYCH 3800 may also count PSYCH 2800. At most one of these 2000-level prerequisites can be counted.

Area VI. Social Systems

- INFO 2040 Networks
- SOC 3040 Social Networks and Social Processes
- INFO 3200 New Media and Society*
- AEM 3220 Internet Strategy
- INFO 3490 Media Technologies
- INFO 3551 Computers: From the 17th Century to the Dotcom Boom
- INFO 3561 Computing Cultures

INFO 3660 History and Theory of Digital Art

ECON 3680 Game Theory*

INFO 3871 The Automatic Lifestyle: Consumer Culture and Technology

STS 4111 Knowledge, Technology, and Property

SOC 4150 Internet and Society*

ECON 4190 Economic Decisions Under Uncertainty

INFO 4290 Copyright in the Digital Age

INFO 4350 Seminar on Applications of Information Science

ORIE 4350 Introduction to Game Theory*

INFO 4144 Responsive Environments

INFO 4470 Social and Economic Data

INFO 4850 Computational Methods for Computer Networks

ECON 4760 Decision Theory I

ECON 4770 Decision Theory II

HADM 4489 The Law of the Internet and E-Commerce

INFO 5150 Culture, Law, and Politics of the Internet

*Only one of ECON 3680 and ORIE 4350 may be taken for ISST credit. Only one of INFO 3200 and SOC 4150 may be taken for ISST credit.

Information Science, Systems, and Technology Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements.

- 3 credit hours of ISST course work at or above the 5000 level (no S-U courses; no seminars or 2-credit courses)
- 6 credit hours of INFO 4900 independent study and research with an ISST faculty member, spread over at least two semesters, with at least A- each semester
or

3 credit hours of INFO 4900 independent study and research with an ISST faculty member and 3 credit hours of INFO 4910 teaching experience, both with grades of at least A-.

The ISST research is expected to result in a programming project or a written report (or both).

Any 5000- or 6000-level course taken to fulfill the honors requirements may not be counted toward fulfillment of the associated primary or secondary option requirements.

Procedures

Each program must be approved by the appropriate co-director of the ISST major, and any changes to the student's program must also be approved.

MATERIALS SCIENCE AND ENGINEERING

Offered by the Department of Materials Science and Engineering

Contact: 214 Bard Hall, 255-9159, www.mse.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

Prospective majors are required to take ENGRD 2610 or 2620 before affiliating with the major. It is highly recommended that the course be taken as an engineering distribution during the sophomore year.

The major program develops a comprehensive understanding of the physics and chemistry underlying the unique properties of modern engineering materials and processes.

Students complete a series of electives to develop knowledge of materials, such as biomaterials, ceramics, polymers, and semiconductors. Application-related courses include areas of biotechnology and life science, energy and environment, materials for information science, nanotechnology, and technology management and ethics. These requirements are satisfied through a series of technical electives taken mainly in the senior year, which are selected from various engineering and science departments. Optional research involvement courses provide undergraduates with the opportunity to work with faculty members and their research groups on current projects.

The major requirements for a B.S. degree in materials science and engineering are:

- ENGRD 2610 Mechanical Properties of Materials: From Nanodevices to Superstructures *or*
ENGRD 2620 Electronic Materials for the Information Age
- 13 required major courses:
MSE 2060 Atomic and Molecular Structure of Matter
MSE 2610 or MSE 2620 (whichever was not taken as a distribution course)
MSE 3010 Materials Chemistry
MSE 3030 Thermodynamics of Condensed Systems
MSE 3040 Kinetics, Diffusion, and Phase Transformations
MSE 3050 Electronic, Magnetic, and Dielectric Properties of Materials
MSE 3070 Materials Design Concepts I
MSE 3110 Junior Lab I
MSE 3120 Junior Lab II
MSE 4020 Mechanical Properties of Materials, Processing, and Design
MSE 4030/4050 Senior Materials Lab I or Senior Thesis I
MSE 4040/4060 Senior Materials Lab II or Senior Thesis II
MSE 4070 Materials Design Concepts II
- Two materials-related electives covering two groups of different materials
- Three application-related electives in at least two different types of applications

- Two of the application-related electives must be taken from outside MSE
- One additional technical elective outside MSE

Materials Science and Engineering Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements.

- The 9 credits (giving a total of 141) of additional courses must be technical in nature, i.e., in engineering, math, chemistry, and physics at the 4000 and graduate level, with selected courses at the 3000 level. The courses must be approved by the major advisor.
- Senior honors thesis (MSE 4050/4060) with a grade of at least A.

MECHANICAL ENGINEERING

Offered by the Sibley School of Mechanical and Aerospace Engineering

Contact: 108 Upson Hall, 255-3573, maeng-mailbox@cornell.edu, www.mae.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

This major is designed to provide a broad background in the fundamentals of the discipline as well as to offer an introduction to the many professional and technical areas in which mechanical engineers work. The program covers both major streams of mechanical engineering.

(1) *Mechanical systems, design, and materials processing* is concerned with the design, analysis, testing, and manufacture of machinery, vehicles, devices, and systems. Other topics covered are computer-aided design, vibrations, control systems, and dynamics. Particular areas of concentration are mechanical systems and design, vehicle engineering, biomechanics, and engineering materials.

(2) *Engineering of fluids, energy, and heat-transfer systems* is concerned with the efficient conversion of energy, aerospace and surface transportation, the environmental impact of engineering activity (including pollutants and noise), aeronautics, and the experimental and theoretical aspects of fluid flow, heat transfer, thermodynamics, and combustion. Specific areas of concentration include aerospace engineering, energy and the environment, and thermo-fluids engineering.

During the fall semester, sophomores who plan to affiliate with the mechanical engineering major take ENGRD 2020 (also TAM 2020) as an engineering distribution course. ENGRD 2210/MAE 2210 is required for the major and is recommended as the second engineering distribution course. The Sibley School supports students who have unusual requirements, but delays or substitutions must be discussed with and receive approval from their major advisor.

The major requires 13 courses (beyond ENGRD 2020 already mentioned) and five major-approved elective courses.

Required courses

MAE 2120 Mechanical Properties and Selection of Engineering Materials

ENGRD 2210 Thermodynamics

MAE 2250 Mechanical Synthesis

ENGRD 2030 Dynamics

MAE 3780 Mechatronics *or* ENGRD 2100 Introduction to Electrical Circuits, Electrical and Computer Engineering, or PHYS 3360 Electronic Circuits

MAE 3230 Introductory Fluid Mechanics

MAE 3240 Heat Transfer

MAE 3250 Analysis of Mechanical and Aerospace Structures

MAE 3260 System Dynamics

MAE 3272 Mechanical Property and Performance Laboratory

MAE 4272 Fluids/Heat Transfer Laboratory

MAE 4280 Engineering Design

MAE 4291 Supervised Senior Design Experience

Electives

Students should use the flexibility provided by the major-approved electives, advisor-approved electives, and humanities, arts, and social sciences electives to develop a program to meet their specific goals.

Major-approved electives

The major includes five major-approved electives. At least three of these courses must be upper-level (3000+) MAE courses. Two of these must be a concentration of MAE's upper-level courses providing depth in a specific subject area. Standard concentrations are shown below, but students may petition for approval of two other related courses to form a custom concentration.

The standard concentrations are:

Aerospace engineering, MAE 3050, 3060, 4150, 4230, 5060, 5070

Biomechanics, MAE 4640, 4660, 5680, 5690

Energy and the Environment, MAE 4020, 4230, 4490, 4580, 4590, 5010, 5430

Engineering Materials, MAE 3120, 3130, 4040, 4140, 4550, 4640, 4700, 5130

Mechanical Systems and Design, MAE 3780*, 4150, 4170, 4700, 4770, 4780, 5200**

Thermo-fluids Engineering, MAE 4230, 4490, 4530, 5010, 5430

Vehicle Engineering, MAE 3050, 3060, 4140, 4250, 4490, 4860, 5060, 5070

*Students who took MAE 3780 as a required course (see above) may not use it again as a major-approved elective.

** MAE 5200 is a 2-credit course. If it is used in a concentration, another course or courses in the concentration must be selected so that the total number of credits in the concentration is 6 or greater.

One major-approved elective must be a senior design elective involving MAE 4291 "Supervised Senior Design Experience." One way to satisfy this requirement is to take a 3+ credit section of MAE 4291, directed by a faculty member as a individual or team exercise. The other option is to take a senior

design elective course (MAE 4000, 4020, 4040, 4140, 4230, 4250, 4700, or 4860) along with the corresponding 1-credit section of MAE 4291.

One of the major-approved electives must be an approved upper-level math course taken after MATH 2940. The course must include some statistics. Currently, the approved courses are TAM 3100, ENGRD 2700, CEE 3040, and ENGRD 3200.

One of the major-approved electives, the "technical elective," may be any course at an appropriate level, chosen from engineering, math, or science (physics, chemistry, or biological sciences). Appropriate level is interpreted as being at a level beyond the required courses of the college curriculum. Courses in economics, business, and organizational behavior are not accepted; advisors may approve such courses as advisor-approved electives.

MAE 4980 may not be used as a major-approved elective.

Advisor-approved electives

To maximize flexibility (i.e., the option for study abroad, Co-op, internships, pre-med, and flexibility during the upper-class years), the Sibley School faculty recommends that students delay use of advisor-approved (AA) electives until after the third semester. Students must seek advisor approval before taking an AA elective. Advanced placement credit may not count as an AA elective. Up to 6 credits of Reserve Officer Training Corps (ROTC) courses numbered 3000 or above or co-listed in an academic department are allowed as AA electives. Students must document AA electives approved before MAE affiliation within a month of registration as an MAE student. The faculty encourages students to consider the following as possible AA electives:

- an engineering distribution course
- courses stressing oral or written communications
- courses stressing the history of technology
- rigorous courses in the physical sciences (physics, biology, chemistry)
- courses in information science (mathematics, computer science)
- courses in methodologies (modeling, problem solving, synthesis, design)
- courses in technology (equipment, machinery, instruments, devices, processes)
- courses in business enterprise operations (e.g., economics, financial, legal)
- courses in organizational behavior
- courses in cognitive sciences

Other considerations

It is recommended that humanities, arts, and social sciences electives include studies in history of technology, societal impacts of technology, history, foreign languages, ethics, communications, political science, aesthetics, economics, and/or architecture.

The Sibley School encourages its students to spend a semester or year abroad at foreign universities with which the college has an exchange agreement, such as the Ecole Centrale de Paris.

The technical-writing requirement of the common curriculum is satisfied by MAE 4272.

A limited set of second- and third-year courses is offered each summer under the auspices of the School of Continuing Education and Summer Sessions and the Engineering Cooperative Education Program.

Preparation in Aerospace Engineering

There is no separate undergraduate major in aerospace engineering, but students may prepare for a career or graduate program in this area by majoring in mechanical engineering and taking courses from the aerospace engineering minor or concentration, for example spacecraft engineering, introduction to aeronautics, and aerospace propulsion systems. It is also possible to prepare for a career or graduate program in aerospace engineering through appropriate course selection in other majors, for example: electrical and computer engineering, engineering physics, or the physical sciences. Subjects recommended as preparation for aerospace engineering endeavors include thermodynamics, fluid mechanics, structures, vibrations, feedback controls, applied mathematics, chemistry, and physics.

OPERATIONS RESEARCH AND ENGINEERING

Offered by the School of Operations Research and Information Engineering

Contact: 203 Rhodes Hall, 255-5088, www.orie.cornell.edu

This major provides a broad education in the techniques and modeling concepts needed to design, analyze, and operate complex systems. The major prepares students for a wide range of careers including operations research, information engineering, entrepreneurship, operations management, consulting, financial engineering, financial services, and engineering management.

The foundation of the major is the development of basic skills in statistics, probability, mathematical optimization, and computer science. Required courses in manufacturing systems, cost accounting, and simulation build on these skills and provide engineering design experiences. In the senior year the curriculum is quite flexible. Students take ORIE electives to broaden and deepen their expertise in applied probability and statistics, industrial systems, optimization, information technology, financial engineering, and their applications.

Because of the wide range of career goals among OR&E students, and the large number of electives, students should consult with their major advisors to select electives that best meet their future goals.

Exceptional students interested in pursuing graduate studies are encouraged to speak with their faculty advisors concerning an accelerated program of study.

A student who intends to affiliate with the major in operations research and engineering should take ENGRD 2700 Basic Engineering Probability and Statistics after completing MATH 1920; MATH 2940 should be completed before or concurrently with ENGRD 2700. OR&E affiliates are required to complete

MATH 1910, 1920, and 2940 (or their subject matter equivalents). Either MATH 2930, CS 2800, or MATH 3040 may be used to satisfy the fourth-semester mathematics requirement. Students should discuss with their advisors which of these three courses is most appropriate to their future program of study in OR&E. The following should be considered:

1. MATH 2930 (differential equations) is essential for advanced study in financial engineering. Also, MATH 2930 is a prerequisite for PHYS 2214, thus students who do not take MATH 2930 must plan to take CHEM 2080.
2. CS 2800 provides an introduction to discrete structures and algorithms of broad applicability in the field of operations research, particularly for fundamental models in the areas of optimization, production scheduling, inventory management, and information technology; it is also a prerequisite for certain upper-class Computer Science courses in the areas of information technology and algorithmic analysis.
3. MATH 3040 covers fundamentals of formal proof techniques.

Early consultation with a faculty member or the associate director for undergraduate studies may be helpful in making appropriate choices. Students considering Ph.D.-level study in operations research are encouraged to see the Associate Director for advice regarding the fourth MATH course.

The required courses for the OR&E major and the typical terms in which they are taken are as follows:

<i>Semester 2 or 3</i>	<i>Credits</i>
ENGRD 2110 Computers and Programming	3
ENGRD 2700 Basic Engineering Probability and Statistics	3
<i>Semester 4</i>	
ORIE 3120 Industrial Data and Systems Analysis*	4
<i>Semester 5</i>	
ORIE 3300 Optimization I	4
ORIE 3500 Engineering Probability and Statistics II	4
Behavioral Science (Organizational Behavior)†	3
Liberal elective	3
Advisor-approved elective	3
<i>Semester 6</i>	
ORIE 3150 Financial and Managerial Accounting (may be taken in semester 4)**	4
ORIE 3310 Optimization II	4
ORIE 3510 Introductory Engineering Stochastic Processes I	4
Major-approved elective	3
Liberal elective	3

*It is highly recommended that ORIE 3120 be taken in semester 4. If the student's schedule does not permit this, the course may be taken in semester 6 or 8.

**ORIE 3150 may be taken in semester 4, 5, or 6.

†The behavioral science requirement can be satisfied by any of several courses, including the Johnson Graduate School of Management

(JGSM) course NCC 5540 (offered only in the fall), which is recommended for those considering a graduate business degree, ILROB 1220, and 1750, HADM 1115, ENGRD 3350 (which also satisfies the technical writing requirement), and others.

The basic senior-year program, from which individualized programs are developed, consists of the following courses:

ORIE 4580 Simulation Modeling and Analysis 4

Three upper-level ORIE electives as described below 9

Two major-approved electives (at least 3 credits must be outside ORIE) 6

Liberal electives 6

One advisor-approved elective 3

Available ORIE electives are as follows:

Manufacturing and distribution systems: ORIE 4150, 4800, 4810, 4850, 5100, 5120, 5122, 5126 and JGSM NBA 6410

Optimization methods: ORIE 4154, 4300, 4320, 4330, 4350, 4360, and 4370

Applied probability and statistics: ORIE 4520, 4540, 4710 (2 credits), 4740, 4711 (2 credits), 4712 (2 credits), 5550, 5560, and 5770

Financial engineering: ORIE 4600, 4630, 5600, 5610, 5620, and 5640

Academic Standing

Each student in the OR&E major should obtain a passing grade in every course; at least C- in ENGRD 2110 and 2700, and all ORIE courses; a GPA of 2.0 each semester; a GPA of 2.0 for OR&E major courses; a grade of C- or better in ENGRD 2110 by the end of the sixth semester; and satisfactory progress toward completion of the degree requirements. Each student's performance is reviewed at the conclusion of each semester.

If at least C- is not earned in a required course, the course must be repeated within one year. The next course in a sequence (ORIE 3310 and 3510, in particular) may not be taken until at least a C- is achieved in the prerequisite course. Failure to achieve at least C- in the second attempt will generally result in withdrawal from the major.

Operations Research and Engineering Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements.

The 9 additional credits of course work shall be from one or more of the following, with at least 4 credits in the first category:

1. Advanced courses in ORIE at the 5000 level or above.
2. A significant research experience or honors project under the direct supervision of an ORIE faculty member using ORIE 4999 ORIE Project. A significant written report must be submitted as part of this component.
3. A significant teaching experience under the direct supervision of a faculty member in ORIE using ORIE 4990 Teaching in ORIE.

Procedures

Each program must be approved by the associate director of undergraduate studies, and any changes to a program must be approved by the associate director.

SCIENCE OF EARTH SYSTEMS (SES)

Offered by the Department of Earth and Atmospheric Sciences

Contact: 2124 Snee Hall, 255-5466, www.eas.cornell.edu

The Earth Sciences have never been more critical to society than they are today. Global warming, dwindling energy resources, inadequate water supplies, political strife over strategic minerals, and megadisasters threatened by volcanic eruptions, earthquakes, tsunamis, and hurricanes: these are but a few of the headlines that appear with increasing frequency. The Department of Earth and Atmospheric Sciences at Cornell is a global leader in research directed toward understanding the fundamental processes that have shaped our planet, and is committed to providing Cornell students with the earth literacy needed to serve as informed citizens and wise stewards of the Earth. EAS faculty members and graduate students carry out frontier research on both basic and applied aspects of subjects as diverse as satellite monitoring of volcanic activity, the deep structure of the Andes Mountains and Tibetan Plateau, the nature of the earth's ionosphere, and the impact of aerosols on global climate.

The Science of Earth Systems (SES) major is the undergraduate program offered by EAS to Cornell students in Engineering, Arts and Sciences and the College of Agriculture and Life Sciences. Students in this program can pursue education and research that prepares them to compete for careers or graduate study at leading institutions in this country and abroad. Students may choose to focus on one of a number of disciplinary specialties, such as geophysics or tectonics, or develop the broad expertise needed to understand the interactions between the diverse elements of earth and life in the past, present, and future. By analyzing the complex relations among the ocean, solid earth, atmosphere, and biosphere, students can help meet society's growing demand for energy, minerals, and clean water as well as contribute to mitigating the negative impacts related to global warming, rising sea level, natural hazards, and decreasing biodiversity.

The SES program is intrinsically interdisciplinary, involving many branches of science and engineering. Examples of the latter include civil and environmental engineering, biological and environmental engineering, mechanical and aerospace engineering, and electrical and computer engineering. The SES program is unique in that it incorporates the fundamentals of Earth Science with the emergence of a new and more complete approach that encompasses all components of the earth system—air, life, rock, and water—to gain a new and more comprehensive understanding of the world as we know it.

To achieve a complete understanding of these important issues, students must have a desire to take a very hands-on approach. An abundance of opportunities exists for

geological, oceanographic, and meteorological research in the field and for nationwide and international travel as well as paid research experience. Students have worked with faculty members in the Andes, the Aleutians, the Rocky Mountains, the Atacama Desert, the Caribbean, Tibet, and Hawaii, and have spent a semester at sea in the Woods Hole Ocean Studies Program. Students are also able to probe the ionosphere of Earth and the surface of Mars by utilizing techniques in remote sensing.

The SES major provides a strong preparation for graduate school in any one of the earth sciences, such as atmospheric sciences, geological sciences, geophysics, geochemistry, oceanography, hydrology, and biogeochemistry. Students seeking employment with the B.S. degree will have many options in a wide variety of careers related to energy, the environment, and critical resources in both the private sector and government. Students with the strong science background provided by the SES major are also highly valued by graduate programs in environmental law, public affairs, economics, and public policy.

Requirements for the Major

1. Basic Math and Sciences

This part of the SES curriculum builds a strong and diverse knowledge of fundamental science and mathematics, providing the student with the basic tools needed in upper-level science classes.

- MATH 1910–1920 (or MATH 2930–2940)
- PHYS 1112–2213
- CHEM 2090–2080 or 1570
- BIOL—three options:
 - one year of biology, choosing from the introductory biology sequences of courses: BIOG 1101/1103–1102/1104, or 1105/1106, or BIOG 1109/1110
 - one semester from the introductory biology sequences of courses (listed in option 1) and EAS/BIOEE 1540 or EAS 1700
 - students may substitute (with written permission of their advisor) one semester of biology with an additional semester of chemistry, math, or physics.

2. A required introductory course in earth science is satisfied by EAS 2200

3. SES Core Courses

The core courses emphasize the interconnectedness of the Earth system and are founded on the most modern views of the planet as an interactive and ever-changing system. Each crosses the traditional boundaries of disciplinary science. The major requires three of the following four core courses.

- EAS 3010 Evolution of the Earth System
- EAS 3030 Biogeochemistry
- EAS 3040 Interior of the Earth
- EAS 3050 Climate Dynamics

4. Concentration Courses

The concentration is achieved by completion of four intermediate to advanced-level courses (3000 level and up) that build on the core courses and have prerequisites in the required

basic sciences and mathematics courses. Note that additional basic math and science courses may be required to complete the concentration courses, depending upon the student's choice of concentration. The concentration courses build depth and provide the student with a specific expertise in some facet of Earth system science. Four defined areas of specialization include geological sciences, biogeochemistry, atmospheric sciences, and ocean sciences. Students may also design other concentrations. Examples include planetary science, ecological systems, geohydrology, and soil science. The concentration should be chosen during the junior year or before in consultation with the student's advisor and with approval of the director of undergraduate studies. For concentrations beyond the four first named, approval by the SES Curriculum Committee is needed.

5. Field/Observational/Laboratory Experience

Exposure to the basic observations of earth science, whether directly in the out-of-doors, or indirectly by the many advanced techniques of remote sensing of our planet, or in the laboratory, is necessary to understand fully the chosen area of concentration in the major. Three credits of appropriate course work are required. Possibilities include the following:

Courses in the Hawaii Environmental Semester Program; or

Courses given by the Shoals Marine Laboratory; or

EAS 2500 Meteorological Observations and Instruments; or

EAS 3520 Synoptic Meteorology I; or

EAS 4170 Field Mapping in Argentina

EAS 4370 Geophysical Field Methods; or

EAS 4910 and/or EAS 4920 Undergraduate Research with appropriate choice of project; or

Field course or courses taught by another college or university (e.g. Semester at Sea).

Students should discuss with their faculty advisor whether the fourth core course listed above or the course used to fulfill the observation/field requirement may also be used to satisfy the concentration.

For more information contact Professor John Cisne, Department of Earth and Atmospheric Sciences, john.cisne@cornell.edu, or visit www.eas.cornell.edu.

Field Study in Hawaii

Field study is a fundamental aspect of earth system science. Students wishing to increase their field experience may fulfill some of the requirements for the Science of Earth Systems major by off-campus study through the Cornell Earth and Environmental Semester program (EES). The EES program, offered during the spring semester, emphasizes field-based education and research. It is based on the island of Hawaii, an outstanding natural laboratory for earth and environmental sciences. Courses that may be applied to the Science of Earth Systems major include EAS 3400, 3220, and 3510. The EES program also offers opportunities for internships with various academic, nonprofit, and government organizations. Typically, students participate in

the EES program during their junior year, although exceptions are possible. For further information, see www.geo.cornell.edu/geology/classes/hawaii.

Science of Earth Systems Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the requirements of an honors thesis involving research (EAS 4910–4920 or 4990, 2 or more credits each) of breadth, depth, and quality. A written proposal of the honors project must be accepted by the student's advisor and the director of undergraduate studies early in the first semester of the student's senior year.

ENGINEERING MINORS

Students may pursue minors in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the students' major. Completed minors will appear on the student's transcript. Not all departments offer minors. Consult the appropriate section in *Courses of Study* or contact the appropriate department for information on minors offered and how to pursue a minor.

An engineering minor recognizes formal study of a particular subject area in engineering normally outside the major. Students undertaking a minor are expected to complete the requirements during the time of their continuous undergraduate enrollment at Cornell. Completing the requirements for an engineering minor (along with a major) may require more than the traditional eight semesters at Cornell. However, courses that fulfill minor requirements may also satisfy other degree requirements (e.g., distribution courses, advisor-approved, or major-approved electives), and completion within eight semesters is possible.

An engineering minor requires:

- successful completion of all requirements for an undergraduate degree.
- enrollment in a major that approves participation in the minor.
- satisfactory completion of six courses (at least 18 credits) in a college-approved minor.

Students may apply for certification of a minor at any time after the required course work has been completed in accordance with published standards. An official notation of certification of a minor appears on the Cornell transcript following graduation.

The College of Engineering offers minors in the following areas (offering units are indicated in parentheses):

- Aerospace Engineering (MAE)
- Applied Mathematics (TAM)
- Biological Engineering (BEE)
- Biomedical Engineering (BME)
- Civil Infrastructure (CEE)
- Computer Science (CS)
- Electrical and Computer Engineering (ECE)
- Engineering Management (CEM)

Engineering Statistics (ORIE)
 Environmental Engineering (BEE/CEE)
 Science of Earth Systems (EAS)
 Game Design (CS)
 Industrial Systems and Information Technology (ORIE)

Information Science (INFO)
 Materials Science and Engineering (MSE)
 Mechanical Engineering (MAE)

Operations Research and Management Science (ORIE)

Additional information on specific minors can be found below, in the *Engineering Undergraduate Handbook*, in the undergraduate major office of the department or school offering the minor, and in Engineering Advising.

MINOR: AEROSPACE ENGINEERING

Offered by: Sibley School of Mechanical and Aerospace Engineering

Contact: 108 Upson Hall, 255-3573, www.mae.cornell.edu

Students intending to earn this minor should seek advice and pre-approval of their minor academic program from the associate director for undergraduate affairs in Mechanical Engineering before taking courses toward the minor.

The aerospace engineering minor develops the engineering analysis and design skills necessary for creating and understanding aerospace vehicles and their subsystems. The minor includes diverse topics relevant to applications both in the earth's atmosphere (e.g., aerodynamics) and in space (e.g., spacecraft thermal systems or orbital mechanics). Students in this minor will take at least four core aerospace courses, along with up to two supporting courses in engineering fundamentals or courses with applicability to aeronautics and spacecraft.

Academic Standards: A grade of at least C- in each course. If a course is offered only S-U, a grade of S is acceptable.

Requirements:

Six courses from the lists below, each worth at least 3 credits, must be completed. No substitutions will be accepted from other departments at Cornell or elsewhere.

Rules for selecting courses:

- Rules for ME majors:
 - Select at least four courses from group A, of which you must choose MAE 3050 or MAE 3060 (or both).
 - Select at most two courses from group B. No courses from group C may be used.
 - Use at most four courses to satisfy both the Aerospace Minor requirements and the BSME degree requirements. The major concentration courses may not be among these overlapped courses.
- Rules for other majors:
 - Select least four courses from group A, of which you must choose MAE 3050 or MAE 3060 (or both).

- Select a total of at most two courses from group B and group C.
- Do not use any courses to satisfy requirements of both the Mechanical Engineering Minor and the Aerospace Engineering Minor.

Group A: Core Aerospace Engineering

MAE 3050 Intro to Aeronautics
 MAE 3060 Spacecraft Engineering
 MAE/ECE 4150 GPS: Theory and Design
 *MAE 4291 Supervised Senior Design Experience, with Aerospace Focus or MAE 4900 Special Investigations in Mechanical and Aerospace Engineering, with Aerospace Focus
 MAE 4230/5230 Intermediate Fluid Dynamics
 MAE 5060 Aerospace Propulsion Systems
 MAE 5070 Dynamics of Flight Vehicles
 *MAE 4291 and 4900 require a form signed by the project advisor, stating that the project focuses on aerospace and is suitable as a core aerospace course for the minor. MAE 4291 or 4900 must be worth 3 credits or more. Students are restricted to at most one MAE 4291 OR one MAE 4900 counting toward the minor (may not count both MAE 4291 and MAE 4900 toward the minor).

Group B: Courses Applicable to Aerospace Engineering

MAE 4170/5170 Introduction to Robotics: Dynamics, Control, Design
 MAE 4550/CEE 4770/MSE 5550/TAM 4550 Introduction to Composite Materials
 MAE 4700/5700 Finite Element Analysis for Mechanical and Aerospace Design or CEE 4720 Introduction to the Finite Element Method
 MAE 4770/5770 Engineering Vibrations
 MAE 4780/5780/CHEME 4720/ECE 4720 Feedback Control Systems
 MAE 5430 Combustion Processes
 MAE 5710 Applied Dynamics or TAM 5700 Intermediate Dynamics

Group C: Fundamentals

ENGRD 2020
 ENGRD 2030
 MAE 2120
 ENGRD/MAE 2210
 MAE 3230
 MAE 3240
 MAE 3250
 MAE 3260
 MAE 3780 or ECE 2100/ENGRD 2100 or PHYS 3360

MINOR: APPLIED MATHEMATICS

Offered jointly by the Department of Theoretical and Applied Mechanics and Department of Mathematics

Contact: Richard Rand, 207 Kimball Hall, 255-7145, thr2@cornell.edu, www.tam.cornell.edu/ undergraduate

All Engineering undergraduates affiliated with all Engineering majors are eligible to participate in this minor.

Academic standards: At least C in each course in the minor.

Requirements

At least six courses beyond MATH 2940, to be chosen as follows:

- At most one course from any one of the groups 1, 2, 3, or 4.
- At least three courses from groups 5 and 6.
- At most one 2000-level course.
- At most one course that is offered by the student's major department.

1. Analysis

AEP 3210 Mathematical Physics I
 MATH 3230 Introduction to Differential Equations
 MATH 4200 Differential Equations and Dynamical Systems
 TAM 3100 Introduction to Applied Mathematics I

2. Computational Methods

CS 4210 Numerical Analysis and Differential Equations
 ENGRD 3200 Engineering Computation
 ENGRD 3220 Introduction to Scientific Computation
 ORIE 3300 Optimization I

3. Probability and Statistics

CEE 3040 Uncertainty Analysis in Engineering
 ECE 3100 Introduction to Probability and Random Signals
 ENGRD 2700 Basic Engineering Probability and Statistics
 MATH 4710 Basic Probability
 ORIE 3500 Engineering Probability and Statistics II

4. Applications

AEP 3330 Mechanics of Particles and Solid Bodies
 CEE 3310 Fluid Mechanics
 CEE 3710 Structural Modeling and Behavior
 CHEME 3230 Fluid Mechanics
 CS 2800 Discrete Structures
 CS 2850 Networks
 ECE 3200 Networks and Systems
 ECE 4250 Digital Signal Processing
 MAE 3230 Introductory Fluid Mechanics
 MSE 3030 Thermodynamics of Condensed Systems

5. Advanced courses

Only one of these three may be chosen:
 AEP 3220 Mathematical Physics II
 MATH 4220 Applied Complex Analysis
 TAM 3110 Introduction to Applied Mathematics II

Only one of the following two may be chosen:

ECE 4110 Random Signals in Communications and Signal Processing

ORIE 3510 Introductory Engineering Stochastic Processes I

Only one of the following two may be chosen:

MAE 5710 Applied Dynamics

TAM 5700 Intermediate Dynamics

Also, you may choose from:

CS 3810 Introduction to Theory of Computing

CS 4820 Introduction to the Analysis of Algorithms

ORIE 3310 Optimization II

ORIE 4330 Discrete Models

ORIE 4350 Introduction to Game Theory

ORIE 4520 Introductory Engineering Stochastic Processes II

ORIE 5600 Financial Engineering with Stochastic Calculus I

ORIE 5610 Financial Engineering with Stochastic Calculus II

TAM 5780 Nonlinear Dynamics and Chaos

TAM 6100 Methods of Applied Mathematics I

TAM 6110 Methods of Applied Mathematics II

6. Mathematics courses

Any 3000+ level course offered by the Mathematics Department in algebra, analysis, probability/statistics, geometry, or logic, with the following exceptions:

- MATH 3230 or 4200, if any course from group 1 is chosen
- MATH 4710, if any course from group 3 is chosen
- MATH 4220, if TAM 3110 or AEP 3220 is chosen from group 5
- Only one of the following may be chosen:

MATH 3320 Algebra and Number Theory

MATH 3360 Applicable Algebra

MINOR: BIOLOGICAL ENGINEERING

Offered by the Department of Biological and Environmental Engineering

Contact: 207 Riley-Robb Hall, 255-2173, www.bee.cornell.edu

Students in all majors except biological engineering may participate. Students should meet with the BE coordinator as soon as they decide to pursue the minor and before their senior year. They will work with a BEE faculty advisor, who will assist them in completing their minor.

Educational objectives of the minor:

Biological engineering is the application of engineering to living systems. Examples of engineering efforts in this field include the development of new biosensor technologies, study and control of biologically based matter transformation systems, and development of

engineered devices to study and regulate fundamental biological processes. The biological engineering minor is an opportunity for students to further their understanding of living systems and to increase their knowledge of the basic transport processes that occur within these systems. Courses in the minor provide opportunities to analyze and manipulate living systems at the molecular, cellular, and system levels.

Academic standards: At least C– in each course in the minor and a GPA ≥ 2.0 in all courses in the minor

Requirements

At least six courses (≥ 18 credits), with at least three courses and 9 credits taught in BEE as follows:

I. Biology Foundation (at least one but no more than two courses)

BIOBM 3300 or 3310–3320 Biochemistry

BIOMI 2900 Microbiology

BIONB 2220 Neurobiology

II. Biological Engineering Core (at least one but no more than two courses)

BEE 2600 Principles of Biological Engineering

BEE 3500 Biological and Environmental Transport Processes

BEE 3600 Molecular and Cellular Bioengineering

BEE 3310 Bio-fluid Mechanics

III. Biological Engineering Concentration Electives (minimum of 3 courses)

Choose any three courses from the concentration lists below. Courses appearing in more than one concentration do not double count. BEE 3600 may be taken as either a concentration elective or a core course.

Biomedical Engineering Concentration

AEP 4700 Biophysical Methods (also BIONB 4700)

BEE 3600 Molecular and Cellular Bioengineering (also BME 3600)

BEE 3650 Properties of Biological Materials

BEE 4500 Bioinstrumentation

BEE 4530 Computer-Aided Engineering: Applications to Biomedical Processes (also MAE 4530)

BEE 4540 Physiological Engineering

BEE 4590 Biosensors and Bioanalytical Techniques

BME 3300 Introduction to Computational Neurosciences (also BIONB/PSYCH/COGST 3300)

BME 4040 Biomedical System Design (also ECE 4020)

BME 5390 Biomedical Materials and Devices for Human Body Repair (also FSAD 4390)

BME 5650 Biomechanical Systems—Analysis and Design (also MAE 5650)

CHEME 4810 Biomedical Engineering (also BME 4810)

ECE 5780 Computer Analysis of Biomedical Images

MAE 4630 Neuromuscular Biomechanics (also BME 4630)

MAE 4640 Orthopaedic Tissue Mechanics

MSE 4610 Biomedical Materials and Their Applications

Bioprocess Engineering Concentration

BEE 3600 Molecular and Cellular Bioengineering (also BME 3600)

BEE 4500 Bioinstrumentation

BEE 4530 Computer Aided Engineering: Applications to Biomedical Processes (also MAE 4530)

BEE 4590 Biosensors and Bioanalytical Techniques

BEE 4640 Bioseparation Processes

BEE 4840 Metabolic Engineering

CHEM 3000 Quantitative Chemistry (does not count for Engineering credit)

CHEME 3320 Analysis of Separation Processes

CHEME 5430 Biomolecular Engineering of Bioprocesses

Bioenvironmental Engineering Concentration

BEE 3710 Physical Hydrology for Ecosystems

BEE 4010 Renewable Energy Systems

BEE 4350 Principles of Aquaculture

BEE 4710 Introduction to Groundwater (also EAS 4710)

BEE 4730 Watershed Engineering

BEE 4870 Sustainable Energy Systems

BEE 6510 Bioremediation Engineering: Organisms to Clean up the Environment

CEE 4510 Microbiology for Environmental Engineering

CEE 4520 Water Supply Engineering

MINOR: BIOMEDICAL ENGINEERING

Offered by the Department of Biomedical Engineering (BME)

Contact: Carol Casler, 120 Olin Hall, 255-1489, www.bme.cornell.edu/academics/undergraduate/biomedminor.cfm

All undergraduates are eligible to participate in this minor, but they may participate in only one of the biological engineering and the biomedical engineering minors.

Educational Objectives: Biomedical engineering is the application of engineering principles and methods to a wide array of problems associated with human health. The discipline includes the design of biocompatible materials, prostheses, surgical implants, artificial organs, controlled drug-delivery systems, and wound closure devices. Diagnosing diseases and determining their biological origins depend upon increasingly sophisticated instrumentation and the use of mathematical models. This minor allows students to gain exposure to the breadth and depth of biomedical engineering offerings at Cornell, to prepare for advanced studies in biomedical engineering, and to obtain transcript recognition for their interest and capability in this rapidly growing area.

Students are asked to complete a form declaring their interest in the minor with the biomedical engineering undergraduate minor coordinator in 120 Olin Hall. On the form you will be asked to choose a BME faculty advisor that you can consult about the BME minor plan.

Academic standards: At least C- in each course in the minor. A cumulative GPA \geq 2.0 for all courses in the minor.

Requirements

The 1-credit bioengineering seminar as well as at least six courses (\geq 18 credits) from the five categories listed below; two course groups need to be in categories 1. Introductory biology and/or 2. Advanced biology with no more than one course from category 1. Four courses must come from the following categories: 3. Molecular and cellular biological engineering, 4. Biomedical engineering analysis of physiological systems, and 5. Biomedical engineering applications with courses from at least two of these categories represented. At least four of the six courses must not be specifically required major degree courses or cross-listings.

Required course: BEE/BME 5010
Bioengineering Seminar (1 credit, 1 semester)

Category 1. Introductory biology (maximum of 4 credits and one course grouping toward the BME minor)

A score of 5 on (CEEB) Advanced Placement Biology

A score of 4 on (CEEB) Advanced Placement Biology and ENGR 1310: Introduction to Biomedical Engineering

A score of 4 on (CEEB) Advanced Placement Biology and BIOG 1103 or BIOG 1104 Biological Sciences, Laboratory

BIOG 1101, 1102, 1103, and 1104 Biological Sciences

BIOG 1105 and 1106 Introductory Biology

BIOG 1107 and 1108 General Biology

BIOG 1110 Biological Principles and ENGR 1310 Introduction to Biomedical Engineering

Category 2. Advanced biology

BIOAP 3110/VTBMS 3460 Introductory Animal Physiology Lectures

BIOBM 3300 Principles of Biochemistry, Individualized Instruction

BIOBM 3310 Principles of Biochemistry, Proteins and Metabolism

BIOBM 3320 Principles of Biochemistry, Molecular Biology

BIOBM 3330 Principles of Biochemistry, Proteins, Metabolism, and Molecular Biology

BIOGD 2810 Genetics

BIONB 2220 Neurobiology and Behavior II: Introduction to Neurobiology

BIOMI 2900 General Microbiology Lectures

Category 3. Molecular and cellular biomedical engineering

AEP 2520/ENGRD 2520 The Physics of Life

BEE 3600/BME 3600 Molecular and Cellular Bioengineering

BME 3010/CHEME 4010* Molecular Principles of Biomedical Engineering

BME 3020/CHEME 4020* Cellular Principles of Biomedical Engineering

Category 4. BME analysis of physiological systems

BEE 4540 Physiological Engineering

BIONB 3300/BME 3300/COGST 3300/PSYCH 3300 Introduction to Computational Neuroscience

BIONB 4910/BME 4910 Principles of Neurophysiology

BME 4010/MAE 4660* Biomedical Engineering of Metabolic and Structural Systems

BME 4020* Electrical and Chemical Physiology

CHEME 4810/BME 4810 Biomedical Engineering

MAE 4640/BME 4640 Orthopaedic Tissue Mechanics

Category 5. Biomedical engineering applications

AEP 4700/BIONB 4700/BME 5700 Biophysical Methods

BEE 3650 Properties of Biological Materials

BEE 4500 Bioinstrumentation

BEE 4530/MAE 4530 Computer-Aided Engineering: Applications to Biomedical Processes

BEE 5400 Biomedical Computation

BEE 4590 Biosensors and Bioanalytical Techniques

BEE 5830 Cell-Biomaterials Interactions

BME 4110 Science and Technology Approaches to Problems in Human Health

BEE 5600 Biotransport and Drug Delivery

BME 5810/MAE 5680 Soft Tissue Biomechanics

CS 3510/BIOBM 3510/ENGRD 3510 Numerical Methods in Computational Molecular Biology

ECE 5020/BME 5020 Biomedical System Design

ECE 5780/BME 5780 Computer Analysis of Biomedical Images

MSE 4610 Biological Materials and Their Applications

MSE 5620/BME 5620 Biomineralization: The Formation and Properties of Inorganic Biomaterials

FSAD 4390/BME 5390 Biomedical Materials and Devices for Human Body Repair

*Students interested in professional practice as biomedical engineers should consider an M.Eng. degree in BME. The recommended sequence for admission is as follows: two courses from categories 1 and 2, BME 3010, 3020, 4010, and 4020. The program requires students to have a knowledge of molecular and cellular biomedical engineering, and of biomedical engineering analysis of physiological systems.

MINOR: CIVIL INFRASTRUCTURE

Offered by the School of Civil and Environmental Engineering

Contact: 221 Hollister Hall, 255-3412, www.cee.cornell.edu

Students affiliated with all majors except civil engineering may participate in this minor.

The minor in civil infrastructure is intended to introduce undergraduates to the engineering methodologies of mechanics, materials, analysis, design, and construction and to show how these are used in solving problems in the development, maintenance, and operation of the built environment that is vital for any modern economy.

Academic standards: At least C in each course in the minor

Requirements

At least six courses (\geq 18 credits), chosen as follows:

1. Required course: ENGRD 2020 Mechanics of Solids
2. Additional courses: choose any five (groupings are for information only)*

Geotechnical engineering

CEE 3410 Introduction to Geotechnical Engineering

CEE 4400 Foundation Engineering

CEE 4410 Retaining Structures and Slopes

CEE 4440 Environmental Site and Remediation Engineering

Structural engineering

CEE 3710 Structural Modeling and Behavior

CEE 3720 Intermediate Solid Mechanics

CEE 4710 Fundamentals of Structural Mechanics

CEE 4720 Introduction to the Finite Element Method

CEE 4730 Design of Concrete Structures

CEE 4740 Introduction to the Behavior of Metal Structures

CEE 4780 Structural Dynamics and Earthquake Engineering

Other related courses

CEE 5950 Construction Planning and Operations

*Other CEE courses may be approved by petition in advance

MINOR: COMPUTER SCIENCE

Offered by the Department of Computer Science

Contact: 303 Upson Hall, 255-0982, www.cs.cornell.edu

Students affiliated with all majors except Computer Science are eligible to participate in this minor. This minor is for students who anticipate that computer science will play a prominent role in their academic and professional career.

Academic standards: At least C in each course in the minor.

Requirements

At least six courses (18 credits) chosen as follows:

1. Required courses
CS/ENGRD 2110 Computers and Programming
- One of the following:
CS 3410 Systems Programming, or
CS 3420/ECE 3140 Computer Organization
2. Additional courses
Four CS courses numbered 3000 or higher with the following exceptions:
CS 4999 and seminars are excluded
CS 2800 is allowed

Cross-listed courses cannot be applied to the minor unless taken under the CS rubric, with the sole exception of ECE 3140 and CS courses also listed as ENGRD. All qualifying courses must be taken at Cornell for a letter grade. No substitutions allowed.

MINOR: ELECTRICAL AND COMPUTER ENGINEERING

Offered by the School of Electrical and Computer Engineering

Contact: 223 Phillips Hall, 255-4309, www.ece.cornell.edu

Students affiliated with all majors except Electrical and Computer Engineering are eligible to participate in this minor.

This minor offers the opportunity to study analog and digital circuits, signals and systems, and electromagnetics and to concentrate at higher levels in one of several different areas such as circuit design, electronic devices, communications, computer engineering, networks, and space engineering.

Academic standards: At least C– in each course in the minor. GPA ≥ 2.3 for all courses in the minor.

Requirements

At least six courses (≥ 18 credits), chosen as follows:

1. Two of the following:
ECE/ENGRD 2100 Introduction to Circuits for Electrical and Computer Engineers
ECE 2200 Signals and Information
ECE/ENGRD 2300 Introduction to Digital Logic Design
2. Two of the following:
ECE 3030 Electromagnetic Fields and Waves
ECE/ENGRD 3100 Introduction to Probability and Random Signals
ECE 3140/CS 3420 Computer Organization or CS 3410 Systems Programming
ECE 3150 Introduction to Microelectronics
3. One other non-project ECE course at the 3000 level or above (3-credit minimum)
4. One other non-project ECE course at the 4000 level or above (3-credit minimum)

MINOR: ENGINEERING MANAGEMENT

Offered by the School of Civil and Environmental Engineering

Contact: 221 Hollister Hall, 255-3412, www.cee.cornell.edu

Students affiliated with all majors are eligible to participate in this minor. CEE students may not use courses simultaneously to satisfy a requirement for the minor and as a major-approved elective or design elective. ORE students have some specific restrictions and requirements as noted below.

This minor focuses on giving students a basic understanding of engineering economics, accounting, statistics, project management methods, and analysis tools necessary to manage technical operations and projects effectively. The minor provides an important set of collateral skills for students in any engineering discipline.

Academic standards: At least C in each course in the minor.

Requirements

At least six courses (≥ 18 credits), chosen as follows:

1. Required courses (3):
CEE 3230 Engineering Economics and Management
or ORIE 4150 Economic Analysis of Engineering Systems
ORIE 3150 Financial and Managerial Accounting¹
CEE 3040 Uncertainty Analysis in Engineering²
or ENGRD 2700 Basic Engineering Probability and Statistics
or ECE 3100 Introduction to Probability and Random Signals
2. Additional courses—choose any three³
CEE 4060 Civil Infrastructure Systems
CEE 4920 Engineers for a Sustainable World: Engineering in International Development
CEE 5930 Engineering Management Methods⁴
CEE 5950 Construction Planning and Operations
CEE 5970 Risk Analysis and Management
NBA 5070 Entrepreneurship for Scientists and Engineers
or MAE/ENGRG 4610/ORIE 4152 Entrepreneurship for Engineers
or BEE 4890 Engineering Entrepreneurship, Management and Ethics

¹ORIE students must substitute NCC 5560 or NBA 5000 for ORIE 3500

²TAM 3100 cannot be substituted for CEE 3040

³Other courses approved by petition in advance

⁴This course is not accepted for ORIE students

MINOR: ENGINEERING STATISTICS

Offered by the School of Operations Research and Information Engineering

Contact: 203 Rhodes Hall, 255-5088, www.orie.cornell.edu

Students affiliated with all majors except Operations Research and Engineering are eligible to participate in this minor.

The goal of the minor is to provide the student with a firm understanding of statistical principles and engineering applications and the ability to apply this knowledge in real-world situations.

Academic standards: At least C– in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements

At least six courses (≥ 18 credits), chosen as follows:

1. Required courses:
ENGRD 2700 Basic Engineering Probability and Statistics
ORIE 3500 Basic Engineering Probability and Statistics II *or* ECE 3100 Introduction to Probability and Random Signals
2. Four of these (≥ 11 credits)*:
ORIE 3510 Introductory Engineering Stochastic Processes I *or* ECE 4110 Random Signals in Communications/Signal Processing
ORIE 4580 Simulation Modeling and Analysis
ORIE 4710 Applied Linear Statistical Models
ORIE 4711 Experimental Design
ORIE 4712 Regression
ORIE 5550 Applied Time Series Analysis
ORIE 5770 Quality Control
MATH 4720 Basic Probability *or* BTRY 4090 Theory of Statistics
BTRY 6020 Statistical Methods II
BTRY 6030 Statistical Methods III *or* ILRST 4110 Statistical Analysis of Qualitative Data
ILRST 3100 Statistical Sampling
ILRST 4100 Techniques of Multivariate Analysis

*Other course options approved by petition in advance. Some of these courses require others as prerequisites. All these courses are cross-listed under the Department of Statistical Science.

MINOR: ENVIRONMENTAL ENGINEERING

Offered jointly by the Department of Biological and Environmental Engineering and the School of Civil and Environmental Engineering

Contact: 207 Riley-Robb Hall, 607 255-2173, www.bee.cornell.edu, or 221 Hollister Hall, 607 255-3412, www.cee.cornell.edu

Students affiliated with all majors except environmental engineering are eligible to participate in this minor. Civil engineering

majors may not use courses simultaneously to satisfy a requirement for the minor and as a major-approved elective or design elective.

A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be trustees and managers of our nation's resources, the air in our cities, and water in our aquifers, streams, estuaries, and coastal areas. This minor encourages engineering students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues.

Academic standards: At least C- in each course in the minor. GPA \geq 2.0 for all courses in the minor.

Requirements

At least six courses (\geq 18 credits), chosen from the following groups, with at least one course from each group.

Group A. Environmental engineering processes:

- BEE/ENGRD 2510 Engineering for a Sustainable Society
- CEE 3510 Environmental Quality Engineering
- CEE 4510 Microbiology for Environmental Engineering
- CEE 4520 Water Supply Engineering
- CEE 4530 Laboratory Research in Environmental Engineering
- CEE 4540 Sustainable Small-Scale Water Supplies
- CEE 4550 AguaClara: Sustainable Water Supply Project
- BEE 4760 Solid Waste Engineering
- CEE 4440 Environmental Site and Remediation Engineering
- BEE/EAS 4800 Our Changing Atmosphere: Global Change and Atmospheric Chemistry
- CEE 4920 Engineers for a Sustainable World
- BEE 6510 Bioremediation
- CEE 6530 Water Chemistry for Environmental Engineering
- CEE 6560 Physical/Chemical Process
- CEE 6570 Biological Processes
- CEE 6580 Biodegradation and Biocatalysis

Group B. Environmental systems

- ENGR/CEE 1130* Sustainable Design for Appledore Island (*may count only if taken before the junior year)
- BEE 4750 Environmental Systems Analysis
- CEE 5970 Risk Analysis and Management
- CEE 6230 Environmental Quality Systems Engineering

Group C. Hydraulics, hydrology, and environmental fluid mechanics

- CEE 3310 Fluid Mechanics (CHEME 3230 or MAE 3230 may be substituted for CEE 3310)
- CEE 3320 Hydraulic Engineering

BEE 3710 Physical Hydrology for Ecosystems

BEE/EAS 4710 Introduction to Groundwater

CEE 4320 Hydrology

CEE 4360 Case Studies in Environmental Fluid Mechanics

CEE 4370 Experimental Methods in Fluid Dynamics

BEE 4730 Watershed Engineering

BEE 4740 Water and Landscape Engineering Applications

CEE 6310 Computational Simulation of Transport in the Environment

CEE 6330 Flow in Porous Media and Groundwater

CEE 6550 Transport, Mixing, and Transformation in the Environment

BEE 6710 Analysis of the Flow of Water and Chemicals in Soils

BEE 6720 Drainage

MINOR: GAME DESIGN

Offered by the Department of Computer Science

See: gdiac.cis.cornell.edu/courses.php

Requirements:

At least six (6) courses (18-credit minimum) chosen as follows:

Required courses: Complete the following two courses:

- CIS 3000 Introduction to Computer Game Design
- CIS 4002 Advanced Projects in Game Design

Additional Courses: Choose four of the following 12 courses:

CS-focused courses:

- CS/ENGRD 2110 Object-Oriented Programming and Data Structures
- CS 4450 Computer Networks
- ARCH 3704/CS 4620 Introduction to Computer Graphics
- CS 4700 Foundations of Artificial Intelligence
- CS 5620 Interactive Computer Graphics
- CS 5643 Physically Based Animation for Computer Graphics

Other courses:

- ART 2730/CIS 5640 (CS 5640 not allowed) Advanced Animation
- COMM 4220 Psychology of Entertainment Media
- ECE 4760 Designing with Microcontrollers
- COMM/INFO 3450 Human-Computer Interaction
- COMM/INFO 4400 Advanced Human-Computer Interaction Design
- COGST 3420/PSYCH 3420/VISST 3422 Human Perception: Applications to Computer Graphics, Art, and Visual Display

Academic standards: at least a letter grade of C is required for each course in the minor

Note: CS majors cannot take courses from the CS-focused list for the Game Design minor.

MINOR: INDUSTRIAL SYSTEMS AND INFORMATION TECHNOLOGY

Offered by the School of Operations Research and Information Engineering

Contact: 203 Rhodes Hall, 255-5088, www.orie.cornell.edu

Students affiliated with all majors except Operations Research and Engineering and Information Science, Systems, and Technology are eligible to participate in this minor.

The aim of this minor is to provide an in-depth education in issues central to the design and analysis of operational systems, and the tools from information technology that have become an integral part of the manufacturing, finance, service, and public health industries. Students will become familiar with the problems, perspectives, and methods found in these fields and be prepared to work with professionals in designing and managing them. That is, rather than providing a comprehensive view of the range of methodological foundations of operations research, this minor is designed to give the student a focused education in application areas closely associated with these techniques.

Academic standards: At least C- in each course in the minor. GPA \geq 2.0 for all courses in the minor.

Requirements

At least six courses (\geq 18 credits), chosen as follows:

1. Required courses:
 - ENGRD 2700 Basic Engineering Probability and Statistics
 - ORIE 3120 Industrial Data and Systems Analysis
 - ORIE 4800 Information Technology
2. The remaining courses chosen from:
 - ORIE 3150 Financial and Managerial Accounting
 - ORIE 3300 Optimization I
 - ORIE 4150 Economic Analysis of Engineering Systems
 - ORIE 4580 Simulation Modeling and Analysis
 - ORIE 4810 Delivering OR Solutions with Information Technology
 - ORIE 4850 Applications of Operations Research and Game Theory to Information Technology
 - ORIE 5100 Design of Manufacturing Systems
 - ORIE 5120 Production Planning and Scheduling Theory and Practice
 - ORIE 5770 Quality Control

MINOR: INFORMATION SCIENCE

Offered by the Department of Computer Science

Contact: Undergraduate Programs Office, 303 Upson Hall, 255-9837, www.infosci.cornell.edu

Students affiliated with any major except Information Science, Systems, and Technology are eligible to participate in this minor.

The interdisciplinary field of information science covers all aspects of digital information. The program has three main areas: information systems, human-centered systems, and social systems. Information systems studies the computer science problems of representing, storing, manipulating, and using digital information. Human-centered systems studies the relationship between humans and information, drawing from human-computer interaction and cognitive science. Social systems examines information in its economic, legal, political, cultural, and social contexts.

The minor has been designed to ensure that students have substantial grounding in all three areas in addition to having a working knowledge of basic probability and statistics necessary for analyzing real-world data.

Academic standards: At least C in all courses for the minor; S–U courses are not allowed. All courses must be taken at Cornell.

Requirements

Note: These requirements apply to students in the College of Engineering. Students who are not in the College of Engineering should refer to the IS minor requirements listed in the CIS section of this publication.

At least six courses (18 credits) chosen as follows:

- Statistics: one course (must be ENGRD 2700 or CEE 3040)
- Information Systems: two courses
- Human-Centered Systems: one course
- Social Systems: one course
- Elective: one additional course from either Human-Centered Systems or Social Systems

Statistics

An introductory course that provides a working knowledge of basic probability and statistics and their application to analyzing real-world data.

ENGRD 2700 Basic Engineering Probability and Statistics

CEE 3040 Uncertainty Analysis in Engineering

Information Systems

CS 2110 Object-Oriented Programming and Data Structures*

MINOR: MATERIALS SCIENCE AND ENGINEERING

Offered by the Department of Materials Science and Engineering

Contact: 214 Bard Hall, 255-9159, www.mse.cornell.edu

Students affiliated with all majors except materials science and engineering are eligible to participate in this minor.

Materials properties are the foundation of many engineering disciplines including mechanical, civil, chemical, and electrical engineering. This minor provides students with a fundamental understanding of mechanisms that determine the ultimate performance, properties, and processing characteristics of modern materials.

Academic standards: At least C in each course in the minor.

Requirements

At least six courses (≥ 18 credits), chosen as follows:

1. ENGRD 2610 Mechanical Properties of Materials: From Nanodevices to Superstructures, or ENGRD 2620 Electronic Materials for the Information Age

2. Two of:
 - MSE 2060 Atomic and Molecular Structure of Matter
 - MSE 3010 Materials Chemistry
 - MSE 3030 Thermodynamics of Condensed Systems
 - MSE 3040 Kinetics, Diffusion, and Phase Transformations
 - MSE 3050 Electronic, Magnetic, and Dielectric Properties of Materials
 - MSE 4020 Mechanical Properties of Materials, Processing, and Design
3. Three electives chosen from:
 - Any MSE course at the 3000 level or above.

Selected courses in materials properties and processing (at the 3000 level or above) from AEP, CHEME, CEE, ECE, MAE, PHYS, and CHEM, as approved by the MSE undergraduate major coordinator.

MINOR: MECHANICAL ENGINEERING

Offered by the Sibley School of Mechanical and Aerospace Engineering

Contact: 108 Upson Hall, 255-3573, www.mae.cornell.edu

Students affiliated with all majors except MAE are eligible to participate in this minor. Students intending to earn this minor should seek advice and pre-approval of their minor academic program from the associate director for undergraduate affairs in mechanical engineering before taking courses toward the minor.

Academic standards: At least C- in each course in the minor.

Requirements

At least six courses (≥ 18 credits) from among the following: MAE courses at the 2000 level or above; ENGRD 2020 Mechanics of Solids; ENGRD 2030 Dynamics.

Rules for selecting courses:

1. The selection of courses must satisfy the following three requirements.
 - a. At least two courses must be numbered above 3000.
 - b. At least one course must be either (i) numbered above 5000 or (ii) numbered above 3260 and have as a prerequisite ENGRD 2020, 2030, or a MAE course.
 - c. Each course must be worth at least 3 credits.
2. All courses used to satisfy the MAE minor must be MAE courses, ENGRD 2020 or 2030. No substitutions will be accepted from other departments at Cornell or elsewhere. Transfer credit may not be used to satisfy the MAE minor. MAE 1110 Naval Ship Systems, or MAE 4980 Teaching Experience in Mechanical Engineering, may not be used toward satisfying the M.E. minor.

MINOR: OPERATIONS RESEARCH AND MANAGEMENT SCIENCE

Offered by the School of Operations Research and Information Engineering

Contact: 203 Rhodes Hall, 255-5088, www.orie.cornell.edu

Students affiliated with all majors except Operations Research and Engineering and Information Science, Systems, and Technology are eligible to participate in this minor.

Operations research and management science supports decision making through modeling and analysis of complex systems. This understanding is used to predict system behavior and improve system performance. This minor gives the student the opportunity to obtain a wide exposure to the core methodological tools of operations research and management science, including mathematical programming, stochastic and statistical models, and simulation. The intent of this minor is to provide a broad knowledge of the fundamentals, rather than to train the student in a particular application domain. With this preparation, students can adjust their advanced courses and pursue either methodological or application-oriented areas most relevant to their educational goals.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements

At least six courses (≥ 18 credits), chosen as follows:

1. At least three of these courses:
 - ENGRD 2700 Basic Engineering Probability and Statistics
 - ORIE 3300 Optimization I
 - ORIE 3310 Optimization II
 - ORIE 3500 Engineering Probability and Statistics II
 - ORIE 3510 Introduction to Engineering Stochastic Processes I
 - ORIE 4580 Simulation Modeling and Analysis
2. Any ORIE courses at the 3000 level or higher (including those in 1).

MINOR: SCIENCE OF EARTH SYSTEMS

Offered by the Department of Earth and Atmospheric Sciences

Contact: 2124 Snee Hall, 255-5466, www.eas.cornell.edu

Students affiliated with all majors except science of earth systems are eligible to participate.

Some of the major problems facing mankind in this century involve earth science, especially the generation of new energy sources for a growing world population, and engineers will be challenged to solve these problems. This minor will prepare engineering students to understand the natural operating systems of Earth and the tools and techniques used by earth scientists to understand and monitor these solid and fluid systems.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements

At least six courses (≥ 18 credits), chosen as follows:

1. EAS 2200 The Earth System
2. At least two of these courses:
 - EAS 3010 Evolution of the Earth System
 - EAS 3030 Introduction to Biogeochemistry
 - EAS 3040 Interior of the Earth
 - EAS 3050 Climate Dynamics
3. Additional EAS courses at the 3000 level or higher to make up the balance of 18 credits. These may include, e.g., additional courses from the above lists, undergraduate research courses, and outdoor field courses.

MASTER OF ENGINEERING DEGREES

The M.Eng. is a professional degree usually completed in two semesters. The curriculum offers advanced training, is practice-oriented, and is designed to assist engineers in development of their professional careers. Completion of the M.Eng. degree requires a design project rather than thesis research. The M.Eng. provides the technical expertise and leadership skills needed in business, government, and industry.

Office of Research and Graduate Studies (RGS), 222 Carpenter Hall, <http://meng.engineering.cornell.edu>.

The following one-year (30-credit) professional master of engineering (M.Eng.) degrees are offered (giving also the administering unit)

M.Eng. (Aerospace Engineering): mechanical and aerospace engineering

M.Eng. (Biological and Environmental Engineering): biological and environmental engineering

M.Eng. (Biomedical Engineering): biomedical engineering

M.Eng. (Chemical Engineering): chemical and biomolecular engineering

M.Eng. (Civil and Environmental Engineering): civil and environmental engineering

M.Eng. (Computer Science): computer science

M.Eng. (Electrical and Computer Engineering): electrical and computer engineering

M.Eng. (Engineering Management): civil and environmental engineering

M.Eng. (Engineering Mechanics): theoretical and applied mechanics

M.Eng. (Engineering Physics): applied and engineering physics

M.Eng. (Geological Sciences): earth and atmospheric sciences

M.Eng. (Materials Science and Engineering): materials science and engineering

M.Eng. (Mechanical Engineering): mechanical and aerospace engineering

M.Eng. (Operations Research and Information Engineering): operations research and information engineering

M.Eng. (Systems Engineering): systems engineering

Many Cornell baccalaureate engineering graduates spend a fifth year at Cornell, earning an M.Eng. degree, although the program is also open to qualified graduates of other schools.

Requirements for admission vary by program. In general, the standard M.Eng. application requirements include

- Statement of purpose
- Complete transcripts from each college or university attended
- At least two letters of recommendation
- Graduate Record Examination (GRE) scores—may not be required by all M. Eng. programs

Many M.Eng. programs waive the GRE requirement and one of the letters of recommendation for students with Cornell Engineering B.S. degrees. Check with the appropriate office for specific program requirements. A list of links and general admission information is posted on <http://meng.engineering.cornell.edu>.

Superior Cornell students who will have between 1 and 8 credits remaining in their last undergraduate semester may petition for early admission to the M.Eng. program. They spend the last semester finishing up their B.S. degree and taking courses that count toward their M.Eng. degree.

Master of Engineering Minors and Concentrations

The following M.Eng. minors and concentrations are offered:

Minors

- bioengineering
- engineering management
- manufacturing
- systems engineering

Concentrations

- applied operations research
- astronautics
- bioinstrumentation/diagnostics
- biomedical materials and mechanics
- complex system development
- data mining and analytical marketing
- drug delivery and cellular/tissue engineering
- dynamics, controls and robotics
- energy and sustainable development
- energy economics and engineering
- engineering mathematics and modeling
- environmental and water resources systems engineering
- environmental fluid mechanics and hydrology
- environmental geophysics
- environmental processes

- financial engineering
- geohydrology
- geotechnical engineering
- information technology
- mechanics of materials
- micro and nanoscale engineering
- nanosystems
- semester in strategic operations
- structural engineering
- technology management for ECE
- thermal-fluidic sciences
- transportation systems engineering

For further information: <http://meng.engineering.cornell.edu>.

Cooperative Program with the Johnson Graduate School of Management

Undergraduates may be interested in a cooperative program at Cornell that leads to both master of engineering and master of business administration (M.B.A.) degrees. With appropriate curriculum planning, such a combined B.S./M.Eng./M.B.A. program can be completed in six years at Cornell, with time out for work experience. For undergraduates from other schools, it may be feasible to complete the M.Eng./M.B.A. program in two years, possibly with an intervening summer or time out for work experience if they do not already have it on coming to Cornell. This accelerated program often incorporates the 12-month M.B.A. program of the Johnson Graduate School of Management (JGSM).

Because 95 percent of the students in the JGSM have work experience, there will typically be a gap for work experience between the M.Eng. and M.B.A. portions of the program for students who do not already have it when beginning the M.Eng. portion.

For further details, visit Engineering Advising (167 Olin Hall), the RGS office (222 Carpenter Hall), the JGSM office in Sage Hall, or the office of your intended undergraduate major.

Lester Knight Scholarship Program

The Lester Knight Scholarship Program is designed to assist and encourage Cornell Engineering students and alumni interested in combining their engineering education with a business degree. The program offers two options or categories of financial support:

- Undergraduate Knight Scholarship
- Alumni Knight Scholarship

Each program has different qualifications and is open to Cornell engineering students and alumni at different stages of their educational or professional career. Participation in the program requires admission by each respective academic program (M.Eng. or M.B.A.) as well as an application to participate in the Knight Scholarship Program.

Contact RGS or refer to the Knight Scholarship web site (www.engr.cornell.edu/knightscholarships) for program specifics.

MASTER OF ENGINEERING (AEROSPACE ENGINEERING)

Offered by the Sibley School of Mechanical and Aerospace Engineering

Contact: 107 Upson Hall, 255-5250, www.mae.cornell.edu

The M.Eng. (Aerospace Engineering) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include aerodynamics, turbulent flows, nonequilibrium flows, combustion, dynamics and control, computational fluid dynamics, and spacecraft.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty advisor. This program and any subsequent changes must also be approved by the Director of the Master of Engineering program. An individual student's curriculum includes a 4- to 8-credit design/research course, a minimum of 12 credits in aerospace engineering or a closely related field with some technical focus, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

Design projects must have an aerospace engineering design or research focus and have the close supervision of a faculty member. The projects may arise from individual faculty and student interests or from collaboration with industry.

All courses must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the approval of the Director of the Master of Engineering program.

Check with the MAE graduate field office (107 Upson Hall) for additional degree requirements.

Students enrolled in the M.Eng. (Aerospace Engineering) degree program may take courses that also satisfy the requirements of the bioengineering, engineering management, or systems engineering minors.

MASTER OF ENGINEERING (BIOLOGICAL AND ENVIRONMENTAL ENGINEERING)

Offered by the Department of Biological and Environmental Engineering

Contact: 207 Riley-Robb hall, 255-2173, www.bee.cornell.edu

Educational Goals

The Master of Engineering (M.Eng.) program prepares graduates for professional positions in biological and environmental engineering. The program is flexible, allowing candidates to select their courses and project area to meet their individual goals. In addition to advanced courses in the Department of

Biological and Environmental Engineering, students have access to courses in all fields and programs in the College of Engineering. The M.Eng. program is designed to foster a close student-faculty mentoring relationship. While many students view the M.Eng. as a "fifth and final year" of formal engineering study, it is definitely appropriate and feasible to pursue advanced graduate study following the M.Eng. program if this is desired.

Curriculum Requirements

A total of 30 credits* is required for the master of engineering degree, and the program is usually completed in two semesters. Cornell Engineering undergraduates may apply early and be accepted into the program in their last undergraduate semester if they have 8 or fewer credits remaining in their bachelor's program. All M.Eng. students must complete the following:

- BEE 5951-5952 Master of Engineering Design Project, 3 to 9 credits
- Biological and Environmental Engineering focus courses, 9 credits minimum
- A total of 30 credits* approved by their M.Eng. faculty advisor

Students choose their design project and complete appropriate courses in one of the following areas:

- Bioenergetics and Stress Factors
- Biomechanics
- Controlled-Environment Agriculture
- Energy Systems Engineering
- Engineering to Solve Global Challenges
- Food Process Engineering
- Metabolic Engineering
- Microbial Fuel cells
- Micro-bioreactors
- Molecular Bioengineering
- Nucleic Acid Engineering
- Physiological Engineering
- Soil and Water Engineering

*Detailed requirements are shown on the department web site.

Applicants to the program need to apply directly to the Cornell Grad School at www.gradschool.cornell.edu.

MASTER OF ENGINEERING (BIOMEDICAL ENGINEERING)

Offered by the Department of Biomedical Engineering

Contact: 109 Weill Hall, 255-2573, www.bme.cornell.edu

Our mechanistic understanding of biology has increased rapidly over the past 20 years, and many expect biology to drive engineering and technology in the next 50 years in much the same way that physics drove them in the 20th century. As biology has become more mechanistic, the opportunities to apply engineering approaches have increased enormously. Simultaneously, humanitarian needs and economic opportunities for the application of engineering to improve health

care have increased significantly. Engineers who understand biology and can apply their knowledge and skills to improve human health are increasingly in demand. A professional degree in biomedical engineering will prepare students to fill this increasing critical need.

The breadth and depth of knowledge needed in biomedical engineering makes a four-year B.S. degree program impractical. By combining the M.Eng. (Biomedical Engineering) with a strong B.S. program, a student can obtain the knowledge and skills necessary to be an effective professional biomedical engineer.

Students will acquire an in-depth knowledge of an essential area of biomedical engineering as well as a broad perspective of the biomedical engineering discipline that complements their undergraduate education in engineering or science. Graduates will be equipped to design biomedical devices and develop therapeutic strategies within the bounds of health care economics, the needs of patients and physicians, the regulatory environment for medical devices and pharmaceuticals, and stringent ethical standards.

Students will acquire depth by extending undergraduate concentrations, by selecting one of three areas for concentrated study, and by completing a design project in their area of concentration. The areas are biomedical mechanics and materials; bioinstrumentation/diagnostics; and drug delivery and cellular/tissue engineering. Design projects will be carried out in teams to take advantage of the diversity of student backgrounds and, when possible, projects will be done in collaboration with industrial or clinical partners.

Students from a wide variety of backgrounds in engineering and science are encouraged to apply. They are expected to have completed two semesters of calculus-based physics, at least three semesters of math, starting with calculus, and introductory computer science.

A knowledge of molecular- and cellular-base biomedical engineering and engineering analysis of physiological systems at the level of BME 3010, 3020, 4010, and 4020 is highly recommended. This knowledge can be demonstrated through appropriate undergraduate course work (at least C in each class). Students lacking the appropriate background may need to complete additional courses (beyond the normal 30 credits) to demonstrate appropriate knowledge in these two subject areas.

MASTER OF ENGINEERING (CHEMICAL ENGINEERING)

Offered by the School of Chemical and Biomolecular Engineering

Contact: 358 Olin Hall, 255-4550, www.cheme.cornell.edu

The Master of Engineering (Chemical) is a 30-credit, typically one year, professional program designed to provide the flexibility to increase depth of knowledge in a specialty area, or to broaden students' breadth of knowledge, or to enhance their competitiveness for graduate programs. New "umbrella" program concentrations in "energy economics and engineering" and in "molecular

biotechnology" provide a unique opportunity for a focused interdisciplinary approach in these important career choices. The program includes the option to acquire supervisory training and practice.

Specific requirements include

1. 12 credits in CHEME courses distributed among chemical and biomolecular engineering fundamentals. One required from among CHEME 7110, 7310, and 7510 and the remainder in chemical and biomolecular engineering applications (partial list: CHEME 4800, 4810, 4840, 5200, 5209, 5430, 5720, 6310, 6400, 6610, 6640, and 6650).
2. A minimum of 3 credits of an individual or group project, CHEME 5650.
3. At least 3 credits to demonstrate a knowledge of business practices and techniques for pollution abatement and control. If this knowledge has already been acquired by students as undergraduates, they are exempt from this requirement. If not, a CHEME course (e.g., CHEME 5720 and 6610) or another non-CHEME course covering these topics is required.

MASTER OF ENGINEERING (CIVIL AND ENVIRONMENTAL ENGINEERING)

Offered by the School of Civil and Environmental Engineering

Contact: 219 Hollister Hall, 255-7560, www.cee.cornell.edu

The Master of Engineering degree is a course work and project-oriented program. It is normally completed in two semesters of intensive study. Thirty credit hours are required, consisting of course work in a major concentration and a supporting area, as well as a design project.

Students may focus their studies in one of six major subject areas: environmental and water resource systems engineering, environmental fluid mechanics and hydrology, environmental processes, geotechnical engineering, structural engineering, and transportation systems engineering. Courses in supporting areas come from many disciplines, including architecture, computer science, economics, engineering management, historic preservation, materials science, microbiology and operations research to name just a few.

MASTER OF ENGINEERING (COMPUTER SCIENCE)

Offered by the Department of Computer Science

Contact: 322 Upson Hall, 255-8720, www.cs.cornell.edu/grad/meng

The M.Eng. program in computer science can be started in either the fall or spring semester. This program is designed to develop expertise in system design and implementation in many areas of computer science, including computer networks, Internet architecture, fault-tolerant and secure systems, distributed and parallel computing, high-performance computer architecture, databases and data mining,

multimedia systems, computer vision, computational tools for finance, computational biology (including genomics), software engineering, programming environments, and artificial intelligence.

A typical program includes several upper-division and graduate courses and a faculty-supervised project. The flexible requirements allow students to build up a program that closely matches their interests. Project work, which may be done individually or in a small group, is often associated with ongoing research in the Department of Computer Science in one of the areas listed above, but it can also be done in collaboration with many fields throughout the university.

Cornell seniors may use the early admission option, which allows them to take courses toward their M.Eng. degree while completing their undergraduate degree. The Early Admit option can be started in either the fall or spring semester. It applies only to students who have 1 to 8 credits remaining to complete their undergraduate program. All remaining undergraduate degree requirements must be satisfied by the end of the first semester the student is enrolled in the M.Eng. "early admit" program.

For students with a non-CS background, there is an "extended" program option of four semesters where students use the first two semesters to complete prerequisite courses needed for the more advanced master's-level courses.

MASTER OF ENGINEERING (ELECTRICAL AND COMPUTER ENGINEERING)

Offered by the School of Electrical and Computer Engineering

Contact: Student Services Office, 223 Phillips Hall, 255-8414, www.ece.cornell.edu/aca-meng.cfm

The M.Eng. (Electrical) degree program prepares students either for professional work in Electrical and Computer Engineering and closely related areas or for further graduate study in a doctoral program. The M.Eng. degree differs from the master of science degree mainly in its emphasis on professional skills, engineering design, and analysis skills rather than basic research.

The program requires 30 credits of advanced technical course work beyond that expected in a typical undergraduate program, including at least four graduate-level courses in Electrical and Computer Engineering. The required Electrical and Computer Engineering design project may account for 3 to 8 credits of the M.Eng. program. Occasionally, students take part in very extensive projects and may petition to increase the project component to 10 credits. Students with special career goals, such as engineering management, may apply to use up to 9 credits of approved courses that have significant technical content but are taught in disciplines other than engineering, math, or the physical sciences.

Although admission to the M.Eng. (Electrical and Computer Engineering) program is highly competitive, all well-qualified students are urged to apply. Further information is available at the web site listed above.

MASTER OF ENGINEERING (ENGINEERING MANAGEMENT)

The M.Eng. (Engineering Management) program is designed for engineers who want to stay in a technical environment but advance to managerial roles. Students learn to identify problems, formulate and analyze models to understand these problems, and interpret the results of analyses for managerial action.

A student's program of study is designed individually in consultation with an academic advisor and then submitted to the school's Professional Degree Committee for approval.

For the M.Eng. (Engineering Management) program, the requirements are at least 30 credits of Approved Courses, including:

1. Four core courses: These include CEE 5900 Project Management, CEE 5910 Management Project, CEE 5930 Engineering Management Methods, and CEE 5970 Risk Analysis and Management..
2. Two managerial breadth courses, including one in finance/accounting and one focused on behavior.
3. Three electives.

The School of Civil and Environmental Engineering cooperates with the Johnson Graduate School of Management in a joint program leading to both Master of Engineering and Master of Business Administration degrees. See the beginning of the section "Master of Engineering Degrees."

MASTER OF ENGINEERING (ENGINEERING MECHANICS)

Offered by the Department of Theoretical and Applied Mechanics

Contact: Marcia Sawyer, 107 Upson Hall, 255-5250, www.tam.cornell.edu

This two-semester professional degree program stresses applications of Engineering Mechanics and Applied Mathematics and Modeling. The centerpiece of the program is a project, either single or team-based, on important real-world problems.

Engineering Mechanics: Students in this program will deepen and broaden their knowledge of mechanics as applied to different material systems. The course work centers on additional study of solid mechanics, fracture mechanics, materials and computational methods widely used in industries (e.g., the finite element method). Potential employers are companies interested in computer modeling of mechanical systems and failure and reliability analysis.

Applied Mathematics and Modeling: Students in this program do course work in mathematical modeling and computational methods. They will have great flexibility in their choice of studies. Students who graduate from this program are in a good position to pursue higher degrees or work for financial or informational organizations.

Laboratories: TAM has many laboratories related to research areas and courses of study for the M.Eng. program:

- Ultrasonic and Materials Characterization Laboratory—*Wolfgang Sachse*

- Bio-robotics and Locomotion Laboratory—*Andy Ruina*
- Granular Flow Research Laboratory—*Jim Jenkins*
- Composites Laboratory—*Leigh Phoenix and Petru Petrina*
- Fracture Mechanics Laboratory—*Alan Zehnder*
- Dynamics Laboratory—*Dan Mittler*
- Mechanics of Solids Laboratory—*Dan Mittler*
- Biological Fluid Dynamics Laboratory—*Jane Wang*

Course Work:

(project 10–12 credit hours)

Current Interesting Projects

1. Animal, Human and Robotic Locomotion—*Andy Ruina*
2. Dynamical Systems—*Richard Rand*
3. Stress Rupture Testing of High-Performance Fibers and Yarns—*S. Leigh Phoenix*
4. Mathematics of Finance (capital budgeting, economic analysis Scholes—Black Diffusion Theory)—*K. Bingham Cady*
5. Fracture and Reliability—*Hui, Phoenix, Zehnder*
6. Response Theory—*K. Bingham Cady*
7. Nuclear Reactor Theory—*K. Bingham Cady*
8. Determination of Elastic Constance of Composite Materials Using Ultrasonics—*Wolfgang Sachse*

MASTER OF ENGINEERING (ENGINEERING PHYSICS)

Offered by the School of Applied and Engineering Physics

Contact: 212 Clark Hall, 255-5198,
www.aep.cornell.edu

The M.Eng. (Engineering Physics) degree may lead directly to employment in engineering design and development or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser and optical technology, nanostructure science and technology, device physics, materials characterization, or software engineering. Wide latitude is allowed in the choice of the required design project.

Students plan their program in consultation with the program chair. The objective is to provide a combination of a good general background in physics and introductory study in a specific field of applied physics. Candidates may enter with an undergraduate preparation in physics, engineering physics, or engineering. Those who have majored in physics usually seek advanced work with an emphasis on engineering; those who have majored in an engineering discipline generally seek to strengthen their physics base. Candidates coming from industry usually want instruction in both areas. Students granted the degree will have demonstrated competence in an appropriate core of basic physics. If this has not been accomplished before entering the M.Eng. program, undergraduate classes in electricity and magnetism, classical mechanics, and quantum mechanics may be required in addition to the classes taken to satisfy the M. Eng. requirements.

The degree requires 30 credits of graduate-level courses or their equivalent, with at least C- in each course, and distributed as follows:

1. a design project in applied science or engineering with a written final report (6 to 12 credits)
2. an integrated program of graduate-level courses, as discussed below (17 to 23 credits)
3. a required special-topics seminar course (1 credit)

The design project, which is proposed by the student and approved by the program chair, is carried out on an individual basis under the guidance of a member of the university faculty. It may be experimental or theoretical in nature; if it is not experimental, a laboratory physics course is required.

The individual program of study consists of a compatible sequence of courses focused on a specific area of applied physics or engineering. Its purpose is to provide an appropriate combination of physics and physics-related courses (applied math, statistical mechanics, applied quantum mechanics) and engineering electives (e.g., courses in biophysics, chemical engineering, electrical engineering, materials science, computer science, mechanical engineering, or nuclear engineering). Additional science and engineering electives may be included. Some courses at the senior level (4000) are acceptable for credit toward the degree; other undergraduate courses may be required as prerequisites but may not be credited toward the degree.

MASTER OF ENGINEERING (GEOLOGICAL SCIENCES)

Offered by the Department of Earth and Atmospheric Sciences

Contact: 2124 Snee Hall, 255-5466,
www.eas.cornell.edu

The one-year M.Eng. (Geological Sciences) degree program provides future professional geologists or engineers with the geological and engineering background they will need to analyze and solve engineering problems that involve geological variables and concepts. Individual programs are developed within two established options: geohydrology and environmental geophysics.

Incoming students are expected to have a strong background in mathematics, the physical sciences, and chemistry and have a strong interest and substantial background in the geological sciences. The 30-hour M.Eng. program is intended to extend and broaden this background to develop competence in four subject categories. Typical categories for the geohydrology option are porous media flow, geology, geochemistry, and numerical modeling. Typical categories for the environmental geophysics option are geophysics, geology, porous media fluid flow, and computer methods. The courses a student selects in a category will vary depending on the student's background. No courses may be required in some categories, and the categories can be adjusted to the student's interest and needs. Alternatives to numerical modeling in the geohydrology option could be economics or biochemistry, for example. To count toward the 30-credit degree requirement, courses must be at a graduate or advanced undergraduate level.

At least 10 of the 30 hours in the program must involve engineering design. Much of this requirement is normally met through a design project, which can account for over one-third of the program (12 of 30 credits) and must constitute at least 3 credits. The design project must involve a significant geological component and lead to concrete conclusions or recommendations of an engineering nature.

The project topic can be drawn from a student's nonacademic work experience but carried out or further developed with advice from a Cornell faculty member with expertise in the project area selected by the student. A design project in geohydrology would normally involve groundwater flow and mass transport. A design project in environmental geophysics might involve implementation of a field survey using seismological, geoelectrical, or ground-penetrating radar methods to map subsurface stratigraphic or structural features that control groundwater flow or contamination at a site. Projects are presented both in written form and orally in a design seminar at the end of the year.

MASTER OF ENGINEERING (MATERIALS SCIENCE AND ENGINEERING)

Offered by the Department of Materials Science and Engineering

Contact: 214 Bard Hall, 255-9159,
www.mse.cornell.edu

Students who have completed a four-year undergraduate program in engineering or the physical sciences can be considered for admission into the M.Eng. (Materials Science and Engineering) program. This 30-credit program includes course work and a master's design project. The project, which requires individual effort and initiative, is carried out under the supervision of a faculty member. Twelve credits are devoted to the project, which is normally experimental in nature, although computational or theoretical projects are also possible.

Courses for the additional 18 credits are selected from the graduate-level classes in materials science and engineering and from other related engineering fields approved by the faculty. Typically half of the courses are from MSE. One 3-credit technical elective must include advanced math (modeling, computer application, or computer modeling) beyond the MSE undergraduate requirements.

MASTER OF ENGINEERING (MECHANICAL ENGINEERING)

Offered by the Sibley School of Mechanical and Aerospace Engineering

Contact: 107 Upson Hall, 255-5250,
www.mae.cornell.edu

The M.Eng. (Mechanical Engineering) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

Candidates may concentrate on any of a variety of specialty areas, including biomechanical engineering, energy systems, combustion, propulsion and power systems, fluid mechanics, heat transfer, materials and manufacturing engineering, and mechanical systems and design.

A coordinated program of courses for the academic year is agreed upon by the student and the faculty advisor. This program and any subsequent changes must also be approved by the Director of the Master of Engineering

program. An individual student's curriculum includes a 4- to 8-credit design/research course, a minimum of 12 credits in mechanical engineering or a closely related field with some technical focus, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have a mechanical engineering design/research focus and have the close supervision of a faculty member.

All courses must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have special approval of the Director of the Master of Engineering program.

The technical electives may be courses of appropriate level in engineering, math, physics, chemistry, or biology; a maximum of two courses may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives.

Check with the MAE graduate field office (107 Upson Hall) for additional degree requirements.

Students enrolled in the M.Eng. (Mechanical Engineering) degree program may take courses that also satisfy the requirements of the bioengineering, engineering management, systems engineering, or manufacturing minors.

MASTER OF ENGINEERING (OPERATIONS RESEARCH AND INFORMATION ENGINEERING)

Offered by the School of Operations Research and Information Engineering

Contact: 201 Rhodes Hall, 255-9128,
www.orie.cornell.edu/orie/academics/meng

This professional degree program stresses applications of operations research. The centerpiece of the program is a team-based project on a significant real-world problem. The course work centers on additional study of analytical techniques, with particular emphasis on the design or improvement of systems and processes in manufacturing, information, finance, and service organizations.

General admission and degree requirements are described in the introductory "Degree Programs" section. The ORIE M.Eng. program is designed to serve two groups of students: graduates of the undergraduate major in ORE who wish to deepen their practical knowledge of the field, and qualified undergraduates from other fields who want to complement their engineering or technical backgrounds with a solid foundation in operations research and information engineering.

For admission, the entering student should have completed an introductory course in probability and statistics, an intermediate-level course in computer science, as well as four semesters of mathematics, including

differential equations, linear algebra, and multivariate calculus. For the financial engineering concentration, the entering student must also have completed an intermediate-level probability course and a basic finance course.

Program requirements include a core of ORIE courses plus technical electives chosen from a broad array of offerings. There are several concentrations, each requiring a particular set of electives plus a specific project course. The concentrations include Applied Operations Research, Financial Engineering, Information Technology, Strategic Operations (which incorporates the Strategic Operations Immersion at the Johnson Graduate School of Management), Data Analytics, and Manufacturing and Industrial Engineering. Students may also minor in systems engineering. Several of these options are offered jointly with other Cornell departments and schools and provide the opportunity to interact with students and specialists in business and other engineering fields. For information about the manufacturing and industrial engineering concentration, contact the Center for Manufacturing Enterprise, 291 Grumman Hall, 255-5545; about the Strategic Operations Immersion, 304 Sage Hall, 255-4691; about systems engineering, 280 Rhodes Hall, 254-8998, and for all others, 201 Rhodes Hall, 255-9128.

The applied operations research concentration is designed to be completed in two semesters. The financial engineering concentration is highly specialized and typically requires three semesters to complete. This permits an industry internship in the summer between semesters as well as a third semester of study in New York City. For scheduling reasons, and depending on the student's preparation, the other concentrations may entail an additional summer or semester.

The manner in which the M.Eng. project requirement is met depends on the chosen concentration. Common elements in all project experiences include working as part of a team of three to five students on an engineering design problem, meeting with a faculty advisor on a regular basis, and presenting the final results to the project sponsor. Most projects have industrial client sponsors and address problems that actually exist in practice.

Applicants who already hold graduate degrees in other fields may be interested in the possibility of completing both an M.Eng. and an M.B.A. program within a period of two years, possibly with intervening work experience. This possibility incorporates the Johnson Graduate School of Management Accelerated M.B.A. Program, which is completed in 12 months.

Additional program requirements are described in the *Master of Engineering Handbook* and on the web. For further details, see the contact information at the beginning of this section.

ENGINEERING COURSES

Courses offered in the College of Engineering are listed under the various departments and schools.

Courses are identified with a standard abbreviation followed by a four-digit number.

Engineering Communications	ENGRC
Engineering Distribution	ENGRD
Engineering General Interest	ENGRG
Engineering Introductions	ENGR I
Applied and Engineering Physics	AEP
Biological and Environmental Engineering BEE	
Chemical and Biomolecular Engineering	CHEME
Civil and Environmental Engineering	CEE
Computer Science	CS
Computing and Information Science	CIS
Earth and Atmospheric Sciences	EAS
Electrical and Computer Engineering	ECE
Information Science	INFO
Materials Science and Engineering	MSE
Mechanical and Aerospace Engineering	MAE
Nuclear Science and Engineering	NSE
Operations Research and Information Engineering	ORIE
Systems Engineering	SYSEN
Theoretical and Applied Mechanics	TAM

ENGINEERING COMMON COURSES

Engineering Communications Courses

Courses in this category, offered by the Engineering Communications Program (ECP), develop writing and oral-presentation skills needed by engineers.

ENGRC 3020 Writing-intensive Opportunity: Practicum in Technical Writing

Fall, spring. 1 credit.

One-credit attachment to an existing engineering course that is not one of the officially designated W-I courses. It may be taken more than once, with different courses by permission of a particular engineering faculty member.

ENGRC 3340 Independent Study in Engineering Communications

1–3 credits, variable. Letter grades. TBA with instructor.

Members of the ECP occasionally give independent (also called "directed") studies in engineering communications, typically with students who are ready for advanced work in technical writing. A student doing a directed study works one-on-one with an ECP instructor to pursue an aspect of professional communications in more depth than is possible in the ECP's regular courses. Various types of projects are possible, e.g., studying forms of technical documentation, creating user manuals, analyzing and producing technical graphics, reading and writing about problems in engineering practice, and writing about technical topics for the public.

ENGR 3350 Communications for Engineering Managers (LA)

Fall, spring, 3 credits. Fulfills college technical-writing requirement. May be used as free or approved elective in expressive arts. Intended for juniors and seniors. Limited to 20 students per sec. Prerequisite: two first-year writing seminars and major affiliation.

This seminar focuses on communications in organizational contexts common to engineering graduates. Topics may include internal and external communications; balancing visual and verbal elements in documents and oral presentations; teamwork and leadership; running and attending meetings; management strategies; and communicating with colleagues, superiors, subordinates, and clients. Students develop writing and management strategies that they apply in individual and team assignments. They learn how to organize technical and managerial information, articulate and support ideas, and communicate with technical and nontechnical audiences.

ENGR 3500 Engineering Communications (LA)

Fall and spring, 3 credits. Designed for juniors and seniors. Fulfills college technical-writing requirement. May be used as free or approved elective in expressive arts. Limited to 20 students per sec. Prerequisite: two first-year writing seminars and affiliation with a major.

This course prepares students for important communication activities. They write various types of documents (e.g., letters, memos, executive summaries, problem analyses, proposals, progress reports), give oral presentations, and incorporate graphics in their oral and written work. Students learn how to communicate specialized information to different audiences (e.g., technical and nontechnical people, colleagues and clients, peers and supervisors, in-house departments, and government agencies), work in teams, and address organizational and ethical issues. The course material is drawn from professional contexts, principally engineering, and it generates lively discussion. The class size ensures close attention to each student's work. (Note: Absences are limited to three, after which sharp penalties occur.)

Engineering Distribution Courses

Courses in this category are sophomore-level courses cross-listed with a department. These courses are intended to introduce students to more advanced concepts of engineering and may require pre- or corequisites.

ENGR 2020 Mechanics of Solids (also TAM 2020)

Fall, spring, 4 credits. Prerequisite: PHYS 1112, co-registration in MATH 1920, or permission of instructor. All students must take a lab section. Staff.

Covers principles of statics, force systems, and equilibrium; frames; mechanics of deformable solids, stress, strain, statically indeterminate problems; mechanical properties of engineering materials; axial force, shearing force, bending moment, thermal stress, stretching; bending and torsion of bars. Laboratory experiments demonstrate basic principles of solid mechanics.

ENGR 2030 Dynamics (also TAM 2030)

Fall, spring, 3 credits. Prerequisite: ENGR/TAM 2020, co-registration in MATH 2930, or permission of instructor. All students must take a lab and a section.

Newtonian dynamics of a particle, systems of particles, a rigid body. Kinematics, motion relative to a moving frame. Impulse, momentum, angular momentum, energy. Rigid-body kinematics, angular velocity, moment of momentum, the inertia tensor. Euler equations, the gyroscope. Laboratory experiments demonstrate basic principles of dynamics.

ENGR 2100 Introduction to Circuits for Electrical and Computer Engineers (also ECE 2100)

Fall, spring, 4 credits. Corequisites: MATH 2930 and PHYS 2213. All students must take a lab and a section.

First course in electrical circuits and electronics. Establishes the fundamental properties of circuits with application to modern electronics. Topics include circuit analysis methods, operational amplifiers, basic filter circuits, and elementary transistor principles. The laboratory experiments are coupled closely with the lectures.

ENGR 2110 Object-Oriented Programming and Data Structures (also CS 2110)

Fall, spring, summer, 3 credits. Prerequisite: CS 1110, CS 1130, or CS 1113 or (CS 1112 if completed before fall 2007), or equivalent course in Java or C++.

Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, object-oriented programming (classes, objects, types, sub-typing), graphical user interfaces, algorithm analysis (asymptotic complexity, big "O" notation), recursion, data structures (lists, trees, stacks, queues, heaps, search trees, hash tables, graphs), simple graph algorithms. Java is the principal programming language.

ENGR 2190 Mass and Energy Balances (also CHEME 2190)

Fall, 3 credits. Corequisite: physical chemistry course or permission of instructor. S. Daniel.

Engineering problems involving material and energy balances. Batch and continuous reactive systems in the steady and unsteady states. Introduction to phase equilibria for multicomponent systems. Examples drawn from a variety of chemical and biomolecular processes.

ENGR 2210 Thermodynamics (also MAE 2210)

Fall, spring, may be offered summer, 3 credits. Prerequisites: MATH 1920 Calculus for Engineers, and PHYS 1112 Physics I, Mechanics.

Presents the definitions, concepts, and laws of thermodynamics. Topics include the first and second laws, thermodynamic property relationships, and applications to vapor and gas power systems, refrigeration, and heat pump systems. Examples and problems are related to contemporary aspects of energy and power generation and to broader environmental issues.

ENGR 2300 Introduction to Digital Logic Design (also ECE 2300)

Fall, spring, 4 credits. Prerequisite: CS 1110 or CS 1112.

Introduction to the design and implementation of practical digital circuits. Topics include transistor network design, Boolean algebra, combinational circuits, sequential circuits, finite state machine design, and analog and digital converters. Design methodology using both discrete components and hardware description languages is covered in the weekly laboratory portion of the course.

ENGR 2510 Engineering for a Sustainable Society (also BEE 2510)

Fall, 3 credits. Pre- or corequisite: MATH 2930. B. A. Ahner.

Case studies of contemporary environmental issues including pollutant distribution in natural systems, air quality, hazardous waste management, and sustainable development. Emphasis is on the application of mathematics, physics, and engineering sciences to solve energy and mass balances in environmental sciences. Students are introduced to the basic chemistry, ecology, biology, ethics, and environmental legislation relevant to the particular environmental problem. BEE students must complete either BEE 2510 or BEE 2600 according to their academic plan. BEE students who complete both BEE 2510 and BEE 2600 receive engineering credit for only one of these courses.

ENGR 2520 The Physics of Life (also AEP 2520/5520)

Spring, 3 credits. Prerequisites: MATH 1920, CHEM 2070 or 2090, and co-registration in or completion of PHYS 2213. L. Pollack.

Introduces the physics of biological macromolecules (e.g., proteins, DNA, RNA) to students of the physical sciences or engineering who have little or no background in biology. The macromolecules are studied from three perspectives. First, the biological role or function of each class of macromolecules is considered. Second, a quantitative description of the physical interactions that determine the behavior of these systems is provided. Finally, techniques that are commonly used to probe these systems, with an emphasis on current research, are discussed.

ENGR 2600 Principles of Biological Engineering (also BEE 2600)

Fall, 3 credits. Pre- or corequisite: MATH 2930, BIOP 1101-1104 or 1105/1106. A. J. Baeumner.

Focuses on the integration of biological systems with engineering, math, and physical principles. Students learn how to formulate equations for biological systems in class and practice it in homework sets. Topics range from molecular principles of reaction kinetics and molecular binding events to macroscopic applications, such as energy and mass balances of bioprocessing and engineering design of implantable sensors. BEE students must complete either BEE 2510 or BEE 2600 according to their academic plan. BEE students who complete both BEE 2510 and BEE 2600 receive engineering credit for only one of these courses.

ENGR 2610 Mechanical Properties of Materials: From Nanodevices to Superstructures (also MSE 2610)

Fall, 3 credits. Prerequisite: MATH 1910. Corequisite: PHYS 1112 or permission of instructor. S. P. Baker.

Examines the mechanical properties of materials (e.g., strength, stiffness, toughness, ductility) and their physical origins. Topics include the relationship of elastic, plastic, and

fracture behavior to microscopic structure in metals, ceramics, polymers, and composite materials. Effects of time and temperature on materials properties, and considerations for design and optimal performance of materials in engineered objects and biological tissues.

ENGRD 2620 Electronic Materials for the Information Age (also MSE 2620)

Spring. 3 credits. Prerequisite: MATH 1920. Corequisite: PHYS 2213 or permission of instructor. G. Malliaras.

Examines the electrical and optical properties of materials. Topics include the mechanism of electrical conduction in metals, semiconductors and insulators, the tuning of electrical properties in semiconductors, the transport of charge across metal/semiconductor and semiconductor/semiconductor junctions, and the interaction of materials with light. Applications in electrophotography, solar cells, electronics, and display technologies are discussed.

ENGRD 2640 Computer-Instrumentation Design (also AEP 2640)

Fall, spring. 3 credits. Prerequisite: CS 1110; permission of instructor for seniors. 1 lec, 1 lab. T. Cool.

Covers the use of a small computer in an engineering or scientific research lab. The experiments and devices investigated include analog to digital converters (ADC), digital to analog converters (DAC), digital input/output (I/O), counter/timers, serial port communications, digital temperature control, error analysis, nonlinear least squares fitting of experimental data, viscosity of fluids, a robot arm, and thermal diffusion. C++ programming and graphical programming with LabVIEW™ are used for computer interfacing to hardware. Students develop effective written communication skills in the context of science and engineering. They prepare progress reports, technical reports, and formal articles based on the experiments.

ENGRD 2700 Basic Engineering Probability and Statistics

Fall, spring, summer. 3 credits. Prerequisites: MATH 1910 and 1920. MATH 2940 should be completed before or concurrently with ENGRD 2700.

Gives students a working knowledge of basic probability and statistics and their application to engineering. Includes computer analysis of data and simulation. Topics include random variables, probability distributions, expectation, estimation, testing, experimental design, quality control, and regression.

ENGRD 3100 Introduction to Probability and Random Signals (also ECE 3100)

Fall, summer. 4 credits. Prerequisites: MATH 2940, PHYS 2213, or equivalents.

For description, see ECE 3100.

ENGRD 3200 Engineering Computation

Spring. 3 credits. Prerequisites: CS 1112 and MATH 2930. Corequisite: MATH 2940. Recommended: completion of MATH 2940. P. J. Diamessis.

Introduction to numerical methods, computational mathematics, and probability and statistics. Development of programming and graphics proficiency with MATLAB and spreadsheets. Topics include Taylor-series approximations, numerical errors, condition numbers, operation counts, convergence, and stability, probability distributions, hypothesis testing. Included are numerical methods for solving engineering problems that entail roots

of functions, simultaneous linear equations, statistics, regression, interpolation, numerical differentiation and integration, and solution of ordinary and partial differential equations, including an introduction to finite difference methods. Applications are drawn from different areas of engineering. A group project uses these methods on a realistic engineering problem.

ENGRD 3220 Introduction to Scientific Computation (also CS 3220)

Spring, summer. 3 credits. Prerequisites: CS 1112 or 1132 and MATH 2220, 2230, or 2940.

An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. Uses the MATLAB computing environment. Stresses sectorization, efficiency, reliability, and stability. Special lectures cover computational statistics.

Courses of General Interest

Courses in this category are of general interest and cover technical, historical, and social issues relevant to the engineering profession. These courses may also include seminar or tutorial type courses.

ENGRG 1009 Cooperative Workshop for CHEM 2090

Fall, spring. 1 credit. Corequisite: CHEM 2090. S–U grades only.

Academic Excellence Workshop for CHEM 2090. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in CHEM 2090.

ENGRG 1011 Cooperative Workshop for CS 2110

Fall, spring. 1 credit. Corequisite: CS 2110. S–U grades only.

Academic Excellence Workshop for CS 2110. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in CS 2110.

ENGRG 1050 Engineering Seminar

Fall. 1 credit. Prerequisite: freshman standing. S–U grades only.

First-year engineering students meet in groups of 18 to 20 students weekly with their faculty advisors. Discussions may include the engineering curriculum and student programs, what engineers do, the character of engineering careers, active research areas in the college and in engineering in general, and study and examination skills useful for engineering students. Groups may visit campus academic, engineering, and research facilities.

ENGRG 1060 Exploration in Engineering Seminar

Summer. 1 credit. Designed for junior and senior high-school students.

Introduction to several engineering fields, such as bioengineering, chemical engineering, civil engineering, computer science, earth sciences, electrical and computer engineering, engineering physics, materials science, mechanical engineering, and operations research. Hands-on experience in weekly labs, as well as design projects to introduce concepts of the engineering design process.

ENGRG 1091 Cooperative Workshop for MATH 1910

Fall. 1 credit. Corequisite: MATH 1910. S–U grades only.

Academic Excellence Workshop for MATH 1910. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 1910.

ENGRG 1092 Cooperative Workshop for MATH 1920

Fall, spring. 1 credit. Corequisite: MATH 1920. S–U grades only.

Academic Excellence Workshop for MATH 1920. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 1920.

ENGRG 1093 Cooperative Workshop for MATH 2930

Fall, spring. 1 credit. Corequisite: MATH 2930. S–U grades only.

Academic Excellence Workshop for MATH 2930. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 2930.

ENGRG 1094 Cooperative Workshop for MATH 2940

Fall, spring. 1 credit. Corequisite: MATH 2940. S–U grades only.

Academic Excellence Workshop for MATH 2940. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 2940.

ENGRG 1010 Cooperative Workshop for CS 1110

Fall, spring. 1 credit. Corequisite: CS 1110. S–U grades only.

Academic Excellence Workshop for CS 1110. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in CS 1110.

ENGRG 1012 Cooperative Workshop for CS 1112

Fall, spring. 1 credit. Corequisite: CS 1112. S–U grades only.

Academic Excellence Workshop for CS 1112. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in CS 1112.

ENGRG 2350 Career Development for Engineering (also ECE 2350)

Spring. 2 credits. Prerequisite: second-semester freshman or sophomore standing. Introduces concepts and techniques that can be used now and in the future to set appropriate personal and professional career goals.

ENGRG 2500 Technology in Society (also ECE/HIST 2500, STS 2501)

Fall. 3 credits. Approved for humanities distribution.

Investigates the history of technology in Europe and the United States from ancient times to the present. Topics include the economic and social aspects of

industrialization; the myths of heroic inventors such as Morse, Edison, and Ford; the government's regulation of technology; the origins of mass production; and the spread of the automobile and microelectronics cultures in the United States.

ENGRG 2980 Inventing an Information Society (also ECE/AMST 2980, HIST 2920, STS/INFO 2921)

Spring. 3 credits. Approved for humanities distribution.

Explores the history of information technology from the 1830s to the present by considering the technical and social history of telecommunications, the electric-power industry, radio, television, computers, and the Internet. Emphasis is on the changing relationship between science and technology, the economic aspects of innovation, gender and technology, and other social relations of this technology.

ENGRG 3230 Engineering Economics and Management (also CEE 3230)

Spring, sometimes offered in summer for Engineering Co-op Program. 3 credits.

Primarily for juniors and seniors. Students must register under CEE 3230. F. Vanek.

Introduction to engineering and business economics investment alternatives and to project management. Intended to give students a working knowledge of money management and how to make economic comparisons of alternatives involving future benefits and cost. The impact of inflation, taxation, depreciation, financial planning, economic optimization, project scheduling, and legal and regulatory issues are introduced and applied to economic investment and planning and project-management problems.

[ENGRG 3570 Engineering in American Culture (also AMST/HIST 3570, STS 3571)]

ENGRG 3600 Ethical Issues in Engineering Practice (also ECE 3600, STS 3601) (KCM)

Spring. 3 credits. Open to sophomores. Studies major ethical and social issues involved in engineering practice. The issues include responsibility for designing products that do not harm public health, safety, and welfare; rights of engineers in large corporations; risk analysis and the principle of informed consent; conflict of interest; whistle blowing; trade secrets; and broader concerns such as environmental degradation, cost of health care, computer ethics, and working in multinational corporations. Codes of ethics of the professional engineering societies, ethical theory, and the history and sociology of engineering are introduced to analyze these issues.

ENGRG 4610 Entrepreneurship for Engineers (also MAE 4610, ORIE 4152)

Fall. 3 credits. Prerequisite: upper-level engineers or permission of instructor. For description, see MAE 4610.

ENGRG 6780 Teaching Seminar

Fall, spring. 1 credit. S-U grades only. Staff. Independent study promoting reflection on teaching styles and experiences for teaching assistants in the College of Engineering. Participants must be concurrently fulfilling a TA assignment. Requirements include participation in the College of Engineering's TA Development Program, consisting of an initial one and one-half day training session,

followed by one evening microteaching session early in the semester; participation in the TA midterm evaluation process, followed by a formal feedback session with program staff; and completion of a reflective journal on teaching experiences. Designed to provide TAs with the opportunity to process their understanding of teaching and learning through the formulation of questions, concepts, and theories related to their experiences.

Introduction to Engineering Courses

Courses in this category are first-year level courses intended to introduce students to various aspects of engineering. They have no prerequisites and most are cross-listed with a department.

ENGRG 1100 Lasers and Photonics (also AEP 1100)

Fall. 3 credits.

Lasers have had an enormous impact on communications, medicine, remote sensing, and material processing. This course reviews the properties of light that are essential to understanding the underlying principles of lasers and these photonic technologies. There also is a strong, hands-on laboratory component in which the students build and operate a nitrogen laser and participate in several demonstration experiments such as holography, laser processing of materials, optical tweezers, and fiber optics.

ENGRG 1101 Engineering Applications of Operations Research

Fall, spring. 3 credits. Not open to ORIE upper-level majors.

Introduction to the problems and methods of operations research and industrial engineering focusing on problem areas (including inventory, network design, and resource allocation), the situations in which these problems arise, and several standard solution techniques. In the computational laboratory, students encounter problem simulations and use some standard commercial software packages.

ENGRG 1110 Nanotechnology (also MSE 1110)

Fall. 3 credits. C. Umbach.

Nanotechnology has been enabling the Information Revolution with the development of even faster and more powerful devices for manipulation, storing, and transmitting information. In this hands-on course students learn how to design and manipulate materials to build devices and structures in applications ranging from computers to telecommunications to biotechnology.

ENGRG 1120 Introduction to Chemical Engineering (also CHEME 1120)

Fall. 3 credits. Prerequisite: first-year standing. T. M. Duncan.

Design and analysis of processes involving chemical change. Students learn strategies for design, such as creative thinking, conceptual blockbusting, and (re)definition of the design goal, in the context of contemporary chemical and biomolecular engineering. Includes methods for analyzing designs, such as mathematical modeling, empirical analysis by graphics, and dynamic scaling through dimensional analysis, to assess product quality, economics, safety, and environmental issues.

ENGRG 1130 Sustainable Design for Appledore Island (also CEE 1130)

Spring. 3 credits. J. J. Bisogni.

The course utilizes a unique environment, Appledore island, as an example of how sustainability is addressed in the design of basic components of the built environment; energy, water supply, and waste treatment. Students will present preliminary designs of sustainable systems to the engineering staff of Appledore Island.

ENGRG 1160 Modern Structures (also CEE 1160)

Fall. 3 credits. A. Ingraffea.

Introduction to structural engineering in the 21st century—the challenges structural engineers face and the innovative approaches they are using to address them. Using case studies of famous structures, students learn to identify different structural forms and understand how various forms carry load—using principles of statics, mechanics, and material behavior. The historical, economic, social, and political context for each structure is discussed. Case studies of failures are used to explain how structures fail in earthquakes and other extreme events, and students are introduced to analytical and experimental approaches (shake table and wind tunnel testing) to quantifying loads on structures subjected to extreme events. Types of structures considered include skyscrapers, bridges, aircraft, and underground structures.

ENGRG 1170 Introduction to Mechanical Engineering (also MAE 1170)

Fall. 3 credits.

Introduction to fundamentals of mechanical and aerospace engineering. Students learn and understand materials characteristics, the behavior of materials, and material selection for performing engineering function. They also learn fundamentals of fluid mechanics, heat transfer, automotive engineering, engineering design and product development, patents and intellectual property, and engineering ethics. In the final project, students use the information learned to design and manufacture a product.

ENGRG 1190 Biomaterials for the Skeletal System (also MSE 1190)

Fall. 3 credits. D. Grubb.

Biomaterials are at the intersection of biology and engineering. This course explores natural structural materials in the human body, their properties and microstructure, and their synthetic and semi-synthetic replacements. Bones, joints, teeth, tendons, and ligaments are used as examples, with their metal, plastic, and ceramic replacements. Topics include strength, corrosion, toxicity, wear, and biocompatibility. Case studies of design lead to consideration of regulatory approval requirements and legal liability issues.

ENGRG 1200 Introduction to Nanoscience and Nanoengineering (also AEP 1200)

Spring. 3 credits.

Lecture/laboratory course designed to introduce first-year students to some of the ideas and concepts of nanoscience and nanotechnology. Topics include nanoscience and nanotechnology—what they are and why they are of interest; atoms and molecules; the solid state; surfaces; behavior of light and material particles when confined to nanoscale dimensions; scanning tunneling microscopy (STM), atomic force microscopy (AFM), microelectromechanical systems (MEMS) design; basic micromachining and chemical synthesis methods, i.e., “top-down” and “bottom-up” approaches to nanofabrication;

how to manipulate structures on the nanoscale; physical laws and limits they place on the nanoworld; some far-out ideas. In the laboratory, students use an AFM to record atomic resolution images, use a MEMS computer-aided design software package to model the entire manufacturing sequence of a simple MEMS device, examine the simulated behavior of the device and compare it with real behavior, construct a simple STM and learn through hands on experience the basic workings of the device.

ENGRI 1220 Earthquake! (also EAS 1220)

Spring, 3 credits. L. Brown.

Explores the science of natural hazards, their societal impacts and means of mitigation. The focus is on earthquakes, volcanoes, and tsunamis, but hurricanes, severe weather, climate change, landslides, wildfires, and the threat of extinction from a future impact by an extraterrestrial body are also considered.

ENGRI 1260 Introduction to Signals and Telecommunications (also ECE 1260)

Spring, 3 credits.

Introduces the concepts that underlie wired and wireless communication systems. Students achieve a rudimentary understanding of basic ideas such as coding and data compression; frequency content, bandwidth, and filtering; sampling and reconstruction; and time- and frequency-division multiplexing. Discussions of practical applications focus on areas such as the public switched telephone network, ISDN, ATM, and TCP/IP. Students also develop an appreciation for the historical development of the field. The course includes both lectures and laboratory demonstrations.

ENGRI 1270 Introduction to Entrepreneurship and Enterprise Engineering (also MAE 1270)

Spring, 3 credits. Open to all Cornell students regardless of major. Prerequisite: none.

A solid introduction to the entrepreneurial process to students in engineering. The main objective is to identify and to begin to develop skills in the engineering work that occurs in high-growth, high-tech ventures. Basic engineering management issues, including the entrepreneurial perspective, opportunity recognition and evaluation, and gathering and managing resources are covered. Technical topics such as the engineering design process, product realization, and technology forecasting are discussed.

ENGRI 1310 Introduction to Biomedical Engineering (also BME 1310)

Spring, 3 credits. Prerequisite: freshman or sophomore standing. C. B. Schaffer and S. D. Archer.

Modern biology and medicine are undergoing a revolution as quantitative principles of measurement, analysis, and design are introduced to help solve a variety of scientific and medical problems. This course will provide an introduction to the study of biological systems with a quantitative perspective from the molecular to the cellular to the organism scale, as well as to the design of practical devices for studying biological systems and treating disease. Collaborative work will be a key element in all aspects of the course, from the lectures and labs, to the assignments and term project.

ENGRI 1610 Computing in the Arts (also CIS/CS 1610, DANCE 1540, FILM 1750, MUSIC 1465, PSYCH 1650)

Fall, 3 credits. Complements ART 1701+ and MUSIC 1421+. S-U or letter grades. For description, see CS 1610 in the CIS section.

ENGRI 1620 Visual Imaging in the Electronic Age (also ART 1700, CIS/CS 1620)

Fall, 3 credits. S-U or letter grades. Staff. For description, see ART 1700.

APPLIED AND ENGINEERING PHYSICS

F. W. Wise, director; L. Pollack, director of undergraduate studies; C. Xu, director of graduate studies; D. Muller, M.Eng. coordinator; M. Lindau, Co-op coordinator; J. D. Brock, R. A. Buhrman, T. A. Cool, H. G. Craighead, C. J. Fennie, A. L. Gaeta, V. O. Kostroun, M. Lindau, R. V. E. Lovelace, D. Muller, L. Pollack, J. Silcox, W. W. Webb, F. W. Wise, C. Xu. Adjunct faculty: D. H. Bilderback, Q. Hao, S. Heinekamp. Senior research associate: E. J. Kirkland. Lecturer: L. Wickham

AEP 1100 Lasers and Photonics (also ENGRI 1100)

Fall, 3 credits. Course in Introduction to Engineering series. For description, see ENGRI 1100.

AEP 1200 Introduction to Nanoscience and Nanoengineering (also ENGRI 1200)

Spring, 3 credits. Course in Introduction to Engineering series. For description, see ENGRI 1200.

AEP 2170 Electricity and Magnetism (also PHYS 2217)

Fall, spring, 4 credits. Prerequisites: permission of advisor and instructor; co-registration in PHYS 2216 or knowledge of special relativity at level of PHYS 1116; MATH 1920 or equivalent and co-registration in MATH 2930 or equivalent. Staff. Intended for students who have done well in PHYS 1112 or 1116 (or equivalent) and mathematics and who desire a more analytic treatment than that of PHYS 2213. At the level of *Electricity and Magnetism* by Purcell. Recommended for prospective engineering physics majors. Placement quiz may be given early in semester, permitting students who find material too abstract or analytical to transfer into PHYS 2213 without difficulty.

AEP 2520 The Physics of Life (also AEP 5520, ENGRD 2520)

Spring. Prerequisites: MATH 1920, CHEM 2070 or 2090, and co-registration in or completion of PHYS 2213. L. Pollack. For description, see ENGRD 2520.

AEP 2640 Computer-Instrumentation Design (also ENGRD 2640)

Fall, spring, 3 credits. Prerequisites: seniors by permission of instructor; CS 1110. 1 lec, 1 lab. For description, see ENGRD 2640.

AEP 3210 Mathematical Physics I

Fall, summer, 4 credits. Prerequisite: MATH 2930. Intended for upper-level undergraduates in physical sciences. (Prior completion of common course curriculum mathematics and physics courses strongly recommended.) B. Kusse.

Review of vector analysis; complex variable theory, Cauchy-Riemann conditions, complex Taylor and Laurent series, Cauchy integral formula and residue techniques, conformal mapping; Fourier Series; Fourier and Laplace transforms; ordinary differential equations; separation of variables. Texts: *Mathematical Methods for Physicists* by Arfken and *Mathematical Physics* by Butkov.

AEP 3220 Mathematical Physics II

Spring, 4 credits. Prerequisite: AEP 3210. Second of two-course sequence in mathematical physics intended for upper-level undergraduates in physical sciences. B. Kusse.

Topics include partial differential equations, Bessel functions, spherical harmonics, separation of variables, wave and diffusion equations, Laplace, Helmholtz, and Poisson's Equations, transform techniques, Green's functions; integral equations, Fredholm equations, kernels; complex variables, theory, branch points and cuts, Riemann sheets, method of steepest descent; tensors, contravariant, and covariant representations; group theory, matrix representations, class and character. Texts: *Mathematical Methods for Physicists* by Arfken and *Mathematical Physics* by Butkov.

AEP 3240 Maple Supplement to Mathematical Physics 321 and 322

Spring, 1 credit. R. V. E. Lovelace. A broad introduction to Maple in applications to problems of mathematical physics similar to those covered in AEP 3210 and 3220. Uses Maple to solve differential equations—both linear and nonlinear. Makes extensive use of plotting capabilities of Maple. Also covers matrices, complex functions, Laplace and Fourier transforms (and FFTs), and group theory. Gives an introduction to LaTeX.

AEP 3300 Modern Experimental Optics (also PHYS 3300)

Fall, 4 credits. Limited enrollment. Prerequisite: PHYS 2214 or equivalent. E. Bodenschatz.

Practical laboratory course in basic and modern optics. The various projects cover a wide range of topics from geometrical optics to classical wave properties such as interference, diffraction, and polarization. Each experimental setup is equipped with standard, off-the-shelf optics and opto-mechanical components to provide the students with hands-on experience in practical laboratory techniques currently employed in physics, chemistry, biology, and engineering. Students are also introduced to digital imaging and image processing techniques.

AEP 3330 Mechanics of Particles and Solid Bodies

Fall, summer, 4 credits. Prerequisites: PHYS 1112 or 1116 and co-registration in AEP 3210 or equivalent or permission of instructor. Staff.

Covers Newton's mechanics; constants of the motion; many-body systems; linear oscillations; variational calculus; Lagrangian and Hamiltonian formalism for generalized coordinates; non-inertial reference systems; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; and basic introduction to relativistic mechanics. Emphasis is on mathematical treatments, physical concepts, and applications. (At the level of *Classical Dynamics* by Marion and Thorton.)

AEP 3550 Intermediate Electromagnetism

Fall, beginning third week of Oct.; summer; second half of semester. 2 credits. Prerequisite: PHYS 2213 or 2217 and co-registration with AEP 3210, or permission of instructor.

Intermediate-level course on electromagnetic theory with a focus on statics. Vector calculus, electrostatics, conductors, dielectric materials, boundary conditions, solutions to Laplace's equation, and magnetostatics. Emphasis is on developing proficiency with analytical techniques and intuitive understanding of fundamental electromagnetism.

AEP 3560 Intermediate Electrodynamics

Spring. 4 credits. Prerequisite: AEP 3550 and co-registration with AEP 3220, or permission of instructor.

Second course in theory of electromagnetism. Magnetic materials, Faraday's law, Maxwell equations, electromagnetic waves, reflection and transmission, guided waves, and radiation.

AEP 3610 Introductory Quantum Mechanics

Fall, through second week of Oct.; summer, first half of semester. 2 credits. Prerequisites: PHYS 2213 or 2217 and co-registration with AEP 3210, or permission of instructor.

Introductory course on the theory of quantum mechanics. Topics include waves, Schrödinger's equation and the concept of the wavefunction, simple potentials, and the harmonic oscillator model. Emphasis is on developing an intuitive understanding of quantum mechanics.

AEP 3620 Intermediate Quantum Mechanics

Spring, 4 credits. Prerequisite: AEP 3610 or PHYS 3316 and co-registration with AEP 3220 or permission of instructor.

Continuation of AEP 3610 covering more advanced material in quantum mechanics. Topics include operator formalism and matrix representation, angular momentum and spin, the hydrogen atom, techniques for solving Schrödinger's equation including perturbation theory, two- and three-level systems, interaction with radiation, and identical particles.

AEP 3630 Electronic Circuits (also PHYS 3360)

Fall, spring, 4 credits. Prerequisites: PHYS 2208 or 2213 or permission of instructor. No previous experience with electronics assumed; however, course moves quickly through introductory topics such as basic DC circuits. Fall semester usually less crowded. 1 lec, 2 labs. Fall: E. Kirkland; spring: Staff.

Students analyze, design, build, and experimentally test circuits used in scientific and engineering instrumentation (with discrete components and integrated circuits). Analog circuits: resistors, capacitors, operational amplifiers (linear amplifiers with feedback, oscillators, comparators), filters, diodes, and transistors. Digital circuits: combinatorial (gates) and sequential (flip-flops, counters, shift registers) logic. Computer interfacing introduced and used to investigate digital to analog (DAC) and analog to digital conversion (ADC) and signal averaging.

AEP 4230 Statistical Thermodynamics

Fall. 4 credits. Prerequisite: introductory three-semester physics sequence, familiarity with quantum mechanics (AEP 3620) and one year junior-level mathematics. Staff.

Quantum statistical basis for equilibrium thermodynamics, microcanonical, canonical and grand canonical ensembles, and partition functions. Classical and quantum ideal gases, paramagnetic and multiple-state systems. Maxwell-Boltzmann, Fermi-Dirac, and Bose-Einstein statistics and applications. Introduction to systems of interacting particles. At the level of *Introductory Statistical Mechanics* by Bowley and Sanchez.

AEP 4340 Continuum Physics

Spring. 4 credits. Prerequisites: AEP 3330 and 3560 or equivalent. Staff.

Topics: Elasticity and Fluid Mechanics: basic phenomena of elasticity, simple beams, stress and strain tensors, materials equations, equations of motion, general beam equations, waves; fluids: basic phenomena, Navier Stokes equation, scaling laws, Reynolds and Froude numbers, Poiseuille flows, Stokes drag on sphere, boundary layers, inviscid and incompressible flows, potential flow, conservation laws, Bernoulli equation, vorticity and circulation, life of wings, jets, instabilities, introduction to turbulence. Projects in combination with AEP 4380 possible. At the level of *Continuum Mechanics* by Lai, Rubin, and Krepl and *Introduction to Fluid Mechanics* by Tritton.

AEP 4380 Computational Engineering Physics

Spring. 3 credits. Prerequisites: CS 1100 or 1112, AEP 3210, 3330, 3550, 3610, or equivalent, or permission of instructor; co-registration in 3620 permitted. Staff.

Numerical computation (e.g., derivatives, integrals, differential equations, matrices, boundary-value problems, relaxation, Monte Carlo methods) is introduced and applied to engineering physics problems that cannot be solved analytically (e.g., three-body problem, electrostatic fields, quantum energy levels). Computer programming required (in C or optionally C++, FORTRAN, or Pascal). Some prior exposure to programming assumed but no previous experience with C assumed.

AEP 4440 Quantum and Nonlinear Optics

Spring. 4 credits. Prerequisites: AEP 3560, 3620, or equivalent. Staff.

Introduction to the fundamentals of the interaction of laser light with matter and to optical devices based on these processes. Topics include the propagation of laser beams in bulk media and guided-wave structures, the origins of optical nonlinearities, harmonic generation, parametric amplification, self-focusing, optical switching, propagation of ultrashort pulses, solitons, four-wave mixing, optical phase conjugation, optical resonance and two-level atoms, atom cooling and trapping, multiphoton processes, spontaneous and simulated scattering, and ultra-intense laser-matter interactions.

AEP 4500 Introductory Solid State Physics (also PHYS 4454)

Fall. 4 credits. Highly recommended: some exposure to quantum mechanics at level of PHYS 4443, AEP 3620, or CHEM 7930. Staff.

Introduction the physics of crystalline solids. Covers crystal structures; electronic states; lattice vibrations; and metals, insulators, and

semiconductors. Computer simulations of the dynamics of electrons and ions in solids. Covers optical properties, magnetism, and superconductivity as time allows. The majority of the course addresses the foundations of the subject, but time is devoted to modern and/or technologically important topics such as quantum size effects. At the level of *Introduction to Solid State Physics* by Kittel or *Solid State Physics* by Ashcroft and Mermun.

AEP 4700 Biophysical Methods (also BIONB 4700)

Fall. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through sophomore level.

Recommended: some knowledge of cellular biology. Letter grades only.

Overview of the diversity of modern biophysical experimental techniques used in the study of biophysical systems at the cellular and molecular level. Topics include methods that examine both structure and function of biological systems, with emphasis on the applications of these methods to biological membranes. The course format includes assigned literature reviews by the students on specific biophysics topics and individual student presentations on these topics. The course is intended for students of the engineering, physics, chemistry, and biological disciplines who seek an introduction to modern biophysical experimental methods.

AEP 4840 Introduction to Controlled Fusion: Principles and Technology (also ECE/NSE 4840, MAE 4590)

Spring. 3 credits. On demand.

Prerequisites: PHYS 1112, 2213, and 2214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students;

For description, see NSE 4840.

AEP 4900-4910 Independent Study in Engineering Physics

Fall, spring. Credit TBA.

Laboratory or theoretical work in any branch of engineering physics under the direction of a member of the faculty. The study can take a number of forms; for example, design of laboratory apparatus, performance of laboratory measurements, computer simulation or software developments, theoretical design and analysis. Details TBA with respective faculty member.

AEP 5500 Applied Solid State Physics

Spring. 3 credits. Prerequisites: AEP 3560, 3620, 4230, 4500 or equivalent.

Directed at students who have had an introductory course in solid state physics at the level of Kittel. Concentrates on the application of the quantum mechanical theory of solid state physics to semiconductor materials, solid state electronic devices, solid state detectors and generators of electromagnetic radiation, superconducting devices and materials, the nonlinear optical properties of solids, ferromagnetic materials, nanoscale devices, and mesoscopic quantum mechanical effects. The course stresses the basic, fundamental physics underlying the applications rather than the applications themselves. At the level of *Introduction to Applied Solid State Physics* by Dalven.

AEP 5520 Physics of Life

Spring. 3 credits.

Introduces the physics of biological macromolecules (e.g., proteins, DNA, RNA) to students of the physical sciences or engineering who have little or no background in biology. The macromolecules are studied from three perspectives. First, the biological role or function of each class of macromolecules is considered. Second, a quantitative description of the physical interactions that determine the behavior of these systems is provided. Finally, techniques that are commonly used to probe these systems, with an emphasis on current research are discussed. Additional requirements for AEP M.Eng. students: Research current topic provided by the instructor and give an oral presentation in class.

AEP 5570 Applied Electrodynamics

Fall. 4 credits. At the level of Jackson's *Classical Electrodynamics*.

Topics include wave propagation in dielectrics, conductors, and plasmas; pulse propagation in dispersive media; reflection and transmission at interfaces; diffraction from apertures and periodic media; radiation from charged particles, dipoles, and antennae; scattering of radiation; waveguides and transmission lines; cavities and resonators.

AEP 5710 Biophysical Methods Advanced Laboratory

Spring, first three weeks of Jan. or TBA during spring semester. 3 credits.

Prerequisite: AEP 4700 highly recommended but qualified students who have not taken AEP 4700 also accepted.

Letter or S-U grades. M. Lindau.

Offered to students in the engineering, physics, chemistry, and biological disciplines who are interested in research at the interface between physical sciences/engineering and life sciences. In groups of two, participants perform five experiments in research laboratories on state-of-the-art equipment. Lab training sessions are arranged individually in January and throughout the spring semester. Typically each experiment is two days in the lab plus one day for analysis and report writing. The course is intended for students who seek hands-on introduction to modern biophysical experimental methods.

AEP 6070 Advanced Plasma Physics (also ECE 5820)

Spring. On demand. 4 credits.

Prerequisites: ECE 5810 and AEP 6060.

For description, see ECE 5820.

AEP 6330 Nuclear Reactor Engineering (also NSE 6330)

Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand. K. B. Cady.

For description, see NSE 6330.

AEP 6610 Nanocharacterization

Fall. 3 credits. Prerequisites: Fourier transforms, basic electromagnetism, and undergraduate quantum mechanics or chemistry. Undergraduates should consult with instructor before enrolling.

Graduate-level introduction to the tools used to image and probe optical, electronic, chemical, and mechanical properties at the nanoscale and below. Discussion centers on the physics of the interaction processes used for characterization, quantification, and interpretation of the collected signals, common artifacts, the engineering trade-offs made in constructing the actual instruments,

and the fundamental detection limits for each method. Topics include the interaction of electrons, ions, and photons with materials; scanned probe and force microscopy; scanning and transmission electron microscopy; x-ray microanalysis; electron energy loss spectroscopy; and a brief survey of non-imaging methods such as RBS, XPS, and SIMS.

AEP 6620 Micro/Nano-fabrication and Processing

Spring. 3 credits.

Introduction to the fundamentals of micro- and nano-fabricating and patterning thin-film materials and surfaces, with emphasis on electronic and optical materials, micro-mechanics, and other applications. Vacuum and plasma thin-film deposition processes. Photon, electron, X-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is on understanding the physics and materials science that define and limit the various processes. At the level of Brodie and Muray.

AEP 6630 Nanobiotechnology (also BIOG 6630, MSE 5630)

Fall. 3 credits. Letter grades only.

Upper-level undergraduate and graduate-level course that covers the basics of biology and the principles and practice of microfabrication techniques. The course focuses on applications in biomedical and biological research. A team design project that stresses interdisciplinary communication and problem solving is one of the course requirements. The course meets twice weekly with 75-minute classes. All lectures are teleconferenced to NBTC associate institutes.

AEP 7110 Principles of Diffraction (also MSE 6710)

Fall. 3 credits. Letter grades only.

J. D. Brock.

Graduate-level introduction to diffraction/scattering phenomena in the context of solid-state and soft condensed-matter systems. The primary topic is using the scattering and absorption of neutron, electron, and X-ray beams to study physical systems. Particular emphasis is placed on issues related to synchrotron X-ray sources. Specific topics include elastic and inelastic scattering; diffraction from two- and three-dimensional periodic lattices; the Fourier representation of scattering centers and the effects of thermal vibrations and disorder; diffraction, reflectivity, or scattering from surface layers; diffraction or scattering from gases and amorphous materials; small angle scattering; X-ray absorption spectroscopy; resonant (e.g., magnetic) scattering; novel techniques using coherent X-ray beams; and a survey of dynamical diffraction from perfect and imperfect lattices.

AEP 7510 M.Eng. Project

Fall, spring. 6–12 credits TBA. Requirement for M.Eng. (engineering physics) students.

Independent study under the direction of a member of the university faculty. Students participate in an independent research project through work on a special problem related to their field of interest. A formal and complete research report is required.

AEP 7530 Special Topics Seminar in Applied Physics

Fall. 1 credit. Requirement for M.Eng. (engineering physics) students; recommended for seniors in engineering physics. Prerequisite: undergraduate physics.

Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the students. Effort is made to integrate the subjects within selected subject areas such as atomic, biological, computational, optical, plasma, and solid-state physics, or microfabrication technology, as suggested by the students and coordinated by the instructor.

[AEP 7810 Advanced Plasma Physics I: Cosmic Plasma Physics]**AEP 7820 Advanced Plasma Physics (also ECE 6820)**

Spring. 3 credits. Prerequisite: ECE 5810. C. E. Seyler.

For description, see ECE 6820.

BIOLOGICAL AND ENVIRONMENTAL ENGINEERING

D. J. Aneshansley, chair; B. A. Ahner, assoc. chair; L. D. Albright, L. T. Angenent, A. J. Baeumer, J. A. Bartsch, A. K. Datta, K. G. Gebremedhin, D. A. Haiht, P. G. Hess, J. B. Hunter, L. H. Irwin, D. Luo, J. C. March, J.-Y. Parlange, G. E. Rehkugler, N. R. Scott, R. M. Spanswick, T. S. Steenhuis, M. B. Timmons, L. P. Walker, M. F. Walter, M. T. Walter. Lecturers: C. L. Anderson, L. D. Geohring

For complete course descriptions, see "Biological and Environmental Engineering" under "College of Agriculture and Life Sciences" or visit the department web site, www.bee.cornell.edu.

BEE 1200 The BEE Experience

Spring. 1 credit. Requirement for CALS BEE freshmen. Not required for students who have completed ENGRG 1050. Prerequisite: BEE majors or permission of instructor.

BEE 1510 Introduction to Computer Programming

Fall. 4 credits. Limited to 18 students per lab and rec. Pre- or corequisite: MATH 1910 or equivalent. No previous programming experience assumed.

BEE 2220 Bioengineering Thermodynamics and Kinetics

Spring. 3 credits. Prerequisites: MATH 1920, BIOG 1101, PHYS 2213, and chemistry course completed or concurrent.

BEE 2510 Engineering for a Sustainable Society (also ENGRD 2510)

Fall. 3 credits. Pre- or corequisite: MATH 2930.

BEE 2600 Principles of Biological Engineering (also ENGRD 2600)

Fall. 3 credits. Pre- or corequisite: MATH 2930, BIOG 1101–1104 or 1105–1106.

BEE 3050 Principles of Navigation (also NAVS 3050)

Spring. 4 credits. Three classes each week (lec-rec-project work).

BEE 3299 Sustainable Development: A Web-Based Course

Spring, summer. 3 credits. Prerequisite: at least sophomore standing. S-U or letter grades.

BEE 3310 Bio-Fluid Mechanics

Fall. 4 credits. Prerequisites: ENGRD 2020 and engineering math sequence.

BEE 3500 Biological and Environmental Transport Processes

Fall. 3 credits. Pre- or corequisites: MATH 2930 and fluid mechanics course.

BEE 3600 Molecular and Cellular Bioengineering (also BME 3600)

Spring. 3 credits. Prerequisites: BEE 2600, biochemistry, linear algebra, ordinary differential equations, or permission of instructor.

BEE 3650 Properties of Biological Materials

Spring. 3 credits. Pre- or corequisite: ENGRD 2020.

BEE 3680 Biotechnology Applications: Animal Bioreactors

Fall. 3 credits. Prerequisite: biochemistry course or permission of instructor. Offered alternate years.

[BEE 3710 Physical Hydrology for Ecosystems

Spring. 3 credits. Prerequisite: MATH 1920 or permission of instructor. Offered alternate years; next offered 2010-2011.]

BEE 4010 Renewable Energy Systems

Spring. 4 credits. Prerequisite: college physics.

BEE 4270 Water Measurement and Analysis Methods

Fall. 3 credits. Prerequisites: fluids or hydrology course and MATH 1910.

BEE 4350 Principles of Aquaculture

Spring. 3 credits. Prerequisite: at least junior standing.

BEE 4500 Bioinstrumentation

Spring. 4 credits. Prerequisites: MATH 2940, introductory computing, two semesters of physics, statistics, or permission of instructor.

BEE 4530 Computer-Aided Engineering: Applications to Biomedical Processes (also MAE 4530)

Spring. 3 credits. Prerequisite: heat and mass transfer course (BEE 3500 or equivalent).

[BEE 4540 Physiological Engineering

Fall. 3 credits. Prerequisites: differential equations, two semesters of physics, introductory biology, statistics. Next offered 2010-2011.]

BEE 4590 Biosensors and Bioanalytical Techniques

Fall. 3 credits. Prerequisite: biochemistry course or permission of instructor.

BEE 4600 Deterministic and Stochastic Modeling in Biological Engineering

Fall. 3 credits. Prerequisites: MATH 2930, MATH 2940, BEE 3500 or equivalent, Mass and Energy Balances, or permission of instructor.

BEE 4640 Bioseparation Processes

Fall. 3 credits. Prerequisites: introductory biochemistry and physics, MATH 1920, BEE 2600 or equivalent, or permission of instructor. S-U or letter grades. Offered alternate years.

[BEE 4710 Introduction to Groundwater (also EAS 4710)

Spring. 3 credits. Prerequisites: MATH 2930, fluid mechanics or hydrology course. S-U or letter grades. Offered alternate years; next offered 2010-2011.]

BEE 4730 Watershed Engineering

Fall. 4 credits. Prerequisite: CEE 3310 or hydrology course.

BEE 4740 Water and Landscape Engineering Applications

Spring. 3 credits. Prerequisite: fluids or hydrology course or permission of instructor.

BEE 4750 Environmental Systems Analysis

Fall. 3 credits. Prerequisites: computer programming course and one year of calculus.

BEE 4760 Solid Waste Engineering

Spring. 3 credits. Prerequisites: one semester of physics and chemistry.
