BEE 4800 Our Changing Atmosphere: Global Change and Atmospheric Chemistry (also EAS 4800)

Fall. 3 credits. Prerequisites: CHEM 2090, MATH 1920, PHYS 1112 or equivalent, or permission of instructor. S-U or letter grades.

BEE 4810 LRFD-Based Engineering of Wood Structures (also CEE 4810)

Spring. 3 credits. Prerequisite: ENGRD 2020.

BEE 4840 Metabolic Engineering

Spring. 3 credits. Prerequisite: biochemistry course or permission of instructor.

BEE 4860 Industrial Ecology of Agriculturally Based Bioindustries

Spring. 3 credits. Prerequisites: one year calculus, some knowledge of MATLAB.

BEE 4870 Sustainable Energy Systems

Fall. 3 credits. Prerequisites: BEE 3500 and thermodynamics course.

BEE 4890 Entrepreneurial Management for Engineers

Fall. 4 credits. Prerequisites: ENGRD 2700 or CEE 3040 or equivalent highly recommended; junior standing.

BEE 4900 Biofuels: The Economic and Environmental Interactions (also AEM 6900)

Spring. 2 credits. Prerequisites: senior or graduate standing, a course in microeconomics, others by permission of instructor. S-U or letter grades.

BEE 4930 Technical Writing for Engineers

Fall or spring. 1 credit.

BEE 4960 Capstone Design in Biological and Environmental Engineering

Spring. 1 credit. Corequisite: BEE 4810.

BEE 4970 Individual Study in Biological and Environmental Engineering

Fall, spring. 1-4 credits. Prerequisites: written permission of instructor and adequate ability and training for work proposed. Normally reserved for seniors in upper two-fifths of their class. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall).

BEE 4980 Undergraduate Teaching

Fall, spring. 1-4 credits. Prerequisite: written permission of instructor. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall).

BEE 4990 Undergraduate Research

Fall, spring. 1-4 credits. Prerequisites: written permission of instructor; adequate training for work proposed. Normally reserved for seniors in upper two-fifths of their class. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall).

BEE 4991-4992 Honors Research

Fall, spring. 1-6 credits. Prerequisite: enrollment in BEE Honors Research Program.

BEE 5010 Bioengineering Seminar (also BME 5010)

Fall, spring. 1 credit. Prerequisite: junior, senior, or graduate standing. S-U grades only.

BEE 5330 Engineering Professionalism

Spring. 1-2 credits. Prerequisite: graduate student with accredited engineering degree or senior who will be graduate with accredited engineering degree. Must register to take Fundamentals of Engineering Exam. Lec only for first 10 weeks of semester. S-U or letter grades.

BEE 5901-5902 M.P.S. Project

Fall, spring. 1-6 credits. Requirement for all M.P.S. candidates in field.

BEE 5951-5952 Master of Engineering Design Project

Fall, spring. 3-6 credits. Prerequisite: admission to M.Eng. degree program.

BEE 6430 Veterinary Perspectives on Pathogen Control in Animal Manure (also VTMED/BIOMI 6430)

Spring, eight weeks. 2 credits. Prerequisites: limited to third- and fourth-year veterinary students, graduate students, and advanced undergraduate students interested in agricultural engineering as related to animal manure management.

BEE 6470 Water Transport in Plants (also BIOPL 6510)

Fall. 2 credits. Offered alternate years.

[BEE 6490 Solute Transport in Plants (also BIOPL 6490)

Fall. 3 credits. Offered alternate years; next offered 2010-2011.]

[BEE 6510 Bioremediation: Engineering Organisms to Clean Up the Environment

Spring. 3 credits. Prerequisite: BIOMI 2900 or BIOBM 3310 or permission of instructor. Next offered 2010-2011.]

BEE 6550 Thermodynamics and Its Applications

Fall. 3 credits. Prerequisite: MATH 2930 or equivalent; for undergraduates, permission of instructor. Offered alternate years.

BEE 6590 Biosensors and Bioanalytical Techniques

Fall. 3 credits. Prerequisites: biochemistry course and permission of instructor.

[BEE 6710 Analysis of the Flow of Water and Chemicals in Soils

Fall. 3 credits. Prerequisites: four calculus courses and fluid mechanics course; for undergraduates, permission of instructor. Offered alternate years; next offered 2010–2011.]

BEE 6720 Drainage

Spring. 4 credits. Prerequisite: BEE 4710 or 4730. Offered alternate years.

BEE 6740 Ecohydrology

Spring. 3 credits. Prerequisite: ecohydrology or hydrology course. Offered alternate years.

BEE 6870 The Science and Engineering Challenges to the Development of Sustainable Bio-Based Industries

Fall. 1 credit. Prerequisite: graduate standing. S–U grades only.

BEE 6970 Graduate Individual Study in Biological and Environmental Engineering

Fall, spring. 1–6 credits. Prerequisite: permission of instructor. S–U or letter grades.

BEE 7000 Orientation to Graduate Study

Fall. 1 credit. Prerequisite: newly joining graduate students in BEE. S–U grades only.

BEE 7010 BEE Seminar Series

Spring. 1 credit. S–U or letter grades.

BEE 7540 Water and Culture in the Mediterranean: A Crisis

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. S–U or letter grades.

BEE 7600 Nucleic Acid Engineering (also BME 7600)

Spring. 2 credits. Prerequisite: graduate standing; seniors by permission of instructor. S–U or letter grades.

BEE 7710 Soil and Water Engineering Seminar

Fall, spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S–U or letter grades.

BEE 8900 Master's-Level Thesis Research

Fall, spring. 1–15 credits. Prerequisite: permission of advisor. S–U grades only.

BEE 9900 Doctoral-Level Thesis Research

Fall, spring. 1–15 credits. Prerequisite: permission of advisor. S–U grades only.

BIOMEDICAL ENGINEERING

M. L. Shuler, James M. and Marsha McCormick chair; L. J. Bonassar, associate chair; J. T. Butcher, P. C. Doerschuk, director of graduate studies, C. Fischbach-Teschl, M. Jin, M. R. King, W. L. Olbricht, D. A. Putnam, C. Reinhart-King, C. B. Schaffer, D. J. Skorton, Y. Wang, W. R. Zipfel. Senior lecturers: S. D. Archer, D. Lipson, R. W. Newman

BME 1310 Introduction to Biomedical Engineering (also ENGRI 1310)

Spring. 3 credits. Prerequisite: freshman or sophomore standing. C. B. Schaffer and S. D. Archer.

For description, see ENGRI 1310.

BME 3010 Molecular Principles of Biomedical Engineering (also CHEME 4010)

Fall. 3 credits. Prerequisite: basic biology such as BIOG 1110, BIOBM 3300, or BIOMI 2900. Lec and lab. M. Jin and S. D. Archer.

Introduction to genomics, proteomics, bioinformatics, and computational biology with an emphasis on the engineering challenges for these areas. Covers cytoskeletal and motor proteins and their relationship to nano- and micro-machines and nanobiotechnology. Existing and emerging technologies and instrumentation critical to molecular-level analysis in biomedical engineering.

BME 3020 Cellular Principles of Biomedical Engineering (also CHEME 4020)

Spring. 3 credits. Prerequisite: BME 3010 or course work in basic biology such as BIOG 1110, BIOBM 3300, or BIOMI 2900 plus mathematics through differential equations (e.g., MATH 2210 or 2940), or permission of instructor. Lec and lab. C. Fischbach-Teschl, W. Zipfel, and S. D. Archer.

Integration of mammalian cell biology with engineering modeling principles, put into the context of medical pathology and disease states. Consists of three modules: (1) cell culture techniques/receptor ligand interactions, (2) cellular trafficking, and (3) signal transduction.

BME 3300 Introduction to Computational Neuroscience (also BIONB/PSYCH/COGST 3300)

Fall. 3 or 4 credits; 4 credits includes lab providing additional computer simulation exercises. Limited to 25 students. Prerequisites: BIONB 2220 or permission of instructor. S–U or letter grades. Offered alternate years. C. Linster.

For description, see BIONB 3300.

BME 3600 Molecular and Cellular Bioengineering (also BEE 3600)

Spring. 3 credits. Prerequisite: BEE 2600, biochemistry course, linear algebra, ordinary differential equations, or permission of instructor.

For description, see BEE 3600.

BME 4010 Biomedical Engineering Analysis of Metabolic and Structural Systems (also MAE 4660)

Fall. 3 credits. Prerequisite: basic biology course work. Highly recommended: solid mechanics and fluid mechanics courses. Lec and lab. L. J. Bonassar and S. D. Archer.

Presents the quantitative biology of the renal, respiratory, cardiovascular, and musculoskeletal systems. Includes mathematical modeling of physiological processes involving mechanics and transport in solid and fluid organs.

BME 4020 Electrical and Chemical Physiology

Spring. 3 credits. Prerequisite: BME 3010, 3020, or 4010 or biology background or permission of instructor. Lec and lab. D. Lipson and S. D. Archer.

Focuses on understanding how circulating agents and bioelectric activity comprises inter-organ and central nervous system communication, and control of the human body. Additional emphasis includes examining medical devices involved in the treatment of human disease.

BME 4110 Science and Technology Approaches to Problems in Human Health

Fall. 3 credits. Prerequisites: junior, senior, or graduate standing; sophomores by permission of instructor. C. B. Schaffer and M. G. Kaplitt.

Provides an in-depth look at diseases that impact human health along with current scientific research and engineering that is aimed at addressing these problems. Faculty from the Weill Cornell Medical College will discuss health problems they are unable to treat as well as they would like, then Cornell University and Weill faculty will discuss current research aimed at better understanding disease process, developing new treatment strategies, and improving patient outcomes. The course is particularly appropriate for students considering medical school or careers in biomedical science and engineering.

BME 4640 Orthopaedic Tissue Mechanics (also MAE 4640)

Spring. 3 credits. Prerequisites: ENGRD 2020 and MAE 3250 or permission of instructor. Offered alternate years.

For description, see MAE 4640.

BME 4810 Biomedical Engineering (also CHEME 4810)

Spring. 3 credits. Prerequisite: CHEME 3240 or equivalent or permission of instructor. W. L. Olbricht.

For description, see CHEME 4810.

BME 4900 Independent Undergraduate Project in Biomedical Engineering

Fall, spring. Variable credit. Staff. Research or projects by an individual or a small group of undergraduates.

BME 4910 Principles of Neurophysiology (also BIONB 4910)

Spring. 4 credits. Limited to 20 students. Prerequisite: BIONB 2220 or written permission of instructor. S–U or letter grades for graduate students by permission of instructor. B. R. Johnson.

For description, see BIONB 4910.

BME 5010 Bioengineering Seminar (also BEE 5010)

Fall, spring. 1 credit. Prerequisite: junior, senior, or graduate standing. Staff.

Gives the engineer-in-training a BROAD overview of different aspects of biological and biomedical engineering including business, legal, and clinical issues. To give students a working knowledge of how abstracts are written and revised. Sessions may occasionally be held outside of scheduled times.

BME 5020 Biomedical System Design (also ECE 5020)

Spring. 1-4 credits. Pre- or corequisites: at least one of ECE 4250, 4760, 4530.
J. C. Belina.

For description, see ECE 5020.

BME 5030 Electronic Bioinstrumentation (also ECE 5030)

Fall. 4 credits. Prerequisites: Introductory Biology, analog design, signal processing, at the level of BIOL 1010, ECE 3150, and ECE 4250, respectively. M.Eng. students only. Permission of instructor required.
B. R. Land.

For description, see ECE 5030.

BME 5390 Biomedical Materials and Devices for Human Body Repair (also FSAD 4390)

Spring. 2-3 credits. Prerequisites: junior or senior standing; college natural science requirement (chemistry or biology).
C. C. Chu.

For description, see FSAD 4390.

BME 5400 Biomedical Computation

Fall. 3 credits. Prerequisites: MATH 293 and 294 (or equivalent), and introductory computer programming course. M. R. King. The application of numerical and statistical methods to model biological systems and interpret biological data, using the MATLAB programming language.

BME 5500 Product Engineering and Design in Biomedical Engineering

Fall. 3 credits. Prerequisite: graduate standing; requirement for M.Eng. students majoring in BME. D. Lipson and R. W. Newman.

A beginning to a cornerstone understanding of engineering, regulatory business, and individual issues for new medical product development. Student background and interests may be highly varied. To accommodate these varied perspectives, the initial focus of the class is on the engineering perspectives of design and development, enabling those undertaking projects (BME 5910) to have timely exposure to key enabling concepts.

BME 5600 Biotransport and Drug Delivery

Spring. 3 credits. Prerequisites: CHEME 324 and MATH 293, or equivalent. M. R. King. This course focuses on engineering analysis of drug delivery applications and basic transport processes in physiological systems. Specific topics include targeted drug delivery, controlled drug release, biorheology, capillary mass transport, and pharmacokinetic compartmental models.

BME 5620 Biomaterialization (also MSE 5620)

Spring. 3 credits. L. Estroff.
For description, see MSE 5620.

[BME 5650 Biomechanical Systems—Analysis and Design (also MAE 5650)]**[BME 5690 Clinical Biomechanics of Musculoskeletal Tissues (also MAE 5690)]**

Fall. 3 credits. Offered alternate years; next offered 2010-2011. Y. Gao.
For description, see MAE 5690.]

BME 5700 Biophysical Methods (also BIONB/AEP 4700)

Fall. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through sophomore level.

Recommended: some knowledge of cellular biology. Letter grades only.
M. Lindau.

For description, see AEP 4700.

BME 5710 Analytical Techniques for Material Science (also MSE 5710)

Spring. 3 credits. D. Grubb.

For description, see MSE 5710.

BME 5780 Computer Analysis of Biomed Images (also ECE 5780)

Spring. 4 credits. Prerequisite: permission of instructor. A. P. Reeves.

For description, see ECE 5780.

BME 5810 Soft Tissue Biomechanics (also MAE 5680)

Fall. 3 credits. Prerequisites: graduate standing; seniors by permission of instructor. J. T. Butcher.

Introduces concepts of biomechanics applied to understanding the material behavior of soft tissues. Topics include finite strain, nonlinearities, constitutive frameworks, and experimental methodologies. Tissues to be modeled include tendons, blood vessels, heart valves, cartilage, and engineered tissues.

BME 5830 Cell-Biomaterials Interactions

Fall. 3 credits. Corequisites: BME 3010, concurrent with 3020, or permission of instructor. C. Reinhart-King.

Biological principles underlying biomaterial design and cell adhesive behavior, incorporating biomechanical analysis across the molecular, cellular, and tissue length scales.

BME 5850 Current Practice in Tissue Engineering

Fall. 3 credits. Corequisites: BME 3010 or 4010 (or BME 3020 as corequisite).
C. Fischbach-Teschl.

Covers fundamental biological principles and engineering concepts underlying the field of tissue engineering and describes specific strategies to engineer tissues for clinical use along with examples.

BME 5910 Design Project

Fall, spring. 3-6 credits. Requirement for M.Eng. students majoring in BME. Students encouraged to register for two semesters as continuing course. D. Lipson and staff.

Design and economic evaluation of a biomedical engineering device or therapeutic strategy. Team projects are encouraged.

BME 5930 Independent Design Project

Fall and spring. Variable credit.

Prerequisite: graduate standing. D. Lipson and staff.

Graduate-level nonthesis research or studies on special projects in biomedical engineering.

BME 6180 Principles of Medical Imaging (also VTMED 6180)

Fall. 1-3 credits. Prerequisites: 3-credit enrollment requires functional knowledge and skills of linear algebra, calculus, Fourier transformation, and calculus-based physics. Y. Wang and N. Dykes.

One-credit version requires attendance the first five weeks of lectures on nonmathematical description of imaging principles and field trips to Cornell University Hospital for Animals (CUHA) to see imaging in clinical practice. Three-credit version requires attendance for the entire semester. The later part of the lectures focus on mathematical description of imaging principles. The formulations of spatial encoding and image contrasts are presented for all major medical imaging modalities: x-ray, CT, MR,

SPECT/PET, US. The inverse problem between detected signal and image source will be discussed and the concepts of image resolution, SNR, and scan time will be illustrated analytically and quantitatively for all modalities.

BME 6260 Biomedical Optics, Imaging, and Spectroscopy

Spring. 3 credits. Prerequisites: introductory physics, calculus, and biology. W. R. Zipfel.

Fundamentals of optical systems design, application, and analysis of concepts used in biological imaging and biomedical optics. The course covers the theory and application of light sources, lenses, mirrors, dispersion elements, optical fibers, detectors, and tissue optics; optical systems analysis concepts such as resolution, optical transfer functions, deconvolution and interference, all in relation to biomedical microscopy, spectroscopy, and bioanalytical techniques.

BME 6310 Engineering Principles for Drug Delivery (also CHEME 6310)

Fall. 3 credits. Prerequisites: graduate standing and background in organic and polymer chemistry or permission of instructor. D. A. Putnam.

Application of engineering design principles to problems in drug formulation and delivery. Specific topics include traditional drug formulation, mechanisms and kinetics of pharmaceutical stability. Stimuli-sensitive systems, controlled-release devices, prodrugs, targeted drug delivery, biomaterials, gene therapy, and governmental regulatory issues.

BME 6410 Biomedical Engineering Analysis of Proteins for Medicine

Spring. 3 credits. Prerequisites: graduate standing and background in biology and chemistry. M. Jin.

Protein engineering principles applied to developing molecules for biotherapeutics and biophysical studies. Course topics include general overview on biochemistry, molecular understanding of proteins in cell signaling, physiology, and pathophysiology, and reviews on modern instrumentations for biophysical studies of proteins. Includes hands-on experience with computers and algorithms for structure inspection and rational design of proteins for medicine.

BME 6501 Natural Engineering: Developmental Biology Paradigms for Regenerative Medicine

Spring. 1-3 credits. Prerequisite: graduate student standing. J. T. Butcher.

The course will be in two modules. The first module, a 1-credit course, will cover the embryonic development and fetal maturation of several major organ systems, including lung, heart, vascular, and bone from an engineer's perspective (evolutionary conservation, major signaling pathways involved, etc.). The second module, a 2-credit course, will build upon the first module by highlighting engineering approaches to study developmental biology (systems biology, mechanical testing, micro-environmental control, genetic manipulation, tissue engineering, etc.). We will also identify relationships between developmental biology and postnatal disease, as well as explore developmental biology-based approaches for regenerative medicine (directed stem cell differentiation, mechanical conditioning, matrix based differentiation, etc.). Material will be drawn largely from primary literature. Students will have regular manuscript reviews,

two midterms, and a final project analyzing the natural engineering of a different organ system.

BME 6640 Mechanics of Bone (also MAE 6640)

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years. For description, see MAE 6640.

[BME 6650 Principles of Tissue Engineering (also MAE/MSE 6650)]

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years; next offered 2010–2011. L. Bonassar.

Covers introductory concepts in tissue engineering, including polymeric biomaterials used for scaffolds, mechanisms of cell-biomaterial interaction, biocompatibility and foreign body response, cell engineering, and tissue biomechanics. This knowledge is applied to engineering of several body systems, including the musculoskeletal system, cardiovascular tissues, the nervous system, and artificial organs. These topics are discussed in the context of scale-up, manufacturing, and regulatory issues.]

BME 6670 Nanobiotechnology (also AEP/ BIOG 6630, MSE 5630)

Spring. 3 credits. Letter grades only. M. L. Shuler. Upper-level undergraduate and graduate-level course that covers the basics of biology and the principles and practice of microfabrication techniques. Course lectures are largely from guest faculty with expertise in the presented topic areas. The course focuses on applications in biomedical and biological research. A team design project that stresses interdisciplinary communication and problem solving is one of the course requirements. The course meets twice weekly with 75-minute classes. All lectures may be teleconferenced to NBTC associate institutes.

BME 7030 Graduate Student Teaching Experience

Fall, spring. Variable credit. S–U or letter grades. Staff. Guided individual experience in laboratory instruction and/or lectures/recitation instruction. Provides a preparatory teaching experience for graduate students considering an academic career.

BME 7110 Fundamentals of Biomedical Engineering Research I

Fall. 3 credits. Prerequisite: BME M.S./Ph.D. graduate students. W. R. Zipfel and staff. First part of a two-semester sequence that introduces students to a variety of subjects in biomedical engineering including nanobiotechnology, biomechanics, systems and computational biology, biomaterials, tissue engineering, statistics, and experimental design. The course also covers associated subjects including professional development, ethics, writing a scientific paper, authorship issues, patents, technology transfer, conflicts of interest, and preparing a research proposal. The course is a combination of lectures and discussions, with students taking an active role in the instruction.

BME 7120 Fundamentals of Biomedical Engineering Research II

Spring. 3 credits. Prerequisite: BME 7110 or permission of instructor. W. L. Olbricht and staff. Continuation of BME 7110.

BME 7160 Immersion Experience in Medical Research and Clinical Practice

Fall. 6 credits. Prerequisite: Ph.D. students in BME. L. J. Bonassar and Y. Wang. Seven-week immersion at Weill Medical College. Students participate in lectures, rounds, and seminars; observe surgeries; and solve medical problems presented by the staff.

BME 7310 Advanced Biomedical Engineering Analysis of Biological Systems

Fall. 3 credits. Prerequisite: graduate standing; priority given to M.S./Ph.D. and M.Eng. students majoring in BME. P. C. Doerschuk. Covers the fundamentals of quantitative analysis of biological systems. Illustrates analytical methods applicable to a variety of biological systems, ranging from molecular to cellular to organ to application of whole-body systems.

BME 7600 Nucleic Acid Engineering (also BEE 7600)

Spring. 2 credits. Prerequisite: graduate standing; BEE 3600 or permission of instructor. D. Luo. For description, see BEE 7600.

BME 7900 Biomedical Engineering Seminar

Fall, spring. 1 credit. Prerequisite: graduate standing. M. L. Shuler. Research-based seminars. May meet with other seminar series as appropriate.

BME 8600 Doctoral Research Rotations in Biomedical Engineering

Fall. 1 credit. Restricted to first-year Ph.D. students. Staff. This course provides a mechanism for granting course credit for optional research rotations of four to eight weeks in duration self-arranged by first-year Ph.D. students.

BME 8999 M.S. Thesis Research

Fall, spring. Variable credit. Staff. Thesis research for the M.S. degree in BME.

BME 9999 Ph.D. Thesis Research

Fall, spring. Variable credit. Staff. Thesis research for the Ph.D. degree in BME.

CHEMICAL AND BIOMOLECULAR ENGINEERING

P. Clancy, director; A. B. Anton, L. A. Archer, A. M. Center, C. Cohen, S. Daniel, M. P. DeLisa, T. M. Duncan, J. R. Engstrom, F. A. Escobedo, T. Hanrath, A. J. Hunter, Y. L. Joo, D. L. Koch, W. L. Olbricht, D. A. Putnam, M. L. Shuler, P. H. Steen, A. D. Stroock, J. W. Tester, J. D. Varner

CHEME 1120 Introduction to Chemical Engineering (also ENGR 1120)

Fall. 3 credits. Prerequisite: freshman standing. T. M. Duncan. Course in the Introduction to Engineering series. For description, see ENGR 1120.

CHEME 2190 Mass and Energy Balances (also ENGR 2190)

Fall. 3 credits. Corequisite: physical chemistry course or permission of instructor. S. Daniel. For description, see ENGR 2190.

CHEME 2880 Biomolecular Engineering: Fundamentals and Applications

Fall. 3 credits. Corequisite: ENGRD 2190. J. D. Varner. An introduction to modern biology including aspects of biochemistry and molecular and cellular biology intended for students with no significant background in this area. An emphasis on practical applications of this knowledge in a variety of settings including the production of industrial enzymes, pharmaceuticals, and biologics.

CHEME 3010 Nonresident Lectures

Spring. 1 credit. Staff. Lecturers from industry and from selected departments of the university provide information to assist students in their post-graduate plans.

CHEME 3130 Chemical Engineering Thermodynamics

Fall. 3 credits. Prerequisite: physical chemistry II. T. Hanrath. Studies the first and second laws and their consequences for chemical systems. Covers thermodynamic properties of pure fluids, solids, and mixtures; phase and chemical reaction equilibrium; heat effects in batch and flow processes; and power cycles and refrigeration.

CHEME 3230 Fluid Mechanics

Spring. 3 credits. Prerequisites: CHEME 2190 and MATH 2930. L. A. Archer. Fundamentals of fluid mechanics. Macroscopic and microscopic balances. Applications to problems involving viscous flow.

CHEME 3240 Heat and Mass Transfer

Fall. 3 credits. Prerequisite: CHEME 3230. Staff. Fundamentals of heat and mass transfer. Macroscopic and microscopic balances. Applications to problems involving conduction, convection, and diffusion.

CHEME 3320 Analysis of Separation Processes

Spring. 3 credits. Prerequisites: CHEME 3130 and 3240. A. B. Anton. Covers the analysis of separation processes involving phase equilibria and mass transfer. Topics include phase equilibria; equilibrium-based separations; rate-based separation processes (membrane separations, sorption operations); introduction to bioseparations and process simulators; choosing a separation option; and the design and synthesis of separation processes.

CHEME 3720 Introduction to Process Dynamics and Control

Spring. 2 credits. Prerequisites: CHEME 3130 and 3230. J. R. Engstrom. Modeling and analysis of the dynamics of chemical processes, Laplace transforms, block diagrams, feedback control systems, and stability analysis.

CHEME 3900 Chemical Kinetics and Reactor Design

Spring. 3 credits. Prerequisites: CHEME 3130 and 3230. T. M. Duncan. Study of chemical reaction kinetics and principles of reactor design for chemical processes.

CHEME 4010 Molecular Principles of Biomedical Engineering (also BME 3010)

Fall. 3 credits. Prerequisite: BIOG 1110 or BIOBM 3300. M. Jin.

For description, see BME 3010.

CHEME 4020 Cellular Principles of Biomedical Engineering (also BME 3020)

Spring. 3 credits. Staff.

For description, see BME 3020.

CHEME 4130 Introduction to Nuclear Science and Engineering (also AEP/ECE/MAE/NSE/TAM 4130)

Fall. 3 credits. B. Cady.

For description, see TAM 4130

CHEME 4320 Chemical Engineering Laboratory

Fall. 4 credits. Prerequisites: CHEME 3230, 3240, 3320, and 3900. A. M. Center and staff.

Laboratory experiments in fluid dynamics, heat and mass transfer, separations, other operations. Correlation and interpretation of data. Technical report writing.

CHEME 4620 Chemical Process Design

Spring. 4 credits. Prerequisite: CHEME 4320. A. M. Center and staff.

Students prepare a full-scale feasibility study of a chemical process including product supply and demand forecasts, process design including reaction system design, separations scheme development, heat integration via application of pinch technology, and economic analysis of the process. Students develop presentation and teamwork skills through weekly presentations.

CHEME 4700 Process Control Strategies

Spring. 3 credits. A. M. Center.

Introduction to how control concepts are represented, control valve sizing and selection, process control strategies, dynamic response of process systems as it relates to control loop tuning, statistical process control, advanced process control methods both for chemical and biological processes and programmable logic controllers and distributed control systems.

CHEME 4720 Feedback Control Systems (also ECE 4720, MAE 4780)

Fall. 4 credits. Prerequisites: CHEME 3720, ECE 2200, MAE 3260, or permission of instructor. M. Campbell.

For description, see MAE 4780.

[CHEME 4800 Chemical Processing of Electronic Materials]**CHEME 4810 Biomedical Engineering (also BME 4810)**

Spring. 3 credits. Prerequisite: CHEME 3240 or equivalent or permission of instructor. W. L. Olbricht.

Special topics in biomedical engineering, including cell separations, blood flow, design of artificial devices and artificial organs, biomaterials, image analysis, biological transport phenomena, pharmacokinetics and drug delivery, tissue engineering, and analysis of physiological processes such as adhesion, mobility, secretion, signaling, and growth.

CHEME 4840 Microchemical and Microfluidic Systems

Fall. 3 credits. Prerequisite: CHEME 3900 or permission of instructor. J. R. Engstrom.

Principles of chemical kinetics, thermodynamics, and transport phenomena applied to

microchemical and microfluidic systems.

Applications in distributed chemical production, portable power, micromixing, separations, and chemical and biological sensing and analysis. Fabrication approaches (contrasted with microelectronics), transport phenomena at small dimensions, modeling challenges, system integration, case studies.

CHEME 4900 Undergraduate Projects in Chemical Engineering

Fall, spring. Variable credit.

Research or studies on special problems in chemical engineering.

CHEME 4980 Design and Testing of the Chemical Engineering Car

Fall, spring. 3-4 variable credits; 3 credits for team members or 4 for officers.

Prerequisites: ENGRD 2190 and CHEM 2090. J. D. Varner.

Research, design, and construct a small chemical-powered model car. Participate in team-oriented hands-on construction of a car powered with a chemical energy source that will carry a specified load a given distance and stop. The AIChE Student Chapter enters it in the AIChE Regional Conference to qualify and compete in the organization's national conference competition.

CHEME 4990 Senior Seminar

Fall, spring. 1 credit. Prerequisite: CHEME seniors. Staff.

Students attend seminars of their selection and write one-page summaries. Eligible seminars include all listings at "Colloquia and Seminars in Physics and Related Fields," which includes the weekly seminars in, for example, Chemical and Biomolecular Engineering, Chemistry and Chemical Biology, Earth and Atmospheric Sciences, History and Ethics of Engineering, and Materials Science and Engineering.

CHEME 5200 An Overview of Chemical Processing (module)

Fall, spring. 1-6 credits; 1 credit per sec.

Fall, first third of semester. 1 credit.

Prerequisite: Chemical Engineering seniors and M.Eng. A. M. Center and Staff.

Covers how the demands of fitness for purpose and market forces shape processes in the areas of pharmaceuticals, petrochemicals, and agricultural chemicals.

CHEME 5201 Introduction to Biomedical Engineering (module)

Spring, first third of semester. 1 credit.

W. L. Olbricht.

Co-meets with CHEME 4810.

[CHEME 5202 Introduction to Electronic Materials Processing (module)]**CHEME 5203 Introduction to Polymer Processing (module)**

Spring, second third of semester. 1 credit.

L. A. Archer.

Overview and simple quantitative analyses of several plastic processes with an emphasis on the role of rheology in polymer processing.

CHEME 5204 Turbomachinery Applications (module)

Fall, last third of semester. 1 credit.

A. M. Center.

Introduction to pumps, compressors, steam turbines and gas turbines. How they are specified and selected for services in the chemical process industries.

CHEME 5205 Chemical Engineering Tools and Equipment (module)

Spring, first third of semester. 1 credit.

A. M. Center.

Introduces the hardware used in chemical engineering processes and a discussion of how these mechanical devices are configured to meet their process objectives. Also includes an introduction to the evaluation techniques and trouble-shooting methods frequently used by chemical engineers.

CHEME 5207 Introduction to Petroleum Refining (module)

Fall, second third of semester. 1 credit.

A. M. Center.

Covers the petroleum refining industry including crude oil evaluation, fuel quality, refining processes, refinery configurations, and refinery economics.

[CHEME 5208 Renewable Resources from Agriculture-Sugarcane as a Feedstock (module)]

Spring, last third of semester. 1 credit. Next offered 2010-2011.

Maximizing the value of a renewable resource by control of inputs and final product use.]

CHEME 5430 Biomolecular Engineering of Bioprocesses

Fall. 3 credits. Prerequisite: CHEME 3900 or

permission of instructor. No prior background in biological sciences required.

M. P. DeLisa.

Discusses principles involved in using biomolecules (e.g., antibodies, enzymes, DNA) and living organisms (e.g., bacteria, yeast, tissue cultures) for engineering biological processes. Primary emphasis is on development and production of biopharmaceuticals, but biological waste treatment and medical systems are also considered.

CHEME 5640 Design of Chemical Reactors

Spring. 3 credits. Prerequisite: CHEME 3900 or equivalent. D. L. Koch.

Design, scale-up, and optimization of chemical reactors with allowance for heat and mass transfer and non-ideal flow patterns. Homework problems feature analysis of published data for gas-solid, gas-liquid, and three-phase reaction systems.

CHEME 5650 Design Project

Fall, spring. 3 or 6 credits. Requirement for Chemical Engineering M.Eng. students. Staff.

Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

CHEME 5720 Managing New Business Development

Fall. 3 credits. Prerequisite: graduate

standing or permission of instructor. Staff.

Case study approach introducing the typical fundamental factors driving a business venture, examines how to develop implementation strategies for the venture, and teaches the project management skills necessary to successfully implement the venture.

CHEME 5870 Energy Seminar I (also MAE 5450, ECE 5870)

Fall. 1 credit. D. Hammer and A. J. Hunter.

For description, see ECE 5870.

CHEME 5880 Energy Seminar II (also MAE 5460, ECE 5880)

Fall, 1 credit. D. Hammer and A. J. Hunter.
For description, see ECE 5880.

CHEME 5999 Special Projects in Chemical Engineering

Fall, spring. Variable credit. Prerequisite: graduate standing. Staff.
Nonthesis research or studies on special problems in chemical engineering.

CHEME 6240 Physics of Micro- and Nanoscale Fluid Mechanics and Heat Transfer

Fall, 3 credits. Prerequisites: undergraduate fluid or continuum mechanics (e.g., MAE 3230, CHEME 3230, AEP 4340) or permission of instructor. B. L. Kirby.
For description, see MAE 5240.

CHEME 6310 Engineering Principles for Drug Delivery (also BME 6310)

Fall, 3 credits. Prerequisite: graduate standing or permission of instructor. D. A. Putnam.

For description, see BME 6310.

CHEME 6400 Polymeric Materials

Fall, 3 credits. C. Cohen.
Covers chemistry and physics of the formation and characterization of polymers; principles of fabrication.

CHEME 6440 Aerosols and Colloids

Fall, 3 credits. D. L. Koch.
Dynamics of micro- and nano-particles, which contain many molecules but are small enough that molecular effects are important. Topics include the formation and growth of particles; their transport, theological and phase behaviors; and their role in technologies including paints, foods, health-care products, drug delivery, composite materials and air pollution control.

CHEME 6610 Air Pollution Control

Spring, 3 credits. P. H. Steen.
Covers origin of air pollutants, U.S. emission standards, dispersion equations; design of equipment for removal of particulate and gaseous pollutants formed in combustion and chemical processing.

CHEME 6640 Energy Economics

Fall, 3 credits. A. J. Hunter.
Supply and demand for energy by sectors and regions. Operating systems and costs. Economic drivers used in simulating energy systems and consumption factors. Supply/demand projections. Interplay between energy, environment, politics, economics, and sustainability.

CHEME 6650 Energy Engineering

Spring, 3 credits. A. J. Hunter.
Applying thermodynamic concepts to large energy systems. Future energy scenarios. Project teams tasked with simulating complex energy systems and cost-benefit analysis.

CHEME 7110 Advanced Chemical Engineering Thermodynamics

Fall, 3 credits. Prerequisite: CHEM 3890–3900 and CHEME 3130 or equivalent. F. A. Escobedo.

Molecular thermodynamics of gases, lattices, and liquids, including special applications to problems in chemical engineering.

CHEME 7130 Chemical Kinetics and Transport

Spring, 5 credits. Prerequisite: CHEME 3900 or equivalent. S. Daniel and staff.

Topics include microscopic and macroscopic viewpoints; connections between phenomenological chemical kinetics and molecular reaction dynamics; reaction cross sections, potential energy surfaces, and dynamics of biomolecular collisions; molecular beam scattering; transition state theory. Unimolecular reaction dynamics; complex chemically reacting systems: reactor stability, multiple steady states, oscillations, and bifurcation; reactions in heterogeneous media; and free-radical mechanisms in combustion and pyrolysis.

CHEME 7310 Advanced Fluid Mechanics and Heat Transfer

Fall, 3 credits. Prerequisites: CHEME 3230–3240 or equivalent. D. L. Koch.

Topics include derivation of conservation equations; conductive heat transfer; low Reynolds number fluid dynamics; lubrication theory; inviscid fluid dynamics; boundary layer theory; forced convection; and introduction to non-Newtonian fluid mechanics (polymeric liquids and suspensions), microfluidics, stability analysis, and turbulent flow.

CHEME 7410 Selected Topics in Biochemical Engineering

Fall, spring, 1 credit; may be repeated for credit. Prerequisite: permission of instructor. D. A. Putnam and M. P. DeLisa.
Discussion of current topics and research in biochemical engineering for graduate students.

CHEME 7450 Physical Polymer Science I

Fall, 3 credits. Corequisite: CHEME 7110 or equivalent. Offered alternate years. L. A. Archer.

Thermodynamic properties of solutions from both classical and scaling approaches. Characterization techniques of dilute solutions. Rubber elasticity; mechanical and thermodynamic properties of gels; polymer melts.

CHEME 7510 Mathematical Methods of Chemical Engineering Analysis

Fall, 4 credits. Y. L. Joo.
Application of advanced mathematical techniques to chemical engineering analysis. Mathematical modeling, scaling, regular and singular perturbations, multiple scales, asymptotic analysis, linear and nonlinear ordinary and partial differential equations, statistics, data analysis, and curve fitting.

[CHEME 7530 Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation

Fall, 3 credits. Prerequisite: CHEME 7510 or equivalent. Offered alternate years; next offered 2010–2011. P. H. Steen.

Topics include elements of stability and bifurcation theory; branch-following techniques; stability of discrete and continuous systems; and application to elasticity, reaction-diffusion, and hydrodynamic systems using software for continuation problems (AUTO).]

CHEME 7900 Seminar

Fall, spring, 1 credit each semester.
Requirement for all graduate students in field of chemical and biomolecular engineering. L. A. Archer.
General chemical engineering seminar.

CHEME 7920 Principles and Practices of Graduate Research

Fall, 1 credit. S. Daniel and T. Hanrath.
A colloquium/discussion group series for first-year graduate students. Topics include the

culture and responsibilities of graduate research and the professional community; the mechanics of conducting research (experimental design, data analysis, serendipity in research, avoiding self-deception), documenting research (lab notebooks, computer files) and reporting research (writing a technical paper and oral presentations).

CHEME 8999 Thesis Research

Fall, spring. Variable credit. Staff.
Thesis research for the M.S. degree in chemical engineering.

CHEME 9999 Thesis Research

Fall, spring. Variable credit. Staff.
Thesis research for the Ph.D. degree in chemical engineering.

CIVIL AND ENVIRONMENTAL ENGINEERING

P. L-F. Liu, director; W. D. Philpot, associate director; J. F. Abel, W. Aquino, L. Banks-Sills, J. J. Bisogni, Jr., W. H. Brutsaert, P. G. Carr, E. A. Cowen, P. J. Diamessis, R. I. Dick, C. Earls, H. O. Gao, K. Gebremedhin, J. M. Gossett, M. D. Grigoriu, D. A. Haith, K. C. Hover, A. R. Ingraffea, P. Koutsourelakis, F. H. Kulhawy, L. W. Lion, D. P. Loucks, J. R. Mbwana, W. McGuire, A. H. Meyburg, L. K. Nozick, T. D. O'Rourke, T. Peköz, P. Petrina, R. E. Richardson, R. E. Schuler, C. A. Shoemaker, J. R. Stedinger, H. E. Stewart, C. H. Trautmann, M. A. Turnquist, D. Warner, F. Wayno, M. Weber-Shirk, R. N. White

Courses in the School of Civil and Environmental Engineering are offered in three broad mission areas: Civil Infrastructure, Environment, and Engineering Systems and Management. Each area has several areas of specialization. The following are the course numbers and titles listed by specialization within each mission area. Some courses are listed in two or more mission areas because the course content is relevant to multiple areas. The school also offers a number of general courses that are not unique to one mission area. Full course descriptions follow in the subsequent section and are listed in numerical order.

General

CEE 1130 Sustainable Design for Appledore Island (also ENGRI 1130) (s,3)

CEE 1160 Modern Structures (also ENGRI 1160) (f,3)

CEE 3040 Uncertainty Analysis in Engineering (f,4)

CEE 3080 Introduction to CADD (f,s,1)

CEE 3090 Special Topics in Civil and Environmental Engineering (f,s,var.)

CEE 3200 Engineering Computation (also ENGRD 3200) (s,3)

CEE 3230 Engineering Economics and Management (also ENGRG 3230) (s,su,3)

CEE 4000 Senior Honors Thesis (f,s,var.)

CEE 4010 Undergraduate Engineering Teaching in CEE (f,s,var.)

Civil Infrastructure

CEE 6900 Creativity, Innovation, and Leadership (s,3)

Environmental and Public Systems

CEE 3230 Engineering Economics and Management (also ENGRG 3230) (s,su,3)

CEE 4650 Transportation, Energy, and Environment Systems for Sustainable Development (s,3)

CEE 5021/5022 Design Project in Environmental or Water Resource Systems (f,s,3)

CEE 5970 Risk Analysis and Management (s,3)

CEE 6021 Seminar—Environmental and Water Resources Systems Analysis (s,1)

CEE 6025 Special Topics in Environmental and Water Resources Systems Analysis (f,s,var.)

CEE 6200 Water Resources Systems Engineering (s,3)

CEE 6210 Stochastic Hydrology (s,3)

CEE 6230 Environmental Quality Systems Engineering (f,3)

CEE 6360 Environmental Fluid Mechanics (s,4)

CEE 6650 Transportation, Energy, and Environment Systems for Sustainable Development (s,3)

CEE 6930 Public Systems Modeling (f,4)

CEE 7020 Environmental and Water Resources Systems Analysis Research (f,s,var.)

CEE 8200 Thesis—Environmental and Water Resources Systems (f,s,var.)

Remote Sensing

CEE 4110 Environmental Information Science (also CSS 4110) (s,3)

CEE 6015 Special Topics—Remote Sensing (f,s,var.)

CEE 6100 Remote Sensing Fundamentals (also CSS 6100) (f,3)

CEE 6150 Digital Image Processing (s,3)

CEE 7010 Research—Remote Sensing (f,s,var.)

CEE 8100 Thesis—Remote Sensing (f,s,var.)

Systems Engineering

CEE 4060 Civil Infrastructure Systems (s,3)

CEE 5240 Applied Systems Engineering (also CIS 5040, ECE/ORIE 5120, MAE 5910, SYSEN 5100) (f,3)

CEE 5252 Systems Architecture, Behavior, and Optimization (also CIS 5050, ECE/ORIE 5130, MAE 5920, SYSEN 5200) (s,3)

CEE 5290 Heuristic Methods for Optimization (also CS 5722, ORIE 5340) (f,3–4)

CEE 6090 Seminar—Engineering Systems and Management (f,s,1)

CEE 6860 Civil Infrastructure Systems (s,3)

CEE 6930 Public Systems Modeling (f,4)

Transportation

CEE 3610 Introduction to Transportation Engineering (s,su,3)

CEE 4610 Urban Transportation Planning and Modeling (s,3)

CEE 4630 Future Transportation Technologies and Systems (f,3)

CEE 4640 Transportation Systems Design (s,3)

CEE 4650 Transportation, Energy, and the Environment System for Sustainable Development (s,3)

CEE 5061/5062 Design Project in Transportation Engineering (f,s,3)

CEE 6060 Seminar—Transportation (f,s,1)

CEE 6065 Special Topics in Transportation (f,s,var.)

CEE 6610 Urban Transportation Planning and Modeling (s,3)

CEE 6620 Urban Transportation Network and Design and Analysis (f,3)

CEE 6630 Network Flows and Algorithms (s,3)

CEE 6650 Transportation, Energy, and the Environment System for Sustainable Development (s,3)

CEE 7620 Practicum in Modeling Transportation Systems (f,3)

CEE 8600 Thesis—Transportation Engineering (f,s,var.)

CEE 1130 Sustainable Design for Appledore Island (also ENGR 1130)

Spring. 3 credits. Students must register under ENGR 1130. J. J. Bisogni. Course in Introduction to Engineering series. For description, see ENGR 1130.

CEE 1160 Modern Structures (also ENGR 1160)

Fall. 3 credits. Students must register under ENGR 1160. A. Ingraffea. Course in Introduction to Engineering series. For description, see ENGR 1160.

CEE 2550 AguaClara: Sustainable Water Supply Project

Fall, spring. 1–3 credits. Meets with CEE 4550. M. L. Weber-Shirk. For description, see CEE 4550.

CEE 3040 Uncertainty Analysis in Engineering

Fall. 4 credits. Prerequisite: first-year calculus. J. R. Stedinger. Introduction to probability theory and statistical techniques, with examples from civil, environmental, biological, and related disciplines. Covers data presentation, commonly used probability distributions describing natural phenomena and material properties, parameter estimation, confidence intervals, hypothesis testing, simple linear regression, and nonparametric statistics. Examples include structural reliability, windspeed/flood distributions, pollutant concentrations, and models of vehicle arrivals.

CEE 3080 Introduction to CADD

Fall, spring. 1 credit. Prerequisites: Pre-enrollment limited to Engineering students. CEE and BEE students will be given preference. All other students are by permission of instructor only, and only after the first meeting of the sections. Students must attend the first meeting of one of the sections. Course begins first Mon. of each semester. Staff.

Students learn to employ computer-aided design and drafting (CADD) to construct 2D drawings and 3D models using a variety of AutoCAD techniques. VIZ, an alternative software tool for 3D modeling and 3D visualization, is also introduced. Course meets in ACCEL (second floor of the Engineering Library in Carpenter Hall) so that each student

can participate on an individual computer. Grades are based on attendance, weekly exercises completed in class, and a semester project due the last week of classes.

CEE 3090 Special Topics in Civil and Environmental Engineering

Fall, spring. 1–6 credits. Staff. Supervised study by individuals or groups of upper-division students on an undergraduate research project or on specialized topics not covered in regular courses.

CEE 3200 Engineering Computation (also ENGRD 3200)

Spring. 3 credits. Students must register under ENGRD 3200. P. Diamessis. For description, see ENGRD 3200.

CEE 3230 Engineering Economics and Management (also ENGRG 3230)

Spring; usually offered in summer for Engineering Co-op Program. 3 credits. Primarily for juniors and seniors. F. Vanek. For description, see ENGRG 3230.

CEE 3310 Fluid Mechanics

Fall; usually offered in summer for Engineering Co-op Program. 4 credits. Pre- or corequisite: ENGRD 2020. E. A. Cowen. Covers hydrostatics, the basic equations of incompressible fluid flow, potential flow and dynamic pressure forces, viscous flow and shear forces, steady pipe flow, turbulence, dimensional analysis, laminar and turbulence boundary layer, flows around obstacles, and open-channel flow. Includes small-group laboratory assignments.

[CEE 3320 Hydraulic Engineering

Spring. 4 credits. Prerequisite: CEE 3310. Next offered 2011–2012. P. L.-F. Liu. Application of fluid-mechanical principles to problems of engineering practice and design: hydraulic machinery, open-channels, and river engineering. Lectures supplemented by laboratory work and a design project.]

CEE 3410 Introduction to Geotechnical Engineering

Fall. 4 credits. Prerequisites: ENGRD 2020 or permission of instructor. Letter grades only. H. E. Stewart. Fundamentals of geotechnical engineering. Topics include origins and descriptions of soil and rock as engineering materials, subsurface exploration methods, principles of effective stresses, stress distribution and ground settlements from surface loads, steady-state and time-dependent subsurface fluid flow, soil strength and failure criteria, geoenvironmental applications, and introduction to hazardous waste containment systems.

CEE 3510 Environmental Quality Engineering

Spring. 3 credits. Staff. Introduction to engineering aspects of environmental quality control. Quality parameters, criteria, and standards for water and wastewater. Elementary analysis pertaining to the modeling of pollutant reactions in natural systems, and introduction to design of unit processes for wastewater treatment.

CEE 3610 Introduction to Transportation Engineering

Spring; usually offered in summer for Engineering Co-op Program. 3 credits. M. A. Turnquist. Introduces technological, economic, and social aspects of transportation. Emphasizes design and functioning of transportation systems and

their components. Covers supply-demand interactions; system planning, design, and management; traffic flow, intersection control and network analysis; institutional and energy issues; and environmental impacts.

CEE 3710 Structural Modeling and Behavior

Spring. 4 credits. Prerequisite: ENGRD 2020. Corequisite: MATH 2940. A. Ingrassia. Introduction to the structural engineering enterprise including aspects of design, loads, behavior, form, modeling, mechanics, materials, analysis, and construction/manufacturing. Case studies involve different scales and various materials. Topics include analytical and finite-element computational modeling of structural systems, including cables, arches, trusses, beams, frames, and 2-D continua; deflections, strains, and stresses of structural members, systems, and 2-D continua by analytical and work/energy methods, with a focus on linear elastic behavior; the foundations of matrix structural analysis; and the application of finite-element software.

CEE 3720 Intermediate Solid Mechanics

Fall. 4 credits. Prerequisites: MATH 2940, CEE 3710. D. Warner. The course presents concepts related to inelastic and nonlinear behavior of engineering materials and structures, the concept of continuum, limit and plastic analysis, and fracture. The course will be a synergy of mathematical modeling, computer simulations, and physical experimentation.

CEE 4000 Senior Honors Thesis

Fall, spring. 1–6 credits. For students admitted to CEE Honors Program. D. Warner. Supervised research, study, and/or project work resulting in a written report or honors thesis.

CEE 4010 Undergraduate Engineering Teaching in CEE

Fall, spring. 1–3 credits. Prerequisite: permission of instructor. Staff. Methods of instruction developed through discussions with faculty and by assisting with the instruction of undergraduates under the supervision of faculty.

CEE 4060 Civil Infrastructure Systems

Spring. 3 credits. Prerequisites: probability and statistics (CEE 3040 or equivalent) or permission of instructor. Recommended: engineering economics (CEE 3230 or equivalent) course. S–U or letter grades. T. D. O'Rourke. Introduction to the framing and solution of civil infrastructure problems using a systems engineering approach. Systems tools, such as optimization, life-cycle cost analysis, decision analysis, simulation, and risk analysis are examined through case studies related to civil infrastructure.

CEE 4110 Environmental Information Science (also CSS 4110)

Spring. 3 credits. Prerequisite: permission of instructor. S. D. DeGloria and S. B. Hoskins. For description, see CSS 4110.

CEE 4320 Hydrology

Spring. 3 credits. Prerequisite: CEE 3310. Intended for undergraduates. Lec concurrent with CEE 6320. W. H. Brutsaert. Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for

environmental engineers. See description for CEE 6320.

CEE 4350 Coastal Engineering

Spring. 4 credits. Prerequisite: CEE 3310. Taught based on demand; contact professor if interested in course. P. L-F. Liu. Covers the following topics: review of hydrodynamics; small-amplitude wave theory; wave statistics; wave-structure interactions; coastal processes.

[CEE 4360 Case Studies in Environmental Fluid Mechanics

Spring. 4 credits. Prerequisite: CEE 3310 or equivalent. Next offered 2010–2011. E. A. Cowen.

An introduction to fundamental fluid mechanics and transport processes of the environment through laboratory—and field—based studies (Cayuga Lake and Fall, Six-Mile, and Cascadilla Creeks) and case studies. Topics include surface and internal wave dynamics, sediment and nutrient/contaminant transport, and interfacial transfer. Lectures are based on a laboratory/field project. Course includes a design project.]

CEE 4370 Experimental Methods in Fluid Dynamics

Spring. 3 credits. Pre- or corequisites: CEE 3310 or equivalent and CEE 3040 or equivalent. E. A. Cowen. Same as CEE 6370 but no project required. For description, see CEE 6370.

CEE 4400 Foundation Engineering

Spring. 3 credits. Prerequisite: CEE 3410. F. H. Kulhawy. Covers soil exploration, sampling, and in-situ testing techniques; bearing capacity, stress distribution, and settlement; design of shallow and deep foundations; compaction and site preparation; and seepage and dewatering of foundation excavations.

CEE 4410 Retaining Structures and Slopes

Fall. 3 credits. Prerequisite: CEE 3410. T. D. O'Rourke. Covers earth pressure theories; design of rigid, flexible, braced, tied-back, slurry wall, soil nailing, and reinforced soil structures; stability of excavation, cut, and natural slopes; and design problems stressing application of course material under field conditions of engineering practice.

[CEE 4440 Environmental Site and Remediation Engineering

Spring. 3 credits. Prerequisite: CEE 3410. Next offered 2011–2012. T. D. O'Rourke. Covers the principles of hydrogeology, contaminant migration, and remediation technologies related to geotechnical and environmental engineering. Emphasizes environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfills. Design problems are based on real projects and involve visits from practicing engineers.]

[CEE 4510 Microbiology for Environmental Engineering

Fall. 3 credits. Prerequisites: two semesters of college chemistry; organic chemistry or permission of instructor. Next offered 2010–2011. R. E. Richardson. Introduction to the fundamental aspects of microbiology and biochemistry that are pertinent to environmental engineering and science. Provides an overview of the characteristics of Bacteria, Archaea, unicellular

Eukaryotes (protozoa, algae, fungi), and viruses. Includes discussions of cell structure, bioenergetics and metabolism, and microbial genetics. Focus is then applied to topics pertinent to environmental engineering: pathogens; disease and immunity; environmental influences on microorganisms; roles of microbes in the carbon, nitrogen, and sulfur cycles; enzymes; bioremediation, bio-energy, molecular microbiology; and microbial ecology. This is an introductory course and is inappropriate for those who have taken BIOMI 2900 or equivalent.]

[CEE 4520 Water Supply Engineering

Fall. 3 credits. Prerequisite: CEE 3510. Next offered 2010–2011. J. J. Bisogni. Analysis of contemporary threats to human health from water supplies. Covers criteria and standards for potable-water quality; water-quality control theory; design of water supply facilities.]

CEE 4530 Laboratory Research in Environmental Engineering

Fall. 3 credits. Prerequisite: CEE 3510 or permission of instructor. Staff. Laboratory investigations of reactor flow characteristics; acid rain/lake chemistry; contaminated soil-site assessment and remediation; and wastewater treatment. Design of laboratory experiments, data analysis, computerized process control, and model development are emphasized.

CEE 4540 Sustainable Small-Scale Water Supplies

Fall. 3 credits. M. L. Weber-Shirk. This course covers the design and analysis of small-scale drinking water supply systems. We explore the technical, economic, and social constraints that form the sustainable space—i.e., the set of viable technologies that could be adopted progressively to improve the availability and quality of water. Students work in teams to design water supply and treatment systems.

CEE 4550 AguaClara: Sustainable Water Supply Project

Fall, spring. 3 credits. Pre- or corequisite: CEE 4540 or CEE 3310 or permission of instructor. Meets with CEE 2550. M. L. Weber-Shirk. Student teams conduct research, build working models, design full-scale prototypes, create design algorithms, and create educational materials for technology transfer to improve drinking water quality in Honduras. For more information see aguaclara.cee.cornell.edu.

[CEE 4610 Urban Transportation Planning and Modeling]

CEE 4630 Future Transportation Technologies and Systems

Fall. 3 credits. F. Vanek. Improving the use of existing facilities transportation infrastructure has become an important objective in transportation engineering and planning. Examines the role of information technologies for effective infrastructure utilization and planning. Focuses specific attention on analyses paradigms to evaluate the benefits of information technologies in transportation systems.

CEE 4640 Transportation Systems Design

Spring. 3 credits. Prerequisites: CEE 3610 and CEE 4060 or permission of instructor. M. A. Turnquist.

Analysis of capacity and operational design of transportation systems, including analytical modeling techniques underlying design criteria. Evaluation of alternative designs. Management and operating policies, including congestion pricing. Facility location decisions, networks, and investment strategies.

CEE 4650 Transportation, Energy, and Environment Systems for Sustainable Development

Spring. 3 credits. Prerequisites: CEE 3610 or permission of instructor. H. O. Gao.
For description, see CEE 6650.

CEE 4710 Fundamentals of Structural Mechanics

Fall. 3 credits. Prerequisites: ENGRD 2020, MATH 2940. M. D. Grigoriu.

Topics include beam bending; beams on elastic foundations; stability analysis for columns and beam-columns; linear elasticity; numerical solutions for linear elasticity problems; and applications including stress concentration, torsion, and plates.

CEE 4720 Introduction to the Finite Element Method

Fall. 3 credits. Prerequisites: CEE 3710, 3720, and 4710. P. Koutsourelakis.

Covers the formulation of the finite element method in 2-D and 3-D continuum, basic 2-D and 3-D continuum isoparametric elements, modeling and programming aspects of the finite element method, and static and transient problems. A large part of the course is devoted to understanding element formulations, testing elements (patch test), and addressing problems such as shear and volumetric locking, among others. Emphasis is placed on understanding fundamental aspects of the method for making intelligent use of commercial software and obtaining a strong background for moving to further study and research.

CEE 4730 Design of Concrete Structures

Fall. 4 credits. K. C. Hover.

Centered on the design of a multi-story building that is initially planned with masonry bearing walls and precast-prestressed concrete floors. The masonry walls are then replaced with steel beams and columns. In the next phase the precast concrete is replaced with cast-in-place reinforced concrete. Finally, the structural steel elements will be replaced with a reinforced concrete framing system. The course explore gravity loads, wind loads, and earthquake loads, and the behavior of individual members and the structure as a whole.

CEE 4740 Introduction to the Behavior of Metal Structures

Spring. 4 credits. Prerequisite ENGRD 2020 or permission of instructor. C. Earls.

An introductory course focused on the use of solid and structural mechanics to quantify elementary behavior of metal structures in order to enable design. The course is project focused; with the students preparing a complete and detailed design deliverable. The course will consider applications from civil structures, naval architecture, and aerospace engineering.

CEE 4750 Concrete Materials and Construction

Spring. 3 credits. K. C. Hover.
Covers the materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Topics include cement chemistry

and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

[CEE 4760 Evaluation and Failure of Structures

Spring. 3 credits. Prerequisites: ENGRD 2020, 2610, and 2030; CEE 3710 and 4730.
Next offered 2011–2012 Staff.

This course teaches material and structural evaluation through the lens of failure. The course builds upon and integrates what students have learned in courses in physics, mechanics, dynamics, materials science, structural modeling/analysis, and design. In addition, the course teaches the physics of methods used for condition assessment of structures (e.g., stress wave propagation, electromagnetic wave propagation, heat flow), introduces students to structural damage and assessment of damage caused by earthquake/wind loads on structures, and introduces students to blast/impact loadings on structures and the concept of progressive collapse.]

CEE 4770 Introduction to Composite Materials (also MAE/TAM 4550, MSE 5550)

Fall. 3 credits. P. Petrina.
For description, see TAM 4550.

CEE 4780 Structural Dynamics and Earthquake Engineering

Spring. 3 credits. Enrollment limited to juniors and seniors. M. D. Grigoriu.
Covers modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

CEE 4810 LRFD-Based Engineering of Wood Structures (also BEE 4791)

Spring. 3 credits. Prerequisite: ENGRD 2020. K. Gebremedhin.
For description, see BEE 4810 under "College of Agriculture and Life Sciences."

CEE 4920 Engineers for a Sustainable World: Engineering in International Development

Fall. 3 credits. Prerequisite: senior or graduate standing; juniors need permission of instructor. F. Vanek and P. Doing.
Engineering-based group service projects offer real-life engineering research and design experience, from problem formulation through implementation. They may be international or local and may relate to any kind of engineering. Students work on interdisciplinary teams with a project supervisor and a partner community organization. Course readings and a writing assignment cover the relationship between engineering and international development, the philosophy and politics of technology, and ethics in engineering practice.

CEE 5021–5022 Design Project

Fall, spring. 3 credits each semester.
Requirement for students in M.Eng. (civil and environmental) program. Staff.
CEE design projects present students with an exemplary design experience that reflects those carried out in the course of professional practice. Projects are typically performed by student design groups, and the topics reflect the diverse specialty areas of the civil and environmental engineering field as described below.

CEE 5021–5022 Project in Environmental and Water Resources Systems

CEE 5031–5032 Project in Environmental Fluid Mechanics and Hydrology
Staff.

CEE 5041–5042 Project in Geotechnical Engineering

F. H. Kulhawy.
Design of major geotechnical engineering project. Planning and preliminary design during fall semester; final design completed in January intersession.

CEE 5051–5052 Agua Clara: Sustainable Water Supply Project

M. Weber-Shirk.
For more information, see aguaclara.cee.cornell.edu.

CEE 5061–5062 Project in Transportation Engineering

Systems analysis of a substantial transportation service.

CEE 5071–5072 Project in Structural Engineering

C. Earls.
A project-centered course focusing on the design of a major engineering structure. Planning and a preliminary design are completed during the fall semester; the comprehensive final design is completed in the January intersession.

CEE 5073–5074 Project in Civil Engineering Materials

Staff.
CEE 5081–5082 Project in Civil Infrastructure Systems
Staff.

Analysis of a problem in civil infrastructure.

CEE 5240 Applied Systems Engineering (also CIS 5040, ECE/ORIE 5120, MAE 5910, SYSEN 5100)

Fall. 3 credits. Prerequisite: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor. A. R. George and R. Roundy.
For description, see SYSEN 5100.

CEE 5252 System Architecture, Behavior, and Optimization (also CIS 5050, ECE 5130, ORIE 5142, MAE 5920, SYSEN 5200)

Spring. 3 credits. Prerequisite: CEE 5240/CS 5040, ECE/ORIE 5120, MAE 5910, or SYSEN 5200). Staff.
For description, see SYSEN 5200.

CEE 5290 Heuristic Methods for Optimization (also CS 5722, ORIE 5340)

Fall. 3 or 4 credits. Prerequisites: graduate standing or CS, ENGRD 2110 or 3510; ENGRD 3200 or permission of instructor. C. A. Shoemaker.
Teaches heuristic search methods including simulated annealing, tabu search, genetic algorithms, derandomized evolution strategy, and random walk developed for optimization of combinatorial- and continuous-variable problems. Application project options include wireless networks, protein folding, job shop scheduling, partial differential equations, satisfiability, or independent projects. Statistical methods are presented for comparing algorithm results. Advantages and disadvantages of heuristic search methods for

both serial and parallel computation are discussed in comparison with other optimization algorithms.

CEE 5900 Project Management

Fall, spring. 4 credits. Prerequisite: permission of instructor. F. J. Wayno. Core graduate course in project management for people who will manage technical or engineering projects. Focuses both on the "technical" tools of project management (e.g., methods for planning, scheduling, and control) and the "human" side (e.g., forming a project team, managing performance, resolving conflicts), with somewhat greater emphasis on the latter.

CEE 5910 Engineering Management Project

Fall. 4 credits. Prerequisite: permission of instructor. Staff. Intensive evaluation of the management aspects of a major engineering project or system. Most students work on a large group project in the area of project management, but students may also work singly or in small groups on an engineering management topic of special interest to them.

CEE 5920 Engineering Management Project

Spring. 4 credits. Prerequisite: permission of instructor. Staff. Continuation of CEE 5910.

CEE 5930 Engineering Management Methods

Spring. 4 credits. Prerequisites: CEE 3230 and 3040 or equivalent. M. A. Turnquist. Methods for managing data and transforming data into information. Modeling as a means to synthesize information into knowledge that can form the basis for decisions and actions. Application of statistical methods and optimization to managerial problems in operations, forecasting, and resource allocation.

[CEE 5940 Economic Methods for Engineering and Management (also ECON 4940)]

CEE 5950 Construction Planning and Operations

Fall. 3 credits. P. G. Carr. The course prepares students for responsibilities in overseeing the engineering and management of construction; on time—on budget. Emphasis is placed on the management processes for organizing, planning, and controlling the activities of complex development and construction programs. Students study the contracts for engineering, architecture, and construction; focusing on cost estimation and schedule control, responsibilities and risks, and the relationships among owners, designers, contractors, and suppliers. The potential for project disruption is discussed with special emphasis on dispute resolution methods.

[CEE 5960 Management Issues in Forensic Engineering

Fall. 3 credits. Next offered 2011–2012. P. G. Carr. Introduction to management issues in forensic engineering, contract administration, and dispute resolution, with particular emphasis on contract formation, performance, breach, and remedies. Through case studies in forensics, the engineer's standard of care and design obligations are explored. The engineer's technical and ethical duties to the

client, the contractors, and the public are examined.]

CEE 5970 Risk Analysis and Management (also TOX 5970)

Spring. 3 credits. Prerequisite: introduction to probability and statistics (e.g., CEE 3040, ENGRD 2700, ILRST 2100, BTRY 3010, or AEM 2100); two semesters of calculus; senior or graduate standing or permission of instructor. J. R. Stedinger.

Develops a working knowledge of risk terminology and reliability engineering, analytic tools and models used to analyze safety, environmental and technological risks, and social and psychological risk issues. Discussions address life risks in the United States historical accidents, natural hazards, threat assessment, transportation risks, industrial accidents, waste incineration, air pollution modeling, public health, regulatory policy, risk communication, and risk management.

[CEE 5980 Intro to Decision Analysis

Fall. 3 credits. Prerequisite: introduction to probability and statistics course such as CEE 3040, ENGRD 2700, ILRST 2100, BTRY 3010, or AEM 2100; seniors and graduate students or permission of instructor. Next offered 2011–2012. L. K. Nozick.

Framework to structure the way we think about decision situations that are complicated by uncertainty, complexity, and competing objectives. Specific decision-analysis concepts and tools, such as decision trees, sensitivity analysis, value of information, and utility theory. Applications to all areas of engineering and life. Includes a group project to analyze a real-world decision.]

[CEE 6000 Numerical Methods for Engineers]

CEE 6015 Special Topics—Remote Sensing

On demand. 1–6 credits. W. D. Philpot. Students may elect to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

CEE 6020 Environmental Seminar

Fall. 1 credit. Staff. Presents topics of current interest.

CEE 6021 Seminar—Environmental and Water Resources Systems Analysis

Spring. 1 credit. Prerequisite: permission of instructor. C. A. Shoemaker and J. R. Stedinger.

Graduate students and faculty members give informal lectures on various topics related to ongoing research in environmental or water resources systems planning and analysis.

CEE 6025 Special Topics in Environmental and Water Resources Systems Analysis

Offered on demand. 1–6 credits. Staff. Supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.

CEE 6030 Seminar—Environmental Fluid Mechanics/Hydrology

Spring. 1 credit. Requirement for graduate students majoring in hydraulics or hydraulic engineering. Open to undergraduates and graduates. P. J. Diamessis.

Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

CEE 6035 Special Topics in Hydraulics

On demand. 1–6 credits. Staff. Special topics in fluid mechanics, hydraulic engineering, or hydrology.

CEE 6045 Special Topics in Geotechnical Engineering

On demand. 1–6 credits. Staff. Supervised study of special topics not covered in the formal courses.

CEE 6051 Seminar—Environmental Quality Engineering

Spring. 1 credit. Prerequisite: graduate students in environmental engineering. J. M. Gossett.

Presentation and discussion of current research in environmental engineering.

CEE 6055 Special Topics in Environmental Engineering

On demand. 1–6 credits. Staff. Supervised study in special topics not covered in formal courses.

CEE 6060 Seminar—Transportation System Engineering

Fall, spring. 1 credit. Staff. Presents topics of current interest.

CEE 6065 Special Topics in Transportation

On demand. 1–6 credits. Staff. Advanced subject matter not covered in depth in other regular courses.

CEE 6070 Seminar—Civil Infrastructure

Fall, spring. 1 credit. Requirement for first-year graduate students. P. Koutsourelakis. Presents topics of current interest.

CEE 6075 Special Topics in Structural Engineering

On demand. 1–6 credits. Staff. Individually supervised study or independent design or research in specialized topics not covered in regular courses. Occasional offering of such special courses as Shell Theory and Design, and Advanced Topics in Finite Element Analysis.

CEE 6090 Seminar—Engineering Systems and Management

Fall, spring. 1 credit. Staff. Presents topics of current interest.

CEE 6095 Special Topics in Engineering Management

On demand. 1–6 credits. Staff. Individually supervised study of one or more specialized topics not covered in regular courses.

CEE 6100 Remote Sensing Fundamentals (also CSS 6100)

Fall. 3 credits. W. D. Philpot. Introduction to the principles, equipment, and methods used in obtaining information about earth resources and the environment from aircraft or satellite sensors. Topics include basic interactions of electromagnetic radiation with the earth, sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design in the form of a proposal to use remote sensing for a specific application.

CEE 6150 Digital Image Processing

Spring. 3 credits. W. D. Philpot. An introduction to digital image-processing concepts and techniques, with emphasis on remote-sensing applications. Topics include image acquisition, enhancement procedures, spatial and spectral feature extraction, and classification, with an introduction to

hyperspectral data analysis. Assignments require the use of image-processing software and graphics.

[CEE 6200 Water-Resources Systems Engineering]

Spring, 3 credits. Prerequisites: CEE 3230 and 5930 or BEE 4750. Next offered 2010–2011. D. P. Loucks.

Development and application of deterministic and stochastic optimization and simulation models for aiding in water-resources planning and management. Covers river-basin modeling, including water allocation to multiple purposes, reservoir design and operation, irrigation planning and operation, hydropower-capacity development, flow augmentation, flood control and protection, ecological habitat restoration, and water-quality prediction and control.]

CEE 6210 Stochastic Hydrology

Spring, 3 credits. Prerequisites: CEE 3040 or permission of instructor. Offered on demand. J. R. Stedinger.

Course examines statistical, time series, and stochastic optimization methods used to address water resources planning and management problems involving uncertainty objectives and hydrologic inputs. Statistical issues include maximum likelihood and moments estimators; censored data sets and historical information; probability plotting; Bayesian inference; regionalization methods; ARMA models; multivariate stochastic streamflow models; stochastic simulation; and stochastic reservoir-operation optimization models.

[CEE 6230 Environmental Quality Systems Engineering]

Fall, 3 credits. Prerequisites: MATH 2940, optimization, and graduate standing or permission of instructor. Next offered 2012–2013. C. A. Shoemaker.

Applications of optimization, simulation methods, and uncertainty analysis to the prevention and remediation of pollution. Case studies include regional waste and wastewater treatment, restoration of dissolved oxygen levels in rivers, and reclamation of contaminated groundwater. Applications use linear programming, integer, dynamic, nonlinear programming, and sensitivity analysis.]

CEE 6300 Spectral Methods for Incompressible Fluid Flows

Fall, 4 credits. P. J. Diamessis.

An introduction to the fundamental building blocks of flow solvers for the simulation of incompressible flow processes in the natural environment. The course will focus on higher-order element-based discretization schemes (Fourier, spectral element, spectral collocation, discontinuous Galerkin, and penalty methods). Course themes are centered around linear advection-diffusion, nonlinearity effects, pressure projection methods, the role of stratification, and the design of robust boundary and initial conditions. All these elements are blended together to build a two-dimensional incompressible Navier-Stokes solver.

CEE 6310 Computational Simulation of Flow and Transport in the Environment

Spring, 3 credits. Prerequisites: MATH 2940 or equivalent, ENGRD 3200 or experience in numerical methods and programming, and elementary fluid mechanics. Staff.

Covers fundamental equations of saturated and unsaturated flow in porous media; flow in fractured media; numerical modeling of transport in porous media; diffusion and advective diffusion in one, two, and three dimensions; anisotropy; and additional terms for reactive substances. Teaches various numerical methods including finite difference, finite elements, and boundary elements.

CEE 6320 Hydrology

Spring, 3 credits. Prerequisite: CEE 3310. W. H. Brutsaert.

Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers and scientists. Covers physical and statistical prediction methods for design related to hydrologic processes; hydrometeorology and evaporation; infiltration and base flow; surface runoff and channel routing; linear and nonlinear hydrologic systems; and storage routing and unit hydrograph methods.

CEE 6330 Flow in Porous Media and Groundwater

Fall, 3 credits. Prerequisite: CEE 3310.

Offered on demand; please contact professor if interested. W. H. Brutsaert. Fluid mechanics and equations of single-phase and multiphase flow; methods of solution. Applications involve aquifer hydraulics, pumping wells; drought flows; infiltration, groundwater recharge; land subsidence; seawater intrusion, miscible displacement; and transient seepage in unsaturated materials.

CEE 6340 Boundary Layer Meteorology

Fall, 3 credits. Prerequisite: CEE 3310 or permission of instructor. Offered on demand; please contact professor if interested. W. H. Brutsaert.

Physical processes in the lower atmospheric environment: turbulent transport in the atmospheric boundary layer, surface-air interaction, disturbed boundary layers, radiation. Applications include sensible and latent heat transfer from lakes, plant canopy flow and evapotranspiration, turbulent diffusion from chimneys and cooling towers, and related design issues.

CEE 6350 Small and Finite Amplitude Water Waves

Spring, 3 credits. Offered on demand; please contact professor if interested. P. L.-F. Liu.

Reviews linear and nonlinear theories of ocean waves. Discusses the applicability of different wave theories to engineering problems.

CEE 6360 Environmental Fluid Mechanics

Spring, 3 credits. Offered on demand; please contact professor if interested. E. A. Cowen.

Covers analytic and modeling perspectives of environmental flows; mechanics of layered and continuously stratified fluids: internal waves, density currents, baroclinic motions, and turbulence; jets and plumes and their behavior in the environment; turbulent diffusion, shear flow dispersion, and wave-induced mixing processes; and applications to mixing processes in rivers, lakes, estuaries, and the coastal ocean.

CEE 6370 Experimental Methods in Fluid Dynamics (also MAE 6270)

Spring, 4 credits. Pre- or corequisites: CEE 3310 or equivalent and CEE 3040 or equivalent. E. A. Cowen.

Introduction to experimental data collection and analysis, in particular as they pertain to fluid flows. Covers computer-based experimental control, analog and digital data acquisition, discrete sampling theory, digital signal processing, uncertainty analysis. Also covers analog transducers, acoustic and laser Doppler velocimetry, full-field (2-D) quantitative imaging techniques. Includes laboratory experiments and a project.

CEE 6400 Foundation Engineering

Spring, 3 credits. Prerequisite: CEE 3410. F. H. Kulhawy.

Covers soil exploration, sampling, and in-situ testing techniques; bearing capacity, stress distribution, and settlement; design of shallow and deep foundations; compaction and site preparation; and seepage and dewatering of foundation excavations.

CEE 6410 Retaining Structures and Slopes

Fall, 3 credits. Prerequisite: CEE 3410. T. D. O'Rourke.

Covers Earth pressure theories; design of rigid, flexible, braced, tied-back, slurry wall, soil nailing, and reinforced soil structures; stability of excavation, cut, and natural slopes; and design problems stressing application of course material under field conditions of engineering practice.

[CEE 6440 Environmental Site and Remediation Engineering]

Spring, 3 credits. Prerequisite: CEE 3410 or equivalent or permission of instructor. Next offered 2011–2012. T. D. O'Rourke.

Covers principles of hydrogeology, contaminant migration, and remediation technologies related to geotechnical and environmental engineering. Emphasizes environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfills. Design problems are based on real projects and involve visits from practicing engineers.]

CEE 6530 Water Chemistry for Environmental Engineering

Fall, 3 credits. Prerequisite: one semester of college chemistry or permission of instructor. J. M. Gossett.

Covers principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical thermodynamics, reaction kinetics, acid-base equilibria, mineral precipitation/dissolution, and electrochemistry. Focuses on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these problems.

[CEE 6540 Aquatic Chemistry]

Spring, 3 credits. Prerequisite: CEE 6530 or CHEM 2870–2880. Next offered 2011–2012. J. J. Bisogni.

Applies concepts of chemical equilibria to natural aquatic systems. Topics include acid-base reactions, buffer systems, mineral precipitation, coordination and redox reactions, Eh-pH diagrams adsorption phenomena, humic acid chemistry, and chemical-equilibria computational techniques. In-depth coverage of topics covered in CEE 6530.]

CEE 6550 Transport, Mixing, and Transformation in the Environment

Fall, 3 credits. Prerequisite: CEE 3310. Staff.

Application of fluid mechanics to problems of transport, mixing, and transformation in the water environment. Introduction to advective, diffuse, and dispersive processes in the environment. Boundary interactions: air-water and sediment-water processes. Introduction to chemical and biochemical transformation processes. Applications to transport, mixing, and transformation in rivers, lakes, and coastal waters.

CEE 6560 Physical/Chemical Process

Fall. 3 credits. Pre- or corequisite: CEE 6530 or permission of instructor.

J. J. Bisogni.

Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Analysis and design of treatment processes and systems.

CEE 6570 Biological Processes

Spring. 3 credits. Prerequisites: introductory microbiology and CEE 6560, or permission of instructor. J. M. Gossett.

Theoretical and engineering aspects of biological phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Bioenergetics analysis, stoichiometry, biokinetic, and design of biological treatment process.

[CEE 6580 Biodegradation and Biocatalysis

Spring. 3 credits. Prerequisites: CEE 4510 or BIOMI 2900 or equivalent; CEE 3510 or CHEME 3900 or permission of instructor.

Next offered 2010–2011. R. E. Richardson.

Students explore the use of microbes in biodegradation and biocatalysis as well as the molecular techniques (i.e., analysis of DNA, RNA, and proteins) commonly used in these applications. Lectures cover enzyme classes and kinetics, selective isolation of organisms with desired bioconversion capabilities, effects of environmental parameters and cell-to-cell communication on gene expression, methods in microbial molecular biology, and contemporary case studies in biodegradation and biocatalysis. Laboratory sessions give students hands-on experience in molecular and analytical methods. Student teams design and then construct a bioreactor employing their own environmental isolates that degrade a selected contaminant or produce a desired compound.]

[CEE 6610 Urban Transportation Planning and Modeling]

CEE 6620 Urban Transportation Network Design and Analysis

Fall. 3 credits. Prerequisite: CEE 3610 or permission of instructor. L. K. Nozick.

Covers the development and use of mathematical models for the design and analysis of urban transportation networks, including formulations and solution procedures for deterministic user equilibrium and stochastic user equilibrium. Students apply these tools to a substantive real-world case study and estimation of origin–destination tables.

[CEE 6630 Network Flows and Algorithms

Spring. 3 credits. Prerequisite: CEE 6620 or permission of instructor. Offered alternate years; next offered 2010–2011.

M. A. Turnquist.

Algorithms for network flow problems encountered in transportation systems modeling, including shortest path, multi-objective shortest path, minimum cost flows, multi-commodity flows, and generalized flows. Applications to vehicle routing, dynamic vehicle allocation, and network design.]

CEE 6650 Transportation, Energy, and Environment Systems for Sustainable Development

Spring. 3 credits. Prerequisites: CEE 3610 or permission of instructor. H. O. Gao.

The course focuses on the nexus of transportation and environment, energy, and climate-change concerns. It is interdisciplinary, drawing upon transportation, environment, urban planning, statistics, economics, and policy. The course covers both the theoretical and practical aspects of relevant topics including mobile emissions inventory estimation, renewable fuels, air quality impact and life cycle benefit assessment of alternative fuels/vehicles, Intelligent Transportation Systems (ITS) and urban sprawl, and congestion mitigation and air quality (CMAQ). Students will apply course materials to real-world cases and projects.

CEE 6710 Fundamentals of Structural Mechanics

Fall. 3 credits. Prerequisites: ENGRD 2020, MATH 2940. M. D. Grigoriu.

Topics include beam bending; beams on elastic foundations; stability analysis for columns and beam-columns; linear elasticity; numerical solutions for linear elasticity problems; and applications including stress concentration, torsion, and plates.

CEE 6720 Introduction to the Finite Element Method

Fall. 3 credits. Prerequisites: CEE 3710, 3720, and 4710. P. Koutsourelakis.

Covers the formulation of the finite element method in 2-D and 3-D continuum, basic 2-D and 3-D continuum isoparametric elements, modeling and programming aspects of the finite element method, and static and transient problems. A large part of the course is devoted to understanding element formulations, testing elements (patch test), and addressing problems such as shear and volumetric locking, among others. Emphasis is placed on understanding fundamental aspects of the method for making intelligent use of commercial software and obtaining a strong background for moving to further study and research.

CEE 6730 Design of Concrete Structures

Fall. 4 credits. Prerequisite: CEE 3710 or permission of instructor. K. C. Hover.

Centered on the design of a multi-story building that is initially planned with masonry bearing walls and precast-prestressed concrete floors. The masonry walls are then replaced with cast-in-place reinforced concrete. Finally, the structural steel elements are replaced with a reinforced concrete framing system. The course explores gravity loads, wind loads, and earthquake loads, and the behavior of individual members and the structure as a whole.

CEE 6750 Concrete Materials and Construction

Spring. 3 credits. K. C. Hover.

Covers the materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Topics include cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

CEE 6760 Advanced Composite Materials (also TAM 6550, MAE/MSE 6550)

Spring. 4 credits. CEE 4770/MAE 4550/MSE 5550/TAM 4550 not a prerequisite but excellent background.

For description, see TAM 6550.

[CEE 6770 Engineering Analysis

Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2011–2012.

M. D. Grigoriu.

Vector spaces, linear transformations, and eigenvalue problems with applications to matrix structural analysis, linear dynamics, stability, and principal stresses, strains, and moments of inertia. Fourier analysis for periodic and non-periodic functions, with applications to the solution of ordinary differential equations, beams, plates, and other structural mechanics problems. Partial differential equations with applications to the analysis of static and dynamic response of continuous systems and transport problems.]

CEE 6780 Structural Dynamics and Earthquake Engineering

Spring. 3 credits. M. D. Grigoriu.

Covers modal analysis, numerical methods, and frequency-domain analysis. Introduces earthquake-resistant design.

[CEE 6790 Evaluation and Failure of Structures]

CEE 6860 Civil Infrastructure Systems

Spring. 3 credits. Prerequisites: probability and statistics course (CEE 3040 or equivalent), or permission of instructor.

Recommended: engineering economics course (CEE 3230 or equivalent). S–U or letter grades. T. D. O'Rourke.

Introduction to the framing and solution of civil infrastructure problems using a systems engineering approach. Systems tools, such as optimization, life-cycle cost analysis, decision analysis, simulation, Markov modeling, and risk analysis, are examined through case studies related to civil infrastructure.

CEE 6900 Creativity, Innovation, and Leadership

Spring. 3 credits. Pre- or corequisite: CEE 5800 or permission of instructor.

F. J. Wayno.

Graduate course designed to help aspiring engineering managers to better understand individual creativity and organizational innovation and to develop the required skills to play a productive role in fostering both. Not incidentally, the course will also help students who take it to become more creative themselves. The course is highly participative and has a flow that moves from the individual—to the group—to the organization, with theory, research results, and practical skills-development woven seamlessly together.

CEE 6910 Principles of Project Leadership (also SYSEN 6910)

Spring. 3 credits. Prerequisite: permission of instructor. F. J. Wayno.

Core graduate course in project management for people who will manage technical or engineering projects. Focuses both on the "technical" tools of project management (e.g., methods for planning, scheduling, and control) and the "human" side (e.g., forming a project team, managing performance, resolving conflicts), with somewhat greater emphasis on the latter. Offered as a distance learning course only.

CEE 6930 Public Systems Modeling

Fall. 4 credits. D. P. Loucks.

An introduction to the art of model building and use, especially related to public sector planning and management issues. The course will focus on the quantitative systems approach for identifying and evaluating alternative possible decisions and their physical, economic, environmental, and social impacts. Modeling methods include various deterministic and probabilistic optimization and simulation models, decision analysis, evolutionary search algorithms, and statistical models applied to a variety of public sector issues. The aim of all of this "modeling technology" is to help us generate and communicate information that can assist and better inform public decision-making.

CEE 6940 Research in Engineering Management

On demand. 1–6 credits. Staff.

The student may select an area of investigation in engineering management. Results should be submitted to the instructor in charge in the form of a research report.

CEE 7010 Research—Remote Sensing

On demand. 1–6 credits. W. D. Philpot.

For students who want to study one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

CEE 7020 Environmental and Water Resources Systems Analysis Research

On demand. 1–6 credits. Prerequisite: permission of instructor. Preparation must be suitable to investigation to be undertaken. Staff.

Investigations of particular environmental or water resources systems problems.

CEE 7030 Research in Environmental Fluid Mechanics and Hydrology

On demand. 1–6 credits. Staff.

The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge in the form of a research report.

CEE 7040 Research in Geotechnical Engineering

On demand. 1–6 credits. Staff.

For students who want to pursue a particular geotechnical topic in considerable depth.

CEE 7050 Research in Environmental Engineering

On demand. 1–6 credits. Staff.

For students who want to study a particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design and analysis procedures.

CEE 7070 Research in Structural Engineering

On demand. 1–6 credits. Staff.

Pursues a branch of structural engineering beyond what is covered in regular courses.

Theoretical or experimental investigation of suitable problems.

CEE 7073 Civil and Environmental Engineering Materials Project

On demand. 1–3 credits. Staff.

Individual projects or reading and study assignments involving engineering materials.

CEE 7360 Turbulence and Turbulent Mixing in Environmental Stratified Flows

Spring. 3 credits. Prerequisite: CEE 6550 or second course in fluid mechanics or with instructor's permission. Offered on demand; please contact professor if interested. P. J. Diamesis.

Fundamentals of stably stratified flows, stratified homogeneous turbulence (spectra, length scales, and timescales), kinematics of diapycnal mixing, basic turbulent flow processes in homogeneous and stratified fluids (shear layers, wakes, boundary layers, etc.), energy budget analysis, and parameterizations of geophysical turbulence. Additional topics may include fossil turbulence theory and vortex-internal wave decomposition in strongly stratified turbulence.

CEE 7400 Engineering Behavior of Soils

Fall. 3 credits. Prerequisite: CEE 3410.

H. E. Stewart.

Detailed study of the physiochemical nature of soil. Stress states due to geostatic loading and stress-history effects. In-depth evaluation of stress-strain-strength, compressibility, and hydraulic conductivity of natural soils.

CEE 7410 Rock Engineering

Fall. 3 credits. Prerequisite: CEE 3410 or permission of instructor. Recommended: introductory geology. T. D. O'Rourke.

Geological and engineering classifications of intact rock, discontinuities, and rock masses. Includes laboratory and field evaluation of properties. Covers stress states and stress analysis; design of foundations on, and openings in, rock masses; analysis of the stability of rock slopes; and rock blasting.

[CEE 7440 Advanced Foundation Engineering]

CEE 7450 Soil Dynamics

Spring. 3 credits. Prerequisite: permission of instructor. H. E. Stewart.

Study of soil behavior under dynamic loading conditions. Foundation design for vibratory loadings. Introductory earthquake engineering including field and laboratory techniques for determining dynamic soil properties and liquefaction potential. Covers design of embankments and retaining structures under dynamic loading conditions.

[CEE 7460 Embankment Dam Engineering]

Spring. 2 credits. Prerequisites: CEE 6410 and 7410, or permission of instructor. Next offered 2011–2012. F. H. Kulhawy.

Principles of analysis and design for earth and rockfill dams. Materials, construction methods, internal and external stability, seepage and drainage, performance monitoring, abutment and foundation evaluation. Introduction to tailings dams.]

CEE 7620 Practicum in Modeling Transportation Systems

Fall. 3 credits. Prerequisites: CEE 6610, 6620, and 6630. L. K. Nozick.

CEE 7700 Engineering Fracture Mechanics

Spring. 3 credits. Prerequisite: CEE 6720 or equivalent and TAM 7530, or permission of instructor. A. Ingrassia.

Computational and physical modeling of crack growth processes. Finite and boundary element-based simulation of brittle fracture initiation and propagation, fatigue crack growth, and elasto-plastic and cohesive approaches to inelastic crack growth. Element formulation, meshing and remeshing, interactive steering. Case studies across scales from geomechanics to micromechanics, and including metals, ceramics, and polymers. Laboratory techniques for fracture toughness, crack growth rate, and trajectory testing.

[CEE 7710 Stochastic Mechanics in Science and Engineering]

Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2011–2012.

M. D. Grigoriu.

Review of probability theory, stochastic processes, and Ito formula with illustrations by Monte Carlo Simulation. Analytical and numerical methods for solving stochastic problems defined by algebraic, differential, and integral equations with random/deterministic coefficients and random/deterministic input. Applications include solution of Laplace, transport, Schrodinger, and other deterministic partial differential equations; dynamic systems subjected to Gaussian and non-Gaussian noise; random eigenvalue problems; and homogenization, structure evolution, and pattern formation for random heterogeneous materials.]

[CEE 7720 Random Vibration]

Fall. 3 credits. Prerequisites: MAE 3260 and ENGRD 2700, or equivalent, and permission of instructor. Next offered 2011–2012. M. D. Grigoriu.

Reviews random-process theory, simulation, and first-passage time. Linear random vibration: second-moment response descriptors and applications from fatigue; seismic analysis; and response to wind, wave, and other non-Gaussian load processes. Nonlinear random vibration: equivalent linearization, perturbation techniques, Fokker-Planck and Kolomogorov equations, Itô calculus, and applications from chaotic vibration, fatigue, seismic analysis, and parametrically excited systems.]

[CEE 7730 Structural Reliability]

Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2011–2012.

M. D. Grigoriu.

Review of probability theory, practical measures for structural reliability, second-moment reliability indices, probability models for strength and loads, probability-based design codes, reliability of structural systems, imperfection-sensitive structures, fatigue, stochastic finite-element techniques, and elementary concepts of probabilistic fracture mechanics.]

CEE 7740 Advanced Structural Concrete

Fall. 3 credits. K. C. Hover.

Covers the fundamental aspects of the mechanical behavior of concrete subjected to axial and multiaxial states of stress, rate effects, time-dependent deformations, and multiscale modeling. Includes the behavior of reinforced concrete membrane elements subjected to plane states of stress, torsion, limit analysis, and gives an introduction to finite element modeling of reinforced concrete structures.

CEE 7750 Nonlinear Finite Element Analysis

Spring, 3 credits. Next offered 2010–2011. W. Aquino.

Covers fundamental aspects of nonlinear finite element analysis including geometric and material nonlinearity. Also covers total and updated Lagrangian formulations, implementation of constitutive models, numerical solutions of global nonlinear systems of equations, and regularization techniques for softening materials.]

CEE 7760 Advanced Topics in Stability

Spring, 3 credits. Prerequisite: CEE 3740 or equivalent. Next offered 2011–2012. C. Earls.]

CEE 7770 Advanced Concepts in Finite Element Methods

Spring, 3 credits. W. Aquino.

The main objective of this course is to introduce the student to modern techniques used for solving partial differential equations using finite element methods. In addition, half of the course will be devoted to advanced programming techniques to produce fast and robust finite element computer codes. The course will cover formal mathematical formulations of the finite element method using function spaces, extensions of the finite element method, optimization of continuous systems, object-oriented implementations, and an introduction to multilevel techniques such as multigrid and domain decomposition.

CEE 7790 Nonlinear Finite Element Analysis II

Fall, 4 credits. Prerequisite CEE 6720 (or equivalent). C. Earls.

An advanced course in finite element analysis emphasizing the nonlinear solution of problems involving solids and structures (with a special emphasis on the latter). The formulation of nonlinear structural elements, the development of efficient and robust means for treating material nonlinearity, and the nonlinear solution of finite element systems are fundamental topics treated in this course. Topics from structural stability, problems involving coupled physics, and those involving transient dynamical response, will also be treated. The primary out-of-class effort centers on a significant project, and all students will be required to write their own nonlinear finite element code in support of this. As a result, some experience with programming is required.

CEE 8100 Thesis—Remote Sensing

Fall, spring, 1–12 credits. Students must register for credit with professor at start of each semester. W. D. Philpot.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 8200 Thesis—Environmental and Water Resource Systems

Fall, spring, 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 8300 Thesis—Environmental Fluid Mechanics and Hydrology

Fall, spring, 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 8400 Thesis—Geotechnical Engineering

Fall, spring, 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 8500 Thesis—Environmental Engineering

Fall, spring, 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 8600 Thesis—Transportation Systems Engineering

Fall, spring, 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 8700 Thesis—Structural Engineering

Fall, spring, 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 8800 Thesis—Civil Infrastructure Systems

Fall, spring, 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

COMPUTER SCIENCE

E. Tardos, chair; W. Arms, G. Bailey, K. Bala, D. Bindel, K. Birman, C. Cardie, R. L. Constable, D. Fan, P. Francis, J. Gehrke, C. Gomes, D. Greenberg, D. Gries, J. Halpern, J. E. Hopcroft, D. Huttenlocher, D. James, T. Joachims, J. Kleinberg, R. Kleinberg, C. Koch, D. Kozen, L. Lee, S. Marschner, A. Myers, R. Pass, F. B. Schneider, B. Selman, D. Shmoys, E. G. Sirer, N. Snavely, R. Teitelbaum, C. Van Loan, H. Weatherspoon, R. Zabih

The Department of Computer Science is part of the College of Arts and Sciences,

Computing and Information Science (CIS), and the College of Engineering. For complete course descriptions, see the Computer Science listing in the CIS section.

CS 1109 Fundamental Programming Concepts

Summer, 2 credits. Prerequisite: pre-freshman standing or permission of instructor. Credit may not be applied toward engineering degree. S–U grades only.

CS 1110 Introduction to Computing Using Java

Fall, spring, summer, 4 credits. Assumes basic high school mathematics (no calculus), but no programming experience.

CS 1112 Introduction to Computing Using MATLAB

Fall, spring, 4 credits. Corequisite: MATH 1110, 1910, or equivalent. Assumes student is comfortable with mathematics (at the level of one semester of calculus) but has no prior programming experience.

CS 1114 Introduction to Computing Using MATLAB and Robotics

Spring, 4 credits. Prerequisite: some programming experience.

CS 1130 Transition to Object-Oriented Programming

Fall, spring, 1 credit. Prerequisite: one course in programming. S–U grades only.

CS 1132 Transition to MATLAB

Fall, spring, 1 credit. Prerequisite: one course in programming. S–U grades only.

CS 1300 Introductory Design and Programming for the Web (also INFO 1300)

Fall, 4 credits.

For description, see INFO 1300 in CIS section.

CS 1610 Computing in the Arts (also CIS/ENGR 1610, DANCE 1540, FILM 1750, MUSIC 1465, PSYCH 1650)

Fall, 3 credits. Recommended: good comfort level with computers and some of the arts.

CS 1620 Visual Imaging in the Electronic Age (also ARCH 3702, ART 1700, CIS 1620, ENGR 1620)

Fall, 3 credits.

For description, see ART 1700.

CS 1710 Introduction to Cognitive Science (also COGST 1101, LING 1170, PHIL 1910, PSYCH 1102)

Fall, summer, 3 credits.

For description, see COGST 1101.

CS 2022 Introduction to C

Fall, spring, usually weeks 1–4. 1 credit.

Prerequisite: one programming course or equivalent programming experience. Credit granted for both CS 2022 and 2024 only if 2022 is taken first. S–U grades only.

CS 2024 C++ Programming

Fall, 2 credits. Prerequisite: one programming course or equivalent programming experience. Students who plan to take CS 2022 and 2024 must take 2022 first. S–U grades only.

CS 2026 Introduction to C#

Spring, usually weeks 5–8. 1 credit.

Prerequisite: CS/ENGRD 2110 or equivalent experience. S–U grades only.

CS 2042 Unix Tools

Fall, usually weeks 5–8. 1 credit.
Prerequisite: one programming course or equivalent programming experience. S–U grades only.

CS 2044 Advanced UNIX Programming and Tools

Spring, usually weeks 5–8. 1 credit.
Prerequisite: CS 2042 or equivalent. S–U grades only.

CS 2110 Object-Oriented Programming and Data Structures (also ENGRD 2110)

Fall, spring, summer. 3 credits. Prerequisite: CS 1110, CS 1130, or CS 1113 or (CS 1112 if completed before fall 2007) or equivalent course in Java or C++.

CS 2300 Intermediate Design and Programming for the Web (also INFO 2300)

Spring. 3 credits. Prerequisite: CS 1300 strongly recommended. Must be taken before CS 3300.

For description, see INFO 2300 in CIS section.

CS 2800 Discrete Structures

Fall, spring. 3 credits. Pre- or corequisite: one course in programming or permission of instructor.

CS 2850 Networks (also ECON/INFO 2040, SOC 2090)

Spring. 4 credits. Prerequisite: none.

For description, see ECON 2040.

CS 3110 Data Structures and Functional Programming

Fall, spring. 4 credits. Prerequisite: CS 2110 and 2111 or equivalent programming experience. Pre- or corequisite: CS 2800. Should not be taken concurrently with CS 3410 or 3420.

CS 3220 Introduction to Scientific Computation (also ENGRD 3220)

Spring, summer. 3 credits. Prerequisites: CS 1112 or 1132 and MATH 2220, 2230, or 2940.

CS 3300 Data-Driven Web Applications (also INFO 3300)

Spring. 3 credits. Prerequisite: CS/ENGRD 2110 and (CS 2300 or permission of instructor). CS majors may use only one of the following toward their degree: CS/INFO 3300 or CS 4321.

For description, see INFO 3300 in CIS section.

CS 3410 Systems Programming

Spring. 4 credits. Prerequisites: CS 2110 or equivalent programming experience. Should not be taken concurrently with CS 3110.

CS 3420 Computer Organization (also ECE 3140)

Spring. 4 credits. Prerequisite: CS 2110 or ENGRD 2300. Should not be taken concurrently with CS 3110.

For description, see ECE 3140.

CS 3740 Computational Linguistics (also COGST 4240, LING 4424)

Fall. 4 credits. Recommended: CS 2042.

For description, see LING 4424.

CS 3810 Introduction to Theory of Computing

Fall, summer. 3 credits. Prerequisite: CS 2800 or permission of instructor.

CS 4120 Introduction to Compilers

Fall. 3 credits. Prerequisites: CS 3110 or permission of instructor and CS 3420 or 3410. Corequisite: CS 4121.

CS 4121 Practicum in Compilers

Fall. 2 credits. Corequisite: CS 4120.

CS 4210 Numerical Analysis and Differential Equations (also MATH 4250)

Fall. 4 credits. Prerequisites: MATH 2210 or 2940 or equivalent, one additional mathematics course numbered 3000 or above, and knowledge of programming. For description, see MATH 4250.

CS 4220 Numerical Analysis: Linear and Nonlinear Equations (also MATH 4260)

Spring. 4 credits. Prerequisites: MATH 2210 or 2940 or equivalent, one additional mathematics course numbered 3000 or above, and knowledge of programming.

CS 4300 Information Retrieval (also INFO 4300)

Fall. 3 credits. Prerequisite: CS 2110 or equivalent.

For description, see INFO 4300 in CIS section.

CS 4302 Web Information Systems (also INFO 4302)

Spring. 3 credits. Prerequisites: CS 2110 and some familiarity with web site technology.

For description, see INFO 4302 in CIS section.

CS 4320 Introduction to Database Systems

Fall. 3 credits. Prerequisites: CS 3110 (or CS 2110, 2111 and permission of instructor).

CS 4321 Practicum in Database Systems

Fall. 2 credits. Pre- or corequisite: CS 4320. CS majors may use only one of the following toward their degree: CS/INFO 3300 or CS 4321.

CS 4410 Operating Systems

Fall. 3 credits. Prerequisite: CS 3410 or 3420.

CS 4411 Practicum in Operating Systems

Fall. 2 credits. Corequisite: CS 4410.

CS 4420 Computer Architecture (also ECE 4750)

Fall. 4 credits. Prerequisites: ENGRD 2300 and CS 3420/ECE 3140.

For description, see ECE 4750.

CS 4620 Introduction to Computer Graphics (also ARCH 3704)

Fall. 3 credits. Prerequisite: CS/ENGRD 2110.

CS 4621 Computer Graphics Practicum

Fall. 2 credits. Pre- or corequisite: CS 4620.

CS 4700 Foundations of Artificial Intelligence

Fall. 3 credits. Prerequisites: CS/ENGRD 2110 and CS 2800 or equivalent.

CS 4701 Practicum in Artificial Intelligence

Fall. 2 credits. Pre- or corequisite: CS 4700.

CS 4740 Introduction to Natural Language Processing (also COGST 4740, LING 4474)

Spring. 4 credits. Prerequisite: CS 2110.

CS 4780 Machine Learning

Spring. 4 credits. Prerequisites: CS 2111, CS 2800, or basic probability theory, and basic knowledge of linear algebra.

[CS 4782 Probabilistic Graphical Models (also BTRY 4790)]

Fall. 4 credits. Prerequisites: probability theory (BTRY 4080 or equivalent), programming and data structures (CS 2110 or equivalent); course in statistical methods recommended but not required (BTRY 4090 or equivalent). Next offered 2010–2011.

For description, see BTRY 4790.]

CS 4812 Quantum Computation (also PHYS 4481/7681)

Spring. 2 credits. Prerequisite: familiarity with theory of vector spaces over complex numbers.

For description, see PHYS 4481.

CS 4820 Introduction to Analysis of Algorithms

Spring, summer. 4 credits. Prerequisites: CS 2800 and 3110.

[CS 4830 Introduction to Cryptography]

Fall. 4 credits. Prerequisites: CS 2800 (or equivalent), or permission of instructor. Next offered 2010–2011.]

CS 4850 Mathematical Foundations for the Information Age

Spring. 4 credits. Prerequisite: Mathematical maturity.

CS 4860 Applied Logic (also MATH 4860)

Fall. 4 credits. Prerequisites: MATH 2220 or 2940, CS 2800 or equivalent (e.g., MATH 3320, 4320, 4340, 4810), and some additional course in mathematics or theoretical computer science.

CS 4999 Independent Reading and Research

Fall, spring. 1–4 credits.

CS 5150 Software Engineering

Fall. 4 credits. Prerequisite: CS 2110 or equivalent experience programming in Java or C++.

CS 5220 Applications of Parallel Computers

Spring. 4 credits. Prerequisites: A course in numerical methods at the level of CS 3220 or higher.

CS 5300 The Architecture of Large-Scale Information Systems (also INFO 5300)

Spring. 4 credits. Prerequisite: CS/INFO 3300 or 4320.

For description, see INFO 5300 in CIS section.

CS 5410 Intermediate Computer Systems

Fall or spring. 4 credits. Prerequisite: CS 4410 or permission of instructor. Next offered fall 2009.

CS 5420 Parallel Computer Architecture (also ECE 5720)

Fall. 4 credits. Prerequisite: ECE 4750.

For description, see ECE 5720.

CS 5430 System Security

Fall or spring. 4 credits. Prerequisites: CS 4410 or 4450 and familiarity with Java, C, or C# programming languages. Next offered spring 2010.

CS 5620 Interactive Computer Graphics

Fall. 4 credits. Prerequisite: CS 4620.

CS 5643 Physically Based Animation for Computer Graphics

Spring. 4 credits. Prerequisites: CS/ENGRD 3220 and/or CS 4620 or permission of instructor.

CS 5722 Heuristic Methods for Optimization (also CEE 5090, ORIE 5340)

Fall. 3 or 4 credits. Prerequisites: CS/ENGRD 2110 or 3220 or CEE/ENGRD 3200, or graduate standing, or permission of instructor.

For description, see CEE 5290.

[CS 5846 Decision Theory I (also ECON 4760/6760)]**CS 6110 Advanced Programming Languages**

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.

CS 6210 Matrix Computations

Fall. 4 credits. Prerequisites: MATH 4110 and 4310 or permission of instructor. Offered alternate years.

[CS 6240 Numerical Solution of Differential Equations

Spring. 4 credits. Prerequisites: exposure to numerical analysis (e.g., CS 4210 or 6210), differential equations, and knowledge of MATLAB.]

CS 6320 Database Systems

Spring. 4 credits. Prerequisite: CS 4320 or permission of instructor.

CS 6322 Advanced Database Systems

Fall. 4 credits.

CS 6410 Advanced Systems

Fall or spring. 4 credits. Prerequisite: CS 4410 or permission of instructor. Offered fall 2009.

CS 6460 Peer-to-Peer Systems

Spring. 4 credits. Recommended: CS 6410.

CS 6464 Advanced Distributed Storage Systems

Spring. 4 credits. Prerequisites: CS 4410 or permission of instructor.

[CS 6620 Advanced Interactive Graphics

Fall or spring. 4 credits. Prerequisite: CS 4620 and 4621 or 5620 or permission of instructor. Next offered 2010-2011.]

CS 6630 Realistic Image Synthesis

Fall or spring. 4 credits. Prerequisites: CS 4620 or equivalent and undergraduate-level understanding of algorithms, programming, and vector calculus. Offered fall 2009.

[CS 6650 Computational Motion

Fall or spring. 4 credits. Prerequisites: Undergraduate-level understanding of algorithms, and some scientific computing. Next offered 2010-2011.]

CS 6670 Computer Vision

Fall or spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATH 2210 or equivalent. Offered fall 2009.

CS 6700 Advanced Artificial Intelligence

Spring. 4 credits. Prerequisite: CS 4700 or permission of instructor.

CS 6740 Advanced Language Technologies (also INFO 6300)

Fall, spring. 3 credits. Prerequisite: permission of instructor. Neither CS 4300 nor CS 4740 are prerequisites.

[CS 6766 Reasoning about Uncertainty

Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic. Next offered 2010-2011.]

CS 6780 Advanced Topics in Machine Learning

Fall or spring. 4 credits. Prerequisites: CS 4780 or equivalent, or CS 5780 or equivalent, or permission of instructor. Offered fall 2009.

[CS 6782 Probabilistic Graphical Models (also BTRY 6790)

Fall. 4 credits. Prerequisites: probability theory (BTRY 4080 or equivalent), programming and data structures (CS 2110 or equivalent); a course in statistical methods is recommended but not required (BTRY 4090 or equivalent). Next offered 2010-2011.

For description, see BTRY 6790.]

[CS 6810 Theory of Computing

Fall or spring. 4 credits. Prerequisite: CS 3810 and CS 4820 or 6820 or permission of instructor. Next offered 2010-2011.]

CS 6820 Analysis of Algorithms

Fall. 4 credits. Prerequisite: CS 4820 or graduate standing.

[CS 6822 Advanced Topics in Theory of Computing

Fall or spring. 4 credits. Prerequisite: CS 6820 or permission of instructor. Next offered 2010-2011.]

CS 6830 Cryptography

Fall. 4 credits. Prerequisites: general ease with algorithms and elementary probability theory, maturity with mathematical proofs (ability to read and write mathematical proofs).

CS 6840 Algorithmic Game Theory

Fall or spring. 4 credits. Prerequisite: background in algorithms and graphs at level of CS 4820. No prior knowledge of game theory or economics assumed. Offered fall 2009.

[CS 6850 The Structure of Information Networks (also INFO 6850)]**CS 6860 Logics of Programs**

Spring. 4 credits. Prerequisites: CS 4810, 6810, and (CS/MATH 4860 or MATH 4810).

CS 7090 Computer Science Colloquium

Fall, spring. 1 credit. For staff, visitors, and graduate students interested in computer science. S-U grades only.

CS 7190 Seminar in Programming Languages

Fall, spring. 1 credit. Prerequisite: CS 6110 or permission of instructor. S-U grades only.

CS 7192 Seminar in Programming Refinement Logics

Fall, spring. 4 credits. Prerequisite: permission of instructor.

CS 7320 Topics in Database Systems

Fall, spring. 4 credits. S-U grades only.

CS 7390 Database Seminar

Spring. 1 credit. S-U grades only. Prerequisite: CS 6322 or permission of instructor.

CS 7490 Systems Research Seminar

Fall, spring. 1 credit. S-U grades only.

CS 7690 Computer Graphics Seminar

Fall, spring. 3 credits.

[CS 7726 Evolutionary Computation and Design Automation (also MAE 6500)

Spring. 4 credits. Prerequisite: programming experience or permission of instructor. Next offered 2010-2011.]

CS 7790 Seminar in Artificial Intelligence

Fall, spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.

CS 7794 Seminar in Natural Language Understanding

Fall, spring. 2 credits.

CS 7860 Introduction to Kleene Algebra

Spring. 4 credits. Prerequisites: CS 4810 and (CS 4680 or MATH 4810).

CS 7890 Seminar in Theory of Algorithms and Computing

Fall, spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.

CS 7893 Cryptography Seminar

Fall, spring. 1 credit.

CS 7999 Independent Research

Fall, spring. Prerequisite: permission of computer science advisor. Independent research or master of engineering project.

CS 9999 Thesis Research

Fall, spring. Prerequisite: permission of computer science advisor. S-U grades only. Doctoral research.

EARTH AND ATMOSPHERIC SCIENCES

L. D. Brown, chair; A. T. DeGaetano, associate chair (CALS); J. L. Cisne, director of undergraduate studies (Science of Earth Systems); R. W. Allmendinger, W. D. Allmon, C. Andronicos, L. M. Cathles, S. J. Colucci, A. T. DeGaetano, L. A. Derry, M. Goman, C. H. Greene, D. L. Hysell, T. E. Jordan, R. W. Kay, S. Mahlburg Kay, R. Lohman, N. Mahowald, B. Monger, A. Moore, J. Phipps Morgan, M. Pritchard, S. J. Riha, W. M. White, D. S. Wilks, M. W. Wysocki

For complete course descriptions, see the Earth and Atmospheric Sciences listing in the College of Arts and Sciences or College of Agriculture and Life Sciences section.

EAS 1101 Introductory Geological Sciences (To Know Earth)

Fall. 3 credits. C. Andronicos and R. Allmendinger.

EAS 1108 Earth in the News

Summer. 3 credits. S. L. Losh.

EAS 1109 Dinosaurs

Fall. 1 credit. J. L. Cisne.

EAS 1150 Severe Weather Phenomena

Summer. 3 credits. M. W. Wysocki.

EAS 1190 Fossil Preparation

Fall. 1 credit. Prerequisite: EAS 1109 or related EAS course. W. Allmon and J. Cisne.

EAS 1220 Earthquake! (also ENGR 1220)

Spring. 3 credits. L. Brown. Course in Introduction to Engineering series. For description, see ENGR 1220.

EAS 1310 Basic Principles of Meteorology

Fall. 3 credits. 1-credit lab is EAS 1330. M. W. Wysocki.

EAS 1330 Basic Meteorology Lab

Fall. 1 credit. Corequisite: EAS 1310. M. W. Wysocki.

Covers topics presented in EAS 1310.

EAS 1340 Weather Analysis and Forecasting

Spring. 1 credit. Prerequisites: EAS 1310 and EAS 1330. S–U grades only. M. W. Wysocki and staff.

This course will serve as an extension of the EAS 1330 first-year majors lab. It will provide opportunity for formal weather briefings, explore specific atmospheric storms (synoptic and mesoscale, including the climatology of each storm type), through assigned readings, map analysis, and weather discussions.

EAS 1400 Freshman Writing Seminar "Writing in the Sciences: Environmental Perspectives"

Spring. 3 credits. S. Jessup.

EAS 1540 Introductory Oceanography (also BIOEE 1540)

Fall, summer. 3 credits. Lec. Optional 1-credit lab is EAS/BIOEE 1550. Fall: C. Greene and B. Monger; summer: B. Monger.

EAS 1550 Introductory Oceanography Lab (also BIOEE 1550)

Fall. 1 credit. Lab. Corequisite: EAS/BIOEE 1540. C. Greene and B. Monger.

Laboratory course covering topics presented in EAS/BIOEE 1540.

EAS 1551 Introduction to Oceanography Lab (also BIOSM 1551)

Summer. 1 credit. Prerequisites: college-level science course, or EAS 1540, or marine science course or permission of instructor. B. Monger and C. Greene

EAS 1700 Evolution of the Earth and Life

Spring. 3 credits. J. L. Cisne.

EAS 2130 Marine and Coastal Geology

Summer. 4 credits. Prerequisite: introductory geology or ecology or permission of instructor. Staff.

EAS 2200 The Earth System

Fall, spring. 4 credits. Prerequisites: MATH 1110/1910. Letter grades only. W. M. White.

[EAS 2220 Seminar—Hawaii's Environment

Fall. 1 credit. S–U grades only. Next offered 2010–2011. A. Moore.]

EAS 2500 Meteorological Observations and Instruments

Fall. 4 credits. Prerequisite: EAS 1310. M. W. Wysocki.

EAS 2680 Climate and Global Warming

Spring. 3 credits. Prerequisite: basic college math. S–U or letter grades. A. T. DeGaetano.

EAS 2900 Computer Programming and Meteorology Software

Spring. 3 credits. Prerequisites: EAS 1310; MATH 1110 or equivalent. N. Mahowald and B. Belcher.

EAS 2960 Forecast Competition

Fall and spring. 1 credit; students enroll for two consecutive semesters; credit awarded for second semester; may be repeated for credit. Prerequisite: undergraduate standing in atmospheric science or permission of instructor. S–U grades only. D. S. Wilks.

EAS 3010 Evolution of the Earth System

Fall. 4 credits. Prerequisites: EAS 2200, MATH 1110 or 1910, and one chemistry course (college or high school). T. Jordan, S. Riha, and W. D. Allmon. Two Saturday field trips.

EAS 3030 Introduction to Biogeochemistry (also NTRES 3030)

Fall. 4 credits. Prerequisites: CHEM 2070 or equivalent, MATH 1120, plus a biology and/or geology course. J. Yavitt.

EAS 3040 Interior of the Earth

Spring. 3 credits. Prerequisite: EAS 2200 or permission of instructor. C. Andronicos.

EAS 3050 Climate Dynamics

Fall. 3 credits. Prerequisite: two semesters of calculus and one semester of physics. N. Mahowald.

EAS 3060 Evolution of Ancient and Modern Oceans (also BIOSM 3060)

Summer. 6 credits. Prerequisites: introductory biology (two semesters) and college-level course in Earth science, or permission of instructor. W. Allmon.

EAS 3220 Biogeochemistry of the Hawaiian Islands

Spring. 4 credits. Prerequisite: enrollment in EES semester in Hawaii, EAS 2200, EAS 3030, or permission of instructor. L. A. Derry.

EAS 3340 Microclimatology

Spring. 3 credits. Prerequisite: physics course. D. S. Wilks.

EAS 3400 Field Study of the Earth System

Spring. 6 credits. Prerequisites: enrollment in Earth and Environmental Sciences Semester in Hawaii; one semester of calculus (MATH 1910/1920 or 1110/1120 and two semesters of any of the following: PHYS 2207/2208 or 1112/2213; CHEM 2070/2080 or 2090/2080; BIOG 1101/1103–1102/1104 or 1105/1106 or 1109/1100; or equivalent course work. A. Moore.

EAS 3410 Atmospheric Thermodynamics and Hydrostatics

Fall. 3 credits. Prerequisites: one year of calculus and one semester of physics. M. W. Wysocki.

EAS 3420 Atmospheric Dynamics (also ASTRO 3342)

Spring. 3 credits. Prerequisites: MATH 2930, 2130 or equivalent; one semester of physics. Staff.

EAS 3500 Dynamics of Marine Ecosystems (also BIOEE 3500)

Fall. 3 credits. Prerequisites: one year of calculus and a semester of oceanography (e.g., EAS 1540), or permission of instructor. Offered alternate years. C. H. Greene and R. W. Howarth.

EAS 3510 Conservation Oceanography (BIOEE 3510)

Spring. 4 credits. Recommended: EAS 3400. C. H. Greene and C. D. Harvell.

EAS 3520 Synoptic Meteorology I

Spring. 3 credits. Prerequisite: EAS 3410. Corequisite: EAS 3420. M. W. Wysocki.

[EAS 3530 Physical Oceanography

Fall. 3 credits. Prerequisites: MATH 1120 or 1920, or one year of physics, or permission of instructor. Offered alternate years; next offered 2010–2011. B. C. Monger.]

EAS 4010 Fundamentals of Energy and Mineral Resources

Fall. 3 credits. Previous course in geology helpful but not necessary. L. Cathles.

[EAS 4040 Geodynamics

Spring. 3 credits. Prerequisite: calculus and calculus-based physics course or permission of instructor. Offered alternate years; next offered 2010–2011. J. Phipps Morgan.]

EAS 4050 Active Tectonics

Spring. 3 credits. Recommended: mechanical background equivalent to EAS 4260/4880. S–U or letter grades. Offered alternate years. R. Lohman.

[EAS 4060 Marine Geology and Geophysics

Spring. 4 credits. Prerequisites: EAS 2200 or comparable course; completion of some EAS classes helpful, but not required. Next offered 2010–2011. J. Phipps-Morgan.]

EAS 4170 Field Mapping in Argentina

Summer. 4 credits. Prerequisites: introductory EAS course and EAS 4260 or EAS 3040. Offered alternate years. S. Mahlborg Kay.

[EAS 4250 European Discovery of Impacts and Explosive Volcanism

Spring. 2 credits. Prerequisite: junior, senior, or graduate students with background in geology and permission of instructor. One two-hour meeting per week plus field trip during spring break. Offered alternate years; next offered 2010–2011. J. Phipps Morgan.]

EAS 4260 Structural Geology

Spring. 4 credits. Prerequisite: one semester of calculus plus an introductory geology course or permission of instructor. One weekend field trip. C. Andronicos.

[EAS 4340 Exploration Geophysics

Fall. 3 credits. Prerequisites: MATH 1920 and PHYS 2208, 2213, or equivalent. Offered alternate years; next offered 2010–2011. L. D. Brown.]

EAS 4350 Statistical Methods in Meteorology and Climatology

Fall. 3 credits. Prerequisites: one introductory course each in statistics (e.g., AEM 2100) and calculus. D. S. Wilks.

EAS 4370 Geophysical Field Methods (also ARKEO 4370)

Fall. 3 credits. Prerequisite: PHYS 2208 or 2213 or permission of instructor. Offered alternate years. L. D. Brown.

[EAS 4400 Seminar: Climate Science, Impacts and Mitigation

Fall. 2 credits. Prerequisites: junior or higher standing. Offered alternate years; next offered 2010–2011. N. Mahowald.]

EAS 4470 Physical Meteorology

Fall. 3 credits. Prerequisites: one year each of calculus and physics. Offered alternate years. A. T. DeGaetano.

EAS 4510 Synoptic Meteorology II

Fall. 3 credits. Prerequisites: EAS 3410 and 3420. S. J. Colucci.

EAS 4530 Mineralogy

Fall. 4 credits. Prerequisites: CHEM 2070 or 2090 or permission of instructor. S. Mahlburg Kay.

[EAS 4540 Petrology and Geochemistry

Spring. 4 credits. Prerequisite: EAS 4530. Next offered 2010-2011. R. W. Kay.]

EAS 4550 Geochemistry

Fall. 4 credits. Prerequisites: CHEM 2070 or CHEM 2090 and MATH 1920 or equivalent. Recommended: EAS 3040. Offered alternate years. W. M. White.

EAS 4560 Mesoscale Meteorology

Spring. 3 credits. Prerequisites: EAS 3410 and 3420 or permission of instructor. S. J. Colucci.

[EAS 4570 Atmospheric Air Pollution

Fall. 3 credits. Prerequisites: EAS 3410 or one course in thermodynamics, and one semester of chemistry, or permission of instructor. Offered alternate years; next offered 2010-2011. M. W. Wysocki.]

[EAS 4580 Volcanology

Fall. 3 credits. Prerequisite: EAS 3040 or equivalent. Offered alternate years; next offered 2010-2011. R. W. Kay.]

[EAS 4600 Late Quaternary Paleocology

Fall. 4 credits. Offered alternate years; next offered 2010-2011. M. Goman.]

EAS 4610 Paleoclimate: Since the Last Ice Age

Fall. 3 credits. Prerequisite: EAS 2200 or permission of instructor. Offered alternate years. M. Goman.

[EAS 4620 Marine Ecology (also BIOEE 4620)

Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE 2610. Offered alternate years; next offered 2010-2011. C. D. Harvell and C. H. Greene. For description, see BIOEE 4620.]

EAS 4700 Weather Forecasting and Analysis

Spring. 3 credits. Prerequisites: EAS 3520 and 4510. M. W. Wysocki.

[EAS 4710 Introduction to Groundwater Hydrology (also BEE 4710)

Spring. 3 credits. Prerequisites: MATH 2940 and ENGRD 2020. Offered alternate years; next offered 2010-2011. L. M. Cathles and T. S. Steenhuis.]

EAS 4750 Special Topics in Oceanography

Fall, spring, summer. 2-6 credits, variable. Prerequisites: one semester of oceanography and permission of instructor. Fall, spring: C. H. Greene; summer: B. C. Monger.

EAS 4760 Sedimentary Basins

Spring. 3 credits. Prerequisite: EAS 3010 or permission of instructor. Offered alternate years. T. E. Jordan.

[EAS 4780 Advanced Stratigraphy

Fall. 3 credits. Prerequisite: EAS 3010 or permission of instructor. Offered alternate years; next offered 2010-2011. T. E. Jordan.]

EAS 4790 Paleobiology (also BIOEE 4790)

Spring. 4 credits. Prerequisites: one year introductory biology and either BIOEE 2740 or 3730 or EAS 3010, or permission of instructor. W. D. Allmon.

EAS 4800 Our Changing Atmosphere: Global Change and Atmospheric Chemistry (also BEE 4800)

Fall. 3 credits. Prerequisites: CHEM 2090, MATH 1920, PHYS 1112, or equivalent, or permission of instructor. S-U or letter grade. P. G. Hess.

EAS 4820 Atmospheric Modeling

Spring. 3 credits. Prerequisite: differential equations, introductory computer background, junior standing or above or permission of instructor. S-U or letter grades. N. Mahowald.

[EAS 4830 Land, Water, Agriculture, and Environment (also CSS 4830)

Fall. 4 credits. Prerequisite: CSS 2600 or equivalent calculus. Next offered 2010-2011. H. Van Es and S. J. Riha.]

[EAS 4840 Inverse Methods in the Natural Sciences

Fall. 3 credits. Prerequisite: MATH 2940. Next offered 2010-2011. D. L. Hysell.]

EAS 4870 Introduction to Radar and Remote Sensing (also ECE 4870)

Spring. 3 credits. Prerequisites: PHYS 2208 or 2213 or equivalent, or permission of instructor. D. L. Hysell.

EAS 4880 Global Geophysics

Spring. 3 credits. Prerequisites: MATH 1920 (or 1120) and PHYS 2208 or 2213. Offered alternate years. M. Pritchard and R. Lohman.

EAS 4910-4920 Undergraduate Research

Fall, spring. 1-4 credits. Students must complete form at 2124 Snee Hall. Staff (J. L. Cisne, coordinator).

EAS 4940 Special Topics in Atmospheric Science (undergraduate level)

Fall or spring. 8 credits max. S-U or letter grades. Staff.

EAS 4960 Internship Experience

Fall, spring. 1-2 credits. Prerequisite: enrollment in EES semester in Hawaii and EAS 3400. S-U grades only. See department for more information. A. Moore.

EAS 4970 Individual Study in Atmospheric Science

Fall or spring. 1-6 credits. Students must register using independent study form. S-U grades only. Staff.

EAS 4980 Teaching Experience in Earth and Atmospheric Sciences

Fall or spring. 1-4 credits. Students must register using independent study form. S-U grades only. Staff.

EAS 4990 Undergraduate Research in Atmospheric Science

Fall, spring. Credit TBA. Students must register using independent study form. S-U grades only. Staff.

EAS 5000 Design Project in Geohydrology

Fall, spring. 3-12 credits. Alternative to industrial project for M.Eng. students choosing geohydrology option. May continue over two or more semesters. L. M. Cathles.

EAS 5020 Case Histories in Groundwater Analysis

Spring. 4 credits. L. M. Cathles.

EAS 5050 Fluid Dynamics in the Earth Sciences

Spring. 3 credits. Prerequisites: MATH through 2940, PHYS through 2208 or 2214, or permission of instructor. Offered alternate years. L. Cathles and M. Wysocki.

EAS 5110 Earth System Interactions

Fall. 1 credit (S-U) or 2 credits (with paper, letter grades). Prerequisite: permission of instructor. J. L. Cisne.

EAS 5220 Advanced Structural Geology I

Fall. 3 credits. Prerequisites: EAS 4260 and permission of instructor. Offered alternate years. R. W. Allmendinger and C. Andronicos.

EAS 5240 Advanced Structural Geology II

Fall. 3 credits. Prerequisites: EAS 4260 and permission of instructor. Offered alternate years. R. W. Allmendinger.

Geometry, kinematics, and mechanics of structural provinces.

EAS 5530 Advanced Petrology

Fall. 3 credits. Prerequisite: EAS 4540. Offered alternate years. R. W. Kay.

EAS 5540 Advanced Mineralogy

Spring. 3 credits. Prerequisites: EAS 4530 or permission of instructor. Offered alternate years. S. Mahlburg Kay.

[EAS 5750 Planetary Atmospheres (also ASTRO 6575)

Fall. 4 credits. Prerequisites: undergraduate physics, vector calculus. Offered alternate years; next offered 2010-2011. P. Gierasch.]

EAS 5770 Planetary Surface Processes (also ASTRO 6577)

Spring. 3 or 4 credits. Offered alternate years. J. Bell.

[EAS 5780 Planet Formation and Evolution (also ASTRO 6578)

Fall. 4 credits. Prerequisites: familiarity with elementary physics and math or permission of instructor. Offered alternate years; next offered 2010-2011. J.-L. Margot and M. Pritchard.

For description, see ASTRO 6578.]

[EAS 5840 Inverse Methods in the Natural Sciences

Fall. 3 credits. Prerequisite: MATH 2940. Next offered 2010-2011. D. L. Hysell.]

EAS 5880 Advanced Methods in Radar (also ECE 5890)

Fall. 3 credits. Prerequisite: EAS 4870 or permission of instructor. D. Hysell.

EAS 6280 Geology of Orogenic Belts

Spring. 3 credits. Prerequisite: permission of instructor. S. M. Kay.

[EAS 6410 Analysis of Biogeochemical Systems

Spring. 2 credits. Prerequisite: MATH 2930 or permission of instructor. Offered alternate years; next offered 2010-2011. L. A. Derry.]

EAS 6480 Air Quality and Atmospheric Chemistry (also MAE 6480)

Fall. 3 credits. Prerequisites: freshman chemistry and thermodynamics (or equivalent) and fluid mechanics (or equivalent); graduate standing or permission of instructor. S–U or letter grades. K. M. Zhang.

For description, see MAE 6480.

EAS 6520 Advanced Atmospheric Dynamics (also ASTRO 7652)

Spring. 3 credits. Prerequisites: EAS 3410 and 3420 or equivalent. S. J. Colucci.

[EAS 6560 Isotope Geochemistry]

Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 4550 or permission of instructor. Offered alternate years; next offered 2010–2011. W. M. White.]

[EAS 6660 Applied Multivariate Statistics]

Spring. 3 credits. Prerequisites: multivariate calculus, matrix algebra, and two statistics courses. Offered alternate years; next offered 2010–2011. D. S. Wilks.]

EAS 6750 Modeling the Soil-Plant-Atmosphere System (also CSS 6750)

Spring. 3 credits. Prerequisite: EAS/CSS 4830 or equivalent. S. J. Riha.

EAS 6920 Special Topics in Atmospheric Science

Fall, spring. 1–6 credits. S–U or letter grades. Staff.

EAS 6930 Special Topics in Geological Sciences

Fall or spring. 1–3 credits, variable. S–U or letter grades. Staff.

EAS 7000–7990 Seminars and Special Work

Fall, spring. 1–3 credits. Prerequisite: permission of instructor. Staff.

EAS 7010–7020 Thesis Research

7010, fall; 7020, spring. 1–15 credits, variable. S–U or letter grades. Staff.

EAS 7110 Upper Atmospheric and Space Physics

Fall or spring. 1–6 credits. D. L. Hysell. Seminar.

EAS 7220 Advanced Topics in Structural Geology

R. W. Allmendinger.

EAS 7310 Advanced Topics in Remote Sensing and Geophysics (also ASTRO 7671)

M. Pritchard and J. Bell.

EAS 7330 Advanced Topics in Geodynamics

Spring. J. Phipps Morgan.

EAS 7500 Satellite Remote Sensing in Biological Oceanography

Summer. 3 credits. B. C. Monger.

EAS 7510 Petrology and Geochemistry

R. W. Kay.

EAS 7550 Advanced Topics in Tectonics and Geochemistry

Fall. 3 credits. J. Phipps Morgan.

EAS 7570 Current Research in Petrology and Geochemistry

S. Mahlburg Kay.

EAS 7620 Advanced Topics in Paleobiology

W. D. Allmon.

EAS 7650 Topics in Paleocology

Fall. 1 credit. S–U grade only. G. Dietl.

EAS 7710 Advanced Topics in Sedimentology and Stratigraphy

T. E. Jordan.

EAS 7730 Paleobiology

J. L. Cisne.

EAS 7750 Advanced Topics in Oceanography

C. H. Greene.

EAS 7800 Earthquake Record Reading

Fall. R. Lohman and M. Barazangi.

EAS 7810 Advanced Topics in Exploration Geophysics

L. D. Brown.

EAS 7930 Andes-Himalaya Seminar

S. Mahlburg Kay, R. W. Allmendinger, M. Pritchard, and T. E. Jordan.

EAS 7950 Low-Temperature Geochemistry

1–3 credits. S–U grades only. L. A. Derry.

EAS 7960 Geochemistry of the Solid Earth

W. M. White.

EAS 7970 Fluid-Rock Interactions

L. M. Cathles.

EAS 7990 Soil, Water, and Geology Seminar

Spring. L. M. Cathles and T. S. Steenhuis.

EAS 8500 Master's-Level Thesis Research in Atmospheric Science

Fall, spring. Credit TBA. S–U grades only. Graduate faculty.

Thesis research for atmospheric science master's students.

EAS 9500 Graduate-Level Dissertation Research in Atmospheric Science

Fall, spring. Credit TBA. S–U or letter grades. Graduate faculty.

Dissertation research for atmospheric science Ph.D. students only before "A" exam has been passed.

EAS 9510 Doctoral-Level Dissertation Research in Atmospheric Science

Fall, spring. Credit TBA. S–U or letter grades. Graduate faculty.

Dissertation research for atmospheric science Ph.D. candidates after "A" exam has been passed.

ELECTRICAL AND COMPUTER ENGINEERING

T. Chen, director; T. L. Fine, assoc. director; D. F. Delchamps, advising coordinator; E. Afshari, D. H. Albonese, A. B. Apse, A. S. Avestimehr, S. Bhave, A. W. Bojanczyk, H.-D. Chiang, P. Doerschuck, L. F. Eastman, W. K. Fuchs, Z. J. Haas, D. A. Hammer, S. S. Hemami, C. R. Johnson, Jr., E. Kan, M. C. Kelley, P. M. Kintner, R. R. Kline, A. Lal, M. Lipson, R. Manohar, J. F. Martínez, A. Molnar, C. R. Pollock, F. Rana, A. P. Reeves, A. Scaglione, C. E. Seyler, J. R. Shealy, X. Shen, E. G. Sireer, M. G. Spencer, G. E. Suh, A. Tang, S. Tiwari, L. Tong, A. B. Wagner, S. B. Wicker

ECE 1260 Introduction to Signals and Telecommunications (also ENGR 1260)

Spring. 3 credits.

For description, see ENGR 1260.

ECE 2100 Introduction to Circuits for Electrical and Computer Engineers (also ENGRD 2100)

Fall, spring. 4 credits. Corequisites: MATH 2930 and PHYS 2213. All students must enroll in a lab and a sec.

For description, see ENGRD 2100.

ECE 2200 Signals and Systems

Spring. 4 credits. Prerequisites: MATH 2930 and CS 1112 or 1132. Corequisite: MATH 2940.

Introduction to signal processing. Topics include frequency-based representations: Fourier analysis and synthesis; discrete time linear systems: input/output relationships, filtering, spectral response; analog-to-digital and digital-to-analog conversion; continuous time signals and linear time invariant systems: frequency response and continuous-time Fourier transform.

ECE 2300 Introduction to Digital Logic Design (also ENGRD 2300)

Fall, spring. 4 credits. Prerequisite: CS 1110 or 1112.

For description, see ENGRD 2300.

ECE 2350 Career Development for Engineering (also ENGRG 2350)

Spring. 2 credits. Prerequisite: second-semester freshman or sophomore standing.

For description, see ENGRG 2350.

ECE 2500 Technology in Society (also ENGRG/HIST 2500, STS 2501)

Fall. 3 credits. Humanities elective for engineering students.

For description, see ENGRG 2500.

ECE 2910–2920 Sophomore Electrical and Computer Engineering Independent Project

2910, fall; 2920, spring. 1–8 credits.

Individual study or directed reading in connection with a special engineering problem chosen by the student, after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor and submit an Independent Project Form to the Student Services Office, 223 Phillips Hall.

ECE 2930–2939; 2940–2949 Sophomore Electrical and Computer Engineering Group Projects

2930–2939, fall; 2940–2949, spring. 1–8 credits.

Group study, analysis, and, usually, experimental tests in connection with a special engineering project chosen by the students after consultation with the faculty member directing the project. New projects will be added upon faculty request. Written progress reports are required. Students must submit a Group Project Form to the Student Services Office, 223 Phillips Hall.

ECE 2980 Inventing an Information Society (also AMST/ENGRG 2980, HIST 2920, INFO 2921, STS 2921)

Spring. 3 credits. Approved for humanities distribution.

For description, see ENGRG 2980.

ECE 3030 Electromagnetic Fields and Waves

Fall, summer. 4 credits. Prerequisites: grade of C or better in PHYS 2213, PHYS 2214, MATH 2930, MATH 2940, and ECE/ENGRD 2100.

Covers static, quasi-static, and dynamic electromagnetic fields and waves. Topics include Maxwell's equations (integral and differential forms), fields of charge and current distributions, boundary conditions, fields near conductors, method of images, material polarization and dielectrics; energy, work, and power in electromagnetic systems; wave propagation and polarization, waves in media (dielectrics, conductors, and anisotropic materials); reflection, transmission, and refraction at media interfaces; guided waves in transmission lines, Smith charts, transients; metallic and dielectric waveguides; radiation and antennas, antenna arrays, electric circuits for transmission and reception, aperture antennas and diffraction.

ECE 3100 Introduction to Probability and Inference for Random Signals and Systems (also ENGRD 3100)

Fall, summer. 4 credits. Prerequisites: MATH 2940, PHYS 2213, or equivalents.

Introduction to probabilistic techniques for modeling random phenomena and making estimates, inferences, predictions, and engineering decisions in the presence of chance and uncertainty. Probability measures, classical probability and combinatorics, countable and uncountable sample spaces, random variables, probability mass functions, probability density functions, cumulative distribution functions, important discrete and continuous distributions, functions of random variables including moments, independence and correlation, conditional probability, Total Probability and Bayes' rule with application to random system response to random signals, characteristic functions and sums of random variables, the multivariate Normal distribution, maximum likelihood and maximum a posteriori estimation, Neyman-Pearson and Bayesian statistical hypothesis testing, Monte Carlo simulation. Applications in communications, networking, circuit design, device modeling, and computer engineering.

ECE 3130 Computerized Instrumentation Interface Design

Summer. 3 credits. Prerequisites: ECE 2100, and/or ECE/ENGRD 2300, and/or programming at level of CS 2110. Can be used for ECE students as an Outside ECE Technical Elective or College Approved Elective (with advisor approval).

This course will explore the technologies for performing both speech recognition and computer-activated control through custom interface circuitry. Use will be made of commercial as well as custom software and hardware. Students will be expected to implement several methods in the programming languages C or JAVA. This is a team-oriented product development experience. Students will define the requirements of a product (a speech-controlled CD player) and organize into a development team according to their specialty knowledge skill sets. Application-oriented computer programming, digital interface circuit design, analog amplifiers and filters are important to the project. This course spans the two co-op sessions. The system-level planning and basic component and module testing is completed in the first term, and the final

construction and system integration will occur in the second half. Students are required to complete both sessions for a grade.

ECE 3140 Computer Organization (also CS 3420)

Spring. 4 credits. Prerequisite: CS/ENGRD 2110 or ENGRD 2300.

Topics include performance metrics, data formats, instruction sets, addressing modes, computer arithmetic, microcoded and pipelined datapath design, memory hierarchies including caches and virtual memory, I/O devices, bus-based I/O systems. Students learn assembly language programming and design a simple pipelined processor.

ECE 3150 Introduction to Microelectronics

Spring. 4 credits. Prerequisite: ECE/ENGRD 2100.

The course offers an introduction to the basic devices and circuits in modern microelectronics. Students will learn not only basic structures and operations of semiconductor devices through simple models (diodes, CMOS, and BJT) but also how to analyze and design basic transistor modules in digital and analog circuits including biasing, amplifiers, filters, logic gates, and memory. We will introduce intuitive design methods to map circuit specifications to transistor topology, as well as first-order time-constant estimation. SPICE and measurement labs will accompany the progress in lectures for hands-on experiences.

ECE 3200 Networks and Systems

Spring. 4 credits. Prerequisites: ECE 2200 and MATH 2940.

Students develop a working understanding of the analytical and computational tools used in the design and representation of complex networks and systems. Topics include state-space techniques, finite state machines, graph-theoretic approaches to network design and analysis, complexity, phase transitions in complex systems, and scalability.

ECE 3250 Mathematics of Signal and System Analysis

Fall. 3 credits. Prerequisites: MATH 2930, MATH 2940, and ECE 2200 or permission of instructor.

Course aims to deepen students' working knowledge of mathematical tools relevant to ECE applications. While the course emphasizes fundamentals, it also provides an ECE context for the topics it covers, which include foundational material about sets and functions; linear algebra; inner products and orthogonal representations; basic ideas from multivariable calculus; and elementary convex analysis.

ECE 3600 Ethical Issues in Engineering Practice (also ENGRG 3600, STS 3601)

Spring. 3 credits. Open to sophomores. For description, see ENGRG 3600.

ECE 3910-3920 Junior Electrical and Computer Engineering Independent Project

3910, fall; 3920, spring. 1-8 credits.

For description, see ECE 2910-2920.

ECE 3930-3939; 3940-3949 Junior Electrical and Computer Engineering Group Project

3930-3939, fall; 3940-3949, spring. 1-8 credits.

For description, see ECE 2930-2939; 2940-2949.

ECE 4060 Introduction to Quantum and Statistical Physics

Fall. 4 credits. Prerequisites: PHYS 2214, MATH 2940, and ECE 3150 or co-registration.

Introductory quantum, statistical, and solid-state physics concepts necessary for understanding modern solid-state electronic and optical devices. Topics include the formalism and methods of quantum mechanics, structures of atoms, molecules, and solids and their interactions with electromagnetic waves, statistical physics, and the basic physics of semiconductor.

ECE 4070 Physics of Semiconductors and Nanostructures

Spring. 4 credits. Prerequisites: ECE 3060 or AEP 3610 and AEP 4230.

This course covers basic solid state and semiconductor physics relevant for understanding electronic and optical devices. Topics include crystalline structures, bonding in atoms and solids, energy bands in solids, electron statistics and dynamics in energy bands, effective mass equation, carrier transport in solids, Boltzmann transport equation, semiconductor homo- and hetero-junctions, optical processes in semiconductors, electronic and optical properties of semiconductor nanostructures, semiconductor quantum wells, wires, and dots, electron transport in reduced dimensions, semiconductor lasers and optoelectronics, high-frequency response of electrons in solids and plasmons.

ECE 4110 Random Signals in Communications and Signal Processing

Fall. 4 credits. Prerequisite: ECE 2200 and ECE 3100 or equivalent.

Introduction to models for random signals in discrete and continuous time; Markov chains, Poisson process, queuing processes, power spectral densities, Gaussian random process. Response of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

ECE 4130 Introduction to Nuclear Science and Engineering (also MAE 4580, TAM 4130)

Fall. 3 credits. Prerequisites: PHYS 2214 and MATH 2940.

For description, see TAM 4130.

ECE 4150 GPS: Theory and Design (also MAE 4150)

Fall. 4 credits. Culminating design experience (CDE) course. Prerequisite: 3000-level engineering course with advanced math content (e.g., ECE 3030 or MAE 3260).

Analysis of GPS operating principles and engineering practice with a culminating design exercise. Navigational algorithms, receiver analysis, error investigation, dilution of precision, antennas, differential GPS.

ECE 4210 Signal Processing Algorithms in Support of Painting Analysis

Fall. 3 credits. Prerequisites: ECE 2200 and MATH 2940. Recommended: ECE 3250.

The analysis of fine art paintings by art historians and conservation specialists involves the close examination of various images (e.g., visible light, x-ray) of the painting. This course will focus on the paintings of Vincent Van Gogh and highlight case studies of recent technical examinations. The signal processing tasks encountered will be extracted and rudimentary solutions proposed based on

fundamental signal processing techniques. Students will assess and improve these "starter" schemes, performing (a) periodicity extraction (e.g., for canvas thread counting), (b) set membership discrimination (e.g., for artist identification), and (c) multiple image alignment (e.g., for x-ray stitching). In this emerging application for signal processing, several of these tasks have no widely adopted computer-assisted schemes. MATLAB will be used for implementation of the algorithms on high resolution image data provided by the Van Gogh Museum (Amsterdam, the Netherlands).

ECE 4250 Digital Signal Processing

Fall. 4 credits. Prerequisites: ECE 2200 and 3100.

Introduces statistical signal processing. Signal representation and manipulation are covered via correlation and using the DFT/FFT to estimate other transforms; applications of these topics are then covered, including quantization, quantization effects in digital filters, multirate DSP, filter banks, delta-sigma modulation, power spectrum estimation, and introductions to Wiener and Kalman filtering and image processing.

ECE 4260 Applications of Signal Processing

Spring. 4 credits. Culminating Design Experience (CDE) course. Prerequisite: ECE 4250 or permission of instructor.

Applications of signal processing, including signal analysis, filtering, and signal synthesis. The course is laboratory oriented, emphasizing individual student projects. Design is done with signal-processing hardware and by computer simulation. Topics include filter design, spectral analysis, speech coding, speech processing, digital recording, adaptive noise cancellation, and digital signal synthesis.

ECE 4271 Evolutionary Processes. Evolutionary Algorithms, Evolutionary Games

Fall. 3 credits. Prerequisites: MATH 2930, MATH 2940, and ECE 3100 or instructor's permission. Offered alternate years.

The course covers a collection of topics relevant to the modeling, analysis, simulation, and optimization of large complex multi-agent systems. Topics include countable-state Markov chains, theoretical issues in evolutionary algorithms and their historical antecedents, and an introduction to evolutionary game theory. The course assumes no prior background in evolutionary algorithms or game theory.

ECE 4300 Lasers and Optoelectronics

Fall. 4 credits. Prerequisite: ECE 3030 or equivalent.

Introduction to the operation and application of lasers. Cover diffraction-limited optics, Gaussian beams, optical resonators, interaction of radiation with matter, physics of laser operation, and laser design. Discusses applications of coherent radiation to nonlinear optics, communication, and research.

ECE 4320 MicroElectro Mechanical Systems (MEMS) (also MAE 4320)

Fall. 4 credits. Prerequisite: ECE 3150 or permission of instructor.

Introduction to MEMS: microsensors, microactuators, and microrobots. Fundamentals of MEMS, including materials, microstructures, devices and simple microelectro-mechanical systems, scaling electronic and mechanical systems to the micrometer/nm-scale, material

issues, and the integration of micromechanical structures and actuators with simple electronics. This is an interdisciplinary course drawing content from mechanics, materials, structures, electronic systems, and the disciplines of physics and chemistry.

ECE 4330 Microwave Theory, Devices, and Applications

Fall. 4 credits. Prerequisite: ECE 3030.

Introduction to the properties of microwave devices and their applications in circuits, waveguides, resonators, and antennas. The course will cover the considerations that must be appreciated when the operating frequency approaches or exceeds 1GHz. Topics include microwave devices, microwave measurement techniques, S-parameters, signal flow diagrams, matching networks, basic circuit design considerations, and computer-aided device and circuit analysis. The course emphasizes physical understanding and intuitive design methods. Labs cover basic measurement techniques for active and passive elements as well as low noise amplifier design.

ECE 4370 Fiber and Integrated Optics

Spring. 4 credits. Culminating design experience (CDE) course. Prerequisite: ECE 3030 or equivalent.

Physical principles of optical waveguides. Wave equation solutions to the mode structure in waveguides, numerical analysis, mode coupling, dispersion and bandwidth limitations, optical materials, photonic band gap structures. Project design of planar optical components.

ECE 4450 Computer Networks and Telecommunications

Fall. 4 credits. Prerequisites: ECE 3140 or CS 3420 and course in probability.

Design, analysis, and implementation of computer and communication networks and systems. This is a basic course in networking. Examples of topics include data transmission and data encoding, data link control, circuit vs. packet switching, Asynchronous Transfer Mode, local area network technology, network interconnections, protocol design (OSE and IP), network security, and multimedia. Emphasis is placed on performance evaluation.

ECE 4510 Electric Power Systems I

Fall. 4 credits. Prerequisite: ECE 3200 or equivalent.

Acquaints students with modern electric power system analysis and control. Stresses analysis techniques appropriate for the restructured industry and advanced protection and control systems. Topics include transmission line models, transformers and per unit system, generator models, network matrices, power flow, system protection, computer relaying, and GPS-based measurement and control systems.

[ECE 4520 Electric Power Systems II

Spring. 4 credits. Prerequisite: ECE 3200 or permission of instructor. Next offered 2010–2011.

Acquaints students with modern electric power system operation and control. Explores aspects of the restructuring of the industry and its implications for planning and operation objectives and methods. Topics include unit commitment, economic dispatch, optimal power flow, control of generation, system security and reliability, state-estimation,

analysis of system dynamics, and system protection.]

ECE 4530 Analog Integrated Circuit Design

Fall. 4 credits. Culminating design experience (CDE) course. Prerequisite: ECE 3150 or equivalent.

Overview of devices available to analog integrated-circuit designers in modern CMOS and BiCMOS processes: resistors, capacitors, MOS transistors, and bipolar transistors. Basic building blocks for linear analog integrated circuits: single-stage amplifiers, current mirrors, and differential pairs. Transistor-level design of linear analog integrated circuits, such as operational amplifiers and operational transconductance amplifiers. Layout techniques for analog integrated circuits. Throughout the course, emphasis is placed on design-oriented analysis techniques.

ECE 4570 Silicon Device Fundamentals

Spring. 4 credits. Prerequisites: ECE 3150 and 3060 or MSE 2620 or AEP 4500.

The course teaches fundamental principles on semiconductor carrier statistics, band diagrams, pn-junction diodes, heterojunctions, Schottky diodes, BJT, MOS capacitor and MOSFET. Emphasis is put on the MOSFET designs for advanced VLSI technology from its physical structure, accurate modeling, manufacturability and applications. Device designs will include short channel effects, gate-stack alternatives, band engineering, and strain engineering. By using computer simulation and experimental data, the course will culminate in a design project dealing with technical concerns in current VLSI industry. The goal for this course is to train circuit, device, and process engineers for semiconductor technology research and development.

ECE 4720 Feedback Control Systems (also CHEM 4720, MAE 4780)

Fall. 4 credits. Prerequisites: CHEM 3720, ECE 2200, MAE 3260, or permission of instructor.

For description, see MAE 4780.

ECE 4740 Digital VLSI Design

Spring. 4 credits. Prerequisite: ECE 3150.

Introduction to digital VLSI design. Topics include basic transistor physics, switching networks and transistors, combinational and sequential logic, latches, clocking strategies, domino logic, PLAs, memories, physical design, floor planning, CMOS scaling, and performance and power considerations, etc. Lecture and homework topics emphasize disciplined design, and include CMOS logic, layout, and timing; computer-aided design and analysis tools; and electrical and performance considerations.

ECE 4750 Computer Architecture (also CS 4420)

Fall. 4 credits. Culminating design experience (CDE) course. Prerequisites: ENGRD 2300 and ECE 3140/CS 3420.

Topics include instruction set principles, advanced pipelining, data and control hazards, multi-cycle instructions, dynamic scheduling, out-of-order execution, speculation branch prediction, instruction-level parallelism, and high-performance memory hierarchies. Students learn the issues and trade-offs involved in the design of modern microprocessors. Labs involve the design of a processor and cache subsystem at the RTL level.

ECE 4760 Digital Systems Design Using Microcontrollers

Spring, 4 credits. Culminating design experience (CDE) course. Prerequisite: ECE 3140/CS 3420. ECE 3150 highly recommended.

Design of real-time digital systems using microprocessor-based embedded controllers. Students working in pairs design, debug, and construct several small systems that illustrate and employ the techniques of digital system design acquired in previous courses. The content focuses on the laboratory work. The lectures are used primarily for the introduction of examples, description of specific modules to be designed, and instruction in the hardware and high-level design tools to be employed.

ECE 4820 Plasma Processing of Electronic Materials (also MSE 4820)

Spring, 3 credits. Prerequisites: PHYS 2213 and 2214 or equivalents. Offered if sufficient demand.

Fundamental principles that govern partially ionized, chemically reactive plasma discharges and their applications to processing electronic materials. Topics include simple models of low pressure, partially ionized plasmas, collision phenomena, diffusive processes, plasma chemistry and surface processes. Examples and their applications to electronic materials processing are discussed in detail.

ECE 4840 Introduction to Controlled Fusion: Principles and Technology (also MAE 4590, AEP/NSE 4840)

Spring, 3 credits. Prerequisites: PHYS 1112, 2213, and 2214, or equivalent background in electricity and magnetism and mechanics. Intended for seniors and graduate students in engineering and physical sciences.

Introduction to the physical principles and various engineering aspects underlying power generation by controlled fusion. Topics include fuels and conditions required for fusion power and basic fusion-reactor concepts; fundamental aspects of plasma physics relevant to fusion plasmas and basic engineering problems for a fusion reactor; and an engineering analysis of proposed magnetic and/or inertial confinement fusion-reactor designs.

ECE 4870 Introduction to Radar Remote Sensing (also EAS 4870)

Spring, 3 credits. Prerequisites: ECE 2200 and 4860 (or grade of B or better in ECE 3030).

For description, see EAS 4870 in the College of Arts and Sciences.

ECE 4880 Radio Frequency (RF) Circuits and Systems

Spring, 4 credits. Prerequisite: ECE 3150 or equivalent.

Basic RF circuits and applications. Receivers, transmitters, modulators, filters, detectors, transmission lines, oscillators, frequency synthesizers, low-noise amplifiers. Applications include communication systems, radio and television broadcasting, radar, radio, and radar astronomy. Computer-aided circuit analysis. Six laboratory sessions.

ECE 4910-4920 Senior Electrical and Computer Independent Engineering Project

4910, fall; 4920, spring, 1-8 credits.

For description, see ECE 2910-2920.

ECE 4930-4939; 4940-4949 Senior Electrical and Computer Engineering Group Project

4930-4939, fall; 4940-4949, spring, 1-8 credits.

For description, see ECE 2930-2939; 2940-2949.

ECE 4950-4960 Special Topics in Electrical and Computer Engineering

4950, fall; 4960, spring, 1-4 credits.

Seminar, special interest, or temporary course.

ECE 5010 Professional Seminar for M.Eng. Students

Fall, 2 credits. Prerequisites: Must be an M.Eng. student.

This seminar introduces students to professional issues that are important as they begin their professional career. Topics include M.Eng. ECE project options; professional expectations; project planning and management; effective teamwork; technical writing and communications; impact of environmental, economic, and societal constraints in design; entrepreneurship possibilities; and career planning issues.

ECE 5020 Biomedical System Design (also BME 5020)

Spring, 4 credits. Co- or prerequisites: at least one of: ECE 4250, 4760, 4530.

Introduces techniques of measuring and conditioning low-level (biological) signals. Topics include special signal to noise improvement circuits for analog signals, techniques to remove common-mode and correlated noise, and computer-aided techniques for analyzing sampled data. Final six or seven weeks devoted to designing/prototyping a safe and effective "ambulatory microprocessor-controlled blood pressure monitor." Formal design document is required.

ECE 5030 Electronic Bioinstrumentation

Fall, 4 credits. Prerequisites: Intro Biol, analog design, signal processing, at the level of BIOL 1010, ECE 3150, and ECE 4250 respectively. For M.Eng. students only. Instructor permission required.

This course covers the theory and practical aspects of recording and analyzing electronic data collected from biological systems. Topics may include electrode and amplifier design, tissue impedance and effects on waveforms, sensors, statistical and signal processing algorithms, noise reduction, and safety considerations.

ECE 5040 Neural and Bioelectronic Interfaces

Spring, 3 credits. Prerequisites: one of ECE 4110, 4250, or 4260, and one of ECE 4530, 4570, 5020, or permission of instructor.

Intended for electrical and biomedical engineers interested in neural-electronic interfaces. The class spans several disciplines. An overview of the electrophysiology and biophysics of neurons and other electrogenic cells informs a subsequent discussion of the theoretical and practical aspects of electrical stimulation and recording, as well as discussion of emerging topics such as optical stimulation and recording. The course also covers some statistical signal processing techniques used in handling the large amounts of imprecise data the nervous system provides. Case studies in existing medical implants are reviewed, as examples of present-day challenges in the field.

ECE 5120 Applied Systems Engineering (also CEE 5240, CIS 5040, MAE 5910, ORIE 5120, SYSEN 5100)

Fall, 3 credits. Prerequisites: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor.

For description, see SYSEN 5100.

ECE 5130 System Architecture, Behavior, and Optimization (also CEE 5252, CIS 5050, MAE 5920, ORIE 5130, SYSEN 5200)

Spring, 3 credits. Prerequisite: CEE 5240/CIS 5040, ECE/ORIE 5120, MAE 5910, or SYSEN 5100.

For description, see SYSEN 5200.

ECE 5180 Principles of Medical Imaging (also BME/VTCS 6180)

Fall, 1-3 credits. Prerequisites: 3-credit enrollment requires functional knowledge and skills of linear algebra, calculus, Fourier transformation, and calculus-based physics.

For description, see BME 6180.

ECE 5210 Theory of Linear Systems (also MAE 5210)

Fall, 3 credits. Prerequisite: MAE 3260, ECE 3200, or permission of instructor.

Recommended: good background in linear algebra and linear differential equations.

For description, see MAE 5210.

ECE 5310 Quantum Optics for Photonics and Optoelectronics

Fall, 4 credits. Prerequisites: ECE 3060 and 4070, or PHYS 4443.

Introduces the basic concepts of quantum optics and quantum electronics necessary for understanding the behavior of optical fields in photonic and optoelectronic devices and systems. Topics include quantization of the electromagnetic field, quantum mechanical properties of photon states, vacuum fluctuations, noise and quantum Langevin equations, matter-photon interactions, phase-sensitive and phase-insensitive optical amplifiers, direct and coherent photon detection, lasers, parametric oscillators, and photonic devices for quantum information processing.

[ECE 5330 Semiconductor Optoelectronics

Fall, 4 credits. Prerequisites: ECE 4300, ECE 4570, or permission of instructor. Next offered 2010-2011.

Study of principles and characteristics of semiconductor lasers. Topics cover laser dynamics, noise, quantum confined structures, single-frequency lasers, traveling-wave lasers, surface-emitting lasers, reliability, and emerging research subjects. A term project and paper are required.]

ECE 5340 Power Semiconductor Devices

Spring, 3 credits. Prerequisites: ECE 4570.

It is estimated that at least 50 percent of the electricity used in the world is controlled by power electronics. The efficiency of power electronics circuits has a direct connection with energy conservation. This course seeks to introduce the student to basic power electronic devices, basic power electronic circuits, and their suitability for power applications spanning a large range of currents and voltages. Device operation, design, fabrication, and power electronic circuit issues will be discussed. Emphasis will

be on the device aspects. Examples will be drawn from current Si device technology as well as emerging power devices technologies developed from wide bandgap semiconductors.

[ECE 5350 Semiconductor Physics

Fall. 4 credits. Prerequisites: ECE 4070 and 4570, or permission of instructor. Offered alternate years from ECE 5370; next offered 2010–2011.

Physics of materials and structures useful in semiconductor electronic and photonic devices, including crystal structure, energy bands, effective mass, phonons, classical low-field transport, high-field and ballistic charge carrier transport, electron scattering by phonons, optical absorption, reflection, optical emissions, deep levels as charge carrier traps, and surface and interface effects.]

ECE 5360 Nanofabrication of Semiconductor Devices (also MSE 5410)

Fall. 4 credits. Prerequisites: ECE 3150 and ECE 4570 or equivalent.

Introduction to modern nanofabrication technologies used to produce integrated circuits. Students perform a series of fabrication steps including lithography, metallization, plasma etching and annealing to realize working semiconductor devices (Schottky diodes, pn junction diodes, MOS capacitors, and MOSFETs) in the lab. Prior knowledge of the operation of these devices is essential as each will be tested to verify the success (or failure) of the fabrication process.

ECE 5370 Nanoscale Devices, Circuits, and Physics

Fall, 4 credits. Prerequisites: ECE 4570 or permission of instructor. Offered alternate years from ECE 5350.

An integrated study connecting semiconductor physics with properties of electronic and optic devices at the nanoscale and the use of electronic devices in circuits. Topics include electronic and optic phenomena in confined structures and in nanoscale limits—single-electron phenomena, nanoscale quantum and size effects such as in tunneling and optical transitions, transistor operation in limited scattering limits, plasmonics, molecular transport, interface effects, and the unification of device attributes with implementation in circuits.

ECE 5470 Computer Vision

Fall. 4 credits. Prerequisites: ECE 2200 (or CS 2800 and 3420) or permission of instructor.

Covers computer acquisition and analysis of image data with emphasis on techniques for robot vision. Concentrates on descriptions of objects at three levels of abstraction: segmented images (images organized into subimages that are likely to correspond to interesting objects), geometric structures (quantitative models of image and world structures), and relational structures (complex symbolic descriptions of images and world structures). The programming of several computer-vision algorithms is required.

ECE 5540 Advanced Analog VLSI Circuit Design

Spring. 4 credits. Prerequisite: ECE 4530. Advanced analog integrated circuit and system design. Topics include integrated continuous-time filter design, translinear circuits and systems, dynamic analog techniques,

integrated discrete-time filter design, and Nyquist-rate data converter design.

[ECE 5580 Compound Semiconductor Electronics

Spring. 3 or 4 credits; 4 with a project. Prerequisite: ECE 4570 or equivalent. Next offered 2010–2011.

Electronic properties of advanced semiconductor structures using compound semiconductor materials and heterojunctions. Fundamentals of carrier transport and scattering. Properties of direct bandgap semiconductors and quantum wells. Advanced semiconductor devices, including metal-semiconductor transistors (FETs), modulation-doped FETs, and heterojunction bipolar transistors (HBTs). High-frequency operation of compound semiconductor devices. Includes six two-week labs, which include low-temperature carrier transport, optical absorption and emission, and electrical characterization of compound semiconductor devices.]

ECE 5610 Error Control Codes

Fall. 4 credits. Prerequisite: ECE 3200 or 5210 or equivalent; strong familiarity with linear algebra.

Introduction to the theory and practice of error control codes. Topics include algebraic codes, convolutional codes, concatenated codes, and codes on graphs. Considers the construction and decoding of Reed-Solomon (RS) codes in some detail as well as the iterative (turbo) decoding of concatenated codes and codes on graphs. The use of error control in wireless systems is discussed throughout the course.

ECE 5620 Fundamental Information Theory

Spring. 4 credits. Prerequisite: ECE 4110 or equivalent.

Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable-length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

ECE 5640 Detection and Estimation

Fall. 4 credits. Prerequisites: ECE 3100, 4110, or permission of instructor.

Graduate-level introduction to fundamentals of signal detection and estimation with applications in communications. Elements of decision theory. Sufficient statistics. Signal detection in discrete and continuous time. Multiuser detection. Parameter estimations. Applications in wireless communications.

ECE 5660 Fundamentals of Networks

Fall. 4 credits. Prerequisite: ECE 3100 or equivalent course in probability.

Introductory course on tools and techniques for modeling communication networks, synthesis of network protocols, analysis of network protocols' operation, and performance evaluation of network protocols when deployed in a particular communication network. Analytical tools include advanced probability theory, discrete and continuous-time Markov Chains, queuing theory, and graph theory. Simulation methods and statistical tools for analysis of data obtained from simulation models are studied. The basic mechanisms used in designing communication protocols in wireless and

wired networks are illustrated by examples from numerous practical systems. Discussions of some classical papers help students learn about best practices as well as common mistakes occurring in studies of communication networks.

ECE 5670 Digital Communications

Fall. 4 credits. Prerequisites: ECE 3100, 4110, or permission of instructor.

Graduate-level introduction to fundamentals of digital communications. Complex random signals. Digital modulations and optimal receiver principles. Baseband and passband transmissions and processing. Interference channels and equalization techniques. Performance analysis including bit error rate calculation and bounds, cutoff rate and channel capacity. Applications in wireless and digital subscriber loops (DSL).

ECE 5680 Mobile Communication Systems

Spring. 4 credits. Prerequisites: ECE 4110 and 4670.

Theory and analysis of mobile communication systems, with an emphasis on understanding the unique characteristics of these systems. Topics include cellular planning, mobile radio propagation and path loss, characterization of multipath and fading channels, modulation and equalization techniques for mobile radio systems, source coding techniques, multiple access alternatives, CDMA system design, and capacity calculations.

[ECE 5710 Arithmetic Circuits

Fall. 3 or 4 credits. Prerequisites: ECE 4740, CS 2110. Offered alternate years from ECE 5740. Next offered 2010–2011.

Designing arithmetic circuits. Topics include number representation, high-performance arithmetic including addition, multiplication, division, and other common operations found in modern computer systems.]

ECE 5715 Computer Hardware Design Practicum

Fall. 4 credits. Prerequisite: ECE 4750 or permission of instructor.

This course will examine the hardware, and to some degree the software, necessary to build a complete computer system, including the CPU, memory, mass storage, input and output devices, and basic operating system functions. In a series of labs over the course of the semester, students will design and implement a working computer system using an FPGA development board.

ECE 5720 Parallel Computer Architecture (also CS 5420)

Fall. 4 credits. Prerequisite: ECE 4750.

Principles and trade-offs in the design of parallel architectures. Emphasis is on latency, bandwidth, and synchronization in parallel machines. Case studies illustrate the history and techniques of shared-memory, message-passing, dataflow, and data-parallel machines. Additional topics include memory consistency models, cache coherence protocols, and interconnection network topologies. Architectural studies presented through lecture and some research papers.

[ECE 5730 Memory Systems

Fall. 4 credits. Prerequisites: ECE 4750, ECE 5720 (co-requisite). Next offered 2010–2011.

Principles and current practices of memory system design. Topics include cache hierarchy optimization, high performance memory

controllers and technologies, approaches to power and reliability issues, exploiting memory level parallelism, memory systems for parallel computer architectures, and case studies.]

ECE 5740 Advanced Digital VLSI

Fall. 4 credits. Prerequisites: ECE 3140 and ECE 4740.

Top-down approach to asynchronous design and the relation between computer architecture and VLSI design. For the asynchronous design component: high-level synthesis, design by program transformations, and correctness by construction. Topics include delay-insensitive design techniques, description of circuits as concurrent programs, circuit compilation, and electrical optimizations. Students will complete a group project of the design of a microprocessor.

ECE 5750 Advanced Microprocessor Architecture

Spring. 4 credits. Prerequisite: ECE 4750 or CS 4420.

This course is a revised version of the former ECE 575 High-Performance Microprocessor Architecture. In addition to performance enhancement techniques of modern single-core microprocessors such as branch prediction and speculation methods, which have been the focus of ECE 5750, this course will also discuss reconfigurable architecture, on-chip interconnect, and non-performance issues such as security and verification.

ECE 5760 Advanced Microcontroller Design

Fall. 4 credits. Prerequisites: ECE 4750 and ECE 4760 or equivalent.

Design of system-on-chip applications. Students working in pairs design, debug, and construct several systems that illustrate the design of embedded processors with custom peripherals running a real-time operating system. The content focuses on laboratory work. The lectures are used primarily for the introduction of examples, description of specific modules to be designed, and instruction in the hardware and high-level design tools to be employed.

ECE 5770 Resilient Computer Systems

Spring. 4 credits. Prerequisite: ECE 4750.

Principles in designing resilient computer architectures. Topics include sources of faults and their manifestation, information redundancy, fault-tolerant hardware and software approaches, resilient parallel architectures and networks, security, modeling and evaluation, and case studies.

ECE 5780 Computer Analysis of Biomed Images (also BME 5780)

Spring. 4 credits. Prerequisite: permission of instructor; engineering, biomedical, or biology background.

Powerful imaging modalities with attending computer image processing methods are evolving for the evaluation of health and the detection of disease. This course focuses on the quantitative analysis of such images and Computer Aided Diagnosis (CAD), i.e., the automatic identification and classification of abnormalities by the computer.

ECE 5790 Advanced High-Speed and RF Integrated Circuits

Spring. 4 credits. Prerequisites: ECE 4330 and ECE 4530.

Principles of analog integrated circuit design in the Giga-Hertz frequency range. This course covers the fundamental understanding

of high-frequency circuit building blocks such as low noise amplifiers, mixers, oscillators, phase locked loops, frequency synthesizers, clock and data recoveries, and power amplifiers. Additionally, because some of the traditional microwave building blocks such as transmission lines and distributed circuit elements are essential parts of today's high speed integrated circuits, the course will briefly cover them. Throughout the course, a systematic review of advanced wireless and wireline applications would be covered. The course emphasizes physical understanding and intuitive design methods as well as qualitative techniques and computer simulations. The course has collaborative class projects, based on real-world problems.

ECE 5800 Control and Optimization of Information Networks

Spring. 4 credits. Prerequisites: ECE 4110 and ECE 4450. The focus may vary from year to year.

Introduction to current research directions in networking featuring the Internet. Assumes basic knowledge of signals and systems as well as random processes. Necessary tools from optimization, dynamical systems, and related economic theory will be introduced. Research topics may include layering, routing, medium access control, flow control, and peer-to-peer networks. Students are expected to hand in homework assignments, discuss one set of papers in class, and participate in a course project.

ECE 5810 Introduction to Plasma Physics (also AEP 6060)

Fall. 4 credits. Prerequisite: ECE 3030 or equivalent. First-year graduate-level course; open to exceptional seniors.

Topics include plasma state; motion of charged particles in fields; drift-orbit theory; coulomb scattering, collisions; ambipolar diffusion; elementary transport theory; two-fluid and hydromagnetic equations; plasma oscillations and waves, CMA diagram; hydromagnetic stability; and elementary applications to space physics, plasma technology, and controlled fusion.

[ECE 5820 Advanced Plasma Physics

Fall. 4 credits. Prerequisite: ECE 5810. Next offered 2010-2011.

Boltzmann and Vlasov equations; waves in hot magnetized plasma; Landau and cyclotron damping; micro-instabilities; low-frequency waves and instabilities; nonlinear phenomena: solitons, nonlinear waves, tearing, and reconnection.]

ECE 5830 Introduction to Technical Management

Fall. 3 credits. Prerequisite: industrial experience or equivalent (summer work or schoolwork).

This course is taught from the perspective of a chief technology officer and is targeted at M. Eng. and management students interested in "real world" problems. It provides an introduction via case examples to the technical, management, and organizational issues of developing and marketing products in high-tech businesses. The focus is on the unique nature of this type of business, including managing with high risk/uncertainty levels, learning to manage very diverse project teams, and recognizing technical versus market success in order to make good business decisions.

[ECE 5840 Advanced GPS Receiver Design

Spring. 4 credits. Prerequisite: ECE 4150 or MAE 4150. Next offered 2010-2011.

GPS receiver design from the RF section to the observables is investigated and implemented in MATLAB software. Creation of C/A code, upsampling, down conversion, code correlation, acquisition, tracking, and interpreting the navigation message. Students start with the digitized GPS bandwidth and build a software receiver to create the navigation solution as the final project.]

ECE 5850 Upper Atmospheric and Ionospheric Physics I

Fall. 4 credits. Prerequisites: PHYS through 2214 or equivalent, introductory chemistry, ECE 4860 or equivalent.

The structure and dynamics of the ionosphere and upper atmosphere. Charged particle production, loss and transport. Coupling to the neutral atmosphere. Ionospheric instabilities. High-latitude currents and plasma convection and its implications for the ionosphere and upper atmosphere.

ECE 5860 Upper Atmospheric and Ionospheric Physics II

Spring. 4 credits. Prerequisites: ECE 5810 and ECE 5850.

Topics include solar phenomena, solar wind, and space weather; magnetospheric structure and physical processes; plasma instabilities in the ionosphere and magnetosphere; and magnetic reconnection and the relation to high-latitude phenomena.

ECE 5870 Energy Seminar I (also CHEME 5870, MAE 5459)

Fall. 1 credit.

Energy resources, their conversion to electricity or mechanical work, and the environmental consequences of the energy cycle are discussed by faculty members from several departments in the university and by outside experts. Topics include energy resources and economics; coal-based electricity generation; nuclear reactors; solar power; energy conservation by users; and air pollution control.

ECE 5880 Energy Seminar II (also CHEME 5880, MAE 5469)

Spring. 1 credit.

For description, see ECE 5870; however, different speakers and/or topics are discussed in ECE 5880.

ECE 5890 Advanced Methods in Radar (also EAS 5880)

5950, fall; 5960, spring. 3 credits.

Prerequisites: EAS/ECE 4870 or permission of instructor.

For description, see EAS 5880.

ECE 5950-5960 Special Topics in Electrical and Computer Engineering

5950, fall; 5960, spring. 1-4 credits.

Seminar, special interest, or temporary course.

[ECE 6830 Seminar in GPS and GNSS

Fall, spring. 1-3 credits. Prerequisite: ECE/MAE 4150 or equivalent. Next offered 2010-2011.

Seminar in GPS (Global Positioning System) and GNSS (Global Navigation Satellite Systems) science and engineering. Current topics in receiver design such as low signal acquisition, ambiguity resolution, and software receivers and topics in GPS science such as space weather effects on GPS and the use of

GPS for remote sensing. Students typically make one presentation during the semester.]

ECE 6930-6931 Master of Engineering Design I & II

6930, fall; 6931, spring. 3-8 credits. Two-semester course: must enroll both semesters; will receive R grade for first semester. For students enrolled in M.Eng. (Electrical and Computer Engineering) degree program.

Uses real engineering situations to present fundamentals of engineering design. Each professor is assigned a class number. To enroll, students must complete a "Course Enrollment Petition" and submit it to the Graduate School. (See roster for appropriate class number.)

ECE 6950-6960 Special Topics in Electrical and Computer Engineering

6950, fall; 6960, spring. 1-credits.

Seminar, special interest, or temporary course.

ECE 6970-6980 Master of Engineering Research

6970, fall; 6980, spring. 7 credits.

Prerequisite: For students enrolled in M. Eng. (Electrical) degree Research Track program. Must enroll both semesters.

Project designed for the M.Eng. student in the Research Track program and more resembles a research thesis. Students will work closely with an ECE Graduate Field Faculty member on a common area of interest. Each professor is assigned a section number. To register, see roster for appropriate six-digit course ID numbers.

ECE 7910-7920 Thesis Research

7910, fall; 7920, spring. 1-15 credits. For students enrolled in master's or doctoral program. Each professor is assigned a section number. To register, see roster for appropriate six-digit course ID numbers.

INFORMATION SCIENCE, SYSTEMS, AND TECHNOLOGY

C. Cardie, director; W. Arms, G. Bailey, K. Bala, R. Caruana, E. Friedman, J. Gehrke, C. Gomes, J. Halpern, D. Huttenlocher, P. Jackson, T. Joachims, J. Kleinberg, L. Lee, D. Ruppert, P. Rusmevichientong, B. Selman, D. Shmoys, E. Tardos, D. Williamson

INFO 7090 IS Colloquium

Fall, spring, 1 credit. For staff, visitors, and graduate students interested in information science.

INFO 7900 Independent Research

Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member. Independent research for M.Eng. students and pre-A exam Ph.D. students.

INFO 9900 Thesis Research

Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member. Thesis research for post-A exam Ph.D. students.

MATERIALS SCIENCE AND ENGINEERING

E. P. Giannelis, director; D. G. Ast, S. P. Baker, J. M. Blakely, R. Dieckmann, L. Estroff, D. Gourdon, D. T. Grubb, R. Hennig, C. Liddell, G. G. Malliaras, C. K. Ober, R. Robinson, D. G. Schlom, M. O. Thompson, C. C. Umbach, R. B. van Dover, U. B. Wiesner

Undergraduate Courses**MSE 1110 Nanotechnology (also ENGRI 1110)**

Fall, 3 credits. C. Umbach. Course in Introduction to Engineering series. For description, see ENGRI 1110.

MSE 1140 Materials: The Future of Energy

Spring, 3 credits. R. B. van Dover. This experiential learning course will explore how new materials can increase our energy supply and decrease consumption. Materials issues in photovoltaic, fuel cell, battery, wind, transportation, lighting, and building technologies will be studied. Through integrated lab-based activities students will develop a broad understanding of materials issues in

order to successfully design and build an energy generation system.

MSE 1180 Design Integration: DVDs and iPods (also ENGRI/TAM 1180)

Spring, 3 credits. Course in Introduction to Engineering series. For description see ENGRI 1180.

MSE 1190 Biomaterials for the Skeletal Systems (also ENGRI 1190)

Fall, 3 credits. D. Grubb. Course in Introduction to Engineering series. For description, see ENGRI 1190.

MSE 1810 MSE at Cornell: an Introduction for Freshmen

Spring, 1 credit. S-U or letter grades; grade based on class participation and course project. C. Umbach.

Introduces materials science and engineering to students considering MSE as their major. Lectures by MSE professors, alumni, and industrial researchers. Topics covered include MSE major requirements as preparation for real-world engineering. Cutting-edge MSE research involving undergraduates. Industrial R&D. Tours of Cornell centers and MSE facilities.

MSE 1910-1920 Research Involvement Ia and Ib

1910, fall; 1920, spring, 3 credits each semester. Prerequisite: approval of department. Staff. For description, see MSE 2910. May be continuation or a one-semester affiliation with a research group.

MSE 2060 Atomic and Molecular Structure of Matter (also MAE 3130)

Spring, 4 credits. R. Robinson. Discusses the basic elements of structure; order and disorder; ideal gas; crystals; liquids; amorphous materials; polymers; liquid crystals; composites; crystal structure; x-ray diffraction.

MSE 2610 Mechanical Properties of Materials: From Nanodevices to Superstructures (also ENGRD 2610)

Fall, 3 credits. Prerequisite: MATH 1910. Corequisite: PHYS 1112 or permission of instructor. S. P. Baker. For description, see ENGRD 2610.

MSE 2620 Electronic Materials for the Information Age (also ENGRD 2620)

Spring, 3 credits. Prerequisite: MATH 1920. Corequisite: PHYS 2213 or permission of instructor. M. Thompson. For description, see ENGRD 2620.

MSE 2910-2920 Research Involvement IIa and IIb

2910, fall; 2920, spring, 3 credits each semester. Prerequisite: approval of department. Staff. Supervised independent research project in association with faculty members and faculty research groups of the department. Students design experiments, set up the necessary equipment, and evaluate the results. Creativity and synthesis are emphasized. Each semester may be taken as a continuation of a previous project or as a one-semester affiliation with a research group.

MSE 3010 Materials Chemistry (also MSE 5810)

Fall, 3 credits. U. Wiesner. Provides a molecular understanding of materials properties: quantum chemistry, symmetry aspects of chemical bonding, solid state reactions, and electrochemistry. Materials

include polymers, organic semiconductors, organic-inorganic hybrids, and biomaterials.

MSE 3030 Thermodynamics of Condensed Systems (also MSE 5830)

Fall, 4 credits. Prerequisites: PHYS 2214 and MATH 2940. M. O. Thompson. Introduces the three laws of thermodynamics as the fundamental basis for thermal and chemical equilibrium, coupled with statistical mechanical interpretations for entropy and specific heat capacities. Applies these principles to understanding phase equilibria and phase diagrams, heterogeneous reactions, solutions, surfaces, and defects. Introduces electrochemistry and fuel/power cells.

MSE 3040 Kinetics, Diffusion, and Phase Transformations (also MSE 5840)

Spring, 4 credits. Prerequisite: MSE 3030 or permission of instructor. R. Hennig. Topics include phenomenological and atomistic theories of diffusion; diffusion in metals, alloys, and nonmetals, including polymers; diffusion in the presence of driving forces; fast diffusion paths; thermo- and electrotransport; interfaces and microstructure; nucleation and growth; growth of product layers (parabolic and linear kinetics); solidification of alloys; diffusional and diffusionless transformations in solids; glass transition.

MSE 3050 Electronic, Magnetic, and Dielectric Properties of Materials (also MSE 5850)

Spring, 3 credits. Prerequisite: MSE 2060 and MSE 2620 or permission of instructor. D. Schlom.

Electronic structure of materials and connection to transport, magnetic, and dielectric properties. Wave and particle nature of electrons, wave packets, potential wells, barriers, tunneling. Valence electron behavior in crystals, density of states for metals, Fermi level, field and thermionic emission, Schottky barriers. Periodic potentials and band structure of crystals. Intrinsic and doped semiconductors, junction electronic and optical devices. Physical origin of magnetic behavior, ferromagnetic domains, magneto-resistance. Materials for data storage and manipulation. Polarization in dielectric materials; frequency dependence of dielectric constants and refractive indices. Ferroelectric domains. Dielectric components in devices. The close connection between fundamental concepts and current technology is emphasized.

MSE 3070 Materials Design Concepts I

Fall, 2 credits. C. Liddell. For description, see MSE 4070.

MSE 3110 Junior Laboratory I

Fall, 1 credit. Staff. Practical laboratory covering the analysis and characterization of materials and processing. Labs are based on materials from courses in chemistry of materials and thermodynamics of condensed systems.

MSE 3120 Junior Laboratory II

Spring, 1 credit. Staff. Practical laboratory covering the analysis and characterization of materials and processing. Labs are based on course material in kinetics, diffusion, and phase transformation and electronic, magnetic, and dielectric properties of materials.

MSE 3910–3920 Research Involvement IIIa and IIIb

3910, fall; 3920, spring. 3 credits each semester. Prerequisite: departmental approval. Staff.

For description, see MSE 2910. May be continuation or a one-semester affiliation with a research group.

MSE 4020 Mechanical Properties of Materials, Processing, and Design (also MAE 3120, MSE 5820)

Fall. 3 credits. Prerequisite: MSE 2060. Corequisite: MSE 3040 or permission of instructor. D. Ast.

Relationship between microscopic mechanisms and macroscopic mechanical behavior of engineering materials, how mechanical properties can be modified, and criteria for selection and use of materials in design. Stress, strain and elastic constants as tensor quantities, viscoelasticity and damping, plastic deformation, creep deformation, fracture, and fatigue.

MSE 4030–4040 Senior Materials Laboratory I and II

4030, fall; 4040, spring. 3 credits each semester. D. Grubb.

Practical laboratory covering the analysis and characterization of materials and processing. Emphasis is on design of experiments for evaluation of materials' properties and performance as related to processing history and microstructure. Projects available in areas such as plasticity, mechanical and chemical processing, phase transformations, electrical properties, magnetic properties, and electron microscopy.

MSE 4050–4060 Senior Thesis I and II

4050, fall; 4060, spring. 4 credits each semester. Requirement for graduation with honors. Open to advanced undergraduates in lieu of senior materials laboratory. M. Thompson.

Proposals for thesis topics should be approved by the supervising faculty member before beginning the senior year. Approved thesis topics normally involve original experimental research in direct collaboration with an ongoing research program. Periodic oral and written presentations and a final written thesis are required. Students must take both semesters to complete the laboratory requirement.

MSE 4070 Materials Design Concepts II

Fall. 2 credits. C. Liddell.

Introduces materials design in the context of real-world materials design projects carried out in industry. In the first portion of the course, the process of engineering design is studied in light of economic, environmental, regulatory, and safety issues. Patent searching and communication skills are addressed. In the second portion, speakers from industry lecture on case studies of materials design problems. Students give oral presentations and write technical reports based on case studies.

MSE 4100 Physical Metallurgy and Applications (also MSE 6100)

Spring. 3 credits. Prerequisites: MSE 2060, 3030, 3040 or permission of instructor. S. Baker.

Microstructure and properties of metals and alloys: processing, structure, defects, phase stability, diffusion, deformation, fracture, corrosion, conductivity, optical properties. Applications of metallurgical principles to high performance metallic materials include thin

films and patterned structures for use in microelectromechanical systems, superalloys for high-temperature engine applications, shape memory alloys for biomedical applications, and others.

MSE 4330 Materials for Energy Production, Storage, and Conversion (also MSE 5330)

Fall. 3 credits. R. Dieckmann.

Concerned with materials and technologies related to energy production, storage, and conversion as well as to sensors used for monitoring the emission of pollutants. The devices discussed include solar cells, fuel cells, batteries, and electrochemical sensors. Thermodynamic, kinetic, and electrochemical concepts and materials properties critical for such devices are the central part of this course.

MSE 4610 Biomedical Materials and Their Applications

Spring. 3 credits. L. Estroff.

Many types of materials are used in biomedical engineering to replace or supplement natural biological systems. Interaction with blood and tissues is always of primary importance, but depending on the use of the biomedical material, mechanical, optical, and transport properties may also be vital. After a general introduction to biomedical materials, case studies involving physiological systems are considered, and design of artificial parts and materials is investigated. Constraints such as methods of production, economics, regulatory approval, and legal liabilities are included. Examples may include dialysis, contact and intra-ocular lenses, heart valves, and the artificial pancreas. Every student is involved in a presentation about a case study.

[MSE 4810 Technology Management (also MSE 5870)]

Spring. 3 credits. E. P. Giannelis. Next offered 2010–2011.

Designed to provide students in engineering and the sciences with the knowledge and analytical skills to manage RD for a strategic competitive advantage. Most organizations recognize the critical importance of RD management in becoming and remaining world-class competitors. The course uses a combination of case studies, readings, discussions, and outside lectures. Topics include technology evaluation, RD portfolio, intellectual property portfolio and management, technology transfer, and technology, policy, and society.]

MSE 4820 Plasma Processing of Electronic Materials (also ECE 4820)

Spring. 3 credits. Prerequisites: PHYS 2213 and 2214 or equivalents. Offered if sufficient demand.

For description, see ECE 4820.

[MSE 4870 Ethics and Technology]

Spring. 1 credit. Next offered 2010–2011. Staff.

Ethics influences all decisions made by a technologist. This course discusses those factors that must be considered in reaching a decision involving technology, ranging from legal impact to consideration of community expectations.]

[MSE 4890 Colloids and Colloid Assemblies for Advanced Materials Applications (also MSE 5890)]

Fall. 3 credits. Next offered 2010–2011. C. Liddell.

Recent global developments in the synthesis, modification, organization, and utilization of fine particles in nanotechnology and biotechnology fields. Underlying principles for control of particle characteristics such as mean size, shape, composition, internal homogeneous structure, layered, hollow, porous, and heterojunction structures. Methods for the formation of ordered and patterned particle arrays employed in advanced materials based on latex, ceramic colloids, metal nanoparticles, semiconductor quantum dots, nanocapsules, and miniemulsions. Applications in photonics, biolabeling, biological screening, drug delivery, catalysis, and magnetic recording.]

MSE 4910–4920 Research Involvement IVa and IVb

4910, fall; 4920, spring. 3 credits each semester. Prerequisite: departmental approval. Staff.

For description, see MSE 2910. May be continuation or a one-semester affiliation with a research group.

MSE 4950 Undergraduate Teaching Involvement

Fall, spring. Variable credit. Staff.

Gives credit to students who help in the laboratory portions of select MSE courses. The number of credits earned is determined by the teaching load and is typically 1–3.

MSE 5010–5020 Special Project

Fall, spring. 6 credits. Staff.

Master of Engineering research project.

[MSE 5120 Mechanical Properties of Thin Films (also MAE 5130)]

Spring. 3 credits. Prerequisite: A course similar to ENGRD 2610 or permission of instructor. S. P. Baker. Next offered 2010–2011.

Stresses, elastic and plastic deformation, creep and anelasticity, and fracture and delamination of thin films and patterned structures. How mechanical behavior at the nanoscale deviates from the predictions of scaling laws derived for bulk materials. Applications in microelectronics, optics, microelectromechanical systems, coatings, etc.]

MSE 5210 Properties of Solid Polymers

Spring. 3 credits. Prerequisite: ENGRD 2610. Corequisite: MSE 3030 or permission of instructor. C. Ober.

Synthetic and natural polymers for engineering applications. Production and characterization of long-chain molecules. Thermodynamics of polymer mixtures. Polymer molecular weight. Gelation and networks, rubber elasticity, elastomers, and thermosetting resins. Amorphous and crystalline thermoplastics and their structure. Time- and temperature-dependent elastic properties of polymers. Glass transition and secondary relaxations. Plastic deformation and molecular orientation.

[MSE 5230 Physics of Soft Materials]

Fall. 3 credits. Next offered 2010–2011. U. Wiesner.

The course covers general aspects of structure, order, and dynamics of soft materials. Typical representatives of this class of materials are polymers, liquid crystals, gels, and surfactant solutions. A general formalism for the description of order in terms of orientation distribution functions is introduced. Examples are given for the measurement of order parameters for partially ordered materials. Finally, the dynamics of soft materials is

discussed. Besides transport and flow behavior aspects of the local dynamics of soft materials are presented. Emphasis is put on the discussion of various techniques frequently used (and available at Cornell) for the characterization of structure, order and dynamics of soft materials such as NMR or various scattering techniques. Using examples of modern multidimensional spectroscopic methods the issue of heterogeneous dynamics at the glass transition of amorphous liquids is presented at the end of the class.]

[MSE 5310 Introduction to Ceramics

Spring, 3 credits. Prerequisites: all MSE 2000- and 3000-level core courses. Next offered 2010–2011. R. Dieckmann.

Covers ceramic processes and products, structure of ceramic crystals, structure of glasses, structural defects (point defects, dislocations), surfaces, interfaces and grain boundaries, diffusion in ionic materials (atomistic and phenomenological approach, relationships between diffusion and point defect structure), ceramic phase diagrams, phase transformations. Emphasizes physicochemical aspects of the different topics.]

MSE 5330 Materials for Energy Production, Storage, and Conversion (also MSE 5330)

Fall, 3 credits. R. Dieckmann.
For description, see MSE 4330.

MSE 5410 Nanofabrication of Semiconductor Devices (also ECE 5360)

Fall, 4 credits. Prerequisites: ECE 3150 and ECE 4570 or equivalent.
For description, see ECE 5360.

[MSE 5420 Flexible Electronics

Spring, 3 credits. Next offered 2010–2011.
C. Ober.

Flexible electronics holds the promise of transformative developments in: (1) flat panel lighting (low cost, low energy), (2) energy production systems (solar), and (3) infrastructure control and monitoring (sensing, energy control, hazard monitoring). Practical realization of flexible circuits will require dramatic progress in new materials that are compatible with flexible media and amenable to facile and low temperature processing as well as major advances in manufacturing technologies such as roll-to-roll processing. This course will discuss these and other developments.]

MSE 5430 Thin-Film Materials Science

Fall, 3 credits. D. Schlom.
Provides fundamental information on the deposition, properties, reaction, and evaluation of thin films. Topics include deposition techniques, surface energies, stress in thin films, surface kinetics, homoepitaxy, heteroepitaxy and superlattices, electrical and optical properties, Schottky barriers, solid phase regrowth, interdiffusion, thin film reactions, and electromigration. The recommended textbook is *Electronic Thin Film Science for Electrical Engineers and Material Scientists* by Tu, Mayer, and Feldman.

[MSE 5450 Magnetic and Ferroelectric Materials

Fall, 3 credits. Prerequisites: PHYS 2213 and 2214 or equivalent. R. B. van Dover.
Next offered 2010–2011.

Topics include magnetic fields, the microscopic origins of magnetism, ferromagnetic materials and properties, and

applications of magnetic materials. The properties of ferroelectric materials are also covered, and applications of ferroelectrics in electronics technology are explored.]

MSE 5490 Nanofabrication: Making It Small

Spring, 3 credits. Prerequisites: CHEM 2090, MATH 1920. M. Thompson.

This course provides an introduction to principles and practice of nanofabrication techniques, combining lectures with hands-on laboratory fabrication. A range of nanosystems will be explored from microelectronic circuits to MEMS sensors and/or microfluidics. Fundamentals common to all fabrication including lithography, deposition, and etching processes are explored in lectures and lab exercises. New developments in “soft” microstamp lithography and self-assembly methods are discussed. In the final project students build one of several nanosystems depending on their particular interests.

MSE 5550 Introduction to Composite Materials (also CEE/MAE/TAM 4550)

Fall, 3 credits. P. Petrina.
For description, see TAM 4550.

[MSE 5620 Biomineralization: The Formation and Properties of Inorganic Biomaterials

Spring 3 credits. Prerequisites: MSE 3010 or CHEM 1570 or CHEM 3570–3580 or equivalent or permission of instructor.
L. Estroff. Next offered 2010–2011.

This course will examine the wide variety of mineralized materials made by biological organisms including mollusk shells, mammalian bone and teeth, silica bodies in plants, and magnetotactic bacteria. The focus will be on the molecular and biological mechanisms that lead to the formation of these materials as well as their unique materials properties (mechanical, optical, magnetic.)]

MSE 5630 Nanobiotechnology (also AEP/ BIOG 6630)

Fall, 3 credits.
For description, see BME 6670.

MSE 5710 Analytical Techniques for Material Science

Spring, 3 credits. D. Grubb.

Survey of modern analytical techniques used to determine composition and structure of near-surface and bulk materials. Interaction of ions, electrons, and photons with solids; characteristics of the emergent radiation. Techniques covered include ion scattering, Auger electron spectroscopy, nuclear activation, secondary ion mass spectroscopy, UV and X-ray photoelectron spectroscopies, and X-ray techniques. Selection and design of experiments.

MSE 5720 Computational Materials Science

Fall, 3 credits. Prerequisite: MSE 3030/6010 or equivalent. R. Hennig.

Computational methods for predicting the behavior of condensed matter systems, including Monte Carlo, molecular dynamics, and phase field approaches. Extraction of physical parameters from simulation results and limitations of computational methods. Survey of interatomic potential development and quantum-mechanical ab-initio techniques. Examples drawn from surface and condensed phase systems.

MSE 5810 Materials Chemistry (also MSE 3010, MAE 3120)

Fall, 3 credits. U. Wiesner.
For description, see MSE 3010.

MSE 5820 Mechanical Properties of Materials, Processing, and Design (also MSE 4020, MAE 3120)

Fall, 3 credits. Corequisite: MSE 5840 or permission of instructor. D. Ast.
For description, see MSE 4020.

MSE 5830 Thermodynamics of Condensed Systems (also MSE 3030)

Fall, 4 credits. M. O. Thompson.
For description, see MSE 3030.

MSE 5840 Kinetics, Diffusion, and Phase Transformation (also MSE 3040)

Spring, 4 credits. Prerequisite: MSE 5830 or permission of instructor. R. Hennig.
For description, see MSE 3040.

MSE 5850 Electronic, Magnetic, and Dielectric Properties of Materials (also MSE 3050)

Spring, 3 credits. D. Schlom.
For description, see MSE 3050.

[MSE 5870 Technology Management (also MSE 4810)

Spring, 3 credits. Next offered 2010–2011.
E. P. Giannelis.
For description, see MSE 4810.]

[MSE 5890 Colloids and Colloid Assemblies for Advanced Materials Applications (also MSE 4890)

Fall, 3 credits. Next offered 2010–2011.
C. Liddell.
For description, see MSE 4890.]

Graduate Core Courses

MSE 6010 Chemistry of Materials

Spring, 3 credits. Prerequisite: thermodynamics course at level of MSE 3030.
U. Wiesner.

In this course modern developments in materials chemistry are taught and discussed. This includes symmetry aspects of chemical bonding, self-assembly, sol-gel chemistry, mesostructured and mesoporous solids, low-dimensional nanomaterials, and bioorganic chemistry.

[MSE 6020 Elasticity, Plasticity, and Fracture

Spring, 3 credits. D. Ast. Next offered 2010–2011.

An advanced overview of mechanical properties of materials combining concepts from continuum mechanics, atomic structure, thermodynamics, and kinetics. Topics include elastic properties of crystals, glasses, and polymers; mechanical damping; plastic deformation in metals and polymers; creep deformation; fracture in brittle and ductile materials; the effects of temperature, time, and thermomechanical history on properties; metals, ceramics, polymers, and composites; and models and scaling laws for mechanical behavior.]

MSE 6030 Thermodynamics of Materials

Fall, 3 credits. Staff.
Topics include basic statistical thermodynamics, partition functions and thermodynamic state functions, distributions, laws of thermodynamics, free-energy functions and conditions of equilibrium, chemical reactions, statistics of electrons in crystals, heat capacity, heterogeneous systems and phase transitions, and lattice models of 1-, 2-, and

3-dimensional interacting systems. Also covers statistical thermodynamics of alloys, free-energy and phase diagrams, order-disorder phenomena, point defects in crystals, and statistical thermodynamics of interfaces.

MSE 6040 Kinetics of Reactions in Condensed Matter

Spring. 3 credits. R. Dieckmann. Phenomenology and microscopic aspects of diffusion in fluids, both simple and polymeric, and in metallic, ionic, semiconductor, and polymeric solids. Cartesian tensors are utilized for fields and properties. Covers phase stability and transformations; nucleation and growth, spinodal decomposition and displacive transformations; phase coarsening processes, recrystallization, and grain growth; diffusion-controlled growth, interfacial reactions, moving boundary problems; grain-boundary migration controlled kinetics; viscosity, anelasticity, and diffusional creep.

[MSE 6050 Electronic Properties of Materials

Spring. 3 credits. D. Schlom. Next offered 2010–2011.

Develops concepts of band structure in crystalline and non-crystalline materials from a real-space as well as reciprocal space perspective, and reconciles the two approaches. Mathematical complexity is kept to a minimum. Specific topics include electronic properties of low-dimensionality materials (surfaces, quantum wires, quantum dots), optical properties of metals and insulators, and electronic properties of exotic materials such as oxide and organic semiconductors. Technological applications to be addressed include switching devices, magnetism, superconductivity, and photonics, depending on student interests.]

MSE 6060 Condensed Matter Structure

Fall. 3 credits. Prerequisite: course at level of MSE 2060. R. Robinson.

Focuses on ways to characterize structure. Includes lectures by several faculty on structural determination on a wide range of materials. Elements of structure at length scales ranging from sub-nanometer to millimeter. Descriptions of structure in crystals, liquids, amorphous solids/glasses. Short- and long-range order, microstructures, cellular structures, domains, domain boundaries, 2-phase and composite structures. Techniques to probe structure: “direct” microscopy, real space imaging, including probe microscopies, optical, electron and X-ray methods. Indirect methods based on analysis of diffraction fields, Fourier/reciprocal space. Examples of application may include polymer structure, metal grain textures, dislocation arrays, cellular structure, structure of biological membranes, nano-composite structures, surfaces, interfaces and grain boundaries in semiconductors, structure of photonic materials, domain structures in ferroelectrics and ferromagnetics, biological materials.

Related Course in Another Department

Introductory Solid-State Physics (PHYS 4454, AEP 4500)

Further Graduate Courses

MSE 6100 Physical Metallurgy and Applications (also MSE 4100)

Spring. 3 credits. Prerequisites: MSE 2060, 3030, 3040 or permission of instructor. S. Baker.

For description, see MSE 4100.

MSE 6210 Advanced Inorganic Chemistry III: Solid-State Chemistry (also CHEM 6070)

Spring. 4 credits. Prerequisite: CHEM 6050 or permission of instructor. S. Lee. For description, see CHEM 6070.

MSE 6550 Composite Materials (also MAE/TAM 6550)

Spring. 4 credits. Staff. For description, see TAM 6550.

MSE 6650 Principles of Tissue Engineering (also MAE/BME 6650)

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. For description, see BME 6650.

MSE 6710 Principles of Diffraction (also AEP 7110)

Spring. 3 credits. Letter grades only. Assumes some knowledge of statistical thermodynamics, crystallography, elementary quantum mechanics, and theory of rate processes. J. D. Brock. For description, see AEP 7110.

Specialty Courses

MSE 8000 Research in Materials Science

Fall, spring. Credit TBA. Staff. Independent research in materials science under the guidance of a member of the staff.

MSE 8010 Materials Science and Engineering Colloquium

Fall and spring. 1 credit each semester. Enrollment limited to MSE Ph.D. students. Staff. Lectures by visiting scientists, Cornell staff members, and graduate students on subjects of interest in materials sciences, especially in connection with new research.

MSE 8020 Materials Science Research Seminars

Fall, spring. 2 credits each semester. Prerequisite: graduate students involved in research projects. Staff. Short presentations on research in progress by students and staff.

MECHANICAL AND AEROSPACE ENGINEERING

P. L. Auer, C. T. Avedisian, D. L. Bartel, L. J. Bonassar, J. F. Booker, J. R. Callister, M. E. Campbell, D. A. Caughey, L. R. Collins, P. R. Dawson, P. C. T. deBoer, D. C. Erickson, E. M. Fisher, Y. Gao, E. Garcia, A. R. George, F. C. Gouldin, B. Hency, C. Hui, B. J. Kirby, H. Kress Gazit, S. Leibovich, H. Lipson, M. Y. Louge, J. L. Lumley, M. P. Miller, F. C. Moon, F. K. Moore, S. Mukherjee, M. A. Peck, R. M. Phelan, S. L. Phoenix, S. B. Pope, M. L. Psiaki, E. L. Resler, Jr., A. Ruina, W. Sachse, K. E. Torrance, M. C. H. van der Meulen, H. B. Voelcker, K. K. Wang, Z. Warhaft, C. H. K. Williamson, N. Zabarar, A. Zehnder, K. M. Zhang

MAE 1110 Naval Ship Systems (also NAVS 2202)

Fall. 3 credits. For description, see NAVS 2020.

MAE 1130 Introduction to Computer-Aided Manufacture (CAM)

Fall, approx. ten weeks (total 20 hrs. of instruction and 20 hrs. of lab). 1 credit. Limited enrollment. Prerequisites: MAE 2250 or equivalent experience or permission of instructor. Introduction to the fundamentals of computer-aided manufacture (CAM) and computer numerical control (CNC) programming. The course is a hands-on series on CAM. Provides practical applications of the use of G codes and solid modeling software, CNC mill and/or lathe setup, tool selection, and operation. The course is required for students wishing to use the CNC equipment in the Emerson Labs Product Realization Facility for team or research projects. It is also required for advanced CAM/CNC work offered on an individual basis in the spring. May not be used to fulfill any MAE requirement.

MAE 1170 Introduction to Mechanical Engineering (also ENGR1 1170)

Fall. 3 credits. 2 lec and 1 lab per week. Course in Introduction to Engineering series. For description, see ENGR1 1170.

MAE 1270 Introduction to Entrepreneurship and Enterprise Engineering (also ENGR1 1270)

Spring. 3 credits. Open to all Cornell students regardless of major. Prerequisites: none. For description, see ENGR1 1270.

MAE 2120 Mechanical Properties and Selection of Engineering Materials

Spring; may be offered in summer. 3 credits. Prerequisites: ENGRD/TAM 2020 (Statics) with minimum of C– (strictly enforced); MATLAB programming at level of CS 1112 or CS 1132. Mechanics of deformable bodies and a reinforcement of the concept of “simple engineering elements” for mechanical analysis associated with design. Introduction to the broad range of properties and behaviors of engineering materials as they relate to mechanical performance. Emphasis is placed on general states of stress and strain, on elasticity and combined loading effects. Failure criteria including yielding, buckling, fracture, fatigue, and environmental effects are developed. A general introduction to the function/constraints/objectives approach to material selection associated with mechanical design is provided with candidate material systems coming from metals, polymers, ceramics, and/or composites. A general overview of material structure and processing is presented within this context of material selection.

MAE 2210 Thermodynamics (also ENGRD 2210)

Fall, spring, may be offered in summer. 3 credits. Prerequisites: MATH 1920 Calculus for Engineers and PHYS 1112 Physics I, Mechanics, or permission of instructor. For description, see ENGRD 2210.

MAE 2250 Mechanical Synthesis

Spring. 4 credits. Prerequisite: ENGRD 2020. Pre- or corequisites: ENGRD 2030 and 2210. Lab fee. Hands-on introduction on the product design process, from conceptualization through prototype construction and testing. Design projects provide experience in basic prototyping skills using machine tools. Mechanical dissection used to demonstrate successful product design and function. Basic instruction in CAD and technical sketching.

MAE 3050 Introduction to Aeronautics

Fall. 3 credits. Prerequisite: TAM/ENGRD 2030. Pre- or corequisites: one of the following thermodynamics classes: ENGRD 2210 or BEE 2220 and one of the following fluid mechanics classes: MAE 3230 or CHEME 3230 or BEE 3310 or CEE 3310; upper-level engineers or permission of instructor.

Introduction to aerodynamic design of aircraft. Principles of incompressible and compressible aerodynamics, boundary layers, and wing theory. Calculation of lift and drag for aircraft. Analysis of aerodynamic performance. Introduction to stability and control.

MAE 3060 Spacecraft Engineering

Spring. 3 credits. Prerequisite: ENGRD 2030 or junior or senior MAE or ECE students or permission of instructor.

Introduction to spacecraft engineering from satellite design through launch to orbital operation. Topics include space missions, space environment, orbital mechanics, systems engineering, and satellite design. Most spacecraft subsystems are introduced including rocket theory, attitude determination and control, thermal design, and communications. Earth-orbiting and interplanetary satellites are considered. Discussions of current problems and trends in spacecraft operation and development.

MAE 3120 Mechanical Properties of Materials, Processing, and Design (also MSE 4020, 5820)

Fall. 4 credits.

For description, see MSE 4020.

MAE 3130 Atomic and Molecular Structure of Matter (also MSE 2060, 5810)

Spring. 4 credits.

For description, see MSE 2060.

MAE 3230 Introductory Fluid Mechanics

Fall; usually offered in summer through Engineering Cooperative Program. 4 credits. Limited to ME majors and those officially registered for AE or ME minor. Prerequisites: ENGRD 2020 and ENGRD 2030 and pre- or co-registration in ENGRD 2210, or permission of instructor.

Topics include physical properties of fluids, hydrostatics, conservation laws using control volume analysis and using differential analysis, Bernoulli's equation, potential flows, simple viscous flows (solved with Navier-Stokes equations), dimensional analysis, pipe flows, boundary layers. Introduction to compressible flow.

MAE 3240 Heat Transfer

Spring; usually offered in summer through Engineering Cooperative Program. 3 credits. Prerequisite: MAE 3230 or permission of instructor.

Topics include discussion of steady and unsteady heat conduction; forced and free convection; external and internal flows; radiation heat exchange; and heat exchangers and boiling.

MAE 3250 Analysis of Mechanical and Aerospace Structures

Fall; usually offered in summer through Engineering Cooperative Program. 3 credits. Prerequisites: ENGRD 2020 and MAE 2120.

Topics in mechanics of materials applied to analysis and design of structural components encountered in mechanical and aerospace systems, including multiaxial stress states,

statically indeterminate structures, torsion and bending of nonsymmetric or curved members, stability, and stress concentrations. Solution strategies include both analytical and finite element methods.

MAE 3260 System Dynamics

Spring; usually offered in summer through Engineering Cooperative Program. 4 credits. Prerequisite: MATH 2930, MATH 2940, ENGRD 2030; junior standing.

Dynamic behavior of mechanical systems: modeling, analysis techniques, and applications; vibrations of single- and multi-degree-of-freedom systems; feedback control systems. Computer simulation and experimental studies of vibration and control systems.

MAE 3272 Mechanical Property and Performance Laboratory

Spring. 2 credits. Prerequisites: MAE 2120, 3250.

This course provides an introduction to the experimental methods, instrumentation, and data analyses associated with material property determination and mechanical performance of materials. Emphasis is placed on integration of theory and analysis with experimental methods.

MAE 3780 Mechatronics

Fall. 3 credits. Prerequisite: MATH 2930, PHYS 2213, or permission of instructor.

At the intersection of mechanical and electrical engineering, Mechatronics involves technologies necessary to create automated systems. This course introduces students to the functional elements of modern controlled dynamic systems. Topics include analog circuits (both passive and active components); filter design; diodes; transistors, MOSFETs and power amplification; pulse width modulation; transduction; mechanical and electro-mechanical devices such as electromagnetic systems; piezoelectric and shape memory material transduction; gear trains; optical encoders; discretization; aliasing; and microprocessors and programming. Lab experiments culminate in the design, fabrication, and programming of a microprocessor-controlled robotic vehicle, which laboratory groups enter into a class-wide competition.

MAE 4000 Components and Systems: Engineering in a Social Context (also STS 4001)

Fall. 3 credits. Prerequisites: upper-class standing, two years of college physics. Counts as "Senior Design Elective" if students sign up for corresponding section of MAE 4291. Co-meets with MAE 5000. Offered alternate years.

Addresses, at a technical level, broader questions than are normally posed in the traditional engineering or physics curriculum. Through the study of individual cases such as the Strategic Defense Initiative (SDI), the National Missile Defense, supersonic transport, and the automobile and its effect on the environment, the course investigates interactions between the scientific, technical, political, economic, and social forces that are involved in the development of engineering systems.

MAE 4020 Wind Power

Fall. 3 credits. Prerequisite(s): MAE 3230 (or equivalent) or MAE 3050, MAE 3250. Counts as "Senior Design Elective" if M.E. seniors enroll in corresponding section of MAE 4291.

Main features of energy conversion by wind turbines. Emphasis on characterization of the atmospheric boundary layer, aerodynamics of horizontal axis wind turbines, and performance prediction. Structural effects, power train considerations, siting, and wind farm planning.

[MAE 4040 Materials Selection for Clean Mechanical Designs

Spring. 3 credits. Prerequisites: MAE 2120, MAE 3250. Pre- or corequisite MAE 3272. Counts as "Senior Design Elective" for M.E. students who enroll in corresponding section of MAE 4291. Offered alternate years; next offered 2010-2011.

Advanced material selection concepts, which build off of the fundamentals of materials index developed in MAE 2120 and 3250, including process and shape selection, hybrid materials, and industrial design. Includes a brief overview of current clean technologies and the basics of life cycle and environmentally conscious design. Two main themes are: (1) application of materials-selection basics and concepts of life-cycle design to current design limitations associated with various clean technologies and (2) determination of the mechanical properties of various emerging green materials.]

MAE 4140 Mechanics of Lightweight Vehicles

Fall. 3 credits. Prerequisites: MAE 2120, 3250, and 3272 or equivalent; senior standing in MAE. "Senior Design Elective" for M.E. students who enroll in corresponding section of MAE 4291. Offered alternate years.

Covers fundamentals of vehicle mechanics for several classes of vehicles (bicycles, light cars, airframes). Topics include types of vehicle structures; pertinent aspects of mechanical behavior including elastic and inelastic responses; static and dynamic behavior of vehicles under elastic loading; and mechanics of crashworthiness. Lectures cover essential background material for understanding of vehicle mechanics. Labs provide hands-on experiences in the major components of the course.

MAE 4150 GPS: Theory and Design (also ECE 4150)

Fall. 4 credits. Prerequisites: 3000-level engineering course with advanced math content (e.g., ECE 3030 or MAE 3260).

For description, see ECE 4150.

MAE 4170 Introduction to Robotics: Dynamics, Control, Design

Spring. 3 credits. Prerequisites: engineering math at level of MATH 2930 and MATH 2940 (Engineering Mathematics); some course in dynamics at level of TAM/ENGRD 2030 (Dynamics); familiarity with control concepts typical of MAE 3260 (System Dynamics).

Introductory course in the analysis and control of mechanical manipulators and related robotic machines. Topics include spatial descriptions and transformations, manipulator kinematics and inverse kinematics. Design of end effectors, differential relationships and static forces, manipulator dynamics, trajectory generation, sensors and actuators. Design of PD controllers, trajectory control, and compliant motion control. Simulation and design using MATLAB and multi-body codes are used. Co-meets with MAE 5170.

MAE 4230 Intermediate Fluid Dynamics
Spring, 3 credits. Prerequisite: MAE 3230 (Introductory Fluid Mechanics) or CEE 3310/BEE 3310, CHEME 3230 or permission of instructor. Counts as "Senior Design Elective" if M.E. seniors enroll in the corresponding section of MAE 4291.
Co-meets with MAE 5230.

This course builds on the foundation of MAE 3230. Emphasis is placed on both the fundamental principles and numerical calculation of real flows (both engineering and environmental) using a computational fluid dynamics package. Topics include compressible flow, exact solutions to the Navier-Stokes equations, boundary layers, wakes and jets, separation, convection, fluid instabilities, and turbulence.

MAE 4250 FSAE Automotive Design Project

Fall, spring. Usually 3 credits: 3 for team members or 4 for team leaders.

Prerequisite: Engineering juniors and seniors or permission of instructor. Counts as "Senior Design Elective" if M.E. seniors enroll in corresponding section of MAE 4291.

Project course to research, design, build, develop, and compete with a Formula SAE car for intercollegiate competition. Students work in interdisciplinary teams using concurrent engineering and systems engineering principles applied to complex mechanical, electromechanical, and electronic systems.

MAE 4272 Fluids/Heat Transfer Laboratory

Fall, 3 credits. Fulfills technical-writing requirement. Prerequisites: MAE 3230, 3240.

Laboratory exercises in fluid mechanics and the thermal sciences. Measurements of flame temperature, pressure, heat transfer, viscosity, lift and drag, fluid-flow rate, effects of turbulence, airfoil stall, flow visualization, and spark ignition engine performance. Instrumentation, techniques and analysis, and interpretation of results. Biweekly written assignments with extensive feedback.

MAE 4291 Supervised Senior Design Experience

Fall, spring. Minimum of 1 or 3 credits depending on section chosen. Prerequisite: senior standing or permission of instructor; taken concurrently or after MAE 4280.
Letter grades only.

Substantial design experience based on the knowledge and skills acquired in earlier course work and incorporating engineering standards and realistic constraints. Sections of this course satisfy the BS ME senior design requirement. They are offered in conjunction with a course designated as "Senior Design Elective" (MAE 4000, 4020, 4040, 4140, 4230, 4700, 4860) or are directed by a faculty member as an individual or a team design exercise. Consult www.mae.cornell.edu for enrollment details.

MAE 4300 Professional Practice in Mechanical Engineering

Fall, 2 credits. Prerequisite: senior standing in MAE or permission of instructor. This course is required for M.E. seniors, replacing MAE 4280.

Professional practice and broader impacts of the mechanical engineering profession are presented through a series of lectures and invited talks, supplemented by assignments and projects. Topics include professional ethics, product liability, intellectual property,

career/educational paths, contemporary issues facing mechanical engineers, and engineering successes and failures, along with the global, societal, environmental and/or economic aspects and impact of engineering.

MAE 4320 MicroElectro Mechanical Systems (MEMS) (also ECE 4320)

Fall, 4 credits. Prerequisite: ECE 3150, AEP 3630, or MAE 3780 or permission of instructor.

For description, see ECE 4320

[MAE 4490 Combustion Engines and Fuel Cells

Spring, 3 credits. Prerequisites: ENGRD 2210 and MAE 3230. Offered alternate years; next offered 2010–2011.

Introduction to reciprocating combustion engines and fuel cells, with emphasis on the application of thermodynamic and fluid-dynamic principles affecting their performance. Chemical equilibrium and kinetics, electrochemistry, thermodynamic limits on performance, deviations from ideal processes, engine breathing, combustion, knock. Formation and control of undesirable exhaust emissions.]

MAE 4530 Computer-Aided Engineering: Applications to Biomedical Processes (also BEE 4530)

Spring, 3 credits. Fulfills technical elective requirement for MAE students. Prerequisite: Heat and Mass Transfer (BEE 3500 Biological and Environmental Transport Processes, or CHEME 3240 Heat and Mass Transfer, or MAE 3240 Heat Transfer) or equivalent.

For description, see BEE 4530.

MAE 4550 Introduction to Composite Materials (also CEE 4770, MSE 5550, TAM 4550)

Fall, 4 credits.

For description, see TAM 4550.

MAE 4570 Space Systems and National Security

Fall, 3 credits. Prerequisite: upper-level standing and MATH 2930 and ENGRD 2030 or permission of instructor.

This course is intended to provide an overview of the implications of space for national security and vice versa. It will consider subjects such as an overview of United States space usage, how the United States monitors what is in space, specific national security applications of space systems, vulnerabilities of space systems, anti-satellite and space weapons, the relationship between missile defenses and space weapons, and the current debate over how the United States can best preserve the benefits it receives from the use of space.

MAE 4580 Introduction to Nuclear Science and Engineering (also ECE/TAM 4130)

Fall, 3 credits. Prerequisites: PHYS 2214 and MATH 2940.

For description, see TAM 4130.

MAE 4590 Introduction to Controlled Fusion: Principles and Technology (also AEP/ECE/NSE 4840)

Spring, 3 credits. Prerequisites: PHYS 1112, 2213, and 2214, or equivalent background in electricity and magnetism and mechanics. Intended for seniors and graduate students in engineering and the physical sciences. Offered alternate years.

For description, see ECE 4840.

MAE 4610 Entrepreneurship for Engineers (also ENGRG 4610, ORIE 4152)

Fall, 3 credits. Limited enrollment. Prerequisite: upper-level engineers or permission of instructor.

Develops skills necessary to identify, evaluate, and begin new business ventures. Topics include intellectual property, competition, strategy, business plans, technology forecasting, finance and accounting, and sources of capital. A rigorous, quantitative approach is stressed throughout, and students create financial documents and plans, analyze human resource models, and work with sophisticated valuation methods, complicated equity structures, and legal and business documents. As such, this course represents the "red meat" of entrepreneurship, and the soft skills are left for other courses. Course work consists of discussions, assignments, and the preparation and presentation of a complete business plan.

[MAE 4640 Orthopaedic Tissue Mechanics (also BME 4640)

Spring, 3 credits. Prerequisites: ENGRD 2020 Mechanics of Solids and MAE 3250 Mechanical Design and Analysis or permission of instructor. Co-meets with MAE 5640. Offered alternate years; next offered 2010–2011.

Applications of mechanics and materials principles to orthopaedic tissues. Physiology of bone, cartilage, ligament, and tendon and how these properties relate to mechanical function. Mechanical behavior of skeletal tissues in the laboratory. Functional adaptation of these tissues to their mechanical environment. Tissue engineering of replacement structures.]

MAE 4660 Biomedical Engineering Analysis of Metabolic and Structural Systems (also BME 4010)

Fall, 3 credits. Prerequisites: ENGRD 2020 Mechanics of Solids and previous course work in biology or permission of instructor.

For description, see BME 4010.

MAE 4700 Finite Element Analysis for Mechanical and Aerospace Design

Fall, 3 credits. Fulfills senior design requirement for MAE students. Limited enrollment. Prerequisite: senior standing or permission of instructor. Evening exams. Term project. "Counts as Senior Design Elective" if M.E. seniors enroll in corresponding section of MAE 4291.
Co-meets with MAE 5700.

Introduction to linear finite element static and dynamic analysis for discrete and distributed mechanical and aerospace structures. Prediction of load, deflection, stress, strain, and temperature distributions. Major emphasis on underlying mechanics and numerical methods. Introduction to computational aspects via educational and commercial software (such as MATLAB and ANSYS). Selected mechanical and aerospace applications in the areas of trusses, beams, frames, heat transfer (steady state and transient), and elasticity (static and dynamic).

MAE 4770 Engineering Vibrations

Spring, 3 credits. Pre- or corequisite: MAE 3260 or permission of instructor. Co-meets with MAE 5770.

Lumped element, distributed parameter, and mixed structural vibratory systems are examined. Equations of motion are derived

from Newton's law and Lagrange's equations. Eigenanalysis, free and forced responses, and frequency/time domain solutions are considered. Vibration absorbers, isolators, and vibration suppression control systems using feedback approaches also are investigated.

MAE 4780 Feedback Control Systems (also CHEME/ECE 4720)

Fall. 4 credits. Prerequisites: CHEME 3720 or MAE 3260 or permission of instructor. Co-meets with MAE 5780.

Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the principal mathematical tools. Design techniques include root-locus and frequency response methods. Includes laboratory that examines modeling and control of representative dynamic processes.

MAE 4860 Automotive Engineering

Spring. 3 credits. Prerequisites: ENGRD 2020 or permission of instructor. Counts as "Senior Design Elective" if M.E. seniors enroll in corresponding section of MAE 4291.

Selected topics in the analysis and design of vehicle components and vehicle systems. Emphasis on automobiles. Engines, transmissions, suspension, brakes, and aerodynamics will be discussed. The course uses first principles and applies them to specific systems. The course is highly quantitative, using empirical and analytical approaches.

MAE 4900 Special Investigations in Mechanical and Aerospace Engineering

Fall, spring. 4 variable credits. Prerequisite: undergraduate standing and permission of instructor.

Intended for an individual student or a small group of students who want to pursue a particular analytical or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses.

MAE 4980 Teaching Experience in Mechanical Engineering

Fall, spring. 3 variable credits. Prerequisite: permission of instructor. Cannot be used to fulfill M.E. technical elective or M.E. major elective requirements but may be approved as advisor-approved elective. May not be used toward satisfying M.E. minor.

Students serve as teaching assistants in Cornell mechanical engineering classes or in local middle school technology classes.

MAE 5000 Components and Systems: Engineering in a Social Context

Fall. 3 credits. Prerequisites: graduate standing or permission of instructor, two years of college physics. Co-meets with MAE 4000. Offered alternate years.

For description, see MAE 4000.

MAE 5010 Future Energy Systems

Spring. 3 credits. Prerequisites: ENGRD 2210 Thermodynamics or equivalent. Recommended: MAE 3230 Introductory Fluid Mechanics, MAE 3240 Heat Transfer, or equivalents; graduate or senior standing or permission of instructor.

Critically examines the technology of energy systems that will be acceptable in a world faced with global climate change, local pollution, and declining supplies of oil. The

focus is on renewable energy sources (wind, solar, biomass), but other non-carbon-emitting sources (nuclear) and lowered-carbon sources (co-generative gas turbine plants, fuel cells) also are studied. Both the devices and the overall systems are analyzed.

MAE 5060 Aerospace Propulsion Systems

Spring. 3 credits. Prerequisite: MAE 3050 Introduction to Aeronautics or permission of instructor. Offered alternate years.

Application of thermodynamic and fluid-mechanical principles to design and performance analysis of aerospace propulsion systems. Jet propulsion principles, including gas turbine engines and rockets. Electric propulsion. Future possibilities for improved performance of aerospace propulsion systems.

[MAE 5070 Dynamics of Flight Vehicles

Spring. 3 credits. Prerequisite: MAE 3050 Introduction to Aeronautics. Pre- or co-requisite: MAE 3260 System Dynamics or permission of instructor. Offered alternate years; next offered 2010-2011.

Introduction to stability and control of atmospheric-flight vehicles. Review of aerodynamic forces and methods for analysis of linear systems. Static stability and control. Small disturbance equations of unsteady motion. Dynamic stability of longitudinal and lateral-directional motions; transient response. At the level of *Flight: Stability and Automatic Control* by Nelson.]

[MAE 5130 Mechanical Properties of Thin Films (also MSE 5120)

Spring. 3 credits. Offered alternate years; next offered 2010-2011.

For description, see MSE 5120.]

MAE 5170 Introduction to Robotics: Dynamics, Control, Design

Spring. 3 credits. Graduate version of MAE 4170. Co-meets with MAE 4170.

For description, see MAE 4170.

MAE 5200 Dimensional Tolerancing in Mechanical Design

Fall, seven-week half term. 2 credits. Prerequisites: MAE 2250 or equivalent CAD-based design course, plus 2.5 years of engineering mathematics through probability and statistics.

Designers use dimensional tolerances to limit spatial variations in mechanical parts and assemblies; the primary goals are interchangeability in assembly, performance, and cost. This course covers traditional limit tolerances briefly but focuses mainly on modern geometric tolerances and their role in assembly control. Students learn how to represent assemblies in terms of mating and relational constraints, and how to design tolerances and inspection procedures from part and assembly specifications.

MAE 5210 Theory of Linear Systems (also ECE 5210)

Fall. 3 credits. Prerequisite: ECE 3200, MAE 3260, or permission of instructor.

Recommended: good background in linear algebra and linear differential equations. State-space and multi-input-multi-output linear systems in discrete and continuous time. The state transition matrix, the matrix exponential, and the Cayley-Hamilton theorem. Controllability, observability, stability, realization theory. At the level of *Linear Systems* by Kailath.

MAE 5230 Intermediate Fluid Dynamics

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.

Co-meets with MAE 4230.

Intended for M.Eng. students who wish to take a fluid dynamics course including implementation of commercial computational fluid dynamics packages. Complements material in MAE 6010 and 6020. For description of topics covered, see MAE 4230. Includes a 1-credit CFD design project due at the end of the semester. Students desiring to write their own computational fluid dynamics software should consider one or more of MAE 6360, 7360, and 7370.

MAE 5240 Physics of Micro- and Nanoscale Fluid Mechanics (also CHEME 6240)

Fall. 3 credits. Prerequisite: undergraduate fluid or continuum mechanics (e.g., MAE 3230) or permission of instructor. Co-meets with MAE 6240.

Introduction to fluid mechanics in micro- and nanofabricated devices. Physicochemical hydrodynamics, electrokinetic effects, capillarity, continuum breakdown, micro- and nanofluidic applications in chemistry and life sciences.

MAE 5430 Combustion Processes

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.

An introduction to combustion and flame processes, with emphasis on fundamental fluid dynamics, heat and mass transport, and reaction-kinetic processes that govern combustion rates. Topics include thermochemistry, kinetics, vessel explosions, laminar premixed and diffusion flames, and droplet combustion. Optional topics may include complex combustion systems, turbulent flames, fuel cells, or combustion of solids.

MAE 5459 Energy Seminar I (also ECE 5870)

Fall. 1 credit.

For description, see ECE 5870.

MAE 5469 Energy Seminar II (also ECE 5880)

Spring. 1 credit.

For description, see ECE 5880.

[MAE 5640 Orthopaedic Tissue Mechanics

Spring. 3 credits. Graduate version of MAE 4640. Offered alternate years; next offered 2010-2011.

For description see MAE 4640.]

MAE 5680 Soft Tissue Biomechanics

Fall. 3 credits.

For description, see BME 5810.

[MAE 5690 Clinical Biomechanics of Musculoskeletal Tissues (also BME 5690)

Fall or spring. 3 credits. Prerequisites: ENGRD 2020, MAE 2120, and MAE 3250, or permission of instructor. Offered alternate years; next offered 2010-2011.

Review physiology and biomechanics of musculoskeletal tissues, focusing on skeletal muscle, ligament, and tendon and the relationship between the structure and mechanical function. Apply mechanics of materials to evaluate and solve clinical problems of musculoskeletal tissue. Determine how the tissues adapt to injury and degenerative changes.]

MAE 5700 Finite Element Analysis for Mechanical and Aerospace Design

Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Evening exams. Term project. Graduate version of MAE 4700 requires additional programming assignment. Co-meets with MAE 4700.

For description, see MAE 4700.

[MAE 5710 Applied Dynamics]**MAE 5770 Engineering Vibrations**

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Graduate version of MAE 4770. Co-meets with MAE 4770.

For description, see MAE 4770.

MAE 5780 Feedback Control Systems

Fall. 4 credits. Graduate version of MAE 4780. Co-meets with MAE 4780.

For description, see MAE 4780.

MAE 5900 Special Investigations in Mechanical and Aerospace Engineering

Fall, spring. Variable credit.

FSAE or Automotive XPrize team. For non-engineering graduate students.

MAE 5910 Applied Systems Engineering (also CEE 5240, CIS 5040, ECE 5120, ORIE 5140, SYSEN 5100)

Fall. 3 credits. Prerequisites: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in a group-based project with a strong system design component that is approved by course instructor.

For description, see SYSEN 5100.

MAE 5920 System Architecture, Behavior, and Optimization (also CEE/CS 5050, ECE 5130, ORIE 5142, SYSEN 5200)

Spring. 3 credits. Prerequisites: senior or graduate standing and completion of Applied Systems Engineering 1 (CEE 5240, CS 5040, ECE 5120, ORIE 5140, MAE 5910, or SYSEN 5100) or permission of instructor.

For description, see SYSEN 5200.

MAE 5930 Systems Engineering for the Design and Operation of Reliable Systems (also SYSEN 5300)

Fall. 3 credits. Prerequisites: MAE 5910 and either ENGRD 2700 or CEE 3040.

For description, see SYSEN 5300.

MAE 5949 Enterprise Engineering Colloquium (also ORIE 9100-9101)

Fall, spring. 1 credit each semester. Usually S-U grades.

For description, see ORIE 9100-9101.

MAE 6010 Foundations of Fluid Dynamics and Aerodynamics

Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.

Foundations of fluid mechanics from an advanced viewpoint, including formulation of continuum fluid dynamics; surface phenomena and boundary conditions at interfaces; fundamental kinematic descriptions of fluid flow, tensor analysis, derivation of the Navier-Stokes equations and energy equation for compressible fluids; and sound waves, viscous flows, boundary layers, and potential flows.

[MAE 6020 Fluid Dynamics at High Reynolds Numbers]**[MAE 6060 Spacecraft Dynamics and Mission Design]**

Spring. 3 credits. Prerequisites: graduate standing or permission of instructor; background in linear algebra at level of MATH 2940; some experience with MATLAB is expected. Offered alternate years. Next offered 2010-2011.

The focus is on spacecraft attitude dynamics and its application in core space-systems areas: mission design, operations, and autonomy. Also introduces the problem of attitude estimation and treats aspects of guidance, navigation, and control unique to the context of space mission design. Readings and lectures include examples based on flight data.]

[MAE 6080 Physics of Fluids]**MAE 6130 Finite Element Methods for Inelastic Design and Process Modeling**

Spring. 4 credits. Prerequisites: introductory finite element course, equivalent experience or permission of instructor. Offered alternate years.

Finite element methods provide powerful computations tools for analyzing the deformations of mechanical systems over a broad range of behaviors, both elastic and inelastic. Analyses of inelastic behaviors arise in the designs for aerospace, automotive, and power generation applications and in the simulation of a wide array of forming and joining processes. This course covers several aspects of inelastic finite element analyses, including: yield criteria and strain hardening laws for plasticity and creep, large deformation kinematics, strategies for solving nonlinear systems, and time integration methods. Applications are drawn from crashworthiness, thermomechanical ratcheting, and metal forming.

MAE 6150 Experiments in Materials Processing

Fall. 4 credits. Prerequisite: graduate standing.

In this lab-centered course, a general introduction to engineering instrumentation fundamentals is presented focusing primarily on experimental solid mechanics. Transducer design for the measurement of force, displacement, strain, and temperature is introduced along with the fundamentals of calibration, sensitivity, resolution, and error estimation. Techniques for determination of the mechanical response of engineering materials are developed. Applications include elastic plastic deformation, fracture, and fatigue.

MAE 6240 Physics of Micro- and Nanoscale Fluid Mechanics

Fall. 4 credits. Prerequisite: undergraduate fluid or continuum mechanics (e.g., MAE 3230) or permission of instructor. Co-meets with MAE 5240; includes additional 1-credit design project.

For description, see MAE 5240.

MAE 6270 Experimental Methods in Fluid Dynamics (also CEE 6370)

Spring. 4 credits. E. A. Cowen.

For description, see CEE 6370.

[MAE 6310 Turbulence and Turbulent Flows]**[MAE 6430 Computational Combustion]****[MAE 6450 Turbulent Reactive Flow]****[MAE 6480 Air Quality and Atmospheric Chemistry (also EAS 6480)]**

Fall. 3 credits. Prerequisites: first-year chemistry and thermodynamics (or equivalent); graduate standing or permission of instructor. Offered alternate years; next offered 2010-2011.

Factors determining air quality and effects of air pollutants on public health, ecological systems and global climate change. Students will examine the source-to-receptor relationship of major air pollutants with an emphasis on the physical and chemical fundamentals of atmospheric transport and transformation. Topics include photochemical smog, atmospheric aerosols, atmospheric transport and deposition, emissions from energy systems, introduction to air quality monitoring and modeling, and air quality management.]

[MAE 6500 Evolutionary Computation and Design Automation (also CS 7726)]**MAE 6510 Advanced Heat Transfer**

Fall, 4 credits. Prerequisite: graduate standing or permission of instructor.

An advanced treatment of conduction, convection, and radiation heat transfer from a theoretical perspective. Topics include: conservation of linear momentum in integral and differential forms; the transport theorem; steady state and transient conduction; moving boundary effects associated with melting and evaporation; boundary layer flows with emphasis on laminar conditions (including an introduction to turbulence); scale analysis; forced and free convection; internal and external flows; radiation, including black body and gray body radiation; and radiative transport equation. Taught at the level of *Conduction Heat Transfer*, by Arpaci; *Convective Heat and Mass Transfer*, by Kays et al.; and *Radiation Heat Transfer*, by Sparrow and Cess.

MAE 6550 Composite Materials (also TAM/MSE 6550)

Spring. 4 credits.

For description, see TAM 6550.

MAE 6560 Nanoscale Energy Transport and Conversion

Spring. 4 credits. Prerequisites: undergraduate heat transfer recommended (e.g., MAE 3240) or permission of instructor.

As electronic, optoelectronic, photonic, and fluidic devices shrink from the microscale down to the nanoscale, the mechanisms for transmitting heat, light, and energy become dramatically different. This course aims to provide a detailed look at thermal, electrical, and optical energy transport and conversion mechanisms at the nanoscale. Topics include a brief review of macroscopic heat transfer with emphasis on limits of macroscopic models, microscopic picture of energy carriers, material waves, energy quantization and energy states in solids, statistical thermodynamics and probability distribution functions as related to thermal energy storage, energy transport by waves and classical particle descriptions of transport processes and energy conversion and exchange processes between carriers.

[MAE 6640 Mechanics of Bone (also BME 6640)]

Spring, 3 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years; next offered 2010-2011.

Covers current methods and results in skeletal research, focusing on bone. Topics include skeletal anatomy and physiology, experimental and analytical methods for determination of skeletal behavior, mechanical behavior of bone tissue, and skeletal functional adaptation to mechanics.]

[MAE 6650 Principles of Tissue Engineering (also BME/MSE 6650)]

Spring, 3 credits. Prerequisite: graduate standing or permission of instructor. Next offered 2010-2011. L. Bonassar.

For description, see BME 6650.]

[MAE 6740 Hybrid Systems]

Spring, 4 credits. Prerequisite: MAE 5210 Linear Systems or permission of instructor. Offered alternate years; next offered 2010-2011.

Introduction to the theory and application of hybrid systems, systems that have both discrete and continuous dynamics. The first part of the course will address general topics such as modeling, control, simulation, verification, and application of hybrid system theory. The second part will focus on new and emerging topics.]

[MAE 6750 System Identification and Control]**MAE 6760 Model-Based Estimation**

Fall, 4 credits. Prerequisites: linear algebra, differential equations, and MATLAB programming; M.S./Ph.D. students or permission of instructor. Offered alternate years.

Covers a variety of ways in which models and experimental data can be used to estimate model quantities that are not directly measured. The two main estimation methods that are presented are least-squares estimation for general problems and Kalman filtering for dynamic systems problems. Techniques for linear models are taught as are techniques for nonlinear models. Both theory and application are presented.

MAE 6770 Robust Control

Fall, 4 credits Prerequisites: ECE/CHEM 4720, ECE/MAE 5210, or MAE 4780/5780, or equivalent or permission of instructor. Offered alternate years.

An introduction to the analysis and control of uncertain systems. First, the course will discuss H-2 and H-infinity control theories and their restatement as semi-definite programming problems. The latter half of the course will consist of the following topics: multiplier theory, switched control, gain-scheduling, and linear Markovian jump systems. Homework involves both analytical exercises and numerical exercises performed with linear matrix inequality solvers.

MAE 6780 Multivariable Control Theory

Spring, 4 credits. Prerequisites: MAE 4780 or 5780 or ECE 4720 Feedback Control Systems and MAE 5210 Theory of Linear Systems, or permission of instructor; strong background in classical control, linear algebra, and state space models.

Introduction to multivariable feedback control theory in both time and frequency domain. Primary topics include state space methods, model-based compensators, performance and robustness of multivariable systems, model

reduction, Linear Quadratic and H-infinity optimal control, and random processes and Kalman filtering for control. Additional topics at the discretion of the instructor include uncertainty management and robust control, discrete time control, optimal control, and nonlinear control.

MAE 6900 Special Investigations in Mechanical and Aerospace Engineering

Fall, spring. Variable credit. Prerequisite: candidacy for M.Eng. degree in mechanical or aerospace engineering or approval of faculty member offering project.

Project-based course in the area of mechanical or aerospace engineering under the guidance of a faculty member.

MAE 6950 Special Topics in Mechanical and Aerospace Engineering

Fall, spring. Credit TBA. Prerequisites: graduate standing and permission of instructor.

Special lectures by faculty members on topics of current research.

[MAE 7110 X-Ray Diffraction Methods for Engineering Materials]

Fall, 4 credits. Prerequisite: graduate standing or permission of instructor. Next offered 2010-2011.

We develop a general understanding of diffraction methods employed for understanding the state of crystalline materials. The focus will be on x-ray diffraction and the determination of crystal orientation and lattice strains. We conduct diffraction experiments at the CCMR x-ray facility and examine synchrotron x-ray data. We develop MATLAB-based methods for reducing diffraction data and extracting distributions of orientation and lattice strain.]

[MAE 7120 Mechanics of Materials with Oriented Microstructures]

Spring, 4 credits. Prerequisite: TAM 6630 or equivalents. Offered alternate years; next offered 2010-2011.

The focus of this course is the evaluation of mechanical properties from knowledge of the material microstructure, with attention to anisotropic elastic and plastic behaviors. Topics include mathematical and mechanics preliminaries; mathematical foundations of orientations, including parameterizations, symmetries, and fibers; construction and sampling of orientation distributions; hypotheses used to link macro and micro length scales; methods for evaluation of effective elastic and plastic moduli; evolution of orientations and orientation distributions with deformation. Applications to polycrystalline solids (metal alloys and minerals), composite materials, biomaterials (soft tissues), and polymers.]

[MAE 7140 Computational Sensorics: Information Technologies for Complex Continuum Systems]**MAE 7150 Atomistic Modeling of Materials**

Spring, 4 credits. Prerequisite: graduate standing or permission of instructor.

Intended for graduate students in engineering, physics, and chemistry with interests in the simulation of materials at the atomic scale using academic and commercial software. Emphasis is given to models of interatomic forces from Lennard-Jones models to self-consistent all-electron solution of the quantum mechanical problem. Specific topics include energy models, density functional theory and

the total-energy pseudopotential method, Monte Carlo and molecular dynamics simulations, free energy and phase transitions, fluctuations and transport properties, first-principles MD, Ab-initio thermodynamics and structure prediction, coarse-graining methods and mesoscale models. The course includes advanced applications of materials to nanotechnology. The material covered is self-contained, but an earlier exposure to quantum mechanics and solid state physics is desirable.

MAE 7340 Analysis of Turbulent Flows

Spring, 4 credits. Prerequisite: MAE 6010 Foundations of Fluid Dynamics and Aerodynamics or permission of instructor. Offered alternate years.

Study of methods for calculating the properties of turbulent flows. Characteristics of turbulent flows. Direct numerical simulations and the closure problem. Reynolds-stress equation: effects of dissipation, anisotropy, deformation. Transported scalars. Probability density functions (pdfs): transport equations, relationship to second-order closures, stochastic modeling, and the Langevin equation. Large-eddy simulations: filtered and residual motions, Smagorinsky, and dynamic models. This course emphasizes comparison of theory with experiment and includes CFD projects.

[MAE 7370 Computational Fluid Mechanics and Heat Transfer]

Fall, 4 credits. Prerequisites: graduate standing; advanced course in continuum mechanics, heat transfer, or fluid mechanics; and some MATLAB, C++, or other programming experience. Next offered 2010-2011.

Numerical methods are developed for the elliptic and parabolic partial differential equations that arise in fluid flow and heat transfer when convection and diffusion are present. Finite-difference, finite-volume, and some spectral methods are considered, together with issues of accuracy, stability, convergence, and conservation. Current methods are reviewed. Emphasis is on steady and unsteady essentially incompressible flows. Assigned problems are solved on a digital computer.]

MAE 7910 Mechanical and Aerospace Research Conference

Fall, spring, 1 credit each semester. For graduate students involved in research projects. S-U grades only.

Presentations on research in progress by faculty and students.

MAE 7999 Mechanical and Aerospace Engineering Colloquium

Fall, spring, 1 credit each semester; credit limited to graduate students. All students and staff are invited to attend.

Lectures by visiting scientists and Cornell faculty and staff members on research topics of current interest in mechanical and aerospace science, especially in connection with new research.

MAE 8900 Research in Mechanical and Aerospace Engineering

Credit TBA. Prerequisite: candidacy for M.S. degree in mechanical or aerospace engineering or approval from director.

Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

MAE 9900 Research in Mechanical and Aerospace Engineering

Credit TBA. Prerequisite: candidacy for Ph.D. degree in mechanical or aerospace engineering or approval from director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

NUCLEAR SCIENCE AND ENGINEERING

Faculty members in the graduate field of nuclear science and engineering who are most directly concerned with the curriculum include K. B. Cady, D. A. Hammer, R. W. Kay, and V. O. Kostroun.

NSE 4130 Introduction to Nuclear Science and Engineering (also AEP/CHEME/ECE/TAM 4130, MAE 4580)

Fall. 3 credits. Prerequisites: PHYS 2214 and MATH 2940.
For description, see TAM 4130.

NSE 4140 Nuclear Reactor Physics (also TAM 4140)

For description, see TAM 4140.

NSE 4840 Introduction to Controlled Fusion: Principles and Technology (also AEP/ECE 4840, MAE 4590)

Spring. 3 credits. Prerequisites: PHYS 1112, 2213, and 2214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students. D. A. Hammer.
For description, see ECE 4840.

NSE 5450 Energy Seminar (also ECE 5870, MAE 5450)

Fall, spring. 1 credit; may be taken for credit both semesters. D. A. Hammer.
For description, see ECE 5870.

NSE 5900 Independent Study

Fall, spring. 1–4 credits. S–U or letter grades. Staff.
Independent study or project under guidance of a faculty member.

NSE 5910 Project

Fall, spring. 1–6 credits. Staff.
Master of engineering or other project under guidance of a faculty member.

NSE 6330 Nuclear Reactor Engineering (also AEP 6330)

Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand. K. B. Cady.
The fundamentals of nuclear reactor engineering, reactor siting and safety, fluid flow and heat transfer, control, environmental effects, and radiation protection.

OPERATIONS RESEARCH AND INFORMATION ENGINEERING

L. J. Billera, R. G. Bland, K. Caggiano, J. R. Callister, E. Friedman, S. Henderson, P. L. Jackson, R. A. Jarrow, A. Lewis, M. Lewis, W. L. Maxwell, J. A. Muckstadt, N. Prabhu, P. Protter, J. Renegar, S. I. Resnick, D. Ruppert, P. Rusmevichientong, G. Samorodnitsky, D. Shmoys, É. Tardos, M. J. Todd, H. Topaloglu, L. E. Trotter, Jr., B. W. Turnbull, D. P. Williamson, D. B. Woodard

ORIE 3120 Industrial Data and Systems Analysis

Spring. 4 credits. Prerequisite: ENGRD 2700.

Database and statistical techniques for data mining, graphical display, and predictive analysis in the context of industrial systems (manufacturing and distribution). Database techniques include structured query language (SQL), procedural event-based programming (Visual Basic), and geographical information systems. Statistical techniques include multiple linear regression, classification, logistic regression, and time series forecasting. Industrial systems analysis includes factory scheduling and simulation, materials planning, cost estimation, inventory planning, and quality engineering.

ORIE 3150 Financial and Managerial Accounting

Fall, spring, summer, and winter. 4 credits. Covers principles of accounting, financial reports, financial-transactions analysis, financial-statement analysis, budgeting, job-order and process-cost systems, standard costing and variance analysis, and economic analysis of short-term decisions.

ORIE 3300 Optimization I

Fall and summer. 4 credits. Prerequisite: grade of C– or better in MATH 2210 or 2940.

Formulation of linear programming problems and solutions by the simplex method. Related topics such as sensitivity analysis, duality, and network programming. Applications include such models as resource allocation and production planning. Introduction to interior-point methods for linear programming.

ORIE 3310 Optimization II

Spring and summer. 4 credits. Prerequisite: grade of C– or better in ORIE 3300 or permission of the instructor.

A variety of optimization methods stressing extensions of linear programming and its applications but also including topics drawn from integer programming, dynamic programming, and network optimization. Formulation and modeling are stressed as well as numerous applications.

ORIE 3500 Engineering Probability and Statistics II

Fall and summer. 4 credits. Prerequisite: grade of C– or better in ENGRD 2700 or equivalent.

A rigorous foundation in theory combined with the methods for modeling, analyzing, and controlling randomness in engineering problems. Probabilistic ideas are used to construct models for engineering problems, and statistical methods are used to test and estimate parameters for these models. Specific topics include random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions

including normal, Poisson, exponential, hypothesis testing, confidence intervals, and point estimation using maximum likelihood and the method of moments.

ORIE 3510 Introductory Engineering Stochastic Processes I

Spring and summer. 4 credits. Prerequisite: grade of C– or better in ORIE 3500 or equivalent.

Uses basic concepts and techniques of random processes to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing, and reliability.

ORIE 3800 Information Systems and Analysis

Spring. 4 credits.

A systematic and hierarchical approach to the development of information systems, featuring business case justification, requirements analysis, use case analysis, functional analysis, structural design, object-oriented modeling, database design, verification and validation, and project schedule estimation. Graphical tools of analysis (e.g., the Unified Modeling Language) are emphasized. Examples are drawn from business and industrial processes. An integrative design project resulting in a detailed information system design specification (but not necessarily implementation) is required.

ORIE 4150 Economic Analysis of Engineering Systems

Spring. 4 credits. Prerequisites: ORIE 3300 and 3150.

Topics include financial planning, including cash-flow analysis and inventory flow models; engineering economic analysis, including discounted cash flows and taxation effects; application of optimization techniques, as in equipment replacement or capacity expansion models, and issues in designing manufacturing systems. Includes a student group project.

ORIE 4152 Entrepreneurship for Engineers (also MAE/ENGRG 4610)

Fall. 3 credits. Prerequisite: upper-level engineers or permission of instructor.
For description see MAE 4610.

ORIE 4154 Revenue Management

Fall. 3 credits. Prerequisites: ORIE 3300 and 3500, or permission of instructor.

The course covers pricing, capacity control, and assortment offering problems. Both static approximations and dynamic programming formulations are emphasized. The optimality of protection-level and bid-price policies in limited settings is illustrated, and these policies are used to find good solutions in more general settings. A structured framework for overbooking decisions is presented. Examples from a variety of industries, such as airline, hospitality, restaurant, and broadcasting, are used to illustrate the concepts.

[ORIE 4300 Optimization Modeling

Spring. 3 credits. Prerequisite: at least B– in ORIE 3310/5310. Next offered 2010–2011.

Emphasizes modeling complicated decision problems as linear programs, integer programs, or highly structured nonlinear programs. Besides modeling, students are required to assimilate articles from the professional literature and to master relevant software.]

[ORIE 4320 Nonlinear Optimization]

Fall. 4 credits. Prerequisite: ORIE 3300.
Next offered 2010–2011.

Introduction to the practical and theoretical aspects of nonlinear optimization. Gives attention to the computational efficiency of algorithms and the application of nonlinear techniques to linear programming, e.g., interior-point methods. Introduces methods of numerical linear algebra as needed.]

[ORIE 4330 Discrete Models]

Fall. 4 credits. Prerequisites: ORIE 3300 and CS 2110 or permission of instructor.
Next offered 2011–2012.

Covers basic concepts of graphs, networks, and discrete optimization. Fundamental models and applications, and algorithmic techniques for their analysis. Specific optimization models studied include flows in networks, the traveling salesman problem, and network design.]

[ORIE 4350 Introduction to Game Theory]

Spring. 4 credits. Prerequisite: ORIE 3300.

Broad survey of the mathematical theory of games, including such topics as two-person matrix and bimatrix games; cooperative and noncooperative n-person games; and games in extensive, normal, and characteristic function form. Economic market games. Applications to weighted voting and cost allocation.

[ORIE 4360 A Mathematical Examination of Fair Representation]

Spring. 3 credits. Prerequisite: MATH 2210 or 2940 or permission of instructor. Next offered 2011–2012.

Covers the mathematical aspects of the political problem of fair apportionment. The most recognizable form (in the United States) of apportionment is the determination of the number of seats in the U.S. House of Representatives awarded to each state. The constitution indicates that the apportionment should reflect the relative populations, but it does not prescribe a specific method. Indivisibility of seats leads us to interesting mathematical questions and a long, rich, and famous political history involving many famous figures. The basic ideas extend beyond apportionment of legislatures (in both federal systems and proportional representation systems) to other realms where indivisible resources are to be allocated among competing constituencies.]

[ORIE 4370 Computational Optimization]

Spring. 4 credits. Prerequisite: ORIE 3300.
Corequisite: ORIE 3310. Next offered 2010–2011.

Covers computational implementation and related methodology for solving large-scale, real-world integer programming problems. Primary emphasis is on branch-and-cut technology: pre-processing, cut strength, exact and heuristic separation techniques, branching strategies, multi-processing. Hands-on experience with state-of-the-art software for various discrete optimization models, including the traveling salesman, capacitated vehicle routing, and air crew scheduling models; experimentation with massively parallel computational implementation on the IBM BlueGene computer for the largest feasible subsystem problem.]

[ORIE 4520 Introductory Engineering Stochastic Processes II]

Spring. 4 credits. Prerequisite: ORIE 3510 or equivalent. Next offered 2010–2011.

Topics include stationary processes, martingales, random walks, and gambler's ruin

problems, processes with stationary independent increments, Brownian motion and other cases, branching processes, renewal and Markov-renewal processes, reliability theory, Markov decision processes, optimal stopping, statistical inference from stochastic models, and stochastic comparison methods for probability models. Applications to population growth, spread of epidemics, and other models.]

[ORIE 4540 Extreme Value Analysis with Applications to Finance and Data Communications]

Spring. 3 credits. Prerequisites: undergraduate and M.Eng. students; stochastic processes course at level of ORIE 3510; statistics course. Next offered 2010–2011.

Covers the basic models of extreme events used in hydrology, finance, insurance, environmental science (pollution controls), reliability, risk management. The course material intersects the related field of heavy tailed modeling and the implications of heavy tails in insurance and data networks.]

[ORIE 4580 Simulation Modeling and Analysis]

Fall. 4 credits. Prerequisite: ORIE 3500 (may be taken concurrently) and CS/ENGRD 2110.

Introduction to Monte Carlo simulation and discrete-event simulation. Emphasizes tools and techniques needed in practice. Random variate, vector, and process generation modeling using a discrete-event simulation language, input and output analysis, modeling.

[ORIE 4600 Introduction to Financial Engineering]

Fall. 3 credits. Prerequisites: ORIE 3500 and 3510. Next offered 2010–2011.

This is an introduction to the most important notions and ideas in modern financial engineering, such as arbitrage, pricing, derivatives, options, interest rate models, risk measures, equivalent martingale measures, complete and incomplete markets, etc. Most of the time the course deals with discrete time models. This course can serve as a preparation for a course on continuous time financial models such as ORIE 5600.]

[ORIE 4630 Operations Research Tools for Financial Engineering]

Fall. 3 credits. Prerequisites: engineering math through MATH 2940 and ENGRD 2700 and ORIE 3500. No previous knowledge of finance required.

Introduction to the applications of OR techniques, e.g., probability, statistics, and optimization, to finance and financial engineering. First reviews probability and statistics and then surveys assets returns, ARIMA time series models, portfolio selection, regression, CAPM, option pricing, GARCH models, fixed-income securities, resampling techniques, and behavioral finance. Also covers the use of MATLAB, MINITAB, and SAS for computation.

[ORIE 4710 Applied Linear Statistical Models]

Spring, weeks 1–7. 2 credits. Prerequisite: ENGRD 2700. Next offered 2010–2011.

Topics include multiple linear regression, diagnostics, model selection, inference, one and two factor analysis of variance. Theory and applications both treated. Use of MINITAB stressed.]

[ORIE 4711 Experimental Design]

Spring, weeks 8–14 (alternates with 4712). 2 credits. Prerequisite: ORIE 4710. Next offered 2010–2011.

Covers randomization, blocking, sample size determination, factorial designs, 2^p full and fractional factorials, response surfaces, Latin squares, split plots, and Taguchi designs. Engineering applications. Computing in MINITAB or SAS.]

[ORIE 4712 Regression]

Spring, weeks 8–14 (alternates with 4711). 2 credits. Prerequisite: ORIE 4710. Next offered 2011–2012.

Covers nonlinear regression, advanced diagnostics for multiple linear regression, collinearity, ridge regression, logistic regression, nonparametric estimation including spline and kernel methods, and regression with correlated errors. Computing in MINITAB or SAS.]

[ORIE 4740 Statistical Data Mining I]

Fall. 4 credits. Prerequisites: ORIE 3500 and MATH 2940 or equivalent; programming experience. Exposure to multiple linear regression and logistic regression strongly recommended..

Examines the statistical aspects of data mining, the effective analysis of large datasets. The first half of the course covers the process of building and interpreting statistical models in a variety of settings including multiple regression and logistic regression. The second half connects these ideas to techniques being developed to handle the large datasets that are now routinely encountered in scientific and business applications. Assignments are done using one or more statistical computing packages.

[ORIE 4800 Information Technology]

Spring. 4 credits. Pre- or corequisites: CS/ENGRD 2110, plus either ORIE 3800 or 3120.

This course covers a variety of fundamental aspects of information technology. Topics may include information transmission, storage, encryption and security; the value of information and the economics of information goods; databases, the Internet, World Wide Web, wireless and cellular networks, and peer-to-peer networks.

[ORIE 4810 Delivering OR Solutions with Information Technology]

Spring. 3 credits. Prerequisite: ORIE 4800. Next offered 2010–2011.

Study of ways information technology is used to deliver operations research methodology in real applications, including decision support systems, embedded operations research techniques, packaged software, and web-based techniques. Several actual applications are investigated. Labs introduce Visual Basic for Applications (VBA) for decision support.]

[ORIE 4820 Spreadsheet-Based Modeling and Data Analysis]

Spring. 3 credits. Prerequisites: ENGRD 2700, ORIE 3300 or equivalent.

Students develop and implement practical spreadsheet models to analyze data and evaluate decision problems in a hands-on learning environment. Microsoft Excel is heavily used. A wide variety of application areas are covered that incorporate concepts from probability, statistics, and constrained optimization.

ORIE 4850 Applications of Operations Research and Game Theory to Information Technology

Fall. 3 credits. Prerequisites: ORIE 3310, 3510, or permission of instructor.

Covers a variety of operations research and game theoretic problems arising in information technology. Examples include web searching, network routing and congestion control, online auctions, and trust and reputations in electronic interactions.

ORIE 4990 Teaching in ORIE

Fall, spring. Variable credit. Prerequisite: permission of instructor.

Involves working as a TA in an ORIE course. The instructor assigns credits (the guideline is 1 credit per four hours per week of work with a limit of 3 credits).

ORIE 4999 ORIE Project

Fall, spring. Variable credit. Prerequisite: permission of instructor.

Project-type work, under faculty supervision, on a real problem existing in some firm or institution. Opportunities in the course may be discussed with the associate director.

[ORIE 5100 Design of Manufacturing Systems

Fall. 4 credits. Prerequisite: ORIE seniors and graduate students in engineering and business school; permission of instructor. Next offered 2010–2011.

Project course in which students, working in teams, design a manufacturing logistics system and conduct capacity, material flow, and cost analysis of their design. Meetings between project teams and faculty advisors are substituted for some lectures. Analytical methods for controlling inventories, planning production, and evaluating system performance are presented in lectures.]

ORIE 5110 Case Studies

Fall. 1 credit. Prerequisite: M.Eng. students in ORIE.

Presents students with an unstructured problem that resembles a real-world situation. Students work in project groups to formulate mathematical models, perform computer analyses of the data and models, and present oral and written reports.

[ORIE 5120 Production Planning and Scheduling Theory and Practice

Fall. 4 credits. Corequisites: ORIE 3300, 3500. Next offered 2010–2011.

Topics include production planning, including MRP, linear programming, and related concepts. Scheduling and sequencing work in manufacturing systems. Job release strategies and control of work in process inventories. Focus is on setup time as a determinant of plans and schedules.]

[ORIE 5122 Inventory Management

Fall. 3 credits. Prerequisite: ORIE 3310, 3510, or permission of instructor. Next offered 2010–2011.

The first portion of this course is devoted to the analysis of several deterministic and probabilistic models for the control of single and multiple items at one of many locations. The second portion is presented in an experiential learning format. The focus is on analyzing and designing an integrated production and distribution system for a global company. Applications are stressed throughout.]

ORIE 5126 Supply Chain Management

Spring. 3 credits. Prerequisites: ORIE 3310, 3510, and one of the following: ORIE 3120, 5100, or 5122.

A supply chain is the scope of activities that convert raw materials (e.g., wheat) to finished products delivered to the end consumer (e.g., a box of cereal at the local P&C), usually spanning several corporations. Supply chain management focuses on the flow of products, information, and money through the supply chain. An overview of issues, opportunities, tools, and approaches. Emphasis is on business processes, system dynamics, control, design, re-engineering. Covers the relationship between the supply chain and the company's strategic position relative to its clients and its competition. Considers dimensions of inter-organizational relationships with partners, including decision-making, incentives, and risk.

ORIE 5127 Supply Chain Management for M.B.A. Students

Spring. 3 credits. Prerequisites: good standing in M.B.A. program; students not required to complete the math-based homework assignments.

For description, see ORIE 5126.

[ORIE 5130 Service System Modeling and Design

Spring. 3 credits. Corequisites: ORIE 3310 or 5311 and ORIE 3510; ability to program simple algorithms in some appropriate environment (e.g., VisualBasic or MATLAB). Next offered 2011–2012.

Today's economy is dominated by service industries. These systems differ from manufacturing industries in many ways, but primarily in the level of interaction with the customer. Examples of service systems include contact centers (aka call centers), airlines, and hospitals. This course covers various techniques that are useful in the analysis and design of such systems. It is structured around a number of cases that drive the need for the theory. The emphasis is on modeling and solving the models. Both operational and strategic decisions are covered through appropriate examples.]

ORIE 5140 Applied Systems Engineering (also CEE/CIS 5040, ECE 5120, MAE 5910)

Fall. 3 credits. Prerequisite: permission of instructor.

For description, see SYSEN 5100.

ORIE 5142 Systems Analysis Architecture, Behavior, and Optimization (also CEE/CIS 5050, ECE 5130, MAE 5920)

Spring. 3 credits. Prerequisite: CEE/CIS 5040, ECE 5120, ORIE 5140, or MAE 5910.

For description, see SYSEN 5200.

ORIE 5150 Economic Analysis of Engineering Systems

Spring. 4 credits. Prerequisites: ORIE 3300 and 3150. Lectures concurrent with ORIE 4150.

For description, see ORIE 4150.

ORIE 5190–5191 Selected Topics in Applied Operations Research

Fall, spring. Variable credit. Prerequisite: permission of instructor.

Current topics dealing with applications of operations research.

ORIE 5300 Operations Research I: Optimization I

For description, see ORIE 3300.

ORIE 5310 Optimization II

For description, see ORIE 3310.

ORIE 5311 Operations Research I: Topics in Linear Optimization

Spring. 1 credit. Pre- or corequisite: M.Eng. students in ORIE; ORIE 5300. Not open to students who have already taken ORIE 3310 or 5310.

Extension of ORIE 5300 that deals with applications and methodologies of dynamic programming, integer programming, and large-scale linear programming.

ORIE 5340 Heuristic Methods for Optimization (also CEE 5290, CIS 5720)

Fall. 3 or 4 credits. Prerequisite: graduate standing or CS/ENGRD 2110, 3510 or CEE/ENGRD 3200 or permission of instructors.

For description, see CEE 5290.

ORIE 5500 Engineering Probability and Statistics II

For description, see ORIE 3500.

ORIE 5510 Operations Research II: Introduction to Stochastic Processes I

For description, see ORIE 3510.

[ORIE 5520 Introductory Engineering Stochastic Processes II

Spring. 4 credits. Prerequisite: ORIE 3510 or equivalent. Next offered 2010–2011.

Lectures concurrent with ORIE 4520. For description, see ORIE 4520.]

[ORIE 5540 Extreme Value Analysis with Applications to Finance and Data Communications

Spring. 3 credits.

For description, see ORIE 4540.]

[ORIE 5550 Applied Time-Series Analysis

Fall. 3 credits. Prerequisites: ORIE 3510 and ENGRD 2700 or permission of instructor. Next offered 2010–2011.

The first part of this course treats regression methods to model seasonal and nonseasonal data. After that, Box-Jenkins models, which are versatile, widely used, and applicable to nonstationary and seasonal time series, are covered in detail. The various stages of model identification, estimation, diagnostic checking, and forecasting are treated. Analysis of real data is carried out. Assignments require computer work with a time-series package.]

[ORIE 5560 Queuing Systems: Theory and Applications

Fall. 3 credits. Prerequisite: ORIE 3510 or permission of instructor. Next offered 2011–2012.

Covers basic queuing models; delay and loss systems; finite source, finite capacity, balking, reneging; systems in series and in parallel; FCFS versus LCFS; busy period problems; output; design and control problems; priority systems; queuing networks; the product formula; time sharing; server vacations; and applications to equipment maintenance, computer operations and flexible manufacturing systems.]

ORIE 5580 Simulation Modeling and Analysis

Fall. 4 credits. Prerequisite: ORIE 3500 (may be taken concurrently) and CS/ENGRD 2110. Lectures concurrent with ORIE 4580.

For description, see ORIE 4580.

ORIE 5581 Monte Carlo Simulation

Fall, weeks 1-7. 2 credits. Co-meets with ORIE 4580.

Introduction to Monte Carlo simulation. Emphasis on tools and techniques needed in practice. Random variate, vector and process generation, input and output analysis, modeling.

ORIE 5582 Monte Carlo Methods in Financial Engineering

Spring, weeks 8-14. 2 credits. Prerequisite: ORIE 4580.

An overview of Monte Carlo methods as they apply in financial engineering. Generating sample paths. Variance reduction (including quasi random number), discretization, and sensitivities. Applications to derivative pricing and risk management.

ORIE 5600 Financial Engineering with Stochastic Calculus I

Fall. 4 credits. Prerequisite: knowledge of probability at level of ORIE 3500.

Introduction to continuous-time models of financial engineering and the mathematical tools required to use them, starting with the Black-Scholes model. Driven by the problem of derivative security pricing and hedging in this model, the course develops a practical knowledge of stochastic calculus from an elementary standpoint, covering topics including Brownian motion, martingales, the Ito formula, the Feynman-Kac formula, and Girsanov transformations.

ORIE 5610 Financial Engineering with Stochastic Calculus II

Spring. 4 credits. Prerequisite: ORIE 5600.

Building on the foundation established in ORIE 5600, this course presents no-arbitrage theories of complete markets, including models for equities, foreign exchange, and fixed-income securities, in relation to the main problems of financial engineering: pricing and hedging of derivative securities, portfolio optimization, and risk management. Other topics include model calibration and incomplete markets.

ORIE 5620 Credit Risk: Modeling, Valuation, and Management

Spring. 4 credits. Prerequisite: ORIE 3510 and 5600.

Credit risk refers to losses due to changes in the credit quality of a counter party in a financial contract. This course is an introduction to the modeling and valuation of credit risks. Emphasis is on credit derivative instruments used for hedging credit risks, including credit swaps, spread options, and collateralized debt obligations.

ORIE 5630 Computational Methods in Finance

Fall. 3 credits. Prerequisite: financial engineering M.Eng. students in Manhattan.

This course covers computational techniques such as binomial trees, solution of PDEs, and Monte Carlo simulation for pricing financial instruments such as European and American options, path-dependent options, and bonds. Other computational topics such as delta and gamma hedging, Value at Risk, and portfolio

problems will also be covered. The emphasis will be on implementation.

ORIE 5640 Statistics for Financial Engineering

Spring. 4 credits. Prerequisites: ORIE 3500/5500 and at least one of ORIE 4600, 4630, or 5600.

Regression, ARIMA, GARCH, stochastic volatility, and factor models. Calibration of financial engineering models. Estimation of diffusion models. Estimation of risk measures. Multivariate models and copulas. Bayesian statistics. Students will be instructed in the use of R software; prior knowledge of R is helpful but not required. This course is intended for M.Eng. students in financial engineering and assumes some familiarity with finance and financial engineering. Students not in the financial engineering program are welcome if they have a suitable background. Students with no background in finance should consider taking ORIE 4630 instead.

[ORIE 5650 Quantitative Methods of Financial Risk Management

Spring. 3 credits. Prerequisite: ORIE 3500. Next offered 2010-2011.

A historical perspective of market risk measurement including the Markowitz, CAPM and APT models, a description of the value-at-risk approach and an overview of VaR variants and extensions such as delta-VaR, CVaR etc. The course will survey other methods for evaluating risk and consider multivariate methods for evaluating portfolios requiring copula tools which have become popular. Topics in credit risk: methods for determining default probabilities and company ratings based on financial ratios (logit, probit and discriminant analysis, decision trees, etc.), and approaches to measuring credit risk which can be roughly divided into structural models and reduced-form models.]

ORIE 5660 Bond Mathematics and Mortgage-Backed Securities

Fall. 3 credits. Prerequisite: financial engineering M.Eng. students in Manhattan.

A transaction-oriented course covering U.S. Bond markets. The course covers valuation, trading strategies, and risk profiles of bonds, with a special emphasis on mortgage-backed securities.

[ORIE 5770 Quality Control

Fall. 3 credits. Prerequisite: ENGRD 2700. Next offered 2010-2011.

Covers concepts and methods for process and acceptance control; control charts for variables and attributes; process capability analysis; acceptance sampling; continuous sampling plans; life tests; and use of experimental design and Taguchi methods for off-line control.]

ORIE 5910 Master of Engineering Manufacturing Project

Fall, R grade only; spring, 5 credits. Prerequisite: M.Eng. students enrolled in manufacturing option.

Project course coordinated by Center for Manufacturing Enterprise.

ORIE 5912-5913-5914 Special Topics in Financial Engineering

Fall. 1-8 credits. Prerequisite: financial engineering M.Eng. students in Manhattan.

Module-based courses focusing on topics relevant to current financial markets. Practitioner-led segments will cover a wide range of quantitative and qualitative topics in the securities industry.

ORIE 5940 Systems Engineering Project

Fall; R grade only; spring, 8 credits. Prerequisite: M.Eng. students enrolled in systems engineering option.

Substantial, group-based design project that has a strong systems design component. The project must be approved by an ASE 1 instructor before the student enrolls in the course. (The following projects are pre-approved: FSAE, HEV, Robocup, Brain.) A formal report is required.

ORIE 5960 Applied Financial Engineering

Fall and spring. 5 credits. Prerequisite: ORIE and M.Eng. students concentrating in financial engineering.

Project course satisfying the engineering design project requirement for financial engineering M.Eng. students.

ORIE 5961 Applied Financial Engineering

Fall. 5 credits. Prerequisite: financial engineering M.Eng. students in Manhattan.

Project course in Manhattan satisfying the engineering design project requirement for the M.Eng degree.

ORIE 5980 Project

Fall, R grade only; spring, 5 credits. Prerequisite: M.Eng. students.

Identification, analysis, design, and evaluation of feasible solutions to some applied problem in the ORIE field. A formal report and oral defense of the approach and solution are required.

[ORIE 6122 Advanced Production and Inventory Planning

Spring. 3 credits. Next offered 2011-2012.

Introduction to a variety of production and inventory control planning problems, the development of mathematical models corresponding to these problems, and a study of approaches for finding solutions.]

[ORIE 6127 Computational Issues in Large Scale Data-Driven Models

Fall. 3 credits. Pre- or corequisites: ORIE 6300, 6500 and 6700. Next offered 2010-2011.

Availability of massive datasets such as web logs and point-of-sale transactions raises new modeling and computational issues. This course provides an introduction to this emerging research area. Topics include data-driven models in operation management, asymptotic statistics, uniform convergence of empirical process, and efficient computational methods. There is discussion of applications in engineering, economics, and marketing, along with current open research problems.]

[ORIE 6140 Mathematical Modeling of Operational Systems

Fall. 2 credits. Prerequisites: ORIE 6300, 6500, or equivalent. Next offered 2011-2012.

The art and science of developing, using and explicating mathematical models, presented in a studio/workshop environment. Structuring of a variety of operational "situations" so they can be reasonably represented by a mathematical model. Extensive class discussion and out-of-class investigation of potential mathematical approaches to each situation. Incorporation of data analysis.]

ORIE 6300 Mathematical Programming I

Fall. 4 credits. Prerequisites: advanced calculus and elementary linear algebra.

Rigorous treatment of the theory and computational techniques of linear programming and its extensions, including

formulation, duality theory, algorithms; sensitivity analysis; network flow problems and algorithms; theory of polyhedral convex sets, systems of linear equations and inequalities, Farkas' Lemma; and exploiting special structure in the simplex method and computational implementation.

ORIE 6310 Mathematical Programming II

Spring. 4 credits. Prerequisite: ORIE 6300. Continuation of ORIE 6300. Introduces nonlinear programming, interior-point methods for linear programming, complexity theory, and integer programming. Includes some discussion of dynamic programming and elementary polyhedral theory.

ORIE 6320 Nonlinear Programming

Spring. 3 credits. Prerequisite: ORIE 6300. Necessary and sufficient conditions for unconstrained and constrained optima. Topics include the duality theory, computational methods for unconstrained problems (e.g., quasi-Newton algorithms), linearly constrained problems (e.g., active set methods), and nonlinearly constrained problems (e.g., successive quadratic programming, penalty, and barrier methods).

ORIE 6325 Interior-Point Methods for Mathematical Programming

Fall. 3 credits. Prerequisites: MATH 4110 and ORIE 6300, or permission of instructor. Next offered 2011–2012.

Interior-point methods for linear, quadratic, and semidefinite programming and, more generally, for convex programming. Discusses the basic ingredients—barrier functions, central paths, and potential functions—that go into the construction of polynomial-time algorithms and various ways of combining them. Emphasizes recent mathematical theory and the most modern viewpoints.]

ORIE 6327 Semidefinite Programming

Spring. 3 credits. Pre- or corequisite: ORIE 6325. Next offered 2010–2011.

Covers linear optimization over the cone of positive semidefinite symmetric matrices; applications to control theory, eigenvalue optimization, and strong relaxations of combinatorial optimization problems; duality; computational methods, particularly interior-point algorithms.]

ORIE 6328 Convex Analysis

Spring. 3 credits. Prerequisite: ORIE 6300 or permission of instructor. Next offered 2011–2012.

Self-contained development of convex analysis and optimization. Convex sets and functions, subgradients, continuity, Fenchel, conic, and Lagrangian duality. Nonsmooth analysis: Clarke and limiting subgradients. Self-concordance and smooth convex optimization. Bundle methods for nonsmooth convex optimization.]

ORIE 6330 Graph Theory and Network Flows

Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2010–2011.

Topics include directed and undirected graphs; bipartite graphs; Hamilton cycles and Euler tours; connectedness, matching, and coloring; flows in capacity-constrained networks; and maximum flow and minimum cost flow problems.]

ORIE 6334 Combinatorial Optimization

Fall. 3 credits.

Topics in combinatorics, graphs, and networks, including matching, matroids,

polyhedral combinatorics, and optimization algorithms.

[ORIE 6335 Scheduling Theory

Spring. 3 credits. Next offered 2011–2012. Scheduling and sequencing problems, including single-machine problems, parallel-machine scheduling, and shop scheduling. The emphasis is on the design and analysis of polynomial time optimization and approximation algorithms and on related complexity issues.]

[ORIE 6336 Integer Programming

Fall. 3 credits. Prerequisite: ORIE 6300. Next offered 2010–2011.

Topics include discrete optimization; linear programming in which the variables must assume integral values; theory, algorithms, and applications; and cutting-plane and enumerative methods, with additional topics drawn from recent research in this area.]

[ORIE 6350 Foundations of Game Theory and Mechanism Design for Engineering Applications

Fall. 3 credits. Prerequisite: basic knowledge of operations research at level of ORIE 6300 and 6500. No prior knowledge of game theory or computer networks assumed. Next offered 2010–2011.

Provides a rigorous foundation for the applications of game theory and mechanism design to problems in operations research and computer science. The goal is to develop a deep understanding of the fundamental issues that are important in many applications while presenting many current open research problems.]

ORIE 6500 Applied Stochastic Processes

Fall. 4 credits. Prerequisite: one-semester calculus-based probability course. Introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, and point processes.

ORIE 6510 Probability

Spring. 4 credits. Prerequisite: real analysis at level of MATH 4130; one-semester calculus-based probability course.

Covers sample spaces, events, sigma fields, probability measures, set induction, independence, random variables, expectation, review of important distributions and transformation techniques, convergence concepts, laws of large numbers and asymptotic normality, and conditioning.

[ORIE 6540 Advanced Stochastic Processes

Fall. 3 credits. Prerequisite: ORIE 6510 or equivalent. Next offered 2010–2011.

Topics include Brownian motion, martingales, Markov processes, and topics selected from: diffusions, stationary processes, point processes, weak convergence for stochastic processes and applications to diffusion approximations, Lévy processes, regenerative phenomena, random walks, and stochastic integrals.]

[ORIE 6570 Queues and Control of Queues: The Dynamic Programming Approach

Fall. 3 credits. Next offered 2010–2011.

We will cover basic queueing theory followed by an introduction to Markov decision

processes (MDPs). The second part of the class will cover the use of MDPs to develop control policies in a variety of queueing settings.]

[ORIE 6580 Simulation

Spring. 3 credits. Prerequisite: computing experience and ORIE 6500 or equivalent, or permission of instructor. Next offered 2010–2011.

Introduction to Monte Carlo and discrete-event simulation. Emphasizes underlying theory. Random variate generation, input and output analysis, variance reduction, selection of current research topics.]

[ORIE 6600 Mathematical Finance I

Spring. 3 credits. Prerequisite: ORIE 6500. Next offered 2011–2012.

Introduction to mathematical finance in discrete time for Ph.D. students. The course covers arbitrage theory, pricing and hedging of derivative securities. American contingent claims, investor preferences and corresponding optimization problems, risk measures, and imperfect hedging strategies.]

ORIE 6610 Mathematical Finance II

Spring. 3 credits. Prerequisites: ORIE 6500, ORIE 6510, and ORIE 6600.

Introduction to stochastic calculus, stochastic differential equations, and applications to continuous-time finance such as the Black-Scholes formula, local and stochastic volatility models, and term structure models for interest rates of volatilities. Corresponding mathematical foundations such as martingale theory, Itô integration, and Girsanov's theorem are also provided.

[ORIE 6630 Empirical and Computational Issues in Finance

Spring. 3 credits. Prerequisites: stochastic processes course at level of ORIE 6500; statistics course at level of ORIE 6700, or permission of instructor. Next offered 2010–2011.

Designed to introduce students to existing empirical work in finance and to demonstrate the use of statistical, econometric, and numerical methods in the analysis of financial data. Topics include linear and nonlinear time series analysis, high-frequency data and market microstructure, continuous-time models, extreme values and quantile estimation, volatility models, and MCMC methods. Numerous applications using market data are presented. MATLAB programming skills are useful.]

ORIE 6700 Statistical Principles

Fall. 4 credits. Corequisite: ORIE 6500 or equivalent.

Topics include review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson, t, and F; introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation; maximum likelihood and Bayes estimation; basic principles of hypothesis testing, including Neyman-Pearson Lemma and likelihood ratio principle; confidence interval construction; and introduction to linear models.

[ORIE 6710 Intermediate Applied Statistics

Spring. 3 credits. Prerequisite: ORIE 6700 or equivalent. Next offered 2011–2012.

Topics include statistical inference based on the general linear model; least-squares estimators and their optimality properties;

likelihood ratio tests and corresponding confidence regions; and simultaneous inference. Applications in regression analysis and ANOVA models. Covers variance components and mixed models. Use of the computer as a tool for statistics is stressed.]

ORIE 6720 Sequential Methods in Statistics

Spring, 3 credits. S-U grades only. Next offered 2010-2011.

The statistical theory of sequential design and analysis of experiments has many applications; including monitoring data from clinical trials in medical studies and quality control in manufacturing operations. This course covers classical sequential hypothesis tests, Wald's SPRT, stopping rules, Kiefer-Weiss test, optimality, group sequential methods, estimation, repeated confidence intervals, stochastic curtailment, adaptive designs, and Bayesian and decision theoretic approaches.]

ORIE 6740 Statistical Learning Theory for Data Mining

Fall, 3 credits. Prerequisites: probability course at level of ORIE 6510; statistics course at level of ORIE 6700. Next offered 2010-2011.

Provides a thorough grounding in probabilistic and computational methods for statistical data mining. Covers a subset of the following topics from supervised and unsupervised data mining: the framework of learning. Performance measures and model selection. Methodology, theoretical properties and computing algorithms used in parametric and nonparametric methods for regression and classification. Frequentist and Bayesian methods.]

ORIE 6780 Bayesian Statistics and Data Analysis

Spring, 3 credits. Prerequisites: ORIE 6700 or an equivalent course in mathematical statistics.

Priors, posteriors, Bayes estimators, Bayes factors, credible regions, hierarchical models, computational methods (especially MCMC), empirical Bayes methods, Bayesian robustness. Includes data analysis and MCMC computation using R and WinBUGS.

ORIE 7190-7191 Selected Topics in Applied Operations Research

Fall, spring, Credit TBA.

Current research topics dealing with applications of operations research.

ORIE 7390-7391 Selected Topics in Mathematical Programming

Fall, spring, Credit TBA.

Current research topics in mathematical programming.

ORIE 7590-7591 Selected Topics in Applied Probability

Fall, spring, Credit TBA.

Topics are chosen from current literature and research areas of the staff.

ORIE 7790-7791 Selected Topics in Applied Statistics

Fall, spring, Credit TBA.

Topics are chosen from current literature and research of the staff.

ORIE 7900 Special Investigations

Fall, spring, Credit TBA.

For individuals or small groups. Study of special topics or problems.

ORIE 9000 Operations Research Graduate Colloquium

Fall, spring, 1 credit.

Weekly one and one-half hour meeting devoted to presentations by distinguished visitors, by faculty members, and by advanced graduate students on topics of current research in the field of operations research.

ORIE 9100-9101 Enterprise Engineering Colloquium (also MAE 5940)

9100, fall; 9101, spring, 1 credit each semester. S-U grades.

Weekly meeting for master of engineering students. Discussion with industry speakers and faculty members on the uses of engineering in the economic design, manufacturing, marketing, and distribution and goods and services.

ORIE 9110 M.Eng. Professional Review

Fall, 1 credit. Limited to ORIE M.Eng. students in their second or third semester. S-U grades only.

An interactive course in which students present findings and share lessons from their summer internship experiences.

ORIE 9160 Seminar in Financial Engineering

Fall, 1 credit. Prerequisites: Limited to Financial Engineering M.Eng. students in Manhattan.

Weekly roundtable meeting for students concentrating in financial engineering. Current market events, practices, and research will be discussed with faculty and financial industry partners.

ORIE 9999 Thesis Research

Fall, spring, Credit TBA.

For individuals doing thesis research for master's or doctoral degrees.

SYSTEMS ENGINEERING

P. L. Jackson, director; A. R. George, assoc. director; L. K. Nozick, director of graduate studies; M. Campbell, E. Garcia, H. O. Gao, A. S. Lewis, J. A. Muckstadt, A. F. Myers, M. Peck, F. B. Schneider, B. Selman, C. A. Shoemaker, J. R. Stedinger, R. J. Thomas, H. Topaloglu, M. A. Turnquist, F. J. Wayno, Jr.

SYSEN 1100 Getting Design Right: A Systems Approach

Summer, six-week session, 3 credits. Web-delivered. Prerequisites: high school mathematics and science and familiarity with spreadsheet modeling (e.g., Microsoft Excel). P. L. Jackson.

This course is a freshman-level exposure to the product design process. The process of getting design right is sometimes called systems engineering. We explain the process using the acronym DMEODVEI (Define, Measure, Explore, Optimize, Develop, Validate, Execute, and Iterate). The process begins with understanding customer requirements and ends with executing the design to satisfy those requirements. It can then be iterated to greater levels of design detail. The focus is not on detailed engineering design but rather on the process of ensuring that the detailed design will meet the needs of the customer. Students work through the steps of the process with reference to a particular product design challenge. The course is web-delivered using the Blackboard learning instruction system.

SYSEN 5100 Applied Systems Engineering (also CEE/CIS 5040, ECE/ ORIE 5120, MAE 5910)

Fall, 3 credits. Prerequisites: senior or graduate standing in an engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor. M. Peck, A. R. George, and P. Jackson.

Fundamental ideas of systems engineering, and their application to design and development of various types of engineered systems. Defining system requirements, creating effective project teams, mathematical tools for system analysis and control, testing and evaluation, economic considerations, and the system life cycle. Students majoring in Systems Engineering enroll in SYSEN 5100. Students taking the minor in Systems Engineering enroll in CEE/CIS 5040, ECE/ORIE 5120, or MAE 5910. Students in distance-learning programs enroll in SYSEN 5110. Course is identical for all versions.

SYSEN 5110 Applied Systems Engineering

Fall, 3 credits. Intended for off-campus students. Prerequisites: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor. Staff.

For description, see SYSEN 5100.

SYSEN 5200 Systems Architecture, Behavior, and Optimization (also MAE 5920, CEE/CIS 5050, ECE 5130, ORIE 5142)

Spring, 3 credits. Prerequisite: Applied System Engineering MAE 5910, CEE/CIS 5040, ECE/ORIE 5120, SYSEN 5100 or 5110, or permission of instructor. Students majoring in Systems Engineering enroll in SYSEN 5200. Students taking the minor in Systems Engineering enroll in MAE 5920, CEE 5252, CIS 5050, ECE 5130, or ORIE 5142. Students in distance learning programs enroll in SYSEN 5210. Course is identical for all versions. H. Topaloglu.

This is an advanced course in the application of the systems engineering process to the architecture design and operation of complex systems. Topics include techniques for design, simulation, optimization, and control of complex systems. Case studies and system simulations in diverse areas provide context for the application of these techniques.

SYSEN 5210 Systems Architecture, Behavior, and Optimization

Spring, 3 credits. Intended for off-campus students. Prerequisites: Applied Systems Engineering or permission of instructor. Staff.

For description, see SYSEN 5200.

SYSEN 5300 Systems Engineering for the Design and Operation of Reliable Systems (also MAE 5930)

Fall, 3-4 credits. Prerequisites: SYSEN 5100 or either ENGRD 2700 or CEE 3040 or permission of instructors. H. O. Gao.

Develops skills in the design, operation and control of systems for reliable performance. Focuses on four key themes; risk analysis (with a particular emphasis on risk assessment and risk characterization), modeling system reliability (including the development of statistical models based on accelerated life testing), quality control techniques and the

optimization of system design for reliability. Students in distance-learning programs enroll in SYSEN 5310. Lectures are identical for all versions.

SYSEN 5310 Systems Engineering for the Design and Operation of Reliable Systems

Fall. 3–4 credits. Prerequisites: SYSEN 5100 and either ENGRD 2700 or CEE 3040 or permission of instructor. H. O. Gao. Intended for off-campus students. For description, see SYSEN 5300.

SYSEN 5700 Special Topics in Systems Engineering

Offered on demand. 1–4 credits. Staff. Supervised study by individuals or small groups of one or more specialized topics not covered in regular courses.

SYSEN 5710 Practicum in Systems Engineering

Offered on demand. 1–4 credits. Staff. Supervised study by individuals or small groups of one or more specialized topics not covered in regular courses.

SYSEN 5750 Independent Study in Systems Engineering

Offered on demand. 1.5–6 credits. Staff. Supervised study by individuals or small groups of one or more specialized topics not covered in regular courses.

SYSEN 5760 Systems Engineering Project—Track I

Offered on demand. 1.5–6 credits. Prerequisite: permission of instructor. Staff. A design project that incorporates the principles of systems engineering for a complex system. Projects are performed by teams of students working together to meet the requirements of the project.

SYSEN 5770 Systems Engineering Project—Track II

Offered on demand. 1.5–6 credits. Prerequisite: permission of instructor. Staff. A design project that incorporates the principles of systems engineering for a complex system. Projects are performed by teams of students working together to meet the requirements of the project.

SYSEN 5900 Systems Engineering Design Project

1–8 credits. Prerequisite: permission of instructor. Staff. A design project that incorporates the principles of systems engineering for a complex system. Projects are performed by teams of students working together to meet the requirements of the project.

SYSEN 5920 Systems Engineering Management for Virtual Teams

Summer. 1 credit. Prerequisites: matriculation in Systems Engineering Master of Engineering distance learning degree program. P. L. Jackson and F. J. Wayno. First of two one-week intensive experiential courses (35 hours) in systems engineering management, with emphasis on laying the social groundwork for students to conduct projects in geographically dispersed teams. Course involves a significant design challenge that must be completed within the week. A leadership laboratory is run simultaneously with the design experience to encourage students to self-assess their leadership style and practices in systems engineering projects.

SYSEN 5940 Creativity and Innovation Within Systems Engineering

Summer. 1 credit. Prerequisites: matriculation in M.Eng. (Systems Engineering) distance learning degree program; CEE 6910 Principles of Project Leadership; SYSEN 5920. P. L. Jackson and F. J. Wayno. Second of two one-week intensive courses (35 hours) in systems engineering management with emphasis on understanding individual creativity and organizational innovation and on developing the required systems engineering leadership skills to foster both.

SYSEN 5960 Systems Engineering Design Project for Virtual Teams

Fall, spring, summer. Variable credit. Prerequisites: matriculation in Systems Engineering M.Eng. distance learning degree program; SYSEN 5100, SYSEN 5920, SYSEN 5940, and SYSEN 6910, or permission of instructor. Staff. Systems engineering project for geographically dispersed teams. Fulfills M.Eng. degree requirement for project, subject to credit hour minimum.

SYSEN 6800 Topics in Systems Engineering Research

Spring. 1.5 credits. Staff. Advanced topics in systems engineering research.

THEORETICAL AND APPLIED MECHANICS

A. T. Zehnder, chair; J. A. Burns, K. B. Cady, J. M. Guckenheimer, T. J. Healey, C. Y. Hui, J. T. Jenkins, S. Mukherjee, S. L. Phoenix, R. H. Rand, A. L. Ruina, W. H. Sachse, S. Strogatz, Z. J. Wang. Emeritus: E. Cranch, R. H. Lance.

Basics in Engineering Mechanics

TAM 2020 Mechanics of Solids (also ENGRD 2020)

Fall, spring. 4 credits. Prerequisite: PHYS 1112, co-registration in MATH 1920, or permission of instructor. For description, see ENGRD 2020.

TAM 2030 Dynamics (also ENGRD 2030)

Fall, spring. 3 credits. Prerequisite: TAM 2020, co-registration in MATH 2930, or permission of instructor. For description, see ENGRD 2030.

Engineering Mathematics

TAM 3100 Introduction to Applied Mathematics I

Fall, spring. 3 credits. Prerequisites: MATH 2930 and 2940. Covers initial value, boundary value, and eigenvalue problems in linear ordinary differential equations. Also covers special functions, linear partial differential equations. This is an introduction to probability and statistics. Use of computers to solve problems is emphasized.

TAM 6100 Methods of Applied Mathematics I

Fall. 3 credits. Intended for beginning graduate students in engineering and science. Intensive course requiring more time than normally available to undergraduates (see TAM 3100–3110) but open to exceptional undergraduates by permission of instructor.

Emphasis is on applications. Course covers linear algebra, calculus of several variables, vector analysis, series, ordinary differential equations, and complex variables.

TAM 6110 Methods of Applied Mathematics II

Spring. 3 credits. Prerequisite: TAM 6100 or equivalent. Emphasis is on applications. Course covers partial differential equations, transform techniques, tensor analysis, and calculus of variations.

TAM 6120 Methods of Applied Mathematics III

Spring. 3 credits. Prerequisite: TAM 6100 and 6110 or equivalent. Next offered 2010–2011. Topics include integral transform, methods, Wiener-Hopf technique, solutions of integral equations and partial differential equations.]

TAM 6130 Asymptotics and Perturbation Methods

Fall. 3 credits. Prerequisites: TAM 6100 and 6110 or equivalent. Topics include asymptotic behavior of solutions of linear and nonlinear ODE (e.g., the WKB boundary layer and multiple-scale methods) and asymptotic expansion of integrals (method of steepest descent, stationary phase, and Laplace methods). Also covers regular and singular perturbation methods for PDE (e.g., method of composite expansions). Other topics (depending on instructor) may include normal forms, center manifolds, Liapunov-Schmidt reducers, and Stokes phenomenon. The course may also include computer exercises at the option of the instructor.

TAM 6170 Advanced Mathematical Modeling—Biological and Fluid Dynamics

Spring. 3 credits. Covers the fundamentals of fluid dynamics that rises in biological fluid dynamics such as the motion of the microscope cells in low Reynolds number flows and unsteady aerodynamics of flapping flight and free falling objects. The topics in fluid dynamics include Stokes flow, propulsion of a beating flagellum and swimming sheets, potential flow, unsteady airfoil theory, reduced model of unsteady forces on a fluttering and tumbling object, and computational methods. The current research in biofluids will be discussed in some depth.

TAM 7180 Topics in Bifurcation Theory

Spring. 3 credits. Offered every third year. Provides a basic, rigorous introduction to certain aspects of nonlinear analysis, with an emphasis on techniques based on differential calculus. Applications to nonlinear elasticity and nonlinear oscillations of mechanical systems (including Liapunov Center Theorem, Hopf Bifurcation, and Hamiltonian-Hopf bifurcation) will be presented throughout. The course is intended for students in the physical and mathematical sciences. The minimal prerequisites are linear algebra, advanced calculus, differential equations, and eigenvalue problems. Exposure to nonlinear problems of engineering science or mathematical physics and some background in basic functional analysis is helpful but not required.

Continuum Mechanics

TAM 4550 Introduction to Composite Materials (also CEE 4770, MAE 4550, MSE 5550)

Fall. 3 credits. Prerequisite: ENGRD 2020. Topics include introduction to composite materials; varieties and properties of fiber reinforcements and matrix materials; micromechanics of stiffness and stress transfer in discontinuous fiber/matrix arrays; orthotropic elasticity as applied to parallel fibers in a matrix and lamina; theory of stiffness (tension, bending, torsion) and failure of laminates and composite plates, including computer software for design; and manufacturing methods and applications for composites. There is a group component design and manufacturing paper required, and a group laboratory on laminated component fabrication.

TAM 5910 Master of Engineering Design Project I

Fall. 3-12 credits, variable. M.Eng. (mechanics) project related to the master of engineering in mechanics.

TAM 5920 Master of Engineering Design Project I

Spring. 3-12 credits, variable. M.Eng. (mechanics) project related to the master of engineering in mechanics.

TAM 6550 Advanced Composite Materials (also CEE 6760, MAE/MSE 6550)

Spring. 4 credits. TAM 4550/5550 not a prerequisite but excellent background. Topics center around micromechanical and statistical (reliability) aspects of the strength and fatigue of fibrous composites. Topics include Hedgepeth shear-lag models of stress transfer around arrays of fiber breaks; statistical theories of composite failure to forecast reliability; stress distributions around holes and cuts in composite laminates; and compressive strength of composites.

TAM 6630 Solid Mechanics I

Fall. 4 credits. Rigorous introduction to solid mechanics emphasizing linear elasticity: tensors; deformations, rotations and strains; balance principles; stress; small-strain theory; linear elasticity, anisotropic and isotropic; basic theorems of elastostatics; and boundary-value problems, e.g., plates, St. Venant's solutions.

TAM 6640 Solid Mechanics II

Spring. 4 credits. Prerequisites: MATH 6110 and TAM 6630 or equivalent. Preparation for advanced courses in solid mechanics. Topics include singular solutions in linear elasticity; plane stress, plane strain, anti-plane shear, airy stress functions; linear viscoelasticity; cracks and dislocations; classical plasticity; thermoelasticity; and three-dimensional elasticity.

TAM 7510 Continuum Mechanics and Thermodynamics

Spring. 3 credits. Prerequisites: TAM 6100 and 6110; and 6630 and 6640 or equivalents. Course topics include kinematics; conservation laws; the entropy inequality; constitutive relations: frame indifference, material symmetry; and finite elasticity, rate-dependent materials, and materials with internal state variables.

[TAM 7520 Nonlinear Elasticity

Spring. 3 credits. Prerequisites: TAM 6100, 6110, and 7510 or equivalents. Next offered 2010-2011.

Review of governing equations. Topics include linearization and stability; constitutive inequalities; exact solution of special problems.]

[TAM 7530 Fracture

Spring. 3 credits. Prerequisites: TAM 6100 or 6110; and 6630 and 6640 or equivalents. Next offered 2010-2011.

Also covers nonlinear rate-independent, small-scale deformation fracture mechanics: plastic fracture, J-integrals.]

TAM 7570 Inelasticity

Fall. 3 credits. Plasticity: dislocations and slip systems; early experimental observations; torsion and bending of bars; inflation of thick cylinders and spheres; general equations governing yielding, flow and work hardening; solution of general boundary value problems; numerical solutions radial return and the consistent tangent operator. Linear viscoelasticity: simple rheological models; correspondence principle; hereditary integral approach; torsion and bending of bars; inflation of thick cylinders and spheres; solution of general quasi-static boundary value problems; thermoviscoelasticity, wave propagation.

[TAM 7590 Boundary Element Methods

Spring. 4 credits. Next offered 2010-2011. Topics include a variety of applications of the boundary element method. Examples are: potential theory, linear elasticity, elastoplasticity, micro and nano-electro-mechanical systems, meshfree boundary methods.]

Dynamics and Space Mechanics

TAM 5700 Intermediate Dynamics

Fall. 3 credits. Topics include Newtonian mechanics; motion in rotating coordinate systems; introduction to analytical mechanics; virtual work, Lagrangian mechanics; Hamilton's principle; small vibration and stability theory. Newtonian-Eulerian mechanics of rigid bodies; and gyroscopes. As time allows, introduction to orbital mechanics and chaos may be offered.

TAM 5780 Nonlinear Dynamics and Chaos

Spring. 3 credits. Prerequisite: MATH 2930 or equivalent. Introduction to nonlinear dynamics, with applications to physics, engineering, biology, and chemistry. Emphasizes analytical methods, concrete examples, and geometric thinking. Topics include one-dimensional systems; bifurcations; phase plane; nonlinear oscillators; and Lorenz equations, chaos, strange attractors, fractals, iterated mappings, period doubling, renormalization.

TAM 6680 Elastic Waves in Solids with Applications

Fall. 3 credits. Waves in one-dimensional elastic solids; two-dimensional systems; waves in infinite media, plates and rods; significant emphasis on measurements and applications.

[TAM 6710 Hamiltonian Dynamics

Spring. 3 credits. Prerequisite: TAM 5700 or equivalent. Next offered 2010-2011. Course topics include review of Lagrangian mechanics, Kanes equations, Hamiltons principle, Hamiltons, canonical equations, Lie

transforms, Hamilton-Jacobi theory; KAM theory; and Melnikovs method.]

[TAM 6720 Celestial Mechanics (also ASTRO 6579)

Spring. 3 credits. Next offered 2010-2011. Course topics include description of orbits; Hill curves, libration points; osculating orbital elements, perturbation equations; effects of forces on satellite orbits; mechanics of planetary rings.]

[TAM 6730 Mechanics of the Solar System (also ASTRO 6571)

Spring. 3 credits. Prerequisite: advanced undergraduate course in dynamics. Next offered 2010-2011. Topics include gravitational potentials, planetary gravity fields; free and forced rotations; Chandler wobble, polar wander, and damping of nutation.]

TAM 6750 Nonlinear Vibrations

Spring. 3 credits. Prerequisite: TAM 5780 or equivalent. Dynamics of nonlinear oscillators, including free and forced vibrations of both conservative and limit cycle oscillators, parametric excitation, systems of two, and N-coupled oscillators. Mathematical techniques include perturbation methods, center manifold reduction, and differential-delay equations.

TAM 7760 Applied Dynamical Systems (also MATH 7170)

Spring. 4 credits. For description, see MATH 7170.

TAM 7960 Mechanics of Terrestrial Locomotion

Spring. 3 credits. Prerequisite: TAM 5700 or equivalent, or A+ level understanding of any sophomore (or above) mechanics course.

The energetics and stability of people, other legged animals and robots are studied by mechanical analysis of simple mechanics-based models. Students will derive equations, do analytic and computer calculations, and write up their results. Advanced students may do original research as part of their course work. (A *Nature* paper was based on research started as course work in this class one year.)

Special Courses, Projects, and Thesis Research

TAM 4130 Introduction to Nuclear Science and Engineering (also AEP/CHEM/ECE/NSE 4130, MAE 4580)

Fall. 3 credits. K. B. Cady. For seniors and M.Eng. students interested in nuclear energy. Topics are presented at the level of the course text: Lamarsh and Baratta, *Introduction to Nuclear Engineering*, 3rd ed. and includes the fundamentals of nuclear science and engineering: nuclear structure, radioactivity, and reactions; interaction of radiation with matter; radiation protection and shielding; the neutron chain reaction and its control; light water reactors, isotope separation, fuel reprocessing, and waste disposal; heat transfer, accidents, atmospheric dispersion, and reactor licensing and safety.

TAM 4140 Nuclear Reactor Physics (also AEP/CHEM/ECE/NSE 4140)

Spring. 3 credits. The physics of the neutron chain reaction for seniors, M.Eng., and graduate students interested in nuclear energy. Topics are

presented at the level of Lamarsh's *Introduction to Nuclear Reactor Theory*, and include low-energy nuclear physics; neutron interactions; nuclear fission and the chain reaction; the moderation of neutrons; the multi-cell collision probability model; neutron diffusion; reactor dynamics and control; the burn-up, build-in, and decay of actinides; linear heat rates and reactor power distributions.

TAM 4910-4920 Project in Engineering Science

4910, fall; 4920, spring. 1-4 credits TBA. Projects for undergraduates under the guidance of a faculty member.

TAM 7960-8000 Topics in Theoretical and Applied Mechanics

Fall, spring. 1-3 credits TBA. Special lectures or seminars on subjects of current interest. Topics are announced when the course is offered.

TAM 8900 Master's Degree Research in Theoretical and Applied Mechanics

Fall, spring. 1-15 credits TBA. S-U grades. Thesis or independent research at the M.S. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

TAM 9900 Doctoral Research in Theoretical and Applied Mechanics

Fall, spring. 1-15 credits TBA. S-U grades. Thesis or independent research at the Ph.D. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

FACULTY ROSTER

- Abel, John F., Ph.D., U. of California, Berkeley. Prof. (Emeritus), Civil and Environmental Engineering, Emeritus
- Afshari, Ehsan, Ph.D., California Inst. of Technology. Asst. Prof., Electrical and Computer Engineering
- Ahner, Beth A., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Biological and Environmental Engineering
- Albonesi, David H., Ph.D., U. of Massachusetts. Assoc. Prof., Electrical and Computer Engineering
- Albright, Louis D., Ph.D., Cornell U. Prof., Biological and Environmental Engineering
- Allmendinger, Richard, Ph.D., Stanford U. Prof., Earth and Atmospheric Sciences
- Allmon, Warren D., Ph.D., Harvard U. Hunter R. Rawlings III Professor of Paleontology, Earth and Atmospheric Sciences
- Andronicos, Christopher L., Ph.D., Princeton U. Assoc. Prof., Earth and Atmospheric Sciences
- Aneshansley, Daniel J., Ph.D., Cornell U. Prof., Biological and Environmental Engineering

GRADUATE SCHOOL

ADMINISTRATION

Alison G. Power, dean

J. Ellen Gainor, associate dean

Terry D. Plater, associate dean

Sarah S. Hale, associate dean

Brenda Wickes, assistant dean

Students interested in professional and research master's and doctoral degrees at Cornell pursue their graduate studies through the Graduate School, which administers 96 graduate fields, ranging from aerospace engineering to zoology. Programs leading to degrees in law (J.D. and LL.M.) are administered by the Cornell Law School; the doctor of medicine (M.D.) is administered by Cornell's Weill Medical College in New York City; the doctor of veterinary medicine (D.V.M.) is administered by the College of Veterinary Medicine; and the master of business administration (M.B.A.) is earned through the Johnson Graduate School of Management.

THE GRADUATE SCHOOL

The graduate program at Cornell permits an unusual degree of accommodation to the needs and interests of the individual student. Degree requirements are kept to a minimum. There are no specific course or credit requirements for the advanced general degrees of master of arts, master of science, and doctor of philosophy but only such general requirements as best accomplish the aim of graduate study: a period of study in residence, mastery of one subject, adequate knowledge of allied subjects, oral examinations to establish competency for presentation of a dissertation or thesis, and a satisfactory dissertation or thesis. Certain advanced professional degree programs have specific course or credit requirements that are determined by the faculty of the professional school or college in which the degrees are offered. All students must have course enrollment each semester. Students not enrolling in specific courses must enroll for thesis or dissertation research using either Graduate School or, if available, departmental course numbers assigned for that purpose.

A close working relationship between the student and faculty members is essential to the graduate program at Cornell. Under the Special Committee system, the student is guided by, and works with, at least two or three faculty members chosen by the student to represent his or her major and minor subjects. The major subject representative is the chair of the Special Committee, who usually has the primary responsibility for directing the student's thesis or dissertation research.

REQUIREMENTS FOR ADMISSION

A successful applicant to the Graduate School must:

1. hold a baccalaureate degree or its equivalent granted by a faculty or university of recognized standing;
2. have adequate preparation for graduate work in the chosen field of study;
3. have fluent command of the English language;
4. present evidence of promise in advanced study and research; and
5. take the Graduate Record Examinations (GRE) General Test or other specific examinations required by the various fields of study.

Additionally, international applicants whose native language is not English must provide proof of competency in English as part of the admissions process. Proof can be:

1. the following minimum scores on the Test of English as a Foreign Language (TOEFL): writing, 20; listening, 15; reading, 20; and speaking, 22. Individual fields of study may set higher minimums.

or

2. evidence of at least two years of study in a college or university in a country where English is both the native language and the language of instruction.

Information about the TOEFL exam and the GRE—including examination times, dates, locations, and application forms—is available online from the Educational Testing Service (www.ets.org) or by postal mail at ETS, Princeton, NJ 08541, U.S.A.

DEADLINES

Each graduate field of study has specific deadlines for fall and spring admission. The earliest deadline is December 1; many deadlines fall in mid-January. Applications should be received no later than those published dates, which are available online at catalog.gradschool.cornell.edu.

INQUIRIES

Applicants should contact the fields of study for answers to specific questions about admission to their graduate programs. Contacts in the fields of study also can answer questions about facilities for advanced study and research, special requirements, and opportunities for fellowships and assistantships. Phone numbers, e-mail addresses, and other contact information are available online at catalog.gradschool.cornell.edu.

General questions about graduate study can be directed to Graduate School Student Services, 255-5820, or gradschool@cornell.edu or www.gradschool.cornell.edu or by writing to Graduate School, 143 Caldwell Hall, Cornell University, Ithaca, NY 14853-2602.

FOR MORE INFORMATION

Detailed information about the admissions process, academic programs, financial aid, and student services is available at the Graduate School web site, www.gradschool.cornell.edu. The site features links to the Graduate School's online application (apply.gradschool.cornell.edu), printable forms, and links to sites of interest to graduate applicants.

SCHOOL OF HOTEL ADMINISTRATION

ADMINISTRATION

Michael D. Johnson, dean, E. M. Statler Professor

Steven A. Carvell, associate dean for academic affairs

David Strong, associate dean for business affairs

Jon Denison, associate dean for external affairs

Judi Brownell, dean of students

Joe Strodel, director of corporate affairs

Tom Ward, director of the Leland C. and Mary M. Pillsbury Institute for Hospitality Entrepreneurship

Timothy Hinkin, Richard J. and Monene P. Bradley Director for Graduate Studies

Lisa M. Shaffer, director of student services

Brad Walp, director of enrollment management and international programs

Molly deRoos, associate director of career management

Meg Keilbach, interim director of alumni affairs and development

Christine Natsios, director of alumni affairs

Emily Franco, director of Hotel School/Culinary Institute of America Alliance

Timothy J. Durnford, director of information technologies

Dina Kristof, registrar

DEGREE PROGRAMS

Hotel Administration

Degree

B.S.
M.M.H.
M.S.
Ph.D.

FACILITIES

Statler Hall Statler Hall is a unique building designed explicitly to meet the needs of the faculty and students of the School of Hotel Administration. The building serves both practical and theoretical instruction, among its classrooms, lecture rooms, laboratories, library, computer center, beverage management center, newly refurbished auditorium, and the Statler Hotel and J. Willard Marriott Executive Education Center. Statler Hall and the Statler Hotel were designed explicitly for the school's academic and executive education programs, providing students with training and work experience in facilities similar to those in which they will work after graduation. In the fall of 2004, the school opened the Robert A. and Jan M. Beck Center, a 35,000-square-foot addition to Statler Hall. This \$16.2 million expansion provides state-of-the-art classroom and meeting spaces, a computer laboratory, and

teaching technologies that facilitate an interactive teaching style.

The School of Hotel Administration's Nestlé Library The Nestlé Library has one of the best collections of hospitality-related materials in the United States. The collection contains approximately 37,000 books, 1,500 videotapes, and more than 600 journal, magazine, newsletter, and newspaper subscriptions. Materials on lodging, foodservice, travel and tourism, real estate, and general hospitality business topics comprise the core of the library's collections. Among the library's special features are numerous electronic information resources, including *Business Source Premier*, *Proquest*, *Hotel Outlook*, *Mintel Marketing Intelligence*, and the *Hospitality and Tourism Complete*, a unique index of hospitality articles. Information resources and services for the hospitality industry are available for a fee through the library's HOSTLINE service. More detailed information about the Nestlé Library can be found at www.nestlelib.cornell.edu. In addition to offering an excellent collection of materials and access to extensive electronic resources, the Hotel School library provides instruction and research support to every student.

Statler Hotel and J. Willard Marriott Executive Education Center The Statler Hotel comprises 153 guest rooms; an executive education center; a signature restaurant, Taverna Banfi; two quick-service food outlets; a lounge; and the university's faculty and staff club. The Statler Hotel is an independent, self-sustaining teaching unit that provides quality food and beverage, meeting, and lodging services to the local community and to campus visitors, such as parents and those who visit Cornell as part of the application process. The Statler Hotel provides a unique brand of hospitality that integrates the management theory taught at the Cornell Hotel School with practical expertise of the hotel's professional and student staff. The hotel offers part-time jobs to approximately 200 students each semester with priority given to students in the Hotel School. A select group of students participate in the Statler Leadership Development program and earn supervisory and management positions in the hotel.

UNDERGRADUATE CURRICULUM

The School of Hotel Administration offers education in the numerous disciplines required for modern management in the global hospitality industry. Included in the core curriculum are courses in operations, management and organizational behavior, human resource management, finance/accounting, real estate development, food and beverage management, marketing, tourism, strategy, facilities management planning and design, communication, information systems, and law. Students also are encouraged to pursue a broad range of elective courses

among the humanities, social sciences, and natural sciences as preparation for assuming leadership positions in the business and local community. For more complete information about undergraduate program requirements, see the Hotel School's *Student Handbook* (available in the Office of Student Services, 180 Statler Hall).

Requirements for Graduation

Regularly enrolled undergraduate students in the School of Hotel Administration are candidates for the degree of bachelor of science. The requirements for that degree are:

1. completion of eight semesters in residence for those who entered as freshmen; semesters of residence for transfer students are determined by the amount of transfer credit awarded;
2. completion, with a minimum cumulative grade point average (GPA) of 2.0 (including a GPA of 2.0 in a full-time schedule of courses on campus in the final semester), of 120 required and elective credits (note: 120 credits does not include PE courses), as set forth in the table on the following page;
3. qualification in one language other than English. This requirement may be met by any one of the following: (a) three years of high school study of one foreign language; (b) score of 560 on Cornell Placement Test; (c) passing language course level 1210 and 1220 (8 credits) or the equivalent, and attaining a minimum grade of at least C- or "Satisfactory" in each (C or above for transfer credit from other institutions); or (d) passing language course level 1230 or the equivalent;
4. completion of two units of practice credit; and
5. completion of the university requirement in physical education (including the swim test).

Suggested course programs appear on the following pages. The core courses account for 69 of the 120 credits needed for graduation, the Hotel School electives account for 12 credits, and 18 credits are allotted for distributive electives. The remaining 21 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met.

Students in the School of Hotel Administration who plan to attend summer school at Cornell or any other four-year college or university, with the expectation that the credit earned will be counted toward the Cornell degree in hotel administration, must obtain the approval from the school in advance. Without advance approval, such credit may not count toward the degree.

Credit earned in military science, aerospace studies, or naval science courses may be counted in the 21-credit group of free electives.

Transfer Credit Policy

Transfer students are required to complete all degree requirements with at least 60 credits at Cornell University. In the core, transfer credit may be allowed against basic courses only (e.g., HADM 1121, 1106). The communication courses (HADM 1165 and 3365) are tailored specifically to the School of Hotel Administration and, thus, communication courses taken elsewhere generally are not a replacement for core courses.

Hotel elective courses may not be transferred, except from the Culinary Institute of America. Eighteen credits in distributive electives may be transferred, and 21 credits in free electives may be transferred.

Minor in Real Estate

The minor in Real Estate is designed to prepare students for careers in the commercial real estate industry. Both the U.S. and international capital markets are undergoing fundamental changes, as is the nature of real estate ownership. This minor focuses on careers as a real estate investor, in real estate finance, in real estate consulting, in structured finance, and in real estate transaction support. Cornell University's Hotel School is at the forefront of knowledge in this field and will help students prepare for a rewarding career. The minor is fulfilled with a minimum of six courses. Four courses are required and two or more electives complete the minor. A minimum of 18 credit hours is required to complete the minor. Any undergraduate student in the university may enroll in the minor in Real Estate; the minor is designed to integrate with the requirements of several majors including AEM in CALS, ORIE in Engineering, Industrial and Labor Relations, and Economics in Arts and Sciences.

Requirements for students in the School of Hotel Administration are different from requirements for students in other undergraduate units. Students who wish to pursue a minor in Real Estate must complete and submit an application. Applications are available in the home of the minor in Real Estate, 465 Statler Hall, on the school's web site, or by e-mailing cu_re_minor@cornell.edu.

Minors

Students in the School of Hotel Administration may pursue minors offered by units in any college or division. A unit that offers a minor may place restrictions on who can pursue that minor (usually because of limited resources), and a major may place restrictions on the minors that its students can take (usually because the major and minor areas are too similar).

Completion of a minor will be audited by the unit that offers it. The minor will be recorded on students' official transcripts by their home colleges after receiving verification by the unit offering the minor, usually during the summer after graduation. Students should inquire with the offering units for application procedures and requirements.

Concentration

While completing the Hotel School elective courses, undergraduates in the school may select a concentration.

Before selecting a field of concentration, students should consult the coordinator of instruction in that area during their

sophomore year to plan the sequence of courses that will best fit their program.

Upon completion, the concentration will be noted on the transcript, provided a cumulative GPA of 3.0 in the concentration was attained.

Foreign Languages

Mastery of a foreign language is particularly desirable for students who are planning careers in the hospitality industry and, hence, there is a second-language requirement for graduation. Further information on foreign language courses at Cornell, and placement in language courses, may be found under "Modern Languages, Literature, and Linguistics" and under "Advanced Placement for Freshmen" in the College of Arts and Sciences section of this catalog.

Independent Study and Research

Students may conduct independent studies or research projects in any academic area of the school under the direction of a resident faculty member. Credit is arranged on an individual basis. To enroll in an independent study or research project, students must obtain written permission from the school before the add deadline. See HADM 4497, 4498, 4499, 6698, or 6699 for more details.

Practice Credit Requirement

As part of the degree requirements, undergraduates enrolled in the School of Hotel Administration must fulfill the practice credit requirement and submit verification thereof. Further details are set forth in the *Student Handbook for Undergraduates in the School of Hotel Administration* (available in the Office of Student Services, 180 Statler Hall).

Management-Intern Program

Hotel school juniors and seniors have a unique opportunity to gain invaluable knowledge and experience in the hospitality industry through the Management-Intern Program (MIP). Students receive 12 free elective credits and 1 practice credit. While on the internship, tuition is reduced and students may receive a salary from the sponsoring organization. Positions are available in the United States and internationally. Application should be completed one semester in advance. Information meetings are held at the beginning of each semester and are open to all students. See HADM 4493, 4494, and the student handbook for more details about the Management-Intern Program (available in the Office of Student Services, 180 Statler Hall).

Study Abroad

All students planning to study abroad must apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of this catalog.

The Hotel School represents the international aspects of the hospitality industry in many ways—from the large number of international students in its program to career opportunities throughout the world. To prepare for the global nature of the industry, students are encouraged to consider studying abroad in either the fall or spring semesters of their junior year (or, in some cases, both). While abroad, students have the opportunity to learn

about other cultures, to become more proficient in a second (or perhaps third) language and, in those programs where internships are offered, to work in an international environment.

Students should start the investigation process early, including a consultation with the Hotel School study abroad advisor, 180 Statler Hall, as well as with the staff in the Cornell Abroad office, 300 Caldwell Hall. Requirements for college approval include a GPA of 3.0 or higher, good academic standing, registered full-time student status, and not being in one's final semester. Credits earned abroad are considered transfer credits, and, as such, they count against the maximum of 60 transfer credits allowed. A maximum of 15 credits may be transferred from study abroad programs, and students should plan on taking no less than 15 credits while abroad. Courses typically transfer into distributive and free electives. Credit for study abroad programs will be awarded only after successful completion (marks equivalent to a Cornell grade of C or higher) of the semester abroad and receipt of the official transcript by the college.

For further details on the application process and deadlines, see the "Cornell Abroad" section of this catalog or view the Cornell Abroad web site at www.cuabroad.cornell.edu.

Culinary Institute of America Alliance

The School of Hotel Administration has an alliance with the Culinary Institute of America (CIA), which is located in Hyde Park, N.Y. Hotel School juniors and seniors can both earn their B.S. from Cornell and complete the requirements for an Associates in Occupational Studies (A.O.S.) degree in Culinary Arts from the CIA during the course of their four-year program at Cornell. Most students apply to the program during their sophomore year, so planning should start early to be sure all program requirements are met.

Students study approximately nine months onsite at the CIA, working and learning daily in the finest training kitchens in the world. Students are required to have completed HADM 2236 Culinary Theory and Practice and HADM 3305 Restaurant Management from the Hotel School core curriculum before attending the full program at the CIA. In addition to the core curriculum, Hotel School students are required to take four specific courses to complete the degree requirement:

- HADM 4403 Specialty Food and Beverage Operations: Guest Chefs (offered spring only)
- HADM 4404 Catering and Special Events Management (offered fall only)
- HADM 4430 Introduction to Wines
- HADM 4432 Contemporary Healthy Foods (offered fall only)

More information about the CIA is available at www.ciachef.edu. Frequently asked questions are available at www.hotelschool.cornell.edu/academics/special/cia/ciasha.html. For additional collaborative degree program questions or to obtain applications, contact CIA_Alliance@cornell.edu.

Part-Time Study

Generally, part-time study is not allowed. Exceptions may be made for employee

degree candidates, students who have medical reasons for a reduced schedule, or in other very extenuating circumstances. In no event shall a student be allowed to enroll on a part-time basis during the last semester of study. Further details on part-time study may be found in the school's student handbook (available in the Office of Student Services, 180 Statler Hall).

Grading System

Letter grades ranging from A+ to F are given to indicate academic performance in each course. These letter grades are assigned a numerical value for each semester average as follows: A is equivalent to 4.0; B to 3.0; C to 2.0; D to 1.0; and F to 0. For good standing, a student must maintain a minimum average of 2.0. A maximum of 4 credits each semester may be taken on a "satisfactory-unsatisfactory" (S-U) basis. Students should be aware that a satisfactory grade is equivalent to a C- or above and an unsatisfactory grade is equivalent to a D+ or lower.

Students whose semester averages are at least 3.3 and who have taken at least 12 credits of letter grades with no unsatisfactory or incomplete grades are honored by being placed on the Dean's List.

Course Requirements for the Bachelor of Science Degree

<i>Required courses</i>	<i>Credits</i>
Operations: HADM 1105, 1106, 2201, 3301, 3305	14
Management and Organizational Behavior: HADM 1115	3
Human Resource Management: HADM 2211	3
Finance/Accounting: HADM 1121, 2221, 2222, 3321	12
Food and Beverage Management: HADM 2236	4
Marketing, Tourism, and Strategy: HADM 2243, 4441	6
Facilities Management, Planning, and Design: HADM 2255, 3355	6
Managerial Communication: HADM 1165, 3365, first-year writing seminar	9
Information Systems: HADM 1174, 2275	6
Law: HADM 3387	3
Economics: HADM 1141	3
<i>Specifically required credits</i>	69
<i>Hotel electives</i>	12
<i>Distributive electives</i>	18
<i>Free electives</i>	21
Total credits required for graduation	120

Typical Course Sequences

The following arrangements of courses tend to be more fixed during freshman and sophomore years, with a greater degree of flexibility characterizing the upper-class years.

Freshman Year

Typically, a freshman schedule will consist of 15 to 16 credits each semester, to include the following:

<i>Required courses</i>	<i>Credits</i>
HADM 1105 Introduction to Hotel Operations	2
HADM 1106 Introduction to Food Service Operations	2
HADM 1115 Organizational Behavior and Interpersonal Skills	3
HADM 1121 Financial Accounting	3
HADM 1141 Microeconomics for the Service Industries	3
HADM 1165 Managerial Communication I	3
HADM 1174 Microcomputing	3
First-year writing seminar	3
Electives	6
	<hr/> 28

Sophomore Year

<i>Required courses</i>	<i>Credits</i>
HADM 2201 Hospitality Quantitative Analysis	3
HADM 2211 Human Resource Management	3
HADM 2221 Managerial Accounting	3
HADM 2222 Finance	3
HADM 2236 Culinary Theory and Practice	4
HADM 2243 Principles of Marketing	3
HADM 2255 Hotel Development and Planning	3
HADM 2275 Introduction to Information Systems Management	3
Electives	6
	<hr/> 31

Junior Year

<i>Required courses</i>	<i>Credits</i>
HADM 3301 Service Operations Management	3
HADM 3305 Restaurant Management	4
HADM 3321 Hospitality Financial Management	3
HADM 3355 Hospitality Facilities Operations	3
HADM 3365 Managerial Communication II	3
HADM 3387 Business and Hospitality Law	3
Electives	12
	<hr/> 31

Senior Year

<i>Required courses</i>	<i>Credits</i>
HADM 4441 Strategic Management	3
Electives	27
	<hr/> 30

GRADUATE CURRICULUM

The school's programs for advanced degrees include those of Master of Management in Hospitality, Master of Science, and Doctor of Philosophy. For further information on graduate programs, contact the Office of Student Services, 180 Statler Hall, 255-6376.

Required Program for Master of Management in Hospitality Degree

<i>Required courses</i>	<i>Credits</i>
HADM 6610 Dean's Distinguished Lecture Series	1
HADM 7703 Operations Management	3
HADM 7711 Organizational Behavior	3
HADM 7712 Human Resources Management	3
HADM 7723 Corporate Finance	3
HADM 7724 Managerial Accounting	3
HADM 7743 Hospitality Marketing	3
HADM 7744 Competitive Strategies for the Hospitality Industry	3
HADM 7751 Property Development and Planning	3
HADM 7761 Managerial Communication	3
HADM 7772 Information Systems Management	3
HADM 7796 Charrette	1
HADM 7797 Hospitality Industry Leadership Development Program	1
Balance of courses is electives.	
Total credits required for the master of management in hospitality program	<hr/> 48

Course Schedule Information

For up-to-date information about course scheduling, and to obtain a course supplement, contact the Office of Student Services, 180 Statler Hall, 255-6376.

ORGANIZATIONAL MANAGEMENT, COMMUNICATION, AND LAW

Management and Organizational Behavior

HADM 1110 Distinguished Lectures in Hospitality Management

Fall. 1 credit. Elective. Those wishing to enroll have until Friday, Sept. 4, 2009, to add it. Dean M. Johnson.

The Dean's Distinguished Lecture Series is a long-standing Hotel School tradition that provides a unique opportunity for successful industry leaders to share their experiences with Cornell students. In its 40-year history, the Dean's Distinguished Lecture Series has hosted the most influential and accomplished leaders from every segment of the hospitality industry. Speakers share their views about successful management styles, possible career paths, critical industry-related issues, and qualities conducive to successful business leadership. Students have an unparalleled opportunity to learn and question how hospitality leaders view the current and future status of the industry.

HADM 1115 Organizational Behavior and Interpersonal Skills

Fall and spring. 3 credits. Required.
T. Hinkin, K. Walsh, J. Brownell, and T. Simons.

This course focuses on how to manage people in the workplace. Students develop theoretic lenses for understanding people and organizations, as well as practical tools for accomplishing personal and organizational goals. Topics include individual differences, conflict management, problem-solving, power and influence, motivation, leadership, coaching and counseling, and group process. Students learn through the use of case studies, self-assessments, experiential exercises, readings, discussions, papers, and group activities.

HADM 2217 Statler Leadership Development Program

Fall. 1 credit. Elective. Prerequisite: one semester (200 hours) of employment at the Statler Hotel. T. Hinkin.

The SLDP is a partnership among Hotel School faculty and Statler Hotel management, who together teach and guide students how to become tomorrow's leaders. The program enables students to progress through five different paid employment phases at the Statler Hotel, from entry level to student manager. Students who progress to the level of student manager become Statler Fellows and will travel to a major city for an all-expense-paid trip that includes forums with industry leaders, site visits of leading industry facilities, and cultural activities. Each phase requires approximately 200 hours of paid employment at the Statler Hotel and is completed through a certification process.

HADM 4410 Hospitality Management Seminar

Fall. 1 credit. Elective. Limited to 30 Hotel seniors. Corequisite: HADM 1110. Preregistered students or students wishing to add course who do not attend first class and who fail to notify secretary in 146 Statler Hall of their absence before first class automatically will be moved to instructor's waiting list. Students permitted to take course will have until F, Sept. 5, 2010, to add it. Failure to do so will result in their being dropped from course. Dean M. Johnson.

HADM 4410 complements HADM 1110 by giving students the opportunity to interact with guest speakers and to participate in roundtable discussions on issues relating to the hospitality industry. Students will have the opportunity to gain a better understanding of industry trends, challenges, and opportunities.

HADM 4411 Negotiations in the Hospitality Industry

Spring. 3 credits. Elective. Limited to 30 students. Prerequisite: undergraduate standing; HADM 1115 or equivalent. Grad students enroll in HADM 6611. T. Simons.

Negotiation is a critical factor in business success. This course provides hands-on experience in negotiation in the hospitality context. Through the use of role-play exercises, discussions, and writing exercises, students develop into tough negotiators with whom people will want to continue doing business. Students become more comfortable with negotiations and develop their own personal negotiating style. Students also learn how to adjust their negotiating style to

respond appropriately to others' different personalities and negotiation tactics.

HADM 4415 Managerial Leadership in the 21st Century

Spring. 1 credit. Elective. Due to popularity of class, priority is given in following order: seniors/second-semester grads, juniors/first-semester grads, nonemployees, extramural students, sophomores, freshmen, and Cornell employees. Space permitting, class may be added up until first day, **but absolute deadline for dropping course is 12 noon F, Feb. 26**. F, Mar. 5 (1–6 P.M.), S, Mar. 6 (10 A.M.–6 P.M.), Sun, Mar. 7 (10 A.M.–4:30 P.M.), 2010, in Statler Auditorium. Attendance mandatory for credit. Fee for required notebook (charged to student's bursar bill; notebook distributed on first day of class): \$45. K. Blanchard.

Managerial Leadership in the 21st Century helps students become participant observers in their own lives through studying the field of applied behavioral science. Students will be able to use what they learn about human beings and how they function best in groups and organizations on a day-to-day basis to develop high-quality relationships between themselves and the people they support and depend upon (their boss, staff, peers/associates, and customers). When quality relationships exist, organizations tend to be characterized by high levels of integrity, customer satisfaction, employee empowerment, and organizational effectiveness. The concepts learned also help students create quality friendships and family relationships. A final paper is due three weeks after the last day of class.

HADM 4417 Hospitality Leadership

Spring, second seven weeks of semester. 2 credits. Limited to Hotel seniors; Hotel juniors by permission. Prerequisite: HADM 1115 or similar course.

Being an effective leader is one of the fundamental responsibilities of almost all hospitality managers and also plays a critical role in managing organizational change. In this course, you will learn about your leadership style, explore a range of effective and ineffective leader behaviors, understand the importance of both formal and informal leadership, and develop your leadership skills. Instructional techniques will include self-assessment, lecture and discussion, case analyses, and experiential exercises. Course is strongly recommended for SLDP seniors.

HADM 5511 Survey of International Management

Fall. 3 credits. Elective. J. Katz.

This course provides an overview of management in the international environment, both within multinational corporations and in domestic corporations based outside of the United States. The goal is to teach students how to be more effective when working in global contexts: how to analyze and respond to behavioral differences across countries; methods to communicate effectively in cross-cultural and multicultural settings; leading multinational teams, etc. The course is taught with a combination of lectures, cases, and in-class exercises.

HADM 6610 M.M.H. Discussion Forums in Hospitality Management

Fall. 1 credit. Required. M.M.H. students only. M. Johnson.

HADM 6610 is a required master's-level course that provides a unique opportunity for

successful industry leaders to share their experiences with M.M.H. students in a small group setting. Speakers will share their views about the successful skill sets, temperaments, and leadership styles needed to be an effective and valuable executive. They will also focus on critical industry-related issues. The speakers are chosen for their knowledge, experience, and proven success in the hospitality industry. As a student in HADM 6610, you will have an unparalleled opportunity to learn how hospitality executives view the current and future status of the industry.

HADM 6611 Negotiations in the Hospitality Industry

Spring. 3 credits. Elective. Limited to 30 students. Prerequisite: graduate standing. Undergraduates to enroll in HADM 4411. T. Simons.

Negotiation is a critical factor in business success. This course provides hands-on experience in negotiation in the hospitality context. Through the use of role-plays, discussions, and writing exercises, students develop into tough negotiators with whom people will want to continue doing business. Students become more comfortable with negotiations and develop their own personal negotiating style. Students also learn how to adjust their negotiating style to respond appropriately to others' personalities and negotiation tactics.

HADM 7711 Organizational Behavior

Fall. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or written permission of instructor in advance of preenrollment. T. Hinkin.

Organizational Behavior teaches how individuals, groups, and organizations interact within a complex, globalized service environment. Students develop interpersonal skills and gain a greater awareness of how their personal styles influence leadership and decision-making. They learn to motivate others, negotiate ethical decisions, manage teams, and lead organizations through change.

Human Resource Management**HADM 2210 The Management of Human Resources**

Fall. 3 credits. Elective. Prerequisite: non-Hotel students. Not open to freshmen. S. Way.

Students engage in a practically oriented examination of the role of human resources management (HRM), starting with an introduction to the HR function and an analysis of the social, legal, international, and competitive factors influencing HRM. The course examines recruitment, selection, training, motivation, development, compensation, performance appraisal, and labor relations. The course assumes a managerial perspective and emphasizes class discussion and case analysis.

HADM 2211 Human Resource Management

Fall, spring. 3 credits. Required. Limited to 70 students per lec. Not open to freshmen or graduate students. Prerequisite: HADM 1115. B. Tracey, S. Way, and M. Sturman.

This course facilitates an understanding of the policies, procedures, and systems required to attract, select, develop, and retain quality employees. Students learn about the major environmental factors that affect the

HR function, including legislation, economics, and demographics. The course emphasizes human resource issues in the hospitality industry. Instruction is based on lecture and discussion as well as case analysis and project work.

HADM 3313 Training and Development

Fall. 3 credits. Elective. Not open to freshmen. B. Tracey.

Training is one of the fundamental responsibilities of almost all hospitality managers, and this HR function plays an instrumental role in managing organizational change. In this course, students will learn how to design, implement, and evaluate both formal and informal training programs. In addition, we will examine factors beyond design and implementation that may influence training effectiveness. A variety of instructional techniques will be used throughout the course, including experiential activities that will enliven the learning process. The course will also include the opportunity to conduct a "live case study" of one or more training problems with a real hospitality firm.

HADM 5512 Managing Compensation

Spring. 3 credits. Elective. Prerequisite: introductory human resource course (HADM 2211, HADM 7712, ILR 2600, ILRHR 5600, or equivalent). M. Sturman.

This course is designed to give students a practical understanding of the methods and implications of compensation, including hands-on experience designing compensation systems for firms in the service industry. (The course is designed to provide material that is distinct from that provided in ILRHR 6690 Managing Compensation.) Students will learn how to design a pay plan, including base pay and pay-for-performance plans. By the completion of the course, participants will know how to design pay ranges and grades for organizations where most jobs can be benchmarked with market data. The course will also devote considerable time to the design of incentive plans, including merit pay, bonuses, gainsharing, profit sharing, piece-rate, tipping, and commission systems. The course is designed to be useful for those desiring employment as an entry-level compensation specialist, a human resources generalist, those starting and running their own business, or those who want a better understanding of how human resource practices are actually managed. For students with a particular interest in compensation, the course can be taken in addition to the ILRHR 6690 course; for those interested in compensation in the services industry, this course can be taken as a standalone course.

HADM 5513 Strategic Human-Resource Management in Hospitality

Spring. 3 credits. Elective. Prerequisite: HADM 2211 or equivalent. B. Tracey.

Over the past several years, the HR function has taken on a broader role in helping organizations to create and sustain a competitive advantage. The primary focus of this course is to examine the ways in which HR policies, practices, and systems can enhance the competitive capabilities of hospitality organizations. This seminar-style course will be conducted using hospitality case studies and current business problems as a basis for learning. The course will also include the opportunity to conduct a "live case study" of one or more strategic HRM problems with a real hospitality firm.

HADM 7712 Human-Resource Management

Spring. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or written permission of instructor in advance of preenrollment. M. Sturman.

This graduate-level course covers the strategies that enable companies to attract, develop, and retain high-quality employees, which include selection, compensation, performance appraisal, and career management. In each of these areas, the focus is on the return on the human-resource investment.

Managerial Communication

HADM 1165 Managerial Communication I

Fall, spring. 3 credits. Required. Limited to 18 students per lec. (Students who are required to take this course generally may not delay it. If extenuating circumstances exist, student must petition to drop course by end of first week of classes. Course must be taken within first two semesters in the Hotel School, including any semesters in Internal Transfer Division (ITD). Add/drop and section exchange must be approved by chairperson.) Priority given to Hotel students.

D. Jameson, A. Newman, and C. Snow.

This course provides an introduction to the role and importance of effective communication in managerial work, especially in the hospitality industry. Students develop abilities in analytical thinking and clear expression. Students will engage in the process of planning, preparing, and executing professional communications with an emphasis on written documents. Students write a series of business documents and give oral presentations.

HADM 3364 Corporate Communication

Spring. 3 credits. Elective. Limited to 30 students per lec; priority given to Hotel students. Prerequisite: junior, senior, or graduate standing or written permission of instructor; for Hotel undergraduates, HADM 1165 or waiver; for non-Hotel undergraduates, completion of their college's writing requirement. A. Newman.

How you communicate as a leader will determine your ability to convey ideas, manage teams, win support—and get promoted within an organization. In this course, we'll analyze how companies handle crisis communication, work with the media, manage change, and inspire employees. With an emphasis on current events, we'll study both traditional communication methods and new communication technologies, such as blogging, intranets, e-mail, web meetings, and instant messaging. Expect written assignments and highly interactive presentations to build your communication skills.

HADM 3365 Managerial Communication II

Fall, spring. 3 credits. Required. Limited to 24 students per lec; priority given to Hotel students. Prerequisites: junior or senior standing; for Hotel undergraduates, HADM 1165 and 1115. D. Lennox and A. Newman.

This course develops the knowledge and skills hospitality managers need to face an array of persuasive communication challenges. HADM 3365 builds on the principles of effective managerial communication presented in HADM 1165 as well as the concepts of organizational

behavior and interpersonal skills covered in HADM 1115. The course introduces the theory and principles of persuasion and focuses on their application in a range of management and leadership contexts.

HADM 4462 Intercultural Communication in the Hospitality Industry

Spring. 3 credits. Elective. Priority given to Hotel students. D. Lennox.

This course is designed to help managers develop proficiency when communicating among and between people who do not share similar cultural assumptions. Students can expect to learn communication variables that differ among cultural groups, including the use of eye contact, body language, personal space, hierarchy, and time. Additional topics include persuasion and negotiation across cultures and the ethics of communication in international business. Students learn through the use of a blend of theory and practice. Activities include lectures, guided discussions, group projects, student and guest speaker presentations, and analysis of specific cross-cultural managerial challenges, with an emphasis on the service industry.

HADM 7761 M.M.H. Managerial Communication

Fall. 3 credits. Required. Limited to 40 M.M.H. students per sec. D. Lennox.

Managers use communication strategies that involve written and oral messages to solve problems and to accomplish professional goals within the workplace. The chief goal of this course is to help students become more competent, confident, and versatile communicators. Each student prepares clear and powerful messages—reports, oral presentations, letters, and memos—and learns to approach problems analytically and make thoughtful communication choices, some of which are situation-specific.

Law

HADM 3385 Business Law I

Fall, spring. 3 credits. Elective. Open to Hotel School juniors, seniors, and graduate students and non-Hotel students. P. Wagner.

Provides students with a presentation of three substantive areas of business law: employment law, franchising, and business organizations. Students read judicial opinions; learn to identify issues; and analyze the issues by applying legal principles.

HADM 3387 Business and Hospitality Law

Fall. 3 credits. Required. Prerequisite: junior, senior, or graduate standing. D. Sherwyn.

This course provides students with an integrated presentation of employment discrimination, tort, and contract concepts as they apply to the legal aspects of hospitality management. Students examine relevant federal and state cases and statutes. The overall objective is to enable students to recognize, analyze, and evaluate legal issues for the purpose of making and articulating appropriate decisions in the workplace.

[HADM 4481 Labor Relations in the Hospitality Industry (also ILR 4060)]

Spring. 4 credits. Elective. Prerequisites: HADM 3387 or ILRCB 2010. Next offered 2010–2011. R. Hurd and D. Sherwyn.

This course will focus on the critical labor relations issues facing the hospitality industry. All students will participate in simulated organizing campaigns and contract negotiations. Representatives of management and unions will address the class on key contemporary developments.]

[HADM 4485 Employment Discrimination Law and Union-Management Relations

Spring. 3 credits. Elective. Prerequisites: junior, senior, or graduate standing; HADM 3387 or permission of instructor. Next offered 2010–2011. D. Sherwyn.

This course provides students with an understanding of discrimination laws, a framework for complying with laws, and a method for using the laws to maintain positive employment relations.]

HADM 4487 Real Estate Law

Fall, spring. 3 credits. Elective. Prerequisite: junior, senior, or graduate standing. Recommended: completion of HADM 3387. A. Klausner.

This course provides students with an understanding of the legal issues surrounding the ownership, transfer, and use and development of real estate. Students will learn to recognize and evaluate legal issues in order to inform the decision-making process with respect to real estate, whether as a business executive, an entrepreneur, or in personal life.

HADM 4489 The Law of the Internet and e-Commerce

Fall. 3 credits. Elective. Prerequisite: junior, senior, or graduate standing. A. Klausner.

The computer industry and the Internet have fundamentally changed the world in swift, dramatic fashion. The emergence of global digital networks and digital technologies offer to nearly anyone the ability to access, store, mine, manipulate, and transmit vast amounts of information. At the same time, this revolution in the use of information raises new and often complex legal disputes in areas such as copyright, trademark, privacy, speech, contract formation, jurisdiction, information security, etc. Moreover, the rapidly growing maze of laws directed at the Internet is another thorny obstacle for persons and companies doing business on the web. The purpose of this course is to acquaint students with the legal topics and principles applicable to the Internet, and to help students identify and understand the rapid developments of the law of the Internet by exploring specific problems.

HOSPITALITY FACILITIES AND OPERATIONS

Food and Beverage Management

HADM 2236 Culinary Theory and Practice

Fall, spring. 4 credits. Required. Prerequisite: HADM 1106. Because this course is laboratory-based, students may not drop after first full week of classes; during first week of class, students may drop only with permission of instructor and/or academic dean. Failure to attend first lab may result in administrative drop. R. Spies.

This course introduces the student to food and beverage operations through three major components: fundamental food composition and properties, food products and preparation, and food safety. Students prepare recipes, menus, and production schedules. Students develop the ability to recognize properly prepared foods by preparing, tasting, and evaluating them. They also are involved in a project in which they create menus, develop and standardize recipes, and complete a plan for a dining event. Completion of a five-hour practicum experience in the Statler Hotel back-of-the-house is a required course activity.

HADM 2290 Introduction to Culinary Arts

Fall, spring. 2 credits. Elective. Limited to 28 non-Hotel students; priority given to seniors and graduate students. Preregistered students who do not attend first class are automatically dropped from instructor's record. Absolute drop deadline is F of first week of classes. Fee (includes cost of uniform and uniform cleaning): \$75. G. Norkus.

This course focuses on the study of food groups and their methods of preparation, cooking, and presentation. The course is designed specifically for non-Hotel students who are interested in learning the professional approach to food preparation and service with hands-on practice. Students are involved in food product identification, preparation and service methods, and learning the professional language of food and cooking.

HADM 4430 Introduction to Wines

Fall, spring. 2 credits. Elective. Prerequisite: Hotel juniors and seniors; seniors and graduate students in all other colleges. Hotel students strongly encouraged to enroll in fall semester. Students are exempt from 21-year-old age requirement under Section 65 of New York State law. Preregistered students who do not attend first class and who fail to notify secretary in 274 Statler Hall of their absence before first class are automatically dropped from instructor's records. These students must drop the course officially with their own college. Because of high demand for this course and consumption of a product, the absolute drop deadline in fall for all students is F, Sept. 11, 2009, and drop deadline in spring is F, Jan. 29, 2010. Fee (includes cost of wine glasses and tasting kit): \$30. No auditors. S. Mutkoski.

Students will be introduced to the major wine-producing regions of the world and what consumers need to know to purchase wine at retail outlets and in a restaurant setting. Lecture topics include flavor components in wine; pairing wine and food; responsible drinking; selecting quality and value wine; and wine etiquette. Samples from a variety of countries, regions, and vineyards are evaluated.

HADM 4431 Wine and Food Pairing Principles and Promotion

Fall. 2 credits. Elective. Limited to 20 Hotel juniors, seniors, and graduate students only. Prerequisite: HADM 4430. G. Pezzotti.

This course focuses on the pairing and creative marketing of wine and food. Students develop an understanding of regional and varietal wine styles, how food flavors can

change a wine's flavor, and the promotion of wine and food. Topics include wine and food pairing principles, cuisines and their flavor components, food trends in restaurants and in the home, special event planning, and wine-list development. Students design and present wine and food tastings to industry guests.

HADM 4432 Contemporary Healthy Foods

Fall. 3 credits. Elective. Priority given to 20 seniors and graduate students; others may enroll, space permitting. Prerequisite: HADM 3305 or equivalent. Cost of required field trip: \$75. M. Tabacchi.

This course is designed to build a greater awareness and understanding among nutrition and foodservice professionals of the origins and manifestations of today's health-conscious and educated foodservice patron. Students gain an understanding of the marriage of nutrition and the imaginative, flavorful cuisine demanded by today's consumer. Emphasis is on the use of fresh produce, lean meats, and lack of fabricated diet foods. Creativity and nutrient density of foods served are very important components of menu design in this course. Key topics include the preparation, marketing, merchandising, and selling of healthy menus in the Statler Hotel.

HADM 4435 Selection, Procurement, and Supply Management

Spring, first seven weeks of semester. 2 credits. Elective. Limited to 20 Hotel juniors, seniors, and graduate students or permission of instructor. Add/drop deadline Sept. 5, 2009. R. Spies.

This course deals with contemporary management issues related to procurement activities within the hospitality industry. Focus is on both the food distribution industry and the hospitality industry so that students understand the role the distributor plays in the movement of food and supplies from the producer to the hospitality operator and how the creation of distribution partnerships serves to improve efficiency and reduce costs. Topics include distribution channels and intermediaries in the supply chain; food distributor financial statement analysis; evaluation and selection of suppliers; development of buying strategies; purchase timing and inventory management; the emerging role of the Internet; and e-procurement service providers.

HADM 4436 Beverage Management

Spring. 3 credits. Elective. Prerequisite: Hotel junior, senior, or graduate standing; HADM 4430 (co-registration not allowed). S. Mutkoski.

This course is designed for students who intend to pursue a career in food and beverage management. Course work deals specifically with the management of beverage operations. Lectures include dram shop liability; staff training and responsible customer service; beverage pricing; food and wine pairings; wine list development; purchasing, storage, and service; wine regions; cost controls and loss prevention; and creative beverage merchandising. Guest lectures highlight industry trends and outlooks.

HADM 4437 Anheuser Busch Seminar in Quality Brewing and Fine Beer

Fall, spring, first seven weeks of semester. 2 credits. Elective. Prerequisite: Hotel students only; HADM 4430. One required local field trip (no fee). G. Pezzotti.

This course is designed for upper-level students who intend to pursue a career in the food and beverage industry. Students will advance their knowledge about beers in terms of managing such products in a restaurant setting or other foodservice outlet. Lecture topics include the brewing process; sensory aspects of beer; international beer types and styles; marketing malt products; purchasing and distribution; storage and service; beer and food pairings; staff training and education; cost controls; and third-party liability issues.

HADM 4438 Seminar in Culture and Cuisine

Spring. 3 credits. Elective. Limited to 20 students. Prerequisite: HADM 2236 or permission of instructor. R. Spies.

This seminar explores various cuisines in terms of history, lifestyle, and foods peculiar to a culture. Through the use of readings, research, and meal preparation, students explore various cuisines in depth. The goal of this course is for students to develop an awareness of several international cuisines and to make comparisons and draw relationships among foodways of different cultures. Possible incorporation of each cuisine into restaurant menus is discussed as well. Students write research reports, make oral presentations, and design and orchestrate the preparation of menus.

HADM 4495 Implementing Strategies for Tying Wellness Practices to Company Profit

Spring. 3 credits. Elective. M. Tabacchi.

There is increasing evidence linking job-induced stress to overall health and happiness or lack thereof. Adding to workplace stress are the needs of its diverse and changing population. These stresses affect the financial health of the corporation as well as the psychological and physical health of the individual. The purpose of this course is to encourage future managers to evaluate the work environment and to enhance opportunities for diverse worker productivity, which should increase the corporation's competitive edge. The emerging fields of complementary and alternative medicines are explored as preventive and cost-effective methods of improving workers' health. Business models for encouraging workplace wellness, systems for implementation, reward, and accountability of managers and corporate officers will be introduced in this course. Only a few corporations overtly reward managers and corporate officers for the well-being and concomitant enhanced performance and productivity of their employees.

HADM 6631 Seminar in Multiunit-Restaurant Management

Spring, first seven weeks of semester. 2 credits. Elective. Deadline to drop is midpoint of course. Prerequisite: graduate standing; seniors only by permission of instructor. A. Susskind.

Through a series of directed readings, case studies, and roundtable discussions with industry leaders, this course focuses on strategic issues in the food and beverage

industry that affect the growth and development of multi-unit restaurant companies. In addition to the weekly scheduled seminar time, students are required to attend two receptions to honor the roundtable speakers. In class, students critically evaluate selected research papers related to multi-unit business management to serve as the basis for class discussion and the fostering of a broader understanding of leadership and growth strategies in the multi-unit restaurant business.

Operations**HADM 1101 Hotel Operations Management: Tactics for Profitability**

Summer. 3 credits. R. McCarthy and M. McCarthy.

In this Summer College program you will develop your business, management, and leadership skills while refining your computer, communication, and analytical skills. You will have the opportunity to explore the hospitality industry at the world-renowned School of Hotel Administration.

This course is designed to provide not only an elemental understanding of the hospitality industry but a realistic exposure to the work, decisions, and competitive forces that have an impact on all of those who take a professional stake, either directly in the industry or within one of its supporting industries. You will be responsible for coming up with a business plan and operating a 250-room simulated CHESSE Hotel. Through careful analysis of your hotel's financial information you will see the multiple impacts of the decisions you make and the issues that need to be taken into consideration and balanced in order to operate a profitable business. Your interpretation of your analysis will be presented in a concise, professional, and well-organized fashion in the form of a business report. You will learn how to use the Microsoft Office 2007 suite of products to support your analysis and to effectively communicate your findings. Your business report will serve as a cumulative demonstration of the knowledge that you have gained during the program.

HADM 1105 Introduction to Hotel Operations

Fall, spring, seven weeks. 2 credits. Required. Prerequisite: Hotel or ITD students. **Corequisite:** HADM 1106. Students enrolled in Lec 1 of HADM 1105 take Lec 2 of HADM 1106 in same semester, and vice versa. R. McCarthy.

This course is designed to introduce students to the scope of the hotel industry and the organizational structure and operational mechanics of how the departments within the rooms division of an individual hotel operate. Understanding the scope of the industry involves understanding who the major players are and what market segments their brands serve. Students gain an understanding of how work is performed and how activities are coordinated within the rooms division and among other hotel departments. Completion of a front desk and housekeeping practicum at the Statler Hotel is a required course activity.

HADM 1106 Introduction to Food Service Operations

Fall, spring, seven weeks. 2 credits.

Required. Prerequisite: Hotel or ITD students. Corequisite: HADM 1105. Students enrolled in Lec 1 of HADM 1106 take Lec 2 of HADM 1105 in same semester, and vice versa. S. Lipinski and R. Spies.

Students are introduced to the principles of foodservice operations, beginning with an overview of the foodservice industry at large. Attention is initially focused on major industry segments, business practices, and trends. Subsequently, detailed consideration is given to the components of the foodservice system: marketing, menu planning, production, service, controls, and quality assurance. Product and systems differentiation in various industry segments are emphasized throughout the course. Completion of a work experience in the Statler Hotel is a required course activity.

HADM 2201 Hospitality Quantitative Analysis

Fall, spring. 3 credits. Required. Prerequisite: Hotel or ITD students. R. Lloyd.

This introductory statistics course is taught from the perspective of solving problems and making decisions within the hospitality industry. Students learn introductory probability, as well as how to gather data; evaluate the quality of data; graphically represent data; and apply some fundamental statistical methodology. Statistical methods covered include estimation and hypothesis testing relating to one- and two-sample problems of means, simple linear regression, and multiple regression. Problems involving multiple means (one-way ANOVA) are covered as a special case of multiple regression, time allowing. Minitab is used as the statistical computing software.

HADM 3301 Service Operations Management

Fall, spring. 3 credits. Required. Limited to 70 Hotel students per lecture.

C. Anderson, G. Thompson, and R. Verma. Students are introduced to statistical and operations research methods that are appropriate for the hospitality industry. The goal of the course is to provide students with the skills and understanding necessary for making decisions using quantitative data. Students use computer spreadsheet software extensively. A key requirement of the course is an ability to communicate the results of analyses in a clear manner. Topics include probability; decision analysis; modeling; forecasting; quality management; process design; waiting lines; and project management.

HADM 3303 Club Management

Fall, second seven weeks; spring, first seven weeks. 2 credits. Elective. Deadline to drop course is midpoint of course.

Limited to 35 Hotel juniors and seniors only in fall, no freshmen; open to non-Hotel students only in spring; Hotel students by permission only. R. James. Students study private membership clubs and the leadership role in club administration. The application of current management principles in a not-for-profit environment is discussed, and club management is compared to other areas of the hospitality industry and other not-for-profit organizations. Topics

include tournament, facility, and recreation management; legal, financial, and legislative issues; human relations and human resource considerations; and marketing, pricing policies, and quality standards.

HADM 3305 Restaurant Management

Fall, spring. 4 credits. Required. Limited to 27 Hotel students per lab. Prerequisite: HADM 2236 and Bar Code and Serv-Safe certified. Cost of lab manual, certification for alcohol service, utensils for front- and back-of-house: approx. \$85. **Because of group work for this course, absolute deadline to drop course in fall is Sept. 4, 2009, and in spring is Feb. 5, 2010.** A. Susskind.

This course offers the opportunity to synthesize the skills, concepts, and theories students have learned in other classes and apply them practically in an actual restaurant setting. Lecture topics cover pertinent issues and principles relevant to the industry at large and then are incorporated as a class into actions that occur in the student-run operation.

HADM 4401 Restaurant Entrepreneurship

Fall, spring. 3 credits. Elective. Limited to 20 Hotel students. Prerequisite: written permission of instructor. Max. cost of five required field trips: \$350. G. Pezzotti.

This course is designed for students who have a strong interest in food and beverage operations and who may be considering a career as an entrepreneur. Under the supervision of the instructor and using student-developed case studies, students visit and analyze various independently owned and corporate restaurant operations. Analysis covers, but is not limited to the restaurant's concept (market), organization, ownership, management, physical structure, staff, front-of-the-house operations, back-of-the-house operations, and fiscal integrity. Readings about current topics in the restaurant industry are required. Classes alternate weekly between field trips (2:30 P.M. through dinner hour) and seminars/case presentations.

HADM 4402 Contract Foodservice Management

Spring. 3 credits. Elective. Prerequisites: HADM 1106 and HADM 2236. Faculty.

The course focuses on outsourcing foodservice operations management in venues such as business and industry, education, sports and entertainment, and lodging. It is particularly relevant since the service segment of business has been focusing on outsourcing all kinds of operational components. Students gain a broader perspective of hospitality foodservice operations rather than just restaurants and hotels. They also explore operational parameters appropriate for different types of foodservice venues, as well as evaluating RFPs and contracts.

HADM 4403 Specialty Food and Beverage Operations: Guest Chefs

Spring. 3 credits. Elective. Limited to 20 students. Prerequisite: Hotel juniors, seniors, and graduate students; HADM 3305; permission of instructor. G. Pezzotti.

This course is designed for students having a strong food and beverage orientation. Students considering a career in the hotel or restaurant food and beverage environment or those who anticipate interacting with present-day culinary trends find the course especially

beneficial. Over the course of the semester, the class, working in groups, will be responsible for the marketing, organization, planning, production, service, financial analysis, and accounting relative to three guest-chef specialty production nights. The chef will be asked to recommend the evening's menu reflecting his or her culinary background and work with the class in producing the meal for the Cornell community using the Hotel School's facilities. A required final project analyzes the relative degree of success experienced during each guest-chef event. The analysis considers consumer reactions as well as proper application of food and beverage management principles.

HADM 4404 Catering and Special Events Management

Fall. 3 credits. Elective. Limited to 30 students. Prerequisites: HADM 2236 or permission of instructor. Cost of required field trip to New York City: approx. \$250. R. Spies.

The catering and special events industries are among the fastest-growing segments within the hospitality industry. This course focuses on off-premise and on-premise catering for social and business functions and the management of large-scale independent events, such as sporting events, artistic performances, and product launches. Topics include organizational structure; legal aspects of catering and special events management; product and service development; marketing and sales; catered function and special event planning and execution; staff recruitment and training; post-event analysis; financial success of catering; and special events businesses.

HADM 4408 Introduction to Casino Operations

Fall. 2 credits. Elective. Limited to Hotel students, others by permission of instructor. Drop deadline for course is end of week three. Cost of required field trip to Atlantic City: approximately \$300. R. McCarthy.

A vital part of the hospitality industry, casino gaming is one of the most exciting and fastest-growing industries. This course focuses primarily on the operation and ownership of commercial casinos and the hotels attached to them. It is designed to introduce students to the internal and external casino environment. It looks at the historical development of gaming in America to understand how the industry has evolved to its present form. Students learn the organizational structure of a casino hotel, how it operates, and how it makes money. Students also gain an understanding of the different companies that own casino hotels and the current issues facing these companies. Topics include casino marketing strategies and player rating systems; the social and economic impact of gaming and the various regulatory environments within which casinos operate; and how common casino games are played and the mathematics of the various games. Students build on their food and beverage and hotel knowledge to better understand the specific challenges facing casino hotel operators.

HADM 5502 Advanced Hospitality Quantitative Analysis

Spring. 3 credits. Elective. Prerequisite: HADM 2201 or permission of instructor. R. Lloyd.

The course introduces students to topics in statistics that can be utilized by corporate or business leaders to aid in decision making. It builds upon the statistical knowledge gained from HADM 2201, including in-depth statistical techniques that may not be mainstream within the hospitality industry today, but which are growing in importance. Topics include more multiple regression; simple and multiple logistic regression; one- and two-factor ANOVA, with multiple comparison procedures; chi-squared tests of independence of categorical factors; tests of proportions; and predicting and forecasting with artificial neural networks. Computational programs include Minitab (used in HADM 2201) and Alyuda NeuroIntelligence.

HADM 6600 Advanced Revenue Management

Spring; second seven weeks. 2 credits. Elective. Hotel graduate students only, others by permission of instructor. This course is taught via video-conference with CNI-Singapore. S. Kimes.

In this course, students will work in virtual teams and learn how to apply revenue management solutions to nontraditional applications such as golf, spa, function space, and retail.

HADM 6602 Spa and Spa Hotel and Resort Development and Management

Fall, spring. 3 credits. Elective. Limited to 33 Hotel School seniors and graduate students; others may enroll, space permitting. Cost of two required field trips: approx. \$150. M. Tabacchi.

This course emphasizes the development, management, and marketing of free-standing spas, spas in hotels and resorts, and spa restaurants. Day spas, resort spas, and destination spas are studied in depth. The feasibility of success for new spas and the marketing research necessary to establish new spas are discussed. The design of menus, mental and physical fitness programs, stress management, spa medical treatments, complementary medical treatments, and other spa programs are all considered. Required personnel, safety, legal, and ethical issues regarding spas are an important part of the course. The integration of nutritious menu items into restaurant menus and their marketing and merchandising is studied. Guest speakers from spas are an integral part of the course.

[HADM 6603 Quality and Process Improvement

Spring. 3 credits. Elective. Prerequisite: graduate students only. Next offered 2010-2011. R. Verma.

The foundation of this course is on the emergence of quality management as a strategic focus in firms seeking excellence and a competitive edge. Topics include defining quality in service industries; techniques for designing high-quality services; process analysis; problem identification techniques; statistical process control techniques; process capability analysis; and robust design of service processes.]

HADM 6605 Yield Management

Fall, spring. 3 credits. Elective. Limited to 30 students. Prerequisite: senior or graduate standing; HADM 3301 or 7703 or equivalent. C. Anderson.

This course helps students learn how to apply the principles of yield management effectively. Focus is placed on the integration of yield management techniques with information technology, internal management issues, and external marketing concerns. Topics include yield management techniques, forecasting, overbooking, group decisions, and management and marketing issues.

HADM 6606 Restaurant Revenue Management

Fall. 3 credits. Elective. Limited to 40 students. Prerequisites: HADM 7703; graduate standing or permission of instructor. G. Thompson.

Revenue management is a method for managing capacity profitably. The objective of this course is to help students learn how to apply the principles of revenue management to maximize profitability in the restaurant industry. The course focuses on methods of managing duration and price with the intent of maximizing revenue per available seat-hour. Topics include forecasting, overbooking, reservations systems, information technology, process design, pricing, and management and marketing issues.

HADM 6609 Airline Service Management

Spring. 3 credits. Elective. Priority given to 30 seniors and graduate students; others may enroll, space permitting. Cost of field trip: approx. \$75. M. Tabacchi.

This course is a must for those interested in a career in the airlines industry. The impact of 9/11 upon the industry is investigated. Airline service and on-board services are used as competitive advantages by airline carriers. In fact, names such as Singapore Airlines and Virgin Atlantic have become synonymous with service excellence in the service economy. The strategies of developing competitive advantages and superior service in today's erratic economic climate are a major part of class discussion. Guest speakers from American Airlines, Singapore Airlines, US Airways, Delta, Continental Airlines, Virgin Atlantic, and SkyChefs are featured. In addition to service strategies both on the ground and in the air, students study the challenge of serving meals on international flights. Strategies, planning, and forecasting by these executives are examined. Case studies based on national and international airline business are an integral part of the course. A field trip to an airline's hub city enables students to observe first-hand the industry and its personnel in action.

HADM 7703 Operations Management

Summer. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. G. Thompson.

Based on principles of scientific management, the course gives students the skills and understanding necessary for decision-making using quantitative and qualitative data. Students use computer spreadsheet software extensively for "number-crunching" analyses and learn to communicate the results of their analyses in a clear manner. Students are provided with a "tool kit" of sophisticated Excel models for solving service-operations problems.

Facilities Management, Planning, and Design

HADM 2255 Hospitality Development and Planning

Fall, spring. 3 credits. Required. Not open to freshmen. S. Robson.

Students are introduced to the issues and opportunities inherent in the development and planning of hospitality facilities, specifically hotels and restaurants. Course components include the project development sequence; conceptual and space planning; architectural design criteria; construction management; and the interpretation of architectural design and consultant drawings. There is an emphasis on setting appropriate facilities requirements, understanding industry practice, and implementing properties decisions within a balanced design, operations, and financial framework.

HADM 3351 Hospitality Facilities Design

Fall. 4 credits. Elective. Limited to 36 students. Prerequisite: HADM 2255 or permission of instructor. R. Penner.

This intensive studio course provides the graphic skills important for design and experience in applying these skills in hospitality planning and design situations. Students prepare design projects using both hand drafting and computer-aided design (CAD) software. These assignments cover basic graphic skills and layouts for typical hotel spaces including guest room suite, lobby and lobby bar, and full-service restaurant or specialty coffee retail outlet.

HADM 3355 Hospitality Facilities Management

Fall, spring. 3 credits. Required. Prerequisite: HADM 2255. C. A. Fisher.

This course provides an overview of the operation of hospitality facilities, including operating costs for various types of facilities, types and characteristics of major building systems, and the responsibilities of the engineering maintenance department. The renovation needs of hospitality facilities are examined, and key managerial aspects of renovations are considered.

[HADM 4451 Restaurant Development

Fall. 3 credits. Prerequisites: Hotel seniors or graduate students; juniors by permission of instructor; for undergraduates: HADM 3305. Students who wish to develop design skills for restaurant concepts are encouraged to enroll in HADM 4453 in the following spring. Next offered 2010-2011. S. Robson.

Students are exposed to the process, challenges, and rewards of developing a restaurant concept from the idea to the construction of the first unit. The course includes readings, discussions with industry leaders, and cases and culminates with students formulating a detailed restaurant concept and development plan.]

HADM 4452 Sustainable Development and the Global Hospitality Industry

Fall. 3 credits. Elective. Prerequisite: junior, senior, or graduate standing. Cost of required overnight field trip: approx. \$150. Staff.

This multidimensional course introduces the global sustainability and environmental movements, their impact on the hospitality industry, and responses to and opportunities associated with sustainability. Readings will

be drawn from the environmental, sustainability, and hospitality literature. Students should be prepared to encounter conflicting views in the readings and in classroom discussions. The course attempts to portray a variety of viewpoints regarding issues of contemporary interest to society and the business community. Discussion of these issues is a key component of the course. An overnight field trip may be a required course activity.

[HADM 4453 Foodservice Facilities Design

Spring. 3 credits. Elective. Limited to 12 students per sec. Pre- or corequisites: HADM 3351, 3305, and 4451 or permission of instructor; Hotel seniors; juniors by permission of instructor. Grads should have commercial food production experience. Next offered 2010-2011. S. Robson.

This course provides an introduction to the basic concepts of foodservice facilities design and planning with an emphasis on restaurants. All documentation is produced on CAD, which is taught as part of the weekly studio. Students also use studio time for planning, designing, and writing specifications for a medium-size restaurant kitchen.]

HADM 4457 Hotel Development

Fall. 3 credits. Elective. Prerequisite: senior or graduate standing; juniors by permission of instructor. Cost of required overnight field trip: approx. \$150. Staff.

This multidimensional course introduces the global sustainability and environmental movements, their impact on the hospitality industry, and responses to and opportunities associated with sustainability. Readings will be drawn from the environmental, sustainability, and hospitality literature. Students should be prepared to encounter conflicting views in the readings and in classroom discussions. The course attempts to portray a variety of viewpoints regarding issues of contemporary interest to society and the business community. Discussion of these issues is a key component of the course. An overnight field trip may be a required course activity.

HADM 4459 International Hotel Development

Spring. 3 credits. Elective. Limited to juniors, seniors, and graduate students. Staff.

The seminar course includes discussion of corporate expansion strategies, the international development process, viewpoints of different stakeholders, and development challenges such as technology, infrastructure, environmental concerns, and public policy issues. Students research a variety of international destinations and the strategies of emerging management companies. Guest lecturers will present and discuss new projects in Europe, the Middle East, South America, and Asia, and contrast these opportunities to development in the United States.

HADM 7751 Properties Development and Planning

Fall. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. R. Penner.

This course serves as an overview of hospitality project development and planning from the perspective of an owner and

manager. Students learn about the role of the development team, feasibility studies, space programming, construction management, and functional and design criteria for hotels and restaurants. Teams prepare program documentation for a new hotel or restaurant or one undergoing major repositioning.

MARKETING, TOURISM, STRATEGY, AND INFORMATION SYSTEMS

Marketing, Tourism, and Strategy

HADM 1141 Micro-economics for the Service Industry

Fall, spring. 3 credits. Required. Limited to 70 Hotel students per lec. B. Carroll.

This course introduces students to microeconomic principles and theories in the context of applications and solutions associated with the service industry with a focus on hospitality and travel. Topics include principles of production, supply and demand, firm behavior, costs, pricing, and topics specifically associated with the travel and hospitality industry. Course work includes readings, lectures, discussions, problem sets, and guest speakers.

HADM 2241 Marketing Principles

Fall, spring. 3 credits. Elective.
Prerequisite: non-Hotel students. Not open to seniors or graduate students.
H. Chun and M. D. Giebelhausen.

This is a foundational marketing course that includes the study of concepts, activities, and decisions related to the exchange process, managing the marketing mix and development of marketing strategy in for-profit and not-for-profit organizations. In a nutshell, marketing is about customers and the development, distribution, and promotion of products. The grease that makes this process work is rooted in the concept of exchange. A priority is to understand how market decision-makers interact so as to create a mutually satisfactory exchange. Emphasis in this course will be placed upon a conceptual understanding of the concepts and ideas such that, as customers and service deliverers you might apply the ideas to your own lives.

HADM 2243 Marketing Management for Services

Fall, spring. 3 credits. Required. Limited to 70 Hotel students per lec; no freshmen.
H. Chun, C. Dev, M. D. Giebelhausen, and R. Kwortnik.

Students develop an understanding of marketing management: the process through which organizations analyze, plan, implement, and control programs to develop and maintain beneficial exchanges with target buyers. Students learn about marketing management through a mix of readings, lectures, class discussions, individual and group exercises, industry guest speakers, and exams. A key element of the course involves students working to create a marketing plan.

HADM 3340 Franchising in the Hospitality Industry

Spring, second seven weeks of semester. 2 credits. Elective. Not open to freshmen. Note: deadline to drop course is point of course. Grad students should enroll in HADM 6640. J. Lavin.

The course deals with relationships between the franchisor and the franchisee, advantages and disadvantages of franchising, structure of and services offered by franchisors. Case studies of leading lodging and restaurant companies currently offering franchises will be discussed. There also will be guest speakers from the franchising industry.

HADM 3343 Marketing Research for Decision Makers

Fall. 3 credits. Elective. Prerequisite: HADM 2243 and a statistics course.
M. D. Giebelhausen.

This course helps students become better consumers of marketing research. Topics include issues involved in designing, conducting, and interpreting focus groups, depth interviews, surveys, experiments, and choice models. Special emphasis is placed on what each method should and should not be used for and why.

HADM 3347 Consumer Behavior

Fall, spring. 3 credits. Elective. Limited to 200 students. Prerequisite: junior or senior standing; HADM 2243 or equivalent introductory marketing course. Grad students should enroll in HADM 6647. H. Chun and M. Lynn.

This course helps students become better at understanding, predicting, and influencing consumer behavior. Topics include motivation, perception, learning, decision making, attitudes, nonverbal communication, persuasion, compliance, geodemographics, and psychographics. The practical implications of psychological principles are emphasized. Specific applications involve such areas as guest frequency programs, menu design, promotional strategy, personal selling, sales and marketing planning, and marketing research. Class time is used for discussions and application exercises as well as for the presentation of relevant information.

HADM 4441 Strategic Management

Fall, spring. 3 credits. Required.
Prerequisites: senior standing; at least one course in accounting, finance, marketing, operations, economics, and information systems. Because students work in groups, absolute drop deadline is two weeks after first day of class. C. Enz, A. Kalnins, and R. Kosova.

Strategic management integrates all of your previous courses including marketing, finance, accounting, operations, etc., and introduces you to new strategic management concepts. The course examines the total enterprise, the industry, and the competitive environment in which it operates. Our goal is to develop a mastery of the analytical tools to perform analyses of the industry and competitors. We focus on how firms formulate, implement, and evaluate strategies. The emphasis of this course is on critical thinking and decision-making to maintain competitive advantage in a hypercompetitive and maturing industry using a case-based approach.

HADM 4443 Innovation and Dynamic Management (also AEM 3280)

Spring. 3 credits. Elective. Limited to 50 seniors and graduate students. C. Enz.

This is a university-wide course that investigates the innovation process, how firms develop innovations, and how to manage change. Innovation involves taking new knowledge and turning it into new products

or services. How successful an organization is in doing so depends on its ability to change and maintain simultaneously. Innovative firms are studied via case analyses. A project gives students hand-on exposure to innovation creation. Emphasis is placed on examining how businesses and managers can build profitable organizations through a process of creative rethinking, re-evaluating, and discarding existing practices. The class will operate as a seminar.

HADM 4444 Introductory Hospitality Entrepreneurship

Fall, spring, first seven weeks of semester. 3 credits. Elective. Prerequisite: HADM 2243 or equivalent. First preference to Hotel students, others by permission only. May not take HADM 4445 concurrently.
J. Quest.

An introductory course for the study of the discipline of entrepreneurship. Introduces students to the process of starting a business from the ground up and to the qualities that are associated with successful entrepreneurs. Students will learn to recognize a good/great business idea and how to evaluate it in terms of market opportunity; superiority of product or service; target audience; competitive landscape; and application of market research. This course will focus on: (a) identifying the business opportunity, (b) developing the concept, and (c) defining and constructing a business model. This course can be described as a business startup feasibility course that uses the construction of a business plan prototype as the format for the class learning experience. The subject matter will be energized with the natural enthusiasm that comes from the day-to-day experiences of starting your own business.

HADM 4445 Developing the Hospitality Entrepreneurship Business Plan

Fall, spring. 3 credits. Elective.
Prerequisite: HADM 2243 or equivalent. First preference to Hotel students, others by permission only. May not take HADM 4444 concurrently. J. Quest.

This is a course for students who wish to learn the disciplines involved in developing a business plan for a startup concept in the hospitality industry. The course will concentrate on the construction of business plans for new business concepts, focusing on all elements of the entrepreneurship discipline: identifying and validating a new business opportunity, and then organizing, constructing, and writing a sound, clear, concise business plan that will include the feasibility phases as well as determining the required resources, acquiring the necessary resources, structure for implementation and management, and strategy for harvesting the venture. Students will be introduced to actual business plans associated with successful capital raising, as well as a review of real-life examples of the process of raising money, furnished by the instructor and other sources. During the course, attention will be given to the disciplines of setting priorities; establishing operational budgets; and developing financial projections resulting from these budgets. This will include a projection for capital needed for startup. Upon completion of the construction of the business plans, the teams will present them to a panel of successful entrepreneurs and professional investors at the close of the course.

HADM 4446 Hospitality Pricing and Analysis

Spring, first seven weeks. 2 credits.
Prerequisite: HADM 1141 and HADM 2243, others by permission of instructor. W. Carroll.

The development and application of pricing strategies in the hospitality industry are presented. Marketing, economic, and financial-pricing principles are applied in the context of the hospitality industry. Students are exposed to both theory and the practical application of pricing tools and analytical processes. Major trends and issues in hospitality pricing are examined and discussed, including the emerging role of the channel management and dynamic travel packaging. Readings, lectures, discussions, cases, exercises, and presentations by industry experts are used to acquaint the student with the complexity and the methods of executing tactical and strategic hospitality pricing actions.

HADM 4447 Managing Hospitality Distribution Strategies

Fall, second seven weeks. 3 credits.
Elective. Prerequisites: HADM 1141 and 2243. B. Carroll.

This course provides a framework for managing marketing distribution strategies. Emphasis is placed on presenting and analyzing the structure and interrelationships among distribution channels within the travel and hospitality industry. Theories of marketing distribution management and analysis are evaluated and applied within the context of that system. Topics include dimensions of hospitality marketing distribution; economics of the major hospitality distribution segments; managing hospitality distribution strategies; and the role of convention and visitors bureaus, national tourist organizations, and associations in distribution management.

HADM 5540 Brand Management

Fall. 3 credits. Elective. C. Dev.
This course explores the impact of brands on consumer behavior, product management, and value creation. Through presentations, cases, exercises, and projects, we will examine the theories behind branding, the challenges of implementation, and current trends in branding. The traditional brand management system was created in the consumer packaged goods industry. In this course, we will evaluate its applicability to the service industry, in general, and the hospitality industry more specifically. We will discuss the evolving responsibilities of brand managers in these organizations—from brand introduction to brand extension to brand repositioning. Our ultimate goal is to for students to understand the opportunities and challenges faced by today's service organizations in creating, growing, managing, and evaluating brand equity.

HADM 5541 International Marketing

Spring. 3 credits. Elective. Prerequisite: core marketing class or permission of instructor. J. Katz.

The goal of this course is to teach students how to create an international expansion plan for products and services. The course progression follows the creation of such a plan; students submit four papers that reflect the components of this plan, and the final submission should look like a real international business plan. To that end, students learn how to identify internationally

transferable competitive advantages and define their product/service based on that; perform quantitative analyses of all potential markets; complete more detailed qualitative and quantitative analyses of two target markets (of their choice); and develop a marketing entry strategy.

HADM 6640 Franchising in the Hospitality Industry

Spring, second seven weeks of semester. 2 credits. Elective. Note: deadline to drop course is point of course. Undergrad students should enroll in HADM 3340. J. Lavin.

The course deals with relationships between the franchisor and the franchisee, advantages and disadvantages of franchising, structure of and services offered by franchisors. Case studies of leading lodging and restaurant companies currently offering franchises will be discussed. There also will be guest speakers from the franchising industry.

HADM 6641 International Business Strategy

Fall. Elective. 3 credits. Limited to advanced undergraduates and graduate students. R. Kosova.

This course will provide theoretical and analytical framework for understanding various aspects of international business environment and its implications for corporate-level strategy. It will also derive some implications for the global operations in the hospitality industry. After reviewing the basic concepts of international business strategy and current globalization trends, the course focuses on the detailed analysis of the global business environment, including: assessment of economic and political risks; impacts of cultural differences, international trade and commercial policy, exchange rates exposure, regional integration, role of global institutions as well as issues related to protection of property and intellectual property rights. Afterwards, the course analyzes how firms decide about market entry, pros and cons of various modes of entry including foreign direct investment (FDI) and debates political economy issues of FDI. At the end, the students have the opportunity to practice the learnt topics in the in-class game, which simulates the negotiations between multinationals, local companies, and governments during firm global expansion.

HADM 6645 Services Marketing and Customer Experience Management

Fall. 3 credits. Elective. Prerequisite: graduate standing; marketing course or permission of instructor. R. Kwornik.

Students will develop critical analytic skills and knowledge for implementing service strategies to create and manage the customer experience. Topics include services consumer behavior and decision processes; services research methods; service quality analysis; customer-relationship management and service recovery; service experience design (analysis of "service as theater," service "blueprinting," and the "servicescape"); and integrated marketing communication strategies for services. Students learn through discussion of current services theories and research, experiential exercises, case analyses, and industry guest speakers. A main focus of the course is a team consulting project involving a services-marketing audit of a "live" organization.

HADM 6647 Consumer Behavior (also NBA 6260)

Fall. 3 credits. Elective. Limited to 25 graduate students. M. Lynn.

This course helps students become better at understanding, predicting, and influencing consumer behavior. Topics include motivation, perception, learning, decision-making, attitudes, nonverbal communication, persuasion, compliance, geodemographics, and psychographics. The practical implications of psychological principles will be emphasized. Specific applications will involve such areas as guest frequency programs, menu design, promotional strategy, personal selling, sales and marketing planning, and marketing research. Class time is used for discussions and application exercises as well as for the presentation of relevant information.

HADM 6649 Integrated Marketing Communications (also NBA 6210)

Fall. 3 credits. Prerequisite: for non-Hotel students permission of instructor.

This course is designed to provide students with the framework and skills required to design, manage, and evaluate integrated marketing communication programs. The course will focus on exploring these tools within the hospitality industry, but the lessons learned can be applied broadly to any service or service-oriented industry. Over the past decade, the number of communication options available to consumers, and hence to organizations, has grown exponentially. With so many different avenues for communication to, from, and among consumers, organizations must approach the communication task with the objective of creating a unified message that is consistent, coherent, and effective across all media—an integrated marketing communications program. Through class exercises, case studies, advertising critiques, online observation and participation, and teamwork on a simulated campaign, students will master the skills necessary for marketing campaign management.

HADM 7743 Marketing Management for Services

Summer. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. M. Lynn.

This course covers the fundamental concepts of marketing management and the techniques, analyses, and frameworks for solving marketing-management problems. Students explore theories and conceptual frameworks that draw on customer, competitor, and core-capability analyses in marketing planning and implementation. Students develop decision-making capabilities in product/service development, pricing, advertising and promotions, and distribution policies. The capstone of the course is team development of a marketing plan for a new hospitality business.

HADM 7444 Competitive Strategies for the Hospitality Industry

Spring. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. A. Kalnins.

The course examines competitive strategies, cooperative strategies, and growth strategies within the hospitality industries and beyond. Our goal is to develop a mastery of the strategic issues facing hospitality as well as important new qualitative tools to perform analyses. We use a case-based approach that

focuses not only on hospitality but other industries as well, allowing thinking “outside the box” and developing novel solutions not possible but studying only hospitality. The course integrates knowledge from all of previous M.M.H. courses including marketing, finance, organizational behavior, and human resources.

Information Systems

HADM 1174 Business Computing

Fall, spring. 3 credits. Required. Limited to 40 students per sec: fall, Hotel freshmen and transfer students; spring, open enrollment. M. Talbert.

This course provides a foundation in information technology (IT) and how it relates to everyday business computing. Students learn IT concepts during lectures, and these concepts are reinforced in practical lab sessions using current standards of business computing. Topics include fundamental IT concepts; proficiency in Microsoft Office; understanding the issues of tool selection, standardization, and efficiency; integration of applications; and recognizing the importance of good computer management.

HADM 2274 Business Computing

Spring. 3 credits. Elective. Limited to 30 non-Hotel students per lec. Co-meets with HADM 1174. M. Talbert.

This course provides a foundation in information technology (IT) and how it relates to everyday business computing. Students learn IT concepts during lectures, and these concepts are reinforced in practical lab sessions using current standards of business computing. Topics include fundamental IT concepts; proficiency in Microsoft Office; understanding the issues of tool selection, standardization, and efficiency; integration of applications; and recognizing the importance of good computer management.

HADM 2275 Introduction to Information Systems Management

Fall, spring. 3 credits. Required. Prerequisite: Hotel students; HADM 1174. P. Clark.

Goals for the course are to learn about information systems; understand and be able to clearly articulate the difference between information technology and information systems; link concepts and technical jargon to the real-world uses of information systems; and learn the information-systems fundamentals needed throughout hospitality careers. The course is designed for students who will work within hospitality organizations as end users, user-managers, leaders, and information-systems professionals. This is not a course for technologists but rather for the general-management student. Students are provided with the essential information that all hospitality management professionals should know about information systems.

HADM 4476 Visual Basic for Applications: End-user Programming

Fall, spring 3 credits. Elective. Limited to 30 students per lec. Due to capacity restraints in Binenkorb lab, attendance at first class is mandatory; no-show students are dropped to make room for stand-by students; students may not drop course after second week of class. M. Talbert.

This is an introductory programming course for end-users (e.g., business managers and consultants). Students develop fluency in the popular Visual Basic for Applications (VBA) language. Using VBA, students learn how to customize and extend the Microsoft Office Suite, with an emphasis on Excel. They also develop custom information systems using Microsoft Office applications as programmable building blocks. Secondary objectives of the course are to cover fundamental design and programming principles. The course is entirely lab-based.

HADM 4477 Advanced Business Modeling

Fall, spring. Lec 1 is first seven weeks of semester, Lec 2 is second seven weeks. 2 credits. Limited to 21 seniors and graduate students; priority given to M.M.H. students. Prerequisite: HADM 1174. Note: Deadline to drop course is midpoint of course. M. Talbert, M. McCarthy.

This course focuses on organizational systems, planning, and decision process and how information is used for decision support in organizations. Students are provided with practical skills in developing spreadsheet computer models using Microsoft Excel. Topics include business planning and forecasting, numerical methods, advanced formulas and functions, user-interface design, data protection and validation, importing external data, and output presentation.

HADM 7772 Information Systems Management

Spring. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or written permission of instructor. Faculty.

Information technologies (IT)-based information systems are important to almost all organizations. They are a primary means for ensuring efficient operations and effective decision-making, and they offer the potential to increase a firm's competitiveness when appropriately planned and used. Students become comfortable with all aspects of information systems decision-making, including systems analysis and design, systems selection and purchasing, and the risks of IT investments. They become familiar with the systems found in hospitality operations. The course is not overly technical, but students are expected to be comfortable researching and discussing information technologies.

FINANCE, ACCOUNTING, AND REAL ESTATE

Finance/Accounting

HADM 1120 Personal Financial Management

Fall, spring. 2 credits. Elective. Limited to 120 non-Hotel students. L. Hensley and E. Cornell.

Students are provided with an overview of personal financial planning including money management, tax planning, use of credit, insurance, investing, retirement planning, and estate planning.

HADM 1121 Financial Accounting

Fall, spring. 3 credits. Required. Prerequisite: Hotel undergraduates. D. Dittman.

This course is an introduction to financial accounting that studies transaction analysis, the balance sheet, income statement, statement of cash flows, and the statement of stockholder's equity. Accounting for investments, bonds, receivables, inventories, tangible and intangible assets, capital stock transactions, as well as the direct and indirect methods for cash flow are analyzed. Basic financial ratios are introduced and interpreted.

HADM 2221 Managerial Accounting

Fall, spring. 3 credits. Required. Prerequisites: Hotel undergraduates; HADM 1121 or equivalent. G. Potter and J. Hesford.

This course focuses on the use of accounting information for management decision making and control. Topics include product costing, budgeting, management decision making, and control systems. There will be one common final exam at the end of the semester.

HADM 2222 Finance

Fall and spring. 3 credits. Required. Prerequisite: Hotel students or permission of instructors. C. Chang and Q. Ma.

The course will provide students with a broad understanding of managerial finance. The overall objective is to develop skills in using accounting and cash flow information for financial planning, capital structure decisions, capital budgeting evaluation, and long-term financial decision-making. Topics will include valuation of investments, capital budgeting decisions, risk analysis for capital budgeting, capital structure, long-term financing, cost of capital, debt capacity, and raising capital in the public markets. When appropriate, specific examples relating to important issues in the hospitality industry will be discussed.

HADM 2223 Financial Accounting Principles

Fall, spring. 3 credits. Elective. Prerequisite: non-Hotel undergraduates. N. Geller and P. Strebel.

This course serves as an in-depth introduction to the principles of financial accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

HADM 2225 Finance

Fall, spring. 3 credits. Elective. Limited to non-Hotel undergraduates. J. Wellman. Students are exposed to a wide variety of corporate finance topics, including time value of money, risk and return, valuation models, cost of capital, capital budgeting, capital structure, and dividend policy.

HADM 3321 Hospitality Financial Management

Fall, spring. 3 credits. Required. Prerequisites: HADM 1121, 2221, and 2222, or permission of instructor. J. deRoos.

This course focuses on owners of hospitality assets and on equity investors in these assets. The course develops an appreciation of the strategic role of real estate in the hotel and restaurant industries and the role of unit-level financial analysis in making investment decisions. That appreciation forms the essence of financial management in hospitality real estate. The course builds competence in using the quantitative tools of financial economics. Topics include property rights, hotel and restaurant investment analysis, valuation of the

assets and the owner's equity, the drives of unit level revenues and value, an introduction to the fundamentals of hotel and restaurant financing, and an overview of the management contracts and franchise agreements used in hotels and restaurants.

HADM 3325 Financial Planning and Wealth Management

Fall, spring. 3 credits. Elective.

Prerequisite: junior or senior standing. P. Strelbel.

Students are exposed to the many facets of wealth management: creating a coordinated financial plan, the dynamics of working with clients, the challenges of running a financial planning practice, and the attributes and skills required to be a successful financial advisor. This course is geared toward students interested in working in an advisory capacity with clients in fields such as investment banking, brokerage, insurance industry, accounting and tax, consulting, law, social work, banking, credit unions, lending institutions, securities, and investments.

HADM 4422 Taxation and Management Decisions

Fall. 3 credits. Elective. Limited to 75 students. Prerequisite: junior, senior, or graduate standing. L. Hensley.

This course introduces students to the tax advantages and disadvantages of the various organizational structures, including corporations, partnerships, and subchapter "S" corporations. Other topics include financial information reporting to tax authorities and to shareholders and how these reports differ; the use of depreciation methods to achieve tax reductions; and syndication techniques and the role tax laws play in promoting private investments and development.

HADM 4425 Securitization and Structured Financial Products

Fall. 3 credits. Elective. Limited to 30 students. Prerequisite: HADM 2222 or equivalent. P. Liu and D. Lebret.

This course deals with the structure and analysis of securitized financial products with an emphasis on residential and commercial mortgage-backed securities (MBS). The course is intended for those who wish to acquire a working knowledge of the analysis of such securities (e.g., collateralized mortgage obligations, commercial MBS, auto loans, and credit card-backed securities) and an understanding of the securitization process. The course's subject matter necessitates a highly analytic and quantitative approach, and students are required to have a strong background in finance and economics. Students who have questions about preparation or background should see the instructor.

HADM 4426 Advanced Corporate Finance

Spring. 3 credits. Elective. Prerequisite: junior or senior standing; HADM 3321.

Graduate students should enroll in HADM 6626. Q. Ma.

Building on the finance class sequence (HADM 2222 Finance and HADM 3321 Hospitality Finance Management), this course helps students develop a framework that is useful for understanding a broad range of major corporate financial policies. While the course materials are relevant to businesses in general, special emphasis will be placed on

applying the framework in the hospitality industries. The framework and applications will be useful to those who will work for corporations, those who will serve as outside consultants to corporations on appropriate financial policies, and those who will work as external financial analysts, whose primary focus is on understanding and evaluating the financial decisions made by corporate management.

HADM 4429 Investment Analysis and Portfolio Management

Fall. 3 credits. Elective. Prerequisites: introduction to corporate finance, financial accounting, introduction to statistics, and beginner knowledge of Excel or permission of instructor. Graduate students should enroll in HADM 6629. C. Chang.

The course is an exploration of the three major investment vehicles: bonds, equity, and derivatives. In each case, students discuss what they are, how they are valued, and what risks they entail. The intimate relationship between return/value and risk is explored. At the focus of these discussions lies the idea that optimal investing is chiefly about balancing risk with returns; extracting maximum gains with minimum exposure; and creating portfolios with "good trade-offs." A study of theories develops a toolkit of skills, and a detailed look at practical application, including pricing anomalies, trading "programs," and a hands-on portfolio simulation, hopes to illuminate this investigation.

HADM 6624 Reporting and Analysis of Financial Statements

Fall. 3 credits. Elective. Limited to 40 students. Prerequisite: junior, senior, or graduate standing. G. Potter.

This course is designed to provide an understanding of the basic accounting model and the accounting rules for the measurement of assets, liabilities, and owners' equity. Emphasis is placed on understanding the economic substance of the transactions and the implications of using alternate accounting rules on the resulting numbers, especially in assessing the "earnings quality" of hospitality firms. Focus is from an outsider's view of the company, and students should be able to evaluate and interpret published financial information, specifically in the context of valuation, debt and compensation contracts, and credit assessment.

HADM 6625 Securitization and Structured Financial Products

Fall, spring. 3 credits. Elective. Limited to 40 seniors or graduate students; others by permission of instructor. Prerequisite: HADM 2222 or 7723. D. Quan and D. Lebret.

This course deals with the structure and analysis of securitized financial products with an emphasis on residential and commercial mortgage-backed securities (MBS). The course is intended for those who wish to acquire a working knowledge of the analysis of such securities (e.g., collateralized mortgage obligations, commercial MBS, auto loans, and credit card-backed securities) and an understanding of the securitization process. The course's subject matter necessitates a highly analytic and quantitative approach, and students are required to have a strong background in finance and economics. Students who have questions about

preparation or background should see the instructor.

HADM 6626 Advanced Corporate Finance

Spring. 3 credits. Elective. Prerequisite: HADM 3321; graduate standing.

Undergraduates should enroll in HADM 4426. Q. Ma.

For description, see HADM 4426.

HADM 6629 Investment Analysis and Portfolio Management

Fall. 3 credits. Elective. Prerequisites: introduction to corporate finance, financial accounting, introduction to statistics, and beginner knowledge of Excel or permission of instructor.

Undergraduates should enroll in HADM 4429. C. Chang.

For description, see HADM 4429.

HADM 7723 Corporate Finance

Summer. 3 credits. M.M.H. requirement.

Prerequisite: M.M.H. students or permission of instructor. L. Canina.

This course builds on the prerequisite courses of financial accounting and financial reporting. Topics include applications of discounting techniques; evaluation of capital expenditures; estimation of cost of capital; bond and stock valuation; portfolio theory; asset-pricing models; and capital-structure decisions. The course emphasizes valuation skills as a means to bring together the cost of capital, financing, and operating issues faced by a firm. Students come to understand the financial impact of managerial decisions; know how to differentiate decisions that increase the value of a firm; and know how to properly evaluate investment, financing, and payout decisions. They also learn standard techniques of financial analysis, such as discounted cash-flow valuation, capital budgeting, risk analysis, and estimation of the cost of debt and equity.

HADM 7724 Managerial Accounting

Summer. 3 credits. M.M.H. requirement.

Prerequisite: M.M.H. students or permission of instructor. J. Hesford.

This introduction to managerial accounting, which is the use of accounting information for decision-making and control, covers: cost behavior, cost classification, cost-volume-profit analysis, product costing, budgeting, variance analysis, cost estimation, cost allocations, customer-profitability analysis, managerial control systems, and performance measurement.

Real Estate Development

HADM 4420 Principles of Real Estate

Fall, spring; 3 credits. Elective. Limited to 50 students. Prerequisites: HADM 2222 or equivalent; junior or senior standing. P. Liu.

This course serves as an introduction to real estate finance and investment. The emphasis of Real Estate Principles is on developing valuation and decision-making skills. It introduces students to the business of real estate, both residential and commercial real estate, including roles, activities and players, terminology, and how the tools, concepts, and models in real estate are used in decision-making. The objectives of this course are twofold: (1) to help students develop an understanding of real estate fundamentals; and (2) to introduce students to the quantitative aspects of real estate—

investment decision-making, valuation under uncertainty, and debt financing.

HADM 4423 Hospitality Real Estate Finance

Fall. 3 credits. Elective. Prerequisite: HADM 3321 or equivalent; junior or senior standing. Graduate students must enroll in HADM 6621. D. Quan.

This course focuses on real estate financing for hospitality-oriented projects. Lectures address the following topics: methods of measuring rates of return; feasibility and appraisal processes; equity and debt financing vehicles to include joint ventures, limited partnerships, construction mortgages, and participating, convertible, and seller-financed mortgages; forms of operating agreements to include management contracts, leases, and franchises; and trends in international hotel franchising. Presentations by hospitality industry real estate practitioners tie course material to current industry practices.

HADM 4428 Real Estate Finance and Investments

Fall, spring. 3 credits. Elective. Limited to Program in Real Estate and Hotel undergrad students; others by permission of instructor. Prerequisites: HADM 3323 or 6621, HADM 4420 or 6620. D. Lebrét.

This course promotes sound real estate investment and finance decision-making, the use of advanced theory, and techniques in financial economics. Real estate investment decisions are made through applications of an extended version of the after-tax discounted cash flow model and other valuation models, including option pricing and regression models. Financing decisions are made using the techniques of modern financial analysis. A wide array of financing options are considered including participating and accrual mortgages. Securitization of equity and debt claims to real estate also are covered extensively. All types of residential and nonresidential real estate are analyzed, including hospitality properties.

HADM 6620 Principles of Real Estate

Fall, spring. 3 credits. Elective. Prerequisite: Hotel M.M.H. and Program in Real Estate students or permission of instructor. P. Liu.

The course is designed to facilitate student learning of real estate fundamentals. This will include both residential and commercial real estate, and develop a thorough understanding of residential mortgage finance and commercial real estate investments. The major objectives of this course are twofold: (1) to help you to develop an understanding of real estate; its practice, its institutions, and its players; and (2) to introduce you to the quantitative aspects of real estate; investment decision making, valuation, and debt financing.

HADM 6621 Hospitality Real Estate Finance

Fall. 3 credits. Elective. Prerequisite: graduate standing. D. Quan.

This course focuses on real estate financing for hospitality-oriented projects. The following topics are addressed: methods of measuring rates of return; feasibility and appraisal processes; equity and debt financing vehicles to include joint ventures, limited partnerships, construction mortgages, participating, convertible and seller-financed mortgages; forms of operating agreements to include management contracts, leases, and

franchises; and trends in international hotel franchising. Presentation of hospitality industry real estate practitioners will tie course material to current industry practices.

HADM 6622 Hospitality Asset Management

Spring, second seven weeks. 2 credits. Elective. Prerequisite: for undergraduates, HADM 3321 and completion of HADM 4420 highly recommended; for graduate students, HADM 7723 and completion of HADM 6620 highly recommended. J. deRoos.

Hotel asset management is the fiduciary responsibility of managing the hospitality investment to meet the specific objectives of ownership. The asset manager's role in building value is analyzed at both the portfolio and property levels. Lectures, assignments, cases, and guest speakers introduce the latest techniques in asset management and provide insights into the current lodging-market and operational challenges. Topics include management contracts; managing the manager; benchmarking property performance; and the capital improvements decision.

HADM 6628 Real Estate Finance and Investments

Spring. 3 credits. Elective. Limited to Program in Real Estate and Hotel grad students; others by permission of instructor. Prerequisites: HADM 3323 or 6621, HADM 4420 or 6620. Software fee: approx. \$50. J. Corgel.

This course promotes sound real estate investment and finance decision-making, the use of advanced theory, and techniques in financial economics. Real estate investment decisions are made through applications of an extended version of the after-tax discounted cash flow model and other valuation models, including option pricing and regression models. Financing decisions are made using the techniques of modern financial analysis. A wide array of financing options are considered including participating and accrual mortgages. Securitization of equity and debt claims to real estate also are covered extensively. All types of residential and nonresidential real estate are analyzed, including hospitality properties.

HADM 6667 Advanced Revenue Management

Fall, spring. 3 credits. Elective. By application only. Application closing dates are well in advance of registration. Prerequisites include HADM 4428 or HADM 6628 or equivalent course work and securities investment experience.

Students manage a real-world portfolio of publicly traded real estate securities and unlisted real estate fund unit interests. Investment management of the portfolio involves fundamental research in property and securities markets, making initial investments in real estate companies and funds, executing trades in positions held in the portfolio, developing/testing trading strategies, and managing risk. The objective of the course is to promote sound real estate investment decision-making. Students will be exposed to a broad literature on real estate securities, fund investing, trading strategies, and hedging. They will be provided opportunities to practice advanced methods of investment management and securities trading with special applications to real

estate, such as taking simultaneous long/short positions to hedge systematic risk, using newly created derivative real estate securities to directly hedge long positions, and running portfolio optimizers to manage unsystematic risk. All types of residential and commercial real estate securities are analyzed, including those of hospitality firms.

OTHER

HADM 4491 Hotel Ezra Cornell (H.E.C.)

Fall and spring. Variable credit: 2–3 in fall and 3–4 in spring. Elective. Prerequisite: Hotel juniors, seniors, and second-year M.M.H. students; others by permission of instructor. Cost of required field trip to November hotel show in NYC: approx. \$200. R. McCarthy.

The HEC Board of Directors are responsible for planning, organizing, staffing, directing, and controlling the weekend-long HEC conference to be held April 8–11, 2010. HEC's mission is to "Showcase Hospitality Education Through Student Leadership." For 80-plus years, HEC has been an essential part of the Cornell Hotel School, allowing students the opportunity to put theory into practice while taking on the leadership responsibility for this student-run hospitality showcase. Board members receive credit for their participation in HEC: 3 Hotel Elective credits in the fall and 3 Free Elective credits in the spring.

Students who are interested in running for board positions in the spring must be in good academic standing with a minimum GPA of 2.5. Eligibility requirements for specific board positions can be obtained from the HEC Office (G72 Statler Hall) and will be distributed to the student body. If you are interested in a board position you are encouraged to discuss your intention with the HEC course instructor.

HADM 4493 Management Intern Program I—Operations

Fall, spring. 6 credits. Elective. Prerequisites: Hotel freshman and sophomore core courses. Highly recommended: HADM 3321, 3305, 3355, and 3365. Additional course work may be required for applicants considering specialized internships. Students must submit detailed plan for completion of all remaining academic requirements before acceptance into course. Faculty.

Limited to juniors and seniors in the Hotel School with approval of the Management Intern Program (MIP) faculty committee. The application process begins the semester before the planned internship. An MIP information meeting is held at the beginning of each semester. Students accepted to MIP enroll in both HADM 4493 and 4494. Students enrolled in HADM 4493 receive academic credit in free electives as well as practical experience in the hospitality field. Six performance evaluations are used to determine this grade. Students must be in good academic standing and have a GPA of at least 2.5 in the preceding semester. Further information is available in the Office of Student Services, 180 Statler Hall.

HADM 4494 Management Intern Program II—Academic

Fall, spring. 6 credits. Elective.

Prerequisite: junior or senior standing in Hotel School; permission of Management Intern Program (MIP) faculty committee. Faculty.

The application process begins the semester before the planned internship. An MIP information meeting is held at the beginning of each semester. Students accepted into MIP enroll in both HADM 4493 and 4494. Students enrolled in HADM 4494 receive academic credit in free electives for submission of a goals and objectives statement, four management reports, six journal entries that focus on insights gained through analysis of events occurring in the workplace, and four Hospitality Management Checklist summaries. Upon return to campus, each intern completes a debriefing and an oral presentation to fulfill the academic requirements. Students must be in good academic standing and have a GPA of at least 2.5 in the preceding semester. Further information is available in the Office of Student Services, 180 Statler Hall.

HADM 4497 Undergraduate Research

Fall, spring. Variable credit. Elective.

Limited to juniors and seniors with a cumulative GPA of at least 3.3. Faculty.

Outstanding students may conduct independent research under faculty supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report. Students make two presentations coordinated by the Center for Hospitality Research (CHR): one at a preliminary stage and one at project completion. Students submit the completed report to the CHR, which will be available online through the CHR web site.

HADM 4498 Undergraduate Independent Study

Fall, spring. Variable credit. Elective. Faculty.

This course can be taken only by students conducting two independent studies in one semester. For more details, see HADM 4499.

HADM 4499 Undergraduate Independent Study

Fall, spring. Variable credit. Elective. Faculty.

Students have the option of conducting an independent study project in any academic area. The number of credits for which students may register are arranged on an individual basis. Note: Students commit themselves to a certain number of credits of independent academic work per week per credit hour if they choose to do an independent study project, and the work must be performed in the semester for which the student is enrolled in the independent study. The usual add/drop policy applies, and retroactive credit for work commenced after an academic semester has ended is not allowed. Projects are conducted under the direction of a faculty member, and regular, frequent consultations are mandatory. Also, a written report must be produced and made available to all faculty members and students of the school after its submission to the supervising faculty member. Credit for independent study projects may not count toward the hotel school elective requirement, but, rather, toward free electives. Students

cannot earn academic credit for independent study when the equivalent material is offered in a regular course, and credit is not earned for teaching a course. Students should consider all aspects of their situation before committing themselves to an independent study project. Enrollment forms are available in the Office of Student Services, 180 Statler Hall.

HADM 5590 Derrida and the Philosophy of Hospitality (also GOVT 4646/6675, FREN 4646/6690)

Fall. 4 credits. D. Rubenstein and L. Shaffer.

Beginning with an examination of hospitality in Plato, Xenophon, Kant, Levinas, and the Bible, we focus on the writings of Jacques Derrida on hospitality from the 1990s until his death. We also consider contemporary readers of hospitality and cosmopolitanism such as Tracy McNulty, Pierre Bourdieu, Seyla Benhabib, Bonnie Honig, James Davidson, Andrew Sandoval-Strausz, and Wayne Koestenbaum. These theoretical texts would be put in tension with practitioners such as Danny Meyers, E. M. Statler, films (Frears, Loach), novels (Kirin Desai), and labor manifestos (Ehrenreich, Levinson.)

HADM 6698 Graduate Independent Research

Fall, spring. Elective. Staff.

Each student must have in mind a project and obtain agreement from an individual faculty member to oversee and direct the study. Written permission is required before course enrollment. Permission forms are available in the Office of Student Services, 180 Statler Hall.

HADM 6699 Graduate Independent Research

Spring. 2 credits. Elective. Staff.

Each student must have in mind a project and obtain agreement from an individual faculty member to oversee and direct the study. Written permission is required before course enrollment. Permission forms are available in the Office of Student Services, 180 Statler Hall.

HADM 7795 Master of Management in Hospitality Master Class

Spring, three-day immersion seminar taught by industry leaders at their establishment during Jan. winter break.

1 credit. Elective. Prerequisite: M.M.H. students or permission of instructor. Faculty.

Students solve problems based on real-life scenarios and present their solutions to industry leaders and the Hotel School faculty members who accompany them. A final paper is due in the spring semester immediately following the seminar.

HADM 7796 M.M.H. Charette

Fall. 1 credit. Required. Prerequisite: M.M.H. students. Staff.

Held during fall break. The M.M.H. Charette is one of several professional and leadership development elements in the required M.M.H. program curriculum. The M.M.H. Charette provides students with a group dynamics laboratory, giving an opportunity to practice group problem solving, prepare a group presentation, and receive group feedback. The Charette is conducted over an intensive weekend working with faculty and a firm in the hospitality industry. Students, working in groups on a problem defined by the firm,

present the results of their work to a panel of faculty and firm representatives 48 hours after receiving instructions.

HADM 7797 Hospitality Industry Leadership Development Program

Summer. 1 credit. M.M.H. requirement.

Prerequisite: M.M.H. students or permission of instructor. Faculty.

A dozen or more senior executives from the hospitality industry visit the campus to evaluate students as individuals and as part of a team. They assess how well the students are able to lead, take direction, work with others, present ideas, and listen to other ideas. At the end of the class, one or more of the industry "coaches" meet with students individually, and in teams, to evaluate performance. This centerpiece of the orientation process is designed to outline some of the personal and career goals students will want to work toward in the coming year.

HADM 8890 M.S. Thesis Research

Fall, spring. Required. Faculty.

HADM 9990 Ph.D. Thesis Research

Fall, spring. Required.

FACULTY ROSTER

- Anderson, Chris, Ph.D., U. of Western Ontario. Asst. Prof.
 Brownell, Judith, Ph.D., Syracuse U. Prof., Dean of Students
 Canina, Linda, Ph.D., New York U. Assoc. Prof., Editor, *Cornell Quarterly*
 Carroll, William, Ph.D., Penn. State U. Sr. Lec.

COLLEGE OF HUMAN ECOLOGY

ADMINISTRATION

Alan Mathios, dean

S. Kay Obendorf, senior associate dean

Carole Bisogni, associate dean

Darryl Scott, director, admission, student, and career development

Tracey L. Thompson, college registrar

COLLEGE FOCUS

The College of Human Ecology anticipates and responds to human needs in the areas of nutrition and health, economic and social well-being, environmental design and technology; as well as human development through education, basic and applied research, and the extension of knowledge. The college is distinctively characterized by the quality of its research in the natural and social sciences and the design arts, a global perspective in academic programs, a preventive approach to contemporary societal problems, multi-disciplinary departments and programs, development of leadership in students and citizens, and a commitment to diverse populations. Faculty and students examine individuals in relation to their family, neighborhood, workplace, and community, seeking a balance between theory and practice that will improve the quality of everyday life.

FACILITIES

The college is housed in Martha Van Rensselaer (MVR), Savage, Kinzelberg as well as the Biotechnology Building and Weill Hall. The buildings include administrative and faculty offices, classrooms, auditoriums, galleries, and lecture halls; wet chemistry and biochemistry laboratories; design studios and computer-aided design laboratories; woodworking shops; human factors and infant research facilities; and classrooms for distance learning. Also included are learning resource centers for career planning, a historical costume collection, a human metabolic research unit, an animal research facility, cold rooms, a constant temperature and humidity laboratory, and an early childhood research and care program.

Specialized equipment for teaching and research includes biochemical and chemical instruments for spectroscopy, chromatography, radioisotope analysis, electrophoresis, microscopy, and ultracentrifugation; physical testing equipment; and cameras, videotape, and sound recording equipment.

DEGREE PROGRAMS

Human Ecology programs lead to the degrees of bachelor of science (B.S.), master of arts (M.A.), master of science (M.S.), master of

professional studies in human ecology (M.P.S.), master of health administration (M.H.A.), and doctor of philosophy (Ph.D.).

General academic information concerning the bachelor of science degree is given here under "Undergraduate Study." Curricula for major studies are described under the various academic areas.

Programs leading to master and doctoral degrees are administered by the Graduate School. They are described in the *Announcement of the Graduate School* and in announcements published by the individual field offices (Design and Environmental Analysis, Human Development, Nutritional Sciences, Policy Analysis and Management, and Fiber Science & Apparel Design). For information regarding the Sloan Program in Health Services Administration, contact the Department of Policy Analysis and Management.

UNDERGRADUATE DEGREES

Bachelor of science (B.S.) degrees are offered in the following areas:

Biology and society

Design and environmental analysis

Fiber science & apparel design

Human biology, health, and society

Human development

Nutritional sciences

Policy analysis and management

UNDERGRADUATE AFFAIRS

Persons interested in undergraduate study in human ecology should contact the admissions office, 170 MVR (255-5471). Those interested in graduate study should contact the graduate field representative identified among the faculty of each department. Department faculty members are listed at the beginning of the course descriptions for each department.

Counselors in the Office of Admission, Student, and Career Development (170-172 MVR) can help prospective students understand college programs and requirements, as well as college and university resources and services. They provide a broad range of career services and personal support for all matriculated undergraduates. The college registrar and degree auditor (146 MVR) assists undergraduates with questions about academic credit and graduation requirements.

The Student Body

The College of Human Ecology undergraduate enrollment is 1,200. Roughly 400 students graduate each year; last year 275 freshmen and 115 transfer students matriculated. Ninety faculty members serve as advisors to undergraduates.

The college's undergraduate admissions committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula. Admission is highly selective. Approximately half of the student body comes from New York State, with the remainder coming from other parts of the United States and abroad. Approximately 30 percent were identified as members of minority groups. Members of the college faculty chair the special committees of approximately 200 graduate students.

Mature Students

The college recognizes that students who interrupted their formal education and are returning to school have needs different from those of younger undergraduates. To facilitate the education of mature students, defined as those 24 years old or older at first matriculation, the college has adopted certain procedures specifically for that group. Counselors in the Office of Student and Career Development (172 MVR) can provide information of interest to mature students. Mature students may be permitted to enroll for as few as 6 credits and also are permitted to extend their residency beyond the normal eight semesters. To find out about qualifying for prorated tuition, mature students must see the college registrar during the course enrollment period in the preceding semester.

Special Students

Students eligible for special status are those visiting from other institutions and interested in particular programs in the college, those with a bachelor's degree who are preparing for graduate study or jobs and careers in human ecology-related fields, or those who have interrupted their education and are considering completing degree programs. Students accepted in the nondegree status of special student may enroll for a maximum of two semesters. During the second semester of attendance, a special student must either apply for admission as a transfer student or plan to terminate studies in the college at the end of the semester. Special students are expected to take a minimum of 12 credits each semester and to take one-half to two-thirds of their work in the statutory divisions of the university. Courses taken while a person is classified as a special student may be counted toward the requirements of the bachelor's degree. Those interested in becoming special students should make appointments to discuss admissions procedures in the Office of Admission (170 MVR, 255-5471).

Empire State Students

Occasionally a student who is completing requirements for a degree through the Empire State College Program is interested in taking a human ecology course. This can be done by registering through the Division of Summer Session, Extramural Study, and Related Programs (B20 Day Hall, 255-4987). All rules

of the extramural division apply, and registrations will be accepted only on a space-available basis and with the written approval of the course instructor. At the time of registration, Empire State College students must provide the extramural division with a completed copy of Empire State College's notification of cross-registration (form number SA-22, F-031) to verify enrollment in Empire State College. Such students will be charged 25 percent of the standard extramural tuition per credit.

Transfer Students

Students may be considered transfer students once they complete 12 college credits after high school graduation. An external transfer student is one who transfers to Human Ecology from an institution outside of Cornell University. Liberal arts credits from other institutions transfer readily, but students must earn a minimum of 60 Cornell credits to graduate. Internal transfer students are admitted to Human Ecology from one of Cornell's other six undergraduate units. Students transferring internally should take special care to learn the policies of Human Ecology, because rules at the various Cornell colleges often differ. Before admission, both internal and external transfer candidates should contact the Office of Admission (170 MVR, 255-5471) to discuss credit transfer. Upon matriculation, admitted transfer students should attend the orientation and contact the Human Ecology registrar's office (146 MVR, 255-2235) to discuss how transfer credits will apply to their specific degree program.

MAJORS

The college requires students to fulfill requirements for a major to graduate. Students must declare a major by the end of the sophomore year. It is common for students to change interests during their undergraduate careers. Counselors in the Office of Student and Career Development (172 MVR), academic advisors, and directors of undergraduate study in each of the academic departments can help students to consider their options and engage in academic planning. All changes of major require submission of the change of major form and are processed through the college registrar's office, 146 MVR. Change of major will trigger re-evaluation of all academic credit and assignment of a new faculty advisor.

DESIGN AND ENVIRONMENTAL ANALYSIS

The Department of Design and Environmental Analysis (DEA) is concerned with planning, designing, and managing the built environment and its effects on human behavior, experience, and the environment itself. The processes for creating, managing, and maintaining the built environment, and the implications for how we live our lives face enormous challenges. These include frequent social and organizational change, technological advances, new building methods, and finite resources. The program in DEA is dedicated to preparing graduates who can help individuals, groups, and organizations meet these challenges.

Diverse faculty backgrounds and teaching approaches help students to develop multidisciplinary problem-solving and creative abilities, aesthetic judgment, and analytical thinking. Students explore innovative concepts for the design and management of interior environments through laboratory, shop, studio, and computer facilities. The relationship between people and their physical surroundings is explored through a combination of academic courses, field experience, and applied research. Examples of student class projects and faculty work are frequently on display in the MVR gallery. The DEA resource center includes books, journals, newsletters, and material samples for student use.

Options

The department offers undergraduate education in three areas: interior design, facility planning and management, and human factors and ergonomics. The interior design option is nationally accredited by the Council for Interior Design Accreditation (CIDA). The Facility Planning and Management Program at Cornell is an IFMA recognized program. This means that it meets the standards for recognition of programs established by the International Facility Management Association.

To take full advantage of the course sequences and electives, it is important to select an option as early as possible. This is particularly true in the interior design option. Transfer students in the interior design option should plan on a minimum of six semesters at Cornell to complete the program.

Option I: Interior Design

This option prepares students for professional careers in interior design. The program emphasizes a design process in which innovative solutions are based on research-derived knowledge of human behavior, values, and attitudes. Students develop an understanding of design theory and methods, design history, behaviorally based programming, and post-occupancy evaluation. They learn about design communication, building systems, furnishings, materials and finishes, and professional practice. Students may use their elective courses to develop a specialization in areas such as design history, historic preservation, theory and criticism, design leadership, interactive multimedia, design sustainability, and behavior-based design.

This program also serves as an excellent preparation for graduate study in interior design, facility management, architecture, and industrial design.

Option II: Facility Planning and Management

This option prepares students for professional careers in facility management. The program focuses on the planning, design, and management of facilities for large, complex organizations such as corporations, health care institutions, research and development laboratories, and universities. Facility planning and management is a basic management function that coordinates and integrates information and expertise from areas such as planning and design, real estate, and business administration with human factors, ergonomics, environmental psychology, telecommunications, and building operations for the purpose of developing and managing

facilities that support individual and organizational effectiveness.

Excellent career opportunities exist in the facility management divisions of private companies, institutions, the health care industry, and with private consulting firms offering facility management services. The program is also a good preparation for graduate study in business, planning, or one of the design disciplines and for advanced study in facility planning and management.

Option III: Human Factors and Ergonomics

This option focuses on the interaction between people, technology, and their physical surroundings. The program seeks to expand understanding of how technology and the environment affects human perception, cognition, motivation, performance, health, safety, and social behavior. This knowledge is then used to help architects, planners, interior and product designers, and facility managers to plan, design, and manage safe and effective environments. This knowledge is also applied to human-computer interaction usability issues. The effect of human capabilities or characteristics such as family structure, life-style, social class, and stage-in-life cycle on environmental needs and requirements is also a focus of the program. Career opportunities are available in software firms, high-technology companies, design firms, and in urban planning and other public agencies as well as in the facility management and product design division of private companies. Human factors and ergonomics is good preparation for graduate study leading to a Ph.D. degree in the social sciences and a career in academic or other research-oriented settings in either the public or private sector. It can also serve as the basis for graduate study in an environmental planning or design discipline such as architecture, facility planning and management, interior design, landscape architecture, or city and regional planning. Electives in the social sciences and in research methods and statistics are encouraged.

Academic Advising

All DEA majors are matched with a faculty advisor during their first semester by the director of undergraduate studies.

Consultation with faculty advisors about future goals, departmental requirements, sequences of courses, and electives inside or outside the college helps students develop their programs. Students majoring in interior design, especially, must begin early to plan and collect materials for a portfolio of their work, which is necessary for many positions and for application to graduate schools. Faculty advisors can make recommendations on what to include. Students are free to change advisors. Although advisors should be consulted about students' schedules during course enrollment each semester, it is the student's responsibility to keep track of his or her courses and to make sure that they meet graduation requirements for their major and college.

Ownership and Exhibition of Student Work

All design work done in studios as part of an academic program is the property of the department until it has been released by the instructor. The department is not responsible for loss or theft of student work.

FIBER SCIENCE & APPAREL DESIGN

The Fiber Science & Apparel Design (FSAD) major is unique in the Ivy League, combining a strong liberal arts foundation with excellent training in apparel and textiles. FSAD offers a broad range of courses, from the art of designing clothing and accessories, to the business of manufacturing and marketing them internationally, to the science of textiles and fibers.

All FSAD students receive an introductory exposure to the basics of textiles and design. Students then choose one of three options that emphasize the application of design principles, management and marketing, or the physical and material sciences. Students may combine courses from more than one option if they choose.

Academic course work is further enhanced by field and international experiences, and significant opportunities to do independent projects for credit with individual faculty members. Gallery space provides the setting to display design work. In addition, the Cornell University Costume Collection, housed in the department, provides a valuable resource; items from the collection are made available to students for classroom and special study use.

Academic Advising

All FSAD majors are matched with a faculty advisor by the director of undergraduate studies, Professor Charlotte Jirousek. Students are strongly urged to discuss their goals, course selection and sequence, electives, and career plans with their faculty advisor. Students in apparel design must begin working with their advisors early to develop a professional portfolio of their work. Students are free to change advisors; changes must be recorded with the director of undergraduate studies. Although advisors oversee course selection for the following semester, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for his or her major and college.

Student Work

All apparel design work done as part of the academic program will be held by the department until it has been released by the instructor. Certain exceptional work may be used by the department to exhibit for academic purposes. The department is not responsible for the loss or theft of student work.

Course Fees

No grade will be given in a course unless the course fee has been paid and equipment returned by the last week of classes.

Options

Students may select options in apparel design, apparel/textile management, or fiber science. Most transfer students will need at least one extra semester to fulfill the requirements of the major. Transfers in the design option should plan on two additional semesters.

Option I: Apparel Design

The Apparel Design option relates the human need for fashionable and functional clothing and accessories to design principles and to the physical properties of textiles. Students

take a sequence of studio courses, focusing on the manipulation by hand, eye, and computer of form, color, and fabric, as well as courses in the social, economic, historical, and cultural aspects of design. Many students participate in design competitions sponsored by the fashion industry.

Option II: Apparel/Textile Management

The Apparel and Textile Management option applies management and marketing principles to industry and consumer issues in this sector of the economy. Courses focus on the processes used to develop, manufacture, and distribute apparel and textile products and examine topics such as business organizational structures, globalization, product development, communication, advertising and marketing, and entrepreneurship. Students combine theory with case studies to find solutions to everyday problems.

Option III: Fiber Science

The Fiber Science option teaches the physical, chemical, and engineering properties of fibrous materials, advanced engineering composites, geotextiles, and protective clothing, as well as the more traditional applications found in apparel interiors. The fiber science option provides a strong base in mathematics and the physical sciences combined with supporting courses in engineering, consumer economics, and the social sciences.

Career Opportunities

Graduates of programs in the Department of Fiber Science & Apparel Design have found challenging employment within the apparel and textile sector, in independent and government-sponsored research, and in community organizations. In addition, the program prepares students for graduate or professional study in apparel design, apparel or textile marketing, business and management, or fiber/polymer science. Some students continue professional study in law or medical school.

Apparel students design for influential fashion houses and under their own labels. Graduates also do specialized design in fields such as military, athletics, and public safety; create innovative clothing for special populations such as children, senior citizens, and the physically challenged; and use their creativity in public-relations firms, theater, publishing, and promotion.

Graduates of the Apparel and Textile Management program are attractive candidates for leadership positions in fashion and other industries. Students who go on to graduate work are well prepared for advanced programs in fields such as business administration, marketing, economics, law, textiles, communication arts, and education.

Recent graduates of the Fiber Science program have begun careers in the fiber and textile industries as well as with government agencies developing and evaluating new products, conducting research, providing technical services, helping to ensure product safety, and coordinating consumer information programs.

HUMAN BIOLOGY, HEALTH, AND SOCIETY

The human biology, health, and society (HBHS) program permits students to combine their interests in the biological sciences while exploring human health issues from the perspectives of both the biological and behavioral sciences. HBHS majors select the issues they want to explore in depth from Human Ecology courses that address health and the broad range of factors that influence human well-being. Issues that can be explored include biology and behavior; metabolism, genetics, and health; biology, growth, and development; and food and health policy and health promotion. Most students in this program will proceed to programs of advanced study to pursue careers related to health. This major is offered by faculty in the Division of Nutritional Sciences. More information about this program can be found in a separate section of the catalog that describes the division's programs.

HUMAN DEVELOPMENT

The field of human development covers the entire life span and has benefited from the contributions of many disciplines. Human development majors explore the psychological, social, cultural, and biological development of people from conception to old age, focusing on the processes and mechanisms of growth and change over the life course. An important emphasis is the role that social institutions such as schools, workplaces, and neighborhoods play in human development, as well as the influence that developing people have on their environments. The human development major provides an excellent foundation for many professional careers, such as law, medicine (pediatrics, geriatrics, and psychiatry), clinical psychology and other mental health professions, education, social work, other health-related professions, business, nonprofit management, and advocacy. Many human development graduates attend graduate school in the fields of human development, psychology, and sociology.

Classes in human development cover a wide range of issues and approaches, and are organized into six different areas: social and personality development; cognitive development; human developmental behavioral neuroscience; aging and health; law, psychology and human development; and group disparities in development. The faculty in the Department of Human Development come from multiple disciplines, including developmental psychology, neuroscience, clinical psychology, education, and sociology. The research of the department's faculty is extensive and world renowned and includes issues such as the neurobiological basis of personality, the role of childhood attachments in the development of adult romantic relationships, the acquisition of language in infants, the effects of environmental stressors on children's cognitive development, interventions to prevent and mitigate the impacts of child maltreatment, risk-taking during adolescence, risk and resilience factors affecting reactivity to stress across the life course, the epidemiology of elder mistreatment, memory and the legal system, health care decision making among older

people, and strategies to prevent social isolation and promote social integration among older people.

Curriculum

Human development is one of the most diverse majors in the College of Human Ecology. While all students learn the fundamentals of human development, students also focus on one or more areas of particular interest (e.g., social and personality development, aging and health; law, psychology, and human development). The major is flexible enough to give students ample opportunity to meet the requirements for admission to professional degree programs, including medical, dental, law, public health, social work, and business schools. Requirements specified by the College of Human Ecology make up part of each student's curriculum, and include classes in the social and natural sciences, humanities, and writing. To fulfill department and college requirements, Human Development majors must take at least one biology course with lab (two biology courses with lab are strongly recommended), and statistics.

Special Opportunities

Beyond the required formal course work, students in human development have many other opportunities that involve ongoing individual work with Cornell faculty or other professionals. Academic credit can be earned through all of them, up to the limit specified by the college (with some restrictions noted below).

Laboratory courses. Human development students may earn credit toward the major by taking formal courses designed to teach laboratory and other research techniques, including study design, data collection, and data analysis. Students may count one of these courses toward the credits required for the Human Development major. Additional elective credits can be earned toward graduation by enrolling in individual faculty research programs, as described below

Faculty research. Many human development students work for several semesters as research assistants on faculty projects. On these projects, students get further training in research techniques such as laboratory experiments, surveys, and scientific behavioral observation. Participation in faculty research provides the type of experience that many graduate and professional schools expect from their top applicants. Recent projects involving students have included (1) language acquisition among infants in bilingual households or settings; (2) experimental studies of risky decision-making among teens; and (3) the impact of poverty on stress responses in children and teens. Participation in faculty research for credit counts as elective credits toward graduation in the College of Human Ecology (up to the limit specified by the college).

Independent research. Under faculty supervision, some advanced students complete an honors thesis. Applications to enter the honors program are due in the first semester of the junior year. Honors theses typically involve a topic related to faculty research, and all applicants must have experience working on research projects, as well as meet other program requirements. Seniors in the honors program register for an

honors seminar and for honors thesis credits. The seminar and honors thesis credits count as elective credits toward graduation in the college (up to limit specified by the college).

Field Placements. Human development majors can arrange internships with Urban Semester in New York City, Cornell in Washington, and Cornell Abroad programs. Students may also arrange internships during the fall and spring semesters in the Ithaca area. All such field placements are required to be under the supervision of a human development faculty member. In recent years, Human development students have participated in projects with the Tompkins County Office on Aging, the Tompkins County Human Service Coalition, Kendal of Ithaca, local schools, the Tompkins County Youth Bureau, and the Law Guardian's Office of Tompkins County. Summer internship credit is not allowed in Human Development unless the student is enrolled for Cornell University credit over the summer. Field Placement credits count as elective credits toward graduation (up to the limit specified by the college).

Undergraduate Teaching Assistant.

Advanced students can serve as undergraduate teaching assistants. The teaching assistantship requires work with the professor teaching the course as well as contact with students. Undergraduate teaching assistantships are for-credit only. Teaching assistantship credits count as elective credits toward graduation (up to the limit specified by the college).

Teaching Certification. A cooperative education program exists between the Department of Human Development and Wells College. This program requires careful planning and course scheduling. It enables students to graduate with a Cornell bachelor's degree and New York State Certification to teach nursery school through sixth grade. This certification is honored by most other states.

The program requires a minimum of a three-semester commitment. Cornell HD students take four courses at Wells College and student teach their last semester at Cornell. Although there is van transportation between Cornell and Wells College, it is important for students to have access to a car, especially while student teaching. Students will be registered at Cornell during the entire undergraduate program and usually maintain Ithaca housing. Wells College courses count as Cornell courses and are used as electives but are not included in a student's GPA. The one-semester student teaching experience is typically based in the Ithaca area, though not necessarily within the city of Ithaca.

This program is open to HD majors only. Students must have at least a 3.0 Cornell cumulative GPA upon application and must maintain a 3.0 GPA to qualify for student teaching and to complete the program. For more information, contact Judith Ross-Bernstein in G56 MVR at 255-0826.

NUTRITIONAL SCIENCES

A major in nutritional sciences (NS) focuses on the complex interrelationships of food patterns, nutritional status, and health. This field draws upon chemistry, biology, and the social sciences to understand questions such as: How are nutrients used by the body? What factors influence human food choice? What

nutrients and dietary patterns are recommended to promote growth, maintain health, or reduce the risk of chronic disease? Students in this program may also fulfill the courses required for didactic training in dietetics toward registration as a dietitian (R.D.), which will enable them to be employed as nutrition counselors, clinical nutritionists, sports nutritionists, or administrators of food and nutrition services. Students also may prepare for medical school and other types of advanced degree programs through this major. The requirements for this program are outlined in the "Nutritional Sciences" section of this catalog.

Special Opportunities

Dietetics and Clinical Nutrition

Students who wish to work in the areas of clinical nutrition, nutrition counseling, sports nutrition, community, nutrition, or food and nutrition management should complete the academic requirements for The American Dietetic Association (ADA). The Didactic Program in Dietetics is accredited by the Commission on Accreditation of Dietetics Education and provides students with the coursework necessary for application to an accredited Dietetic internship or an Approved Pre-professional Practice (AP4) program. Students successfully completing didactic program requirements at Cornell are issued a Verification Statement. A one time fee is involved to cover the cost of program materials and transcript evaluation. The Didactic Program in Dietetics policy and procedure for issuing verification statements can be found at nutrition.cornell.edu/dns7_dietetic.html. Upon completion of a Dietetic Internship or AP4 program, students are eligible to take the Registered Examination of the Commission on Dietetic Registration, and become a Registered Dietitian (RD).

Courses in foods, nutrition and disease, microbiology, management, statistics, and nutritional care are added to the courses required for the nutrition programs. For additional information about meeting ADA requirements, contact the DNS academic affairs office, B19 Savage Hall, 255-2628.

Exercise Science Minor

Students can complete the Applied Exercise Science Concentration at Ithaca College, which includes courses in kinesiology, exercise physiology, and biomechanics of human movement. Nutrition courses of special interest relate to growth and development, regulation of body weight, and community nutrition and health. For information about the Applied Exercise Science Concentration, contact the DNS academic affairs office, B21 Savage Hall, 255-4410.

POLICY ANALYSIS AND MANAGEMENT

The policy analysis and management (PAM) major produces graduates skilled in policy analysis and management skills applicable to the public, nonprofit, and private sectors. The PAM graduate will have concentrated knowledge in policy areas such as family/social welfare, health, or market regulation. Graduates are well-qualified for a wide variety of public, not-for-profit, and private sector employment emphasizing either policy

analysis or managerial decision making. The major attracts large numbers of pre-law students, pre-M.B.A. students, and students intending to pursue graduate studies in economics, sociology, and public policy. The potential exists to pursue a five-year program resulting in a B.S. and a Master of Health Administration through the Sloan Program.

The PAM major combines theoretical underpinnings from economics, sociology, psychology, demography, and government to critique and analyze U.S. domestic policies and programs. It provides students with knowledge to build management skills for use in the public, not-for-profit, and for-profit sectors of the economy. Ideas of social justice, equity, and economic efficiency will be studied. Research methods, statistics, and multivariate statistics will be taught and applied to program evaluation, policy analysis, and management.

In addition to learning basic policy analysis and management skills, the student will be expected to apply these skills within particular areas of policy focus. Upper-level family/social welfare courses cover a panoply of governmental and private sector income maintenance, social, and human service delivery programs and policies that range from child adoption, neglect, and abuse policies and antipoverty programs to policies and programs that impinge on or regulate marriage, divorce, and fertility. Upper-level health policy courses cover programs and issues such as health care access, the Medicare and Medicaid programs, long-term care, managed care, public health issues such as obesity, and substance abuse policies. Upper-level market regulation courses cover programs and policies governing the regulation of advertising, the regulations of financial institutions, risk and insurance markets, food and drug safety, and public utility markets. They also deal with issues such as privacy, the Internet, and television.

In addition to meeting college requirements, all PAM majors are expected to take the following core courses: Introductory and Intermediate Policy Analysis, Demography and Family Policy, Multivariate Statistics, Intermediate Microeconomics, and Public Sector Economics. Multivariate Statistics and Intermediate Microeconomics must be completed by the second semester of the sophomore year.

PAM Honors Program

The honors program, which leads to a B.S. degree with honors in Policy Analysis and Management, gives official recognition to students who have demonstrated excellence in their academic work and their capacity for independent research. In addition to fulfilling the requirements for the major, students in the honors program will participate in an honors seminar and prepare an honors thesis. Honors students work with a research mentor in preparing for their thesis. Interested students should obtain a PAM Honors Program application form from the PAM Undergraduate Office (122 MVR). For more information, students should contact the PAM director of undergraduate studies.

INTERDEPARTMENTAL MAJOR IN BIOLOGY AND SOCIETY

Biology and society is a multidisciplinary program for students with special interests in such problems as genetic engineering, environmental quality, food and population, the right to medical care, and the relation between biology, society, and ethics and/or public policy. It is also designed for students who plan postgraduate study in management, health, medicine, law, or other related fields.

Because the biology and society major is multidisciplinary, students must attain a basic understanding of each of the several disciplines it comprises, by including courses in the fields of biology, humanities, social sciences, and mathematics. In addition, majors take core courses in biology and society, a set of electives, and a special senior seminar.

Course work in the College of Human Ecology may be selected from concentrations in human development, health, or social policy and human services. The other basic requirements of the college must also be met. Programs incorporating those required courses are designed in consultation with a faculty advisor to accommodate each student's individual goals and interests. For further information on the major, including courses of related interest, specific course requirements, and application procedures, see Nancy Breen, director of undergraduate studies, in 205 MVR.

SPECIAL OPPORTUNITIES

Study Abroad

Each year over 75 Human Ecology students spend a semester or more off campus in places spanning the globe, such as Australia and Zaire. There they supplement their Cornell studies with a wide range of cross-cultural and academic experiences. Study abroad opportunities are available through Cornell-sponsored programs and other U.S. college-sponsored programs as well as by direct enrollment at foreign universities.

Residency Requirements

All study abroad students must meet college study abroad requirements and remain registered at Cornell during the overseas study. Credits earned count toward the 60 Cornell credits required for graduation (in unusual circumstances some credits earned abroad may be considered as transfer credit).

Requirements for College Approval

1. GPA of 3.0 or higher, good academic standing, and well-articulated goals for students' study abroad semester.
2. Completion of the Cornell application; applications from individual programs also must be submitted to Cornell.
3. Completion of the equivalent of 15 semester credits per semester while abroad.
4. Courses taken for a letter grade (unless course is offered with only an S-U option).
5. Submission of a petition by second-semester seniors going abroad.

Application Process

Typically, students considering study abroad begin their planning at least a year before the semester abroad. Students should carefully consider what they hope to get out of a study abroad experience (academically and culturally) when investigating program options. Resources can be found in the Cornell Abroad office (300 Caldwell Hall), through the Human Ecology study abroad advisor (170 MVR), or in the Human Ecology Career Development Center (162 MVR). Completed applications must be submitted to the Human Ecology registrar's office by the following dates:

Fall and year deadlines: February 1

Spring deadline: September 15

Some programs will be filled by these dates. Use of the early deadlines is strongly recommended. These are:

Fall and year deadlines: December 15

Spring deadline: May 1

Approved applications will be signed and forwarded to the respective programs through the Cornell Abroad office.

Credits Abroad and Transfer of Credit

Most study abroad courses are transferred to the Cornell degree program as electives or liberal arts distribution credit. Study abroad credit awarded toward one's major is much less common and must be approved via signature of the student's department advising coordinator on the Cornell application. Credit for study abroad will be awarded only after successful completion of the semester abroad (marks equivalent to a Cornell grade of C or higher) and receipt of the official transcript by the college. Official transcripts should be sent to the Cornell Abroad office, which will process and forward them to the Human Ecology registrar.

Courses must be pre-approved before the student's departure. Any variances must be cleared with Human Ecology. Students must include a foreign language course in the country's native language if studying in a country where English is not the native language. All courses taken abroad and grades received will appear on the Cornell transcript. Grades earned do not, however, become part of the Cornell GPA. Students should save all written work from all classes until courses are officially transferred.

Independent Research

Research opportunities for undergraduates are extensive and valued as an important part of the learning experience. The opportunity to engage in substantive research with some of the leading scientists in their fields is so compelling that approximately half of the college's undergraduates conduct research projects. Students may become involved in research with the guidance of faculty members by conducting research assigned in a class, joining a faculty member's research group, completing an independent study research project, or carrying out an honors program project.

For further information, students should contact individual faculty members or the director of undergraduate studies (DUS) in their department.

Honors Programs

Students interested in college honors programs that lead to the degree “bachelor of science with honors” usually apply to the appropriate honors committee no later than the end of the first semester of their junior year. A minimum GPA of 3.3 and demonstrated potential for honors-level research is required. Students take approved courses in research methodology and evaluation, attend honors seminars, complete a written thesis, and defend it in an oral examination.

In addition to the college honors program, special programs are offered by the Department of Design and Environmental Analysis, the Department of Fiber Science & Apparel Design, the Department of Human Development, the Department of Policy Analysis and Management, and the Division of Nutritional Sciences.

Students who are interested in the honors program should contact the director of undergraduate studies (DUS) in their department or division for information and guidelines.

Field Study and Internships

Field study and internships provide experiential learning opportunities in real-life circumstances where classroom knowledge is tested and applied. Students are able to master new skills, develop and implement plans of action, solve problems, interact in multicultural situations, and build networks for future job opportunities. By applying techniques of research methods, critical thinking, and self-directed learning, students learn to think conceptually while becoming agents of change.

Check with the director of undergraduate studies for major specific information. The Career Development Center (162 MVR) and career counselors in 172 MVR also can provide resources and assistance in finding internships and other experiential opportunities.

Concentration/Certificate in Gerontology

For students interested in pursuing study related to aging, the College of Human Ecology, under the auspices of the Bronfenbrenner Life Course Center, offers the option of completing an undergraduate concentration in gerontology. This program is designed to develop an understanding of and competence in dealing with the processes and issues of aging. Study in gerontology enriches the practical experience of students and prepares them for professional work in this area. The program draws on the resources of several departments and colleges at Cornell and Ithaca College to shape a curriculum suited to each student’s professional goals and interests.

The concentration is available in combination with any major offered by the university. Twelve credit hours of course work must be completed, with 9 of these taken in the College of Human Ecology. The courses explore aging through biology, psychology, sociology, economics, and design.

Experiential learning opportunities are strongly recommended as a complement to classroom work. With faculty sponsorship,

students can participate in experiences in the Ithaca area, the Urban Semester in New York City, Cornell in Washington, the Capital Semester, or in a placement arranged more individually.

Both Cornell and Ithaca College offer courses that incorporate a service-learning component into their curriculum. Cornell’s course *Environments for Elders* (DEA 4720) involves service in local agencies (e.g., local nursing homes, Office of Aging, assisted-living facilities), where students gain valuable experience. Students may also join the “Elderly Partnership” through the Cornell Public Service Center to participate in local visits to elders. There also are opportunities for undergraduates to become involved in research projects examining topics such as residential changes and adjustments in the later years, nutrition and elders, social security, and design for people with dementia. In addition, senior students can apply to work as a teaching assistant for a gerontology course.

Departments and programs have designated academic advisors for the gerontology concentration who will help students plan the sequences of courses and electives needed to complete both a major and the gerontology concentration. Because many gerontology courses have prerequisites, early and careful planning is essential.

Specific program requirements may be obtained in the Human Ecology registrar’s office (146 MVR, 255-2235) or from Nancy Wells, Bronfenbrenner Life Course Center (E220 MVR, 254-6330).

Concentrations

The College of Human Ecology formally recognizes as concentrations computer information sciences and international relations (both administered by the College of Arts and Sciences) and the previously described concentration in gerontology (administered by the College of Human Ecology). Students interested in pursuing these concentrations should inquire with the college department offering them. If successfully completed before graduation, these concentrations will be posted as part of the student’s official transcript.

Students may develop an unofficial concentration in additional fields taught at Cornell by taking 12 credits in an approved area. Africana studies, communications, and business are just a few examples of concentrations that are possible. While these unofficial concentrations are not part of a student’s transcript, students may choose to publicize these concentrations on their personal résumés.

Minors

A student may pursue a minor in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the student’s major. Completed minors will appear on the student’s transcript. Not all departments offer minors. Consult the appropriate section in this catalog or contact the appropriate department for information on minors offered and how to pursue a minor.

THE URBAN SEMESTER PROGRAM IN NEW YORK CITY

Multicultural Issues in Urban Affairs

Sam Beck, Ph.D., director

The Urban Semester Program is a set of courses spanning the entire year. Students choose either fall or spring semester and enroll in three classes focusing on the opportunities and barriers that a multicultural society presents and their relationship with professional, community, or public policy settings and concerns (15-credit residential program). They also intern three days each week in placements of their choosing. One day each week, students carry out community service in an inner city school (pre-K to high school). One day each week, students participate in site visits. Seminars are incorporated into these activities. All students reside in the Olin Hall dormitory of the Weill Medical College of Cornell University.

In the eight-week summer semester (1 to 3 credits), students carry out internships in various settings. Students work with the program staff to locate internship placements. For information, contact the Urban Semester Program staff in 162 MVR, 255-1846, or the Urban Semester Program in New York City at 212-746-2273.

New York City offers a wide variety of internship settings. Many bilingual and bicultural internship settings are available in Chinese, Spanish, Creole, Russian, Yiddish, and other languages. Examples of internships follow:

Health and medicine—New York Presbyterian Hospital/New York Weill Cornell Medical Center, Queens Medical Center for Women and Children, South Bronx Health Center for Children and Families, Memorial Sloan Kettering Hospital, Hospital for Special Surgery, Montefiore Hospital, Bellevue Hospital, Our Lady of Mercy Hospital

Private and public law—NOW Legal Defense and Education Fund, Agenda for Children Tomorrow, Skadden Arps, Slate, Meagher & Flom, Lawyers for Children, DA’s Office, Legal Aid Society, AALDEF, Committee Against Anti-Asian Violence, Center for Immigrant Rights, NAACP/PLDEF, Dorsey & Whitney

Government and community agencies—Cornell University Cooperative Extension, Senator Charles Schumer’s office, NYC Housing Authority, Dept. of Aging, Women’s Action Alliance, NYC Commission on the Status of Women, NYC Dept. of Consumer Affairs, The Center for Puerto Rican Studies, Manhattan Borough President’s office, Central Park Wildlife Center, Attorney General’s office, The Parks Dept., Health Dept.

Wall Street firms and other private businesses—Bloomingdales, Prudential Securities, Merrill Lynch, PricewaterhouseCoopers, Cairns & Associates, Burson Marsteller, Cushman & Wakefield, AIG-AI Underwriters, Salomon Smith Barney, Jane Clark Chermayeff Associates, DDB Needham, KCSA, William M. Mercer Consulting Co., MGM, Madison Square Garden, Gensler Architecture, Niedeffhoffer-Henkel Century Group, American Management Association

Private not-for-profit organizations—City Lights Youth, Council on Economic Priorities, Planned Parenthood, Talbot Perkins, FEGS, National Resources Defense Council, Urban Youth Alliance Inc., Phipps Housing, The Door, Covenant House, Global Policy and International Law, UN International Assoc. of Religious Freedom, Mothers and Others for a Livable Planet, UN Child Care Center, WHEDCO, YAI, Families and Work Institute

Private and public schools—Beginning with Children, Banana Kelly High School, East Harlem School at Exodus House, The Hetrick Martin Institute, Nuestros Niños, Theodore Roosevelt High School, The Choir Academy of Harlem, El Puente, Genesis RFK Center, River East School, MS 118, Mott Haven Village

Design and arts organizations—Harlem Textiles Works, TADA!, NY Theater Workshop, Cynthia Rowley, Inc., Perry Ellis International, Museum of African Art, SOHO20 Gallery, Lower East Side Tenement Museum, Tommy Hilfiger, Polo, The Gap, Liz Claiborne

Communications and media—Nickelodeon, *Do Something* magazine, NBC *Dateline*, CNN, CBS News—48 Hours, NBC News, ABC *One Life to Live*, MSNBC *The News w/Brian Williams*, *The Village Voice*, *Good Housekeeping*, *The New Yorker*, *Essence*, Children's Television Workshop, *Good Morning America*, MTV, HarperCollins Publishing, *Maxim Magazine*, MTV Online International

Other Off-Campus Programs

Capital Semester

Richard Canfield, Ph.D., director

Combine a full semester of 15 Cornell credits with a paid internship and a reduction in tuition. Students intern directly for a New York State legislator (Senate or Assembly) in Albany to explore their policy interests in greater depth. Interns attend hearings and legislative sessions, meet with lobbyists and constituents, write reports for legislation and possible publication, and generally help conduct the work of their legislator. All Cornell students, regardless of major, are encouraged to apply. The program is available during the spring semester only, and it is open to sophomores, juniors, and seniors. Interns benefit greatly when subsequently applying for future employment, law school, graduate school, or business school. Information is available from the Career Development Center (162 MVR), and applications and further information can be obtained from Richard Canfield (B09 Savage Hall, RLC5@cornell.edu).

Cornell in Washington

Students take courses from Cornell faculty, conduct individual research projects, and work as externs while taking advantage of the rich resources of the nation's capital. For more information, visit the program office (M101 McGraw Hall).

Courses at Ithaca College and Wells College

Full-time undergraduate students at Cornell may petition to enroll in courses at Ithaca or Wells College. Students pay regular full tuition to Cornell and only special fees to either Ithaca or Wells where applicable. Students are allowed to register for one course per semester and a maximum of 12 credits in four years. Exceptions will be granted to Cornell

students enrolled in methods and practice teaching courses at Ithaca and Wells, and those students pursuing a concentration in exercise science through a specially arranged program with Ithaca College.

Cornell students are eligible to register only for Ithaca and Wells College courses that are relevant to their program and that do not duplicate Cornell courses. Ithaca and Wells College credit counts as Cornell credit but not as Human Ecology credit. Students are accepted on a space-available basis. Participation in this program is not guaranteed, and both Ithaca and Wells have the right to accept or reject students for any reason deemed appropriate. The program is available only during the fall and spring semesters. For further information, contact the college registrar (146 MVR, 255-2235).

Double-Registration Programs

Cornell undergraduates from PAM and other fields across the college and campus are eligible to apply to the Sloan Program in their junior year for a five-year accelerated B.S./M.H.A. degree in health administration. In their senior year, these students will take the first-year Sloan courses, which will be counted twice to satisfy both undergraduate as well as graduate requirements. At the end of their senior year, students will graduate with a B.S. degree. Students whose grades are competitive will be notified during the spring semester of their senior year that they are invited to continue for the final year of Sloan as a graduate student. Those students accepted for the five-year program will participate in a health care administrative internship during the summer after earning their B.S. degree and following the first year of Sloan academic course work. The following graduate year they will complete the second year of required Sloan courses and electives and will earn a master in professional studies, with Cornell certifying completion of the requirements for a graduate degree in health administration.

Students applying to the accelerated B.S./M.H.A. program need to complete the initial application to the Sloan five-year program through PAM in their junior year. In general, at the time of application, most of their undergraduate requirements will have been met. This application must include the GRE general test score, along with recommendations from the faculty advisor and at least one other source, as well as transcripts and the statement of purpose. During their final senior undergraduate year they also will have to submit a formal application to the graduate school. A sample schedule of the two-year curriculum for Sloan can be viewed at www.human.cornell.edu/pam/sloan/current_students/Academics.cfm.

Double-Registration Program for Law

A small number of highly qualified applicants may be admitted to the Cornell Law School after only three years of undergraduate education. The requirements for admission under these circumstances are more stringent than for acceptance after four years of undergraduate study. Applicants must present outstanding qualifications and strong professional motivation. The junior year applicant follows the ordinary application procedures for Cornell Law School admission.

Interested students should contact the Law School director of admissions (Myron Taylor

Hall, 255-5141) to discuss the admissions criteria. Because students accepted to this program will be spending their senior year away from Human Ecology, they need to plan ahead to ensure that distribution and major requirements for the B.S. degree will be met. Successful applicants need the approval of the college registrar in Human Ecology.

ACADEMIC ADVISING AND STUDENT SERVICES

Faculty Advisors

Students are assigned a faculty advisor in the department of their major. Students may change advisors by working with the director of undergraduate studies (DUS) in their major.

Faculty advisors are available to discuss course requirements and sequences, useful electives inside or outside the college, as well as future goals and career opportunities. It is the student's responsibility to make sure that his or her course selections meet graduation requirements for the major, the college, and the university. Directors of undergraduate studies in each department are available to answer questions about the advising system and the undergraduate major. Students who are exploring alternative majors should work closely with college counselors in the Office of Admission, Student, and Career Development.

Office of Admission, Student, and Career Development

The Office of Admission, Student, and Career Development (ASCD) (170-172 MVR) is a center for undergraduate freshman and transfer admission activities; student orientation activities; academic, personal, and career advising; study abroad; and multicultural student programs.

Personal counseling, including exploration of problems or concerns of a personal nature, is available to all students. These ASCD counselors, however, are not psychiatrists or therapists; they are available to help students understand and navigate the Cornell system, and to offer advice, support, assistance, and referral. Discussions are completely confidential. Appointments may be made through the receptionist in ASCD or by calling 255-2532.

In addition, ASCD provides advising support for several student organizations, including Human Ecology Ambassadors, the Mature Students Association, the Association for Students of Color, the Pre-professional Association toward Careers in Health, the Pre-law Undergraduate Society, and the Orientation Committee. Primary responsibilities of the office are listed below:

Academic advisement. This service is provided to all students as an adjunct to faculty advising. Counselors assist in course scheduling, academic planning, selection of a major, graduation requirements, and related issues.

Undeclared majors. Students who have not yet declared a major work closely with counselors in the Office of Student and Career Development, 172 MVR. We encourage students to explore interests by taking courses in several Human Ecology departments

If you have general ideas about what you would like to study, or what you would like to do after college, then you have probably already narrowed your choice of majors. If you have, then choosing one of those majors as a tentative first home in the college makes a lot of sense.

- You will be assigned a faculty advisor by your department.
- You will receive departmental invitations and communications.
- You may change your major at any time.

Career counseling. Career counseling is designed to help students clarify the relationship between personal skills, abilities, and career goals. Services are offered on an individual or group basis. Counselors assist in identifying career outcomes of the majors, developing networking skills, suggesting course work appropriate to various career goals, and assisting students in their general internship and job searches.

Post-graduate advisement. Material and advice pertaining to graduate and professional schools, graduate entrance examinations, courses of study, and career outcomes is readily available.

Students with disabilities. The College of Human Ecology is committed to assisting students with disabilities; accommodations are available to students who have registered with the Office of Student Disability Services (420 CCC). You are encouraged to contact SDS before your arrival on campus in order to arrange services in time for your first semester. Support within the college is available through the Office of Student and Career Development, 172 MVR.

Financial aid. Students who encounter financial difficulty or anticipate running short of funds may discuss their needs with a counselor. Complete information is available from the Office of Financial Aid, 203 Day Hall.

The Human Ecology Alumni Association Student Grants. Students in the college can apply for these competitive grants to further their academic interests through independent research, community outreach, conference travel, and limited summer study related to career preparation/professional development. Applications are available on the college web site.

Office of the Registrar

The Office of the University Registrar (B7 Day Hall) maintains the official academic records for the university and provides students with their official university transcripts. Additional information is available on the university registrar's web site: <http://registrar.sas.cornell.edu>. The college registrar (146 MVR) maintains students' official academic records, including the audit of progress toward the degree. The college registrar also provides services such as adding and dropping courses, correcting student records, and approving the transfer of credit from other institutions. Additional information is available on the HE registrar's web site: www.human.cornell.edu/che/Academics/undergraduate/Student_Services/Registrar/.

Multicultural Programs

The College of Human Ecology at Cornell University believes that a diverse community enriches the educational process for all members of the college community. Consequently, the college focuses particular efforts on a broad range of services for students of color. This includes not only recruitment but also services for students already on campus. Additionally, the college collaborates with university and New York State programs to assure that Human Ecology students have access to the vast array of services available here.

The professional staff of Human Ecology's Office of Admission, Student, and Career Development includes a director of multicultural programs who assists in the recruitment, admission, and enrollment of the most qualified and appropriate EOP (a program for New York State residents), African American, Native American, Hispanic American, and Asian American students to the college. All accepted EOP students are invited to a special university-wide pre-freshman summer program that introduces accepted students to the Cornell campus and its classrooms. Services for current students include EOP/COSEP; academic, career, and personal counseling; recommendation letters for employment or graduate schools; and advising and support for student activities and programs.

Human Ecology Peer Partnership Program

helps incoming students of color transition to the college and university. Small groups of freshmen, usually about six to eight students, are paired with faculty and upper-class students. They meet weekly for discussions, guidance, and explorations of the Cornell campus and the Ithaca community. For more information, contact Verdene Lee in the Office of Student and Career Development (172 MVR, 255-2532); or Gary Evans (E306 MVR, 255-4775); or Lorraine Maxwell (E310 MVR, 255-1958), both in the Department of Design and Environmental Analysis.

ASC (Association for Students of Color). With the motto "Yesterday's vision, today's reality, and tomorrow's hope," the ASC was created to bring together Human Ecology students to provide a supportive foundation for enrollment, retention, graduation, and career placement for students of color. The goals of the ASC are to increase communication between students of color, administration, and faculty; assist in increasing enrollment of students of color in Human Ecology; and assist in increasing the retention of students of color in Human Ecology and in their selected majors. ASC's two committees are recruitment/retention and career development. For more information, contact Verdene Lee (172 MVR, 255-2532).

CSTEP. The Collegiate Science and Technology Entry Program is the New York State program that provides enrichment activities for pre-med and pre-law New York State residents. Services are targeted at populations who are historically underrepresented in scientific, technical, health-related, or licensed professions and/or who are economically disadvantaged and who demonstrate interest in, and potential for, a CSTEP-targeted profession. For more information, contact Verdene Lee in the Office of Student and Career Development (172 MVR, 255-2532).

BBMTA (Black Biomedical and Technical Association). A university organization that provides enrichment activities for minority students interested in pursuing health careers. For more information, contact Janice Turner (55 Goldwin Smith Hall, 255-9497).

Multicultural Education

Multicultural education broadens understanding of the world's many different societies as well as the various cultures of this country. Students take courses in the Cornell programs listed below that may be used to meet degree requirements. The college encourages students to incorporate courses from these cultural programs and from study abroad experiences in their degree programs. See information on study abroad opportunities.

Africana Studies and Research Center
 American Indian Program
 Asian American Studies Program
 East Asia Program
 Feminist, Gender, and Sexuality Studies Program
 Gender and Global Change
 Institute for European Studies
 Languages and Linguistics
 Latin American Studies Program
 Latino Studies Program
 Peace Studies Program
 Program for Contemporary Near Eastern Studies
 Program in Jewish Studies
 Religious Studies
 South Asia Program
 Southeast Asia Program

International Students

The International Students and Scholars Office (ISSO, B50 Caldwell Hall, 255-5243) provides a broad range of services to international students. All international students should maintain contact with the ISSO. Counselors in ASCD are also available for assistance.

International students in the College of Human Ecology are encouraged to meet with the college registrar to discuss any questions or concerns that they have about their academic record.

Career Planning, Graduate and Professional School, and Job Search Services

Counseling. The Office of Student and Career Development (172 MVR, 255-2532) provides career counseling and resources to help students explore career options through employment and internship opportunities and professional and graduate school advising. Individual assistance is available as well as group programming, workshops, and panels. Career development is strongly encouraged and supported, including skill development in résumé writing, networking, and interviewing. Students also are instructed in the use and protocol of online résumé submissions and on-campus recruiting. The office works in conjunction with Cornell Career Services (103

Barnes Hall, 255-5221) to facilitate access to university-wide programs.

The Career Development Center (CDC, 162 MVR) is a starting point for students looking for career information. Selected resources about career planning and job search techniques, general directories to begin job or graduate school searches, and information for alumni networking are housed there. Also available are Cornell Career Services handouts and registration forms, graduate and professional school testing booklets and registration packets, study abroad, as well as Urban and Capital Semester program materials. Computers provide access to web-based information regarding internship and employment opportunities, as well as graduate/professional schools.

The CDC is open weekdays during the academic semester. Student career assistants are available to provide résumé and cover letter critiques, conduct mock interviews on video, and help navigate the library resources. Final critiques can be provided by a career counselor once the student review has been completed.

To provide assistance to interested students, former Urban Semester Program participants comprise a portion of the CDC student staff and are available daily to answer questions about the program and its application process.

Selected services are listed below. Exploring such services will help students investigate their interests, skills, and values as they relate to career options, provide useful information and tips for a successful summer or full-time job search, and provide access to employment opportunities. In addition, please refer to the college's career development web site: www.human.cornell.edu/che/Academics/Career-Services/index.cfm.

Pre-law or Pre-med. Students who consider themselves pre-law or pre-med are encouraged to join a student group affiliated with ASCD. Those interested in pursuing a legal education can join PLUS (PreLaw Undergraduate Society), which provides information on applying to law school, preparing for the LSAT, and examining career opportunities in law. Students interested in pursuing a health-related career are welcome to join PATCH (Pre-professional Association Toward Careers in Health), which provides opportunities for students to explore various careers in medicine and health care. PATCH provides guidance as students prepare for the MCAT and other standardized tests, and it offers and mentor program for incoming students.

Extern Program. Students can spend one day to one week over winter break shadowing an alum in a career field of their choice. They observe day-to-day activities, discuss specific jobs and careers, and sometimes obtain limited hands-on experience. This service is available to sophomores, juniors, and seniors and is a valuable networking tool.

Fresh Program. This service is similar to the Extern Program but is available to freshmen only. Students can spend one day to one week over spring break shadowing an alum in a career field of their choice. In addition to career explorations, the Fresh Program provides excellent networking opportunities.

Internship and Employer Files. The CDC keeps files of more than 100 internships and hundreds of potential employers for student review.

Alumni Career Presentations. Alumni from the college come back to campus throughout the year to discuss their postgraduate or professional experiences. These meetings are ideal for exploring career outcomes of specific majors.

AlumNet. Students have access to Human Ecology alumni who can provide information on their careers and offer suggestions on a job search in their particular field or location. Students can query alumni on a host of variables and review selected alumni résumés to learn more about specific careers. AlumNet is also an excellent networking tool.

Job Search Workshops. The college hosts several workshops every semester. These workshops are designed to help students market themselves for either summer or full-time job opportunities. Students learn how to conduct effective job searches, write résumés and cover letters, and interview successfully.

CornellCareerNet. Exclusively for Cornell students, CornellCareerNet provides access to many important services offered by Cornell Career Services. These services include a listing of job opportunities, summer opportunities, alumni networking databases, access to on-campus recruiting, employer showcases, and more.

CornellCareerNet On-Campus Recruiting (OCR) This service provides access to on-campus interviews with employers interested specifically in Cornell students. Interviews occur primarily in banking and financial services, retail sales and management, facilities planning and management, and consulting. Please note that on-campus recruiting is only one component of a successful job search. Approximately 70 percent of Cornellians get their jobs through other resources.

New York Recruiting Consortium. Available exclusively to Human Ecology and Arts and Sciences students, the New York Recruiting Consortium is held in New York City over winter break. It offers interviews for full-time employment with employers involved in banking and financial services, retail sales/management, advertising, law, health care, and consulting.

NFP in New York City and NFP in Washington, D.C. Speak with representatives from dozens of New York City or Washington, D.C., not-for-profit/public service agencies about work or internship opportunities in health, education, advocacy, government, and more (held only during the spring semester).

Communications Consortium. Interview with organizations in advertising, public relations, film and radio, and print media. National organizations come to Syracuse, N.Y., to meet with students for individual appointments. During the spring semester, a job fair is held the evening before.

GRADUATION REQUIREMENTS AND POLICIES

It is important for students to track their graduation progress by comparing their current transcript with an appropriate curriculum sheet. Official transcripts may be obtained at the Office of the University Registrar (B07 Day Hall). Curriculum sheets are available in the Human Ecology registrar's

office (146 MVR). Students are responsible for planning course selections to ensure that graduation requirements are fulfilled in eight semesters. Transfer students are allowed fewer semesters based on the number of transferable credits granted at admission. Students requiring additional semesters to fulfill their graduation requirements must meet with a Human Ecology counselor (172 MVR) and request to petition for an extension.

Grade Point Average (GPA) Requirement for Graduation

- Students must earn a minimum cumulative GPA of 2.0 (C) or better to graduate.

Cornell Credit Requirements

- To graduate, a student must earn a minimum of 120 academic credits. Physical education credits and "00" courses do not count toward the 120 required credits.
- Of the 120 credits required to graduate, at least 60 credits must be earned at Cornell University (applicable to transfer students).
- As of fall 2003, students who matriculate as freshmen may apply a maximum of 15 non-Cornell credits earned before matriculation (including AP, IB, and college credits) toward the 120 credits required for graduation. For all students, an additional pre-approved 15 in absentia credits earned after matriculation may be applied. AP, IB, and transfer courses may be applied toward fulfillment of specific requirements regardless of whether the credit is transferred (i.e., required courses may be waived). Refer to "Advanced Placement Credit" for full details.
- No *college* credit earned before matriculation and used to meet Cornell's minimum admission requirements may be counted in the 120 credits required for graduation. This policy does not apply to transfer students.
- *Courses taught by a college in the high school setting or counted toward high school graduation are not allowed to count for either credits or fulfillment of requirements (i.e., Syracuse Project Advance).*
- Cornell extramural credit (defined below) is limited to 15 credits toward the 120 required.
- Strict limitations exist on the number of credits that can be applied toward the 120-credit minimum for special studies courses (4000, 4010, 4020), for 4030 courses, and for courses taken with an optional S-U grade. Details follow.

Human Ecology Credit Requirements

- The college divides the 120 minimum required academic credits into four general categories. (*Students should refer to curriculum sheets for their major for specific details on course selections. These sheets are available in the Office of the Registrar (146 MVR) and in the Office of Admission, Student, and Career Development (172 MVR) as well as on the college web site at www.human.cornell.edu.*)

- a. Category I—College distribution requirements
 - Natural sciences
 - Social sciences
 - First-year writing seminars
 - Humanities
 - Quantitative and analytical courses (math and statistics)
- b. Category II—Requirements for a major
- c. Category III—Elective credits
- d. Category IV—Physical education

These categories are detailed below.

- **Students must complete 43 Human Ecology (HE) credits from Categories I, II, and III.** *Additional course-specific rules are listed below.*

S–U grading rules for this requirement are as follows:

1. If a course is a requirement in Category I or II, the course may *not* be taken for an S–U grade (unless it is the only grade option offered for the course).
2. Courses used to count toward Category III (electives) that are taken for an S–U grade *may* also count toward the 43-credit requirement.
3. Students should refer to the section on S–U grading rules for full S–U grading details.

- **Students must complete 9 Human Ecology (HE) credits from outside their major department from Categories I, II, or III.** Note: Biology and society majors are exempt from this requirement. A maximum of 3 credits from the 4000–4020 special studies series may be applied to this requirement. *Other course-specific rules for this requirement are listed below.*

S–U grading rules for this requirement are as follows:

1. If a course counting toward the 9-credit outside-the-major requirement is also a requirement in Category I or II, the course may *not* be taken for an S–U grade unless it is the only grade option offered for the course.
2. Courses used to count toward Category III (electives) that are taken for an S–U grade may also count toward the 9-credit outside-the-major requirement.
3. Students should refer to the section on S–U grading rules for full S–U grading details.

Course-specific rules that apply to both the 43 Human Ecology credit requirement and the 9 Human Ecology credit outside-the-major requirement:

1. Effective fall 2004, Human Ecology (prefix “HE”) courses below the 3000 level (e.g., HE 1100 and 1200) do not count toward either the 43-credit requirement or the 9-credit outside-the-major requirement. These HE–prefix courses that are below 3000 level may be used as elective credit.
2. ECON 1110 and 1120 are considered Human Ecology credit courses and may be used to fulfill Human Ecology’s 43- and 9-credit outside-the-major requirements. If either or both courses are

taken to fulfill a Category I or II requirement, they must be taken for a letter grade.

3. BSOC courses do not count as Human Ecology credit.
- 4., Experiential credit is applied to Human Ecology’s 40- and 9-credit outside-the-major requirements as follows:
 - a. Urban Semester (HE 4700, 4800, 4900/4950). Effective fall 2005, students in all Human Ecology majors earn:
 - 15 Human Ecology credits and 8 credits toward the 9-credit outside-the-major requirement.
 - b. Capital Semester (HE 3920). Effective spring 2007, all students earn:
 - 15 Human Ecology credits and 8 credits toward the 9-credit outside-the-major requirement.
 - c. Cornell in Washington (PAM 4060). For this entire semester, PAM majors earn:
 - 8 credits toward the 43-credit requirement, which also count as 8 PAM credits.
 Non–PAM majors earn:
 - 8 credits toward the 43-credit requirement, which also count as 8 credits toward the 9-credit outside-the-major requirement. The remainder of the credits counts as elective credit.

Elective Credits

Students have individual objectives in choosing courses beyond the minimum requirements of the major. The university is diverse; the departments, centers, and special programs numerous; the fields of study almost unlimited. Counselors and faculty advisors are available to discuss which courses may interest students and best round out their education.

Students should consult the index in this catalog to learn where different subjects are taught in the university. Some subjects are taught in more than one division.

Elective credits can be earned in the endowed and statutory colleges of Cornell.

An unlimited number of credits may be taken in the statutory colleges of Cornell.

Physical Education Requirements for Graduation

1. Students must earn 2 credits of physical education within their first two semesters. These 2 credits do not count as part of the 60 Cornell credits, or as part of the 120 total credits required for a degree, or toward full-time status. Students who matriculate at Cornell with 12 or more credits must complete only 1 credit of physical education. Students who transfer more than 25 credits (excluding AP credits) are not required to take physical education at Cornell, regardless of whether they took physical education at their previous college.
2. Students must pass the university’s swim test. Students who transfer more than 25 credits (excluding AP credits) are exempt. Refer to “University Requirements for Graduation—Physical Education—Swim Test” in this catalog for specifics.

Minimum Semester Requirements

1. Students enrolling in the college as freshmen must complete at least 12 credits of Human Ecology courses by the end of the fourth semester, and at least 5 credits of Human Ecology courses must be taken in the freshman and 7 credits in the sophomore years (ECON 1110 and 1120 may be used to fulfill this requirement).
2. Students must carry 12 credits each semester, excluding physical education, to be matriculated as full-time students. Mature students must carry a minimum of 6 credits each semester (see “Mature Student Guidelines” for details).
3. In special cases, a student may petition to carry between 8 and 12 credits. Forms for petitioning this exception and advice on how to proceed are available in the Office of Admission, Student, and Career Development (172 MVR).

Special Studies

- Students may use only 12 credits of 4000, 4010, 4020, or 4030 courses toward graduation.
- Additional credits of 4000, 4010, 4020, or 4030 courses can be taken but will not be applied toward graduation.

“00” Courses

- “00” courses do not count toward graduation requirements but do count toward full-time semester status.

Requirements for Majors

- Students must fulfill the requirements specified for a major that are in effect at the time of their matriculation or thereafter. The requirements are detailed in curriculum sheets that are maintained for each academic year.

S–U Grade Options

- The S–U grading option may *not* be used for courses in category I or required courses in category II unless it is the only grade option offered for those courses. S–U grades *may* be used for the 9 credits of Human Ecology course work outside of one’s major and for electives in category III.
- Students may apply no more than 12 credits of S–U toward the 120 credits required for graduation. If a required course is offered only S–U, it will not count toward this limit. Also, Honors Research 4990 taken S–U does not count against the 12 maximum limit. Students may take more S–Us if they choose, but the additional credit may not be applied toward graduation.

First-Year Writing Seminars

In each of their first two semesters of matriculation at the College of Human Ecology, students are required to take a Knight Program First-Year Writing Seminar. This policy also applies to transfer students. One or more of the seminars may be waived for transfer students if the college registrar grants credit for equivalent course work taken before matriculation at Cornell.

Those who do not fulfill this requirement on time will be referred to the Committee on Academic Status. Refer to "Criteria for Good Standing" for specifics on warning statuses that the committee applies to students who do not complete this requirement.

First-year writing seminars must be taken at Cornell and **may not be taken in absentia**. Students who receive a score of 5 on either the English Literature and Composition or English Language and Composition Advanced Placement (AP) exams can be exempt from *one semester* of their first-year writing seminar requirements. No other AP scores will allow a student this exemption (even if a lower score allows the student to use the course as elective credit toward graduation.) Students should be aware that the add/drop period for first-year writing seminars may be shorter in duration than the add/drop period for most Cornell classes.

Wells, Ithaca College, and Study Abroad Credits

Any credits earned with the Wells or Ithaca College exchange program are considered Cornell credits for the purpose of fulfilling the 60 Cornell credit graduation requirement. They may not be used for Human Ecology credit. Study abroad courses may also count as Cornell credit (but not for Human Ecology credit). Refer to "Cornell Credit Requirements" for details on how many advanced placement (AP) credits can be applied toward the 120 credits needed for graduation.

Advanced Placement Credit

Students can earn advanced placement credit from one of the following:

1. The requisite score on a departmental examination at Cornell (usually given during orientation week) or on a College Entrance Examination Board (CEEB) achievement test. The requisite scores for the CEEB exams are determined by the relevant department at Cornell, vary by subject, and are listed in the beginning of this catalog. College-specific rules apply toward many AP courses such as biology, English literature, English composition, and statistics.
2. A regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments have delegated the review of courses to college staff according to guidelines they have formulated. Some departments review each request individually. Some departments accept credit from virtually all accredited colleges; some do not.
3. Credit from the International Baccalaureates (IB) is evaluated individually.
4. Refer to "Cornell Credit Requirements" for details on how many Advanced Placement (AP) credits can be applied toward the 120 credits needed for graduation.

Note: Cornell does not accept credit for courses sponsored by colleges but taught in high schools to high school students, at colleges if enrollment is targeted at high school students, or if the course was used toward high school credit. This is true even if the college provides a transcript of such work. These courses also may not be used to fulfill college requirements.

Students who have taken such courses may, however, take the appropriate CEEB test to qualify for credit as in paragraph 1 above. For further information and limitations on Advanced Placement credit, see the front pages of this catalog.

Foreign Language Study and Placement

Students who studied a foreign language before coming to Cornell and who want to continue must take either the CEEB test in that language or a Cornell departmental language placement test. The latter is given during orientation week in September and again in December, January, and May. Human Ecology students who plan to work with non-English-speaking people in this country or abroad often find it necessary to be proficient in another language. Many study abroad programs in non-English-speaking countries require the equivalent of two years of college-level language study.

Extramural Credit

Extramural credit is administered by the Office of Continuing Education and Summer Sessions (B20 Day Hall, 255-4987). Extramural credit is charged by the credit hour at the endowed tuition rate. Students may count only 15 credits of extramural credit toward their degree requirements. A student may enroll for extramural credit during the fall or spring semester only if he or she is not registered in the College of Human Ecology. For example, some students enroll for extramural credit before matriculating at Cornell.

An exception to this rule is credit earned in the Ithaca College or Wells College exchange programs. Students enrolled in these programs simultaneously maintain their status as students registered in the College of Human Ecology.

Humanities

Only certain classes will count for Category I, Humanities. To determine eligibility the college uses the following definition: "The humanities include the study of literature, history (including art and design history), philosophy, religion, and archaeology. Critical, historical, and theoretical studies of the arts and design are considered humanities. Languages and creative or performing arts such as the writing of fiction or poetry, painting, sculpting, designing, composing or performing music, acting, directing, and dance are not considered humanities." Additionally, social science courses such as sociology, government, anthropology, and psychology are not considered humanities.

Specifically, courses in the following list will count as humanities:

Africana Studies (literature and history)

Archaeology

Asian American Studies

Asian and Near Eastern Studies (literature and history)

Classics (literature and history)

Comparative Literature

Development Sociology 1750, 3180

English (literature only)

Fiber Science & Apparel Design 1250

History

History of Art/History of Architecture

Landscape Architecture 2820

Music and Theatre Arts (theory, literature, and history only)

Natural Resources 3320

Philosophy

Policy Analysis and Management 5310, 5340, 5520

Religious Studies

Science and Technology Studies 2050, 2060, 2330, 2500, 2810, 2820, 2860, 2920, 3580, 3600, 3890, 4330, 4440, 4470, 4720, 4810, 4900

Math Requirement

Students may meet the college level requirement in *one* of the following ways.

Any CORNELL math course except MATH 1000 (BTRY 1150 may be used)

OR

Any CORNELL statistics course

OR

Score of at 3 or higher on the AP Calculus BC exam. (Other AP math credit could be used toward graduation credit but not used to meet the math requirement)

Notes:

- Departments may impose additional requirements for majors or specify courses within this requirement.
- Students entering as transfers may apply to have their stats or math courses approved, but pre-calculus courses would not longer meet this requirement or receive graduation credit.

PROCEDURES

Registration and Course Enrollment

Registration Requirements

University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear

communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must complete course enrollment according to individual college requirements; settle all financial accounts including current semester tuition; satisfy New York State health requirements; and have no holds from the college, the Office of the Judicial Administrator, Gannett Health Center, or the Bursar's office.

Individuals must become registered students by the end of the third week of the semester. Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises.

Verification of Registration

Many insurance companies or scholarship funds require verification of full-time registration at Cornell. Should students need such verification, they should use the official university verification service at <http://certification.cornell.edu> or request an official letter from the Office of the University Registrar (B-7 Day Hall). Students who need letters of good standing should contact the Human Ecology registrar's office (146 MVR).

Bursar Bill

A bursar bill is sent to each student over the summer and winter breaks; it summarizes what is owed to the university. The bursar bill can also be viewed through *Student Center*. Any questions regarding the bursar bill can be directed to the bursar's office (260 Day Hall, 255-2336). Initial New York State residency eligibility is determined during the admissions process, but the bursar's office will handle any request for a status change after matriculation.

Late University Registration

A student clearing his or her financial obligations after the deadline date on the bursar's bill is considered late. **Late registrants are assessed a finance charge on the bursar's bill starting from the date the bill is due.** According to university policy, all students must be registered before the end of the third week of classes. If for any reason a student registers after that time, the Bursar's office will charge a late fee. **Students who fail to register by the third week of the semester may be withdrawn from the university. Human Ecology students who do not arrange payment agreements satisfactory to the university bursar by the last day of classes for a semester will be withdrawn from the university. Furthermore, credit for any classes attended for the semester will not be awarded regardless of the letter grade received for a class. Should withdrawn students wish to return, they must reapply through the college admissions office.**

Proration of Tuition

Except for mature students, it is seldom possible to have tuition prorated if a student carries fewer than 12 credits during a semester. See the college registrar (146 MVR) for more information. Students of mature status may carry 6 to 11 credits but must

request that their tuition be prorated. Prorated tuition will be considered only for requests of between 3 and 10 credits. All requests should be made to the college registrar (146 MVR) by the end of the pre-enrollment period in the semester before the term in which proration is requested.

Course Enrollment

Initiating the Process

"CoursEnroll" selections are only "requests" for seats in classes. Between the end of the course enrollment period and the beginning of the next semester, course requests are evaluated by the offering college department. Students can determine if their requests have been successful when final schedules are published before the add/drop period. Students are expected to make course requests for the subsequent semester during a specified time in the current semester. Those dates are advertised publicly and are available on the university registrar's web site (<http://registrar.sas.cornell.edu>). "CoursEnroll" takes place electronically, using software available through *Student Center*. During this time, each student must meet with his or her faculty advisor to discuss academic plans.

Information on courses is readily available in this catalog and in the *Course and Time Roster* for each semester. Both of these publications can be accessed on the web through CUInfo.

Incoming students will receive tentative schedules upon their arrival to campus, and will meet with faculty advisors during the orientation period.

Course Loads

Full-time matriculated students must carry at least 12 credits (exclusive of physical education courses) to maintain full-time status. Refer to the preceding section, "Minimum Semester Requirements," for details. The normal course load in the college ranges from 12 to 18 credits, although there is no limit to the number of statutory credits a student may take each semester. Nonetheless, students should avoid planning excessive workloads; the time required to keep abreast of courses tends to increase as the semester progresses. Students may not withdraw from courses after the seventh week of classes without petitioning and by substantiating extenuating circumstances. Students should avoid the need to drop courses by taking on a reasonable workload and using the drop period to make changes in their program.

Late Course Enrollment

Students who do not complete course enrollment during the CoursEnroll period usually must wait until the beginning of the next semester's add/drop period to enroll. Extensions are rarely granted and usually only for documented illness.

Students who do not meet the deadline for any reason should see the college registrar in 146 MVR as soon as possible. The college registrar can explain available options and course enrollment procedures under such circumstances.

Note: Students can review their course schedule via computer using *Student Center*. Students are responsible for checking their course schedule for accuracy of course numbers, credit hours, grade options, and

other data. Errors must be corrected immediately. Procedures for correcting enrollment errors as well as for making any other changes are described in the following section.

Course Enrollment Changes

It is to the student's advantage to make any necessary course enrollment changes as early in the semester as possible. Adding new courses early makes it easier for the student to keep up with course work. Dropping a course early makes room for other students who may need it for their academic programs.

Ideally, students evaluate their course load carefully at the beginning of the semester. If, in the first week or two, the instructors do not discuss the amount of material to be covered and the extent of student assignments, students need to ask about course requirements.

Deadlines for Add/Drop and Grade Option Changes

Note: Brief add/drop periods exist for first-year writing seminars and half-semester courses.

1. During the first three weeks of the semester, courses may be added, dropped, or the grade option changed. Special status courses (4000, 4010, 4020) may be added through the seventh week of classes. 4030 Teaching Apprentice courses must be added during the first three weeks of the semester.
2. From the fourth through the seventh week of the semester, courses may be dropped. **Grade option changes may not be made at this point regardless of instructor's permission.**
3. After the seventh week of the semester, any requests for course changes must be made through the petition process. Students should request an appointment with an Admission, Career and Student Development counselor in 172 MVR to initiate the process.
4. After the seventh week of the semester, any student granted permission to drop a course after petitioning will automatically receive a grade of W (Withdrawn), and the course and grade will remain on the official transcript even if repeated in a later semester. The deadline to petition to drop a course with a "W" is the end of the 12th week.

Deadlines for Half-Semester Courses

Students may drop half-semester courses within the first three-and-one-half weeks of the course. Students may add a course after the first week of classes only with the permission of the instructor. After the first three-and-one-half weeks, students must petition to drop the course.

Time and Place for Add/Drop and Grade Option Changes

All students may adjust their schedules and grading options during the first three weeks of each semester. **To make course changes after the seventh week of the semester, a student must file a general petition form** (see "Petition Process.") Students are expected to attend classes and to do assigned work

until the petition has been formally approved or denied.

Permission of Instructor

Certain courses may be taken only with the permission of the instructor as indicated in this catalog or on the official course description on the web. Undergraduates must obtain permission of the instructor to take any graduate course. Students must request the instructor's permission during the course enrollment period by placing their name on a list maintained by the departmental advising assistant.

Students interested in taking a course in the Department of Art in the College of Architecture, Art, and Planning are required to register with the departmental secretary (100 Olive Tjaden Hall) before enrolling in the course. Seniors who want to take an elective course in the Johnson Graduate School of Management are required to obtain permission of the instructor on a course authorization form that the student then files with that school's registrar in Sage Hall.

Course Enrollment while Studying Abroad

Students who plan to study abroad have several options available to enroll for their returning semester at Cornell. Students can consult with their faculty advisor before departure to consider the schedule of classes that they will take upon their return to campus. Once abroad, the student can use the web to access *Courses of Study* and the *Course and Time Roster* for the coming semester. The roster is available on the web in approximately the first week of October and the first week of March. Using these resources, the student can e-mail the course requests to the student's faculty advisor for approval; the faculty advisor can then e-mail them to the college registrar. A student who does not have access to the Internet while abroad can wait for the *Course and Time Roster* to arrive via airmail from the Cornell Abroad office. The student can then e-mail, fax, or mail the course requests to their faculty advisor and ask the faculty advisor to submit the course requests to the college registrar. The *Course and Time Roster* becomes available only the day that pre-enrollment begins; thus, students who depend on receiving the mailed copy will experience some delay in submitting their course requests. Requests must be submitted within the published deadlines.

Oversubscribed Courses

Enrollment in many human ecology courses is limited. When a course is overenrolled, students are generally assigned on the basis of seniority or by criteria defined for each course as listed in this book. Students' professional goals may be considered. Those students not admitted to a course may be placed on a waiting list maintained by the professor or the department offering the course. Course instructors are responsible for determining the criteria to fill their classes from waiting lists. Waiting lists are maintained only for the first three weeks of each semester.

Limited-Enrollment Classes

Students who do not attend the first two class sessions of courses with limited enrollment may be dropped from the course list. Students can avoid being dropped from a class by notifying the instructor that unavoidable circumstances have prevented their attendance.

Cross-Listed Courses

To apply a cross-listed course to graduation requirements, students must enroll in the department for which they need the credits. If changes in department designations need to be made, this must be done during the official course add period for the semester. To do so, students must complete a special form, which can be obtained in the registrar's office in 146 MVR.

Courses with Duplicate Content

Students should scrutinize course descriptions for details about other Cornell courses with duplicate content that would preclude a student from receiving full credit for duplicate courses. For example, students may not receive 6 credits toward graduation requirements if they take DSOC 1010 and SOC 1101. Because both are introduction to sociology courses, only 3 credits would be allowed. To aid students in this evaluation, the college maintains a partial list (those that are commonly required in Human Ecology curricula) of Cornell courses that have duplicate content.

Special Studies Courses

Each department in the College of Human Ecology (DEA, FSAD, HD, NS, and PAM) offers special studies courses that provide opportunities for students to do independent work not available in regular courses. One of those courses, designated 3000 Special Studies for Undergraduates, is intended primarily for students who have transferred from another institution and need to make up certain course work.

The other special studies courses are 4000 Directed Readings; 4010 Empirical Research; and 4020 Supervised Fieldwork. Juniors and seniors normally take those courses, and a faculty member in the department in which the course is offered supervises work on an individual basis. It is important for students to use the appropriate course number (3000, 4000, 4010, or 4020) for a special project.

To register for a special studies course, a student obtains a special studies form from the departmental office where he or she plans to take the course. The student discusses the proposed course with the faculty member under whose supervision the study would be done and then prepares a plan of work. If the faculty member agrees to supervise the study, the student completes a special studies form and obtains signatures from the instructor, faculty advisor, and department chair before submitting the form to the college registrar's office (146 MVR). Special studies forms are available in 146 MVR or in departmental offices.

Semester credits for special studies courses are determined by the number of contact hours the student has with the supervising faculty member (or a person designated by the faculty member). To earn 1 credit, a student must have the equivalent of three to four hours of contact time per week for 15 weeks (a total of 45 contact hours). For additional credit, multiply the number of credits to be earned by 45 to determine the number of contact hours needed for the course. **Strict limitations exist on the number of special studies credits that can apply toward graduation and how these credits may be applied toward Category II requirements in the major. Refer to "Human Ecology**

Credit Requirements" for details. To register in a special studies course taught in a department outside the college, follow the procedures established by that department.

Changes in Status

General Petition Process

The petition process permits students to request exceptions to existing regulations. Petitions are considered individually, weighing the unique situation of the petitioning student with the intent of college and university regulations. In most cases, extenuating circumstances are needed for a petition to be approved if it involves waiving a deadline. These are situations beyond a student's control, such as a documented medical emergency.

Students can avoid the necessity to petition by carefully observing the deadlines that affect their academic program. See "Course Enrollment Changes" above for some of the important deadlines. If unsure of a deadline, check with a counselor in the Office of Student and Career Development (172 MVR) or with the staff in the college registrar's office (146 MVR).

A general petition may be needed to carry fewer than 12 credits, withdraw from a class after the seventh-week deadline, add a course after the third-week deadline, change a grade option after the third-week deadline, be exempt from one or more of the college's graduation requirements, substitute a required course in one's major with another course, or stay an additional semester to complete the graduation requirements.

Although many kinds of requests can be petitioned in the college, options other than petitioning may be preferable in some cases. To explore whether a petition is appropriate, the student may discuss the situation with a college counselor or the college registrar.

If a student decides to submit a general petition, the form is available in the registrar's office (146 MVR) and in the Office of Student and Career Development (172 MVR) or on the web at www.human.cornell.edu/che/Academics/Undergraduate/Student_Services/Registrar/Forms-and-Petitions.cfm. After completing the form and obtaining the required signatures, the student must turn the form in to the registrar. Once a decision is made, a letter is placed in the student's college mail folder indicating approval or denial of the petition.

Students may appeal the college registrar's decision to the Committee on Academic Status. Students who elect to appeal have the option of appearing in person before the committee to state their case. A member of the counseling staff can guide a student through this process.

In Absentia Study

Under certain conditions, credit toward a Cornell degree may be given for in absentia study, that is, study done at an accredited institution away from Cornell after the student matriculates in the College of Human Ecology. In absentia study can be done during any semester: fall, winter, spring, or summer. First-year writing seminars may not be taken in absentia.

To be eligible for in absentia study, a student must be in good academic standing and must

receive permission in advance from the college registrar. A student not in good standing may study in absentia but will not receive transcript credit until the Committee on Academic Status has returned the student to good standing. Students not in good academic standing who wish to finish their degree in absentia must seek pre-approval from the college's Committee on Academic Status via the general petition process. In some cases, students may petition for in absentia credit after the work has been completed, but there is no guarantee that such credit will be awarded without advance approval.

In absentia petition forms are available in the Human Ecology registrar's office (146 MVR) or on the web at http://www.human.cornell.edu/che/Academics/Undergraduate/Student_Services/Registrar/Forms-and-Petitions.cfm. The student submits the form to the Human Ecology registrar's office (146 MVR). In absentia study during the fall or spring semester carries a nominal administrative fee. (Contact the Bursar's office, 260 Day Hall, for the current amount.) Students will receive a letter in their college mail folder from the college registrar notifying them of the petition decision.

Note: Students seeking pre-approval for in absentia course work should do so well in advance as turnaround time for the approval process can be variable.

A student may take up to 15 credits in absentia as long as the courses do not duplicate courses already taken and the in absentia courses are applicable to the requirements of the college. Students who study abroad during the summer or winter term are limited to a maximum of 9 in absentia credits. Study abroad during the fall or spring semester must be done through the Study Abroad office and is not considered in absentia study. **Students studying while on a leave of absence during the spring or fall semesters may not receive credit for nondomestic campus programs.**

On the following rare occasions a student's petition for more than 15 credits in absentia may be allowed: (1) the work taken represents a special educational opportunity not available at Cornell, (2) it relates to the student's particular professional goals, and (3) those goals are consistent with the focus of the college. The in absentia petition form is used to request more than 15 credits in absentia. Wells and Ithaca College credit are not considered in absentia credit and are not included in the 15-credit limit.

The college registrar requests approval from the appropriate department if a student wants to apply in absentia credit to requirements in his or her major. Students seeking in absentia credit for a modern foreign language in which they have done work must obtain the approval of the appropriate language department (College of Arts and Sciences). The department will recommend the number of credits the student should receive and may require the student to take a placement test after returning to Cornell.

The student is responsible for having the registrar of the institution where in absentia study is done send transcripts of grades directly to the Human Ecology registrar's office (146 MVR). Only then will credit be officially assessed and applied to the Cornell

degree. Credit for in absentia study will be granted *only* for those courses with grades of C- or better. Courses may not be taken for S-U grades unless it is the only grade option offered. In absentia courses appear on the Cornell University transcript, but the grades are not calculated in the student's GPA.

A student who holds a Regents' or Children of Deceased or Disabled Veterans Scholarship may claim that scholarship for study in absentia if the study is done in a college in New York State and if it is for a maximum of 15 credits acceptable to the College of Human Ecology.

The rules regarding study in absentia apply to transfer students with the additional stipulation that at least 60 credits must be taken at Cornell. At least 43 of the 60 credits must be in the College of Human Ecology at Cornell unless the student has transferred equivalent human ecology credit. (No more than 20 credits of equivalent credit may be applied to the 43 credits required in human ecology course work.)

Leaves of Absence

A student may request a leave of absence before the beginning of the semester or during the first seven weeks of the semester for which a leave is sought. A leave may be extended for a second semester by making a written request to the Office of Student and Career Development (172 MVR). Note: In absentia study status and leave of absence status are not the same; however, students may petition to earn credits with either status. Students on leave must notify the college registrar (146 MVR), in writing, of their intention to return to campus at least one month before the beginning of the semester.

Those whose leave period has expired will be withdrawn from the college after the third week of the semester they were due back.

Students considering a leave of absence should discuss their plans with a counselor in the Office of Admission, Student, and Career Development. The counselor can supply the necessary forms for the student to complete and file with the Human Ecology registrar's office (146 MVR). Leaves initiated after instruction begins will be charged a percentage of the semester tuition. (Refer to "Bursar Information" in this catalog for a billing schedule.)

Requests for a leave of absence received after the first seven weeks of the semester, or requests for a leave of absence from students who have already had two semesters' leave of absence, will be referred for action to the Committee on Academic Status. The committee may grant or deny such requests, attaching conditions to the leave as it deems necessary. Leaves of absence after the first seven weeks are generally granted only when there are compelling reasons why a student is unable to complete the semester, such as extended illness.

A student who requests a leave of absence after the first seven weeks is advised to attend classes until action is taken on the petition. A student whose petition for a leave of absence is denied may choose to withdraw or to complete the semester. If the petition for leave is approved the student's courses will remain on the transcript with W grades.

The academic records of all students who are granted a leave of absence are subject to

review, and the Committee on Academic Status may request grades and other information from faculty members to determine whether the student should return under warning or severe warning or in good academic standing.

Under certain documented medical circumstances a student may be granted a **health leave of absence**. Health leaves are initiated by the student with Gannett Health Center. If Gannett Health Center recommends a health leave for the student, the college registrar may grant the leave. A health leave is for an indeterminate period of time not to exceed five years. Students who are granted a health leave of absence should maintain contact with a counselor in the Office of Student and Career Development (172 MVR, 255-2532) to arrange their return to campus. The counselor will advise the student on procedures to obtain a recommendation from Gannett Health Center to the college registrar for the student's return. Students should plan sufficiently in advance to assure time for Gannett Health Center and the college registrar to consider their request.

Withdrawal

A withdrawal is a termination of student status at the university. Students may withdraw voluntarily at any time by notifying a counselor in the Office of Admission, Student, and Career Development and filing a written notice of withdrawal in the Human Ecology registrar's office. A student considering such an action is urged to first discuss plans with a counselor in the Office of Admission, Student, and Career Development (172 MVR, 255-2532).

In some instances a student may be given a withdrawal by the college registrar. Students who leave the college without an approved leave of absence, or do not return after the leave has expired, will be given a withdrawal after the seventh week of the semester in which they fail to register.

A student who has withdrawn from the college or who has been given a withdrawal by the college registrar and who wishes to return at a later date must reapply through the Office of Admission for consideration along with all other applicants for admission. If the student was in academic difficulty at the time of the withdrawal, the request for readmission will be referred to the Committee on Academic Status (CAS) for consideration, and that committee may stipulate criteria under which the student may be readmitted to the college.

GRADES AND EXAMINATIONS

Grade Definitions and Equivalents

The official university grading system uses a system of letter grades ranging from A+ to D-, with F denoting failure. An INC grade is given for incomplete work and R is given at the end of the first semester of a two-semester course. If a student is given permission to withdraw from a course after the seventh week of the semester a "W" is automatically assigned. Students can view their grades on *Student Center* after the semester has ended. See "Grading Guidelines" for more information on the official university grading policies.

To compute a semester grade point average (GPA), first add up the products (credit hours X grade quality points) and divide by the total credit hours taken. Grades of INC, R, S, SX, U, UX, and W should not be included in any GPA calculations. A grade of F has no quality points, but the credits are counted, thereby lowering the average. A cumulative GPA is simply the sum of all semester products divided by all credits taken. Refer to "Repeating Courses" for details on how GPA is affected if a student repeats a course. For further help on calculating a GPA ask at the college registrar's office (146 MVR).

These are the quality point equivalents:

A+ = 4.3	C+ = 2.3
A = 4.0	C = 2.0
A- = 3.7	C- = 1.7
B+ = 3.3	D+ = 1.3
B = 3.0	D = 1.0
B- = 2.7	D- = 0.7
	F = 0.0

Repeating Courses

Students are allowed to register a second time for a course they have already passed or in which they received an F. If a student has previously passed a course he or she is taking a second time, the second registration will not count toward the degree requirements, and the grade received will not be included in the cumulative GPA.

If a student enrolls in a course in which he or she previously received an F, the credits from the second registration will count toward the graduation requirements and the grade will be included in the cumulative GPA. The F will also remain on the record and will be included in the GPA.

S-U Grades

Some courses in the college and in other academic units at Cornell are offered on an S-U basis (see course descriptions in this book and on the Cornell web site). Courses listed as SX-UX are available only on an S-U basis and may not be taken for a letter grade. University regulations concerning the S-U system require that a grade of S be given for work equivalent to a C- or better; for work below that level, a U must be given. **No grade point assignment is given to a grade of S, and S or U grades are not included in the computation of semester or cumulative averages.** A course in which a student receives a grade of S is, however, counted for credit. No credit is received for a U. Both the S and U grades appear on a student's record. A student who is attempting to qualify for the semester's Dean's List must take at least 12 credits of course work graded non-S-U. See "Awards and Honors" for more details about the Dean's List.

No more than 12 S-U credits will count toward a student's 120-credit graduation requirement. However, a student may take more than one S-U course in any one semester. **S-U courses may be taken only as electives or in the 9 credits required in the college outside the major** unless the requirements for a specific major indicate otherwise. Freshmen enrolled in ENGL 1370 and 1380 (offered for S-U grades only) are permitted to apply those courses to the first-year writing seminar requirement. If a

required course is offered only S-U, it will not count toward the 12-credit limit.

To take a course for an S-U grade, a student must check the course description to make sure that the course is offered on the S-U basis; then either sign up for S-U credit during course enrollment, or obtain and file an add/drop form in the Human Ecology registrar's office before the end of the third week of the semester. After the third week of the semester, students cannot change grade options.

Grades of Incomplete

A grade of incomplete is given when a student does not complete the work for a course on time but when, in the instructor's judgment, there was a valid reason. A student with such a reason should discuss the matter with the instructor and request a grade of incomplete. Students are at risk of going under the minimum semester requirement if an INC grade in a course puts the total number of credit hours under 12 for the semester. For more information, refer to "Minimum Semester Requirements."

A grade of incomplete may remain on a student's official transcript for a maximum of two semesters and one summer after the grade is given, or until the awarding of a degree, whichever is the shorter period of time. The instructor has the option of setting a shorter time limit for completing the course work.

If the work is completed within the designated time period, the grade of incomplete will be changed to a regular grade on the student's official transcript. **If the work is not completed within the designated time period, the grade of incomplete automatically will be converted to an F.**

When a student wants to receive a grade of incomplete, the student should arrange a conference with the instructor (preferably before classes end and the study period begins) to work out the agreement. A form, called Explanation for Reporting a Final Grade of F or Incomplete, which must be signed by both the instructor and the student, needs to be submitted by the instructor to the Human Ecology registrar's office. This form is submitted with the final grade sheets whenever a grade of incomplete is given. This form is for the student's protection, particularly in the event that a faculty member with whom a course is being completed leaves campus without leaving a record of the work completed in the course. If circumstances prevent a student from being present to consult the instructor, the instructor may, if requested by the student, initiate the process by filling out and signing the form without the student's signature and turning the form in to the Human Ecology registrar's office with the grade sheet. Before a student will be allowed to register for succeeding semesters, he or she must go to the Human Ecology registrar's office to fill out and sign the remainder of the form.

If the work is completed satisfactorily within the required time, the course appears on the student's official transcript with an asterisk adjacent to the final grade received for the semester in which the student was registered for the course. A student who completes the work in the required time and expects to receive a grade must take the responsibility for

checking with the Human Ecology registrar's office (about two weeks after the work has been handed in) to make sure that the grade has been received. Any questions should be discussed with the course instructor.

Grade Disputes

Students who find themselves in disagreement with an instructor over grades have several options:

1. Meet with the instructor and try to resolve the dispute.
2. Meet with the chair of the department in which the instructor has his or her appointment.
3. Meet with the associate dean for undergraduate studies of the college in which the course was taught.
4. Meet with the university ombudsman (118 Stimson Hall, 255-4321).

A student may also seek advice from his or her faculty advisor or with a counselor in the Office of Admission, Student, and Career Development (172 MVR).

Examinations

Both the preliminary and final examination schedules are available on the university registrar's web page at <http://registrar.sas.cornell.edu>.

Final Examinations

The following is quoted from the *Cornell University Faculty Handbook*, 1990, pages 66-67:

"The University Faculty long ago established, and has never reversed, the policy that each course should require a final examination or some equivalent exercise (e.g., a term paper, project report, final critique, oral presentation, or conference) to be conducted or due during the period set aside for final examinations.

"Although not specifically prohibited, it is University policy to discourage more than two examinations for a student in one 24-hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a makeup for other valid reasons, e.g., illness, death in the family, etc.

Legislation of the University Faculty governing study period and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the Registrar's Office without prior written permission of the Dean of the Faculty.
2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.
3. Permission will be given by the Dean of the Faculty to reschedule examinations during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time that the examination was originally scheduled. The faculty member requesting

such a change will be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the Registrar's Office.

4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) in the final examination period.
5. Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period completing them.
6. Faculty can require students to submit papers during the week preceding the study period.
7. Take-home examinations should be given to classes well before the end of the regular semester and should not be required to be submitted during study period but rather well into the examination period.

Students have a right to examine their corrected exams, papers, and the like, in order to be able to question their grading. They do not, however, have an absolute right to the return thereof. Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester preferably until the end of the following semester, to afford students such right of review."

Preliminary Examinations

The following is quoted from the *Cornell University Faculty Handbook* (1990), pages 65–66:

"Preliminary examinations are those given at intermediate times during a course. It is common to have three of these in a semester to encourage review and integration of major segments of the course, to provide students with feedback on how well or poorly they are progressing, and to contribute to the overall basis for a subsequent final grade.

The most convenient times and places for "prelims" are the normal class times and classrooms. But many courses, particularly large ones with multiple sections, choose to examine all the sections together at one time and to design an examination that takes more than one class period to complete. In such cases the only alternative is to hold the prelim in the evening. This practice creates conflicts with other student activities, with evening classes and laboratories, and among the various courses that might choose the same nights.

To eliminate direct conflicts, departments offering large multisection courses with evening prelims send representatives annually to meet with the dean of the University Faculty to lay out the evening prelim schedule a year in advance. Instructors of smaller courses work out their own evening prelim schedules, consulting their students to find a time when all can attend. Room assignments are obtained by the faculty member through the contact person in his or her college or the Central Reservations Coordinator.

The policy governing evening examinations is as follows:

1. Evening examinations may be scheduled only on Tuesday and Thursday evenings and only after 7:30 P.M. without prior permission from the Office of the University Faculty.
 - a. Such prior permission is not, however, required for examinations or makeup examinations involving small numbers of students (generally 30 or fewer) provided that the scheduled time is acceptable to the students involved and that an alternate examination time is provided for those students who have academic, athletic, or employment conflicts at the time scheduled.
2. Permission from the Office of the University Faculty to schedule on evenings other than Tuesdays and Thursdays or at a time before 7:30 P.M. will be granted only on the following conditions:
 - a. Conditions such as the nature of the examination, room availability, large number of conflicts, etc., justify such scheduling.
 - b. An alternate time to take the exam must be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.
3. If there is a conflict between an examination listed on the schedule developed at the annual evening prelim scheduling meeting and an examination not on the schedule, the examination on the schedule shall have a priority, and the course not on the schedule must provide an alternate time to take the examination for those students faced with the conflict.
4. If there is a conflict between examinations, both of which are on the schedule developed at the annual evening prelim scheduling meeting or both of which are not on the schedule, the instructors of the courses involved must consult and agree on how to resolve the conflict. Both instructors must approach this resolution process with a willingness to provide an alternative or earlier examination.
5. Courses using evening examinations are strongly urged to indicate this in the course description listed in *Courses* and must notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed."

ACADEMIC STANDING

Criteria for Good Standing

The College of Human Ecology has established a set of **minimum academic standards** that all students must meet or exceed each semester. These standards are as follows:

1. A student must maintain a semester and cumulative grade point average of 2.0 or higher.
2. A student must successfully complete at least 12 credits per semester, excluding physical education courses. Mature students must carry at least 6 credits each

semester, also excluding physical education.

3. Students enrolling in the college as freshmen must complete at least 12 credits of Human Ecology courses by the end of the fourth semester such that at least 5 credits must be taken by the end of the second semester (ECON 1110 and 1120 may be used to fulfill this requirement). Transfer students must complete 12 Human Ecology credits by the end of their second semester at Cornell.
4. A student must be making "satisfactory progress" toward a Human Ecology bachelor's degree.
5. All students must complete their requirements for first-year writing seminars (FWS) during their first two semesters at Cornell. Students who do not take a required first-year writing seminar in the first semester that they matriculate at the College of Human Ecology will be placed on a warning status.

Students who have completed the second or subsequent semesters of matriculation at the college who have not taken both of the required writing seminars will be placed on a severe warning with danger of being withdrawn status. In these cases, if the student has not pre-enrolled for an FWS for the upcoming semester, a hold will be placed on the student's semester registration status until he or she is actually enrolled in an FWS. **If this requirement is not completed by the end of that semester, the student will be withdrawn from the college.**

At the end of each semester, the Committee on Academic Status (CAS) reviews each student's academic record to ensure that the **minimum academic standards** listed above are met. The committee then takes appropriate action for students whose academic achievement is considered unsatisfactory as defined by these criteria. CAS considers each case individually before deciding on a course of action. In an effort to support every student's success, the committee may take any of the following actions:

1. Place a hold on a student's university registration status for the current or upcoming semester.
2. Withdraw the student permanently from the college and Cornell University.
3. Require the student to take a leave of absence for one or more semesters.
4. Issue a warning to the student at one of the following levels:
 - a. Severe warning with danger of being withdrawn
 - b. Severe warning
 - c. Warning

These imply that if the student does not show considerable improvement during the semester, the committee may withdraw the student.

5. Add the student's name to a review list; students with this status are monitored by the committee throughout the semester.
6. Return the student to good standing.

Students placed on a required leave must appeal to CAS to return. This appeal occurs at the end of the required leave period. Students

who have been withdrawn may appeal the decision before the committee during the pre-semester appeals meeting. Students who have been placed on a warning status owing to incomplete or missing grades may request that their status be reviewed for possible updating to good standing once the grade records reflect the updates or corrections. These requests should be made using the general petition process and submitted to the college registrar.

All students with an academic warning status automatically will be reviewed for specific criteria at the end of the subsequent semester. In most cases, students put on warning, severe warning, or severe warning with danger of being withdrawn status will be informed of conditions that they are expected to fulfill to return to good standing. In general, these conditions are that a student must earn a minimum semester GPA of 2.0, complete 12 credits (exclusive of physical education), and not have any incomplete, missing, F, or U grades on his or her most recent semester record.

If a student who has been previously placed on a required leave wishes to return to the college, he or she must submit a plan of study to the committee before being rejoined.

Students who have been withdrawn from the college by CAS may request that they be readmitted. Such students have three years from the date they were withdrawn to make this appeal with assistance from a counselor in the Office of Student and Career Development (172 MVR). After three years, a former student must apply for readmission through the college's Office of Admission. A student applying for readmission should discuss his or her situation with a counselor in the Office of Admission, Student and Career Development. The student also should also talk with others who may be able to help—faculty advisors, instructors, or a member of the university medical staff. Any information given to the committee is held in the strictest confidence.

Academic Integrity

Academic integrity is a critical issue for all students and professors in the academic community. The University Code of Academic Integrity states that (1) a student assumes responsibility for the content and integrity of the academic work he or she submits, such as papers, examinations, or reports and (2) a student shall be guilty of violating the code and subject to proceedings under it if he or she:

- Knowingly represents the work of others as his or her own.
- Uses or obtains unauthorized assistance in any academic work.
- Gives fraudulent assistance to another student.
- Fabricates data in support of laboratory or field work.
- Forges a signature to certify completion or approval of a course assignment.
- Uses an assignment for more than one course without the permission of the instructor involved.
- Uses computer hardware and/or software to abuse privacy, ownership, or user rights of others.

- In any manner violates the principle of absolute integrity.

The college's Academic Integrity Hearing Board, which consists of a chairperson, three faculty members, and three students, hears appeals from students who have breached the code. It also deals with cases brought directly to it by members of the faculty.

Academic Records

Students may obtain their Cornell academic record in several ways. The **Cornell transcript**, which is the official record of the courses, credits, and grades that a student has earned can be ordered with no charge at the Office of the University Registrar (B7 Day Hall) or online at <http://transcript.cornell.edu>. For more information, call 255-4232. Students may also access their grades and course schedules electronically using *Student Center*. **Students should be in the habit of checking Student Center by the second week of every semester to confirm that their schedule and grade options are correct.** Adjustments must be made before published enrollment deadlines.

The college also maintains a **graduation progress worksheet** for each student showing progress toward the degree. At the beginning of fall semester continuing students should check their updated worksheet on the registrar tab at www.human.cornell.edu. It is important to check this document and bring any errors to the attention of the staff in the college registrar's office (146 MVR).

Disclaimer: These worksheets are unofficial tally tools used by the college registrar and in no way substitute for a student's responsibility for tracking the progress toward completing degree requirements as outlined in the curriculum sheet for each major.

Access to Records

The Family Educational Rights and Privacy Act of 1974 assures students of privacy of their records. The law also assures students' access to their records. Information concerning a student's relationship with the university is considered restricted and may be released only at the student's specific written request. Restricted information includes the courses elected; grades earned; class rank; academic and disciplinary actions by appropriate faculty, student, or administrative committees; and financial arrangements between the student and the university. Letters of recommendation are restricted information unless the student has specifically waived right of access.

Students who want additional information on access to their records may contact the Office of the College Registrar (146 MVR) or the Office of the University Registrar (B7 Day Hall). An inventory of those student records maintained by Cornell University offices in Ithaca, their location, and cognizant officer are available in the Office of the Dean of Students (401 Willard Straight Hall).

For specific information, refer to the university's policy "Access to Student Information" at www.univco.cornell.edu/policy/ASI.html, or talk with the college registrar.

ACADEMIC HONORS AND AWARDS

The college encourages high academic achievement and recognizes outstanding students in several ways.

Honors

Dean's List. Excellence in academic achievement is recognized each semester by placing on the Dean's List the names of students who have completed satisfactorily at least 12 credits of letter grades and who have a semester GPA of 3.7 or above. No student who has received an F or U in an academic course will be eligible.

Kappa Omicron Nu seeks to promote graduate study and research and to stimulate scholarship and leadership toward the well-being of individuals and families. As a chapter of a national honor society in the New York State College of Human Ecology, it stimulates and encourages scholarly inquiry and action on significant problems of living—at home, in the community, and throughout the world.

Students are eligible for membership if they have attained junior status and have a cumulative average of B or higher. Transfer students are eligible after completing one year in this institution with a B average.

Current members of Kappa Omicron Nu elect new members. No more than 10 percent of the junior class may be elected to membership and no more than 20 percent of the senior class may be elected. Graduate students nominated by faculty members may be elected. The president of Kappa Omicron Nu has the honor of serving as First Degree Marshall for the college during May commencement.

Bachelor of science with honors

recognizes outstanding scholastic achievement in an academic field. Programs leading to a degree with honors are offered to selected students. Information about admission to the programs and their requirements may be obtained from the appropriate department or division. Students in other departments who wish to qualify for honors should contact the Office of Admission, Student, and Career Development (172 MVR) during their sophomore year or the first semester of their junior year. Honors candidates must have a minimum GPA of 3.3 and have demonstrated potential for honors-level research. To graduate with honors a student must take approved courses in research methodology and evaluation, attend honors seminars, complete a written thesis, and successfully defend it in front of a committee.

Bachelor of science with distinction

recognizes outstanding scholastic achievement. Distinction is awarded to students in the top 10 percent of the graduating class based on the last 60 credits earned at Cornell. The graduating class includes students who will complete requirements for bachelor of science degrees in January or May of the same academic year or the prior August. Names of seniors who meet these requirements are presented to the faculty of the college for approval.

The primary objectives of the honor society, **Phi Kappa Phi**, are to promote the pursuit of excellence in higher education and to recognize outstanding achievement by students, faculty, and others through election to membership. Phi Kappa Phi is unique in

that it recognizes scholarship in all academic disciplines. To be eligible for membership students must rank in the top 10 percent of the senior class, or in the top 5 percent of the junior class. Provisions also exist for the election of faculty members and graduate students whose work merits recognition.

Awards

The Elsie Van Buren Rice Public Speaking Contest awards prizes totaling \$2,500 for speeches related to published research by Human Ecology faculty members. The contest is held each year in March.

The Flora Rose Prize is given to a Cornell Human Ecology junior or senior whom, in the words of the donor, "shall demonstrate the greatest promise for contributing to the growth and self-fulfillment of future generations." The recipient receives a cash prize of \$750.

The Florence Halpern Award is named for the noted psychologist, Dr. Florence Halpern, in recognition of her lifelong interest in "innovative human service, which betters the quality of life." In that spirit the award is presented to an undergraduate in the College of Human Ecology who has demonstrated, through supervised fieldwork or community service, creativity in the search for solutions to human problems. The award carries a \$750 cash prize.

COLLEGE COMMITTEES AND ORGANIZATIONS

Student Groups and Organizations

Following are brief descriptions of some of the organizations that offer valuable experiences to human ecology students. Information about many other student activities on campus may be obtained from the Office of the Dean of Students (401 Willard Straight Hall).

The **Cornell Design League** was formed to give students interested in apparel a chance to express their creativity outside of the classroom by producing a fashion show every spring. It has become concerned with all aspects of a professional presentation. Consequently, it also provides a creative outlet for those interested in graphics, photography, illustration, or theater production. Although many of its designers are part of the Department of Fiber Science & Apparel Design, the Design League welcomes people of all majors and schools.

Students have opportunities to work throughout the community in a variety of service capacities. They volunteer in day care centers, youth programs, health-related agencies, services for elderly people and people with disabilities, as well as nutrition programs, arts organizations, and Ithaca schools. For further information, contact the **Public Service Center** (200 Barnes Hall). Call 255-1148 for information about volunteer work or 255-1107 for information about work-study arrangements.

The **Human Ecology Ambassadors** is a group of Human Ecology undergraduates who assist the Office of Admission in the area of new student recruitment and yield. Ambassadors participate in group conferences

with prospective students to provide information from a student's perspective, assist with on-campus programs for high school students and potential transfer students, and help with prospective student phonathons and letter writing. In addition, ambassadors attend regular meetings and serve as coordinators for activities in the Office of Admission.

For information, contact the Office of Student and Career Development (172 MVR, 255-5471).

The **Human Ecology Mature Students Association** is an organization of students who are 24 years of age or older at the time of matriculation. Many mature students need to balance family, work, and other concerns with their academic efforts. The Mature Students Association strives to help by providing a forum for resource exchange and referral, support, socializing, and special projects depending upon expressed interest. These goals are pursued through seminars and informational meetings, the mature students listserv, supplementary orientation activities, liaison with other university offices, and the encouragement of informal networking. For more information, contact Patti Papapietro in the Office of Admission, Student, and Career Development (172 MVR).

Students interested in the relationship between the physical environment and human behavior may join the **Human-Environment Relations Students Association (HERSA)**. For more information, contact the Department of Design and Environmental Analysis.

The **International Facility Managers Association (IFMA)** also has a student chapter. Membership information is available from the Department of Design and Environmental Analysis.

The **Association for Students of Color (ASC)** unites Human Ecology students of color to provide a supportive foundation for their enrollment, retention, graduation, and career placement. ASC members work toward these goals by

1. participating in admissions hosting programs and conducting high school visitations.
2. sponsoring presentations on career and graduate school outcomes of a Human Ecology education.
3. providing volunteer services to the Cornell and Ithaca communities.
4. attending regular meetings and hosting annual fall and spring forums.

For more information, contact Verdene Lee in the Office of Admission, Student, and Career Development (172 MVR, 255-2532).

The **PreLaw Undergraduate Society (PLUS)** is sponsored by Human Ecology and welcomes members from the Cornell community. Meetings provide information and support for students considering careers in law. Programs include information on the law school admission process, law school applications, and LSAT preparations. Additionally, PLUS offers tours of the Cornell Law School and information panels with current law students. Guest speakers include practicing attorneys, law faculty, and current law school students. For more information, contact Deanne Maxwell in the Office of Admission, Student, and Career Development (172 MVR, 255-2532).

The **Preprofessional Association Toward Careers in Health (PATCH)** provides support, advising, and up-to-date information to students pursuing careers in health care. Programs include academic advising, guest speakers from allopathic and alternative medicine, information on medical school admissions, exposure to complementary health care career options, MCAT preparation tips, information on research and internship opportunities, and a visit to a local medical school. This student-run organization is sponsored by Human Ecology and is open to the Cornell community. For more information, contact Paula Jacobs in the Office of Admission, Student, and Career Development (172 MVR, 255-2532).

The **Orientation Committee** consists of students and advisors interested in planning and implementing programs to acquaint new students with the College of Human Ecology. The committee is particularly active at the beginning of each semester and is always eager for new members. For more information, contact Patti Papapietro in the Office of Admission, Student, and Career Development (172 MVR, 255-2532).

Membership in the **Sloan Student Association** is open to students interested in health care and related fields. For more information, contact the president of the association (122 MVR, 255-7772).

The **Students for Gerontology (SFG)** is composed of students from a wide variety of majors who are interested in career and internship opportunities that contribute to the well-being of our aging population. Programs sponsored by this organization focus on developing linkages with community organizations and other student gerontology groups. SFG meets monthly. For more information, contact Nancy Wells, faculty advisor, Bronfenbrenner Life Course Center (E220 MVR, 254-6330).

The **Health and Nutritional Undergraduate Society (Health NUTS)** promotes nutritional well-being through education, communication, and research. Members of the student chapter organize programs such as Food and Nutrition Day in March, and host on-campus speakers in nutrition and health-related fields. The student chapter is open to all students interested in nutrition education. For more information, contact Gail Canterbury (B19 Savage Hall, 255-2628).

Committees and Councils

Several official organizations exist within the college to deal with matters of policy and to provide leadership in college planning. Most include elected student and faculty representatives; the actions of these various groups affect all students directly or indirectly.

The **Educational Policies Committee (EPC)** has two student members, one graduate and one undergraduate, who vote along with the faculty members on all matters relating to college academic policy. Recommendations are submitted to this committee regarding revisions in degree requirements, new curriculum changes, and new course approval.

Students also have the opportunity to serve on the **Admissions Policy Subcommittee**, and the **Academic Integrity Hearing Board**.

The **Selection Committee for the Chancellor's Award for Excellence in**

Teaching or Professional Service handles the nomination and selection process for this prestigious yearly award. The committee consists of three teaching faculty members, one professional staff member, and three undergraduate members.

The **Human Ecology Alumni Association Board of Directors** includes two student board members—one junior and one senior. One student is selected each spring to begin a two-year term as student representative. The two students co-chair the board's Student Activities Committee, which works to increase the visibility of the Alumni Association among the student body by funding a variety of activities. The student members also bring an important perspective to board deliberations about programming and annual goals.

The Committee on Academic Status does not include student representatives but does have a faculty representative from each department. This committee is responsible for upholding the academic standards of the college and takes action when appropriate. The committee also hears appeals regarding student petitions and requests to be readmitted to the college.

INTERDEPARTMENTAL COURSES

HE 1100 Critical Reading and Thinking

Fall, spring, or summer. 2 credits (credit toward graduation depends on individual college). Limited enrollment. Prerequisite: freshman or sophomore standing; juniors and seniors by permission of instructor. Letter or S-U grades. Staff.

Enables students to increase critical reading and thinking abilities. Examines theory and research associated with a wide range of reading, thinking, and learning skills. Emphasis is placed on developing and applying analytical and evaluative skills.

HE 1110 College Achievement Seminar

Summer, six-week session. 2 credits (credit toward graduation depends on individual college). Prerequisite: Pre-freshman Summer Program students. Letter or S-U grades. Staff.

Improves the study and learning skills of incoming freshmen. Emphasis is placed on acquisition of skills necessary to achieve academic success. Topics include time management, note-taking, mapping, textbook comprehension, exam preparation, and exam strategies. The application of theory to the demands of Cornell course work is stressed. In addition, students are introduced to library and computing resources through hands-on

HE 4070 Leadership in the Nonprofit Environment

Fall. 3 credits. Limited to 30 students. Letter grades only. B. Bricker.

The nonprofit sector contributes nearly 10 percent of U.S. GNP and employs 11 to 12 percent of citizens. This economic sector touches all our lives—as volunteers, donors, receivers of service, employees, or board members. This course provides an opportunity to explore the challenges and opportunities of the nonprofit sector. After becoming familiar with the issues and complications of strategic charitable giving, students will consider actual grant applications from community organizations and make decisions to award \$10,000 in grant aid. HE 4070 is made

possible by a generous gift of \$10,000 from the Sunshine Lady Foundation. Students learn to read, evaluate, and write effective grant proposals. They create a Request for Proposal (RFP) to invite community nonprofits to apply for funding. They study organizational missions, the strengths and challenges of private, not for profit organizations, the motivation for giving time and money, and many related themes.

HE 4991/4992 Biology & Society Honors Project I and II

Fall and spring (yearlong). Credit TBA. Students who are admitted to the honors program are required to complete two semesters of honors project research and to write an honors thesis. The project must include substantial research, and the completed work should be of wider scope and greater originality than is normal for an upper-level course. The student must find a project supervisor and a second faculty member willing to serve as faculty reader; at least one of these must be a member of the Biology and Society faculty. Minimally, an honors thesis outline and bibliography should be completed during the first semester. In consultation with the advisors, the director of undergraduate studies will evaluate whether the student should continue working on an honors project. Students should note that these courses are to be taken in addition to those courses that meet the regular major requirements.

THE URBAN SEMESTER PROGRAM IN MULTICULTURAL DYNAMICS IN URBAN AFFAIRS

Cornell in New York City provides students with many study options that focus on multicultural dynamics in urban affairs. The options available include internships, individual and group community service projects, research, independent study, collaborative learning, and mentorships. Students must enroll concurrently in the three courses HE 4700, 4800, and 4900 or 4950. Students learn through reflection and action. Program options are possible throughout the academic year, during winter break, and in the summer.

Courses of study enable students to seek out the relationship between theory and practice, apply theory to practice, identify and acquire professional practice skills, and learn about the impact of diversity on New York City. By applying ethnographic research techniques and methods, students learn to think conceptually, reflect on their actions, and be agents of change.

HE 4060 Fieldwork in Diversity and Professional Practice: The Culture of Medicine and Public Health

Summer, eight-week session. Variable credit. S. Beck.

This course is part of the Urban Semester Program in New York City. Students learn through a cycle of experience and reflection. Over the course of eight weeks, students learn how to implement experience-based learning techniques and perspectives to enhance their competencies as initiates of professional practice. Students spend four days each week in an internship of their own choosing. One day each week, students have discussions with

professionals who represent different aspects of the New York City economy. This exposure enables students to explore a variety of professional perspectives and practices. Students participate in reflections seminars with the director of the program to explore student internship experiences and learning.

HE 4080 Fieldwork in Diversity and Professional Practice: Community and Public Service

Summer, eight-week session. Variable credit. M. Cocchini.

This course is part of the Urban Semester Program in New York City. Students learn through a cycle of experience and reflection. Over the course of eight weeks, students learn how to implement experience-based learning techniques and perspectives to enhance their competencies as initiates of professional practice. Students spend four days each week in an internship of their own choosing. One day each week, students have discussions with professionals who represent different aspects of the New York City economy. This exposure enables students to explore a variety of professional perspectives and practices. Students participate in reflections seminars with the director of the program to explore student internship experiences and learning.

HE 4090 Fieldwork in Diversity and Professional Practice: Finance, Business, and Other Settings

Summer, eight-week session. Variable credit. M. Cocchini.

This course is part of the Urban Semester Program in New York City. Students learn through a cycle of experience and reflection. Over the course of eight weeks, students learn how to implement experience-based learning techniques and perspectives to enhance their competencies as initiates of professional practice. Students spend four days each week in an internship of their own choosing. One day each week, students have discussions with professionals who represent different aspects of the New York City economy. This exposure enables students to explore a variety of professional perspectives and practices. Students participate in reflections seminars with the director of the program to explore student internship experiences and learning.

HE 4700 Multicultural Issues in Urban Affairs

Fall and spring. 3 credits. Students must take course during semester they participate in Urban Semester Program. Staff.

Uses New York City as a classroom. The landscapes, built environments, and people in them are the texts. In the beginning, students study the formation of this multicultural city by traversing lower Manhattan and imagining New Amsterdam as it became New York City. Then they investigate a number of neighborhoods and speak with local leaders about diversity issues in context, in practice, and in use, to learn how multicultural issues are experienced by people and how they make sense of them.

HE 4800 Communities in Multicultural Practice

Fall and spring, 6 credits. Students must take course during semester they participate in Urban Semester Program. Staff.

Concerns urban children and youth in communities of color. Each week of the semester, students participate one day in the school lives of children pre-K through eighth grade in selected neighborhoods in New York City. Students keep journals of their reflections on their experiences and observations.

HE 4900 Multicultural Practice

Fall and spring, 6 credits. Students must take *either* HE 4900 *or* 4950 during semester they participate in Urban Semester Program; which is appropriate depends on student's placement and is determined by Urban Semester director. Staff.

Students explore the intersection of organizational culture with issues of diversity. They investigate the nature of organizational culture and how it engages and includes or does not include diversity. Students report back in seminars their understanding and analysis of their internship organizations and their industry's role in creating conditions and environments of inclusion or exclusion. The course explores the conditions and processes that have brought about inclusion or exclusion.

HE 4950 Culture, Medicine, and Professional Practice in a Diverse World

Fall and spring, 6 credits. Students must take *either* HE 4900 *or* 4950 during semester they participate in Urban Semester; which is appropriate depends on student's placement and is determined by Urban Semester director. Staff.

Students participate in several experiential learning environments related to medicine over the course of the semester. Students rotate in a four-week unit, supported by Pastoral Care and ER, as well as several other choices through the semester. Medical and health-related practitioners make presentations throughout the semester.

DESIGN AND ENVIRONMENTAL ANALYSIS

S. Danko, chair (3M29 MVR, 255-3165); P. Eshelman, director of undergraduate studies; J. Elliott, director of graduate studies; F. Becker, S. Curtis, J. Elliott, G. Evans, D. Feathers, K. Gibson, R. Gilmore, A. Hedge, Y. Hua, J. Jennings, J. Laquatra, N. Wells

Note: A minimal charge for photocopied course handouts may be required.

DEA 4+1 Master's Degree Program

Outstanding students who complete their four-year undergraduate degree in DEA may apply for a master of arts/M.A. (interior design) or a master of science/M.S. (human environment relations) degree that typically requires one additional year of graduate study.

Through careful planning by the beginning of their junior year, many of the courses required in the M.A. or M.S. programs can be taken during the undergraduate years, creating an opportunity to focus the fifth year of study on

completing graduate courses and thesis requirements. Typically, students will take four to five courses in their fall semester as a graduate student, and two to three courses plus their thesis research in the spring semester. Students should expect to complete their thesis by the end of the summer term of their fifth year.

Admission to the 4+1 Master's program is not automatic. Students must meet with their advisors early in their undergraduate programs to plan carefully for this possibility. In the fall of the senior year, interested students must submit an online application to the Graduate School. The GRE exam and a portfolio are not required for 4+1 applicants. In addition to the online application, 4+1 applicants must submit a 4+1 study proposal to the department. Students who have compiled a strong undergraduate record in the department are usually good candidates for admission into the graduate program in Design and Environmental Analysis.

DEA 1101 Interior Design Studio I (also VISST 1101)

Fall, 3 credits. Limited to 20 students per sec. Prerequisite: DEA majors; permission of instructor for nonmajors. Option I majors must take DEA 1101 in fall of first year. B- or higher in DEA 1101 required to take DEA 1102 and 1150. Must complete incomplete grade in DEA 1101 before taking 1102 and 1150. Cost of materials: approx. \$200. J. Elliott.

Introduces the fundamental vocabulary and principles of two- and three-dimensional design. Students experiment with the development of image and form through problem-solving activities. Visit <http://courses.cit.cornell.edu/dea1101>.

DEA 1102 Interior Design Studio II

Spring, 3 credits. Prerequisite: Option I DEA majors only. Option I majors must take DEA 1102 and 1150 concurrently. B- or higher in DEA 1102 required to take DEA 2201. Must complete incomplete grade in this course before taking DEA 2201. Cost of materials: approx. \$300; shop fee: \$10. P. Eshelman.

Studio course in three-dimensional design with an interior design emphasis. Explores problems in spatial organization through drawings and models.

[DEA 1110 Making a Difference: By Design

Fall, 3 credits. Limited to 130 students. Lab fee: \$25. Next offered 2010-2011. S. Danko.

This course focuses on issues of leadership, creative problem-solving, and risk-taking through case study examination of leaders in business, education, medicine, human development, science, and other areas who have made a difference using design as a tool for positive social change. Using a micro to macro framework, students examine how design affects their daily lives and future professions from the person to the planet. Additional topics include nurturing creativity, visual communications, socially responsible design and business, culture, and ecological issues.]

DEA 1150 Design Graphics and Visualization

Spring, 3 credits. Limited to 18 students. Prerequisite: Option I DEA majors only; DEA 1101 with grade of B- or higher. Corequisite: DEA 1102. B- or higher in DEA 1150 required to take DEA 2201. Must complete incomplete grade in this course before taking DEA 2201. Minimum cost of materials: \$200; technology fee: \$10. K. Gibson.

Introductory graphics course for interior designers. Emphasizes orthographic and perspective drawing, formal and conceptual presentation methods. Reinforces concepts through projects, readings, and field trips.

DEA 1500 Introduction to Human-Environment Relations (also COGST 1500)

Spring, 3 credits. Limited to 15 students per sec (20 sec). Lec, disc. G. Evans.

Human-Environment Relations is an interdisciplinary field concerned with how the physical environment and human behavior interrelate. Most of our attention will be focused on how residential environments and urban and natural settings affect human health and well-being. We also examine at how human attitudes and behaviors affect environmental quality. Hands-on projects plus exams. Lecture and discussion sections Writing in Major option also available.

DEA 2030 Digital Communications

Spring, 2 credits. Limited to 45 students. Priority given to DEA majors. Lab fee: \$10. J. Elliott.

Digital information technologies for designers of the built environment. Students explore issues in relation to text and image through analysis and composition of form and content. Through a series of projects the students work toward the development of a professional web-based portfolio of self-promotional materials. The primary objective is to reinforce principles of visual communications while learning the rudiments of vector, raster, and html graphic software. Visit <http://courses.cit.cornell.edu/dea2030>.

DEA 2040 Introduction to Building Technology

Spring, 2 credits. Y. Hua.

This course is an introduction to a wide range of building technology. The goal is to develop basic understanding of building systems, their implications for the planning, design, and operation processes of buildings, as well as the impact of their performance on building occupants and the environment. Topics include site and climate, structural systems, building envelope, passive strategies for building conditioning, HVAC systems, interior systems, lighting systems, acoustics, electrical systems, construction process and building maintenance, and principles of building systems integration for occupant comfort and environmental sustainability.

DEA 2150 Digital Graphics

Fall, first seven weeks of semester. 1 credit. Prerequisites: DEA majors or permission of instructor, DEA 1101. Letter grades only. S. Curtis.

This course will be an investigation into use of computer graphic software programs for the purpose of design, visualization, and presentation. The course will investigate the inherent differences between raster and vector graphics and how to use a variety of computer graphics programs such as Adobe

Photoshop, Illustrator, Sketch Up, and Acrobat to achieve a desired end result. Lab-based course providing technical illustration in Adobe Illustrator, Photoshop, and Sketch Up.

DEA 2201 Interior Design Studio III

Fall. 4 credits. Limited to 18 students. Prerequisites: Option I DEA students; DEA 1101, 1102, 1110, 1150, and 1500 (minimum grades of B-); B- or higher required to take DEA 2202. Must complete incomplete in 2201 before taking 2202. Corequisites: DEA 2510, DEA 2150, DEA 4600. Minimum cost of materials: \$150; lab fee: \$40; required field trip: approx. \$130. J. Jennings.

Third semester in the studio sequence of eight semesters. The theme and objectives focus on design as critical thinking, introducing means by which students can think, draw, write, and build their way critically through design. Taken concurrently with DEA 2510, the course applies historical theory to contemporary design projects. Also includes a collaborative project with a professor and students from another design discipline.

DEA 2202 Interior Design Studio IV

Spring. 4 credits. Prerequisites: Option I DEA students; DEA 2201 and 2030. Pre- or corequisite: DEA 2040. Must complete incomplete grade in this course before registering for DEA 3301. Minimum cost of materials: \$120; field trip fee. R. Gilmore.

Based on programmatic criteria from real clients, students learn how to design several types of interior environments, from health care facilities to local nonprofit agencies. Emphasis is on space planning, lighting design, construction of custom light fixtures, and service learning, where students use design to transform the facilities of social service agencies in the community.

DEA 2410 Introduction to Computer-Aided Design (CAD)

Spring, first seven weeks of semester. 1 credit. Prerequisites: DEA majors or permission of instructor; DEA 1101. Letter grades only. Minimum cost of materials: \$50. S. Curtis.

This course provides an understanding of, and experience with, electronic drafting on the microcomputer. It includes a basic understanding of the features, limitations, and considerations associated with the operation of the latest release of AutoCAD. By the end of the course, the student will be proficient enough with the AutoCAD software to draw and plot most projects required by their course of study as they relate to architecture and interior design.

DEA 2420 Advanced Computer-Aided Design (CAD)

Spring, second seven weeks of semester. 1 credit. Prerequisites: DEA majors or permission of instructor; DEA 1101. Letter grades only. Minimum cost of materials: \$50. S. Curtis.

This course provides a thorough understanding of the 2-D features, limitations, and considerations associated with the operation of the latest release of AutoCAD. This course builds on knowledge gained in DEA 2410 and requires DEA 2410 as a prerequisite. Commands and concepts such as multi-sheet plotting, xreference drawings, blocks and attributes, raster images, user coordinate systems, and customization of AutoCAD are covered. This course will give the student a high level of proficiency with the AutoCAD software as they relate to architecture and interior design.

DEA 2500 The Environment and Social Behavior

Fall. 3 credits. Limited to 16 students. Priority order: DEA seniors, juniors, sophomores, freshmen. Prerequisite: DEA 1500 and written permission of instructor. Field trip fee: \$65. G. Evans.

This course is about architecture and human behavior. It is centered on two key principles: 1. the complex interplay of social and personal factors with the physical environment largely determines how the built environment influences human well-being; 2. aesthetics is not sufficient in judging design—we must also consider how the built environment affects health, interpersonal relationships, and performance along with preference. Two major projects, one in collaboration with a design studio and a real community client.

DEA 2510 History and Theory of the Interior

Fall. 3 credits. Limited to 35 students. Priority given to DEA majors. J. Jennings.

A historic study of interior architecture and design with an emphasis on the concepts of design theory. Overarching themes encompass several time periods from the classical to the 20th century and isolate cultural patterns, spatial ideas, dialectics, design elements, and theorists. Reading, discussion, analytical exercises, essays, and a field trip are included. Visit <http://courses.cit.cornell.edu/dea2510>.

DEA 2550 Introduction to Facility Planning and Management

Fall. 2 credits. Letter grades only. F. Becker. Introduction to the field of facility planning and management. Focuses on how the planning, design, and management of an organization's physical facilities can help it meet its business objectives. Topics include the history of the field, strategic planning, space planning and design, project management, building operations, workplace change management, real estate, and computer-aided facility management systems.

DEA 3000 Special Studies for Undergraduates

Fall or spring. Credit TBA. DEA faculty. Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the college registrar's office. The form, signed by both the instructor directing the study and the head of the department, is filed at course registration or during the change-of-registration period.

DEA 3030 Interior Materials and Sustainable Elements

Fall. 3 credits. Limited to 45 students. Prerequisite: interior design, hospitality, or architectural studio or permission of instructor. Approx. cost of materials: \$10. R. Gilmore.

A sustainable approach to the evaluation and selection of materials, finishes, and furnishings for the built environment has the potential to protect our planet. This course provides an introduction to sustainable sources and asks students to manipulate materials, understand performance testing, use building codes, create a life-cycle cost analysis, and complete interior specifications. Field trips provide an overview of the manufacturing process, and group projects culminate in the presentation of research on current "green" products and resources.

DEA 3040 Introduction to Professional Practice of Interior Design

Spring. 1 credit. Limited to 15 students. Prerequisite: Option I DEA students. DEA faculty.

Introduction to organizational and management principles for delivery of interior design and facility management services. Covers basic organizational structures and basic management functions within interior design and facility management organizations, work flow and scheduling, business practices, legal and ethical responsibilities and concerns, contracts, basic contract documents such as working drawings and specifications, supervision of construction and installation, and cost estimation.

DEA 3050 Construction Documents and Detailing

Spring. 2 credits. Prerequisites: DEA 3301 and 3030 or permission of instructor. Corequisite: DEA 3302. Minimum cost of materials: \$50; required field trips: \$10. R. Gilmore.

A continuous dialogue between the idea for an interior space and the reality of its final built form is contained within construction documents, also known as working drawings and specifications. Students study the history of architectural documentation, the organization of construction drawings, schedules, and specifications, and the detailing of interior elements and construction methods by touring a local millwork shop. Each student completes a comprehensive set of construction documents.

DEA 3250 Human Factors: Ergonomics-Anthropometrics

Fall. 3 credits. Recommended: DEA 1500. Undergraduate sec of DEA 6510; shares lec but meets for an additional hour. DEA 6510 has additional readings and projects. A. Hedge.

Implications of human physical and physiological characteristics and limitations on the design of settings, products, and tasks. An introduction to engineering anthropometry, biomechanics, control/display design, work physiology, and motor performance. Includes practical exercises and field project work. Visit <http://ergo.human.cornell.edu>.

DEA 3301 Interior Design Studio V

Fall. 5 credits. Prerequisites: DEA 1110, 1500, 2201, 2202, 2030, and 2040. Corequisites: DEA 3030 and 4590. Must complete incomplete grade in this course before registering for DEA 3302. Minimum cost of materials: \$150; shop fee: \$10; optional field trip: approx. \$10. P. Eshelman.

This intermediate-level interior design studio focuses on design for a special population inclusive of young children, older adults, and people of any age living with a congenital or hereditary condition, injury, or disease. The course is organized around a semester-long project broken into four phases: pre-design, design, full-scale model construction, and design documentation and presentation. Collaboration with students in DEA 2500/6600 provides experience in the application of evidence-based information in the design process.

DEA 3302 Interior Design Studio VI

Spring. 5 credits. Limited to 18 students. Prerequisites: DEA 3301 and 3030 or permission of instructor. Corequisite: DEA 3050. Must complete incomplete grade in this course before registering for DEA 4401. Minimum cost of materials: \$200; shop fee: \$10; field trip fee: \$20. K. Gibson.

Sixth semester in the studio sequence of eight semesters. Emphasizes use of the microcomputer as a creative tool in the design process. Explores social, cultural, and physical factors related to the interior environment through assignments, readings, and a field trip. Design and problem-solving skills are reinforced according to project type.

DEA 3500 Human Factors: The Ambient Environment

Spring, 3 credits. Recommended: DEA 1500. Undergraduate sec of DEA 6520; shares lec but meets for an additional hour. DEA 6520 has additional readings and projects. A. Hedge.

Introduces human-factor considerations in lighting, acoustics, noise control, indoor air quality and ventilation, and the thermal environment. Views the ambient environment as a support system that should promote human efficiency, productivity, health, and safety. Emphasizes the implications for planning, design, and management of settings and facilities. Visit <http://ergo.human.cornell.edu>.

DEA 3540 Facility Planning and Management Studio

Spring, 4 credits. Prerequisite: DEA 4590 or permission of instructor. Letter grades only. Minimum cost of materials: \$200. Y. Hua.

For advanced undergraduates interested in facility planning and management. Purpose is to provide basic tools, techniques, and concepts useful in planning, designing, and managing facilities for large, complex organizations. Covers strategic and tactical planning for facilities, organizing to deliver facility management services, project management, space forecasting, space allocation policies, programming, relocation analysis, site selection, building assessment, space planning and design, furniture specifications, and moves. Considers sociopsychological, organizational, financial, architectural, and legal factors.

DEA 4000-4010-4020-4030 Special Studies for Undergraduates

Fall or spring. Credit TBA. S-U or letter grades. DEA faculty.

For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of DEA not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake on a form available from the department office. This form must be signed by the instructor directing the study and the director of undergraduate studies and filed at course registration or within the change-of-registration period in the college registrar's office, 146 MVR, along with an add/drop slip. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department head is necessary. Students, in consultation with their advisors and the instructor should register for one of the following subdivisions of independent study.

DEA 4000 Directed Readings

For study that predominantly involves library research and independent reading.

DEA 4010 Empirical Research

For study that predominantly involves data collection and analysis or laboratory or studio projects.

DEA 4020 Supervised Fieldwork

For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

DEA 4030 Teaching Apprenticeship

For study that includes teaching methods in the field and assisting faculty with instruction. Students must have demonstrated a high level of performance in the subject to be taught and in the overall academic program.

DEA 4100 Facility Planning and Design in a Diverse Society

Spring, 3 credits. Prerequisites: DEA 1500, 1110, 2500, 6530, or permission of instructor. Letter grades only. L. Maxwell.

This is an upper-level undergraduate course appropriate for undergraduate and graduate students in facility planning and management, human environment relations and interior design students in DEA as well as students outside of DEA who are interested in how the built environment should respond to a diverse society. The course will examine facility planning and design issues in a diverse society. Specifically, the role of culture, gender, stage in the life cycle, and disability in planning facilities of various types will be studied. This course will examine the issues of diversity from two perspectives. One, how are the implicit and explicit assumptions about the user expressed in various aspects of the built environment in our society; and two, how do we purposely plan facilities in a diverse society.

DEA 4150 Strategic Facility Planning for Social Institutions

Spring, 3 credits. Prerequisites: DEA 1500, 2500, 4590, or permission of instructor. Letter grades only. L. Maxwell.

This is an upper-level undergraduate course appropriate for undergraduate and graduate students in facility planning and management, the Sloan program, urban planning, and design/architecture students interested in facility planning and design issues for health care institutions. The course will examine the facility planning and management issues that affect the healthcare industries. The course will specifically look at how these facilities respond to changes in (1) the needs of their target population, (2) technology and communications, (3) sustainability, (4) healthcare delivery practices, and (5) regulatory and policy issues related to the healthcare industry. The course will specifically examine all of these issues in the long-term care industry.

DEA 4220 Ecological Literacy and Design (also ARCH 4601)

Spring, 3 credits. Prerequisite: junior or senior standing. Letter grades only. Cost of field trips: approx. \$25. J. Elliott.

Lecture/seminar course for advanced undergraduates interested in learning about the effects of designing the built environment on the biophysical world. Course objectives are to develop sensitivities to environmental issues, construct conceptual frameworks for analysis, and demonstrate how ecological knowledge can be applied to the practice of

design through researching the use of the LEED building certification process for real world clients and stakeholders. Visit <http://courses.cit.cornell.edu/dea4220>.

[DEA 4230 Restaurant Design Charrette

Spring, 1 credit. Limited to 18 students. Prerequisite: permission of instructor. Letter grades only. Minimum cost of materials: \$50. Next offered 2010-2011. R. Gilmore and S. Robson.

This intensive weekend-long course pushes the boundaries of current restaurant design by developing a concept plan for an innovative restaurant in a nontraditional setting. Students work in teams to develop design solutions and prepare design presentations for review by course instructors and visiting design professionals.]

DEA 4300 Furniture as a Social Art

Spring, 3 credits. Limited to 15 students. Prerequisite: permission of instructor. Cost of building materials: \$150. (Additional shop hours are made available.) P. Eshelman.

The focus is on how innovation in furniture design is inspired. Four sources of inspiration explored are: user needs; aesthetic interpretation; material and manufacturing technologies; and environmental impact. The interplay among these four sources of inspiration will be examined with emphasis on the first, user needs. Assignments involve both analyzing furniture products currently on the market and designing and constructing a furniture piece for a special population inclusive of young children, older adults, and people of any age living with a congenital or hereditary condition, injury, or disease.

DEA 4401 Interior Design Studio VII

Fall, 5 credits. Prerequisites: DEA 3302, 3030, 3040, and 3050. Must complete incomplete grade in this course before registering for DEA 4402. Minimum cost of materials: \$150; field trip: \$50. R. Gilmore.

Comprehensive historic preservation design studio in which students complete each phase of the adaptive reuse of a historic structure. After site visit and historic survey work, students conduct demographic research, complete a building assessment, and design a new use for a viable, yet older structure. Lecture topics range from professional practice strategies, to the history of preservation, to the Secretary of the Interior's Standards for Rehabilitation. Components of the work include program documents, code compliance, concept development, schematic and design development presentations, and construction documents.

DEA 4402 Interior Design Studio VIII

Spring, 5 credits. Prerequisites: DEA 3301, 3302, 3030, and 3040. Minimum cost of materials: \$150. S. Danko.

Completion of advanced interior design problems broken into five phases: programming; schematic design and evaluation; design development, including material and finish selection; design detailing; and in-process documentation and the preparation of a professional-quality design presentation.

DEA 4530 Planning and Managing the Workplace

Fall, 3 credits. Prerequisite: junior or senior standing. F. Becker.

Through lectures, readings, and a field studies project, this course explores how the

planning, design, and management of health care facilities affects the experience of patients and care-giving staff; and the relationship of these outcomes to healthcare quality.

DEA 4540 Computer-Aided Facilities Management

Fall, second seven weeks of semester. 1 credit. Prerequisites: none. Letter grades only. S. Curtis.

This course will be an investigation into the use of computer-aided facilities management software in facilities management. Emphasis will be placed initially on understanding how FM CAD systems work. Topics such as Building a Space Inventory Database, Adding Occupancy Data, AutoCAD commands, Reports, Asset Management, and Strategic Planning and Stacking will be learned and discussed.

[DEA 4550 Research Methods in Human-Environment Relations]

Fall. 3 credits. Prerequisite: DEA majors or permission of instructor; statistics course. Next offered 2010-2011. N. Wells.

Develops students' understanding and competence in the use of research and analytical tools to study the relationship between the physical environment and human behavior. Emphasizes evaluation of internal and external validity as well as measurement reliability and validity. Topics include research design, unobtrusive and obtrusive data-collecting tools, the processing of data, and effective communication of empirical research findings.]

DEA 4590 Programming Methods in Design

Fall. 3 credits. Letter grades only. Minimum cost of materials: \$100. L. Maxwell.

Introduction to facility programming. Emphasizes formulation of building requirements based on user characteristics and potential constraints. The course presents diverse methods for determining characteristics that will enable a particular environmental setting to support desired behaviors of users. The course emphasizes selection of appropriate methods to suit the specific user/client needs. Students will work with an actual client to prepare a program document.

[DEA 4600 Design City]

Fall. 1 credit; may be repeated for credit. Prerequisite: DEA majors; permission of instructors. Not open to freshmen for credit. Students are required to take this course in order to participate in field study trip to a major city. Field trip fee covers cost of hotel and chartered bus; trip fee will be billed to student's bursar account. S-U grades only. Next offered 2010-2011. K. Gibson and J. Jennings.

Field study of historic and contemporary interiors with guided tours to architectural and interior design firms, installations, exhibits, and showrooms in New York City, Toronto, or other major cities. Topics and themes change yearly.]

DEA 4700 Applied Ergonomic Methods

Spring. 3 credits. Prerequisite: DEA 3250. Undergraduate sec of DEA 6700; shares lec but meets for an additional hour. DEA 6700 has additional readings and projects. A. Hedge.

Covers physical and cognitive ergonomics methods and techniques and their application to the design of modern work environments. Emphasizes understanding key concepts.

Covers conceptual frameworks for ergonomic analysis, systems methods and processes, a repertoire of ergonomics methods and techniques for the analysis of work activities and work systems.

DEA 4720 Environments for Elders: Housing and Design for an Aging Population

Spring. 3 credits. Field trip fee: \$20. N. Wells.

Through seminars, lectures, field trips, and service learning opportunities, students examine the relationship between older adults and the physical environment. Students gain understanding of the relevance of design characteristics to the well-being of older people; an appreciation of late-life social, cognitive, and physiological changes; as well as familiarity with a variety of housing options for late life. Visit <http://courses.cit.cornell.edu/dea4720>.

DEA 4990 Senior Honors Thesis

Fall or spring. Variable credit. Prerequisite: permission of thesis advisor and DEA director of undergraduate studies. Letter grades only. DEA faculty.

Opportunity for DEA majors to undertake original research and scholarly work leading to the preparation of a thesis. Students work closely with their thesis advisor on a topic of interest.

DEA 6000-6030 Special Problems for Graduate Students

Fall or spring. Credit TBA. S-U or letter grades. DEA faculty.

Independent advanced work by graduate students recommended by their special committee chair and approved by the head of the department and instructor.

6000: Special Problems. For study of special problems in the areas of interior design, human environment relations, or facilities planning and management.

6010: Directed Readings. For study that predominantly involves library research and independent study.

6020: Graduate Empirical Research. For study that predominantly involves collection and analysis of research data.

6030: Graduate Practicum. For study that predominantly involves field experiences in community settings.

DEA 6450 Dancing Mind/Thinking Heart: Creative Problem-Solving Theory and Practice

Spring. 3 credits. Limited to 24 students. Prerequisite: graduate or advanced undergraduate standing; undergraduates must have permission of instructor. S. Danko.

Focuses on thinking processes and techniques that support creative problem solving. Examines theories of creative behavior and critical thinking. The course is highly participatory and experiential by design. Weekly discussions include hands-on applications of theories on short problems tailored to the backgrounds of the students. The primary goal is to demonstrate perceptual, emotional, intellectual, cultural, and environmental blocks to creative thinking and expand the student's repertoire of creative problem solving strategies for use in day-to-day professional practice. Case studies of creative individuals and organizations from a variety of fields are presented.

[DEA 6480 Virtual Design, Analysis, and Representation]

Fall. Variable credit; max. 4. Limited to 15 students. Prerequisite: graduate or advanced undergraduate standing; for undergraduates, DEA 3302 or permission of instructor. Minimum cost of materials: \$150; lab fee: \$35. Next offered 2010-2011. K. Gibson.

Advanced use of computer technology to create and analyze interior environments. Emphasizes the use of 3-D modeling, animation, photorealistic rendering, and emerging technologies to investigate dynamic design issues.]

DEA 6500 Programming Methods in Design

Fall. 4 credits. L. Maxwell.

This course is intended for graduate students in cooperation with DEA 4590. Each student is required to attend DEA 4590 lectures, complete all required readings and assignments, and meet with the instructor and with other graduate students. An additional programming project will be required for all graduate students.

DEA 6510 Human Factors: Ergonomics-Anthropometrics

Fall. 4 credits. Recommended: DEA 1500 and 3-credit statistics course. A. Hedge.

Intended for graduate students who want a more thorough grounding in human factors than is provided by DEA 3250. Each student is required to attend DEA 3250 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For more detail, see DEA 3250.

DEA 6520 Human Factors: The Ambient Environment

Spring. 4 credits. Recommended: DEA 1500. A. Hedge.

Intended for graduate students who want a more thorough grounding in human factors considerations than is provided by DEA 3500. Each student is required to attend DEA 3500 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For detailed description, see DEA 3500.

DEA 6530 Planning and Managing the Workplace

Fall. 4 credits. Prerequisite: graduate standing. Letter grades only. F. Becker.

Through lectures, readings, and a field studies project, this course explores how the planning, design, and management of health care facilities affects the experience of patients and care-giving staff; and the relationship of these outcomes to healthcare quality.

DEA 6540 Facility Planning and Management Studio

Spring. 4 credits. Prerequisite: DEA 4590/6500 or permission of instructor. Letter grades only. Minimum cost of materials: \$200. Y. Hua.

For graduate students interested in facility planning and management. For description, see DEA 3540.

[DEA 6560 Research Methods in Human-Environment Relations]

Fall. 4 credits. Prerequisite: DEA majors or permission of instructor; statistics course. Next offered 2010–2011. N. Wells.

Intended for graduate students who want a more thorough understanding of the use of research to study the relationship between physical environment and human behavior than is provided by DEA 4550. Each student is required to attend DEA 4550 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For more detail, see DEA 4550.]

DEA 6590 Introduction to Facility Planning and Management

Fall. 1 credit. For graduate students interested in careers in facility planning and management. Letter grades only. F. Becker.

Introduction to the field of facility planning and management. Focuses on how the planning, design, and management of an organization's physical facilities can help it meet its business objectives. Topics include the history of the field, strategic planning, space planning and design, project management, building operations, workplace change management, real estate and computer-aided facility management systems.

DEA 6600 The Environment and Social Behavior

Fall. 4 credits. Prerequisite: DEA 1500 and written permission of instructor. Field trip fee: \$65. G. Evans.

This course is about architecture and human behavior. It is centered on two key principles: 1. the complex interplay of social and personal factors with the physical environment largely determines how the built environment influences human well-being; 2. aesthetics is not sufficient in judging design—we must also consider how the built environment affects health, interpersonal relationships, and performance along with preference. Two major projects, one in collaboration with a design studio and a real community client.

DEA 6610 Environments and Health

Spring. 3 credits. N. Wells.

Examines the impact of the physical environment on human health and well-being through the life course. Environmental factors examined include characteristics of the built and natural environment, housing, and neighborhood as well as sprawl, the dominance of the automobile, and patterns of American landscape development. Health outcomes include physical health, obesity, mental health, and cognitive functioning. Working within the life course perspective, the course focuses particularly on environmental factors that may act as either protective mechanisms fostering the long-term resilience of individuals or risk factors contributing to long-term vulnerability.

DEA 6680 Design Theory and Criticism Seminar

Spring. 4 credits. Limited to 15 students. Letter grades only. J. Jennings.

For advanced undergraduate and graduate students. The seminar explores two methods of design thinking: theoretical and critical. One method stems from a desire to understand historical theory and to assess the relevance of theory as an intellectual basis for contemporary design. The other approach involves learning to write critically. Within this

construct is the notion that every design is an argument a designer makes.

DEA 6700 Applied Ergonomics Methods

Spring. 4 credits. Limited to 20 students.

Prerequisite: DEA 6510. A. Hedge.

Intended for graduate students who want a more thorough understanding of applied ergonomics methods than is provided by DEA 4700. Each student is required to attend DEA 4700 lectures, meet with the instructor and other graduate students for an additional class each week, and complete additional readings and projects. For further detail, see DEA 4700.

DEA 6760 Universal Design: Ergonomics and Accessibility

Spring. 3 credits. Recommended prerequisite: DEA 1500, 3250, or 6510, or permission of instructor. S–U or letter grades (DEA Option III students must do letter grade). D. Feathers.

Universal design accommodates and fosters human function, preferences, choice and identity through the design of the built environment. This course introduces the concepts of universal design from a human factors/ergonomics perspective and outlines precepts and regulations to support environmental design decisions that accommodate individuals that vary by factors such as age, gender, and ability. Universal design concepts are also discussed throughout one's life course. Student projects emphasize evaluating the built environment from a universal design perspective.

DEA 8990 Master's Thesis and Research

Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S–U or letter grades. DEA graduate faculty.

DEA 9990 Ph.D. Thesis and Research

Fall or Spring. Credit TBA. Prerequisite: permission of doctoral thesis committee chair and instructor. S–U or letter grades. DEA Ph.D. graduate faculty.

FIBER SCIENCE & APPAREL DESIGN

A. Lemley, chair (209 MVR, 255-3151); M. Frey, director of graduate studies; C. Jirousek, director of undergraduate studies; S. Ashdown, N. Breen, C. C. Chu, C. Coffman, J. Hinestroza, V. D. Lewis, F. Mete, A. Netravali, S. K. Obendorf, A. Racine

FSAD 1140 Introduction to Computer-Aided Design

Fall. 3 credits. Limited to 14 students per sec. Priority given to FSAD students and those in transfer process to FSAD. S–U or letter grades. Minimum cost of materials: \$100. A. Racine.

Explores the creative potential of microcomputers for fashion design. Uses AutoCAD software program as a design tool for drawing 2-D images. Introduces basic Photoshop software functions to enhance original drawings. Projects include creating full-scale engineered designs on fabric for digital printing in the studio, and a team-based fashion magazine.

FSAD 1170 Fashion Graphics

Spring. 3 credits. Limited to 21 students. Priority given to apparel design students. Prerequisite: basic drawing course. Letter grades only. Minimum cost of supplies: \$200; lab fee: \$30. V. D. Lewis.

Students develop both familiar and unfamiliar methods that enable them to visualize the fashioned body and ancillary expressions of fashion. Fashion graphics is explored as a communicative strategy essential in most aspects of fashion development.

FSAD 1250 Art, Design, and Visual Thinking

Fall. 3 credits. S–U or letter grades. C. Jirousek.

Introduction to the visual arts and design that explores aesthetic and cross-cultural dimensions of visual experience. Augmented by slide presentations, artifacts, video, and an Internet-based electronic textbook, lectures emphasize the varieties of visual expression seen in works of art and design. Discusses social, cultural, and historic interpretations of visual expression.

FSAD 1350 Fibers, Fabrics, and Finishes

Spring. 3 credits. FSAD majors must also enroll in FSAD 1360. S–U or letter grades. A. Netravali.

Introduction to fibers, fibrous materials, and dyes and finishes. Gives special emphasis to the use of fibrous materials in apparel, residential and contract interiors, and industrial applications. Topics include fiber properties, fabric structure, coloration of fibrous materials, dimensional stability, flammability, product specifications, and performance standards.

FSAD 1360 Fiber and Yarn Analysis Laboratory

Spring. 1 credit. Corequisite: FSAD 1350. Letter grades only. A. Netravali.

Consists of 14 laboratory sessions, in which students learn techniques to identify and test fibers and yarns. A midterm and final exam are based on using the methods learned to identify an unknown fiber (midterm) and an unknown bi-component yarn (final).

FSAD 1450 Introduction to Fashion Design

Spring. 4 credits. Limited to 30 students; 15 per lab. Priority given to FSAD students and students transferring into FSAD. Prerequisite: FSAD 1140. Corequisites: FSAD 1350 and 1360. Letter grades only. Apparel design majors should take course during first year. Minimum cost of materials: \$200. A. Racine.

Intensive study of principles and processes of flat-pattern design with emphasis on creative expression in upscale children's fashions. Through studio projects, students develop an understanding of the techniques needed to produce apparel from technical sketches, flat pattern design processes, and garment assembly.

FSAD 2370 Structural Fabric Design

Fall. 3 credits. Prerequisite: FSAD 1350. Recommended: college algebra. S–U or letter grades. M. Frey.

Covers the elements of technical fabric design with an emphasis on woven and knitted fabrics. Topics include structure of woven and knitted fabrics, openness, manufacturability, equivalence, and color effects.

FSAD 2640 Draping

Fall. 4 credits. Limited to 30 students; 15 per lab. Prerequisites: FSAD 1250 and 1450. Recommended: drawing course. Letter grades only. Minimum cost of materials: \$250; lab fee: \$10. F. Mete.

This studio course examines the process of creating a three-dimensional garment from the

two-dimensional fabric. The principles and processes of draping, advanced flat pattern making, and fitting are studied through projects. Drawing exercises focus on the communication of three-dimensional garments in two-dimensional sketches. Assigned problems require students to make judgments regarding the design process, the nature of materials, body structure, function, and fashion.

FSAD 2650 Patternmaking for Fashion Design

Spring. 3 credits. Limited to 30 students. Prerequisites: FSAD 1140, 1170, 1250, 1450, 1350, and 1360. Corequisite: FSAD 2370. Letter grades only. Minimum cost for fabrics, studio, and portfolio supplies: \$250. A. Racine.

The goal of this apparel studio course is to expand student competencies in flat pattern design, technical sketching, and fitting. Students generate original design concepts using fashion sources from historic to contemporary times. Advanced garment assembly and detailing techniques for fashion apparel with Sonobond Technology are introduced.

FSAD 2660 Apparel Design: Product Development

Spring. 3 credits. Prerequisites: FSAD 1140 and 1450. Recommended: drawing course. Letter grades only. Minimum cost of materials: \$150; lab fee: \$10. S. Ashdown.

Project-based course in which students explore the relationship between technology and design, and the impact of production issues on manufactured clothing. Students learn computer-aided patternmaking, grading, manufacturing technologies, communication of technical details, flats, specifications, and costing of garments. Designs are developed to various stages from conceptual work to full specification of the product and its production details, with a concentration on the iterative design process.

FSAD 3000 Special Studies for Undergraduates

Fall or spring. Credit TBA. Staff. Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the college registrar's office. The form, signed by both the instructor directing the study and the department chair, is filed at course registration or during the change-of-registration period.

FSAD 3250 Color and Surface Design of Textiles

Fall. 4 credits. Limited to 18 students. Priority given to FSAD apparel design majors. Recommended: FSAD 1140 and 1350. Letter grades only. Minimum cost of materials: \$100; lab fee: \$100. C. Jirousek.

Studio experience in the surface design of textiles combined with exercises in color theory. Textile projects use techniques such as block printing, shibori, batik, silk painting, silk screen, and stitchery to produce a portfolio of textile designs. Studio work is augmented by lectures on pattern and color theory illustrated by slides and textile examples.

FSAD 3350 Fiber Science

Fall. 3 credits. Limited to 20 students. Prerequisites: college chemistry and physics. S-U or letter grades. A. Netravali.

Covers fibers commonly used in various engineering, medical, and apparel applications. Topics include the nature of polymer molecules, the chemical structure of organic fibers, inorganic fibers, micro-macro structure of fibers, fiber dimensions, environmental effects, and mechanical, optical, thermal, and frictional properties of fibers. The following fiber uses are discussed: composites in aerospace and other structural components, circuit boards, bulletproof vests, sutures, artificial arteries, geotextiles, sporting goods, and others.

FSAD 3460 Design Process

Fall. 4 credits. Limited to 30 students. Prerequisites: FSAD 1350, 1450, 2640, and 2650. Letter grades only. Minimum cost of materials: \$250; lab fee: \$10. V. D. Lewis.

The course exposes students to dilemmas and methods used by creative Fashion designers. Course ambitions are to develop personal design handwriting, unite a provocative design issue with the requirement of the market and functionality while emphasizing quality and creativity in realizing design ideas.

FSAD 3690 Style, Fashion, and the Apparel Industry

Fall. 2 credits. Limited to 30 students. Not open to freshmen. Prerequisites: FSAD 1250, 1350, and 2370. Students should not take FSAD 3690 and FSAD 3460 in same semester. Letter grades only. A. Racine.

Illustrated lectures focus on changes in the U.S. apparel industry and fashion cycles from the 19th century to the present day resulting from social forces, technological developments, and shifting demographics. The Cornell Costume Collection is used for discussion. Students write an original research paper on topics relating to changes in fashion over time.

FSAD 4000-4010-4020-4030 Special Independent Studies for Undergraduates

Fall, summer, or spring. Credit TBA. S-U or letter grades. Staff.

For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of FSAD not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake on a form available from the department office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration along with an add/drop slip in the college registrar's office (146 MVR). To ensure review before the close of the course registration or change-of-registration period, early submission of the special-studies form to the department chair is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

FSAD 4000: Directed Reading. For study that predominantly involves library research and independent reading.

FSAD 4010: Empirical Research. For study that predominantly involves data collection and analysis, or laboratory or studio projects.

FSAD 4020: Supervised Fieldwork. S-U grades only. For study that involves both responsible participation in a community setting and reflection on that experience

through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

FSAD 4030: Teaching Apprenticeships. Fall or spring. 2-4 credits. Prerequisites: upper-class standing, demonstrated high level of performance in subject to be taught and in overall academic program, and permission of instructor and department chair. S-U or letter grades. Staff. Apprenticeship includes both a study of teaching methods in the field and assisting the faculty with instruction.

[FSAD 4200 History of Color and Design in Textiles]

Spring. 3 credits. Prerequisite: FSAD 1250 or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2010-2011. C. Jirousek.

History of textile design; color theory, trends and measurement; design use of pigments and dyes. Students complete hands-on exercises, two exams and a paper.]

FSAD 4310 Apparel Production and Management

Spring. 3 credits. Limited to 40 students. Prerequisites: ECON 1110 and 1120 and upper-division course in either apparel or textiles. S-U or letter grades. F. Mete.

Introduction to the global textile and apparel industry, particularly the technical and economic aspects of apparel production and strategic management. Includes analysis of specific apparel manufacturing and management issues such as international sourcing, strategies, Fast Fashion, Quick Response, mass customization, production and information technology, labor, and logistics. Students will analyze and discuss case studies of creative individuals and organizations from a variety of fields that apply to the textile and apparel industry.

FSAD 4320 Product Quality Assessment

Spring. 3 credits. Limited to 36 students in lec, 18 per lab. Prerequisites: FSAD 1350 and statistics course. S-U or letter grades. Lab fee: \$20. N. Breen.

Covers evaluation of fibers, yarns, fabrics, and garments, with emphases on the meaning of standards, testing philosophy, quality control, and statistical analysis. Discusses day-to-day tests done in the textile and apparel industry. Laboratory sections introduce students to various test methods, data generation for analysis, and evaluation.

FSAD 4360 Fiber Chemistry

Spring. 3 credits. Prerequisite: senior or first-year graduate standing. S-U or letter grades. Offered alternate years. C. C. Chu.

Discusses the chemical and physical structure of several commercially important fibers, such as cotton, wool, silk, polyesters, nylons, acrylics, polyolefins and spandex, and their polymerization process. Gives the general chemical and physical properties of each. Discusses degradation reactions for certain fibers such as polyolefins and acrylics.

FSAD 4390 Biomedical Materials and Devices for Human Body Repair (also BME 5390)

Spring. 2-3 credits. Prerequisites: junior or senior standing; college natural science requirement (chemistry or biology). S-U grades only for 2 credits, letter grades only for 3 credits. C. C. Chu.

Surveys materials and devices for repair of injured, diseased, or aged human tissues/organs. Includes properties of synthetic and

biological materials, wound healing processes, medical devices for repair of wounds, blood vessels, hearts, joints, bones, nerves, male impotence, vision/hearing/voice, and drug control/release.

FSAD 4440 Apparel/Textile Retailing and Distribution

Fall. 3 credits. Prerequisites: junior or senior standing; FSAD 1350 and marketing course. S–U or letter grades. N. Breen.

Overview of the business of design, production, distribution, marketing, and merchandising of apparel and related products from a management perspective. Includes the organization and structure of both domestic and international retailers along with pricing strategies, merchandise planning, inventory management, and sales promotion. New uses of computer systems and information technologies are emphasized throughout.

FSAD 4660 Textiles, Apparel, and Innovation

Fall. 3 credits. Prerequisite: FSAD 2370. Recommended: FSAD 4320. S–U or letter grades. Cost of field trip: \$100. J. Hinestroza.

Designed for students in all FSAD options. Explores the relationship between materials and design with a concentration on the use of innovative textile materials in apparel. Both aesthetic and functional issues are addressed. The course consists of a combination of lecture, discussion of readings, oral reports, a research paper, and project work. There is a one-day field trip to New York City.

FSAD 4700 Fashion Presentation: Portfolio Development

Fall. 3 credits. Limited to 25 students. Prerequisites: FSAD 1170, 2640, 2650, and 3460. Minimum cost of materials: \$250. V. D. Lewis.

Students are expected to discover their personal philosophy of fashion and to discover and adopt current presentation techniques. Students gain an understanding of presentation methods currently used in Fashion design, forecasting, and editorial illustration. Skills covered include fashion illustration, image manipulation, and photographic image, layout, and presentation.

FSAD 4990 Honors Thesis Research

Fall and spring. 4 credits each in fall and spring semesters of senior year. Prerequisites: minimum GPA of 3.3 and submission of application in junior year. S–U or letter grades. Staff.

Student will prepare a thesis, based on independent research, including a research statement, background, approach, results (which could be a description of a creative work), and discussion. The student may also produce creative work. Student will have an open presentation of work, either a seminar or an exhibition, and an oral defense with the committee. Interested students should obtain a FSAD Honors Program application form from the FSAD undergraduate office (207 MVR), and submit the application to the department before the end of the fall semester of junior year. For more information students should contact the director of undergraduate studies.

FSAD 6000 Special Problems for Graduate Students

Fall or spring. Credit TBA. S–U or letter grades. Staff.

Independent advanced work by graduate students recommended by their chair and

approved by the department chair and instructor.

FSAD 6160 Rheology of Solids: Dynamic Mechanical Analysis of Fibers and Polymers

Fall. 3 credits. S–U or letter grades. Offered alternate years. J. Hinestroza.

This course will introduce students to Dynamic Mechanical Analysis (DMA) and its relevance in the characterization of polymer fibers and films. DMA is a materials characterization technique that supplies information about major transitions as well as secondary and tertiary transitions not readily identifiable by other methods. It also allows characterization of bulk properties directly affecting material performance. DMA can also be used to predict the behavior of polymeric materials as a function of time and their exposure to liquids and gases over a wide range of temperatures.

[FSAD 6200 Physical Properties of Fiber-Forming Polymers and Fibers

Spring. 3 credits. Prerequisite: permission of instructor. Offered alternate years; next offered 2010–2011. A. Netravali.

Covers formation and properties of fiber-forming polymers, their states and interconnection. Discusses relationship between chemical structure and morphology of fibers on their properties and testing methods.]

[FSAD 6260 The Chemistry of Textile Finishes and Dyeing

Spring. 3 credits. Prerequisites: organic chemistry course or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. C. C. Chu.

Studies industrially important textile chemicals used for dyeing and enhancing fiber and fabric properties, such as durable press, anti-soiling, water repellency.]

FSAD 6370 Research Seminars in Apparel Design

Fall and spring. 1 credit; repeat of course each semester encouraged for all apparel design graduate students. Prerequisites: permission of individual instructor for advanced undergraduates. S–U grades only. Apparel Design faculty.

[FSAD 6390 Mechanics of Fibrous Assemblies

Spring. 3 credits. Prerequisite: solid mechanics course or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. J. Hinestroza.

Studies the mechanics of fiber assemblies: bending and buckling; and the mechanical behavior of nonwoven textile materials.]

[FSAD 6640 Human Factors: Anthropometrics and Apparel

Spring. 3 credits. Open to advanced undergraduates. Prerequisites: statistics course and permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. S. Ashdown.

Seminar course focusing on anthropometrics and human variation, development of sizing systems for clothing, and the impact of new technologies such as the 3D body scanner on apparel design and distribution.]

FSAD 6660 Fiber Formation: Theory and Practice

Spring. 3 credits. Prerequisites: polymer chemistry, college physics, FSAD 4360, 6200, or permission of instructor. S–U or letter grades. Offered alternate years. M. Frey.

Covers the practical and theoretical analysis of the chemical and physical principles of the methods of converting bulk polymer to fiber; rheology; melt, dry, and wet polymer spinning; fiber drawing, heat setting; and general theory applied to unit processes.

FSAD 6700 Fashion Theory

Spring. 3 credits. Limited to 25 students. Prerequisite: FSAD 3460 for undergraduates or similar course for graduates. Letter grades only. Offered alternate years. Minimum cost of materials: \$250. V. D. Lewis.

Provides students with theoretical insights that will enable them to conduct innovative debates and challenge extant creative strategies. The course considers a topical dilemma that students must respond to using conceptual foundations and methodologies that are bound in studio practice, criticism, education, management and the cultural context of fashion design.

[FSAD 6720 Creative Problem-Solving in Apparel Design]

FSAD 6750 Aesthetics and Meaning in World Dress

Spring. 3 credits. Prerequisites: FSAD 1250 or course in history of art, costume history, or other history. S–U or letter grades. Offered alternate years. C. Jirousek.

Examines the aesthetic and social/psychological relationship between body and clothing in the context of various cultures. Students develop a research topic to be presented orally and in a term paper, and they participate in the development of an exhibition.

FSAD 8990 Master's Thesis and Research

Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S–U or letter grades. Staff.

FSAD 9990 Doctoral Thesis and Research

Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S–U or letter grades. Staff.

HUMAN DEVELOPMENT

R. Savin-Williams, chair; B. Koslowski, director of graduate studies; E. Wethington, director of undergraduate studies; M. Belmonte, C. Brainerd, M. Casasola, S. Ceci, R. Depue, J. Eckenrode, G. Evans, S. Hamilton, C. Hazan, T. Kushnir, C. Loeckenhoff, B. Lust, J. Mikels, A. Ong, K. Pillemer, V. Reyna, S. Robertson, J. Ross-Bernstein, C. Schelhas-Miller, Q. Wang, W. Williams. Emeritus: J. Brumberg, M. Cochran, H. Ricciuti

HD 1150 Human Development: Infancy and Childhood

Fall or summer. 3 credits. S–U or letter grades. C. Schelhas-Miller.

Introduces students to the basic concepts, theories, and research in human development as they explain prenatal development and development in infancy and childhood. The

focus is on individual development from an interdisciplinary perspective with an emphasis on psychological development, but also drawing from the fields of sociology, history, biology, anthropology, and education.

HD 1160 Section for Infancy and Childhood

Fall or summer. 1 credit. Enrollment in fall limited to HD majors. Enrollment in fall and summer limited to students enrolled in HD 1150. Letter grades only. C. Schelhas-Miller.

Provides an opportunity to discuss material in more depth in a small group. Students learn to read and critique empirical research articles and discuss the application and policy implications of course topics.

HD 1170 Human Development: Adolescence and Emerging Adulthood

Spring. 3 credits. S-U or letter grades. C. Schelhas-Miller.

Broad overview of theories, research, and issues in the study of human development during adolescence and emerging adulthood. Focuses on the major biological, cognitive, and social changes during adolescence; the psychosocial issues of adolescence, including identity, autonomy, intimacy, sexuality, achievement, and problems; and the contexts in which adolescent development occurs, particularly families, peer groups, schools, work, and popular culture. Discusses empirical research, theories, case studies of the lives of real adolescents, and, to a lesser degree, public policies.

HD 1710 The Black Family and the Socialization of Black Children (also ASRC 1600)

Fall. 3 credits. Letter grades only. T. Gosa. For description, see ASRC 1160.

HD 2180 Human Development: Adulthood and Aging

Spring. 3 credits. Prerequisite: HD 1150. S-U or letter grades. C. Loeckenhoff.

General introduction to theories and research in adult development and aging. Discusses psychological, social, and biological changes from youth through late adulthood. Emphasizes both individual development within generations and differences among generations.

[HD 2200 The Human Brain and Mind: Biological Issues in Human Development (also COGST 2200)]

HD 2300 Cognitive Development (also COGST 2300)

Fall. 3 credits. Prerequisite: HD 1150 or PSYCH 1101. T. Kushnir.

Surveys current theory and research on various aspects of cognitive development across the life span, with emphasis on infancy and early childhood. Topics include perception, representation and concepts, reasoning and problem solving, social cognition, memory, metacognition, language and thought, and academic skills. Students develop a broad understanding of the mechanisms, processes, and current issues in cognitive development and learn to critically assess developmental research. The course is a combination of lecture, seminar, and fieldwork.

HD 2380 Thinking and Reasoning (also COGST 2380)

Fall. 3 credits. Prerequisite: HD 1150 or PSYCH 1101. B. Koslowski.

Examines problem solving, transfer, and creativity; pre-causal and causal reasoning; models of good thinking based on formal logic, pragmatic syllogisms, and probability theory; expert-novice differences; cognition and attitudes; extra-rational and magical beliefs; and putative racial and social class differences in intelligence. Two general themes run through the course: (1) the extent to which children and adults approximate the sorts of reasoning that are described by various psychological models; (2) the extent to which various models accurately describe the kind of thinking that actually is required by the problems and issues that arise and must be dealt with in the real world.

HD 2510 Social Gerontology: Aging and the Life Course (also SOC 2510)

Spring. 3 credits. Prerequisites: HD 1150, SOC 1101, DSOC 1101, or PSYCH 1101. S-U or letter grades. E. Wethington.

Analyzes the social aspects of aging in contemporary American society from a life course perspective. Topics include (1) an introduction to the field of gerontology, its history, theories, and research methods; (2) a brief overview of the physiological and psychological changes that accompany aging; (3) an analysis of the contexts (e.g., family, friends, social support, employment, volunteer work) in which individual aging occurs, including differences of gender, ethnicity, and social class; and (4) the influences of society on the aging individual.

HD 2600 Introduction to Personality (also PSYCH 2750)

Fall. 3 credits. Recommended: introductory psychology or human development course. V. Zayas.

Introduction to theory and research in the area of personality psychology, with special emphasis on personality development. Covers the major influences—including genetic, environmental, and gene-environment interactions—and involves in-depth study of the major theories. Examines and compares assumptions and models of human behavior that form the basis of each theoretical orientation, and reviews and evaluates the relevant empirical evidence. In addition, basic psychometric concepts and the methods for measuring and assessing personality are covered, as are the major related debates and controversies.

HD 2610 The Development of Social Behavior

Fall. 3 credits. Highly recommended: HD 1150 or PSYCH 1280. J. Mikels.

Examines issues in the development of social behavior from the perspective of theory and research. Likely topics include bases of social behavior across the life span, the role of parents, siblings, and peers, the development of prosocial and aggressive behavior, the development and functioning of attitude and value systems, moral development, emotional development, and the function and limits of experimental research in the study of social development.

HD 2820 Community Outreach (also PSYCH 2820)

Fall. 2 credits. Prerequisites: HD 1150 or PSYCH 1101. Students may not register concurrently with HD 3270/PSYCH 3270 or 3280. Letter grades only. H. Segal.

For description, see PSYCH 2820.

HD 3110 Educational Psychology (also EDUC 3110)

Fall. 4 credits. S-U or letter grades. D. Schrader.

For description, see EDUC 3110.

HD 3190 Memory and the Law

Fall. 3 credits. Prerequisites: HD 1150 or PSYCH 1101 or HD 2330 or PSYCH 2650. S-U or letter grades. C. Brainerd.

This course will focus on how the scientific study of human memory interfaces with the theory and practice of law. Students will study relevant areas of memory research (e.g., storage, retrieval, false memory, memory deficits in impaired populations) and memory theory. Students will also study specific areas of legal practice in which the reliability of evidence is critically dependent on human memory (e.g., eyewitness identification, recovery of repressed traumatic memories, confessions, elderly witnesses, child witnesses). Readings will come from leading textbooks on these topics and also from primary sources.

[HD 3200 Human Developmental Neuropsychology]

HD 3270 Field Practicum I (also PSYCH 3270)

Fall. 3 credits. Limited to 30 students. Students must commit to taking HD 3280 in spring semester. Prerequisites: HD 3700 or PSYCH 3250 and permission of instructor. Letter grades only. H. Segal.

For description, see PSYCH 3270.

HD 3280 Field Practicum II (also PSYCH 3280)

Spring. 3 credits. Limited to 30 students. Prerequisites: HD 3270/PSYCH 3270 taken previous semester, PSYCH 3250 or HD 3700 and permission of instructor. Letter grades only. H. Segal.

For description, see PSYCH 3280.

HD 3330 Children and the Law

Fall. 3 credits. Prerequisites: HD 1150 and introductory statistics course. S. Ceci.

Examines psychological data and theories that shed light on the practical issues that arise when children enter the legal arena. Attempts to integrate theories, research, and methodology from several areas of psychology, including developmental, cognitive, social, and clinical. Also attempts to examine the degree to which basic research can (and should) be used to solve applied issues. Selected topics include memory development, suggestibility, theory of mind, childhood amnesia, expectancy formation, symbolic representational ability, and finally, what can (or should) an expert witness tell the court. Several actual cases involving child witnesses are presented to illustrate the application of scientific data to the courtroom. Because of the heavy use of case materials and video and textual coverage of actual trials, it is expected that students will devote more than the usual number of hours to this course.

[HD 3340 The Growth of the Mind (also COGST 3340)]

Spring. 4 credits. Recommended: course in human experimental psychology, statistics, or HD 1150 or equivalent, or permission of instructor. S–U or letter grades. Next offered 2010–2011. B. Lust.

Introduces the fundamental issues of cognition. Students are asked to consider several questions. What is the nature of human intelligence? How are knowledge and understanding acquired and represented in the human mind? What is the nature of mental representation? What are the cognitive characteristics of the mind at birth? What is the relation of the acquisition of knowledge and understanding to their final representation? What are the relations between language and thought? In the study of those issues, how can epistemology and experimental psychology be related through the experimental method? Basic debates within the study of cognition are introduced and discussed throughout. The course analyzes Piaget's comprehensive theory of cognitive development and experimental results. Current research in cognitive development is contrasted.]

[HD 3360 Connecting Social, Cognitive, and Emotional Development]**[HD 3370 Language Development (also COGST/PSYCH/LING 3370)]**

Spring. 4 credits. Open to undergraduate and graduate students. Supplemental lab course available (HD 4370, PSYCH 4370, COGST/LING 4500). Graduate students also should enroll in HD 6370/LING 7000, supplemental graduate seminar. Prerequisite: at least one course in developmental psychology, cognitive psychology, cognitive development, neurobiology, biology, or linguistics. S–U grades optional. Next offered 2010–2011. B. Lust.

Surveys basic issues, methods, and research in the study of first-language acquisition. Considers major theoretical positions in the field in the light of experimental studies in first-language acquisition of phonology, syntax, and semantics from infancy on. The fundamental issues of relationships between language and thought are discussed, as are the fundamental linguistic issues of "Universal Grammar" and the biological foundations for language acquisition. The acquisition of communication systems in nonhuman species such as chimpanzees is addressed, but major emphasis is on the child.]

HD 3420 Participation with Groups of Young Children

Fall. 4 credits. Limited to 25 students. Prerequisites: HD 1150 and contact with instructor to arrange placement hours. S–U or letter grades. J. Ross-Bernstein.

Designed to integrate developmental theories with supervised experience in local care and educational contexts for young children, the intention being to enhance the student's abilities to understand and to relate effectively to young children. Students are required to participate six hours per week in a setting with young children. Placements are in local pre-kindergarten and kindergarten programs, day care centers, nursery schools, and Head Start programs.

Note: Six hours of placement per week (completed in two 3-hour blocks of time) are required. For your information: students select

ONE of the following placement options: M W (8–11 or 9–12), M F (8–11 or 9–12), T R (8–11 or 9–12), M F (11–2), T R (11–2). A few late-afternoon placements are available M F (2:30–5:30), T R (2:30–5:30).

HD 3430 Social Worlds of Childhood

Spring. 4 credits. Limited to 25 students. Prerequisite: HD 1150. S–U or letter grades. J. Ross-Bernstein.

This course explores the nature, quality, and impact of relationships of school-age children (ages 5–11) in multiple contexts (e.g. school, home, community). Course work is grounded in ecological theory. Paths of inquiry include (1) who and what play critical roles in children's diverse lives, (2) how are these relationships relevant to school-age children's socialization, and (3) what are the processes by which individuals acquire the knowledge, skills, and character traits that enable them to participate as effective members of groups and society. Study of systems and relationships that impact the child will be organized according to person, process, context, and outcome. Students are required to participate 4 hours per week in a setting with school-age (5–11) children.

HD 3440 Infant Behavior and Development

Fall. 3 credits. Limited to 60 students. Not open to freshmen. Prerequisites: HD 1150, biology course, and statistics course. S. Robertson.

Examines behavior and development from conception through the first two years of life in traditional areas (e.g., perception, cognition, socioemotional theory, language, motor function). Strongly emphasizes the fundamental interconnectedness of these aspects of development as well as their relation to the biology of fetal and infant development. Emphasizes topics with implications for general theories of development (e.g., the functional significance of early behavior, the nature of continuity and change, and the role of the environment in development). Also describes conditions that put infants at risk for poor development (e.g., premature birth, exposure to environmental toxins, maternal depression) and topics with current social, ethical, or political implications (e.g., infant day care, fetal rights). Research methodology in the study of early behavior and development is emphasized throughout the course.

HD 3460 The Role and Meaning of Play

Fall. 3 credits. Limited to 45 students. Prerequisite: junior or senior standing; HD 1150. J. Ross-Bernstein.

Examines the play of children ages three through seven. Through seminar discussions, workshops, videos, and individualized research students explore the meaning and validity of play in the lives of young children, the different ways that children play and the value of each, and the effect of the environment in enhancing and supporting play.

[HD 3470 Human Growth and Development: Biological and Behavioral Interactions (also BSOC 3471, NS 3470)]

Spring. 3 credits. Limited to 150 students. Prerequisites: BIOG 1101 or 1109 or equivalent, and HD 1150 or PSYCH 1101. Offered alternate years; next offered 2010–2011. S. Robertson and J. Haas.

Concerned with the interrelationships of physical and psychological growth and development in humans during infancy. Considers intrinsic and extrinsic causes of variations in growth, including various forms of stimulation. Also examines the consequences of early growth and its variations for current and subsequent behavioral, psychological, and physical development. The interaction between physical and behavioral or psychological factors is emphasized throughout the course.]

HD 3490 Positive Psychology

Fall. 3 credits. Limited to 120 students. Prerequisites: HD 1150 or PSYCH 1010 and HD 2600/PSYCH 2750 or HD 2610 or PSYCH 2800. S–U or letter grades. A. Ong.

This course will take a comprehensive look at current research and theory in the emerging field of Positive Psychology. Students will become familiar with theories, methods, and empirical research pertaining to the psychology of human strengths, virtues, abilities and talents.

HD 3530 Risk and Opportunity Factors in Childhood and Adolescence

Fall. 3 credits. Limited to 100 students. Prerequisites: HD 1150 or 1170. S–U or letter grades. J. Whitlock.

Explores the meaning of risk and opportunity in the lives of children and youth. Begins with a brief history of the social construction of childhood and adolescence and moves into identification of the core concepts associated with risk accumulation and resilience. Uses case studies, large and small group discussion, and policy debates to explore central concepts as they relate to social policy, professional practice, and community development. Assignments include integrative reflection papers on course material, quizzes, and participation in a simulated public policy debate. .

[HD 3570 Social Inequalities in Physical and Mental Health (also SOC 3670)]

Fall. 3 credits. Limited to 120 students. Prerequisites: HD 1150, PSYCH 1010, HD/SOC 2510, DSOC 1010, or SOC 1010. S–U or letter grades. Next offered 2010–2011. E. Wethington.

This course is an introduction to physical and mental health inequalities in the United States, the causes of these inequalities, and their impact on individual development across the life course. Lectures will focus on the relationship between socioeconomic status and rates of physical and mental illness in social groups, exposure to psychosocial stress across the life course, and the protective role of social integration.]

HD 3620 Human Bonding

Spring. 3 credits. Limited to 600 students. Recommended: introductory psychology or human development course. S–U or letter grades. C. Hazan.

Covers the science of interpersonal relationships. Examines the basic nature of human affectional bonds, including their functions and dynamics. Covers such topics as interpersonal attraction and mate selection, intimacy and commitment, love and sex, jealousy and loneliness, the neurobiology of affiliation and attachment, and the role of relationships in physical and psychological health.

HD 3660 Emotional Functions of the Brain

Spring. 3 credits. Prerequisites: HD 2200 or PSYCH 2230/4600 or BIONB 2220. Letter grades only. R. Depue.

The focus of this course concerns networks of brain regions that are organized around the integration of processes related to emotion and motivation. The course first explores brain pathways for processing visual, auditory, body and face movements, and tactile stimuli that comprise the raw material used to judge the emotional significance of external events.

Next, brain regions involved in the (1) emotional evaluation of that sensory input, and (2) emotional expression once a significant event is identified are described. Then, brain processes underlying the special nature of human emotional experience (subjective feelings) are explored. All of these basic emotional processes are extended by placing them within widespread brain networks that modulate emotional behavior. There is an emphasis on social contexts and the development of social emotions, including social bonding and social rejection. The manner in which emotional stress influences learning and memory, with implications for PTSD, concludes the course.

HD 3700 Adult Psychopathology (also PSYCH 3250)

Spring. 3 credits. Prerequisites: sophomore, junior, or senior standing; any course in psychology or human development. H. Segal.

For description see PSYCH 3250.

HD 3820 Research Methods in Human Development

Spring. 3 credits. Prerequisite: HD 1150. Highly recommended: background in statistics. Letter grades only. M. Casasola.

Students learn about a variety of research methodologies and gain firsthand experience in conducting all aspects of a research project. Students design and conduct one descriptive and one experimental study. They also gain experience in using statistical software to analyze data.

HD 3840 Gender and Sexual Minorities (also FGSS 3850)

Fall. 3 credits. Prerequisite: social science course. S-U or letter grades. K. Cohen.

Introduces students to theories, empirical scholarship, and current controversies regarding lesbian, gay, bisexual, transgender, sexually questioning, and other gender and sexual minority populations. The major focus is on sexual development, lifestyles, and communities with additional coverage of ethnic, racial, and gender issues. Videos supplement readings and lectures.

HD 4000-4010-4020-4030 Special Studies for Undergraduates

Fall or spring. Credit TBA; 1-4.

Prerequisite: permission of instructor. S-U or letter grades.

For advanced independent study by an individual student or for study with a group of students in a field of HD not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake, on a form available from the department office in G77 MVR. This form must be signed by the instructor directing the study and the student's faculty advisor and submitted to G77 MVR, the Office of Undergraduate Education. After the

form is approved, the student takes it to the college registrar's office, 146 MVR. To ensure review before the close of the periods, early submission of the special studies form to the Office of Undergraduate Education is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

4000: Directed Readings. Prerequisite: permission of instructor. For study that predominantly involves library research and independent study.

4010: Empirical Research. Prerequisite: permission of instructor. For study that predominantly involves data collection and analysis, or laboratory or studio projects.

4020: Supervised Fieldwork. Prerequisite: permission of instructor. For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

4030: Teaching Assistantship. Prerequisites: permission of instructor; juniors and seniors with minimum 3.0 GPA; either HD 1150, or PSYCH 1101, and two intermediate-level HD courses, or equivalent courses in psychology or sociology. Students must have taken course and received B+ or higher. For study that includes assisting faculty with instruction.

[HD 4140 Social and Psychological Aspects of the Death Penalty

Spring. 3 credits. Limited to 20 students.

Prerequisites: junior or senior standing and HD 1150 and HD 2330 or PSYCH 2650. S-U or letter grades. Next offered 2010-2011. C. Brainerd.

This course will focus on how the field of human development contributes to death penalty cases through the creation of social history reports on death-qualified defendants and will provide training in how to prepare such reports. Students will study relevant areas of death penalty law (e.g., *Wiggins v. Smith*, mitigation law, pre- vs. post-conviction). Students will also study specific areas of human development research that figure centrally in social history reports (e.g., intelligence testing, educational disability, mental illness and the DMS-IV, social and family environment, prediction of future dangerousness, anti-social personality.)

[HD 4180 Aging: Contemporary Issues

Spring. 3 credits. Limited to 20 students.

Prerequisites: junior or senior standing; HD 2180, 2500, or 2510 or permission of instructor. Letter grades only. Next offered 2010-2011. J. Mikels.

Seminar addressing major issues and controversies in the field of aging. Designed for upper-level students who wish to pursue an in-depth analysis of concepts such as "successful" aging and wisdom. Although these issues are addressed primarily from a psychological viewpoint, interdisciplinary perspectives are considered and incorporated in both readings and discussions. Designed for advanced undergraduates who have completed an introductory course in adulthood and aging and wish to pursue such issues in more depth. Class time is devoted primarily to discussion of assigned readings.]

[HD 4190 Midlife Development

Fall. 3 credits. Limited to 20 students.

Prerequisites: junior or senior standing; HD 2180, 2500, or 2510 or permission of instructor. Letter grades only. Offered alternate years; next offered 2010-2011.

A. Ong.

This seminar-style course examines the burgeoning research literature on adult development during midlife. Focuses on research and theory examining psychological changes during middle adulthood such as relativistic and dialectical thinking, personality, identity, and sense of control. Also considers the social and physical changes that occur at this time of life especially regarding issues such as empty nest anxieties, divorce, career transitions, menopause, and cardiovascular disease. Oral presentations, class participation, and an integrative paper are required.]

HD 4200 Risk and Rational Decision Making

Spring. 3 credits. Limited to 20 students.

Prerequisites: junior or senior standing and HD 1150 and HD 2330 or PSYCH 2650 or PSYCH 2800. S-U or letter grades.

V. Reyna.

This course will offer a hands-on introduction to research and laboratory techniques that address topics in risk and rational decision making in human development from multiple disciplinary perspectives. The course will include activities such as scientific presentations, collaborative work, peer review, and designing research on topics in decision-making under risk and uncertainty, as well as discussion of scientific methods and interpretation of data. Topics in decision-making may include war, terrorism, cancer control and prevention (e.g., screening tests), personal behaviors that involve risk (e.g., HIV-prevention), and other public health risks (e.g., vaccinations), law enforcement (e.g., use of a weapon) and legal decision-making (e.g., jury deliberations).

HD 4220 Research in Emotion and Cognition

Fall. 4 credits. Limited to 20 students.

Prerequisites: HD 1150 or PSYCH 1101 AND HD 2610 or HD 2600; permission of instructor. J. Mikels.

The course focuses on age-related changes in emotion and cognition. Research indicates that while cognitive processes decline, emotional processes remain intact in later life. Moreover, evidence indicates that the goals of older adults differ from those of younger adults, which have critical implications for changes in cognitive and emotional processes with age. The ongoing research in the Emotion and Cognition Laboratory examines these relationships. In this research course, undergraduate students attend a weekly lab meeting for 1.25 hours per week, read pertinent papers, write reaction responses, and work in the lab completing various tasks for 10.75 hours.

[HD 4230 Research in Children's Testimony: Exploring Social and Cognitive Mechanisms

Fall. 4 credits. Limited to 20 students.

Prerequisites: HD 1150 or PSYCH 1101 AND an introductory course in statistics, and permission of instructor. Next offered 2010-2011. S. Ceci.

HD 4230 is a laboratory-based research that exposes students to the research process in the area of children's testimonial competence.

This means going from theory to empirical reports and participating in the generation of new hypotheses and methods of falsifying them. Theoretical arguments, grounded in empirical findings, suggest children are vulnerable to a host of reliability risks when they are interviewed or give testimony. Various social (e.g., stereotypes, reinforcement, parental attachment, peer pressure) and cognitive (trace strength, source misattributions) mechanisms are responsible for these risks, and students will have a ringside seat at their examination. In this course, up to 20 undergraduate students will attend a weekly lab meeting for 1.5 hours per week, read assigned research articles, post questions on Blackboard that can lead to follow-up studies, and work 10.5 hours per week in the laboratory completing tasks that contribute to ongoing research studies conducted by the professor and his graduate students.]

HD 4240 Stress, Emotions, and Health

Fall. 4 credits. Limited to 20 students.
Prerequisites: HD 1150 or PSYCH 1101 AND HD 2610 or HD 2600 and permission of instructor. A. Ong.

The course will review theory and research on stress, emotions, and health. This course will offer opportunities for students to develop new ways to integrate theory and research on stress and health with the advances in the science of affect and emotion. In this course, undergraduate students attend a weekly lab meeting for 1.25 hours per week, read pertinent papers, write reaction responses, and work 10.75 hours per week in the laboratory completing tasks that contribute to ongoing research studies.

HD 4250 Translational Research on Decision Making

Fall. 4 credits. Limited to 20 students.
Prerequisites: HD 1150 or PSYCH 1101 AND HD 2610 or HD 2600. V. Reyna.

A laboratory-based course focusing on basic foundations in translational research on decision making across the lifespan. The course will introduce students to hands-on applications of research skills in the context of research on decision making, spanning basic and applied research in law, medicine, behavioral economics, and policy. This introductory course will focus on such topics as human subjects protection, working with populations across the life span (e.g., children; seniors), database development, working with external partners and stakeholders (e.g., schools; hospitals), and basic concepts and techniques in decision research. Students in this basic course will participate in weekly laboratory meetings in small teams focused on specific projects as well as monthly meetings in which all teams participate. During laboratory meetings, we discuss ongoing research, plans for new studies, and interpretations of empirical findings from studies that are in progress or have been recently completed. New students work closely with experienced students eventually working more independently. In order to fully grasp how the research projects fit into the broader field, students will read relevant papers weekly and write reaction responses. Because several projects are ongoing at all times, students have the opportunity to be involved in more than one study and will be assigned multiple tasks such as piloting research paradigms, subject recruitment, data collection, data analysis, and data entry. Students attend a weekly lab

meeting for 1.5 hours per week, read pertinent papers, write reaction responses, and work 10.5 hours per week in the laboratory completing tasks that contribute to ongoing research studies.

HD 4260 Translational Research on Memory and Neuroscience

Spring. 4 credits. Limited to 20 students.
Prerequisite: HD 1150 or PSYCH 1101 AND HD 2610 or HD 2600. C. Brainerd.

HD 4260 is a laboratory-based course focusing on basic foundations in translational research on the neuroscience of human memory and memory development. The course will introduce students to hands-on applications of research skills in the context of research on memory and neuroscience, spanning basic and applied research in law and medicine. In this course, undergraduate students attend a weekly lab meeting for 1.75 hours per week, read pertinent papers, write reaction responses, and work 10.25 hours per week in the laboratory completing tasks that contribute to ongoing research studies.

HD 4310 Mind, Self, and Emotion: Research Seminar

Spring. 3 credits. Limited to 20 students.
Prerequisites: upper-class undergraduate or graduate standing; HD 1150 or PSYCH 1010. Letter grades only. Offered alternate years. Q. Wang.

This research seminar is offered to students who are currently conducting research or planning to do research in the near future on one of the three topics—memory, self, or emotion. We examine current data and theories concerning the topics from a variety of perspectives and at multiple levels of analysis, particularly focusing on the interconnections among these fields of inquiry. The “scale of observation” is viewed as occurring within the person (brain mechanisms, including genetics), at the level of the person (content-goals, beliefs, desires, etc.), and between persons (relationships and group interaction—including culture).

[HD 4320 Cognitive, Social, and Developmental Aspects of Scientific Reasoning (also COGST 4320)]

Spring. 3 credits. Limited to 20 students (14 HD 4320, 6 COGST 4320). Prerequisites: junior or senior standing; HD 1150 or PSYCH 1010 or permission of instructor. S–U or letter grades. Next offered 2010–2011. B. Koslowski.

The basic premise of this course is that scientific reasoning is not restricted to scientists but is continuous with good reasoning in general. We will examine not only how people reason, but also the extent to which their reasoning is either flawed or appropriate. The seminar will discuss issues related to how we identify the causes of phenomena, especially in situations in which we cannot conduct an experiment; the limits of covariation data and how it interacts with information about theory; generating, evaluating, and deciding between competing explanations; dealing with anomalous or inconsistent data; confirmation bias and disconfirmation; the role of theory and culturally available information in generating and evaluating alternative hypotheses; and whether age and cultural differences in reasoning result from different reasoning strategies or from differences in the sorts of background information that are available and the different explanations that are treated as legitimate.]

[HD 4330 Developmental Cognitive Neuroscience]

Spring. 3 credits. Limited to 20 students.
Prerequisites: junior or senior standing; HD 2200 or PSYCH 2230, BIONB 2220. S–U or letter grades. Offered alternate years; next offered 2010–2011. Staff.

What are the brain mechanisms underlying human behavior and cognition? How do those underlying brain mechanisms develop? These are the questions that developmental cognitive neuroscience tries to address and those explored in this course. The course explores methods used in the field (including brain imaging techniques), recent findings on the development of brain mechanisms underlying human behaviors such as language, attention, and memory, as well as the brain mechanisms that may underlie various developmental disorders such as developmental dyslexia, autism, and attention deficit (hyperactive) disorder (AD/HD). Emphasis is on reading primary research literature and acquiring the skills to understand, critique, discuss, and write about primary research. The format includes lecture and discussion.]

[HD 4340 Current Topics in Cognitive Development]

Spring. 3 credits. Limited to 20 students.
Prerequisites: HD/COGST 3340 or permission of instructor. S–U or letter grades. Next offered 2010–2011. B. Lust.

This course will supplement survey course HD/COGST 3340 with additional discussion of current research in the area of cognitive development. Selected current papers that debate issues discussed in HD/COGST 3340 will be read and discussed in parallel with the HD/COGST 3340 survey course. Modern interpretations and challenges to Piaget's theory will be evaluated in light of current literature in the field. A small-group format will be adopted to encourage discussion.]

[HD 4370 Lab Course: Language Development (also COGST/LING 4500, PSYCH 4370)]

Fall. 4 credits. Limited to 20 students.
Prerequisite: HD/COGST/PSYCH/LING 3370 or equivalent. Next offered 2010–2011. B. Lust.

Optional supplement to the survey course Language Development (COGST/HD/LING/PSYCH 3370). The lab course provides students with a hands-on introduction to scientific research, including design and methods, in the area of first-language acquisition.]

HD 4440 Internship in Educational Settings for Children

Fall or spring. 8–12 credits. Prerequisites: HD 1150, 3420 or 3430, and 3480; permission of instructor. Recommended: HD 3460. S–U or letter grades. J. Ross-Bernstein.

Offers an opportunity to integrate theory with practice at an advanced level and to further develop understanding of children ages 2 to 10 and their families. Interns function as participants in varied settings and participate in curriculum planning, evaluation, staff meetings, home visits, parent conferences, and parent meetings. Supervision by head teacher and instructor. Students are expected to define their own goals and to assess their progress, to do assigned and self-directed readings, and to keep a critical incident journal.

HD 4480 Advanced Participation with Children

Spring. 4-8 credits. Limited to 20 students (depending on availability of placements and supervision). Prerequisites: HD 1150 and 3420 or 3430 and permission of instructor. Recommended: HD 3460. S-U or letter grades. J. Ross-Bernstein.

Supervised field-based course designed to help students deepen and consolidate their understanding of children. Students are expected to define their own goals and assess progress with supervising teachers and the instructor; to keep a journal; and to plan, carry out, and evaluate weekly activities for children within their placement. Conference groups and readings focus on the contexts of development and on ways to support children's personal and interpersonal learning. Each student is expected to do a presentation and paper on a self-selected topic within the scope of the course. Participation is in settings that serve typical and/or special needs children from three to eight years of age and provide education, care, or special-purpose interventions for them.

HD 4520 Culture and Human Development (also COGST 4520)

Spring. 3 credits. Limited to 20 students. Prerequisite: HD 1150 or PSYCH 1010. Open to undergraduate and graduate students. Letter grades only. Offered alternate years. Q. Wang.

This seminar takes an interdisciplinary approach to address the central role of culture in human development. It draws on diverse theoretical perspectives, including psychology, anthropology, education, ethnography, and linguistics, to understand human difference, experience, and complexity. It takes empirical reflections upon major developmental topics such as cultural aspects of physical growth and development; culture and cognition; culture and language; culture, self, and personality; cultural construction of emotion; culture issues of sex and gender; and cultural differences in pathology.

HD 4570 Health and Social Behavior (also SOC 4570)

Fall. 3 credits. Limited to 20 students. Prerequisites: junior or senior standing; statistics course and *one* of the following: HD 2500, SOC/DSOC 1101, or HD/SOC 2510. Letter grades only. Offered alternate years. E. Wethington.

Critically examines theories and empirical research on the relationships among social group membership, social status, and physical and mental health. Lectures focus on social stress, social support, and socioeconomic status, all of which are associated with variations in physical health, mental health, and health maintenance behaviors. Students are expected to read widely from current literature in medical sociology, health psychology, public health, and epidemiology.

HD 4590 Transitions Across the Life Span

Fall. 3 credits. Prerequisites: Senior or Junior standing, HD 3180, HD 2510, or instructor permission. Enrollment limited to 20 students. C. Loeckenhoff.

This seminar-style class will focus on some of the major normative and non-normative transitions that people encounter from late adolescence to advanced old age. Based on the contemporary research literature, we will identify common factors including personality traits, coping strategies, social support, and

environmental context that influence successful mastery of such transitions.

[HD 4640 Adolescent Sexuality (also FGSS 4670)]**[HD 4660 Psychobiology of Temperament and Personality]**

Fall. 3 credits. Limited to 20 students. Prerequisite: HD 3660 and permission of instructor. Next offered 2010-2011. Letter grades only. R. Depue.

This course has a seminar format and is oriented to students planning to enter either a Ph.D. program in biological aspects of psychology or an M.D. program. It relies on basic research literature that requires detailed studying. The development of neurobehavioral systems as a means of adapting to critical stimuli has formed the basis of emotional systems in humans, and individual differences in these systems form the basis of temperament and personality. The nature of temperament and personality is explored from psychometric, experiential, genetic, and neurobiological points of view. There is a focus on the general role played by the biogenic amines (dopamine, norepinephrine, and serotonin), neuropeptides (corticotrophin releasing hormone, opiates, oxytocin), genetic polymorphisms in these neuromodulators, and early experience in determining individual differences in temperament and personality. The manner in which these biological factors influence the encoding of experience is explored as the basis of stability in personality traits.]

HD 4680 Stress in Childhood and Adolescence

Spring. 3 credits. Limited to 20 students. Prerequisite: junior or senior standing. Recommended: HD 1150 and a statistics course. Letter grades only. J. Eckenrode.

Advanced seminar that reviews research related to the nature and consequences of stressful experiences in childhood and adolescence, particularly those arising in the family. Topics represent common stressors in the lives of children (e.g., divorce of parents) that have potentially damaging consequences for development. Also covers topics in which Cornell faculty members have conducted significant research (e.g., child abuse and neglect). In addition to considering the negative effect of stress on development, also considers issues of individual differences in stress reactivity, including the concepts of coping and resilience. These topics lead naturally into discussions of practice and policy.

HD 4740 Autism and the Development of Social Cognition

Fall. 3 credits. Limited to 20 seniors and juniors. Prerequisites: one statistics course AND either BIONB 2220 OR one course in neuroscience numbered 3000 or above (e.g., HD 3660 or PSYCH 3320 or 4250). S-U or letter grades. M. Belmonte.

What drives the development of social cognitive skills such as language, theory of mind, and empathy? To what extent do these capacities constitute isolable "modules," or how might they emerge from more elementary neural properties? How can understanding what goes wrong during autistic development teach us about what goes right during normal development, and about how neural and cognitive development intertwine? This seminar covers current psychological and neurobiological theories of autism, emphasizing written analysis and critical

review of the primary research literature. Specific topics will be selected to match students' interests, and each student will develop and orally defend a research proposal on an open question in the neuroscience of autism or related developmental disorders.

HD 4780 Attention Deficit/Hyperactivity Disorder in Children

Spring. 3 credits. Limited to 15 students. Prerequisites: HD 1150 or equivalent, introductory biology, statistics course. S-U or letter grades. S. Robertson.

This seminar examines in detail the nature, diagnosis, epidemiology, causes, and treatment of ADHD through a critical evaluation of the recent scientific and medical literature. Also considers implications for families, schools, and society.

HD 4980 Senior Honors Seminar

Fall and spring. 1 credit. Requirement for and limited to seniors in HD honors program. S-U grades only. M. Casasola. In this weekly seminar, students are guided through the process of completing an honors thesis in human development. The course focuses on developing students' writing abilities, reviewing statistics and how to present research findings in a manuscript, and receiving feedback on drafts of their thesis, as well as practice presenting the results of their thesis in poster and oral presentations.

HD 4990 Senior Honors Thesis

Fall or spring. Credit TBA. Prerequisite: permission of thesis advisor and coordinator of honors program. S-U or letter grades. HD faculty.

The Graduate Program

HD graduate courses are open to undergraduates only by permission of instructor.

General Courses**HD 6020 Research in Risk and Rational Decision Making**

Spring. 3 credits. Limited to 5 students. Corequisite: HD 4200. S-U or letter grades. V. Reyna.

This hands-on laboratory course will inculcate research skills in the context of risk and rational decision making in human development from multiple disciplinary perspectives and with respect to different kinds of decision-making under risk and uncertainty. Such decisions concern war, terrorism, cancer control and prevention (e.g., screening tests), personal behaviors that involve risk (e.g., HIV-prevention), and other public health risks (e.g., vaccinations), law enforcement (e.g., use of a weapon), and legal decision-making (e.g., jury deliberations). Students will read the research literature, and discuss the latest empirical findings and scientific theories of risk and rationality, engaging in group work and peer review to hone their skills. Students will then design research projects based on that 6520 Translational Research on Aging material as well as additional references tailored to their interests.

HD 6110 Psychology of Emotion

Spring. 3 credits. J. Mikels and A. Ong. This course will take a comprehensive look at current research and theory in the field of emotion. Students will become familiar with theories, methods, and empirical research pertaining to the psychology of emotions. Topics covered will include—but are not

limited to—theoretical models of emotion, emotion antecedents, emotional responses (facial, subjective, and physiological), functions of emotion, emotion regulation, individual differences, and health implications.

[HD 6140 Social and Psychological Aspects of the Death Penalty]

Spring. 3 credits. Limited to 5 students. Prerequisite: Cornell doctoral students. S–U or letter grades. Next offered 2010–2011. C. Brainerd.

This course will focus on how the field of human development contributes to death penalty cases through the creation of social history reports on death-qualified defendants and will provide training in how to prepare such reports. Students will study relevant areas of death penalty law (e.g., *Wiggins v. Smith*, mitigation law, pre- vs. post-conviction) and design relevant research. Students will also study specific areas of human development research that figure centrally in social history reports (e.g., intelligence testing, educational disability, mental illness and the DMS-IV, social and family environment, prediction of future dangerousness, anti-social personality.)

HD 6190 Memory and the Law

Fall. 3 credits. Limited to 5 doctoral students. S–U or letter grades. C. Brainerd. This course will focus on how the scientific study of human memory interfaces with the theory and practice of law. Students will study relevant areas of memory research (e.g., storage, retrieval, false memory, memory deficits in impaired populations) and memory theory. Students will also study specific areas of legal practice in which the reliability of evidence is critically dependent on human memory (e.g., eyewitness identification, recovery of repressed traumatic memories, confessions, elderly witnesses, child witnesses). Readings will come from primary library sources.

HD 6200 First-Year Proseminar in Human Development

Yearlong. 1 credit. Prerequisite: first-year HD graduate students. S–U grades only. B. Koslowski.

Designed as an orientation to the department and the university. Activities include attendance at research presentations, visits to departmental research laboratories, relevant informational sessions (e.g., University Committee on Human Subjects, College Grants), and guidance in preparing a public research presentation to be made at the end of spring semester.

[HD 6210 Seminar on Autobiographical Memory]

Fall. 3 credits. Prerequisites: graduate standing; seniors by permission of instructor. Letter grades only. Next offered 2010–2011. Q. Wang.

This graduate seminar is designed to give an overview as well as in-depth analysis of topics related to autobiographical memory and its development. Readings focus heavily on current theories and empirical research on a wide range of topics including childhood amnesia, reminiscence bump, emotion and memory, memory accuracy, development and disruption, neurological perspectives, memory functions, and memory across cultures.]

[HD 6310 Proseminar on Cognitive Development]

[HD 6320 Cognitive Neuroscience Seminar: Applications of Brain Science to Behavioral Research]

HD 6330 Language Acquisition Seminar (also COGST/LING 6330)

Fall. 1–4 credits. Prerequisite: 3370 or equivalent or permission of instructor. S–U or letter grades. B. Lust.

This seminar reviews and critiques current theoretical and experimental studies of first language acquisition, with a concentration on insights gained by cross-linguistic study of this area. Attention is also given to the development of research proposals.

[HD 6340 Judgment, Decision Making, and Scientific Reasoning]

(HD 6360 Connecting Social, Cognitive, and Emotional Development)

Fall. 3 credits. S–U or letter grades. Next offered 2010–2011. M. Casasola.

Opportunity for graduate students to explore several current areas of research from both a cognitive and a social-emotional perspective. Although the traditional approach to the study of development has centered on studying cognitive development as separate from social and emotional development, the current course focuses on how cognitive and socio-emotional development are integrated and how each influences the development of the other. Thus the course is intended to provide a more integrated view of development. As one example, language acquisition, which traditionally has been viewed as a cognitive achievement, depends not only on social interactions but also on achievement in social understanding and awareness. Likewise, acquiring language that describes emotional states plays an important role in developing children's understanding of others' emotional states. Topics are determined by the interests of the graduate students who enroll.]

[HD 6370 First-Language Acquisition]

HD 6400 Infancy

Spring. 3 credits. S. Robertson.

Examines development in infancy through a critical review of key research and theory in selected aspects of neurobehavior, perception, cognition, language, emotion, and social relationships. Theoretical issues considered include the role of experiences in early development, sensitive periods, continuity and discontinuity in development, and the functional significance of early behavior. Some of the conditions that put infants at risk for poor development are also considered, such as premature birth, perinatal medical complications, and exposure to environmental toxins. Combines perspectives from developmental psychology and psychobiology.

HD 6510 Interdisciplinary Community-Based Scientific Research in Health Disparities

Spring. 2 credits. Prerequisite: for Cornell graduate students, two semesters of graduate-level statistics. S–U or letter grades. E. Wethington.

This course introduces doctoral students to the principles and practices of community-based participatory research (CBPR) on health disparities. The course consists of a series of expert presentations from researchers and practitioners involved in community based research projects in New York City. Individual

seminar topics will range from theoretical models of different models of CBPR and other types of translational research models, methodological education, ethical issues in community-based research, specific community research projects, and funding and publication issues. A primary emphasis is on exposure to interdisciplinary activities, diverse perspectives, and values provided by researcher and community-practice presenters.

HD 6520 Translational Research on Aging Research Seminar

Fall and Spring. 1 credit. Ph.D. students or permission of instructor. S–U or letter grades. K. Pillemer, M. S. Lachs, E. Wethington, and M. C. Reid.

This course introduces Ph.D. students to multidisciplinary research, proposal development, and journal article development in the area of aging and health. The course is organized as a work-in-progress seminar, video-conferenced between the Ithaca campus and Weill Cornell Medical College. At each monthly video-conference, participants discuss two or three works in progress, including grant proposals, funding opportunities, and papers about to be submitted. Participants are expected to have read the papers and proposals beforehand and each attendee is required to comment on each work.

[HD 6600 Social Development]

HD 6740 Autism Spectrum Conditions

Spring. 3 credits. Limited to 25 students. Prerequisites: graduate students in doctoral program; master's students or undergraduates doing research may apply but will be accepted only if actively involved in their own research program. S–U or letter grades. M. Belmonte.

This graduate seminar emphasizes research methodologies and the development of research proposals addressing the neuroscience of autism and other neurobiologically based developmental disorders. Topics will be selected on the basis of students' research objectives and on the basis of the experimental methods used to achieve these objectives. Techniques discussed may include functional magnetic resonance imaging, MRI morphometry, quantitative electroencephalography and event-related potentials, behavior and psychophysics, computational modeling, and diagnostic and psychometric testing. The course will commence with a discussion of participants' research interests and topics, and an overview of diagnostic criteria and other symptoms of autism spectrum conditions. Subsequent sessions will cover the Autism Diagnostic Interview–Revised, the Autism Diagnostic Observation Schedule–Generic, and the Broader Phenotype Autism Symptom Scale. Subsequent discussions will provide an overview of experimental design and anatomical and physiological measurement techniques applicable to human cognitive neuroscience, including MRI, fMRI, PET, EEG, and MEG.

[HD 6860 Graduate Seminar in Research Methods]

HD 6870 Issues in Professional Development

Fall. 3 credits. Prerequisite: at least one semester of graduate-level course work. S–U or letter grades. S. Ceci.

The goal of this seminar is to provide graduate students with essential information

about professional activities that are related to careers in the academy, such as publishing in journals, applying for grants, ethical dilemmas in teaching and research, human subjects issues, academic job search issues, career milestones and evaluations, nonacademic positions, values and mores of the professoriate.

HD 6910 Poverty, the Life Course, and Public Policy (also DEA 6910)

Fall. 3 credits. Limited to 15 students. Prerequisite: graduate standing. Letter grades only. G. Evans.

For description, see DEA 6910.

[HD 6920 Seminar in Translational Developmental Science]

Individualized Special Instruction

HD 7000-8060 Special Studies for Graduate Students

Fall or spring. Credit TBA; 1-15 (3 hours work per week per credit). S-U grades at discretion of instructor. Independent advanced work by graduate students recommended by their Special Committee chair with permission of the instructor.

HD 7000: Directed Readings. For study that predominantly involves library research and independent study.

HD 7010: Empirical Research. For study that predominantly involves collection and analysis of research data.

HD 7020: Practicum. For study that predominantly involves field experience in community settings.

HD 7030: Teaching Assistantship. For students assisting faculty with instruction. Does not apply to work for which students receive financial compensation.

HD 7040: Research Assistantship. For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

HD 7050: Extension Assistantship. For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

HD 7060: Supervised Teaching. 4 credits. For advanced students who assume major responsibility for teaching a course. Supervision by a faculty member is required.

HD 8060: Teaching Practicum. 4 credits. For advanced graduate students independently to develop and teach an undergraduate topics course under the supervision of a faculty member.

HD 8990 Master's Thesis and Research
Fall or spring. Credit TBA; 1-15 (3 hours work per week per credit). Prerequisite: permission of thesis advisor. S-U grades only.

HD 9990 Doctoral Thesis and Research
Fall or spring. Credit TBA; 1-15 (3 hours work per week per credit). Prerequisite: permission of thesis advisor. S-U grades only.

POLICY ANALYSIS AND MANAGEMENT

R. Avery, chair (119A MVR, 255-2578); T. Evans, director of undergraduate studies; D. Kenkel, director of graduate studies; W. White, director of Sloan Program; B. Hollis, executive director of Sloan Program; Faculty: R. Burkhauser, J. Cawley, R. Dunifon, R. Geddes, J. Gerner, J. Glass, J. Kuder, D. Lichter, C. Lucarelli, A. Mathios, J. Matsudaira, K. Musick, S. Nicholson, E. Owens, A. Parrot, E. Peters, P. Pollak, S. Sassler, K. Simon, S. Tennyson, W. Trochim, M. Waller. Emeritus faculty: J. Allen, J. Ziegler. Lecturers: H. Allen, N. Fabrizio, J. Lewis, D. Perosio, W. Schlesinger, M. Weidner.

PAM 2000 Intermediate Microeconomics

Fall or spring. 4 credits. Prerequisite: ECON 1110 or equivalent. Students must enroll in a sec. J. Cawley, T. Evans, and staff.

Topics include theory of demand and consumer behavior including classical and indifference curve analyses; theories of production and cost; models for the following markets—competitive, monopoly, monopolistic competition, oligopoly, and inputs; general equilibrium; welfare economics; public goods; and risk.

PAM 2030 Population and Public Policy

Fall. 3 credits. D. Lichter.

Examines from a demographic perspective family policies that concern children and adults. Toward this end, it considers the relationships between family policies and demographic behavior. It also addresses the effects of family policies and demographic behavior on the well-being of children. Although this course focuses on the United States, it considers U.S. trends against the backdrop of changes in other industrialized countries.

PAM 2040 Economics of the Public Sector

Fall or spring. 3 credits. Prerequisite: PAM 2000. S-U or letter grades. E. Owens, J. Lewis, and staff.

The public sector now spends nearly two out of every five dollars generated as income in the U.S. economy. A thorough knowledge and understanding of this important sector is an essential part of training in policy analysis and management. This course provides an overview of the public sector of the U.S. economy, the major categories of public expenditures, and the main methods used to finance these expenditures. The principles of tax analysis and cost-benefit analysis are presented with a focus on the role of public policy in improving economic efficiency, promoting the goals of equity and social justice, and improving equity by altering the distribution of wealth and income.

PAM 2100 Introduction to Statistics

Fall or spring. 4 credits. J. Lewis, T. Evans, and staff.

Introduces students to descriptive and inferential statistics. Topics include hypothesis testing, analysis of variance, and multiple regression. To illustrate these topics, this course examines applications of these methods in studies of child and family policy.

PAM 2150 Research Design, Practice, and Policy (also SOC 2130)

Spring. 3 credits. Prerequisite: PAM 2100 or equivalent. K. Musick.

This course examines systematic approaches for addressing questions about poverty, family life, racial inequality, and a range of other

issues central to public policy. It emphasizes the logic and methods of social science research, including the measurement of social phenomena, generalizing results to groups of interest, establishing cause and effect, social experiments, survey research, and qualitative methods. It develops skills to critically evaluate the research of others and provides hands-on experience applying research methods to policy-related problems.

[PAM 2220 Controversies about Inequality (also PHIL 1920, DSOC/GOVT/ILROB/SOC 2220)]

Spring. 1-4 credits. Next offered 2010-2011. S. Morgan.]

PAM 2300 Introduction to Policy Analysis

Fall or spring. 4 credits. Fall: R. Avery; spring: J. Gerner.

Policy analysis is an interdisciplinary field that uses theories, concepts, and methods from disciplines such as economics, sociology, and political science to address substantive issues in the public policy arena. Students are introduced to the functions of and interactions between the major institutions (public and private) at the national, state, and local level involved in the policy making process. The course focuses on public policy analysis in the family/social welfare, health, and market regulatory areas and also includes an introduction to the technical skills required to undertake policy analysis.

PAM 2350 The U.S. Health Care System

Spring. 3 credits. S. Nicholson.

Introduction to the U.S. health care system. Covers the interrelatedness of health services, the financing of health care, and the key stakeholders in health care delivery, including regulators, physicians, hospitals, health plans, employers, the pharmaceutical/biotech and medical device industries, and consumers. Describes the history and organization of health care, behavioral models of utilization, issues of health care reform, and current trends. Provides an overview of key policy issues, including the uninsured, the rising cost of medical care, the value of medical care, and inadequate or variable quality of care.

PAM 3100 Multiple Regression Analysis

Fall and spring. 4 credits. Prerequisites: PAM 2100, AEM/ILRST 2100 or equivalent. Sec meets once a week. M. Lovenheim and staff.

Introduces basic econometric principles and the use of statistical procedures in empirical studies of economic models. Discusses assumptions, properties, and problems encountered in the use of multiple regression procedures. Students are required to specify, estimate, and report the results of an empirical model.

PAM 3240 Risk Management and Policy

Fall. 3 credits. Prerequisite: ECON 1110 and statistics course. S. Tennyson.

Provides students with a broad understanding of risk management problems and solutions, a greater appreciation of the importance of risk and risk regulation in our society, and increased comprehension of the complexities of making decisions about risk. Topics include alternative ways to define and measure risk, the importance of risk-tradeoffs, and models of decision making under risk. With this background, alternative approaches to risk management are analyzed. The impact on risk management of the legal liability system and government programs, laws, and policies is also considered.

PAM 3300 Intermediate Policy Analysis

Fall or spring. 3 credits. Prerequisites: PAM 2300, PAM 2100, PAM 3100. J. Matsudaira and staff.

This course examines evaluation methods used to judge whether public policies and programs are effective in achieving their goals. Policy makers are barraged with information about the likely effects of various policy changes, and need to be adept at identifying credible evidence. Building on concepts covered in introductory courses in policy analysis, economics, and statistics, this course will aid students in becoming critical consumers of policy research and evaluations. Examples from a variety of policy areas, including education, welfare, and economic development will be explored.

[PAM 3340 Corporations, Shareholders, and Policy]

Fall. 3 credits. Prerequisite: ECON 1110, PAM 2000 and 2100. S–U or letter grades. Next offered 2010–2011. R. Geddes.]

[PAM 3350 Families, Poverty, and Public Policy]**PAM 3360 Evolving Families: Challenges to Public Policy (also SOC 3360)**

Spring. 3 credits. S. Sassler.

This course examines the social institution of the family, challenges to the institution's well-being and stability, and the role of public policy in these transformations. Topics include family structure and responsibilities; marriage as a traditional building block of the family and challenges to the institution of marriage, including divorce, nonmarital childbearing, cohabitation, and same-sex unions; children, and the impact of family change on their well-being, including the effects of child poverty, maternal employment, and paternal involvement. The role of public policy in managing and shaping these developments will be discussed.

PAM 3370 Race and Public Policy (also SOC 3370)

Spring. 3 credits. S. Sassler.

This course provides an overview of perspectives used in sociological studies of race and ethnicity. We will read classic and contemporary research on racial and ethnic relations in the United States. The first part of the course covers a variety of theories on race/ethnic relations and addresses issues related to the social construction of race, racial identities, and the impact of immigration on racial dynamics. We next examine racial and ethnic inequality in social and demographic outcomes. The course concludes with readings that explore interracial contact and multiracial populations.

PAM 3400 The Economics of Consumer Policy

Fall. 4 credits. Prerequisite: PAM 2000 or equivalent or permission of instructor. S. Tennyson.

Familiarizes students with the economic analysis of consumer policy issues. Uses the tools of microeconomic analysis to investigate the interaction between government and the marketplace, with an emphasis on how that interaction affects consumers. Examines the rationale for and effects of regulation of industry. Considers alternative theories of regulation, including the capture, economic, and public interest theories. Applies those theories to specific types of regulation, including economic regulation of specific industries (e.g., telecommunications, electricity,

trucking, railroads, postal services) as well as to broader social regulation (e.g., health, safety, environmental). The effects of regulatory reform in numerous industries are also examined. An attempt is made to examine current topics relating to consumer policy.

PAM 3410 Economics of Consumer Law and Protection (also ECON 4410)

Spring. 3 credits. Prerequisite: PAM 2000 or equivalent. S–U or letter grades. J. Gerner. Economic analysis of the roles played both by the courts and by federal and state regulatory legislation in altering consumer markets, consumer behavior, and consumer welfare. Topics include economic analyses of contract law, product liability, accident law and antitrust law, and the activities of such agencies as the Federal Trade Commission, the Food and Drug Administration, and the Consumer Product Safety Commission.

PAM 3500 Contemporary Issues in Women's Health (also FGSS 3500)

Spring. 3–5 credits. A. Parrot. Deals with the history of women in medicine and the historical and cultural treatment of women's health problems. Also addresses health care research and the exclusion of women from research trials and protocols. Reproductive issues, alternative approaches to treatment, medical problems, ethical issues, cancers, factors that contribute to post-traumatic stress disorders, health promotion behaviors, political issues, and routine medical recommendations are also discussed in depth. Students may take the course for a fifth credit, which requires attending a discussion section every other week and observing 12 facilities (e.g., birthing center, mammogram, and ultrasound center, wellness center, hospital labor and delivery unit, La Maze class, women's self-defense class) that provide a variety of women's health care. Some of these visits will be virtual visits available through the course web site, others will require in-person attendance.

PAM 3800 Human Sexuality

Spring. 4 credits. Limited to 150 students. Prerequisite: introductory course in human development and family studies, psychology, or sociology (or equivalent social science course). Recommended: biology course. Two 75-minute lec and one sec per week. A. Parrot.

Provides students with an understanding of the interactions and interrelationships of human behavior that influence sexual development and behavior. Focuses on the evolution of sexual norms, cross-cultural customs, legislation within changing sociopolitical systems, and delivery of services related to sexual issues, needs, and/or problems. Addresses future trends in sexuality.

PAM 4000–4010–4020–4030 Special Studies for Undergraduates

Fall and spring. Credit TBA. S–U or letter grades. Staff.

For advanced independent study by an individual student or for study on an experimental basis with a group of students not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake on a form available from the department field office. This form must be signed by the instructor directing the study, the student's faculty advisor, and the

department head and filed at course registration or within the change-of-registration period in the college registrar's office, 146 MVR. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department chair is necessary. Students, in consultation with their faculty supervisor, should register for one of the following subdivisions of independent study.

PAM 4000: Directed Readings. For study that predominantly involves library research and independent reading.

PAM 4010: Empirical Research. For study that predominantly involves data collection and analysis.

PAM 4020: Supervised Fieldwork. For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

PAM 4030: Teaching Apprenticeship

Prerequisite: course (or equivalent) in which student is assisting and has demonstrated high level of performance. For study that includes assisting faculty with instruction.

PAM 4060 Politics and Policy: Theory, Research, and Practice (also GOVT/ALS/AMST 4998)

Fall, spring. Taught in Washington, D.C. For description, see GOVT 4998.

[PAM 4330 Topics in Corporations and Policy]

Spring. 3 credits. Prerequisite: PAM 2000, PAM 3100, PAM 3340. S–U or letter grades. Next offered 2010–2011. R. Geddes.]

PAM 4340 Economics of the Criminal Justice Policy

Fall. 3 credits. Prerequisite: PAM 2000 or equivalent, PAM 3100. S–U or letter grades. E. Owens.

Why do governments attempt to regulate our behavior? What determines which actions are considered criminal? Why do some people, in spite of legal institutions, choose to engage in illicit activity? How do governments attempt to reduce criminal behavior, and how effective are those attempts? This class is intended to introduce you to both theoretical and empirical ways to answer these questions. The content of the class will span economic theory, criminology, and statistics: effective policy makers should be able to understand all three. By the end of the semester, students will be able to think about crime and criminal justice, an intrinsically controversial and emotional topic, from an objective economic perspective.

PAM 4360 Drugs and Gangs

Spring. 3 credits. Prerequisite: PAM 3330, PAM 3100, or permission of the instructor. S–U or letter grades. E. Owens.

Examines the development of illegal markets and criminal gangs in the United States, and evaluates government attempts to limit the size and scope of these activities. We will study the evolution of street gangs, prison gangs, and organized crime from the 19th century to the present, focusing on their role in the drug markets. Students will use economic theory and data to analyze how drug markets respond to government policy.

PAM 4370 Economics of Health Policy (also ECON 4370)

Fall. 3 credits. Prerequisite: PAM 2000, 3100, or equivalent. S-U or letter grades. K. Simon.

Uses the economic tools of policy analysis to understand the health care system and critically evaluate current policy debates. In the past decade, some of the most controversial policies considered by state and federal governments have involved issues that have been studied by health economists and health services researchers. Uses the United States as its main institutional framework but also pays attention to health care topics of international concern, such as the AIDS epidemic.

[PAM 4380 Economics of Public Health (also ECON 4380)]

Fall. 3 credits. Prerequisites: ECON 1110, PAM 2000, 3100, or equivalent. S-U or letter grades. Next offered 2010-2011. D. Kenkel.]

[PAM 4440 Violence against Women: Policy Implications and Global Perspectives (also FGSS 4480)]

Spring. 3 credits. Next offered 2010-2011. A. Parrot.]

PAM 4450 Regulating Financial Institutions

Spring, weeks 7 through 14, meeting time TBD. 3 credits. Prerequisites: ECON 1110, PAM 2000, PAM 3400 or equivalent. S-U or letter grades. S. Tennyson.

Examines financial institutions and the way that these institutions are regulated in the United States and in other countries. The course provides a history and overview of regulatory institutions, considers the intent of regulatory policies, and evaluates regulatory outcomes. An important focus of the course will be on current public policy issues relating to financial institutions regulation.

PAM 4460 Economics of Social Security (also ECON 4460)

Fall. 3 credits. Prerequisite: PAM 2000 or equivalent. S-U or letter grades. R. Burkhauser.

Provides students with an "economic tool-kit" for evaluating social policies. Economic analysis is used to predict the behavioral and distributional consequences of such policies. Students learn to use computer software on data from the Current Population Survey to estimate the economic well-being of both older people with disabilities, show how sensitive your results are to the methods used, and stimulate the effects of alternative policies on these outcomes.

PAM 4470 Families and Social Inequality (also SOC 4470)

Fall. 3 credits. Prerequisite: PAM 2030, PAM 2220, SOC 2208, or equivalent social science course. S-U or letter grades. K. Musick.

Disparities in family life are widening in the U.S., with important implications for the well-being of family members and the reproduction of inequality from one generation to the next. Using tools of demographic analysis, this course explores growing education and income differences in family patterns (e.g., marriage, divorce, childbearing, and parenting), analyzing the forces behind these changes and the potential consequences for children's life chances.

[PAM 4570 Innovation and Entrepreneurship in the Health Care Industry]

Fall. 3 credits. Prerequisite: PAM 4350 or permission of instructor. Next offered 2010-2011. J. Kuder.]

[PAM 4760 Economic Evaluations in Health Care]

Fall. 3 credits. Recommended: background in microeconomics and statistical tools. S-U or letter grades. Next offered 2010-2011. Staff.]

PAM 4770 Child Policy

Fall. 3 credits. Prerequisites: PAM 2000, PAM 3100. S-U or letter grades. J. Gerner. Topics in public policy dealing with children, with a special emphasis on the impacts of policy on child outcomes. Topics include policy affecting education attendance, high stakes testing and its impact on performance, policy impacts on family composition and change, and the effects of these on child outcomes.

PAM 4980 Honors Seminar

Fall. 3 credits. Prerequisites: PAM 2100, 2150, and 3100. Letter grades only. S. Sessler.

Designed to help guide students through the development of their honors thesis. The objective of the course is to help students frame a research question that is appropriate for an honors thesis, identify an appropriate methodology to use in answering this question, identify data that can be used to answer this question, and identify literature appropriate to this question. Students will also work collaboratively in critiquing research questions and techniques to be used. Students will meet in a seminar-style class each week and will also meet with the students individually and with their research mentor throughout the semester as they work on their thesis question and methods. Students who wish to participate in the PAM Honors Program must enroll in this course during their senior year. Students must receive a grade of B or better to continue in the Honors Program.

PAM 4990 Honors Program

Fall or spring. Credit TBA. Prerequisite: PAM 4980. Letter grades only. PAM faculty. Provides students with the opportunity to undertake basic or applied research that will be preparation of a thesis representing original work of publishable quality. Intended for students who desire the opportunity to extend their interests and efforts beyond the current course offerings in the department. Furthermore, the program is designed to offer the student the opportunity to work closely with a professor on a topic of interest. The number of hours of thesis credit is determined by the student's research mentor. See the director of undergraduate studies for more details.

PAM 5310 Ethics, Public Policy in American Society

Fall. 3 credits. Prerequisite: senior or graduate standing. J. Ziegler. Explores current issues of ethics and public policy against a background of theories of ethical behavior. Examines questions of how public officials and managers of public and nonprofit agencies and private enterprises act. How do standards of ethical behavior in the professions get established? How are public policy issues with ethical implications

resolved? Readings are drawn from political philosophy, contemporary social science, and imaginative writing. Class participation is essential.

[PAM 5320 The Intergovernmental System: Analysis of Current Policy Issues]

Fall. 3 credits. Prerequisite: graduate students or seniors who have had course in American government. Next offered 2010-2011. J. Ziegler.]

PAM 5470 Microeconomics for Management and Policy

Spring. 4 credits. S-U or letter grades. Sloan students only. W. White.

Introduces microeconomic theory and its application to decision making in the management and policy arenas. Places special emphasis on the economic environment of health care organizations and the problems faced by managers in this environment.

PAM 5520 Health Care Services: Consumer and Ethical Perspectives

Fall. 3-4 credits; 4-credit option may be used as Biology and Society senior seminar option. Limited to 30 students. Prerequisite: undergraduates by permission of instructor. A. Parrot.

Focuses on consumer and ethical issues faced by professionals in the health care field today. Broad topics discussed include ethical standards and guidelines, health care costs and accessibility of services, government role in health care delivery, health care as a right or privilege, private industry role in health care, services for the medically indigent and elderly, practitioner burnout and training, ethics of transplant surgery and funding, reproductive technology, AIDS research and funding, animals in medical research, right to die, and baby and granny Doe cases.

PAM 5540 Legal Aspects of Health Care

Spring. 3 credits. Prerequisites: PAM 5570 or permission of instructor. Offered alternate years. H. Allen.

Introduces principles of the law that specifically are applicable to health-service delivery. Topics include the liability of hospitals and their staff and personnel for injuries to patients; medical records and disclosure of information; consent to medical and surgical procedures; responsibility for patients' personal property; collection of bills; medical staff privileges; and confidential communications.

[PAM 5560 Managed Health Delivery Systems: Primary-Ambulatory Care]

Fall. 3 credits. Prerequisite: PAM 5570 or permission of instructor. Next offered 2010-2011. J. Kuder.]

PAM 5570 Health Care Organization

Fall. 3 credits. Limited to 30 students. Prerequisite: Sloan students or permission of instructor. J. Kuder.

Graduate-level introduction to the organization of health providers in the United States, the interrelationships of health services and the major sources and methods of paying for care. Describes how health services are structured in the United States and how these different services interrelate along the continuum of care. Describes and analyzes organization, delivery, and financing issues from a variety of perspectives using specific performance criteria (e.g., equity, quality, efficiency). Also presents innovations by the public and private

sectors in the delivery and reimbursement of health care.

PAM 5620 Finance (also AEM 3240)

Spring. 3 credits. Staff.
For description, see AEM 3240.

PAM 5630 Health Care Financial Management II

Fall. 3 credits. Prerequisite: PAM 5620 or other financial management course.
S. Nicholson.

Focuses on the financial analyses that managers in the health care industry use to make strategic and operating decisions. Begins by examining how health insurers design and price their products and manage enrollees' medical expenditures. Next reviews two different methods of valuing a medical product/service, and two methods of estimating the value of a company. The four valuation methods covered are: net present value of free cash flows, decision tree analysis/real options, multiples, and the venture capital method. Seven cases allow students to apply these skills to examine decisions/situations such as: determining why a Medicare HMO is losing money and recommending a redesigned benefit and reimbursement structure; estimating a health system's profitability by product line; valuing a drug that is being developed; valuing a pharmaceutical company; valuing a drug using decision-free analysis in determining whether a medical device company should go public and how it should price its products.

PAM 5640 Health Care Resource Management and Quality Improvement

Fall. 3 credits. Prerequisite: strong basic computer skills. S-U or letter grades.
S. Nicholson.

Exposes students to the opportunities and challenges of using information technologies (IT), such as computerized physician order entry systems, electronic medical records, medical decision support systems, handheld devices for physicians, and remote patient monitoring devices, to improve the quality of medical care and/or reduce costs. Focuses on the manager's role in the application of IT to assess and improve the quality of medical care. Students will develop a business plan for a company that uses IT to improve the quality of medical care in the U.S. health care system.

PAM 5660 Strategic Management and Organizational Design of Health Care Systems

Spring. 3 credits. Staff.
Examines strategy and design issues faced by health care organizations. Topics include analysis of market conditions, organizational culture issues, development of an organizational mission and management strategy, the management of professionals, and the importance of roles, structure, and inter- and intra-institutional relationships within organizations. Taught via a case study approach.

PAM 5670 Health Policy

Fall. 3 credits. Prerequisite: Sloan M.H.A. students, Ph.D. students, or permission of instructor. K. Simon.
Addresses major health policy issues and the critical processes that influence them. Focuses primarily on the United States, with some coverage of health policy in other countries. Topics include Medicare, Medicaid, the uninsured, public health, the effect of welfare policy on health care, managed care

development and regulation, state and federal health care reform, and many others. The course analyzes the politics of health policy in terms of legislative and executive processes; the forces involved including economic, social, ethical, and political factors; and key players in health policy, such as special interest groups, public agencies, and elected officials.

PAM 5690 Regression Analysis and Managerial Forecasting

Fall. 3 credits. Prerequisite: at least one statistics course. T. Evans.
Teaches various statistical methods for managerial decision making, with a particular emphasis on regression and forecasting. Other topics include ANOVA, correlation, confounding, interaction, and statistical process control. Emphasizes applications to health care organizations.

PAM 5700 Health Care Accounting

Fall. 4 credits. Core course for Sloan M.H.A. students. W. Schlesinger.
Introduces the basic concepts of financial and managerial accounting with emphasis on health care applications. Explains the measurement system of business operations, business valuation, financial reporting, budgeting, cost allocation, service and product costing, and special reports for managerial use. Ethical and international issues are integrated throughout the course materials with real world applications. At the conclusion of the course, students should be able to read, understand, and analyze the annual financial reports of an organization. Collaborative learning, cases, discussions, readings, researches, presentation, speakers, problem solving, videotapes, and lectures are used as teaching pedagogy.

PAM 5710 Organizational Development/ Human Resource Management in Health Care Organization

Fall. 3 credits. Sloan students only.
N. Fabrizio.
Explores (1) the theoretical foundation of organizational theory, research, and human resource management with an emphasis on implementation; (2) real-world problems while analyzing, exploring, and discussing varied interpretations of selected cases; (3) the building blocks of managerial activity; internal organizational issues; performance issues related to organization design; and strategic issues. Key organizational change and development concepts enhance students' perspectives on how the theories, strategies, and practices relate to today's organizations. The course serves as a framework to establish the theory and both the conceptual and competency foundations necessary for applying interventions.

PAM 5740 Short Course in Fundamentals of Health Facility Planning for Managers

Spring. 1 credit. B. Hollis.
Provides MHA and other students who may be interested in careers in health care management with a basic familiarity regarding some of the concepts and terminology related to health facility planning projects. The course will touch on areas that a manager might encounter, including working with designers, the relationship between strategic planning issues and facility planning, basic cost estimating techniques, simplified plan interpretation, and use of architectural and engineering scales. The course will have two primary components. One portion will be lectures and hands-on demonstrations on plan

reading/measurements and an overview of the process of project planning. We anticipate a tour of an active or recently completed project at either Cornell or Cayuga Medical Center as time allows. The other will involve live or videoconference presentations from invited practitioners and researchers in the health facilities area.

PAM 5760 Long-Term Care and Lifestyle Alternatives for the Older Adult

Spring. 1 credit. M. Weidner.
Provides students exposure to, and fosters critical thinking about, policy and operational issues related to health care and living alternatives for the well, near frail, and frail older adult. Preliminary readings will introduce the student to societal issues of the aging, clinical issues facing the older adult, and management operations for nursing homes, independent living communities, assisted living, and home care. Emphasis will be placed on student interaction with instructors and other seminar participants regarding society and management issues. Case studies will be used to enhance student interaction and participation.

PAM 5770 Marketing for Health Care Managers

Fall. 3 credits. Prerequisites: microeconomics and permission of instructor. D. Perosio.
Introduces students to the substantive and procedural aspects of marketing strategy and management. The course is designed to convey the key concepts of marketing and how they fit into the larger context of overall management strategy and decisions. Both the practical "how" and the fundamental "why" of marketing activities will be explored. Course examples rely heavily on actual situations and experiences in the health care industry. Students will apply their knowledge of marketing and health care management to the development of a marketing plan.

PAM 5810 Measuring and Evaluating Health Program Performance and Quality

Spring. 3 credits. Prerequisites: PAM 5570 and a basic multivariate statistics course or permission of instructor. S-U or letter grades. J. Kuder.
This course is designed for policy makers, health systems managers, and beginning health services researchers that want an applied introduction to using health system evaluation tools and literature to enhance system and program performance and improve quality.

PAM 5900 Special Topics in Health Administration and Finance

Fall and spring. 1-3 credits. Adjunct faculty.
A special topics course specifically designed for students in the Sloan Program in Health Administration. Possible multiple offerings using adjunct faculty teaching in areas of expertise not covered in depth in the Sloan core curriculum and relevant to students preparing for careers in health management. Format ranges from intensive courses offered over several full days to longer courses meeting on a weekly basis.

PAM 5951/2 Field Studies in Health Administration and Planning

Fall or spring. 5951, fall. 1 credit; 5952, spring, 3 credits; 4 total credits. Capstone course for second-year Sloan students.
J. Kuder.

Students interested in developing administrative and program-planning research skills are given an opportunity to evaluate an ongoing phase of health care agency activity in the light of sound administrative practice and principles of good medical care. In planning and carrying out the research, students work closely with a skilled practicing administrator and with members of the faculty.

PAM 5990 Challenges and Trends in the Health Services Industry

Fall and spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U grades only. W. White. Provides students with information and exposure to current and emerging issues in the health services industry. Topics may include financial management of health care facilities, human resource management, information systems, cost-effective clinical decision making, quality measurement and outcomes, public health, and entrepreneurship in the health services industry.

PAM 6000 Special Problems for Graduate Students

Fall and spring. Credit TBA. S-U or letter grades. Staff. Independent advanced work by graduate students recommended by their chair and approved by the department chair and the instructor.

[PAM 6030 Experimental, Quasi-Experimental, and Economic Evaluation Methods

Spring. 3 credits. Highly recommended: background in statistics (e.g., AEM 7100 or equivalent) and microeconomics (e.g., PAM 2000 or ECON 6390). Next offered 2010-2011. E. Peters.]

[PAM 6040 Qualitative, Survey, and Mixed-Method Approaches to Policy Research

Spring. 3 credits. Prerequisite: Ph.D. students. Highly recommended: previous course in social science research methods. Next offered 2010-2011. M. Waller.]

PAM 6060 Demographic Techniques (also DSOC 6080)

Spring. 3 credits. S-U or letter grades. D. Gurak and D. Lichter.

This course provides an introduction to various demographic data sources (e.g., decennial census and vital registration data), measures of demographic processes and population structure (e.g., fertility rates and segregation indices), and standard demographic techniques (e.g., life tables, rate standardization, and population forecasting) used in social demography. The course emphasizes the application of demographic tools and interpretation.

PAM 6090 Empirical Strategies for Policy Analysis

Fall. 3 credits. Prerequisite: graduate course in econometrics (e.g., ILRLE 7480-7490 or AEM 7100). J. Matsudaira. This course focuses on empirical strategies to identify the causal effects of public policies and programs. The course will use problem sets based on real-world examples and data to examine techniques for analyzing non-experimental data including control function approaches, matching methods, panel-data methods, selection models, instrumental variables, and regression-discontinuity methods. The emphasis throughout, however, will be on the critical role of research design

in facilitating credible causal inference. The course will aid students in both learning to implement a variety of statistical tools using large data sets, and in learning to select which tools are best suited to a given research project.

PAM 6250 Economics of Family Policy

Fall. 3 credits. Prerequisite: PAM 6390 or ECON 6090 or permission of instructor. S-U or letter grades. E. Peters.

This course uses an economic framework to study family policy. Both single-agent and multiple-agent (e.g., game theoretic and bargaining) frameworks are used to understand the impact of family policy on outcomes and behavior. Theoretical models of fertility decisions, household production, time allocation, investments in children, marriage markets, household formation and dissolution decisions, bargaining over resource allocation within the household, and inter- and intra-generational transfers across households are developed. The theoretical models are applied to family policies such as child care subsidies, family leave, divorce laws and child support, welfare reform, family planning, government subsidies to education, and social security. Empirical applications are presented for both developed and developing countries.

PAM 6280 Family Demography (also SOC 6280)

Spring. 3 credits. S-U or letter grades. K. Musick.

This graduate seminar explores changes in family behaviors and household relationships from a demographic perspective. It focuses centrally on contemporary trends in the U.S., considering (often competing) interpretations of the causes and consequences of family change and variation. Emphasis will be placed on critically evaluating research in this area, including assessments of data quality, research design, and causal inference. Topics include cohabitation and marriage, divorce, fertility, family structure, and the intersection of work and family.

[PAM 6330 Seminar in Pharmaceutical Policy Issues

Spring. 2 credits. Meets once a week. S-U or letter grades. Next offered 2010-2011. S. Tennyson.]

[PAM 6350 Consumers, Information, and Regulatory Policy

Fall. 3 credits. Prerequisites: PAM 6390 or calculus and intermediate microeconomics. Next offered 2010-2011. S. Tennyson.]

PAM 6410 Health Economics I (also ECON 6410)

Fall. 3 credits. First course in Ph.D.-level health economics sequence. Prerequisites: Ph.D.-level courses in microeconomic theory and econometrics. J. Cawley and staff.

Comprehensive course covering microeconomic theory and its application to health and health care markets. Topics include consumer decision making, the theory of the firm, welfare economics, monopolies and oligopolies, and market imperfections. Applications in health economics include the demand for health, rational addiction, the industrial organization of health care, cost-effectiveness analysis, price discrimination by health care providers, how consumers respond to information about health care, adverse selection in health insurance, and the moral hazard created by physician compensation

strategies. Each student writes a research paper, testing predictions from microeconomic theory by acquiring suitable data and estimating the appropriate econometric model, and presents his or her findings in a research seminar.

PAM 6420 Health Economics II

Spring. 3 credits. Prerequisites: Ph.D.-level courses in microeconomic theory and econometrics. Staff.

Covers microeconomic theory and its applications to health and health care markets. Topics include consumer demand for health and health behaviors, the supply side of health promotion, the industrial organization of health care, and cost-benefit and cost-effectiveness analysis of health interventions. Second course in Ph.D.-level health economics sequence, but the courses may be taken in any order.

PAM 6900 Professional Seminar in Public Policy

Fall. 2 credits. Prerequisite: Enrollment limited to Ph.D. and M.S. students in PAM (as well as Ph.D. students funded by PAM). S-U or letter grades. R. Dunifon

This proseminar introduces new graduate students to the field of PAM. Students will read and discuss research papers by PAM faculty as well as other readings that provide an overview of the field of Policy Analysis and Management and offer important tools and skills that can be used throughout the graduate career.

PAM 8990 Master's Thesis and Research

Fall and spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S-U or letter grades.

PAM 9990 Doctoral Thesis and Research

Fall and spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S-U or letter grades.

SCHOOL OF INDUSTRIAL AND LABOR RELATIONS

ADMINISTRATION

Harry C. Katz, dean

Robert Smith, associate dean, academic affairs

Suzanne Bruyere, associate dean, outreach

Gordon Law, librarian

Joseph Grasso, director, administrative services

Martin Wells, director, research

Regina Duffey Moravek, director, office of career services

Christopher Crooker, director, external relations

Laura Lewis, director, office of student services

William J. Sonnenstuhl, graduate faculty representative

Tove Hammer, editor, *Industrial and Labor Relations Review*

DEGREE PROGRAMS

Industrial and Labor Relations	Degree
	B.S.
	M.I.L.R.
	M.P.S.
	M.S.
	Ph.D.

THE SCHOOL

The School of Industrial and Labor Relations at Cornell (ILR) is a small school within a large university. It tries to maintain the small-college atmosphere expected of an institution that has about 800 undergraduates and approximately 200 graduate students, even as ILR students participate fully in the activities of the larger Cornell community.

ILR students study in modern, technologically advanced lecture halls, seminar rooms, and libraries.

Students enrolled in the School of Industrial and Labor Relations at Cornell may take a substantial number of courses in the other six undergraduate colleges and schools of the university, including the College of Arts and Sciences. Cornell students have access to all of the libraries and other services of the university.

The school operates in four areas: (1) resident instruction, (2) extension and outreach, (3) research, and (4) publications. It provides instruction to undergraduates and graduate students who are preparing for careers in industrial and labor relations, as well as to men and women already engaged in industrial relations activities and the general public through its Extension and Outreach.

The school's Conference Center, part of the extension division, initiates and hosts conferences covering the full scope of

industrial and labor relations. The center provides continuing education and information to practitioners and scholars.

The Research Division develops materials for resident and extension teaching and originates studies in industrial and labor relations. The Publications Division publishes and distributes the research results.

GRADUATE DEGREES

More than 150 students on the Cornell campus are enrolled in graduate study in industrial and labor relations, one of the largest graduate fields in the university. Students may work toward the degrees of master of industrial and labor relations, master of professional studies, master of science, and doctor of philosophy. For further information on graduate programs, contact the Graduate Office, School of Industrial and Labor Relations, Cornell University, 214 Ives Hall, Ithaca, NY 14853-3901.

DEPARTMENTS OF INSTRUCTION

Courses in the school are organized into six departments:

Collective Bargaining, Labor Law, and Labor History

The Department of Collective Bargaining, Labor Law, and Labor History brings together a diverse group of faculty members, all of whom are involved in researching and teaching about workers, employers, and the government policies that affect them. Our courses explore ILR issues in American society within a global framework using methods drawn from the social sciences, the humanities, and the legal professions.

Human Resource Studies

The Department of Human Resource Studies consists of world-class faculty members engaged in research, teaching, and practice. These faculty members play integral roles in the administration of the Center for Advanced Human Resource Studies (CAHRS), an ILR-based research center funded by over 50 corporations, and the ILR Executive Education Program, which offers advanced training to HR practitioners. The goal in teaching is to balance a rigorous academic research approach with a real-world practice orientation. In this way students are provided with state-of-the-art knowledge relevant to managing human resources in organizations.

International and Comparative Labor

The Department of International and Comparative Labor is concerned with industrial relations, unions, human-resource studies, and labor markets throughout the world. World-renowned faculty members are authorities on issues related to labor in Latin America, Europe, Asia, and Africa, as well as

North America, and bring this knowledge to bear on the courses they teach to prepare students to understand the global marketplace.

Labor Economics

The Department of Labor Economics deals with labor markets, that is, the institutional arrangements, terms, and conditions under which workers supply their labor and under which firms demand their labor. Faculty members are especially concerned with understanding the workings of labor markets and the effects of various public policies. The topics dealt with in courses and research include analysis of the labor force, employment and unemployment, wages and related terms of employment, income distribution, income security programs, health and safety in industry, retirement, pensions and social security, economic aspects of collective bargaining, and economic demography.

Organizational Behavior

The psychologists and sociologists in the Department of Organizational Behavior use discipline-based theoretical perspectives to examine an array of empirical workplace phenomena. Their teaching and research focus on the impact of environmental, technological, and interpersonal relationships on work group and organizational dynamics.

Social Statistics

Faculty members in the Department of Social Statistics conduct research in the field of economic and social statistics. In applying their research results to their teaching, they provide their students with cutting-edge training on the principles of statistical reasoning, statistical methods, and the application of statistical tools of analysis.

A full list of required and elective courses is available from the Office of Student Services, 101 Ives Hall.

RESIDENT INSTRUCTION

This division conducts the on-campus programs leading to the degrees of bachelor of science, master of industrial and labor relations, master of professional studies, master of science, and doctor of philosophy from Cornell.

Office of Student Services

Staff members from the Office of Student Services, 101 Ives Hall, work closely with faculty members and faculty committees to administer degree programs for the school and many of the school's support services. The office's responsibilities include admitting and orienting new students, maintaining students' personal and academic records, providing information on special study opportunities such as study abroad, and counseling students on personal and academic

concerns. The office also works closely with seniors who are planning graduate study.

Counseling and Advising

New students are advised on orientation, academic procedures, and course registration by counselors in the Office of Student Services.

Each of the school's academic departments names faculty members to serve as advisors for students who wish to consult with them regarding career possibilities in the field, research opportunities, postgraduate programs, or similar matters. Questions or issues related to graduation requirements, course registration, and related academic procedures should be directed to counselors in the Office of Student Services.

Multicultural Programs

The School of Industrial and Labor Relations values diversity and is responsive to the unique social, academic and cultural contributions and needs of multicultural students. The School is committed to providing students with support that will enhance academic achievement, career development, and personal growth. The assistant director for multicultural affairs in the Office of Student Services works in conjunction with many university programs to provide services that ensure academic success and an enjoyable quality of life for ILR students. For more information, see the Multicultural Affairs web site: www.ilr.cornell.edu/studentservices/advising/multicultural.

STUDY OPTIONS

Several study options are open to ILR undergraduates, making it possible to tailor a program to fit special circumstances.

Some students elect to spend a semester in New York City, Albany, or Washington, D.C., with a chance to observe actual labor problem solving as interns in congressional offices, labor organizations, personnel offices, and state and federal agencies. For more information, see "Special Academic Programs" below.

Study abroad opportunities are available in numerous countries and foreign universities. Qualified students may spend a semester or a full year studying abroad.

A number of ILR courses deal directly with today's workplace issues and involve fieldwork in the Ithaca area and elsewhere in the country.

With early planning, some students may apply for and earn the M.S. degree in the fifth year.

Minors

Students may pursue minors in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the students' major. Completed minors will appear on the student's transcript. Not all departments offer minors. Consult the appropriate section in this catalog or contact the appropriate department for information on minors offered and how to pursue a minor.

Study in Absentia

Registration in absentia enables a student to seek admission in another American institution for a semester or a year and transfer credit toward completion of the Cornell degree. This study option requires the development of a plan of study, a statement of appropriate reasons for study away from the university (e.g., availability of courses not offered at Cornell), good academic standing, approval of the plan by the director of student services, and payment of a special in absentia registration fee.

Leave of Absence or Withdrawal

Students who desire to withdraw or take a personal leave of absence from the university should schedule an interview with a counselor in the Office of Student Services. Counselors will assist students in contacting the appropriate offices or departments of the university, if necessary. All health leaves are handled by Gannett Health Center (www.gannett.cornell.edu).

REQUIREMENTS FOR GRADUATION

To earn the Cornell bachelor of science degree in industrial and labor relations, a student must successfully complete 120 credits. This requires eight semesters of full-time study (30 credits a year on average), including work done while on an approved credit internship or study abroad program. Those who enter the school as transfer students will be required to complete 4 to 6 semesters in full-time residence, depending on the number of full-time semesters completed at another institution. Exceptions may be made by petitioning the ILR Academic Standards and Scholarships Committee. Those enrolled in the employee degree program, who typically study on a part-time basis, will be exempt from this requirement.

New Curriculum Effective Fall 2008

<i>Junior and Senior Years</i>	
ILR Elective courses—40 credits	40

- Must include at least one course from an approved list in each of the following three areas: International and Comparative elective, Labor History elective, and Economic Policy elective
- Minimum of 24 credits of ILR course work, including 4950 Honors, 4990 Independent Study—with a maximum of 16 credits for non-ILR courses at Cornell as approved in ILR departments
- Maximum of 12 credits from foreign language or advanced math
- May include up to 9 credits for one semester abroad or 15 credits for a full year abroad
- Maximum of 16 credits in a credit internship program

Additional general elective credits (in addition to distribution requirements) 12

Minimum total credits required for graduation 120

*Required courses usually taken in the College of Arts and Sciences

**Required courses taken in the ILR School

†Distribution credits (courses you choose that satisfy requirements in certain categories)

Physical Education credit does not count toward the 120 credits

ILR Math Requirement

A student who took AP calculus in high school and scored a 3 or better on the AB exam or subscore of BC exam has fulfilled the ILR math requirement. If AP calculus wasn't completed, or if the scores noted above were not achieved, the student is expected to take and pass the ILR Math Assessment before registering for required courses in Statistics and Labor Economics.

The ILR Math Assessment is scheduled in August, January, and May. Those who do not pass in the first attempt are expected to register in an appropriate math course and pass the assessment *before the beginning of their third semester* in the school. Any student who cannot meet the requirement by the beginning of the third semester is enrolled for a terminal semester and is expected to leave the school thereafter.

Transfer students are expected to meet the same standards in math: either present the score required by Cornell University for AP calculus (AB or BC) credit or pass the ILR Math Assessment before being permitted to register in required courses in statistics or labor economics, with a terminal semester

possible after failing the assessment given at the beginning of a third semester as an ILR student.

SCHEDULING AND ATTENDANCE

Schedule Changes

Occasionally it may be necessary for a student to request changes in his or her course schedule either before a semester begins or during the semester. Such requests must be directed to the Office of Student Services to avoid possible loss of academic credit.

Class Attendance

It is each student's responsibility to attend all scheduled classes unless excuses have been approved by the faculty members. In some courses an instructor may permit a maximum number of class absences without a grade penalty or recommend withdrawal from the course. An explanation for absence from class may occasionally be secured from the Office of Student Services in advance of the expected absence. An approved absence may be warranted by:

1. participation in authorized university activities such as athletic events, dramatic productions, or debates;
2. medical problems supported by a record of treatment at Gannett Health Center or by another physician;
3. serious illness or death in the immediate family;
4. other circumstances beyond the student's control.

A request for explanation of an absence should, when possible, be made to the Office of Student Services before the date of expected absence. A reported and explained absence does not relieve a student from fulfillment of academic requirements during the period of absence. The course instructor has the authority to determine what work must be completed. The office can only confirm the explanation for absence. Students should inform the Office of Student Services of any problems they have meeting course requirements.

STANDING AND GRADES

Academic Integrity

In 1987 the faculty of the School of Industrial and Labor Relations approved a revised code of academic integrity. This code, while based on the Cornell University code, varies somewhat.

Absolute integrity is expected of all Cornell students in all academic undertakings. They must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity. The code specifically prohibits:

1. knowingly representing the work of others as one's own;
2. using or obtaining unauthorized assistance in any academic work;
3. fabricating data in laboratory or field work;

4. giving fraudulent assistance to others;
5. fabricating data in support of laboratory or field work.

Full details on the applications of those prohibitions to course work, term papers, examinations, and other situations are listed in the code (cunfo.cornell.edu/Academic/AIC.html).

Dean's List

A Dean's List is compiled for each of the four undergraduate classes each semester following receipt of final grades from the registrar. Eligibility for the Dean's List is determined by applying all of the following criteria:

1. achievement of a semester average for freshmen of 3.3 or better; for sophomores of 3.4 or better; and for juniors and seniors of 3.6 or better;
2. a minimum course load for the semester of 12 letter-graded credits;
3. completion of all courses registered for at the beginning of the semester;
4. satisfaction of all good-standing requirements.

Academic Standing

Good standing requires that all of the following criteria be met at the end of each semester:

1. an average of C (2.0) for the semester's work, including a minimum of 8 completed and letter-graded credits;
2. no failing grades in any course, including physical education;
3. a cumulative average of C (2.0) for all completed semesters.

If at the end of any semester a student fails to maintain good standing, or if overall academic performance is so marginal as to endanger the possibility of meeting school and university degree requirements, his or her record is reviewed by the Committee on Academic Standards and Scholarships. The committee may issue a written warning to the student at that time. If a student who does not improve after the written warning, he or she may be placed on a required leave of absence for one or two semesters.

Involuntary Separation from the School for Academic Reasons

A student may be placed on a required leave of absence at the end of any semester when he or she has failed:

1. to establish good standing after a semester on warning;
2. to maintain an average of 2.0 in any semester after a previous record of warning;
3. to achieve good standing after being on warning any two previous semesters;
4. two or more classes in one semester or has a semester average of 1.0 or below.

The Academic Standards and Scholarships Committee may decide to permit a student to remain on warning more than one semester if there has been significant improvement even though the cumulative average is still below 2.0.

S-U Grading Policy

An undergraduate may register to receive a final grade of S (Satisfactory) or U (Unsatisfactory) in courses that offer this option—either in the school or in other divisions of the university—subject to the following conditions:

1. the S-U option may be used in ILR and in out-of-college course electives only, not in directed studies;
2. students are limited to registering in *two* S-U courses a semester;
3. S-U registration is limited to 4 credits for each course;
4. students registering for S-U grades must be in good standing;
5. students must fulfill the graduation requirement of 105 letter-graded credits.

ILR faculty members assign a grade of U for any grade below C- and a grade of S for any grade of C- or better. A grade of U is considered equal to an F in determining a student's academic standing, although it is not included in the cumulative average.

No change of grading (from letter to S-U or from S-U to letter) may be made after the first three weeks of class. There are no exceptions to this restriction, and appeals will not be accepted.

Grades of Incomplete

A grade of incomplete (INC) is assigned when a course has not been completed for reasons that are acceptable to the instructor. It is understood that the work will be completed later and credit given. Instructors may grant a grade of incomplete for a limited number of clearly valid reasons, but only to students with substantial equity in a course. A firm and definite agreement on the conditions under which the work may be made up must be made with the instructor. The school's policy allows a maximum of two full semesters of residence for removal of a grade of incomplete. If it is not made up within this time, the grade automatically becomes an F.

SPECIAL ACADEMIC PROGRAMS

To meet the special academic objectives of some students, the school's faculty has established several special academic programs. For additional information, students should contact a counselor in the Office of Student Services. Counselors will explore the program with students to help them decide if it suits their interests.

Five-Year Master of Science Degree Program

With early planning it is possible to earn the M.S. degree in a fifth year of study. This program is designed specifically for those who wish concentrated study in an area of specialization in the school for a master of science degree. Students considering this program should consult a counselor in the Office of Student Services after their freshman year.

Credit Internship Program

The ILR Credit Internship Program affords our advanced undergraduates (juniors and seniors) opportunities to enhance their understanding of the field of industrial and labor relations by

working for a semester (approximately 15 weeks) in one of the professional careers it encompasses. The Credit Internship Program operates both domestically and internationally, from Washington, D.C., New York City, and Los Angeles to Geneva, London, Kuala Lumpur, and Beijing, among many other locations. For more information, please visit ILR's Off-Campus Programs office in 381 Ives East and the ILR Credit Internship web site: www.ilr.cornell.edu/creditinternships. You are also welcome to send e-mail to Brigid Beachler, assistant director of off-campus credit programs, at bk30@cornell.edu.

Summer Internships

What is a summer internship? During the summer, a student who works in a job that is related to industrial and labor relations may find that the employer refers to that job as an internship. Their terminology differs from that used by ILR and Cornell to refer to credit-bearing internships. Academic credits earned: ILR considers an internship to be a learning experience engaged in during the academic year, for which students earn academic credit, are supervised by a faculty member, are evaluated, have a grade recorded, and pay tuition. With very few exceptions (the Clem Miller Scholarship, Saul Wallen internship, Chaim and Ida Miller Scholarship, all of which are summer support provided to selected ILR students) summer employment has little in common with the semester credit internship program. Approval is required in advance. Some companies tell students that they cannot be employed unless they receive academic credit for a summer internship. Cornell does not grant credit unless a student is registered, pays tuition, has a faculty supervisor, and is in a position approved for internship credit.

Programs in Washington

Interns work a minimum of 30 hours per week for the 15 weeks of the semester with approved organizations addressing issues of work and workplace relations. Students are also required to complete a comprehensive research project, related to their internship, that is graded by their ILR faculty supervisor. Students will also be required to take a 4-credit public policy course for ILR credit. Interns will receive a total of 16 ILR elective credits.

ILR/UCD Semester in Dublin Program

The ILR/UCD Semester in Dublin Program is the educational centerpiece of a comprehensive collaboration between the ILR School at Cornell University and the Quinn School of Business at University College Dublin. The program's purpose is to afford eligible ILR undergraduate students (juniors and seniors) opportunities to enhance their understanding of various international dimensions of the field of industrial and labor relations through courses taught by leading scholars at one of Europe's most vibrant and dynamic universities. The curriculum consists of three required courses: European Industrial Relations and Human Resource Management, Multinationals in the Global Economy, and Irish History and Culture. In addition, students will select one elective course related to the ILR field. Students will receive 12 ILR elective credits for the three ILR-related courses and three transfer credits for the Irish History and Culture course, for a total of 15 credits. For more information, please visit our web site:

www.ilr.cornell.edu/dublin, or contact Brigid Beachler, assistant director of off-campus credit programs, at bk30@cornell.edu.

Honors Program

Undergraduates who are ranked in the top 20 percent of their class at the end of the junior year may propose a two-semester research project, an honors thesis, for review by the Committee on Academic Standards and Scholarships. When approved, the candidate for graduation with honors works for two semesters (for 4 credits each semester) to research, write, and then defend the thesis.

Study Abroad

ILR students who plan to study in another country most often do so in the junior year, occasionally in the senior year. They may study in one of the programs that is sponsored by Cornell, in one sponsored by another institution and endorsed by Cornell, or in an approved externally sponsored program. Information about study abroad is available in OSS (101 Ives Hall) or the Cornell Abroad office (300 Caldwell Hall).

Students are expected to register for a full course load, the equivalent of 15 credit hours in a semester or 30 hours in a year, when they study abroad. Some courses will be the equivalent of general elective credit or distribution credit, but others may be accepted as ILR elective credit if evaluated and approved by the relevant ILR department chairs. A student may satisfy up to 9 hours of the ILR elective credit in a single semester abroad and up to 15 hours in a year of foreign study.

Application for foreign study requires that the student meet the Cornell deadlines as well as those specified by the program(s) of interest. Applications include tentative class schedules, recommendations from faculty members, approval of the application by an ILR faculty committee, essays, and transcripts. After being approved in ILR, the application is sent to the Cornell Abroad office and then to the program for which the student is applying. For more information, contact Kevin Harris, associate director of student services, 101 Ives Hall, 255-2223, kfh4@cornell.edu, or the Cornell Abroad office, 300 Caldwell Hall, 255-6224, CornellAbroad@cornell.edu, www.cuabroad.cornell.edu.

COLLECTIVE BARGAINING, LABOR LAW, AND LABOR HISTORY

I. DeVault, chair (340 Ives Hall, 255-3055); A. Colvin, M. Cook, J. Cowie, C. Daniel, R. Givan, M. Gold, K. Griffith, J. Gross, H. Katz, S. Kuruvilla, R. Lieberwitz, D. Lipsky, N. Salvatore, L. Turner

ILRCB 1100 Introduction to U.S. Labor History

Fall and spring. 3 credits. R. Applegate, J. Berger, J. Cowie, C. Daniel, I. DeVault, and N. Salvatore.

Introductory survey covering the major changes in the nature of work, the workforce, and the institutions involved in industrial relations from the late 19th century to the present.

ILRCB 1200 Introduction to Disability Studies

Fall. 2 credits. M. Gold.

A survey of the facts and issues that affect individuals with disabilities. Topics may include history of the treatment of disabilities; disability in literature; models of disability; disability in education, employment, health care, and the media; mental health and disability; accessible designs; and technologies for the disabled.

ILRCB 2010 Labor and Employment Law

Fall and spring. 3 credits. M. Gold,

J. Gross, K. Griffith, and R. Lieberwitz.

Survey and analysis of the law governing labor relations and employee rights in the workplace. The first half of the course examines the legal framework in which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The second half surveys the laws against discrimination based on race, religion, sex, national origin, age, and disability. Also serves as an introduction to judicial and administrative systems.

ILRCB 2050 Collective Bargaining

Fall and spring. 3 credits. A. Colvin,

R. Givan, R. Hurd, H. Katz, D. Lipsky,

R. Seeber, and L. Turner.

Comprehensive introduction to industrial relations and collective bargaining in the United States; the negotiation, scope, and day-to-day administration of contracts; the major substantive issues in bargaining, including their implication for public policy; industrial conflict; the major challenges facing unions and employers today; U.S. industrial relations in international and comparative perspective.

ILRCB 2060 Writing Seminar in Law

Fall or spring. 3 credits. Limited to 15

students. Fulfills sophomore writing

requirement. L. Adler, M. Gold, J. Gross,

K. Griffith, and R. Lieberwitz.

Topics change depending on semester and instructor.

ILRCB 2061 Citizenship, Race, and Class in 20th-Century America

Fall. 3 credits. Fulfills sophomore writing

requirement. J. Berger.

Explores the ways Americans have defined what it means to be a citizen of the United States. How have understandings of race and ethnicity influenced immigration policy and determined who can or cannot become a citizen? Why do some members of minority groups argue they historically have had only second-class citizenship? What types of benefits and rights should citizenship entail?

ILRCB 2063 Body, Mind, and Soul

Fall. 3 credits. Fulfills sophomore writing

requirement. J. Cowie.

Bruce Springsteen once said that Elvis Presley freed our bodies and Bob Dylan freed our minds. Ever since then, Springsteen has been working on our souls. This sophomore writing seminar will hone our analytical and writing skills by examining the historical context and artistic expressions of these three icons of the fifties, sixties, and seventies respectively. We will explore the roots of each artist's work in relationship to history, race, gender, class, postwar culture, politics, as well as each other. This writing seminar will require an intensive amount of reading, writing, and re-writing in

order to penetrate the complexities of these artists' contributions to American culture.

ILRCB 2070 Writing Seminar in History

Fall or spring. 3 credits. Limited to 15 students. Fulfills sophomore writing requirement. R. Applegate, J. Berger, J. Cowie, C. Daniel, I. DeVault, and N. Salvatore.

Topics change depending on semester and instructor.

ILRCB 2080 Writing Seminar in Collective Bargaining

Fall or spring. 3 credits. Limited to 15 students. Fulfills sophomore writing requirement. K. Bronfenbrenner, A. Colvin, R. Givan, J. Gross, R. Hurd, H. Katz, and D. Lipsky.

Topics change depending on semester and instructor.

ILRCB 2090 Work and Labor in the Global Economy

Spring. 3 credits. Limited to 20 students. Fulfills sophomore writing requirement. K. Bronfenbrenner.

Examines the evolution of American workplace in the past 20 years in the context of the global economy. Through a combination of nonfiction, fiction, workplace site visits, worker interviews, guest speakers, and weekly short writing assignments, students explore the changing nature of corporate structure, the workplace, the work process, and workers' lives in a range of occupations in five different sectors of the economy: IT, manufacturing, public sector, health care, and casual labor. Guest speakers include workers, union leaders, and employers from companies in the target sectors and site visits are made to both union and nonunion facilities. Particular emphasis is placed on exploring how work, workers, and communities have been impacted by globalization.

ILRCB 3010 Labor Union Administration

Fall. 4 credits. R. Hurd.

Study and analysis of the structure and operations of American unions, including the complicated internal life of the organizations; the varied environments in which unions develop and grow or decline; the relationship of national unions, local unions, and members in the context of internal union government; the ways in which unions are set up to handle organizing, collective bargaining, contract administration, and political activity; and the widespread movement toward merger and consolidation of unions. Examines the role of union leaders and the strategic choices they make. Attention is given to current developments in the labor movement and to the eternal problems of attaining union democracy.

ILRCB 3020 Strangers and Citizens: Immigration and Labor in U.S. History

Fall or spring. 4 credits. I. DeVault.

Explores immigrant workers' experiences in the 19th and 20th centuries from different perspectives. Students examine what it meant to the immigrants themselves to arrive as strangers in the United States while also examining the ways in which preexisting American groups defined these immigrants as "strangers." Similarly, students look at U.S. citizens in their roles as greeters of immigrants, detractors of immigrants, and as models for the aspirations of immigrants. The

main examples are taken from the industrial and union realms.

ILRCB 3030 Working-Class America in Mass Media and Popular Culture

Spring. 4 credits. J. Cowie.

Examines a variety of representations of working people found in commercial popular culture throughout the 20th century as a means to explore the ways in which history, memory, and politics are shaped through popular discourse. Uses sources as diverse as popular music, Hollywood movies, the mainstream press, and television sitcoms to understand the ideological and political influences on our pre-conceptions of workers, and how those forces influence our notions of authenticity, the historical experience, and the politics of social class.

ILRCB 3040 Special Topics: Labor History

Fall or spring. 4 credits. Prerequisite: permission of instructor. R. Applegate, J. Cowie, C. Daniel, I. DeVault, and N. Salvatore.

Undergraduate seminar whose topic changes depending on semester and instructor.

ILRCB 3042 Varieties of American Dissent, 1880-1990 (also AMST/HIST 3240)

Spring. 4 credits. N. Salvatore.

The idea of dissent in American society raises a variety of images. Civil rights activists, striking workers, and student radicals of the 1960s are familiar enough symbols of dissent. But might we understand a Pentecostal believer, filled with the spirit of his or her God in critiquing contemporary society, as an example of American dissent? This course explores the varieties of economic, political, and cultural dissent in American between 1880 and 1990, and examines how understanding dissent in its specific historical context illuminates major aspects of American life and culture.

ILRCB 3060 Recent History of American Workers: From the '60s through the '90s

Fall. 4 credits. J. Cowie.

Focuses on the social history of American workers and the role of organized labor in American life since the 1960s. Course themes often center on the complexities of social class in the United States. Topics include the transformations of liberalism, the civil rights and black power movements, the Vietnam War, the rise and fall of the New Left, industrial restructuring, the rise of neoconservatism, changes in civic identity, and sources of cultural conflict. Course ends with an examination of globalization, changes in the major political parties, the future of work, and prospects for social change.

ILRCB 3070 U.S. Business History: The Changing American Corporation

Spring. 4 credits. R. Applegate.

Surveys the changing organization of business firms in the United States since the Civil War, with a central focus on the historically dominant form of American business organization: the large industrial corporation. Course work covers the distinctive features and historical significance of the corporations known as "big business" by investigating the circumstances of their creation, successive phases of their organizational restructuring, the expanding reach of their managerial controls from firms to industries and markets,

and the enduring contest over their governance.

ILRCB 3071 Governing Economic Development: The U.S. Experience

Fall. 4 credits. R. Applegate.

Surveys the history of U.S. economic development from the perspective of the governance structures created to organize and control economic activity, emphasizing the changing regulatory roles of public and private institutions. Course work covers successive periods of economic development: a comparison of the "old liberal" governance regimes of the 19th century with the "new liberal" regimes created in the 20th century is followed by an investigation of the post-1970s contest between "neoliberal" and "neoprogressive" forms of economic regulation.

ILRCB 3072 Union Advocacy for Equality and Social Justice

Fall or spring. 2 credits. R. Hurd.

An exploration of the U.S. labor movement's relatively recent embrace of immigrant rights and support for the concerns of lesbian, gay, bisexual, and transgender workers. Also a review of labor's longer-term involvement in the women's rights and the civil rights movements. Attention to the role of labor constituency groups including Coalition of Labor Union Women, Asian Pacific American Labor Alliance, A. Phillip Randolph Institute, Coalition of Black Trade Unionists, Labor Council for Latin American Advancement, and Pride at Work. Also individual union political advocacy and targeted bargaining innovations related to equality and social justice.

ILRCB 3830 Workers' Rights as Human Rights

Fall or spring. 4 credits. J. Gross.

Examines U.S. domestic labor law and policy using internationally accepted human rights principles as standards for judgment. Considers the idea of human rights, its philosophical and moral origins, and introduces the legal and social obligations of both governments and nonstate actors to respect the human rights of workers. Topics include the Universal Declaration on Human Rights, ILO International Labor Standards, the Declaration on Fundamental Principles and Rights at Work, workers' freedom of association and the right to organize and collectively bargain, occupational health and safety, discrimination, forced labor, child labor, migrant labor, labor rights defined in international trade agreements, the value judgments underlying labor policy choices, and the struggle for enforcement of human rights standards nationally and internationally. The course examines these topics in an internationally comparative context and includes presentations and discussions from international experts on various human rights issues.

ILRCB 3850 African American Social History, 1865 to 1910: The Rural and Urban Experience

Fall. 4 credits. N. Salvatore.

Examines the experience of black Americans from Emancipation through the experience of the first generation born after slavery. Topics include the changing nature of work; political organization and the rise of Jim Crow; protest, accommodation, and separatism; and the continued evolution of black social and cultural expression after slavery.

ILRCB 3860 African American Social History, 1910 to the Present: Race, Work, and the City

Spring. 4 credits. N. Salvatore.

Examines the experience of black Americans from the start of the Great Migration just before World War I. Topics include the effects of migration on work experiences and unionization patterns, the impact of depression and two world wars on black social structure and economic status, the growth of the Civil Rights movement, and the impact of migration and urbanization on a variety of social and cultural institutions.

ILRCB 3880 Unfree Labor: Servants, Slaves, and Wives

Spring. 4 credits. I. DeVault.

Examines various forms of unfree labor, mostly in the antebellum (pre-Civil War) era in the United States. Will look at the situation of indentured servants and apprentices, African slaves, and wives of all social classes, reading both autobiographical and historical studies. Will also discuss the contrasts and interrelationships among these different groups of early American workers.

ILRCB 4000 Union Organizing

Spring. 4 credits. Prerequisites: ILRCB

2010/5010, 2050/5000. K. Bronfenbrenner.

Examines the theory, practice, and strategy of organizing in a global economy. Addresses current challenges facing unions organizing in both the public and private sector, in certification elections and card check campaigns. Topics include review of organizing theory, the social and political context of current organizing, the debate on organizing policy and labor law reform, worker attitudes toward organizing, changing employer strategies and tactics, staffing and financing organizing campaigns, strategic targeting, organizing styles and tactics, changing demographics of newly organized workers, organizing outside the labor board process, and the limits and possibilities of organizing on a global scale.

ILRCB 4020 Migrant Workers (also HIST/LATA/LSP 4310)

Spring. 3 credits. R. Craib.

For description, see LSP 4310.

ILRCB 4030 The Economics of Collective Bargaining in Sports

Fall or spring. 4 credits. L. Kahn.

Surveys economic and industrial issues in the sports industry. Topics include salary determination, including free agency, salary caps, salary arbitration; competitive balance and financial health of sports leagues; antitrust issues in sports; labor disputes, union history, and contract administration issues in sports leagues; discrimination in sports; and performance incentives.

ILRCB 4040 Contract Administration

Fall. 4 credits. Prerequisites: ILRCB

2010/5010, 2050/5000. K. Bronfenbrenner.

Focuses on the practice, nature, and challenges of union representation under collective bargaining agreements. Working with union contracts, constitutions, and by-laws from a diversity of national and local public and private sector agreements, the course examines how U.S. unions represent their members in different industries and different collective bargaining environments. Issues addressed include union representative/steward rights and responsibilities, contract enforcement structures and practice, access to

information, new work systems, hours of work and scheduling, contingent staffing arrangements, workplace discrimination, health and safety, promotional opportunities, downsizing, leadership development, membership involvement and commitment, internal organizing, community coalition building, and decertification campaigns. Students practice hands-on work in interpreting contract language and preparing and presenting grievances and unfair labor practices.

ILRCB 4050 Employment Law I

Fall. 4 credits. Prerequisites: ILRCB 2010, 5010, or permission of instructor.

Attendance and participation mandatory.

May be taken either before or after ILRCB 4051. L. Adler.

Takes a similar approach to ILRCB 4051, but the subject matter differs. Topics include employment at will and its exceptions; the role of the Constitution in the U.S. workplace; the law of electronic and traditional privacy at work; and the slowly evolving rights of contingent workers in the old and new economies. One study reviews primarily federal and state court decisions and focuses upon the way that employees' rights are advanced or constricted by law. There are considerable reading responsibilities.

ILRCB 4051 Employment Law II

Spring. 4 credits. Prerequisites: ILRCB 2010, 5010, or permission of instructor.

Attendance and class participation mandatory. May be taken either before or after ILRCB 4050. L. Adler.

Takes a similar approach to ILRCB 4050, but the subject matter differs. Topics include the meaning and validity of preemployment arbitration agreements; the critical distinctions in the status and thus the rights of employees, independent contractors, and contingent workers; what rights the working poor, the homeless, and welfare individuals have on the "job;" and the origin and application of the workers' compensation laws that apply when people are injured or contract disease from their work. One study reviews primarily federal and state court decisions and focuses on the way that employees' rights are advanced or constricted by the law. There are considerable reading responsibilities.

ILRCB 4060 Hospitality Industry Labor Relations (also HADM 4481)

Spring. 4 credits. R. Hurd and D. Sherwyn.

Critical labor relations issues facing the hospitality industry. The impact of the structure and performance of the industry on the collective bargaining environment. Labor relations strategy of UNITE-HERE, the key union representing hospitality industry workers. Labor relations strategies of selected hospitality industry corporations. Labor-management partnerships. Neutrality, union organizing, and the expanding reach of hospitality industry labor relations. All students will participate in simulated organizing campaigns and contract negotiations. Representatives of management and unions will address the class on key contemporary developments.

ILRCB 4070 Contemporary Trade Union Movement

Spring. 4 credits. Prerequisites:

undergraduates, ILRCB 1100; graduate students, ILRCB 5020. R. Hurd.

Examination of contemporary trade union issues, including union power, political action,

collective bargaining approaches, and organizing efforts. Covers structural, functional, and strategic aspects of contemporary unions. Speakers from the union movement address the class.

ILRCB 4820 Ethics at Work

Fall or spring. 4 credits. Prerequisite: junior or senior standing or permission of instructor. M. Gold.

Examines major theories of ethics, then applies them to issues in the employment relationship such as genetic screening of job applicants, random drug testing of employees, affirmative action, discipline for off-duty conduct, whistle-blowing, worker safety and cost/benefit analysis, comparable worth, strikes by employees providing crucial services, and crossing a picket line.

ILRCB 4860 Collective Bargaining in Public Sector

Fall or spring. 4 credits. Prerequisites:

ILRCB 2010 and 2050/5000. L. Adler.

Examines the history of public employees' collective bargaining and other workplace rights. Emphasis is placed on the current trade-offs between municipal and state governments and their unionized employees in New York City and state, although trends in other states, the federal sector, and in certain EU countries are also examined. Topics include representation rights, public sector workers ability to leverage their power, unfair labor practices, impasse procedures, the scope of collective bargaining, and a limited treatment of the U.S. constitution in the public workplace. Examination of the development, practice, and extent of collective bargaining between federal, state, and local governments and their employees. Throughout, we are mindful of how the exercise of public employee rights impacts municipal, state, and federal public policy labor market considerations. There are several prominent guest speakers.

ILRCB 4880 Liberty and Justice for All

Fall or spring. 4 credits. Prerequisite: junior or senior standing or permission of instructor. M. Gold.

Examines major theories of ethics, then applies them to contemporary issues such as affirmative action and reverse discrimination, the right to life (from abortion to capital punishment), comparable worth, and constitutional rights such as freedom of speech.

ILRCB 4950 Honors Program

Fall and spring (yearlong). 4 credits each

semester. Students are eligible for ILR senior honors program if they (1) are in upper 20 percent of their class at end of junior year; (2) propose an honors project, entailing research leading to completion of a thesis, to an ILR faculty member who agrees to act as thesis supervisor; and (3) submit project, endorsed by proposed faculty sponsor, to Committee on Academic Standards and Scholarships.

Accepted students embark on a two-semester sequence. The first semester consists of determining a research design, familiarization with germane scholarly literature, and preliminary data collection. The second semester involves completion of the data collection and preparation of the honors thesis. At the end of the second semester, the candidate is examined orally on the completed thesis by a committee consisting of the thesis supervisor, a second faculty member designated by the appropriate department

chair, and a representative of the Academic Standards and Scholarship Committee.

ILRCB 4970-4980 Field Research, Internship

Fall and spring. 4970, 4 credits; 4980, 8 credits. Staff.

All requests for permission to register for an internship must be approved by the faculty member who will supervise the project and the chairman of the faculty member's academic department before submission for approval by the director of off-campus credit programs. Upon approval of the internship, the Office of Student Services will register each student for 4970, for 4 credits graded A+ to F for individual research, and for 4980, for 8 credits graded S-U, for completion of a professionally appropriate learning experience, which is graded by the faculty sponsor.

ILRCB 4990 Directed Studies

Fall and spring. 4 credits. Staff.

For individual or group research projects conducted under the direction of a member of the ILR faculty, in a special area of labor relations not covered by regular course offerings. Sophomores, juniors, and seniors with a preceding semester of 3.0 semester average are eligible to submit projects for approval by the Academic Standards Committee. Students should consult with a counselor in the Office of Student Services at the time of CourseEnroll to arrange for formal submission of their directed study.

ILRCB 5000 Collective Bargaining

Fall. 3 credits. Prerequisite: graduate standing. Recommended: previous or concurrent enrollment in ILRCB 5010. A. Colvin, H. Katz, and S. Kuruvilla.

Comprehensive introduction to the industrial relations system of the United States. Covers the negotiation, scope, and day-to-day administration of contracts; union and employer bargaining structures; implications of industrial relations issues for U.S. competitiveness and public policy; industrial conflict; and U.S. industrial relations in international and comparative perspective.

ILRCB 5005 Employee Benefits: Law, Policy, and Practice

Fall, seven-week course, 2 credits. L. Compa.

Offers a general overview of the basics of ERISA, retirement plans, and health insurance, with some additional treatment of other employee benefits such as sick leave, parental leave, and child care. We will examine these issues in (1) a policy context, since health insurance and pension protection will be at the top of the national policy agenda with a new administration and congress in Washington; and (2) a collective bargaining context, since bargaining over employee benefits present sharp challenges to employer and union negotiators.

ILRCB 5010 Labor and Employment Law

Fall. 3 credits. Prerequisite: graduate standing. A. Colvin, L. Compa, M. Gold, K. Griffith, and R. Lieberwitz.

Survey and analysis of the law governing labor relations and employee rights in the workplace. The first half of the course examines the legal framework in which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The second half surveys additional

issues of rights in employment, including such topics as employment discrimination, the developing law of "unjust dismissal," and union democracy. Also serves as an introduction to judicial and administrative systems.

ILRCB 5020 History of Industrial Relations in the United States since 1865

Fall or spring. 3 credits. Prerequisite: graduate standing. J. Cowie, C. Daniel, I. DeVault, and N. Salvatore.

Introductory survey course emphasizing historical developments in the 20th century. Special studies include labor union struggles over organizational alternatives and such other topics as industrial conflicts, working-class lifestyles, radicalism, welfare capitalism, union democracy, and the expanding authority of the federal government.

ILRCB 5040 The U.S. Industrial Relations System

4 credits. Offered only in New York City for M.P.S. program. Staff.

Examines the development, operation, and outcomes of the U.S. industrial relations system in a comparative context. Specifically, the course contrasts the American experience with industrial relations institutions and outcomes with the experience of several other countries in Europe and Asia. Students look at the process of union formation, the practice of collective bargaining at different levels, the methods of dispute resolution, and the legal regime germane to industrial relations. The course also focuses on both processes and outcomes of different country systems, focusing on the degree of collaboration or conflict, wage levels and wage inequality, and practices in different industries and firms. Finally the role played by industrial relations and human resource policy in economic and social development in these nations is addressed.

ILRCB 6000 Special Topics: Labor Law

Fall or spring. 4 credits. Prerequisite: permission of instructor. Open to graduate students and upper-division undergraduates. Sem. A. Colvin, L. Compa, M. Gold, K. Griffith, and R. Lieberwitz.

Topic changes depending on semester and instructor.

ILRCB 6011 Negotiation: Theory and Practice

Fall or spring. 4 credits. Prerequisites: background in economics and social sciences, or permission of instructor. D. Lipsky and R. Seeber.

Deals with negotiation and bargaining, focusing on process, practice, and procedures. Concentrates on the use of negotiation and bargaining to resolve conflicts and disputes between organizations and groups. Discusses various theories of negotiation, including conventional, "positional" bargaining, interest-based bargaining, the use of power in negotiation, and game theoretic approaches to bargaining. Examples, cases, and exercises are used to illustrate general principles. This is a generic negotiation course and thus does not deal with labor relations nor does it focus on any particular type of negotiation. Rather, it examines negotiation and bargaining generally, using examples drawn from several contexts, including employment relations, environmental disputes, real estate transactions, and other settings.

ILRCB 6012 Managing and Resolving Conflict

Fall or spring. 4 credits. Prerequisite: background in economics and social sciences or permission of instructor. A. Colvin, D. Lipsky, and R. Seeber.

Deals with managing and resolving workplace conflicts and examines dispute resolution and conflict management in both union and nonunion settings. The course covers two related topics: (1) Third-party dispute resolution, including alternative dispute resolution (ADR). This part focuses primarily on the use of mediation and arbitration but also deals with other dispute resolution techniques, such as fact-finding, facilitation, peer review, and the ombuds function; (2) Conflict management in organizations, including the recent development of conflict management systems. The course reviews the factors that have caused the growth of ADR and conflict management systems, and it provides instruction on the design, implementation, and evaluation of such systems.

ILRCB 6014 Industrial Relations in Transition

Spring. 4 credits. Prerequisite: senior or graduate standing. H. Katz.

Considers whether recent developments such as concession bargaining, worker participation programs, and the growth of nonunion firms represent a fundamental transformation in industrial relations practice. Reviews recent research and new theories arguing that such a transformation is occurring, including the work of Piore and Sabel, Bluestone and Harrison, and Kochan, McKersie, and Katz. Also reviews the counterarguments and evidence put forth by those who believe no such transformation is under way. Course material focuses on industrial relations practice in the private sector in the United States, although some attention is paid to developments in Western Europe, the United Kingdom, and Japan.

ILRCB 6018 Current Issues in Collective Bargaining: Theory and Practice

Spring. 4 credits. K. Bronfenbrenner.

Examines the theory and practice of the collective bargaining process in the past three decades. This will be achieved both through a review of recent literature on bargaining theory and through the analysis and evaluation of a series of collective bargaining campaigns from a variety of industries, unions, strategic models, and outcomes both in the United States and around the world, starting with the Phelps Dodge Strike in 1982 and ending with recent contract campaigns with large transnational firms, which students will research and write about as their final paper. Subjects addressed will include changing bargaining climate, bargaining theory, variations in bargaining structures and practices, union and company power analysis, role of membership in bargaining, interest-based bargaining, bargaining with transnational firms, comprehensive and cross-border campaigns, strikes and lockouts, community labor coalitions, bargaining in an era of global economic crisis, and bankruptcy and bargaining.

ILRCB 6019 Dispute Resolution Practicum

Spring. 2 credits. Limited to 20 students. D. Lipsky, R. Seeber, and R. Scanza.

Purpose is to link classroom discussion and analysis of arbitration and mediation with opportunities for students to observe actual arbitration and mediation cases. The course is designed to be an advanced seminar for graduate and undergraduate students who have a serious interest in pursuing a career in arbitration or mediation. Classroom discussions and readings will focus on both labor arbitration and mediation (i.e., the use of arbitration and mediation in unionized settings) and employment arbitration and mediation (i.e., the use of arbitration and mediation in cases involving nonunion employees).

ILRCB 6020 Arbitration

Fall and spring. 4 credits. Limited to 21 students. Prerequisites: ILRCB 2010, 2050, 5000, and 5010. A. Colvin, J. Gross, and R. Lieberwitz.

Study of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of a mock arbitration hearing, and the preparation of arbitration opinions and post-hearing briefs.

ILRCB 6040 Theories of Equality and Their Application in the Workplace

Spring. 4 credits. R. Lieberwitz.

An examination of the various aspects of equality in the workplace, focusing most closely on issues of race, gender, and national origin and the ways in which societal discrimination on these bases are institutionalized in the workplace. Theories attempting to define "equality" and specific workplace issues are studied, including the means for achieving equality at the workplace. The course entails research and writing assignments and a high level of student participation in class discussions.

ILRCB 6060 Theories of Industrial Relations Systems

Fall or spring. 4 credits. Prerequisite: senior or graduate standing; ILRCB 1100, 2050, 5000. H. Katz.

Traces the evolution of theory and research on industrial relations. Topics include theories of the labor movement; institutional models and evidence regarding what unions do; the origins of internal labor markets and their relationship with unionization; models of strikes; empirical assessments of arbitration; research on union decline; and empirical evidence of the impacts of new technology.

ILRCB 6070 Values in Law, Economics, and Industrial Relations

Fall and spring. 4 credits. Limited to 21 students. Prerequisites: ILRCB 2010, 2050, 5000, 5010. J. Gross.

Examination of the often hidden values and assumptions that underlie the contemporary U.S. systems of employment law, work and business, and industrial relations. Classroom discussions and student research projects use novels and short stories (as well as the literature of industrial and labor relations) to focus on issues such as discrimination; law, economics, and the state; work and business; power, conflict, and protest; and rights and justice.

ILRCB 6079 Low-wage Workers and the Law

Spring. 4 credits. Prerequisite: ILRCB 2010 or permission of instructor. K. Griffith.

Examines labor and employment law as it affects low-wage (including documented and

undocumented immigrant) workers. It will cover traditional labor and employment law statutes as well as new developments in labor and employment law that affect low-wage workers. Much of the course will be dedicated to federal legislation and case law related to the above. The course will also cover the overlap between labor and employment law and low-wage and immigrant worker organizing efforts.

ILRCB 6080 Special Topics in CB, LL, and L History

Fall or spring. 4 credits. Staff.

Topics change depending on semester and instructor.

ILRCB 6081 Public Policy and Public Sector Employment Relations

Fall. 4 credits. Prerequisites: ILRCB 2010/5010 or permission of instructor.

L. Adler.

Examine legal and other public employment conflicts created by taxation, education, fiscal failings, and labor/management problems. Our understanding will be informed by assessing the conflict resolution value of litigation, interest-based bargaining, traditional collective bargaining, and alternative dispute resolution mechanisms. Journal review, legal cases, and policy readings related to current, critical challenges to the public employment relationship will comprise our traditional study. As important will be field trip work with dispute resolution professionals, litigators, and collective bargaining practitioners. In addition to assigned readings, class participation, and an encouraged modest externship, there will be one examination and one or more significant writing assignments.

ILRCB 6082 Collective Bargaining Simulation

Fall. 4 credits. Limited to 18 students.

Prerequisite: junior, senior, or graduate standing.

Recommended: previous or concurrent enrollment in collective bargaining theory and labor law course. Attendance at first class mandatory. Up to two required evening extended bargaining sessions. H. Kramer.

Students prepare for and participate in a simulated negotiation between a hypothetical corporation and a hypothetical union in a typical big company with mid-size single site bargaining unit context. Students are assigned, usually in line with preferences, to either a management or union bargaining team. The course stresses the negotiation process over settlement or substantive outcomes.

Negotiation problems are as real life as possible, constrained by student time needs and with attention given to dynamic legal, political, economic, and communications concerns as well as power, information, and time factors. Participants plan for negotiations, reach agreements in principle and negotiate language, bargain wages, pensions, health care and noneconomic items in the context of a company and union with an established contract, policies, and culture. This is a hands-on program with active participation essential.

ILRCB 6830 Research Seminar in the History of Industrial Relations

Fall or spring. 4 credits. Prerequisites:

ILRCB 1100, 5020. J. Cowie, C. Daniel, I. DeVault, and N. Salvatore.

Areas of study are determined each semester by the instructor offering the seminar.

ILRCB 6840 Employment Discrimination and the Law

Fall or spring. 4 credits. Prerequisite: ILRCB 2010/5010 or equivalent. M. Gold, K. Griffith, and R. Lieberwitz.

Examines the laws against employment discrimination based on race, color, religion, sex, national origin, age, and disability.

ILRCB 6870 Introduction to Labor Research

Spring. 4 credits. Limited to 20 students.

K. Bronfenbrenner.

Designed to provide students interested in the labor field with the skills necessary to understand and use social science research as it relates to the labor movement. The course's four major goals are to (1) develop the skills to critically evaluate a wide variety of research relating to unions and the workplace; (2) introduce a number of both quantitative and qualitative research techniques used by unions and those who study the labor movement; (3) familiarize students with the broad range of library and computer resources that can be used for labor and corporate research; and (4) provide students with an opportunity to design and conduct a research project for a national or local union.

ILRCB 6890 Constitutional Aspects of Labor Law

Fall or spring. 4 credits. R. Lieberwitz.

In-depth analysis of the Supreme Court decisions that interpret the United States Constitution as it applies in the workplace. Focuses on the First Amendment, Fifth Amendment, Fourteenth Amendment, and Commerce Clause, with issues including freedom of speech and association, equal protection, due process, and other issues in the area of political and civil rights. The course entails a high level of student participation in class discussion, and assignments include a research paper.

ILRCB 7030 Qualitative Research Methods in Industrial Relations and Human Resources

Spring. 4 credits. Prerequisite: M.S. and Ph.D. students; ILRCB 5000.

Recommended: statistics course beyond level of ILRST 5100. S. Kuruvilla.

Advanced doctoral seminar that focuses on the philosophy of inquiry, generally, as well as the various paradigms governing research on work. The course further focuses on selected qualitative research methods used in research in industrial relations, human resource management, and organizational behavior.

ILRCB 7050 The Economics of Collective Bargaining

Spring. 3 credits. Prerequisites: ILRCB 5000, ILRLE 5400 or equivalents and an understanding of multiple regression analysis; or permission of instructor. Staff.

Focuses on both the economic analysis of unions and collective bargaining in our economy and the economic forces that affect collective bargaining. The method is to identify and conceptualize the structural determinants of relative bargaining power. On this basis, the course examines both the economic outcomes of collective bargaining and current bargaining trends in a variety of industries. Tentative theoretical analyses of unionism (neoclassical, institutionalist) are compared. The statistical techniques and empirical results of research on the union effect on economic outcomes (wages, prices, inflation, profits, productivity, earnings

inequality) are also evaluated. The effect of technology, corporate structures, and public policy on union bargaining power is outlined, and a number of case studies of collective bargaining in the private sector are reviewed. A term paper is required.

ILRCB 7070 Seminar on Conflict and Dispute Resolution

Fall. 3 credits. A. Colvin.

Examines past and present research on conflict and dispute resolution. This seminar will cover a variety of perspectives on conflict and its resolution. Readings will include a mixture of classic works on conflict and dispute resolution in work and employment relations, as well as recent conceptual and empirical studies in this area.

ILRCB 7080 Negotiations in Practice

Fall. 3 credits. S. Kuruvilla.

Provides opportunities for students to develop their negotiating abilities for use in organizational and other settings. The course is premised on the assumption that negotiating concepts are best learned through practice that is grounded in rigorous analysis and reflection. While theoretical principles and concepts from various reference disciplines (e.g., social psychology, sociology, and economics) are presented through lectures and readings, this course focuses primarily on improving practical skills. Participants learn not only to enhance their individual abilities in dyadic and group situations but also to analyze contexts for the most effective application of these skills.

ILRCB 7081 Seminar in American Labor History (also HIST 6830)

Fall or spring. 3 credits. Prerequisite: graduate standing and permission of instructor. J. Cowie, I. De Vault, and N. Salvatore.

Topics change depending on semester and instructor.

ILRCB 7900 ILR M.P.S. Program

Fall and spring. 1-9 credits. Staff.

Supervised research only for those enrolled in the ILR M.P.S. program.

ILRCB 7980 Internship

Fall and spring. 1-3 credits.

Designed to grant credit for individual research under direction of a faculty member by graduate students who have been selected for an internship. All requests for permission to register for ILRCB 7980 must be approved by the faculty member who will supervise the project.

ILRCB 7990 Directed Studies

Fall and spring. Credit TBA.

For individual research conducted under the direction of a member of the faculty.

ILRCB 9800 Workshop in Collective Bargaining, Labor Law, and Labor History

Fall and spring. 2 credits. Prerequisite: M.S. and Ph.D. candidates in department. S-U grades only. Staff.

Provides a forum for the presentation of current research being undertaken by faculty members and graduate students in the Department of Collective Bargaining, Labor Law, and Labor History, and by invited guests. All M.S. and Ph.D. candidates in the department who are at work on their theses are strongly urged to enroll. Each student is expected to make at least one presentation during the year, focusing on the formulation,

design, execution, and results of his or her thesis research.

HUMAN RESOURCE STUDIES

L. Dyer, chair (387 Ives Hall, 255-8805); R. Batt, B. Bell, J. Bishop, D. Burton, D. Cohen, C. Collins, L. Dragoni, L. Gasser, J. Grasso, K. Hallock, J. Hausknecht, R. Hewerston, C. Homrighouse, R. Kehoe, B. Livingston, L. Nishii, C. Tharp, C. Warzinski, W. Wasmuth, P. Wright

ILRHR 2600 Human Resource Management

Fall and spring. 3 credits. Prerequisite: ILR students or permission of instructor. Staff. Intended to introduce students to the field of human resource management (HRM). Students learn theories and applications involved in effectively managing people in organizations. In addition, this course covers current topics in HRM that have resulted from environmental and organizational challenges, e.g., technology, globalization, legislation, restructuring, work/life balance, changing labor markets, and so on. Emphasis is placed on developing relevant problem solving and critical thinking skills, as the basic concepts of HRM and the skills developed in this course are applicable to all types of organizations and jobs in which students will eventually work.

ILRHR 2660 Essential Desktop Applications

Fall, spring, and summer. 2 credits. Limited enrollment. C. Homrighouse.

Provides skills in the use of personal computers that run the Windows operating system. Covers the basics and time-saving techniques for Windows, Lexis Nexis, and Microsoft Excel, Access, and PowerPoint. Emphasizes hands-on experience and development of PC-based solutions by using examples that address human resource and other practical real-world issues. The skills developed in this course are useful prerequisites for several elective courses in human resource management and essential in the 21st-century workplace.

ILRHR 2680 Job Loss

Fall. 3 credits. Sophomore writing course. Limited to 15 students. K. Hallock.

Students will gain an understanding of the effects of layoffs on firms, from an interdisciplinary perspective. By the end of the course you should know quite a bit about the who, what, where, when, and why of layoffs and you should understand the effects of the layoffs on firms. Readings from economics, sociology, political science, psychology, finance, industrial relations, and human-resource management. Will include discussion of recent theory and research. However, the strong focus of the course will be on applications and on writing. Issues we will consider include: federal and state legislation and public policy, how layoffs actually occur—the procedures used by human resource managers in implementing layoffs, reasons for layoffs, types of workers involved in layoffs, timing of layoffs, layoffs and managerial outcomes (such as compensation and managerial turnover), layoffs and firm performance in the short run, layoffs and firm performance in the long run, case studies, and suggestions for policy. Occasional speakers will join the class: for example, Louis Uchitelle

from the *New York Times* has agreed to speak about writing and his work on layoffs.

ILRHR 2690 Cross-Cultural Perspectives on Work

Spring. 4 credits. Writing course.

Prerequisite: ILRHR 2600 or equivalent.

L. Nishii.

Most management theories have been developed and tested by Western scholars, based on Western cultural assumptions regarding the bases of human cognition, motivation, and emotion. Yet the vast majority of the world's population is non-Western and lives accordingly, based on different cultural assumptions. Students will begin by learning about theories of cultural variation, then will learn about the implications of these cross-cultural differences for basic HR and OB concepts.

ILRHR 3600 Human Resource Economics and Public Policy

Spring. 4 credits. Prerequisite: sophomore, junior, or senior standing. J. Bishop.

State and local efforts to improve K-12 education are employing a variety of (sometimes contradictory) reform strategies. This course critically examines the case that is made for (and against) each of the major reform proposals and review studies that provide objective evidence on their effectiveness. The education reform strategies examined include vouchers, charter schools, small schools, career academies, extending the school day and year, better preparation and selection of new teachers, better professional development, ending tenure, merit pay, state standards and school accountability, ending social promotion, and externally set end-of-course examinations.

ILRHR 3620 Career Development: Theory and Practice

Fall, spring, seven weeks. 2 credits. Limited to 30 students. S-U grades only. L. Gasser.

Covers the components of career management, individual factors, and organizational realities in the development of both careers and organized programs for career management. Two complementary learning tasks are required: information-gathering for career decision making based on self-assessment activities, and comprehension of organizational circumstances and practices encountered as careers develop. Grades are based on short writing assignments and a research paper.

ILRHR 3650 Organizational Consulting: Process and Results

Fall. 4 credits. Prerequisite: ILRHR 2600 or equivalent. R. B. Hewerston.

Provides students with the insights and tools they need to work successfully as human resource generalists who consult with operating managers to improve organizational effectiveness. The consulting process is examined from both an interpersonal and systems perspective. This includes the knowledge and skills required to build trust and influence, contract with clients, and maintain good working relationships with clients. It also includes developing a clear comprehension of the consulting process from diagnosis, through action planning, to implementation and completion. While attention is given to theory and practice, the focus is on gaining hands-on experience dealing with real-world issues. As a final project, students design and present consulting plans based on actual case

situations (e.g., implementing a new HR program, effectuating a new organizational culture, and enhancing project team operations).

ILRHR 3670 Employee Training and Development

Fall. 4 credits. Prerequisite: ILRHR 2600; undergraduate standing. B. Bell and L. Dragoni.

Faced with increasing competition, globalization, technological complexities, and dynamic labor markets, firms increasingly are struggling to determine the best approaches to training and developing their workforces. This course introduces the issues, concepts, and processes with which firms are wrestling, as well as specifics on planning, designing, implementing, and evaluating training and development programs. After completing this course, participants should be able to conduct a needs assessment, evaluate employee readiness, evaluate the strengths and weaknesses of various training and development techniques, solve transfer of learning problems, and design evaluation procedures.

ILRHR 4600 International Human Resource Management

Fall. 4 credits. Prerequisite: ILRHR 2600 or equivalent. L. Nishii.

Illustrates how cultural context affects the structure and implementation of HR practices. The first part focuses on comparative human resource management or the study of how HRM differs across cultures, with a primary emphasis on comparing American HRM practices with those in East Asia and a secondary focus on Western European HRM practices. Class readings and discussions are grounded in theories of cultural variation. The second part focuses on IHRM, or the HRM issues facing multinational corporations. Topics include expatriation and repatriation, global leadership, compensation, and training.

ILRHR 4610 Working in the New Economy: The Sociology of Work

Spring. 4 credits. Prerequisite: undergraduate standing. R. Batt.

Seminar that draws on qualitative studies of the workplace in the United States and abroad to examine how workers and managers are affected by changes in globalization technologies, business strategies, labor markets, and other factors. What dilemmas and conflicts emerge, how are they managed, and what are their outcomes? Readings cover firsthand accounts of people's experiences in a wide range of occupations and industries, including professional, service, and factory workers.

ILRHR 4620 Staffing Organizations

Spring. 4 credits. Prerequisite: undergraduate standing. C. Collins, J. Hausknecht, and B. Livingston.

Seminar designed to provide an overview of the processes by which organizations staff positions with both internal and external applicants. Through a combination of lectures, cases, and projects, the course covers theory, research, and legal foundations that inform organizational staffing actions. Topics include staffing strategy and context, measurement of staffing effectiveness, job/competency analysis, human resource planning, recruitment and job choice, retention, and internal and external selection practices.

ILRHR 4631 Managing Compensation

Spring. 4 credits. Prerequisite: ILRHR 2600 or equivalent; undergraduate standing. C. Tharp.

Compensation, including direct wages, indirect payments, and employee benefits, is studied from the points of view of theory and practice. Upon completion of the course, students should be able to analyze wage surveys, evaluate jobs, create salary structures, and administer compensation programs within the context of sound economic and motivational theory, and to align rewards with business strategy. Topics include strategic perspectives on pay; internal equity and alignment; external competitiveness; pay for performance; compensating special groups (including unionized employees, executives, and boards of directors); international compensation; employee benefits; and compensation administration (costing, taxation, regulation, etc.).

ILRHR 4632 Finance for Human Resources

Fall. 4 credits. J. Grasso.

Provides students with basic concepts of financial management and analysis, with an emphasis on human resource applications. The course begins with understanding financial statements; the financial structure of the firm; evaluation of financial performance; cash flow; and time value of money. It then focuses on investment management and performance with a broad overview of debt, equity, and alternative investments and a review of capital markets. The case-study method is used to evaluate several financial market disruptions during the past decade. The HR portion of the course focuses on valuing pension obligations; stock options and executive pay; costing labor agreements; costing health care and other benefits; preparing a compensation budget; and understanding IRS Form 5500; etc. The course also reviews corporate proxies; governance; social responsibility and corporate transparency, ethics, and fraud; and SEC, FASB, IRS, and Sarbanes-Oxley requirements. Students are required to follow one company stock, industry, or topic throughout the course; write a paper; and work in groups on small projects.

ILRHR 4640 Business Strategy

Fall. 4 credits. Prerequisite: undergraduate standing. D. Cohen.

Integrative course focusing on strategic management. The main purpose is to provide an opportunity for students to study and analyze issues associated with strategic thinking in complex business situations, top management decision making, and the functions of corporations as a whole. Allows students to bring together all of the functional skills they have learned in other business or related classes (e.g., marketing, accounting, finance, human resources) and to apply this knowledge to business problems faced by top management in existing organizations. Class format includes lectures and case studies.

ILRHR 4641 Business Strategy, Organizational Design, and Human Resource Strategy

Fall. 4 credits. Prerequisite: ILRHR 2600 or equivalent. R. Kehoe.

Explores ways in which the effective use of human capital contributes to organizational success. Specifically, it provides insights into and practice using the processes firms employ to attain and maintain alignment among the

three key elements involved in this endeavor: business strategies, organizational designs, and human resource strategies. Lectures and discussion are used to promote a clear understanding of the theory, research, and experience that underlie the role of human capital in organizations, as well as the design and alignment of business strategies, organizational designs, and human resource strategies. Case studies are employed to provide hands-on experience in analyzing and working with these concepts in actual situations.

ILRHR 4650 Globalization at Work

Spring. 4 credits. Prerequisite: undergraduate standing. R. Batt.

Examines how firms are responding to globalization and compares the strategies and outcomes of restructuring in manufacturing and service enterprises. While globalization has been a continuing phenomenon in manufacturing, recent changes in multilateral agreements, advances in information technology, and market deregulation have led to a process of globalization in service activities as well. Outcomes for firms, employees, consumers, and unions are examined.

ILRHR 4660 Entrepreneurship and Small Business

Fall. 4 credits. Prerequisite: undergraduate standing. D. Cohen.

Broadly addresses strategic issues in the startup phase and management of entrepreneurial firms and small businesses. Topics include opportunity recognition, satisfying real market needs, strategy, performance, financial planning, growth, and innovation. The course consists of a mix of lectures, case studies, guest speakers, and a final group project.

ILRHR 4662 Human Resource Analytics

Fall. 4 credits. J. Hausknecht.

Addresses the growing need for data-driven, analytical approaches to managing talent. Introduces students to the fundamental logic, metrics, analysis, and interpretation needed to link human resource practices to broader indicators of organizational performance. Students will be capable of gathering, integrating, analyzing, and interpreting relevant HR metrics to make better decisions about managing people in organizations.

ILRHR 4670 Leadership Development

Spring. 4 credits. Prerequisite: ILRHR 2600 or equivalent. L. Dragoni.

Focuses on leadership development at the organizational level. Specifically, it covers the structure, methods, and approaches that firms use to identify and develop high potential talent. Topics include: techniques for identifying development needs, on- and off-the-job approaches to development, and methods of program evaluation. The course combines traditional lectures and discussions with experiential learning techniques designed to provide practice with the concepts being learned.

ILRHR 4680 Human Resources Management Simulation

Fall, seven weeks. 2 credits. Limited to 30 students. Prerequisite: junior or senior standing; ILRHR 2600 or equivalent.

Regular attendance mandatory.

W. Wasmuth.

Uses a simulation model and an open-systems approach as means to enhance students' skills in strategic planning and managerial decision

making. Attention is given to the implications and efforts of strategic human resource managerial and supervisory decisions as measured by 10 organizational performance indicators, including quality of work life, employee productivity, customer satisfaction, employee retention, internal control, and the bottom line. Each student is assigned to a group (team) of five members and must be committed to the work of that group. An individual research paper is also required.

ILRHR 4950 Honors Program

Fall and spring (yearlong). 4 credits each semester.

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRHR 4970-4980 Field Research, Internship

Fall and spring. 4 and 8 credits.

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRHR 4990 Directed Studies

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRHR 5600 Human Resource Management

Fall and spring. 3 credits. Prerequisite: graduate standing. Staff.

Survey course designed to provide an introduction to concepts and topics in human resource management. Consideration is given to theories and applications involved in effectively managing people in organizations. Topics include recruitment, staffing, training, performance management, retention, compensation, international human resource management, and the legal environment. Emphasis is placed on exploring these issues from both strategic and tactical levels to increase organizational effectiveness.

ILRHR 5640 Human Resources Management in Effective Organizations

Fall or spring. 4 credits. Offered only in New York City for M.P.S. program. Staff.

Offers students the opportunity to become better prepared to make effective decisions about human resources. Successful organizations depend on people, their human resources. The first module examines strategic human resource management and the effects of HR decisions on organization success and fair treatment of people. The second module focuses on alternative systems used to staff and develop people. The third module focuses on compensating and rewarding people. The final module includes employee relations and alternative work systems. Case and field studies are used throughout the course.

ILRHR 6590 HR Challenge: Balancing, Ethics, Economics, and Social Responsibility

Fall. 4 credits. Limited to 15 students. Prerequisite: ILRHR 2600/5600; M.I.L.R. graduates; seniors by permission of instructor. Letter grades only. P. Wright.

Examines the challenges of synthesizing personal/professional ethics with professional responsibilities and synthesizing organizational economic demands with social responsibility, particularly focusing on how these issues impact HR professionals. These concerns are examined from both ends of the political spectrum. The course is taught in a seminar format in which students are expected to participate in and lead class discussions.

ILRHR 6600 HR Leadership: Views from the Top

Fall. 4 credits. Limited to 30 students.

Prerequisites: ILRHR 2600/5600 or equivalent, senior or graduate standing, and permission of instructor. L. Dyer.

Hands-on course offering students a unique opportunity to learn about strategic business and human resource issues from the perspectives of senior HR executives. Five chief human resource officers (CHROs) from major corporations meet with the class for lively give-and-take sessions on subjects of strategic and topical interest to their organizations. Before their visits, teams prepare background papers on the speakers, their companies, and their topics. Students discuss these papers before the visits to assure readiness to address the issues at hand when the CHROs arrive. During the visits the teams host the CHROs and usually have an opportunity to interact informally with them. After the visits, the teams revise their background papers into white papers that reflect insights gleaned from their research and discussions. Subsequently, all five white papers are assembled in a book that is shared with the CHROs and others.

ILRHR 6601 Research on Education Reform and Human Resource Policy

Fall and spring. 4 credits. J. Bishop.

State and local efforts to improve K-12 education are employing a variety of (sometimes contradictory) reform strategies. This research seminar critically examines the case that is made for (and against) each of the major reform proposals and review studies that provide objective evidence on their effectiveness. The education reform strategies examined include vouchers, charter schools, small schools, career academies, extending the school day and year, better preparation and selection of new teachers, better professional development, ending tenure, merit pay, state standards and school accountability, ending social promotion, and externally set end-of-course examinations.

ILRHR 6602 Introduction to HR Information Systems

Fall, seven weeks. 1 credit. Prerequisite:

ILRHR 2660 or equivalent; use of Access or similar database package for at least data entry and report generation.

C. Homrighouse.

Focuses on understanding how and why human resource information systems are developed, maintained, and managed. A database is designed from the ground up, beginning with basic instruction on the need for and how to create a relational database. Once the initial design is in place, the data are manipulated to create reports, forms, and queries to assist in human resource decisions. The course examines ways to make databases efficient and consistent. Production database systems such as PeopleSoft also are reviewed and used. All instruction is hands-on and supplemented with assigned readings and guest lecturers.

ILRHR 6604 Global Field Study in Strategic Human Resources

Spring. 4 credits. Prerequisite: seniors by permission of instructor. Limited to 25 students. J. Haggerty.

This unique course provides students with in-depth information on strategic HRM in a selected region of the world. We will study the development of selected businesses, the

history, role and current efforts of government in the workplace, and local cultural nuances as they affect the world of work. Students will travel to the region studied and visit a variety of workplaces and institutions during spring break. Student presentations and a final paper will compare and contrast significant aspects of the dominant U.S. strategic HR model with strategic HR model(s) found in the studied region.

ILRHR 6605 Nonprofit Finance and Management

Spring. 4 credits. J. Grasso.

Provides students with a practitioner's focus on financial and managerial issues in the nonprofit sector, including universities, hospitals, government agencies, and foundations. The course will include an overview of nonprofit financial statements, debt issuance, endowment management, credit analysis, organizational governance issues, strategic planning, industry trends, executive compensation, and philanthropy. Students will gain a comprehensive overview of all critical aspects of nonprofit management. A research paper will allow students to focus on a particular nonprofit sector (e.g., environmental organizations, trade unions, private foundations) or to focus on a functional area (e.g., endowment management, philanthropy, organizational governance).

ILRHR 6606 Developing Leadership: Personally and in Organizations

Fall. 4 credits. Prerequisite: ILRHR 2600 or equivalent. L. Dragoni.

Focuses on two aspects of developing leadership. At the personal level, students' leadership skills are assessed and a plan for skill development is created. At the organizational level, students are exposed to the structure, methods, and approaches that organizations use to identify and develop high potential talent. In both aspects, the course combines traditional lectures and discussions with experiential learning techniques designed to provide practice with the concepts being learned.

ILRHR 6607 Executive Compensation

Fall. 4 credits. Prerequisite: ILRHR 5600 or equivalent. C. Tharp.

Provides students with an in-depth understanding of the structure and governance of executive compensation programs and practices. Course material draws upon theory and research in executive compensation and explores current legislative and shareholder reform initiatives affecting executive pay. The topic is approached from a multi-stakeholder perspective taking into account the interests of shareholders, institutional investors, advocacy groups, social activists, governmental regulators, employees, and executives. Also examined are the linkages between executive compensation and business strategy; issues surrounding compliance with securities laws, tax regulations, accounting standards, and principles of good corporate governance; various types of executive pay programs, including equity-based incentives, perquisites, and executive benefits; the roles of corporate compensation committees and independent compensation consultants; and current trends and best practices.

ILRHR 6608 Comparative Institutional Perspectives on Human Resource Management

Fall. 4 credits. R. Batt.

The globalization of product, labor, and capital markets has led to profound changes

in competitive environment in which firms operate. Yet these global economic forces are filtered through national institutions that offer unique sets of opportunities and constraints for multinational corporations doing business in different countries. Regional governance systems, such as the European Union, add another layer of complexity to the institutional environment in which firms operate; while governments at many levels are creating new regulatory rules in response to recent financial crises. Examines how corporations respond to these environmental complexities, why they adopt different approaches to business and HR management, and whether alternative strategies affect important outcomes for firms, employees, and other stakeholders.

ILRHR 6611 Seminar on Entrepreneurs and Entrepreneurial Organizations

Spring. 4 credits. D. Burton.

Entrepreneurs are modern-day heroes. We are increasingly captivated by the stories of people from humble origins who, with only a good idea and a bit of luck, build respected, high-profile organizations. In this seminar we will examine the myths and realities of entrepreneurship and the entrepreneurial process in the United States. Through case studies and readings, we will critically evaluate the received wisdom about building successful new ventures. Intended for students who are interested in learning more about entrepreneurship. It is not a "how to" course, but rather a conceptual overview of the field with particular emphasis on labor market and employment-related topics. Through readings and case studies, students will learn about topics such as opportunity assessment, organization growth and management, and entrepreneurial careers. We will examine different types of entrepreneurship including self-employment, franchising, small and family businesses, and externally financed new ventures. A seminar-style course where students will be expected to actively engage with the material. Requires coming to class having read the assigned material and being prepared to discuss and debate the ideas.

ILRHR 6620 Agility and Complexity in Organizations

Spring. 4 credits. Prerequisites: ILRHR 5600 or equivalent and permission of instructor. L. Dyer.

The need to compete in increasingly tumultuous environments is leading many companies to search for new ways of enhancing their adaptability, nimbleness, resilience, or agility. Most are focusing on flexing their basic bureaucracies and the first part of the course explores these efforts. A few, though, are tentatively exploring the desirability/feasibility of using basic tenets from complexity science to create new organizational forms that are capable of driving continuous innovation in the marketplace without having to go through internal change. The rest of the course focuses on these efforts and, at this point, the pedagogy shifts from traditional to experiential. Participants are provided opportunities to not only experiment with these new organizational forms, but also feel first-hand what life in them is like. The overall purpose of the course is to assist students in becoming knowledgeable forces for organizational transformation in the 21st century.

ILRHR 6640 HR Online Research and Reporting Methods for Executive Decision-Making

Spring. 4 credits. Limited to 18 students. Prerequisite: ILRHR 5600/2600 or equivalent. S. Basefsky.

Designed to develop key HR competencies and skills for researching and presenting information necessary for executive decision-making. Includes a comprehensive overview of primarily web-based resources available to HR executives. Emphasizes hands-on training in the best techniques and methods for extracting conceptual frameworks, checklists, best practices, competitive intelligence, legal information, statistical data, and academic research on topics of current interest to industry. Interviewing skills, report writing and presentation methods are imparted. Following five weeks of intense information instruction and hands-on experience, students act as consultants in a combined classroom and workplace setting as they work on special projects and topics posed by HR executives of primarily Fortune 500 companies. These team-based assignments give students exposure to different companies, their cultures, and executives while providing real work experience.

ILRHR 6650 Business Strategy and Human Resources

Fall. 4 credits. Limited enrollment. Prerequisite: ILRHR 2600/5600; three other courses in human resource studies; permission of instructor. D. Burton.

In this capstone course in HR studies, students integrate the theories and practices learned in other courses, to explore the linkages between business strategy and HRM. Extensive fieldwork is involved. The field projects are designed to make students explore and understand business strategy and draw upon and integrate their course work in HR staffing, training and development, compensation and rewards, and new work systems.

ILRHR 6660 Strategic HR Metrics

Spring. 4 credits. Prerequisites: ILRHR 2600/5600 or equivalent, one statistics course, one elective in HR studies. P. Wright.

The search for the ideal strategic HR metrics misses the larger issue of taking a more analytical approach toward HR decision making. Analytics requires understanding the process through which knowledge is gained, and then applying the tools and techniques to gather and analyze the right kind of data relevant to the question at hand. This course covers topics such as philosophy of science, theory development, research methodology, data analysis and interpretation as well as data and practices commonly used to assess the effectiveness of HR activities. Consequently, the class simultaneously addresses the types of information needed for HR decision making, as well as the processes and techniques necessary to gather, integrate, and analyze the data.

ILRHR 6680 Staffing Organizations

Spring. 4 credits. Prerequisites: ILRHR 2600/5600, one statistics course, or permission of instructor. C. Collins and J. Hausknecht.

Seminar providing an overview of the processes by which organizations staff positions with both internal and external applicants. Because staffing is one of the primary human resource activities, it is critical

for human resource professionals to understand how theory, research, and legal foundations can inform staffing decisions. Therefore, this course focuses on theories, research, policies, and practices concerning job recruitment and selection. Topics include staffing strategy and context, measurement of staffing effectiveness, job/competency analysis, human resource planning, recruitment and job choice, and internal and external selection practices.

ILRHR 6690 Managing Compensation

Spring. 4 credits. Limited to 30 students. Prerequisites: ILRHR 2600/5600 and statistics course. Staff.

Helps students gain an understanding of how to make decisions about compensation. The strong focus is on applications and includes some discussion of recent theory and research. By the end of the course, you should be able to design your own compensation system from scratch. Issues we consider include how compensation fits with an overall HR strategy, the internal focus on the firm (including alignment, job analysis, and job evaluation), making pay competitive with the outside market (including designing pay levels, types of pay and pay structures), considering individual contributions (by examining performance appraisals, pay-for-performance, and stock options), benefits (such as pensions, child care, and health care), management (including government regulation and managing budgets), and dealing with international issues in setting pay plans. A substantial section focuses on executive compensation and also examines how a consultant might estimate the damages to an employee in the case of wrongful termination.

ILRHR 6900 International Comparative Human Resource Management

Fall. 4 credits. Prerequisite: ILRHR 2600/5600 or permission of instructor. L. Nishii.

Provides students with an understanding of the complexities associated with international human resource management. The central theme of the course is to identify whether and in what ways HRM practices need to be adapted across cultures to be effective. Course material reflects a focus on comparing American HRM practices with those in East Asia and Western Europe. In addition, the major topic areas of concern to IHRM managers are covered, including the selection, training, compensation, and performance management of international managers (expatriates), coordination across subsidiaries of a company, the development and tracking of global leaders, and cross-cultural communication and negotiation.

ILRHR 6910 Finance for Human Resources

Fall. 4 credits. K. Hallock.

Helps students understand some basic ideas in finance from the perspective of human resource management. Broadly considers certain topics that include: overview of financial markets, how firms issue securities, history and pitfalls in investing, the time value of money, investment criteria such as net present value, risk versus return and the opportunity cost of capital, capital asset pricing, capital budgeting and risk, market efficiency and predictability, measuring firm financial performance and reading financial statements, event studies in finance and

economics, mergers, ESOPs and stock options, executive compensation, the relationship between job loss and firm outcomes, and other forms of organizational form such as nonprofits. Covers theoretical ideas and has many empirical, policy, and practitioner-relevant applications.

ILRHR 6930 Training and Development in Organizations

Spring, 4 credits. Prerequisite: ILRHR 5600 or permission of instructor. B. Bell. Acquaints students with aspects of learning in organizations. Begins by discussing organizational learning and then focuses more narrowly on specific ways in which learning is achieved through the training and development functions. Topics include how learning is linked to organizational strategy, how to determine that training is needed, issues regarding the design of training programs, current training techniques, evaluation strategies, and management development practices.

ILRHR 6940 Service Management in Global Perspective

Spring, 4 credits. Prerequisites: ILRHR 5600 or equivalent; permission of instructor. R. Batt.

This case-based course examines the fundamentals of service management in the context of globalization, with attention to the interaction among strategy, marketing, operations, and human resource management. Topics include: service process design, quality, and productivity improvement; customer relationship management; outsourcing and offshoring strategies, managing supplier and vendor relations; and implications for customers, employees, and firm competitiveness. Student projects focus on particular companies and industries and their international strategies.

ILRHR 6950 Education, Technology, and Productivity

Fall, 4 credits. J. Bishop. This seminar investigates the nexus between the education and training in schools and at the workplace and the technological progressiveness, productivity, and competitiveness of firms, individuals, and nations. Students investigate how technological progress is changing the nature of work and what this implies for reform of education and training; how education and training contribute to growth and competitiveness; why educational achievement has declined; and how the responsibility for education and training should be apportioned among individuals, firms, private nonprofit organizations, and government.

ILRHR 6970 Special Topics in Resource Studies

Fall or spring, 4 credits. Staff. Areas of study are determined each semester by the instructor offering the seminar.

ILRHR 6990 Advanced Desktop Applications

Spring, 1 credit. Prerequisite: ILRHR 2660 or significant experience (two to four years) using office applications. Letter grades only. C. Homrighouse. Explores advanced topics for common desktop applications including Windows, Word, Excel, Access, and PowerPoint. The course is designed based on student input and instructor recommendations, covering those subjects that students feel would be most useful and relevant in the job market.

Examples of areas include working with tables, columns, or sections in Word, pivot tables in Excel; taking a PowerPoint presentation "on the road"; and using join tables to create relationships in Access.

ILRHR 7560 Organizational Consulting
Fall, 3 credits. Prerequisite: ILRHR 5600. C. Collins.

Provides students with the insights and tools they need to work successfully as human resource management consultants, both as HR managers operating within the firm to improve organizational effectiveness and as external consultants providing project support to an internal HR organization. The consulting process is examined primarily from a systems perspective. This includes the knowledge and skills required to build trust and influence, to contract with clients, and to maintain good working relationships with clients. It also includes developing a clear comprehension of the consulting process from diagnosis, through action planning, to implementation and completion. While attention is given to theory and practice, the focus is on gaining hands-on experience dealing with real-world issues. As a final project, students will work in teams on a live case providing consulting services to an organization with an existing HR issue (i.e., implementing a new HR program, effectuating a new organizational culture, and enhancing project team operations).

ILRHR 7600 Seminar in Human Resource Studies

Fall or spring, 3 credits. Prerequisites: ILRHR 5600, ILRST 5110, and ILRHR 6690 and permission of instructor. Staff. "Floating" seminar designed to give faculty and students an opportunity to pursue specific topics in detail, with an emphasis on theory and research. Topics vary from semester to semester. Interested students should consult current course announcements for details.

ILRHR 7630 Interdisciplinary Perspectives on the Organization of Work

Fall or spring, 4 credits. R. Batt. Ph.D. seminar examining the theoretical and empirical literature on the organization of work. Topics include studies of group effectiveness, teams, social capital, and recent critical and international research. Draws on alternative perspectives from psychology, sociology, engineering, organization studies, economics, and industrial relations.

ILRHR 7640 Comparative International Perspectives on Work and Human Resource Systems

Fall or spring, 3 credits. R. Batt. Research seminar focusing on comparative international research on work and human resource systems. It draws on institutional theories and empirical research across several disciplines to examine the intersection between institutions and organizations. What is the relative importance of markets, technology, management strategies, and the institutional environment in shaping work and employment systems? It considers how and why firms adopt alternative approaches to work and how variation in these choices shapes outcomes of interest to firms, employees, and other key stakeholder groups. The seminar is designed to help students formulate theoretically driven research questions of critical importance to the field and to develop appropriate qualitative and quantitative research methodologies.

ILRHR 7900 ILR M.P.S. Program

Fall and spring, 1-9 credits. Supervised research only for those enrolled in the ILR M.P.S. program.

ILRHR 7980 Internship

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRHR 7990 Directed Studies

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRHR 9600 Workshop in Human Resource Studies

Fall and spring, 2 credits. Prerequisite: M.S. and Ph.D. candidates. S-U grades only. Staff.

Provides a forum for the presentation and critical discussion of current research being undertaken by graduate students, faculty members, and invited guests in the field of human resource studies. All M.S. and Ph.D. candidates in the Department of Human Resource Studies are urged to enroll; candidates in other departments are cordially invited. Each participant has an opportunity to benefit from the collective wisdom of the others in the formulation, design, and execution of his or her research, as well as to become current on the latest developments in the field.

ILRHR 9610 Doctoral Research Seminar in Human Resource Management (Micro)

Fall or spring, 3 credits. Prerequisite: Ph.D. candidates. Staff.

Aimed at reading, understanding, and conducting research in HRM. Students should obtain thorough understanding of the current research in traditional areas of HRM such as validation, job analysis, EEO, selection, performance appraisal, compensation, and training and should develop the skills necessary to evaluate, criticize, and contribute to the literature on HRM.

ILRHR 9620 Doctoral Research Seminar in Strategic Human Resource Management (Macro)

Fall or spring, 3 credits. Prerequisite: Ph.D. candidates. Staff.

Aimed at reading, understanding, and conducting research in SHRM. The course should enable students to obtain a thorough understanding of the current research in SHRM and to develop the skills necessary to evaluate, criticize, and contribute to the literature on SHRM.

ILRHR 9630 Research Methods in HRM/Strategic Human Resource Management

Fall and spring, 3 credits. Prerequisite: Ph.D. candidates. Staff.

Designed to build social science research skills, particularly in the area of human resource studies (HRS). Topics include measurement reliability, construct validity, design of studies, external validity, meta-analysis, critiquing/reviewing HRS research, publishing HRS research, and applications of statistical models of HRS issues.

ILRHR 9640 Doctoral Research Seminar: Special Topics

Fall, 3 credits. M.S. and Ph.D. candidates only. Staff.

Advanced doctoral seminar that covers selected topics in human resource management. Topics vary across semesters depending on student and faculty interests. The course is designed to allow students and

faculty to pursue scholarly topics that further the scientific study of human research management issues.

INTERNATIONAL AND COMPARATIVE LABOR

M. Cook, chair (336 Ives East, 255-1349); R. Batt, J. Bishop, G. Boyer, A. Colvin, L. Compa, I. DeVault, G. Fields, R. Givan, J. Gross, S. Kuruvilla, L. Nishii, and L. Turner.

ILRIC 2301 Migrants and Migration

Fall. 3 credits. Sophomore writing course. M. Cook.

Focuses on the international migration experience through the perspective of migrants themselves, drawing upon first-person accounts, letters and interviews, fiction, and nonfiction. Looks at global and regional migration processes and at national policies that shape migration.

ILRIC 2350 Work, Labor, and Capital in the Global Economy

Fall and spring. 3 credits. Open to ILR freshmen and sophomores; juniors and seniors must obtain prior permission from instructors, R. Applegate, R. Batt, M. Cook, K. Griffith, and S. Kuruvilla. Guest lecturers via videoconferencing.

Provides an introduction to how globalization is changing the nature of work, labor, and capital. It examines both contemporary and historical debates about globalization, but also covers a number of interrelated issues, including the regulation of labor standards, the mobility of capital, the rise of global production systems, and international labor migration. Lectures and discussion for the topics mentioned above will be grounded in the experiences of different countries, firms, workplaces, industrial sectors, and individuals.

ILRIC 2360 Revitalizing the Labor Movement: A Comparative Perspective

Spring. 3 credits. Sophomore writing course. L. Turner.

Writing seminar that examines contemporary efforts in the United States and Europe to revitalize unions in broad political, social, economic and workplace contexts.

ILRIC 3340 Perspectives on Work and Welfare

Spring. 4 credits. R. Givan.

Examines the relationship between work and welfare from a variety of perspectives. Examples will be drawn from advanced industrial countries, and international comparisons will be emphasized. Key topics will include: welfare state foundation and development; social citizenship, constructions of the deserving and undeserving poor; welfare reform; the relationship between low wage work and welfare; competing notions of entitlement and universality; the male breadwinner model; firms and welfare.

[ILRIC 3390 The Political Economy of Mexico

Spring. 4 credits. Next offered 2010–2011. M. Cook.]

ILRIC 4330 Politics of the Global North (also GOVT 3303)

Fall and spring. 4 credits. L. Turner. With an emphasis on current events and world affairs, this course examines global governance and economic policy debates. We

consider conflicts around markets, democracy, and global justice, including efforts aimed at economic recovery and the reform of national and global economic policy and institutions. We also look at distinctive types of political and economic organization, especially in Europe and the United States, and the capacities of these societies to meet current economic, political, and social challenges, both domestic and international.

ILRIC 4990 Directed Studies

For description, see “Collective Bargaining, Labor Law, and Labor History.”

ILRIC 6010 Crossing Borders: Migrations in Comparative Perspective

Spring. 4 credits. M. Cook.

Provides an introduction to the challenges posed by the movement of people across borders. Examines the links between globalization and migration, and explores the implications of contemporary migrations for national immigration and integration policies, labor markets, human rights, asylum, security, and politics. Regional and national cases will be drawn from Europe, North America, and Australia, among others.

ILRIC 6011 Comparative Education and Development

Spring, seven-week course. 2 credits. J. Bishop.

Comparative study of educational institutions in Western Europe, North America, Latin America, and Asia (with special emphasis on math and science education) and of the effects of these institutions on economic development, growth, and equality of opportunity. The institutions studied include primary and secondary education, apprenticeship, and higher education. Data on the consequences of policies are presented and an effort made to understand how human resource policies and educational institutions have contributed to rapid growth in both poor and rich countries. Another focus is understanding the causes of the differences in achievement levels across nations.

ILRIC 6012 Comparative Labor and Employment Law

Spring. 4 credits. A. Colvin.

Examines the laws governing employment and labor relations in comparative perspective. It covers examples of employment and labor law systems of countries from a number of different regions of the world including Europe, the Americas, Africa, Asia, and Australia. It also examines insights from comparative perspectives on major contemporary employment and labor law issues. The course assumes some existing knowledge of American employment and labor law, but will also consider American employment and labor law in comparative perspective.

ILRIC 6020 Corporate Social Responsibility: Human Rights, Labor, and the Environment

Spring. 4 credits. L. Compa.

Covers recent and current developments in the field of corporate social responsibility (CSR) and socially responsible investment (SRI) in a context of economic globalization. First classes set a foundation on the role of the multinational company in the global economy and international standards on human rights, labor rights, and the environment. Classes then move to topical studies of CSR/SRI initiatives and controversies. A consistent underlying theme

of the course is the tension (and how to resolve it) between voluntary corporate self-regulation and mandatory government and intergovernmental regulation of corporate activity.

ILRIC 6310 Comparative Labor Movements in Latin America

Fall. 4 credits. M. Cook.

Examines the historical development of labor movements in Latin America, their role in national political and economic development, and the impact of economic liberalization, authoritarianism, and redemocratization on contemporary labor organizations in the region. Countries examined include, but are not limited to, Mexico, Brazil, Argentina, Chile, Peru, and Guatemala.

ILRIC 6330 Global Debates and Comparative Political Economy

Fall and spring. 4 credits. Prerequisite: graduate standing. L. Turner.

For description, see ILRIC 4330. The subject matter is similar (and students are encouraged to attend the lectures for 4330), but this course is pitched at graduate students, in a seminar format emphasizing particular weekly themes and active student participation.

ILRIC 6331 Special Topics

Fall. 4 credits.

Devoted to new topics in the field. The specific content and emphasis vary depending upon the interests of the faculty member teaching the course.

ILRIC 6340 International Labor Law

Fall or spring. 4 credits. Prerequisites: undergraduates, ILRCB 2010; graduate students, ILRCB 5010. L. Compa.

Examines labor rights and labor standards in a world economy regulated by bilateral and multilateral trade agreements, in a context of sharp competition among countries and firms. Readings and discussions focus on the intersections of labor, human rights, and international trade law and policy in this new global economic context. A prior course in a related topic may be helpful but is not required—the first classes are meant to establish a foundation in each area. While labor law is a unifying theme, the course is more policy-oriented than legalistic. After the introductory classes on labor rights, human rights, and trade, the focus turns to a series of topics that reflect the links between labor rights and trade.

[ILRIC 6350 Labor Markets, Income Distribution, and Globalization: Perspectives on the Developing World

Spring. 4 credits. Prerequisite: ILRLE 2400 or ILRLE 5400 or ECON 3130. Next offered 2010–2011. G. Fields.

The first half of the course is on distribution and development: theory and evidence. The second half is on labor markets in a globalized world.]

ILRIC 6360 Comparative History of Women and Work (also FGSS 6360)

Spring. 4 credits. Prerequisite: permission of instructor. I. DeVault.

Explores the similarities and differences between different cultures' assumptions about the work of women as well as women's experiences in varying work circumstances throughout history. Beginning with theoretical pieces and overviews of the history of women and work, most of the course consists of in-depth examinations of specific work

situations or occupations across time and geography. Comparative examples are taken from the United States, Europe, and the Third World.

ILRIC 6370 Labor Relations in Asia

Fall. 4 credits. Limited enrollment; open to graduate students, seniors, and juniors. S. Kuruvilla.

Serves as an introduction to industrial relations in Asia. The emphasis is on highlighting the variation in industrial relations systems in Asia and will focus more on the systems of Japan, China, India, South Korea, and Singapore.

[ILRIC 7300 Research Seminar on Labor Markets in Comparative Perspective]

Fall and spring. 3 credits. Prerequisite: M.S. and Ph.D. students. Next offered 2010–2011. G. Fields.

For students writing theses or dissertations on economic aspects of labor markets in comparative perspective. Presentations and written papers required.]

[ILRIC 7310 Industrial Relations in Latin America]

Fall. 4 credits. Next offered 2010–2011. M. Cook.

Examines and compares changes in contemporary industrial relations throughout Latin America, with some comparative references to other regions of the Global South. The aim is to introduce students to the main issues in industrial relations of key Latin American countries, and through individual research papers, to enable students to become familiar with a specific country or sector/ theme in two or more countries of the region.]

ILRIC 7360 Labor and Global Cities (also GOVT 7060)

Fall. 4 credits. L. Turner.

Examines social coalition building and innovative union strategies aimed at organizing, bargaining, economic development, and political influence in the United States and Europe. Student projects may focus on major cities anywhere in the world.

ILRIR 7900 ILR M.P.S. Program

Fall and spring. 1–9 credits.

Supervised research only for those enrolled in the ILR M.P.S. program.

ILRIR 7990 Directed Studies

For description, see “Collective Bargaining, Labor Law, and Labor History.”

Other courses approved to fulfill the ILRIC distribution requirement

ILRCB 3830 Workers' Rights as Human Rights

Fall. J. Gross.

For description, see “Collective Bargaining, Labor Law, and Labor History.”

ILRHR 4600 International Human Resource Management

Spring. L. Nishii.

For description, see “Human Resource Studies.”

ILRHR 4610 Working in the New Economy: The Sociology of Work

Spring. R. Batt.

For description, see “Human Resource Studies.”

ILRHR 4650 The Globalization at Work

Spring. R. Batt.

For description, see “Human Resource Studies.”

ILRHR 6900 Comparative Human Resource Management

Fall. L. Nishii.

For description, see “Human Resource Studies.”

ILRHR 6980 International Human Resource Policies and Institutions

Spring. J. Bishop.

For description, see “Human Resource Studies.”

ILRLE 4440 The Evolution of Social Policy in Britain and America (also ECON 4440)

Fall, spring. G. Boyer.

For description, see “Labor Economics.”

ILRLE 4480 Topics in 20th-Century Economic History: The Economics of Depression and the Rise of the Managed Economy (also ECON 4580)

Fall. G. Boyer.

For description, see “Labor Economics.”

ILRLE 6420 Economic Analysis of the Welfare State (also ECON 4600)

Fall. 4 credits. R. Hutchens.

For description, see “Labor Economics.”

INTERDEPARTMENTAL COURSES

ILRID 1500 Freshman Colloquium

Fall. 1 credit. Prerequisite: ILR freshmen. S–U grades only. Staff.

Acquaints first-year students with issues and disciplines in the field of industrial and labor relations and to establish acquaintanceship among members of the ILR faculty and small, randomly assigned groups of students. Includes a plant visit and several meetings early in the semester designed to introduce issues encountered in studying the employment relationship.

ILRID 5660 Public Policy

Spring. 4 credits. Offered only in New York City for M.P.S. program. Staff.

The government's influence on the workplace and the role of public policy in the use and preparation of the nation's human resources for employment is assessed. Areas of study include the government's historical role in the labor market and the effect of efficiency, price stability and economic growth, equity, and immigration policy and its market implications.

ILRID 5990 Cross-Cultural Work Experience

Fall. 1 credit. S–U grades only.

W. Sonnestuhl.

Open to MILR students who will be working in the summer of 2008 in a country other than that of their citizenship or past work experience. This option is only available for students who have been enrolled for one academic year by the time the Internship begins. Enrollment occurs in regular pre-enrollment period, with a grade posted in the fall after the requirements are satisfied. Prior to registering for the course, students must obtain a summer internship offer and international students MUST report to the ISSO (B50 Caldwell Hall) for their work authorization forms.

ILRID 7900 ILR M.P.S. Program

Fall and spring. 1–9 credits.

Supervised research only for those enrolled in the ILR M.P.S. program.

LABOR ECONOMICS

G. Boyer, chair (364 Ives Hall, 255-2752); J. Abowd, F. Blau, R. Ehrenberg, G. Fields, M. Freedman, K. Hallock, R. Hutchens, K. Jackson, G. Jakobson, L. Kahn, and R. Smith

ILRLE 2400 Economics of Wages and Employment

Fall and spring. 3 credits. Prerequisites: ECON 1110–1120 or permission of instructor; ILR students may substitute ILRLE 4400 if they have calculus.

Applies the theory and elementary tools of economics to the characteristics and problems of the labor market. Considers both the demand (employer) and supply (employee) sides of the market to gain a deeper understanding of the effects of various government programs and private decisions targeted at the labor market. Topics include employment demand, basic compensation determination, education and training, benefits and the structure of compensation, labor-force participation and its relation to household production, occupational choice, migration, labor-market discrimination, and the effects of unions.

ILRLE 3440 Development of Economic Thought and Institutions (also ECON 3440)

Fall. 4 credits. Prerequisite: ECON 1110–1120 or equivalent. G. Boyer.

Examines the historical roots of the economic institutions currently dominant in Western Europe and the United States, and the evolution of economics as a discipline, from pre-industrial mercantilist thought through the economics of John Maynard Keynes. Readings focus on the relationship between economic development and the evolution of economic thought, and in particular on policies relating to labor and the relief of poverty.

ILRLE 4400 Labor Market Analysis (also ECON 3410)

Spring. 4 credits. Prerequisites: ECON 3130 and calculus; ILR students who have taken ILRLE 2400 cannot receive credit for this course.

For description, see ILRLE 2400. Designed for ECON majors with calculus.

ILRLE 4410 Income Distribution (also ECON 4550)

Spring. 4 credits. Prerequisite: ILRLE 2400 or ECON 3410. Students who have taken PAM 370 may not receive credit for 441. R. Hutchens.

Explores income distribution in the United States and the world. Topics include functional and size distributions of income, wage structure, income-generating functions and theories, discrimination, poverty, public policy and income distribution, and changing income distribution and growth.

ILRLE 4420 The Economics of Employee Benefits (also ECON 4560)

Fall. 4 credits. Prerequisite: ILR 2400 or equivalent. Staff.

In-depth treatment of the economics and financial management and administration of all employee benefits: health care, insurance,

retirement income, family-care benefits, executive incentive plans, and other compensation provided as a service or contingent financial package to employees. Includes detailed international comparisons of health care and retirement systems are included.

ILRLE 4430 Compensation, Incentives, and Productivity (also ECON 4430)

Fall. 4 credits. Prerequisite: ILRLE 2400 or equivalent. Staff.

Examines topics in labor economics of particular relevance to individual managers and firms. Representative topics include recruitment, screening, and hiring strategies; compensation (including retirement pensions and other benefits); training, turnover, and the theory of human capital; incentive schemes and promotions; layoffs, downsizing, and buyouts; teamwork; and internal labor markets. Focuses on labor-related business problems using the analytic tools of economic theory and should appeal to students with strong quantitative skills who are contemplating careers in general business, consulting, and human resource management as well as in economics.

ILRLE 4440 The Evolution of Social Policy in Britain and America (also ECON 4440)

Fall or spring. 4 credits. Prerequisite: ILRLE 2400 or equivalent. G. Boyer.

Surveys the history of social policy in Great Britain and the United States from 1800 to the adoption of the British welfare state after World War II. Topics include the role of poor relief in the early 19th century; the changing relationship between public relief and private charity; the adoption of social insurance programs and protective labor legislation for children and women; government intervention in the Great Depression; and the beginnings of the welfare state.

ILRLE 4450 Women in the Economy (also ECON 4570, FGSS 4460)

Fall. 4 credits. Prerequisite: ILRLE 2400 or equivalent. Staff.

Examines the changing economic roles of women and men in the labor market and in the family. Topics include a historical overview of changing gender roles; the determinants of the gender division of labor in the family; trends in female and male labor force participation; gender differences in occupations and earnings; the consequences of women's employment for the family; and a consideration of women's status in other countries.

ILRLE 4470 Social and Economic Data (also ILRLE 7400, INFO 4470)

Spring. 4 credits. Prerequisites: one semester of calculus, IS statistics requirement, at least one upper-level social science course, or permission of instructor. J. Abowd.

For description, see INFO 4470.

ILRLE 4480 Topics in 20th-Century Economic History: The Economics of Depression and the Rise of the Managed Economy (also ECON 4580)

Spring. 4 credits. Prerequisite: ILRLE 2400 or ECON 3140. G. Boyer.

Examines the anatomy of the Great Depression through the experiences of the two most important economies of the time: the United States and Great Britain. Also examines the development of macroeconomic

policy in the United States and Britain in the 1920s and 1930s and its evolution in the postwar world, culminating with the decline of Keynesian-style demand management policy under Reagan and Thatcher.

ILRLE 4950 Honors Program

Fall and spring (yearlong). 4 credits each semester.

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRLE 4970-4980 Field Research, Internship

Fall and spring. 4 and 8 credits.

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRLE 4990 Directed Studies

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRLE 5400 Labor Economics

Fall. 3 credits. Requirement for M.I.L.R. candidates. Prerequisites: ECON 1110-1120 or equivalent. Not open to students who have taken NBA 5440. G. Fields.

A course in labor market economics for prospective managers in the corporate, union, and governmental sectors. It begins with demand and supply in labor markets, presenting market-level analysis and the decision tools for workers and firms. It then goes on to consider various topics for managers including: education and training investments; the interdependence of capital market and labor market decisions; pay and productivity; attracting and retaining talent; workplace metrics; and pensions and retirement. The final section of the course covers public policy issues including policy evaluation methods, unemployment, poverty and inequality, and discrimination.

ILRLE 5440 Labor Market and Personnel Economics

4 credits. Offered only in New York City for M.P.S. program. Staff.

Four-module course in which the first module covers the basic elements of supply and demand in the labor market, the second and third modules cover the "new personnel economics" (emphasizing economic issues in a firm that relate to selecting, training, assigning, motivating, and compensating workers), and the final module covers key institutions and economic security issues (including unemployment, pensions, disability, discrimination, and unions). The goals of this course are for students to learn to analyze both business and public policy problems, taking into account both basic principles of economic theory and the relevant institutional environments.

ILRLE 6420 Economic Analysis of the Welfare State (also ECON 4600)

Fall. 4 credits. R. Hutchens.

Uses the tools of public economics to analyze modern welfare states. Although examples are drawn from several countries, the course focuses on the United States, Canada, and Sweden. What are the rationales for the level of government intervention in these states, and how do these rationales square with notions of market failure? What are the economic costs and benefits of taxes, transfers, and regulations in these states? Can voting models explain the growth and operation of welfare states? The possible answers to these questions are discussed.

ILRLE 6470 Economics of Education (also ECON 3470)

Spring. 4 credits. Prerequisite: ILRLE 2400 or intermediate microeconomics and statistics through multivariate linear models. R. Ehrenberg.

A survey of the econometric literature on a wide variety of educational issues, dealing with elementary, secondary, and higher education. The course begins with an introduction to experimental and quasi-experimental design and the implementation of these designs in multivariate regression models. Much of the course involves reading and discussing recent research, and students conduct their own empirical research projects.

ILRLE 6480 Economic Analysis of the University (also ECON 3420)

Fall. 4 credits. Staff.

Seeks to illustrate the complexity of decision making in a nonprofit organization and to show how microeconomic analysis in general, and labor market analysis in particular, can usefully be applied to analyze resource allocation decisions at universities. Topics include financial aid, tuition, admissions policies, endowment policies, faculty salary determination, the tenure system, mandatory retirement policies, merit pay, affirmative action, comparable worth, collective bargaining, resource allocation across and within departments, undergraduate versus graduate education, research costs, libraries, athletics, and "socially responsible" policies. Lectures and discussions of the extensive readings are supplemented by presentations by Cornell administrators and outside speakers who have been engaged in university resource allocation decisions or have done research on the subject.

ILRLE 7400 Social and Economic Data (GR RDC) (also INFO 7470, ECON 7400)

Spring. 4 credits. J. Abowd.

Teaches the basics required to acquire and transform raw information into social and economic data. Graduate materials emphasize methods for creating and certifying laboratories in which data privacy and confidentiality concerns can be controlled and audited. Legal, statistical, computing, and social science aspects of the data "manufacturing" process are treated. The formal U.S., Eurostat, OECD, and UN statistical infrastructure are covered as are major private data sources. Topics include basic statistical principles of populations and sampling frames; acquiring data via samples, censuses, administrative records, and transaction logging; the law, economics, and statistics of data privacy and confidentiality protection; data linking and integration techniques (probabilistic record linking; multivariate statistical matching); analytic methods in the social sciences. Graduate students are assumed to be interested in applying these techniques to original research in an area of specialization, and are required to do individual projects. This class may be taught to students at Cornell and other universities whose emphasis is placed on U.S. Census Bureau procedures.

ILRLE 7410 Applied Econometrics I (also ECON 7480)

Fall. 4 credits. Prerequisite: graduate Ph.D.-level sequence in econometrics or permission of instructor. S-U or letter grades. G. Jakubson.

Considers methods for the analysis of longitudinal data, that is, data in which a set of individual units are followed over time. Focuses on both estimation and specification testing of these models. Students consider how these statistical models are linked to underlying theories in the social sciences. Course coverage includes panel data methods (e.g., fixed, random, mixed effects models) factor analysis, measurement error models, and general moment structure methods.

ILRLE 7420 Applied Econometrics II (also ECON 7492)

Spring. 4 credits. Prerequisite: ILRLE 7410 or permission of instructor. Letter or S-U grades. G. Jakubson.

Continues from ILRLE 7410 and covers statistical methods for models in which the dependent variable is not continuous. Covers models for dichotomous response (including probit and logit); polychotomous response (including ordered response and multinomial logit); various types of censoring and truncation (e.g., the response variable is only observed when it is greater than a threshold); and sample selection issues. Includes an introduction to duration analysis. Covers not only the statistical issues but also the links between behavioral theories in the social sciences and the specification of the statistical model.

ILRLE 7430 Applied Econometrics III

Spring. 4 credits. Prerequisites: ILRLE 7410-7420 or permission of instructor. ILRLE 7410, 7420, and 7430 constitute Ph.D.-level sequence in applied microeconomics. Letter grades only. G. Jakubson.

Covers topics not covered in ILRLE 7410-7420, including further development of duration analysis, panel data methods for nonlinear models, quantile regression and related techniques, and an introduction to nonparametric and semiparametric methods. Additional topics as suggested by their use in applied areas of social science. Covers not only the statistical issues but also the links between behavioral theories in the social sciences and the specification of the statistical model. Also develops a general framework for the techniques covered in the ILRLE 7410-7420-7430 sequence.

ILRLE 7450 Seminar in Labor Economics I (also ECON 7420)

Fall. 4 credits. Note: ILRLE 7450 and 7460 constitute Ph.D.-level sequence in labor economics.

Includes reading and discussion of selected topics in labor economics. Stresses applications of economic theory and econometrics to the labor market and human resource areas.

ILRLE 7460 Seminar in Labor Economics II (also ECON 7430)

Spring. 4 credits. Note: ILRLE 7450 and 7460 constitute Ph.D.-level sequence in labor economics.

Includes reading and discussion of selected topics in labor economics. Stresses applications of economic theory and econometrics to the labor market and human resource areas.

ILRLE 7470 Economics of Education I (also ECON 7470)

Spring. 4 credits. Limited to economics and labor economics Ph.D. students or by permission of instructor. R. Ehrenberg.

Survey of the econometric research on a wide variety of higher education issues. Topics include public and private funding, financial aid and tuition policies, faculty labor markets, and Ph.D. production.

ILRLE 7471 Economics of Education II

Fall. 4 credits. K. Jackson.

Survey of the econometric research and theory on a wide variety of education issues at the elementary and secondary level. Topics include school finance policies, peer effects, accountability, incentives, class size debate, and teacher labor markets. The two-semester sequence in the Economics of Education can be taken in any order.

ILRLE 7490 Economics of Development (also ECON 7720)

Fall. 4 credits. Prerequisites: first-year graduate economic theory and econometrics. G. Fields.

Takes analytical approaches to the economic problems of developing nations. Topics include old and new directions in development economics thinking; the welfare economics of poverty and inequality; empirical evidence on who benefits from economic development; labor market models; project analysis with application to the economics of education; and development policy.

ILRLE 7900 ILR M.P.S. Program

Fall and spring. 1-9 credits.

Supervised research only for those enrolled in the ILR M.P.S. program.

ILRLE 7980 Internship

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRLE 7990 Directed Studies

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILRLE 9400 Workshop in Labor Economics

Fall and spring. 3 credits. Intended for Ph.D. students who have started to write their dissertations.

Presentations of completed papers and work in progress by faculty members, advanced graduate students, and speakers from other universities. Focuses on the formulation, design, and execution of dissertations.

ORGANIZATIONAL BEHAVIOR

P. Tolbert, chair (146 East Ives Hall, 255-9527); S. Bacharach, M. Besharov, J. Goncalo, T. Hammer, E. Lawler, B. Rubineau, M. Williams, W. Sonnenstuhl

ILROB 1220 Introduction to Organizational Behavior

Fall and spring. 3 credits. Staff.

Introductory survey course of theory and research on individual and group processes (including personality, motivation, communication, leadership), as well as structural and economic forces (including organizational design, power relations, inter-organizational ties, social norms and laws) that shape the contemporary workplace.

ILROB 1750 Behavior, Values, and Performance

Fall and spring. 3 credits. Not open to ILR students. Staff.

Examines the modern technology-based organization as a workplace. With global competitive dynamics as a backdrop, the course explores how organizational structures, processes, and practices have evolved to meet environmental challenges and will define the behavioral implications of those changes for practicing engineers and designers and managers who work with them. Interpreting such changes and building a capacity for professional effectiveness in this environment requires students to develop a working familiarity with an array of social and behavioral science literature, dealing with such matters as personal identity, motivation, and job design; creativity and the organizational enablers to innovation; group dynamics and project effectiveness; perception, communication, and cross-cultural understanding; and ethical decision making in a high-stress environment. The teaching cases/situations used reflect the orientation of the course toward technology-based organizations.

ILROB 2220 Controversies about Inequality (also SOC/PAM/DSOC/GOVT 2220, PHIL 1950)

Spring. 4 credits. S. Morgan.

For description, see SOC 2200.

ILROB 2225 Commitments to Groups and Organizations

Fall. 3 credits. Sophomore writing course. E. Lawler.

Deals with how and when people become committed to groups and organizations. Such commitments are an important source of social order, solidarity, altruism, and citizenship behavior in small groups and large organizations. Emphasizes sociological and social psychological theories of commitment, solidarity, and order, including in particular those dealing with the role of power, legitimacy, trust, affect, and social identity. Taught in a seminar format and involves frequent writing assignments and a major paper.

ILROB 3200 The Psychology of Industrial Engineering

Fall. 4 credits. T. Hammer.

Study of the human factors in the industrial engineering of work, workplaces, tools, and machinery. Examines the aspects of individual and social psychology that operate in the work setting and that should be taken into account in the design of jobs. These include limitations of the human sensory system; individual difference in skills, abilities, motives, and needs; group dynamics; intrinsic motivation; job satisfaction; and conflict.

ILROB 3201 Organizational Change: Theory and Practice

Fall. 3 credits. Prerequisite: ILROB 1220. M. Besharov.

Examines problems of change in organizations from both a theoretical and practical perspective. We consider questions such as: How does change occur in organizations? What is the role of leaders in creating and sustaining change in organizations? What is organizational culture and how does it affect change? The course draws on theory and research from sociology and related disciplines. Course material also includes case studies and interactive exercises.

ILROB 3210 Group Solidarity (also SOC 3110)

Fall. 4 credits. M. Macy.

For description, see SOC 3110.

ILROB 3290 Organizational Cultures

Fall or spring. 4 credits. Prerequisite: one or more courses in OB and/or sociology. W. Sonnenstuhl.

Reviews the concept of culture as it has evolved in sociology and anthropology, applying it to formal organizations in workplaces such as corporations and unions. The course first examines the nature of ideologies as sense-making definitions of behavior, concentrating on the cultural forms that carry these cultural messages, rituals, symbols, myths, sagas, legends, and organizational stories. Considerable attention is given to rites and ceremonials as a cultural form in organizational life that consolidates many of these expressive forms into one. The course examines types of ceremonial behavior such as rites of passage, rites of enhancement, and rites of degradation, including the role of language gestures, physical settings, and artifacts in ceremonial behavior. The presence of subcultures and countercultures in organizational behavior also receive attention, especially the part played by occupational subcultures in formal organizations.

ILROB 3700 The Study of Work Motivation

Fall. 4 credits. Prerequisite: junior or senior standing. T. Hammer.

Designed to acquaint students with the basic concepts and theories of human motivation with implications for job design and organizational effectiveness. Focuses on theories of worker motivation and on research approaches and results as they apply to the performance of individuals and groups in formal organizations. Readings are predominantly from the field of organizational psychology, supplemented by relevant contributions from experimental and social psychology. Each student designs, executes, and analyzes a research study of his or her own.

ILROB 4220 Organizations and Deviance

Fall or spring. 4 credits. Limited to 60 students. W. Sonnenstuhl.

Focuses on the deviant actions of organizations, including such behaviors as price fixing, environmental pollution, illegal campaign contributions, and discrimination in hiring and promotion. Examines the origins of such behaviors in organizations, the processes by which they became institutionalized, and the processes by which they become defined as deviant organizational actions. Within this context, the course examines such contemporary cases as Exxon's Valdez oil spill, Iran-Contra, drug testing, and the federal savings and loan scandal. These events raise troubling questions about what it means to live and work in an organizational society, and they cannot be dismissed as instances of a few individuals gone bad.

ILROB 4230 Leadership in Organizations

Fall or spring. 4 credits. T. Hammer.

Covers basic leadership theories with an emphasis on how they are used, analyzes leadership cases, and examines current leadership surveys and training materials. We also study leadership philosophies and management practices in countries outside of the United States. In addition, you learn to evaluate and use leadership "best-sellers," that is, the kind of books that sell in airports.

ILROB 4240 Social Influence and Persuasion

Fall. 4 credits. Prerequisites: junior or senior standing. J. Goncalo.

Many of the most admired organizations are adept at using social influence to achieve their strategic objectives. This course reviews basic theories of social influence such as conformity, group polarization, and social facilitation to understand how social influence tactics can be used to make organizations more efficient and productive. The course also considers how these tactics can backfire when excessive agreement gives rise to groupthink and poor decisions. We conclude by exploring strategies for managing social influence processes to encourage creativity and innovation in organizations.

ILROB 4250 Seminar in Organizational Culture

Spring. 4 credits. Limited to 20 students. Prerequisite: ILROB 3290 and permission of instructor. W. Sonnenstuhl.

Expands on the theoretical ideas developed in the earlier course through more focused reading, intensive fieldwork, and paper writing. Students are accepted into the seminar based on their research projects for ILROB 3290 and work with the professor to develop a more detailed reading list and more focused data collection strategy for expanding upon their earlier projects. The seminar also is taught as an intensive writing experience.

ILROB 4260 Managing Creativity

Fall. 4 credits. J. Goncalo.

Although most people can agree that creativity is an important concept, there is often very little agreement about what creativity is and how we can achieve it. This course surveys basic theories of creativity with the goal of applying this knowledge to the management of creativity in organizations. It focuses primarily on (1) cognitive theories about creative thought, (2) personality theories about exceptionally creative individuals (3) social-psychological theories about creative groups, and (4) the points at which these approaches interact. The course concludes by questioning whether, given the costs involved, anyone would willingly follow the path of a creative individual or implement the practices of the most innovative firms.

ILROB 4270 The Professions: Organization and Control

Fall. 4 credits. Prerequisite: permission of instructor. P. Tolbert.

Focuses on the sources of power and control exercised by professional groups in contemporary society. A number of issues are examined in this context, including the role of professions in society, processes through which an occupational group becomes defined as a profession, sources of control that professional associations have over their members, relations between professionals and nonprofessionals in organizations, and the relationship between unionization and professionalization of occupations.

ILROB 4280 Blue-Collar Work in America

Spring. 4 credits. Prerequisites: ILROB 1220. S. Bacharach and W. Sonnenstuhl.

Although America is often described as a post-industrial society in which service jobs predominate, the term "blue collar" remains relevant for understanding workplace relationship and their consequences. This course examines the nature of blue-collar work in the 21st century. It takes an in-depth

look at a number of blue-collar occupations to understand workers' experiences. Special attention is paid to the manner in which management exercises control over blue-collar workers, the strategies workers use to gain greater discretion over their work, and the social and psychological consequences that follow from this struggle. This course uses lectures, readings, and interviews/discussions with blue-collar workers to illuminate workers' experiences. It uses long-distance learning technology to bring New York city-based blue-collar workers into the Ithaca classroom.

ILROB 4290 Organizational Politics and Institutional Change

Spring, seven weeks. 2 credits. Prerequisite: junior or senior standing; permission of instructor. Students should see instructor before first class. S. Bacharach.

Examines the market, cultural, political, and structural forces that change the organizational "rules of the game," how those changes affect individuals and organizations, and the distortions that occur as individuals and organizations attempt to adjust to a new unstable order. Issues examined include power, corruption, deal-making, rationality, uncertainty, and competition. Course requirements include completing a major research paper and leading a class discussion.

ILROB 4700 Group Processes

Fall. 4 credits. Prerequisites: ILROB 1220 or equivalent; junior or senior standing. E. Lawler.

A review of theoretical approaches and selected research on group phenomena, including the formation of groups, the structure of group relations, and group performance. Specific topics include conformity and obedience, status and power relations, social identity, emotions and emotion management, group solidarity and commitment, and groups within larger organizations.

ILROB 4710 Organizations and Negotiation

Spring. 4 credits. *If you have completed ILROB 6011 you are NOT eligible to take this course.* Course fee: \$31, which includes cases for in-class negotiation simulations, online Negotiation Style Survey, and individualized assessment report. M. Williams.

This introductory course provides understanding of the theory and the processes of negotiations as practiced in a variety of organizational settings. It is designed for relevance to the broad spectrum of bargaining problems faced by team members, managers, and professionals. It allows students the opportunity to develop negotiation skills experientially and to understand negotiation by using analytical frameworks. General topics include: distributive bargaining, integrative negotiations, psychological biases, and multiparty negotiations. Advanced topics include: sources of power, dispute resolution, emotionally intelligent negotiations, team on team negotiations (e.g., union management). Simulations, exercises, role-playing, and cases are emphasized.

ILROB 4720 Applied Organizational Behavior

Fall. 4 credits. Prerequisite: ILROB 1220. S. Bacharach.

Introduces students to intermediate theory of organizational behavior. Concentrates specifically on teaching students to use

organizational theories for analytical and applied purposes. Topics include organizational structure, work processes, organizational politics, organizational design, job design, incentive systems, and quality-of-work-life programs.

ILROB 4750 Organizational Uncertainty and Tactical Leadership

Spring, seven weeks. 2 credits.
S. Bacharach.

Focuses on how leaders implement and sustain ideas in organizations during periods where it is clear that coming up with the perfect answer is impossible because of conditions of uncertainty. Specifically, the premise is that a good idea is not enough. What you need are the tactical skills to mobilize, implement, and sustain the idea throughout the organization. These tactical skills are the focus of the seminar. Through a series of examples and structured cases, students learn the skills of mobilization, coalition formation, and execution. There is a specific concern about how leaders need to anticipate reaction of others, analyze the political terrain in their organizations, and establish credibility. Leadership is examined not from the perspective of personality but from the perspective of practical skills that can be learned. These skills are applied to numerous types of organizations. There is case material, a required film, and tutorials. The class is broken up into six groups and grades assigned on the basis of group exercises and one final group project. An effort is made to balance the class equally between graduate and undergraduate students. Please note that the final project is a comprehensive case development in which each group must extensively illustrate many of the arguments presented in the course. The final illustrates many of the arguments presented in the course.

ILROB 4950 Honors Program

Fall and spring (yearlong). 3 credits each semester.

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILROB 4970-4980 Field Research, Internship

Fall and spring. 4 and 8 credits.

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILROB 4990 Directed Studies

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILROB 5200 Organizational Behavior

Fall or spring. 3 credits. Staff.

Survey of concepts, theories, and research from the fields of sociology, psychology, and social psychology as these relate to the behavior of individuals, groups, and work organizations. Topics include: job attitudes, motivation, leadership and power, group formation, organizational structure, and interorganizational relations. This course is designed for students in professional programs.

ILROB 5210 Organizational Design, Culture, and Change

Fall. 3 credits. Prerequisite: ILROB 5200.
M. Besharov.

The goal of this course is to expose students to some of the central challenges in designing effective organizations, shaping organizational culture, and leading organizational change.

The course draws on theory and research from sociology and related disciplines. Course material also includes case studies and interactive exercises.

ILROB 5250 Organizational Behavior

Fall, spring. 4 credits. Offered only in New York City for M.P.S. program. Staff.

Applies theories and methods from the behavioral sciences to the analysis of behavior in organizations. Areas of study include classical and modern theories of organization and their underlying assumptions of human nature, the relationship between organizations and their environment, the role of power, politics, and decision-making in organizations, industrial history, and leadership culture.

ILROB 5790 Negotiation and Conflict Resolution

Fall. 4 credits. Course fee: \$31, which includes cases for in-class simulations, online Negotiation Style Survey, and individualized assessment report.
M. Williams.

Provides understanding of the theory and the processes of negotiation as practiced in a variety of organizational settings. The course is designed for relevance to the broad spectrum of bargaining problems faced by the manager and the professional. It allows students the opportunity to develop negotiation skills experientially and to understand negotiation by using analytical frameworks. General topics include: distributive bargaining, integrative negotiations, psychological biases, sources of power, and multi-party negotiations. Advanced topics include: dispute resolution, emotionally intelligent negotiations, team on team negotiations (e.g., union-management, mergers). Simulations, exercises, role-playing, and cases are emphasized.

ILROB 6202 Political Leadership and Managerial Competence in Organizations

Spring; seven-week course. 2 credits.
S. Bacharach.

The capacity to lead politically is a talent often not made explicit. All too often we're not clear where politics ends and management begins and vice versa. This course will try to clarify these issues. Will focus on key political skills that are necessary in getting agendas put in place in organizations. Making use of historical figures as well as contemporary examples, this course with empirically and theoretically frame the issue of political skills. Students will be required to write a paper on one political leader and evaluate his or her political skills based on the material presented in this course. Among the leaders to be discussed will be Lincoln, Gandhi, FDR, LBJ, etc. Readings will include Machiavelli's *The Prince*, as well as current texts on leadership. Taught via distance video technology.

ILROB 6221 Dialogues on Diversity: Learning to Work Cross-Culturally

Spring; seven-week course. 2 credits.
Prerequisite: permission of instructor.
W. Sonnenstuhl.

Consist of a series of dialogues between ILR and ESCP-EAP faculty members about diversity-related issues and learning to work with one another in diverse groups. Each session will be organized as a dialogue between two faculty members. The dialogue will highlight the similarities and differences between American and European ideas and provide students with opportunities to examine how those may be applied to work

organizations. Some topics to be discussed are: What does diversity mean in the United States and Europe? How do people work in diverse international teams? What are the roles of human resource managers in implementing diversity in the United States and Europe? How does immigration impact diversity in the United States and Europe? How do we negotiate across cultures? What does leadership mean in an international workplace? Students will work as part of a U.S.-European team on projects.

ILROB 6250 Conflict, Power, and Negotiation

Fall. 4 credits. Limited enrollment.

Prerequisite: senior or graduate standing; permission of instructor. E. Lawler.

Theoretical seminar that adopts a power perspective on bargaining and conflict resolution. Examines how power relations and power processes affect tactics in bargaining and also when power relations inhibit or promote conflict resolution. "Power" is viewed in the course as a capability, embedded in a social structure, and tactics are the action based on or using such power. The seminar gives an overview of several theoretical approaches to conflict and bargaining (e.g., rational choice, cognitive, social exchange) and places the power perspective in this context.

ILROB 6251 Building Commitment to Groups and Organizations

Fall. 4 credits. Prerequisite: ILROB 5200 and permission of instructor. E. Lawler.

Graduate seminar intended for Masters in Industrial and Labor Relations (MILR) students. Uses sociological and social psychological theories to understand the foundations of commitment, cohesion, and solidarity in groups and organizations. Topics include the role of rational choice, social dilemmas, trust, social exchange, norms, affect, and social identity. Students read and discuss theoretical/conceptual material in the first half or so of the course; during the second half, they present papers that apply one or more of the theories to a case of their choosing.

ILROB 6260 Organizations and Social Inequality

Spring. 4 credits. P. Tolbert.

Examines the central role that organizations in industrial societies play in allocating income, status, and other resources to individuals. A variety of theoretical explanations of social inequality are examined, and the social policy implications of each are considered.

ILROB 6270 Leadership in Organizations

Spring. 4 credits. Prerequisite: graduate standing; seniors by permission of instructor. T. Hammer.

Examination of theories and research findings from the behavioral sciences that are relevant to leadership and the influence process in groups and organizations. Discusses personality, situational factors, intergroup processes, interpersonal perception as well as the motivation to both lead and follow. Explores the implications for leadership training, organization development, and action research.

ILROB 6710 Work, Health, and Health Care

Spring. 4 credits. Prerequisite: permission of instructor. W. Sonnenstuhl.

The health care industry is the fastest growing segment of the U.S. economy. Examines the

interplay between business organizations, which fund employee health insurance, and health. The first half of the course will focus on U.S. organizations with topics ranging from corporate culture and power to the structure of work in health care organizations. For instance, we will examine how power and corporate culture influence the definition of health, employee attention to safety, and employee willingness to use wellness programs. The second half of the course will shift to an international comparative analysis of work, health, and health care in countries with differing institutional environments, including Canada, the United Kingdom, Germany, and Korea.

ILROB 6790 Methods of Observation and Analysis of Behavior

Fall or spring. 4 credits. Limited to 25 students. Prerequisite: permission of instructor. W. Sonnenstuhl.

Focuses on qualitative methods and emphasizes learning by doing. Examines different approaches to the collection and analysis of data. Students learn a variety of data collection techniques for understanding individual and collective behavior, including participant observation, in-depth interviews, and working with archival materials. The course also emphasizes the constant comparative method as a basic technique for data analysis. This technique is the basis of such qualitative computer programs as Ethnograph and Nudist. Students conduct their own research projects. Students who wish to use qualitative methods either for a senior honors thesis, master's thesis, or doctoral dissertation are encouraged to take this course.

ILROB 7210 Advanced Micro Organizational Behavior

Spring. 3 credits. Staff.

Examines the historical development of psychological theories of organizational behavior and contemporary issues in micro organizational research. Emphasizes reading and analysis of primary source material.

ILROB 7220 Advanced Macro Organizational Behavior

Fall. 3 credits. Prerequisite: ILROB 5200. Staff.

Examines the historical development of sociological theories of organizations and contemporary issues in macro organizational research. Emphasizes reading and analysis of primary source material.

ILROB 7240 Managing Social Influence

Fall. 3 credits. J. Goncalo.

Survey of basic theories of social influence and how they are applied (and sometimes misapplied) to managing people in organizations. Theories covered include social facilitation, social norms, group polarization, conformity and minority influence. Emphasizes the evaluation of certain popular management techniques in light of social influence processes.

ILROB 7250 Analysis of Published Research in Organizational Behavior

Fall. 3 credits. Prerequisites: ILROB 5200 and one year of statistics. Staff.

Advanced research methods course that critically examines published research papers in the field of organizational behavior in terms of research design and method as well as theory.

ILROB 7260 Selected Topics in Organizational Behavior

Fall. 3 credits. Prerequisites: ILROB 5200 and permission of instructor. Staff.

Advanced proseminar that seeks to develop an interdisciplinary perspective on selected topics in organizational behavior. The topics themselves change from year to year depending on participants' interests. Course is designed to allow students and the instructor to jointly pursue significant scholarly inquiry into one or more arenas of organizational theory. Emphasis is placed on exploring the relevance of tradition in related disciplines (e.g., anthropology, linguistics, philosophy, sociology) that may enrich our understanding of organizational life.

ILROB 7270 Leadership in Organizations

Fall or spring. 3 credits. Open to MLR graduates. T. Hammer.

Covers basic leadership theories with an emphasis on how they are used, analyzes leadership cases, and examines current leadership surveys and training material. To allow you to gain additional information of practical use, you also have at the end of the semester a collection of essays on two practical topics: how to read and use leadership "best-sellers" (the kind of book that sells in airports), and leadership philosophies and management practices in foreign countries.

ILROB 7280 Theories of Motivation and Leadership

Spring. 4 credits. Prerequisite: ILROB 5200. T. Hammer.

Introduction to basic concepts of human motivation in general, with particular emphasis on the theories that explain and predict work motivation. Students examine the empirical research that tests the validity of the theories and shows how and under what conditions different motivation models can be used for practice in work organizations. Several current microtheories of leadership and power and related research are examined. The disciplinary perspective employed is social organizational psychology, and the level of analysis emphasized is action and experience of individuals in groups.

ILROB 7290 Organizational Change and Intervention

Fall. 3 credits. Prerequisite: graduate standing.

Seminar concerned with planned and unplanned change in organizations. It is designed to analyze theory in practice. Particular attention is paid to the role of internal and external change agents. Students are encouraged to analyze contemporary changes such as mergers and acquisitions and workforce reductions. Participants submit weekly workforce journals.

ILROB 7780 Solidarity in Groups (also SOC 7780)

Fall. 3 credits. Prerequisite: M.S. and Ph.D. candidates in department. All M.S. and Ph.D. candidates in department at work on their theses are strongly urged to enroll. S-U grades only. E. Lawler.

It analyzes contemporary theories of group solidarity. Particular attention is given to the comparison of rational choice, social exchange, and normative/affective explanations for the development and maintenance of social solidarity at both the micro (group) level and macro (organizational) level. Trust, emotion, social

identities also are analyzed in the context of these approaches. Most of the theoretical work covered in the course falls within the sociological tradition.

ILROB 7900 ILR M.P.S. Program

Fall and spring. 1-9 credits. Supervised research only for those enrolled in the ILR M.P.S. program.

ILROB 7980 Internship

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILROB 7990 Directed Studies

For description, see "Collective Bargaining, Labor Law, and Labor History."

ILROB 9200 Organizational Behavior Workshop

Fall. 2 credits. Prerequisite: M.S. and Ph.D. candidates in department. All M.S. and Ph.D. candidates in department at work on their theses are strongly urged to enroll. S-U grades only. Staff.

This workshop is designed to provide a forum for the presentation of current research undertaken by faculty members and graduate students in the Department of Organizational Behavior and by invited guests. Each student is expected to make at least one presentation during the year, focusing on the formulation, design, execution, and results of his or her thesis research.

SOCIAL STATISTICS

J. Bunge, chair (358 Ives Hall, 255-8643); T. DiCiccio, M. L. Karns, P. Velleman, and M. Wells

ILRST 2100 Introductory Statistics (also STSCI 2100)

Fall, spring, and summer. 4 credits.

Prerequisite: introductory algebra. L. Karns, P. Velleman, and M. Wells.

Statistics is about understanding the world through data. We are surrounded by data, so there is a lot to understand. Covers data exploration and display, data gathering methods, probability, and statistical inference methods through contingency tables and linear regression. The emphasis is on thinking scientifically, understanding what is commonly done with data (and doing some of it for yourself), and laying a foundation for further study. You will learn to use statistical software, and to use simulation tools to discover fundamental results. Will use computers regularly; the test includes both multimedia materials and a software package. This course does not focus on data from any particular discipline, but will use real-world examples from a wide variety of disciplines and current events.

ILRST 2130 Research Strategies and Regression Analysis

Fall. 3 credits. Limited to 20 students. Prerequisite: ILRST 2100 or equivalent. L. Karns.

Builds on the introduction to statistics course by considering multivariate regression methods. Application of the methods is explored through the analysis of data found by each student. Topics include: regression inference, indicator variables, analysis of outliers, interaction terms, interpretation, and presentation. Analysis process and interpretation will be emphasized rather than

specific research results. Students will present their final models in class.

ILRST 2150 Statistical Applications in Law and Policy

Fall. 4 credits. Prerequisite: ILRST 2100. Sophomore writing course. L. Karns.

The practical aspects of quantitative research in law and policy (occupational and environmental health, product liability, and employment discrimination). Students will evaluate the existing literature on a topic, analyze statistical merits, and make quantitative arguments. Standards of evidence will be considered. Required weekly writing assignments, a preliminary paper, and a final paper. Final oral presentations.

ILRST 2200 Occupational Epidemiology

Fall. 3 credits. Prerequisite: ILRST 2100 or equivalent. L. Karns.

Occupational epidemiology is the investigation of workplace health issues requiring knowledge of medicine, organizational structures, industrial hygiene, and human behavior. An introduction to occupational epidemiology through exploration of research design (cohort, case-control, and cross-sectional), exposure assessment, and statistical evaluation of the health issue. Students will use odds ratios, relative risk, and logistic regression models to measure the relationship between exposure and outcome. All students will select a topic area of interest, summarize current knowledge, and develop a research design protocol for future implementation.

ILRST 3100 Statistical Sampling (also BTRY 3100)

Fall. 4 credits. Prerequisite: two semesters of statistics. J. Bunge.

Theory and application of statistical sampling, especially in regard to sample design, cost, estimation of population quantities, and error estimation. Assessment of nonsampling errors. Discussion of applications to social and biological sciences and to business problems. Includes an applied project.

ILRST 3120 Applied Regression Methods

Fall. 4 credits. Prerequisite: ILRST 2100 or equivalent. P. Velleman.

Reviews matrix algebra necessary to analyze regression models. Covers multiple linear regression, analysis of variance, nonlinear regression, and linear logistic regression models. For these models, least squares and maximum likelihood estimation, hypothesis testing, model selection, and diagnostic procedures are considered. Illustrative examples are taken from the social sciences. Computer packages are used.

[ILRST 4070 Principles of Probability and Statistics (also BTRY 4070)]

Fall. 4 credits. Next offered 2010–2011. Staff.

For description, see BTRY 4070.]

ILRST 4100 Techniques of Multivariate Analysis (also BTRY 4100)

Spring. 4 credits. Prerequisite: ILRST 3120 or equivalent; some knowledge of matrix notation. Staff.

Discusses techniques of multivariate statistical analysis and illustrates them using examples from various fields. Emphasizes application, but theory is not ignored. Deviation from assumptions and the rationale for choices among techniques are discussed. Students are expected to learn how to thoroughly analyze real-life data sets using computer-packaged

programs. Topics include multivariate normal distribution, sample geometry and multivariate distances, inference about a mean vector, comparison of several multivariate means, variances, and covariances; detection of multivariate outliers; principal component analysis; factor analysis; canonical correlation analysis; discriminant analysis; and multivariate multiple regression.

[ILRST 4110 Statistical Analysis of Qualitative Data (also BTRY 6030)]

Spring. 4 credits. Prerequisite: two statistics courses or permission of instructor. Next offered 2010–2011. T. DiCiccio.

Advanced undergraduate and beginning graduate course. Includes treatment of association between qualitative variates; contingency tables; log-linear models; binary ordinal and multinomial regression models; and limit dependent variables.]

[ILRST 4140 Statistical Methods: Applied Design (also BTRY 6040)]

Fall. 3 credits. Prerequisites: ILRST 2100, 2130, or ILRST 5100, 5110, or equivalent. Next offered 2010–2011. T. DiCiccio.]

ILRST 4990 Directed Studies

For description, see “Collective Bargaining, Labor Law, and Labor History.”

ILRST 5100 Statistical Methods for the Social Sciences I

Fall. 3 credits. T. DiCiccio.

A first course in statistics for graduate students in the social sciences. Descriptive statistics, probability and sampling distributions, estimation, hypothesis testing, simple linear regression, and correlation. Students are instructed on the use of a statistics computer package at the beginning of the term and use it for weekly assignments.

ILRST 5110 Statistical Methods for the Social Sciences II

Fall and spring. 3 credits. Prerequisite: ILRST 5100 or equivalent introductory statistics course. T. DiCiccio.

Second course in statistics that emphasizes applications to the social sciences. Topics include simple linear regression; multiple linear regression (theory, model building, and model diagnostics); and the analysis of variance. Computer packages are used extensively.

ILRST 5150 Statistical Research Methods

Fall or spring. 4 credits. Offered only in New York City for M.P.S. program. Staff.

Students learn basic skills for conducting qualitative and survey research. They work through an introductory review course at home on their own time. After passing an exam, they attend a two-week immersion course in Ithaca taught by the on-campus faculty in July. Topics include an introduction to surveys and discrete analysis, basic regression, and integration of qualitative and quantitative research methods.

ILRST 6140 Structural Equations with Latent Variables

Fall. 3 credits. Prerequisites: ILRST 2100/5100/5110 or equivalent. M. Wells.

Provides a comprehensive introduction to the general structural equation system, commonly known as the “LISREL model.” One purpose of the course is to demonstrate the generality of this model. Rather than treating path analysis, recursive and nonrecursive models, classical econometrics, and confirmatory factor analysis

as distinct and unique, we will treat them as special cases of a common model. Another goal of the course is to emphasize the application of these techniques.

ILRST 6190 Special Topics in Social Statistics

Spring. 3 credits. Prerequisite: ORIE 6700 or equivalent. A. Vidyashankar.

The areas of study are determined each semester by the instructor offering the seminar. Topics may include: hierarchical linear models, the multivariate normal and Wishart distributions, multivariate sampling, tests of mean and covariance, multivariate regression, principal components, factor analysis, canonical correlation, robustness, and bootstrap confidence regions and tests.

[ILRST 7150 Likelihood Inference]

Fall. 3 credits. Prerequisite: graduate courses equivalent to ORIE 6700. Next offered 2010–2011. T. DiCiccio.

In most statistical models, exact distribution theory for testing hypotheses or constructing confidence intervals is either unavailable or computationally cumbersome. Inferences are routinely performed by using large-sample approximations to the distributions of test statistics. This course provides a survey of some recent higher-order asymptotic approximations for likelihood-based methods of inference.]

[ILRST 7170 Analysis of Longitudinal Data]

Spring. 3 credits. Prerequisites: extensive knowledge of SAS; advanced linear models; probability and statistics (at level of text by Casella and Berger). Next offered 2010–2011. A. Vidyashankar.

Comprehensive introduction to analysis of longitudinal data. Involves modeling, analysis, and a diagnostic components. Modeling and methodology for analysis of missing data are also incorporated.]

ILRST 7990 Directed Studies

For description, see “Collective Bargaining, Labor Law, and Labor History.”

FACULTY ROSTER

Abowd, John M., Ph.D., U. of Chicago.

Edmund Ezra Day Prof. of Industrial and Labor Relations, Labor Economics

Applegate, Ronald, Ph.D., SUNY Binghamton. Lec., Collective Bargaining, Labor Law, and Labor History

Bacharach, Samuel, Ph.D., U. of Wisconsin.

JOHNSON GRADUATE SCHOOL OF MANAGEMENT

ADMINISTRATION

L. Joseph Thomas, dean

Mark Nelson, associate dean for academic affairs

Douglas Stayman, associate dean for M.B.A. Program

Sunny Donenfeld, associate dean for administration

Randy Allen, associate dean for corporate relations

Rebecca Mitchell, associate dean for alumni affairs and development

Thomas B. Hambury, director of executive programs

Daniel Szpiro, director of Cornell Queens Executive M.B.A. Program

Randall Sawyer, director of admissions, financial aid and inclusion

Karin S. Ash, director of career management center

Irma Almirall-Padamsee, director of Office of Diversity and Inclusion

Amanda Shaw, director, Student Services

Ann W. Richards, associate director of admissions and financial aid

Rhonda H. Velazquez, director of student activities and special events

Kerwin-Michael Smith, college registrar

The Johnson Graduate School of Management prepares men and women for managerial careers in business. The school offers course work in many disciplines to provide potential managers with an understanding of the complexities of the professional world in which they operate and of the organizations of which they will become a part.

A bachelor's degree or its equivalent is required for admission to the two-year program leading to the master of business administration (M.B.A.) degree. Nearly half of the students have a background of undergraduate studies in arts and sciences, and about one-quarter in engineering. Five percent of the students begin their graduate training immediately after receiving their bachelor's degrees and the remaining 95 percent following work experience.

Combined degree programs allow highly qualified Cornell students to co-register in the school during their senior year, thereby earning a master's degree in less than the usual time.

The doctoral program, administered through the Graduate School, provides an advanced level of education in business for those who seek careers in teaching and research at leading universities.

More detailed information about these programs is available from the Office of Admissions and Student Affairs, Johnson Graduate School of Management, 111 Sage Hall.

Students in other graduate programs and undergraduate students registered with the university are welcome in most classes.

UNDERGRADUATE ONLY

NBA 3000 Entrepreneurship and Private Equity

Fall, spring. 3 credits. Prerequisite: non-Johnson School undergraduate students only. Johnson School and graduate students, see NBA 5640. D. BenDaniel. This course uses lectures, live case studies, and business plans written by student teams to address entrepreneurial management in start-up ventures and private equity investments. Topics include financing, valuation, growth management, and buying and selling businesses. Guest lecturers speak on specialized topics such as leveraged buyouts, distressed businesses, advice from experienced board members, and private equity deals. The course attempts to integrate marketing, finance, operations, and human resource topics in the context of high-growth business ventures and private equity.

COURSES FOR NON-JOHNSON SCHOOL STUDENTS

NBA 5070 Entrepreneurship for Scientists and Engineers

Fall, spring. 3 credits. Prerequisite: M.Eng., Ph.D., and M.S. students; priority given to seniors as undergraduates. G. Schneider. Specifically designed for mentored independent study, this course is customized using streaming video, guest speakers, distance learning, and special lectures/tutorial sessions. Work is focused on a single project: students form a start-up team and follow a technical business idea of their own choosing through the process of developing and founding a business that can attract venture investors. Learn how high-technology ideas are converted into world-class businesses in venture-backed start-up companies as well as in new business development in existing companies. Tutorial sessions with professors apply lessons to the team business plan.

NBA 5150 Leadership Theory and Practice

Fall, spring. 3 credits. M. Hostetler. This course will focus on the challenges of effective leadership in a complex world. The course has four significant parts: (1) Exploring historical and contemporary theories and models of leadership through the required text and selected articles; (2) Examining and applying the Johnson School's Leadership Model; (3) Analyzing the practical challenges of leadership through case studies, executive speakers, and company visits; (4) Developing self-awareness of the student's leadership strengths and weaknesses through the use of behavioral instruments and group exercises and creating a personal action plan for

improvement. A critical element of this course will be the coaching and feedback students will receive on their own leadership styles and behaviors from their peers and instructor.

NBA 5530 Accounting and Financial Decision Making

Spring. 3 credits. Prerequisite: non-Johnson School students. J. D'Souza, M. Shackell-Dowell.

Focuses on basic financial and managerial accounting and the economic and financial concepts that have a bearing on managerial decisions. The goals are to (1) give students a working knowledge of the accounting process and the value and limitations of the data that come out of the accounting information system; (2) familiarize students with key concepts in managerial accounting and the application of cost information to pricing and operating decisions; (3) promote an understanding of the use of economic theory in the evaluation of capital investment projects. The teaching methods consist of lectures and cases. Students are evaluated on the basis of exams.

NCC 5500 Financial Accounting

Fall, spring. 3 credits. Prerequisite: non-Johnson School students. Similar in content to M.B.A. core course NCC 5000. Staff. Introductory accounting course that examines the subject from the viewpoint of users external to the organization. Topics include transaction analysis; the accounting cycle; financial-statement preparation, use, and analysis; revenue recognition and cost measurement; present value; and problems in financial-accounting disclosure.

NCC 5530 Marketing Management

Fall, spring. 3 credits. Prerequisite: non-Johnson School students. Similar in content to M.B.A. core course NCC 5030. Staff. Addresses controllable and uncontrollable marketing variables that managers in multiproduct firms face in today's business environment. Topics include customer behavior, product planning, distribution, advertising and promotion, pricing, and competitive strategy.

NCC 5540 Management and Leading in Organizations

Spring. 3 credits. Staff. Ultimately, the goal of managers and leaders is to get things done in organizations. Most of that work is accomplished by effectively managing other people. Using text-based cases, video cases, audio cases, exercises, and readings, we will focus on the skills managers need to be successful in their firms and in their careers. An important course goal is to help you hone your critical thinking and problem-solving skills. To this end, our case analyses will require you to take problems apart into their component parts, to uncover their root causes, and to develop workable solutions. I will introduce frameworks and models that will help you analyze organizational problems and generate appropriate solutions. Major content themes focus on motivating employees, understanding

organizational design and organizational culture, persuading and influencing others, and managing change. The course is particularly relevant for students who (1) plan to work in corporations; or (2) intend to manage and lead firms; or (3) plan to work in the consulting industry; or (4) think about founding and/or owning start-up companies.

NCC 5560 Managerial Finance

Fall, spring, 3 credits. Prerequisite: non-Johnson School students. Similar in content to M.B.A. core course NCC 5060. Letter grades only. Staff.

Introduces business finance through theory and case studies. Topics include stock and bond valuation, the capital budgeting decision, portfolio theory, the asset-pricing models, raising capital, capital structure, mergers and acquisitions, costs of capital, option pricing, and risk management. International applications are considered within each topic area. Grading is based on an exam, group case reports, homework, and class participation.

NCC 5580 Managing Operations

Spring, 3 credits. Staff.

Operations Management is the design and management of the processes that transform inputs into finished goods or services. This course provides a foundation for understanding the operations of a firm. Our objective by the end of the course is to provide you with the basic skills necessary to critically analyze a firm's operating performance and practices. We will focus on how the "physics" of material, work and information flows, and the design and management of a firm's processes interact to determine a firm's cost structure and its ability to compete effectively in terms of noncost measures such as quality, variety, and speed.

NCC 5590 Strategy

Spring, 3 credits. Staff.

Among the critical tasks facing any senior manager are the creation, implementation, and evaluation of a business unit's strategy. This course seeks to provide the management student with the tools and frameworks essential to carrying out these tasks. Many of these tools and frameworks will be based on recent advances in game theory, industrial organization, and organization theory, although the course will also draw from the older business policy tradition. Students who successfully complete this course will be able to analyze industries, identify areas of strategy advantage and disadvantage, and devise strategies that exploit advantages and remedy disadvantages.

IMMERSIONS

Only the Johnson School offers learning immersion courses in strategic operations, managerial finance, investment banking, brand management, and entrepreneurship. Immersions offer a semester of continuous focus, real-world problem solving, and site visits to dozens of companies.

MFI—Managerial Finance Immersion

Prerequisite: NCC 5060 with grade of B or better.

Specifically designed for students planning to pursue finance careers. Some students interested in nonfinance careers (including consulting) may wish to consider this course, but they should recognize that it is not specifically designed for this purpose. A major objective is to help students make more informed choices about how to launch their finance careers.

NBA 5020 Managerial Cost Accounting 3 credits

NBA 5060 Financial Statement Analysis 1.5 credits

NBA 5490 Managerial Finance— Practicum 2.0 credits

NBA 5580 Corporate Financial Policy 1.5 credits

NBA 5650 Corporate Governance 1.0 credit

NBA 6560 Valuation Principles 1.5 credits

NCC 5040 Managing and Leading in Organizations 2.5 credits

NCC 5080 Managing Operations 2.5 credits

IBI—Investment Banking Immersion

Prerequisite: NCC 5060 with grade of B or better.

Specifically designed for students planning to pursue careers in investment banking. Inappropriate for students interested in following a finance career in nonfinancial industry or nonfinance careers (including consulting).

This course is designed to meld the practical and theoretical aspects of the field. A great deal of interaction and discussion is expected between students, participating faculty, and visiting practitioners. While the course is designed to make its students more attractive as candidates for employment in the investment banking profession, and it is expected that some of the participating firms will be using their visits to identify candidates for summer internships, obtaining relevant summer internships remains the responsibility of the students.

NBA 5000 Intermediate Accounting 3.0 credits

NBA 5110 Financial Modeling 1.5 credits

NBA 5560 Investment Banking— Practicum 2.5 credits

NBA 5580 Corporate Financial Policy 2.5 credits

NBA 6560 Valuation Principles 1.5 credits

NCC 5040 Managing and Leading in Organizations 2.5 credits

NCC 5080 Managing Operations 2.5 credits

CMAM—Capital Markets and Asset Management

Prerequisite: NCC 5060 with grade of B or better.

Specifically designed for students planning to pursue careers in research (both buy-side and sell-side), sales, and trading, either at Wall Street firms (sell-side) or at buy-side firms such as mutual funds. Melds the practical and theoretical aspects of the field. A great deal of interaction and discussion is expected between students, participating faculty, and visiting practitioners. While the course is designed to make its students more attractive as candidates for employment in the investment management profession, and it is expected that some of the participating firms will use their visits to identify candidates for summer internships, obtaining relevant summer internships remains the responsibility of the students.

NBA 5420 Investment and Portfolio Management 3.0 credits

NBA 5830 Capital Markets and Asset Management Practicum 2.5 credits

NBA 6560 Valuation Principles 1.5 credits

NCC 5040 Managing and Leading in Organizations 2.5 credits

NCC 5080 Managing Operations 2.5 credits

Highly recommended courses for CMAM Immersion:

NBA 5000 Intermediate Accounting 3.0 credits

NBA 5060 Financial Statement Analysis 1.5 credits

NBA 5110 Financial Modeling 1.5 credits

NBA 6730 Derivatives I 1.5 credits

SMI—Strategic Marketing Immersion

Limited enrollment. Prerequisites: NCC 5000, 5010, 5020, 5030, and 5060; permission of instructor.

Full-time program for the semester; students are not able to take other courses concurrently. The course objective is to begin developing students to think and act like brand managers, some of the best trained and most upwardly mobile professionals in industry. It provides students with a unique opportunity to begin internalizing the concepts, principles, and tools necessary to achieve success in brand management. While the course focuses on managing traditional consumer brands, high-tech products, services, and global branding are also addressed. In-class methods consist of (1) academic and industry lecturers; (2) on-site visits with marketing and manufacturing professionals; (3) case and project discussions and presentations; and (4) a brand management simulation. Course requirements consist of (1) discussion of readings; (2) individual case write-ups and presentations; (3) group projects and presentations (including a capstone simulation); and (4) in-class exams. There is considerable off-campus travel for field study.

NBA 5020 Managerial Cost Accounting
3 credits

NBA 6200 Marketing Research
3 credits

**NBA 6240 Brand Management—
Practicum**
4.5 credits

**NCC 5040 Managing and Leading in
Organizations**
2.5 credits

NCC 5080 Managing Operations
2.5 credits

SSO—Semester in Strategic Operations

Limited enrollment. Prerequisites: NCC 5010 and 5060 for Johnson School students; permission of instructor.

Full-time program for the semester; students cannot take other courses concurrently. The course is concerned with the integration of technological, human-resource, logistical, and financial considerations to produce a manufacturing enterprise that can respond quickly and effectively to market requirements. The course is taught by a team of faculty and industrial practitioners, and much of the student work is team oriented. There is off-campus travel for field study of various manufacturing plants.

NBA 5020 Managerial Cost Accounting
3 credits

**NBA 6410 Logistics and Manufacturing
Strategy**
3 credits

**NBA 6500 Semester in Strategic
Operations Practicum**
4.5 credits

**NCC 5040 Managing and Leading in
Organizations**
2.5 credits

NCC 5080 Managing Operations
2.5 credits

E&PE—Entrepreneurship and Private Equities Immersion

Comprehensive course that integrates the technical, strategic, and economic aspects of entrepreneurship; is the student's full course load for the semester. David J. BenDaniel, the Don and Margi Berens Professor of Entrepreneurship at the Johnson School, leads the faculty team for this immersion.

NBA 5020 Managerial Cost Accounting
3.0 credits

**NBA 5320 Due Diligence in Private
Equity Investments**
0.5 credits

**NBA 5590 Venture Capital Industry and
Private Equity Markets**
0.5 credits

**NBA 5640 Entrepreneurship and Private
Equity—Practicum**

NBA 6530 Strategic Alliances
1.0 credit

NBA 6560 Valuation Principles
1.5 credits

**NCC 5040 Managing and Leading in
Organizations**
2.5 credits

NCC 5080 Managing Operations
2.5 credits

SGE—Sustainable Global Enterprise

The SGE immersion provides students with a breadth and depth of knowledge and experience relating to the broad impact of social and environmental issues as well as the strategic opportunity these issues present to firms across a number of industries. Students will spend much of their time in field projects that require them to address real problems currently being faced by companies who expect to receive practical, operational solutions.

NBA 6030 Sustainable Global Enterprise
1.5 credits

**NBA 6580 Sustainable Global Enterprise
Practicum**
3.5 credits

**NCC 5040 Managing and Leading in
Organizations**
2.5 credits

NCC 5080 Managing Operations
2.5 credits

*Note: Students electing to take the immersion must choose a minimum of five (5) additional credits of course work from the recommended electives list of Johnson School courses or other courses from other programs at Cornell. Course availability is subject to scheduling.

NCC COMMON CORE COURSES

NCC 5000 Financial Accounting

Fall. 2.5 credits. Johnson School core course. Limited enrollment. Non-Johnson students see NCC 5500. R. Libby. Introductory accounting course that examines the subject from the viewpoint of users external to the organization. Topics include transaction analysis; the accounting cycle; financial-statement preparation, use, and analysis; revenue recognition and cost measurement; present value; and problems in financial-accounting disclosure.

NCC 5010 Statistics for Management

Fall. 2.5 credits. Johnson School Core Course. Limited enrollment. A. Farahat. This course provides the foundations of probability and statistics required for a manager to interpret large quantities of data and to make informed decisions under uncertainty. Topics covered include decision trees, sampling, hypothesis testing, and multiple regression.

NCC 5020 Microeconomics for Management

Fall. 2.5 credits. Johnson School core course. Limited enrollment. R. Frank and M. Waldman. Introduces microeconomic theory and applies it to problems faced by managers. Topics include supply and demand, consumer behavior, pricing when a firm has market power, and the role of contracts. The course employs a lecture format and emphasizes problem solving. Grading is based on a midterm and a final exam.

NCC 5030 Marketing Management

Fall. 2.5 credits. Johnson School core course. Limited enrollment. Non-Johnson students see NCC 5530. S. Gupta and V. Narayan.

Designed to convey the key concepts of marketing and how they fit into the larger context of management strategy and decisions. Presents both the practical "how" and the fundamental "why" of marketing activities in the light of contributions from behavioral science, economics, and statistics. The goals are to provide sufficient understanding for those who need only to interact with the marketing function, as well as communication concepts and developing processes that can provide the foundation for further course work and future experience in marketing. The course makes extensive use of case materials.

NCC 5040 Managing and Leading in Organizations

Spring. 2.5 credits. Johnson School core course. Limited enrollment. Non-Johnson students see NCC 5540. K. O'Connor and S. Spataro.

Stories are central to how we know and remember events, people, and facts and to how we communicate knowledge and history. Most of the jobs we aspire to involve a particular form of storytelling—the CEO's vision, the analyst's report, the planner's strategy, the salesperson's pitch, the consultant's analysis, and the manager's brand. What distinguishes these as business stories is that they are often analytical (based on a set of objective facts and statistics) and reflect a deep understanding of the complex interactions of individuals and organizations. This course has two goals: (1) to make students appreciate the complexity of the issues that often arise in organizations, and (2) to develop and refine students' analytical storytelling abilities. To achieve these goals, the course is taught by the case-study method, an efficient way to expand the student's experience base with respect to such issues as motivation, power, leadership, ethics, structure, design, and change. Students learn how to make good inferences about what will and won't work in particular situations, and how to learn from their own experiences and those of others.

NCC 5060 Managerial Finance

Fall. 2.5 credits. Johnson School core course. Limited enrollment. Non-Johnson students see NCC 5560. R. Michaely. Introduces students to the basic concepts of finance. In particular, the course addresses what type of investments firms and individuals should take on and how these investments should be financed. Understanding these concepts is essential to financial managers and professional investors and has important applications to many aspects of financial decisions all of us have to make on a daily basis (e.g., is getting an M.B.A. a good investment?). These issues involve capital budgeting decisions, stock and bond valuation, how to assess and account for risk through the capital asset pricing model (CAPM), option pricing, capital structure and cost of capital, and market efficiency. Grading is based on exams, quizzes, group case reports, homework, and class participation.

NCC 5080 Managing Operations

Spring, 2.5 credits. Johnson School core course. Limited enrollment. Prerequisite: NCC 5010 or permission of instructor. Non-Johnson students see NCC 5580. N. Gavirneni and V. Gaur.

Focuses on managing processes: actions that convert inputs into outputs. Almost any business function can be modeled as a network of processes. The first part of the course examines processes, both individually and as part of a larger system; students see that good process design reflects both the volume and the variety of the product. A common course theme is the deleterious effect of variability (in demand, supply, quality, or capacity) in complex systems. Queuing theory and simulation are particularly helpful for analyzing process capabilities. The second part analyzes how goods and services are produced. After describing the strategic role of operations, it examines forecasting systems, inventory management, and just-in-time and logistic management. Constrained optimization models provide information about managing with finite resources. The final part examines process improvement through quality and productivity management and corporate learning.

NCC 5090 Strategy

Fall, 2.5 credits. Johnson School core course. Limited enrollment. Non-Johnson students see NCC 5590. V. Kadiyali and H. Schneider.

Among the critical tasks facing any senior manager are the creation, implementation, and evaluation of a business unit's strategy. This course seeks to provide the management student with the tools and frameworks essential to carrying out these tasks. Many of these tools and frameworks are based on recent advances in game theory, industrial organization, and organization theory, although the course also draws from the older business policy tradition. Students who successfully complete this course are able to analyze industries, identify areas of strategy advantage and disadvantage, and devise strategies that exploit advantages and remedy disadvantages.

NBA MANAGEMENT ELECTIVE COURSES

Accounting

NBA 5000 Intermediate Accounting

Spring, 3 credits. Prerequisite: NCC 5000 or equivalent. M. Nelson and R. Swieringa. This course is relevant to a general business career, but is particularly relevant to careers that involve the use of financial statements. Our objective is to enable you to become more knowledgeable, skeptical consumers of financial information by teaching you to (1) understand and be able to reconstruct the accounting that produced the numbers you see in financial statements and the financial press, and (2) anticipate circumstances where financial information is likely to be biased or imprecise, in part by understanding the alternatives that were available at the time that a choice among accounting treatments was made. This objective will be achieved by a combination of lectures and analyzing and discussing articles from the financial press and cases that are based on actual financial statements.

NBA 5010 Taxes and Business Strategy

Spring, 1 credit. Prerequisites: NCC 5000 and NCC 5060. E. Maydew.

Part of being financially savvy is having an understanding of how taxation affects business decisions; e.g., forming a corporation and raising capital, operating the firm, distributing cash to shareholders through dividends and share repurchases, expanding through acquisition, and divesting lines of business. Taxes have a direct impact on cash flow and often divert 30 to 40 percent of the firm's pretax cash flow to the government, effectively making the government the single largest stakeholder in many firms. Having an understanding of taxation and how firms plan accordingly is important for just about any career path you choose, whether you will be an investment banker, venture capitalist, consultant, money manager, CFO, treasurer, controller, taking over a family-owned business, or an entrepreneur setting up a new business. Topics include tax planning fundamentals, corporate tax fundamentals, taxation of mergers and acquisitions, taxation of divestitures, international taxation, taxes and wealth planning.

NBA 5020 Managerial Cost Accounting

Fall, spring, 3 credits. Prerequisites: NCC 5000, 5010, and 5020, or equivalent.

R. Hilton and R. Bloomfield.

Designed both for those responsible for internal accounting information and those who use such information for decision making and performance evaluation. Course topics include budgeting, product costing systems, activity-based costing, activity-based management standard costing, cost variance analysis, cost estimation and prediction, cost-volume-profit analysis, responsibility accounting, performance evaluation, non-manufacturing cost analysis, cost allocation, and transfer pricing. Instruction is a mixture of lecture and case discussion. Student evaluation is based on a midterm exam, a final exam, and class participation.

NBA 5030 Strategic Cost Management

Fall, 1.5 credits. Prerequisite: NBA 5020 or permission of instructor. R. Hilton.

Focuses on the concepts and tools of cost management systems and the relationship of cost management to an organization's strategy. Based on cases that explore the use of cost management concepts and tools in a variety of organizations. Course topics include target costing, process value engineering, Kaizen costing, cost reduction, continuous improvement, cost-quality-functionality trade-offs, construction and implementation of a balanced scorecard, activity-based costing, activity-based management, identification of value-added and non-value-added costs, and the value chain. Instruction is based on the presentation and discussion of cases. Student evaluation is based on a case presentation, a final case write-up, and class participation.

NBA 5060 Financial Statement Analysis

Fall, spring, 1.5 credits. Prerequisite: NCC 5060, NBA 5000 (or concurrent enrollment), or permission of instructor. N. Yehuda and C. Nichols.

Develops a set of core skills essential to financial statement analysis. Covers strategic ratio analysis, cash flow analysis, pro forma financial statements, financial modeling, credit analysis, bond rating and bankruptcy predictions, and firm valuation using discounted cash flow techniques. Emphasizes practical applications. The course format is a

combination of case studies and lectures. The lectures communicate subtler aspects of the material while the cases provide hands-on experience.

NBA 5090 Advanced Financial Statement Analysis

Fall, 1.5 credits. Prerequisites: NBA 5060, finance immersion course, or permission of instructor. Not open to students who have completed 3-credit version of NBA 5060. N. Yehuda.

Builds on the core financial analysis skills developed in NBA 5060. Topics include trading strategies, relative (multiple) valuation, mergers and acquisitions-consolidated statements, deal structure, strategic deal pricing, joint ventures and alliances, holding companies and segments, credit and bankruptcy analysis. The overall focus is on using accounting-based information to make investment decisions. The class is case based with a strong emphasis on practical applications. There is no final exam.

NBA 5110 Financial Modeling

Fall, spring, 1.5 credits. Prerequisites: NBA 5060 or permission of instructor; mastery of basic Excel skills. J. D'Souza and C. Nichols.

Financial modeling is the art and science of constructing spreadsheet models of firms' future financial statements. This course builds on the brief introduction to financial modeling in NBA 5060 by modeling the effect on the income statement, balance sheet, and statement of cash flows of more complicated financial transactions such as leveraged buyouts, mergers and acquisitions, and corporate reorganizations. The class meets in the state-of-the-art Parker Center computer lab, and active student participation is emphasized.

NBA 6060 Evaluating Capital Investment Projects

Spring, 1.5 credits. Prerequisites: NCC 5060. M. Leary.

This course focuses on the financial-economic analysis of corporate investment decisions. One of the most important decisions a firm makes is how to best allocate its capital resources. Both financial and nonfinancial managers alike need to be able to analyze and communicate the value impact of proposed capital expenditures and strategic decisions. Using both financial theory and case examples, we will explore such topics as discounted cash flow analysis, alternative decision criteria, mutually exclusive investments, lease vs. buy decisions, monte-carlo simulation and real options. This course is especially useful to anyone preparing for a career role with input to business investment decisions, including marketing, operational and corporate financial managers.

Economics

NBA 5240 Macroeconomics and International Trade

Fall, spring, 3 credits. Prerequisite: NCC 5020 or equivalent or permission of instructor. O. Heffetz and I. Azis.

Applies basic macroeconomic theory to such problems as inflation, unemployment, economic growth, and productivity and examines how those problems interact with international trade and finance. Students learn to be informed observers of national and international economic policies and discerning users of economic analyses and forecasts. Uses a lecture/discussion format.

NBA 5270 Applied Economic Analysis

Spring, 4 credits. B. Ho.

Emphasizes how economic analysis can help firms and individuals make the most of their opportunities. Of special interest to managers and consultants is the focus on examples that illustrate how faulty economic reasoning leads to inefficient outcomes. Also emphasizes strategic thinking and instructs students in the art of "economic naturalism"—the use of economic reasoning to understand and explain everyday patterns of individual and firm behavior.

Entrepreneurship**NBA 5190 Sustainability as a Driver for Innovation in the Entrepreneurial Organization**

Spring, 1 credit. F. Keller.

This one credit eight-session course will give the student an overview of the emerging sustainable business model. Using the teacher's business as an example along with appearances from other business leaders, the class focuses on principles of Sustainability and how leaders are transforming their own organizations. While the U.S. version of capitalism has succeeded in providing unprecedented wealth throughout the 20th century, this class will evaluate the potential of "tweaking" capitalism to benefit not only the owners but the whole of society in a manner different than "trickle" economy. Using the Hegelian notion of thesis, antithesis, and synthesis, this class will explore capitalism as practiced today as the thesis. The antithesis will be from environmental and social movement concepts. The principles of sustainability will be synthesized as the potential "new normal" for business in the future. Students will learn that in addition to traditional financial analysis, business decisions can benefit from taking into account the impacts of social capital and ecological capital as well. Students will learn using dialogue and presentations about actual cases and the logic of how the sustainable business model is being constructed.

[NBA 5300 Entrepreneurship Lab

Fall, 3 credits. Prerequisites: M.B.A. students; NBA 5640 or concurrent enrollment or permission of instructor. G. Schneider.]

NBA 5320 Due Diligence in Private Equity Investments

Spring, 0.5 credits. D. BenDaniel.

This is an arranged course featuring expert practitioners covering the following topics: Integrating Strategic Planning into Private Equity Due Diligence, Operational Due Diligence, Effective People and Organizational Due Diligence, Review of Non-Compete and Other Key Agreements, Legal Due Diligence, Tax Planning, and Financial and Accounting Due Diligence. Because of the large enrollment expected and at the request of the visiting faculty, only students who are prepared to attend all the required sessions will be admitted and can receive credit for the course.

NBA 5570 Case Studies in Venture Investment and Management

Fall, 1.5 credits. D. BenDaniel.

Consists of a series of cases that focus on the venture capital investment process and the subsequent management of such ventures. The primary perspective is that of the venture capitalist in assembling and evaluating

information, preparing forecasts, assessing risks, developing and negotiating investment structure and terms, and deciding whether to invest. Cases also focus on management and financial problems and on policy issues and the relationship between venture capitalists and entrepreneurs. The secondary perspective is that of the entrepreneur and the techniques and skills employed in managing growing enterprises. Presentations by venture capitalists and entrepreneurs supplement student discussion and analysis of cases. Grades are based on written reports, quality of classroom participation, and a final exam.

NBA 5590 The Venture Capital Industry and Private Equity Markets

Spring, 0.5 credit. D. BenDaniel.

Four lectures (two on Friday afternoon, two on Saturday morning) will be given by Jesse Reyes, former vice president of research for Thompson's venture capital data subsidiary. The lectures will focus on the venture capital and private equity industries from the practitioners' perspective. Topics include (1) an introduction to the private equity market focusing on the transactions that define the industry, its structure, participants, history, and trends; (2) institutional private equity investing—now an increasingly important and dynamic part of the asset allocation mix; (3) issues in private equity investing such as concentration in fewer, larger funds; and (4) the critical role of a new class of gatekeeper/consultants for limited partners. There will be a final paper.

NBA 5630 The IPO and Mergers and Acquisition Process

Fall, 3 credits. T. Willett.

Gives students an in-depth look at initial public offerings and deal structures from a practitioner's point of view. With respect to initial public offerings, the course covers the applicable statutory framework, pre-offering corporate preparations, the due diligence process, the implementation of corporate governance policies appropriate for a public company, the offering registration process, liability under federal securities laws, the Securities and Exchange Commission review process, underwriting arrangements, and selection of a trading forum. Regarding deal structures, the course explores choosing an appropriate transaction structure, deal financing alternatives, due diligence, public company transaction issues, and crucial legal aspects of the acquisition, such as caps/collars, letters of intent, successor liability, continuity of employees, and noncompetition agreements.

NBA 5640 Entrepreneurship and Private Equity

Fall, spring, 3 credits. D. BenDaniel and S. Gaul.

This course uses lectures and live case studies to address entrepreneurial management in start-up ventures and private equity investments. Topics include valuation and growth management of start-up ventures, buying and selling businesses, leveraged buyouts, and business plans produced by student teams. Guest lecturers speak on specialized topics such as boards of start-up companies, distressed businesses, real estate investment, and entrepreneurial marketing. The lectures and cases are in the first half of the semester and the business plans are developed in the second half. The course attempts to integrate marketing, finance,

operations, and human-resource topics in the context of high-growth business ventures and business ventures and private equity.

NBA 6180 Global Innovation and Technology Commercialization

Spring, 1.5 credits. W. Sine.

Examines technology commercialization from an investor's point of view. Will address issues related to intellectual property, recognizing and screening opportunities, exploiting technology opportunities, and marketing high technology. Case studies and discussions with practitioners will be used to examine this topic.

NBA 6530 Strategic Alliances

Spring, 1 credit. J. Suwinski.

A wide variety of strategic alliances are being used today as companies try to leverage their resources for competitive advantage. This course gives an overview of the spectrum of alliances, examining the strategic rationale and pros and cons of each major type of alliance. The primary focus is on joint ventures as a specific form of strategic alliance, where the success rate is less than 50 percent. The course develops a set of principles that have contributed to success for Corning Incorporated. The course is taught from the perspective of the general manager of a major business unit.

NBA 6780 Advance Private Equity; Negotiations and Structuring

Spring, 1.5 credits. Prerequisites: NBA 5640, NBA 3000, or permission of instructor. Staff.

Focuses on venture capital financing, including the problems and issues facing emerging growth companies as they progress from early stage, start-up status to mature public companies. Emphasizes practical skills: hands-on examination, for example, of how deals are negotiated and valuations arrived at, the principal focus being the so-called Series A, or first professional, round of financing. Views the early stage space from three perspectives: (1) the entrepreneur, or founder, (2) the professional investors, or VCs, and (3) the key executives, i.e., the major players in emerging growth finance. Reviews economics, finance, tax, securities, corporate and employment law considerations, and custom and usage in the industry.

NBA 6890 Law for High-Growth Business

Fall, 3 credits. Z. Shulman.

In-depth analysis of key issues that an emerging high-growth business must consider and address, including (1) choosing type of business entity, (2) protecting confidential information and inventions, (3) sources of capital, (4) understanding capitalization structures (e.g., common stock, preferred stock, preferred stock terms and economics), (5) using stock options as employee incentives, (6) fundamental fair employment practices, (7) proper establishment and use of boards of directors and advisory boards, (8) structuring convertible debt for start-ups, (9) bribery and the Foreign Corrupt Practices Act, and (10) dealing with lawyers.

Finance

NBA 5120 Applied Portfolio Management

Fall, spring. 3 credits each semester. Limited enrollment. Students must commit to taking course in fall and spring semesters. Priority given to second-year M.B.A.s who successfully completed either NBA 5060 or finance immersion. Students must apply formally; if number of applicants exceeds 12, admission is competitive and merit-based. S. Bhojraj.

Focuses on the management of an investment fund. For full description, see Sanjeev Bhojraj.

NBA 5130 International Finance Cases

Spring. 1.5 credits. W. Bailey.

International finance is different because of two issues, exchange rate volatility and barriers to the flow of capital. Furthermore, political risk is heightened when money crosses borders, and governance, disclosure, law, and regulation are more varied than in a single-country context. The purpose of this course is to practice applying the ideas and methods of finance to cross-border problems. The course is centered on six cases including discussions of related research and other materials.

[NBA 5210 Advanced Valuation: Mergers, Acquisitions, and Chapter Restructuring]

NBA 5400 Advanced Corporate Finance

Fall. 3 credits. Prerequisite: NBA 5060 or equivalent. Staff.

Relevant for both investment banking and the treasurer's activities of an operating corporation. Most class sessions are lecture-discussion, but there will be several corporate finance cases. Topics include debt securities (duration, convexity, inverse floaters, bond refunding, term structure), convertible debt, capital structure, distribution policy, exotic new securities, financial strategies, and the buy versus lease decision. Investigates corporate financial policy decisions from a normative-quantitative point of view and develops skill in formulating financial models and evaluating models. Uses basic mathematics.

NBA 5405 Advanced Corporate Finance

Spring. 1.5 credits. H. Bierman.

This course is relevant for banking, investment banking, security analysis, and the financial activities of an operation corporation. Class sessions are lecture-discussion and a very few cases. We will investigate corporate financial policy decisions from a normative-quantitative point of view and develop some skill in formulating financial models, and in evaluating financial models. The mathematics used is basic algebra. We want to develop an approach to the analysis of financing decisions of corporations. The time spent on each topic will depend on how long each topic takes. There will be several class leaders from the real world talking to the class, as well as visitors.

NBA 5420 Investment and Portfolio Management

Spring. 3 credits. Prerequisite: NCC 5060, NCC 5560, or an equivalent core finance course. G. Saar.

This course emphasizes both conceptual foundations and practical implementation. The material in the course would be helpful to anyone interested in investing. However, the course should be especially useful to students

interested in an investment management career (e.g., portfolio management in mutual funds and hedge funds, equity research, equity trading, risk management, investment consulting, and investment banking). After a brief review of fundamental issues (such as the risk/return trade-off), the course contains an extensive module on strategic asset allocation with a focus on practical implementation. The course continues with an exposition of certain approaches to tactical asset allocation. The remainder of the course focuses on topics relevant to security selection and optimal portfolio construction. The course contains an extensive discussion of equity multifactor models and screening, with applications to value and growth investing. The course highlights trends in the investment management industry and introduces terminology and tools familiar to investment professionals.

NBA 5430 Financial Markets and Institutions

Fall, spring. 3 credits. Prerequisite: NCC 5060. W. Bailey.

Applies principles of finance to understand modern financial markets. Central themes are the structure of financial markets, their pricing function, the interaction between financial markets and macroeconomic conditions, and the processes of innovation and regulation in these markets. Students look at the workings of a variety of markets and develop an understanding of the different problems that different types of markets address. Studies the question of market efficiency and the interaction between government policies and financial markets. Analyzes issues in innovation and regulation with basic principles of financial economics. Throughout the course, the relevance of these issues for the practical corporate, portfolio, or public sector decision maker is considered. The course includes ideas and evidence from academic research along with historical, institutional, and international perspectives. Recent events are used to illustrate concepts and develop analytic skills. Spreadsheet assignments and a term project requiring data analysis develop research skills and illustrate academic concepts. Exams consist of computational, short answer, and short essay questions.

NBA 5450 The Search for Alpha

Fall. 1 credit. R. Marin.

This course will focus on the fundamental trends under way in the asset management industry. While it will start with an overview of the investment management industry, it will move quickly toward a review of the more recent growth in hedge funds. Given the attention that the investment management industry (not to mention the world at large) has put on hedge funds and the relatively unregulated and secretive nature of the breed, the course will seek to answer the question of what exactly is going on in the industry and where it is going. The intention will be to give students an overview of the hedge fund space from the perspective of what comprises it, who the participants are (managers, investors, support areas, and intermediaries), how hedge funds are assessed and measured both individually and in portfolio, how investors access hedge funds, and what major issues face the industry.

NBA 5460 Liability Driven Alpha

Spring. 1 credit. R. Marin.

This course will focus on the fundamental trends underway in the pension management industry. This \$3 trillion arena has, from before the creation of ERISA to the present day, been managed in a very homogenous manner with similar investment approaches and very questionable results. The convergence of accounting, regulatory, and market forces is forcing change upon the industry in a way that will impact a broad range of service providers and potential investors, and indeed the underlying company plan sponsors and the very participants they serve. These changes will produce major dislocations and opportunities for asset managers, investment bankers, insurance companies, private equity firms, hedge funds and a whole array of processing companies. Given the demographics of the aging baby boomer population and the looming crisis in global retirement funding, this may prove to be a bellwether issue in finance and social policy for the next decade. The changing regulatory and accounting rules that govern defined benefit plans will be reviewed with emphasis on the Pension Protection Act of 2006, FAS 158 (Phases I and II) and the convergence of U.S. and international accounting standards in this arena.

NBA 5470 Operational Alpha

Spring. 1 credit. R. Marin.

This course will focus on the elements of the asset management industry that most critically add to success, but that are outside the traditional realm of investment strategy. It is generally understood today that risk is comprised of many elements and includes a significant component of operational risk. There are operational elements of the investment process that clearly add or detract significant value from returns just like operational risk can add to or detract from overall risk. These operational elements that add to return can be called operational alpha and the more mature a market or investment strategy becomes, or the more difficult the return environment, the more important operational alpha becomes.

NBA 5520 Cases in Corporate Finance

Fall. 3 credits. Prerequisites: second-year M.B.A.s and Accelerated M.B.A. (AMBA) students; NCC 5060 or equivalent.

H. Bierman.

We will develop an understanding of the theories of corporate finance and have discussions of corporate finance cases. Cases and lectures deal with mergers, acquisitions, valuation, corporate restructuring, LBOs, MBOs, distribution policies, and the financing of corporations. The material applies to careers in investment banking, managerial finance, and top-level executives. Several executives working in or with corporate finance will present cases. The goal is to develop a skill in analyzing the financing decisions of corporations.

NBA 5540 International Finance

Spring. 3 credits. Prerequisite: NCC 5060 or permission of instructor. W. Bailey.

Applies principles of finance to the international setting. International finance is different in two basic respects: (1) the existence of multiple currencies adds risk to investment and financing decisions; (2) when corporations and portfolio investors cross international borders, both problems and opportunities arise. This course focuses on these issues and highlights how finance theory

can be extended to address them. Students apply the basic principles of international finance to a variety of problems. The course helps students understand the ideas and research results of international finance and adapt what they learn to the practical problems in the increasingly globalized business world. The first part of the course outlines exchange rate volatility, barriers to international capital flows, and the value of international diversification. The second part presents a variety of problems, examples, and applications from the three basic themes described in part one. Spreadsheet assignments and a term project requiring data analysis develop research skills and illustrate academic concepts. Exams consist of computational, short answer, and short essay questions.

NBA 5550 Fixed-Income Securities and Interest Rate Options

Fall. 3 credits. Prerequisites: NCC 5060, NCC 5010. R. Jarro.

Designed to study the pricing, hedging, and risk management of fixed-income securities and interest rate derivatives. Topics include the term structure of interest rates, interest rate swaps (caps, floors, collars), the risk structure of interest rates, credit risk spreads, and corporate bond valuation. The method of instruction is lectures and discussion, and computer illustrations are an integral part of the course content.

NBA 5580 Corporate Financial Policy

Fall, spring. 1.5 credits. Prerequisite: NCC 5060. Y. Grinstein and M. Leary.

Provides an understanding of the financial decisions of corporations. Discusses the factors that affect corporate financial decisions and how they determine firms' financing, investment, and hedging policies. These factors include taxes, transaction costs, contracting (between managers and shareholders and between shareholders and other claimholders such as bondholders), and asymmetric information. Much of the material is presented using examples and cases designed to demonstrate how financial decisions create, destroy, or modify value.

NBA 5650 Corporate Governance

Spring. 1.5 credits. Prerequisites: NCC 5060 and NBA 6560 or permission of instructor. Y. Grinstein and R. Swieringa.

Deals with the ways in which different investors assure themselves of getting a return on their investments. How do investors get managers to return some of the profits to them? How do they make sure that managers do not invest their money in bad projects? These questions are extremely relevant for almost any organization, from start-ups to Forbes 500 companies. This course explores these issues through a series of case studies and examples. Topics depend on time availability. Career focus: M.B.A. students aspiring to top corporate offices, regardless of functional area, or envisioning a career in M&A/investment banking, financial management, or consulting firms.

NBA 5850 Advanced Topics in Valuation

Fall. credits TBD. Prerequisite: NBA 6560 or equivalent. W. Rehm.

NBA 5850 is an entirely case-base class that builds on the core valuation class. Students will apply the principles of corporate valuation (DCF, APV, and multiples) to several real-life companies in different industries. We will address how to adjust "normal" valuation

method—what to do when the standard approach gives strange results. The goal is to prepare students for "real life" valuations of complex, multibusiness-unit companies. Teams of four students will prepare a case for each class. We will spend about one-third of each class on the prepared case, one-third on key technical issues, and one-third on an introduction to the next industry.

NBA 5980 Behavioral Finance

Spring. 3 credits. M. Huang.

Traditional finance theories assume that financial market participants are rational, and argue that the financial market is always efficient. Behavioral finance, on the other hand, argues that some financial market phenomena can plausibly be understood only under the assumption that some market participants are not fully rational. This course gives an introduction to behavioral finance. Introduced to the conceptual framework of behavioral finance, and then apply the framework to study a wide range of issues in asset pricing, investment, and corporate finance. Topics covered in the course include investor psychology and behavior, limits of arbitrage, aggregate market timing, anomalies in stock portfolio returns (including value, momentum, size, and many other effects), professional money management, corporate issuance, mergers and acquisitions, investment banking, and earnings management. As a summary of the course, we will apply the conceptual framework of behavioral finance to understanding China's financial market.

[NBA 6550 Advanced Valuations]

NBA 6560 Valuations Principles

Fall, spring. 1.5 credits. D. Weinbaum.

Deals with the principles of valuation for publicly traded firms, divisions of publicly traded firms, or private firms that have publicly traded comparables, using discounted cash flow (DCF) valuation. The definitions of cash flow and discount rate depend on whether we want to value the entire firm or value only equity. Discusses (1) how to compute free cash flows based on historical income statements and balance sheets; (2) the concept of value drivers and economic value added (economic profits or residual income); (3) operating risk and financial risk, the relation between financial leverage and cost of capital, the levering and unlevering of equity betas, capital asset pricing model, computing cost of equity, cost of debt, cost of preferred stock, weighted average cost of capital, divisional cost of capital, etc. These concepts are applied; (4) to computing cost of capital. Introduces valuation by multiples using comparables and discusses its applications to valuing divisions of multibusiness firms.

NBA 6730 Introduction to Derivatives, Part 1

Fall, spring. 1.5 credits. Prerequisite: NCC 5060 or permission of instructor. X. Zhang.

Introduces students to the pricing and hedging of derivative securities. Briefly covers forward contracts, futures contracts, and swaps. The primary emphasis is on option contracts. Underlying assets include stocks, currencies, and commodities.

NBA 6740 Introduction to Derivatives, Part 2

Fall. 1.5 credits. Prerequisite: NCC 5060 or permission of instructor. X. Zhang. For description, see NBA 6730.

NBA 6940 Equity Derivatives and Related Products

Fall. 3 credits. M. Zurack.

Relying on quantitative techniques and practical experiences, this course attempts to provide an in-depth analysis of how equity derivatives and related products are structured, valued, and used by all types of investors globally. Students attending this class will learn many real-world applications of these products, which they should find useful in equity sales and trading, private wealth management, investment management, as well as Investment Banking pursuits. The course is broken into the following sections: Exchange Traded Funds, Futures Portfolio Trading and Swaps; Equity and Credit Options and Convertibles; Strategies; Non-U.S. Markets.

General Management

NBA 5140 Ethics and Corporate Culture

Spring. 1.5 credits. D. Radcliffe and B. Wendel.

In the high-pressure worlds of business and law, all too often good people do bad things. In many cases, the unethical behavior is due in part to a "toxic" corporate culture. The attitudes, values, and practices that prevail in their organizations induce otherwise ethical employees to take actions that violate widely shared norms of conduct. Such behavior can be costly—even disastrous—leading to ruined careers, tarnished corporate reputations, and legal liability for the individuals and their companies. In an environment where "only results matter," it can be difficult for a new M.B.A. or law school graduate to recognize the risks. If she does see the dangers, she may still find it hard to avoid them. This course seeks, first, to help M.B.A. and law students understand how a firm's culture can tempt—or push—employees into unethical behavior. Second, the course aims to acquaint students with strategies for dealing with ethical challenges posed by a problematic corporate culture. Class sessions include discussion of case studies and articles reporting on relevant research in organizational behavior, as well as talks by noted guest speakers from the fields of business and law. Since managers and attorneys frequently work together, team projects require collaboration among M.B.A.s and law students, as they bring both business and legal perspectives to bear on tough ethical issues. Course grades are based on class participation and several short writing assignments (individual and group).

NBA 5250 Energy and the Environment: An Economics Approach

Spring. 3 credits. Prerequisite: NCC 5020. B. Ho.

Energy use and its impact on the environment will be two of the most important issues of the 21st century. The large role of energy in geopolitical relationships combined with the fact that most of the greenhouse gas emissions associated with global climate change come from energy production, means the energy sector is poised for dramatic change, and thus great opportunity. This course is designed to be a primer for potential entrepreneurs, investors, managers and policy makers on energy and environmental issues. We will consider the economic, social, political, and strategic realities of the energy sector using political/economic analysis, and strategic case analysis. Topics will include environmental economics, energy economics, environmental

ethics, the politics of energy, NGO activism, climate change, the oil sector, the electricity sector, alternative energy, the international context, and sustainability.

NBA 5330 Management Cases and Consulting Process

Spring, 3 credits. N. Peck.

The objective of the course is to prepare first-year students for summer internships and careers in consulting and general management by developing their analytic skills and understanding of project-oriented business problems. Students will be expected to answer case questions and present solutions in class. In addition, a semester-long case study of a consulting project will be conducted with teams providing proposal, interim, and final presentations.

NBA 5600 Business Law I (also AEM 3200)

Fall, 3 credits. Requirement for students intending to be professional accountants. Highly recommended for finance students. Prerequisite: junior, senior, or graduate standing. D. Grossman.

Introduces the basic tenets of law as they apply to businesses and their operations. Topics include personal property, contracts, agency, and real property. Uses text readings and case studies.

NBA 5610 Business Law II (also AEM 3210)

Spring, 3 credits. Prerequisite: NBA 5600 or permission of instructor. D. Grossman.

The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited-liability companies. The second portion covers selected topics in business law, such as employment discrimination, secured transactions, product liability, unfair competition, and international business law.

NBA 5620 Estate Planning (also AEM 4220)

Fall, 14 sessions. 1 credit. Prerequisite: junior, senior, or graduate standing. D. Grossman.

Covers law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and probate procedures.

NBA 5670 Management Writing

Fall, spring, 1.5 credits. Priority given to M.B.A. students; open to other graduate students and employee degree candidates if room. B. Mink, C. Rosen, and A. Noble-Grange.

Students learn to write clearly and effectively by focusing on the writing process as well as the finished product. Topics include audience perspective, style, organization, strategy, and persuasion. There is a writing assignment every week. Students receive instructor and peer feedback.

NBA 5680 Oral Communication

Fall, spring, seven weeks. 1.5 credits. Priority given to M.B.A. students; open to other graduate students and employee degree candidates if room. B. Mink, C. Rosen, and A. Noble-Grange.

Focuses on improving the presentation skills of management students. Covers speaking formats, delivery, organization, visual aids, persuasion, and question/answer. Student speeches constitute the bulk of class time, with each student presenting seven or eight

speeches, many of which are video recorded. The small class size allows for significant individual attention and feedback from peers and the instructor.

[NBA 5690 Management Consulting]

NBA 5700 Foundations of Leadership

Spring, 1.5 credits. P. Stepp.

The purpose of the course is to assess the leadership and management skills of students by providing an opportunity to gather feedback on their strengths and developmental needs. The first two days focus on self-awareness and employs several experiential exercises and self-assessment instruments, including: Johnson Leadership 360 Assessment, the Myers-Briggs Type Indicator (MBTI), and the Fundamental Interpersonal Relations Orientation-Behavior (FIRO-B). Class members will be trained in giving and receiving feedback from team members. Activities will include various leadership and team challenges. Professional feedback providers will observe students in group work and provide feedback on their observations and the results of the individual instruments. The final day of the course, students will focus on goal setting for future leadership development.

NBA 5710 Cornell Management Simulation

Fall, 1.5 credits. Prerequisite: second-year M.B.A. students. Not open to students who have completed NBA 5490. S. Smidt.

This computer-based simulation is played by self-selected teams of three or four students who make marketing, production, and finance decisions for one of five companies operating competitively in the same industry. After the first week, during which the rules of the simulation are explained and the software used by each team is demonstrated, the teams make periodic decisions (meeting at their own convenience). At the beginning of the simulation, each team writes a strategic intent paper and, before the results of the last decision have been determined, presents an in-depth analysis of its performance and its strategy for the future in a "board of directors" (BOD) meeting. Grades are based on the value created for the company's shareholders (relative to other firms in the same industry), the team's strategic intent paper, and the instructor's evaluation of team's performance at the BOD meeting. Meetings are periodic throughout the semester.

NBA 5730 Seminar in Sustainable Development

Spring, 1-3 credits, variable. A. McAdams.

Involves readings and discussion of issues in environmental management and features four significant outside speakers on the subject of environmental management. (Students interested in doing consulting projects in environmental management are accommodated in NBA 5750 Management Projects.)

NBA 5740 Management Practicum for AMBA Students

Fall 3 credits. Prerequisite: accelerated M.B.A. (AMBA). R. Allen.

This course would begin in the summer with a relationship meeting with the companies involved as clients. The clients would be recruited between now and then to focus on companies with technology/science content consistent with the background of many of the TMO students. The types of companies we would focus on are ones that are research centric and ideally within driving distance or

closely aligned with the school. The companies need to be willing to commit their resources and support and will provide a two-week internship.

NBA 5750 Management Consulting Projects

Spring, 3 credits. G. Hubbell.

This is a full-semester course designed to apply consulting processes to real business projects. Students will be formed into consulting teams focused on specific strategic, process improvement or operational problems in companies. Consultant in Residence, Greg Hubbell, will teach the course supported by Consultant Advisor, Rich Schneider. The teams will meet together with the faculty advisors on a weekly basis. Sessions will focus on cross-team learning about the application of the consulting process into a variety of consulting engagements. The Consultant Advisor and CIR will also meet as needed with each individual team to work through real-time issues presented by each consulting project. Consulting projects are intended to include local business clients, not-for-profits, as well as large national and multinational companies. At the end of the project, each student and team will receive 360 feedback from the Consultant Advisor, CIR, the client, and other team members.

NBA 5770 The Political, Legal, and Social Environment of Business

Spring, 3 credits. B. Ho.

The course addresses the managerial issues in the political, legal, and social environment of business. Most strategy courses focus on interactions with customers, competitors, suppliers, workers, or financial institutions that occur in market contexts. However, many strategic interactions occur outside of the marketplace. Drawing from research in political economy, this course focuses on integrated strategy in nonmarket environments, i.e., strategy that involves nonmarket constituents and institutions such as governments, non-government organizations (NGOs) and intergovernmental organizations. Topics include: activists, the media, lobbying, the U.S. political system, environmental and other regulation, antitrust, intellectual property, international political economy, trade policy, ethics, and corporate social responsibility.

NBA 5780 Consulting Process

Fall, spring, 1.5 credits. N. Peck.

Focuses on understanding and applying the basic consulting process by covering the elements of a consulting engagement, including selling the engagement, scoping the project, contracting with the client, forming the consulting team, creating consultant/client work teams, defining deliverables, developing a work plan, conducting analysis, creating a communication and change plan, managing the project, overcoming resistance and barriers, developing recommendations, presenting the deliverables/implementation plan, and developing potential follow-on work. The course is organized around a real client engagement, examining the consulting process from the perspective of the case. Several guest speakers from the consulting engagement add both client and consulting perspectives. The course is intended for students with no or limited consulting experience who have an interest in exploring consulting as a career or who want to sharpen their analytical and organizational change skills.

NBA 5790 Cases in Business Strategy

Fall. 1.5 credits. Prerequisite: second-year M.B.A. students. J. Suwinski.

Focuses on the process of effective strategy formulation from the perspective of the general manager of a business unit. Discusses corporate strategy and its interaction with business unit strategies; tools for industry and company analysis; and situational analysis. Complements the core strategy course, with emphasis on understanding and practicing frameworks that are useful in case-based interviews. Draws heavily on the instructor's experience developing strategy for numerous businesses at Corning Incorporated. Guest speakers from industry and strategy consulting firms and from industry present their approaches to strategy and discuss the analytical tools they find most effective in working on business strategy. Students gain experience, via assigned cases, in analyzing business problems/opportunities, using the strategic process to formulate effective business strategies, and in presenting their recommendations in written and oral form. A major case write-up and presentation in a mock board environment at the end of the course gives each student an opportunity to play the role of a strategy consultant working on a real case.

NBA 5810 Management Cases

Fall. 1.5 credits. N. Peck.

This half-semester course will focus on analyzing multidisciplinary business cases from a CEO perspective. The course will develop students' analytical and strategic thinking and their presentation skills for effective communication as executive managers or consultants to executive managers. Students will be expected to answer case questions and present solutions in class.

NBA 6030 Sustainable Global Enterprise

Spring. 1.5 credits. Staff.

Explores the connections between "global sustainability" and business strategy—the unlimited business opportunities in solving the world's most difficult problems. Through a combination of cases, readings, lectures, videos, and simulations, class sessions will engage students in discussions aimed at developing strategy models and applying new strategy tools that incorporate principles of environmental management and social performance.

NBA 6110 Creative Design for Affordability

Spring. 1.5 credits. A. McAdams.

The idea of Creative Design for Affordability is to use product design to help students become more aware of their own creativity and to give them the background necessary to lead or facilitate creative teams in their future careers as managers. Most important, students will be required to actively participate in their teams' creative processes and engage in designing, building, and iterating working prototypes of simple products. Another objective of the course is to give students the tools to understand the product design process as it typically occurs within some of today's organizations. Students will become well versed in real case studies from companies like Kodak and IDEO, and they will come to understand the basics of how to design products that at once appeal to the target customer, meet the customer's needs, and meet the highest quality specifications,

while achieving a level of sustainability through the use of reusable or eco-friendly materials. While achieving all of these goals, students must—above all—design products that are affordable to the consumer.

NBA 6690 Leading Teams

Spring. 1.5 credits. M. Thomas-Hunt.

This course examines the design, management, and leadership of teams in organizational settings. The focus is on the interpersonal processes and structural characteristics that influence the effectiveness of teams, individual behavior in face-to-face interactions, and the dynamics of interpersonal relationships. The purpose of this course is to understand the theory and processes of group and team behavior so that leaders can successfully work with teams. Students who take advantage of everything this course has to offer will become comfortable and adept in leading group and team enterprises. The primary teaching method in this course will be inductive and experiential. Relatively little class time will be devoted to standard lectures. Much of the learning that occurs in the course will involve exercises and simulations that draw on students' current experiences in the class as well as their previous experiences in teams and organizations outside of Cornell.

NBA 6720 Goal Setting for Personal Leadership

Fall. 1.5 credits. Prerequisite: NBA 5700. P. Stepp.

This course is required for the Leadership Focus Program designed as a follow-up to NBA 5700 and will introduce students to "leader as coach." The lasting value of NBA 5700 Foundations of Leadership depends on the amount of follow through students achieve on their personal learning plans (MAPS), learn how to learn about personal behavior change on their own, and learn to coach others. The action learning method will be used to link leadership development to immediate business and personal concerns by challenging participants to practice leadership skills in real world activities. The course will provide structured support for personal change using MAPS plans, establishing learning and development strategies, and receiving feedback and coaching support from peers and practitioners. Students will leave the course with a mission and values statement to help guide and drive personal learning plans, and align them with career aspirations.

NBA 6770 Systems Tools for Sustainable Enterprise, Concepts, Methods, and Applications

Spring. 1.5 credits. Prerequisite: Master students. J. Geurts.

Using readings and cases, this course on strategy making for sustainability introduces the students to modern hybrid interactive processes such as 'systems dynamics group modeling', 'scenario building', 'strategic decision analysis', 'interactive strategic journey designs', and gaming/simulation. Students will get to know and apply the tools mentioned above that can be woven together to form systemic and interactive managerial support processes using both systems analytical and collective learning techniques to assist an organization in policy exploration, decision making, and strategic change for sustainability.

NBA 6900 Sustainable Global Enterprise in Hospitality (also HADM 6690)

Spring. 4 credits. M. Milstein.

An advanced experiential learning course in which students are primarily tasked to work directly with hospitality companies to solve real sustainability-related issues in the marketplace. Projects relate to the greening of current operations (operational), the refurbishment of existing assets and properties (brownfield), and the establishment of new businesses (greenfield). The goal of the course is to provide students with the opportunity to develop and refine critical analysis and decision-making skills related to hospitality management and sustainability through hands-on learning experiences.

NBA 6950 Game Theory and Business Strategy

Spring. 1.5 credits. H. Schneider.

Game theory provides a method for identifying optimal strategies and predicting the outcomes of strategic interactions when players' actions impinge upon each other. Using lectures and in-class games, this course develops the basic tools of game theory as they relate to business situation, and then applies them to business examples and cases. Some of the topics covered include strategic cooperation and punishment between firms, strategic commitments, predatory and limit pricing, entry deterrence, and auctions. The final deliverable is a take-home essay in which you apply the course material to a game theoretic setting of your choice. This course requires only basic mathematics skills, but a familiarity with strategic concepts is recommended.

International Management**NBA 5240 Macroeconomics and International Trade**

Spring. 3 credits. I. Azis.

Applies basic macroeconomic theory to such problems as inflation, unemployment, economic growth, and productivity and examines how those problems interact with international trade and finance. Students learn to be informed observers of national and international economic policies and discerning users of economic analyses and forecasts.

NBA 5480 Global Business Risk Management

Spring. 1.5 credits. E. Iankova.

The aim of this course is to introduce students to the global risks involved in international business operations, and to develop students' general understanding of the field of global risk analysis and management. More specifically, students will get acquainted with the various types of risks that international businesses face in their overseas operations, such as: political risks (asset expropriation, contract repudiation, legal and regulatory risks), macroeconomic risks (taxation risk), market risks (intellectual property theft), financial risks, operational risks (reputation and public image issues), societal risks (activism of international nongovernmental organizations), and everyday risks (corruption). Through a combination of readings, lectures, guest speakers and case discussions students will develop practical skills in evaluating and assessing risk, and will learn how to approach and manage risks on a global scale.

NBA 5800 Strategies for Global Competitiveness

Fall. 3 credits. Can be used to fulfill strategy requirement. A. McAdams.

Initially, students explore the role of government in several private-market industrialized nations—Japan, France, Germany, the United Kingdom, and Italy—for lessons the United States might learn and use. Students investigate the impact in each of those countries of government policies on the global competitiveness of the country's firms. Special emphasis is given to differential policies appropriate to each of a range of industries, from the mature to the high tech (including computers, telecommunications, and electronics), and to stages of development in each economy. Possible lessons are then tested for less developed countries that might include Venezuela and Malaysia and newly emergent countries such as Singapore. Classes are run in a discussion format.

NBA 5840 International Competitive Strategy

Spring, 1.5 credits. G. Katzenstein.

Focuses on the development of competitive strategies in the global environment—including the identification of internationally relevant strengths and weaknesses, the movement and use of resources to gain competitive advantage, and strategies to confront competitors, both domestic and multinational.

NBA 5870 International Mergers and Acquisitions

Spring, 1.5–2 credits, variable. J. Hanks.

Addresses the principal business and legal issues in cross-border mergers and acquisitions, including forms and techniques of combining two businesses, negotiation, pricing and other economic terms, due diligence, issuance of securities, antitrust, duties of managers, and the resolution of employee and other social issues. The graded work is a written proposal for an M&A transaction between two existing companies in different countries prepared by small teams. Proposals are based on publicly available financial, business, legal, and other documents and data and any other information obtained. The goal of the written work is to simulate the process in which business people, investment bankers, and lawyers work together to structure transactions across national borders. The reading covers the basic business and legal issues most frequently encountered in international mergers and acquisitions. Class discussion occasionally refers to the reading but generally covers other issues.

NBA 5890 International Management

Spring, 3 credits. G. Katzenstein.

International management is a survey of international business from a cultural and managerial perspective. The course uses culture as a foundation to examine a variety of considerations related to business in an international context. The first part of the course briefly examines the context and environment of cross-cultural management. We will look at globalization, why firms get involved in international business, and how they analyze their investment environment and opportunities. The second part of the course concerns analyzing international business, including macro issues such as organizational structure, control, and culture, and micro concerns such as motivation, leadership, negotiation, teams, decision making, and human resource management.

NBA 5900 Business in Emerging Markets

Fall 1.5 credits. E. Iankova.

This course focuses on the opportunities and market potential, as well as the risk factors in emerging economies. It offers an in-depth comparative perspective on business development and strategy across the most important regions with emerging markets in the world—Eastern Europe, Asia, and Latin America, with a special emphasis on the BRIC countries (Brazil, Russia, India, and China). The course looks at the emerging economies from four major perspectives: market potential; trading opportunities; sourcing; and global competition. It examines in greater detail foreign investment trends, entry strategies and investment decisions, determinants of enterprise behavior, modes of establishing and managing relationships, impact of local cultures, and strategic responses to potential risks and opportunities in emerging markets.

NBA 5920 Experience in International Management

Fall, spring, 1.5 credits. Fee charged for required faculty-approved study trip.

G. Katzenstein.

Combines classroom sessions and international experience with an increased awareness of business environments outside the United States. On trips, students visit local businesses, subsidiaries of foreign multinationals, government officials, local business school students, and others. Students also must attend two pre-trip meetings during spring semester (2-1/2 hours each). Those meetings are used to present information on international business conditions, industrial structures, management styles, and also to develop cross-cultural skills. A final paper, integrating the material learned in the classroom with their experiences, is required.

NBA 5930 International Entrepreneurship

Spring, 1.5 credits. Prerequisite: At least one finance or economics class.

M. Goldman.

Entrepreneurial start-ups and their financing across the globe (outside of the United States) are the focus of the course. Sessions will examine the constraints to entrepreneurs and the ways in which they obtain financing with a particular focus on venture capital and emerging markets. The course will use cases of successful entrepreneurs under the most difficult circumstances and will address entrepreneurship in a serious downturn and networking across borders. In addition to common issues related to starting a business and investing in it, the class will address issues not normally on the radar screen of U.S. entrepreneurs and venture capitalists. The course will draw on the experience of investors and entrepreneurs, cases prepared especially for this course, as well as findings reported in the research literature. This course is meant to be in part a practical guide to students who wish to be entrepreneurs outside the United States or to create cross border businesses. It may be of interest to people working in entrepreneurial environments in other organizations or students who want to get involved in various forms of financing entrepreneurial ventures. Students may use the course to explore development of a business concept or plan outside (at least in part) the United States. There will be a particular concentration on Asia, the role of government in stimulating entrepreneurship and venture capital and the nitty-gritty issues of valuing young and private

firms sharing profits, raising resources, and organizing and managing human resources.

NBA 5940 Asian Business

Spring, 1.5 credits. G. Katzenstein.

This course takes a managerial perspective to introduce students to those differences, whether working in Asia or managing operations and personnel in Asia. The course will cover major issues in strategy, organizational behavior, and human resource management in the Asian context. The strategy part of the course will look at issues including particular Asian forms of organization and larger strategic issues such as the role of government, corruption, intellectual property, and the Asian Diaspora. The organizational behavior part of the class will look at issues such as national culture, communication, leadership, motivation, decision making, and group dynamics in an Asian context. The human resource part of the course will examine recruiting, developing, and retaining your local personnel, managing expatriates in Asia, and localization of Asian businesses.

NBA 5950 Economics of Financial Crises

Spring, 3 credits. I. Azis.

Familiarizes students with the analysis of the causes, nature, and consequences of financial crises, and equips them with tools of analyses to better understand the economics of financial instability and alternative strategies for dealing with them. The first part of the course concentrates on financial instability/crisis by way of explaining the empirical episodes of the crisis in various emerging market countries, and elucidating the relevant theoretical concepts in each of the cases. The second part is devoted to discussions of post-crisis episodes, emphasizing the different paths of recovery and major policy responses to the crisis. The latter includes financial and monetary policies and the unsettled relationship between interest rates and exchange rates.

NBA 5990 Business in the European Union

Fall, 1.5 credits. E. Iankova.

Explores the impact of the process of European integration on business organization and strategy. The foundations, institutions, and common policies of the European Union are discussed first. The course further examines how the establishment of the Economic and Monetary Union and the 2004 enlargement to the east are shaping the strategies of multinational corporations with operations in Europe. To understand better the pressures for change in a "deepening" and "widening" European Union in their complexity and entirety, students become personally involved in problem solving through issue and case discussions, such as determinants and policy of entrepreneurship in a European–U.S. comparison; corporate networks in a European–U.S. comparison; trade policy and the European Union's trade disputes with the United States; competition policy and Microsoft's antitrust battles in European courts; environmental policies and corporate sustainability issues in Europe; the common agricultural policy of the European Union and the impact of global trade talks on European farm subsidies; work conditions in Europe and the Wal-Mart experience with doing retail business in Europe; and a variety of other mini-cases.

NBA 6250 International Marketing

Fall. 1.5 credits. Recommended: background in core marketing. Staff. Designed to train students to take a domestic product and successfully expand it into international markets. Discusses market selection, international market research issues, and international marketing strategies. The term project (submitted in three parts throughout the semester) requires students to choose a product and develop a plan for taking it abroad. Because each class includes cases, class preparation is essential. Grading is based on the term project, a final exam, and class participation.

NBA 6310 The Global Enterprise

Fall. 2 credits. G. Dowell. Whether you are working in a large multinational or a business that is focused on the domestic market, global forces are affecting your organization. This course is designed to give you a strong grounding in the basic issues affecting global business today, from macro forces like economic and political risk, to internal organizational issues like assessing your business's preparedness for global business. We bring these issues to life by taking a trip to work with students from a foreign business school and to visit companies in that environment—for the last two years the trip has been to Shanghai, China, and it most likely will involve China again this year.

Strategic Technology Management**NBA 5180 Data Mining for Marketing, Sales, and Customer Relationship Management**

Spring. 1.5 credits. J. Gehrke. Introduces modern data management systems and their use in the business context. Focuses on the capabilities of modern database systems and their role in the enterprise instead of going into technical detail. Topics include data models and modeling, query languages, transactions, database tuning, application servers, service-oriented and three-tier architectures, capacity planning, and data mining. Students perform several hands-on exercises involving a commercial database system.

NBA 5230 Data-Driven Businesses

Spring. 1.5 credits. J. Gehrke. The course will cover management challenges and strategy for businesses where data is a strategic asset. Topics include (1) how to create value from data through tools such as data management, search, and data mining; and (2) management challenges in data-centric businesses, especially managing businesses in markets with network effects such as search online advertising, and social networks.

NBA 6000 The Strategic Role of Information Technology

Fall. 3 credits. D. Huttenlocher. Beyond the hype surrounding the rise and fall of the dot-com era, information technology has had a wide-ranging impact on business activities. For instance, search costs and transaction costs have plummeted, while concurrently new ways of pricing and of organizing commercial transactions have emerged. Such changes are affecting how firms are managed as well as how they interact with their customers, employees, and business partners. This course explores how firms can use information technology to create business value and looks at strategies that can

help ensure they capture part of that value. Examines small and large companies in a variety of industries, including financial services, travel, retail, software, and manufacturing. Prior knowledge of information technology is not presumed; relevant technologies are covered in class or in assigned readings. The course format is a combination of lectures and cases.

NBA 6010 Electronic Commerce

Spring. 3 credits. L. Orman. Electronic commerce, the use of information technology in conducting economic transactions and managing businesses over computer networks, has captured public attention because of its wide-ranging implications for businesses, markets, public institutions, and the general public. Electronic commerce involves a wide variety of cooperating technologies (e.g., communications, networks, databases, expert systems, and multimedia) and affects a wide variety of managerial issues. It created a new emphasis on information technologies and systems in management; led to the development of new technologies and new combinations of existing technologies to support management; and occasionally radically altered business practices and the role of management. Students in this course learn to conduct economic transactions and manage businesses on the Internet. All major technical and managerial issues are covered through computer exercises on the Internet and case studies and examples of businesses on the Internet.

NBA 6020 Commercialization of Fundamental Technologies

Spring. 3 credits. E. Fitzgerald. Students explore in-depth projects based on a particular fundamental technology. Students are expected to investigate the science and technology and the strategic value of the technology via cross-disciplinary student teams; student teams will explore potential applications for fundamental advances and determine intellectual property related to the technology and applications. Students map progress with presentations, and are expected to create an end-of-term document enveloping technology, intellectual property, applications, and potential commercialization.

NBA 6080 Innovation in Pharma/Biotech: The Challenge of Change

Spring. 1.5 credits. B. Ganem and A. Biloski. NBA 6080 will introduce JGSM students to the scientific and business principles underlying the modern pharmaceutical and biotechnology industries. The course will examine organizational models in this corporate sector and help students more effectively perform financial and business evaluations of current and emerging technologies. The course will be organized into therapeutic modules, with guest speakers presenting unique perspectives on therapeutic developments in these areas. Each student will participate in a team project whose goal is to identify a therapeutic product or licensing/acquisition opportunity that would be of interest to a specific major pharma company. Course grades will be based upon the consistency and persuasiveness of both business and technical arguments.

NBA 6100 Technology Management, Bio, Info, Nano

Fall. 1.5 credits. D. Huttenlocher.

This course will introduce students to some of the current trends in modern biotechnology, information technology, and nanotechnology, and consider cross-cutting issues such as new technology adoption, business models for new technologies, and bridging the gap between scientific invention and business innovation. This course will be a "capstone" course that spends two weeks on bio/tech/pharma, two weeks on materials/nanotech, and two weeks on info tech. Scientific and technological discoveries will continue to drive advances in a broad range of industries. The wide array of technologies in the biological sciences, information technology, and advanced materials present numerous challenges to managers attempting to map future growth in industries that are driven technological advances.

NBA 6120 Disruptive Technologies

Fall. 1.5 credits. Priority given to students with technology of science backgrounds. Prerequisite: working knowledge of computers. D. Greenberg. Begins by presenting historical technological advances that created major paradigm shifts for communications. Presents advances in computer technology emphasizing the fundamentals behind the increases in processing power, video and computer graphics capabilities, and network transmission. The second half of the course covers the effect of these scientific advances on many discipline-specific areas including photography, the film industry, the entertainment and animation industry, television broadcasting, publishing, and the computer industry itself. Sessions are devoted to the social and legal issues rising from the rapid advances in electronic communication. In attempting to predict the disruptive changes of the future, it is best to understand the technologies themselves. The course is especially tailored to a business school and industrial concerns and has interactive live demonstrations at the state-of-the-art laboratory of the Program of Computer Graphics. No prior knowledge of computer science is required.

NBA 6520 Commercializing University Science and High Technology

Spring. 1.5 credits. W. Sine. How do scientists take their research to the marketplace? How do scientists and entrepreneurs find and create market opportunities? Commercializing University Science and High Technology will tackle these issues and apply our learning to projects drawn from Cornell labs and local high-tech firms. This course is designed to help students to identify, evaluate, and obtain control over technology opportunities. The course focuses on three themes: (1) the source, discovery, and evaluation of technological opportunities on a university campus, (2) increasing the efficiency of the innovation process to produce new technologies that satisfy customer needs, and (3) the different mechanisms available to appropriate returns from technology. We will use readings, cases, and discussions with practitioners to examine this phenomenon. After completing this class, students will be familiar with basic principles related to technology entrepreneurship and will have gained a deeper understanding of the technology commercialization process here at Cornell. The class will be composed of a select group of graduate students drawn from science, engineering, law, medicine, and the Johnson Graduate School of Business (enrollment is limited).

NBA 6650 The Strategic Management of Technology and Innovation

Spring, 3 credits. W. Sine.

This is an introductory management course covering the strategic management of technology and innovation in established firms as well as start-up organizations. This course is designed for students who may someday work in, consult for, and/or create firms whose primary product is fundamentally related to technology or innovation. The course typically includes both M.B.A. students and graduate students in science. We will start by examining how industries are transformed by new technologies and how these patterns of industrial change generate both opportunity and high rates of firm failure. We will then explore the questions: Why do some technology leaders fail; and how do technology innovators successfully take on and replace incumbent firms? This will lead us to an examination of internal management issues, focusing on the design of innovative organizations: designing reward systems, managing growth, overcoming resistance to change, and using organizational culture to promote innovation.

Management and Organizations**NBA 5220 International Negotiations**

Spring, 1.5 credits. Staff.

This course focuses on negotiation in the global business setting. It will cover the negotiation concepts dealt with in NBA 6660 (Negotiations) and NBA 6820 (Negotiation Essentials). In addition, it will investigate issues that can be particularly troublesome in the global setting, including: currency, venue for dispute resolution, and ethics that are unique to the international arena; parties at the cross-cultural negotiation table; and how culture affects negotiators' interests and priorities and strategies. The capstone exercise is a real-time email negotiation with students in Beijing, China.

NBA 5290 Executing Successful Corporate Strategy

Spring, 1.5 credits. Prerequisite: NCC 5090. O. Khessina.

Firms evolve, grow, and change through mergers and acquisitions, as well as through the internal creation of new divisions or subsidiaries. As promising as these pathways can sound, as most people know, the success rate of these efforts is quite poor. In fact, most mergers and acquisitions fail to recover their costs. We will explore the central and critical challenge in corporate strategy, which is to create corporate advantage through investments in a set of businesses that are better off for being commonly owned. We will focus on features of the firm that interfere with or support these efforts, including the role of the culture, the role of organizational capabilities, and the role of existing social, communication and power networks, among others. By the end of the course, you should be able to examine a firm and offer answers to three main questions: (1) What factors should inform the firm's decision to diversify? (2) What is the right portfolio of businesses for the firm? (3) How can diverse businesses be integrated to achieve strategic advantage for a corporation? The course is relevant for students who plan to pursue a managerial career in large corporations, intend to start and sell a new business, or plan to work in the investment or consulting industries.

Students interested in the managerial aspects of mergers and acquisitions, divestitures and internal development will find the course especially useful.

NBA 5880 Critical Thinking for Business Leaders

Spring, 1.5 credits. R. Mish.

This course is based on the proposition that leading well requires thinking well—that is, in order to succeed in any business leadership role, you must learn, exhibit, and model critical thinking skills to organizational stakeholders: your colleagues, supervisors/senior executives, and clients/customers. We spend the first few class sessions looking at a series of brief articles that attempt to advance arguments in favor of a particular business proposition, and we learn how to examine these arguments critically, including by evaluating the strength and limitations of the evidence presented and by identifying and articulating the best counter-arguments to the positions offered. We then spend the remainder of the course applying these critical thinking skills to a set of business cases, using a Strategic Thinking Problem-Solving framework. By the end of the course, the goal is for you to be able to approach business problems in a systematic and critically thoughtful way, and to produce and communicate a problem solution that is well-reasoned, well-received by ultimate decision makers, and likely to be implemented with success by the group/organization that you are leading.

NBA 6280 Strategic Change and Renewal

Fall, 1.5 credits. Prerequisite: NCC 5040. G. Dowell.

Today's organizations are beset by change, and if you want to have a real impact on your company, you must be ready to deal with changes stemming from a variety of internal and external forces. This course will give you the tools to think more systematically about the challenges of managing change, by considering (a) the impetus for the change, and (b) the systemic implications of the change.

NBA 6540 Power and Politics

Fall, 1.5 credits. E. Mannix.

Nothing is more frustrating than having a great idea and not having the political capital to get it recognized and implemented. This course is aimed at providing you with the political intelligence to succeed in an organization. This course aims to: 1) improve your ability to diagnose the underlying distribution of power in organizations, 2) allow you to practice strategies for building your own personal power, and 3) show you how to be fluent in multiple techniques for influencing others.

NBA 6630 Managerial Decision Making

Fall, 3 credits. J. Russo.

This course attempts to make its participants better managerial decision makers. However, most students find that the course applies equally well to their personal decisions. There are two other objectives. The first is to convey an enduring understanding of decision concepts, skills, and tools that, taken as a whole, comprise a troubleshooter's guide to dealing with the uncertainty, complexity, and conflict of the professional world. The second is to provide a framework for a good decision process in which all of the decision concepts, skills, and tools fit coherently. The

pedagogical approach uses lectures, in-class exercises, and applications.

NBA 6660 Negotiations

Fall, spring, 3 credits. Staff.

Judgment is the art and science of transforming perception into thought or opinion. Negotiation is the art and science of securing agreements between two or more interdependent parties. The purpose of this course is to understand the theory and processes of negotiation as it is practiced in a variety of settings. It is designed to complement the technical and diagnostic skills learned in other courses. A basic premise is that while a manager needs analytical skills to develop optimal solutions to problems, he or she also needs a broad array of negotiation skills for these solutions to be accepted and implemented. The course highlights the components of an effective negotiation and teaches students to analyze their own behavior in negotiations. It is largely experiential, giving students an opportunity to develop their skills by participating in negotiations and integrating their experiences with the principles presented in the assigned readings and course discussions.

NBA 6680 Leading Teams and Organizations

Fall, 3 credits. Priority given to M.B.A.s. Staff.

Focuses on general principles for successfully leading teams and organizations (the personal development course is NBA 5700). Draws on the latest research in team decision making and organizational leadership to address questions such as: what is the difference between leadership and management? how does a leader establish trust and commitment to an organization? and how do leaders transform organizations? Consists primarily of case studies of leaders but also includes some experiential and group activities. Grading is based on class participation, group case analyses, and a final individual case analysis.

NBA 6700 Becoming a Leader

Spring, 1.5 credits. J. Detert.

This course explores the complex process of "becoming a leader" by systematically uncovering beliefs and myths about leadership and rigorously examining how they hold up to the scrutiny of critical thinking, analysis, and research. Each class will address a number of important questions about leadership. We will generally use case studies and videos to first illustrate a topic by focusing on a specific leader and decision or dilemma faced by that leader. We will then abstract from the specific to the general by discussing the principles and research findings pertaining to that aspect of leadership. Students should also develop a significantly enhanced understanding of their own leadership strengths and objectives because the course requires personalization of concepts via a number of self-reflections and exercises.

NBA 6710 Business Ethics

Fall, spring, 1.5 credits. D. Radcliffe.

Poor moral judgment can ruin a manager's career or even sink a company. In general, an organization cannot survive without the trust of numerous stakeholders, and ethical lapses destroy trust and threaten vital stakeholder relationships. In today's volatile and fiercely competitive business environment, a manager must be able to identify and effectively resolve ethical issues that inevitably arise in the

pursuit of business (and career) objectives. This course is designed to enhance students' skills in moral reasoning as it applies to managerial decision making. It begins by examining normative concepts and principles that typically enter into moral reasoning, then uses those concepts and principles to analyze cases. Discussions seek to understand the moral issues confronting the decision makers in the cases and explore how those issues might be addressed in ethically responsible ways.

NBA 6760 Organizing for Strategic Advantage

Spring, 1.5 credits. Prerequisite: NCC 5090. O. Khessina.

Among the critical tasks facing any senior manager are the creation, evaluation, and implementation of a business unit's strategy. NCC 5090 (Strategy Core) and NBA 5790 (Cases in Business Strategy) teach students tools of creation and evaluation of strategies. This course is complementary and will offer frameworks for understanding ways of strategy implementation. Specifically, it will provide conceptual tools for designing and changing organizations given the strategic choices that have already been made. It will place special emphasis on organizational and human resources issues, hence the name, "Organizing for Strategic Advantage." The course is particularly relevant for students who are (1) thinking about working in the consulting industry; (2) planning to manage and lead firms; or (3) planning to found and own start-up companies.

NBA 6820 Negotiation Essentials

Spring, 1.5 credits. S. Spataro and K. O'Connor.

Judgment is the art and science of transforming perception into thought or opinion. Negotiation is the art and science of securing agreements between two or more interdependent parties. The purpose of this course is to understand the theory and processes of negotiation as it is practiced in a variety of settings. This course is designed to complement the technical and diagnostic skills learned in other courses at the Johnson School. A basic premise of the course is that while a manager needs analytical skills to develop optimal solutions to problems, a broad array of negotiation skills is needed in order for these solutions to be accepted and implemented. The course will highlight the components of an effective negotiation and teach students to analyze their own behavior in negotiations. The course will be experiential, allowing students to develop their skills by participating in negotiations and integrating their experiences with the principles presented in the assigned readings and course discussions.

Marketing

NBA 6170 Emerging Technology Marketing

Spring, 1.5 credits. Prerequisite: Graduate Students. B. LaPerle.

An overview of how successful companies combine a deep understanding of unmet customer needs with a key emerging and enabling technology to create significant new market and shareholder value. A proactive and repeatable 10-step Market Development Planning process will be described with special emphasis on tools and techniques that link industry and competitor technology

trends with unmet customer needs. This course will give prospective Brand Managers, Product Managers, Business and Engineering Managers the conceptual and operating tools to proactively identify, and successfully bring from the R&D lab to the marketplace, new differentiated Value Propositions.

NBA 6200 Marketing Research

Spring, 3 credits. Prerequisites: NCC 5010 and NCC 5030 or equivalent. Y. Park.

Deals with marketing research as a critical support function in corporations. The broad objective is to provide a fundamental understanding of marketing research methods employed by better-managed firms or proposed by leading academicians. The course is aimed at the manager, the ultimate user of marketing information, who is responsible for the scope and direction of research activities involved in obtaining, analyzing, and interpreting results of research. Covers the use of secondary sources of marketing information for designing studies and collecting primary data. Students are exposed to up-to-date methods in research design, qualitative research, measurement, data collection, and analysis. The emphasis is on evaluating research methods and on interpretation and use of results rather than on mathematical derivations. Students are also exposed to the practical side of marketing research through case studies, problem sets, and projects.

NBA 6210 Integrated Marketing Communications (also HADM 6649)

Fall, 3 credits. L. Pearo.

This course is designed to provide students with the framework and skills required to design, manage, and evaluate integrated marketing communication programs. Over the past decade, the number of communication options available to consumers, and hence to organizations, has grown exponentially. With so many different avenues for communication to, from, and among consumers, organizations must approach the communication task with the objective of creating a unified message that is consistent, coherent, and effective across all media—an integrated marketing communications program. Through class exercises, case studies, advertising critiques, online observation and participation, and teamwork on a simulated campaign, students will master the skills necessary for marketing campaign management.

NBA 6220 Marketing Strategy

Fall, 3 credits. Prerequisite: NCC 5030. Staff.

A sound marketing strategy is essential for the long-term success of a firm. Marketing strategies, while guided by environmental conditions, also seek to anticipate, exploit, and sometimes shape changes in the environment to gain competitive advantage. This requires an understanding of how customer needs evolve, how product-market boundaries shift, and how competitors are likely to react. The strategic roles of existing and new products need to be assessed, appropriate resource allocations made, and marketing strategies developed to ensure sustained growth. Successful development of marketing strategy requires an equal measure of analytical and creative thinking. This course introduces students to various concepts and analysis methods of defining opportunities and threats implicit in dynamic environments and to the process of formulating a long-term marketing strategy for a multiproduct

organization. Students will learn about the theoretical and applied perspectives of marketing strategy from readings, competitive marketing strategy simulation, developing a marketing strategy plan for a firm of their choice, case analyses, and guest speakers.

NBA 6260 Consumer Behavior

Fall, 3 credits. Staff.

Topics include factors that influence response to various kinds of advertising, purchase decisions, product perceptions, response to promotion, consumer satisfaction, and the basic methodologies for understanding consumer behavior.

NBA 6290 Current Topics in Marketing

Fall, 1.5 credits. Prerequisite: NCC 5030. J. Russo.

The focus of this course will be on emerging topics such as new media, measuring ROI for marketing, channel partnerships, and global marketing. Specific topics vary from year to year. For each topic, students will be required to do readings and apply the readings and class material to an assignment in class. Students will work on in-class assignments in groups and will submit an individual term paper.

NBA 6340 Customer Relationship Management

Spring, 1.5 credits. Y. Park.

The course is aimed at managers who are interested in pursuing activities in CRM built around the notion of customer centricity. The principal objectives of the course are to emphasize how CRM can help accomplish strategic initiatives and improve firm profitability, to develop essential skills using the statistics program, and to implement strategic initiatives in CRM. Students will be exposed to the practical side of CRM through case studies and hands-on exercises.

NBA 6390 Data-Driven Marketing

Spring, 3 credits. S. Gupta.

Deals with the use of data to make marketing decisions. Introduces concepts, methods, and applications of decision modeling to address marketing issues such as segmentation, targeting, positioning, promotions, advertising, and sales force decisions. Unlike marketing courses that focus on conceptual material, this course provides skills to translate conceptual understanding into specific operational plans—a skill in increasing demand in organizations today. The course is particularly valuable to students planning careers in management consulting, marketing, and market research. It is designed for students who have some background in quantitative methods and have a willingness to deal with mathematical concepts.

NBA 6930 Strategy and Tactics of Pricing

Spring, 3 credits. S. Gupta.

Pricing is a critical management decision that has both strategic and tactical elements. The objective of this course is to introduce participants to proven techniques and frameworks for assessing and formulating pricing strategy and tactics. A marketing manager responsible for pricing needs to understand economic, psychological, and organizational factors. This course revolves around understanding how to make effective pricing decisions, while keeping in mind these factors. Some of the topics to be covered include the analysis of relevant costs, economic value analysis (EVA), measurement

of price sensitivity, techniques for price differentiation, competitive pricing, and revenue management. This course should be useful for those pursuing careers in marketing, general management, and consulting.

Operations Management

NBA 6410 Logistics and Manufacturing Strategy

Spring. 3 credits. Prerequisite: NCC 5080 or permission of instructor. Staff.

Covers supply-chain integration, which involves strategic management of the value chain from materials to customer. Students discuss operations strategy issues that are important to both manufacturing and service organizations. The course emphasizes written and oral communication skills. About a fourth of the classes are spent on case studies that are analyzed by small groups. There is a midterm and final exam, but the majority of the grade is evaluated based on a course project, case analyses, and a supply chain simulation assignment that allows students to apply course topics in an experiential-learning setting.

NBA 6430 Managerial Spreadsheet Modeling

Fall, spring. 1.5 credits. T. Janosi.

The goal of this hands-on, lab-style course, taught in the Parker Center, is to develop proficiency in quantitative modeling within the environment of Microsoft Excel. Students develop and use spreadsheets to analyze a variety of business problems. The course has two principal components: spreadsheets and models. Spreadsheet topics include principles of good spreadsheet design, the effective presentation of information through spreadsheets (including graphical controls like sliding bars), and advanced Excel features (e.g., data validation, conditional formatting, scenarios). Modeling topics include the art of finding the appropriate level of modeling detail, practice in dealing with vague and unstructured problems, sensitivity analysis, and working with incomplete and unreliable data.

NBA 6470 Advanced Spreadsheet Modeling

Fall. 1.5 credits. T. Janosi.

The goal of this hands-on lab course, taught in the Parker Center, is to develop proficiency with Excel's quantitative tools of Solver (for optimization) and @Risk (for simulation). Building on their brief introduction in the Managing Operations core course, students use these advanced tools to analyze problems and cases in finance, marketing, and operations. Although the bulk of this course is devoted to case analysis, occasional lectures introduce some advanced features of these two powerful modeling tools, including integer and nonlinear programming and sensitivity analysis within optimization, and correlated random variables, scenario analysis, and valid statistical analysis within simulation.

NMI AND NRE RESEARCH AND ADVANCED STUDIES

NMI 5000 Directed Reading and Research

Fall, spring. 1–3 credits, variable.

Prerequisite: approval of advisors and faculty members involved in research. Staff. Students undertake special-interest research under the supervision of faculty members.

NMI 5030 Principles of Lean Six Sigma Process Improvement

Spring. 1.5 credits. Staff.

Lean Six Sigma is a robust and customer-focused process improvement methodology that develops value-creating processes in an organization while simultaneously reducing costs, defects, and lead times. This 20-hour course will (1) familiarize students with the Lean Six Sigma D-M-A-I-C process improvement roadmap, (2) introduce the technical fundamentals of Lean Six Sigma, and (3) demonstrate the use of Lean Six Sigma to support and accomplish an organization's strategic and operating plans. Students receiving a passing grade will receive a "Principles of Lean Six Sigma" course completion certificate.

NMI 5100 Multicultural Work Environments

Fall. 1 credit. Prerequisite: students whose summer internships are in a country other than that of their citizenship or prior work experience. Students should register for course in spring semester before internship after obtaining an internship offer and completing paperwork for course instructors. International students obtain and process work authorization forms with the International Students office. See Charlotte Rosen (435 Sage Hall) for further details about academic and immigration requirements for NMI 5100. C. Rosen and B. Mink.

Independent study. Promotes an understanding of the cultural assumptions we bring to the work environment and the effects of cultural differences on organizational interactions and productivity. Grades are posted in the following fall semester after completion of the course project (a 10-page paper).

DOCTORAL SEMINARS

NRE 5010 Capital Markets Research in Accounting

Spring. 1.5 credits. C. Nichols.

This course is designed to introduce topics in capital markets research and to develop students' ability to evaluate and generate archival research in accounting. In addition, the course is intended to develop students' understanding of common research designs used in archival studies and to identify potential research questions.

NRE 5020 Doctoral Seminar In Marketing

3 credits. Prerequisite: permission of instructor; graduate-level course in mathematical statistics or econometrics (may be waived in special cases). Staff.

Introduces students to empirical research in marketing. Although there is a strong focus on the historical development of econometric specifications of consumer choice models (with an emphasis on heterogeneity and

issues of dynamic consumption patterns) and Bayesian methods in marketing, the content is to some extent driven by the students.

Teaching is interactive, and each student is expected to present one of the papers studied to the rest of the class and to replicate the results of one of the papers, requiring him or her to write the necessary code and briefly discuss their findings. Students are welcome to sit in on parts of the class (e.g., the section on Bayesian Methods is broad enough that students from other areas may find the presentation useful).

NRE 5040 Judgment and Decision Making, Research and Accounting

3 credits. Prerequisite: Ph.D. students.

C. Nichols.

This seminar provides a rigorous and integrative exposure to those aspects of the literature in accounting, behavioral economics, and psychology that are related to questions of accounting and auditing theory and research.

NRE 5150 Behavioral Decision Making

Spring. 3 credits. Prerequisite: Graduate status. J. Russo.

This seminar focuses on decision making, judgment, and related topics. The initial topic is competing paradigms for research on decision making and the contributions to knowledge that each has made. Specific issues include (a) the kinds of decisions that each paradigmatic approach is most successful in explaining or predicting, (b) the forces that have impelled a shift of emphasis from one paradigm to another, and (c) the expected future productivity of the different paradigms. The remainder of the course is devoted to specific topics within decision research broadly construed, with their selection and priority guided by the interest of participants.

NRE 5170 Macro Organizational Theory Ph.D. Seminar

Spring. 3 credits. G. Dowell.

We review the major themes in macro OT research, paying particular attention to institutional theory and organizational ecology, but also including organizational learning, organizational identity, strategic management, and other topics.

NRE 5180 Marketing Model

Spring. 1.5 credits. S. Gupta.

This course is a study of model-based research in the marketing literature. The course aims to accomplish three main objectives: 1) Develop the student's knowledge of the technical details of various techniques for analyzing data. 2) Expose students to "hands-on" use of various computer programs for carrying out statistical data analyses. 3) Ask students to propose a model of consumer/market behavior that potentially constitute contributions to the literature.

NRE 5360 Doctoral Seminar on Introduction to Asset Pricing

Spring. 3 credits. M. Huang.

This course is an introductory Ph.D.-level course on the basic theories of asset pricing. It consists of four parts. The first part deals with individual choices under uncertainty, including expected utility theory, risk aversion, stochastic dominance, and two-period consumption-portfolio problems. The second part deals with equilibrium pricing theories, including implications of no arbitrage and stochastic discount factor, risk sharing,

aggregation, and consumption-based pricing in complete markets, mean-variance efficiency and the Capital Asset Pricing Model, and the Arbitrage Pricing Theory. We also explore the relation between these various pricing theories, and extend the treatment of individual consumption/portfolio problems and equilibrium pricing to a multi-period setting. In the third part, we review recent development in asset pricing by introducing some stylized facts and new theories. The fourth part gives a brief introduction to behavioral finance.

FACULTY ROSTER

- Bailey, Warren B., Ph.D., U. of California, Los Angeles. Prof., Finance
- BenDaniel, David J., Ph.D., Massachusetts Inst. of Technology. Don and Margi Berens Professor of Entrepreneurship
- Bhojraj, Sanjeev, Ph.D., U. of Florida. Assoc. Prof., Accounting
- Bierman, Harold, Jr., Ph.D., U. of Michigan. Nicholas H. Noyes Professor of Business Administration; Prof., Finance
- Bloomfield, Robert J., Ph.D., U. of Michigan. Prof., Accounting
- D'Souza, Julia, Ph.D., Northwestern U. Assoc. Prof., Accounting. Director of Graduate Studies
- Detert, James R., Ph.D., Harvard U. Asst. Prof., Management and Organizations
- Dowell, Glen W. S., Ph.D., U. of Michigan, Asst. Prof., Management and Organizations
- Dyckman, Thomas R., Ph.D., U. of Michigan, Ann Whitney Olin Professor of Accounting; Emeritus
- Farahat, Amr A., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Operations Management
- Frank, Robert, Ph.D., U. of California, Berkeley. Prof., Economics, Henrietta Johnson Louis Professor of Management
- Gavirneni, Srinagesh (Nagesh), Ph.D., Carnegie Mellon U. Asst. Prof., Operations Management
- Grinstein, Yaniv, Ph.D., Carnegie Mellon U. Assoc. Prof., Finance
- Guar, Vishal, Ph.D., U. of Pennsylvania, Assoc. Prof., Operations Management
- Gupta, Sachin, Ph.D., Cornell U. Prof., Marketing, Henrietta Johnson Louis Professor of Management
- Hart, Stuart, Ph.D., U. of Michigan. S. C. Johnson Chair in Sustainable Global Enterprise; Prof., Management
- Hass, Jerome E., Ph.D., Carnegie Mellon U. James B. Rubin Professor of Finance, Krause Faculty Fellow in Real Estate; Prof., Finance
- Heffetz, Ori, Ph.D., Princeton U. Asst. Prof. of Economics
- Hilton, Ronald W., Ph.D., Ohio State U. Prof., Accounting
- Ho, Benjamin, Ph.D., Stanford U. Asst. Prof., Economics
- Huang, Ming, Ph.D., Stanford U. Prof. of Finance, Clifford H. Whitcomb Faculty Fellow
- Huttenlocher, Daniel P., Ph.D., Massachusetts Inst. of Technology. John P. and Rilla Neafsey Professor of Computing and Information Science and Business; Prof., Information Technology
- Isen, Alice M., Ph.D., Stanford U. S. C. Johnson Professor, Marketing
- Jarrow, Robert A., Ph.D., Massachusetts Inst. of Technology. Ronald P. and Susan E. Lynch Professor of Investment Management; Prof., Finance and Economics
- Johnson, Justin, Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Economics
- Kadiyali, Vrinda, Ph.D., Northwestern U. Prof., Marketing and Economics
- Khessina, Olga M., Ph.D., U. of California, Berkeley. Asst. Prof., Management and Organizations
- Leary, Mark T., Ph.D., Duke U. Asst. Prof., Finance
- Libby, Robert, Ph.D., U. of Illinois. David A. Thomas Professor of Management; Prof., Accounting and Management and Behavioral Science
- Mannix, Elizabeth, A., Ph.D., U. of Chicago. Prof., Management and Organizations Ann Whitney Olin Professor of Management
- McAdams, Alan K., Ph.D., Stanford U. Prof., Economics
- McClain, John O., Ph.D., Yale U. Prof., Operations Management; Emerson Electric Company Professor of Manufacturing Management
- Michaely, Roni, Ph.D., New York U. Prof., Finance; Rudd Family Professorship of Management
- Narayan, Vishal, Ph.D., New York U. Asst. Prof., Marketing
- Nelson, Mark W., Ph.D., Ohio State U. Prof., Accounting; Eleanora and George Landew Professor of Management
- Nichols, D. Craig, Ph.D., Indiana U. Asst. Prof., Accounting
- O'Connor, Kathleen, Ph.D., U. of Illinois. Assoc. Prof., Management and Organizations
- O'Hara, Maureen, Ph.D., Northwestern U. Robert W. Purcell Professor in Management; Prof., Finance
- Orman, Levent V., Ph.D., Northwestern U. Prof., Management Information Systems
- Park, Young-Hoon, Ph.D., U. of Pennsylvania. Assoc. Prof., Marketing
- Rao, Vithala R., Ph.D., U. of Pennsylvania. Deane W. Malott Professor of Management; Prof., Marketing and Quantitative Methods
- Robinson, Lawrence W., Ph.D., U. of Chicago. Assoc. Prof., Operations Management

LAW SCHOOL

ADMINISTRATION

Stewart J. Schwab, Dean and Professor of Law

Barbara J. Holden-Smith, Vice Dean and Professor of Law

Stephen P. Garvey, Associate Dean for Academic Affairs and Professor of Law

Claire M. Germain, Law Librarian and Professor of Law

Richard D. Geiger, Associate Dean, Communications and Enrollment

Anne Lukingbeal, Associate Dean and Dean of Students

Richard F. Robinson, Associate Dean for Administration and Finance

Karen V. Comstock, Assistant Dean for Public Service

Charles D. Cramton, Assistant Dean for Graduate Legal Studies

John R. DeRosa, Assistant Dean for Student and Career Services

Nan A. Colvin, Registrar

The Law School prepares attorneys for both public and private practice. Graduates are trained to provide the highest quality professional services to their clients and to contribute to the development and reform of law and legal institutions. The curriculum is designed to prepare students for admission to the bar in all American states and territories. Students who pursue the three-year Doctor of Law degree (J.D.) must have a bachelor's degree or equivalent. Students wishing to concentrate in international law may be admitted to a program leading to the J.D. "with specialization in international legal affairs." The Law School also offers a limited number of students an opportunity to earn both a J.D. degree and an LL.M. (Master of Laws) degree in international and comparative law.

Students may pursue combined graduate degree programs with the Johnson Graduate School of Management; the Department of City and Regional Planning of the College of Architecture, Art, and Planning; the School of Industrial and Labor Relations; the graduate divisions in economics, history, and philosophy of the College of Arts and Sciences; the Université de Paris I (Pantheon Sorbonne); L'Institut d'Etudes Politiques de Paris; and Humboldt University.

Each year a limited number of students from abroad pursue the LL.M. degree (Master of Laws) and the J.S.D. degree (Doctor of the Science of Law). A small number of law graduates also may be admitted as special students, to pursue advanced legal studies without seeking a degree. Students in other graduate programs and qualified undergraduate students registered with the university are welcome in many classes with the permission of the instructor. In addition, highly qualified undergraduates in the College of Arts and Sciences may register in the Law School during their senior year.

For further information, refer to the Law School web site, or contact the Office of the Registrar, Myron

Taylor Hall. Course descriptions are current as of April 2007. For updated law descriptions visit: www.lawschool.cornell.edu

FIRST-YEAR COURSES

LAW 5001 Civil Procedure

Full year. 6 credits. Letter grades only. K. M. Clermont, B. J. Holden-Smith, and F. F. Rossi.

An introduction to civil litigation, from commencement of an action through disposition on appeal, studied in the context of the federal procedural system. Also, a detailed consideration of federalism and ascertainment of applicable law; jurisdiction, process, and venue; and former adjudication.

LAW 5021 Constitutional Law

Fall. 4 credits. Letter grades only. J. Chafetz, M. Dorf, S. L. Johnson, and S. H. Shiffrin.

A study of basic American constitutional law, including structural aspects of the Constitution and certain of its rights provisions.

LAW 5041 Contracts

Full year. 6 credits. Letter grades only. A. Anghie, R. A. Hillman, N. Oman, and R. S. Summers.

An introduction to the nature, functions, and processes of exchange, contract, and contract law. The course focuses on the predominant rules and principles governing contract and related obligation, including the substantive reasons underlying the rules and principles.

LAW 5061 Criminal Law

Spring. 4 credits. Letter grades only. S. P. Garvey and J. Ohlin.

An introductory study of the criminal law, including theories of punishment, analysis of the elements of criminal liability and available defenses, and consideration of specific crimes as defined by statute and the common law.

LAW 5081 Lawyering

Full year. 4 credits. Letter grades only. J. Atlas, L. Freed, J. Mollenkamp, A. J. Mooney, U. H. Weigold, and M. A. Whelan.

Lawyering is a full-year course designed to introduce first-year students to lawyering skills, with primary emphasis on legal writing, analysis, research, and oral presentations. Assignments are usually set in the context of a simulated law office (or judge's chambers). In the fall semester, students write predictive memoranda that point out the strengths and weaknesses of their client's case. To prepare the memoranda, students may need to determine the facts of the case by conducting interviews or depositions. Acting as junior attorneys, students will also make an oral presentation to a supervising attorney. The spring semester focuses on persuasive advocacy. Students prepare a memorandum, motion, or brief for submission to a court and,

later, orally argue for their positions in a simulated court session. Throughout the year, students also learn the fundamentals of legal research. Instruction occurs not only in full-class sessions but also in individual conferences. Students receive extensive feedback on each major assignment.

LAW 5121 Property

Spring. 4 credits. Letter grades only. E. M. Penalver and L. S. Underkuffler.

This is a course in basic property law. It covers acquisitions of rights in property, estates in land, concurrent ownership, landlord/tenant relations, and regulation of land use.

LAW 5151 Torts

Fall. 4 credits. Letter grades only. V. Hans, M. Heise, J. A. Henderson Jr., and W. B. Wendel.

An introduction to the principles of civil liability in the tort field: intentional wrongs, negligence, and strict liability. Attention is also given to the processes by which tort disputes are handled in our legal system.

GRADUATE COURSES

LAW 6071 Advanced Legal Research—U. S. Legal Research for LL.M. Students

Fall (first 7 weeks of term). 1 credit. Graduate program grading—H, S, U. Graduate students only; limited enrollment. M. M. Morrison.

This course will introduce LL.M. students to basic legal research in U.S. materials that will be valuable to them in their course work at Cornell and in practice. The focus will be on understanding and finding primary legal sources, including statutory codes, session laws, administrative regulations, and court decisions, as well as explanatory materials, such as law reviews and treatises. To a large extent, instruction will use online materials that are most likely to be available to the students in their future careers. There will be short introductory lectures, as well as hands-on laptop and Reading Room sessions. Students will complete five assigned exercises using the resources learned in class, and there is no final exam. The final grade will be based on the five assigned exercises (20 percent each).

LAW 6221 Anglo-American Contract Law

Spring. 3 credits. Graduate program grading—H, S, U. Limited to graduate students. C. Thomas.

This course is designed for foreign-trained lawyers who are familiar with basic contract law in their own country. It surveys the Anglo-American common law of contracts and related civil obligations. The pedagogic approach focuses on the case method and is Socratically based, similar to the traditional first year course in Contracts. Graduate students who wish to study contract law would generally be expected to take this one-semester course. They are free to enroll

instead in the first-year Contracts course, but if they do so, they must take that course for the full year.

LAW 7991 Cornell Research Colloquium

Fall. 3 credits. Limited enrollment. Seminar course required for all first-year J.S.D. candidates. Also open first to L.L.M. students and then to J.D. students if places are available. Visiting scholars and exchange students from foreign institutions highly encouraged to attend in an unofficial capacity. Satisfies writing requirement. J.S.D. and LL.M. program grading—H, S, U. J.D. program, letter grades only. M. Lasser.

This seminar is a course in advanced academic research methodology. The colloquium is designed to prepare the students to engage in doctoral-level research, analysis and writing, especially in comparative and international contexts. How is the researcher to select an object or subject of investigation? How should she formulate research questions? How should she engage in the study of foreign and domestic legal institutions, doctrines and/or cultures? How is interdisciplinary work to be accomplished? The early portions of the course will involve discussing readings in comparative research methodology, including functionalism, Common Core analysis, legal transplant theory, historicism, law and development, legal pluralism, cultural analysis, colonial studies, and comparative institutionalism. In the latter portions of the course, students will present and critique their methodologically reflective research projects. A modest number of external speakers will be invited to present their work in progress for the purposes of generating methodologically oriented discussion.

LAW 6761 Principles of American Legal Writing

Fall, spring. 3 credits. Graduate program grading—H, S, U. Graduate students only; limited enrollment. L. Knight.

This course provides foreign-trained lawyers with an introduction to the American legal system and essential principles of legal writing in the United States. Students are afforded an opportunity to practice some of the forms of writing common to American legal practice, by drafting documents such as memoranda, and briefs, in the context of representing hypothetical clients. Students are given the opportunity to conference individually with the instructor and to rewrite assignments after receiving the instructor's comments.

LAW 8991 Thesis

Fall, spring. 5 credits. Limited to graduate students and students completing joint J.D.-LL.M. program. Graduate program grading—H, S, U. J.D./LL.M. program—Letter grades only.

Arrangements for a master's thesis are made by the student directly with a faculty member. A faculty member may require the student to submit a detailed outline of the proposed thesis, as well as a summary of previous writing on the subject or other appropriate information. The work is completed during the academic year under the supervision of a law faculty member.

LAW 9901 Graduate Research

Fall, spring. Limited to J.S.D. students.

UPPERCLASS COURSES

LAW 6001 Accounting for Lawyers

Spring. 2 credits. S-U or letter grades. R. A. Sarachan.

This course is designed to introduce students to the basic concepts and fundamentals of financial accounting. It will focus on (1) accrual accounting concepts, principles and conventions, (2) the presentation of financial statements (balance sheets, income statements, statements of cash flow), (3) the interpretation and analysis of financial statements, and (4) the use and misuse of accounting information. The goal of the course is to enable students to critically review a company's financial statements. The course is intended primarily for students with little or no prior background in bookkeeping or accounting and is limited to students who have had no more than 6 credit hours of accounting (or its equivalent) or permission of instructor.

LAW 6011 Administrative Law: The Law of the Regulatory State

Fall, spring. 3 credits. Limited enrollment. Letter grades only. J. J. Rachlinski [fall], C. R. Farina [spring].

An introduction to the constitutional and other legal issues posed by the modern administrative state. Topics include: procedural due process, separation of powers, procedural modes of administrative policymaking; judicial review of agency action; and the oversight and control relationships between agencies and Congress or the President. The course provides a working familiarity with the fundamentals of administrative procedure, as well as a larger inquiry into the role of agencies in our constitutional system—and the effect of legal doctrine on shaping that role.

LAW 6023 Advanced Civil Procedure

Spring. 2 credits. S-U or letter grades. K. M. Clermont.

A complement to the first-year civil procedure course. Topics touched on in the first year are studied in greater depth: pretrial procedure, including pleadings, discovery, pretrial conferences, and summary judgment; trial procedure, with special emphasis on judge-jury problems; and, if time permits, appeals. The context of study is the federal procedural system.

LAW 6081 Animal Law

Fall. 2 credits. S-U or letter grades. D. Campbell.

This cutting-edge and constantly evolving field of law will explore the statutory and case law in which the legal, social, or biological nature of nonhuman animals is an important factor. The course encompasses companion animals, wildlife, and animals raised for food, entertainment, and research, and will survey traditional law topics like torts, contracts, criminal law, constitutional law, and federal laws as they intersect with animals. Grade will be based on participation in open-minded discussions and a paper.

LAW 6101 Antitrust Law

Fall. 3 credits. Letter grades only. G. A. Hay.

The antitrust laws of the U.S. protect competitive markets and limit the exercise of monopoly power. Topics include: price fixing, boycotts, and market allocation agreements among competitors; agreements between suppliers and customers; joint ventures; monopolization; and mergers.

LAW 6121 Bankruptcy

Fall. 3 credits. Letter grades only. T. Eisenberg.

Selected topics in the law of bankruptcy. An overview of the various bankruptcy chapters and a detailed study of the business bankruptcy provision of most general applicability. The relationship between the rights of an Article 9-secured creditor and the bankruptcy trustee's power to avoid liens. Related topics in the enforcement of money judgments and the law of fraudulent conveyance.

LAW 6131 Business Organizations

Fall, spring. 4 credits. S-U or letter grades. Limited enrollment. Fall, R. C. Hockett; spring, C. K. Whitehead.

An introduction to the legal rules and principles, as well as some of the economic factors, that underlay the conduct of productive enterprise in the United States. A principal focus will be upon the large, publicly traded corporation that dominates much of the U.S. business environment—in particular, its control and the potentially conflicting interests that the form must mediate. Legal topics to be covered: basic fiduciary obligations, shareholder voting rights, shareholder suits, corporate control transactions, and insider trading. We shall also devote some attention to closely held corporations and other business forms.

LAW 6150 The City and the World: The Legal Aspects of the Globalization of Cities

Fall, first half of semester. 1 credit. S-U or letter grades. Y. Blank.

Local governments are increasingly becoming major actors in the emerging global legal order. The United Nations, the World Bank, the European Union, and other international and transnational institutions are beginning to view local governments as vehicles for the advancement of policies on a global scale. Local governments are transforming into objects for international regulation and are increasingly used as a means for disseminating and implementing global political programs, financial schemes, and governance strategies. The traditional legal focus on state actors is shifting on to local governments, giving them independent legal status in the new global order. Local governments are obtaining international duties, powers and rights: enforcing international standards; forming global networks involved in the creation of international standards; and becoming objects of international regulation. It has indeed become impossible to understand globalization and its legal ordering without considering the role of localities: they have become prime vehicles for the dissemination of global capital, goods, work force, and images. The course will investigate these developments through an examination of various legal documents and institutions such as the EU, the UN and the World Bank and will focus on the transformations that local legal regimes concerning localities (i.e., local government law) are undergoing (or are expected to undergo) as a result thereof.

LAW 6161 Comparative Law: The Civil Law Tradition

Fall. 3 credits. S-U or letter grades. M. Lasser.

This course introduces students to the institutional and conceptual organization of "civil law" legal systems (which govern almost all of Western and Eastern Europe and Latin

America, as well as significant portions of Africa and Asia). The course will therefore provide a broad overview of "civilian" private law and procedure, criminal procedure, administrative law, and constitutional law. The course is particularly interested in the differences between common law and civil law understandings of the relationship between law-making, legal interpretation, and the judiciary.

LAW 6191 Conflict of Laws

Fall. 3 credits. S-U or letter grades.
B. J. Holden-Smith.

This course focuses primarily on the choice-of-law methods used by courts in the United States to decide the applicable law in cases that, in their parties or events, involve more than one state or country. The course examines in detail the nature, logic, and constitutionality of such methods. In addition, the course devotes substantial attention to recognition and enforcement of judgments and, in particular, to the obligation imposed by the Constitution's Full Faith and Credit Clause to respect the judgments of other states' courts.

LAW 6201 Constitutional Law II: The First Amendment

Spring. 3 credits. S-U or letter grades.
S. H. Shiffrin.

A comprehensive discussion of freedom of speech, press, and association. The free-exercise-of-religion clause and the establishment clause of the First Amendment will also be treated to some extent.

LAW 6263 Criminal Procedure—Adjudications

Fall. 2 or 3 credits. S-U or letter grades.
Prerequisites: none. Students who have previously taken Criminal Procedure from Professor Blume are eligible to take this course for 2 credits due to some overlap in course content. Other than first class, students who were enrolled in Criminal Procedure with Professor Blume during fall of 2008, may—but are not required to—attend classes where material covered previously in Professor Blume's Criminal Procedure course is discussed. Students who have not taken Professor Blume's Criminal Procedure class will take class for 3 credits. J. H. Blume.

This course will primarily focus on the adjudication phase of the criminal process including pretrial detention, guilty pleas, jury composition and selection, fair trial procedures, double jeopardy and collateral review. However, the first third of the class will address various topics relating to the right to counsel.

LAW 6264 Criminal Procedure—Investigations

Fall. 3 credits. S-U or letter grades.
S. F. Colb.

Criminal Procedure: Investigations examines the constitutional law that governs police attempts to solve crime and bring perpetrators to justice. The course considers the role of the Fourth Amendment prohibition against unreasonable searches and seizures as well as the Fifth Amendment ban on compelled self-incrimination, in guiding police behavior and in structuring the trials that follow constitutional violations. Students will evaluate the wisdom and constitutional validity of the Fourth Amendment exclusionary rule, which prohibits the introduction of evidence obtained as a result of an unreasonable

search, and the well-known *Miranda v. Arizona* decision as it has evolved over time.

LAW 6301 Directed Reading

Fall, spring. 1 or 2 credits. S-U grades only. Arrange directly with instructor. Specific credit limits apply—carefully review the registration form available from online registration site or registrar's office.

An examination of a topic through readings selected by arrangement between the instructor and an individual student or group of students (not exceeding eight).

LAW 6661 Constitutional Law of the European Union

Spring. 3 credits. S-U or letter grades.
M. Lasser.

This course introduces students to the law and institutions of the European Union. It examines the composition, organization, functions and powers of the Union's governing bodies; analyzes the Union's governing treaties and constitutional law; and studies the Union's decision-making processes. The course also explores broader questions of political, economic and legal integration, such as the proper relation between the Union's law and the domestic law of the Union's Member states, and the desirability and feasibility of using the E.U. as a model on which to pattern other transnational agreements.

LAW 6732 Cross Cultural Negotiations

Fall. 2 credits. S-U grades only.
Prerequisite: LL.M.s and third-year students more likely to benefit than second-year students in fall term. Limited enrollment. Course meets Nov. 12, 13, 14, 19, 20, and 21, 2009. Attendance mandatory for all course sessions. D. Plant.

This Cross Cultural Negotiation workshop is designed to give law students an intensive opportunity to develop negotiation skills which can be used in the global market place to create and repair relationships and to manage conflict. Classes will consist primarily of interactive negotiations and communication exercises, together with some lectures. Problems to be negotiated will have some rudimentary IP overtones.

LAW 6731 Dispute Resolution: Negotiation, Mediation and Arbitration

Fall. 2 credits. Letter grades only. Limited enrollment. J. P. Meyer and S. G. Yusem.
During the past decade, the field of alternative dispute resolution has virtually transformed the practice of law. Today, every lawyer has a professional responsibility to his or her clients to consider the most appropriate process available to resolve issues. The course will explore the characteristics of negotiation, mediation and arbitration as well as the ethical concerns inherent in them, employing interactive and videotape dispute simulations, enabling the student to engage as a negotiator, dispute resolution advocate, mediator, and arbitrator.

LAW 6311 Education Law

Spring. 3 credits. S-U or letter grades.
M. Heise.

This course focuses on selected legal issues that arise in the public and private education context, with emphasis on the elementary and secondary school setting. Topics considered include the legal and policy dimensions of the rights of students, parents, educators, and the state with respect to such issues as access to, control over, and regulation of the education setting and institutions. Issues germane to

equal education opportunity, school finance, and school governance and regulation receive particular attention.

LAW 6361 Environmental Law

Spring. 3 credits. Letter grades only.
Recommended prerequisite: Administrative Law. J. J. Rachlinski.

The course surveys the major environmental laws, with a primary focus on federal statutes. Emphasis will be placed on the various sources of liability to both individuals and corporations from common law, statutory provisions, administrative regulation, and enforcement policy. Corporate successor liability through mergers and acquisitions will be included, including the increasing importance of performing a full range due diligence review for environmental conditions in such transactions. Special attention is paid to the economic, social, and political obstacles to efficient regulation of the environment.

6392 Ethics and Corporate Culture (also NBA 5140)

Spring. 2 credits. Letter grades only.
Satisfies professional responsibility requirement. Offered second half of spring semester. Limited enrollment. D. Radcliffe and B. Wendel.

In the high-pressure worlds of business and law, all too often good people do bad things. In many cases, the unethical behavior is due in part to a toxic corporate culture. The attitudes, values, and practices that prevail in their organizations induce otherwise ethical employees to take actions that violate widely shared norms of conduct. Such behavior can be costly—even disastrous—leading to ruined careers, tarnished corporate reputations, and legal liability for the individuals and their companies. In an environment where "only results matter," it can be difficult for a new M.B.A. or law school graduate to recognize the risks. If she does see the dangers, she may still find it hard to avoid them. This course seeks to help M.B.A. and law students understand how a firm's culture can tempt—or push—employees into unethical behavior. It also considers how employees can meet ethical challenges posed by their firms' cultures and what leaders can do to build ethically healthy cultures.

LAW 6401 Evidence

Fall, 3 credits. Letter grades only. Limited enrollment. F. F. Rossi.

The rules of evidence in civil and criminal cases with emphasis on relevance, hearsay, authentication, witnesses, experts, and confrontation. The course focuses on the Federal Rules of Evidence, with some attention to how they diverge from the common law.

LAW 6401 Evidence

Spring, 4 credits. S-U or letter grades.
S. F. Colb.

This course examines the rules that govern attorneys' trial presentations in criminal and civil cases. Beginning with the requirement that every piece of evidence offered be relevant to a fact that bears on the dispute, the course surveys the obstacles that confront attorneys offering proof at trial. We consider the rules barring character evidence, proof of sexual propensity, and hearsay, among others. The Federal Rules of Evidence (FRE) represents the main source of law for the course, though the case method is used and will accordingly, on occasion, expose students to state analogues of the federal rules. The

exam in this course is entirely objective, i.e., true-false and multiple choice.

LAW 6421 Family Law

Spring. 3 credits. S-U or letter grades.
C. G. Bowman.

Broadly understood, family law is the study of state-imposed rules regulating intimacy and intimate relationships in society. In this course we evaluate our assumptions and beliefs about the appropriateness of a number of current laws regulating families. Substantial attention is devoted to the social and legal consequences of marriage dissolution, including child custody, child support, property distribution, and spousal maintenance. Other topics considered include: the legal significance of marriage rights and obligations; private ordering within the marital context; non-marital relationships and their regulation; and the legal rights of parents, children, and foster parents in situations of abuse and neglect.

LAW 6431 Federal Courts

Spring. 4 credits. S-U or letter grades.
Prerequisite: Constitutional Law and second semester of Civil Procedure.
Students without such background should consult with the instructor. Knowledge of the basic doctrines of administrative law is very useful, although not a strict prerequisite. M. Dorf.

This course examines the various constitutional, statutory, and judge-made doctrines that control access to the federal courts to vindicate federal rights. It is particularly valuable for those planning a career in public interest or the public sector, anyone else expecting to litigate extensively in federal court, and students who have or hope to obtain a judicial clerkship. Topics covered include: case or controversy limitations, including standing; constitutional and statutory limits on jurisdiction; causes of action for constitutional and statutory rights, including 42 U.S.C. §1983 and Bivens actions; bars to such actions, including sovereign immunity and abstention doctrines; and habeas corpus.

LAW 6441 Federal Income Taxation

Fall, spring. 4 credits. S-U or letter grades.
Limited enrollment. Fall, R. A. Green;
spring, R. A. Schnur.

A basic course designed to develop understanding of tax concepts and ability to work effectively with the Internal Revenue Code, regulations, cases, and other tax materials.

LAW 6461 Financial Institutions

Spring. 4 credits. S-U or letter grades.
R. C. Hockett.

An introduction to the regulatory structures, as well as some of the economic, technological and other factors, that pattern the conduct of financial intermediation in the U.S. The principal focus will be upon commercial banks, investment companies (mainly mutual funds), insurance companies, pension funds and securities firms in so far as these institutions discharge a common set of economic functions and give rise to a common cluster of counterparty and third party ("systemic") risks. Legal topics to be covered accordingly include entry-, functional and geographical restrictions; consumer-protection (including disclosure requirements) and competition-promotion; capital adequacy-, solvency- and related forms of risk-regulation (including deposit insurance); community-reinvestment; and "self-regulation."

We shall also devote some attention to "alternative" financial service providers such as check-cashing services, community development financial institutions and micro-credit providers; and we shall take occasional note both of divergent (generally, non-American) jurisdictions' dominant modes of financial intermediation and of the "globalization" of finance, in order both to place what is distinctive about the dominant American forms into bolder relief and better to understand the forces operating behind recent and still unfolding changes to the American (and global) financial and finance-regulatory environments. No prior background in financial law or economics is required, but it is helpful.

LAW 6471 Health Law

Fall. 3 credits. S-U or letter grades.
H. R. Beresford.

This course will consider legal aspects of the organization, financing, and distribution of health care in the United States. It will emphasize issues of access, costs, and quality, and address the use of regulation, litigation and market-driven strategies to confront emerging problems. Readings will be from a health law casebook, supplemented by occasional handouts of current materials. The goal is to convey an appreciation of the challenges involved in providing health care to those in need and of the role of law and lawyers in meeting these challenges.

LAW 6501 Insurance Law

Spring. 3 credits. S-U or letter grades.
M. Heise.

Insurance is an increasingly important tool for the management of risk by both private and public enterprises. This course provides a working knowledge of basic insurance law governing insurance contract formation, insurance regulation, property, life, health, disability, and liability insurance and claims processes. The emphasis throughout the course is on the links between insurance theory, doctrine, and modern ideas about the functions of private law.

LAW 6511 Intellectual Property

Fall. 3 credits. Letter grades or S-U by permission of the faculty member.
O. Liivak.

A survey of legal mechanisms for protecting intellectual property including patent, trademark, copyright, trade secret, and related state law doctrines.

LAW 6521 International Business Transactions

Fall. 2 credits. S-U or letter grades.
D. MacGrath.

This course provides an overview of different commercial legal systems and examines private and public law aspects of international business transactions and the legal rules governing such transactions. Examples of private international business transactions include international sale of goods, letters of credit, foreign investment, international technology transfers and joint ventures. This course also considers international dispute resolution mechanisms (including international litigation and commercial arbitration) and related issues (including governing law, choice of forum and applicable treaties).

LAW 6531 International Commercial Arbitration

Fall. 3 credits. S-U or letter grades.
Students who have taken the international commercial arbitration course in the Paris

program will receive 1 credit for this course. All others will receive 3 credits.

J. J. Barceló III.

A study of arbitration as increasingly the dispute resolution method of choice for international trade and international business disputes (where the parties are from different countries). The course introduces the sources and hierarchy of norms governing international arbitration and then studies the legal issues and processes concerning enforcement of agreements to arbitrate, selecting and challenging arbitrators, choosing the procedure and applicable law in arbitral proceedings, and enforcement of the resulting arbitral award. The course gives special attention to the 1958 UN Convention on the Recognition and Enforcement of Foreign Arbitral Awards (and agreements to arbitrate) known as the New York Convention, and the UNCITRAL (U.N. Commission of International Trade Law) Model Law. The course's unique approach—patterned on the nature of international commercial arbitration itself—focuses on commercial arbitration as a transnational phenomenon and not on arbitration under any particular national system. The course materials include court decisions, arbitral awards, national arbitration statutes, the rules of various arbitration institutions, and scholarly writings—drawn from all over the world.

LAW 6532 International Law and Politics

Spring. 3 credits. S-U or letter grades.
A. Efrat.

The course is an introduction to public international law from a social science perspective. We begin by exploring the basic principles of international law, such as treaty making and sovereignty. We then cover the laws of war, international trade law, international law and development, human rights law, international law in the U.S. legal system, and legalized resolution of international disputes. The course will emphasize the close relationship between international law and politics and will seek to answer questions such as: Why do states comply with international law? Why do states sometimes turn to an international court to settle their disputes? How and to what extent has international law been effective in facilitating trade and promoting human rights? Throughout the course, we will consider relevant historical and contemporary episodes, such as the use of force in Iraq and the development of the World Trade Organization.

LAW 6681 International Law and Foreign Direct Investment

Spring. 3 credits. S-U or letter grades.
M. B. Ndulo.

This course studies legal aspects of direct foreign investments. It seeks to identify legal problems that are likely to affect a commercial investment in a foreign country. Inter alia, it deals with the public international law principles and rules governing the establishment by foreign businesses of various factors of production (persons and capital) on the territory of other states and the protection of such investments. Thus, the course includes a discussion of the following topics: economic development and foreign capital; obstacles to the flow of investments to developing countries; guarantees to investors and investment codes; bilateral treaties; nationalization; joint ventures; project financing; transfer of technology; arbitration;

investment insurance; unification of trade law; and the settlement of investment disputes.

LAW 6583 International Trade and Development

Fall. 3 credits. S-U or letter grades.
C. Thomas.

This course focuses on the intersection of two key objectives of the international order and international economic law: (1) the promotion of rules for the stabilization and liberalization of international trade; and (2) the encouragement of economic growth and development in poor countries. The course will begin with an overview of theoretical and policy models for development through trade, and then consider the origins and commitments of existing international trade law. Employing a case-study approach, the course will proceed to examine high-profile international trade disputes implicating development issues. Questions arising out of these disputes include the following: Should developing countries receive special and differential trade preferences or be subject to universal free trade principles? Speaking of universal principles, should developing country governments be subject to the same environmental and labor standards that apply in industrialized countries? What about intellectual property rights do they help or hinder economic growth in weak economies? And how does trade affect the debt burdens of poor countries? Finally, what do these issues, and the disputes that raised them, suggest about the chances for success of current efforts in the international trade regime, such as the stalemated Doha Development Agenda?

LAW 6590 Judicial Opinion Writing

Fall. 3 credits. S-U or letter grades.
J. Mollenkamp.

Judicial opinions are a fundamental part of our legal system. Well-written opinions share many common characteristics making them effective resolutions of current disputes as well as helpful precedent for the resolution of future disputes. This course will require students to research, write, and revise majority and dissenting opinions in various cases based upon a careful consideration of a full record, an oral argument, and any applicable precedent.

LAW 6592 Labor Law, Practice and Policy

Fall. 3 credits. S-U or letter grades.
A. B. Cornell.

This course will focus on the federal laws regulating the organization of private-sector workers and unions and the process of collective bargaining in addition to addressing protected concerted activity unrelated to union organizing. Practice in the field of labor and employment law will be highlighted along with important and timely public policy issues.

LAW 6601 Land Use Planning

Fall. 3 credits. S-U or letter grades.
E. Penalver.

This course will provide a broad introduction to the theory, doctrine, and history of land use regulation. Topics will include zoning, homeowners' associations, nuisance, suburban sprawl, eminent domain and regulatory takings. Readings will be drawn from the leading cases as well as commentary by scholars in the fields of law, architecture, and planning.

LAW 6141 Law and Ethics of Business Practice

Fall. 2 credits. S-U grades only.
S. J. Schwab.

Each week a distinguished guest lecturer from the business world will present a business-law problem. Speakers include the founders of businesses, the managing partners of large law firms, and the managers of hedge funds and private equity firms. The problems will cover a wide variety of topics, such as how to comply with the Sarbanes-Oxley audit requirements and how a hedge fund should react to improperly discovered confidential information. Students will be required to write two 5-page lead papers on particular problems, and four 2-3 page response papers on themes covered in the class. No final examination.

LAW 6631 Law for High Growth Business (also NBA 6890)

Fall. 3 credits. S-U or letter grades. BR
Legal students must preregister to receive first priority for the course. Limited enrollment. Z. J. Shulman.

An in-depth analysis of key issues that an emerging high growth business must consider and address, including: (i) choosing type of business entity, (ii) protecting confidential information and inventions, (iii) sources of capital, (iv) understanding capitalization structures (common stock, preferred stock, warrants, etc.), (v) use of stock options as employee incentives, (vi) fundamental employment practices, (vii) proper establishment and utilization of Boards of Directors and Advisory Boards, (viii) technology licensing and commercialization, and (ix) acceptable business practices and the Foreign Corrupt Practices Act.

LAW 6641 The Law Governing Lawyers

Spring. 3 credits. Letter grades only.
Satisfies professional responsibility requirement. Enrolling in this course does not prohibit enrollment in another professional responsibility course.
W. B. Wendel.

This course is intended to provide a comprehensive overview of the law governing lawyers in a variety of practice settings, including transactional, counseling, and civil and criminal litigation. The course is not focused merely on the ABA's Model Rules, but draws extensively from judicial decisions in malpractice and disqualification cases, the new Restatement of the Law Governing Lawyers, and other sources of law. A major theme is the relationship between state bar disciplinary rules and the generally applicable law of tort, contracts, agency, procedure, and crimes. Another significant theme is the prevention of attorney discipline and malpractice liability through advance planning.

LAW 6651 The Law of Branding and Advertising: Trademarks, Trade Dress, and Unfair Competition

Fall. 2 credits. S-U or letter grades.
N. St. Landau.

Fundamental trademark, trade dress, and false advertising laws are examined in the context of assisting clients to execute branding and marketing strategies. Special focus is given to branding as it relates to: "consumer products companies"; the impact of e-business and the Internet on branding strategies and acquisitions; and complex proof issues in trademark and domain name litigation. Marketing strategies embody fundamental and long-established principles of the trademark laws. The Lanham

Act is used to address issues ranging from confusingly similar words and designs, to false and unsubstantiated advertising claims, and public appropriation—and misappropriation—of long-established corporate icons in today's e-commerce world. This course examines the basics of this rapidly changing body of law.

LAW 6701 Legislation

Spring. 3 credits. S-U or letter grades.
J. Chafetz.

Much of the "law" that lawyers work with is statutory. This course will examine both how legislatures go about doing their work (that is, legislative process) and how courts and others utilize legislative output (that is, statutory interpretation). We will begin with a case study of the drafting and judicial interpretation of the 1964 Civil Rights Act. We will then devote substantial attention to theoretical and practical issues in statutory interpretation, including theories of interpretation generally, the canons of construction, and the use of legislative history. We will also examine the rules governing legislative behavior and debate, and we will consider how the different roles of legislators and judges affect our interpretation of statutes and cases.

LAW 6742 Patent Law

Spring. 3 credits. Letter grades or S-U by permission of the faculty member only.
Prerequisite: An intellectual property survey course such as LAW 6511 is recommended but not required. O. Liivak.

This course will focus on U.S. patent law giving comprehensive coverage of doctrinal elements and touching on key policy issues. No technical background is required.

LAW 6713 Prelude to the U.S. Supreme Court and Labor and Employment Law

Winter. 1 credit. S-U grades only. Please note that this course may require students to miss at least one day of class during the semester for travel. Class is limited to 6 students with preference given to third-year students. The course will meet for two hours at the end of the fall examination period. Prior to the start of spring semester, during the second week in January, the class will meet for two four-hour days. This period will be spent discussing the substantive law in the case and hearing student presentations. The discussion of the case will continue on the six-hour drive to D.C. and debriefing on the return leg of the trip. Students will have one class session in spring with professors who have clerked in the Supreme Court. During the intercession period, students will be required to communicate with the professor regarding their paper topics and research agendas. A. Cornell.

This 1-credit intercession course will expose students to a timely labor and employment law topic pending before the U.S. Supreme Court. The class will travel to D.C. sometime during the semester in order to hear the oral argument. During the intercession period, students will be required to read the briefs in the case, prepare a five-page paper on a related topic, and to present their research in class. Over the break, students will be required to read *The Nine: Inside the Secret World of the Supreme Court*, by Jeffrey Toobin or another book about the Court agreed upon by the professor. A one-page review of the book will also be required. Additional reading may be assigned.

LAW 6781 Products Liability

Fall. 3 credits. Letter grades only.
J. A. Henderson Jr.

Applications of products-liability doctrine and theory to a variety of problems drawn from or closely approximating actual litigation. An overview of the relevant case law, statutes, and administrative regulations, including the Restatement, Third, of Torts: Products Liability.

LAW 6791 Public International Law

Fall. 3 credits. S–U or letter grades.
J. Ohlin.

An introduction to the legal rules governing the conduct of states vis-à-vis other states, individuals, and international organizations, with reference to major current events and issues. Topics include the nature, sources, and effectiveness of international law; the establishment and recognition of states; principles concerning state sovereignty, territory, and jurisdiction; the law of treaties; state responsibility; international criminal and humanitarian law; terrorism; and human rights. Special attention is given to the law governing the use of force.

LAW 6792 Real Estate Transactions and Deal Structuring (also CRP 6290)

Spring. 3 credits. S–U or letter grades.
D. L. Funk.

Real estate transactions and deal structuring will examine real estate deals through a practitioner perspective within a case study and transactional approach. The course looks at the transactional components and structuring of real estate deals and related parties at each step in creating value from real estate, including acquisition and assemblage; due diligence; sourcing and financing; structuring the venture/parties; operation; disposition; and tax consequences. Additional issues within deal structuring that may be included are negotiation, managing risk including litigation and environmental issues, and analysis of financing techniques, and consequences when deals go bad, including workouts and bankruptcy. The case study format will address deals from the perspectives of investment fund manager, banker/lender, developer, REIT, joint venture partner/investor, and owner. The course will include assignments and exercises where students analyze real estate transactions, prepare and negotiate documents, and present transactions and deals to review entities.

LAW 6811 Secured Transactions

Spring. 3 credits. S–U or letter grades.
N. Oman.

A study of Article 9 of the Uniform Commercial Code, the law regarding security interests in personal property. In a secured transaction, a creditor may resort directly to particular assets of the debtor if an obligation is not met. The assets may be virtually any property, whether tangible (e.g., inventory and equipment) or intangible (e.g., shares of stock, accounts, intellectual property). Secured transactions are an integral part of the complex world of commercial finance. They help fuel the economy by enabling debtors to borrow more freely and lenders to better manage risk. On the other hand, if a debtor becomes insolvent, there might be nothing left for other creditors or tort victims because Article 9 enables lenders who take security to claim virtually all the debtor's assets. The first goal of the course is for students to become familiar with the substantive law, and particularly to learn to recognize when Article

9 applies to a transaction, which may not be immediately apparent. Second, working through the intricacies of Article 9 will help students sharpen their skills in statutory interpretation. Finally, we will address some of the theoretical issues involved in security and debt. There is no prerequisite for this course. (Students with a particular interest in commercial law may wish to study bankruptcy as well as secured transactions, but this can be done in either order.)

LAW 6821 Securities Regulation

Spring. 4 credits. S–U or letter grades.
Prerequisite: Corporations/Business Organizations (or the equivalent for LL.M.s) is required for a student to enroll. This requirement may be waived only with the permission of instructor. A student may enroll in Corporations/Business Organizations concurrently. C. K. Whitehead.

This course analyzes key issues under the U.S. federal securities laws, principally the Securities Act of 1933 and the Securities Exchange Act of 1934, with respect to the domestic and international offer and sale of securities. It includes a study of what constitutes a security, the public offering process, mandatory disclosure requirements for public companies, exemptions from registration (including exempt global offerings), and potential liabilities and sanctions.

LAW 6823 Social and Cognitive Psychology for Lawyers

Spring. 3 credits. Letter grades only.
J. J. Rachlinski. Limited enrollment.

In their short history, cognitive and social psychology have produced a rich understanding of how human beings think and how they interact with each other. It should therefore come as no surprise that these two fields have a number of applications to law. This course will explore those applications. Examples include: what effect common errors in judgment have on tort and contract law; how the perception of risk affects societal demand for regulation in environmental law; how organizational and group decision-making processes affect corporate governance; how social norms about fairness impede or facilitate negotiation and dispute resolution; how biases in judgment influence litigation strategies; and what studies of conformity mean for the development of international human rights law. The goal of this course is to introduce students with interests in different areas of law to some general principles of human thought and social interaction that will be valuable to them in their future practice.

LAW 6822 Social Science and the Law

Fall. 3 credits. S–U or letter grades.
V. Hans.

This course examines the relationship of social science to law, focusing on the growing use of social science in the legal system. Over the past several decades, increasing numbers of social scientists have conducted systematic research on the operation of law and legal institutions. At the same time, social scientists themselves are testifying as experts in increasing numbers, encouraging lawyers and judges at both the trial and appellate levels to rely on social science evidence to decide cases. Social science research is also used as a tool in law reform. The aim of the course is to develop a critical analysis of these uses of

social science in law and litigation. Are social scientists asking the right questions? Are lawyers, judges, legislators, and legal reformers using social science findings appropriately? Is the law's increasing reliance on social science problematic or advantageous—or both?

LAW 6841 Sports Law

Spring. 2 credits. Recommended prerequisites: Antitrust Law and Labor Law. Course meets for 10 weeks. S–U or letter grades. W. B. Briggs.

The course traces the development of sports law in the United States. Particular attention is given to the relationship of sports with antitrust and labor law. Contemporary issues involving arbitration, collective bargaining, amateur athletics, agents, franchise movement, and constitutional law are addressed.

LAW 6844 State and Local Government

Fall. 3 credits. S–U or letter grades.
L. S. Underkuffler.

State and local governments have long been regarded as “laboratories” for possible solutions to difficult social issues, and as political institutions that are closest to the people. In addition to traditional concerns, state and local governments in recent years have been the primary actors in contentious areas such as health care reform, gay marriage legalization, campaign finance reform, property rights protection, and other issues. This course will examine the powers of and legal restraints on state and local governments in state systems, and as a part of the American constitutional order. Topics will include state constitutions, the rights that they confer, and their methods of interpretation; local government boundary formation and boundary change; state and local service, police, and taxing powers; the emergence of supra-local (regional) government; and the place of state and local governments in the federal system (including commerce clause, privileges and immunities clause, and taxation issues). The final part of the course will consider several areas of recent and future litigation—such as the interstate validity of gay marriages and federal challenges to states' medical and health reforms – as a way to illustrate the difficult issues of conflicting sovereignty that this area of law presents.

LAW 6861 Supervised Teaching

Fall, spring. 1 or 2 credits. S–U grades only. Arrange directly with instructor. Specific credit limits apply—carefully review the registration form available from online registration site or registrar's office.

LAW 6871 Supervised Writing

Fall, spring. 1, 2, or 3 credits. S–U grades only. Arrange directly with instructor. Specific credit limits apply—carefully review the registration form available from online registration site or registrar's office.

LAW 6881 Supervised Teaching and Supervised Writing—Lawyering Program Honors Fellows

Full year. 4 credits. S–U grades only. Prerequisite: application process. Specific credit limits apply—carefully review the registration form available from online registration site or registrar's office.

Lawyering Program Honors Fellows serve for the full academic year as teaching assistants in the Lawyering course. With training and guidance from the Lawyering faculty, Honors Fellows work on myriad course-related tasks. In addition to meeting regularly with first-year

students, Honors Fellows may help design course assignments and documents, critique papers, participate in simulations, and assist the research attorneys with the teaching of legal research. Honors Fellows also teach classes on the Bluebook. Additionally, Honors Fellows serve as mentors to first-year students and may participate in workshops on basic law-school skills. During the spring semester, Honors Fellows may, under the direction of the Dean of Students, tutor first-year students.

LAW 6891 Taxation of Corporations and Shareholders

Spring. 3 credits. S-U or letter grades.
Prerequisite: Federal Income Taxation.

LL.M. students must secure permission of instructor. R. A. Green.

This course examines the federal income taxation of corporate transactions, including incorporations, dividends, redemptions, liquidations, and reorganizations.

LAW 6892 Negotiated and Collaborative Decision-Making

Spring. 3 credits. Letter grades only.
Limited enrollment. C. R. Farina,
M. J. Newhart.

Increasingly, systematic and collaborative techniques are being used both to address conflict and to reach decision in diverse settings, including the workplace, communities, and government. This course focuses on the nature of conflict; personal, cognitive and cultural factors affecting collaboration and negotiation; systems for conflict management, and different orientations for negotiation, mediation, and facilitation. Private and public settings will be considered; emerging online processes will be discussed. Case studies and exercises will be used to develop critical thinking and reasoning abilities, and illustrate the collaborative, creative and response methods for resolving disputes.

LAW 6921 Trial Advocacy

Spring. 4 credits. S-U or letter grades. Pre- or co-requisite: Evidence. G. G. Galbreath.
Limited enrollment.

The course is devoted to the study and weekly performance of the full range of trial techniques. Fundamental skills are taught in the context of challenging procedural and substantive law problems. Each stage of the trial is examined: jury selection, opening statement, direct examination, cross-examination, objections, impeachment, exhibits, expert witnesses, child witnesses, pre-trial, and closing argument. In addition to a lecture and student exercises every week, students will do a full day jury trial exercise at the completion of the course on a weekend at a local court with an actual judge and jury. All weekly performances are digitally recorded and reviewed and then re-reviewed by another faculty member with the student individually. There are occasional written assignments and class attendance is mandatory for all exercises sessions and the first class lecture. The pass/fail option is available.

LAW 6941 Trusts and Estates

Fall. 4 credits. Letter grades only.
G. S. Alexander.

The course surveys the law of succession to property, including wills and intestate succession, as well as the law of trusts. The course provides basic tools for estate planning, but does not include systematic coverage of estate taxation.

LAW 6981 WTO and International Trade Law

Spring. 3 credits. S-U or letter grades.

J. J. Barceló III.

The law of the World Trade Organization (WTO), including international trade theory, the basic WTO rules and principles limiting national trade policy, and the WTO dispute settlement process. A study of national (U.S.) fair and unfair trade law within the WTO framework (safeguard, antidumping, subsidies and countervailing duty remedies).

Consideration will also be given to non-trade values within the WTO system (environment, labor rights, and human rights).

PROBLEM COURSES AND SEMINARS

All problem courses and seminars satisfy the writing requirement. Limited enrollment.

Admission to all problem courses and seminars determined by lottery.

LAW 7012 Advanced Criminal Procedure: Post-Conviction Remedies

Spring. 3 credits. S-U or letter grades.

Limited enrollment. Satisfies writing requirement. K. M. Weyble.

This course examines the procedural and substantive law governing collateral challenges to criminal convictions in state and federal courts, and explores the tensions between the criminal justice system's competing interests in finality and production of reliable convictions and sentences. The course includes a historical overview of modern habeas corpus, studies substantive claims for relief common to collateral proceedings, and examines important procedural limitations on relief including the exhaustion requirement, procedural default, and nonretroactivity. Much of the course will concentrate on the meaning, application and impact of the modifications to the federal habeas corpus statutes made by the Antiterrorism and Effective Death Penalty Act of 1996.

LAW 7031 Advanced Legal Research

Spring. 3 credits. Letter grades only.

Prerequisite: Lawyering. Limited enrollment. Satisfies writing requirement.

P. G. Court, J. M. Callihan, and A. Emerson.

This seminar is designed to provide students with research skills that are essential for success as law practitioners, regardless of their career path. The topics move beyond the basic legal research instruction in Lawyering, including efficient use of Lexis, Westlaw, and other electronic databases; internet resources; international and foreign law research; business and social science resources; and legislative history. Emphasis is placed on devising effective research strategies, finding materials, and evaluating resources. In addition to weekly assignments on each topic, students develop their skills by completing a substantial paper examining the research process and key sources in a topic of the student's choosing.

LAW 7042 Advanced Litigation: Problem-Solving Seminar

Spring. 3 credits. S-U or letter grades.

Limited enrollment. Satisfies writing requirement. Attendance is not mandatory for first class, although strongly recommended. M. Oxhorn.

Through a series of written and oral assignments involving hypothetical federal and state cases (criminal as well as civil) derived

from the instructor's actual experience as a litigator, students will learn reliable methods for developing effective responses to a wide range of increasingly complex litigation problems, including ones involving seemingly novel questions or unfamiliar fields. There will be some opportunities for formal drafting, briefing and moot court presentations, but the primary focus will be on working through a series of problem-solving exercises designed to enable any good advocate to approach even the most challenging issues with the clarity and creativity needed to (a) identify what is at stake and (b) successfully anticipate and be prepared to respond to any potentially persuasive arguments that an adversary or court might conceivably raise. There will be no examinations. Grading will be based entirely on student work on assignments and class participation, including an overall assessment of progress over time.

LAW 7052 Advanced Persuasive Writing and Appellate Advocacy

Fall. 3 credits. S-U or letter grades.

B. R. Bryan. Limited enrollment. Satisfies writing requirement.

Students will master the art of persuasive writing and oral advocacy. Lecture topics include: knowing your audience; writing a Statement of Facts that appears objective but subjectively persuades; what good judges are taught about good writing; methods to achieve clarity, brevity and logic; issue selection; the effective use of precedent; establishing credibility; understanding non-legal factors that influence decisions; the interplay between judges and their law clerks; appellate procedure and standards of review; the winning opening statement; and handling questions from the bench. Students will critique actual briefs, judicial opinions and oral arguments for technique and persuasive value. Guest speakers, including judges of the United States Court of Appeals for the Second Circuit and federal prosecutors, will provide advice and recommendations. Students will apply what they have learned to the drafting of an appellate brief based on an actual court record. The brief will be written in stages and followed by one-on-one critiques. Student will also present an oral argument. Initial practice arguments are critiqued by the professor and student panels (to permit students to see an argument from a judge's perspective), and the final argument is judged by the professor.

LAW 7022 Advanced Topics in Property Theory

Spring. 3 credits. Letter grades only.

Limited enrollment. Satisfies writing requirement. L. Underkuffler.

The idea of property as that which describes the individual's inviolable sphere has been central to our constitutional scheme and to calls for protection of various interests by the political right and the political left. In this seminar, we will examine the idea of property and its usefulness in resolving issues of current social conflict. We will begin with a general consideration of rights by examining some philosophical readings on rights theories, and critiques of those theories. We will next look at the particular right of property: what it is, and the extent to which it should be placed beyond ordinary democratic processes through various constitutional theories of protection. We will then consider the extent to which property concepts can be usefully employed to resolve an array of critical social issues, such as the enforcement

of surrogacy (parenting) contacts, the sale or other control of body parts, the determination of the fate of human embryos, the pursuit of human cloning and genetic engineering, an individual's control of personal information, the recognition of relational rights (such as those arising from unmarried heterosexual and gay relationships), and others. Grading will be based on brief reaction papers written by students throughout the course. Students who wish to write longer research papers in conjunction with the seminar may do so for additional credit (with permission of instructor).

LAW 7072 Animal Rights

Spring. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. S. F. Colb.

This seminar examines the moral assumptions underlying the legal status and human use of non-human animals. State and federal law treat animals primarily as property, sometimes modified to take account of animals' subjective experience. We will study a variety of legal and philosophical writings that address the legal and moral status of animals, including the debate between supporters of an "animal welfare" approach that aspires to the reduction of animal suffering, and supporters of an "animal rights" approach that aims to abolish the use of animals. Among the questions the seminar poses are: What capacities, if any, warrant shielding animals from various forms of exploitation? Do animals have interests in continued existence or merely in avoiding suffering? Might some but not other human uses of animals be justified, and if so, which ones? Medical experimentation? The use of animal products (such as milk and eggs) for food? The keeping of animals as pets? In addition to the assigned readings, students will be responsible for a research paper.

LAW 7091 Biblical Law

Spring. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. C. M. Carmichael.

Analysis of law and narrative in the Bible from the perspective of ancient law and legal history. Topics include the nature of the law codes (e.g., hypothetical formulation versus statutory law), legal issues in the narratives (e.g., law of adultery and women's rights), law and morality (e.g., the Ten Commandments), law and religion (e.g., institutions guaranteed by the law but condemned by religious authority), the transformation of extralegal relations into legal ones (e.g., with the introduction of money), legal interpretation in antiquity (e.g., the Sermon on the Mount), social factors in legal development (e.g., shame and guilt), and aspects of criminal, family, and private law (e.g., an eye for an eye, incest rules, and unjust enrichment).

LAW 7102 Capital Punishment Law

Fall. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. C. Seeds.

This seminar examines the complex body of law governing imposition of the death penalty in the United States. The course aims to provide a historical overview of capital punishment law, critically analyze its constitutional doctrines, and introduce aspects of criminal procedure that are unique to death penalty cases. The primary focus will be on Eighth Amendment jurisprudence, including challenges to the arbitrary and discriminatory

application of the death penalty, the development of modern death penalty statutes, the role of aggravating and mitigating circumstances in the capital sentencing trial, and constitutional limitations on eligibility for the death penalty. The course will also examine the performance standards for counsel in capital cases, difficult problems raised by volunteer defendants who wish to waive mitigation, the role of international law in capital cases, and the constitutionality of certain methods of execution. The seminar is recommended for students interested in the Capital Trial Clinic or the Capital Appellate Clinic.

LAW 7092 Catholic Thought and the Law

Fall. 3 credits. S-U or letter grades. E. Penalver. Limited enrollment. Satisfies writing requirement.

With a Catholic majority on the Supreme Court, it is more important than ever to understand the distinctive features of the Catholic jurisprudential tradition. This course is intended to serve as a broad introduction to Catholic social teaching as it has developed since the Pope Leo XIII's landmark 1891 encyclical, *Rerum Novarum*. The course involves a mixture of readings, ranging from church documents to scholarly commentary by such writers as Thomas Aquinas, John Courtney Murray, Robert George, and Charles Curran. Issues covered include the relationship between morality and law, economic justice and the welfare state, the Theology of Liberation, the death penalty, abortion, and assisted suicide.

LAW 7101 Central Topics in Jurisprudence and Legal Theory

Fall. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. R. S. Summers.

This seminar will address four related topics that arise within all discrete law school courses: (1) the rational design of overall forms and complementary material or other components of the main functional legal units of a system of law, including those that are institutional such as legislatures and courts, preceptual such as rules and principles, and enforceive such as sanctions and remedies, (2) the distinctive bearing of various concepts of justice on the make-up and operation of functional legal units and other phenomena of law, with several sessions on procedural justice, (3) the special and extensive nature of the resources of reason and argument in the law, and (4) the major facets of the "legal positivism vs. natural law" debate. In a discrete law school course, many occasions arise to give such topics as the foregoing some frontal and systematic treatment, yet many instructors feel there is rarely time to stop and do so without sacrificing important course coverage. The well-educated lawyer should, however, be conversant with such topics as the foregoing, and with at least some of the now very rich literature of relevance. A special seminar or course is one solution.

Assigned seminar materials will include a recent book by Prof. Summers, *Form and Function in a Legal System* (Cambridge University Press), selected jurisprudential readings, judicial opinions, statutes, and other primary sources. There will be extensive opportunity for seminar discussion. The grade will be based on a seminar paper and class discussion.

LAW 7144 Colloquium on Law and Development in the Middle East and North Africa

Spring. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. C. Thomas.

This course begins with a comparative review of contemporary approaches to law and development, from the era of 20th-century decolonization to the present day. We will then consider particular challenges in the region related to conflict resolution, democratic governance, urbanization, and market growth. The bulk of the course will feature speakers from Cornell as well as other universities who will present their work for critical analysis by the class. Students will be required to write six short papers, which will be due in advance of the class session.

LAW 7151 Constitutional Law and Political Theory

Spring. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. S. H. Shiffrin.

The purpose of the seminar is to explore theories of freedom of speech and theories of equality. How are the ideas of freedom, equality, association, and community linked in doctrine, and how should they be linked? Neoconservative, liberal, radical, feminist, and Marxist writings may be considered.

LAW 7132 Constitutional Law and Theory Colloquium

Fall. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. J. Chafetz and M. Dorf.

This colloquium will examine current and classic topics in advanced constitutional law and constitutional theory. Roughly half of the sessions will feature presentations of works in progress by constitutional scholars. During the other sessions, assigned readings will mostly consist of canonical works in the field. For class meetings in which no faculty presentation occurs, responsibility for presenting the assigned reading will rotate among students in the colloquium. Over the course of the term, each student will be responsible for writing three brief reaction papers to the works in progress and at the end of the semester, each student will hand in a longer research paper on a topic approved by the instructors.

LAW 7991 Cornell Research Colloquium

Fall. 3 credits. Limited enrollment. Satisfies writing requirement. Required for all first-year J.S.D. candidates. J.S.D. and LL.M. program grading—H, S, U. J.D. program—Letter grades only. Open first to LL.M. students and then to J.D. students to the extent that places are available. Visiting scholars and exchange students from foreign institutions are highly encouraged to attend in an unofficial capacity. M. Lasser.

This seminar is a course in advanced academic research methodology. The Colloquium is designed to prepare the students to engage in doctoral-level research, analysis and writing, especially in comparative and international contexts. How is the researcher to select an object or subject of investigation? How should she formulate research questions? How should she engage in the study of foreign and domestic legal institutions, doctrines and/or cultures? How is interdisciplinary work to be accomplished? The early portions of the course will involve

discussing readings in comparative research methodology, including functionalism, Common Core analysis, legal transplant theory, historicism, law and development, legal pluralism, cultural analysis, colonial studies, and comparative institutionalism. In the latter portions of the course, students will present and critique their methodologically reflective research projects. A modest number of external speakers will be invited to present their work in progress for the purposes of generating methodologically oriented discussion.

LAW 7171 Corruption Control

Spring. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. R. Goldstock.

This seminar analyzes the types of corruption that exist in both the public and private sectors, the means by which a variety of criminal and non-traditional remedies may be used to reduce the frequency and impact of corrupt activities, and the constitutional and statutory problems implicated by such approaches.

LAW 7170 East Asian Law and Culture Seminar

Fall. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. Cannot be taken concurrently with LAW 7171. A. Riles.

With many of the world's most dynamic economies now in East Asia, today's law graduates are more likely than ever to be involved with legal issues from that region. At the same time, legal problems in East Asia, from human rights, to judicial and legal education reform, to conflicts over labor, environmental and minority rights, to local debates about medical and scientific regulation and ethics, are invaluable sources of comparative insight about our own legal system. This seminar introduces students to the challenges and opportunities of studying law and culture in East Asia from a sophisticated interdisciplinary perspective. Students will participate in a semester-long colloquium and conference series on law and culture in East Asia in which Cornell faculty and guest speakers from around the world will present new research on current legal issues in the region. Students will be required to read a series of background materials in preparation for each seminar and to write six three- to five-page papers responding to the presentations. Everyone who wishes to take the course for credit must attend the first class. With the permission of instructor a student will be permitted to take this seminar more than once.

LAW 7171 East Asian Law and Culture Colloquium

Fall. 1 credit. S-U grades only. Unlimited enrollment. Cannot be taken concurrently with LAW 7170. A. Riles.

Students will participate in a semester-long colloquium and conference series on law and culture in East Asia in which Cornell faculty and guest speakers from around the world will present new research on current legal issues in the region. Attendance and participation in all of the six to eight scheduled colloquia as well as the annual Clarke Lecture and Conference is required. Students will prepare a three- to five-page response paper summarizing key findings of one workshop event for a wider public audience over the course of the semester.

LAW 7194 Empirical Legal Studies Colloquium

Spring. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. V. Hans.

This colloquium provides an in-depth exploration of Empirical Legal Studies, which involves the application of systematic research methods to the study of legal issues. Issues that have been studied using these methods include such diverse topics as the structure of the legal profession, the influence of race and gender in legal decision making, the impact of educational policies and practices, reforms in medical malpractice and civil justice, corporate law and finance, bankruptcy, employment discrimination, and criminal sentencing.

LAW 7201 Empirical Studies of the Legal System

Fall. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. T. Eisenberg.

This seminar will focus on empirical studies of selected topics, including the death penalty and punitive damages. Each student is expected to complete an empirical project. Each student will need a laptop computer.

LAW 7172 Employment Discrimination

Fall. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. M. L. Goldstein.

This seminar explores contemporary problems in employment discrimination law. It focuses on legal issues involving Title VII, wrongful discharge, disability discrimination, age discrimination, and equal pay. Students are required to submit a paper as partial fulfillment of the requirements of the course.

LAW 7232 Ethical Issues in the Investigation and Prosecution of Complex Criminal Cases and Terrorism

Fall. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. Satisfies professional responsibility requirement. M. Bachrach.

This seminar will explore the role of government lawyers and defense counsel in complex investigations and prosecutions, including cases and matters involving terrorism. We will examine some recent cases and proceedings, including, for example: the disbarment of Michael Nifong, the prosecutor of the Duke Lacrosse team members; the Scrusby and Stringer cases; the Chapman case; and recent cases against two criminal defense attorneys, Lynne Stewart and Robert Simels. We will also address the role of government lawyers in advising on the treatment of detained persons during interrogation. In doing so, we will read some of the materials, including recently declassified memoranda, written by and about lawyers from the Office of Legal Counsel of the Department of Justice on the use of cruelty and torture in the investigations conducted as part of the war on terrorism.

LAW 7261 Feminist Jurisprudence

Spring. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. C. G. Bowman.

This seminar examines the role of law, and more generally, the role of the state, in perpetuating and remedying inequities against women. After studying the historical emergence of sexual equality law in the United States, we will discuss a number of paradigmatic feminist legal theories, including formal equality, MacKinnon's "dominance" theory, relational feminism, pragmatic

feminism, and various anti-essentialist theories (e.g., critical race feminism and intersectionality). We will then proceed to apply these analytical structures to various substantive areas of law of particular concern to women, including but not limited to rape and other types of violence against women; abortion, surrogacy and other reproductive rights issues; pornography; prostitution; and problems encountered by women in the legal profession.

LAW 7291 Global and Regional Economic Integration: The WTO, EU, and NAFTA

Spring. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. J. J. Barceló III.

The seminar studies the process of international economic integration occurring both globally and regionally. In the global context it takes up a basic introduction to WTO law and selected problems. In the regional context it takes up a basic introduction to the European Union, including the institutional and lawmaking processes, the direct effect and supremacy of EU law, and the development of the four freedoms (goods, services, persons, and capital). A basic introduction to NAFTA will also be included. Student seminar papers may deal with issues arising within any of the three regimes. Comparative studies will be encouraged.

LAW 7311 Immigration and Refugee Law

Fall. 3 credits. S-U or letter grades. Prerequisite: Constitutional Law. Limited enrollment. Satisfies writing requirement. S. W. Yale-Loehr.

This course explores the evolving relationship between U.S. immigration policy and our national purposes. Immigration plays a central role in contemporary American life, significantly affecting our foreign relations, human rights posture, ethnic group relations, labor market conditions, welfare programs, public services, and domestic politics. It also raises in acute form some of the most basic problems that our legal system must address, including the rights of insular minorities, the concepts of nationhood and sovereignty, fair treatment of competing claimants for scarce resources, the imperatives of mass administrative justice, and pervasive discrimination. In approaching these questions, the course draws on diverse historical, judicial, administrative, and policy materials.

LAW 7593 Income Taxations of Corporate Mergers and Acquisitions

Spring. 3 credits. S-U or letter grades. Prerequisite: Federal Income Taxation is an absolute prerequisite for the seminar, unless (a) a student believes that he or she has an equivalent academic or professional background, AND (b) receives my advance permission to enroll. Limited enrollment. Satisfies writing requirement. R. Schnur.

This is an advanced seminar that, after reviewing the basic federal income tax principles governing taxable and nontaxable corporate mergers and acquisitions, will introduce students to some of the more complex transactional tax issues and will explore how these tax concepts are utilized in structuring acquisition transactions. The emphasis will be on domestic rather than cross-border acquisitions. There will be no final examination, but students will be asked to prepare several planning memoranda directed at different merger and acquisition fact patterns.

LAW 7313 International Cooperation

Fall. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. A. Efrat.

The seminar examines—both theoretically and empirically—the establishment of international cooperation through legal rules and institutions in various areas, including security (laws of war; alliances; arms control); legal and illicit trade; human rights; intellectual property rights; and foreign investment. Additional topics include international adjudication, the United Nations, and the European Union. The seminar will be based on class discussions, in which we will critically consider the relevant literature. We will also apply our theoretical understanding of international cooperation to current events (e.g., how should we assess the recent efforts for UN reform?). Grade will be determined on the basis of participation in class discussion and a final paper on a topic related to the seminar's themes.

LAW 7321 International Criminal Law

Spring. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. M. B. Ndulo.

The seminar examines the questions surrounding international criminal law as a separate discipline and the sources of and basic principles underlying the subject. Particular attention will be paid to the question of jurisdiction over international crimes. It will consider international crimes such as aggression; war crimes, crimes against humanity, terrorism, and torture. It will also consider the treatment of past human rights violations in post conflict situations. It will further consider procedural aspects of international criminal law and the forums that deal with international crimes. In that context, it will look at the structure, jurisdiction and jurisprudence of Truth Commissions; the International Criminal Court (The Rome Statute); the former Yugoslavia Tribunal; Rwanda Tribunal and extradition and mutual legal assistance. The format will be class discussions of assigned readings. Final assessment in the course will be based on participation in class discussions and a written paper on a subject falling within the themes of the seminar. Paper topics must be submitted to the instructor for review not later than the third week of class. Each student is expected to give a presentation based on his or her paper to the class.

LAW 7352 International Law and Imperialism

Spring. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. A. Anghie.

This seminar explores the relationship between imperialism and international law through an examination of historical materials and the writings of scholars and jurists from the 16th century to the present. We will study relevant legal doctrines—such as conquest, terra-nullius and self-determination—and theories used to account for colonialism and decolonization, and the efforts of newly independent countries to reform international law. In studying these themes and issues, we will contrast traditional understandings of the relationship between imperialism and international law with alternative interpretations, and consider these in the context of broader contemporary debates about the nature and theory of international law. We will also study the work of scholars

writing in the tradition of Third World Approaches to International Law (TWAAIL).

LAW 7322 International Taxation

Spring. 3 credits. S-U or letter grades. Prerequisite: Federal Income Taxation. LL.M. students must secure permission of instructor. Limited enrollment. Satisfies writing requirement. R. A. Green.

This seminar examines the principles underlying the U.S. taxation of U.S. persons who earn income abroad and the U.S. taxation of foreign persons who earn income in the United States.

LAW 7332 International Women's Rights

Fall. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. M. E. Greenberg.

Since the Fourth World Conference on Women in 1995 and the Beijing Platform for Action, the focus on women's rights has expanded to engage advocates worldwide, reach beyond international frameworks to the national and community levels, involve men in promoting women's rights, and paying attention to economic and social rights. Yet violations of women's rights remain pervasive and tragic. While global exchange of information, alliances and experience have increased the use of legal mechanisms, they have also raised questions about their limitations. This seminar will have three dimensions: conceptual and historic foundations, international and regional legal systems, and multi-faceted strategies for promoting and protecting women's rights. We will address legal literacy and access to law, influences of religion and culture, the roles of regional women's networks and local civil society, and comparisons with gender equality objectives and gender mainstreaming. The seminar requirements will be: (1) Regular attendance and active participation in class discussions, (2) Team presentation on a region of choice, (3) a take-home midterm, and (4) a major seminar paper.

LAW 7371 Islamic Law and History

Fall. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. D. S. Powers.

This course is designed to introduce law students to the terminology, principles, and concepts of classical Islamic law. After discussing the origins and evolution of Islamic law, we will turn first to the organization of qadi courts (procedure and evidence) and then to specific areas of the law, e.g., personal status (marriage and divorce), the intergenerational transmission of property (bequests, gifts, and endowments), commerce (contracts, hire, allocation of loss), and crime. The application of legal doctrine to actual disputes will be analyzed through the reading of expert judicial opinions or fatwas (in English translation) issued in connection with medieval and modern court cases.

LAW 7392 Jurisprudence of War

Spring. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. J. Ohlin.

An investigation of the deeper theoretical and conceptual problems underlying the Law of War, including current constitutional developments regarding habeas corpus rights for battlefield detainees; the categories of enemy combatant and War on Terror; the legal definitions of terrorism and torture; the collective nature of genocide, aggression, and crimes against humanity; and modes of

liability in international criminal law, including the doctrines of conspiracy, joint criminal enterprise, co-perpetration, and command responsibility. Students are required to write a seminar paper on a topic to be chosen in consultation with the professor.

LAW 7411 Law and Higher Education

Spring. 3 credits. Letter grades only. Prerequisite: Constitutional Law or Administrative Law. Limited enrollment. Satisfies writing requirement. J. J. Mingle.

Higher education is a complex, idiosyncratic institution. Universities and colleges have a unique mission—teaching, research, and public service—and a uniquely challenging task of accommodating the various constituencies and organizations, both internal (governing boards, faculty, students, alumni) and external (legislatures, courts, regulatory agencies) that influence how they are managed and how policies are shaped. This seminar explores the dynamic tensions, high expectations, and complex legal-policy issues universities and colleges face in fulfilling their mission.

LAW 7561 Legal Aspects of Commercial Real Estate Development

Spring. 3 credits. Letter grades only. Prerequisite: first-year Property course or the equivalent. Limited enrollment. Satisfies writing requirement. J. E. Blyth.

Through the use of several written memoranda and one oral presentation, this seminar addresses considerations basic to commercial real estate development. It focuses on purchase agreements, options, rights of refusal, and memoranda thereof; representations and warranties; disclosure required of brokers and sellers; attorneys as brokers; notarial misconduct; conveyancing and surveys; commercial leases; conventional financing; conflicts between commercial tenants and institutional lenders; alternatives to conventional financing; title insurance; attorney opinion letters; and choice of real estate entity. About half of the semester is devoted to commercial leases, conventional financing, and alternatives to conventional financing (such as tax-exempt financing, mezzanine financing).

LAW 7580 Markets, Morals, and Methods

Spring. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. R. C. Hockett and K. Basu.

This seminar, open to law students and graduate philosophy and economics students, is devoted to the foundations of choice, agency, and welfare—matters that lie at the core of normative legal and economic theory. It is jointly run by Kaushik Basu, Chair of Economics at Cornell, and Robert Hockett, of the Cornell Law School.

Readings, guest speakers, and class discussion will focus on the nature of preferences, reasons, and norms, as well as (a) their interrelations and (b) their roles in guiding human decision and action. A central theme will be the question whether and to what degree welfare, well-being, and wealth for that matter can be understood apart from and even as determinative of normative propriety ("rightness" and "wrongness"), or whether instead these concepts presuppose a prior conception of normative propriety. Many legal and economic theorists seem to assume the former, but this assumption can—and in this course will—be examined critically. Approximately half of the class sessions will

feature presentations by distinguished legal theorists, welfare economists, and philosophers. The other class sessions will be devoted to discussion of papers sent in advance by these guests, as well as complementary work by others.

LAW 7582 Memory and the Law (also HD 6190)

Fall. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. C. Brainerd.

This course will focus on how the scientific study of human memory interfaces with the theory and practice of law. Students will study relevant areas of memory research (e.g., storage, retrieval, false memory, memory deficits in impaired populations) and memory theory. Students will also study specific areas of legal practice in which the reliability of evidence is critically dependent on human memory (e.g., eyewitness identification, recovery of repressed traumatic memories, confessions, elderly witnesses, child witnesses). Readings will come from primary library sources.

LAW 7591 Mergers and Acquisitions

Fall. 3 credits. S-U or letter grades.

Prerequisite: Prior or concurrent: basic Business Organizations/Corporations class at Cornell or another U.S./Canadian law school. Prior (not concurrent): basic Contracts class from Cornell or another U.S./Canadian law school or basic contracts class (from any other law school) deemed comparable by the professors. Limited enrollment. Satisfies writing requirement. M. I. Greene and R. A. Hall.

The focus of this course is developing the lawyering skills required by an attorney advising a client who is selling or acquiring a business. Individual drafting exercises, as well as strategy discussions and negotiations by student teams acting as counsel to the buyer or seller, will be interspersed with lectures on the business acquisition process and analysis of selected publicly available documentation of actual acquisition transactions. The typical chronology of an acquisition: negotiation by the buyer and the seller of the basic terms of the deal including selection of structure (sale of stock or assets; merger); drafting and negotiation of a term sheet or letter of intent; due diligence investigation; drafting and negotiation of the definitive acquisition agreement; handling of problems encountered between the execution of the agreement and the closing of the acquisition; and the closing.

LAW 7594 Neuroscience and the Law

Fall. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. P. Johnson.

This seminar examines key findings and implications for the law in the rapidly expanding field of neuroscience. Topics to be covered include the neurobiology of decision-making and memory, issues of gender difference in brain function, and the neurophysiology of trauma, addiction, and aggression. Attention will also be given to recently developed technologies for observing the human brain, the history and philosophy of clinical diagnosis as related to psychopathology and deviant behavior, and to prisons as asylums. The goal of the seminar is to enable students to integrate cutting-edge scientific findings and related controversies into their understanding and approach to legal practice in such areas as criminal justice,

mental health disability, domestic violence, gender equity, and child welfare.

LAW 7594 New York Civil Practice

Spring. 3 credits. S-U or letter grades. Prerequisite: Full year of Civil Procedure. Limited enrollment. Satisfies writing requirement. Satisfies professional responsibility requirement. N. E. Roth.

The course will explore the idiosyncrasies and intricacies of New York practice and procedure, with a particular focus on practice in the New York Supreme Court (the primary court of general original jurisdiction in New York). The course will also examine rules concerning civility in litigation and the ethical boundaries of zealous representation.

LAW 7601 Organized Crime Control

Fall. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. R. Goldstock.

This seminar will explore the challenges organized crime poses to society and to traditional law enforcement techniques. Students will undertake a simulated investigation using physical and electronic surveillance, the analysis of documentary evidence, and the examination of recalcitrant witnesses before the grand jury. The RICO statute will be explored in detail as well as a variety of non-criminal remedies including forfeiture and court-imposed trusteeships.

LAW 7631 Pretrial Practice, Litigation Strategies, and Remedies in Commercial Litigation

Fall. 3 credits. S-U or letter grades. Prerequisite: Civil Procedure and Contracts or Contracts in a Global Society. Limited enrollment. Satisfies writing requirement. Satisfies professional responsibility requirement. A. M. Radice and M. D'Amore.

This seminar studies the strategies of complex commercial litigation, focusing on case development in the pretrial period. It will address strategies and approaches to pleadings, jurisdiction, motions, pretrial discovery and remedies (e.g., preliminary injunctions, damages) in the context of difficult and unclear legal issues. Hardball litigation techniques and ethical considerations will be considered as well as the use of litigation to achieve business goals. Actual litigated cases will be dissected and papers in the form of briefs and memoranda will be written on each. Since 90 percent of commercial cases settle before trial, this seminar will be a real life presentation of the commercial litigation process.

LAW 7654 Special Problems in Trial Practice

Fall. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. E. Ainslie.

An examination of professional problems faced by American trial lawyers, e.g. unethical judges, ineffective opposing counsel, unpreparable witnesses and lying clients, as well as practical trial strategy issues in more typical trials. Readings from real cases, including several from the instructor's case-files over decades of trial practice.

LAW 7783 Topics in Intellectual Property

Spring. 3 credits. Letter grades only. Limited enrollment. Satisfies writing requirement. O. Liivak.

Sizable disagreement and controversy surround many areas of intellectual property. This seminar explores these disputes. By

surveying the academic literature the seminar aims to introduce, understand, and ultimately critique the arguments being made for and against various aspects of intellectual property.

LAW 7785 War Crimes Trials

Fall. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. Satisfies professional responsibility requirement. M. Rosensaft.

Beginning in November 1945, in an unprecedented attempt to bring war criminals to justice, more than 20 senior government officials and military leaders of Hitler's Third Reich were indicted and tried, in what has become known as the Nuremberg Trial, for crimes against peace, war crimes, and crimes against humanity. Earlier that fall, the SS commandants, officers, and guards who had been arrested by the British upon the liberation of the Bergen-Belsen concentration camp, had been tried before a British military tribunal. These were the first of numerous trials of Nazi war criminals and related criminal and civil proceedings arising out of the Holocaust. This seminar will examine legal and ethical issues raised in these and other trials of Nazi war criminals and individuals accused of collaborating with the Nazis in perpetrating crimes against humanity, including the Eichmann Trial in Jerusalem, the Auschwitz Trial of former SS officials and guards held in Frankfurt-am-Main, Germany in 1963-65, the 1963-64 Tel Aviv trial of Hersz Barenblat, the head of the Jewish police in the ghetto of Bedzin, Poland, and the trials of Klaus Barbie (1987), Paul Touvier (1994), and Maurice Papon (1997-98) in France.

LAW 7784 The War on Drugs

Fall. 3 credits. S-U or letter grades. Limited enrollment. Satisfies writing requirement. M. J. Satin.

The United States incarcerates more people for drug offenses than any other country. Of the more than 2 million people in prisons or jails, approximately one-quarter of those people have been convicted of a drug offense. This seminar examines America's War on Drugs, including its evolution and development over the past forty years, its successes and failures, and its social and economic consequences. Specific attention will be paid to its impact on the poor and people of color. To that end, the seminar will examine the basis for and effect of disparities in sentences between crack and cocaine offenses as well as recent federal cases and legislation on this subject. Other topics include mandatory minimum sentences, drug treatment and drug court, the movement to legalize drugs, mandatory drug testing in schools and in sports, and U.S. foreign policy towards countries supplying drugs. Students will be expected to write a weekly paper on the reading.

CLINICAL COURSES AND EXTERNSHIPS

All clinical courses and externships have limited enrollment.

Admission to all clinic courses is instructed selected.

Detailed clinical descriptions may be found at: <https://support.law.cornell.edu/students/forms/ClinicalCoursesAndExternshipsDescriptions.pdf>.

LAW 7802 Capital Appellate Clinic

Fall. 4 credits. S–U or letter grades.
Prerequisite: permission of instructor; Criminal Procedure, Evidence, and the Capital Punishment Seminar are preferred but not required. Limited enrollment.
J. H. Blume and S. L. Johnson.

Students in this clinic will assist in the preparation of appellate briefs in selected capital cases. Students will work intensively with the record, research legal issues, and draft arguments. Unlike most of the death penalty clinics, no travel is expected.

LAW 7811 Capital Punishment Clinic: Post-Conviction Litigation

Spring. 4 credits. S–U or letter grades.
Prerequisite: permission of instructor; Criminal Procedure, Evidence, and the Capital Punishment Seminar are preferred but not required. Limited enrollment. Note: This course may require off-premises travel. The Cornell Death Penalty Project will reimburse students for reasonable travel expenses. S. L. Johnson.

Death penalty litigation: investigation and the preparation of petitions, memoranda, and briefs. This course is taught as a clinic. Two or possibly three capital cases are worked on by students. Case selection depends on both pedagogical factors and litigation needs of the inmates. Students read the record and research legal issues. Some students are involved in investigation, while others assist in the preparation of papers. All students are included in discussions regarding the necessary investigation, research, and strategy for the cases.

LAW 7812 Child Advocacy Clinic I

Spring. 4 credits. S–U or letter grades.
Prerequisite: permission of instructor. Limited enrollment. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites.
A. J. Mooney.

Students will participate in the representation of children who are the subject of family court proceedings. Cases are likely to involve children who are the subjects of petitions such as: abuse or neglect, custody, termination of parental rights, status offense and juvenile delinquency. Students will interview clients and their families, prepare documents such as pleadings, motions, pre-trial memos and proposed findings of fact, and participate in court conferences and hearings. The in-class component of the course will address cross-disciplinary concerns such as working with other professionals and using social science to assist a client. Additionally, the course will focus on child development and the particular ethical concerns involved with the representation of children.

LAW 7813 Child Advocacy Clinic II

Spring. 4 credits. S–U or letter grades.
Prerequisite: Child Advocacy Clinic I. Limited enrollment. A. J. Mooney.

Students in Clinic II will: (1) work directly on law guardian cases, taking greater responsibility and working more independently than they are able to in the Child Advocacy Clinic; (2) develop a more in-depth knowledge of the field of child advocacy by participating in a weekly reading group; (3) act as mentors for students in the Child Advocacy Clinic, answering simple questions and providing emotional support for students who are often encountering, for the first time in their lives, stark poverty and

violence; (4) act as liaisons between the students in the Child Advocacy Clinic and the instructor, helping to identify areas in which the Clinic students need further instruction; (5) act as teaching assistants, reviewing work products of the Clinic students and assisting them in locating research, formbooks, and samples of court documents.

LAW 7833 Criminal Defense Trial Clinic

Fall. 4 credits. S–U or letter grades.
Prerequisite: Evidence recommended or with permission of instructor. Limited enrollment. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites. L. Salisbury.

Students represent defendants in non-felony, non-jury criminal cases. The course has both a classroom and courtroom component. The classroom component focuses on all aspects of the handling of a criminal case, including criminal law and procedure, ethics, trial strategy, plea bargaining and trials. The courtroom component involves attendance at court proceedings, including pre-trial conferences. Each student will interview clients and witnesses, prepare clients and witnesses for trial, conduct negotiations, do legal research, conduct fact investigation, prepare discovery demands and engage in motion practice.

LAW 7831–7832 Full-Term Externship

Fall, spring. 12 credits. S–U grades only.
Prerequisite: permission of instructor. Limited enrollment. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites.
G. G. Galbreath.

The Full-Term Externship course allows students to earn 12 credit hours as externs working full time at approved placement sites (most are with non-profit organizations or governmental agencies) during the fall or spring semester of their third year or the spring semester of their second year. A written application for the course must be submitted to the instructor and approved during the semester preceding the semester the student plans to participate. The student must be supervised/mentored by an attorney and engage in meaningful and “attorney-like” work at the placement which furthers the student’s education and career goals. In addition to his or her work responsibilities for the placement, the extern will prepare weekly journal entries, engage in regular electronic communication with the other extern and instructor, host the instructor for a site visit, and do a written evaluation of the placement experience.

LAW 7801 Immigration Appellate Law and Advocacy Clinic

Spring. 4 credits. S–U (with permission of instructor only) or letter grades.
Limited enrollment. S. Kalantry and S. W. Yale-Loehr.

Students will learn asylum and Convention Against Torture law and immigration and appellate procedure in class lectures. In the practice component of the clinic, students will develop skills such as brief-writing, interviewing, fact-finding and legal researching. Some students will write appellate briefs to the Board of Immigration Appeals on behalf of clients who have petitioned to remain in the United States because they fear persecution or torture in their home countries. Other students in the class may work on advocacy projects involving drafting proposed legislation, advocating for immigration reform,

or other advocacy work around emerging issues in immigration such as prolonged detention and unconstitutional raids. Students may interview clients over the phone during this time, with the possibility of face-to-face interviews. Some clients may be incarcerated, and many will be out-of-state. Students may also locate expert and other witnesses, and draft affidavits and motions. This course may require off-premises travel.

LAW 7855 International Human Rights Clinic

Fall, spring. 4 credits. Letter grade. S–U (with permission of instructor only). Recommended prerequisites: International Human Rights and Public International Law. Limited enrollment. This course may require off-premises travel. S. Kalantry.

In this clinic students will learn substantive human rights law as well as human rights lawyering and advocacy skills. Students will learn to describe issues in human rights terms, formulate demands using human rights accountability tools, and develop strategies that utilize key features of human rights law. Students will develop their international research and writing, and communication skills by working in teams on projects for international organizations and judges. The projects may involve legal action such as impact litigation, legal assistance and counseling, or fact-finding and reporting or human rights education and training, including judicial training.

LAW 7861 Judicial Externship

Fall. 4, 5 or 6 credits. S–U or letter grades. Limited enrollment. Note: The course requires travel to the placement court. Some are within walking distance and some are over an hour away. The student must arrange for her/his own transportation. G. G. Galbreath.

Students work part time with a trial or appellate state or federal judge in central New York. Work involves courtroom observation, conferences with the judge and law clerk(s), research and writing memoranda and drafting decisions. Emphasis is on learning about judges, judicial decision-making and trials or appeals. There are weekly class sessions with readings and discussions of topics related to the externship experience. While the primary focus of the course is the student’s work at the court placement, each student will also do class presentations, weekly journal entries, provide written work samples and meet individually with the instructor.

LAW 7871 Labor Law Clinic

Spring. 4 credits. S–U or letter grades. Prerequisite: preference is given to students who have taken Labor Law. It is helpful to have taken Administrative or Employment Law, but not required. Limited enrollment. Note: This course may require off-premises travel. Please contact the professor if this is an obstacle. A. Cornell. The Labor Law Clinic will provide students a practical opportunity to learn labor law, while making meaningful contributions to the labor movement and working people. This clinic will combine a substantive component with practical experience. Students will advise labor unions on a variety of legal issues that surface during the semester and may have the opportunity to represent unions in different forums. Students will communicate directly with union representatives and will be required to sort through the facts, research the

issues, and provide information and advice. Students will routinely draft legal memoranda, prepare and file pleadings and briefs as required. Students may have the opportunity to represent unions at hearings, mediation or arbitration. Students may also be required to observe a hearing before the National Labor Relations Board, Public Employment Relations Board or an arbitration. Students have also been invited to observe the collective bargaining process. A small number of students will have the opportunity to dedicate their clinical time to international labor law. Interested students can support the ongoing work of the International Commission for Labour Rights, a non-profit organization, or a global union federation with ongoing cases or projects. Student contribution in this area is likely to be research oriented.

LAW 7872 Land Use, Development, and Natural Resource Protection Clinic

Spring, 4 credits, S-U or letter grades.

Prerequisites: Land Use and/or Water Law Clinic recommended. Limited enrollment. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites. K. S. Porter.

Issues of how land use and development may be managed to control, protect, and conserve natural resources, particularly water, are coming to the forefront of national and international policy. Land use policy is fundamental to both economic development and the protection of natural resources. The rich and complex body of law that balances often-competing needs of different stakeholders involves areas of law as diverse as land use, real estate, property, tax, contract, tort, local government, and water and environmental law. Often, even when stakeholders share a uniform vision, the transaction costs involved in executing alternative development plans are prohibitively high. This clinic provides students with the opportunity to work hands-on to identify, design and implement economically and politically viable solutions to environmental problems arising from land use decisions. Participating students will assist clients such as developers, government agencies, community leaders, and public interest groups with a wide range of services. An increasingly critical concern is the role of land use and development on the quantity and quality of water resources. Potential projects include drafting/reviewing municipal ordinances and inter-municipal agreements; consulting on design parameters for development sites (i.e., what type of density is possible, what type of variances are available); drafting petition/explanatory documents for clients who wish to obtain variances; resolving compliance issues with state and local laws; and attending meetings and advocating for clients. Because this clinic offers a great variety of transactional work, it will be of benefit to most students who are interested in transactional practices, particularly those interested in a career in real estate, land use, finance, general practice, and environmental law.

LAW 7881 Law Guardian Externship

Fall, spring, 4 credits. S-U or letter grades. Limited enrollment. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites. A. J. Mooney.

Students are placed at Citizens Concerned for Children, the local Law Guardian Office, where they assist the attorneys in the representation of children in abuse and

neglect cases, juvenile delinquency proceedings, and PINS (Person in Need of Supervision) cases. Students also may have their own cases, in which they will assume primary responsibility for the representation. Duties may include interviewing, investigation, drafting memoranda and motions, and trial preparation. There will be several meetings with the instructor during the semester. Bi-weekly journals are also required.

LAW 7901 Legislative Externship

Fall, spring, 3 credits. S-U or letter grades. Students selected by Assemblywoman Lifton. Limited enrollment. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites. B. Strom.

Students work with the local New York State Member of Assembly. Work involves drafting legislation, tracking legislation for constituents, legal research and writing, and responding to constituent requests that particularly require legal research of an explanation of law. The emphasis is on learning about legislative process, drafting of legislation, understanding the reasons for statutory ambiguity, and developing various skills. There are several informal meetings with the faculty supervisor related to the externship experience.

LAW 7911-2-3 Neighborhood Legal Services Externship 1, 2, or 3

Fall, spring, 4 credits. S-U or letter grades. Limited enrollment. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites. B. Strom.

Classroom component is provided by Clinical Skills 1, 2 (fall), or 3 (spring) depending on whether the student has previously been enrolled in a course in which Clinical Skills 1 was a component. Cases involve the representation of clients of a legal services office, the Ithaca office of Neighborhood Legal Services (NLS). Along with case handling, this externship includes a classroom component, provided by Clinical Skills 1, 2, or 3. The classes are devoted to the development of lawyering skills and issues related to professional responsibility and the role of an attorney. In addition, each student will meet periodically with the faculty supervisor for review of the placement experience.

LAW 7921 Prosecution Trial Clinic

Fall, 4 credits. S-U or letter grades. Prerequisite: Evidence or permission of instructor. Interested students will need to submit a statement of interest and resume to Prof. Robert Sarachan by July 15, 2009. Limited enrollment. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites. R. A. Sarachan.

This course gives students the opportunity to prosecute non-felony non-jury trials in Ithaca City Court. The course has both a classroom component and a courtroom component. The classroom component involves lecture, discussion and trial simulation exercises. Topics include criminal law and procedure, prosecution ethics, trial strategy and preparation, trial conduct including direct and cross-examination, plea-bargaining and professional judgment. The courtroom component involves regular attendance at Ithaca City Court's non-jury terms. Students will observe and critique trials and will prosecute offenses including traffic tickets (such as speeding and running a red light),

city code violations (such as open container and noise offenses), non-felony penal law violations (such as disorderly conduct, possession of marijuana) among others. Each student will be expected to conduct multiple trials during the semester, depending on docket volume. During the semester students will also be expected to prepare witnesses (typically police officers), conduct plea-bargaining negotiations, case research and fact investigation, respond to discovery demands, and engage in motion practice and appellate practice as needed.

LAW 7931 Public Interest Clinic 1

Fall, spring, 4 credits. S-U or letter grades. Limited enrollment. Note: This course may require travel for purposes of participating in hearings. G. G. Galbreath and B. Strom.

Students handle civil cases for low-income clients of the Public Interest Clinic under the supervision of clinic faculty. Students interview and counsel; investigate and analyze facts; interrelate substantive and procedural law with facts in the context of actual representation; develop strategies to handle clients' problems; identify and resolve professional responsibility issues; do legal writing; negotiate and settle cases; and represent clients in hearings. Classroom component is provided by the Clinical Skills 1 class, in which students will develop interviewing, counseling, and advocacy skills through the use of readings, videotapes, discussions, and simulation exercises.

LAW 7932 Public Interest Clinic 2

Fall, 4 credits. S-U or letter grades.

Prerequisite: Public Interest Clinic 1 or a clinic course that included the Clinical Skills 1 classroom component. Limited enrollment. Note: This course may require travel for purposes of participating in hearings. G. G. Galbreath and B. Strom. Students handle civil cases, participate in a classroom component, Clinical Skills 2, and help supervise participants in Public Interest Clinic 1. Cases are handled as described in the course description for Public Interest 1. Students represent the clinic's clients in both federal and state courts. Clinical Skills 2 builds on the skills taught in Clinical Skills 1.

LAW 7933 Public Interest Clinic 3

Spring, 4 credits. S-U or letter grades.

Prerequisite: Public Interest Clinic 1 or a clinic course that included the Clinical Skills 1 classroom component. Limited enrollment. Note: This course may require travel for purposes of participating in hearings. G. G. Galbreath and B. Strom. Students handle civil cases, participate in a classroom component, Clinical Skills 3, and help supervise participants in Public Interest Clinic 1. Cases are handled as described in the course description for Public Interest 1. Students represent the clinic's clients in both federal and state courts. Clinical Skills 3 builds on the skills taught in Clinical Skills 1 and 2.

LAW 7953-7954-7955 Securities Law Clinic 1, 2, and 3

Fall, spring, 4 credits. S-U or letter grades.

Prerequisites: None. Pre- or co-enrollment in Securities Regulation or Dispute Resolution recommended but not required. Limited enrollment. Note: This course may require off-premises travel for potential client and witness interviews, hearings, and community presentations. Assistance will be provided to students who lack available transportation. W. A. Jacobson.

The course will focus on fundamental investigatory and advocacy skills applicable to representation of public investors in disputes subject to arbitration at the Financial Industry Regulatory Authority (f/k/a National Association of Securities Dealers), with particular attention to the elderly and to small investors. Substantive legal topics will include the scope and nature of binding arbitration under the Federal Arbitration Act and New York law, and the legal and regulatory remedies available to defrauded investors. Coursework will include training in skills such as interviewing potential clients, evaluating potential claims, preparing pleadings, conducting discovery, representing clients at hearings and negotiating settlements. Class work will include presentations by nationally-recognized experts on topics applicable to evaluation of securities accounts, trading, and products. Students will have the opportunity under faculty supervision to represent investors, to provide public education to community groups as to investment frauds, to draft position statements to regulatory authorities, and/or to participate in preparing amicus briefs, in support of public investors.

LAW 7951-7952 U.S. Attorney's Office Clinic 1 or 2

Fall, spring. 6 credits. S–U grades only. Registration for the fall offerings was handled by the U.S. Attorney's Office in February 2009. Limited enrollment. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites. C. E. Roberts.

The United States Attorney's Office Clinic is a program in which law students work 12-15 hours per week for the United States Attorney's Office in Syracuse, New York. Each student is assigned to work for an Assistant United States Attorney. Students perform research and writing, and trial assistance as needed. Students may qualify to appear in court under the supervision of their attorney, and are encouraged to observe court proceedings in the U.S. Courthouse. Students also attend a two hour seminar once a week at Cornell. The seminar will focus on writing in practice, including critiques of briefs, motions, and a petition for certiorari. Additional topics include federal criminal and civil practice, prosecutorial discretion, and habeas corpus. Guest speakers may include judges, a special prosecutor, and U.S. Department of Justice officials. Students must be a U.S. citizen. A detailed course description is available at <https://support.law.cornell.edu/students/forms/ClinicalCoursesAndExternshipsDescriptions.pdf>.

LAW 7961 Water Law in Theory and Practice 1

Fall. 4 credits. S–U or letter grades. Limited enrollment. Note: This course requires off-premises travel. The student is responsible for travel to and from the sites. K. S. Porter. Competing uses of water resources pose high stakes. Serious conflicts now arise with increased frequency. There is growing necessity for effective legal instruments and methods of conflict resolution to avert or resolve disputes. The Clinic addresses problems of law related to water through collaboration, consultation, relevant research and writing. This involves selecting and working on a topic, or a dispute, of local, regional, national or international importance with leaders and experts having knowledge or involvement in the issues of the topic. A

specific purpose of the clinic is to provide real world transactional experience particularly in resolving or avoiding disputes. Students have available for their projects the extensive network of resources initially established through the New York State Water Resources Institute based at Cornell University.

Under faculty supervision, each student selects a project on a topic or dispute of theoretical and practical legal importance. Students consult and work with attorneys, professional staff and stakeholders engaged in work to which the project applies. Projects generally involve the following steps: Identifying and defining the problem or dispute; Formulating a procedure for the project including prospective cooperators and "clients"; Developing a basic understanding of the legal issues and applicable methods through the relevant literature and documents; Participating in on and off-campus meetings, and field trips; Obtaining assistance, as relevant, of faculty in the various colleges and departments at Cornell University. (Cornell University is preeminent in its faculty and staff resources with interests in the multiple aspects of water and land resource management.); Presenting the progress and results of their project to interested groups and clients, and to the class.

NON-PROFESSIONAL COURSES—NOT OPEN TO LAW STUDENTS

LAW 4021 Competition Law and Policy

Fall. 4 credits. Letter grades only. G. A. Hay.

This course will examine issues that arise when a country attempts to implement and maintain a "competition policy" as a way of promoting economic growth and efficiency. The basic reading material will start with actual cases (most of them arising under U.S. antitrust law), and use those cases to probe the legal, economic and broad policy issues that the cases raise. This course is intended for non-law students; law students interested in the subject should take the Antitrust Law course. The course requires no legal training or background. Economics 101 (Elementary Microeconomics) or its equivalent is a prerequisite. The course can be used by Economics majors as an equivalent to a 400-level Economics course.

LAW 4051 The Death Penalty in America

Spring 4 credits. S–U or letter grades. Undergraduates only. J. H. Blume and S. L. Johnson.

The death penalty has gotten increased media attention due to high profile death row exonerations, and has long been under siege for other reasons, such as racial disparities in its imposition and the prevalence of very poor representation by defense counsel. This course surveys the legal and social issues that arise in the administration of the death penalty. The reading will be largely comprised of reported death penalty cases, but will be augmented by a variety of other sources, including empirical studies of the death penalty and the litigation experience of the professors. Although the focus will be on capital punishment as practiced in the United States, we will also consider international and comparative perspectives. Guest speakers will provide a range of views, and law students with

experience working on capital cases will lead discussion sections.

LAW 4121 Gender, Public Policy, and Law

Fall. 4 credits. S–U or letter grades.

Undergraduates only. C. G. Bowman. The course will include, first, a brief introduction to the history of the women's movement in the United States and to the development of the constitutional standard for gender, followed by a sampling of the competing theoretical approaches that can be taken to legal problems involving gender—a formal equality approach, the dominance approach (exemplified by Catharine MacKinnon), relational or cultural feminism (a "differences" approach represented in the legal academy by Robin West and Mary Becker), socialist feminism, pragmatic feminism, and critical race feminism. After the constitutional and theoretical foundations have been laid, we will study a series of issues and issue areas where gender is critical to legal treatment—reproduction (abortion, surrogate motherhood and other reproductive technologies, for example), rape, domestic violence, prostitution, pornography, cohabitation, same-sex marriage, and other family law issues. We will both study how these issues are treated under current law and discuss what might be better approaches to each. In order to introduce students to the study of law, we will be using a textbook used in law school courses, Becker, Bowman, Nourse, and Yuracko, *Feminist Jurisprudence: Taking Women Seriously* (3d ed. 2007). No prior knowledge of legal analysis or concepts will be presumed. Requirements: two short (five-page) papers and a final exam.

LAW 4131 The Nature, Functions, and Limits of Law (also GOVT 3131)

Fall. 4 credits. Letter grades only.

Undergraduates only. A. Riles.

A general-education course for students at the sophomore and higher levels. The course will introduce students to different perspectives on what law is, what role it ought to play in society, and what it can—and cannot—accomplish. In addressing these questions, students will consider the different roles of legislatures, courts, and executives. Assigned readings consist of case law, commentaries on the legal process, social scientific articles, and works of literature addressing the role of law in society.

Schnur, Robert A., J.D., Harvard U.

Seeds, Christopher, J.D., Cornell U.

Weyble, Keir M., J.D., U. of South Carolina

Yale Loehr, Stephen W., J.D., Cornell U.

Yusem, Stephen G., J.D., U. of Pennsylvania

DIVISION OF NUTRITIONAL SCIENCES

ADMINISTRATION

Patrick Stover, director

Charles McCormick, director of undergraduate studies

Cha-Sook You, assistant director of undergraduate studies

Charles McCormick, director of graduate studies, field of nutrition

THE DIVISION

Nutritional science draws upon the chemical, biological, and social sciences to understand the complex relationships between human health, nutritional status, food and lifestyle patterns, and social and institutional environments. Understanding these relationships includes the study of the metabolic regulation and function of nutrients, nutrient requirements throughout the life span, the role of diet in reducing risk of chronic disease, the nutritional quality of foods, and interventions and policies designed to promote the nutritional health of individuals, communities, and populations.

The focus of this broad field of study at Cornell is the Division of Nutritional Sciences, which brings together specialists from many disciplines. Faculty members are involved in undergraduate and graduate teaching, research, and extension of research-based knowledge throughout New York State, the nation, and the world.

The division is affiliated with both the College of Human Ecology and the College of Agriculture and Life Sciences. The undergraduate program in Nutritional Sciences is offered to students enrolled in both colleges. The undergraduate program in Human Biology, Health, and Society is offered through the College of Human Ecology. A program of study in nutrition for biological science majors is offered in collaboration with the undergraduate program in biology. Graduate study in the field of nutrition is administered by faculty members throughout the university.

FACILITIES

Most of the faculty members of the division work in Savage Hall, Kinzelberg Hall, and Martha Van Rensselaer (MVR) Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities. Savage Hall has a graduate reading room and undergraduate student room.

UNDERGRADUATE PROGRAMS

The Division of Nutritional Sciences (DNS) offers three programs leading to a B.S. degree:

Nutritional Sciences (NS-CHE), College of Human Ecology: this program provides students with a strong foundation in the broad field of nutritional sciences as well as thorough training in chemistry and biology. Students may prepare for a variety of career interests, including medicine and other health careers, fitness and sports nutrition, nutrition counseling, clinical nutrition, dietetics, nutritional biochemistry, community nutrition, and nutrition education.

Nutritional Sciences (NS-CALS), College of Agriculture and Life Sciences: this program is for students who want strong training in human nutrition combined with supportive course work in agriculture and the life sciences. Strong preparation in biology, chemistry, and math is required. Students in the NS-CALS program supplement the nutrition curriculum with courses in areas such as food science, animal science, plant science, advanced biology, business and economics, education, and communication.

Human Biology, Health, and Society (HBHS), College of Human Ecology: established in 1997, this program gives students a strong foundation in biology. It then goes on to explore human health issues from the perspectives of both biology and the social sciences. Students complete a rigorous curriculum in the natural sciences and then, choosing from a wide array of courses offered in the College of Human Ecology, focus their studies on health issues of their choice. Students can explore such topics as gene expression and metabolism related to disease states, biological and social aspects of growth and development, and policies and programs influencing health.

The division also offers the **Program of Study in Human Nutrition for biological sciences majors** who may be enrolled in the College of Agriculture and Life Sciences or College of Arts and Sciences. The Program of Study in Human Nutrition offers biology majors courses on the nature and biochemical function of essential and nonessential nutrients, nutrient requirements, the role of nutrients in gene expression, and the role of diet in both risk of chronic disease and treatment of existing disease states. Students in this program of study are encouraged to complete a diverse set of advanced courses that afford a perspective on current knowledge of nutrient requirements and function and how this knowledge can be put to use. With the exception of a core course in the structure and function of nutrients, the course requirements are unspecified.

Faculty advisors work with individual students to develop a curriculum that fits the students' interests. As part of their program, students are encouraged to obtain laboratory experience either through course work or research. Students completing the program in nutrition most often choose to continue their education in medical or graduate school and pursue careers in the applied aspects of nutrition or in laboratory-based or epidemiological research.

THE CURRICULUM

Undergraduate students in these programs complete the requirements of their colleges as well as the courses required by the program of their specific interest.

Both the NS and HBHS programs require a rigorous sequence of courses in chemistry and biology, including introductory chemistry and biology, organic chemistry, biochemistry, and physiology. A minimum competency in college algebra is required with an additional math and/or statistics requirement for some programs and career paths. Students in the HBHS major also complete a course in physics and two additional courses in advanced biology.

All students complete the introductory course NS 1150 Nutrition, Health, and Society. The NS program requires the completion of four other core courses: NS 2450 Social Science Perspectives on Food and Nutrition; NS 3450 Introduction to Physicochemical and Biological Aspects of Foods; NS 3310 Physiological and Biochemical Bases of Nutrition; and NS 3320 Methods in Nutritional Sciences. Students in these programs also must select a minimum of 9 credits in advanced courses in the nutritional sciences.

The HBHS major requires 15 credits of advanced electives that explore health issues from primarily a biological or a social perspective. These courses are offered by faculty in several departments within the College of Human Ecology.

Undergraduate students in these programs have a faculty advisor with whom they meet at least twice a year. Advisors help students plan their course schedules and can suggest opportunities for individual study or experience outside the classroom.

In both undergraduate programs the correct sequencing of biology, chemistry, and/or nutrition courses is very important. Students considering these programs should obtain detailed information about course requirements from the division's Academic Affairs office, B21 Savage Hall. This office offers a wide range of advising materials to help students develop a program of study that matches their interests and needs.

CAREER OPTIONS AND COURSE PLANNING

Requirements for the programs are the minimum set of courses necessary for a bachelor's degree in these fields. Students should supplement their requirements with elective courses and other learning experiences that will prepare them for entry-level jobs or advanced study in their field(s) of interest. A summary of suggested electives for different career interests follows:

Medicine and Other Health Careers: Recommended courses for pre-med students include calculus and two semesters of physics.

Specific information about medical school admissions requirements can be obtained from the university's Health Careers office, 203 Barnes Hall. Students interested in other health careers should acquire specific information about those requirements. Courses of interest may include those related to the biological and social determinants of health; human growth, development, and behavior through the life course; interpersonal communications; advanced biology; sociology; psychology; and ethics.

Dietetics: Students who wish to work in the areas of clinical nutrition, nutrition counseling, sports nutrition, community nutrition, or food and nutrition management should complete the academic requirements for The American Dietetic Association (ADA). The Didactic Program in Dietetics is accredited by the Commission on Accreditation of Dietetics Education and provides students with the course work necessary for application to an accredited Dietetic internship or an Approved Pre-professional Practice (AP4) program. Students successfully completing didactic program requirements at Cornell are issued a Verification Statement. A one-time fee is involved to cover the cost of program materials and transcript evaluation. The Didactic Program in Dietetics policy and procedure for issuing verification statements can be found at nutrition.cornell.edu/dns7_dietetic.html. Upon completion of a Dietetic Internship or AP4 program, students are eligible to take the Registered Examination of the Commission on Dietetic Registration and become a Registered Dietitian (RD). Courses in foods, nutrition and disease, microbiology, management, statistics, and nutritional care are added to the courses required for the nutrition programs. For more information about meeting ADA requirements, contact the DNS Academic Affairs office, B19 Savage Hall.

Exercise, Nutrition, and Health

Promotion: Students should complete a course in physiology and a course in anatomy after introductory biology. Students can complete the Applied Exercise Science Concentration at Ithaca College, which includes courses in kinesiology, exercise physiology, and biomechanics. Students who wish to apply to graduate schools to study physical therapy should complete a year of introductory physics, a course in statistics, a course in ethics, and three courses in psychology. Students should check the specific requirements of their schools of interest. For information about the Applied Exercise Science Concentration, contact the DNS Academic Affairs office, B21 Savage Hall.

Biomedical Research/Nutritional

Biochemistry: Recommended electives include calculus, physics, genetics, advanced biology and chemistry, toxicology, and nutritional sciences courses related to the physiology, biochemistry, and metabolism of different nutrients and disease states.

Public Health and Community Nutrition:

Suggested electives include courses in communications, education, human development, policy analysis and management, maternal and child nutrition, geriatric nutrition, nutrition and disease, and food economics.

Nutrition, Food, and Business:

Recommended electives include courses in management, marketing, economics,

communications, hotel administration, and food science.

Nutrition and Agriculture: Recommended electives include courses in food science, animal science, plant sciences, international agriculture, agricultural economics, biological sciences, and development sociology.

International Nutrition: Recommended electives include courses in language, anthropology, agricultural economics, policy, economics, development sociology, international agriculture, and nutritional sciences related to maternal and child health and problems of developing nations.

Biology and Behavior: Recommended electives include courses in psychology, human development, and neurobiology.

Food, Nutrition, and Health Policy:

Recommended electives include courses in economics, sociology, government, policy analysis, and management.

SPECIAL EXPERIENCES

Undergraduates can enhance their experiences by participating in structured field experiences or study abroad. Academic credit can be earned for field experiences in a community agency, health care facility, or business. The Urban Semester in the College of Human Ecology provides students with an opportunity to study and gain field experience in New York City. All students intending to spend a semester off-campus in field experience or study abroad must plan their courses well in advance to be sure that all program requirements can be met.

INDEPENDENT STUDY ELECTIVES

Independent study courses (NS 4000, 4010, 4020) can be used to obtain credit for more diverse or intensive experience than the classroom can offer, whether this involves laboratory work, library research, or field study. Any student interested in independent study should obtain the sponsorship of a faculty advisor and the approval of the director of undergraduate studies or consider applying to the honors program.

HONORS PROGRAM

The honors program, which leads to a B.S. degree with honors in the College of Human Ecology or a B.S. degree with distinction in research in the College of Agriculture and Life Sciences, gives official recognition to students who have demonstrated excellence in their academic work and their capacity for independent study.

In addition to fulfilling the requirements for a major, students in the honors program take seminars in designing and evaluating research (NS 3980), complete an original piece of research (at least 6 credits of NS 4990), and prepare an honors thesis. The honors project may be laboratory or field research or deal with policy and program development. For more information, students should contact Professor J. Thomas Brenna, B38 Savage Hall.

COURSES RECOMMENDED FOR NONMAJORS

Courses in nutritional sciences can strengthen programs of study in biological sciences, biology and society, communications, food science, human development, human services, and other fields.

NS 1150 Nutrition, Health, and Society is open to all students. After NS 1150, nonmajors with limited backgrounds in chemistry and biology may elect NS 2450 Social Science Perspectives on Food and Nutrition; NS 2470 Food for Contemporary Living; NS 2750 Human Biology and Evolution; NS 3060 Nutritional Problems of Developing Nations; NS 3150 Obesity and the Regulation of Body Weight; NS 3470 Human Growth and Development: Biological and Behavioral Interactions; NS 4500 Public Health Nutrition. Nonmajors with strong backgrounds in chemistry and the biological sciences may consider NS 3310 Physiological and Biochemical Bases of Human Nutrition, as well as many advanced nutritional sciences courses, such as NS 3450 Introduction to Physicochemical and Biological Aspects of Foods; NS 4310 Mineral Nutrition and Chronic Disease; and NS 4410 Nutrition and Disease.

GRADUATE PROGRAMS

Graduate study is administered by the field of nutrition, a group of about 40 faculty members from throughout the university who have a common interest in nutritional problems. In the M.S./Ph.D. and Ph.D. degree programs, students may specialize in molecular and biochemical nutrition, human or animal nutrition, community nutrition, or international nutrition. Research is emphasized in all graduate programs. Field experience may be an important component of concentrations in community, international, and public health nutrition and nutrition education. Teaching experience and participation in the graduate student seminar (NS 7030) are important aspects of graduate training.

The specialties and interests represented by faculty in the field of nutrition provide almost unlimited opportunity for graduate study. Cornell's extensive laboratory and agricultural facilities ensure that students interested in experimental nutrition have exceptional choices and thorough training. As the largest faculty in the country devoted to the study of human nutrition, the field includes specialists in biochemical, metabolic, epidemiological, and sociocultural research. Opportunities to work with community and federal agencies are available to students interested in applied nutrition and public policy. Students in international nutrition are expected to conduct their thesis research abroad.

For more information about the graduate program, students should visit the web site or contact the director of graduate studies, field of nutrition, Cornell University, B19 Savage Hall, Ithaca, NY 14853-4401, 255-2628, nutrition_gfr@cornell.edu, or www.nutrition.cornell.edu/grad.html.

COURSES

NS 1150 Nutrition, Health, and Society

Fall. 3 credits. S–U or letter grades.

Evening prelim. D. Levitsky.

Discusses the facts and fallacies concerning the role that nutrition, exercise, and other health behaviors play in preventing disease, maintaining good health, and maximizing athletic performance. Emphasis is on understanding the biological mechanisms through which good nutrition and regular exercise affect psychological and physical health.

NS 1160 Personalized Concepts and Controversies

Fall. 1 credit. Limited enrollment.

Prerequisite: freshman or transfer standing.

Corequisite: NS 1150. S–U grades only.

J. Swanson.

Provides students enrolled in NS 1150 individualized assistance in many skills including using computers to analyze diets, finding and using scientific references, understanding and criticizing scientific articles, and reviewing material presented in lectures.

NS 1200 Nutrition and Health: Issues, Outlooks, and Opportunities

Spring. 1 credit. Prerequisite: freshman, sophomore, or junior standing or permission of instructor. *Not* an introductory nutrition course for nonmajors. S–U grades only. C. You.

For students interested in exploring careers in the broad fields of food, nutrition, and health. Experts representing different areas discuss their work, focusing on current issues and trends as well as the requisite knowledge and skills. This course introduces many of the disciplines that are drawn upon in addressing human problems related to food, diet, and health. Students explore career opportunities through a variety of assignments.

NS 1200 Nutrition and the Life Cycle

Spring. 3 credits. Prerequisite: one semester college biology or NS 1150. Letter grades only. P. Brannon.

Biology of the life cycle including development, growth, maturation, and aging and its impact on nutritional requirements of humans from the zygote to the elderly is considered. How to meet these nutritional requirements is discussed relative to the feeding issues and context of each major life stage. Course emphasizes the critical analyses of beneficial and adverse outcomes of various nutrient intakes and dietary patterns on the nutritional status and well-being through integration of nutrition and other health sciences in understanding nutritional needs during the life cycle.

NS 2450 Social Science Perspectives on Food and Nutrition

Fall. 3 credits. Limited enrollment. Must be enrolled by third class meeting.

Prerequisite: NS 1150. S–U or letter grades. C. Bisogni and J. Sobal.

Uses theories, concepts, and methods from the social sciences to examine food, eating, and nutrition. The food choice process model is used as a framework for examining the scope of social science aspects of nutrition. Assignments include examinations, short papers, and two research projects, one qualitative and one quantitative, for which students prepare proposals, collect and interpret data, and write papers to report data.

NS 2470 Food for Contemporary Living

Fall and spring. 2 credits. Limited enrollment. Priority given to Dietetics students. Highly recommended: NS 1150. Students must attend first lab or placement is forfeited. S–U or letter grades. Lab coat required. E. Gier.

During this laboratory course, the understanding of food ingredients and techniques of food preparation is applied to positive nutritional practices and health promotion goals; basic food science and nutrition principles, food safety/sanitation, sensory evaluation, and social-cultural influences on food choices; food preparation, recipe modification, sensory evaluation (taste testing required); basic cooking skills, techniques. Introduction to basic menu planning and meeting nutritional requirements while restricted to a budget. Lab performance and a lab practical factored into final student evaluation; attendance at all labs is expected.

NS 2600 Introduction to Global Health

Spring. 3 credits. Limited enrollment. Letter grades only. Evening prelim. R. Stoltzfus and J. Moseley.

Explore contemporary issues, problems, and controversies in global health through an interdisciplinary perspective. Introduces the global burden of disease and then examines complex social, economic, political, environmental, and biological factors that structure the origins, consequences, and possible treatments of global health problems. A limited number of problems are explored in depth (e.g., HIV, maternal mortality, malaria).

NS 2750 Human Biology and Evolution (also ANTHR 2750)

Fall. 3 credits. Prerequisite: college biology. S–U or letter grades. J. D. Haas and Z. Gu.

Examines the theories and mechanisms of modern evolutionary biology as they apply to present-day humans and their hominid ancestors. Includes lectures and discussions of molecular and paleontological evidence of human evolution, the causes and consequences of contemporary human biological diversity, and biological and behavioral modes of human adaptation to past and present natural and cultural environments.

NS 3000 Special Studies for Undergraduates

Fall or spring. Prerequisite: permission of instructor. S–U or letter grades. DNS faculty. Special arrangements can be made to establish equivalency for courses not transferred from a previous major or institution. Students prepare a description of the study they want to undertake using a form available from the college registrar's office. The form, signed by both the instructor directing the study and the associate director for academic affairs, is filed at course registration or during the change-of-registration period.

NS 3060 Nutritional Problems of Developing Nations

Fall. 3 credits. Prerequisite: NS 1150. S–U or letter grades. Offered alternate years. R. Stoltzfus.

Overview of the most important nutrition problems facing developing countries today and an in-depth understanding of the nutrition problems of one country, chosen as a case study for the course. Course uses the health/care/food framework to analyze the causes of these nutrition problems. Instruction is through lectures and readings. Evaluation is

through individual assignments, a group project, and exams.

NS 3150 Obesity and the Regulation of Body Weight (also PSYCH 3150)

Spring. 3 credits. Prerequisites: junior or senior standing; NS 1150, PSYCH 1101.

S–U or letter grades. Offered alternate years. D. Levitsky.

Multidisciplinary discussion of the causes, effects, and treatments of human obesity. Topics include the biopsychology of eating behavior, the genetics of obesity, the role of activity and energy metabolism, the psychosocial determinants of obesity, anorexia nervosa, therapy and its effectiveness, and social discrimination.

NS 3200 Introduction to Human Biochemistry

Fall. 4 credits. Prerequisites: one year college biology; one year college general chemistry; and CHEM 1570 or 3570–3580; or permission of instructor. S–U or letter grades. P. Stover and S. B. Qian.

Presents the principles of biochemistry within the context of human health and disease. Teaches the metabolism of carbohydrates, lipids, proteins, and selected micronutrients from a perspective that emphasizes their role in supporting the structure and physiological functions of the major organs of the body. Incorporates the concepts of enzyme catalysis, enzyme regulation, hormone action, and bioenergetics within this framework. Covers the fundamental concepts of eukaryotic DNA structure, function, and gene expression with reference to their importance in regulating metabolism and the impact of a changing nutrient environment.

[NS 3220 Maternal and Child Nutrition

Spring. 3 credits. Limited enrollment.

Prerequisite: NS 1220 or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. P. Brannon.

Critical analyses of the nutritional requirements and impact of nutritional status on the mother, fetus, and young child from global and domestic perspectives.]

NS 3310 Physiological and Biochemical Bases of Human Nutrition

Spring. 4 credits. Prerequisites: BIOBM 3300 or 3310, or NS 3200, or equivalent. S–U or letter grades. C. McCormick and L. Qi.

Examines the biochemical and physiological bases of human nutritional requirements. Uses an integrated approach to cover the digestion and metabolism of nutrients (carbohydrates, proteins, lipids, vitamins, and minerals). Metabolic and chronic diseases related to nutrition are discussed throughout the semester. Discussion sections and problem sets provide an opportunity to examine in greater depth selected topics from lecture.

NS 3320 Methods in Nutritional Sciences

Fall. 3 credits. Prerequisites: undergraduate biochemistry; NS 3450, NS 3310 preferred or concurrent registration. Letter grades only. M. N. Kazarinoff.

Laboratory introduction to principles and analytical techniques of nutritional research. Emphasizes analytical concepts and skills required to determine nutrient function and nutritional status of individuals. Topics include methods of nutrient, metabolite, and enzyme analysis in body fluids; methods for assessing individual food intake and nutritional status; and methods for assessing the composition of foods.

NS 3410 Human Anatomy and Physiology

Spring, 3 credits. Prerequisite: college biology. Priority given to DNS majors. Letter grades only. K. O'Brien.

Introduces human anatomy and physiology by detailing the structure and function of the human body and mechanisms used to maintain homeostasis. Emphasis is given to aspects relevant to the nutritional sciences and medicine. Content includes language of anatomy, cells, tissue, integumentary, respiratory, skeletal, muscular, digestive, nervous, cardiovascular, urinary, and reproductive systems. Clinical examples are provided to highlight perturbations and physiology of topics discussed. Evaluation is based on attendance, iclicker-based class interaction, weekly quizzes, and a midterm and final.

NS 3420 Human Anatomy and Physiology Laboratory

Spring, 2 credits. Corequisite: NS 3410. Priority given to DNS majors. Students registered for lab course who are more than 10 minutes late for first meeting forfeit registration; no admittance after second week. M. Lujan.

Principles of anatomy and physiology will be presented using models of the human body, organs, skeleton, and muscles as well as interactive noninvasive assessment techniques of physiological functions. Weekly lecture will provide content connections with NS 3410 and a discussion format. Emphasis will be on location, recognition, and description of anatomical structure and relation to function. Content includes human body orientation and language of anatomy, histology, and various body systems. Evaluation based on attendance, two lab practicums, and lab written assignments.

NS 3450 Introduction to Physicochemical and Biological Aspects of Foods (also FDSC 2000)

Fall, 3 credits. Prerequisites: college-level courses in chemistry and biology. Letter grades only. R. Parker and J. Hotchkiss. For description, see FDSC 2000.

[NS 3470 Human Growth and Development: Biological and Behavioral Interactions (also HD 3470, BSOC 3471)]

Spring, 3 credits. Prerequisites: BIOG 1101 or 1109 or equivalent; HD 1150 or PSYCH 1101 or equivalent. S-U or letter grades. Offered alternate years; next offered 2010-2011. J. Haas and S. Robertson.

Discusses the interrelationships of physical and psychological growth and development in humans during infancy. Considers its variations for behavioral, psychological, and physical development.]

NS 3500 Epidemiology in Context

Spring, 3 credits. Prerequisite: introductory statistics (e.g., PAM 2100, AEM 2100, ILRST 2100). Letter grades only. D. Pelletier.

Provides the conceptual tools to critically analyze the controversies related to a wide range of contemporary health and social issues in the United States and global context. Basic principles of epidemiology are illustrated via case studies of nutritional and biomedical interventions, environmental toxins, and social issues.

NS 3980 Research in Human Nutrition and Health

Fall, 1 credit. Requirement for students in honors research program sponsored by DNS. Open to all students. S-U grades only. J. T. Brenna.

Lecture course focusing on the structures and practice of professional research conducted in human nutrition and health, a field that encompasses questions ranging widely from subcellular components to population-level issues. Introduces the various approaches and methods used by researchers and addresses the topics of ethics and research controls. Describes the structure of scientific literature, preparation of research proposals, roles of scientific organizations, and funding sources. Students are required to attend and report on research seminars on campus.

NS 4000-4010-4020-4030 Special Studies for Undergraduates

Fall or spring. Variable to 3 credits. S-U grades only for NS 4000-4010-4020; after completing 2 credits S-U with final grade of S for NS 4000-4010-4020, grading option may be S-U or letter for NS 4000-4010-4020; S-U or letter grades for NS 4030. DNS faculty.

For advanced independent study by an individual or group of students who want to study a field of nutritional sciences not otherwise provided through course work in the division or elsewhere in the university. Students prepare a description of the study they want to undertake on a form to be signed by the instructor directing the study and the student's faculty advisor. The form, available in B21 Savage Hall or in the Human Ecology registrar's office, is filed at course registration or within the change-of-registration period. To ensure review before the close of the course registration or change-of-registration period, students should submit the special-studies form to B21 Savage Hall as early as possible.

NS 4000 Directed Readings

S-U grades only; after completing 2 credits S-U with a final grade of S for NS 4000, grading option may be S-U or letter.

Study that predominantly involves library research and independent reading.

NS 4010 Empirical Research

S-U grades only; after completing 2 credits S-U with a final grade of S for NS 4010, grading option may be S-U or letter.

Study that predominantly involves data collection and analysis or laboratory or studio projects.

NS 4020 Supervised Fieldwork

S-U grades only; after completing 2 credits S-U with a final grade of S for NS 4020, grading option may be S-U or letter.

Study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

NS 4030 Teaching Apprenticeship

S-U or letter grades.

Study that includes assisting faculty with instruction.

NS 4130 Nutritional Genomics—Evolution and Environment

Spring, 2 credits. Prerequisites: senior or graduate standing, BIOGD 2810 or permission of instructor. S-U or letter grades. Z. Gu.

Examines selected topics related to nutrition and genome biology. Discussion of nutrition and human evolution, such as human brain evolution, evolution of taste, population variation related with nutrition, and evolution of human diseases. Reading materials are from literature and participation in class discussion is required.

[NS 4210 Nutrition and Exercise]**NS 4250 Nutrition Communications and Counseling**

Spring, 3 credits. Limited enrollment. Prerequisites: NS 1150, 1220, and 2450; junior or senior standing; priority given to dietetics/nutrition majors. Letter grades only. S. Travis.

Students learn the theoretical basis of effective health promotion communications and develop effective nutrition communication skills through application in a variety of settings. Provides hands-on experiences in counseling, educational program development, and oral and written communications.

NS 4310 Mineral Nutrition and Chronic Disease

Fall, 3 credits. NS 3310 preferred. S-U or letter grades. C. McCormick.

Evaluate the evidence from primary literature that dietary calcium, sodium, and iron play an important role in the development of osteoporosis, hypertension, and anemia, respectively. An additional goal of the course is to review the molecular processes that are involved in the homeostasis of each mineral and the recommendations for daily nutrient intakes. Class discussion of key research articles is conducted and evaluated.

NS 4410 Nutrition and Disease

Fall, spring, 4 credits. Prerequisites: NS 3310 and physiology course. S-U or letter grades. Fall, M. Caudill.

Principles of nutrition, biochemistry, physiology, genetics, and pathology are combined to understand disease risk, prevention, progression, and management. Topics include nutritional genomics, obesity, cardiovascular disease, cancer, diabetes mellitus, trauma, and renal, neurological, liver, skeletal, and gastrointestinal disorders.

NS 4420 Implementation of Nutrition Care

Fall, 3 credits. Pre- or corequisites: NS 1150, NS 1220, NS 2470, NS 4410, or concurrent registration or equivalent background in courses. S-U or letter grades. Evening prelim. E. Gier.

Develop skills necessary to implement nutrition care. Application of the nutrition care process as it applies to clinical settings is emphasized. Students develop skills to perform nutrition assessment, nutrition diagnosis, nutrition intervention, monitoring, and evaluation. Content includes principles of MNT for acute and chronic diseases, menu planning for disease states, the role of other allied health practitioners in assuring nutritional health, and reimbursement and legislation in dietetics practice.

NS 4450 Toward a Sustainable Global Food System: Food Policy for Developing Countries (also AEM 4450)

Fall, 3 credits. Preferred: 6 credits in economics, applied economics, or sociology and 6 credits in nutrition and/or agricultural sciences. Letter grades only. P. Pinstrup-Andersen.

Comprehensive presentation and discussion of policy options for a sustainable global food system, with focus on developing countries. Topics include economic policy related to nutrition, health, consumption, production, natural resource management, trade, markets, gender roles, armed conflict, and ethics. A social entrepreneurship approach bases on case studies and active participation by students will be used.

NS 4500 Public Health Nutrition

Spring. 2 credits. Prerequisite: NS 1150. Students must attend first lec or placement is forfeited. Letter grades only. Evening prelim. K. Rasmussen.

Public health nutrition is the major professional career track for nutritionists outside of dietetics. It deals with efforts to improve the diets and nutritional status of whole populations by working at the community, state, and national levels. Course helps prepare students to work in public health nutrition by describing methods used in the assessment of nutrition problems, the development of nutrition-related policies, and the delivery of health, nutrition, and food assistance programs.

NS 4550 Actors and Interests in Global Health (also GOVT 4558)

Fall, spring. 3 credits. Offered at Cornell-in-Washington program only. Letter grades only. D. Pelletier.

Explores the perspectives and interests of a range of organizations involved in global health; their roles and activities; the complications for agenda-setting, policy development, and implementation arising from this diversity of actors; and the opportunities and challenges for greater harmonization at national and international levels. The course includes readings, student-driven discussions, guest speakers from the D.C. area, student presentations, and student portfolios.

NS 4570 Health, Poverty, and Inequality: A Global Perspective (also ECON 4740)

Fall. 3 credits. Prerequisite: introductory microeconomics and statistics or permission of instructor. S–U or letter grades. Offered alternate years. D. Sahn.

Course focuses on global health challenges, and how they are related to poverty and inequality.

NS 4600 Explorations in Global Health

Spring. 3 credits. Prerequisite: junior or senior standing with completion of all requirements for global health minor, or permission of instructor. Letter grades only. D. Pelletier.

Capstone course for global health minors assists students to explore their topical interests in global health and integrate these with their field experiences, core knowledge in global health, and personal values and ethical frameworks. Course content is driven largely by student topical interests and experiences, and selected guest speakers. Explorations are done through individual work, team projects, and classroom discussions.

NS 4620 Seminar in Global Health and Development Issues: Tanzania

Spring. 1 credit. Restricted to students in the Global Health and IARD Summer Session and Internship Program in Tanzania. S–U grades only. J. Moseley and L. Harrington.

Seminar prepares students for the Global Health and IARD Summer Session and Internship Program in Tanzania during the summer. Students hear from Cornell faculty and other speakers on global health, agriculture, and development issues relevant to Tanzania. Course sessions also cover Tanzanian history, culture, language, and politics. Students will be actively engaged in reading, discussing, and presenting on key seminar topics.

NS 4630 Global Health, Development and Policy Issues in Tanzania

Summer. 4 credits. Prerequisite: NS 4620. Restricted to students in the Global Health and IARD Summer Session and Internship Program in Tanzania. Letter grades only. R. Stoltzfus.

Engages Global Health minors, IARD majors, and Tanzanian medical students in problem-based learning in a cross-cultural small group context in Tanzania. Develop and justify policy recommendations to address a current issue related to global health, nutrition, food safety, or agriculture. Students will work in assigned teams of three to four, designed to mix Cornell and Tanzanian students.

[NS 4750 Mechanisms Underlying Mammalian Developmental Defects (also BIOAP 4750)]

Spring. 3 credits. Prerequisites: BIOBM 3300, 3310–3320 or 3330 (may be taken concurrently). Offered alternate years. D. Noden and P. Stover.

For description, see BIOAP 4750.]

NS 4880 Applied Dietetics in Food Service Systems

Spring. 3 credits. Limited to Dietetics seniors. Prerequisites: HADM 1106 or intro food service management course, NS 2470, and BIOMI 2900. White lab coat required. Fee for special supplies/training and activities: approx. \$110. E. Gier.

Gain experience in facility design; equipment selection, use, and care; job analysis and evaluation; human resources planning; management of financial resources; recipe development and volume food production; computer-assisted management; employee training; and applied safety and sanitation standards. Through planning and executing a themed event, students develop skills required to operate/manage a food service program. Application of quality management in food service operations and facility management is stressed. Laboratories are arranged through Cornell Dining and other off-campus sites. Completion of a professional portfolio is required. ServSafe training and examination is conducted; successful completion results in ServSafe certification.

NS 4900 Manipulating the Mouse Genome (also BIOGD 4900)

Fall. 1 credit. Meets during first half of semester and provides background information for VTBMS/TOX 7010 Mouse Pathology and Transgenesis, which meets during second half. Students interested in both must register for them separately. Prerequisites: BIOGD 2800, 2810, or 2820 and BIOBM 3300, 3320 or 3330, or NS 3200. S–U or letter grades. P. Soloway.

Functional genomic analysis has benefited enormously from experimental manipulation of the genomes of many organisms. The mouse has been the model of choice for such studies in mammals. Explores the tools available for experimental manipulation of the mouse

genome, including transgenesis, gene targeting, gene trapping, chemical mutagenesis, and cloning by nuclear transplant. Also discussed are use of recombinant inbred mice for complex trait analysis. Readings from the scientific literature focus on seminal applications of these methods.

NS 4990 Honors Problem

Fall and spring. Credit TBA. Prerequisite: acceptance into honors research program. Students who have been accepted into the honors research program work on their projects under the guidance of their faculty mentors. Honors research students must complete a minimum of 6 credits of NS 4990, typically spread over two or more semesters. The student and the mentor determine the appropriate number of credits for each semester. Research activities may include reviewing the literature, writing a proposal, developing research methods, collecting data in the field or laboratory, analyzing data, and writing the honors thesis.

NS 6000 Special Problems for Graduate Students

Fall or spring. Credit TBA. Prerequisite: graduate students recommended by their chair and approved by instructor in charge. S–U or letter grades. DNS faculty. Emphasizes independent advanced work. Experience in research laboratories in the division may be arranged.

NS 6030 Mineral Nutrition: Metabolic, Health, and Environmental Aspects (also ANSC 6030)

Fall. 2 credits. Prerequisites: biochemistry, physiology, and nutrition courses. Letter grades only. Offered alternate years. X. G. Lei and C. C. McCormick. For description, see ANSC 6030.

NS 6050 Molecular and Human Nutrition

Fall and spring. 1 credit. S–U grades only. Molecular nutrition faculty. Graduate seminar series that focuses on recent advances in molecular nutrition. Weekly presentations are made by faculty members, postdocs, and graduate students and are based on the primary literature. The presentations are followed by a discussion involving all participants.

NS 6080 Epigenetics (also BIOGD 6080)

Fall. 2 credits. Prerequisites: BIOGD 2810 and BIOBM 3300, 3320, or 3330 or NS 3200. Letter grades only. P. Soloway. Epigenetic effects refer to reversible alterations in chromatin structure that can stably and heritably influence gene expression. Changes include covalent modifications to DNA itself or to proteins bound to DNA as well as noncovalent remodeling of chromatin. Course examines selected epigenetic phenomena described in several eukaryotes, mechanisms regulating these effects, and their phenotypic consequences when normal regulation is lost. Reading materials are from current literature, and participation in class discussion is required.

[NS 6100 Proteins and Amino Acids: Nutritional Regulation of Mammalian Protein Synthesis and Degradation

Fall. 2 credits. Letter grades only. Offered alternate years; next offered 2010–2011. M. Stipanuk. Basic biochemistry and cell biology related to processes involved in protein synthesis and degradation and the regulation of these

processes. Scientific literature will be used to provide examples of regulation of each of these processes, selected for their relevance to human nutrition and metabolism.]

[NS 6110 Molecular Toxicology (also TOX 6110)

Spring, 3 credits. S-U letter grades. Offered alternate years; next offered 2010-2011. S. Bloom and B. Strupp.

Focuses on metabolism of drugs and environmental chemicals to toxic and mutagenic products and how they can induce developmental and reproductive alterations or carcinogenesis. Signaling pathways that regulate cellular responses to toxicant exposure are discussed. Also emphasizes molecular markers useful for assessment of human exposure to chemicals and radiation.]

NS 6140 Topics in Maternal and Child Nutrition

Fall, 3 credits. Prerequisite: permission of instructor. Letter grades only. K. Rasmussen. Advanced course on the role of nutrition during pregnancy and lactation. The feeding and growth of infants and children in health and disease is considered. Critical evaluation of current literature is emphasized via lecture, discussions, and a term paper.

NS 6170 Teaching Seminar

Fall or spring, 0 credits. Prerequisite: DNS graduate students or permission of instructor. S-U grades only. C. You and D. Way. Individualized instruction focusing on development of teaching skills for guiding learning in lecture, discussion, and laboratory setting, and reflection on the impact of these skills on teaching and learning. Students identify the aspects of the specific teaching assignments they wish to develop and work with instructors on independent learning projects that may include preparation for lecturing, preparation of exams, efficient grading, and so on. Optional videotaping provides opportunities for practice and analysis.

NS 6180 Teaching Experience

Fall or spring, 0 credits. Prerequisite: DNS graduate students or permission of instructor. S-U grades only. C. You. Designed to provide experience in teaching nutritional sciences by direct involvement in college courses under supervision of a faculty member. The aspects of teaching and the degree of involvement vary, depending on the needs of the course and the experience of the student.

NS 6190 Field of Nutrition Seminar (also ANSC 6190)

Fall or spring, 0 credits. S-U grades only. Faculty and guest lecturers. Lectures on current research in nutrition.

NS 6250 Community Nutrition in Action

Fall, 3 credits. Prerequisite: dietetic interns. Letter grades only. Staff. Provides students enrolled as dietetic interns with supervised, in-depth experiences in a community nutrition program and fosters the integration of research, theory, and practice. Through placements in community programs, students gain experience in program administration and in assessing, designing, implementing, and evaluating food and nutrition programs for targeted populations through public and private organizations. In weekly seminars (and other seminars and observations as arranged) students integrate theory and practice, reflect upon their

placement experience, learn about community nutrition research, and explore the many issues facing community food and nutrition practitioners.

NS 6300 Anthropometric Assessment

Spring, five weeks. 1 credit. Prerequisite: NS 3310 or equivalent and permission of instructor. S-U or letter grades. Offered alternate years. J. Haas.

Topics in this lecture/lab course include biological basis of anthropometry for nutritional status assessment, quality control of anthropometric data, applications to special groups (infants, children, adolescents, pregnant women, and the elderly), statistical analysis and presentation of anthropometric data, reference standards and interpretation, measurement techniques of anthropometry, and body composition assessment.

NS 6310 Micronutrients: Function, Homeostasis, and Assessment

Fall, 2-4 credits. Prerequisites: intro biochemistry and NS 3310 (or equivalent) or permission of instructor. S-U or letter grades. C. McCormick, M. Caudill, K. O'Brien, and R. Parker.

Advanced course in nutrition that focuses on the function, homeostasis, and metabolism of the principal dietary micronutrients (vitamins and minerals). It expands on the principles of nutritional biochemistry provided in introductory courses. One goal is to provide the scientific basis and rationale for recommended Dietary Reference Intakes. The course will draw on primary literature of both past and contemporary research. This course is divided into two parts: minerals and vitamins (each for 2 credits) during the first and second 7-week periods, respectively.

NS 6320 Regulation of Macronutrient Metabolism

Spring, 4 credits. Prerequisite: NS 3310 or permission of instructor. S-U or letter grades. M. Stipanuk, P. Brannon, L. Qi, P. Soloway, T. Brenna, and R. Parker.

Course provides a comprehensive overview of macronutrient metabolism with an emphasis on issues relevant to human nutrition. Topics include regulation of macronutrient utilization by various tissues in response to food intake, energy stores, and energy expenditure; cellular pathways for integration of nutrient, growth, and stress signals; biological regulation of food intake and energy expenditure; the regulation of utilization of macronutrients for growth; dietary reference intakes for macronutrients; specialized functions of essential amino acids and essential fatty acids; lipoprotein and cholesterol metabolism; and the regulation, or dysregulation, of macronutrient utilization in various disease/physiological states.

NS 6350 Introduction to Community Nutrition Research for Dietetic Interns

Fall, 3 credits. Prerequisites: graduate standing and permission of instructor. Letter grades only. Staff.

Introduces the paradigms, concepts, methods, and issues involved in community nutrition research. Students design and conduct individual research projects to inform community nutrition programs. Lectures, readings, and class discussion support students as they conduct their research activities.

NS 6370 Epidemiology of Nutrition

Spring, 3 credits. Prerequisites: graduate standing; BTRY 6010 and concurrent registration in BTRY 6020 or equivalent knowledge; basic knowledge of nutritional aspects of growth and development and nutritional biochemistry. S-U or letter grades. Staff.

Covers principles of nutritional epidemiology, impact assessment of nutrition intervention programs, and nutritional surveillance. Presents principles of using nutritional information in decision making. Shows how the biochemistry and physiology of nutrition can be related to epidemiological assessment and research strategies.

NS 6380 Epidemiology of Nutrition Seminar

Spring, 3 credits. Prerequisites: graduate students planning field intervention studies; permission of instructor; NS 6370. Covers the meta-analysis, design, measurement, and analytic issues involved in developing, implementing, and analyzing studies of field interventions with nutritional impact.

NS 6400 Social Science Theories in Nutrition

Fall, 3 credits. Limited enrollment. Prerequisite: graduate standing. Letter grades only. J. Sobal. Social science theories from sociology, psychology, anthropology, economics, political science, geography, and history that contribute to understanding food, eating, and nutrition are discussed to understand how paradigms, theories, and models apply to nutrition topics, issues, and problems.

NS 6420 Globalization, Food Security, and Nutrition (also AEM 6420)

Fall, 2 credits. Prerequisites: permission of instructor, graduate standing, and basic understanding of economics and nutrition. Letter grades only. P. Pinstrup-Andersen. Directed readings course with a weekly 50-minute discussion session. Course is aimed at graduate students in nutrition, agricultural economics, and other relevant fields, who wish to explore how globalization may affect poverty, food security, and nutrition in developing countries and how national policies and international agreements and institutions may influence the outcome. Discussion sessions are based on assigned readings for each week.

NS 6440 Community Nutrition Seminar

Fall and spring, 1 credit. S-U grades only. A. Gillespie. Sponsored by the Cornell Community Nutrition Program. Graduate students and faculty learn about current research in the program and related fields within and outside Cornell and about community nutrition theories and research methodologies. The seminar also provides a forum to discuss participants' own research and current issues in community nutrition.

NS 6520 The Foundations of Epidemiology

Spring, 3 credits. Prerequisite: BTRY 6010 or equivalent. Letter grades only. P. A. Cassano. Intent is to train students to conduct epidemiologic research of the highest quality. Through lectures and in-class discussion, students also will learn how to evaluate research conducted by others, and how to apply epidemiologic principles to study the

role of nutrition in health, the outcomes of treatment in clinical medicine, and the evaluation of health services.

NS 6600 Special Topics in Nutrition

Fall or spring. 3 credits max. each semester; because topics change, may be repeated for credit. Prerequisite: graduate standing and permission of instructor. DNS faculty.

Designed for students who want to become informed in any specific topic related directly or indirectly to nutrition. The course may include individual tutorial study, experience in research laboratories, a lecture series on a special topic selected by a professor or a group of students, and/or selected lectures of another course already offered.

[NS 6800 International Nutrition Problems, Policy, and Programs

Spring. 3 credits. Prerequisite: permission of instructor. TBA. Offered alternate years. Staff.

Designed for graduate students who want to learn about the important nutritional problems of developing countries. The major forms of malnutrition related to poverty and their underlying causes are discussed. Emphasis is placed on programs and policies that can help poor countries and communities improve their nutritional and health status.]

[NS 6850 Empirical Methods for the Analysis of Household Survey Data: Applications to Nutrition, Health, and Poverty (also ECON 7711)

Spring. 4 credits. Prerequisites: intermediate microeconomics, intermediate statistics or econometrics (through multiple regression and limited dependent variable models), or permission of instructor. Offered alternate years; next offered 2010–2011. D. Sahn.

Advanced seminar explores recent empirical research and evaluation literature on issues of health, nutrition, education and intra-household decision-making in developing countries.]

[NS 6900 Trace Element and Isotopic Analysis (also CHEM 6280)

Fall. 3 credits. Prerequisite: CHEM 2880 or 3900, 3020 or CHEM 2080 and MATH 1120, or permission of instructor. Primarily for graduate students and advanced undergraduates. S–U or letter grades. Offered alternate years; next offered 2010–2011. J. T. Brenna.

Survey course in modern high-precision isotope ratio mass spectrometry (IRMS) techniques and trace/surface methods of analysis. Topics include dual inlet and continuous flow IRMS, elemental MS, atomic, X-ray, and electron spectroscopies, ion and electron microscopies, and biological and solid state applications.]

NS 6980 International Nutrition Seminar

Fall and spring. 0 credits. No grades given. Staff.

Consists of presentations by Cornell faculty and graduate students and invited outside speakers. Speakers cover a range of topics relating to nutritional problems, policy, and programs in nonindustrialized countries.

NS 6990 Special Topics in International Nutrition

Fall and spring. 3 credits max. each semester; because topics change, may be repeated for credit. Prerequisite: permission of instructor. Staff.

Designed for graduate students, mainly those with a concentration in international nutrition, who wish to become familiar with some specific topic related to international nutrition that is not adequately covered in an existing course. It consists of tutorial study on an agreed-upon topic.

NS 7020 Seminar in Toxicology (also TOX 7020)

Fall or spring. 1 credit. S–U grades only. Staff.

Covers varied topics in biochemical, genetic, nutritional, veterinary, and regulatory toxicology, ecotoxicology, and environmental chemistry. Includes presentations of basic research studies, fundamental concepts, and research activities involving environmental problems of a toxicological nature. Presentations are given by speakers from Cornell and visitors.

NS 7030 Seminar in Nutritional Sciences

Fall and spring. 1 credit. Prerequisite: for undergraduates, permission of instructor. S–U grades only. Staff.

Presentations of original articles pertinent to the nutritional sciences. Students read and learn how to critically analyze and interpret original articles published in a wide variety of journals. Students learn how to make professional presentations and how to critique the presentations given by others.

NS 7040 Grant Writing

Spring. 2 credits. Prerequisite: NS 7030. S–U grades only. P. Stover.

Interactive course that addresses the knowledge, approach, and professional skills (conceptual, technical, and writing) required to create a successful grant proposal and initiate a career in research. Format is focused around the development, execution, and evaluation of NIH–style grant proposals. Lectures will focus on the development of hypotheses, specific aims, and long term goals, as well as research design and methodology. Issues of human subject and animal experimentation, ethics, and research collaborators are also covered. Students are expected to develop a full-length grant proposal in consultation with their research advisor. Basic guidelines and approach to proposal evaluation and scoring are covered. Course concludes with a mock study section where all proposals are reviewed by the students.

NS 8990 Master's Thesis and Research

Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S–U or letter grades. DNS graduate faculty.

NS 9990 Doctoral Thesis and Research

Fall or spring. Credit TBA. Prerequisite: permission of graduate committee chair and instructor. S–U or letter grades. DNS graduate faculty.

Miller, Dennis, Prof., Food Science/Nutritional Sciences

OFFICER EDUCATION

Military instruction began at Cornell University in 1868 under the provisions of the Morrill Act of 1862. Since that time, officer education has been highlighted by the construction of Barton Hall in 1914 and the establishment of a formal Reserve Officers Training Corps (ROTC) unit in 1917. The program evolves to keep pace with the latest military changes and emphasizes the development of leadership and managerial skills.

The Officer Education Programs prepare students for a commission as an officer in either the United States Army, Navy, Air Force, or Marine Corps. Each service program is headed by a senior military officer who also serves as a full professor on the Cornell faculty.

MILITARY SCIENCE

Lieutenant Colonel Steven Alexander,
Professor of Military Science and Chair, 255-5651/-4000

Captain Epstein, Major Johnson, Major Fosdick, SFC Hart, MSG Davis

United States Army ROTC Program

The primary objective of the Army Officer Education Program at Cornell is to commission the future officer leadership of the United States Army. Intermediate objectives are to provide students with an understanding of the fundamentals of responsibility, integrity, and self-discipline, as well as an appreciation of the citizen's role in national defense. The application of the decision-making process to a variety of situations is given major emphasis as a valuable aid in developing leadership potential. These objectives are achieved through a program covering 1.5 to 4 years. The program includes specific courses in military science, practical training in leadership through participation in the Cadet Corps (including attendance at a five-week summer camp at Ft. Lewis, Wash.), and the opportunity to participate in a number of extracurricular activities. This combination prepares the student for commissioning and effective performance in the 16 branches of the Army. One application can result in a one- to four-year scholarship that currently provides \$166,750 in funding over four years.

All courses are open to enrollment without a military obligation; some require instructor permission. Noncitizens may enroll in courses but not commission. Overall sound mental and physical condition is essential; students are required to undergo periodic physical fitness tests.

Four-Year Program

The program is available to graduate and undergraduate students. Veterans of the Armed Forces of the United States and students entering Cornell with AROTC credit from secondary or military schools (Junior Division AROTC) may receive advanced

standing. Under the Four-Year Program students enroll in the Basic Course (MILS I and II) during the first two years, and the Advanced Course (MILS III and IV) during the next two years. A total of 12 credits of military subjects are taken. In addition, academic enrichment courses are required in such fields as written communications, computer science, and military history. All cadets attend a five-week Leadership Development and Assessment Course (LDAC), with pay, between their junior and senior years. All contracted cadets participate in physical fitness training three days per week. Each year selected cadets are sent to the Airborne School, Winter Survival School, and Air Assault Course, depending upon availability and student standings within the ROTC program.

Scholarships

Scholarships are awarded on the basis of merit and are available for 1.5 to 5 years.

Scholarships pay full tuition and mandatory fees, and cadets also receive between \$300 and \$500 a month for up to 10 months a year and \$1,200 a year for books.

Service Obligations

ROTC graduates may serve on active duty, in the Army Reserve, or in the National Guard, depending upon the needs of the Army and the cadet's request. Officers beginning active duty attend the OFFICER BASIC LEADERSHIP COURSE II/III (normally 10 to 16 weeks) for training in their assigned branch. Upon completion, officers are assigned to a unit and location determined by the desires of the individual and the requirements of the Army. Officers selected for reserve duty attend the OFFICER BASIC LEADERSHIP COURSE II/III, after which they are released to reserve status.

Graduate Study

Graduate students are allowed in the program. Active duty deferments, or educational delays, may be granted to individuals who want to attend graduate school at their own expense. Requests will be considered on the basis of the needs of the service. Admission to graduate school is the student's responsibility.

Military Science Courses

All cadets take one course and a leadership laboratory each semester in military science. The number of hours a week spent in the classroom varies from semester to semester, as does the credit received for each course. Additionally, cadets work out three days a week.

Freshman Year (MILS I)

MILS 1101 Foundations of Officership

Fall. 1 credit. Required. M. Davis. Students examine the U.S. defense structure in terms of organization, mission, personnel, and relationships among and between military forces and branches and departments of the government. The U.S. Army force structure is examined at all levels. The complexities and

magnitude of operating the defense organization are studied to provide a framework for subsequent instruction. Students develop skills in conducting oral and written presentations.

MILS 1102 Foundations in Leadership

Spring. 1 credit. Required. M. Davis. Allows students to develop a basic understanding and appreciation of theories of social and organizational psychology and behavior as they apply to the military setting. Attention is given to leader types, the source and exercise of authority, and the impact of varying styles of leadership, resource management, motivation, and organizational effectiveness. The student is instructed in the concepts of integrity, ethics, and professionalism. Classes on historical events and strategy are also presented.

Sophomore Year (MILS II)

MILS 2201 Individual Leadership Studies/Teamwork

Spring. 1 credit. Required. M. Epstein. Students learn the basic principles of group dynamics at the level of the smallest military unit, the squad. Troop-leading procedures are introduced through case studies and role-playing exercises. Leadership theories introduced in MILS 1102 are examined in a variety of realistic settings. The practical application of behavioral theories is explored in the context of small military organizations. The course also provides practical knowledge of the various forms of topographic representation. Students use maps in terrain association and land navigation. Knowledge of topography is complemented by an orientation on significant environmental influences of physical, social, and climatic factors. Portions of the course offer experience in land navigation and orienteering.

MILS 2250 Basic Mountaineering Course

Fall and spring. 2 credits. Open to all students; limited to 20 per sec. Two 1-hour sec: M or R 9-9:50, Barton Hall G-1. Equipment fee: \$30. D. Johnson.

This course instructs techniques for students to cope with mountainous terrain. It discusses and instructs in basic techniques including rappelling, survival, acclimatization, illness and injury, equipment, anchors, evacuation, movement, safety, and training.

MILS 2260 Basic Orienteering

Fall. 1 credit. Open to all students; limited to 20. Equipment fee: \$20. Barton Hall G-1. M. Hart.

This course instructs the principles of orienteering including basic map reading, terrain association, and compass skills. Course running techniques are applied in field orienteering events. Instruction includes safety and survival in hot and cold weather environments.

MILS 2270 Basic Rifle Marksmanship

Fall. 1 credit. Open to all students; limited to 15. W 9-9:50, Barton Hall G-16. Fee for upkeep of systems: \$20. M. Davis.

This course instructs the principles of rifle and pistol safety including marksmanship fundamentals, range procedures, safe weapons handling, and target engagement. Students will use state-of-the-art digital weapons engagement systems as well as real weapons.

MILS 3321 Armed Conflict in Society

Fall. 2 credits. Required. M. Epstein. Provides practical knowledge in American military history. It is primarily an overview course designed to provide an understanding of the art and nature of warfare and particularly how warfare has affected the United States. The course consists of three primary areas of instruction with an emphasis on American military history. The first area of instruction addresses the art and theory of modern warfare. It analyzes America's first attempt at war, the American Revolution, and ends with the development of modern warfare under Napoleon Bonaparte. The second phase focuses on America at war in the 19th century. It places particular emphasis on the American Civil War and the strategy of annihilation versus the strategy of attrition. The final phase looks at warfare in the 20th century and finishes with an analysis of the future of warfare for the military of the United States.

Junior Year (MILS III)

MILS 3301 Leadership and Problem Solving

Fall. 2 credits. Required. R. Brown. After an initial introduction to techniques of presenting briefings, students are provided with a broad understanding of the principles and application of teamwork in military organizations. Particular emphasis is given to the leadership responsibilities of the commander as the team coordinator. This course helps students develop an understanding of the roles and contributions of the various branches of the Army in support of the military team.

MILS 3302 Leadership and Ethics

Spring. 2 credits. Required. R. Brown. Takes on the nature of decision making and the tactical application of the military team. Through the use of conferences and extensive practical exercises, students develop familiarity with the factors influencing a leader's decisions and the process of planning, coordinating, and directing the operations of military units through operation plans and orders.

Senior Year (MILS IV)

MILS 4401 Leadership and Management

Fall. 2 credits. Required. S. Alexander. Provides an overview of the functions, responsibilities, and interrelationships among small-unit leaders, the commander, and the staff. Discussions focus on actions of small-unit leaders, communication skills, army operations, the logistical support of the army in the field, and the army training system. The course focuses on the dynamics of leadership in battle through the detailed analysis of a series of case studies. Just war theory, ethics, and professionalism are also addressed in a seminar fashion.

MILS 4402 Officership

Spring. 2 credits. Required. S. Alexander. A continuation of MILS 4401. Conferences and seminars examine the techniques of effective military leadership, with special attention given to professionalism and ethical considerations in the armed forces during

both peacetime and conflict. Army operations and basic doctrine are also discussed. This is a capstone course designed to prepare the student for commissioning.

Practical Leadership Training

Army Officer-Education Students

No credit is given for leadership training, but participation is required for successful completion of the AROTC program. Students receive physical education credit for the laboratory. Each semester, cadets register for the appropriate leadership laboratory, consisting of physical fitness training three times per week, two hours of military training each week, and one weekend training exercise per semester.

MILS 1111 Leadership Laboratory I

Fall, spring. 0 credits. S-U. MILS I cadets meet for two hours each week to learn a variety of military skills including rappelling, first aid, drill and ceremonies, weapons familiarization, physical fitness training, and small group leadership.

MILS 2200 Leader's Training Course

Summer. 1-6 credits. Prerequisite: permission of instructor. S-U grades only. One to six units of credit may be granted depending upon successful completion of training. Six weeks of training, Fort Knox, Kentucky. Travel pay and salary provided through the Military Science Department. No obligation. LTC graduates eligible to enroll in ROTC Advanced Program.

MILS 2211 Leadership Laboratory II

Fall, spring. 0 credits. S-U. Cadets meet for two hours each week as members of the cadet organization to participate in practical leadership exercises. Types of practical activities include rifle marksmanship, orienteering, drill and ceremonies, signal communications, physical fitness training, first aid, tactics, field exercises, and small group leadership.

MILS 3311 Leadership Laboratory III

Fall, spring. 0 credits. Required. S-U. Cadets meet for two hours a week and occasional weekends to prepare for a five-week summer camp that follows their junior year. Emphasis is placed on the development of individual practical and leadership skills. Cadets rotate through leadership positions to practice applying decision-making skills in a myriad of situations.

MILS 3314 Leadership Development and Assessment Course

Summer. 4 credits. Prerequisite: permission of instructor. S-U grades only. Six-week summer training program required to achieve an Army commission. Training and testing as functional Army officers and determination of potential for service. Travel pay, room and board, and salary are provided by the U.S. Army. Held at Fort Lewis, Washington.

MILS 4400 Special Problems for Advanced Undergraduates

Fall, spring. 1-4 credits. Prerequisite: permission of instructor. Letter grade. Individual investigation, research, studies, or surveys of selected problems. Total credit limited to 4 units, with a maximum of 2 units per quarter.

MILS 4411 Leadership Laboratory IV

Fall, spring. 0 credits. Required. S-U. Senior cadets plan and operate the leadership laboratory programs for MILS I-III cadets. The development of planning and supervisory skills is emphasized. Cadets have an opportunity to practice leadership skills developed during previous ROTC training and summer camp experiences. Includes two to three hours a week devoted to physical fitness.

Professional Military Education (PME) Requirements

In addition to the ROTC classes and leadership laboratories listed above, a number of courses are required as part of the contracted student's academic program. These courses are offered by the university and round out the student's professional education. The PME component of the ROTC program requires at least one college course in each of the following areas: communication skills, military history, and an introduction to computers. Courses that meet these requirements are approved by the Professor of Military Science.

NAVAL SCIENCE

Captain Larry Olsen, United States Navy, Professor of Naval Science and Commanding Officer, Naval ROTC Unit

Lieutenant Colonel Jerry Rizzo, United States Marine Corps

Lieutenant Matthew Zarracina, United States Navy

Lieutenant Douglas Raineault, United States Navy

Lieutenant Reginald Preston, United States Navy

The objective of the Naval Reserve Officers Training Corps Education Program is to prepare students for service as commissioned officers in the United States Navy or United States Marine Corps. This is accomplished by supplementing undergraduate education with instruction in essential concepts of naval science and by fostering qualities of leadership, integrity, and dedication to country. The program is compatible with most undergraduate major fields of study, including five-year baccalaureate degree programs.

The program covers four years and combines specific courses in naval science and specified academic subjects. These courses supplement weekly professional development sessions in which the practical aspects of naval science and leadership procedures are stressed. It also includes at least one summer-at-sea period.

Though the Navy and Marine Corps program has been designed to prepare future officers, naval science courses are open to all students at Cornell as space limitations allow.

Requirements for Enrollment

An applicant for the Naval ROTC program at Cornell must be a citizen of the United States. Applicants must have reached their 17th birthday by September 1 of the year of enrollment and be less than 27 years of age on June 30 of the calendar year in which they are commissioned. Waivers of the upper age limit may be available for applicants who have prior active duty military service. Applicants must also meet physical and medical

requirements. Interested students can visit the Naval ROTC Unit in Barton Hall or contact their local officer recruiter.

Programs

There are two programs: the Scholarship Program and the College Program. The two programs differ primarily in benefits given to the student.

Scholarship Program

The Scholarship Program provides approximately 1,000 scholarships in more than 70 universities nationwide to selected students who want to serve in the Navy or Marine Corps. Financial support is provided to students during college preceding the award of the baccalaureate degree.

Benefits

The program offers scholarships that provide full tuition and are not need-based. While on scholarship, students also receive money for instructional fees, textbooks, nonconsumable supplies, and a stipend of \$250–\$400 a month for a maximum of 40 months.

Successful completion of the Scholarship Program leads to a commission in the Navy or Marine Corps. At Cornell University, over 90 percent of NROTC students have a scholarship. Students entering NROTC without a prior scholarship award are entitled to compete for two- or three-year scholarships controlled by the Naval Service Training Command.

Entering the Scholarship Program

There are three ways to enter the Scholarship Program:

1. by applying to the national competition each year. This process entails filling out and submitting an appropriate application; being interviewed; having a physical examination; and applying to, and being accepted by, one of the colleges or universities throughout the country that offers an NROTC program.
2. by enrolling in the College Program at Cornell and being recommended by the Professor of Naval Science for a scholarship after at least one semester in the program.
3. by entering through the Two-Year Scholarship Program.

College Program

Two College Programs are available. Both lead to a commission in the Navy or Marine Corps.

Starting in the junior year, each of these programs provides textbooks for naval science courses, uniforms, and a subsistence allowance of \$350–\$400 a month.

The regular College Program is four years long. Academic requirements for students in this program are somewhat fewer than those for scholarship students, as noted in the curriculum section of this book.

The Two-Year College Program begins the summer before the junior year; students attend a required program, with pay, at the Naval Science Institute in Newport, R.I.

Summer Training

Each summer, students in the Scholarship Program spend approximately four to six weeks on a Navy ship, or participate in a naval activity that may take place anywhere in the world, for on-the-job training. College Program students attend one summer training session of the same duration between the junior and senior years.

Active Duty Requirements

Scholarship midshipmen commissioned in the Navy or Marine Corps serve on active duty for a minimum of four years. College program midshipmen commissioned in the Navy or Marine Corps serve a minimum of three years. In some cases, following commissioning, specialized training such as aviation or nuclear power will add additional active duty requirements.

Choice of Assignment

Graduates have the opportunity to request the duty they prefer upon graduation. These requests are given careful consideration, and every effort is made to assign newly commissioned officers to their duty of choice.

Among the assignments available are duties in naval aviation as either a pilot or naval flight officer, on submarines, and on surface ships. Other specialties, such as special warfare or medical service corps, may be available on a limited basis.

Marine Corps Options

The United States Marine Corps is an integral part of the Naval Services and is commanded by the Commandant of the Marine Corps. One-sixth of the NROTC scholarship students may be Marine selectees who will be designated Marine-option midshipmen. Upon successful completion of the program they will be appointed Second Lieutenants in the United States Marine Corps.

Marine-option midshipmen follow the same program as other NROTC midshipmen for the first two years. Beginning with the junior year, Marine-option midshipmen are taught Marine-oriented courses by a Marine Officer Instructor. For First Class summer training (after the junior year), Marine-option students travel to Quantico, Va., where they undergo six weeks of intensive training known as the USMC Officer Candidate School. Upon commissioning the following year as Second Lieutenants, they are assigned to the Basic School at Quantico, Va. After the Basic School, the Marine officer is assigned duty in a variety of occupational fields. Among the duties available are infantry, aviation, artillery, tracked vehicles, engineering, communications, electronics, supply, administration, and computer science. The officer may serve on board naval vessels or at shore installations of the Marine Corps or Navy, either in this country or overseas.

The Marine Corps has a postgraduate training system similar in objectives and organization to that of the Navy. Marine officers selected for aviation receive flight training at the Naval Air Station, Pensacola, Fla., along with their Navy counterparts.

Curriculum

A student has three categories of requirements to fulfill as a midshipman. The first of these

requirements is a weekly naval professional development session each semester. The second requirement is a naval science course each semester. The last set of requirements consists of further courses prescribed by the Navy to meet the growing need for more and better technically educated junior officers.

Naval Professional Laboratories

NAVS 1141, 2241, 3341, 4441

All students in the program participate in a two-hour professional development session each week. The session is held from 2:30 until 4:30 on Wednesday afternoons and consists of drill, athletics, and professional information events. Students gain experience in actual leadership situations and learn the fundamentals of seamanship, military formations, movements, commands, discipline, courtesies, and honors. During information briefings, special emphasis is given to applied leadership as it relates to the administrative and managerial aspects of a Navy or Marine Corps officer's duties.

Naval Science Courses

All Navy and Marine midshipmen take one naval science course each semester during their freshman and sophomore years. Navy-option students continue to take a naval science course each semester during their junior and senior years. Marine-option students have slightly different curriculum requirements for their junior and senior years.

Freshman Year (Navy and Marines)

NAVS 1101 Fundamentals of Naval Science

Fall. 1 credit. M. Zarracina.

Involves a study of fundamental aspects of naval science. This includes contributions to sea power, different warfare communities involved in the physical development of naval forces, and study of resource management and naval science prospects for the future. Naval uniforms, customs, and traditions are also covered.

NAVS 1102 Sea Power and Maritime Affairs

Spring. 3 credits. M. Zarracina.

Discussions examine the history of the Navy as a force in diplomacy and an instrument of U.S. foreign policy. Relationships between Congress and the military for determining the national defense policy are also explored. An integrated examination of current events and issues lends historical perspective throughout the course.

NAVS 1480 Small Boat Sailing (also PE 1480)

Fall and spring. Physical education credit. Instructor TBA.

This is a course of instruction in basic sailing skills and safety principles. Students sail small boats on Cayuga Lake. Focus is on U.S. Navy Class B inshore skipper certifications.

Sophomore Year (Navy and Marines)

NAVS 2201 Leadership and Management I (also HADM 1115)

Fall. 3 credits. L. Olsen and J. Rizzo.

The theme of the course is the "evolving role of the manager, organizational decision maker, and leader." The course begins by briefly covering the theoretical principles of management and progresses through practical skills used by managers and leaders. Lectures,

reading assignments, films, and discussions provide students with an excellent opportunity to consider complex managerial and leadership issues. The goal of this course is for students to begin to develop a sound personal leadership philosophy that will enable them to more effectively accomplish the assigned responsibilities of leading men and women in today's demanding and high-tech naval environment.

NAVS 3201 Naval Ship Systems I (also MAE 1110)

Fall. 3 credits. R. Preston.

Introduces primary ship-systems and their interrelationships. Basic principles of thermodynamics, propulsion, mechanical operation, internal communications, electronics, ship structure, and other marine systems are covered.

Junior Year (Navy)

NAVS 2202 Navigation (also BEE 3050)

Spring. 4 credits. D. Raineault.

Introduces the fundamentals of marine navigation emphasizing piloting and electronic navigation procedures. Covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, and study of tides and currents. Electronic navigation systems are discussed.

NAVS 4401 Naval Operations

Fall. 3 credits. D. Raineault.

Covers the application of the nautical rules and maneuvering board in order to avoid collisions at sea. Other aspects of naval surface ship operations that are introduced include visual and electronic communications methods, tactical disposition of forces, ship handling theory, and deck seamanship topics.

Senior Year (Navy)

NAVS 3202 Naval Ships Systems II (Weapons)

Spring. 3 credits. R. Preston.

Examines the principles and theories used in the development of naval weapons systems. Extensive study is made of detection systems, especially radar and sonar, followed by discussions of ancillary systems for computing, stabilizing, tracking, and weapons control and delivery.

NAVS 4402 Leadership and Ethics

Spring. 3 credits. L. Olsen.

Reviews a variety of topics important to the naval officer for both professional and managerial development. The material is designed to provide the midshipman with an understanding and appreciation of leadership and ethics in preparation for assignments in the naval service. Through the use of lectures, case studies, and role-playing, the student learns various aspects of naval leadership and ethical decision making. Marine-option students may also take this course.

Junior or Senior Year (Marine Options)

NAVS 3310 Evolution of Warfare

Spring. 3 credits. J. Rizzo.

A study of warfare that examines the relationship of military strategy to geography, economics, sociology, technology, and governing policy. This course examines the historical evolution of warfare, including principles of war, development of weapons and their effects on warfare, and the political goals associated with specific adversaries through history.

NAVS 4410 Amphibious Warfare

Spring. 3 credits. J. Rizzo.

The history of the development, theory, techniques, and conduct of amphibious operations from 490 BC to the present. Special emphasis is placed on amphibious operations conducted in the central Pacific during World War II and on the future of amphibious operations.

Other Required Courses

Navy-Option Scholarship Program

To be eligible for a commission in the United States Navy, midshipmen must successfully complete all the requirements for a baccalaureate degree in any field of study offered by Cornell University, and complete courses in the following subjects (specified courses to be approved by the Professor of Naval Science):

American Military Affairs or National Security Policy (one semester)

English (one year)

Calculus (one year)

Calculus-based physics (one year)

World Cultures/Regional Studies (one semester)

The calculus requirement must be satisfied by the end of the sophomore year and the physics requirement by the end of the junior year.

Although free choice of academic majors is permitted, students are encouraged to pursue majors in engineering and the physical sciences so that they may be best prepared to meet the technological requirements of the modern Navy.

Navy-Option College Program

Navy-option College Program students must complete college-level study in mathematics (1 year), physical science (1 year), and English (1 year), American Military History or National Security Policy (1 semester), and World Culture and Regional Studies (1 semester) as a prerequisite for commissioning. The mathematics course must be completed by the end of the junior year, the physical science course by the end of the senior year. College Program students who desire entry into the Navy-option Scholarship Program should fulfill all of the requirements applicable to Navy-option scholarship students if they wish to be eligible for a scholarship controlled by the Naval Service Training Command.

Marine Option

Any midshipman, in either the Scholarship Program or the College Program, who completes all of Cornell University's degree requirements in any academic major is eligible for a commission in the U.S. Marine Corps or U.S. Marine Corps Reserve. Marine-option students take the same naval science courses and naval professional laboratories as Navy-option students for the freshman and sophomore years. During the junior and senior years, Marine-option students have slightly different naval science course requirements than their Navy-option counterparts. One semester (a minimum of 3 hours) of courses in American Military Affairs or National Security Policy is required.

Extracurricular Activities

The NROTC midshipman at Cornell is offered a broad range of activities, including sail training and a comprehensive intramural sports program. Midshipmen participate in a myriad of social events, including the annual Navy/Marine Corps Birthday Ball.

DEPARTMENT OF AEROSPACE STUDIES

Lieutenant Colonel Michael Williamson, United States Air Force, Professor of Aerospace Studies and Commander, Air Force ROTC Detachment 520

Captain Misty Johnson, United States Air Force, Assistant Professor of Aerospace Studies and Commandant of Cadets, Air Force ROTC Detachment 520

Captain Phillip Ulmer, United States Air Force, Assistant Professor of Aerospace Studies and Unit Admissions Officer, Air Force ROTC Detachment 520

The objective of the Air Force Officer Education Program at Cornell is to prepare men and women for positions as officers in the United States Air Force. The program is designed to teach students about the mission and organization of the Air Force, the historical development of airpower, leadership, and management. Students study national security policy and the role of the military in a democratic society. This program includes specific courses in aerospace studies and practical leadership laboratories. Additionally, the Department of Aerospace Studies seeks to inform and engage noncadet students about the U.S. military, in general, and the USAF, in particular.

Requirements for Enrollment

The Air Force Officer Education Program is open to any qualified undergraduate or graduate student enrolled in any major field of study. Though the program is designed to prepare future Air Force officers, academic courses in the Department of Aerospace Studies are open to all students at Cornell without incurring any military obligation. An applicant must be a United States citizen to become a commissioned officer. Noncitizens may enroll and will receive certificates acknowledging completion of the course but cannot receive a commission. U.S. permanent residents who are naturalized by their date of graduation may receive a commission.

All applicants receive physical examinations at no cost and must meet certain physical requirements to be accepted. Students who are interested in qualifying for flying categories (pilot, navigator, or air battle manager) must meet more stringent physical requirements. In addition, students enrolled in the commissioning program must meet specified physical fitness requirements each semester.

Four-Year Commissioning Program

The Four-Year Program is open to all qualified freshmen. Sophomores and juniors may also enter a condensed version of the four-year program with the approval of the department head. Many students join the program after the first semester of their freshman year. If interested, contact the department for details.

Veterans of the U.S. armed forces, students entering Cornell from military schools, or high school students with documented Junior ROTC or Civil Air Patrol involvement may receive advanced academic standing, subject to approval by the Professor of Aerospace Studies.

The Four-Year Program consists of a two-year General Military Course (GMC) program of study followed by a two-year Professional Officer Course (POC) program of study. For four-year scholarship cadets, the first year of the GMC carries no military commitment, and students may withdraw at any time. Entry into the POC does carry a military commitment. For nonscholarship cadets, both years of the GMC carry no military commitment, and students may withdraw at any time.

General Military Course

Students in General Military Courses (GMC) take a 1-credit Aerospace Studies course each semester. During the freshman year, the student examines the organization and mission of the United States Air Force and the environment of the Air Force officer. In the sophomore year, the student studies the history and development of American air power. In both years, officership and professionalism within the United States Air Force are emphasized.

Students also spend two hours a week in a leadership laboratory. Leadership laboratories provide cadets with an opportunity to put into practice the skills they have learned in their aerospace studies classes. These laboratories focus on the development of officer qualities through activities such as drill and ceremonies, group leadership problems, confidence-building exercises, and guest lecturers. Students who intend to continue on into the Professional Officer Course and pursue a commission will participate in summer field training for four weeks between their sophomore and junior years; some students may complete field training between their junior and senior years.

Professional Officer Course

The Professional Officer Courses (POC) provide a two-year advanced program of instruction. Each cadet accepted into the POC must sign an agreement to complete the program and accept, if offered, a commission in the United States Air Force upon graduation. Completing the GMC program of study is not required for POC entry. Many students join the program after their freshman year. Contact the Department of Aerospace Studies for details.

Classroom study in the POC is a 3-credit course each semester. In the junior year, cadets study Air Force leadership and management at the junior officer level. During the senior year, cadets study the elements of national security and the military's role in American society. Leadership laboratory requires two hours a week in the junior and senior years. In leadership laboratory, cadets are exposed to advanced leadership experiences and apply principles of leadership learned in the classroom.

Two-Year Commissioning Program

The Two-Year Program consists of the last two years of the regular Four-Year Program plus a five-week summer training course.

The Two-Year Program is open to all qualified students with two years of academic study remaining. Graduate or undergraduate entry into this program depends on the needs of the Air Force. Many students join the program after their freshman year. Interested students should contact the department for information.

Scholarships

The Air Force offers three- and four-year scholarships to high school seniors and one-, two-, and three-year scholarships to college students. Four-year scholarships are offered on a competitive basis to high school seniors. Scholarship information can be obtained from a high school guidance counselor, from Air Force ROTC officers at Cornell (AFROTC phone number is 607-255-4004), from a local Air Force recruiter, via the web at www.afrotc.com, or from the Air Force ROTC scholarship section, Maxwell AFB, AL 36112-6106, 334-953-2869. The deadline for submitting a four-year scholarship application is December 1 of the year preceding the academic year in which a student wants to enter the program. Students should apply early.

Scholarships for two and three years.

Applications for these scholarships should be made to the Professor of Aerospace Studies during the freshman, sophomore, or junior years of college. All selections are based on the student's major, scores achieved on the Air Force Officer Qualifying Test, the student's overall grade point average, and the recommendation of the Professor of Aerospace Studies. Scholarships include amounts ranging from \$3,000 per year to full tuition and fees. There is a monthly \$300-\$500 nontaxable allowance during the school year. A \$900 per year textbook allowance is included in every scholarship. Scholarships do not include the cost of room and board. All AFROTC scholarships are merit-based, not need-based.

Fees

An initial uniform deposit of \$50 is required on entry into AFROTC. Before commissioning, cadets may purchase uniforms with their deposit or return uniforms and receive their deposit back.

Benefits

All cadets in the advanced program—whether they are on scholarship or not—receive a \$450-\$500-a-month, nontaxable subsistence allowance during the academic year. During the four- or five-week summer field training (see below), each cadet receives a pay allowance plus an allowance for travel to and from the field site. Textbooks and supplies required for Department of Aerospace Studies courses are provided.

All cadets are eligible to participate in AFROTC-sponsored field trips made to Air Force bases throughout the country as well as voluntary summer programs for professional development. Scholarship and POC cadets are entitled to space-available travel on Air Force aircraft flying within the continental United States.

Field Training

Two types of field training are available: a four-week course for cadets in the Four-Year Program and a five-week course for Two-Year Program applicants.

Field training is designed to stimulate the development of military leadership skills through meaningful experiences. The curriculum consists of aircraft, aircrew, and survival orientation; junior officer training; physical training; small arms training; team building and leadership training. The five-week training program includes 60 hours of Air Force ROTC academic course work that substitutes for the freshman and sophomore Aerospace Studies courses. Cadets are evaluated for their officer potential at field training.

Cadets may also volunteer for one of many Advanced Training Programs. These programs can include but are not limited to the Air Force Academy Free-Fall Parachute Training, Technical Research and Development Internships, the Academy Soaring Program, Special Operations Training, and language and cultural immersion programs.

Commissioning Obligations

All students who successfully complete the AFROTC advanced program must be awarded a baccalaureate degree before receiving their commission. They then enter the Air Force as second lieutenants.

Second lieutenants commissioned in nonflying categories are required to serve on active duty for four years. Pilots are required to serve on active duty for 10 years after completing flying training. Navigators and Air Battle Managers serve eight and six years respectively after completing training.

Air Force Careers

The Air Force assigns new officers to a career field based on mission requirements, educational background, and officers' preferences. Students in the engineering-scientific category may be assigned to practice in their specialty in research and development, communications, electronics, aeronautics, astronautics, the biological sciences, computer design and maintenance, meteorology, space, or other engineering and scientific fields. Graduates in the nontechnical category can anticipate assignments in manpower management, information management, logistics, law enforcement and investigation, intelligence, personnel, public affairs, transportation, accounting and finance, and other career fields. Specializations for language and cultural studies majors are also available.

Any undergraduate major is suitable for those who are qualified and interested in entering the space and missile career fields or in becoming pilots, navigators, or air battle managers. After completion of flying training, personnel are assigned to a specific type of aircraft.

Curriculum

Students in the Four-Year Program are required to take all courses listed below. Students in the Two-Year Program are required to take all of the courses listed for the junior and senior years. There are no prerequisites for any Aerospace Studies courses.

Freshman Year**AIRS 1161 The Foundations of the United States Air Force I**

Fall. 1 credit. P. Ulmer.

This is a survey course designed to introduce students to the United States Air Force and Air Force Reserve Officer Training Corps. Featured topics include: mission and organization of the Air Force, officership and professionalism, military customs and courtesies, Air Force officer career opportunities, war and the American military, and Air Force heritage. Leadership laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with followership experiences.

AIRS 1162 The Foundations of the United States Air Force II

Spring. 1 credit. P. Ulmer.

Continuation of AIRS 1161. Topics include Air Force core values, human relations, team building, communication skills, and officer leadership.

Sophomore Year**AIRS 2211 The Evolution of USAF Air and Space Power I**

Fall. 1 credit. M. Williamson.

This course is designed to examine general aspects of air and space power through a historical perspective. The course covers a time period from the first balloons and dirigibles to the role of air power in the Korean conflict. Historical examples are provided to illustrate the development of Air Force capabilities and functions to demonstrate the evolution of what has become today's USAF air and space power. The course examines several fundamental truths associated with war in the third dimension, and provides students with an understanding of the general element and employment of air and space power from an institutional, doctrinal, and historical perspective. In addition, students continue to discuss the importance of the Air Force core values.

AIRS 2212 The Evolution of USAF Air and Space Power II

Spring. 1 credit. M. Williamson.

Continuation of AIRS 2211. This course covers the role of airpower from Vietnam to the present day. Attending AIRS 2211, while helpful, is not required to take AIRS 2212.

Junior Year**AIRS 3331 Air Force Leadership Studies I**

Fall. 3 credits. P. Ulmer.

This course is a study of leadership required of an Air Force junior officer; it has applicability to any entry-level professional as a junior executive. The course investigates theories and styles of leadership, power and influence, the meaning and function of followership in the military context, critical thinking, problem solving and team building, group conflict management, situational leadership, and management functions and principles. Films and case studies are used for analysis of theories and principles studied. Students receive instruction and practice effective writing (e.g., background and position papers) and briefing skills (e.g., informative and advocacy briefings) for professional communications; students practice both modes of communication. The course also provides professional officer education in terms of defining professional

and unprofessional relationships, working with civilian personnel, and the profession of arms. The course is open to any student. For officer candidates, a mandatory leadership laboratory complements this course.

AIRS 3332 Air Force Leadership Studies II

Spring. 3 credits. Open to any student. P. Ulmer.

A continuation of AIRS 3331. The course investigates advanced skills in leadership: dynamic subordinacy, effective supervision, essentials of counseling, corrective supervision, professional authority, responsibility, and accountability. The course also investigates the meaning and application of ethical and moral leadership, professional officer ethics, military ethics in joint operations, and the core values of the Air Force. Film and case studies are used for analysis of course content. Written and briefing practice continues. For officer candidates, a mandatory leadership laboratory complements this course.

Senior Year**AIRS 4401 National Security Affairs/Preparation for Active Duty I**

Fall. 3 credits. M. Williamson.

This course is concerned with the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Other topics include the military as a profession, officership, military justice, civilian control of the military, preparation for active duty, and current issues affecting military professionalism. Continued emphasis is given to refining communication skills. A mandatory leadership laboratory complements this course by providing advanced leadership experiences, giving students the opportunity to apply the leadership and management principles described in this course.

AIRS 4402 National Security Affairs/Preparation for Active Duty II

Spring. 3 credits. M. Johnson.

Continuation of AIRS 4401.

Leadership Laboratory Courses

All Air Force cadets spend two hours a week throughout the academic year in a leadership laboratory. Occasionally laboratories are held at times other than the normally scheduled period. All cadets are expected to participate in a formal dinner and to meet minimum physical fitness and weight standards each semester. Leadership lab is open to students qualified to compete for an Air Force commission.

AIRS 1141 Initial Military Experiences

Fall and spring. 0 credits. Required. S-U grades.

Introduction to the responsibilities, life, and work of an Air Force officer. Basic knowledge of drill and ceremonies, military courtesies, and the wearing of the uniform. This course includes a field trip to a local military installation.

AIRS 2241 Intermediate Military Experiences

Fall and spring. 0 credits. Required. S-U grades.

Designed to help students develop skill in giving commands for drill and ceremonies. Students are also introduced to the Air Force base environment in which the officer functions. Career areas available based on academic majors are described. Students

participate in military drills and ceremonies and go on a field trip to a local military installation.

AIRS 3341 Junior Officer Leadership Experiences

Fall and spring. 0 credits. Required. S-U grades.

Cadets assume leadership responsibilities similar to those of a junior officer. Emphasis is on the importance of applying effective human relations skills in dealing with superiors, peers, and subordinates. Cadets also gain insight into the general structure and progression patterns of selected Air Force officer career fields.

AIRS 4441 Advanced Leadership Experiences

Fall. 0 credits. Required. S-U grades.

Cadets assume command leadership responsibilities to operate a military organization. Cadets apply effective leadership and managerial techniques with individuals and groups and participate in self-analysis of leadership and managerial abilities.

AIRS 4442 Precommissioning Laboratory

Spring. 0 credits. Required. S-U grades.

Factors that facilitate transition from civilian to military life are reviewed. The need for military security, base services and activities, personal finances, travel regulations, and social obligations are introduced.

COLLEGE OF VETERINARY MEDICINE

ADMINISTRATION

Michael I. Kotlikoff, dean

Robert O. Gilbert, associate dean for clinical programs

Alfonso Torres, associate dean for veterinary public policy

Drew M. Noden, secretary of the college

Katherine M. Edmondson, assistant dean for learning and instruction

Robert F. Gilmour Jr., associate dean for research and graduate education

Gene R. Wheeler, assistant dean for finance and administration

Kevin Mahaney, assistant dean for alumni affairs and development

Lorin D. Warnick, associate dean for veterinary curriculum

Judith A. Appleton, associate dean for academic affairs

Bruce L. Akey, assistant dean for diagnostic operations

Douglas F. Antczak, director, James A. Baker Institute for Animal Health

Carol S. Gary, director of student financial planning

Erla Heyns, director, Flower Sprecher Veterinary Library

Mary Beth Jordan, director of human resources

Douglas D. McGregor, director of leadership and training initiatives

Jennifer A. Mailey, director of admissions

Jai Sweet, director of student services and multicultural affairs

Microbiology and Immunology: D. Russell

Molecular Medicine: G. Weiland

Population Medicine and Diagnostic Sciences: Y. Grohn

THE COLLEGE

The College of Veterinary Medicine offers a professional program that requires four years of full-time academic and clinical study of the normal and abnormal structure and function of the animal body and the diagnosis, treatment, and prevention of animal disease.

Graduates of the college receive the doctor of veterinary medicine (D.V.M.) degree, which is recognized by licensing boards throughout the world. Graduates generally enter private practice or academia, or become engaged in

one of an increasing number of biomedical activities.

Admission requires a minimum of three years of college work, including specific prerequisite courses and experience. Applications must be filed approximately one year before the proposed matriculation date. The competition for admission is keen, since there are many more qualified applicants than can be admitted.

Graduate programs in veterinary research and postdoctoral training in clinical specialties are open to doctors of veterinary medicine and some highly qualified holders of baccalaureate degrees and lead to the degree of master of science or doctor of philosophy.

More detailed information is available at the College of Veterinary Medicine web site, www.vet.cornell.edu/.

Note: 5000- and 6000-level courses are open only to veterinary students except by written permission from the instructor.

The College of Veterinary Medicine's professional curriculum comprises courses in two categories: Foundation courses and Distribution courses.

Courses contributing to the D.V.M. degree begin with VTMED.

FOUNDATION COURSES

Foundation courses are interdisciplinary and represent approximately 70 percent of the professional curriculum. In Foundation courses I, III, and IV (VTMED 5100, 5300, 5400), students work in small groups under the guidance of a faculty tutor. Case-based exercises are used to facilitate the understanding of basic science concepts within the context of clinical medicine. In some courses, three two-hour tutorial sessions are scheduled each week. These are complemented by lectures, laboratories, and discussion sessions or other organized learning opportunities specific to the individual course. Faculty members are available to respond to questions that arise as a result of the case-based exercises.

Tutorial sessions and all other organized learning programs are scheduled primarily during the mornings, thereby reserving time in the afternoon for independent study. By learning in a clinical context, students are better able to integrate material from the basic and clinical sciences and are encouraged to develop an understanding of the clinical reasoning process from the beginning of the curriculum. The tutorial-based educational format creates an atmosphere that requires students to be involved actively in their learning and allows them to develop skills in communication, information retrieval, and analysis.

Note: Courses listed in brackets [] are approved courses that are not offered during the 2009–2010 academic year.

VTMED 5100 The Animal Body (Foundation Course I)

Fall. 12 credits. Prerequisite: first-year veterinary students. Letter grades only. Fee charged for course guide. L. Mizer and staff.

Designed to enable students to understand the principles of veterinary anatomy at the gross, microscopic, and ultrastructural levels.

Emphasizes developmental anatomy to the extent that it reflects determination of adult form and species differences. Radiologic and related imaging techniques are used throughout the course to assist in the understanding of normal structural anatomy. Understanding of the anatomic basis of common surgical procedures is achieved during the various dissection procedures. The course is based on tutorials with significant emphasis on practical laboratories. Lectures and modules complement student learning.

VTMED 5200 Cell Biology and Genetics (Foundation Course II)

Fall and spring. 8 credits. Prerequisite: first-year veterinary students; VTMED 5100.

Letter grades only. G. A. Weiland and staff.

Designed to develop an appreciation of the molecular and cellular basis of animal health and disease. Students gain an understanding of the molecular mechanisms that regulate cell function, the molecular signaling processes that form the basis of integrated function and the response to disease, and the mechanisms underlying inherited traits and genetic disease. Students are introduced to the pathologic basis of disease and the immune response by studying cellular responses to injury. Emphasis is placed on defining and characterizing normal cell function and on understanding how mutations in specific genes promote disease. Fundamental biological processes as revealed by gross and microscopic pathological changes are emphasized. The course is divided into two parts separated by a midterm exam. The first part is made up of three sections: Principles of Cell Biology, Cell Signaling, and Medical Genetics. The second half of the course builds upon and expands these principles, using examples from veterinary medicine including wound repair and cancer. In both parts, clinical cases are utilized to illustrate the concepts presented.

VTMED 5220 Neuroanatomy

Spring. 1 credit. Prerequisite: first-year veterinary students. Letter grades only. M. FitzMaurice.

Designed to give students the necessary background for the understanding of neurophysiology and clinical neurology. Students will gain a basic understanding of the gross anatomy of the central nervous system (CNS), pathways involved in somatosensory and motor systems, as well as some exposure to modern imaging of the CNS (CT and MRI correlates with gross coronal sections of the CNS).

VTMED 5300 Function and Dysfunction: Part I (Foundation Course IIIa)

Spring, 9 credits. Prerequisite: first-year veterinary students; VTMED 5200. Letter grades only. Fee charged for course guide. Live animals used on limited basis for demonstration of noninvasive procedures. R. Rawson and staff.

Designed to develop students' understanding of how an animal maintains itself as a functional organism; how the maintenance of function is achieved through the integration of different organ systems; how tissue structure relates to tissue function; how injury alters structure and leads to dysfunction, manifested as clinical signs; how organ function can be assessed; and how organ function can be modulated pharmacologically. The course incorporates aspects of physiology, biochemistry, cell biology, histology, pathology and histopathology, clinical pathology, and pharmacology.

VTMED 5310 Function and Dysfunction: Part II (Foundation Course IIIb)

Fall, 7 credits. Prerequisite: second-year veterinary students; VTMED 5300. Letter grades only. Fee charged for course guide. R. Rawson and staff.

Continuation of VTMED 5300 Function and Dysfunction: Part I.

VTMED 5400 Host, Agent, and Defense (Foundation Course IV)

Fall, 12 credits. Prerequisite: second-year veterinary students; VTMED 5310. Letter grades only. Fee charged for course guide. D. Bowman (course leader) and staff.

This course seeks to develop an understanding of the interplay between the immunological system of the host and the most significant bacterial and viral agents that cause disease in animals. Lectures focus primarily on adaptive and innate immunity, as well as bacterial and viral pathogens and the diseases they cause. Autoimmunity, epidemiological methods to investigate infectious disease at the herd and single-animal levels, and techniques and tools to control infectious disease are also important components of the course. In the laboratory, animals are used to illustrate some aspects of infectious diseases.

VTMED 5410 Veterinary Parasitology

Fall, 2.5 credits. Prerequisite: second-year veterinary students. Letter grades only. D. D. Bowman.

Provides a basic introduction to animal parasites of veterinary importance, concentrating mainly on the biology, control, and diagnosis of protozoan and metazoan parasites. Emphasizes parasites representative of significant disease processes or of significant clinical importance to veterinarians. Elaborates on the biology and pathogenesis of these major pathogens with the ultimate goal being to maximize the recognition of the major disease manifestations induced by the different groups of organisms. Laboratories stress certain aspects of some important parasite groups.

VTMED 5500 Animal Health and Disease: Part I (Foundation Course V)

Spring, 10 credits. Prerequisite: second-year veterinary students; VTMED 5400. Letter grades only. Fee charged for course guide. S. Fubini and D. W. Scott.

Integrates the clinical sciences of medicine, surgery, anesthesiology, radiology, and theriogenology, which are themselves integrated subjects, with systems pathology

and relevant aspects of applied pharmacology. The course is presented on a systems basis, moving from clinical signs of alteration in function, to pathophysiology of clinical signs, to strategies for diagnosis and treatment. Specific examples are used to establish a cognitive framework and knowledge of the most important diseases. This course provides a sound foundation for clinical rotations in Foundation Course VI. It builds on the strengths developed in earlier courses by an increased exposure to case examples in a more directed way, taking advantage of the diversity of skills and special knowledge of both faculty and students. A variety of educational techniques are used, including lectures in which interaction is encouraged, laboratories, demonstrations, case discussions, and autotutorials.

VTMED 5510 Animal Health and Disease: Part II (Foundation Course V, continued)

Fall, 20 credits. Prerequisite: third-year veterinary students; VTMED 5500. Letter grades only. Fee charged for course guide. S. Fubini and D. W. Scott.

Continuation of VTMED 5500 Animal Health and Disease: Part I.

VTMED 5600 Ambulatory and Production Medicine

Fall, winter, spring, and summer, 2 credits. Required component of Clinical Rotations (Foundation Course VI). Students can take more than one week early but a minimum of one week must be completed during Block VI. C. Guard and staff.

Clinical service rotation in which students accompany ambulatory clinicians on farm and stable calls and learn the skills and procedures necessary for operation of a modern veterinary practice offering primary care to large-animal clients. Routine herd health visits are conducted for cattle, horses, sheep, goats, and swine. Reproductive evaluations (including pregnancy and fertility examinations), nutritional evaluation, and disease prevention are stressed. Herd health programs also include vaccinations, parasite control, mastitis prevention, and routine procedures. With appropriate herds, analysis of computerized performance data is conducted and discussed with the owner. In addition to assisting with routine scheduled work, students participate in diagnosis and medical or surgical treatment of ill or injured animals. This includes rotating assignments for night and weekend duty.

VTMED 5601 Community Practice Service: Medicine

Fall, winter, spring, and summer, 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. W. E. Hornbuckle and staff.

Structured to provide supervised clinical experience in the practice of companion small-animal medicine. The course is conducted in the Companion Animal Hospital of the Cornell University Hospital for Animals. Students interact directly with clients presenting their pets for primary medical care. Under the supervision of the clinical faculty and staff, the students are expected to formulate and carry out plans for the diagnostic evaluation and medical management of these patients. After review, students explain their plans to the clients and provide follow-up care and management of these patients.

VTMED 5602 Small-Animal Medicine

Fall, spring, winter, and summer, 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. S. C. Barr, S. A. Center, J. F. Randolph, K. W. Simpson, and R. Goldstein.

Structured to provide supervised clinical experience in the practice of companion small-animal medicine. The course is conducted in the Companion Animal Hospital of the Cornell University Hospital for Animals. Students interact directly with clients presenting their pets for primary or referral medical care. Under the supervision of the clinical faculty and staff, the students are expected to formulate and carry out plans for the diagnostic evaluation and medical management of these patients.

VTMED 5603 Small-Animal Soft Tissue Surgery Service

Fall, winter, spring, and summer, 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. H. J. Harvey and small-animal surgery faculty.

Clinical service rotation that exposes the student to the practice of surgery under hospital conditions. Students participate in office hours, diagnostic techniques; planning of therapy; and daily care of dogs and cats under the direction of a faculty veterinarian. Students assist experienced surgeons in the operating room. Client communications and the basics of efficient practice are emphasized.

VTMED 5604 Large-Animal Medicine Service

Fall, winter, spring, and summer, 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. G. Perkins, D. Ainsworth, T. Divers, and M. Flaminio.

Students assigned to this service assist the faculty, technicians, and residents of the Large-Animal Medicine Service in the diagnosis and care of patients. The goal of this course is for students working on this service to acquire knowledge and skills in history taking, physical examination, selection and completion of appropriate ancillary tests, diagnosis, treatment, and patient care. Daily rounds and discussions are used to monitor patient progress and further educate students. If time allows, sit-down rounds to discuss medical disorders are provided.

VTMED 5605 Large-Animal Soft Tissue Surgery Service

Fall, winter, spring, and summer, 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. A. J. Nixon and staff.

Clinical rotation structured to provide supervised clinical experience in the practice of large-animal surgery. Under the direction of faculty and house staff, students participate in the diagnosis, surgical treatment, and care of patients presented to the Equine and Farm Animal Hospital. Training through patient care is supplemented by formal rounds and didactic instruction.

VTMED 5606 Anesthesiology Service

Fall, winter, spring, and summer, 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. A. L. Campoy, R. D. Gleed, W. A. Horne, A. L. Looney, J. W. Ludders, M. Flores, and staff.

Designed to provide clinical experience in the use of anesthetics in small companion

animals, horses, and some food animals. Students participate in selecting suitable anesthetic techniques for patients in the Cornell University Hospital for Animals and then implement those techniques under the supervision of faculty and residents. The goal is for students to learn the skills and thought processes necessary to perform safe anesthesia in a modern veterinary practice.

VTMED 5607 Dermatology Service

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. W. H. Miller and D. W. Scott.

During this clinical rotation, students participate in the diagnosis and management of skin disorders in small and large animals. Patients are examined by appointment and through consultation with other hospital services.

VTMED 5608 Ophthalmology Service

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. T. Kern, N. Irby, and E. C. Ledbetter.

Combines clinical experience with beginning skills in diagnostic ophthalmology. Students learn how to apply the ophthalmic diagnostic tests. A competent ocular examination is the goal of this rotation. Confidence in using direct and indirect ophthalmoscopes, slit lamps, tonometers, gonioscopes, conjunctival cytology, and surgery comes with the practice provided by this rotation. Students are required to review the introductory orientation videotapes in the autotutorial center titled *Ocular Examination I and II* before the start of the rotation. This rotation provides surgical experience and consultations. A high percentage of the consultations are referral cases that usually challenge the service. Adequate routine case material is presented to prepare most students for practice.

VTMED 5609 Pathology Service

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. S. P. McDonough and staff.

The pathology rotation strives to integrate gross pathology with other diagnostic modalities. Students will work in groups of three to five for the two-week rotation performing necropsies on mammals, birds, exotic species, and laboratory animals under the guidance of pathology faculty and residents. Students will prepare written reports of the necropsies performed and discuss the findings at daily morning rounds. Students will also be instructed by faculty of the Animal Health Diagnostic Center with expertise in ancillary diagnostic techniques. Students will be expected to learn to use diagnostic testing regimens as integral parts of comprehensive diagnostic and therapeutic plans. Instruction will consist primarily of the discussion of clinical cases with emphasis on laboratory diagnostics. Students will be expected to lead and participate in these discussions and will be evaluated on their ability to do so.

VTMED 5610 Radiology Service

Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. N. L. Dykes and staff.

Two-week clinical experience in the imaging section of the Cornell University Hospital for Animals. Students use radiographic, ultrasonographic, CT, MRI, and nuclear

medicine imaging techniques to evaluate animal patients under treatment in the Cornell University Hospital for Animals. Students obtain and interpret radiographic studies with guidance from radiology faculty and technical staff. Autotutorial teaching films are used to familiarize students with radiographic examples of common diseases of large- and small-animal species. Small-group discussions are scheduled to present and discuss the teaching files and current cases. The safe use of X-ray-producing equipment and radioisotopes is discussed.

VTMED 5611 Small-Animal Clinical Emergency and Critical Care Medicine

Fall, winter, spring, and summer. 2 credits. Prerequisite: third- and fourth-year veterinary students. Letter grades only. N. Dhupa, G. Schoeffler, D. Fletcher, and staff.

Management of both emergent and critical cases represents a significant component of the practice of veterinary medicine. The focus of this clinical rotation is the development of a knowledge base and a comprehensive set of skills necessary for a veterinarian to perform adequately in these areas, within a structured format. These skills include the appropriate evaluation (triage) and stabilization of emergency patients, the management of post-operative and other critical patients, and sensitive and effective client communication. Participants access relevant information from various sources related to emergency and critical care medicine and understand and apply these principles to clinical cases. Students will participate in the management of incoming emergency cases as well as having primary patient care responsibilities in both intensive care and intermediate care units. Students will be expected to work closely with technicians and clinicians to develop familiarity with technical and nursing procedures.

VTMED 5612 Fourth-Year Seminar

Fall and spring. 1 credit. Required component of Clinical Rotations (Foundation Course VI). First-, second-, and third-year students and all faculty and staff members also invited and encouraged to attend. S-U grades only. M. Smith, chair of Senior Seminar Committee.

Gives the student the responsibility and opportunity of selecting and studying a disease entity on the basis of a case or series of cases, or to conduct a short-term, clinically oriented research project under the direction of a faculty member. In either case, an oral report is presented at a weekly seminar. A written report is also submitted within two weeks after the seminar. All participants are encouraged to foster an atmosphere in which discussion, exchange of ideas, and the airing of controversial opinions might flourish.

VTMED 5701 Animals, Veterinarians, and Society (Part A) (Foundation Course VIIa)

Fall. 1.5 credits. Prerequisite: first-year veterinary students. Letter grades only. Fee charged for course guide. Live animals used in course instruction. N. L. Irby, C. McDaniel, and staff.

Complements and augments material learned in VTMED 5100 (Foundation Course I—The Animal Body). The class is divided into small groups and each group meets for four to five hours each week during the first 11 weeks of the fall semester. Using live dogs, cats, horses,

and cows as models for learning how to perform a physical examination, this laboratory course teaches the skills of observation, auscultation, palpation, and percussion as well as related basic diagnostic procedures. The body systems are examined sequentially and follow the order of study in Foundation Course I.

VTMED 5702 Animals, Veterinarians, and Society (Part B: Ethics) (Foundation Course VIIb)

Last part of fall semester through end of winter session. 1 credit. Prerequisite: first-year veterinary students; VTMED 5701. Letter grades only. Lecs average two hours each week; lab, 12 hours spread throughout course. Live animals used in course instruction. N. L. Irby, C. McDaniel, and staff.

Consists of both lectures and laboratory sessions. Lectures partially complement materials learned in VTMED 5200 (Foundation Course II—Cell Biology and Genetics) but for the most part focus primarily on veterinary medical ethical issues related to animal use, animal welfare, genetics counseling, and clinical day-to-day ethics. The laboratory reviews basic equine and bovine husbandry skills and the small-animal physical examination.

VTMED 5703 Animals, Veterinarians, and Society (Part C) (Foundation Course VIIc)

Spring. 1 credit. Prerequisite: first-year veterinary students; VTMED 5702. Letter grades only. Fee charged for course guide. Live animals used in course instruction. N. L. Irby, J. Morrissey, C. McDaniel, and staff.

Introduces students to medical record keeping and to the communication skills and techniques necessary for effective communication with clients. In addition, students are introduced to the human-animal bond and its implications for veterinary medicine, animal death, and grief counseling. This course gives students the opportunity to practice interviewing clients while refreshing their physical exam skills.

VTMED 5704 Animals, Veterinarians, and Society (Part D: Public Health and Preventive Medicine) (Foundation Course VIId)

Fall. 2 credits. Prerequisite: second-year veterinary medical students; VTMED 5703. Letter grades only. Fee charged for course guide. Live animals used in course instruction. N. L. Irby, L. D. Warnick, and staff.

Complements and augments material learned in VTMED 5400 (Block IV—Host, Agent, and Defense). Emphasizes veterinary public health and preventive medicine. Topics include aggressive animals and animal bites, routes of disease transmission, rabies control programs, zoonotic diseases, emerging infectious diseases, environmental health, and preventive health care programs including vaccination protocols in large and small animals.

VTMED 5705 Animals, Veterinarians, and Society (Part E: Introduction to Clinical Procedures) (Foundation Course VIIe)

Spring. 0.5 credit. Prerequisite: second-year veterinary students; VTMED 5704. Letter grades only. Fee charged for course guide. Live animals used in course instruction. N. L. Irby, C. McDaniel, and staff.

Laboratory course that provides a basic introduction to clinical skills students will need when they start their clinical rotations in the Cornell University Hospital for Animals. Includes a brief review of the physical examination of the dog, cat, horse, and cow. Clinical procedures include but are not limited to ear examination and treatment, IM and SQ injections, fluid administration, naso- and orogastric tube placement, urinary catheterization, and IV catheterization.

VTMED 5706 Animals, Veterinarians, and Society (Part F) (Foundation Course VIIf)

Fall. 1.5 credits. Prerequisite: third-year veterinary students; VTMED 5705. Letter grades only. Fee charged for course guide. Live animals used in course instruction. N. L. Irby, C. McDaniel, and staff.

Complements material learned in VTMED 5510 Foundation Course V—Animal Health and Disease. Examines governmental regulation of the veterinary profession, including proper drug usage, extra label drug use (FDA), controlled substances (DEA), professional liability and malpractice insurance, professional and unprofessional conduct, hazardous materials in the workplace (OSHA), and environmental issues (EPA). Also includes sessions relating to the control and prevention of the spread of animal diseases and the role of USDA and specifically APHIS in these regulatory functions. The laboratory component consists of night treatments in the Equine and Farm Animal Hospital.

DISTRIBUTION COURSES

Distribution courses comprise 30 percent of the curriculum and are usually scheduled during the first half of each spring semester. During the first two years, many of the distribution courses are oriented to the basic sciences. During years three and four, students have additional distribution course offerings from which to choose. Some emphasize clinical specialties, whereas others integrate basic science disciplines with clinical medicine and are co-taught by faculty members representing both areas. Students from different classes have the opportunity to take many of these courses together.

Grading options for distribution courses are either letter or S–U.

VTMED 6100 Anatomy of the Carnivore

Spring. 3 credits. Prerequisite: VTMED 5100 or permission of instructor; first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. P. S. Maza.

Students study carnivore anatomy by detailed systematic and regional dissection of the cat, with comparison to the dog. Student dissection is supplemented with prosections, radiographs, palpation of live cats, and exercises focusing on surgical approaches. There are opportunities to dissect other carnivores, such as the ferret and the fox, depending on availability of specimens. The lectures augment the laboratory dissection and introduce the student to clinical anatomy of the cat and functional morphological comparative features in the Order Carnivora. Students do an independent project on the carnivore species of their choice and give an oral presentation on this to the class.

VTMED 6101 Anatomy of the Horse

Spring. 3 credits. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. A. J. Bezuidenhout.

Organized as a traditional anatomy course that relies primarily on students learning the anatomy of horses through hands-on dissection laboratories augmented by lectures and highlighted by clinical correlations. An understanding of anatomy that provides the foundation for surgery and medicine. Its relevance to clinical practice is emphasized by the regional approach to dissection. Most lectures emphasize structural-functional correlations that are unique or important in the horse. Microscopic anatomy is integrated into the course in selected areas to lay a foundation for the later study of pathology or when it reinforces concepts of structure and function that are difficult to understand by a study of the gross anatomy alone (i.e., hoof). Student dissection cadavers are supplemented by skeletal materials, radiographs, models, preserved predissected specimens, and fresh specimens when available. A live horse will be available for palpation.

VTMED 6102 Anatomy of the Ruminant

Spring. 3 credits. Prerequisite: VTMED 5100 or permission of instructor; first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. L. A. Mizer.

Covers the regional anatomy of several ruminant species using dissection laboratories and lectures. Emphasizes the functional consequences of structural modifications and anatomical features relevant to clinical practice. Correlates microscopic anatomy with gross anatomy when appropriate to relate structure to function and to provide a foundation for later study in pathology. Student dissection material is supplemented by skeletal materials, radiographs, models, predissected specimens, and postmortem specimens. Students are required to complete an independent study project on a relevant subject of their choice. Assessment includes written and practical exam.

VTMED 6103 Comparative Anatomy: Pattern and Function

Spring. 3 credits. Prerequisite: VTMED 5100; first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. J. Hermanson.

The goal of this course is to study anatomical variability among amniote (mammals, birds, and reptiles) and anamniote (amphibian and fish) species. This is accomplished by relating the anatomy of major organ systems in each species to a common basic pattern and considering the differences in a functional perspective. Five major systems are explored (integumentary, locomotory, cardiorespiratory, digestive, and urogenital) in a variety of species as available.

VTMED 6120 Anatomy and Histology of Fish

Spring. 2 credits. Minimum enrollment 4; maximum 6. Prerequisite: first-, second-, third-, and fourth-year veterinary students or written permission of instructor. S–U or letter grades. P. R. Bowser.

Provides an overview of the diversity of anatomy and histology of fish. Students participate in lecture, discussion, and laboratory exercises to review the major organ systems. Extensive use of library resources for assigned readings is expected. Each student

prepares a term project and makes one oral presentation.

VTMED 6198, 6298, 6398, 6498, 6598, 6698, 6798 Special Projects in Veterinary Medicine

Fall, winter, spring, summer. 1–4 credits, variable. S–U or letter grades. Must be arranged with College of Veterinary Medicine lecturer, senior lecturer, or tenure-track faculty member.

Provides students the opportunity to work individually with a faculty member to pursue an area of particular interest and, typically, not part of the established curriculum. Specific course objectives and course content are flexible and reflect the scope and academic expertise of the faculty.

VTMED 6199, 6299, 6399, 6499, 6599, 6699, 6799 Research Opportunities in Veterinary Medicine

Fall, winter, spring, summer. 1–4 credits, variable. S–U or letter grades. Must be arranged with College of Veterinary Medicine lecturer, senior lecturer, or tenure-track faculty member.

Provides students the opportunity to work in the research environment of faculty involved in veterinary or biomedical research. Specific course objectives and course content are flexible and reflect the specific research environment. Research projects may be arranged to accumulate credit toward requirements in Distribution Sets I, II, III, IV, and V.

VTMED 6222 Canine and Feline Medical Genetics

Spring. 2 credits. Minimum enrollment 10; maximum 40. Prerequisites: VTMED 5200, 5300, and 5310. S–U or letter grades. V. N. Meyers-Wallen.

Covers the genetic and pathophysiologic mechanisms underlying inherited diseases in dogs and cats that may be encountered in small-animal practice. Specific disorders of clinical importance are presented in a lecture format to illustrate the distribution, diagnosis, and control of inherited diseases in individuals and populations. Ethical considerations regarding treatment, prevention, and control measures are discussed.

VTMED 6320 Clinical Pathology

Spring. 2 credits. Minimum enrollment 25; maximum 90. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. T. Stokol and D. Schaefer.

Addresses a range of issues related to laboratory medicine and interpretation of laboratory results. General topic areas include hematology, clinical chemistry and immunology, and urinalysis. The primary mode of instruction is student-driven small-group (untutored) exploration of case materials followed by faculty-moderated large-group discussions. Selected lectures and laboratory sessions supplement and expand on issues generated by the case discussions. This course builds on concepts previously addressed in Foundation Courses III and IV and provides additional experiences in practical clinical pathology procedures and microscopy.

VTMED 6321 Management of Fluid and Electrolyte Disorders

Spring. 2 credits. Minimum enrollment 20; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. R. Rawson.

Students focus on clinical manifestations and the pathophysiologic mechanisms associated with fluid, electrolyte, and metabolic acid-base disturbances in domestic animals. The course is divided into segments dealing with salt and water imbalances, potassium, calcium, and phosphate abnormalities, metabolic acidosis, metabolic alkalosis, and mixed acid-base disturbances.

VTMED 6324 Antimicrobial Drug Therapy in Veterinary Medicine

Spring. 1 credit; may be repeated for credit max. of two times. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. W. S. Schwark.

Familiarizes students with antimicrobial drugs used in veterinary practice. Builds on fundamental pharmacological and microbiological principles covered in Foundation Courses III and IV and considers antibacterial, antifungal, antiparasitic, and anticancer drugs from the point of view of unique pharmacokinetic properties, indications for clinical use, and potential toxicities as the basis for rational use.

VTMED 6327 Current Concepts in Reproductive Biology (also BIOAP 7570)

Fall. 3 credits. Minimum enrollment 6. Prerequisite: first-, second-, and third-year veterinary students and appropriate undergraduate/graduate training. Letter grades only. Offered odd-numbered years. J. Fortune, P. A. Johnson, and staff.

For description, see BIOAP 7570.

VTMED 6328 Veterinary Clinical Toxicology

Spring. 2 credits. Prerequisite: second-, third-, and fourth-year veterinary students. S-U or letter grades. K. Bischoff.

Provides veterinary students with a solid introduction to concepts and principles of toxicology and how they are applied in the clinical setting. Students learn about specific common toxicants, clinical signs in affected animals, and treatment protocols for the toxicants in question. Students also gain an understanding of the clinical approach to suspected or unknown toxicoses, sample collection and handling, and resources available for clinical toxicologic problems. The course is conducted with three one-hour lectures per week and one hour-long large-group discussion per week. Grades are based on weekly homework assignments, a midterm, and a final exam.

VTMED 6420 Foreign Infectious Diseases of Animals

Spring. 1 credit. Minimum enrollment 20. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. A. Torres, R. Gilbert, and D. Schlafer.

Describes the etiology, pathogenesis, clinical signs, gross pathology, differential diagnosis, methods of spread, reservoir hosts, and control of the most important foreign and emerging animal diseases that present serious economic threats to the United States. Several foreign and emerging animal diseases are also important zoonoses affecting public health. The recent spread and impact of foot-and-mouth disease, avian influenza virus, bovine spongiform encephalopathy, and chronic wasting disease are good examples of the need to emphasize the importance to practicing veterinarians so they in turn could educate producers, consumers, and the public in general.

VTMED 6421 Epidemiology of Infectious Diseases

Spring. 1 credit. Maximum enrollment 8. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. H. Mohammed and staff.

Introduces the epidemiologic methods used in infectious disease investigations. Also discusses the importance of surveillance systems in detecting modern epidemics and in the development of effective disease prevention and control strategies. Emphasizes understanding the relationships between the host, the agent, and the environment as they relate to disease causation. Explores contemporary epidemiologic methods applicable to old diseases that remain real or potential problems, newly emerging infectious diseases, and nosocomial infections. Selected diseases are discussed to clarify the role of epidemiology in understanding the pathogenesis of infectious processes in individuals and groups of animals. Students have the opportunity to apply the methods learned to actual disease problems and write an epidemiologic report that might lead to a publication in a peer-reviewed scientific journal.

VTMED 6422 Clinical Biostatistics for Journal Readers

Spring. 1 credit. Minimum enrollment 3; maximum 12. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades. H. N. Erb.

Students become familiar with the statistical methods commonly used in veterinary clinical articles, learn to recognize obvious misuse of those methods, and become able to interpret the statistical results.

VTMED 6423 Clinical Diagnostic Parasitology

Fall and spring. 0.5 credit for attending eight one-hour parasitology sessions; student usually can easily obtain 2 hours on each of the five participating rotations (Ambulatory, Community Practice Service, Dermatology, Pathology, and Wildlife). Prerequisite: VTMED 5510; third- and fourth-year veterinary students. S-U grades only. A. Lucio-Forester and D. D. Bowman.

Gives students experience in diagnosing parasitic infections. Students perform appropriate parasitological testing methods on clinical samples from patients on their rotation. They also evaluate the test results in terms of treatment or management of the infections. If clinical specimens are not available, appropriate materials are provided for study and evaluation. Ambulatory students typically do qualitative and quantitative floatations on samples from large-animal cases they have encountered that week. In CPS, one hour is spent testing samples from current dog and cat patients, while a second hour is devoted to a discussion of the treatment of common endo- and ecto-parasites. Pathology students typically examine and identify intact parasites they retrieved from various organs at necropsy. This course is considered to be a logical extension to Foundation Course IV: Host, Agent, and Defense, and is expected to build on the didactic material presented in Large- and Small-Animal Parasitology.

VTMED 6424 Approaches to Problems in Canine Infectious Diseases

Spring. 1 credit. Minimum enrollment 10; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. S. C. Barr.

Emphasizes the clinical aspects of the more common canine infectious diseases. The overall objective is to provide details about specific infectious diseases a future small-animal practitioner may need to know to effectively diagnose and treat these diseases. Clinical signs, presentation, clinicopathologic data, diagnostic choices, treatment plans, and prevention are emphasized. Most lectures are presented by clinical faculty and therefore the material is oriented toward practical skills in managing clinical cases. Grading is based entirely on the result of a written exam (usually multiple-choice format) given in the final period.

VTMED 6425 Shelter Medicine I

Spring. 1 credit. Minimum enrollment 5; maximum 40. Prerequisite: VTMED 5400; third- and fourth-year veterinary students. Letter grades only. J. M. Scarlett and staff from American Society for Prevention of Cruelty to Animals.

Shelter medicine is a new and exciting discipline in veterinary medicine. Caring for animals in animal shelters requires a "herd health" as well as an individual animal perspective. This course addresses the role of veterinarians working with and for animal shelters, the principles of preventive medicine and population health in companion animals; behavioral enrichment, temperament testing, and diagnosis and treatment of behavior problems in shelter animals; design and implementation of high volume spay/neuter programs for shelters; design and implementation of trap/neuter/release programs by shelters; and the medical management of common infectious diseases in shelter cats and approved methods of euthanasia for companion animals. This is the second course in a three-course sequence.

VTMED 6426 Timely Topics in Veterinary Parasitology: Large-Animal

Spring. 0.5 credit. Minimum enrollment 2. Prerequisite: third- and fourth-year veterinary students. S-U grades only. D. D. Bowman.

In-depth look at one or a few parasites of special interest relative to large-animal medicine. Presents details of taxonomy, biology, epidemiology, clinical presentation, and preventive and curative treatment. Efforts are made to discuss those aspects of the disease as it relates to the practical control of these and in-depth coverage of primary literature relating to the parasite being discussed. Topics vary annually. The course is presented in a lecture/discussion format.

VTMED 6427 Timely Topics in Veterinary Parasitology: Small-Animal

Spring. 0.5 credit. Minimum enrollment 2. Prerequisite: third- and fourth-year veterinary students. S-U grades only. D. D. Bowman.

In-depth look at one or a few parasites of special interest relative to small-animal medicine. Presents details of taxonomy, biology, epidemiology, clinical presentation, and preventive and curative treatment. Efforts are made to discuss those aspects of the disease as it relates to the practical control of these and in-depth coverage of primary

literature relating to the parasite being discussed. Topics vary annually. The course is presented in a lecture/discussion format.

VTMED 6428 Vaccines: Theory and Practice

Spring. 1 credit. Minimum enrollment 10. Prerequisite: introductory immunology course or VTMED 5400 or VETMI 3150; second-, third-, and fourth-year veterinary students and graduate students or others by permission of instructor. Letter grades only. Offered odd-numbered years. T. Clark.

Broad overview of vaccines and immunization program used in contemporary veterinary medicine, focusing on efficacy use and safety. One take-home final exam.

VTMED 6429 Infectious Diseases and Management of Swine

Spring. 2 credits. Minimum enrollment 6; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. S-U or letter grades. K. Earnest-Koons.

Provides veterinary students with a solid introduction to concepts and principles of swine infectious diseases and how they are treated in the clinical setting. Students learn about specific infectious diseases, clinical signs in affected animals, and treatment protocols for the diseases in question. Students also gain an understanding of the clinical approach to suspected or unknown infectious agents, sample collection and handling, and resources available for infectious disease diagnosis. Good management practices for swine farmers are also reviewed and their relationship to disease is discussed. The course is conducted with three one-hour lectures per week and one hour-long large group discussion per week. Meets two days per week for one hour and one day per week for two hours. Grades are based on weekly quizzes, a final exam, a short paper, and attendance/participation.

VTMED 6430 Veterinary Perspectives on Pathogen Control in Animal Manure (also BEE/BIOMI 6430)

Spring. 2 credits. Prerequisite: third- and fourth-year veterinary students, graduate students, advanced undergraduate students interested in agricultural engineering as related to animal manure management. Letter grades only. D. D. Bowman.

In-depth look at the management of pathogens in animal manures. Reviews the pathogens involved, the role of governing agencies, the survival of pathogens in the field, and methods of pathogen destruction. Discusses commercial methods of manure processing for the control of these pathogens for the protection of other animals and the human population. Concludes with class discussions with major stakeholders representing the dairy, beef, pork, and poultry industries and their understanding of the problem as it relates to veterinary students.

VTMED 6432 Fish Health Management

Spring. 1.5 credit. Minimum enrollment 8; maximum 16. Prerequisite: first-, second-, third-, and fourth-year veterinary students or written permission of instructor. S-U or letter grades. P. R. Bowser.

Lecture and laboratory course providing an overview of the aquatic environment and the important infectious and noninfectious diseases of fish. Covers important diseases encountered in commercial aquaculture, aquarium systems, and natural waters. The laboratory is designed to provide students

with a knowledge base and hands-on diagnostic experience in diseases of fish. Students also maintain and manage aquarium systems during the course to gain an appreciation for the science behind the operation of those systems. The laboratory requires time outside the normal scheduled class sessions (to be scheduled by the students) for management of the aquarium systems. Each student also makes a presentation on a topic in aquatic animal health during the course.

VTMED 6433 Anaerobic Infections of Animals

Spring, two 1-hr. lec per week for eight weeks. 1 credit. Minimum enrollment 10; maximum 80. Prerequisite: VTMED 5400. S-U grades only. P. L. McDonough and staff.

Presents anaerobic infections in clinical context as an adjunct to the material covered in Foundation Course IV. Students gain an understanding of the diversity and biology of anaerobic bacteria and the niches that they occupy in the animal and avian body. A basic, clinically oriented taxonomy is presented, and students learn about the virulence and pathogenesis of the major anaerobes that they will encounter in clinical practice. The clinical signs of anaerobic infections, laboratory identification and susceptibility testing, and the use of specimen transport media are also covered. Treatment of common infections, including wound care, is covered and vaccines currently available are discussed in detail. In the second four weeks of the course, students learn about the major clinical syndromes caused by anaerobes.

VTMED 6434 Shelter Medicine II

Spring. 1 credit. Minimum enrollment 3; maximum 20. Prerequisite: third- and fourth-year veterinary students. Highly recommended: VTMED 6425. Letter grades only. J. M. Scarlett.

Intended as a sequel to the Issues and Preventive Medicine in Animal Shelters course offered in the C Distribution block. In light of the time constraints in the Issues course, the principles of prevention and control to specific diseases (e.g., ringworm, kennel cough) commonly encountered in small-animal populations are not discussed. This course encourages students to apply principles of infectious disease, epidemiology, and preventive medicine to infectious disease problems in small-animal populations, with a particular emphasis on disease problems in shelters. Mention of modification to fit other small-animal populations (e.g., catteries, kennels) is made.

VTMED 6435 Forensic Science for Marine Biologists (also BIOSM 4450)

Summer. 2 credits. Held at Shoals Marine Laboratory. By application through Shoals Marine Laboratory. Maximum enrollment 21. Prerequisite: satisfactory completion of a year of college-level biology, ecology, or marine science. S-U or letter grades. Special fee required. P. R. Bowser. For description, see BIOSM 4450.

VTMED 6521 AQUAVET II: Comparative Pathology of Aquatic Animals

Two weeks of full-time instruction at Woods Hole, Mass., immediately after spring semester. 2 credits. Maximum enrollment 18. Prerequisites: formal course work in diseases of aquatic animals or appropriate experience and permission of instructor.

S-U or letter grades. Fee charged. Available by competitive application process to veterinary and graduate students. P. R. Bowser.

Advanced course (sponsored by Cornell U., the U. of Pennsylvania, and three marine-science institutes at Woods Hole: the Marine Biological Laboratory, Woods Hole Oceanographic Institution, and Northeast Center of the National Marine Fisheries Service) covering the comparative pathology of aquatic invertebrates and vertebrates commonly used as laboratory animals. The material presented consists of discussions of the diseases of aquatic animals as well as extensive use of the microscope to examine the histopathology associated with these diseases. The course is taught by an invited faculty of 12 individuals who are leaders in their respective fields of aquatic-animal medicine.

VTMED 6522 Diseases of Birds

Spring. 2 credits. Minimum enrollment 10; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. G. V. Kollias and staff.

Designed to introduce second-, third-, and fourth-year veterinary students to a basic and practical knowledge of the most common infectious and noninfectious diseases affecting a variety of avian species. Emphasizes the latest diagnostic and control approaches. The course format is a combination of didactic lectures and discussions.

VTMED 6524 Feline Infectious Diseases

Spring. 1 credit, two 50-min. lec each week for eight weeks. Minimum enrollment 10; maximum 80. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. S. C. Barr.

Emphasizes the clinical aspects of feline infectious diseases common to cats in North America and complements knowledge acquired in Foundation Courses IV and V. The overall objective is to provide details about specific infectious diseases a future small-animal practitioner may need to know to effectively diagnose and treat diseases. Etiology, epidemiology (prevalence and transmission), pathogenesis, clinical findings, diagnosis, pathologic findings, therapy prevention, and public health considerations are emphasized. Most lectures are presented from a clinician's point of view, and therefore the material is oriented toward practical skills in managing clinical cases. Grades are based entirely on the result of a written exam (usually multiple-choice format) given in the final period.

VTMED 6525 Osteoarthritis

Spring. 1 credit. Minimum enrollment 8; maximum 24. Prerequisite: graduate and second-, third-, and fourth-year veterinary students. Letter grades only. G. Lust.

Provides a basis at the molecular, cellular, and tissue levels for understanding the function of mammalian diarthrodial joints. Includes a description of a diarthrodial joint and the composition and metabolism of articular cartilage, subchondral bone, ligaments, meniscus, capsule, and synovium. Considers the interrelationships of synovium, synovial fluid, articular cartilage, joint lubrication, biomechanical considerations, and enervation. Canine hip dysplasia is a focus during the early class sessions. The osteoarthritis associated with canine hip dysplasia serves as a basis for discussion of the etiopathogenesis of the disease. Canine osteoarthritis is

emphasized, but the diseases in other animals such as mice, guinea pigs, rabbits, cats, and horses are mentioned. Therapies such as nonsteroidal anti-inflammatory drugs, glucocorticoids, and others may be discussed.

VTMED 6526 Veterinary Nutrition

Spring. 2 credits. Minimum enrollment 10; maximum 90. Prerequisite: second- and third-year veterinary students or permission of instructor. Recommended for second- and third-year veterinary students. Letter grades only. J. Wakshlag.

The first half of this course provides information on the requirements for and metabolic uses of the essential nutrients of companion animals as well as on formulation and evaluation of practical rations for species of veterinary interest. These concepts are applied in discussion of life stage nutritional needs, including growth, adult maintenance, gestation, lactation, aging, performance, and production. The second half covers clinically relevant diseases of nutritional deficiency and excess, including obesity, as well as the role of nutrition in the management of diseases of the various organ systems—e.g., renal, lower urinary tract, cardiac, G-I, hepatic, and musculoskeletal system disease. Other topics include the role of nutrition in managing cancer and hypersensitivity disorders and in critical care, including enteral and parenteral nutrition. The course also includes an introduction to nutrition for exotic and zoo animals.

VTMED 6527 Veterinary Aspects of Captive Wildlife Management

Spring. 2 credits. Minimum enrollment 10; maximum 40. Prerequisite: first-, second-, third-, and fourth-year veterinary students. Letter grades only. G. V. Kollias.

Concentrates on principles of captive wildlife management, both clinical and nonclinical. Students are challenged to learn and integrate a variety of disciplines that are essential to managing wildlife successfully in a captive or semi-free-ranging environment. These disciplines include but are not limited to species-specific (1) behavior and behavioral requirements, (2) nutritional requirements and problems, (3) natural history, (4) zoonotic and toxicological problems, (5) manual restraint and anesthesia, (6) preventive medicine, and (7) medical and legal ethics. In even-numbered years the course emphasizes non-North American wildlife species (e.g., African, Asian, Australian, and Central and South American species). Format includes lectures and student presentations. In odd-numbered years it focuses more on the North American (native) wildlife species, presented in lectures and laboratories.

VTMED 6528 Equine Surgical and Anesthetic Techniques

Winter, one-week period over winter intersession. 1 credit. Minimum enrollment 3; maximum 21. Enrollment by lottery. Prerequisite: VTMED 6101; priority given to students who have indicated career interest in equine medicine and surgery; third- and fourth-year veterinary students. S-U grades only. S. Fubini (coordinator) and other large-animal surgeons.

Consists of five laboratories performing surgical procedures on ponies and cadaver specimens. It is the intent of this course not to make the students proficient in these procedures but to familiarize them with some specialized surgical techniques and to make them more

enlightened referring practitioners. The course, therefore, is intended for students anticipating equine practice after graduation.

VTMED 6529 Food-Animal Surgical and Anesthetic Techniques

Winter, one-week period over winter intersession. 1 credit. Minimum enrollment 6; maximum 21. Enrollment by lottery. Prerequisite: VTMED 6103; priority given to students who have indicated career interest in farm animals; third- and fourth-year veterinary students. S-U grades only. S. Fubini and other large-animal surgeons.

Consists of five laboratories performing surgical procedures on sheep, calves, cadaver specimens, and adult cattle. It is the intent of this course not to make the students proficient in these procedures but to familiarize them with surgical techniques and to make them more enlightened referring practitioners. The course, therefore, is intended for students anticipating food-animal practice after graduation.

VTMED 6530 Llama Tutorial

Fall, spring, summer. 1 credit. Prerequisite: VTMED 5400; second-semester second-, third-, and fourth-year veterinary students. S-U grades only. Independent study. M. C. Smith.

Autotutorial or group tutorial course covering common problems of llamas and alpacas. Participants are provided with study guides consisting of brief case descriptions and sample study questions. Reference is made to textbooks, journal articles, videotapes, and (if available) a teaching llama or alpaca to assist students in finding the answers to the questions efficiently. Grading is based on an oral exam.

VTMED 6531 Poisonous Plants

Fall. 1 credit. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. S-U grades only. M. C. Smith.

Field trips demonstrate toxic plants growing in natural or cultivated settings. Lectures address economically important poisonous plants native to the United States. Information presented includes plant identification, natural habitat, toxic principles, clinical signs of toxicity, and treatment and prevention of poisoning in animals. Some of the major toxic principles found in plants and considered in detail in the course are nitrates, cyanide, oxalates, photodynamic agents, alkaloids, and mycotoxins.

VTMED 6532 Avian Medicine and Surgery

Spring. 2 credits. Minimum enrollment 20; maximum 40. Prerequisite: third- and fourth-year veterinary students. Letter grades only. Live birds used in some laboratories. G. V. Kollias and staff.

Designed to introduce third- and fourth-year veterinary students to the principles and practice of clinical avian medicine and surgery. The course is taught in a basic didactic lecture and discussion format with laboratories that reinforce concepts presented in the lectures.

VTMED 6533 Advanced Equine Lameness

Spring. 2 credits. Minimum enrollment 7; maximum 21. Enrollment by lottery. Prerequisite: third- and fourth-year veterinary students. Letter grades. Live animals used for learning. N. Ducharme, A. Nixon, R. Radcliffe, L. Fortier, and staff. Designed to teach students the methodology of equine lameness diagnosis. Places a strong

emphasis on a hands-on approach to learning and is primarily laboratory-based. During laboratories, students work in small groups on live horses to diagnose the cause of their lameness. To this end, students learn both the practical skills, such as perineural and intra-articular blocks, as well as the methodology necessary to systematically work up a lameness case. Laboratories also provide students with the opportunity to practice field radiography and gain ultrasound skills as they pertain to equine lameness. Additionally, students have the opportunity to practice basic farrier skills. Lecture topics are intended to round out the students' understanding of lameness by providing them with a knowledge base of the common causes of lameness, organized by response to local anesthesia. Imaging interpretation is emphasized through case discussions. The course is recommended for students anticipating entry into equine practice. Students seeking hands-on experience with horses are also welcome.

VTMED 6534 Equine Reproduction

Spring. 2 credits. Minimum enrollment 8; maximum 20. Enrollment by lottery. Prerequisite: third- and fourth-year veterinary students. Lab corequisite: enrollment in lec. Letter grades only. M. A. Coutinho da Silva.

Covers advanced aspects of equine reproductive physiology. Discusses reproductive management of mares and stallions using natural and artificial breeding strategies. Stresses diagnosis, treatment, and prevention of common reproductive disorders. The laboratory component builds on skills acquired during foundation courses and provides experience in techniques important in equine theriogenology.

VTMED 6536-6537 Advanced Dairy Reproduction

Spring. 6536, lec; 6537, lab. Lec, 1 credit; lab, 1 credit. Minimum lab enrollment 12; maximum 24. Lab enrollment by lottery. Prerequisite: third- and fourth-year veterinary students. Lecture and lab corequisite: enrollment in both lecture and lab components. Letter grades only. R. Gilbert.

Offers lectures and labs that provide both theoretical and practical training in current approaches to the veterinary aspects of dairy-cow reproductive care and management. The aim is to empower the student with entry-level, current knowledge and skills for the reproductive aspects of any modern dairy practice.

VTMED 6538 Special Problems in Equine Medicine

Spring. 0.5 credit. Minimum enrollment 10; maximum 30. Enrollment by lottery. Prerequisite: third- and fourth-year veterinary students. S-U grades only. T. Divers and staff.

Intended for students anticipating equine practice. In-depth study of important diseases, review of recent literature, health management, and hands-on procedures or demonstrations are the core of this course.

VTMED 6539 Disorders of Large-Animal Neonates

Spring. 1 credit. Minimum enrollment 10; maximum 100. Prerequisite: first-, second-, third-, and fourth-year veterinary students. Letter grades only. G. Perkins.

Introductory neonatology course. The emphasis is on the medical and surgical problems of foals in the early neonatal period with some information presented about calves, small ruminants, and camelid neonates. Students also spend several hours in the neonatal intensive care unit providing medical care of hospitalized patients under staff supervision.

VTMED 6540 Equine Soft-Tissue Surgery

Spring. 1 credit. Minimum enrollment 6; maximum 24. Enrollment by lottery. Prerequisite: third- and fourth-year veterinary students. Letter grades only. R. Hackett and staff.

Intended for students anticipating equine practice after graduation. Builds on material presented in the foundation courses to provide supplemental instruction in surgical disorders of the horse. Lectures are case-based and emphasize disorders likely to be encountered in equine practice (colic, traumatic injuries, upper respiratory tract disorders, prepurchase examination). Laboratories emphasize diagnostic and therapeutic procedures in which an entry-level equine practitioner should be competent.

VTMED 6541 Surgical Pathology

Spring, summer, fall. 1–2 credits, variable; one or two weeks, approx. eight hours per day for 1 credit per week. Prerequisite: second-, third-, and fourth-year veterinary students by permission of instructor. Letter grades only. S. McDonough.

Provides hands-on experience in the Surgical Pathology Service of the Department of Biomedical Sciences. Working with the attending pathologist, students examine tissue specimens histologically, propose diagnoses, and discuss their interpretations. Students may enroll in this course only through the Office of Student Records *within the official add/drop period*. All requests to enroll must be accompanied by the Supplemental Enrollment Form indicating Dr. McDonough's approval of the enrollment and the amount of credit to be awarded. *Second-year students* should not enroll for any term other than summer *unless* they have actually reserved a January or spring-break slot through Dr. McDonough.

VTMED 6542 Medical and Surgical Problems of Dairy Cattle: Emphasis on the Individual Animal

Spring. 1 credit. Minimum enrollment 6; maximum 28. Prerequisite: third- and fourth-year veterinary students. Letter grades only. S. Fubini and staff.

Provides students who have a special interest in dairy practice the opportunity for in-depth discussions of special problems in bovine medicine and surgery. Emphasizes case discussions, physical examination techniques, and ethical and practical matters. Emphasizes individual cow treatment.

VTMED 6543 Special Problems in Small-Animal Medicine

Spring. 1 credit. Minimum enrollment 10; maximum 40. Prerequisite: third- and fourth-year veterinary students. S–U grades only. K. Simpson (coordinator) and staff.

Students work through selected problems in small-animal medicine in two-hour weekly seminars. The focus is on the medical problems associated with cases using historic, clinical, clinical pathologic, and pathologic findings to elucidate basic pathophysiological principles of disease. The overall objective is to give future small-animal practitioners skills

in the approach to clinical problems with specific emphasis placed on history taking, clinical signs and examination skills, assessment of clinical pathology data and diagnostic materials (radiographs, ultrasounds), treatment plans, and prevention. The course expands knowledge gained in Foundation Course V and, under the instruction of a clinical faculty member, is aimed at facilitating the use of that knowledge into the practical skills of managing clinical cases.

VTMED 6544 Practice Management

Spring. 2 credits. Prerequisite: third- and fourth-year veterinary students. S–U grades only. M. Kraus, J. Ludders, J. Morrisey, and K. Cummings.

Professional practice and financial managers teach veterinary medical students the essential elements of a successful practice, concentrating on management and organizational skills. Topics include basic practice organization, leadership styles, career planning, communication skills, facility management, human resource management, marketing, building and maintaining clients, practice growth, personal finances, money management, insurance, animals and the law, malpractice, medical records, inventory and pharmacy management, and contracts.

VTMED 6545–6546 Sheep and Goat Medicine

Spring. 6545, lec; 6546, lab. Lec, 1 credit; lab, 0.5 credit. Prerequisite: third- and fourth-year veterinary students. Lab corequisite: Sheep and Goat Medicine lec. S–U grades only. M. C. Smith.

Discusses diagnosis, treatment, and prevention of medical and surgical problems of individual small ruminants and of sheep and goat herds. Basic information on breeds, behavior, nutritional requirements, and management systems is supplied. Economically important contagious or metabolic diseases are discussed in depth. The diagnostic evaluation and differential diagnoses for common clinical presentations such as skin disease, neurologic disease, lameness, and mastitis are considered. Herd monitoring of economically important parameters and necropsy diagnosis of abortions and neonatal losses are addressed. Breeding systems, pregnancy diagnosis methods, correction of dystocia, and common surgical procedures are discussed and demonstrated in laboratory sessions.

VTMED 6547 Clinical Ophthalmology

Spring. 0.5 credit. Prerequisite: third- and fourth-year veterinary students. S–U grades only. R. Riis, N. Irby, and T. Kern.

The principles and practice of entry-level veterinary ophthalmology introduced in Foundation Course V, Introduction to Veterinary Ophthalmology, are supplemented by lectures and discussions that emphasize species differences, basic surgical decision-making, and recognition of ocular conditions appropriate for referral. One of the four class periods is devoted to ocular surgical techniques performed on cadaver tissues.

VTMED 6548 Dairy Production Medicine

Fall. 2 credits. Minimum enrollment 6; maximum 14. Prerequisite: third- and fourth-year veterinary students. S–U grades only. C. Guard.

Intermediate course in techniques and procedures used by veterinarians in modern dairy practice. Many of these activities fall outside the traditional boundaries of medicine,

surgery, and theriogenology and might include housing, facilities, manure management, and employee education. Data analysis, disease and productivity monitoring, and evaluation of deviations from targeted performance are used to plan cost-effective interventions or corrections, followed by continued surveillance to monitor their effect. Students are introduced to the dominant software currently used in dairy management. Local dairy herds serve as additional laboratories for class projects.

VTMED 6550 Clinical Pharmacology

Spring. 0.5 credit; may be repeated for credit max. of two times. Prerequisite: third- and fourth-year veterinary students. S–U grades only. W. S. Schwark.

Offered after Foundation Courses I–V and formal exposure to pharmacology course work is completed. The course is designed to familiarize students with drug use in the clinical setting and uses ongoing cases in the Cornell University Hospital for Animals as a teaching tool. Pharmacological concepts are emphasized, with a focus on the rationale for drug choice, alternative drug choices available, pharmacokinetic considerations, and potential drug interactions/toxicities. This course is offered at the time students are about to embark on their clinical rotations. It is designed to emphasize practical aspects of pharmacology in the clinical setting, using basic concepts obtained during formal course work. The onus is placed on the student to explain/rationalize drugs employed in clinical cases in the teaching hospital.

VTMED 6551 Topics in Veterinary Emergency and Critical Care Medicine

Spring. 1 credit. Minimum enrollment 20. Prerequisite: third- and fourth-year veterinary students; for all others, permission of instructor. S–U or letter grades. D. Fletcher.

This course builds upon the foundation built in Block V. It will consist of a combination of lecture and case discussion sections. Although all of the discussions will center on small animal medicine, the same principles often apply to both small animal and large animal situations. Topics that MIGHT be covered include a selection from the following list: shock, trauma, stabilization, cardiopulmonary resuscitation, respiratory emergencies, cardiac emergencies, endocrine emergencies, acute renal failure, hematologic emergencies, transfusion medicine, respiratory monitoring, hemodynamic monitoring, acute abdomen, emergency surgical procedures, and sepsis. The class will focus on both emergency stabilization and management of critically ill patients.

VTMED 6554 Reptile and Amphibian Medicine and Surgery

Spring. 1.5 credits. Minimum enrollment 10; maximum 40. Prerequisite: third- and fourth-year veterinary students or graduate students. Letter grades only. G. V. Kollias.

Designed to introduce veterinary students to the basic principles and practice of reptile and amphibian husbandry, management, diseases and medicine, and surgery.

VTMED 6555 Dairy Business Management and Health Economics

Spring. 2 credits. Minimum enrollment 5; maximum 18. Prerequisite: second-, third-, and fourth-year veterinary students. Letter grades only. L. Warnick and C. Guard.

This course helps veterinary students understand basic principles of dairy economics and business management and develop specific skills used by veterinarians in health economic decision making. Three main topic areas are covered: (1) overview of dairy economics from regional and national perspectives; (2) the terminology and concepts used in dairy business financial analyses and economic decision-making; (3) dairy health economics, including the application of economic tools to decisions related to disease treatment, health maintenance, and productivity.

VTMED 6556 Dairy Herd Health Epidemiology

Spring. 1 credit. Prerequisite: third- and fourth-year veterinary students. Letter grades only. L. D. Warnick, D. V. Nydam, and Y. T. Grohn.

Veterinarians are increasingly asked to advise dairy producers on productivity and management decision-making. This course addresses the relationships of dairy cattle diseases with herd-performance parameters. Through a combination of lectures and laboratory exercises, students learn analytic techniques and computer software skills to evaluate dairy herd disease and production problems. Topics include (1) how often production diseases occur and when; (2) how they are interrelated; (3) the impact of disease on milk production, reproductive performance, and risk of culling; and (4) how to use this information in production medicine.

VTMED 6557 Exotic Small Mammals as Pets

Spring. 1.5 credits. Maximum enrollment 80. Prerequisite: third- and fourth-year veterinary students and graduate students. Students enrolled in VTMED 6603 encouraged to enroll. Letter grades only. J. K. Morrisey.

Concentrates on the husbandry, clinical presentation, diagnosis, and treatment of common diseases of nontraditional small mammals that are kept as pets. These species include ferrets, rabbits, guinea pigs, chinchillas, rats, mice, hamsters, gerbils, hedgehogs, sugar gliders, and other animals. Grading is based on a midterm and final exam. Information regarding these species in the laboratory setting will also be discussed.

VTMED 6559 Applied Dairy Nutrition for Practitioners

Spring. 2 credits. Minimum enrollment 5; maximum 25. Prerequisite: veterinary students or permission of instructor. S-U grades only. D. Nydam, T. Overton, and others.

Provides a foundation in the principles of dairy cattle nutrition for veterinary students interested in dairy production medicine. Emphasizes integration of the principles of dairy cattle nutrition with practical rational formulation with troubleshooting on dairy farms, both preventive and curative.

VTMED 6560 Small-Animal Veterinary Dentistry

Spring. 0.5 credit. Prerequisite: second-, third-, and fourth-year veterinary students who have completed Block III. S-U grades only. J. Rawlinson.

This is an introductory-level course in small-animal dentistry. Students will complete an online auto-tutorial course that covers the basics of oral examination, dental radiography,

oral pathology, and treatment options in the disciplines of oral surgery, periodontology, endodontics, orthodontics, restorative dentistry, and prosthodontics. This will be complimented by eight nonmandatory one-hour question-and-answer sessions and two mandatory three-hour laboratories covering oral examination, dental radiography, basic periodontology, and simple and advanced extractions.

VTMED 6561 Advanced Imaging: Cross Sectional and Functional Modalities

Spring. 1 credit. Minimum enrollment 20; maximum 80. Prerequisite: VTMED 6501. Letter grades only. M. Thompson, N. Dykes, and P. Scrivani.

Elective course designed to complement Block V Distribution course in a lecture and laboratory format designed to introduce veterinary students to nonradiographic imaging modalities including ultrasound, CT, MRI, and nuclear scintigraphy. Content includes discussion of neuroimaging, abdominal ultrasound, and functional imaging of bone, thyroid, kidney, and liver. A focus on recognition of appropriateness of examination and modality will be emphasized. The course focuses on conditions affecting dogs and cats.

VTMED 6562 Animal Pain: Recognition, Prevention, and Treatment in the 21st Century

Spring. 1 credit. Minimum enrollment 10; Maximum enrollment 30 (80). S-U grades only. A. Looney, J. Ludders, L. Campoy, B. Horne, and R. Glead.

This elective course will form the foundation of veterinary pain physiology, pathophysiology, assessment, treatment, and prevention for companion and farm animals. Emphasis will be placed on pharmacologic and nonpharmacologic treatment of acute pain, surgical pain, and chronic pain typical of cancer, degenerative diseases, and surgical or traumatic disease in small animals, horses, and food and farm animals. Final project will utilize either case-based or problem-based critical literature review to benefit students' understating of pain recognition and treatment in animal patients.

VTMED 6600 Theriogenology Service

Spring. 2 or 4 credits. Maximum enrollment 5 per rotation. Prerequisite: VTMED 5510; third- and fourth-year veterinary students. Letter grades only. S. Bedford, M. DaSilva, and staff.

Exposure to clinical procedures in theriogenology as provided by Cornell University Hospital for Animals patient load and augmented by teaching herd animals. Clinical techniques taught include palpation and ultrasound evaluation, artificial insemination and pregnancy diagnosis in mares; semen collection and evaluation in stallions; and foaling monitoring and neonatal foal care. Additionally, students get exposure to breeding management and assisted reproduction in mares at the Equine Park and to theriogenology clinical cases and emergencies in CUHA comprising all equine, camelid, and canine species.

VTMED 6601 Cardiology Service

Fall and spring. 2 credits. Minimum enrollment 1 per rotation; maximum 2. Prerequisite: VTMED 5510; third- and fourth-year veterinary students. Letter grades only. S. Moise and staff.

Provides students with the opportunity to put into practice what they have learned in the

foundation years. The management of the most common cardiac diseases is emphasized, including congestive heart failure, arrhythmias, and secondary cardiac diseases. All species are examined, large and small, although the majority are small animals. Diagnostics, including cardiovascular physical examination, electrocardiography, radiography, and echocardiography, are taught. The rotation includes clinical work, didactic teaching, and self-initiated digging for information.

VTMED 6602 Laboratory-Animal Medicine

Fall and spring. 2 credits. Maximum enrollment 2 per rotation. Prerequisite: VTMED 5510; third- and fourth-year veterinary students. Letter grades only. M. Martin.

The practice of laboratory-animal medicine requires a combination of preventive programs, clinical skills, knowledge of various species' biologies, familiarity with research methodology, and acquaintance with state and federal regulations. This course is an introduction to that specialty. Students accompany laboratory-animal veterinarians on clinical rounds of Cornell's research-animal housing and participate in laboratory diagnostic work. Review sessions are conducted on the biology, medicine, pathology, and husbandry of rodents, rabbits, and primates and on current legislation regulating the care and use of research animals. The course may include field trips to other institutions.

VTMED 6603 Clinical Wildlife-, Exotic-, and Zoo-Animal Medicine

Fall, winter, spring, summer. 2 credits. Maximum enrollment 3 per rotation (plus one intern or extern). Prerequisite: VTMED 5510; third- and fourth-year veterinary students. Letter grades only. G. V. Kollias and staff.

Introduces students to primary medical care of nontraditional pet species, zoo animals, and native wildlife. Students, directly supervised by the attending clinician, are responsible for the assessment, physical examination, and medical management of exotic animal species presented to the Cornell University Hospital for Animals. Other opportunities available to assist in the development of clinical skills in wildlife-, zoo-, and exotic-animal medicine include the wildlife clinic cases at the Cornell Wildlife Health Center, ongoing wildlife research and service projects, and trips to the Rosamond Gifford Zoo. Successful completion of the course requires satisfactory performance during this 14-day clinical rotation.

VTMED 6604 Quality Milk

Fall. 2 credits. Prerequisite: VTMED 5510; third- and fourth-year veterinary students. Letter grades only. R. Gonzalez and QMPS staff.

Covers the causes, diagnosis, treatment, and prevention of bovine mastitis. Stresses the role of management practices. Includes lectures, readings, discussions, laboratory exercises, and farm visits as part of the Quality Milk Production Services. Participants are expected to complete a case study on a dairy farm with udder-health problems and present their findings to the producer and farm personnel. Grading is on performance during the course and a final exam.

VTMED 6605 Special Opportunities in Clinical Veterinary Medicine

Fall, spring, and summer. Prerequisite: VTMED 5510; third- and fourth-year veterinary students. S–U grades only. W. Miller and N. Ducharme.

Provides opportunities for students finished with Foundation Course V to explore professional areas not available through the regular curriculum. Blocks of two to four weeks are usually spent at other teaching hospitals, research laboratories, or zoological facilities. Student proposals are submitted to the assistant dean for learning and instruction for review and approval. Onsite supervisors of the block are required to evaluate each student formally.

VTMED 6607 Poultry Medicine and Production Rotation

Fall, two-week rotation that takes place at University of St. Hyacinthe or University of Guelph in alternating years. 2 credits. Prerequisite: VTMED 5510; third- and fourth-year veterinary students.

Recommended: VTMED 6522. K. A. Schat.

Provides an introduction in practical poultry medicine by a combination of lectures, discussions, and laboratory sessions including postmortem examinations. Students also visit hatcheries, broiler, layer, and turkey farms.

VTMED 6608 Clinical Oncology

Fall and spring. 2 credits. Maximum enrollment 4 per rotation. Prerequisite: VTMED 5510; third- and fourth-year veterinary students. Letter grades only. K. M. Rassnick and staff.

Management and prevention of cancer in companion animals represents a significant component of the practice of veterinary medicine. The focus of this clinical rotation is the development of a comprehensive set of skills necessary for a veterinarian to become an advocate for the client/patient with cancer. These skills include appropriate initial evaluation of animals with cancer; sensitive and effective client and referring-veterinarian communication; ability to access relevant information from numerous sources related to cancer management; and ability to understand and apply principles of surgical, medical, and radiation oncology as well as techniques specifically related to minimize pain and treatment-related effects in cancer patients.

VTMED 6609 Animal Behavior Clinic

Fall, winter, spring, and summer. 2 credits. Maximum enrollment 2 per rotation. Prerequisite: VTMED 6731; third- and fourth-year veterinary students. S–U grades only. K. A. Houpt and staff.

Students participate fully in the Animal Behavior Clinic: answering telephone, mail, and e-mail inquiries, observing and taking charge of behavior cases. To answer inquiries, the student is expected to consult several behavioral textbooks or other sources. Taking charge of the cases includes reading the entire behavioral history, interviewing the owner, forming a diagnosis, conferring with Dr. Houpt or a behavioral resident as to the proper behavioral and pharmacological treatment, demonstrating behavior-modification techniques, and writing a letter to the client. Follow-up calls to earlier cases may be made.

VTMED 6610 Herd Health and Biosecurity Risk Evaluation Using the NYS Cattle Health Assurance Program (NYSCHAP) Model

Summer, fall. 2 credits. Minimum enrollment 5. Prerequisites: VTMED 5400; second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. D. V. Nydam, K. Kaufman, F. L. Welcome, and Diagnostic Lab faculty.

Introduces students to the identification of disease risk and the evaluation of cattle operations, focusing on animal health, food safety, and the environment. The course combines information on risk assessment, creation of herd plans, biosecurity, Johne's disease, standard operating procedures, global trade, and environmental issues. Additionally, two local farms are visited to give students the opportunity to implement knowledge gained in lectures.

VTMED 6611 Small-Animal Orthopedic Surgery Service

Fall, winter, spring, and summer. 2 credits. Letter grades only. R. Todhunter and small-animal surgery faculty.

Clinical service rotation that exposes the student to the practice of surgery under hospital conditions. Students participate in office hours; diagnostic techniques; planning of therapy; and daily care of dogs and cats under the direction of interns, surgical residents in training, and faculty. Students assist experienced surgeons in the operating room. Client communications and the basics of efficient practice are emphasized. Students are expected to be able to successfully perform an orthopedic examination and localize the lameness by the end of the rotation. Shelter dogs and cats will be neutered by the students on the service as time permits.

VTMED 6612 Large-Animal Orthopedic/Sport Medicine Surgery Service

Fall, winter, spring, and summer. 2 credits. Letter grades only. N. Ducharme, A. Nixon, L. Fortier, and staff.

Clinical rotation structured to provide supervised clinical experience in the practice of large-animal surgery. Under the direction of faculty and house staff, students participate in the diagnosis, surgical treatment, and care of patients presented to the Equine and Farm Animal Hospital. Training through patient care is supplemented by formal rounds and didactic instruction.

VTMED 6613 Equine Specialty Rotation

Fall. 2 credits. Minimum enrollment 5; maximum 10. Prerequisite: VTMED 5510. Priority given to fourth-year veterinary students in equine pathway. Letter grades only. Live animals used for learning. G. Perkins and R. Hackett.

The objective of the rotation is to teach students basic diagnostic recognition and clinical skills for those interested in equine practice. These skills prepare students to respond on equine-related calls on their first day of work. The Cornell horse population is used to teach these practical skills. The emphasis of this elective is hands-on with discussion, rounds, and lectures. The rotation includes lectures and corresponding discussion groups to cover the scientific basis, controversies, industry-specific state of the art and clinical indications, contraindications, and potential complications of the various modalities.

VTMED 6614 Large-Animal Clinical Emergency and Critical Care

Summer and spring. 2 credits. Prerequisite: third- and fourth-year veterinary students. Letter grades only. R. Radcliffe and staff.

The evaluation and management of critical patients and other emergency problems represents a significant component of the practice of large-animal veterinary medicine. As emergency cases are frequently presented to these practitioners, it is imperative such veterinarians are well prepared. The focus of this clinical rotation is for students to acquire the knowledge, skills, and thought processes necessary to triage large-animal emergencies and manage critical patients. These skills include the appropriate evaluation, stabilization, and treatment of emergency patients and the management of post-operative cases and other critical patients. Participants access relevant information from various sources related to emergency and critical-care medicine and surgery in an effort to understand and apply these principles to clinical cases. Participants primarily have patient care responsibilities in the Large-Animal Intensive Care Unit of the Cornell University Hospital for Animals and work closely with technicians and clinicians to develop familiarity with technical and nursing procedures. In addition, students will learn common veterinary skills and techniques using teaching animals when time permits. The large-animal emergency and critical-care rotation is primarily an after-hours rotation.

VTMED 6615 Special Topics in Ambulatory and Production-Animal Medicine

Fall, winter, spring, and summer. 1–2 credits, variable. Prerequisite: second-, third-, and fourth-year veterinary students; VTMED 5600 and permission of instructor. Letter grades only. M. E. White and staff.

Provides specialized experiences in the Ambulatory and Production Medicine Service. Consists of participation in scheduled and emergency farm calls and completion of projects designed to provide experience in herd problem-solving, records analysis, and implementing herd-health programs. Clinical service assignments are planned to meet individual student goals. Examples of focus areas available include livestock production medicine, dairy reproductive examinations, and small-ruminant medicine.

VTMED 6616 Veterinary Dentistry Service

Fall, winter, spring, summer. 2 credits. Prerequisite: third- and fourth-year veterinary students who have completed Foundation Course V. Letter grades only. J. Rawlinson.

This rotation is designed to introduce students to clinical veterinary dentistry with an emphasis on small animals. The goal of this rotation is for students to become proficient in completing thorough oral examinations, identifying oral pathology, interpreting dental radiographs, discussing appropriate dental therapeutic options, and performing dental prophylaxis, basic periodontal procedures, and basic and advanced extractions.

VTMED 6617 South American Camelid Specialty Rotation

First 2 weeks in June. 2 credits. Minimum enrollment 6; Maximum enrollment 10. Prerequisite: completion of second year of Vet curriculum and VTMED 6530. Letter grades only. S. Bedford-Guaus, S. Purdy, G. Perkins, N. Ducharme, S. Fubini, M. Martin-Flores, L. Mizer, J. Wakshlag, E. Dubovi, and E. Ledbetter.

The objective of the rotation is to provide students with the necessary skills to be able to attend a routine camelid medical problem upon graduation. During the first week, students will work with the alpaca herd at the University of Massachusetts, Amherst, learning basic clinical skills and common health problems under the supervision of Dr. Purdy. During the second week, clinicians at Cornell University will provide specialty lectures and laboratories covering advanced medical problems and clinical techniques that will build upon the skills learned during the first week. The rotation will also include farm visits to familiarize students with different management systems and some of the clinical laboratories will be performed during these visits.

VTMED 6620 Introduction to Ambulatory Primary Care Medicine

Spring, summer, fall. 1 credit. Prerequisite: first-, second-, and first-semester third-year veterinary students. Letter grades only. M. White.

This a clinical service rotation in which students accompany ambulatory clinicians on farm and stable calls and learn the skills and procedures necessary for operation of a modern veterinary practice offering primary care and production medicine services to large-animal clients. Routine herd health visits are conducted for cattle, horses, sheep, goats, and swine. Reproductive evaluations (including pregnancy and fertility examinations), sick and lame animal evaluation and treatment, and other health maintenance procedures make up the majority of nonemergency work. Emergencies are usually obstetric cases, injuries, and acute illness. In addition to assisting with routine scheduled work, students participate in diagnosis and medical or surgical treatment of ill or injured animals. This includes rotating assignments for night and weekend duty.

VTMED 6621 Introduction to Small-Animal Clinical Orthopedics

Fall and spring. 2 credits. Prerequisites: UVIS training; ability to perform physical examination through Block V/IIA laboratory; permission of instructor. No expertise necessary in orthopedics. Letter grades only.

This distribution will allow students early in curriculum early exposure to small-animal clinical orthopedic practice. Students will shadow the senior students for the first week until they and the supervising faculty are sure they can function more independently. Students will perform activities expected of a senior DVM student whose primary responsibility is patient care, through which they learn how to prevent, diagnose, and treat clinical orthopedic disease. History taking, physical and orthopedic exam, radiography, laboratory testing, diagnosis, and options for treatment will be learned. Students will participate in rounds, scrub into surgery, administer post-operative care, learn the SOAP format for patient management; discuss patient

care with owners; become facile with electronic UVIS records; write discharge instructions and review them with owners and discharge patients.

VTMED 6622 Small-Animal Emergency Clinical Experience

Summer (Fall). 2 credits. Prerequisites: completion of first year of veterinary school; permission of instructor. Letter grades only.

Management of both emergent and critical cases represents a significant component of the practice of veterinary medicine. The focus of this course will be the initial development of a knowledge base and skill set necessary for a veterinarian to perform adequately in these areas, within a structured format. These skills will include the appropriate evaluation (triage) and stabilization of emergency patients, the management of postoperative and other critical patients, and sensitive and effective client communication. Participants will work closely with fourth-year students, interns, residents, technicians, and faculty on the Emergency and Critical Care Service to become familiar with technical and nursing procedures as well as to develop clinical skills and a systematic approach to clinical cases.

VTMED 6630 Student Rounds in Radiology

Fall and spring. 0.5 credit. Does not count toward elective rotation credits. Prerequisite: permission of instructor. P. Scrivani, M. Thompson, and N. Dykes.

Radiology rounds are a gathering of veterinarians and veterinary students to discuss the condition and imaging diagnosis of patients in the hospital. These are student-presented rounds and all students are expected to attend. Presentations emphasize the selection of the appropriate imaging examination, detection of imaging signs, diagnostic or prognostic importance of imaging signs, and the impact of the imaging examination on subsequent patient care.

VTMED 6631 Diagnosis and Treatment of Diseases of the Dairy Cow—A Case-Based Approach Utilizing Hospitalized Cases

Fall, winter, spring, summer. 0.5–1 credit; 0.5 credit requires participation in seven sessions; 1 credit requires participation in 14 sessions during the semester; students may change credits up through seventh week of class; course may be taken up to three semesters. Maximum enrollment 14. Students selected after submission of résumé, letter of intent, and documentation of career focus on dairy cattle. Prerequisite: completion of first-year vet curriculum and permission of instructor. S–U grades only. T. Divers and S. Fubini.

This course is designed for dairy-focused veterinary students and will expose them to diagnosis and management of diseases of dairy cattle, focusing on individual animal medicine and surgery rather than production. According to and utilizing existing hospital cases, students will meet with clinicians during the academic year to examine and discuss cases. Case logs, literature review, attendance, and class presentations will be required.

VTMED 6720 The Literature and Subject Matter of Natural History

Spring. 1 credit. Minimum enrollment 10; maximum 30. Prerequisite: third- and fourth-year veterinary students. S–U grades only. H. E. Evans.

Introduces natural history literature. Shows and discusses materials relating to the earth sciences and the biology of plants and animals from around the world. Students are required to show and discuss a book that concerns natural history in a country of their choice and submit a one-page book report for duplication. (A recommended reference text is *The Cambridge Illustrated Dictionary of Natural History* by R. J. Lincoln and G. A. Boxshall, 1990.) Golden Guides for mammals, birds, reptiles, fishes, insects, pond life, seashore life, and tropical fish may be given to participants.

VTMED 6721 Introduction to Avian Biomedicine

Spring. 1.5 credits. Minimum enrollment 10; maximum 60. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. Letter grades only. G. V. Kollias, A. J. Bezuidenhout, and D. Muscarella.

Introduction to avian biology for veterinary students. Includes lectures and laboratories involving avian anatomy, physiology, and natural history. The course emphasizes the development of a strong foundation in avian biology that is applied in VTMED 6522 Diseases of Birds and VTMED 6532 Avian Medicine and Surgery.

VTMED 6722 AQUAVET I: Introduction to Aquatic Veterinary Medicine

Four weeks of full-time instruction at Woods Hole, Mass., immediately after spring semester. 4 credits. Maximum enrollment 24 students from Cornell U., the U. of Pennsylvania, and other U.S. colleges and schools of veterinary medicine. Available, by competitive application process, to veterinary and graduate students. S–U grades only. Fee charged. P. R. Bowser.

Sponsored by Cornell U., the U. of Pennsylvania, and three marine-science institutions at Woods Hole: the Marine Biological Laboratory, Woods Hole Oceanographic Institution, and Northeast Center of the National Marine Fisheries Service. Introduces veterinary students to aquatic-animal medicine. The marine environment is described and visited on field trips in the Woods Hole area. Specific aspects of the comparative anatomy, physiology, nutrition, microbiology, pathology, and medicine of a variety of marine and freshwater species are discussed. Some emphasis is placed on systems of aquaculture. The specific diseases of a few selected species are presented as examples. The course is taught by an invited faculty of 35 individuals who are leaders in their respective fields of aquatic-animal medicine. Students present seminars on appropriate topics.

VTMED 6723 Veterinary Medicine in Developing Nations

Spring. 2 credits. Prerequisite: first-, second-, third-, and fourth-year veterinary students or permission of instructor. S–U grades only. Offered even-numbered years. K. A. Schat.

Veterinary medicine has an important role to play in developing nations in developing and providing economical sources of animal protein for human consumption and protecting ecological resources. This seminar course provides interested veterinary students with information on and insight into the multitude of complex issues facing U.S. veterinarians working in developing nations.

VTMED 6724 Senior Seminar

Fall and spring. 0.5 credit. Does *not* fulfill 1-credit Set VII minimum. Prerequisite: first-, second-, and third-year veterinary students. S–U grades only. M. Smith. Attendance at 10 of the senior seminar sessions presented during the academic year constitutes acceptable completion of this course. If not completed during semester enrolled, an incomplete grade will be assigned and the remaining sessions must be completed during the following semester or a failing grade will be assigned.

VTMED 6726 Introduction to the Professional Literature

Spring. 1 credit. Minimum enrollment 6; maximum 20. Prerequisite: first-, second-, third-, and fourth-year veterinary students. S–U grades only. S. Whitaker. Introduces veterinary students to the professional and biomedical literature, including development of critical reading skills. Students become familiar with the broad range of professional and biomedical literature and are encouraged to develop a rigorous approach to journal and scientific article review. Secondary emphasis is on developing skills in library and bibliographic search techniques and strategies for personal information management, as well as exploring the use of veterinary-related online information.

VTMED 6727 Introduction to Community Practice Service

Fall, winter, spring, and summer. 1 credit. Prerequisite: first- and second-year veterinary students; permission of instructor. S–U or letter grades. W. E. Hornbuckle. Introduces veterinary students to primary care small-animal clinical practice through direct exposure to the Community Practice Service of the Cornell University Hospital for Animals. Students observe and assist with restraint, examination, and routine treatment of pets and communication with clients. Successful completion requires satisfactory participation during 10 half-days of clinical service.

VTMED 6728 Clinical Management of Native Wildlife

Fall, spring, summer (credit given in fall). 1 credit. Maximum enrollment 30 students per semester. Prerequisite: first-, second-, third-, and fourth-year veterinary students. Letter grades only. G. V. Kollias and staff. Introduces veterinary students to primary care for native wildlife and to wildlife issues that practicing veterinarians face on a daily basis. Students are responsible for the assessment, physical examination, and medical care of native wildlife presented to the Cornell University Wildlife Health Center by the public and local wildlife rehabilitators. Student activities are directly supervised and assessed by faculty and residents on a daily basis. Scheduling is organized by a designated student supervisor. Successful completion of the course requires 40 hours of satisfactory supervised participation per semester in the clinic. Clinic times are appropriately scheduled throughout the semester. Students are required to submit two case summaries, or alternatives approved by the course leader, before the end of the semester and a log of their clinical hours.

VTMED 6729 Introduction to Equine Practice

Spring. 0.5 credit. Maximum enrollment 50. Prerequisite: veterinary students. Intended for students with little or no experience working with horses. Letter grades only. R. Hackett and C. Collyer. Introductory course in equine husbandry. Lecture topics include horse breeds and colors, housing facilities and fencing, and overview discussions of the racing, showing, and breeding industries.

VTMED 6730 Behavior Problems of Horses

Spring. 1 credit. Prerequisite: one semester of veterinary curriculum; first-, second-, third-, and fourth-year veterinary students. S–U grades only. K. A. Houpt. The goal of this course is to give veterinary students the ability to treat the behavior problems of horses. History-taking, counseling, diagnostic tests, follow-up, the importance of cooperation with the referring veterinarian, prevention of behavior problems, training techniques of value to the practitioner, and socialization of foals are presented.

VTMED 6731 Behavior Problems of Small Animals

Spring. 1 credit. Minimum enrollment 10. Prerequisite: one semester of veterinary curriculum; first-, second-, third-, and fourth-year veterinary students. S–U grades only. K. A. Houpt. The goal of this course is to give veterinary students the ability to treat the behavior problems of cats and dogs. History-taking, counseling, and follow-up methods are presented. Each student has the opportunity to participate in three cases. Behavioral and pharmacological treatments for behavior problems are presented.

VTMED 6733 Veterinarians and Food-Animal Production Systems: An Introduction

Spring. 1 credit. Minimum enrollment 5. Prerequisite: first- and second-year veterinary students or permission of instructor. Letter grades only. D. V. Nydam and invited speakers.

This seminar course uses an interactive format and multiple experts from their fields to introduce future veterinarians to various food-animal production systems, how veterinarians interact with them, and the synergy between these systems and veterinarians in society. Each week the production structure of the dairy, beef, swine, poultry, or aquaculture industry, veterinarians' role in them, and career opportunities and expectations are discussed. The offering is intended for first- or second-year students so that they can plan appropriately to take additional courses or set up externships in the following years.

VTMED 6734 Companion Animal Welfare Issues

Spring. 1 credit. Minimum enrollment 3; maximum 50. Letter grades only. J. M. Scarlett, L. Appel, and L. Miller. Companion animal welfare issues have become a major concern for many American communities. Precipitated by the changing status of companion animals, the proliferation of free-roaming cats, and human safety issues, communities are considering (or have passed) breed-specific bans, restrictions on declawing, and solutions for "free-roaming" cats. This course will address these and other issues such as pet surplus—animals entering shelters

and those euthanized in shelters; the "no-kill" movement, reasons for relinquishment to shelters; recognition and documentation of animal abuse; the use of pediatric neutering in population control—studies relating to safety and potential adverse effects; dogs and cock fighting and the role of the veterinarian in the recognition and reporting of these activities. The objective of the course is to provide information for veterinary students such that they can assume leadership with regard to these issues in their future communities.

VTMED 6735 Conservation Medicine

Spring. 1.5 credits. Maximum enrollment 80. Prerequisite: veterinary students, graduate students at CVM, others by written permission of instructor. Letter grades only. G. V. Kollias, A. J. Travis, and N. Abou-Madi. Conservation Medicine will introduce students to the basic concepts of free-ranging and captive wildlife conservation and will engage veterinary students in issues of sustainable development relating to wildlife. The course will present information not included in other courses within the curriculum that is fundamental for veterinarians contemplating a career in conservation medicine, wildlife health, or zoological medicine. This course will complement existing courses in the curriculum including, but not limited to, Introduction to Avian Biomedicine, Avian Diseases, Veterinary Aspects of Captive Wildlife, Veterinary Medicine in Developing Nations, The Literature and Subject Matter of Natural History, Comparative Anatomy, Foreign Animal Diseases, Epidemiology of Infectious Diseases, Anatomy and Histology of Fishes, and Fish Health Management. Students will learn how wildlife populations are regulated by their environment and how such populations are managed and assessed. Various habitat preservation strategies will be presented and discussed. Conversely, for critical endangered species, the focus will be on *ex situ* recovery programs.

VTMED 6736 Pet Loss and Bereavement Counseling Course

Spring. 0.5 credit. S–U grades only. M. McEntee. This course introduces first- and second-year veterinary students to the key issues related to the loss of a companion animal and bereavement counseling. The course provides a structured background to assist students in developing the necessary skills to deal with clients and the grieving process. Students will participate in Cornell University's Pet Loss Support Hotline, a telephone-based community outreach program designed to provide support to callers grieving the loss of a companion animal. Students actively participate in the prerequisite nine hours of training in the fall semester, followed by hand-on experience staffing the Pet Loss Support Hotline, attendance in rounds (twice a semester), and will maintain a case log and write one case report.

UNDERGRADUATE AND GRADUATE COURSES

These courses are taught by the faculty in the College of Veterinary Medicine but do not contribute to the D.V.M. degree requirements.

Biomedical Sciences

VTBMS 3460 Introductory Animal Physiology (also BIOAP 3110) (Undergraduate)

Fall. 3 credits. Prerequisites: one year college biology, chemistry, and mathematics. S-U (letter grades by permission of instructor). E. R. Loew. For description, see BIOAP 3110.

VTBMS 4010 Genomic Analysis

Spring. 3 credits. Prerequisites: upper-level undergraduates and graduate students; BIOGD/VTBMS 4000 or equivalent by permission of instructor. Letter grades only. T. O'Brien.

Overview of approaches and tools used in genomic research. Covers experimental and computational technologies as well as theoretical concepts important for the study of genomes and their function. Topics include genome sequencing and assembly, high-throughput sequencing, comparative genomics, genetic variation and complex traits, expression profiling and proteomics, genome modification and transgenesis, modeling network structure, and dynamics. Discussions will explore how genomic tools and approaches can be integrated to study biological systems.

VTBMS 6000 Special Projects in Anatomy

Fall, spring. 1 credit per 2.5-hour period. Prerequisite: permission of instructor. S-U grades only. Biomedical science staff.

VTBMS 6100 Genomes as Chromosomes

Fall. 1 credit. Prerequisites: upper-level undergraduates and graduate students; others by permission of instructor or BIOGD 2810 and BIOBM 3320. Letter grades only. Offered alternate years. T. O'Brien and P. Cohen.

The eukaryotic genome is partitioned into discrete structural units, the chromosomes. This course examines how chromosome organization is related to chromatin structure, gene expression, DNA replication, repair, and stability. Special emphasis is placed on how the linear arrangement of sequence features along the chromosome, such as genes and regulatory modules, relate to the functional organization of the genome in the nucleus. Experimental and computational approaches used to address chromosome structure and function are studied.

VTBMS 6110 Genomes Maintenance Mechanisms

Fall, first half of semester. 1 credit. Minimum enrollment 7. Prerequisites: upper-level undergraduates and graduate students; BIOGD 2810, BIOBM 3300, or 3330, or 3310/3320 or equivalents. S-U or letter grades. R. Weiss.

Focuses on the molecular mechanisms used by eukaryotic cells to preserve genomic integrity. Topics include endogenous and exogenous sources of mutation, DNA repair pathways, and cell cycle checkpoint mechanisms. Also addresses how genome maintenance impacts genome plasticity and evolution, as well as the relationship between genomic instability and disease, including cancer.

VTBMS 6120 Overview of Model Genetic Organisms

Spring. 1 credit. Minimum enrollment 5; maximum enrollment 20. Prerequisites: upper-level undergraduates and graduate students; BIOGD 2810 or BIOGD/VTBMS 4000 or permission of instructor. S-U or letter grades. Offered alternate years. J. Schimenti and guest lecturers.

Presents the features of various model organisms and their relative merits for conducting various types of genomics/genetics research. Model systems discussed are: *Arabidopsis*, yeast, *Drosophila*, *C. elegans*, zebrafish, and mice.

VTBMS 6200 Research Fellowship in Biomedical Sciences

Fall, spring. 1-12 credits. Cannot be used to fulfill formal course requirements for DVM curriculum. Prerequisite: permission of instructor. S-U grades only. Offered by individual faculty members in the Department of Biomedical Sciences for DVM students undertaking research in research fellowship.

VTBMS 7010 Mouse Pathology and Transgenesis (also TOX 7010)

Fall, meets during second half of semester and relies on background information from NS BIOGD 4900, which meets during first half. Students interested in both courses must register for them separately. 1 credit. Maximum enrollment 12 students. Prerequisite: permission of instructor. Highly recommended: basic histology course (BIOAP 4130) and BIOGD 4900. Letter grades only. A. Nikitin and staff.

Introductory course on contemporary mouse pathobiology explains principles and methods of pathology. The course focuses on systematic evaluation of new genetically modified mice, with particular attention to such topics as experimental design, validation of mouse models, and identification of novel phenotypes. Also included is supervised mouse necropsy.

VTBMS 7020 The Practice of Laboratory Animal Medicine

Fall, spring. 1 credit. Prerequisite: upper-level undergraduate or graduate standing; basic knowledge of anatomy and pathology in comparative animal species. S-U or letter grades. M. E. Martin.

Laboratory animal veterinarians must be trained in the regulatory aspects of research and teaching utilizing animals; in addition, they must understand the principles of facility management and design. Also, to work with researchers, lab animal veterinarians must have knowledge of basic research methodologies and animal welfare issues. This course may also be of interest to other veterinarians, veterinary students, and researchers who wish to understand the workings of the specialized field that oversees and enables the use of animals in research and teaching. The topics covered include: Laboratory Animal Medicine: Historical Perspectives; Laws, Regulations, and Policies; Design and Management of Animal Facilities; Anesthesia, Analgesia, and Euthanasia; Techniques of Experimentation; Control of Biohazards Used in Animal Research; Selected Zoonoses/Xenozoonoses; Genetic Monitoring; Transgenic and Knock-out Mice; Factors Influencing Animal Research; Animal Models in Biomedical Research; Research in Lab Animal and Comparative Medicine; Lab Animal Behavior.

VTBMS 7030 The Biology and Diseases of Laboratory Animals

Fall, spring. 2 credits. Prerequisite: upper-level undergraduate or graduate standing; basic knowledge of anatomy and pathology in comparative animal species. S-U or letter grades. M. E. Martin.

Intended for veterinarians entering the field of laboratory animal medicine. It may also be of interest to other veterinarians, veterinary students, and researchers with a basic knowledge of anatomy and pathology who use animals in research or teaching. This course will cover the main laboratory animal species (rodents, rabbits, nonhuman primates, ruminants, swine, dogs, cats, ferrets, reptiles, amphibians, and fish). The biology, husbandry, diseases, pathology, and main research uses of these species will be covered. The course will meet for two hours weekly and will extend over the course of two years.

VTBMS 7130 Cell Cycle Analysis

Spring. 1 credit. Minimum enrollment 5 students. S-U grades only. Offered even-numbered years. A. Yen.

Presents a brief historical review of the cell cycle; a summary of cell-cycle regulatory processes; and practical methods for cell-cycle analysis, including mathematical representations. Topics include growth control of bacterial cell cycle including chemostats, mammalian-cell tissue culture, cell synchronization, flow cytometry, age-density representation, G1 regulation, labile regulatory protein models, cell transformation, regulation by growth factors and the cytoskeleton, cyclin/E2F/RB regulatory model, practical examples for analysis of cell-cycle phase durations, cell-cycle phase specific growth factor sensitivity, and timing of RB protein phosphorylation within the cell cycle. The objective of the course is to present graduate students with methods for cell-cycle analyses that will be used in their research.

VTBMS 7200 Animal Physiology and Anatomy Seminar

Fall, spring. 1 credit. Prerequisite: admission to graduate field of physiology; permission of instructor. S-U or letter grades.

Designed to train graduate students in the field of physiology to become professional scientists. Students are required to give a seminar on their research. Advice and feedback are provided. Throughout the semester, advice is provided on subjects such as preparation of manuscripts, seminars, and grant proposals.

VTBMS 7880 Seminar in Surgical Pathology

Fall, spring. 1 credit. Intended for residents in anatomic pathology; third- and fourth-year veterinary students may attend. Letter grades only. D. H. Schlafer and faculty of the Section of Anatomic Pathology and visiting pathologists.

The major objective of this discussion and seminar course is to introduce the residents to the discipline of surgical pathology. Selected material from the Surgical Pathology Service is prepared in advance for independent review by the residents. The material is presented in a slide-seminar format by the residents under the review of the faculty. Emphasis is placed on pathogenesis, etiology, and pathologic descriptions of the lesions. In addition, appropriate guest lecturers cover specific areas of interest and special topics not encountered in the departmental service programs.

Clinical Sciences

VETCS 6180 Principles of Medical Imaging (also BME 6180)

Fall. 3 credits. Prerequisite: graduate D.V.M.s or equivalent in residency or graduate training programs. Letter grades only. Y. Wang and N. Dykes.

For description, see BME 6180.

VETCS 7000 Pathophysiology of Gastrointestinal Surgery

Fall. 1 credit. S-U grades only. Offered every third year. S. L. Fubini.

Initially presents normal anatomy and physiology of the gastrointestinal system in carnivores, herbivores, and ruminants. This is followed by in-depth discussion of the pathophysiological mechanisms and sequelae of gastrointestinal obstructions including reperfusion injury, peritonitis, adhesions, and short bowel syndrome. This course emphasizes development of an advanced understanding of surgically relevant gastrointestinal problems leading to appropriate decision-making.

VETCS 7010 Pathophysiology of Orthopedic Surgery (Graduate)

Spring. 1.5 credits. Prerequisites: D.V.M., M.D., or equivalents or permission of instructor. S-U grades only. Offered every third year. A. J. Nixon.

Provides specialized training in the anatomic, physiologic, and pathologic process of musculoskeletal diseases in animals and humans, with special emphasis on surgical diseases of tendons, bones, and joints.

VETCS 7020 Pathophysiology of Respiratory and Cardiac Surgery (Graduate)

Fall. 1.5 credits. Prerequisite: D.V.M. or equivalent. S-U grades only. Offered every third year. R. P. Hackett, S. L. Fubini, and N. G. Ducharme.

Using lectures and group discussions, the objective of this course is to explain the pathophysiology of various cardiovascular diseases (cardiac arrest, cardiac arrhythmia under anesthesia) and airway disease (thoracic and upper-airway disease). As a basis for these abnormalities, cardiopulmonary hemodynamics and biomechanical aspects of ventilation are reviewed. The emphasis is placed on understanding these mechanisms and outlining the surgeon's response to them.

VETCS 7030 Surgical Principles and Surgery of the Integumentary System (Graduate)

Spring. 1 credit. Prerequisite: graduate D.V.M.s or equivalent in residency or graduate training programs. S-U grades only. Offered every third year. S. L. Fubini.

Designed for surgery residents and graduate students. It is largely discussion format and examines surgical principles and surgery of the integumentary system.

VETCS 7040 Pathophysiology of Urogenital Surgery (Graduate)

Fall. 1 credit. Prerequisite: graduate D.V.M.s or equivalent in residency or graduate training programs. S-U grades only. Offered every third year. R. P. Hackett.

Designed to review and discuss urogenital surgical procedures in animals and the rational basis for them. Pathophysiology is stressed. Some classes consist of reprints with discussion.

VETCS 7060 Pathophysiology of Neurologic Surgery (Graduate)

Spring. 1.5 credits. Prerequisite: D.V.M.s, M.D.s, or equivalent or permission of instructor. S-U grades only. Offered every third year. A. J. Nixon.

Provides specialized training in neurosurgical techniques and application and discusses pathophysiological implications of neurosurgical and neurologic diseases.

VETCS 7100 Advanced Veterinary Anesthesiology I

Fall. 1 credit. Prerequisite: VTMED 5606 or permission of instructor; third- and fourth-year veterinary students, graduate students, interns, and residents. S-U grades only.

A. L. Campoy, M. Flores, R. D. Gleed, W. A. Horne, A. L. Looney, and J. W. Ludders.

Designed to prepare students for the American College of Veterinary Anesthesiology examinations. Also suitable for interns and for residency training in other areas such as surgery and internal medicine. Speakers are from both inside and outside the college.

Topics cover the basic sciences as they apply to anesthesiology such as physics and engineering, applied pharmacology, physiology, and pathology. Clinically oriented lectures are also given concerning specific anesthetic techniques and species-specific differences in response to anesthetic drugs.

VETCS 7110 Advanced Veterinary Anesthesiology II

Spring. 1 credit. Prerequisite: VTMED 5606 or permission of instructor; third- and fourth-year veterinary students, graduate students, interns, and residents. S-U grades only. A. L. Campoy, M. Flores, R. D. Gleed, W. A. Horne, A. L. Looney, and J. W. Ludders.

Designed to prepare students for the American College of Veterinary Anesthesiology examinations. Also suitable for interns and for residency training in other areas such as surgery and internal medicine. Speakers are from both inside and outside the college.

Topics cover the basic sciences as they apply to anesthesiology such as physics and engineering, applied pharmacology, physiology, and pathology. Clinically oriented lectures are also given concerning specific anesthetic techniques and species-specific differences in response to anesthetic drugs.

Microbiology and Immunology

VETMI 2990 Research Opportunities in Microbiology and Immunology

Summer, six-week session. 6 credits; minimum 120 hours lab time expected per 3 credits. Prerequisites: one year of basic biology (scores of 5 on Biology Advanced Placement Examination of College Entrance Examination Board or BIOG 1000 level). Letter grades only. Microbiology and Immunology faculty.

Mentored research apprenticeship program designed to give laboratory experience to qualified unmatriculated high school students (participating in Cornell Summer College).

VETMI 6050 Special Projects in Microbiology (Undergraduate)

Fall, spring. 1-3 credits. Prerequisite: permission of instructor; good background in microbiology or immunology. Recommended: background in pathogenic microbiology and immunology. S-U grades only. Microbiology staff.

Normally provides an opportunity for the student to work in a research laboratory or carry out a special project under supervision.

VETMI 6200 Research Fellowship in Microbiology and Immunology

Fall, spring. 1-12 credits. Cannot be used to fulfill formal course requirements for DVM curriculum. Prerequisite: permission of instructor. S-U grades only. Faculty TBA.

Offered by individual faculty members in the Department of Microbiology and Immunology for DVM students undertaking research in Research Fellowship.

VETMI 7000 The Biology of Animal and Plant Viruses (Graduate and Upper-level Undergraduate)

Fall. 2 credits. Letter grades only. Offered odd-numbered years. C. R. Parrish and virology faculty.

Examines current topics in studies of animal and plant viruses. Topics examined in depth include the structures of viruses and their interactions with host cells.

VETMI 7050 Advanced Immunology

Spring. 3 credits. Prerequisite: basic immunology course or permission of instructor. Letter grades only. Offered even-numbered years. C. Leifer and staff.

This course covers selected topics in immunology at an advanced and in-depth level through lectures and paper discussions. Topics include genomic approaches to immunology, host defense by macrophages and neutrophils, pattern recognition receptors, molecular signaling events, regulation of immune responses, T helper cell differentiation, immunologic memory, neonatal immunity, mucosal immunology, and vaccines. There will be two in-class exams in addition to the final exam.

VETMI 7070 Advanced Work in Bacteriology, Virology, and Immunology (Graduate)

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. S-U or letter grades. Microbiology staff.

Designed primarily for graduate students with a good background in pathogenic microbiology and immunology. May be elected by veterinary students who are properly prepared.

VETMI 7120 Seminars in Infection and Immunity

Fall, spring. 1 credit. Requirement for graduate students in Department of Microbiology and Immunology and field of immunology. S-U grades only. D. G. Russell.

Invited speakers in immunology and infection biology acquaint students with current advances in the field. For seminar schedule and speaker list, see the web site at www.vet.cornell.edu/public/InfectionAndPathobiology/seminar_fall.htm and www.vet.cornell.edu/public/InfectionAndPathobiology/seminar_spring.htm.

VETMI 7130 Biological and Biomedical Sciences Program—Teaching Experience

Fall, spring. 1 credit. Requirement for first-year graduate students. S-U grades only. D. G. Russell.

All graduate students who are a part of the Biological and Biomedical Sciences Program must complete this 1-credit teaching experience. The goal is for each graduate student to increase his or her knowledge in a

biology area and simultaneously increase confidence in his or her teaching abilities. Specific teaching assignments are administered through the CVM's Office of Graduate Education. A faculty mentor provides ongoing feedback throughout the experience.

VETMI 7190 Immunology of Infectious Diseases

Spring, 2 credits. Prerequisite: basic immunology course or permission of instructor. S-U or letter grades. Offered odd-numbered years. M. Bynoe and staff. Focuses on molecular and cellular mechanisms underlying the immunity and innate recognition of viruses, bacteria, and protozoa pathogens.

VETMI 7230 Current Topics in Immunology

Fall, spring, 1 credit. Registration each semester required of field of immunology graduate students. Prerequisite: graduate standing. S-U grades only. Immunology faculty.

Immunology discussion group in which students present research papers from the contemporary scientific literature.

VETMI 7250 Mechanisms of Microbial Pathogenesis (also BIOMI 7250)

Spring, 3 credits. Prerequisites: BIOMI 4040, 4090, 4170 or equivalent course; written permission of instructor for undergraduates. Letter grades only. D. Debbie, H. Marquis, and M. Scidmore. Covers the mechanisms of pathogenesis of bacteria, fungi, parasites, and viruses. Addresses the need for a course covering the breadth of microbial pathogenesis. Emphasizes, at the molecular and cellular levels, the methods microbial pathogens use to enter, survive, and cause damage to their hosts. By studying the molecular mechanisms of all the major microbial groups together, students will be able to appreciate the commonality of pathogenic mechanisms as well as see the unique properties of each group of organisms. The contribution of the host response to the pathogenesis process will be covered, but in less detail as this information is addressed in VETMI 7190 Immunology of Infectious Diseases.

VETMI 7370 Advanced Work in Animal Parasitology (Graduate)

Fall, spring, 1-3 credits. Prerequisite: advanced undergraduate, graduate, and veterinary students. Letter grades only. D. D. Bowman and other faculty. Intended for advanced undergraduate, graduate, and veterinary students with interests in parasitology research.

VETMI 7700 Advanced Work in Avian Diseases (Graduate)

Fall, spring, 1-3 credits. Letter grades only. K. A. Schat.

VETMI 7720 Advanced Work in Aquatic Animal Diseases (Graduate)

Fall, spring, 1-3 credits. S-U grades only. P. R. Bowser.

VETMI 7730 Advanced Work in Avian Immunology

Fall, spring, Variable credit. Letter grades only. K. A. Schat.

VETMI 7830 Seminars in Parasitology (Graduate)

Fall, spring, 1 credit. Prerequisite: veterinary or graduate students or permission of instructor. S-U grades only. D. D. Bowman.

Seminar series designed to acquaint students with current research in the field of parasitology. The range of topics is determined, in part, by the interests of those participating and may include such topics as the ecology of parasitism, parasite systematics, wildlife parasitology, and parasitic diseases of plants and animals, including humans.

Molecular Medicine

VETMM 2990 Undergraduate Research in Pharmacology

Summer, six-week session. 3 to 6 credits; minimum 120 hours of lab time expected per 3 credits. Prerequisites: one year basic biology (score of 5 on Biology Advanced Placement Examination of College Entrance Examination Board or BIOG 1000 level.) Letter grades only. R. A. Cerione.

Mentored research apprenticeship program designed to give laboratory experience to qualified un-matriculated high school students (participating in Cornell Summer College) or Cornell underclassmen. Students are placed in a research laboratory with a designated project under the direct supervision of a research associate (upper-level graduate student, post-doc, or faculty member). Students are graded on preparation, participation in laboratory academic life, and appropriate acquisition of techniques. At the end of the session, students are expected to give a brief (15- to 20-minute) oral presentation of their work and submit a manuscript in a form suitable for publication. The faculty director has ultimate responsibility for evaluating the student's work and assigning the grade.

VETMM 4700 Biophysical Methods (also AEP/BIONB 4700)

Fall, 3 credits. Prerequisite: permission of instructor; basic knowledge of physics and mathematics. Recommended: some knowledge of physical chemistry, molecular and cell biology, or neurobiology. Letter grades only. M. Lindau.

For description, see AEP 4700.

VETMM 5710 Biophysics Methods Advanced Laboratory (also AEP 5710)

Spring, taught daily during first three weeks of Jan. 3 credits. Prerequisites: VETMM 4700. S-U or letter grades. M. Lindau.

For description, see AEP 5710.

VETMM 6100 Cellular and Molecular Pharmacology

Fall, 2 credits. Prerequisite: permission of instructor. S-U or letter grades. Offered even-numbered years. C. M. S. Fewtrell and field of pharmacology faculty.

Graduate-level course surveying the molecular and cellular aspects of receptor mechanisms, signaling pathways, and effector systems. Topics include drug-receptor interactions; ligand- and voltage-gated ion channels; G protein pathways; growth factor signaling; calcium; nutrient and nitric oxide signaling; mechanisms of receptor-mediated effects on neural excitability, electrical pacemakers, muscle contraction, gene expression; and chemotherapy, including antimicrobial agents and cancer chemotherapy.

VETMM 6110 Systems Pharmacology

Spring, 2 credits. Prerequisite: permission of instructor. S-U or letter grades. Offered even-numbered years. C. M. S. Fewtrell and field of pharmacology faculty. Graduate-level course surveying system- and organ-related aspects of pharmacology. Topics include drug disposition; pharmacokinetics; autonomic pharmacology; central nervous system pharmacology; pharmacology of inflammation, allergy and platelet function; and cardiovascular, gastrointestinal, and endocrine pharmacology.

VETMM 6120 Topics in Pharmacology

Fall (even sections), spring (odd sections), taught once a week for 10 weeks during the semester. 0.5 credit. Prerequisite: none. S-U grades only. L. M. Nowak (even sections); H. Sonderman (odd sections). A journal club-workshop course based on topics corresponding to the Department of Molecular Medicine seminar series. In the journal club, students will select and present papers with guidance from the course director. Career development topics will be intended to promote students reading widely in the scientific literature and to develop their public speaking skills.

VETMM 6130 Medical Pharmacology

Spring, taught from third week of March through first week of May. 2 credits. Prerequisite: permission of instructor. Letter grades only. Offered odd-numbered years. A lecture course covering basic principles of pharmacology and physiology, will feature the central and peripheral nervous system and muscle, cardiovascular, renal pulmonary systems, and gastrointestinal tract. This course is intended to provide graduate students with a strong foundation in medical pharmacology required for teaching in a medical curriculum. Grades will be based on take-home midterm and final exams.

VETMM 7010 Organ-System Toxicology (also TOX 6110)

Fall, 1 credit. Prerequisite: graduate students in environmental toxicology. S-U grades only. Offered even-numbered years. W. S. Schwark. Minicourse on molecular mechanisms involved in chemical toxicity. Considers specific examples of toxicity in organ systems such as the nervous system, kidney, liver, respiratory tract, and cardiovascular system.

[VETMM 7030 Receptor-Ligand Interactions

Fall, 2 credits. Prerequisite: permission of instructors. S-U or letter grades. Offered even-numbered years; next offered 2010-2011. G. A. Weiland and R. E. Oswald. Covers both the practical and theoretical tools for the study of ligand-receptor interactions, emphasizing the quantitative and physical chemical aspects of receptor theory. Topics discussed are basic methods of radioligand binding assays, including separation and measurement of bound and free ligand; characterization of receptor function; analysis of receptor structure; thermodynamic basis of the binding; methods of analyzing equilibrium binding; equilibrium binding for complex binding mechanisms; and kinetics of simple and complex binding mechanisms.]

VETMM 7040 CNS Synaptic Transmission

Fall. 2 credits. Limited to 20 students. Prerequisite: graduate students, undergraduate seniors, or juniors majoring in neurobiology; permission of instructor. S-U or letter grades. Offered even-numbered years. L. M. Nowak.

Survey course in vertebrate central nervous system physiology and pharmacology that focuses on mechanisms of neuro-transmitter action at the membrane and cellular levels. Roles of selected neurotransmitters in normal brain and neurological disorders are discussed. Topics are introduced in lectures and followed up by discussions of recent journal articles.

VETMM 7050 The Chemistry and Biology Behind Cell Signaling

Spring. 2 credits. S-U or letter grades. Offered even-numbered years. R. A. Cerione.

Focuses on the mechanisms of action of GTP binding proteins. Examines several receptor-coupled signaling systems, including adenylyl cyclase, vertebrate vision, phosphatidylinositol lipid turnover, receptor systems regulating various ion channels, and receptors involved in cell growth regulation.

[VETMM 7060 Growth Factor-Coupled Signaling (also BIOBM 7340)]

Fall. 0.5 credit. Prerequisite: permission of instructor. S-U or letter grades. Offered even-numbered years; next offered 2010-2011. R. A. Cerione.

The general theme of this course is mitogenic signaling pathways. Receptor tyrosine kinases, src, ras, and ras-regulatory proteins are covered.]

VETMM 7070 Protein NMR Spectroscopy (also BIOBM 7300)

Spring. 2 credits. Prerequisites: CHEM 3890 and 3900 or 2870 and 2880 or permission of instructor. S-U or letter grades. Offered even-numbered years. R. E. Oswald and K. L. Nicholson.

The student acquires the tools necessary for in-depth understanding of multidimensional, multinuclear NMR experiments. Schemes for magnetization transfer, selective excitation, water suppression, decoupling, and others are presented. The application of these techniques to proteins for resonance assignments, structure determination, and dynamics characterization is studied.

VETMM 7100 Biological and Biomedical Graduate Program—Teaching Experience

Fall and spring. 1 credit. Requirement for first-year graduate students. S-U grades only. G. A. Weiland.

All graduate students who are a part of the Biological and Biomedical Sciences Graduate Program must complete a teaching experience. The goal of the experience is for each graduate student to increase his or her knowledge in a biology area and simultaneously increase skills and confidence in his or her teaching abilities. Specific teaching assignments will be administered through the CVM Office of Graduate Education. A faculty mentor will provide ongoing feedback.

VETMM 7200 Patch Clamp Techniques in Biology

Spring, taught daily during second and third weeks of Jan. 2 credits. S-U grades only. Offered even-numbered years. Times TBA. L. M. Nowak.

Students learn theoretical background for patch clamp studies in morning lectures. The experimental techniques of conventional and permeabilized patch whole-cell recording and single channel recordings in cell-attached and excised membrane patches are taught in 15 hours of afternoon laboratory instruction per student. Lab training sessions are arranged individually throughout the spring semester.

VETMM 7300 Graduate Research in Pharmacology or Molecular Medicine

Fall, spring, and summer. 1-12 credits. May not be used to fulfill formal course requirements for field of pharmacology. Prerequisite: permission of instructor. S-U grades only.

Offered by individual faculty members in the Department of Molecular Medicine and the graduate field of pharmacology for graduate students undertaking research toward M.S. or Ph.D. degrees.

VETMM 7400 Special Projects and Research in Pharmacology

Fall, spring, and summer. 1-3 credits each topic. May not be used to fulfill formal course requirements for field of pharmacology. S-U or letter grades. Field of pharmacology faculty.

Enables students to undertake research in an area related to the research interests of a faculty member in the graduate field of pharmacology. Topics include but are not limited to Mechanisms of Growth-Factor Action—R. A. Cerione; Mechanisms of Neurotransmitter Release—M. Lindau; Central Nervous System Neurotransmitters—L. M. Nowak; Structure-Function of the Nicotinic Acetylcholine Receptor—R. E. Oswald.

VETMM 7600 Directed Readings in Pharmacology

Fall, spring, and summer. 1-3 credits each topic. S-U or letter grades. Reading and disc. Field of pharmacology faculty.

Individual members of the graduate field of pharmacology offer directed readings and discussions on pharmacological topics to small groups or to individual students. Topics include but are not limited to Receptor Mechanisms—G. A. Weiland; Biochemical Neuropharmacology—G. A. Weiland; Amino Acid Neurotransmitters—L. M. Nowak; Stimulus-Secretion Coupling—C. M. S. Fewtrell; Cell Calcium—C. M. S. Fewtrell.

Population Medicine and Diagnostic Sciences**VETPM 2990 Undergraduate Research in Epidemiology**

Fall, spring, and summer. 3 credits; minimum 120 hours of lab time expected per 3 credits. Prerequisite: undergraduate standing; one year of basic biology (score of 5 on Biology Advanced Placement Examination of College Entrance Examination Board or BIOG 1000 level) or permission of instructor. J. Scarlett, H. Erb, Y. Grohn, L. Warnick, H. Mohammed, Y. Schukken, and D. Nydam.

Mentored research apprenticeship program designed to give laboratory experience in applied epidemiology to qualified unmatriculated high school students

(participating in Cornell Summer College) or Cornell undergrads. Students are placed in a research laboratory with a designed project under the direct supervision of a research associate (upper-level graduate student, post-doc, or faculty member). Students are graded on preparation, participation in laboratory, academic life, and appropriate acquisition of techniques. At the end of the six-week session, they are expected to give a brief (15- to 20-minute) oral presentation on their work and submit a manuscript in a form suitable for publication. The faculty director of the laboratory has ultimate responsibility for evaluating each student's work and assigning the grade.

VTPMD 6250 Evolutionary Genomics of Bacteria

Spring. 1 credit. Prerequisite: graduate standing. S-U or letter grades. M. J. Stanhope.

Comparative genomics of bacteria is a valuable approach to deriving information on pathogenesis, antibiotic resistance, host adaptation, and genome evolution. This course provides an evolutionary perspective on comparative bacterial genomics, focusing in particular on pathogens of human and agricultural importance. The course includes lectures, discussion of relevant scientific literature, and hands-on bioinformatics exercises.

VTPMD 6640 Introduction to Epidemiology (Graduate)

Fall. 3 credits. Corequisite: BTRY 6010 (College of Agriculture and Life Sciences) or permission of instructor. S-U or letter grades. H. N. Erb.

Lectures and discussion deal with the fundamentals of epidemiology. Topics include outbreak investigation, causal association, data quality, the design and ethical constraints of clinical trials, and infectious-disease epidemiology.

VTPMD 6650 Study Designs (Graduate)

Spring. 2 credits. Prerequisites: VTPMD/VETCS 6640 and BTRY 6010 (College of Agriculture and Life Sciences). S-U or letter grades. H. O. Mohammed.

Design and interpretation of cross-sectional, case-control, and cohort studies (including controlled clinical trial). Design issues include sample size, bias, and relative advantages and disadvantages. Course objectives are to (1) know the difference between different epidemiologic study designs and relative advantages and disadvantages of each; (2) given a problem (usually a field situation), be able to design an appropriate epidemiologic study; (3) be able to effectively analyze and criticize published epidemiologic studies. Consists of lectures on the principles of epidemiologic study design and related issues (sample size calculations, validity and precision, and identification and minimizing of bias); basic analysis of epidemiologic data; and discussion of published epidemiologic studies. These include observational cohort studies (prospective and retrospective), cross-sectional studies, case-control studies, and hybrid studies (ambidirectional and other hybrid designs).

VTPMD 6660 Advanced Methods in Epidemiology (Graduate)

Fall. 3 credits. Prerequisites: VTPMD/VETCS 6650 and BTRY 6020 (College of Agriculture and Life Sciences). S-U or letter grades. Y. T. Grohn.

Concepts introduced in VTPMD 6640 and 6650 are developed further, with emphasis on statistical methods. Topics to be covered include multivariable methods and strategies (simple analysis, stratification, matching, logistic and poisson regression, and survival analysis) for the analysis of epidemiologic data.

VTPMD 7000 Special Projects in Diagnostic Endocrinology

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Recommended: ANSC 4270. Letter grades only. N. J. Place. Independent study course. Students have the opportunity to research a particular topic in diagnostic/clinical endocrinology of animals.

VTPMD 7010 Special Projects in Infectious Diseases

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. S-U or letter grades. Y. Chang. Provides laboratory experience with attention to specific aspects of infectious disease problems.

VTPMD 7020 Special Topics in Infectious Diseases

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. S-U or letter grades. Y. Chang. Offers a broad exposure to various aspects of infectious diseases.

VTPMD 7040 Master's-Level Thesis Research (Graduate)

Fall, spring. 1-3 credits. Prerequisite: permission of instructor. S-U grades only. Diagnostic Laboratory faculty. Research leading to an M.S. degree.

VTPMD 7070 Clinical Biostatistics (Graduate)

Spring. 2 credits. Minimum enrollment 2; maximum 25. Prerequisite: veterinary residents and graduate students. Letter grades only. Offered odd-numbered years. H. N. Erb, J. M. Scarlett, and H. O. Mohammed. Explains the theory behind and interpretation of parametric and nonparametric statistical techniques commonly used in research/clinical medicine. Students analyze small data sets using a commercial statistical-software package.

VTPMD 7080 Epidemiology Seminar Series (Graduate)

Fall, spring. 1 credit. S-U grades only. Y. T. Grohn. Discusses advanced theoretical and analytical epidemiologic concepts and techniques.

VTPMD 7660 Graduate Research (Graduate)

Fall, spring, summer. Credit TBA. Prerequisite: master's and Ph.D. students; permission of graduate faculty member concerned. S-U grades only. Y. T. Grohn. Enables students outside the section of epidemiology to receive graduate research credits for projects with epidemiological components.

VTPMD 7690 Doctoral-Level Thesis Research

Fall, spring, and summer. Credit TBA. Prerequisite: master's and Ph.D. students in epidemiology. S-U grades only. Y. T. Grohn.

Enables students in the section of epidemiology to receive graduate research credits for their doctoral research.

VTPMD 7990 Independent Studies in Epidemiology

Fall, spring. 1-3 credits. H. N. Erb, Y. T. Grohn, H. O. Mohammed, and J. M. Scarlett.

The purpose of this course is to investigate an epidemiologic topic with one of the instructors. It provides experience in problem definition, research design, and the analysis of epidemiologic data.

FACULTY ROSTER

Abou-Madi, Noha, D.V.M., U. of Montreal (Canada). Lec., Clinical Sciences
 Acland, Gregory M., D.V.M., U. of Sydney (Australia). Prof., James A. Baker Inst. for Animal Health
 Ainsworth, Dorothy M., Ph.D., U. of Wisconsin, Madison. Prof., Clinical Sciences
 Akey, Bruce, D.V.M., U. of Minnesota. Asst. Dean for Diagnostic Operations

COLLEGE OF ARTS AND SCIENCES

ADMINISTRATION

G. Peter Lepage, dean—255-4146

Walter Cohen, senior associate dean—255-4147

Elizabeth Adkins-Regan, senior associate dean—255-4147

David DeVries, associate dean of undergraduate admissions and education—255-3386

Jane V. Pedersen, associate dean of administration—255-7507

Susan Robertson, director of communications—255-6386

Paul Sawyer, associate dean and director of writing programs—255-4061

PROGRAM OF STUDY

Introduction

The College of Arts and Sciences is a community of about 4,100 undergraduates and 500 faculty members. It is also a graduate school and research center. Altogether it attracts faculty members whose research and scholarly and creative work require first-rate academic facilities and who bring to all their students the profound questioning and exciting ideas of current scholarship. Finally, the college exists within a university of other colleges at Cornell—about 19,500 undergraduate and graduate students and 1,600 faculty members. This wider community provides depth and diversity of applied and professional studies beyond what a college of the liberal arts and sciences alone can offer. Students studying the liberal arts and sciences may draw upon the knowledge and facilities of the other colleges at Cornell to complement their studies. Abundant variety and outstanding quality in many fields, including interdisciplinary fields, and emphasis on individual academic freedom and responsibility give the college and the university their distinctive character.

The richness of the college's undergraduate curriculum is extraordinary; there is no course that all students must take, and there are nearly 2,000 from which they may choose. By choosing courses each semester, students design their own education. They develop known interests and explore new subjects. An education in the liberal arts and sciences means honing one's critical and imaginative capacities, learning about oneself in nature and culture, and gaining experience with views of the world radically unlike one's own. All this is highly individual, and the college relies on each student and faculty advisor to design a sensible, challenging, and appropriate course of study.

Yet the college faculty believes that each student's education should have certain common qualities. These include familiarity with several different ways of knowing that are reflected in the various disciplines and fields of study. In addition to these general areas of knowledge, students acquire effective

writing and quantitative skills, study foreign languages, achieve cultural breadth, and concentrate on one particular field through which they deepen their imaginative and critical thinking as fully as possible. To accomplish these objectives, the college has certain requirements for graduation.

The College of Arts and Sciences awards one undergraduate degree, the Bachelor of Arts degree.

Summary of Requirements

1. First-year writing seminars: two courses. (See "John S. Knight Institute for Writing in the Disciplines," p. 599.)
2. Foreign language: completion of one course at the nonintroductory level or above (Option 1) or at least 11 credits in one language (Option 2).
3. Distribution: nine courses (may overlap with courses counting toward a major).
4. Breadth: two courses (may overlap with courses for distribution, major, or electives).
5. Major (see individual department listings for major requirements).
6. Electives: four or five courses (at least 15 credits) not used to fulfill other requirements (other than the breadth requirements) and not in the major field.
7. Residence: eight full-time semesters, unless a student can successfully complete all other requirements in fewer than eight semesters and meet the additional criteria to accelerate graduation. (See "Acceleration" below.)
8. 34 courses: a 3- or 4-credit course counts as one course. A 2-credit course counts as half a course; a 1-credit course does not normally count toward the requirement; a 6-credit language course counts as one and one-half courses. (See "Courses and Credits" for some 1-credit courses in music, dance, and theatre performance that can be cumulated to count as one-half course.)
9. Credits: a total of 120 academic credits, of which 100 must be taken in the College of Arts and Sciences at Cornell. (See "Noncredit Courses" below for courses that do not count as academic credits or courses.)
10. Physical education: completion of the university requirement (passing a swim test and two 1-credit nonacademic courses). Note: Physical education credit does not count toward graduation or toward the 12-credit minimum required for good academic standing each semester.
11. Application to graduate. (See "Graduation," p. 457.)

Undergraduates are responsible for knowing and fulfilling the requirements for graduation and for alerting the college to any problems with their records. To check on their progress toward the degree, students are urged to consult their advising deans in 55 or 172

Goldwin Smith Hall and to check their DUST (Distributed Undergraduate Student Tracking) reports at <http://data.arts.cornell.edu/as-stus>. The DUST report is updated after each semester to reflect the student's progress in college requirements. To check on their progress in the major, students should consult their major advisors.

Explanation of Requirements

Foreign Language Requirement

The faculty considers competence in a foreign language essential for an educated person. Studying a language other than one's own helps students understand the dynamics of language, our fundamental intellectual tool, and enables students to understand another culture. The sooner a student acquires competence, the sooner it will be useful. Hence, work toward the foreign language requirement should be undertaken in the first two years. Students postponing the language requirement for junior and senior years risk not being graduated in time. Courses in foreign languages and/or literature are taught in the College of Arts and Sciences by the following departments: Africana Studies and Research Center, Asian Studies, China and Asia-Pacific Studies, Classics, German Studies, Linguistics, Near Eastern Studies, Romance Studies, and Russian.

The language requirement may be satisfied in one of the following ways:

Option 1: Passing (a) a nonintroductory foreign language course of 3 or more credits at Cornell at the 2000 level or above or (b) any other nonintroductory course at the 2000 level or above conducted in a foreign language at Cornell. **OR**

Option 2: Passing at least 11 credits of study in a single foreign language (taken in the appropriate sequence) at Cornell.

Any exceptions to these rules will be noted elsewhere in individual department descriptions.

Students whose speaking, reading, and writing competence in a language other than English is at the same level we would expect our entering freshmen to have in English (as shown by completing high school in that language or by special examination during their first year here at Cornell) are exempt from the college's language requirement.

Placement

Entering students who have completed two or more years of high school study in a language, who have been awarded credit for language work at another college or university, or who are native speakers, bilingual, or have spoken the language at home, may enroll in a course in the same language only after being placed by examination. The placement exam may have been taken in high school (SAT II, taken after the last course, or AP, if the score was 4 or 5) or at Cornell (LP test). Being placed by examination into the first course at a nonintroductory level does not earn credit

toward the degree. Degree credit is earned only for demonstrated mastery of work equivalent to the first course at an intermediate level at Cornell and placement into the second intermediate course. Students should seek to satisfy the language requirement in their first years at Cornell. Those with test scores one or more years old may be required to take a Cornell Advanced Standing Examination (CASE) if the instructor deems the student is insufficiently prepared for the level in which he or she has enrolled.

Placement Tests and Advanced Placement Credit

1. The following language placement and advanced standing tests are scheduled at the beginning of each semester:

- Chinese (Cantonese and Mandarin), Hindi, Japanese, and Korean (schedule available from Department of Asian Studies, 350 Rockefeller Hall);
- German (schedule available from Department of German Studies, 183 Goldwin Smith Hall);
- French, Italian, and Spanish (schedule available from Department of Romance Studies, 303 Morrill Hall) [These placement tests are also offered online during the summer.];
- Russian (schedule available from Department of Russian, 226 Morrill Hall).

The advanced standing examination in French, German, Italian, Russian, and Spanish, is called the CASE (Cornell Advanced Standing Examination). Eligibility for the CASE may be determined from the placement tables. In Russian only, all students seeking placement take the CASE.

Native speakers of Spanish who have completed their secondary education in a Spanish-speaking country do not take the CASE. For these students, the Spanish program offers a walk-in service, the Native Language Accreditation for Spanish, in the third week of September and the first week of February. Students interested in this service should contact Brisa Teutli in 414 Morrill Hall, bt54@cornell.edu. Speakers of Spanish who completed their secondary education in a non-Spanish-speaking country are required to present either SAT II or AP or LPS scores for placement, or for eligibility to take the CASE exam.

2. Arabic: departmental examination, Department of Near Eastern Studies, 409 White Hall.
3. Greek: departmental examination, Department of Classics, 120 Goldwin Smith Hall.
4. Hebrew: departmental examination, Department of Near Eastern Studies, 409 White Hall.
5. Latin: departmental examination, Department of Classics, 120 Goldwin Smith Hall.
6. Persian: departmental examination, Department of Near Eastern Studies, 409 White Hall.

7. Turkish: departmental examination, Department of Near Eastern Studies, 409 White Hall.

Distribution Requirements

In satisfying the distribution requirements, students become acquainted with a broad range of subject matter and points of view among disciplines in the college and explore areas that may be entirely new to them. Or, to look at it the other way, as first-year students explore subjects that interest them, they begin to satisfy distribution requirements.

Consequently, first-year students should take courses to prepare for possible majors and to explore subjects new to them and take no course only in order to satisfy a distribution requirement. Although students may complete distribution requirements over eight semesters, they can take advanced courses in subjects they (perhaps unexpectedly) find intriguing only if they have completed the introductory prerequisites. Consequently, students should not postpone satisfying distribution requirements until the last semesters. Once sure of a major, students should consider which distribution requirements are yet unfulfilled and how to fulfill them with courses that complement their overall program. Courses in the major may be applied to the distribution requirements (unless prohibited by one of the restrictions noted under restrictions on applying AP credit, transfer credit, and Cornell courses to distribution requirements).

Students must complete four courses in science and quantitative reasoning, identified below under the categories Physical and Biological Sciences (PBS) and Mathematics and Quantitative Reasoning (MQR). In addition, they must complete five courses of 3 or more credits each from four of the five categories of courses in the humanities and social sciences with no more than three in the same department. The five categories of courses fulfilling the distribution requirements in humanities and social sciences are: Cultural Analysis (CA-AS), Historical Analysis (HA-AS), Knowledge Cognition and Moral Reasoning (KCM-AS), Literature and the Arts (LA-AS), and Social and Behavioral Analysis (SBA-AS). How an individual course is categorized is indicated with the appropriate abbreviation in its description under its department.

It is important to recognize that only courses with the proper designation in the Arts and Sciences section of the catalog can be used toward fulfilling the distribution requirements in Arts and Sciences. Some topics courses and courses offered through the Society for the Humanities, among others, do not count toward distribution.

Students wishing to take an Arts and Sciences course that does not have a rubric assigned to it in this volume should consult their advising dean to ascertain the status of the course and see if it has, in fact, been assigned any distribution rubric after the publication of this volume. Students may not petition to change the rubric of any given course, nor may any faculty member change the rubric of a course for an individual student. Faculty members wishing to change the rubric for a course they teach must petition the Educational Policy Committee for a change in rubric, and that rubric must then be applied to the course for all students in the course.

• Cultural Analysis (CA-AS)

Courses in this area study human life in particular cultural contexts through interpretive analysis of individual behavior, discourse, and social practice. Topics include belief systems (science, medicine, religion), expressive arts and symbolic behavior (visual arts, performance, poetry, myth, narrative, ritual), identity (nationality, race, ethnicity, gender, sexuality), social groups and institutions (family, market, community), power and politics (states, colonialism, inequality).

• Historical Analysis (HA-AS)

Courses in this group interpret continuities and changes—political, social, economic, diplomatic, religious, intellectual, artistic, scientific—through time. The focus may be on groups of people, dominant or subordinate, a specific country or region, an event, a process, or a time period.

• Knowledge, Cognition, and Moral Reasoning (KCM-AS)

Offerings in this area investigate the bases of human knowledge in its broadest sense, ranging from cognitive faculties shared by humans and animals such as perception, to abstract reasoning, to the ability to form and justify moral judgments. Courses investigating the sources, structure, and limits of cognition may use the methodologies of science, cognitive psychology, linguistics, or philosophy. Courses focusing on moral reasoning explore ways of reflecting on ethical questions that concern the nature of justice, the good life, or human values in general.

• Literature and the Arts (LA-AS)

Offerings in this area explore literature and the arts in two different but related ways. Some courses focus on the critical study of artworks and on their history, aesthetics, and theory. These courses develop skills of reading, observing, and hearing and encourage reflection on such experiences; many investigate the interplay among individual achievement, artistic tradition, and historical context. Other courses are devoted to the production and performance of artworks (in creative writing, performing arts, and media such as film and video). These courses emphasize the interaction among technical mastery, cognitive knowledge, and creative imagination.

• Social and Behavioral Analysis (SBA-AS)

Courses in this area examine human life in its social context through the use of social scientific methods, often including hypothesis testing, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to interpersonal relations between individuals (e.g., in friendship, love, conflict) to larger social organizations (e.g., the family, society, religious or educational or civic institutions, the economy, government) to the relationships and conflicts among groups or individuals (e.g., discrimination, inequality, prejudice, stigmas, conflict resolution). Please note that CRP 1100 (The American City) and CRP 1101 (Global City) satisfy SBA but do not count as A&S credit.

• Physical and Biological Sciences (PBS)

In fulfilling the four courses in science and quantitative reasoning, students must take at least two science courses. At least one of these must be from the primary list of courses in science departments in the College of Arts and Sciences:

Primary list:

(The courses listed individually are all cross-listed in an A&S science department.)

Animal Science

4270 Fundamentals of Endocrinology

Anthropology

3710 Human Paleontology

Applied and Engineering Physics

2170 Physics II: Electricity and Magnetism
3300 Modern Experimental Optics
3630 Electronic Circuits
4500 Introduction to Solid-State Physics
4700 Biophysical Methods

Astronomy: all 3- or 4-credit courses

Biological Sciences: all 3- or 4-credit courses (including any combination of two courses from BIO 1101–1104) except BIOG 1115, 2990, 4980; BIOEE 3620; BIOBM 1320, 3990; BIOGD 1320; BIOMI 1720; BIONB 3210, 4200, 4230, 4350, and BIOSM 2040, 2250, 3620, 3710. BIOG 2000 and 4990 require permission from the Office of Undergraduate Biology.

Biological and Environmental Engineering

4710 Introduction to Groundwater

Biology and Society

2141 Biological Basis of Sex Differences
4471 Seminar in the History of Biology
4611 Environmental Policy
4612 Environmental Policy

Chemistry and Chemical Biology

all 3- or 4-credit courses

Cognitive Science

1110 Brain, Mind, and Behavior
3300 Introduction to Computational Neuroscience

Crop Sciences

3970 Environmental Microbiology
4830 Land, Water, Agriculture, and Environment

Earth and Atmospheric Sciences

all 3- or 4-credit courses except 2500, 2900, 3750, 4350, 4940

Electrical and Computer Engineering

4870 Intro to Radar Remote Sensing

Engineering

1220 Earthquake!

Entomology

3250 Insect Behavior
3690 Chemical Ecology
4400 Phylogenetic Systems
4530 Historical Biogeography
4550 Insect Ecology

Feminist, Gender, & Sexuality Studies

2140 Biological Basis of Sex Differences

History

2870 Evolution
4150 Seminar in the History of Biology

Horticulture

2430 Taxonomy of Cultivated Plants
4730 Ecology of Agricultural Systems

Music

- 1466 (previously 2111) Physics of Musical Sound

Natural Resources

- 3030 Introduction to Biogeochemistry
4560 Stream Ecology

Nutritional Sciences

- 4750 Mammalian Developmental Defects

Physics

- all 3- or 4-credit courses

Plant Pathology

- 4090 Principles of Virology

Psychology

- 1110 Brain, Mind, and Behavior
3220 Hormones and Behavior
3240 Biopsychology Laboratory
3300 Introduction to Computational Neuroscience
3320 Biopsychology of Learning and Memory
3960 Introduction to Sensory Systems
4240 Neuroethology
4310 Effects of Aging on Sensory and Perception Systems
4920 Sensory Function

Science and Technology Studies

- 2871 Evolution
4471 Seminar in the History of Biology

Students may select additional science courses from the following **supplementary list**:

Animal Science

- 1100 Domestic Animal Biology I
1150 Domestic Animal Biology II
2120 Animal Nutrition

Anthropology

- 1300 Human Evolution: Genes, Behavior, and the Fossil Record
3270 Environmental Archaeology
3390 Primate Behavior and Ecology
4263 Zooarchaeological Method
4264 Zooarchaeological Interpretation

Applied and Engineering Physics

- 1100 Lasers and Photonics

Archaeology

- 3270 Environmental Archaeology
4263 Zooarchaeological Method
4264 Zooarchaeological Interpretation

Dance

- 3120 The Moving Body: Form and Function

Electrical and Computer Engineering

- 4300 Lasers and Optical Electronics

Engineering (Intro course)

- 1100 Lasers and Photonics

Entomology

- 2010 Alien Empire: Bizarre Biology of Bugs (3 cr.)
2100 Plagues and People (3 cr.)
2120 Insect Biology
2770 Natural Enemies: An Intro to Biological Control (3 cr.)
3150 Spider Biology

Food

- 2000 Intro to Physio & Bio Aspects of Food

Materials Science and Engineering

- 2810 The Substance of Civilization

Natural Resources

- 2010 Environmental Conservation
2100 Introductory Field Biology
3110 Fish Ecology, Conservation, and Management
4200 Forest Ecology

Nutritional Sciences

- 1150 Nutrition and Health
3610 Biology of Normal and Abnormal Behavior

Plant Pathology

- 2013 Magic Mushrooms, Molds, and More
2015 Mushrooms, Molds, and Molecules

Psychology

- 2230 Introduction to Biopsychology
3260 Evolution of Human Behavior
3610 Biology of Normal and Abnormal Behavior

• **Mathematics and quantitative reasoning (MQR)**

In completing four courses in science and quantitative reasoning, students must take at least one of the following courses (note that EDUC 1150 Introductory College Mathematics counts neither toward the college degree nor toward distribution):

Applied Economics and Management

- 2100 Introductory Statistics

Biometry

- 3010 Biological Statistics I

City and Regional Planning

- 3210 Introduction to Quantitative Methods
3280 Quantitative Methods in Policy Planning

Cognitive Science

- 1720 Computation, Information, and Intelligence
4240 Computational Linguistics

Computer Science

- 1110, 1112, 1113, 1114 Introduction to Computing
1700 Computation, Information, and Intelligence
2110 Object-Oriented Programming and Data Structures
2800 Discrete Structures
3110 Data Structures and Functional Programming
3740 Computational Linguistics
4210 Numerical Analysis and Differential Equations
4220 Numerical Analysis: Linear and Nonlinear Equations
4860 Applied Logic

Earth and Atmospheric Sciences

- 4350 Statistical Methods in Meteorology and Climatology

Ecology and Evolutionary Biology

- 3620 Dynamic Models in Biology

Economics

- 3190 Introduction to Statistics and Probability
3200 Introduction to Econometrics
3210 Applied Econometrics
3270 Time Series Econometrics
3680 Game Theory
4760/4770 Decision Theory I and II

Engineering

- 1101 Engineering Applications of ORIE
1700 Computation, Information, and Intelligence
2110 Object-Oriented Programming and Data Structures

Industrial and Labor Relations

- 2100 Introduction to Statistics
2120 Statistical Reasoning

Information Science

- 1700 Computation, Information, and Intelligence

Linguistics

- 4424 Computational Linguistics
4485 Topics in Computational Linguistics

Mathematics

- all 3- or 4-credit courses except 1000 and 1009

Philosophy

- 2310 Introduction to Deductive Logic
3300 Foundations of Mathematics
3310 Deductive Logic
4310 Mathematical Logic
4311 Topics in Logic

Policy Analysis and Management

- 2100 Introduction to Statistics

Psychology

- 3500 Statistics and Research Design

Sociology

- 3010 Evaluating Statistical Evidence

Statistical Science

- 2100 Introduction to Statistics

If students choose two courses from this list to satisfy part of the distribution requirement, those two courses may not have significant overlap. For example, students may not choose two beginning courses in statistics. Nor may they earn credit toward the degree for overlapping courses: AEM 2100 Introductory Statistics, ILRST 2100 Introduction to Statistics, ILRST 2120 Statistical Reasoning, MATH 1710 Statistical Theory and Application in the Real World, PAM 2100 Introduction to Statistics, PSYCH 3500 Statistics Research and Design, SOC 3010 Evaluating Statistical Evidence, STSCI 2100 Introduction to Statistics.

Breadth Requirements

Students must include in their undergraduate program at least one Arts and Sciences course that focuses on an area or a people other than those of the United States, Canada, or Europe and one course that focuses on an historical period before the 20th century. Courses that satisfy the geographic breadth requirement are marked with an @ when described in this catalog. Courses that satisfy the historical breadth requirement are marked with a #. Many courses satisfy both requirements, and students may in fact use the same course to satisfy both. Students may use courses satisfying distribution, major, or elective—but not writing—requirements in satisfaction of either of the breadth requirements. They may also apply Cornell courses (not credit from an examination) conferring proficiency in a non-Western language toward the geographical breadth requirement.

Restrictions on Applying AP Courses and Credit from Other Institutions to the Distribution Requirements

Students may not apply AP credit or transfer credit from another institution to the breadth requirements or to any distribution requirement.

Students who transfer to the college from another institution are under the above rules for advanced placement credit, but are eligible to have credit for post-high school course work taken during regular semesters (not summer school) at their previous institution count toward all distribution requirements. Transfer students receive a detailed credit evaluation when they are accepted for admission.

Restrictions on Applying Cornell Courses to the Distribution and Breadth Requirements

1. First-year writing seminars may not count toward any other college requirement.
2. No single course may satisfy more than one distribution requirement.
3. Students may count courses in their major toward distribution and breadth.
4. Only courses with the proper designation in the Arts and Sciences section of the catalog can be used toward fulfilling the distribution requirements in Arts and Sciences.
5. A student may not petition for alteration of a particular course's distribution rubric, nor may a faculty member change a course rubric for an individual student. The rubric for a course may be changed only if the Educational Policy Committee grants a petition by the course's instructor to change the rubric. If the rubric changes, it does so for the class as a whole and never for an individual student.

The Major

In their last two years, students devote roughly one-half of their time to acquiring depth and competence in a major subject. The major does not necessarily define a student's intellect or character or lead directly to a lifetime occupation, although it sometimes does some of each. Through the major, students focus and develop their imaginative and intellectual capacities through a subject they find especially interesting.

Most departments and programs specify certain prerequisites for admission to the major; they are found on the following pages in the descriptions of each department and program.

Students may apply for acceptance into the major as soon as they have completed the prerequisites and are confident of their choice. This may be as early as the second semester of freshman year, and must be no later than second semester of sophomore year. To apply, they take a copy of their official transcript to an appointment with the director of undergraduate studies in their prospective major. A department or program may refuse admission into the major if the applicant's performance does not meet established standards. A student without a major at the beginning of the junior year is not making satisfactory progress toward the degree and risks not being allowed to continue in the college. That student must meet with an advising dean and may be placed on a leave of absence as early as the first semester of the junior year if he or she has not declared a major.

Available majors

Majors are offered by each of the departments. There are also majors in American Studies, Archaeology, Biology and Society, China and Asia-Pacific Studies, Information Science, Religious Studies, Science of Earth Systems, and Feminist, Gender, and Sexuality Studies.

Some students want to pursue a subject that cannot be met within an established major.

They may plan, with the help of their faculty advisor, an independent major that includes courses from several departments and even colleges. See "Independent Major and College Scholar Program," under "Special Academic Options." Whatever the major—chemistry, math, philosophy, or music—graduates from the College of Arts and Sciences earn the one degree the college awards, a Bachelor of Arts.

Double majors

Only one major is required for graduation. Some students choose to complete two or more majors. No special permission or procedure is required; students simply become accepted into multiple majors and find an advisor in each department. All completed majors are posted on the official transcript. However, even though courses in a second major count among the required 15 credits of electives (see immediately below), double majoring can constrict the variety of electives that might be valuable for an education in the liberal arts and sciences. Students should "double major" only if their intellects and deep interests direct them to do so. If a student majoring in more than one subject decides s/he does not wish to complete the second major, s/he must go to the department and formally withdraw from that major.

Minors

Students may pursue minors in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the students' major. Completed minors will appear on the student's transcript. Not all departments offer minors. Consult the appropriate department or program listing in this *Courses of Study* or contact the appropriate department for information on minors offered and how to pursue a minor.

Electives

Of the 34 courses and 120 credits required for graduation, almost one-third are free electives. How students use these electives frequently makes the difference between an ordinary and a truly interesting course of study. Students must complete at least four courses and at least 15 credits offered outside the major field and not used to fill another requirement except breadth. AP credits not otherwise used may fulfill elective requirements. Students may group electives to complete one of the established interdisciplinary minors. Students may also group electives into a second major. Since only one major is required, students may count courses in a second major as electives. Some students choose to explore a variety of subjects; some develop a concentration in a department or subject outside Arts and Sciences to gain applied training or specialized knowledge.

Residence

The College of Arts and Sciences is a residential community for students who devote their energy and spirit to full-time study. The faculty believes that integrated, full-time study for a defined period best promotes intellectual and creative development and best prepares people for citizenship and careers.

Consequently, eight semesters of full-time study in the College of Arts and Sciences are integral to earning the B.A. degree. Even if the

minimum requirements can be met in fewer semesters, the faculty of the college expects students to take advantage of the resources of the university for eight full semesters and obtain as rich and advanced an education in the liberal arts and sciences as possible. Students may complete their undergraduate degrees with credits earned at other institutions or as part-time or summer students at Cornell only if they have completed their eight full-time semesters of residence or satisfied the criteria listed below under "Part-time study in final semester."

For transfer students from other institutions, each full semester of study at their previous institution counts as one of the eight semesters of residence. However, even if transfer students have completed more than four full semesters at their previous institution, they must spend a minimum of four semesters on the Cornell campus in Ithaca enrolled in the College of Arts and Sciences. Internal transfers from other colleges at Cornell must spend four semesters on campus in Ithaca as students in the Internal Transfer Division or in the college. Only if a transfer student spends at least four semesters in the College of Arts and Sciences can he or she accelerate (see "Acceleration," below).

Approved study abroad, SEA Semester, Urban Semester, FALCON, and Cornell in Washington are considered semesters of residence but not semesters on the Cornell campus. Students may spend no more than two semesters on such programs and must be on campus during their last semester. Dual-degree students spending 10 semesters at Cornell who feel they need three semesters abroad may petition the Academic Records Committee for permission but must demonstrate the academic necessity of the extended time away. Semesters of extramural study in Cornell's School of Continuing Education, semesters of study at other institutions, and summer sessions anywhere do not count as semesters of residence.

Acceleration

The faculty of the college desires that each student achieve depth, as well as breadth, from his or her undergraduate education. Indeed, benefiting from opportunities for advanced, seminar, and independent (sometimes honors) work is what best characterizes undergraduate education in the college. When a student feels he or she does not need eight semesters in order to achieve this depth, the student can apply to be able to accelerate by a term (and in rare cases, two terms), compressing the first four semesters into three (or two), and completing the prerequisites for the major in time to spend four full semesters in the major.

A student desiring to accelerate should meet with an advising dean in the first month of the desired penultimate semester so that he or she may have time to submit the online application to graduate by the deadline. The advising dean will determine the student's eligibility to accelerate. Accelerants must fulfill the following requirements:

1. All graduation requirements except for the residency requirement (120 total credits, 100 Arts and Sciences credits, 34 courses, all college requirements, and the university's physical education requirement).

2. Either condition *a* or *b*:
 - a. 60 credits before beginning their last four semesters in the college and the prerequisites for admission to the major in time to spend *four* semesters in the major.
 - b. 48 credits in College of Arts and Sciences courses numbered 3000 and above and prerequisites for admission to the major in time to spend *four* semesters in the major. No more than three upper-level courses taken in other colleges at Cornell University may count toward the 48 credits and then only if approved as part of the major.
3. 100 credits at Cornell at "C" (not C-) or above. Courses completed with a grade of "S" will count toward the 100 credits. Advanced placement and transfer credits do not count toward this requirement.
4. Students may not use credits earned while on leave of absence to reduce their terms of residence. In other words, they must be eligible to accelerate without applying any credit toward the degree that they earned while on leave.
5. Accelerators may not finish the degree with credits earned through part-time study (unless they meet the guidelines for part-time study), or at an off-campus program, including Cornell in Washington, SEA Semester, Urban Semester, or study abroad. That is, they may not exit through any program other than a regular, full-time Cornell semester in Ithaca.

Students matriculating as first-year students may not compress their undergraduate education into fewer than six semesters of residence. Transfer students, both from other institutions and from other colleges at Cornell, must spend at least four semesters in the college on campus in Ithaca. Acceleration is thus limited to transfer students who enter as sophomores. If a student does not meet the requirements for acceleration, that student may not petition for an exception. Acceleration is, in itself, an exception to the normal rules of the college, and the Academic Records Committee does not grant exceptions to exceptions.

Ninth semester

Students who can graduate in eight semesters should do so. If a worthy academic plan for a full ninth or tenth semester is approved, the student enrolls in the college as a special student for the additional work. Such a status allows enrollment in a full schedule of courses and full access to campus resources for full tuition, but allows financial aid only from loans or outside agencies, not from Cornell funds. Students who need fewer than 12 credits in a ninth or tenth semester to graduate should complete the outstanding courses and pay prorated tuition. Students may spend a ninth semester with Cornell aid only with permission of the Committee on Academic Records. Such permission is normally granted only to the following:

1. Students who have been ill or experienced other untoward circumstances beyond their control.
2. Students who were academically underprepared for the curriculum at Cornell and needed to begin with a lighter

schedule of courses than normal. (See Dean Turner, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall, about this option.)

Extramural study

Students in good academic standing may take a personal leave of absence and enroll in the School of Continuing Education, but such semesters of extramural study do not count as terms of residence and credits from such semesters may not be used to reduce the terms of residence.

Part-time study in special circumstances

The college and university support students (with financial aid and services) as best they can to make full-time study possible. Occasionally, however, extraordinary but nonfinancial personal, academic, or medical circumstances make studying part-time temporarily necessary and appropriate. Students in good academic standing who face extraordinary situations may petition the Committee on Academic Records for a part-time schedule and proration of tuition in the college.

Prorated tuition in the final semester

Students may complete their degrees by taking fewer than 12 credits and pay prorated tuition at Cornell after fewer than eight semesters of full-time residence only if:

1. They have completed all requirements by the end of the sixth or seventh semester, met the criteria for accelerated graduation, and are remaining to complete study beyond what is required for the degree.
2. They are writing an honors thesis in the eighth semester and can complete all degree requirements by taking exactly two courses, one of which is the thesis itself. They must register for the thesis and one additional course.

A student must see an advising dean to confirm his or her eligibility for prorated tuition and receive a petition to be approved by his or her faculty advisor. The student must specify the number of credits to be taken in the final term, and the faculty advisor must be able to certify that those credits will allow the student to complete his or her graduation requirements. Once the student has submitted the petition to the advising dean for college approval, he or she must see college registrar Sally O'Hanlon in 55 Goldwin Smith Hall to complete the prorated tuition form necessary for the Office of the Bursar. Both the petition form and prorated tuition form must be completed and approved during the first two weeks of the final semester.

Courses and Credits

Students must complete at least 34 full courses (which may include courses students place out of with AP credit), to be graduated—that is, an average of four full courses during each of six semesters and five courses during each of two semesters. Not all courses are full courses. Course equivalencies are as follows:

Counting courses:

- 1-credit courses: Certain 1-credit courses in Music, and in Theatre, Film, and Dance, may aggregate so that each two can count as a half course, and four can count as a full course. Otherwise, single-credit courses do not count as part of the 34.
- 2-credit course = one-half course

3- or 4-credit course = one full course

5-credit BIOGD 2810 (Genetics) = one and one-half course

Other 5-credit courses = one full course each

6-credit language course = one and one-half course

Other 6-credit courses = one full course each

8-credit FALCON courses = 2 full courses each

16-credit FALCON semester = 4 full courses

16-credit Intensive Arabic semester = 4 full courses

Counting credits: Students must complete 120 credits (which may include AP credits). Of the 120, 100 must be from courses taken in the College of Arts and Sciences at Cornell.

Courses that do not count toward the 120 credits required for the degree or toward good standing: The College of Arts and Sciences does not grant credit toward the degree for every course offered by the university. Courses in military training, training as an emergency medical technician, service as a teaching assistant, physical education, remedial or developmental training, precalculus mathematics (including EDUC 115), supplemental science and mathematics offered by the Learning Strategies Center, English as a second language, keyboarding, and shorthand are among those for which degree credit and credit toward the 12 credits required each semester for good academic standing are not given. Students should consult www.arts.cornell.edu/stu-adv/coursesdontcount.php for more information and a list of courses.

Other cases in which a course may not receive credit or count toward good standing include the following:

- A course identified as a prerequisite for a subsequent course may not be taken for credit once a student completes that subsequent course.
- A repeated course. (For more information, see "Repeating courses," below).
- A course with material that significantly overlaps with material in a course a student has already taken, for example, SOC 1101 Introduction to Sociology, and DSOC 1101 Introduction to Sociology; or any of the following statistics courses: AEM 2100 Introductory Statistics, ILRST 2100 Introduction to Statistics, ILRST 2120 Statistical Reasoning, MATH 1710 Statistical Theory and Application in the Real World, PAM 2100 Introduction to Statistics, PSYCH 3500 Statistics Research and Design, SOC 3010 Evaluating Statistical Evidence, STSCI 2010 Introduction to Statistics.

Courses that count toward the 100 required Arts and Sciences credits may include liberal arts courses approved for study abroad during a semester or academic year of full-time study (not summer study), courses taken in certain off-campus Cornell residential programs, courses (usually no more than three) that certain departments accept from other colleges at Cornell as fulfilling major requirements (and substituting for A&S courses), and courses (up to two) that an advisor accepts as part of a completed and formally established cross-college, interdisciplinary minor.

Courses that do not count toward the 100 required Arts and Sciences credits include

credits earned in other colleges at Cornell (except in the cases noted above), credits earned in any subject at institutions other than Cornell, and advanced placement credits. AP credits count as part of the 120 credits and 34 courses required for the degree but not as part of the 100 Arts and Sciences credits and may not be applied to distribution or breadth. AP credits are posted on the transcript during the summer between the freshman and sophomore years, after students have decided whether to accept the credit or forfeit it by taking the Cornell course out of which they had placed. If, subsequently, a student takes the course out of which s/he had placed, the AP credit will be removed because of the overlap in content (For more information on AP credits, please see pages 445–447).

Repeating courses

Students occasionally need to repeat courses. If the instructor certifies that the course content is significantly different, credit is granted a second time. If the content is the same, both grades nonetheless appear on the transcript and are included in any GPA that is calculated, but the course and credit count toward the degree only once. Repeated courses do not count toward the 12 credits required for good standing. Students considering repeating a course under this circumstance should discuss the matter with their advisor and an advising dean. Students who plan to repeat a course must submit a petition to the college registrar, Sally O'Hanlon, 55 Goldwin Smith Hall. If the original course grade was F, no petition is necessary.

Using courses to fulfill more than one requirement:

A course may fulfill more than one college requirement in any of the following situations:

1. A course may be used to fulfill distribution, breadth, and a major requirement (except as noted in earlier sections on restrictions on applying AP credits, transfer credits, and Cornell courses to distribution requirements).
2. A one-semester course in foreign literature (not language) or culture that is acceptable for certifying option 1 in that language may also be applied to the relevant distribution requirement and, if appropriate, to the breadth requirement.
3. Courses may count toward breadth requirements and toward any other requirement except first-year writing seminars.
4. Courses in a second major may count as electives.

Summer session credit

A student may earn credit toward the degree by completing courses in Cornell's summer session or by successfully petitioning for transfer credit for summer courses at other colleges. Students should consult their advisors regarding summer study plans.

Credit for summer courses not taken at Cornell must be approved by the appropriate Cornell department. Approval forms and information are available online, www.arts.cornell.edu, and in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall. Students are advised to submit course descriptions, syllabi, and approval forms to the director of

undergraduate studies in the relevant Cornell department for prior approval of each course. Transcripts for completed work at other institutions must be sent to Robin Perry, 172 Goldwin Smith Hall. Credit approved for summer courses away from Cornell (including summer courses abroad) counts toward the 120 credits and 34 courses required for the degree, but not toward the 100 credits required in the college at Cornell. It may not be applied to distribution or breadth requirements but may be applied to elective requirements and to major requirements (with the approval of the department).

Entering students who want to receive credit toward the degree for courses completed before matriculation in a summer session away from Cornell should obtain approval forms as soon as possible and have transcripts sent to Robin Perry, 172 Goldwin Smith Hall. Credits completed in Cornell summer sessions will be awarded automatically.

Summer session at Cornell or elsewhere does not count toward the eight-semester residence requirement. Students are permitted to earn up to 12 credits in one summer.

Transferring credit earned away from Cornell while on leave of absence

See "Leaves of Absence."

Transferring credit (for transfer students from another institution or from another Cornell college)

Transfer students must satisfy all normal requirements for the degree, including eight semesters of full-time study. They must always complete at least 60 credits and 18 courses at Cornell and be in residence on campus in the college for at least four regular semesters (summer session does not count toward the residence requirement). The college evaluates credit and residence earned either at another school or college at Cornell University or at another accredited institution of collegiate rank and determines the number of credits and courses the student may apply toward the various requirements for the bachelor of arts degree at Cornell. In addition, it reevaluates advanced placement credit allowed by another institution, including another college at Cornell. Evaluations of transfer credits are normally provided when students are notified of their admission. Once matriculated in Arts and Sciences at Cornell, transfer students must adhere to the same rules for transferring credit earned on leave as all other students.

SPECIAL ACADEMIC OPTIONS

Degree Programs

The following four programs allow students to alter the regular college or major requirements or to work toward more than one degree.

College Scholar Program

The College Scholar Program is meant to serve students whose interests and talents would benefit from a little more academic freedom than other students have, who demonstrate exceptional promise, and who show the maturity to plan and carry out, with the help of their advisor, a well-designed program of study. College Scholars design idiosyncratic programs: some pursue diverse interests; others integrate a variety of courses

into a coherent subject. Up to 40 students in each class are accepted into the program.

College Scholars must complete 120 credits of course work (100 in the college), 34 courses, the university's physical education requirement, and, unless they receive permission from the program to accelerate, eight full terms of undergraduate study but are not required to fulfill the other usual college requirements for the degree. All college scholars must complete a senior project. Although they are not required to complete or fulfill the general education requirements, members of the College Scholar Advisory Board believe that the spirit of those requirements is good.

Each applicant to the College Scholar Program is asked to write an essay, which is due the last Wednesday of classes in the spring of the freshman year. Students should contact Dean Ken Gabard, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall, for further information.

Dual-Degree Program with Other Colleges

The Dual-Degree Program enables especially ambitious undergraduate students to pursue programs of study in two colleges. Dual-degree candidates may earn both a Bachelor of Arts degree from the College of Arts and Sciences and: (1) a bachelor of science degree from the College of Engineering; or (2) a bachelor of fine arts degree from the Department of Art in the College of Architecture, Art, and Planning; or (3) a bachelor of science degree in urban and regional studies from the Department of City and Regional Planning in the College of Architecture, Art, and Planning; or (4) a bachelor of science degree in architectural history from the Department of Architecture in the College of Architecture, Art, and Planning. Students enter one of these colleges as freshmen or sophomores and begin the Dual-Degree Program with the second college in the second or, in some cases, the third year. The Dual-Degree Program ordinarily takes five years to complete, and students are eligible for 10 semesters with financial aid. For further information contact Dean Tammy Shapiro in the Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Independent Major Program

The Independent Major Program allows students to design their own interdisciplinary majors and pursue a subject that cannot be found in an established major. Proposals for an independent major must be equivalent in coherence, breadth, and depth to a departmental major, well suited to the student's academic preparation, and consistent with a liberal education. Proposals must also be supported by a faculty advisor and are assessed by a board of faculty members. Independent majors substitute for established majors, but students must still satisfy all the other requirements for the bachelor's degree. Students should contact Dean James Finlay, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall, for further information. Deadlines for submitting independent major proposals are listed on the calendar supplement for the College of Arts and Sciences.

Double Registration with and Early Admission to Professional Schools

Registration in the senior year of the College of Arts and Sciences and the first year of Cornell Law School or the Johnson Graduate School of Management is occasionally possible. A very few exceptionally well-prepared students who have earned 105 credits before the start of the senior year and have been accepted by one of the above-named professional schools may be permitted to register simultaneously in the college and in one or another of these professional schools during the seventh and eighth terms. They earn the B.A. degree after the first year of professional school.

Students with 8 or fewer credits and two or fewer courses to complete may apply to enter the Master's of Engineering program during (but no earlier than) their eighth semester; dual-degree students may enter this program no earlier than the ninth semester. They earn the bachelor degree(s) after one semester of graduate school.

Students interested in the joint program with the Law School, the Cornell Institute for Public Affairs (CIPA), or the Graduate School of Management, or in early admission to the master's of engineering program should apply to the relevant program. All candidates should confirm their eligibility with an advising dean, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Double-registered students must, of course, complete all requirements for the B.A. degree, including 100 credits in Arts and Sciences courses.

Teacher Education

Students at Cornell may pursue teaching credentials in agriculture, biology, chemistry, earth science, general science, mathematics, and physics. Cornell students from any college are encouraged to apply for admission to the Cornell Teacher Education Program during their sophomore or junior year. Those who are admitted complete their undergraduate major in an agricultural science, mathematics or science and a minor (concentration) in education. They are then able to complete a master of arts in teaching (MAT) in one year and earn certification in New York State. Students in agricultural science may be able to complete all certification requirements as undergraduates, although this option is not recommended.

For more information, contact the program director, Deborah Trumbull, at 255-3108 or djt2@cornell.edu.

Special-Interest Options

The following options enable students to pursue special interests within the usual degree programs.

Independent Study

Independent study affords students the opportunity to pursue special interests or research not treated in regularly scheduled courses. A faculty member, who becomes the student's instructor for the independent course, must approve the proposed study and agree to provide continuing supervision of the work. Students must prepare a proposal for independent study (proposal forms are available in the Office of Undergraduate Admissions and Advising, 55 and 172 Goldwin

Smith Hall). In one semester students may earn up to 6 credits with one instructor or up to 8 credits with more than one instructor. Students who are being paid for assisting faculty in research *cannot* earn course credit for that work.

Undergraduate Research

An excellent way to benefit from being an undergraduate at a research university, at Cornell in particular, is to become an apprentice in ongoing faculty research. About 400 students participate each year in creating new knowledge and earn independent study credit for what they learn and contribute. They sharpen their critical and creative abilities and test their interest in pursuing a research career. Sometimes they publish their work.

The Cornell Undergraduate Research Board, an undergraduate organization, conducts an annual open house to help students get started in research and an annual forum at which undergraduates present their work. See www.rso.cornell.edu/curb.

Students interested in research should consult the Director of Undergraduate Studies in the department of interest to find out about available opportunities. For more general information on the process of research or on petitioning for independent study credit for research, students should consult Dean James Finlay, Dean Maria Davidis [on leave 2009-2010], or Dean David DeVries, in the Office of Undergraduate Admissions and Advising, or consult www.research.cornell.edu/undergrad.

Language Study

FALCON (Full-Year Asian Language Concentration). FALCON allows students who are interested in the Far East to study Chinese or Japanese exclusively for one year. They gain proficiency in the language and familiarity with the culture. Students who are interested in the Far East should be aware of the opportunities to pursue rapid and thorough beginning studies on campus with the objective of studying abroad in China or Japan. Students interested in this program should contact the Department of Asian Studies, 388 Rockefeller Hall; e-mail: falcon@cornell.edu.

Prelaw Study

Law schools seek students with sound training in the liberal arts and sciences; they neither require nor prefer any particular program of study. Students should therefore study what they love and do well. While doing that, they should also develop their powers of precise, analytical thinking and proficiency in writing and speaking. Students in the College of Arts and Sciences who are applying to law school may consult Dean Heather Struck in the Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

The college offers a minor in law and society. This program offers a broad scope, complements almost any major, and attracts many students not intending to become lawyers as well as a subset of those intending to.

Premedical Study

The breadth and depth afforded by a liberal arts education are invaluable for students planning medical careers, whether they intend to practice or go into research. Such education has a profound effect on the doctor's

understanding of the world and hence usefulness to patients, and it affords the flexibility of mind that is needed for major research undertakings. Medical and dental schools do not prescribe or even prefer a particular major; they do, however, require particular undergraduate courses, and most students are well advised to begin chemistry in their freshman year. Students who are interested in medical careers are urged to visit the Health Careers Office, 203 Barnes Hall.

The advisor for students in the College of Arts and Sciences who are planning careers in medicine is Dean Janice Turner, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall.

Off-Campus Programs

Many students find it important to their majors or to their overall academic programs to study off campus or abroad for one or two semesters. When it makes academic sense, the college encourages its students to pursue such studies and grants credit toward the degree for work satisfactorily completed. Students wishing to participate in any off-campus program must petition their advising dean with a list of courses they wish to take during the program and a well-reasoned explanation of why the proposed semester is crucial for their course of study.

Study Abroad

The College of Arts and Sciences encourages study, both on campus and abroad, that provides a greater understanding of the world's peoples, cultures, economies, and environments, and prepares graduates for the challenges of international citizenship in the 21st century. Study abroad is open to students in any major who meet the college requirements and have a strong academic goal. Well-chosen and well-planned study abroad contributes a global or comparative dimension to your chosen field, enhances critical thinking and communications skills, and provides firsthand immersion in and appreciation of another culture. Focused academic work in the right institution abroad can be excellent preparation for advanced study or honors work in your final semesters at Cornell, and can lead to a career with a global component.

Requirements

- acceptance into a major
- area studies course work
- fulfillment of the College of Arts and Sciences residence requirement
- GPA of 3.0 or higher and good academic standing
- language study at the required level
- meet requirements set by the foreign university or program

Cornell Study Abroad students must study alongside degree candidates in their host institutions rather than in self-contained programs that offer courses specially designed for foreigners. The college will approve only those study-abroad proposals that demonstrate realistic and coherent academic goals that are consistent with the philosophy of a liberal arts education.

The college advocates study abroad that enables students to become competent in another language, so that they can engage

fully in daily life in another culture, develop social relationships, and complete formal course work in that language. To study abroad in a country where the host language is not English, the student must demonstrate competence in the language as a prerequisite.

For study abroad in Western Europe and Latin America, students must complete at least **two semesters of the appropriate foreign language at the 2000 level** at Cornell; additional course work is strongly encouraged and will increase students' chances for acceptance into the most highly competitive programs. Consult this catalog for the required level of course work in specific languages. For study abroad in Asia, Eastern Europe, the Middle East, and parts of Africa, course work entirely in the host language is not always practical, even after several semesters of language preparation at Cornell. Students should still plan to complete as much language preparation as possible within the Cornell curriculum, at least one to two years of study, and may be approved for language-intensive programs (at least half of the permitted 15 credits) with appropriate course work in English. If Cornell does not offer instruction in the language of the proposed host country, the student may be approved for a program that combines intensive language instruction with subject course work in English. All students must continue to formally study the language of the host country while abroad.

For study abroad in English-speaking countries, direct university enrollment is approved and expected. Cornell students will engage in a full course of study, generally in their major field, alongside regular degree candidates in the host country. In general, the college requires that at least 50 percent of the classes the student enrolls in be advanced-level course work in their major field.

Students will need to acquire background knowledge of the country or region where they intend to study. At least one area-studies course or one course in the history, culture, economics, politics, or social relations of the country of destination (3 or more credits) **in addition to language study** should be part of every student's preparation for study abroad. Some especially competitive programs require substantial prior course work in the proposed course of study as a prerequisite to acceptance. Students who intend to enhance their major with study abroad may need advanced course work in that field. As with language study, area-studies preparation beyond the minimum is highly recommended.

All A&S students must be formally accepted into a major before going abroad, and should ideally be accepted into a major before beginning the application process. Most students plan a significant amount of academic work toward the major while abroad. Whether or not students intend to earn major credit, the college requires that time spent abroad will not impede their progress toward the degree. The student's faculty advisor and departmental director of undergraduate studies must review and approve the study-abroad plans before the application is submitted to the college.

Study abroad can earn up to 15 A&S credits per semester of full-time course work as long as the curriculum abroad is consistent with that of the college. Completion of one trimester of study earns a maximum of 10

credits. Two terms at Oxford or Cambridge may earn up to 20 credits. You must carry a full course load as defined by the host institution, which should be equivalent to at least 15 credits at Cornell, and all courses must be taken for a letter grade. Courses that fall outside the scope of the liberal arts and sciences may only be taken with the **prior approval** of Dean Wasyliw, and will earn non-A&S credits. Some foreign universities offer courses for visiting students that do not carry any academic credit. Students may **not** earn additional credit for enrolling in extra courses during the semester or year abroad.

Credit for study abroad will be awarded only after completion of the semester abroad, and after the college receives your official transcript. To receive credit, students must fill out a **Request for Credit from Study Abroad** form and submit it to the advising office along with a copy of their transcript. All courses taken abroad will appear on the Cornell transcript and grades earned are reported in the system of the host institution. Grades earned through course work abroad do not become part of the Cornell GPA, since grades at other institutions are rarely equivalent to grades at Cornell. **Students must save all written work from all courses until their grades are received and recorded on their Cornell transcript.**

The maximum length of study abroad that can count toward A&S degree requirements is two semesters, which is also the amount of time recommended for true immersion in another culture and language. Approved semesters away from campus include Cornell in Washington, Urban Semester, and SEA Semester as well as all Cornell Abroad destinations. Students who transfer to Cornell must complete a minimum of four semesters of residence on campus in Ithaca and may not study abroad during any of those four semesters. Internal transfers must complete four semesters of residence on campus in the Internal Transfer Division and/or the College of Arts and Sciences. Students interested in the Cornell in Rome Program should contact Dean Wasyliw.

All applicants for study abroad during the academic year must go through the Cornell Abroad office after being approved by the College of Arts and Sciences. For more information, see Dean Patricia Wasyliw, 55 Goldwin Smith Hall. The full A&S study-abroad policy can be found on the Cornell Abroad web site.

Summer Residential Programs in Archaeology

During the summer months students may participate in a Cornell-sponsored archaeological project. In recent years the program has organized archaeological projects in Central America, Greece, Israel, Italy, Turkey, and New York State. Students should contact the Archaeology Program for information about the sites currently available. Students planning on attending field schools organized by other institutions should contact Professor Thomas Volman, 201 McGraw Hall, or tpv1@cornell.edu.

Marine Science

Shoals Marine Laboratory is a seasonal field station that offers more than 30 college courses that award Cornell credit and paid internships, a variety of courses and experiences designed to introduce

undergraduates to marine science. The laboratory is located on Appledore Island, six miles off the Maine/New Hampshire coasts. Students should contact the Shoals Marine Laboratory Office, G14 Stimson Hall, or e-mail shoals-lab@cornell.edu, for further information.

Cornell in Washington

The Cornell in Washington program offers students from all colleges in the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty members, conduct individual research projects, and work as externs. The Cornell in Washington program offers two study options: (1) studies in public policy, and (2) studies in the American experience. The program also offers unique externship opportunities: students serve as externs in a federal agency, congressional office, or nongovernmental organization and take part in a public policy or humanities seminar. They define and carry out individual research projects under the supervision of Cornell faculty members. Potential externships are arranged through, and approved by, the Cornell in Washington program. For further information, see p. 22 or inquire at M101 McGraw Hall, 255-4090.

Off-campus Programs Offered by Other Colleges

Students wishing to participate in the Urban Semester program, Capital Semester in Albany program, or the Earth and Environmental Systems (EES) semester in Hawaii must petition their advising dean with a list of the courses they wish to take during the program and a well-reasoned explanation of why the proposed semester is crucial for their major course of study. Students interested in the Cornell in Rome program should consult Dean Patricia Wasyliw in 55 Goldwin Smith Hall.

ACADEMIC INTEGRITY

Academic integrity is the heart of intellectual life—both in learning and in research. All members of the university community simply must support each other's efforts to master new material and discover new knowledge by sharing ideas and resources, by respecting each other's contributions, and by being honest about their own work. Otherwise the university will fail to accomplish its most central and important goals.

Cornell's Code of Academic Integrity and policy about acknowledging the work of others are among the documents new students receive. Students should read them carefully and not assume they understand what integrity and cheating are and are not. Academic integrity implies more here at the university than it usually did in high school. The standards of integrity are those that prevail in professional life. This means that students must acknowledge and cite ideas they adopt from others (not just direct quotations) and help they receive from colleagues or parents. With productive emphases on collaborative learning and writing, students must understand the general standards and policies about academic integrity and be sure they understand the expectations in individual courses as well. When in doubt, ask the instructor. For more information, consult cuinfo.cornell.edu/Academic/AIC.html.

Forgery or Fraud on Forms

Forging signatures or credentials on college forms is an academic offense and constitutes academic fraud. In all cases of forgery on academic forms, the effect of the forged documents shall be negated; such incidents will be recorded in the Academic Integrity Hearing Board's confidential file for forgeries. If the student forges more than once, or if the forgery would advance the student's academic standing unfairly or fraudulently, or if for any reason the situation requires some response in addition to the uniform penalty, the Academic Integrity Hearing Board might recommend further action, such as a notation on the student's transcript, suspension, or dismissal.

ADVISING

The following advisors and offices provide academic advising, help with problems, and information on college procedures and regulations.

Pre-Major Advisors

Each new student is assigned a faculty advisor. Advisors help students plan programs of study and advise them about ways to achieve their academic goals. Advisors may also help students with study or personal problems or may direct them to other offices on campus where help is available. Academic difficulties may frequently be solved or avoided if students and advisors recognize and address problems early.

Advisors and new advisees meet first during orientation week to discuss course selection. New students are encouraged to see their advisors again early in the semester, before it is too late to drop courses, to discuss their academic progress and to become better acquainted. Advisors and advisees meet at least once each semester to discuss courses for the following semester, and more often if advisees wish to discuss academic or personal issues or to petition for an exception to college rules.

Major Advisors

After acceptance into a major, each student is assigned a faculty advisor in his or her department, with whom the student shapes and directs the course of study. The advisor eventually certifies the completion of the major. Students should consult their major advisor about all academic plans, including honors, study abroad, acceleration, and graduate study. The advisor's support is especially important if a student petitions for an exception to the normal procedures or requirements.

Student Advisors

Student advisors pass on lore about the college and life at Cornell and help new students become oriented to the university.

Office of Undergraduate Admissions and Advising

This office, located in 55 Goldwin Smith Hall, 255-5004, and 172 Goldwin Smith Hall, 255-4833, is a resource for faculty and student advisors and for individual students and their parents. Advising deans are available to help students define their academic and career goals, to help with special academic options

and exceptions to college rules, and to help when problems arise:

- David DeVries, associate dean for undergraduate admissions and advising and undergraduate research, 255-3386
- Juliette Corazón, minority students and liaison to Latino Studies Program, 255-4833
- Maria Davidis [on leave 2009-2010], juniors, seniors, Tanner Dean's Scholars, Rawlings Cornell Presidential Research Scholars, Mellon Mays Fellows, undergraduate research, and postgraduate fellowships, 255-4833
- Christa Downey, career services, 255-4166
- James Finlay, first- and second-year students, Independent Major Program, undergraduate research, and peer advisors, 255-5004
- Ken Gabard, first- and second-year students and College Scholar Program, 255-5004
- Ray Kim, juniors, seniors, student ambassadors, 255-4833
- Irene Komor, career counseling, 254-5295
- Clare McMillan, first- and second-year students, students with disabilities, Tanner Dean's Scholars, 255-4833
- Diane J. Miller, career services, 255-6924
- Sally O'Hanlon, registrar, 255-5794
- Myra Sabir, juniors, seniors, internal transfers, Mellon Mays Fellows, and minority students, 255-4833
- Tammy Shapiro, juniors, seniors, dual-degree students, 255-4833
- Arthur Smith, first- and second-year students
- Heather Struck, juniors, seniors, prelaw students, 255-4833
- Janice Turner, minority students and pre-med students, 255-9497
- Patricia Wasyliv, first- and second-year students, academic integrity, study abroad, 255-5004

Committee on Academic Records

The college faculty's standing Committee on Academic Records has two main tasks: (1) to decide on students' petitions for exceptions to college requirements or rules and (2) to review the records of students who fail to maintain good academic standing and to take appropriate action. It accomplishes both those tasks without formulae and with attention to each individual situation. Its overriding goal is to help students achieve the best undergraduate education possible.

Petitions

The college faculty takes graduation requirements seriously, and the faculty's Committee on Academic Records virtually never waives a requirement outright. However, some students, with the support of their advisors, propose structuring their educations or fulfilling the spirit of college requirements in ways other than the specified norms. The Committee on Academic Records decides on such requests. Students who find that their undergraduate education would be better realized by satisfying requirements or proceeding in a way that requires an exception to normal rules, for example, a substitution for the language requirement,

should meet with an advising dean in the Office of Undergraduate Admissions and Advising. The deans are expert in the college's expectations and procedures and can help the student formulate a petition, if appropriate. The committee decides petitions on the basis of their educational merit.

Actions

The College of Arts and Sciences has no minimum grade requirement for graduation beyond the guideline that at least 100 Cornell credits of the 120 total required for graduation be passed with grades of C (not C-) or above. Consequently, only through actions of the Committee on Academic Records, described below under "Academic Standing," does the college maintain the quality of the degree and attend to individual situations when things academic are not going well.

REGISTRATION AND COURSE SCHEDULING

Enrollment in Courses in the College of Arts and Sciences

New Students

During orientation week, new students attend briefings and other information sessions, meet with faculty advisors, and sign into courses. The college reserves spaces in courses for its incoming students.

Continuing Students

Continuing students select and schedule up to five courses of 3 or more credits and as many 1- and 2-credit courses as they would like during the semester before the one in which the courses will be taken. Students who do not "pre-enroll" during the designated period must wait until the beginning of the semester and may have difficulty securing places in the courses they most want. Before enrolling in courses, students plan their programs and discuss long-range goals with their faculty advisors. In addition, all students are welcome to discuss programs and plans with an advising dean in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall.

At the beginning of each semester, students find their schedules on Student Center at www.studentcenter.cornell.edu. Periodically during the semester, and particularly just before the 3-, 7-, and 12-week deadlines, they should confirm the accuracy of their records.

Limits on Numbers of Courses and Credits

To meet the 34-course requirement, students must normally take four courses during each of six semesters and five courses during each of two semesters. To meet the 120-credit requirement, students must average 15 credits per semester. (Note: AP credit and/or summer credits may reduce the average numbers of courses and credits required each semester.)

Minimum number of credits per semester

To maintain good academic standing as a full-time student, students must complete at least 12 degree credits per semester; if for compelling personal or academic reasons students need to carry fewer than 12 credits, they should consult their faculty advisor and

an advising dean. Permission is by petition only, and after the first semester, such permission is given only in extraordinary circumstances.

Maximum number of credits per semester

First-year students must petition to enroll in more than 18 credits; other students may enroll in up to 22 credits if their previous semester's average was 3.0 or higher and they are in good academic standing. No more than 22 credits may be taken in a regular semester without permission of the college faculty's Committee on Academic Records. Students who fail to receive approval for excess credits from the committee may count only 18 or 22 credits, depending on their previous semester's average, toward the degree for that semester. Students taking summer courses may earn no more than 12 credits in any one semester.

Attendance

Attendance in classes is expected. Absences are a matter between students and their instructors. If a student cannot attend classes because of illness or family crisis, the Office of Undergraduate Admissions and Advising will notify instructors at the request of the student or the family. Nonetheless, the student must arrange to make up examinations or other work with each instructor. A student who will be absent because of religious holidays or athletic competitions must discuss arrangements for making up work with his or her instructors well in advance of the absence. A student who must miss an examination must also consult with the professor in advance. Alternative arrangements are at the discretion of the instructor.

Student athletes should discuss scheduled absences with their instructors at the beginning of the semester. Courses vary in their tolerance of absences. Instructors are not obligated to approve absences for purposes of participating in extracurricular activities, although most will be as flexible as is sensible for a student's academic program.

Adding and Dropping Courses

After course enrollment (also known as pre-enrollment), students may not adjust their schedules until the new semester begins. During the first three weeks of the semester, students may change courses without petitioning. (Note: the add period for first-year writing seminars is only two weeks.)

After the third week of classes, students must petition to add courses and may add them only for a letter grade. They may drop courses through the seventh week of the semester if no issue of academic integrity is at stake. Between the seventh and 12th weeks students may petition to withdraw from courses, if (1) the instructor approves; (2) the advisor approves; (3) an advising dean approves; (4) the drop does not result in fewer than 12 credits; and (5) no issue of academic integrity is at stake. Students must meet with an advising dean to obtain petition forms.

Courses officially dropped after the seventh week will be noted on the transcript by a "W" where the grade would normally appear. **This is a matter of record and cannot be petitioned. Petitions to withdraw from courses may not be submitted after the end of the 12th week in the semester.** Deadlines for short courses will be adjusted according to the length of the courses.

The effective date of all course changes will be the day the student submits all completed paperwork to the Office of Undergraduate Admissions and Advising.

GRADES

Letter Grades

See "Grading Guidelines," pages 15–16.

S–U Grades

The S–U (satisfactory–unsatisfactory) option allows students to explore unfamiliar subjects or take advanced courses in subjects relatively new to them without being under pressure to compete with better-prepared students for high grades. Students are expected to devote full effort and commitment to a course and complete all work in a course they take for an S–U grade. The S–U option is contingent upon the instructor's willingness to assign such grades. **Students must select their grading option and obtain the instructor's approval for the S–U option during the first three weeks of the semester. No exceptions to this deadline are permitted, and consequently students adding courses after the third week of the semester must add them for a letter grade.** After the third week of the semester, students may not petition for a grade option change, unless the course in question has been taken for S–U and is now part of the student's major. If, subsequently, the student withdraws from that major, the grade option will revert to its prior state. Students should note that a grade of S is equivalent to a grade of C– or higher; a grade of U, which is equivalent to any grade below C–, is a failing grade equal to an F. S means the student receives the credit specified for the course. U means no credit is given. A few courses in the college are graded exclusively S–U; in that case, the final grade appears on the transcript as SX or UX.

Prerequisite courses for graduate school and courses counting toward the major should not be taken for an S–U grade, unless the department grants permission. Students may elect the S–U option in courses used to satisfy distribution and elective requirements, provided that such courses do not also count toward major requirements or serve as prerequisites for admission to the major. First-year writing seminars and most language courses disallow the S–U option. In any case, students are advised to use the S–U option sparingly, if they intend to apply to graduate school or for transfer to another college. In addition, second-semester seniors in particular are advised to use the S–U option carefully: A student receiving a D in a nonmajor course he or she needs for graduation will still be graduated if that course has been taken for a letter grade. If, however, the student has taken the course S–U, the D will be recorded as a U and the student will be unable to be graduated on the desired degree date. There is no limit on the number of courses each semester for which students may elect the S–U grade, but within the 120 credits required for the degree, a minimum of 80 credits must be in courses for which a letter grade was received.

Note of Incomplete

An incomplete (INC) signifies that a course was not completed before the end of the semester for reasons beyond the student's control and acceptable to the instructor. Students must have substantial (normally at least 50 percent) equity in the course, be able to complete the remaining work, and have a passing grade for the completed portion. When a grade of incomplete is reported, the instructor submits a form stating what work must be completed, when it must be completed, and the grade (or permanent—"frozen"—incomplete) earned if the work is not completed by that date. When a final grade is determined, it is recorded on the official transcript with an asterisk and a footnote explaining that this grade was formerly an incomplete.

Students should be aware that INCs are interpreted as credits not passed during a given semester. If a student's INC takes his or her record below 12 credits in a given semester, the student risks being placed on warning or on leave by the Academic Records Committee. If placed on leave, the student must complete the INC before being allowed to return, and readmission will be permitted only at the beginning of a given semester. If the INC is not completed by the beginning of a regular academic term, the student may not register for that term. Students must resolve (make up or "freeze") any incompletes with their instructors before graduation.

Note of R (Yearlong Courses)

R is recorded for satisfactory progress at the end of the first semester of a two-semester course. Students enroll in such courses both semesters. The grade recorded at the end of the second semester evaluates the student's performance in the course for the entire year and will also replace the grade of "R" for the first semester of the course.

Students enrolled in an R course for the thesis may occasionally wish or feel compelled not to complete that thesis. In order to drop the thesis but continue with an independent study, the student should see Sue Downes in 172 Goldwin Smith Hall for the appropriate forms.

Grade Reports

Grade reports are available online on Student Center at www.StudentCenter.cornell.edu; they are not mailed to students. Students should periodically check their courses and grades to be sure that they are recorded correctly.

Class Rank

The college does not compute class rank.

Dean's List

Inclusion on the Dean's List is an academic honor bestowed by the dean of the college semester by semester. Based on grades, the criteria include about the top 30 percent of students and vary with the number of credits the student completes. The criteria are subject to slight changes from semester to semester and are available at www.arts.cornell.edu/stu-adv/deanslist.asp and in the Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall.

ACADEMIC STANDING

Students are in good academic standing for the semester if they successfully complete at least 12 degree credits by the end of the semester and earn no more than one D and no F or U grades. If a student completes only three courses, all grades must be above D. In addition, students are expected to make satisfactory progress toward satisfying requirements for the degree and to earn grades of C (not C-) or better in at least 100 of the 120 credits for the degree. Courses listed under "courses that do not count toward the degree" do not count toward good academic standing in a semester.

Academic Actions

Students who are not in good academic standing will be considered for academic action by the college faculty's Committee on Academic Records or by one of the advising deans of the college. Students are urged to explain their poor academic performance and submit corroborating documentation. Students may appeal a decision or action of the committee if they have new relevant information and documentation. They must consult an advising dean about appealing.

Warning

Any student who fails to maintain good academic standing will, at a minimum, be warned. A warning is posted on a student's college record but is not reported to the university registrar and does not appear on official transcripts.

Required leave of absence

A student in serious academic difficulty may be required by the faculty Committee on Academic Records to take a leave of absence, normally for a full year. Usually, but not always or necessarily, the Committee on Academic Records warns students before suspending them. Before being allowed to return and reregister in the college, students must document what they did on leave and how they resolved their problems, and they must submit a plan for completing the degree. In some cases students will be required to furnish evidence that they are ready to return or satisfy other conditions before being allowed to reregister in the college. Students who request to return in less than a year must present to the committee extraordinarily convincing evidence of their readiness to return. "Required leave" is posted on the student's official transcript.

Required withdrawal

The faculty Committee on Academic Records may dismiss a student from the college because of a highly unsatisfactory record for one semester or for failure to make satisfactory overall progress in grades, credits, or degree requirements. This action expels the student permanently from the college. "Required withdrawal" is posted on the student's official transcript.

Leaves of absence (LOAs)

Most leaves of absence are not required. Taking time off from college to gain experience or funds, or to find direction, is sometimes useful. In general, students arrange in advance for leaves to take effect the following semester. Students in good academic standing must see an advising dean to obtain

and submit a leave of absence statement, to be approved by the advising dean. Students may take a personal leave of absence up to the beginning of the semester (defined as the first day of classes). Students not in good academic standing may pursue a conditional leave of absence from the college up to the first day of classes. If medical issues are involved, students must consult Gannett: Cornell University Health Services about the advisability of a medical leave of absence.

Any student who wishes to take a leave of absence must consult with an advising dean in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall.

Students sometimes find it necessary to take a leave of absence at some point during the semester. In addition to the serious financial consequence of taking leaves after the semester has begun (see the Proration Schedule for Withdrawals and Leaves of Absence in the General Information section of this catalog), all leaves taken during the semester are granted at the discretion of the college and must, if granted, be conditional leaves of absence. Students must discuss their need for a LOA with an advising dean.

Leaves of Absence are of four types:

1. *Personal leaves* impose no conditions concerning reentering the college except for the five-year limit (see "Return from Leave," below). Readmission is automatic upon written request made by the student to his or her advising dean by August 1 for a fall semester, or January 1 for a spring semester. The college is not obliged to re-admit any student who does not meet the deadline for a given semester.
2. *Conditional leaves* are granted by the college for students who wish to take a leave but are not in good academic standing, or for students who wish to take a leave during the current semester. In consultation with the student, an advising dean and the Committee on Academic Records set the conditions for the student's return. Students may not return from conditional leaves for at least two semesters and/or until specific and individual conditions, such as completing unfinished work, have been met, and permission to return must be granted by the Committee on Academic Records. Students may be granted conditional leaves after the 12th week of a semester only under extraordinary circumstances and with the approval of the faculty's Committee on Academic Records.
3. *Medical leaves* are granted by the college only upon the recommendation of Gannett Health Services, and are usually issued for at least six months. The college may attach additional conditions appropriate to the individual situation. The student's academic standing is also subject to review at the time of the leave and on return. Students must then receive clearance from both Gannett and the college to be readmitted to study. Students wishing to return from a medical leave should contact Gannett several months in advance to initiate the return process, and only then contact the college.

4. *Required leaves.* The Committee on Academic Records may require a leave of absence if a student is not making satisfactory progress toward the degree. See "Academic Actions."

Students on conditional or required leaves of absence (LOA) may not attend any classes at Cornell through the School of Continuing Education and Summer Sessions. Students on a medical LOA may not register for classes at Cornell unless they obtain the permission of the college and a recommendation from Gannett. Courses taken without college permission will not count toward degree requirements.

Return from Leave

Students wishing to return from leave must contact the college and, where appropriate, provide documentation that all conditions for readmission have been satisfied. All requests for readmission must be received by the college by August 1 for the fall semester and January 1 for the spring semester. In the case of conditional and/or medical leaves, students must consult well in advance of those dates with both the college and Gannett. On readmission, the student's graduation date will be recalculated to account for the time spent away. Five years is the maximum length of time a student may be on leave before being withdrawn from the college.

Transferring Credits Earned While on Leave

Students who take courses elsewhere in the United States while on leave may petition to have credits transferred. Petitions are available in 55 and 172 Goldwin Smith Hall and at www.arts.cornell.edu. Approval depends on acceptable grades and the judgment of the relevant departments about the quality of the courses. If approved, these credits may be applied toward the 120 credits and 34 courses needed for graduation, but not toward the 100 credits required in the college. They may be applied to elective requirements or to the major, as allowed by the department, but not to any of the breadth or distribution requirements. **Credits earned during a leave do not count toward the eight semesters of residence and may not be used to reduce the terms of residence below the required eight. See "Residence."**

Study Abroad and International Students on Leave of Absence

Study abroad undertaken during a leave of absence will not receive academic credit. International students on leave of absence from the College of Arts and Sciences may enroll in courses at a college or university in their home country **only**, as such enrollment is not defined as study abroad. They may petition for transfer of credit upon return to Cornell. If approved, the credit will count as described in the previous paragraph.

Withdrawals

A withdrawal is a permanent severance from the university and from candidacy for the degree. Students planning to withdraw should consult an advising dean. Students not requesting a leave and failing to register for a semester will be withdrawn from the college. The college faculty's Committee on Academic Records may require a student to withdraw because of a highly unsatisfactory academic record, and the college may require a student

to withdraw because of failure to register in a timely fashion.

Transferring within Cornell (Internal Transfer)

Internal transfer from one college or school at Cornell into another is attractive for students whose intellectual interests change (or become more focused). Students who wish to transfer should discuss their eligibility with a counselor in the new school or college.

In some cases, students who want to transfer into the College of Arts and Sciences may transfer directly. In other cases, they may be referred to the Internal Transfer Division. During the semester immediately preceding transfer into the College of Arts and Sciences, students must complete at least 12 credits of courses in the College of Arts and Sciences with a 3.0 average and with no grades of *Incomplete*, S–U grades (unless only S–U grades are offered for that particular course), or grade below C (C– is below C). Satisfying this minimum requirement does not, however, guarantee admission. Admission to the college is based on consideration of the student's entire record at Cornell and the high school record, not just the work of one semester. It is also based on ability to complete the B.A. degree within a reasonable time. Internal transfers are required to spend four semesters in Arts and Sciences and thus should initiate the transfer process no later than the second semester of sophomore year. They also must complete at least 100 credits at Cornell with grades of C (not C–) or above. Interested students should see Dean Ray Kim, 172 Goldwin Smith Hall.

GRADUATION

The Degree

The College of Arts and Sciences grants only one degree (no matter the student's major): the A.B. (or B.A.). A.B. is the abbreviation of the Latin name for the degree, "artium baccalarius," or translated into English, B.A., "Bachelor of Arts."

Application to Graduate

In the first semester of their senior year, students will receive an e-mail instructing them to complete an online application to graduate. The application is intended to help seniors identify problems early enough in the final year to make any necessary changes in course selection to satisfy those requirements. *Nonetheless, meeting graduation requirements is the student's responsibility*; problems that are discovered, even late in the final semester, must be resolved by the student before the degree can be granted. Students are responsible for checking their DUST reports and transcripts and alerting their advising deans of any problems with the academic record.

Degree Dates

There are three degree dates in the year: May, August, and January. Students who plan to graduate in August may attend graduation ceremonies in the preceding May. Students graduating in January are invited to a special recognition ceremony in December; they may also attend graduation ceremonies the following May.

Honors

Bachelor of Arts with Honors

Almost all departments offer honors programs for students who have demonstrated exceptional accomplishment in the major and succeeded in research. The honors programs are described by individual departments. The degree of Bachelor of Arts *cum laude*, *magna cum laude*, or *summa cum laude* will be conferred upon a student who, in addition to having completed the requirements for the degree of Bachelor of Arts, has been recommended for a level of honors by the major department, the Independent Major Program, or the College Scholar Program. Concentrations do not offer honors programs.

Bachelor of Arts with Distinction

The degree of Bachelor of Arts with distinction in all subjects will be conferred on students who have completed the requirements for the degree of Bachelor of Arts, if they have met the following requirements by the end of their final semester:

1. completed at least 60 credits while registered in regular sessions at Cornell;
2. achieved a GPA in the upper 30 percent of their class at the end of the seventh semester, or next-to-last semester for transfers and accelerants;
3. received a grade below C– in no more than one course;
4. received no failing grade;
5. have no frozen Incompletes on their records; and
6. maintained good academic standing, including completing a full schedule of at least 12 credits, in each of their last four semesters. (Students who have been approved to be pro-rated for the final semester in order to complete an honor's thesis are considered to be in good academic standing and therefore eligible to receive distinction.)

CALENDAR SUPPLEMENT

All of the dates in the university calendar at the front of this volume apply to all Cornell students. Listed below are some additional dates that are of importance for students in the College of Arts and Sciences.

	Fall 2009	Spring 2010
Last day for adding courses without petition	Sept. 18	Feb. 15
Last day for adding a first-year writing seminar	Sept. 11	Feb. 5
Last day for changing grade option to S–U or letter	Sept. 18	Feb. 15
First deadline for submitting independent major requests. Go to 55 Goldwin Smith Hall for further information.	Sept. 29	Feb. 23
Last day for dropping courses without petition	Oct. 16	March 15

Last day to petition to withdraw from a course	Nov. 20	April 23
Second deadline for submitting independent major requests. Go to the Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall, for further information.	Nov. 24	April 6
Deadline for requesting internal transfer to the College of Arts and Sciences for the following semester.	Dec. 5	May 1
Deadline for applying to the College Scholar Program.		April 29
Deadline for applying Office, to study abroad	See Cornell Abroad Office, 474 Uris Hall	
Course enrollment (preregistration) for the following semester.	TBA	TBA

Departments, Programs, and Courses

AFRICANA STUDIES AND RESEARCH CENTER

S. Hassan, Director (254-1592); N. Assié-Lumumba, A. Bekerie, C. Boyce Davies, J. Byfield, L. Edmondson, G. Farred, T. Gosa, R. Harris, A. Mazrui, A. Nanji, R. Richardson, J. Turner. Offices: 310 Triphammer Road, 255-4625 or 255-4291.

The Africana Studies and Research Center is concerned with the examination of the history, culture, intellectual development, and social organization of Black people and cultures in the Americas, Africa, and the Caribbean. Its program is structured from an interdisciplinary and comparative perspective and presents a variety of subjects in focal areas of history, literature, social sciences, and African languages. African languages such as Swahili and Yoruba are consistently offered fall and spring semesters and some are also taught during summer/winter session.

The center offers a unique and specialized program of study that leads to an undergraduate degree through the College of Arts and Sciences and a graduate degree, the Master of Professional Studies (African and African-American), through the university's Graduate School.

A student may major in Africana Studies; however, another attractive alternative is the center's minor in Africana Studies. This program enables the student to complete a major in any of the other disciplines represented in the college while at the same time fulfilling requirements for a minor in Africana Studies. This requires only a few more credits than is usually the case when one completes a single major course of study. Courses offered by the center are open to both majors and nonmajors and may be used to meet a number of college distribution requirements, including historical/temporal breadth (#) and geographical breadth (@) requirements, such as first-year writing seminars, languages, expressive arts, humanities, social sciences, and history.

The center also brings distinguished visitors to the campus, sponsors a new Book/Black

Author series, a colloquium series, and houses its own Africana library, the John Henrik Clarke Library.

The Africana Major

The undergraduate major offers interdisciplinary study of the fundamental dimensions of the African American, African, and Caribbean experiences. Because of the comprehensive nature of the program, it is to the students' advantage to declare themselves Africana majors as early as possible. The following are prerequisites for admission to the major.

Students should submit:

1. a statement of why they want to be an Africana Studies major;
2. a tentative outline of the area of study they are considering (African, African American, or Caribbean) for the major; and
3. a full transcript of courses taken and grades received.

The center's director of undergraduate studies will review the applications and notify students within two weeks of the status of their request.

After acceptance as a major in the Africana Center, a student must maintain a C+ cumulative average in the center's courses while completing the major program. The Africana major must complete 36 credits in courses offered by the center, to include the following four core courses: ASRC 2300, 2601, 2602, and 4501. Beyond the core courses, the student must take 8 credits of center courses numbered 2000 or above and 15 credits numbered 3000 or above. The program of an undergraduate major may have a specifically African American or African focus.

The Africana Minor

The center offers minors in Africana Studies. The center's director of undergraduate studies will assist students in the design and coordination of minor programs. For the minor the center will require that at least 16 credits be taken in Africana Studies courses, including ASRC 2602.

Double Majors

In the case of double majors, students undertake to carry the full load of stipulated requirements for a major in each of the two departments they have selected.

[Certificate in African Studies

Not available 2009-2010. In conjunction with the Institute for African Development, the Africana Studies and Research Center administers an undergraduate Certificate in African Studies program. The certificate is available to students in all of the undergraduate colleges at Cornell. Many of the courses in the program might be used to fulfill other course distribution requirements. By pursuing this certificate, students acquire an interdisciplinary understanding of Africa.]

Honors

The honors program offers students the opportunity to complete a library research thesis, a field project in conjunction with a report on the field experience, or a project or experiment designed by the student. The requirements for admission to the honors program for all students—regular majors, joint majors, and double majors—are a B– cumulative average in all courses and a B+ cumulative average in the center's courses. Each student accepted into the honors program will have an honors faculty committee consisting of the student's advisor and one additional faculty member, which is responsible for final evaluation of the student's work. The honors committee must approve the thesis or project before May 1 of the student's junior year. The completed thesis or project should be filed with the student's faculty committee by May 10 of the senior year.

Language Requirement

Courses in Swahili, Arabic, Yoruba, and Zulu may be used to satisfy the College of Arts and Sciences language requirement. In Swahili, successful completion of ASRC 2100 satisfies Option 1. For Yoruba, successful completion of ASRC 2103 satisfies Option 1. For Arabic, ASRC 2101 or ASRC 3101 satisfy Option 1. For Zulu, ASRC 2104 satisfies Option 1. ASRC majors are not required to take an African language, but the center recommends the study of an African language to complete the language requirement.

First-Year Writing Seminars

See John S. Knight Institute brochure for times, instructor, and descriptions.

ASRC 1100 Elementary Swahili I

Fall, winter, summer. 4 credits. Language lab times TBA. A. Nanji.

Beginner's Swahili. Part 1—Grammar for speaking, reading, and writing. Requires no knowledge of language. Swahili is spoken in the East and Central parts of Africa.

ASRC 1101 Elementary Swahili II

Spring, summer, winter. 4 credits.

Prerequisite: ASRC 1100. A. Nanji.

Continued study of the basic grammatical formation of the language and the introduction of reading material ranging from songs to short stories. A great many drills are used in this course to help develop the student's comprehension of the language. Swahili tapes are used during all of these sequences.

ASRC 1102 Intermediate Swahili I

Fall. 4 credits. Prerequisites: ASRC 1100 and 1101. A. Nanji.

Advanced study in reading and composition.

ASRC 1104/1105 Elementary Arabic I and II (also NES 1201/1202)

Fall, spring, summer. 4 credits. M. Younes. For description, see NES 1201/1202.

ASRC 1106/2101 Intermediate Arabic I and II (also NES 1203/2200)

Fall, spring, summer. 4 credits. ASRC 2101 @ satisfies Option 1. M. Younes.

For description, see NES 1203/2200.

ASRC 1108/1109 Introduction to Yoruba I and II

Fall/spring. 4 credits. A. Ademoyo.

A two-semester beginner's course in Yoruba Language and Culture. Organized to offer Yoruba language skills and proficiency in speaking, reading, listening, writing, and translation. Focus is placed on familiar informal and formal contexts, e.g., home, school, work, family, social situations, politics, etc. Course uses Yoruba oral literature, proverbs, rhetoric, songs, popular videos, and theatre, as learning tools for class comprehension. First semester focuses on conversation, speaking and listening. Second semester focuses on writing, translation and grammatical formation. Through the language course students gain basic background for the study of an African culture, arts, and history both in the continent and in the diaspora. Yoruba language is widely spoken along the west coast of Africa and in some African communities in diaspora. Yoruba video culture, theatre, music, and arts have strong influence along the west coast and in the diaspora.

ASRC 1110 Intermediate Yoruba I

Fall. 4 credits. Prerequisite: ASRC 1109.

A. Ademoyo.

The intermediate course extends the development of the main language skills, reading, writing, listening, and conversation. The course deepens the development of correct native pronunciation, the accuracy of grammatical and syntactic structures; and the idiomatic nuances of the language. Students who take the course are able to (i) prepare, illustrate and present Yoruba texts such as poems, folktales, advertisements, compositions, letters, (ii) read Yoruba literature of average complexity, (iii) interpret Yoruba visual texts of average difficulty, (iv) comprehend Yoruba oral literature and philosophy—within the context of African oral literature and philosophy—of basic complexity. Through the Yoruba language students appreciate African oral literature and philosophy. The primary textual media are Yoruba short stories, poems, short plays, films, songs, and newspapers.

ASRC 1114/1115 Elementary Zulu I and II

Fall, spring. 4 credits. S. Mkhonza.

Zulu, known by native speakers as IsiZulu, is one of the 11 official languages of South Africa. Out of the four Nguni languages (Zulu, Xhosa, Swati, and Ndebele), Zulu is the most widely spoken. The advantage of learning IsiZulu is that it forms the basis for understanding the other Nguni languages. This is a two-semester elementary course which introduces students to the basic structures of the language which are applied to rapidly develop the primary speaking, reading, and writing skills of the Zulus. The class will also explore traditional and contemporary cultures of the Zulu people.

ASRC 1116 Intermediate Zulu I

Spring. 4 credits. Prerequisite: ASRC 1115. S. Mkhonza.

The course will help students to expand their understanding of the Zulu language through the communicative approach. We will focus on the four skills, speaking, listening, reading and writing. Intermediate work focuses on reading and speaking spontaneously. We will introduce composing in Zulu more reading.

ASRC 1300 Africa: The Continent and Its People @ (HA-AS)

Fall. 3 credits. L. Edmondson.

Introductory interdisciplinary course focusing on Africa's geographical, ecological, and demographic characteristics; indigenous institutions and values; the triple cultural heritage of Africinity, Islam, and Western civilization; main historical developments and transitions; and contemporary political, economic, social, and cultural change. Africa's ties with the United States (from trans-Atlantic slavery to the present), its impact on the emerging world order, and its contribution to world civilization are also explored.

ASRC 1600 Black Families and the Socialization of Black Children (SBA-AS)

Fall. 3 credits. T. Gosa.

This course explores the historic and contemporary dynamics of the African American family in U.S. society. We will begin our work by focusing on the socio-historical, -political, and -cultural contexts of black family formations and functions in the African Diaspora. Students will be challenged to consider the continuation of African heritage in black family organization. We will review Afrocentric, feminist, and sociological frameworks for understanding black families. The course proceeds to consider more contemporary topics including gender roles, divorce and marriage dissolution, sexuality and love, mate selection, parenting and fatherhood, and the well-being of black children. We will pay special attention to how black families are (re)imagined in popular culture, including representations in the news, film and television, and music.

ASRC 1900 Research Strategies in Africana and Latino Studies (also LSP 1101)

Spring. 1 credit. E. Acree and T. Cosgrave. For description, see LSP 1101.

ASRC 2100 Swahili Literature @ (LA-AS)Spring. 4 credits. *Satisfies Option 1.*

Prerequisite: ASRC 1102. A. Nanji.

Students gain mastery over spoken Swahili and are introduced to the predominant Swahili literary forms.

ASRC 2103 Intermediate Yoruba II @Spring. 4 credits. *Satisfies Option 1.*

Prerequisite: ASRC 1110. A. Ademoyo.

The Intermediate Yoruba II is a follow-up to Intermediate Yoruba I. It is a fourth semester Yoruba Language course. The course assists students to acquire advanced level proficiency in reading, speaking, writing and listening in Yoruba language. Students are introduced to grammatical and syntactic structures in the language that will assist them in describing, presenting, and narrating information in the basic tenses. At the end of the course, students will be able to listen to, process and understand programs produced for native speakers in media such as television, radio, films etc. They will be able to read and understand short stories, novels, plays written for native speakers of the language.

ASRC 2106 Intro to Quranic Arabic (also NES/RELST 2204) @ (LA-AS)

Spring. 4 credits. M. Younes.

For description, see NES 2204.

ASRC 2300 African Cultures and Civilizations # @ (CA-AS)

Spring, summer. 3 credits. A. Bekerie.

Concerned with the peoples of Africa and the development of African cultures and civilizations from the earliest times to the present day. Focuses on the near modern civilizations of Africa south of the Sahara, and the ancient civilizations of Egypt and the Nile Valley, together with their contributions to the development of the major world civilizations. Also deals with the sociopolitical organization of African societies, their kinship systems, cross-cutting ties, rites of passage, gender relations, and arts (including music, dance, folklore, architecture, sculpture, painting, and body decoration).

ASRC 2304 African Encounters with Colon (also HIST 2540) @ (HA-AS)

Spring. 4 credits. D. Magaziner.

For description, see HIST 2540.

ASRC 2306 The Past and Present of Precolonial Africa (also HIST 2550) @ (HA-AS)

Spring. 4 credits. S. Greene.

For description, see HIST 2550.

ASRC 2307 The White Image in the Black Mind (also HIST 2412) @ (HA-AS)

Fall. 4 credits. S. Greene.

For description, see HIST 2412.

ASRC 2308 Caribbean History (also HIST 2308) (HA-AS)

Fall. 3 credits. J. Byfield.

This course provides an historical overview of the Caribbean beginning with a brief examination of indigenous society and the impact of European colonization. Most of our attention will focus on the development of the plantation economy, slavery, post-emancipation and post-colonial society. Readings pay particular attention to the ways in which race, gender, and ethnicity shape the histories of the peoples of the region. The course uses a pan-Caribbean approach by focusing on three islands—Cuba, Haiti, Jamaica—that belonged to competing empires. Although their histories are shaped in distinct ways by their former metropolises, they share certain common features. Therefore, we examine the differences and similarities of their histories as they evolved from plantation based colonies to independent nations.

ASRC 2309 Reading and Writing the African Diaspora (also HIST 2461) @ (HA-AS)

Spring. 4 credits. D. Magaziner.

For description, see HIST 2461.

ASRC 2505 Literature, Sports, and Ideology (also ENGL 2751) (LA-AS)

Fall. 3 credits. G. Farred.

This course will explore the relations amongst sport, literature, and ideology. Reading texts from a variety of genres, novels, "memoirs," social histories (that are also love letters to a particular team), and some forms that refuse easy categorization, this course seeks to understand the very distinct, and often hard to define exactly, that sport "performs" in literature. From Don DeLillo's *Underworld* to Eduardo Galeano's beautiful, cryptic contemplation on football (*Soccer in Sun and Shadow*) to CLR James' magisterial work on cricket (*Beyond a Boundary*), this course will engage writings on sport from all over the world. Sport, the premise is here, opens the reader up to the world in a way that no other literary pursuit does.

ASRC 2601 Afro-American Social and Political Thought (SBA-AS)

Spring. 3 credits. J. Turner.

This is an introductory course that reviews and analyzes the major theoretical and ideological formulations developed and espoused by African-Americans in the struggle for liberation. We focus specifically on the political philosophy and historical significance of Malcolm X, and the work and movement of Marcus Garvey, as the prime movers of nationalism and pan-Africanism among Black people in this century. Such themes as slave resistance, nationalism, Pan-Africanism, emigration, anti-imperialism, socialism and internal colonialism, and the political and social views of Black women are discussed. Black political thought is viewed in its development as responses to concrete conditions of oppression and expression.

ASRC 2602 The Sociology of the African-American Experience (SBA-AS)

Fall. 3 credits. J. Turner.

This is an introductory course to the field of Africana Studies. It assumes a historical/sociological approach to the examination of the African-American experience. The course surveys the African beginnings of humankind and the classical role of Black people in world civilization and the making of early culture. The course treats issues in the humanities, social sciences, and history. The course is required for all undergraduate students majoring at the Africana Center.

ASRC 3100/3101 Advanced Intermediate Arabic I and II (also NES 3201/3202) @Fall/spring. 4 credits. *ASRC 3100 satisfies Option 1.* M. Younes.

For description, see NES 3201/3202.

ASRC 3200 Politics of Global Africa (also ASRC 6200) @ (SBA-AS)

Fall. 4 credits. A. Mazruu.

This course will combine the study of Africa with the study of two Diasporas. The Diaspora of Enslavement concerns enslaved Africans and descendants of slaves in both the Western and Eastern Diaspora. The Diaspora of Colonization concerns demographic dispersal as a result of colonialism. African Americans are part of the Diaspora of Enslavement. Algerian immigrants into France are part of the Diaspora of Colonization. Jamaicans and Trinidadians in Briton are a double-Diaspora—products of both enslavement and colonialism. This course will also examine the debate about whether the African peoples are owed reparations by either the West of the Arabs or both. This course will address the following areas of comparative Black experience: the politics of race, gender, religion, liberation, language, civil rights and postcoloniality.

ASRC 3205 Thinking Black Intellectuals

Spring. 4 credits. G. Farred.

"Thinking Black Intellectuals" departs from the premise that there is always, in one form or another, a "crisis"—or, a question about the "role" of the intellectual. However, in the conception of this course, the intention is not to address this issue. Instead, the course seeks to "demonstrate" the act of, properly speaking, Black intellectual thinking. By reading a series of texts, from Black scholars in philosophy such as Valentin Mudimbe to the renowned African-American theologian and preacher, Gardner C. Taylor, from the artistic oeuvre of Fela Kuti to the interventionist work of Angela Davis, this course will engage the thought of Black intellectuals. What, the guiding question

will be, does it mean to think, specifically, or not, as a Black intellectual?

ASRC 3300 African History: Earliest Times to 1800 @# (HA-AS)

Fall. 3 credits. *May be used for history requirement; satisfies geographical and historical breadth requirement.*

A. Bekerie.

As the second largest continent with vast and varying geographical and sociocultural conditions combined with recently established fact as an original home of human species, Africa provides a rich and diverse oral and written early history. The course covers some of the major historical signposts from the origins of human species to 1800. Among the topics for discussion are: Physical and Economic Geography of Africa, the Cradle of Humankind, the Peopling of Africa, Historical Perspectives and Sources, the Nile River Cultural Complex, Berber, Carthage and Maghreb of North Africa, Upper Guinea and Western Sudan of West Africa, cities of the East African Coast, and Great Zimbabwe and other sites of Southern Africa.

ASRC 3302 West Africa and West: 1450-1850 (also HIST 3650) @ # (HA-AS)

Fall. 3 credits. S. Greene.

For description, see HIST 3650.

ASRC 3303 History and Popular Culture in Africa (also ARTH/HIST 3303)

Spring. 4 credits. J. Byfield.

Although African societies are often presented as suspended in "traditional" culture, visitors to the continent are acutely aware of the dynamic popular culture that exists. This course uses a multidisciplinary approach to explore the complex relationship between history and popular culture in several African countries. Examining old as well as new forms of popular culture, we will explore the ways in which artists, writers, filmmakers, and musicians use moments of great historical significance or key historical actors as a point of departure for critique and reflection on the present. Examples will be taken from eastern, western, and southern Africa.

ASRC 3304 African American History: B. T. Washington to B. Obama

Spring. 4 credits. R. Harris, Jr.

This course will examine the changing contours of the African American past from the post-Reconstruction period to the present. W.E.B. Du Bois in *The Souls of Black Folk* evoked the need to study Black America from the inside out and in relation to the trajectory of American history. This course will seek to understand the challenges, triumphs and tragedies, of African Americans in the quest for racial equality in the United States. It will consider, against the backdrop of the past, the extent to which the election of a Black President of the United States has signaled the end of Black history and the arrival of a post-racial America.

ASRC 3500 African American Art (also ARTH 3500) (LA-AS)

Fall. 3 credits. C. Finley.

For description, see ARTH 3500.

[ASRC 3510 Caribbean Literature (also ENGL/FGSS 3510) (LA-AS)]

Fall. 4 credits. Next offered 2010-2011.

C. Boyce Davies.

This course examines representative literature of the Caribbean, including work by Caribbean women writers. We will examine the writings of Caribbean communities abroad

as we broaden the meanings of what is Caribbean. Traditional and contemporary oral/folk/urban forms of creative expression and film expression will be features of our ongoing analysis. We will pursue some of the themes that have been current in Caribbean literature and the particular relationships of Caribbean literature to the construction of American and/or English literatures and the definitions of Caribbeaness. Our sub-theme focuses on the discourses of migration that have garnered substantial attention in recent years and is a fundamental feature of the construction of Caribbean identities and literatures.]

ASRC 3604 U.S. Education, Oppression, Resistance

Spring. 4 credits. T. Gosa.

Despite salient reductions in educational inequality over the past 30 years, the academic underachievement of Black, Latino/a, and Native American youth remains one of the most researched, yet stubborn social problems in American society. The goal of this course is to explore issues of race and ethnicity in American education. Students will be asked to consider the ways in which schools foster poor academic performance and devalue minority youth's cultural and ethnic identities. Topics include school and residential segregation, academic tracking, language isolation, teacher quality, pedagogy and curriculum, and family/peer group influences. We will pay special attention to how students resist unfair schooling conditions and persist against the odds. The course will conclude with the limits and possibilities for school reform.

[ASRC 4200 Afrocentricity: Paradigm and Critical Readings @ (CA-AS)]

Fall. 4 credits. Next offered 2010-2011.

A. Bekerie.

What is Afrocentricity? It is a theoretical framework designed to study and interpret the histories and cultures of peoples of Africa and African descent by locating them at the center of their experiences. In other words, it is a method of knowing the life experiences of African peoples from the inside out. The course examines—through the writings of Asante, Keto, Clarke, Jean, Myers, Amin, Mazrui, Gates, Appiah, Richards, Schlesinger, and Thiongo—the conception and depth of the paradigm, its relevance in the production and utilization of knowledge, particularly emancipatory knowledge, the history of the paradigm, and the debate it generates among a wide range of thinkers and scholars.]

ASRC 4201 Islam in Africa and Its Diaspora (also ASRC 6206, DSOC 4360/6630, NES 4501) (CA-AS)

Spring. 4 credits. A. Mazrui.

It has been estimated that one-third of the Muslim population of the world is in Africa and the African Diaspora. This course addresses the historical dimension of Islam in the Black experience examining Global Africa as a whole. Within the African continent, Islam is part of the triple religious heritage, which includes rivalry with Christianity and co-existence with African indigenous religions. In the Americas, Islam is up against Western secularism and Christianity. We are concerned with how Islam has affected the politics and cultures of the African peoples worldwide, issue of slavery and Islam, and the interaction between Islam and contemporary ideologies of socialism, nationalism and race consciousness in the Black experience.

ASRC 4300 African American Politics (also ASRC 6301) (HA-AS)

Fall. 4 credits. J. Turner.

The central thesis of African-American politics has been its movements for political change and democratic access and human rights. This development since the 17th century is a complex political legacy. This course conducts a close study of African-American political practice and theoretical analysis of the American political system. Implications of the political systems for prospects and limitations to participation by Black people are analyzed. Critical historical stages in the process of Black politics are examined. The development of electoral offices in federal and statewide politics in critical industrial centers, as well as rural hamlets, center the course. Presidential politics—the Jesse Jackson campaigns—and new political formations including Black Republicans/conservatives constitute the emphasis on contemporary events. The course reviews the development of the literature in African-American politics.

ASRC 4301 African American History: Black Leaders and Movements

Spring. 4 credits. R. Harris, Jr.

From rebellions aboard slave ships through the quest for black self-determination, African Americans have sought to define freedom, justice, and equality for themselves and in the process have challenged the universality of the American Creed. This course will examine the dynamics of leadership, types of leaders, and the major movements that have emerged among African Americans from the early 17th century to the present. The relationship between leaders and followers, balance between ends and means, and measures of success and failure will be major concerns of the course.

ASRC 4302 Nile Valley Civilization: Ethiopia, Nubia, and Egypt @ (HA-AS)

Spring. 4 credits. A. Bekerie.

Focuses on Nile Valley civilizations and their contributions to African and world history. Since natural and human resources provide the foundation for civilizations, the course also examines the ecological and cultural compositions of the river. Concentrates on the Aksumite civilization of Ethiopia, Nubian civilizations of the Sudan, and the Kemetic civilizations of Egypt. Uses archaeological, literary, oral, biological, and religious sources to study civilization centers along the Nile. Students discuss civilizations as artifacts that have material, spiritual, social, and philosophical dimensions. Students are introduced to the Ethiopic writing system as a practical lesson in the conception and understanding of aspects of African civilizations.

ASRC 4305 African Environmental History (also HIST 4271) @ (HA-AS)

Fall. 4 credits. D. Magaziner.

For description, see HIST 4271.

ASRC 4306 To Be Enslaved Then and Now (also HIST 4421) # (HA-AS)

Spring. 4 credits. S. Greene.

For description, see HIST 4421.

ASRC 4502 African Cinema (also ARTH 4578) @ (LA-AS)

Fall. 4 credits. S. Hassan.

This course offers an overview of African cinema and filmmaking. It surveys historically the evolution of African cinema from its early days to the present. Through screening of

selected African films, different trends within African cinema will be explored, such as "Return to the Sources" and the rediscovery of the pre-colonial past; the "Social Realist" narrative and critique of post-independence Africa; reconstructing the story of colonialism from the perspective of the colonized; and the entertainment genre. Techniques, styles, and aesthetics of African cinema will also be discussed. The course offers a unique opportunity of looking at African culture and society, and at issues of social change, gender, class, tradition, and modernization through African eyes.

[ASRC 4504 Exhibiting Cultures (also ARTH 4508) (CA-AS)]

Fall. 4 credits. Next offered 2010–2011. C. Finley.]

ASRC 4508 The Harlem Renaissance (also ENGL 4508) (LA-AS)

Fall. 4 credits. R. Richardson.

In this course, we will examine the Harlem Renaissance, including works by James Weldon Johnson, Jean Toomer, Nella Larsen, Langston Hughes, Countee Cullen, George Schuyler, Wallace Thurman, and Zora Neale Hurston. The Harlem Renaissance occurred during the 1920s in the wake of the Great Migration to the urban North. It encompassed a range of other art forms and media beyond literature, such as painting, photography, and music and coincided with the "Jazz Age." We will consider the rise of Josephine Baker as a phenomenon in Paris. We will consider overlapping literary movements that also shaped the Harlem Renaissance profoundly, from modernism to Negritude (i.e., in France and the Caribbean). Additionally, we will explore the work of noted photographers, artists and musicians of the period.

ASRC 4509 Toni Morrison's Novels (also ASRC 6513, ENGL 4509)

Spring. 4 credits. R. Richardson.

The course will focus on reading novels by Toni Morrison, including *The Bluest Eye*, *Sula* (1973), *Song of Solomon* (1977), *Beloved* (1987), *Jazz* (1992), *Paradise* (1998), *Love* (2003), and *A Mercy* (2008). The presentation of her novels in trilogy form and her contributions to the genre of historical writing will be given some consideration. We will explore the author's stylistic innovation and expansion of this genre. We will consider topics such as how to read novels critically. We will pursue our study with attention to major public works of Morrison, from her art project as a curator at the Louvre to the Toni Morrison Society's "Bench by the Road" project and its 2008 conference in Charleston, South Carolina and upcoming Paris meeting in summer 2010.

ASRC 4600 Politics and Social Change in the Caribbean @ (SBA-AS)

Fall. 4 credits. L. Edmondson.

Study of the historical, geostrategic, political, economic, and social (including racial and cultural) forces affecting the domestic and international experiences of Caribbean societies.

[ASRC 4601 Education Innovation in Africa and the Diaspora (also EDUC 4590) @ (SBA-AS)]

Fall. 4 credits. Next offered 2010–2011. N. Assié-Lumumba.

This course deals with educational innovations geared to promoting equal opportunity based on gender, race and class, in Africa and the African Diaspora.]

ASRC 4602 Women and Gender Issues in Africa @ (SBA-AS)

Spring. 4 credits. N. Assié-Lumumba.

There are two contrasting views of the status and role of women in Africa. One view portrays African women as dominated and exploited by men. According to another view women have a favorable social position in Africa; indigenous ideologies consider women to be the foundation of society, they are economically active and independent and they have an identity independent of men. In this seminar we discuss the status and role of women in Africa historically as well as in the contemporary period. Topics include women in nonwesternized/precolonial societies; the impact of colonial policies on the status of women; gender and access to schooling, participation in the economy and politics; women and the law; women and health issues; gender issues in southern Africa; womanism and feminism; the United Nations Decade of Women; and the four World Conferences on Women (Mexico 1975, Copenhagen 1986, Nairobi 1985, and Beijing 1995).

ASRC 4603 Politics and Social Change in Southern Africa @ (SBA-AS)

Spring. 4 credits. L. Edmondson.

Focuses on the legacies of apartheid and the challenges of transformation toward a post-apartheid society in South Africa. Topics include the rise and decline of apartheid; the historical continuity of Black resistance against racism; women under, against, and after apartheid; South Africa's relations with its neighbors; geo-political, economic, and racial dimensions of the American connection; politics of negotiation and transition to majority rule; prospects for stability, democracy, and equality; and South Africa's new role in the African continental and global arenas. Instructor's lectures are supplemented by films and class discussions.

ASRC 4605 Public Policy and the African-American Urban Community (SBA-AS)

Spring. 4 credits. J. Turner.

The socioeconomic conditions of the African-American urban community are the central focus of the course. Community development models are explored in relationship to the social needs of the African-American population. The changing configuration of internal organization of the African American community nationally is examined.

[ASRC 4606 The Family and Society In Africa (also SOC 4780) @ (SBA-AS)]

Fall, summer. 4 credits. Next offered 2010–2011. N. Assié-Lumumba.

Concepts of the nuclear and extended family, the roles, rights and obligations of different age groups and generations; and marriage and its related issues.]

ASRC 4607 African Port Cities: Empire Building at the Crossroads (also ARTH/SHUM 4825)

Fall. 4 credits. P. Meier.

For description, see SHUM 4825.

ASRC 4900–4901 Honors Thesis

4900, fall; 4901, spring. Prerequisite: permission of ASRC director of undergraduate studies. Africana Center faculty.

For senior Africana Studies majors working on honors theses, with selected reading, research projects, etc., under the supervision of a

member of the Africana Studies and Research Center faculty.

ASRC 4902–4903 Independent Study

4902, fall; 4903, spring. Africana Studies faculty.

For students working on special topics, with selected reading, research projects, etc., under the supervision of a member of the Africana Studies and Research Center faculty.

ASRC 4933 Abolitionist Circuits (also ENGL 4073, HIST/SHUM 4933)

Spring. 4 credits. M. Schoolman.

For description, see SHUM 4933.

ASRC 6200 Politics of Global Africa (also ASRC 3200)

Fall. 4 credits. A. Mazrui.

For description, see ASRC 3200.

ASRC 6206 Islam in Africa and Its Diaspora (also ASRC 4201, DSOC 4360/6630, NES 6710)

Spring. 4 credits. A. Mazrui.

For description, see ASRC 4201.

ASRC 6207 Black Feminist Theories (also ENGL/FGSS 6207, COML 6465)

Fall. 4 credits. C. Boyce Davies.

This course examines black feminist theories, paying particular emphasis on the cross-cultural experiences of women as expressed both theoretically and creatively. It follows the chronologies and variations of modern black feminisms, beginning with the U.S. articulations and moving toward how particular feminist positions are constructed and theorized in other locations across the African diaspora such as Black British feminism, Caribbean feminism, African feminism. Thus we will explore the various theories and texts within their sociopolitical and geographical frames and locations, analyzing these as appropriate against or in relation to a range of feminist activism and movements.

ASRC 6301 African American Politics (also ASRC 4300)

Fall. 4 credits. J. Turner.

For description, see ASRC 4300.

ASRC 6304 Marriage and Divorce in the African Context (also FGSS 6304)

Fall. 4 credits. J. Byfield.

Marriage was the widely expected norm within African societies. The institution was an important marker of adulthood, linking individuals and lineages in a network of mutual cooperation and support. Marriage practices and their concomitant gender expectations varied significantly between societies, and over time. As a result, marriage and divorce are especially rich terrain for exploring social history, women's agency, discursive constructions of "woman," masculinity, and gender relations of power. This course explores some of the newest scholarship on marriage by Africanist scholars. The readings demonstrate the wide cultural variety in marriage as well as the dynamic relationship between marriage and historical change. They especially highlight women's roles and expectations in marriage, masculinity and the ways men and women negotiated the rules and boundaries of marriage.

ASRC 6305 Dress, Cloth, and Identity: Africa and the Diaspora (also ARTH 6305)

Spring. 4 credits. J. Byfield.

This course uses a multidisciplinary approach to examine the importance of textiles in African social and economic history. It combines art history, anthropology, social and economic history to explore the role of textiles in marking status, gender, political authority and ethnicity. In addition, we examine the production and distribution of indigenous cloth and the consequences of colonial rule on African textile industries. Our analysis also considers the principles of African dress and clothing that shaped the African diaspora in the Americas as well as the more recent popularity and use of African fabrics and dress in the United States.

ASRC 6400 Africana Thought (also ENGL 6401)

Fall. 4 credits. G. Farred.

What kind of thinking is being and has been produced, historically by figures in Africana philosophy? Intention of course is not—though that may a collateral effect—to argue against those who naysay the existence of Africana philosophy nor is it to “define” the field, as if such a project were even possible. “Africana Thought” will, instead, seek to engage those thinkers who produce this philosophy. The readings will run from the “Confessions” of St. Augustine through Alexander Crummell’s musings to Valentin Mudimbe’s “The Invention of Africa,” from intense reflections on the condition of black subjugation that is Frantz Fanon’s writing to locating Jacques Derrida as a philosopher of the Maghreb. Course about Africana philosophy as a project that persistently questions itself.

ASRC 6401 The Politics of Theory (also ENGL 6402, FREN 6401)

Spring. 4 credits. G. Farred.

There is an old and hoary chestnut that pits theory against politics, presuming, arguing, that theory is not, has no, politics. This course is not designed to either rebut or ignore that antagonism. Instead, the intent here is simply to read a range of theorists, from John Stuart Mill (“On Liberty”) to Alain Badiou, to think how the politics of theory and the theory of politics. Badiou, Mill, Carl Schmitt and Jacques Ranciere, never shy away from their sense of the political. If anything, this course will delight in how unreflectively these thinkers take the matter of politics. In fact, and here Schmitt is crucial, at issue will be: how could we not think our politics theoretically?

ASRC 6506 African Aesthetics (also ARTH 5571)

Spring. 4 credits. S. Hassan.

The goal of this course is to investigate in depth the principles of aesthetics and philosophy of African visual arts. The course offers a critical survey of the different writings and the growing body of research on this relatively new area of inquiry. The objectives of the course are to review how African aesthetics have been studied to date, to provide a critical analysis of the different approaches to the subject and related issues, and to suggest future directions of research. In-depth analysis of particular African societies is used to examine the relationship of arts and aesthetics to indigenous concept of time, space, color, form, and sociopolitical order. In addition, issues related to African aesthetics and arts such as style, gender, class, and social change are also explored.

ASRC 6513 Toni Morrison’s Novels (also ASRC 4509)

Spring. 4 credits. R. Richardson.

For description, see ASRC 4509.

ASRC 6600 Education and Development in Africa

Spring. 4 credits. N. Assié-Lumumba.

Human capital theory establishes a positive and linear relationship between formal education and individual productivity and socioeconomic attainment and economic growth and development of nations. While enjoying considerable popularity in industrial and developing countries, including African countries, education has also been perceived as a hindrance to development. The concept of human capital and paradigms of development including modernization, dependency, and Third World Forum are first introduced. Specific issues discussed include schooling and nonformal education; the role of primary, secondary, and higher education in development; and language, access, output, and outcome based on social class, ethnicity, race, and gender. Employment, migration and international brain drain, the information and communication technologies, indigenous knowledge systems, and the role of higher education in regional and international cooperation are also examined.

ASRC 6606 Politics of the Hip-Hop Generation

Spring. 4 credits. T. Gosa.

This graduate seminar investigates the political dynamics of the hip-hop generation. The primary focus of this course will be the major political and economic forces that have shaped the worldview of Black and Latino/a youth born between 1965 and 1984. Students will critically address major topics surrounding hip-hop including race-ethnicity, gender and sexuality, social class, segregation/mass-incarceration, politics, and education. After reviewing the socio-historical development of hip-hop, we will examine the role of hip-hop in modern black politics and activism, including its significance for mobilizing youth. Special attention will be given to the generational gap between the hip-hop generations and the Civil-Rights/Black Power parents.

ASRC 6900-6901 Independent Study

6900, fall; 6901, spring. Variable credit.

Prerequisite: graduate standing. Africana Studies faculty.

ASRC 6902-6903 Africana Studies Graduate Seminar

6902, fall; 6903, spring. 4 credits. Africana Studies faculty.

Designed for first-year ASRC graduate students. The seminar is coordinated and supervised by one professor but team-taught by three or four faculty members per semester. Each participating faculty member is responsible for a topical segment of the course related to her or his areas of specialization or an area of interest pertaining to theory and methodology of Africana Studies.

ASRC 8900-8901 Thesis

8900, fall; 8901, spring. Prerequisite: ASRC graduate students. Africana Studies faculty.

AMERICAN STUDIES

M. C. Garcia, acting director; G. Altschuler, E. Baptist, R. Bensel, M. P. Brady, D. Chang, E. Cheyfitz, J. Cowie, J. Frank, J. E. Gainer, M. C. Garcia, F. Gleach, S. Haenni, A. Hammer, R. Harris, M. Jones-Correa, K. Jordan, K. Kassam, M. Katzenstein, J. Kirschner, R. Kline, I. Krannick, C. Lai, F. Logevall, T. J. Lowi, B. Maxwell, K. McCullough, L. L. Meixner, R. Mize, R. L. Moore, V. Nee, M. B. Norton, J. Parmenter, R. Polenberg, S. Pond, A. Sachs, N. Salvatore, S. Samuels, M. E. Sanders, V. Santiago-Irizarry, M. Shefter, A. M. Smith, S. Villenas, M. Washington, S. Wong, M. Woods, D. Woubshet. Affiliated faculty: J. E. Bernstock, M. Hatch, J. Jennings, J. Peraino, P. Sawyer. Emeritus: S. Blumin, J. Brumberg, M. Kammen, D. E. McCall, J. Silbey

The Major

The major in American Studies, appropriate for a wide array of future professions, began as a program of coordinated study in the history, literature, and politics of the United States. These remain the core elements, but American Studies aims to be inclusive in its subject matter. Given the nation’s diverse population and cultures, the program wants its majors to examine American experience in broad terms, drawing on the materials and methods of a variety of disciplines.

Students who contemplate becoming American Studies majors are encouraged to speak with the program director as early as possible to arrange for a major advisor.

All students majoring in American Studies must take a minimum of 12 courses selected from the American Studies roster, completing them with a grade of C or better. No more than six of these courses can come from any one discipline. Of the 12 courses at least three must have a substantial focus on material before 1900, at least two must deal with American diversity (AMST 1109 and 1110 are especially recommended), and at least one must be a 4000-level seminar, either one of the American Studies 4300 course range (4300-4399) or an appropriate substitute seminar at the 4000 level (AMST 4997/4998, taught in Washington, D.C., does not fulfill the seminar requirement though it counts as one course toward the major). Note: A single course may satisfy more than one of these requirements: e.g., a course on Native Americans in the 1800s is both a course dealing substantially with pre-1900 material and one dealing with American diversity.

Although a good bit of freedom is encouraged in the selection of courses, American Studies majors, in consultation with their advisor, must define an area of concentration and complete six courses in that area. The area of concentration can be designed to fit the particular interests of a student, but it must include subjects in at least two disciplines. Possible areas of concentration include “visual studies,” “cultural studies,” “race and ethnicity,” “legal and Constitutional studies,” “American institutions,” “class and social structure,” “the American environment.” (Courses taken to satisfy the concentration may be used to fulfill other requirements for the major.)

Students may find courses relevant to American experience that they wish to take but that are not on the American Studies course list. With their advisor’s approval,

students may count two such courses toward fulfilling the major.

Honors

Candidates for honors must maintain an average of B+ in courses pertinent to the major and have taken at least one course in which they wrote a research paper. Normally, at the end of the junior year students who wish to write a senior honors essay must approach a member of the American Studies faculty and discuss their ideas for a project. With approval from the faculty member students may then register in the fall of their senior year for AMST 4993, the honors essay tutorial. At the end of the fall semester, honors candidates meet with their advisor and a second member of the American Studies faculty to discuss their progress. If satisfactory, honors students complete their honors essays in the spring by enrolling in AMST 4994.

Category Key: Courses in American Studies are broken into different categories. To determine which category (ies) a course falls in, please note the reference at the end of each course description. The key is as follows: ASE = Anthropology, Sociology, and Economics, LT = Literature and Theatre Arts, GP = Government and Public Policy, HI = History, MV = Music and Visual Studies, HR = Honors, Reading and Research.

American Studies 4300 Seminars

AMST 4300 The Milman Seminar

Fall. 4 credits. Prerequisite: permission of instructor. G. C. Altschuler.

The Milman Seminar: Baseball in American Culture. Through a reading of fiction and nonfiction, we examine the role of baseball as it has shaped and reflected the attitudes and values of Americans. Novels assigned in the course include Bernard Malamud, *The Natural*; Mark Harris, *Bang the Drums Slowly*; Philip Roth, *The Great American Novel*; and Robert Coover, *The Universal Baseball Association*. Nonfiction works may include Neil Lanctot, *Negro League Baseball*, Roger Kahn, *The Boys of Summer*, and Andrew Zimbalist, *Baseball and Billions*. Each student in the course writes a 25- to 35-page research paper. (HI)

AMST 4301 The Rabinor Seminar (also ENGL 4301)

Spring. 4 credits. Prerequisite: permission of instructor. M. P. Brady.

The Rabinor Seminar explores the role of diversity in the formation of a distinct American tapestry. The specific topic varies each year, but the general subject is the promise and experience of pluralism. Topic for spring 2010: Queering Latinidad. This course will examine queer Latina and Latino literature, film, and art. Beginning with John Rechy's stunning novel about sex work, *City of Dreams*, and continuing with the theoretical and literary transformations wrought by Cherrie Moraga and Gloria Anzaldúa, this course explores the relationship between sex, desire, revolution, and belonging in the work of Luz Marie Umpierre, Rafael Campos, Luis Alfaro, Marga Gomez, Laura Aguilar, Frances Negron-Mutaner, and many others. We will also take up the theoretical terrain outlined by Jose Munoz, Maja Horn, and Yvonne Yarbro-Bejaranno. This course will entail extensive reading and two longer papers. (LT)

AMST 4303 Literature as History: The Americas (also ENGL 4303)

Fall. 4 credits. B. Maxwell.

Beginning with William Carlos Williams's *In the American Grain* (1925), this course will consider modernist innovations in the telling of history by literary means. Responding to what they felt as the "deadness" of conventional historiography, writers such as Williams, Charles Reznikoff, John Sanford, Muriel Rukeyser, Melvin Tolson, and Paul Metcalf produced imaginative American histories that made a new world of historical narration, and in the process found new objects of historical attention, one of which was the plural, transnational America of the hemispheric Americas. This reconfiguration anticipated and in some cases shaped recent revisionist critiques of the European presence on American soil (Eduardo Galeano, Leslie Marmon Silko, David Stannard, Ward Churchill, Noam Chomsky, Ana Castillo); accordingly, students will read examples, some polemical, of that later work. (LT)

AMST 4306 Topics in American Studies (also ARTH/VISST 4761)

Fall and spring. 4 credits. Prerequisite: permission of instructor. Not open to freshmen. L. L. Meixner.

Topic for Fall 2009: Public art and popular entertainments as the means for everyday people to politically engage or escape the Great Depression (1929–41). Discussions include Living Newspapers, the Federal Theater Project, Union-sponsored theater including Pins and Needles, WPA muralists and printmakers, FSA photographers, Social Realists including Ben Shahn, Reginald Marsh, and Philip Evergood, alongside Grant Wood and the Regionalists. Connecting these is FDR's New Deal and its controversial government support for the arts. We consider Big Bands and swing, pulp and comic strips, star tabloids, Depression-era Hollywood gangster films, "screwball" comedies, and Fred Astaire and Ginger Rogers spectacles. Will examine the importance of early radio in the home through FDR's fireside chats, soap operas, and serial thrillers such as the *Shadow*. Students will draw on the American Memory Project, documentaries, and the Johnson Art Museum collections. Films include *It Happened One Night*, *Gay Divorcee*, *Double Indemnity*, and Woody Allen's *Radio Days*. (MV)

Topic for spring 2010: American Art and the Machine. Seminar examines early modernism in America with emphases on the machine, mechanical reproduction, and the moving image including film and television. Machine is defined in broad terms to mean the artist, city, camera, department store, and consumer by-products including pictorial monthlies such as *Life*, fan magazines, fashion magazines, and comic books. Themes include the comic body in silent film; photography and social surveillance; early cinema and working-class women; the Great Depression and Broadway theatre; Depression-era "screwball comedies"; women and urban consumption; comic books and censorship; the construction of gender and the "American family" in early TV sitcoms including *Leave it to Beaver* and *Father Knows Best*; TV ads and the American homemaker; and 1940s "women's films." Artists include the Ashcan School, Hine, Lange, Evans, and Charlie Chaplin, Alfred Hitchcock, and Bette Davis. Films include *Modern Times*, *Rear Window*, *Dark Victory*, and *Sorry, Wrong Number*. (MV)

[AMST 4310 Topics in American Studies: American Politics and Dissent, 1945 to 2000 (also HIST 4311)]

4 credits. Permission of instructor required. Next offered 2011–2012. N. Salvatore.

This course will examine the Civil Rights movement, anti-Vietnam protests, a revitalized conservative politics, and the re-emergence of an evangelical presence in American politics, with particular focus on the electoral process after 1964. A series of papers, and a term paper are required. (HI)

AMST 4390 Reconstruction and the New South (also HIST 4390/6391) # (HA-AS)

Fall. 4 credits. M. Washington.

This course focuses on the American South in the 19th century as it made the transition from Reconstruction to new forms of social organization and patterns of race relations. Reconstruction will be considered from a sociopolitical perspective, concentrating on the experiences of the freed people. The New South emphasis will include topics on labor relations, economic and political changes, new cultural alliances, the rise of agrarianism, and legalization of Jim Crow. (HI)

Courses

AMST 1101 Introduction to American Studies # (CA-AS)

Spring. 4 credits. B. Maxwell.

This course is an introduction to interdisciplinary considerations of American culture. We will reflect on topics ranging from Native American relations to the land, to the European conquest of the Americas, to the development of American civic life and political culture and the ongoing African American struggle for freedom and equality. We will also study immigration as a (threatened) constant in national life and labor, the distinctions between mass culture and popular culture, the promise of American life, and violence as a persisting national woe. We'll examine these themes through literature, historical writing, music, art, film, architecture, and political economy in the United States. The course will also give attention to the many methods through which scholars have, over time, developed the discipline of American Studies, and to ongoing debates over the intellectual and political stakes of those methods. (LT)

[AMST 1109 Introduction to American Studies: New Approaches to Understanding American Diversity, the 19th Century # (HA-AS)]

4 credits. Next offered 2010–2011. N. Salvatore. (HI)

[AMST 1110 Introduction to American Studies: New Approaches to Understanding American Diversity, the 20th Century (HA-AS)]

4 credits. Next offered 2010–2011. M. C. Garcia and D. Chang. (HI)

AMST 1240 Democracy and Its Discontents: Political Traditions in the United States (also HIST 1240) (HA-AS)

Summer. 3 credits. N. Salvatore.

An examination of democracy and its critics. The course explores the evolution of democracy in America, focusing on some of the dramatic and important episodes in American history. It considers the struggles over the emancipation of slaves in the 19th

century and expanded rights for women and working people in the 20th century, free-speech issues, the civil-rights movement, religious-based critiques of American culture, and conservative critiques of American liberalism. The course serves as an investigation of the ways in which political expression takes forms in modern American culture. In addition to lectures, the course features several afternoon programs that include guest lecturers and hands-on instruction in how to use the modern electronic research library. (HI)

[AMST 1311 Popular Music in America: A Historical Survey (also MUSIC 1311) # (LA-AS)]

3 credits. Next offered 2011-2012. S. Pond. For description, see MUSIC 1311. (MV)

AMST 1312 History of Rock Music (also MUSIC 1312) (LA-AS)

Spring. 3 credits. J. Peraino. For description, see MUSIC 1312. (MV)

AMST 1313 A Survey of Jazz (also MUSIC 1313) (LA-AS)

Fall. 3 credits. S. Pond. For description, see MUSIC 1313. (MV)

AMST 1530 Introduction to American History (also HIST 1530) # (HA-AS)

Fall. 4 credits. M. B. Norton. For description, see HIST 1530. (HI)

AMST 1531 Introduction to American History: 1865-Present (also HIST 1531) (HA-AS)

Spring. 4 credits. A. Sachs. For description, see HIST 1531. (HI)

AMST 1600 Introduction to American Indian Studies I (also AIS 1100) (HA-AS)

Fall. 3 credits. P. Nadasdy. For description, see AIS 1100. (HI)

AMST 1601 Introduction to American Indian Studies II (also AIS 1110) (CA-AS)

Spring. 4 credits. K. Kassam. For description, see AIS 1110. (HI)

[AMST 2010 Popular Culture in the United States, 1900 to 1945 (HA-AS)]

4 credits. Next offered 2010-2011. G. Altschuler.

AMST 2010 deals with American popular culture in the period between 1900 and the end of World War II. As we examine best-sellers, films, sports and television, radio, ads, newspapers, magazines, and music, the goal is to better understand the ways in which popular culture as "contested terrain," the place where social classes, racial and ethnic groups, women and men, the powerful and the less powerful, seek to "control" images and themes. Topics include: the Western; Cultural Heroes and the Cult of Individualism in the 1920s; The Hays Code and the Black Sox scandal; Mae West and the "New Women"; Advertising in an Age of Consumption; Gangsters and G-Men; and Jackie Robinson and the American Dilemma. (HI)

[AMST 2020 Popular Culture in the United States, 1950 to Present (HA-AS)]

4 credits. Next offered 2010-2011. G. Altschuler.

AMST 2020 treats the period from 1950 to the present as we examine best-sellers, films, sports and television, radio, ads, newspapers, magazines, and music. We try to better understand the ways in which popular culture

shapes and/or reflects American values. The course also depicts popular culture as "contested terrain," the place where social classes, racial and ethnic groups, women and men, the powerful and less powerful, seek to "control" images and themes. Topics include: *The Honeymooners* and 1950s television, soap operas; "gross-out" movies; Elvis; the Beatles and Guns 'n Roses; gothic romances; and *People Magazine* and *USA Today*.]

AMST 2022 The Court, Crime, and the Constitution (also HIST 2020) (HA-AS)

Fall. 4 credits. R. Polenber. For description, see HIST 2020. (HI)

4 credits. Next offered 2010–2011.
M. B. Norton. (HI)]

AMST 2760 Survey of American Film (also FILM 2760, VISST 2300) (LA-AS)

Spring. 4 credits. Each student must enroll in a section and attend one screening per week. S. Haenni.

Focusing mostly on Hollywood film, this course surveys some major developments in and approaches to 20th-century American cinema. We trace changes in film aesthetics and film style, the development of the American cinema as an institution that comprises an industrial system of production, social and aesthetic norms and codes, and particular modes of reception. The course introduces methodological issues in American film history—especially questions of narrative, genre, stardom, and authorship—and focuses on the ways film shapes gender, race, class, ethnic, and national identities. Screenings include work by D. W. Griffith, John Ford, Howard Hawks, Alfred Hitchcock, and others and are supplemented by readings in film criticism and history. (LT)

AMST 2820 Photography and the American Landscape (also LA 2820)

Fall. 3 credits. A. Hammer.
For description, see LA 2820. (MV)

AMST 4180 Audio Documentary: Stories from the Land (also LA 4180)

Fall. 3 credits. A. Hammer.
For description, see LA 4180. (MV)

[AMST 4200 Asian American Communities (also HIST 4200, AAS 4240) (HA-AS)

4 credits. Limited to 15 students. Next offered 2010–2011. D. Chang. (HI)

AMST 4222 Political Culture (also GOVT 4222)

Spring. 4 credits. R. Bensel.
For description, see GOVT 4222. (GP)

[AMST 4231 The 1960s: Conceptualizing the Future from the Past (also GOVT 4231) (CA-AS)

4 credits. Next offered 2010–2011.
J. Kirshner and T. Lowi.
For description, see GOVT 4231. (GP)

AMST 4241 Contemporary American Politics (also AMST 6291, GOVT 4241/6291) (HA-AS)

Spring. 4 credits. M. Shefter.
For description, see GOVT 4241. (GP)

[AMST 4260 The West and Beyond: Frontiers and Borders in American History and Culture (also HIST 4260) (HA-AS)

4 credits. Next offered 2010–2011. A. Sachs.
For description, see HIST 4260. (HI)

AMST 4261 Commodification and Consumerism in Historical Perspective: Sex, Rugs, Salt, and Coal (also HIST 4261) @ # (HA-AS)

Fall. 4 credits. A. Sachs.
For description, see HIST 4261. (HI)

AMST 4272 Historical Archaeology of Indigenous Peoples (also AIS 4270/7720, AMST 6272, ANTHR/ ARKEO 4272/7272) # (HA-AS)

4 credits. K. Jordan.
For description, see ANTHR 4272. (ASE)

AMST 4281 Government and Public Policy: An Introduction to Analysis and Criticism (also AMST 6281, GOVT 4281/7281) (SBA-AS)

Fall. 4 credits. T. Lowi.
For description, see GOVT 4281. (GP)

AMST 4400 Seminar in Recent American History (also HIST 4400) (HA-AS)

Fall. 4 credits. R. Polenberg.
For description, see HIST 4400.

[AMST 4440 American Men (also FGSS 4450, HIST 4440) (HA-AS)

4 credits. Next offered 2010–2011.
E. Baptist. (HI)

[AMST 4508 Exhibiting Cultures (also AMST 6508, ARTH 4508/6508, ASRC 4504/6508) (CA-AS)

4 credits. Next offered 2010–2011.
C. Finley. (MV)

AMST 4509 Black Arts Movement (also ARTH 4509/ASRC 4505) (CA-AS)

Summer. 4 credits. C. Finley.
For description, see ARTH 4509. (MV)

AMST 4510 Multiculturalism and Education (also EDUC/LSP 4510)

Fall. 3 credits. S. Villenas.
For description, see EDUC 4510. (ASE)

AMST 4530 20th-Century Women Writers of Color (also AAS/ENGL/FGSS 4530) (LA-AS)

Fall. 4 credits. S. Wong.

AMST 4585 American Political Thought (also AMST 6585, GOVT 4585/6585) (HA-AS)

Fall. 4 credits. J. Frank.
For description, see GOVT 4585. (GP)

[AMST 4600 Melville (also ENGL 4600) # (LA-AS)

4 credits. Next offered 2011–2012.
B. Maxwell. (LT)

[AMST 4616 Interpreting Race and Racism: DuBois (also GOVT 4616) (HA-AS)

4 credits. Next offered 2011–2012.
A. M. Smith.
For description, see GOVT 4616. (GP)

[AMST 4625 Sexuality and the Law (also AMST 6625, FGSS 4610/7620, GOVT 4625/7625) (KCM-AS)

4 credits. Next offered 2011–2012.
A. M. Smith. (GP)

[AMST 4635 Feminist Theory/Law and Society (also GOVT 4635) (CA-AS)

4 credits. Next offered 2010–2011.
A. M. Smith.
For description, see GOVT 4635. (GP)

[AMST 4660 Iroquois History (also AIS/ HIST 4660) # (HA-AS)

4 credits. Not open to freshmen. Next offered 2010–2011. J. Parmenter. (HI)

[AMST 4662 Contemporary American Indian Poets (also ENGL 4662) (LA-AS)

4 credits. Next offered 2011–2012.
E. Cheyfitz. (LT)

[AMST 4690 Faulkner (also ENGL 4690) (LA-AS)

4 credits. Next offered 2011–2012. K. Attell. (LT)

[AMST 4750 Seminar in Cinema I (also FILM 4750) (LA-AS)

4 credits. Next offered 2011–2012.
D. Fredericksen.
For description, see FILM 4750. (LT)

AMST 4755 Seminar in Cinema I (also ENGL 4750)

Spring. 4 credits. D. Woubshet.
For description, see ENGL 4750.

[AMST 4780 Intersections in Lesbian Fiction (also ENGL 4780, FGSS 4770) (LA-AS)

4 credits. Next offered 2011–2012.
K. McCullough. (LT)

[AMST 4790 Gender and Visual Culture in Women's Literature (also ENGL/FGSS 4790, VISST 4800) (LA-AS)

4 credits. Next offered 2012–2013.
S. Samuels. (LT)

[AMST 4809 Politics of '70s Film (also GOVT 4809) (SBA-AS)

4 credits. Next offered 2011–2012.
J. Kirshner. (GP)

[AMST 4821 Religious and Secular in American Culture (also HIST/RELST 4821) (HA-AS)

4 credits. Next offered 2011–2012.
R. L. Moore. (HI)

AMST 4850 Immigration: History, Theory, and Practice (also HIST/LSP 4850) (HA-AS)

Fall. 4 credits. M. C. Garcia.
For description, see HIST 4850. (HI)

AMST 4851 Refugees (also HIST 4851) (HA-AS)

Spring. 4 credits. M. C. Garcia.
For description, see HIST 4851.

[AMST 4900 New World Encounters, 1500 to 1800 (also AIS/HIST 4900) (HA-AS)

4 credits. Next offered 2012–2013.
J. Parmenter. (HI)

[AMST 4970 Jim Crow and Exclusion-Era America (also AAS/HIST 4970, AMST/ HIST 6970) (HA-AS)

4 credits. Next offered 2011–2012.
D. Chang. (HI)

AMST 4997 Research Seminar in American Studies (also HIST 4997)

Fall or spring. Offered in Cornell in Washington Program only. S. Jackson.
For description, see HIST 4997. (HI)

AMST 4998 Politics and Policy: Theory, Research, and Practice (also ALS/ CAPS/GOVT 4998, PAM 4060)

Fall and spring. 8 credits each semester.
S. Jackson.
Offered in Cornell in Washington Program. This course, taught in Washington, D.C., forms the core of the public policy option of the Cornell in Washington Program. (GP)

AMST 5710 Social and Political Context of American Education (also AMST 6710, EDUC 2710/5710, SOC 2710/5710)

Fall. 4 credits. J. Sipple.
For description, see EDUC 2710. (ASE)

[AMST 6050 U.S.-Cuba Relations (also AMST/HIST/LSP 4050/6050)

4 credits. Next offered 2011-2012.
M. C. Garcia. (HI)

[AMST 6101 African-American Historiography (also HIST 6101)

4 credits. Next offered 2010-2011.
M. Washington. (HI)

AMST 6102 Asian American Politics and Public Policy (also AMST 3102, CRP 3102/6107, AAS 3901)

Spring. 3 credits. C. Lai.
For description, see CRP 3102.

[AMST 6121 American Political Development in the 20th Century (also AMST 4041, GOVT 4041/6121)

4 credits. Next offered 2011-2012.
E. Sanders.
For description, see GOVT 4041. (GP)

AMST 6142 Causes and Consequences of U.S. Foreign Policy (also AMST/GOVT 4142/6142)

Fall. 4 credits. E. Sanders.
For description, see GOVT 4142. (GP)

[AMST 6161 Politics of Slow-Moving Crises (also AMST/GOVT 4061, GOVT 6161)

4 credits. Next offered 2011-2012.
M. Jones-Correa. (GP)

AMST 6202 Political Culture (also GOVT 6202)

4 credits. R. Bensel.
For description, see GOVT 6202. (GP)

[AMST 6248 Iroquois Archaeology (also AIS/ANTHR/ARKEO 6248)

4 credits. Next offered 2011-2012.
K. Jordan. (ASE)

AMST 6272 Historical Archaeology (also AMST 4272, ANTHR/ARKEO 4272/7272)

Fall. 4 credits. Next offered 2011-2012.
K. Jordan.
For description, see ANTHR 4272. (ASE)

AMST 6281 Government and Public Policy: An Introduction to Analysis and Criticism (also AMST 4281, GOVT 4281/7281)

Fall. 4 credits. T. Lowi.
For description, see GOVT 4281. (GP)

AMST 6291 Contemporary American Politics (also AMST 4241, GOVT 4241/6291)

Spring. 4 credits. M. Shefter.
For description, see GOVT 4241. (GP)

AMST 6301 Institutions (also GOVT 6301)

Fall. 4 credits. R. Bensel.
For description, see GOVT 6301. (GP)

[AMST 6424 Ethnoracial Identity in Anthropology, Language, and Law (also ANTHR/LSP 6424, LAW 7231)

4 credits. Next offered 2011-2012.
V. Santiago-Irizarry. (ASE)

[AMST 6550 Early Modern Atlantic World (also HIST 6550)

Spring. 4 credits. Next offered 2010-2011.
M. B. Norton. (HI)

AMST 6585 American Political Thought (also GOVT 4585/6585, AMST 4585)

Fall. 4 credits. J. Frank.
For description, see GOVT 4585.

AMST 6611 What Is a Just Society?: Nature American Philosophies and the Limits of Capitalism's Imagination (also ENGL 6611)

Spring. 4 credits. E. Cheyfitz.
For description, see ENGL 6611.

[AMST 6625 Sexuality and the Law (also AMST 4625, FGSS 4610/7620, GOVT 4625/7625)

4 credits. Next offered 2011-2012.
A. M. Smith. (GP)

[AMST 6631 American Poetry, 1955-1980 (also ENGL 6631)

4 credits. Next offered 2011-2012.
R. Gilbert. (LT)

[AMST 6645 Democratic Theory (also GOVT 6645)

4 credits. Next offered 2010-2011. J. Frank.
For description, see GOVT 6645. (GP)

[AMST 6690 Gift and Contract in the 19th-Century United States: Social and Sexual Constructions of Whiteness, Race, and Ethnicity (also ENGL 6690)

4 credits. Next offered 2011-2012.
S. Samuels. (LT)

AMST 6801 Asian American Urban Experience (also AAS/CRP 3801/6801, AMST 3801)

Fall. 3 credits. C. Lai.
For description, see AAS 3801. (HI)

[AMST 6811 James Baldwin (also ENGL/FGSS 6811)

4 credits. Next offered 2011-2012.
D. Woubshet. (LT)

AMST 6950 Race, Space, and Place (also AMST/AAS 3950, CRP 3101/6101)

Fall. 3 credits. C. Lai.
For description, see CRP 3101.

[AMST 6970 Jim Crow and Exclusion Era America (also AMST 4970, HIST 4970/6970)

4 credits. Next offered 2011-2012.
D. Chang. (HI).

Honors

Please see description of major for information about registration in these courses.

AMST 4993-4994 Honors Essay Tutorial

4993, fall; 4994, spring. 4 credits. See Director of American Studies for appropriate advisors. (HR)

ANTHROPOLOGY

A. Willford, chair; H. Miyazaki and N. Russell, directors of graduate studies; S. Langwick, director of undergraduate studies; A. Clark Arcadi, J. Fajans, M. Fiskesjo, F. Gleach, D. Greenwood, J. Henderson, D. Holmberg, K. Jordan, K. March, H. Miyazaki, V. Munasinghe, P. Nadasy, A. Riles, N. Russell, S. Sangren, V. Santiago-Irizarry, M. Small, T. Volman, M. Welker. Emeritus: R. Ascher, B. J. Isbell, B. Lambert, J. Siegel, R. Smith.

Anthropology is one of the most diverse disciplines in the university. Spanning human evolution, the development and heterogeneity of language and culture, human history, and the diversity of cultures past and present, the field has broad scope, uses a variety of methods, addresses basic issues about human origins and human life, and maintains commitment to understanding social life and using this understanding to improve society. Anthropology is an ideal "liberal arts" major. It also serves as a major that, when well designed by the student with his or her advisor, prepares students for a wide range of professional careers, e.g., law, medicine, foreign service, human rights, social services, international development, and business, among others.

Courses for nonmajors: Anthropology welcomes nonmajors into many of its courses. Unless prerequisites are explicitly stated, 2000- and 3000-level courses do not have formal prerequisites and students without prior experience in anthropology are welcome in these classes. For additional information, see the anthropology department web page (falcon.arts.cornell.edu/Anthro).

The Major

The major is structured to provide both general grounding in three subfields of anthropology (sociocultural anthropology, anthropological archaeology, and biological anthropology) and detailed focus on a particular area of concentration. Areas of concentration include a wide variety of subjects within and between these three subfields. Topics ranging from identity politics and globalization to prehistory and human evolution can be pursued in classes focused on every major geographical region in the world. Upper-level courses span a range of topical and theoretical issues related to religion, gender, economics, colonialism, democratization, prehistoric cultures, race, behavioral evolution, and conservation, to name a few.

No prerequisites are required to enter the anthropology major. Students should see the director of undergraduate studies to apply to the major and obtain an advisor. Majors prepare a short statement about their interests and goals for the major, and then meet with their advisor. Majors and advisors collaboratively build a program of study that reflects the student's individual interests and the intellectual breadth of the field. Our goal is to provide a close and supportive advising relationship and a strong and coherent structure for the student's major.

A minimum of 37 credits are necessary to complete the major. To complete the major, students must take:

- One class of 3 or more credits in each of the three subfields (sociocultural,

archaeological, biological) at the 1000 or 2000 level.

- ANTHR 3000: Introduction to Anthropological Theory
- Two other courses of at least 4 credits at the 3000 level that are designated “comparative survey” courses in the catalog.
- Two 4000-level courses, one of which must be a seminar course in your senior year (4000, 4258, 4260, and 4263 are not seminar courses and do not fill the requirements).
- An additional 8 credits in elective courses, which may be in cognate disciplines with the approval of your advisor.

Exceptions to these requirements may be granted if a written petition is approved by the director of undergraduate studies.

No S–U credits or First-Year Writing Seminars may count toward the major. A letter grade of C– or better is required in all courses counted toward the major.

Study abroad and off-campus study programs:

The Department of Anthropology encourages students to consider a semester of study abroad or off-campus study developed as an integral part of the student’s major concentration. The director of undergraduate studies serves as the anthropology study abroad advisor.

The Cornell–Nepal Study Program: The Cornell–Nepal Study Program is a joint program of Cornell University and Tribhuvan University, the national university of Nepal. Qualified juniors, seniors, and first- or second-year graduate students work with faculty from both universities to prepare for and undertake field research projects in Nepal. Students receive 15 credits per semester; students may enroll for either fall or spring semester, or for the entire year; application is through Cornell Abroad. For further information, consult David Holmberg or Kathryn March in the Department of Anthropology.

Other anthropologically relevant study abroad options, using existing Cornell Abroad and off-campus options, can be worked out in consultation with the major advisor, the anthropology study abroad advisor, and Cornell Abroad.

Honors

Honors in anthropology are awarded for excellence in the major, which includes overall GPA and completion of an honors thesis. Undergraduate students interested in working for an honors degree should apply to the chair of the Honors Committee in the second semester of their junior year (requests for late admission may be considered, but not later than the second week of the first semester of the senior year). It is the student’s responsibility to identify an appropriate topic for a thesis and to find a faculty member willing to sponsor and supervise the research; the advisor and at least the general subject of the thesis must be identified at the time of application for admission to the Honors Program. Note that clearance from the University Committee on Human Subjects usually is required before research involving living people may begin; students contemplating such research should begin to work with their thesis advisors to design their

investigations and obtain the clearance well in advance of the date when the involvement with research subjects is to begin.

Admission to the Honors Program requires an overall GPA of 3.3 or greater and a 3.5 GPA in the major. In addition, the student should have no outstanding Incompletes in courses that will be used toward the major (provisional admission with Incompletes is possible at the discretion of the chair of the Honors Committee on evidence that a good faith effort to finish them is under way). Under special circumstances, a student with an overall GPA of 3.0 may petition for admittance to the program.

Writing an honors thesis typically is a two-semester project involving 8 credits of course work; most students do this work during their senior year. During their first semester of honors work, students typically register for (1) ANTHR 4983 Honors Thesis Research (3 credits); and (2) ANTHR 4991 Honors Workshop I (1 credit). During their second semester of honors work, students typically register for (1) ANTHR 4984 Honors Thesis Write-up (2 credits); and (2) ANTHR 4992 Honors Workshop II (2 credits). The two-course/term arrangement reflects the division of supervision over the thesis between the thesis advisor and the chair of the Honors Committee. The thesis advisor is ultimately responsible for guiding the scholarly development of the thesis; the chair of the Honors Committee is mainly responsible for assuring timely progress toward completion of the thesis, and providing a context for students in the Honors Program to share ideas (both editorial and substantive) as their theses progress.

Special Programs and Facilities

Collections: the department has an extensive collection of archaeological and ethnological materials housed in the Anthropology Collections. A limited number of students can make arrangements to serve as interns in the Anthropology Collections. Olin Library houses some of the most extensive collections of materials on the ethnology of Southeast Asia, South Asia, East Asia, and Latin America to be found anywhere in the United States. The biological anthropology laboratory (B65 McGraw Hall) houses an extensive collection of materials for teaching purposes, including (1) human skeletal remains, (2) articulated skeletons and cranial casts of primates, and (3) casts of important fossils in the human lineage.

Independent Study: specialized individual study programs are offered in ANTHR 4910, Topics in Anthropology, a course open to a limited number of juniors and seniors who have obtained permission and supervision of a faculty member. Undergraduates should note that many 6000-level courses are open to them by permission of the instructor.

Colloquia: The Department of Anthropology holds colloquia almost every week of the semester on Friday at 3:30 p.m. in 215 McGraw Hall. Faculty members from Cornell and other universities participate in discussions of current research and problems in anthropology. Students are encouraged to attend.

For more complete information about the anthropology major, see the director of undergraduate studies or visit the Department

of Anthropology web page (falcon.arts.cornell.edu/Anthro).

I. Introductory Courses

Each of these Introductory Courses provides an introduction to one of the subfields of anthropology. They do not form a sequence; students can take them in any order and at any point during their time at Cornell.

ANTHR 1200 Ancient Peoples and Places @ # (HA-AS)

Spring. 3 credits. T. Volman.

A broad introduction to archaeology—the study of material remains to answer questions about the human past. Case studies highlight the variability of ancient societies and illustrate the varied methods and interpretive frameworks archaeologists use to reconstruct them. This course can serve as a platform for both archaeology and anthropology undergraduate majors.

ANTHR 1300 Human Evolution: Genes, Behavior, and the Fossil Record (PBS Supplementary List)

Spring. 3 credits. Fee for lab usage and maintenance, \$5. A. Arcadi.

The evolution of humankind is explored through the fossil record, studies of the biological differences among current human populations, and a comparison with our closest relatives, the primates. This course investigates the roots of human biology and behavior with an evolutionary framework.

ANTHR 1400 The Comparison of Cultures @ (CA-AS)

Fall. 3 credits. Staff.

An introduction to cultural anthropology through ethnographies, or the descriptive accounts of anthropologists. Through readings and lectures, students acquaint themselves with a number of cultures from several parts of the world. The cultures range in form from those of small-scale tribal societies to those of state societies. Throughout the course, we attempt to make sense of exotic cultures in their own terms. Attention is focused on variation in cultural patterns as they are expressed in social, economic, and ritual practices. In this encounter, the principles of anthropology, as a comparative enterprise that poses distinct cultural systems in relief, will be developed. Fiction, films, and exercises supplement the formal anthropological materials.

ANTHR 1401 The Scope of Anthropology

Fall. 1 credit. Does not satisfy major requirement to take two broad introductory courses. Pre- or corequisite: ANTHR 1300 or 1400. S–U grades only. Staff.

This course is intended for majors in anthropology, prospective majors. Each week a different member of the faculty in anthropology at Cornell will make a presentation on the nature of their work within the field and discuss their interests with students. The course is meant to introduce the range of approaches found within anthropology and help students in planning future course work.

ANTHR 2400 Cultural Diversity and Contemporary Issues @ (SBA-AS)

Spring. 3 credits. M. Fiskesjo.

This course will introduce students to the meaning and significance of forms of cultural diversity for the understanding of

contemporary issues. Drawing from films, videos, and selected readings, students will be confronted with different representational forms that portray cultures in various parts of the world, and they will be asked to examine critically their own prejudices as they influence the perception and evaluation of cultural differences. We shall approach cultures holistically, assuming the inseparability of economics, kinship, religion, and politics, as well as interconnections and dependencies between world areas (e.g., Africa, Latin America, the West). Among the issues considered: "political correctness" and truth; nativism and ecological diversity; race, ethnicity, and sexuality; sin, religion, and war; global process and cultural integrity.

II. Sociocultural Anthropology

Sociocultural anthropology is rooted in the precise observation and rigorous analysis of human cultural capacities and human social practices, relations, and institutions. All sociocultural anthropology involves both inquiry into the diversity of human cultures (ethnography) and comparative analysis of human social dynamics (social theory). Historically, sociocultural anthropology specialized in the study of nonwestern peoples, but today there are few places and domains of human activity that sociocultural anthropologists do not study. To give a few examples, sociocultural anthropologists study nuclear weapons scientists in California, the transformation of state power in Russia, and the politics of development in India. They study how television producers in Egypt contribute to nationalism, the social effects of truth commissions in Guatemala and South Africa, and the emergence of new religious and social movements in Latin America. What distinguishes sociocultural anthropology as a field is its engagement with the full abundance of human lived experience and its integrated, comparative effort to make sense of the key processes shaping this experience. As such, sociocultural anthropology is an excellent, flexible choice of major. It teaches core critical, analytical, and expressive skills and important perspectives on human cultural creativity and social life that are widely applicable. Recently, our majors have gone into careers as diverse as academic scholarship, activism, advertising, consulting, design, film, journalism, marketing, medicine, NGO-work, and politics and government.

ANTHR 1400 The Comparison of Cultures @ (CA-AS)

Fall. 3 credits. Staff.
For description, see Introductory Courses.

ANTHR 1401 The Scope of Anthropology

Fall. 1 credit. Staff.
For description, see Introductory Courses.

ANTHR 2400 Cultural Diversity and Contemporary Issues @ (SBA-AS)

Spring. 3 credits. M. Fiskesjo.
For description, see Introductory Courses.

[ANTHR 2428 Slavery and Human Trafficking # (CA-AS)

Spring. 4 credits. Next offered 2010–2011.
M. Fiskesjo.]

ANTHR 2450 The Anthropology of Food and Cuisine @ (CA-AS)

Spring. 4 credits. J. Fajans.
You are what you eat! This course examines the way food is produced, prepared,

exchanged, presented, and given meaning in cultures around the world. It examines the symbolism of specific foodstuffs. Who prepares food and how is it done? Who feeds whom and how these relations are expressed and valued? In addition to looking at these questions we analyze ideas about commensality; how food is used in public contexts for presentation or exchange, and how food is a marker of gender, class, status, ethnicity, and identity. In addition to looking specifically at food, we analyze cultural ideas about gender, the body, and identity in terms of how these cultural patterns are produced and expressed through concrete activities like eating, fasting, and special diets. In this class we stress critical and comparative thinking about subjects we tend to take for granted.

ANTHR 2468 Medicine, Culture, and Society (CA-AS)

Fall. 3 credits. S. Langwick.
Medicine has become the language and practice through which we address a broad range of both individual and societal complaints. Interest in this "medicalization of life" may be one of the reasons that medical anthropology is currently the fastest-growing sub-field in anthropology. This course encourages students to examine concepts of disease, suffering, health, and well-being in their immediate experience and beyond. In the process, students will gain a working knowledge of ecological, critical, phenomenological, and applied approaches used by medical anthropologists. We will investigate what is involved in becoming a doctor, the sociality of medicines, controversies over new medical technologies, and the politics of medical knowledge. The universality of biomedicine (or hospital medicine) will not be taken for granted, but rather we will examine the plurality generated by the various political, economic, social, and ethical demands under which biomedicine has developed in different places and at different times. In addition, biomedical healing and expertise will be viewed in relation to other kinds of healing and expertise. Our readings will address medicine in North America as well as other parts of the world. In class, our discussions will return regularly to consider the broad diversity of kinds of medicine throughout the world, as well as the specific historical and local contexts of biomedicine.

[ANTHR 2546 South Asian Religions in Practice @ (CA-AS)

Fall. 3 credits. Next offered 2011–2012.
Staff.]

ANTHR 2560 Japanese Society Through Film @ (CA-AS)

Fall. 3 credits. H. Miyazaki.
This is an anthropological introduction to Japanese society through a critical investigation of a wide range of films from Ozu Yasujiro's classic films to Miyazaki Hayao's animated films. Topics of investigation include kinship and marriage, work and workplaces, gender and sexuality, bureaucracy, crime and legal culture, nationalism and nostalgia, and techno-scientific utopia.

[ANTHR 2721 Anthropological Representation: Ethnographies on Latino Culture (also AMST/LSP 2721) (CA-AS)

Fall. 3 credits. Next offered 2010–2011.
V. Santiago-Irizarry.]

ANTHR 3000 Introduction to Anthropological Theory (CA-AS)

Spring. 4 credits. P. Nadasdy.
This seminar course is designed for anthropology majors to give them an introduction to classical and contemporary social and anthropological theory and to help prepare them for upper-level seminars in anthropology. The seminar format emphasizes close reading and active discussion of key texts and theorists. The reading list will vary from year to year but will include consideration of influential texts and debates in 19th, 20th, and 21st century anthropological theory especially as they have sought to offer conceptual and analytical tools for making sense of human social experience and cultural capacities.

[ANTHR 3406 Gifts and Exchange (SBA-AS)

Spring. 4 credits. Comparative survey. Next offered 2010–2011. H. Miyazaki.]

[ANTHR 3410 Nationalism and Revivalism (CA-AS)

Spring. 4 credits. Comparative survey. Next offered 2011–2012. Staff.]

ANTHR 3420 Myth, Ritual, and Symbol (also RELST 3230) @ (CA-AS)

Spring. 4 credits. Comparative survey.
D. Holmberg.
Examines how systems of thought, symbolic forms, and ritual practice are formulated and expressed in primarily non-Western societies. Focuses on anthropological interpretations of space, time, cosmology, myth, classificatory systems (e.g., color, totems, food, dress, kinship), taboos, sacrifice, witchcraft, sorcery, and rites of passage (birth, initiation, marriage, death). Examines both the roles of specialists (e.g., spirit mediums, curers, priests, ascetics) and nonspecialists in producing these cultural forms.

ANTHR 3421 Sex and Gender in Cross-Cultural Perspective (also FGSS 3210) @ (SBA-AS)

Fall. 4 credits. Comparative survey.
K. March.
Introduction to the study of sex roles cross-culturally and to anthropological theories of sex and gender. Examines various aspects of the place of the sexes in social, political, economic, ideological, and biological systems to emphasize the diversity in gender and sex-role definitions around the world.

ANTHR 3422 Culture, Politics, and Environment in the Circumpolar North (also ANTHR 6422) (CA-AS)

Spring. 4 credits. P. Nadasdy.
This course examines the cultures and histories of the circumpolar North. The primary emphasis is on the North American Arctic and Subarctic with some attention to northern Eurasia for comparative purposes. The focus is on the indigenous peoples of the region and the socio-political and ecological dimensions of their evolving relationships with southern industrial societies.

[ANTHR 3428 Conflict, Dispute Resolution, and Law in Cultural Context (SBA-AS)

Fall. 4 credits. Comparative survey. Next offered 2011–2012. V. Santiago-Irizarry.]

ANTHR 3447 Sport @ (CA-AS)

Spring. 4 credits. S. Sangren.
Long overlooked by anthropologists, sport and recreation are increasingly recognized as

important windows into culture. Sport can be approached from a number of directions—interpreted as a ritual; viewed as a spectacle of ethnic, regional, or national identity; seen as a metaphor for life; understood as a major industry. This course will consider these and other approaches to sport, encouraging students to bring their own involvements in sport to reflect not only upon sport itself, but also upon how such reflection can illuminate cultural, psychological, and political dimensions of social life. Why, for example, do we take sport (and other forms of recreation) so seriously? Why do many of us apparently invest more passion in such pursuits than to life's allegedly more serious activities? How is sport integrated into people's identities? Readings will draw from popular literature and media as well as academic writing from a variety of disciplines (psychology, sociology, history) in addition to anthropology.

[ANTHR 3451 Global Movements of Cultural Heritage @ (CA-AS)]

Spring. 4 credits. Comparative survey. Next offered 2010–2011. M. Fiskesjo.]

[ANTHR 3461 Anthropology of Organizations (also ANTHR 6461) (SBA-AS)]

[ANTHR 3462 Democratizing Research (also ANTHR 6462) (SBA-AS)]

Fall. 4 credits. D. Greenwood. Next offered 2010–2011.]

ANTHR 3465 Anthropology of the Body (also ANTHR 6465) (CA-AS)]

Fall. 4 credits. S. Langwick.

This course examines a range of texts that treat the body as the subject and object of cultural, technological, political and ethical processes. Students investigate the cultivation of physical and social bodies through ethnographic and historical materials concerning healing and medicine, discipline and labor, governance and religion, aesthetics and desire. The production and reproduction of bodies and embodied practices have long been central to the way that power works. In this class, we will read and discuss a range of approach to the body. There is much contention over how work, politics, environment, technologies, and violence shape the body and the senses. We will debate how histories of the body are intertwined with histories of gender, race, class, sexuality, (post)coloniality, modernization, science, transnationalism, and the webs of institution, ideas, and capital that comprise these phenomena. Some readings will investigate the complex mediations that account for the body as icon, text, metaphor, commodity, and raw material. Others will contend that serious attention to the production and reproduction of the body across different times and spaces challenge traditional notions of materiality and physicality. Because every examination of the body rests—implicitly or explicitly—in a theoretical and methodological approach to experience, we will also explore the histories of bodily senses, appetites and capabilities. Ultimately, our inquiry into contests over and reflections on “the body,” as well as specific bodies, aims to open up broader anthropological questions about authority, agency, sovereignties, and material life.

[ANTHR 3479 Culture, Language, and Thought (CA-AS)]

Spring. 4 credits. Comparative survey. Next offered 2010–2011. V. Santiago-Irizarry.]

ANTHR 3545 Peoples and Cultures of the Himalayas (also ANTHR 7545) @ (CA-AS)]

Fall. 4 credits. K. March.

A comprehensive exploration of the peoples and cultures of the Himalayas. Ethnographic materials draw on the lifeways of populations living in the Himalayan regions of Bhutan, India, Nepal, and Tibet. Some of the cultural issues to be examined through these sources include images of the Himalayas in the West, forms of social life, ethnic diversity, political and economic history, and religious complexity.

[ANTHR 3546 Asian Minorities @ (CA-AS)]

Fall. 4 credits. Next offered 2010–2011. M. Fiskesjo.]

ANTHR 3554 Male and Female in Chinese Culture and Society (also FGSS 3440) @ (SBA-AS)]

Fall. 4 credits. S. Sangren.

This course explores the culture of gender, sex roles, and domestic relations in late traditional and modern Chinese society. Readings and lectures range from ethnographic descriptions of the dynamics of Chinese family life, kin relations, and socialization to representations of male and female in mythologies and ritual activities. The course also considers developments subsequent to political changes in China. Although the course's analytical focus is anthropological, readings will draw from the writings of historians and political scientists as well. A premise of the course is that understanding sex and gender in China is essential to understanding Chinese culture and its most fundamental values. The course also aims to introduce students interested in Chinese to techniques of anthropological analysis.

[ANTHR 3703 Asians in the Americas: A Comparative Perspective (also AAS 3030) (CA-AS)]

Fall. 4 credits. Next offered 2010–2011. V. Munasinghe.]

ANTHR 3734 Brazil: Many Cultures, One Nation @ (CA-AS)]

Spring. 4 credits. J. Fajans.

From the streets of Rio to the shores of the Amazon, Anthropology studies the lives, communities, beliefs, practices, and politics of the diverse region known as Brazil. This course will look at issues of race, gender, ethnicity, religion, ritual, environment, development, and human rights across Brazil. We will examine rural and urban cultures, discuss African and European Influences, and explore the relations between indigenous and national cultures. In this context, we will look at the roles that religion, food, dress, soccer, samba, and carnival all play in producing this vibrant culture.

[ANTHR 3777 The United States (also AMST/LSP 3777) (CA-AS)]

Fall. 4 credits. Next offered 2011–2012. V. Santiago-Irizarry.]

ANTHR 4000 Development of Anthropological Thought (also ANTHR 7000) (SBA-AS)]

Fall. 4 credits. Prerequisite: for undergraduates, two prior anthropology courses or permission of instructor. Staff. Examination of the history and development of anthropological theory and practice. Focuses on the differences and continuities among the various national and historical approaches that have come to be regarded as the schools of anthropology.

[ANTHR 4403 Ethnographic Field Methods (also ANTHR 6403) (SBA-AS)]

Fall. 4 credits. Next offered 2010–2011. V. Santiago-Irizarry.]

[ANTHR 4406 The Culture of Lives (also FGSS 4060) @ (CA-AS)]

Spring. 4 credits. Next offered 2010–2011. K. March.]

ANTHR 4419 Anthropology of Corporations (also ANTHR 7419) (SBA-AS)]

Spring. 4 credits. M. Welker.

This course develops an anthropological approach to corporations with a focus on large, profit-oriented, publicly traded corporations. To denaturalize the corporation, we will consider competing cultural logics internal to corporations as well as the contingent historical processes and debates that shaped the corporate form over the past two centuries. The course will examine processes through which various social groups have sought to alter and restrain corporations as well as reciprocal corporate attempts to reshape the social environment in which they operate.

ANTHR 4426 Ideology and Social Production (also ANTHR 7426) @ (SBA-AS)]

Spring. 4 credits. S. Sangren.

This course is premised on the notion that understanding social life requires understanding how social institutions are produced and sustained through time—that is to say, one must understand “society” as a process of production. By the same token, all cultures produce ideas or “representation” (e.g., about reality, nature, society, gender, authority) that serve to legitimize or validate each society's particular social arrangements. These ideologies play an important role in social production, on the one hand, and are also products of social processes, on the other. This course focuses on the linkages between ideology and social production in readings drawn from social theory and ethnographic case studies. We discuss strongly diverging views (psychoanalytic, postmodernist, poststructuralist, practice-theory, neo-Marxist) on how best to conceive social processes. An integrating theme is that understanding ideology and its alienating operations is essential in developing a coherent understanding of what culture, in the last analysis, is.

ANTHR 4429 Anthropology and Psychoanalysis (also ANTHR 7429) @ (SBA-AS)]

Fall. 4 credits. S. Sangren.

Psychoanalysis holds that desire emerges from the clash between individuals' predisposition and the need to accommodate to others in society. Yes anthropology has been resistant to the role that psychoanalytic theory might play in linking individual desire to culture. Does psychoanalysis have anything to offer cultural anthropology? Can understanding of collective institutions be advanced with reference to theories of individual motivation and desire? Conversely, can collective life be understood without reference to individual motivation and desire? Is desire best understood as sexual in nature, or is it better understood in more abstract and existential terms. With such questions in mind, this course surveys anthropology's engagements with psychoanalysis. We read theoretical works as well as ethnographically grounded case studies on topics ranging from religious experience, mythic narratives, the cultural construction of gender and desire, and modern popular culture.

[ANTHR 4437 Anthropology of Development (also ANTHR 7437) @ (CA-AS)]

Fall. 4 credits. Next offered 2010-2011.
M. Welker.]

ANTHR 4439 Sovereignty and Biopolitics @ # (CA-AS)

Spring. 4 credits. M. Fiskesjo.

This seminar course's starting point is Agamben's widely discussed ideas about "bare life" in relation to modern state sovereignty and to continuities with earlier forms of sovereignty. The course unfolds as a political-legal anthropology of sovereignty and citizenship, the exclusion of undesirables, and modern biopolitical control mechanisms. Readings will draw on classics from the anthropology and other literature on sovereignty and kingship, as well as case studies dealing with the modern Chinese state, the United States, the Soviet Union, etc.

[ANTHR 4444 God(s) and the Market (also ANTHR 7444) @ (CA-AS)]

Spring. 4 credits. Next offered 2012-2013.
H. Miyazaki.]

ANTHR 4513 Religion and Politics in Southeast Asia (also ASIAN 4413) @ (CA-AS)]

Spring. 4 credits. A. Willford.

This course explores how religious beliefs and practices in Southeast Asia have been transformed by the combined forces of colonialism, nationalism, and globalization. By examining both diversity and resurgence in

one of the world's most rapidly modernizing regions, we aim to understand the common economic, social, and political conditions that are contributing to the popularity of contemporary religious movements. At the same time, we also consider the unique ideological, theological, and cultural understandings behind different religions and movements. Through this process we also rethink conceptions of modernity.

ANTHR 4523 Making History on the Margins: The China-SE Asia Borderlands (also ANTHR 7523) # @ (HA-AS)]

Fall. 4 credits. M. Fiskesjo.

This seminar course is a new in-depth look at classical issues regarding the making of history, revisiting the mountain borderlands in between China and Southeast Asia made famous by anthropologists (Leach, Lévi-Strauss, Kirch, and Friedman) attempting to understand structure, history, and center-periphery transformations. Are the peoples of this region (Kachin, Wa, Naga, etc. predetermined by fateful forces and processes beyond their control, as prisoners of geography and circumstance, or what role do they have in the making of their own history? The course addresses themes from regional ethnography as well as theoretical issues, and forms an introduction to field research in this fertile region.

[ANTHR 4542 Violence, Symbolic Violence, Terror, and Trauma in South Asia and the Himalayas (also ANTHR 6542) @ (CA-AS)]

Fall. 4 credits. Next offered 2011-2012.
D. Holmberg.]

III. Anthropological Archaeology

Anthropological archaeology studies the diverse societies of the past using the material traces they left behind in the archaeological record. In addition to studying artifacts, archaeologists use unique methods to study the settings in which artifacts were produced and used by examining regional settlement patterns, the structure of sites and communities, the organization of activities, and ancient symbolism and social relations. The concerns of anthropological archaeology range from basic questions about continuity and change in the past, to application of hard science methods to date sites and determine the sources of artifacts, criticism of the uses to which the past is put in contemporary society, and protection of the archaeological record. Anthropological archaeology can be distinguished from other forms of archaeology (such as Classical or Art Historical archaeology) based on its emphasis on holistically studying past cultural systems, and by the theories and approaches it shares with sociocultural and biological anthropology. There are numerous career opportunities for anthropological archaeologists, including work with museums, government agencies, and historic preservation groups in addition to academic employment. Private companies engaged in federally mandated cultural resource management (or CRM) archaeology employ thousands of archaeologists in the United States, and similar management programs exist in many other countries.

ANTHR 1200 Ancient Peoples and Places (also ARKEO 1200) # @ (HA-AS)]

Spring. 3 credits. T. Volman.

For description, see Introductory Courses.

ANTHR 1401 The Scope of Anthropology

Fall. 1 credit. Staff.

For description, see Introductory Courses.

[ANTHR 2200 Early People: The Archaeological and Fossil Record (also ARKEO 2200) # (HA-AS)]

Spring. 3 credits. T. Volman.

A survey of the archaeological and fossil record of human evolution. Contributions by researchers from a variety of disciplines are highlighted, as are the discoveries that have enlivened the study of human evolution for more than a century. Critical evaluation of evidence and interpretation will be stressed. Demonstrations and films supplement the lectures.]

ANTHR 2201 Early Agriculture (also ARKEO 2201) # @ (HA-AS)]

Spring. 3 credits. N. Russell.

Throughout most of the human career, people survived by hunting and gathering wild foods. The advent of food production is one of the most profound changes in (pre)history. This course examines the current evidence for the appearance and spread of agriculture (plant and animal domestication) around the world. We will consider definitions of agriculture and domestication, the conditions under which it arises, the consequences for those who adopt it, and why it has spread over most of the world.

[ANTHR 2215 Stone Age Art (also ARKEO 2215) # (CA-AS)]

Fall. 3 credits. Next offered 2010-2011.
T. Volman.]

ANTHR 2220 Field Course in Iroquois Archaeology (also ARKEO 2220) # (SBA-AS)]

Summer only. 3 credits. K. Jordan.

This course offers hands-on training in archaeological field methods through survey and excavation at historic-period Iroquois sites in the Finger Lakes region. The majority of class time will be spent engaging in supervised fieldwork, supplemented by lectures introducing archaeological methods and Iroquois history and material culture. Excavations will gather data on Iroquois residential architecture and domestic activities. Students will master field procedures, record-keeping, and interpretation of field data; study Iroquois material culture; and write a short research paper (7-10 pages) that uses data generated by the project to evaluate a topic of anthropological interest. Most class time will be spent off-campus; transportation will be arranged by the instructor.

ANTHR 2235 Archaeology of North American Indians (also AIS/AMST 2350, ARKEO 2235) # (HA-AS)]

Spring. 3 credits. K. Jordan.

This introductory course surveys archaeology's contributions to the study of American Indian cultural diversity and change in North America north of Mexico. Lectures and readings will examine topics ranging from the debate over when the continent was first inhabited to present-day conflicts between Native Americans and archaeologists over excavation and the interpretation of the past. We will review important archaeological sites such as Chaco Canyon, Cahokia, Lamoka Lake, and the Little Bighorn battlefield. A principal focus will be on major transformations in lifeways such as the adoption of agriculture, the development of political-economic hierarchies,

and the disruptions that accompanied the arrival of Europeans to the continent.

ANTHR 3000 Introduction to Anthropological Theory (CA-AS)

Fall. 4 credits. P. Nadasdy.
For description, see Sociocultural Anthropology.

[ANTHR 3217 Stone Age Archaeology (also ARKEO 3217) (HA-AS)]

Fall. 4 credits. Comparative survey. Next offered 2010–2011. T. Volman.]

[ANTHR 3230 Humans and Animals (also ARKEO 3230) @ # (CA-AS)]

Fall. 4 credits. Comparative survey. Next offered 2010–2011. N. Russell.]

[ANTHR 3232 Politics of the Past (also ARKEO 3232) @ # (HA-AS)]

Fall. 4 credits. Comparative survey. Next offered 2010–2011. N. Russell.]

[ANTHR 3248 Iroquois Archaeology (also AIS/ARKEO 3248/6248, ANTHR 6248) # (HA-AS)]

Fall. 4 credits. Next offered 2011–2012. K. Jordan.]

[ANTHR 3255 Ancient Mexico and Central America (also ARKEO 3255) @ # (HA-AS)]

Fall. 4 credits. Next offered 2010–2011. J. Henderson.]

ANTHR 3256 Archaeology of the Andes (also ARKEO 3256) @ # (HA-AS)]

Fall. 4 credits. J. Henderson.
A survey of the rise and decline of civilizations in the Andean region of western South America before the European invasion. Key topics include the use of invasion-period and ethnographic information to interpret precolumbian societies, the emergence of settled farming life, and the development of the state.

[ANTHR 3269 Gender and Age in Archaeology (also ANTHR 6269, ARKEO 3269/6269, FGSS 3700/6700) (SBA-AS)]

Fall. 4 credits. Comparative survey. Next offered 2010–2011. N. Russell.]

ANTHR 3270 Environmental Archaeology (also ANTHR 6270, ARKEO 3270/6270) (PBS Supplementary List)]

Fall. 4 credits. Comparative survey. T. Volman.

A survey of selected topics in paleoenvironmental analysis and reconstruction, with emphasis on how they inform interpretations of the archaeological record. The course ranges broadly from a general consideration of human ecology and the role of environment in culture change to detailed study of specific techniques and approaches.

ANTHR 3272 Hunters and Gatherers (also ANTHR 6272, ARKEO 3272/6272) @ # (SBA-AS)]

Fall. 4 credits. Comparative survey. T. Volman.

A survey of contemporary and recent peoples with economies based completely or mainly on hunting and gathering. Selected societies from various parts of the world will be examined to compare aspects of technology, subsistence practices, organization and beliefs. The impact of contact with more economically advanced societies will be considered.

ANTHR 4209 Approaches to Archaeology (also ARKEO 4209) (CA-AS)]

Spring. 4 credits. K. Jordan.

An exploration of the concepts that have shaped modern archaeology. The course briefly examines the history of theoretical orientations in archaeology, then considers the variety of perspectives and interpretive frameworks that guide present-day investigations. Case studies illustrate the implications of the nature of the archaeological record for reconstructing subsistence and economic systems, trade, social and political organization, demography, and ideology. An undergraduate seminar especially recommended for undergraduate majors and graduate archaeologists but open to anyone with a serious interest in archaeology.

[ANTHR 4256 Mesoamerican Religion, Science, and History (also ARKEO 4256, LATA 4250) @ # (CA-AS)]

Spring. 4 credits. Next offered 2010–2011. J. Henderson.]

[ANTHR 4258 Archaeological Analysis (also ANTHR/ARKEO 6258, ARKEO 4258) (SBA-AS)]

Spring. 4 credits. Limited to 15 students. Prerequisite: archaeology course or permission of instructor. Next offered 2011–2012. J. Henderson.]

ANTHR 4263 Zooarchaeological Method (also ARKEO 4263) (PBS Supplementary List)]

Fall. 5 credits. N. Russell.

This is a hands-on laboratory course in zooarchaeological method: the study of animal bones from archaeological sites. It is designed to provide students with a basic grounding in identification of body part and taxon, aging and sexing, pathologies, taphonomy, and human modification. We will deal only with mammals larger than squirrels. While we will work on animal bones from prehistoric Europe, most of these skills are easily transferable to the fauna of other areas, especially North America. This is an intensive course that emphasizes laboratory skills in a realistic setting. You will analyze an assemblage of actual archaeological bones. It is highly recommended that students also take the course in Zooarchaeological Interpretation (ANTHR/ARKEO 4264) offered in the spring.

ANTHR 4264 Zooarchaeological Interpretation (also ARKEO 4264) (PBS Supplementary List)]

Spring. 4 credits. Prerequisite: permission of instructor. N. Russell.

This course follows from last semester's Zooarchaeological Method. We will shift our emphasis here from basic skills to interpretation, although you will continue to work with archaeological bones. We will begin by examining topics surrounding the basic interpretation of raw faunal data: sampling, quantification, taphonomy,

seasonality. We will then explore how to use faunal data to reconstruct subsistence patterns, social structure, and human/animal relations.

[ANTHR 4267 Origins of Agriculture (also ARKEO 4267) # (HA-AS)]

Spring. 4 credits. Next offered 2010–2011. N. Russell.]

[ANTHR 4268 Myth, History, and Politics: The Aztecs and Their Empire (also ANTHR/ARKEO 7268, ARKEO 4268)]

Spring. 4 credits. Next offered 2011–2012. J. Henderson.]

[ANTHR 4270 Political Economy in Archaeology (also ANTHR/ARKEO 7270, ARKEO 4270) # (SBA-AS)]

Fall. 4 credits. Next offered 2011–2012. K. Jordan.]

ANTHR 4272 Historical Archaeology of Indigenous Peoples (also AMST 6272, ANTHR/ARKEO 7272, ARKEO/AMST 4272) # (HA-AS)]

Fall. 4 credits. K. Jordan.

This seminar uses archaeology to examine the responses of nonstate indigenous peoples across the world to European expansion and colonialism over the past 500 years.

Archaeology provides a perspective on indigenous lives that both supplements and challenges document-based histories. We will assess the strengths and weaknesses of various theories of culture contact, and explore a series of archaeological case studies, using examples primarily from North America with lesser emphasis on Africa and the Pacific. The seminar provides a comparative perspective on indigenous-colonial relationships, in particular exploring the hard-fought spaces of relative autonomy created and sustained by indigenous peoples.

[ANTHR 4294 Seminar in Archaeology: The Archaeology of Human Origins (also ARKEO 4294) (HA-AS)]

Spring. 4 credits. T. Volman.

An exploration of the archaeological record associated with early modern and near-modern humans as well as their nonmodern contemporaries, such as the Neanderthals. Major issues include: what behaviors and capabilities are indicated for various populations, and how and why did these change over the course of the later Pleistocene? To what extent does the archaeological record support the "Out-of-Africa" hypothesis of a recent, African origin for all modern humans?]

IV. Biological Anthropology

Biological anthropology is the subfield of anthropology that explores the physical diversity, evolutionary history, and behavioral potential of our species. Consistent with anthropology more generally, biological anthropology is concerned with human variation. The distinctive perspective of this subfield is that it examines human variation within the framework of evolutionary theory. Analyses of both biology and culture, and of the interaction between the two, mark the broad boundaries of this discipline. Within that wide scope, specific areas of inquiry are diverse, including fossil studies, primate behavior, nutrition and development, sexual behavior, parental investment, molecular and population genetics, adaptation to environmental stress, disease evolution, life history analysis, and more. Some of the most

pressing social issues of our time fall within the domain of biological anthropology as well as a range of professions: the controversy over evolution and intelligent design; race, gender, and genetic determinism; the control of disease; the roots of aggression; and conservation and the role of humans in ecological systems. Although the number of Anthropology courses offered in this subfield are limited, students can pursue their interests through a variety of related courses in other departments and by constructing independent study courses with specific faculty members.

ANTHR 1300 Human Evolution: Genes, Behavior, and the Fossil Record (PBS Supplementary List)

Spring. 3 credits. Lab usage and maintenance fee: \$5. A. Arcadi.

For description, see Introductory Courses.

ANTHR 1401 The Scope of Anthropology

Fall. 1 credit. Staff.

For description, see Introductory Courses.

ANTHR 2750 Human Biology and Evolution (also NS 2750)

Fall. 3 credits. J. D. Haas.

For description, see NS 2750.

ANTHR 3000 Introduction to Anthropological Theory (CA-AS)

Fall. 4 credits. P. Nadasdy.

For description, see Sociocultural Anthropology.

ANTHR 3302 Anthropology of Everyday Life @ (SBA-AS)

Fall. 4 credits. M. Small.

How can a subject as esoteric as anthropology affect our daily lives? This course will cover 14 individual subjects such as love, sex, competition, anger, war, self-deceit, marriage, work, play and look at them anthropologically, that is, from an evolutionary and cross-cultural viewpoint. Students will also be required to integrate their own experience and observation of with these subjects and demonstrate how their behavior, too, has an anthropological bent.

[ANTHR 3305 Anthropology of Parenting @ (SBA-AS)]

Spring. 4 credits. Next offered 2010-2011. M. Small.]

ANTHR 3390 Primate Behavior and Ecology (PBS Supplementary List)

Spring. 4 credits. Comparative survey.

Prerequisite: ANTHR 1300 or permission of instructor. A. Clark Arcadi.

The course will investigate all aspects of nonhuman primate life. Based on the fundamentals of evolutionary theory, group and inter-individual behaviors will be presented. In addition, an understanding of group structure and breeding systems will be reached through an evaluation of ecological constraints imposed on primates in different habitats. Subjects include: primate taxonomy, diet and foraging, predation, cooperation and competition, social ontogeny, kinship, and mating strategies.

ANTHR 4390 Topics in Biological Anthropology

Fall. 4 credits. Prerequisites: ANTHR 1300, 3390, or permission of instructor. M. Small.

Current topics in biological anthropology are explored. Topics change each semester. For further information, contact the professor or department office.

V. Honors, Field Research, and Independent Study

ANTHR 4910 Independent Study: Undergrad I

Fall or spring. Credit TBA. Prerequisite: undergraduate standing. Staff.

Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 4920 Independent Study: Undergrad II

Fall or spring. Credit and times TBA.

Prerequisite: undergraduate standing. Staff.

For description, see ANTHR 4910, section II, "Honors and Independent Study."

ANTHR 4983 Honors Thesis Research

Fall. 3 credits. Prerequisite: permission of Honors Committee. Staff.

Research work supervised by the thesis advisor, concentrating on determination of the major issues to be addressed by the thesis, preparation of literature reviews, analysis of data, and the like. The thesis advisor will assign the grade for this course.

ANTHR 4984 Honors Thesis Write-Up

Spring. 2 credits. Staff.

Final write-up of the thesis under the direct supervision of the thesis advisor, who will assign the grade for this course.

ANTHR 4991 Honors Workshop I Write-Up

Fall. 1 credit. Staff.

Course will consist of several mandatory meetings of all thesis writers with the honors chair. These sessions will inform students about the standard thesis production timetable, format and content expectations, and deadlines; expose students to standard reference sources; and introduce students to each other's projects. The chair of the Honors Committee will assign the grade for this course.

ANTHR 4992 Honors Workshop II

Spring. 2 credits. Staff.

Course will consist of weekly, seminar-style meetings of all thesis writers until mid-semester, under the direction of the honors chair. This second semester concentrates on preparation of a full draft of the thesis by mid-semester, with ample time left for revisions prior to submission. Group meetings will concentrate on collective reviewing of the work of other students, presentation of research, and the like.

Spring. 3 credits. M. Hatch.

MUSIC 1341 Gamelan in Indonesian History and Cultures

Fall and spring. 3 credits. Prerequisite: permission of instructor. M. Hatch.

BSOC/HD/NS 3470 Human Growth and Development: Biological and Behavioral Interactions

Spring. 3 credits. J. Haas and S. Robertson.

NS 6300 Anthropometric Assessment

Spring. 1 credit. J. Haas.

VI. Graduate Seminars

The graduate program in anthropology is described in much greater detail on the anthropology department web page at falcon.arts.cornell.edu/Anthro. The seminars described immediately below pertain to the program in sociocultural anthropology. For information about graduate study in archaeology and biological anthropology, see the anthropology department web page.

A core set of seminars is required of all graduate students in sociocultural anthropology: ANTHR 6000 and 6010. ANTHR 6403 is strongly recommended. These courses are open to graduate students from other related fields. This sequence, and the graduate curriculum in general, is premised on the idea that anthropology is best defined as the comparative study of human social life. This definition resists institutional pressures in the academy to distinguish social science from humanistic or cultural studies and scholarly from more worldly applications. Our most important method, ethnography, is at once scientific and humanistic; disciplinary aspirations refuse to view cultural interpretation and analytic explanation as separable values. Furthermore, theory in anthropology is directly related to practice in the world whether in relation to research or more action-oriented pursuits. Consequently, the core sequences as well as most other courses for graduate students are oriented explicitly toward subverting an ideological construction of social life as separable into cultural and social (or political-economic) domains.

ANTHR 6000 Proseminar: Culture and Symbol

Fall. 6 credits. H. Miyazaki.

Focuses on an appreciation of symbolic, expressive, and representational forms and processes both as producers and products of social activities. Through the study of symbolic anthropology, structuralism, exchange, myth and ritual, religion, gender, personhood, linguistics, semiology, etc., the course investigates how identity and meaning are linked to the practical exigencies of social life. While emphasizing aspects of the discipline generally associated with cultural anthropology, the course endeavors to set the stage for a dialectical understanding of social, political, economic, and symbolic activities as interrelated phenomena. The works of de Saussure, Levi-Strauss, Dumont, Geertz, Victor Turner, Sahlins, among others, as well as contemporary theories are given careful attention.

ANTHR 6010 Proseminar: Social Organization

Spring. 6 credits. M. Welker.

Focuses on linkages between culture and social institutions, representations and practices. The nature of these linkages is debated from strongly contesting points of view in social theory (structuralist, poststructuralist, utilitarian, hermeneutic, Marxist). Unlike debates in critical theory where the form of contestation has been mainly philosophical, in anthropology, these issues have developed in ethnographic analyses. The course briefly surveys kinship theory and economic anthropology with a focus on implications for general issues in social theory. Discussion of attempts to develop dialectical syntheses around the motion of "practice" follows. The issues addressed in this section carry over into the

next, colonialism and post-colonialism, in which poststructuralist readings of history are counterposed to Marxist ones. Finally, Lacanian and Marxist visions of ideology as they relate to anthropological theory and ethnographic analysis are examined with particular emphasis on the cultural and social production of persons.

[ANTHR 6248 Iroquois Archaeology (also ANTHR 3248, ARKEO/AIS 3248/6248)]

Fall. 4 credits. Next offered 2011–2012.

Spring. 4 credits. Next offered 2011–2012.
V. Santiago-Irizarry.]

ANTHR 6430 Concepts and Categories in Theory and Practice

Fall. 4 credits. P. Nadasdy.

Concepts and categories form the basis of much human thought and action, and anthropologists have long been fascinated by how humans categorize the world. Yet, concepts and categories shape anthropological thought and practice as well. The conceptual tools we bring to bear in the study of sociocultural phenomena profoundly shape our understandings of them. Despite this, however, many of the concepts and categories that anthropologists and other social scientists use are implicit in their work rather than consciously theorized. The goal of this course is to make students aware of the role that concepts and categories play in the practice of social science and to provide them with the theoretical tools needed to evaluate conceptual frameworks in the social sciences.

ANTHR 6440 Research Design

Spring. 4 credits. K. March.

This seminar focuses on preparing a full-scale proposal for anthropological fieldwork for a dissertation. Topics include identifying of appropriate funding sources; defining a researchable problem; selecting and justifying a particular fieldwork site; situating the ethnographic case within appropriate theoretical contexts; selecting and justifying appropriate research methodologies; developing a feasible timetable for field research; ethical considerations and human subjects protection procedures; and preparing appropriate budgets. This is a writing seminar, and students will complete a proposal suitable for submission to a major funding agency in the social sciences.

ANTHR 6543 Chinese Ethnology

Fall. 4 credits. S. Sangren and M. Fiskesjo.
This seminar is designed for graduate students specializing in the study of Chinese culture and society and for advanced undergraduates who plan to pursue careers in the academic study of Chinese culture. The course focuses on close readings on theoretical and conceptual problems and issues in the study of Chinese culture and society, with an emphasis on perspectives provided by cultural anthropology. Among topics that may be included are the social production of gender, ideology in myth and ritual, the cultural uses of history, and political culture; however, the particular emphases of the seminar may vary from year to year. Those with a reading knowledge of Chinese will be encouraged to explore Chinese sources, but use of such sources is not a requirement of the course.

ANTHR 7520 Southeast Asia: Readings in Special Problems

Fall or spring. Credit TBA. Staff.
Independent reading course on topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 7523 Making History on the Margins: The China-SE Asia Borderlands (also ANTHR 4523)

Fall. 4 credits. M. Fiskesjo.
For description, see ANTHR 4523.

ANTHR 7530 South Asia: Readings in Special Problems

Fall or spring. Credit TBA. Staff.
Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 7545 Peoples and Cultures of the Himalayas (also ANTHR 3545)

Fall. 4 credits. K. March.
For description, see ANTHR 3545.

ANTHR 7550 East Asia: Readings in Special Problems

Fall or spring. Credit TBA. Staff.
Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 7910 Independent Study: Grad I

Fall or spring. Credit TBA. Prerequisite: graduate standing. Staff.
Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 7920 Independent Study: Grad II

Fall or spring. Credit TBA. Prerequisite: graduate standing. Staff.

For description, see ANTHR 7910.

ANTHR 7930 Independent Study: Grad III

Fall or spring. Credit TBA. Prerequisite: graduate standing. Staff.

For description, see ANTHR 7910.

ARCHAEOLOGY

S. Baugher, director (Landscape Architecture), K. M. Clinton, director of graduate studies (Classics), A. Alexandridis (History of Art), K. Bowes (Classics), J. E. Coleman (Classics), M. Fiskesjo (anthropology), F. Gleach (Anthropology), K. L. Gleason (Landscape Architecture), J. S. Henderson (Anthropology), K. Jordan (Anthropology), K. A. R. Kennedy (Ecology and Evolutionary Biology), S. Manning (Classics), R. McNeal (Asian Studies), C. Monroe (Near Eastern Studies), L. Monroe (Near Eastern Studies), D. I. Owen (Near Eastern Studies), A. Ramage (History of Art), E. Rebillard (Classics), N. Russell (Anthropology), B. S. Strauss (History), M. A. Tomlan (City and Regional Planning), T. P. Volman, director of undergraduate studies (Anthropology), J. R. Zorn (Near Eastern Studies).

Archaeology is an interdisciplinary field at Cornell, which is one of the few universities in the United States to offer a separate archaeology major and a master's degree. Program faculty members, affiliated with several departments, coordinate course offerings and help students identify

opportunities for fieldwork, graduate study, and professional positions.

The Major

Prospective majors must complete ARKEO 1200 or one of the basic courses as defined below before they will be admitted to the major.

Because the major draws on the teaching and research interests of faculty from many departments to present a broad view of the archaeological process, interested students should discuss their course of study with a participating faculty member as early as possible. In some areas of specialization, intensive language training should be coordinated with other studies as early as the freshman year.

Once admitted to the major, students must take at least 32 additional credits from the courses listed below, or from related fields selected in consultation with a major advisor of their choosing. The courses chosen should provide exposure to a broad range of cultures known through archaeology and the methods of uncovering and interpreting them. Sixteen of the credit hours should be at the 3000 level or above. At least two courses must be taken from each of the following categories: II. Anthropological Archaeology; III. Classical, Near Eastern, and Medieval Archaeology; and IV. Methodology and Technology. Only 4 credits of ARKEO 3000 Individual Study or other supervised study can count toward the major.

Courses basic to the discipline of archaeology are marked with the word "Basic" after the number of credit hours. It is recommended that majors who are planning to pursue graduate studies in archaeology take at least two of the basic courses in each category. Further courses in languages and geology are also recommended.

Honors. Honors in archaeology are awarded on the basis of the quality of an honors essay and the student's overall academic record. Prospective honors students should have at least a 3.5 GPA in the major and a 3.0 grade point average overall. They should consult with the director of undergraduate studies by the beginning of the senior year. The honors essay is normally prepared over two semesters in consultation with a faculty advisor during the senior year. Students may enroll in ARKEO 4981 Honors Thesis Research, and to complete the thesis, they may enroll in ARKEO 4982 Honors Thesis Writeup. Both courses are offered in the fall and spring. Only ARKEO 4981 may count toward hours for completion of the archaeology major requirements. The credit hours for these courses are variable.

Fieldwork. Every student should gain some practical experience in archaeological fieldwork on a project authorized by his or her advisor. This requirement may be waived in exceptional circumstances. The Jacob and Hedwig Hirsch bequest provides support for a limited number of students to work at excavations sponsored by Cornell and other approved institutions.

The Minor

Students in Cornell schools and colleges other than Arts and Sciences may elect a minor in archaeology. To minor in archaeology, the student must complete five courses, all with a grade of C or better. The five courses must consist of either (1) ARKEO 1200 and four other courses from categories II-IV (described

above), at least three of which must be basic courses, or (2) five courses from categories II-IV, at least four of which must be basic courses. Minors are encouraged to gain some fieldwork experience. They are eligible for Hirsch Scholarships in support of fieldwork on the same basis as majors.

First-Year Writing Seminars

For course descriptions, see the First-Year Writing Program brochure.

I. Introductory Courses and Independent Study Courses

ARKEO 1200 Ancient Peoples and Places (also ANTHR 1200) # @ (HA-AS)

Spring. 3 credits. Basic. F. Gleach.
Broad introduction to archaeology: the study of material remains to answer questions about the human past. Case studies highlight the variability of ancient societies and illustrate the varied methods and interpretive frameworks archaeologists use to reconstruct them. This course can serve as a platform for both archaeology and anthropology undergraduate majors.

ARKEO 3000 Individual Study in Archaeology and Related Fields

Fall and spring. Credit TBA. Prerequisite: ARKEO 1200 or permission of instructor.
Undergraduate students pursue topics of particular interest under the guidance of a faculty member.

ARKEO 4981 Honors Thesis Research

Fall or spring. 4 credits, variable.
Prerequisite: admission to honors program.
Independent work under the close guidance of a faculty member.

ARKEO 4982 Honors Thesis Writeup

Fall or spring. 4 credits, variable.

ARKEO 6000 Special Topics in Archaeology

Fall and spring. 4 credits, variable.
Graduate students pursue advanced topics of particular interest under the guidance of a faculty member(s).

ARKEO 8901-8902 Master's Thesis

8901, fall; 8902, spring. 4 credits, variable.
Prerequisite: master's students in archaeology. S-U grades only.
Students, working individually with faculty member(s), prepare a master's thesis in archaeology.

II. Anthropological Archaeology

ARKEO 2200 Early People: The Archaeological and Fossil Record (also ANTHR 2200) # (HA-AS)

Spring. 3 credits. Basic. T. P. Volman.
For description, see ANTHR 2200.

LA 5450 The Parks and Fora of Imperial Rome

Spring. 3 credits. Prerequisites: advanced standing in design field, classics, or history of art, or permission of instructor. K. Gleason.

IV. Methodology and Technology**ARKEO 2220 Field Course in Iroquois Archaeology (also ANTHR 2220) (SBA-AS)]**

Summer only. 3 credits. K. Jordan. For description, see ANTHR 2220.

[ARKEO 2728 Art and Archaeology in the Ancient Mediterranean World (also ARTH 2227, CLASS 2727)]

Fall. 4 credits. Basic. Next offered 2010–2011. S. Manning.]

[ARKEO 2756 Practical Archaeology (also CLASS 2756)]

ARKEO 2610 Urban Archaeology (also CRP/LA 2610)

Fall. 3 credits. Basic. S. Baugher.
For description, see LA 2610.

ARKEO 2620 Laboratory in Landscape Archaeology (also LA 2620)

Spring. 3 credits. Basic. S. Baugher.
For description, see LA 2620.

ARKEO 3002 Archaeology Underwater

Summer only. 2 credits. Off campus at Shoals Marine Lab. N. Brady.
This course outlines the development of maritime archaeology as it has emerged from more traditional terrestrial archaeology and the still-young discipline of underwater archaeology. As its primary examples, the course focuses on the archaeology of the Isles of Shoals within the Gulf of Maine; it also conducts onsite survey and site investigations to create an in-depth archaeological and historical study of the isles. Students participate in active fieldwork, including foreshore study and underwater exploration.

ARKEO 3003 Island Archaeology

Summer only. 2 credits. Off campus at Shoals Marine Lab. N. Hamilton.
The objective of this course will be to train students in standardized and innovative methods and technology used in archaeological surveys, excavations, assessments, research, and compliance work. Course work will include documentation, reporting, and completion of architectural, historic, and prehistoric site survey and excavation forms suitable for historic reservation submission. Students will be able to develop research designs and strategies for Phase I, II, and III archaeological investigations. Field logistics, scheduling, ethics, public relations, and personnel-management training will be included. The Register of Professional Archaeology standards and practice will be used as a guide.

ARKEO 3090 Introduction to Dendrochronology (also ARTH 3250, CLASS 3750) # (HA-AS)

Fall. 4 credits. Limited to 10 students.
Prerequisite: permission of instructor. Letter grades only. S. Manning.
For description, see CLASS 3750.

ARKEO 3270 Environmental Archaeology (also ANTHR 3270/6270, ARKEO 6270) (PBS Supplementary List)

Fall. 4 credits. T. P. Volman.
For description, see ANTHR 3270.

[ARKEO 4020 Designing Archaeological Exhibits (also ARKEO 6020)

Fall. Variable credit. Letter grades only.
Next offered 2010-2011. S. Baugher.]

[ARKEO 4258 Archaeological Analysis (also ANTHR 4258/6258, ARKEO 6258) (SBA-AS)

Spring. 4 credits. Limited to 15 students.
Prerequisite: archaeology course or permission of instructor. Next offered 2011-2012. J. S. Henderson.]

[ARKEO 4260 Field and Analytical Methods in Archaeology (also ANTHR 4260) # (SBA-AS)

Spring. 4 or 6 credits. Next offered 2011-2012. K. Jordan.]

ARKEO 4263 Zooarchaeological Method (also ANTHR 4263) (PBS Supplementary List)

Fall. 5 credits. N. Russell.
For description, see ANTHR 4263.

ARKEO 4264 Zooarchaeological Interpretation (also ANTHR 4264) (PBS Supplementary List)

Spring. 4 credits. Prerequisites: ANTHR/ARKEO 4263; permission of instructor.
N. Russell.
For description, see ANTHR 4264.

[ARKEO 4267 Origins of Agriculture (also ANTHR 4267) # (HA-AS)

Spring. 4 credits. Next offered 2010-2011.
N. Russell.]

ARKEO 4370 Geophysical Field Methods (also EAS 4370) (PBS)

Fall. 3 credits. Prerequisite: PHYS 2213 or 2208 or permission of instructor.
L. D. Brown.
For description, see EAS 4370.

ARKEO 4600 Late Quaternary Paleocology (also EAS 4600) (PBS)

Fall. 4 credits. M. Goman.
For description, see EAS 4600.

[ARKEO 4903 Methods in the Study of the Ancient Near East (also JWST/NES 4903)

Spring. 4 credits. Next offered 2010-2011.
D. Owen.
For description, see NES 4903.]

ARKEO 6000 Special Topics in Archaeology

Fall and spring. 4 credits. Staff.

[ARKEO 6020 Designing Archaeological Exhibits (also ARKEO 4020)

Spring. Variable credit. Letter grades only.
Next offered 2010. S. Baugher.]

ARKEO 6270 Environmental Archaeology (also ANTHR 3270/6270, ARKEO 3270)

Fall. 4 credits. T. P. Volman.
For description, see ANTHR 3270.

ARKEO 6510 Advanced Fieldwork in Historical Archaeology (also ARKEO 4510)

Fall. 4 credits. S. Baugher.

ARKEO 6520 Advanced Laboratory in Historical Archaeology (also ARKEO 4520)

Spring. 3 credits. S. Baugher.
This is a course for archaeology majors and minors who want to obtain more in-depth skills in laboratory work, identification and cataloguing of historic period ceramics, glass, and metal. The course will provide the students with skills to undertake laboratory analysis of artifacts. Students will undertake independent research projects on specific artifacts (in lieu of a term paper).

[ARKEO 7742 Research Methods in Archaeology (also CLASS 7742)

Spring. 4 credits. S. Manning. Next offered 2010-2011.]

[BIOEE 6710 Paleoanthropology of South Asia (also ANTHR 6371, ASIAN 6672)

Fall. 3 credits. Next offered 2011-2012.
K. A. R. Kennedy.]

ASIAN STUDIES

R. McNeal, chair (350 Rockefeller Hall, 255-5095); A. Blackburn, B. Bledsoe, D. Boucher, T. Chalomentiarana, M. Chapman, B. de Bary, S. Divo, W. George, D. Gold, G. Green, E. Gunn, B. Herath, H. Huang, S. Ichikawa, N. Jagacinski, J. Kanemitsu, Y. Katagiri, N. Larson, J. M. Law, L. McCrear, D. McKee, Y. Lee-Mehta, S. Mukherjee, S. Oja, J. Pandin, L. Paterson, H. Phan, B. Rusk, N. Sakai, T. Savella, W. Shao, S. Singh, M. Song, R. Sukle, M. Suzuki, K. Taylor, Q. Teng, T. Tranviet, S. Tun, D. X. Warner, L. Zheng; Emeritus: K. Brazell, T. L. Mei, J. Wolff; Associated Faculty: A. Carlson, J. Chen, Z. Chen, S. Cochran, A. Cohn, M. Fiskesjo, M. Hatch, R. Herring, T. J. Hinrichs, K. Hirano, D. Holmberg, M. Katzenstein, K. Kennedy, V. Koschmann, T. Loos, T. Lyons, K. March, S. Martin, K. McGowan, H. Miyazaki, S. Mohanty, V. Munasinghe, V. Nee, A. Nussbaum, A. Pan, P. Sangren, J. Siegel, E. Tagliacozzo, N. Uphoff, J. Whitman, A. Willford

The Department of Asian Studies and associated faculty members in other departments encompass the study of East Asia, South Asia, and Southeast Asia and offer courses in most of the disciplines of the social sciences and the humanities. Over 40 faculty members specialize in topics arranged under our rubrics of "Literature and Linguistics," "Religion," and "Society and Culture," as well as offering more broad courses under our "General Education" heading. Asian Studies courses through the 4400 level (ASIAN is the prefix) are taught in English and are open to all students in the university. Some of these courses may be counted toward majors in other departments; others fulfill various distribution requirements.

The Major

To become an Asian Studies major, a student must first successfully complete with a minimum grade of B at least two Asia content courses (excluding writing seminars), one of which may be a language course. Applications to major in Asian Studies must be approved by the director of undergraduate studies.

Completion of the major requires completion of two years of an Asian language or the demonstration of equivalent proficiency. To demonstrate equivalent proficiency, a student with prior background in the language should attempt to test into a desired language course at the 2200 level or beyond. Completing two courses at the 2200 level, or the second semester of such a sequence (while testing out of the first semester), or testing into a language course beyond the 2200 level, serves to demonstrate proficiency. Once proficiency has been demonstrated, students may count up to 6 units of further language study among the 30 Asian Studies units required of departmental majors. These 30 units must be taken from courses numbered 2200 and above and including at least one from two of the Asian Studies categories of "Literature and Linguistics" (LL), "Religion" (RL), and "Society and Culture" (SC); at least one course at the 3300 level; and at least one course at the 4400 level or above. A minimum grade of B must be received in all of these courses. Courses taken for major credit must be taken for a grade rather than as S–U. Certain courses about Asia offered in other departments at the 1100 level may, at the discretion of the advisor and the DUS, be counted toward our major as if they were 2200-level courses, e.g., HIST/ASIAN 1191, 1192.

Category Key: Courses in Asian Studies are broken into different categories. To determine which category a course falls in, please note the reference at the end of each course description. The key is as follows: GE = General Education, LL = Literature and Linguistics, RL = Religion and SC = Society and Culture.

Honors

To be eligible for honors in Asian Studies, a student must have a cumulative GPA of 3.7 in all Asian Studies area courses and must successfully complete an honors essay during the senior year. Students who wish to be considered for honors should apply to the director of undergraduate studies during the second semester of their junior year. The application must include an outline of the proposed project and the endorsement of a supervisor chosen from the Asian Studies advising faculty. During the first term of the senior year, the student does research for the essay in conjunction with an appropriate Asian Studies course or ASIAN 4401. By the end of the first term, the student must present a detailed outline of the honors essay and have it approved by the project supervisor and the director of undergraduate studies. The student is then eligible for ASIAN 4402, the honors course, which entails the writing of the essay. At the end of the senior year, the student has an oral examination (with at least two faculty members) covering both the honors essay and the student's area of concentration.

Minor in East Asia Studies

A candidate for the bachelor of arts or science degree at Cornell may take a minor in East Asian studies by completing at least 18 units of course work in East Asian studies.

Students normally take five courses in East Asian Studies from those East Asian courses listed (China, Japan, Korea) either under Asian Studies or Asian-related courses taught outside of the Asian Studies department. Of these,

nonlanguage courses should be selected at the 2200 level or above. Two courses in an East Asian language at the 1100 level or above may be counted toward the minor. Language study is strongly encouraged. East Asian graduate courses may also be taken for the minor, as well as East Asia–related courses with a research paper on an East Asian topic. Appropriate courses taken through Cornell Abroad in East Asia may also be counted toward the minor. A minimum grade of B must be received for all courses counted toward the minor. S–U courses are ineligible. Students minoring in East Asian Studies should select an advisor from the East Asia Program faculty for consultation on their course of study. For more information, contact the Department of Asian Studies, 350 Rockefeller Hall, 255-5095, or lrc.cornell.edu/asian.

Minor in South Asia Studies

A candidate for the bachelor of arts or science degree at Cornell may achieve a minor in South Asia Studies by completing at least 18 units of course work (typically five courses) in South Asian Studies. These courses are selected from South Asia courses listed under the Department of Asian Studies, or from other Asia-related courses offered by other departments. Of these, nonlanguage courses should be selected at the 2200 level or above. Two courses in an South Asian language at the 1100 level or above may be counted toward the minor. Language study is strongly encouraged. Appropriate South Asia graduate course work may be included in the minor with consent of the instructor and the advisor. One South Asia–related course with a research paper on a South Asia subject may be included with the consent of the advisor and the director of undergraduate studies. A minimum grade of B must be received for all courses toward the Minor. S–U courses are ineligible. Students minoring in South Asian Studies are considered members of the South Asia Program and will have an advisor from the program faculty. (This advisor will supervise a student's minor and does not substitute for a student's major advisor.) For more information, contact the Department of Asian Studies, 350 Rockefeller Hall, 255-5095, or lrc.cornell.edu/asian.

Minor in Southeast Asia Studies

A candidate for the bachelor of arts or science degree at Cornell may take a minor in Southeast Asian Studies by completing 18 units of course work, including a history course and 3 courses or seminars at the intermediate or advanced level. Up to 2 Southeast Asian language courses at the 1100 level or above may be included in the minor courses. A recommended plan would include ASIAN 2208 and 4 additional courses. A minimum grade of B must be received for all courses counted toward the minor. S–U courses are ineligible. Students taking a minor in Southeast Asian Studies are members of the Southeast Asia Program and will have an advisor from the Southeast Asia program faculty. Such students are encouraged to commence work on a Southeast Asian language either at the 10-week intensive courses offered by the Southeast Asia Studies Summer Institute (SEASSI) or by studying for a semester at IKIP Malang, Indonesia; Khon Kaen University, Thailand; or Hanoi University, Vietnam. Fellowships are available for undergraduates through the Cornell Abroad

Program. For more information, contact the Department of Asian Studies, 350 Rockefeller Hall, 255-5095, or lrc.cornell.edu/asian.

Intensive Language Program (FALCON)

The FALCON Program offers intensive instruction in either Japanese or Mandarin Chinese. Aside from the exclusive language schools of some government agencies, FALCON is the only program in the world that offers a full year of intensive instruction beginning at the elementary level and continuing through the advanced level. FALCON is a full-time program; the degree of intensity does not allow students to enroll simultaneously in other courses or to work, except perhaps on weekends. Students typically take the entire sequence of 1160, 2260, and 3360, but they may take any portion of the program if they have the necessary background as determined by a placement interview. Some students do choose to apply only to the summer portion. The spring semester of the Chinese program will be offered in Beijing at the School of International Studies at Peking University.

Students must formally apply to the program. To guarantee course availability and scholarship eligibility, applications must be received by March 1. After that, applicants are reviewed on a rolling basis and acceptance is contingent on the availability of spaces. The 1160–2260–3360 sequence fulfills the language requirement for the M.A. in Asian Studies and the joint M.B.A./M.A. in Asian Studies. Applications are available in 388 Rockefeller Hall or on the FALCON web site at lrc.cornell.edu/falcon/apply.

Study Abroad

There are many strong options for study abroad in Asia. Cornell Abroad helps students plan a year or semester abroad as part of their Cornell undergraduate degree. Cornell has affiliations with several programs and institutions in Asia and sends students to those and others.

Cornell is affiliated with IUP, the Inter-University Program for Chinese Language Studies in Beijing (at Tsinghua University) and is a member of CIEE and IES, organizations sponsoring study abroad programs offering Chinese language instruction at several levels as well as courses in Chinese studies in the humanities and social sciences. Students may also study at other programs in China, Hong Kong, and Taiwan. The Chinese FALCON program includes a spring semester in Beijing at Peking University.

Cornell is a member of the consortium of the Kyoto Center for Japanese Studies, an undergraduate semester or year program in Japanese language and Japanese studies. An agreement with International Christian University (ICU), outside Tokyo, permits Cornell students to attend that institution. Cornell students have attended CIEE and IES programs as well as other programs and institutions in Japan.

Cornell is a member of the American Association of Indian Studies, which offers fellowships for intensive study in India or Hindi, Bengali, and Tamil. There are study abroad options in universities or other organizations in various regions of India. In cooperation with Tribhuvan National University of Nepal, Cornell organizes the Cornell–Nepal Study Program for

undergraduate and graduate students wishing to spend a semester or year studying and conducting research in Nepal.

Students may spend a semester or year in Mongolia, Korea, Vietnam, Indonesia, Thailand, Singapore, or the Philippines or choose to study about Asia at such institutions as the School of Oriental and African Studies in London or the Faculty of Asian Studies at the Australian National University. Undergraduates should consult Cornell Abroad; graduate students should inquire at the East Asia Program, Southeast Asia Program, or South Asia Program offices.

Students may apply up to 15 credits from abroad to the major.

First-Year Writing Seminars

See John S. Knight Institute brochure for times, instructor, and descriptions.

Asia—General Education Courses

[ASIAN 1190 East Asia to 1800 (also HIST 1900) (HA-AS)]

Spring. 4 credits. Next offered 2010–2011. H. Hirano.

For description, see HIST 1900. (GE)

[ASIAN 1191 Introduction to Modern Asian History (also HIST 1910) @ (HA-AS)]

Fall. 4 credits. E. Tagliacozzo and S. Cochran.

For description, see HIST 1910. (GE)

[ASIAN 1192 Introduction to World Music II: Asia (also MUSIC 1302) @ (CA-AS)]

Fall. 3 credits. Next offered 2011–2012. M. Hatch.

For description, see MUSIC 1302. (GE)

[ASIAN 2208 Introduction to Southeast Asia @ (CA-AS)]

Fall. 3 credits. T. Chaloeintiarana.

For anyone curious about the most diverse part of Asia; defines Southeast Asia both as the nation-states that have emerged since 1945 (Brunei, Burma, Cambodia, Indonesia, Laos, Malaysia, Philippines, Singapore, Thailand, and Vietnam) and as a larger cultural world extending from southern China to Madagascar and Polynesia. Students find a serious, organized introduction to a variety of disciplinary and topical approaches to this region, including geography, linguistics, history, religion and ideology, anthropology, marriage and family systems, music, literacy and literature, art and architecture, agriculture, industrialization and urbanization, politics and government, warfare and diplomacy, ecological and human degradation, and business and marketing. The course teaches both basic information and different ways of interpreting that information. (GE)

[ASIAN 2209 Script and Culture in East Asia (also ARTH 2801, HIST 2891) @ # (LA-AS)]

Fall. 3 credits. Next offered 2010–2011. B. Rusk.

Introduction to the history and cultural role of writing systems, with a focus on the case of East Asia. (GE)

[ASIAN 2211 Introduction to Japan @ # (CA-AS)]

Fall. 3 credits. J. M. Law.

This course surveys major disciplinary approaches in the social sciences and humanities to the study of Japan by focusing

on different historical formulations of Japanese native and national identity: Japan the sacred nation, Japan the aesthetic, Japan the warrior nation, Japan the peaceful (victim) nation, Japan the industrious economic superpower and Japan the hyper-modern. We introduce Japanese performance traditions, read fiction, poetry and plays, see classical films and recent anime, and study historical cases relating to each of these formulations. (GE)

[ASIAN 2212 Introduction to China @ # (CA-AS)]

Spring. 3 credits. R. McNeal.

Interdisciplinary introduction to Chinese culture especially designed for students not majoring in Asian Studies. Explores literature, history, religion, art and archaeology, and other aspects of China's rich and diverse heritage, from earliest times to the present. (GE)

[ASIAN 2215 Introduction to South Asia @ (HA-AS)]

Fall. 3 credits. A. Blackburn and L. McCrea.

This is an interdisciplinary introduction to the cultures and histories of South Asia, with special attention to the intersections of religion, political authority, and the arts, as well as problems connected to gender and development. Students will look briefly at South Asian migration as well. Many sections of the course focus on questions of identity and belonging, looking at how people express their relationship to places and social groups. This course is suitable for students not majoring in Asian Studies. Students with more specialized interests in Asia and Asian Studies are also welcome. (GE)

[ASIAN 2218 Introduction to Korea @ (CA-AS)]

Fall. 3 credits. J. Pak.

Multidisciplinary introduction to Korean history, society, and culture. The first part of the course will examine sources of Korean tradition in their historical contexts. The second part, on the transition to a modern society, will cover the mid–19th century to the Korean War. The last part will be devoted to contemporary society. (GE)

[ASIAN 2250 Introduction to Asian Religions (also RELST 2250) @ # (HA-AS)]

Spring. 3 credits. D. Boucher.

Explores religious traditions in South Asia (Pakistan, India, and Sri Lanka) and East Asia (China and Japan) including Hinduism, Buddhism (South Asian and East Asian), Sikhism, Confucianism, Daoism, and Shinto. Encounters a wide range of religious expressions as well, including myth, ritual, pilgrimage, mysticism, meditation, and other spiritual technologies. (GE)

Asia—Literature and Linguistics Courses

The following courses are taught entirely in English and are open to any Cornell student.

[ASIAN 2240 Love, War, and the Supernatural in Pre-Modern Japan @ # (LA-AS)]

Fall. 3 credits. J. Kanemitsu.

In this course, students will meet some of the most memorable characters depicted in Japanese literature, from the eighth through 18th centuries. In addition to each work's historical and cultural contexts, we will consider its literary conventions and think about how genres have been defined. A survey of representative works in Japan's

literary history, this course examines changing representations of idealized male and female protagonists as they pursue desire, conquest, and occasionally both. (LL)

[ASIAN 2241 China's Literary Heritage: An Introduction in Translation @ # (LA-AS)]

Spring. 3 credits. Next offered 2012–2013. D. X. Warner.

This is a survey course designed for, though not limited to, nonmajors with or without any knowledge of Chinese language, history, or culture. Students read a broad selection in translation of poems, prose, and narrative writings from the pre-modern period on a variety of themes. (LL)

[ASIAN 2279 Chinese Mythology @ # (LA-AS)]

Summer. 3 credits. R. McNeal.

Students will study Chinese myths from the earliest times down to the late imperial era. Focus will be on understanding the form Chinese myths take, how they are related to religion, literature, historical accounts and intellectual trends. (LL)

[ASIAN 3318 Literature and Media in Japan (also COML 3150, VISST 3318)]

Fall. 3 credits. B. de Bary.

Dissolving the conventional distinction between literary studies and media studies, the course will first consider the formation of a modern national literature within the environment of rapidly transforming media in late 19th-century Japan. The primary focus, however, will be on dynamic relays and reciprocal influences among contemporary novels, films, anime, comics, video games, and digital arts. The course will use materials with translations or subtitles in English. (LL)

[ASIAN 3365 Traditional Japanese Theatre (also ASIAN 6665)]

Spring. 3 credits. J. Kanemitsu.

An introduction to seven genres of Japanese performing arts from the 14th through 19th centuries. In addition to examining pivotal moments in itinerant storytelling, dramatic literature, and dramaturgical treatises, we will also consider transformations in performance spaces and costuming as well as the traditions of artistic transmission. We will also be viewing recordings of modern performances and cinematic adaptations. All readings will be in English; no knowledge of the Japanese language will be required. (LL)

[ASIAN 3370 Global Martial Arts, Film, and Literature (also COML/FILM 3701)]

Spring. 4 credits. P. Liu.

For description, see COML 3701. (LL)

[ASIAN 3373 20th-Century Chinese Literature @ (LA-AS)]

Fall. 4 credits. Next offered 2010–2011. E. Gunn. (LL)

[ASIAN 3374 Chinese Narrative Literature @ # (LA-AS)]

Fall. 4 credits. E. Gunn.

Selected works in classical Chinese fiction are read in translation. Major novels, such as *The Dream of the Red Chamber* and *Water Margin*, are emphasized. (LL)

[ASIAN 3379 Southeast Asian Literature in Translation @ (LA-AS)]

Spring. 4 credits. Next offered 2011–2012. L. Paterson. (LL)

[ASIAN 3380 Vietnamese Literature in Translation (also ASIAN 6680) @ # (LA-AS)]

Fall. 4 credits. Next offered 2010–2011.
L. Paterson. (LL)

[ASIAN 3387 Literature and Film of South Asia (also COML 3860, VISST 3870) @ (CA-AS)]

Spring. 4 credits. Next offered 2010–2011.
A. Banerjee. (LL)

ASIAN 3389 Partition/Fiction and Film (also COML 3850)

Fall. 4 credits. A. Banerjee.
For description, see COML 3850. (LL)

ASIAN 4411 History of the Japanese Language (also LING 4411, JAPAN 4410) @ # (HA-AS)]

Fall. 4 credits. J. Whitman.
For description, see LING 4411. (LL)

[ASIAN 4412 Linguistic Structure of Japanese (also LING 4412) (KCM-AS)]

Spring. 4 credits. Next offered 2010–2011.
J. Whitman.
For description, see LING 4412. (LL)

ASIAN 4424 Asia Memoirs: Trauma and Social Upheaval in East and Southeast Asia (also ASIAN 6627) @ (CA-AS)]

Spring. 4 credits. L. Paterson.
From the Chinese Cultural Revolution to Khmer Rouge Cambodia, social upheaval in Asia has given rise to a genre of trauma memoir. In this course we will discuss how periods of societal terror are represented and remembered within these personal narratives. Through reading such accounts in conjunction with secondary scholarship, we will examine various issues of representation such as intended audience, construction of memory, and framing of individual experience. We will also examine to what extent these accounts contribute to, or contradict, national narratives of the respective countries. (LL)

[ASIAN 4430 Structure of Korean (also LING/KOREA 4430) (KCM-AS)]

Spring. 4 credits. Next offered 2010–2011.
J. Whitman.
For description, see LING 4430. (LL)

[ASIAN 4437 Research Methods in Pre-Modern China (also ASIAN 6611) @ # (LA-AS)]

Fall. 4 credits. Next offered 2010–2011.
B. Rusk. (LL)

[ASIAN 4481 Translation and Cultural Difference (also COML 4700) @ (KCM-AS)]

Fall. 4 credits. Next offered 2010–2011.
N. Sakai.
The course will explore the broader conception of translation in terms of which to critically understand communication as the ideology of Capital. (LL)

ASIAN 5505 Methodology of Asian Language Learning and Teaching

Spring. 2 credits. Limited enrollment.
Preference given to graduate students in Asian Studies and Linguistics. R. Sukle.
This is a course for anyone interested in the pedagogy of Asian languages; required for graduate students seeking appointment as teaching assistants and those seeking as continuing appointments as teaching associates in the Department of Asian Studies for Chinese, Hindi and Urdu, Japanese, and Korean. The course presents theories of language teaching and learning, provides

classroom observation and practice teaching, and outlines the basics of phonology, morphology, grammar, sociolinguistics, pragmatics, and discourse structure and other features of language use. (LL)

Asia—Religion Courses**ASIAN 2220 Buddhism in America (also RELST 2220) (CA-AS)]**

Summer. 3 credits. J. M. Law.
This course focuses on a threefold division of Buddhist communities in America: (1) communities established by Asian teachers with predominantly western community members; (2) communities established to serve the needs of immigrant communities arriving from traditionally Buddhist cultures; and (3) communities established by refugee communities. The class explores how these three different methods of arrival and establishment of Buddhist traditions in North America influence the decisions these communities make as they adapt Buddhism to a new cultural setting. We also look at the writings of several thinkers who deal with the multicultural setting. We also look at the writings of several thinkers who deal with the multicultural nature of American religious life, including Buddhism in the community of American religions in the 21st century. (RL)

[ASIAN 2226 Society and Religion in China (also HIST 2261) @ # (HA-AS)]

Fall. Next offered 2010–2011. T. J. Hinrichs. (RL)

ASIAN 2277 Meditation in Indian Culture (also RELST 2277) @ # (CA-AS)]

Spring. 3 credits. D. Gold.
Probes the truths behind traditional claims of the priority of internal practice in Indian traditions. Students are expected to experiment with some basic meditation practices and situate them within larger South Asian world views as suggested by doctrines, rituals, iconic forms, and literary texts. Grades are based on short papers. (RL)

ASIAN 3309 Temple in the World: Buddhism in Contemporary South and Southeast Asia (also RELST 3309) @ (CA-AS)]

Spring. 3 credits. A. Blackburn.
Buddhism is often thought of as a meditative and philosophical tradition, remote from the concerns and pleasures of everyday life, practical ethics, and politics. This course explores the unfolding of Buddhist life in contemporary South and Southeast Asia, in locations such as Burma, Thailand, India, Sri Lanka, Malaysia, and Cambodia. We will see how the practices of meditation and philosophical reflection enter the lives of Buddhists, along with other expressions of devotion, aesthetic fascination, political action, and sociability. Our goal will be to recognize the sensual, emotional, and social qualities of Buddhist practice, and the ways in which life unfolds in a Buddhist idiom. (RL)

[ASIAN 3344 Introduction to Indian Philosophy # @ (KCM-AS)]

Fall. 4 credits. Next offered 2010–2011.
L. McCrea. (RL)

[ASIAN 3347 Tantric Traditions (also RELST 3349) @ # (CA-AS)]

Fall. 4 credits. Next offered 2010–2011.
D. Gold. (RL)

[ASIAN 3348 Indian Devotional Poetry (also RELST 3347) @ # (LA-AS)]

Spring. 4 credits. Next offered 2011–2012.
D. Gold. (RL)

ASIAN 3351 Indian Religious Worlds (also RELST 3351) @ (CA-AS)]

Spring. 4 credits. D. Gold.
A study of religious traditions as lived today in the Indian subcontinent. Attention will be paid to differences in piety and practice within alternative environments. (RL)

ASIAN 3353 Mysticism in Chinese Religion (also RELST 3353) @ # (CA-AS)]

Fall. 4 credits. D. Boucher.
This course will examine techniques of spiritual cultivation in both the Daoist and Buddhist traditions of China. In particular we will compare and contrast methods which focus on the manipulation of bodily energies and fluids, particularly in the early and medieval Daoist traditions, with the Buddhist emphasis on cognitive transformation, particularly in the Chan school. Some of our discussion will also look at the debates on the nature of mystical states as “pure consciousness events” on the one hand, or culturally specific constructions on the other. (RL)

[ASIAN 3354 Indian Buddhism (also ASIAN 6654, RELST 3354/6654) @ # (HA-AS)]

Fall. 4 credits. Next offered 2010–2011.
D. Boucher. (RL)

[ASIAN 3355 Japanese Religions (also RELST 3355) @ (CA-AS)]

Spring. 4 credits. Next offered 2010–2011.
J. M. Law. (RL)

ASIAN 3359 Japanese Buddhism: Texts in Context (also RELST 3359) @ # (HA-AS)]

Spring. 4 credits. J. M. Law.
Focuses on six figures in Japanese Buddhism: Saichō (767–822), Kūkai (774–835), Hōnen (113–1212), Nichiren (1222–1282), Dōgen (1200–1253), and Hakuin (1686–1769). Studies their lives, writings, core practices and doctrines, and a central religious dynamic the work of each embodies: establishment of a Mahayana ordination, esoteric practice, the popularization of Buddhism, Buddhist pronominalist ideologies, and establishment of Zen meditation as iconic “Japanese” Buddhism. (RL)

ASIAN 4405 Zen Buddhism: Experience and Ideology (also RELST 4405) @ # (CA-AS)]

Spring. 4 credits. J. M. Law.
Explores the ideological and religious claims of Zen tradition, focusing on religious, historical, and aesthetic developments in Japan. We'll rely on primary sources in translation and secondary sources by scholars in religion and Buddhist Studies. Reading classic text on Zen for American audiences, course starts with rise of Ch'an tradition in China and development of Northern and Southern Schools, reading primary sources in translation. In Japan, we'll look at establishment of Zen in Kamakura period, focusing on developments of Rinzaï and Soto Zen, and early transmissions of Chinese texts/practices to Japan through emissaries. To understand the developments of these schools, we'll study the lives/writings of Eisai and Dōgen, and how their life works/writings influenced developments in Zen. We'll explore

the work of the Tokugawa Zen figure Hakuin through a focus on his key works, and his vision of Zen reform. We will study the ways Zen has become implicated in Japanese postwar identity discourses, focusing on critical readings of D. T. Suzuki and others that create an aestheticism central to Japanese national identity. Finally direct spiritual cultivation has rooted itself in American soil. Includes field trip to one of the largest Zen monasteries in North America, near Ithaca, and a visit from a prominent Zen priest from Japan.

[ASIAN 4421 Religious Reflections on the Human Body (also RELST 4421) (KCM-AS)]

Fall. 4 credits. Prerequisites: one religious studies course or permission of instructor. Next offered 2010-2011. J. M. Law. (RL)

[ASIAN 4427 Buddhist Monasticism (also RELST 4427) @ # (CA-AS)]

Fall. 4 credits. D. Boucher. This seminar will investigate a range of monastic vocations and interests. We will be particularly interested in the socioeconomic impact of monasticism on Buddhist societies: why have so many people dedicated so much capital to the preservation of an institution that seemingly contributes nothing to the economy? We will also want to ask questions about monastic motivations: why would someone choose to live this kind of life? What are its advantages? How do such choices influence monastic attitudes to the laity and, particularly, to women? (RL)

[ASIAN 4438 Monks, Texts, and Relics: Transnational Buddhism in South and Southeast Asia (also ASIAN 6638, RELST 4438/6638) (CA-AS)]

Spring. 4 credits. A. Blackburn. What role did magic and ritual play in the growth of Buddhism in South and Southeast Asia? Where did Buddhist monks travel and why? This course examines how Buddhist communities were formed by networks that carried monks, potent texts, and relic talismans throughout these regions, from the beginning of Buddhism to the present day. (RL)

[ASIAN 4441 Mahayana Buddhism (also RELST 4441) @ # (CA-AS)]

Spring. 4 credits. Next offered 2010-2011. D. Boucher. (RL)

[ASIAN 4444 Ritual Puppetry in a Global Context (also RELST/THETR 4444, DANCE 4377) @ # (CA-AS)]

Spring. 4 credits. Next offered 2010-2011. J. M. Law. (RL)

[ASIAN 4449 History and Methods of the Academic Study of Religion (also RELST 4449) # (KCM-AS)]

Spring. 4 credits. Prerequisite: two courses in religious studies major or permission of instructor. D. Boucher.

Provides advanced students in religious studies or the humanities familiarity with important methodological issues in the academic study of religion. (RL)

[ASIAN 4460 Indian Meditation Texts (also RELST 4460) @ # (KCM-AS)]

Fall. 4 credits. No knowledge of Indian languages required. Next offered 2010-2011. D. Gold.

Draws on approaches from literary criticism, anthropology, and religious studies to explore texts that record religious experience. (RL)

[ASIAN 4462 Religion, Colonialism, and Nationalism in South and Southeast Asia (also ASIAN 6662, RELST 4462) (CA-AS)]

Fall. 4 credits. Prerequisites: one course in ANTHR, ASIAN, HIST, RELST at 3000 level or above or permission of instructor.

A. Blackburn.

Taught as a seminar, the course engages recent theoretical literature on the relations between religion, colonialism and nation formation. This theoretical literature is read in conjunction with historical and ethnographic materials from South and Southeast Asian contexts, which allow us to explore the intellectual promise and limitations of the theoretical work in question. (RL)

[ASIAN 4489 Religion and Sustainability: Traditionalist Discourses in the 21st Century (also RELST 4489) @ (CA-AS)]

Fall. 4 credits. Prerequisite: permission of instructor. J. M. Law.

The natural world and the relationship of human beings and animals to it and within it is a central component of cosmogonic myths and religious ideologies in most major religious traditions. In this course, we explore how mythological, textual, ritual and ideological understandings of the relationship between human beings and the natural world uniform understandings of the contemporary environmental crisis and the responsibility of human beings to address it. We'll also explore how different approaches to environmentalism have tried to incorporate various religions. This class will focus on cases from Hindu, Buddhist, Jain, Jewish, Christian and Muslim discourses on the natural world. We'll explore a variety of models of formulating the human/natural relationship: dominion, stewardship, illusion, primary sacrality and alienation. We challenge the view that grounding environmental activism in religious discourse is an effective way for environmental work to proceed and look at concrete case studies of religious communities working for, or against, environmental sustainability. (RL)

Asia—Society and Culture Courses

[ASIAN 2206 The Occidental Tourist: Travel Writing and Orientalism in Southeast Asia (also ASIAN 5507, HIST 2070/5070) @ (CA-AS)]

Fall. 4 credits. Next offered 2010-2011. T. Loos. (SC)

[ASIAN 2210 Pop Culture in China (also HIST 2210) @ (HA-AS)]

Spring. 4 credits. Next offered 2011-2012. T. J. Hinrichs.

For description, see HIST 2210. (SC)

[ASIAN 2219 Women and Gender in South Asia (also FGSS/HIST 2190) @ (HA-AS)]

Fall. 4 credits. Next offered 2010-2011. D. Ghosh. (SC)

[ASIAN 2225 Literature, Politics, and Genocide in Cambodia (also ASIAN 4422) @ (CA-AS)]

Summer. 3 credits. G. Chigas.

This course will examine various literary, historical, and political responses to the Cambodian genocide, particularly literary testimony by survivors and governmental efforts to bring the perpetrators to justice. The course considers the limited effectiveness of these responses for addressing the causes and effects of genocide despite the vow of "never

again." To pursue these questions, students will read selections from novels and poetry written by Cambodian survivors, along with historical accounts of the genocide and analysis attempts by the Cambodian government and the international community to bring the perpetrators to justice. (SC)

[ASIAN 2228 Indian Ocean World (also HIST 2280) @ # (HA-AS)]

Spring. 4 credits. Next offered 2010-2011. Limited to 15 students. E. Tagliacozzo. (SC)

[ASIAN 2238 Families in China Since 17th Century (also HIST 2380) @ (HA-AS)]

Fall. 4 credits. S. Cochran. For description, see HIST 2380. (SC)

[ASIAN 2245 Gamelan in Indonesian History and Cultures (also MUSIC 1341, VISST 2744) @ (LA-AS)]

Fall or spring. 3 credits. Prerequisite: permission of instructor. C. Miller. For description, see MUSIC 1341. (SC)

[ASIAN 2257 China Encounters the World (also CAPS 2570, HIST 2571) @ (HA-AS)]

Fall. 3 credits. J. Chen. For description, see HIST 2571. (SC)

[ASIAN 2259 The Vietnam Wars in Film]

Fall. 3 credits. L. Paterson. This course will explore cinematic depictions of the Indochina Wars from the United States, Vietnam and France. By exploring films from all three participant countries, the historical, social, and cultural contexts of these iconic wars will be critiqued. (SC)

[ASIAN 2260 Popular Culture of Japan]

Spring. 3 credits. J. Kanemitsu. In this writing-intensive course, we will examine and analyze the mass and pop cultures of Japan from the Tokugawa period (1600-1868) up to the present, considering how the cultural conventions of different eras have been coded, decoded, and recoded. The overall course will be divided into a variety of modules, including media and communication; illustrated fiction and manga; theater, TV melodrama, and anime; gender identity, recreation, fashion. (SC)

[ASIAN 2275 History of Modern South Asia (also HIST 2750) @ # (HA-AS)]

Spring. 4 credits. D. Ghosh. For description, see HIST 2750. (SC)

[ASIAN 2281 Antiquity and Modernity in Contemporary China (also CAPS 2281) @ # (CA-AS)]

Spring. 3 credits. Next offered 2010-2011. R. McNeal (SC)

[ASIAN 2290 East Asian Martial Arts (also HIST 2960) @ (HA-AS)]

Fall. 4 credits. Next offered 2011-2012. T. J. Hinrichs. For description, see HIST 2960. (SC)

[ASIAN 2294 History of China in Modern Times (also HIST 2940) @ (HA-AS)]

Fall. 4 credits. Next offered 2010-2011. S. Cochran. (SC)

[ASIAN 2295 Power, Culture, and Heterogene in Premodern Japan (also HIST 2981) @ # (HA-AS)]

Fall. 4 credits. Next offered 2010-2011. K. Hirano. For description, see HIST 2981. (SC)

[ASIAN 2296 From Slow Boats to CEOs?: The Chinese of Southeast Asia @ (CA-AS)

Spring. 4 credits. Next offered 2010–2011.
L. Paterson. (SC)

[ASIAN 2298 The U.S.–Vietnam War (also HIST 2890) @ (HA-AS)

Fall. 4 credits. Next offered 2010–2011.
F. Logevall. (SC)

[ASIAN 3301 Schools of Thought—Ancient China @ # (HA-AS)

Spring. 4 credits. Next offered 2010–2011.
R. McNeal.

This class is a critical, in-depth introduction to the intellectual history of ancient China. Students will read translations from early Confucian, Legalist, Mohist, and Daoist texts, as well as lesser-known works from, e.g., the Yin-Yang school. (SC)

[ASIAN 3302 Art of War in Ancient China @ # (HA-AS)

Fall. 4 credits. Next offered 2010–2011.
R. McNeal. (SC)

ASIAN 3305 Seminar on American Relations with China (also CAPS 3000, HIST 3391) (HA-AS)

Fall. 4 credits. Taught in Washington, D.C.
R. Bush.

For description, see CAPS 3000. (SC)

ASIAN 3315 Banaras: Sacred Geography @ (CA-AS)

Winter. 3 credits. Course taught in Banaras, India. D. Gold and R. Gupta.

An interdisciplinary exploration of the notion “Sacred Geography” in India’s oldest continually occupied urban settlement. Students will be totally immersed in the history, culture, architecture, and traditional and performing arts of Banaras and will reflect on the notion of the city as metaphor, specifically the self-conscious representation of a city as embodiment of cosmos. (SC)

[ASIAN 3328 Construction of Modern Japan (also HIST 3280) @ # (HA-AS)

Spring. 4 credits. Next offered 2010–2011.
J. V. Koschmann. (SC)

ASIAN 3334 Government and Politics of Southeast Asia (also GOVT 3443) @ (HA-AS)

Spring. 4 credits. T. Pepinsky.

For description, see GOVT 3443. (SC)

[ASIAN 3335 Japan from War to Prosperity (also HIST 3300) @ (HA-AS)

Fall. 3 credits. Next offered 2011–2012.
J. V. Koschmann. (SC)

ASIAN 3346 Modern Japanese Politics (also GOVT 3463) @ (SBA-AS)

Spring. 4 credits. S. Martin.

Fall. 4 credits. K. McGowan.

For description, see ARTH 3850. (SC)

[ASIAN 3361 Bakumatsu–ISHIN: Conflicts and Transformation in Early Modern Japan, 1700–1890 (also HIST 3611) @ (HA-AS)

Fall. 4 credits. Next offered 2011–2012.
K. Hirano. (SC)

[ASIAN 3381 Introduction to the Arts of Japan (also ARTH 3820) @ # (LA-AS)

Fall. 4 credits. Next offered 2010–2011.

A. Pan.

For description, see ARTH 3820. (SC)

[ASIAN 3382 Art of South Asia, 1500–Present (also ARTH 3611) @ # (CA-AS)

Spring. 4 credits. Next offered 2010–2011.

I. Dadi.

For description, see ARTH 3611. (SC)

ASIAN 3383 Introduction to the Arts of China (also ARTH 3800) @ # (LA-AS)

Fall. 4 credits. A. Pan.

For description, see ARTH 3800. (SC)

[ASIAN 3385 History of Vietnam (also ASIAN 6685, HIST 3880/6880) @ # (HA-AS)

Fall. 4 credits. Meets concurrently with ASIAN 6685. Graduate students may enroll and attend a seminar sec. Next offered 2010–2011. K. Taylor.

Survey of Vietnamese history and culture from earliest times to the present. (SC)

ASIAN 3386 Southeast Asia through Film @ (CA-AS)

Spring. 4 credits. L. Paterson.

In Western films Southeast Asia has always been portrayed as an exotic locale of romance, haunting landscapes, and “inscrutable” smiling natives. This class will explore the ways in which the countries of Southeast Asia have been portrayed in Western cinema, in juxtaposition with films produced in the countries themselves. In what ways is this exotic region constructed through Western eyes? To what degree has Southeast Asian cinema itself imitated the Occidental construct? What are the cultural themes explored by Southeast Asian filmmakers themselves? Through close analysis of the films, we will explore the process of visual translation from reality to fantasy in both the local and international contexts. (SC)

[ASIAN 3388 Theorizing Gender and Race in Asian Histories and Literatures (also ASIAN 6688, COML 3980/6680, FGSS 3580/6580) @ (CA-AS)

Spring. 4 credits. Next offered 2010–2011.
N. Sakai. (SC)

T. Loos. (SC)

ASIAN 4417 Themes and Problems in Asian Studies # (CA-AS)

Spring. 4 credits. B. de Bary.

Strongly recommended for Asian Studies majors and prospective majors, this course provides an overview of themes and problems central to work in Asian Studies. We will see how Asian Studies developed as a field of academic inquiry, and explore central themes in the present discipline of Asian Studies. How are Asian traditions invented and transmitted? How do we study the histories of Asian literatures and aesthetics? How have mixed media and technologies shaped Asian worlds from the age of manuscripts and block prints to the digital era? What is the place of ritual and performance in Asian contexts? Is “popular culture” a new phenomenon in Asia? This course is intended for juniors and seniors. Open to first- and second-year students only with permission of instructor. (SC)

ASIAN 4422 Literature, Politics, and Genocide in Cambodia (also ASIAN 2225) @ (CA-AS)

Summer. 3 credits. G. Chigas.

For description, see ASIAN 2225. (SC)

ASIAN 6619 Graduate Seminar: Translation in Theory (also COML 6160, VISST 6619)

Spring. 4 credits. B. de Bary.
The course provides an introduction to various aspects of translation theory, and emphasizes relations between translation theory and trauma theory, post-structuralism, post-colonial theory, and debates on comparative literature, "world literature," and area studies. (LL)

[ASIAN 6626 The 18th Century and the Emergence of Literary Modernity (also COML 6380)]

Spring. 4 credits. Next offered 2010-2011. N. Sakai.]

ASIAN 6627 Asia Memoirs: Trauma and Social Upheaval in East and Southeast Asia (also ASIAN 4424)

Spring. 4 credits. L. Paterson.
For description, see ASIAN 4424. (LL)

ASIAN 6629 Contemporary Studies of Japan

Spring. 4 credits. N. Sakai.
This course will help graduate students meet new demands of contemporary East Asian studies. Emphasis will be on students' ability to express themselves and engage in their interlocutors' debates. While reading texts particularly influential in the early and contemporary formation of the field and its critique, we will consider such questions as, what is academically and intellectually shared between American and East Asian intellectuals in the fields of humanities; how area studies specialists can engage in transnational problematics; and what is the relationship between "Japan" as an object of area studies discourse and "America" as represented in Japanese journalism, popular culture, and politics. This course will encourage students to discuss not area related topics but reflectively their own theoretical concerns in the Japanese language. (SC)

ASIAN 6632 Theatre and Society: A Comparative Study of Asian Dramatic Cultures (also ASIAN 4435, THETR 4320/6320)

Spring. 4 credits. H. Yan.
For description, see THETR 4320. (SC)

ASIAN 6638 Monks, Texts, and Relics: Transnational Buddhism in South and Southeast Asia (also ASIAN 4438, RELST 4438/6638)

Spring. 4 credits. A. Blackburn.
For description, see ASIAN 4438. (RL)

[ASIAN 6650 Seminar in Asian Religions (also RELST 6650)]

Fall. 4 credits. Limited to 10 students. Prerequisite: graduate standing. Next offered 2010-2011. Staff.]

[ASIAN 6654 Indian Buddhism (also ASIAN 3354, RELST 3354/6654)]

Spring. 4 credits. Graduate students attend ASIAN 3354 and arrange additional meetings with instructor. Next offered 2010-2011. D. Boucher. (RL)]

[ASIAN 6659 Seminar in Vedic Philology (also CLASS 7690, LING 6659) (KCM-AS)]

Fall. 4 credits. Next offered 2010-2011. M. Weiss.

For description, see LING 6659. (LL)]

ASIAN 6662 Religion, Colonialism, and Nationalism in South and Southeast Asia (also ASIAN/RELST 4462)

ASIAN 7701–7702 Graduate Seminar in East Asian Literature

7701, fall; 7702, spring. 4 credits.
B. de Bary.

This course will take up Japanese language texts written by members of the “Circle Village” collective established in 1959 near Fukuoka. Work by Morisaki Kazue, Ishimure Michiko, Tanigawa Gan, and Ueno Eishin will form the core readings, but we will also consider related visual texts (woodblock prints and photography). Recent English-language research and theoretical texts will contextualize these readings. Graduate students interested in art/activist projects contemporary to the Circle Village project will be invited to make class presentations.

ASIAN 7703–7704 Directed Research

7703, fall or spring; 7704, fall or spring.
1–4 credits. Staff.

[ASIAN 7708 Academic Study of Religion

Fall. 4 credits. Prerequisite: graduate standing and permission of instructor. Letter grades only. Next offered 2010–2011 or by demand. J. M. Law.

This course is limited to graduate students with a strong interest in the academic study of religion. (RL)

Fall, spring. 2–4 credits. Staff.

Asia—Honors and Supervised Reading Courses**ASIAN 4401 Asian Studies Honors Course**

Fall or spring. 4 credits. Prerequisite: senior standing; admission to honors program. Staff.

Supervised reading and research on the problem selected for honors work.

ASIAN 4402 Asian Studies Honors: Senior Essay

Fall or spring. 4 credits. Prerequisite: admission to honors program. Staff.

The student, under faculty direction, prepares an honors essay.

ASIAN 4403–4404 Asian Studies Supervised Reading

Fall, spring, or both. 1–4 credits. Prerequisite: permission of instructor; majors and other qualified students.

Intensive reading under the direction of a member of the staff.

Bengali**BENGL 1121–1122 Elementary Bengali**

1121, fall; 1122, spring. 4 credits each semester. Prerequisite: for BENGL 1122, BENGL 1121 or examination. Letter grades only. S. Mukherjee.

For beginners, provides a thorough grounding in conversational, reading, and writing skills. An interactive videoconference course.

BENGL 2201–2202 Intermediate Bengali @

2201, fall; 2202, spring. 4 credits each semester. *BENGL 2201 satisfies Option 1.* Prerequisites: for BENGL 2201, BENGL 1122 or examination; for BENGL 2202, BENGL 2201 or examination. Letter grades only. S. Mukherjee.

Continuing focus on reading, writing and conversational skills, this course is designed to advance students' oral competence and enhance comprehension skills through reading, conversations, and listening.

[BENGL 2203–2204 Intermediate Bengali II: Composition and Conversation

2203, fall; 2204, spring. 2 credits each semester. Prerequisites: for BENGL 2203, BENGL 2202 or examination; for BENGL 2204, BENGL 2203 or examination. Letter grades only. S. Mukherjee.

Continuing instruction in Bengali at the higher intermediate level with a focus on conversations, discussions, and writing skills.]

BENGL 3301–3302 Advanced Bengali @

3301, fall; 3302, spring. 4 credits. *BENGL 3301 satisfies Option 1.* S. Mukherjee.

Continuing instruction in Bengali at the advanced level focusing on conversation, interview and writing skills.

[BENGL 3303–3304 Bengali Literature I, II @

3303, fall; 3304, spring. 4 credits each semester. Prerequisites: BENGL 2203–2204 or equivalent. *BENGL 3303 satisfies Option 1.* Letter grades only. S. Mukherjee.

Designed in consultation with students to address their specific needs. Through reading literary texts organized around social and cultural theme-clusters, the course aims to

refine the students' breadth of understanding and develop literary/critical skills.]

BENGL 4431–4432 Directed Study

4431, fall; 4432, spring. 1–4 credits, variable. Prerequisite: permission of instructor. Letter grades only. S. Mukherjee. Intended for advanced language study.

Burmese

Note: Contact S. Tun in 405 Morrill Hall before classes begin for placement or other testing and organizational information.

BURM 1121–1122 Elementary Burmese

1121, fall; 1122, spring. 4 credits each semester. Prerequisites: for BURM 1122, BURM 1121. Letter grades only. S. Tun.

A thorough grounding is given in all language skills: listening, speaking, reading, and writing.

BURM 2201–2202 Intermediate Burmese Reading @

2201, fall or spring; 2202, fall or spring. 3 credits each semester. *BURM 2201 satisfies Option 1.* Prerequisites: for BURM 2201, BURM 1122; for BURM 2202, BURM 2201. Letter grades only. S. Tun.

Continuing instruction in Burmese. For consolidating and extending skills acquired at the elementary level in both spoken and written Burmese, and for strengthening the understanding of literary Burmese.

BURM 2203–2204 Intermediate Burmese I and II @

2203, fall or spring; 2204, fall or spring. 3 credits each semester. *BURM 2203 satisfies Option 1.* Prerequisites: for BURM 2203, BURM 2202; for BURM 2204, BURM 2203 or by examination. Letter grades only. S. Tun.

Continuing instruction in Burmese at the higher intermediate level with a focus on improving oral expression, reading and interpretation of written texts, and further development of listening skills using language learning materials based on authentic audio-video clips.

BURM 3301–3302 Advanced Burmese @

3301, fall or spring; 3302, fall or spring. 3 credits each semester. Prerequisites: for BURM 3301, BURM 2202 or permission of instructor; for BURM 3302, BURM 3301.

BURM 3301 satisfies Option 1. Letter grades only. S. Tun.

For further development of listening skills in Burmese with emphasis on enriching vocabulary, strengthening grammatical competence, and understanding various genres and styles of written Burmese, such as articles on current events, anecdotes, short stories, etc.

BURM 4431–4432 Directed Study

4431, fall; 4432, spring. 1–4 credits variable. Prerequisite: permission of instructor. Letter grades only. S. Tun.

Intended for advanced language study.

See “Khmer.”

Chinese

Note: Testing for placement, including those with near-native abilities, takes place in registration week, before classes begin. Time and place will be posted at irc.cornell.edu/asian/programs/placement and on the bulletin board outside 350 Rockefeller Hall.

CHIN 1101-1102 Beginning Mandarin I and II

1101, fall; 1102, spring. 6 credits each semester. Limited to 12 students per sec. Prerequisite: for CHIN 1102, grade of C+ or higher in CHIN 1101, or permission of instructor. Students must enroll in lec and one sec. Because of limited sec size, students missing first two class meetings without university excuse are dropped so others may register. No students added after second week of classes. Letter grades only. S. Divo and staff.

For beginners only, providing a thorough grounding in conversational and reading skills. Students with some facility in the spoken language (because Chinese is spoken at home) but who do not read characters should take 1109-1110. Students who read Chinese, but who speak "dialects," such as Cantonese or Amoy, should enroll in CHIN 2215.

CHIN 1109-1110 Beginning Chinese Reading and Writing for Students of Chinese Heritage I and II

1109, fall; 1110, spring. 4 credits each semester. Students who complete CHIN 1110 normally continue with CHIN 2209 and 2210. Because of high demand, students missing first two meetings without university excuse are dropped so others may register. Letter grades only. Y. Lee-Mehta and staff.

Intended primarily for students who speak some Chinese (e.g., at home), but who have had little or no formal training. The focus is on characters, reading comprehension, basic composition, standard grammar, and reading aloud with standard Chinese (Mandarin) pronunciation.

CHIN 1111-1112 Elementary Cantonese I and II

1111, fall; 1112, spring. 4 credits each semester. Prerequisite: for CHIN 1111, none; for CHIN 1112, CHIN 1111 or equivalent. Students with Mandarin background should consult with instructor for enrollment. Letter grades only. H. Huang.

CHIN 1111 is for beginners with no or very limited Chinese/Cantonese language background from heritage or previous formal training. CHIN 1111/1112 gives basic training in oral/aural Cantonese spoken and used in Guangzhou and Hong Kong. CHIN 1112 gives some basic training in reading Cantonese characters besides the training in oral/aural Cantonese. For more details, see lrc.cornell.edu/asian/courses/ch/chin111 and lrc.cornell.edu/asian/courses/ch/chin112.

CHIN 2201-2202 Intermediate Mandarin I and II @

2201, fall or summer; 2202, spring or summer. 4 credits each semester. *CHIN 2201 satisfies Option 1.* Prerequisites: for CHIN 2201, CHIN 1102 with grade of B- or above or CHIN 1160 with grade of B or above or equivalent as determined through placement exam; for CHIN 2202, CHIN 2201 or equivalent. Letter grades only. Q. Teng and staff.

Continuing instruction in written and spoken Chinese with particular emphasis on consolidating basic conversational skills and improving reading confidence and ability.

CHIN 2209-2210 Intermediate Chinese Reading and Writing for Students of Chinese Heritage I and II @

2209, fall; 2210, spring. 4 credits each semester. *CHIN 2209 satisfies Option 1.* Prerequisites: for CHIN 2209, a grade of B in CHIN 1110 or equivalent as determined through placement exam; CHIN 2210, CHIN 2209. Letter grades only. Staff.

Continuing focus on reading and writing for students with spoken background in standard Chinese; introduction of personal letter writing and other types of composition.

CHIN 2211-2212 Intermediate Cantonese I and II @

2211, fall; 2212, spring. 4 credits each semester. *CHIN 2211 satisfies Option 1.* Prerequisites: for 2211, CHIN 1112 or equivalent, or elementary conversational skills in Cantonese from heritage or previous formal training in Cantonese; for 2212, CHIN 2211 or equivalent. Mandarin speakers should consult with instructor for enrollment. Letter grades only. H. Huang.

Gives comprehensive training in oral and written Cantonese at a higher level than CHIN 1111-1112. Oral training covers conversational Cantonese expression on daily life topics with more vocabulary and more sophisticated sentence structures. Written training includes reading with proper Cantonese pronunciation and writing Cantonese characters. For more details, see lrc.cornell.edu/asian/courses/ch/chin211 and lrc.cornell.edu/asian/courses/ch/chin212.

CHIN 2213-2214 High Intermediate Cantonese I and II @

2213, fall; 2214, spring. 4 credits each semester. *CHIN 2213 satisfies Option 1.* Prerequisite: for 2213, basic oral/aural and written skill in Cantonese and intention to continue the learning of Cantonese both oral and written, or completion of CHIN 2212; Prerequisite for 2214: 2213 or equivalent. Letter grades only. H. Huang.

CHIN 2213: A course primarily for students who have acquired basic oral/aural and written skill in Cantonese and have the interest to continue learning speaking Cantonese and reading and writing Cantonese characters; CHIN 2214: A course primarily for students who have the interest to raise their oral and written Cantonese to a higher level. For more detail, see lrc.cornell.edu/asian/courses/ch/chin213 and lrc.cornell.edu/asian/courses/ch/chin214.

CHIN 2215 Mandarin for Cantonese Speakers @

Fall. 4 credits. *Satisfies Option 1.* Limited to 15 students. Prerequisite: advanced Cantonese with native-like reading and writing ability. Letter grades only. Staff.

Works on standard Chinese pronunciation and differences in vocabulary and grammar between Cantonese and Mandarin.

CHIN 3301-3302 High Intermediate Mandarin I and II @

3301, fall; 3302, spring. 4 credits each semester. *CHIN 3301 satisfies Option 1.* Prerequisites: for CHIN 3301, grade of B+ or higher in CHIN 2202, or equivalent as determined through placement exam; for CHIN 3302, CHIN 3301. Letter grades only. Y. Lee-Mehta.

Continuing instruction in spoken Chinese and in various genres and styles of written Chinese.

[CHIN 3306 Readings in Chinese History, Culture and Society (also CAPS 3060) @

Spring. 4 credits. Next offered 2010-2011. Z. Chen.

Designed for CAPS majors to enhance Chinese proficiency while preparing them for studying in a Chinese-language setting.]

CHIN 3309/3310 Business Chinese in Cultural Context I (also CHIN 5509/5510) @

Fall, spring. 4 credits each semester. *CHIN 3309 satisfies Option 1.* Prerequisite: two years of Chinese and permission of instructor only. Letter grades only. Z. Chen.

First part of a two-semester sequence for those who studied Mandarin to advanced level. Will cover first five chapters of the textbook, developed surrounding five real cases. These are multinational companies, successfully operated in China by adapting their strategies to special needs of the Chinese market. By reading, discussing, and performing communicative tasks related to those cases, students will learn how to use Chinese as a "carrier of culture," acquiring a better understanding of China in economic and cultural terms. To expand students' knowledge on various business-related issues, in addition to business case analysis, supplementary reading, writing and listening exercises as well as clips of TV shows and interviews will also be provided. Highlights are: Listening comprehension of business news reports; translation of business terms and documents; discussion of Chinese business laws, commercial language and word processing. Class will be in Chinese.

CHIN 3341 High Intermediate Mandarin: CAPS in D.C. @

Fall. 4 credits. Letter grades only. Staff. For description, see CHIN 3301.

CHIN 4411-4412 Advanced Mandarin I and II @

4411, fall; 4412, spring. 4 credits each semester. *CHIN 4411 satisfies Option 1.* Prerequisites: for CHIN 4411, grade of B+ or higher in CHIN 3302, or equivalent as determined through placement exam; for CHIN 4412, grade of B+ or higher in CHIN 4411 or permission of instructor. Letter grades only. Q. Teng.

Reading, discussion, and composition at advanced levels.

[CHIN 4425 Special Topics (also CHIN 6625) @

Spring. 4 credits. Prerequisite: permission of instructor. Letter grades only. Next offered 2010-2011. Staff.]

CHIN 4426 Historical Documents on Modern China (also CHIN 6626, HIST 4650/6650) @

Fall. 4 credits. Prerequisite: permission of instructor. Z. Chen.

For description, see HIST 4650.

CHIN 4427-4428 High Advanced Mandarin I and II @

4427, fall; 4428, spring. *CHIN 4427 satisfies Option 1.* 4 credits each semester. Prerequisite: for CHIN 4427, grade of B+ or higher in CHIN 2210 or CHIN 4412, or equivalent as determined through placement exam; for CHIN 4428, grade of B+ or higher in CHIN 4427 or permission of instructor. Letter grades only. W. Shao. The focus of the course is on formal Chinese, and the main aim of this course is to help

students achieve an advanced level of Chinese performance, so they may combine Chinese with their work in their majors.

CHIN 4431-4432 Directed Study

4431, fall; 4432, spring. 1-4 credits, variable. Prerequisite: permission of instructor. Staff.

Intended for advanced language study.

CHIN 4441 Advanced Mandarin: CAPS in D.C. @

Fall. 4 credits. Letter grades only. Staff. For description, see CHIN 4411.

CHIN 4445 Directed Study: CAPS in D.C.

Fall. 1-4 credits. Letter grades only. Staff. For description, see CHIN 4431-4432.

CHIN 4451 Advanced Mandarin: CAPS in Beijing @

Fall. 4 credits. Letter grades only. Staff. For description, see CHIN 4411.

CHIN 4455 Directed Study: CAPS in Beijing

Fall. 1-4 credits. Letter grades only. Staff. For description, see CHIN 4431-4432.

CHIN 4457 High Advanced Mandarin: CAPS in Beijing @

Fall. 3 credits. *CHIN 4457 satisfies Option 1.* Letter grades only. Staff. For description, see CHIN 4427.

CHIN 5509-5510 Business Chinese in Cultural Context I (also CHIN 3309-3310)

Fall, spring. 4 credits each semester. Letter grades only. Z. Chen. For description, see CHIN 3309-3310.

[CHIN 6625 Special Topics (also CHIN 4425)]

Fall. 4 credits. Prerequisite: permission of instructor. Letter grades only. Next offered 2010-2011. Staff.]

CHIN 6626 Historical Documents on Modern China (also CHIN 4426, HIST 4650/6650)

Fall. 4 credits. Prerequisite: permission of instructor. Z. Chen. For description, see HIST 4650.

Chinese FALCON (Full-Year Asian Language CONcentration)

For full information, brochures, etc., see the FALCON Program coordinator in 388 Rockefeller Hall or e-mail: falcon@cornell.edu or lrc.cornell.edu/falcon

FALCON is designed to help students develop "copability" in Mandarin Chinese by bringing them to the level where they can make progress on their own even with no further instruction. The full-year program provides over 1,800 hours of language exposure—which exceeds even the exposure that students living in China typically receive. This allows students to develop levels of fluency, accuracy, and control that are not achieved in other academic settings. By taking the entire full-year sequence, students can complete as much Chinese in one calendar year as they would complete in three or more years of regular study at most academic institutions. The full-year sequence is CHIN 1159 or 1160 (summer), 2260 (fall), and 3360 (spring). Students typically take the entire sequence, but they may take any portion of the program if they have the necessary background as determined by a placement interview. This

course sequence also serves to fulfill the language requirement for the M.A. in Asian Studies and the joint M.B.A./M.A. in Asian Studies. For more information and application forms, please contact the FALCON program office. Some students do choose to apply only to the summer portion. The spring semester of the Chinese program will be offered in Beijing at the School of International Studies at Peking University. In the summer and fall, three small interactive classes per day are conducted entirely in Chinese, and one lecture is conducted in both Chinese and English. In the spring semester, all four classes are conducted entirely in Chinese. In the summer and fall, students are also required to spend at least two one-hour sessions per day in the language lab. Additional preparation time in the language lab of up to three hours is necessary in the evenings. The demands of this 16-credit program do not normally permit students to take other courses simultaneously.

Students must formally apply to the program. To guarantee course availability and scholarship eligibility, applications must be received by March 1. After that, applicants are reviewed on a rolling basis and acceptance is contingent on the availability of spaces. Applications are available in 388 Rockefeller Hall or at lrc.cornell.edu/falcon/apply.

CHIN 1159 Summer Intensive Chinese (FALCON)

Summer only. 1-7 credits. Prerequisite: some previous language study in Chinese; permission of program director. S. Divo and staff.

This course is for students with significant prior background in Chinese who take CHIN 1160 for fewer than 8 credits. Formal application and a placement interview are required.

CHIN 1160 Introductory Intensive Mandarin (FALCON)

Summer only. 8 credits. Students who complete this course with grade of at least B are normally eligible to enroll in CHIN 2201. S. Divo and staff.

This is a nine-week intensive, 8-credit course that meets only in the summer, Monday through Friday from 8:30 a.m. to 4:30 p.m., beginning from an absolutely introductory level introducing the spoken and written language. Lectures on linguistics and cultural matters, intensive practice with native speakers, and laboratory work prepare students for an intermediate level of study. This course involves work on all four skills: speaking, listening comprehension, reading and writing. Students who complete this course with a grade of B or higher are normally eligible to enroll in CHIN 2201, if they choose not to continue to CHIN 2260.

CHIN 2260 Intermediate Intensive Mandarin (FALCON) @

Fall. 16 credits. *Satisfies Option 1.* Prerequisites: grade of B+ in CHIN 1160 or equivalent with permission of instructor. Students must apply formally to FALCON program; open to all Cornell students and students from other institutions. S. Divo and staff.

Students work on spoken and written Chinese at the intermediate level, developing fluency, accuracy, and control that are not achieved in other academic settings. This is a full-time academic program that meets Monday through Friday from 9:05 a.m. to 4:30 p.m., with 1-3

hours per day of self-directed practice in Cornell's Language Resource Center.

CHIN 3360 Advanced Intensive Mandarin (FALCON) @

Spring. 16 credits. Prerequisite: grade of B+ or higher in CHIN 2260 or permission of instructor. CHIN 3360 is scheduled to be held in Beijing, People's Republic of China. S. Divo and staff.

After finishing the summer and fall terms at Cornell, students have the language skills to benefit fully from a Chinese linguistic and cultural environment. FALCON's full-year students spend their last semester in Beijing, where they continue to improve their skills and put them to effective use in daily life. In Beijing, students continue to attend four small-group classes with FALCON-trained Chinese language teachers; these classes include comprehensive training to develop reading, writing, and speaking proficiency, a course in newspaper reading and translation, as well as a course in advanced listening skills. In addition, a variety of activities outside the classroom, including field trips and guest lectures are provided. Spring FALCON is scheduled at the School of International Studies at Peking University.

Literature in Chinese

CHLIT 2213-2214 Introduction to Classical Chinese @ # (LA-AS)

2213, fall; 2214, spring. 3 credits each semester. *CHLIT 2213-2214 does NOT satisfy Option 1.* Prerequisite: for 2213, qualification in Chinese or permission of instructor; for 2214, 2213 or permission of instructor. May be taken concurrently with CHIN 1101-1102, 2201-2202, 3301-3302. Open to students who have studied at least two years of any language that employs Chinese writing system (e.g., Mandarin, Cantonese, Japanese). D. X. Warner and B. Rusk.

Two-part introductory course. Students learn the fundamental grammar and vocabulary of classical Chinese by analyzing and translating short passages. (LL)

[CHLIT 3300 Reading from the Early Masters @ # (HA-AS)]

Spring. 4 credits. Prerequisites: CHLIT 2213-2214 or permission of instructor. Next offered 2010-2011. R. McNeal. Students read and discuss several passages from early classical texts, such as the Confucian Analects, the Mozi, the Guanzi, and others. Attention is paid to grammar, historical context, and methodology.]

[CHLIT 3307 Readings in Classical Chinese Literature @ # (LA-AS)]

Spring. 4 credits. Prerequisite: CHLIT 2214 or permission of instructor. Next offered 2010-2011. D. X. Warner and B. Rusk. This course surveys selected texts—primarily in prose—from the ancient and medieval periods. (LL)]

[CHLIT 4418 Medieval Chinese Narrative Tales @ # (LA-AS)]

Fall. 4 credits. Prerequisite: at least three years of Chinese language training and preferably one year classical Chinese. Next offered 2010-2011. D. X. Warner. This course introduces students to medieval Chinese narrative literature. (LL)]

CHLIT 4420 T'ang Poetry: Themes and Contexts (also CHLIT 6620) @ # (LA-AS)

Spring. 4 credits. Prerequisite: minimum three years of Chinese and/or one year of Classical Chinese or permission of instructor. D. X. Warner.

A guided reading in Chinese of selected works on shared themes written by selected poets of the T'ang dynasty (618-907). Focuses on developing the essential skills for reading T'ang poems while giving attention to their social, cultural, and historical contexts. (LL)

CHLIT 4421-4422 Directed Study

Fall or spring. 2-4 credits each semester.

Prerequisite: permission of instructor. Staff. Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop course content. (LL)

CHLIT 4423 Readings in Chinese History @

Spring. 4 credits. Prerequisites: equivalent of three years of Mandarin instruction; permission of instructor. *Satisfies Option 1.* Staff. (LL)

[CHLIT 4435 Chinese Buddhist Texts @ # (LA-AS)]

Fall. 4 credits. Prerequisite: one year of classical Chinese or permission of instructor. Open to students in any area of East Asia with an interest in developing skills in Buddhist texts. Next offered 2010-2011. D. Boucher. (LL)

[CHLIT 6603 Seminar in Chinese Fiction and Drama]

Fall. 4 credits. Prerequisite: permission of instructor. Next offered 2010-2011. E. Gunn. (LL)

CHLIT 6605 Seminar in Chinese Fiction and Drama

Fall. 4 credits. Prerequisite: permission of instructor. E. Gunn.

As a seminar, the course engages students in contemporary fiction and drama and published criticism of them in order to build the students' scholarly and critical abilities. Texts are in Chinese, with some criticism published in English. (LL)

[CHLIT 6610 Chinese Cultural Criticism]

Spring. 4 credits. Next offered 2010-2011. E. Gunn. (SC)

[CHLIT 6615 Seminar: Ideas and Literature of Medieval China]

Spring. 4 credits. Next offered 2010-2011. D. X. Warner. (LL)

[CHLIT 6620 T'ang Poetry: Themes and Contexts (also CHLIT 4420)]

Fall. 4 credits. Prerequisite: minimum three years of Chinese and/or one year of Classical Chinese or permission of instructor. Next offered 2010-2011. D. X. Warner.

For description, see CHLIT 4420. (LL)

CHLIT 6621-6622 Advanced Directed Reading: Chinese Historical Syntax

6621, fall; 6622, spring. 2-4 credits. Prerequisite: permission of instructor. Staff. Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop class readings. (LL)

Hindi**HINDI 1101-1102 Introductory Hindi I and II**

1101, fall; 1102, spring. 6 credits each semester. *Students may not receive credit for both HINDI 1101 and 1109. Students may not receive credit for both HINDI 1102 and 1110.* Prerequisite: for HINDI 1102, HINDI 1101 or equivalent. Letter grades only. S. Singh and staff.

This is a course designed for a complete beginner in Hindi. Students are not expected to have any prior knowledge in Hindi before taking this course. In this course, they will learn how to read and write Hindi script and how to speak survival Hindi in different social settings. While reading, writing, and listening are very important components of this course, much emphasis is put on spoken Hindi.

HINDI 1109-1110 Accelerated Hindi I and II

1109, fall; 1110, spring. 4 credits each semester. *Students may not receive credit for both HINDI 1101 and 1109. Students may not receive credit for both HINDI 1102 and 1110.* Prerequisite: for HINDI 1109, background in Hindi or permission of instructor; for HINDI 1110, HINDI 1109 or equivalent. Check with instructor regarding placement. Letter grades only. S. Singh and staff.

Accelerated Hindi is a course designed for heritage students. Students develop fluency and accuracy in all four language skills: reading, writing, listening and speaking. It is a parallel course of HINDI 1101, except it moves faster and the focus is on fluency and accuracy in the target language.

HINDI 2201-2202 Intermediate Hindi I and II @

2201, fall; 2202, spring. 4 credits each semester. *HINDI 2201 satisfies Option 1.* Prerequisites: for HINDI 2201, HINDI 1102 or HINDI 1110; for HINDI 2202, HINDI 2201 or permission of instructor. Letter grades only. S. Singh and staff.

This is an intermediate-level course in Hindi. Students' competence in all four language areas will become very strong and solid. This course will work on building up their confidence in describing complicated situations and ideas in the target language, reading and writing speed, and clarity in listening comprehension such as news, complicated descriptions, and other media contents.

HINDI 3301-3302 Advanced Hindi I and II @

3301, fall; 3302, spring. 3 credits each semester. *HINDI 3301 satisfies Option 1.* Prerequisites: for HINDI 3301, HINDI 2202; for HINDI 3302, HINDI 3301; or permission of instructor. Letter grades only. S. Singh and staff.

Selected readings in modern Hindi literature. Continued work on fluency in speaking Hindi on an advanced level. There will be a combination of different reading materials from literature, journals, newspapers and many social, entertainment, and political magazines in Hindi. Discussions will be based on those readings and articles, hence giving opportunities to express views and opinions in a fluent and effective manner.

HINDI 4431-4432 Directed Study

4431, fall; 4432, spring. 1-4 credits, variable. Prerequisite: permission of instructor. Letter grades only. S. Singh. Intended for advanced language study.

Indonesian**INDO 1121-1122 Elementary Indonesian**

1121, fall; 1122, spring. 4 credits each semester. Prerequisite: for INDO 1122, INDO 1121. Letter grades only. J. Pandin. Gives a thorough grounding in basic speaking, listening, and writing skills with an introduction to reading.

INDO 2205-2206 Intermediate Indonesian @

2205, fall; 2206, spring. 3 credits each semester. *INDO 2205 satisfies Option 1.* Prerequisites: for INDO 2205, INDO 1122 or equivalent; for INDO 2206, INDO 2205 or equivalent. Letter grades only. J. Pandin. Develops all four skills: reading, writing, speaking, and comprehension.

INDO 3301-3302 Advanced Indonesian @

3301, fall; 3302, spring. 3 credits each semester. *INDO 3301 satisfies Option 1.* Prerequisite: INDO 2206 or equivalent. Letter grades only. J. Pandin. Practical language course on an advanced level in which students read selected materials on current issues, write reports, and make oral presentations.

INDO 4431-4432 Directed Study

4431, fall; 4432, spring. 1-4 credits, variable. Prerequisite: permission of instructor. Letter grades only. J. Pandin. Intended for advanced language study.

Japanese**JAPAN 1101-1102 Elementary Japanese I and II**

1101, fall; 1102, spring. 6 credits each semester. Prerequisite for 1102: JAPAN 1101 or placement by instructor during registration period. Intended for beginners or those who have been placed in the course by examination. Students must enroll in one lec and one sec. Letter grades only. M. Suzuki and staff.

Gives a thorough grounding in all four language skills—speaking, listening, reading, and writing—at the beginning level. The lecture provides explanation, analysis, and cultural background. Sections are conducted entirely in Japanese.

JAPAN 2201-2202 Intermediate Japanese I and II @

2201, fall; 2202, spring. 4 credits each semester. *JAPAN 2201 satisfies Option 1.* Prerequisites: for JAPAN 2201, JAPAN 1102 or placement by instructor during registration; for JAPAN 2202, JAPAN 2201 or placement by instructor during registration. Students must enroll in lec and one sec. Letter grades only. Y. Katagiri.

This course provides widely applicable language proficiency as an integrated Japanese course, which develops all four language skills (speaking, listening, reading, and writing) at the post-elementary level. Discussion sections are conducted entirely in Japanese to give opportunities to practice socioculturally appropriate language performances while enhancing listening comprehension and speaking ability through realistic situational

practices, in addition to training in practical reading and writing skills. Lectures systematically demonstrate versatile knowledge of essential structural patterns with audio-visual aides and explain cultural background and customs useful for effective oral and written communication.

JAPAN 3301-3302 Continuing Intermediate Japanese I and II @

3301, fall; 3302, spring. 4 credits each semester. *JAPAN 3301 satisfies Option 1.* Prerequisites: for JAPAN 3301, JAPAN 2202 or placement by instructor during registration; for JAPAN 3302, JAPAN 3301 or placement by instructor during registration. Letter grades only. S. Ichikawa. For students who have learned basic Japanese skills and would like to develop higher skills in listening, speaking, reading, and writing.

JAPAN 4401-4402 Advanced Japanese I and II

4401, fall; 4402, spring. 4 credits each semester. *JAPAN 4401 satisfies Option 1.* Prerequisites: for JAPAN 4401, JAPAN 3306 or placement by instructor during registration; for JAPAN 4402, JAPAN 4401 or placement by instructor during registration. Letter grades only. N. Larson. Develops all four language skills (speaking, listening, reading, and writing) at the advanced level.

JAPAN 4410 History of the Japanese Language (also ASIAN/LING 4411) @ # (HA-AS)

4 credits. Prerequisite: permission of instructor. J. Whitman. For description, see LING 4411.

JAPAN 4421-4422 Special Topics @

4421, fall; 4422, spring. 4 credits. Prerequisites, for JAPAN 4421, JAPAN 4402 or placement by instructor during registration; for JAPAN 4422, JAPAN 4421 or placement by instructor during registration. *JAPAN 4421 satisfies Option 1.* Letter grades only. M. Chapman. Intended for advanced students or placement by instructor. Advanced readings with discussion about a particular topic.

JAPAN 4431-4432 Directed Study

4431, fall; 4432, spring. 1-4 credits each semester. Prerequisite: permission of instructor. Letter grades only. Staff. Intended for advanced language study.

Japanese FALCON (Full-Year Asian Language Concentration)

Web site: lrc.cornell.edu/falcon.

Director: R. Sukle, 388 Rockefeller Hall, 255-0734 or rjs19@cornell.edu.

Program coordinator: 388 Rockefeller Hall, 255-6457 or falcon@cornell.edu.

FALCON is designed to develop "copability" in students by bringing them to the level where they can make further progress on their own even with no further instruction. The full-year program provides over 1,800 hours of language exposure—which exceeds even the exposure that students living in Japan typically receive. This intensive work in Japanese allows students to develop levels of fluency, accuracy, and control of the language that is not achieved in any other type of academic setting. The full-year FALCON sequence is Japanese 1160 (summer), 2260 (fall), and 3360 (spring). By taking this entire sequence,

students can complete as much Japanese in one calendar year as they would complete in three or more years of regular study at most academic institutions. This course sequence also serves to fulfill the language requirement for the M.A. in Asian Studies and the joint M.B.A./M.A. in Asian Studies. For more information and application forms, please contact the FALCON program office. Because of FALCON's intensive nature, graduate students can complete their language work in minimal time. Undergraduates, including freshmen, achieve levels of competency that far exceed what is normally achieved in a four-year program, provided that they continue studying Japanese after FALCON. Three small interactive classes per day are conducted entirely in Japanese, and one lecture is conducted in both Japanese and English. The interactive classes are conducted by experienced and highly trained teachers, and the lecture is taught by an expert in the structure of the Japanese language. In addition to time spent in these classes, students are required to spend at least two one-hour sessions per day in the language lab. Additional preparation time in the language lab of up to three hours is necessary in the evenings. One must formally apply to the program to take the courses. The deadline for application is March 1 in a given year, but applications will be considered after that date if space is still available. The degree of intensity of this program makes it impossible to simultaneously take other courses or work except possibly on weekends.

JAPAN 1159 Summer Intensive Japanese (FALCON)

Summer only. 1-7 credits. Prerequisite: permission of program director; some previous language study in Japanese. Applications must be received by March 1. After the deadline, applications are considered provided that space is available. R. Sukle and staff.

This course is for students with significant prior background in Japanese who take JAPAN 1160 for fewer than 8 credits. Formal application and a placement interview are required.

JAPAN 1160 Introductory Intensive Japanese (FALCON)

Summer only. 8 credits. Formal application to FALCON is required. Admission is open to all students, not just those planning to take the full year. Students from other institutions are also welcome to apply. Applications must be received by March 1. After the deadline, applications are considered provided that space is available. R. Sukle and staff.

This is a nine-week intensive, 8-credit course that meets only in the summer, Monday through Friday from 8:30 a.m. to 4:30 p.m., beginning from an absolute introductory level introducing the spoken and written language. Lectures on linguistics and cultural matters, intensive practice with native speakers, and laboratory work prepare students for an intermediate level of study. This course involves work on all four skills: speaking, listening comprehension, reading and writing. Students who successfully complete this course and plan to continue at Cornell may take the fall and spring FALCON courses (JAPAN 2260 and 3360). Students interested in other options for continuing after FALCON should consult the FALCON director, Robert Sukle, at rjs19@cornell.edu or 255-0734.

JAPAN 2260 Intermediate Intensive Japanese (FALCON) @

Fall. 16 credits. *Satisfies Option 1 or Option 2.* Prerequisites: JAPAN 1160, JAPAN 1102 at Cornell, or placement by FALCON staff before beginning of fall semester. Formal application to FALCON is required. Admission is open to all students, including those from other institutions. Applications must be received by March 1. After the deadline, applications are considered provided that space is available. R. Sukle and staff.

Students work on spoken and written Japanese at the intermediate level, allowing students to develop fluency, accuracy, and control that are not achieved in other academic settings. This is a full-time academic program that meets Monday through Friday from 9:05 a.m. to 4:30 p.m., with one to three hours per day of self-directed practice in Cornell's Language Resource Center.

JAPAN 3360 Advanced Intensive Japanese (FALCON) @

Spring. 16 credits. Prerequisite: JAPAN 2201 at Cornell or placement by FALCON staff. R. Sukle and staff.

Students work on spoken and written Japanese from an intermediate to an advanced level, allowing students to develop fluency, accuracy, and control. The material is more complicated with practice on switching levels of politeness (formal to informal). There is great emphasis on eliciting from students complex explanations and narratives rather than one-sentence answers. By the end of the term students are able to speak in paragraph-length utterances. More emphasis is placed on application and vocabulary acquisition, allowing students to deal with natural, social interactions and to begin explaining ideas. After the texts are finished, students begin reading authentic publications from Japan aimed at a native Japanese reader, learning to discuss the contents of what they have read in Japanese.

Literature in Japanese

[JPLIT 4406 Introduction to Classical Japanese @ #

Fall. 4 credits. Prerequisite: JAPAN 4402 or permission of instructor. Next offered 2010-2011. J. Kanemitsu.

Introduction to the fundamental grammar and vocabulary of classical Japanese. (LL)]

[JPLIT 4408 Readings in Classical Japanese @ #

Spring. 4 credits. *Satisfies Option 1.* Prerequisite: JPLIT 4406 or permission of instructor. Next offered 2010-2011. J. Kanemitsu.

Readings of excerpts and complete brief pieces from representative premodern Japanese literature mostly with the use of standard modern annotated editions. (LL)]

[JPLIT 6617 Modern Japanese Philosophy

Fall. 4 credits. Next offered 2010-2011. N. Sakai.

Seminar on modern Japanese philosophy. Students are expected to read texts in Japanese and discuss epistemic, historical, and practical issues involved in them. Supplementary reading of European and U.S. philosophical texts is also required. (LL)]

[JPLIT 6618 Japanese Philosophical Discourse II

Spring, 4 credits. Prerequisite: reading knowledge of Japanese. Next offered 2010-2011. N. Sakai. (LL)

JPLIT 6625 Directed Readings

Fall or spring, 4 credits. Staff. Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop class readings. (LL)

JPLIT 6627-6628 Advanced Directed Readings

6627, fall; 6628, spring, 1-4 credits. Prerequisite: permission of instructor. Staff.

Khmer (Cambodian)**KHMER 1121-1122 Elementary Khmer I and II**

1121, fall; 1122, spring, 4 credits each semester. Prerequisite: for KHMER 1122, KHMER 1121; for beginners or those placed in course by examination. Letter grades only. H. Phan.

Gives a thorough grounding in speaking and reading.

KHMER 2201-2202 Intermediate Khmer Reading I and II @

2201, fall; 2202, spring, 3 credits each semester. *KHMER 2201 satisfies Option 1.* Prerequisites: for KHMER 2201, KHMER 1122; for KHMER 2202, 2201. Letter grades only. H. Phan.

Continuing instruction in spoken and written Khmer. Intermediate level of reading Khmer.

KHMER 2203-2204 Intermediate Composition and Conversation I and II @

2203, fall; 2204, spring, 3 credits each semester. *KHMER 2203 satisfies Option 1.* Prerequisites: for KHMER 2203, KHMER 1122; for KHMER 2204, 2203. Letter grades only. H. Phan.

KHMER 3301-3302 Advanced Khmer I and II @

3301, 3302, fall, 4 credits each semester. *KHMER 3301 satisfies Option 1.* Prerequisites: for KHMER 3301, KHMER 2202 or equivalent; for KHMER 3302, 3301. Letter grades only. H. Phan.

Continuing instruction in spoken and written Khmer; emphasis on enlarging vocabulary, increasing reading speed, and reading various genres and styles of prose.

KHMER 4431-4432 Directed Study

4431, fall; 4432, spring, 1-4 credits variable. Prerequisite: permission of instructor. Letter grades only. H. Phan. Intended for advanced language study.

Korean**KOREA 1101-1102 Elementary Korean I and II**

1101, fall; 1102, spring, 6 credits each semester. Prerequisites: for KOREA 1101, none; for KOREA 1102, KOREA 1101 or placement by instructor. *Students may not receive credit for both KOREA 1101 and KOREA 1109. Students may not receive credit for both KOREA 1102 and 1110.* Letter grades only. M. Song.

Covers basics of speaking, reading, and writing. Introduces Hangeul writing system and grammar.

KOREA 1109-1110 Elementary Korean Reading and Writing I and II

1109, fall; 1110, spring, 4 credits each semester. Prerequisites: for KOREA 1109, placement by instructor; for KOREA 1110, KOREA 1109 or placement by instructor. If in doubt about eligibility, see instructor. *Students may not receive credit for both KOREA 1101 and KOREA 1109. Students may not receive credit for both KOREA 1102 and 1110.* Letter grades only. M. Song.

For students who have spoken some Korean in the home, but whose reading and writing skills are limited or nonexistent.

KOREA 2201-2202 Intermediate Korean I and II @

2201, fall; 2202, spring, 4 credits each semester. *KOREA 2201 satisfies Option 1.* Prerequisites: for KOREA 2201, KOREA 1102 or placement by instructor; for KOREA 2202, 2201. Letter grades only. Staff.

Continuing instruction in written and spoken Korean with emphasis on consolidating basic conversational skills and improving reading ability and confidence.

KOREA 2209-2210 Intermediate Korean Reading and Writing I and II @

2209, fall; 2210, spring, 4 credits each semester. *KOREA 2209 satisfies Option 1.* Prerequisites: for KOREA 2209, KOREA 1110 or placement by instructor; for KOREA 2210, 2209 or placement by instructor. If in doubt about eligibility, see instructor. Letter grades only. Staff.

Intermediate level of reading comprehension and writing course for students who have acquired basic written proficiency. Introduces some reading and writing with Chinese characters.

KOREA 3301-3302 High Intermediate Korean I and II @

3301, fall; 3302, spring, 4 credits each semester. *KOREA 3301 satisfies Option 1.* Prerequisites: for KOREA 3301, KOREA 2202 or KOREA 2210, or placement by instructor; for KOREA 3302, 3301 or placement by instructor. Letter grades only. Staff.

Continuing instruction in Korean with emphasis upon spoken fluency and reading various materials including newspapers.

KOREA 4401-4402 Advanced Korean I and II @

4401, fall; 4402, spring, 4 credits. *KOREA 4401 satisfies Option 1.* Prerequisite: for KOREA 4401, KOREA 2210 or KOREA 3302 or placement by instructor; for KOREA 4402, KOREA 4401 or placement by instructor. Letter grades only. M. Song.

Develops all four language skills (speaking, listening, reading and writing) through discussion and composition at the advanced level.

KOREA 4425 Special Topics @

Fall, 4 credits. *KOREA 4425 satisfies Option 1.* Prerequisite: Fluency in Korean and permission of instructor. Letter grades only. Taught in Korean. J. Pak.

In-depth examination of topics on Korea.

[KOREA 4430 Structure of Korean (also ASIAN/LING 4430) (KCM-AS)

Spring, 4 credits. Next offered 2010-2011. J. Whitman.

For description, see LING 4430.]

KOREA 4431-4432 Directed Study

4431, fall; 4432, spring, 1-4 credits, variable. Prerequisite: permission of instructor. Letter grades only. Staff. Intended for advanced language study.

Literature in Korean**[KRLIT 4432 Middle Korean (also LING 4432) @ # (LA-AS)**

Spring, 4 credits. Prerequisite: KOREA 3301 or equivalent. Next offered 2010-2011.

J. Whitman.

For description, see LING 4432. (LL)]

Nepali**The Cornell Nepal Study Program**

Cornell and the central campus of Tribhuvan National University (in Kirtipur, Kathmandu) cosponsor a semester or year in Nepal at the Cornell Nepal Study Program for both undergraduate and graduate students. North American students live and study with Nepali students at the Cornell program houses near the university, taking courses taught in English by faculty from Tribhuvan University. After an intensive orientation, semester courses include intensive spoken and written Nepali language, Contemporary Issues in Nepal, and Research Design and Methods in a wide variety of fields in the social and natural sciences and the humanities. (Language instruction in Tibetan and Newari may also be arranged.) There is a 10-day study tour and field trip during the semester, and students execute their research proposal during four weeks of guided field research, writing up their findings for presentation at the end of the semester.

Juniors, seniors, and graduate students from any field may apply. Students should have a desire to participate in a program featuring relatively intense cultural immersion and to undertake rigorous field research. Instruction is in English, but prior study of Nepali language is strongly recommended for Cornell students. Those interested in the program should consult Cornell Abroad (cuabroad@cornell.edu).

NEPAL 1101-1102 Elementary Nepali I and II

1101, fall; 1102, spring; 1101-1102, summer, 6 credits each semester.

Prerequisite: for NEPAL 1102, NEPAL 1101 or examination. Letter grades only. S. Oja. Intended for beginners. The emphasis is on basic grammar, speaking, and comprehension skills, using culturally appropriate materials and texts. Devanagari script for reading and writing is also introduced.

NEPAL 2201-2202 Intermediate Nepali Conversation I and II @

2201, fall; 2202, spring; 2201-2202, summer, 3 credits each semester. *NEPAL 2201 satisfies Option 1.* Prerequisites: for NEPAL 2201, NEPAL 1102 or examination; for NEPAL 2202, 2201 or examination.

Letter grades only. S. Oja.

Intermediate instruction in spoken grammar and verbal comprehension skills, with special attention to developing technical vocabularies and other verbal skills appropriate to students' professional fields.

NEPAL 2203-2204 Intermediate Nepali Composition I and II @

2203, fall; 2204, spring; 2203-2204, summer. 3 credits each semester. *NEPAL 2203 satisfies Option 1.* Prerequisites: for NEPAL 2203, NEPAL 1102 or examination; for NEPAL 2204, 2203 or examination. Letter grades only. S. Oja.

Systematic review of written grammar and reading comprehension, with special attention to the technical vocabularies, necessary writing skills, and published materials typical of advanced students' professional fields.

NEPAL 3301-3302 Advanced Nepali I and II @

3301, fall; 3302, spring; 3301-3302, summer. 3 credits each semester. *NEPAL 3301 satisfies Option 1.* Prerequisite: NEPAL 2204 or permission of instructor. Letter grades only. S. Oja.

Reading of advanced texts, together with advanced drill on the spoken language.

NEPAL 4431-4432 Directed Study

4431, fall; 4432, spring. 1-4 credits, variable. Letter grades only. S. Oja.

Permission of instructor needed. Intended for advanced language study.

Intensive Nepali

Nepali, the official language of Nepal, will be offered in the Summer Session at both beginning and continuing levels. Taught by faculty from Cornell University and the Cornell-Nepal Study Program at Tribhuvan University, this summer program provides an unusual opportunity to develop competence in Nepali. Emphasis will be on the spoken colloquial language, in dialogues, exercises, and conversational practice. In addition, special attention is given to assisting students in developing vocabularies and skills appropriate to their unique professional needs. Reading and writing practice use both popular and scholarly materials in the Nepali (Devanagari) script. Students will spend five hours per day in class and two further hours working with recorded materials in addition to the time required for daily preparation. Films and guest lecturers complement the summer program. The program lasts six weeks and meets five days a week. Students must formally apply to the program. Applications are available at <http://irc.cornell.edu/asian/programs/summer/nepali> during the spring semester. For more information, etc., please see Kim Scott in 350 Rockefeller Hall or e-mail: kp16@cornell.edu.

NEPAL 1159 Summer Intensive Nepali

Summer only. 1-5 credits. Prerequisite: permission only. Students must formally apply. S. Oja and B. Oja.

For students who take NEPAL 1160 for fewer than 6 credits. It is a six-week intensive language course beginning at the absolute beginning level and going up to intermediate level. It includes work on all four language skills: speaking, listening comprehension, reading, and writing.

NEPAL 1160 Intensive Nepali

Summer only. 6 credits. Prerequisite: permission only. Students must formally apply. S. Oja and B. Oja.

This intensive study of Nepali provides an unusual opportunity to obtain basic competence in the language in one summer. Emphasis is upon the spoken (colloquial) language; although attention will also be given

to assisting the students develop vocabularies appropriate to their professional fields as well. Reading and writing practice will use both colloquial and scholarly materials in the Nepali (Devanagari) script.

NEPAL 2260 Intermediate Intensive Nepali @

Summer only. 6 credits. *Satisfies Option 1.* Prerequisite: NEPAL 1160 or placement by Nepali instructors. Students must formally apply. S. Oja and B. Oja.

Intermediate instruction in spoken grammar and verbal comprehension skills, with special attention to developing technical vocabularies and other verbal skills appropriate to students' professional fields.

NEPAL 3360 Advanced Intensive Nepali

Summer only. 6 credits. *Satisfies Option 1.* Prerequisite: NEPAL 2260 or placement by Nepali instructors. Students must formally apply. S. Oja and B. Oja.

Reading of advanced texts, together with advanced drills on the spoken language.

Pali**PALI 4450 Readings in Pali @**

Fall and spring. 3 credits. Prerequisite: permission of instructor. Letter grades only. A. Blackburn.

Readings in Pali selected in relation to student and instructor interests. This course may be repeated for credit with different topics and readings.

Sanskrit**SANSK 1131-1132 Elementary Sanskrit I and II (also CLASS 1331-1332, LING 1131-1132)**

1131, fall; 1132, spring. 4 credits each semester. Letter grades only. A. Nussbaum and A. Ruppel.

An introduction to the essentials of Sanskrit grammar. Designed to enable the student to read classical and epic Sanskrit as quickly as possible.

SANSK 2251-2252 Intermediate Sanskrit I and II (also CLASS 2351-2352, LING 2251-2252) @ #

2251, fall; 2252, spring. 3 credits each semester. *SANSK 2251 satisfies Option 1.* Prerequisite: at least one year study of Sanskrit or equivalent. Offered alternate years. Letter grades only. A. Ruppel and L. McCrea.

Review of grammar and reading of selections from Sanskrit epic poetry and narrative prose.

[SANSK 3323 Buddhist Sanskrit

Fall. 4 credits. Next offered 2011-2012. D. Boucher.]

SANSK 4431-4432 Directed Study

4431, fall; 4432, spring. 1-4 credits, variable. Prerequisite: permission of instructor. Letter grades only. Staff.

Intended for advanced language study.

Literature in Sanskrit**SNLIT 3301-3302 Advanced Sanskrit I and II (also CLASS 3393-3394) @ (LA-AS)**

3301, fall; 3302, spring. 4 credits each semester. Prerequisite: two years study of Sanskrit or equivalent. L. McCrea.

Selected readings in Sanskrit literary and philosophical texts.

SNLIT 4465 The Literature of Ancient India

Spring. 4 credits. L. McCrea.

The course will survey in translation a selection of major works of poetry, drama, and aesthetic theory and criticism from the Sanskrit literary tradition of ancient India. (LL)

Sinhala (Sinhalese)**SINHA 1121-1122 Elementary Sinhala**

1121, fall; 1122, spring. 4 credits each semester. Prerequisite: for SINHA 1122, SINHA 1121 or equivalent. Letter grades only. B. Herath.

Semi-intensive introduction to colloquial Sinhala, intended for beginners. A thorough grounding is given in all the language skills; listening, speaking, reading, and writing.

SINHA 2201-2202 Intermediate Sinhala @

2201, fall; 2202, spring. 3 credits each semester. *Satisfies Option 1.* Prerequisites: for SINHA 2201, SINHA 1102 or SINHA 1122; for SINHA 2202, 2201 or equivalent. Letter grades only. B. Herath.

This course further develops student competence in colloquial Sinhala, attending to all the language skills: listening, speaking, reading and writing. In addition, this course prepares students for the transition to literary Sinhala.

SINHA 3301 Literary Sinhala I @

Fall or spring. 3 credits. *Satisfies Option 1.* Prerequisite: SINHA 2201/2202 or permission of instructor. Letter grades only. B. Herath.

This one-semester course provides an introduction to the distinctive grammatical forms and vocabulary used in Literary Sinhala. While focused particularly on the development of reading skills, the course also introduces students to Literary Sinhala composition, and builds students' listening comprehension of semi-literary Sinhala forms (such as those used in radio and TV news).

SINHA 4400 Literary Sinhala II

Fall or spring. 2-4 credits variable. Prerequisite: SINHA 3301 or permission of instructor. B. Herath.

This one-semester course further develops students' comprehension of written Literary Sinhala, using sample materials from a variety of genres prepared by the instructor, as well as excerpts from texts relevant to graduate student research (when appropriate).

SINHA 4431-4432 Directed Study

4431, fall; 4432 spring. 1-4 credits variable. Prerequisite: permission of instructor. Letter grades only. B. Herath.

Intended for advanced language study.

Tagalog**TAG 1121-1122 Elementary Tagalog I and II**

1121, fall; 1122, spring. 4 credits each semester. Prerequisite: for TAG 1122, TAG 1121. Letter grades only. T. Savella.

Gives a thorough grounding in basic speaking and listening skills with an introduction to reading.

TAG 2205-2206 Intermediate Tagalog I and II @

2205, fall; 2206, spring. 3 credits each semester. *TAG 2205 satisfies Option 1.* Prerequisites: for TAG 2205, TAG 1122 or equivalent; for TAG 2206, 2205 or equivalent. Letter grades only. T. Savella. Develops all four skills: reading, writing, speaking, and comprehension.

TAG 3301-3302 Advanced Tagalog I and II @

3301, fall; 3302, spring. 3 credits each semester. *TAG 3301 satisfies Option 1.* Prerequisite: TAG 2206 or equivalent. Letter grades only. T. Savella. Continuing instruction on conversational skills but with emphasis on reading and writing. Selected core readings in contemporary Tagalog literature are used, but students, in consultation with the instructor, may select some of the reading materials.

TAG 4431-4432 Directed Study

4431, fall; 4432, spring. 1-4 credits, variable. Prerequisite: permission of instructor. Letter grades only. T. Savella. Intended for advanced language study.

Tamil**TAMIL 1121-1122 Elementary Tamil I and II**

1121, fall; 1122, spring. 4 credits. Prerequisite: for TAMIL 1122, TAMIL 1121 or permission of instructor. Letter grades only. S. Chavan.

This course will teach modern spoken and written Tamil to beginning level students. Students will learn Tamil through simple conversations, sentence and question construction, grammar, culture and festivals and folk tales of Tamilians of India, and how to express performance of simple daily activities. All course activities conducted in Tamil. An interactive videoconference course.

TAMIL 2201-2202 Intermediate Tamil I and II

2201, fall; 2202, spring. 4 credits. *TAMIL 2201 satisfies option 1.* Prerequisite: for TAMIL 2201, TAMIL 1121/1122 or permission of instructor; for TAMIL 2202, TAMIL 2201 or permission of instructor. S. Chavan.

To teach modern spoken and written Tamil to intermediate-level students. This course helps to acquire Tamil language proficiency, which refines and expands previously acquired linguistic skills in culturally authentic contexts. This course further incorporates reading, discussing, and analyzing texts as a basis for the expression and interpretation of meaning. All course activities are conducted in Tamil. Video-conference with Syracuse University.

Thai**THAI 1101-1102 Elementary Thai**

1101, fall; 1102, spring. 6 credits each semester. Prerequisite: for THAI 1102, THAI 1101 or equivalent. Intended for beginners or students placed by examination. Letter grades only. N. Jagacinski.

Gives a thorough grounding in all the language skills: listening, speaking, reading, and writing.

THAI 2201-2202 Intermediate Thai Reading @

2201, fall; 2202, spring. 3 credits each semester. *THAI 2201 satisfies Option 1.* Prerequisites: for THAI 2201, THAI 1102; for THAI 2202, 2201 or equivalent. Letter grades only. N. Jagacinski. Continuing instruction in spoken and written Thai.

THAI 2203-2204 Intermediate Composition and Conversation @

2203, fall; 2204, spring. 3 credits each semester. *THAI 2203 satisfies Option 1.* Prerequisites: for THAI 2203, THAI 1102; for THAI 2204, 2203. Letter grades only. N. Jagacinski. Intermediate instruction in spoken and written grammar and reading comprehension.

THAI 3301-3302 Advanced Thai @

3301, fall; 3302, spring. 4 credits each semester. *THAI 3301 satisfies Option 1.* Prerequisite: THAI 2202 or equivalent. Letter grades only. N. Jagacinski. Selected readings in Thai writings in various fields.

THAI 3303-3304 Thai Literature @

3303, fall; 3304, spring. 4 credits each semester. *THAI 3303 satisfies Option 1.* Prerequisite: THAI 3302 or equivalent. Letter grades only. N. Jagacinski. Reading of significant novels, short stories, and poetry written since 1850.

THAI 4431-4432 Directed Study

4431, fall; 4432, spring. 1-4 credits variable. Prerequisite: permission of instructor. Letter grades only. N. Jagacinski. Intended for advanced language study.

Urdu**URDU 1125 Introduction to the Urdu Script (also NES 1312)**

Fall or spring. 1 credit. Prerequisite: HINDI 1101 or permission of instructor. Letter grades only. S. Singh.

Focus of this course is to learn basic Urdu script. The course will meet two times per week, for one hour each. Students will learn how to read and write basic Urdu. In addition to teaching the script, the instructors will teach a significant number of most commonly used expressions and words in Urdu.

URDU 2201-2202 Intermediate Written Urdu I and II (also NES 2201-2202)

2201, fall; 2202, spring. 2 credits. Prerequisite: HINDI 1102 or HINDI 1110; and URDU 1125 or permission of instructor. Letter grades only. S. Singh.

This course is designed to develop competence in Urdu reading and writing for students with a first-year knowledge of Hindi and knowledge of Urdu script. May be taken concurrently with Intermediate Hindi.

URDU 4431-4432 Directed Study

4431, fall; 4432, spring. 1-4 credits variable. Prerequisite: permission of instructor. Letter grades only. S. Singh. Intended for advanced language study.

Vietnamese**VIET 1101-1102 Elementary Vietnamese I and II**

1101, fall; 1102, spring. 6 credits each semester. Prerequisite: for VIET 1102, VIET 1101 or equivalent. Intended for beginners or students placed by examination. Letter grades only. T. Tranviet. Gives a thorough grounding in all language skills: listening, speaking, reading, and writing.

VIET 2201-2202 Intermediate Vietnamese I and II @

2201, fall; 2202, spring. 3 credits each semester. *VIET 2201 satisfies Option 1.* Prerequisites: for VIET 2201, VIET 1102 or equivalent; for VIET 2202, 2201. Letter grades only. T. Tranviet. Continuing instruction in spoken and written Vietnamese.

VIET 2203-2204 Intermediate Vietnamese Composition and Reading I and II @

2203, fall; 2204, spring. 3 credits each semester. *VIET 2203 satisfies Option 1.* Prerequisite: placement by instructor. Letter grades only. T. Tranviet. Designed for students and "native" speakers of Vietnamese whose speaking and listening skills are at the advanced level, but who still need to improve writing and reading skills.

VIET 3301-3302 Advanced Vietnamese I and II @

3301, fall or spring; 3302, fall or spring. 3 credits each semester. *VIET 3301 satisfies Option 1.* Prerequisites: for VIET 3301, VIET 2202 or permission of instructor; for VIET 3302, 3301. Letter grades only. T. Tranviet.

Continuing instruction in spoken and written Vietnamese; emphasis on enlarging vocabulary, increasing reading speed, and reading various genres and styles of prose.

VIET 4431-4432 Directed Study

4431, fall; 4432, spring. 1-4 credits, variable. Prerequisite: permission of instructor. Letter grades only. T. Tranviet. Intended for advanced language study.

Literature in Vietnamese**[VTLIT 2222 Introduction to Classical Vietnamese @ #**

Spring. 3 credits. *Satisfies Option 1.* Prerequisite: qualification in Vietnamese or permission of instructor. Next offered 2010-2011. K. Taylor.

Introduces students to Han (classical Chinese as used in the Vietnamese language) and Nom (vernacular Vietnamese character writing). Students learn to read Han and Nom texts, from the 17th through 19th centuries, including historical records, prose writings, and poetry. (LL)

Related Courses in Other Departments and Colleges

Check the primary department section for the offering status of the following courses. Courses in other colleges will count as College of Arts and Sciences credit only for Asian Studies majors. Courses below generally count toward the Asian Studies major, as long as the course content is 50 percent or more focused on Asia. Such courses typically fall under the heading of Society and Culture (SC).

Asia/General Courses

- [ARTH 2800 Introduction to Art History: Approaches to Asian Art (SC)]
- DSOC 2050 International Development (SC)
- ECON 4730 Economics of Export-Led Development (SC)
- ILRIC 6370 Labor Relations in Asia (SC)
- ECON 4450 Industrial Policy (SC)
- ECON 4540 China and India: Growth Miracle (SC)

China—Area Courses

- [ANTHR 3535 The Situation of China's Minorities (SC)]
- ANTHR 7550 East Asia: Readings in Specific Problems (SC)
- CAPS/GOVT 2827 China and the World (SC)
- [ARTH 3800 Introduction to the Arts of China (SC)]
- [ARTH 4810 The Arts in Modern China (SC)]
- ECON 4690 China's Economy Under Mao and Deng (also CAPS 4690) (SC)

Japan—Area Courses

- ANTHR 2560 Japanese Society through Film (SC)
- ANTHR 7550 East Asia: Readings in Specific Problems (SC)
- ARCH 3309 Elements, Principles, and Theories in Japanese Architecture (SC)
- [HIST 2300 Japan and the Pacific War (SC)]

South Asia—Area Courses

- ANTHR 3421/6421 Sex and Gender (SC)
- ANTHR 3545 Peoples and Cultures of the Himalayas (SC)
- ANTHR 4406 Culture of Lives (SC)
- [ANTHR 6373 Human Evolution: History, Concepts, and Theory (also BIOES 6373) (SC)]
- ANTHR 7530 South Asia: Readings in Specific Problems (SC)
- ARCH 3402 Architecture as a Cultural System (SC)
- ARCH 4405 Architecture and the Mythic Imagination (SC)
- ARCH 4407 Architectural Design and the Utopian Tradition (SC)
- ARCH 4408 Topics in Architecture, Culture, and Society (SC)
- ARCH 4408–4418 Special Topics in Architectural Culture and Society (SC)
- ARCH 6401–6402 Architecture in Its Cultural Context I and II (SC)
- ARCH 6409 Graduate Investigations in Architecture, Culture, and Society (SC)
- CRP 6710 Seminar in International Planning (SC)

- [ECON 4750 The Economy of India (SC)]
- HD 6330 Language Acquisition (SC)

Southeast Asia—Area Courses

- [ANTHR 3516 Power, Society, and Culture in Southeast Asia (SC)]
- ANTHR 4420 Development of Anthropology Thought (SC)
- ANTHR 4523 Making History on the Margins: The China–SE Asian Borderlands (SC)
- ANTHR 7520 Southeast Asia: Readings in Special Problems (SC)
- ARTH 3960 The Arts of Southeast Asia (SC)
- ARTH 4900 Art and Collecting: East and West (SC)
- ARTH 4855 Threads of Consequence—Textiles in South and Southeast Asia (SC)
- GOVT 6423 Comparative Political Economy: East and Southeast Asia (SC)
- HIST 2440 The United States in Viet Nam (SC)
- HIST 3950 Southeast Asian History from the 18th Century (SC)
- HIST 6950 Early Southeast Asia: Graduate Proseminar (SC)
- HIST 6960 Modern Southeast Asia: Graduate Proseminar (SC)
- MUSIC 1341 Gamelan in Indonesian History and Cultures (SC)
- [MUSIC 3610 Cornell Gamelan Ensemble (SC)]
- [MUSIC 6301 Ethnomusicology (SC)]

ASIAN AMERICAN STUDIES PROGRAM

The Asian American Studies Program is a university-wide academic program housed administratively within the College of Arts and Sciences. Its aim is to promote teaching, research, and educational activities related to Asians in the Americas and to serve as a resource to the campus and regional communities. The program's undergraduate courses, offered within the program and cross-listed with departments in various colleges, meet distribution requirements and count toward a minor in Asian American Studies. The program does not offer a graduate course of study, but students can undertake graduate work in Asian American Studies within selected disciplines of the university.

Undergraduate Minor

The program's undergraduate minor affords students an opportunity to develop a multidisciplinary approach to the study of Asians in the hemispheric Americas. The course of study stresses developments not only within the United States, but also underscores the transnational and comparative contexts of Asian America and the field's connections with African American, American Indian, Latino, and Women's Studies. Students must work with a faculty advisor from among the program's affiliated faculty and must

complete at least 15 units of credits as follows: (1) AAS 1100 and two additional courses in Asian American Studies; (2) one course in African American, American Indian, U.S. Latino Studies, or Feminist, Gender, & Sexuality Studies*; and (3) one course in East Asian, South Asian, or Southeast Asian Studies.* (*These courses must be approved by the student's faculty advisor, and they should address issues of race, gender, or the histories and cultures of Asian peoples.) Students must file an application for the minor with the Asian American Studies Program.

Resource Center

The program's Asian American Studies Resource Center, located in 420 Rockefeller Hall, provides meeting space for the more than 50 undergraduate student organizations of the Cornell Asian Pacific Student Union and the Society for Asian American Graduate Affairs. It also holds a modest print collection of books, periodicals, and newspapers; a current news clipping file; a comprehensive database of publications on Asian Americans since 1977; and a sizable collection of videotapes as well as music CDs on the Asian American experience.

Research

The program encourages faculty and student research on Asian Americans by sponsoring guest lectures, conferences, film festivals, readings, and exhibits. It also funds research projects and student travel to conferences and research sites. The Asian American Studies Workshop is the program's principal research initiative, engaging Cornell's faculty and students with invited faculty from other universities in a yearlong intensive study of selected themes.

Core Faculty

D. Chang, C. Lai, V. Munasinghe, S. Wong

Courses**AAS 1100 Introduction to Asian American Studies (CA-AS)**

Spring. 3 credits. Can be used to satisfy either social science or humanities distribution requirement. S. Wong. The purpose of this course is fourfold: (1) to introduce students to the multifaceted experiences of Asians in the United States; (2) to examine how a diverse group of people came to be identified as "Asian Americans"; (3) to understand the role of difference—gender, class, ethnic—in the formation of "Asian American" identities; and (4) to link historical experiences with contemporary issues.

AAS 2130 Introduction to Asian American History (also AMST/HIST 2640) (HA-AS)

Fall. 4 credits. D. Chang.
For description, see HIST 2640.

AAS 2620 Asian American Literature (also AMST/ENGL 2620) (LA-AS)

Spring. 4 credits. S. Wong.
For description, see ENGL 2620.

[AAS 3030 Asians in the Americas: A Comparative Perspective (also ANTHR 3703) (CA-AS)]

Fall. 4 credits. Next offered 2010–2011.
V. Munasinghe.]

AAS 3470 Asian American Women's History (also AMST/FGSS/HIST 3470) (CA-AS)

Spring. 4 credits. D. Chang.
For description, see HIST 3470.

AAS 3801/6801 Asian American Urban Experience (also AMST/CRP 3801/6801)

Fall. 3 credits. C. Lai.
The seminar examines the histories and geographies of urban Asian American communities. We begin with an introduction to key geographical terms and spatial theories and then use them to analyze different Asian ethnic communities throughout North America. This includes an investigation of 19th- and early-20th-century segregated ethnic enclaves on the West Coast and the East Coast as well as an examination of postwar Asian American communities in suburbs.

AAS 3901 Asian American Politics and Public Policy (also AMST/CRP 3102/6102) (CA-AS)

Spring. 3 credits. C. Lai.
This lecture course examines key political and public policy issues affecting Asian American communities, such as immigration law, racial profiling, labor struggles, and electoral politics. We pay particular attention to political mobilization efforts of different Asian ethnic groups and examine how these groups have organized, framed their issues, and mobilized in terms of space, place, and spatial scale.

AAS 3950 Race, Space, and Place (also AMST 3950/6950, CRP 3101/6101) (CA-AS)

Fall. 3 credits. C. Lai.
This seminar examines critical theories of race and space and investigates key sites where racial formation and spatial production intersect. These multiscale sites include the neoliberal city, the prison industrial complex, and the Mississippi Delta. We analyze not only the fatal coupling of difference, power, and space, but also the spatial politics of resistance and refusal.

[AAS 4310 Mind, Self, and Emotion (also HD 4310) (SBA-AS)]

3 credits. Next offered 2010-2011.
Q. Wang.
For description, see HD 4310.]

[AAS 4240 Asian American Communities (also AMST/HIST 4200) (HA-AS)]

Fall. 4 credits. Next offered 2010-2011.
D. Chang.]

AAS 4520 Culture and Human Development (also COGST/HD 4520) (CA-AS)

Spring. 3 credits. Q. Wang.
For description see HD 4520.

AAS 4530 20th-Century American Women Writers of Color (also AMST/ENGL/FGSS 4530) (LA-AS)

Fall. 4 credits. S. Wong.
For description, see ENGL 4530.

[AAS 4790 Ethnicity and Identity Politics: An Anthropological Perspective (also ANTHR 4749) (SBA-AS)]

Next offered 2010-2011. V. Munasinghe.
For description, see ANTHR 4749.]

AAS 4950 Independent Study

Fall or spring. 1-4 credits. Topic and credit hours TBA arranged between faculty and student. Independent study forms must be approved by Asian American Studies Program office. Staff.

[AAS 4970 Jim Crow and Exclusion-Era America (also AMST/HIST 4970/6970)]

Spring. 4 credits. Next offered 2011-2012.
D. Chang.]

ASTRONOMY

I. M. Wasserman, chair (616 Space Sciences Bldg., 254-4556); G. J. Stacey, director of undergraduate studies (212 Space Sciences Bldg., 255-5900); R. E. Bean, J. F. Bell, J. A. Burns, D. B. Campbell, D. F. Chernoff, J. M. Cordes, E. E. Flanagan, P. J. Gierasch, R. Giovanelli, M. P. Haynes, T. L. Herter, J. R. Houck, D. Lai, J. P. Lloyd, R. V. E. Lovelace, P. D. Nicholson, S. W. Squyres, Y. Terzian, S. A. Teukolsky, J. F. Veverka. Emeritus: P. F. Goldsmith, M. O. Harwit

Cornell's Astronomy faculty, research staff, graduate, and undergraduate students are active in diverse areas of modern astronomy ranging from theoretical astrophysics and general relativity to radio and radar astronomy, submillimeter, infrared and optical astronomy, and the exploration of the solar system. Cornell operates two local optical observatories, the world's largest radio telescope at Arecibo, Puerto Rico, and with two other institutions, the 200-inch optical telescope at Mt. Palomar in California. With Caltech, Cornell is carrying out a design study for a large submillimeter telescope in the high Atacama desert in Chile. Several members of the department faculty are also principal investigators on major NASA space and planetary exploration missions.

The department offers a number of courses to satisfy a general interest in astronomy. These courses have few or no prerequisites and are not intended for the training of professional astronomers. Among the introductory courses, several choices are available, depending on background and on the requirements to be fulfilled. The 1000-level courses are designed primarily for nonscience majors. The alternative introductory sequence ASTRO 2211-2212 is geared toward sophomore physical science and engineering majors and requires co-registration in beginning calculus. ASTRO 2201 and 2202 are intended for students with an interest in astronomy but no scientific background; they are topical rather than survey-oriented. ASTRO 3332 is designed for physical science and engineering majors as an introduction to astrophysics. Other courses at the 2000 and 3000 levels may appeal to students of various backgrounds and interests, as indicated in the individual course descriptions.

Courses numbered above 4000 are intended for students who have had two to three years of college physics and at least two years of college mathematics. ASTRO 4940 Independent Study permits students to engage in individual research projects under the guidance of a faculty member.

Interested students are encouraged to become members of the undergraduate Cornell Astronomy Club. The club has access to the Fuertes Observatory on campus and conducts regular observing and astrophotography sessions. All students are invited to visit the Space Sciences Building, see the exhibits on display there, and consult faculty members about career plans or choice of courses.

The Major

The purpose of the major in Astronomy is to provide in-depth knowledge and education about the nature of the universe. Astronomy relies heavily on preparation in physics and mathematics. Consequently, many courses in these fields are included as prerequisites. In preparation for the major, students normally elect the introductory physics sequence PHYS 1112-2213-2214 or 1116-2217-2218 and the complementary pathway in mathematics, MATH 1110-1220-2210-2220 or 1910-1920-2930-2940 (or equivalent). Students who anticipate undertaking graduate study are urged to elect the honors physics sequence PHYS 1116-2217-2218-3318-3327 if possible. We recommend, but do not require, that prospective astronomy majors take at least one of the following courses: ASTRO 2211, ASTRO 2212, ASTRO 2233, ASTRO 2290. Students are also urged to acquire computer literacy. ASTRO 3334 is designed to give students hands-on experience with the methods of analysis, visualization, and simulation needed in astrophysical research. Acceptance to the major is first considered after completion of three semesters of introductory physics and mathematics and in general requires a GPA of 3.2 in physics and mathematics courses.

The major requirements stress the importance of building a strong preparation in physical science. The following upper-level courses are normally required:

PHYS 3314 or 3318, 3316, 3323 or 3327, 3341 and 4443

AEP 3210-3220 (or equivalent, e.g., MATH 4200 and 4220)

ASTRO 4410, 4431, and 4432

With permission of the major advisor, students interested in planetary studies may substitute appropriate advanced courses or may pursue an independent major under the program in the Science of Earth Systems. Majors are encouraged to supplement the above courses with any astronomy, physics, or other appropriate courses at or above the 3000 level. Advanced seniors can enroll in astronomy graduate courses with the permission of the instructor. Students are also encouraged to work with faculty members on independent study projects under the course ASTRO 4940 or to apply to a variety of programs at Cornell, Arecibo, and elsewhere that offer undergraduates summer employment as research assistants. Nearly all undergraduate majors and concentrators become involved in research projects in the junior and senior years.

Students whose interest in astronomy is sparked somewhat late in their undergraduate career are encouraged to discuss possible paths with the director of undergraduate studies in Astronomy.

Honors. A student may be granted honors in Astronomy upon the recommendation of the Astronomy Advisors Committee of the Astronomy faculty. Typical requirements for graduating with honors are a minimum GPA of 3.5 over the past four semesters and grades of A- or better in ASTRO 4410, 4431, and 4432.

Double majors. A double major in Astronomy and another subject is possible in many circumstances. However, the set of courses used to fulfill the requirements for each major must be completely independent.

Minor. The minor in Astronomy for other majors normally requires 12 credits, at least 8 of which must be at the 3000 level or above. We recommend, but do not require, that sophomores planning to concentrate in Astronomy take at least one of the following courses: ASTRO 2211, ASTRO 2212, ASTRO 2233, ASTRO 2290.

Distribution Requirement

All courses in astronomy, except ASTRO 1109, may be used to fulfill the science distribution requirement in the College of Arts and Sciences.

Courses

ASTRO 1101 The Nature of the Universe (PBS)

Fall. 3 credits. Limited to 30 students per disc sec. *Students may not receive credit for both ASTRO 1101 and 1103.* J. Lloyd. Introduces students to the cosmos. The birth, evolution, and death of stars, the formation of the chemical elements, and the nature of white dwarfs, neutron stars, and black holes are discussed. An introduction to the theories of special relativity and general relativity is given. The course covers the search for other worlds outside the solar system and the possible existence of life and intelligence elsewhere in the universe. Modern theories of cosmology are presented, and the origin, structure, and fate of the universe are discussed. Most of the course notes as well as sample exams and simulations are made available on the web.

ASTRO 1102 Our Solar System (PBS)

Spring. 3 credits. Limited to 30 students per disc sec. *Students may not receive credit for both ASTRO 1102 and 1104.* S. Squyres and J. Veverka.

The past few decades have seen incredible advances in the exploration of our solar system. In this course students learn about the current state and past evolution of the Sun and its family of planets, moons, asteroids, and comets. The course emphasizes images and other data obtained from current and past NASA space missions and how these data provide insights about the important processes that have shaped the evolution of solar system objects. General astronomical concepts relevant to the study of the solar system are also discussed. Critical focus is on developing an understanding of the Earth as a planetary body and discovering how studies of other planets and satellites influence models of the climatic, geologic, and biologic history of our home world. Other topics covered include energy production in stars, global warming, impact hazards, the search for life in the solar system and beyond, and future missions.

ASTRO 1103 The Nature of the Universe (PBS)

Fall. 4 credits. Limited to 22 students per lab, 30 students per disc sec. *Students may not receive credit for both ASTRO 1101 and 1103.* J. Lloyd. Identical to ASTRO 1101 except for addition of the laboratory.

ASTRO 1104 Our Solar System (PBS)

Spring. 4 credits. Limited to 22 students per lab, 30 students per disc sec. *Students may not receive credit for both ASTRO 1102 and 1104.* S. Squyres and J. Veverka. Identical to ASTRO 1102 except for addition of the laboratory.

ASTRO 1105 An Introduction to the Universe (PBS)

Summer. 3 credits. Recommended: high school physics. *Students may not receive credit for both ASTRO 1105 and 1107.* D. Kornreich.

How do we measure the size of our galaxy and the size of the universe? Is the universe round or flat? How are the stars born, why do they shine, and how do they die? What are the chemical elements, and how were they formed in stars? What are quasars, pulsars, and black holes? How was the solar system formed? What are the environments of other planets like? What is the basic structure of Earth and the other planets? Will we catastrophically alter the earth? Does life exist elsewhere in the universe? How can we find out? Each student has an opportunity to make observations with small telescopes.

ASTRO 1106 Essential Ideas in Relativity and Cosmology (PBS)

Summer. 3 credits. Prerequisites: high school algebra and trigonometry. A. Brazier.

Explanation of Einstein's theories of special and general relativity, which brought about a fundamental change in our conceptual understanding of space and time. Correspondence to, and conflicts with, common sense. Applications to various areas in special relativity (space travel, the equivalence of mass and energy, nuclear fission and fusion, and thermonuclear processes in the sun) and in general relativity (motion of light and particles in curved space-time, cosmological models, and the question of whether the universe is open or closed).

ASTRO 1107 An Introduction to the Universe (PBS)

Summer. 4 credits. *Students may not receive credit for both ASTRO 1105 and 1107.* D. Kornreich.

Identical to ASTRO 1105 except for the addition of the afternoon laboratory that emphasizes mathematical problem-solving. This option is recommended for potential majors in science and engineering.

ASTRO 1195 Observational Astronomy (PBS)

Fall. 3 credits. Limited to 24 students. G. Stacey.

Provides a "hands-on" introduction to observational astronomy intended for liberal arts students at the freshman and sophomore level. High school mathematics is assumed, but otherwise there are no formal prerequisites. The course objective is to teach how we know what we know about the universe. The course is set up with two lectures and one evening laboratory per week. Not all of the evening sessions are used. Planned exercises include five or six observational labs (star gazing with binoculars and small telescopes, telescopic observations and CCD imaging of star clusters, nebulae, and the planets, solar observations, radio observations of the Milky Way Galaxy), plus a selection of exercises from the following: experiments in navigating by the stars; construction and use of simple instruments such as optical spectrometers and sun dials; laboratory spectroscopy; experiments in planetary cratering; collection and study of micrometeorites; analyses of planetary and lunar images obtained by the class, measuring the diameter of Earth or the size of the solar system.

ASTRO 2201 Our Home in the Universe (PBS)

Fall. 3 credits. Prerequisite: freshman or sophomore standing. No scientific background assumed. R. Giovanelli and M. Haynes.

General discussion of our relation to the physical universe and how our view of the universe has changed from ancient to modern times. Several main themes are covered over the course of the semester: the evolution of our view of the sky from that of ancient cultures to that of space telescopes; the death of stars and the formation of black holes; dark matter and the structure of galaxies; and the origin, evolution, and fate of the universe. Presents a nonmathematical introduction to these subjects and discuss uncertainties and unresolved issues in our understanding.

ASTRO 2202 Our Home in the Solar System (PBS)

Spring. 3 credits. Prerequisite: freshman or sophomore standing; some background in science. J. Veverka.

Writing course designed to develop an understanding of our home planet as a member of a diverse family of objects in our solar system. Discussion centers on how studies of other planets and satellites have broadened our knowledge and perspective of Earth, and vice versa. We study, debate, and learn to write critically about important issues in science and public policy that benefit from this perspective. Topics discussed include global warming, the impact threat, the searches for extrasolar planets and extraterrestrial intelligence, and the exploration of Mars.

ASTRO 2211 Astronomy: Stars, Galaxies, and Cosmology (PBS)

Fall. 4 credits. Intended for first- and second-year engineering and physical sciences students. Prerequisite: introductory calculus or co-registration in MATH 1110 or 1910 or permission of instructor. R. Bean.

This course offers an introduction to astrophysics aimed at prospective science and engineering majors. It covers a broad array of topics in astrophysics including the formation, structure, evolution and observational properties of normal and extreme stars, galaxies and cosmology, and the underlying physical processes governing them. The textbook is by Kutner. This course is a slightly more mathematical and physics-oriented alternative to ASTRO 1101/1103.

ASTRO 2212 The Solar System: Planets, Satellites, and Rings (PBS)

Spring. 4 credits. Intended for first- and second-year engineering and physical sciences students. Prerequisite: introductory calculus or co-registration in MATH 1110 or 1910; some knowledge of classical physics (mechanics and thermodynamics). D. Campbell and P. Gierasch.

Introduction to the solar system with emphasis on the quantitative application of simple physical principles to the understanding of what we observe or can deduce. Topics include the Sun and the interior processes that control its luminosity, the interiors, surfaces, and atmospheres of the planets including the effects of greenhouse gases, satellites, and small bodies, orbits of solar system bodies and the search for extra-solar planets. Results from past and current spacecraft missions will be

discussed including the Cassini mission to the Saturn system and the Mars Exploration Rovers.

[ASTRO 2233 Topics in Astronomy and Astrophysics]

Fall. 3 credits. Intended for sophomores planning to major in Astronomy or related fields. Prerequisites: co-registration in PHYS 1112 or 1116, MATH 1120, 1220 or 1920. Home page: www.astro.cornell.edu/academics/courses/astro233. Next offered 2010–2011. M. Haynes and D. Campbell.]

ASTRO 2280 Space Exploration (PBS)

Fall. 3 credits. No special background in physical sciences, math, or engineering assumed. S. Squyres.

Provides an overview of space science, with particular emphasis on the solar system, and a detailed examination of a few selected objects, including the planet Mars, the satellites in the outer solar system, and comets. The focus is on methods of collecting information and especially on spacecraft and space missions. Topics include the design and limitations of instruments. Ethical and political questions associated with space exploration are discussed. Intended for students with an interest in science, technology, and associated policy issues.

ASTRO 2290 Relativity and Astrophysics (PBS)

Spring. 4 credits. Prerequisites: freshman physics, calculus, and geometry. T. Herter. Provides a geometrically based introduction to special and general relativity, followed by consideration of astrophysical applications. Includes discussion of tests of Einstein's theory of space, time, and gravitation; the physics of white dwarfs, neutron stars, and black holes; an introduction to modern cosmology.

ASTRO 2299 Search for Life in the Universe (PBS)

Spring. 4 credits. Prerequisites: two courses in any physical science subject or permission of instructors. J. Cordes and Y. Terzian.

Surveys the contents of the universe. Reviews theories of cosmic and stellar evolution, and of the formation and evolution of planetary systems, planetary atmospheres, and surfaces. Questions regarding the evolution of life and the development of technology are discussed. Methods to detect extraterrestrial life with emphasis on radio telescopes and associated instrumentation are presented. Hypothetical communication systems are developed and discussed.

ASTRO 3310 Planetary Imaging Processing (PBS)

Fall. 3 credits. Intended for sophomores or juniors majoring or concentrating in Astronomy or related fields. Prerequisites: two semesters of introductory physics and some experience with computer programming; permission of instructor required (form available in S8610). J. Bell. Reviews basic techniques employed in the collection and processing of spacecraft images of solar system objects. See www.astro.cornell.edu/courses/astro310/main.html for course details.

ASTRO 3332 Elements of Astrophysics (PBS)

Spring. 4 credits. Prerequisites: MATH 1120, 1220, 1920, or equivalent; PHYS 2213 or 2217. J. Houck.

Introduction to astronomy, with emphasis on the application of physics to the study of the universe. Covers: physical laws of radiation; distance, size, mass, and age of stars, galaxies, and the universe; stellar evolution and nucleosynthesis; supernovae and black holes; galaxies and quasars. Introduction to cosmology. Mainly intended for students of science, engineering, and science education interested in astronomy and astrophysics.

ASTRO 3334 Modern Astrophysical Techniques (PBS)

Spring. 3 credits. Intended for sophomores majoring or concentrating in Astronomy or related fields. Prerequisites: two semesters of introductory physics and two semesters of calculus. Recommended: ASTRO 2233. J. Lloyd.

The course reviews the basic techniques employed in astrophysical research, both observational and theoretical, to explore the universe. Basic methods and strategies of data acquisition and image and signal processing are discussed. Students gain hands-on experience with visualization techniques and methods of error analysis, data fitting, and numerical simulation. Exercises address the processes by which astrophysicists piece together observations made with today's foremost astronomical instruments to solve questions concerning the origin of planets, stars, galaxies, and the universe itself.

ASTRO 4410 Experimental Astronomy (PBS)

Fall. 4 credits. Prerequisites: PHYS 2214/2218 (or 3310 or 3360), PHYS 3323/3327 (or co-registration). J. Cordes and J. Houck.

Observational astrophysics. Major experiments involve techniques in CCD (charge-coupled-device) imaging, optical photometry, optical spectroscopy, radiometry, radio spectroscopy and radio astronomy. The experiments involve use of the Hartung-Boothroyd Observatory's 24-inch telescope, a laboratory two-element radio interferometer, and a radio telescope mounted on top of the Space Sciences Building. The laboratory covers the fundamentals of using astronomical instrumentation and data analysis as applied to celestial phenomena: asteroids, normal stars, supernova remnants, globular clusters, planetary nebulae, the interstellar medium, OH masers, and galaxies.

ASTRO 4431 Introduction to Astrophysics and Space Sciences (PBS)

Fall. 4 credits. Prerequisites: mathematics above 2000 level and physics above 3000 level. Recommended: PHYS 4443. D. Chernoff and P. Nicholson.

Overview of modern astrophysical concepts for physical science majors. Major topics include stellar formation, structure, and evolution; stellar atmospheres; compact objects (white dwarf, neutron star, and black holes); planets; and brown dwarfs. Current research problems in these areas are introduced along the way. The emphasis is on using fundamental principles of physics to explain astronomical phenomena. A variety of physics, including elements of atomic and molecular physics, solid state physics and fluid mechanics, are introduced or reviewed in a quick, practical fashion to be put to use in solving astrophysics puzzles.

ASTRO 4432 Introduction to Astrophysics and Space Sciences II (PBS)

Spring. 4 credits. Prerequisite: ASTRO 4431 or permission of instructor. T. Herter and G. Stacey.

Covers two broad topics: the astrophysics of the interstellar medium and cosmology. The interstellar medium section covers thermal equilibrium and radiative transport in HII regions, atomic gas regions, and molecular clouds. The cosmology section includes expansion of the universe, metrics, Friedmann equations, dark matter, cosmological tests, the early universe, and the cosmological production of the elements.

ASTRO 4445 Introduction to General Relativity (also PHYS 4445) (PBS)

Fall. 4 credits. Staff.

For description, see PHYS 4445.

ASTRO 4490 Senior Seminar Critical Thinking (PBS)

Fall. 4 credits. Prerequisites: none. Open to all students. Y. Terzian.

Critical thinking in scientific and nonscientific contexts with selections from the history of astronomy. Topics include elements of classical logic, including standards of evidence. Case studies include examples of competing hypotheses in the history of science, as well as examples from borderline sciences. Stress is put on creative generation of alternative hypotheses and their winnowing by critical scrutiny. Topics include the nature and history of the universe, the nature of time, the nature of reality, the possibilities of life on other planets, and artificial intelligence. Fallacies, illusions, and paradoxes will also be discussed. The course includes debates by the students on controversial topics such as: Can machines think? Is science and technology to be blamed for Hiroshima and 9/11? Should the genome be improved? Is the future determined?

ASTRO 4940 Independent Study in Astronomy

Fall or spring. 2–4 credits. Prerequisite: permission of instructor; to register: obtain an independent study form in department office, 610 Space Sciences Bldg.

Recommended: familiarity with topics covered in ASTRO 3332, 4431, or 4434.

Individuals work on selected topics. A program of study is devised by the student and instructor.

[ASTRO 6509 General Relativity I (also PHYS 6553)]

Fall. 4 credits. Prerequisite: knowledge of special relativity and methods of dynamics at level of *Classical Mechanics* by Goldstein. Next offered 2010–2011.

E. Flanagan.

For description, see PHYS 6553.]

[ASTRO 6510 General Relativity II (also PHYS 6554)]

Spring. 4 credits. Prerequisite: ASTRO 6509. Next offered 2010–2011. E. Flanagan.

For description, see PHYS 6554.]

ASTRO 6511 Physics of Black Holes, White Dwarfs, and Neutron Stars (also PHYS 6525)

Fall. 4 credits. Prerequisites: all of physics at upper-division undergraduate level. D. Lai.

Compact objects (neutron stars, black holes, and white dwarfs) are the endpoints of stellar evolution. They are responsible for some of

the most exotic phenomena in the universe, including supernova explosion, radio pulsars, bright X-ray binaries, magnetars, and gamma-ray bursts. Supermassive black holes also lie at the heart of the violent processes in active galactic nuclei and quasars. The study of compact objects allows one to probe physics under extreme conditions (high densities, strong magnetic fields, and gravity). This course surveys the astrophysics of compact stars and related subjects. Emphasis is on the application of diverse theoretical physics tools to various observations of compact stars. There are no astronomy or general relativity prerequisites. At the level of *Physics of Black Holes, White Dwarfs, and Neutron Stars* by Shapiro and Teukolsky.

ASTRO 6516 Galactic Structure and Stellar Dynamics

Fall. 4 credits. D. Chernoff.
Introduction to the study of the structure of galaxies via the laws of modern physics. Topics include the observed kinematics and spatial distribution of stars in the vicinity of the Sun, shapes and properties of stellar orbits, the gravitational N-body problem, collisional relaxation in stellar systems, spiral structure, galaxy classification and evolution, and cosmological results in galaxy formation.

ASTRO 6520 Radio Astronomy

Fall. 4 credits. J. Cordes and D. Campbell.
Covers radio astronomy telescopes and electronics; antenna theory; observing procedures and data analysis; concepts of interferometry and aperture synthesis.

[ASTRO 6523 Signal Modeling, Statistical Inference, and Data Mining in Astronomy]

Fall. 4 credits. Next offered 2010–2011. J. Cordes.]

[ASTRO 6525 Techniques of Optical/Infrared and Submillimeter Astronomy]

Fall. 4 credits. Next offered 2010–2011. T. Herter.

Optical design, detectors, cryogenic techniques, and data analysis are discussed and related to instrument design and use within the context of current astronomical research.]

ASTRO 6530 Astrophysical Processes

Spring. 4 credits. D. Lai, T. Herter, and G. Stacey.

Fundamentals of radiative transfer, bremsstrahlung, synchrotron radiation, Compton scattering, spectral line transfer, gas heating and cooling and topics in atomic and molecular spectroscopy topics are discussed within the framework of astrophysical sources and problems.

[ASTRO 6531 Astrophysical Fluid Dynamics]

Spring. 4 credits. Next offered 2010–2011. D. Lai.]

[ASTRO 6560 Theory of Stellar Structure and Evolution (also PHYS 7667)]

Fall. 4 credits. Next offered 2010–2011. D. Chernoff.]

ASTRO 6570 Physics of the Planets

Fall. 4 credits. P. Nicholson.

Introductory survey of planetary science with an emphasis on the application of physical principles. Planetary dynamics, including satellite orbits, tidal interactions, resonances, and ring dynamics. An introduction to the theory of planetary interiors, gravitational

fields, heat sources, and rotational mechanics. Intended for graduate students and seniors in astronomy, physics, and engineering.

[ASTRO 6571 Mechanics of the Solar System (also TAM 6730)]

Spring. 3 credits. Next offered 2010–2011. J. Burns.

For description, see TAM 6730.]

[ASTRO 6575 Planetary Atmospheres (also EAS 5750)]

Fall. 4 credits. Next offered 2010–2011. P. Gierasch.]

[ASTRO 6577 Planetary Surface Processes (also EAS 5770)]

Spring; 3 or 4 credits (3 credits for course only; 4 credits if registered for lab trip). Next offered 2010–2011. J. Bell.]

[ASTRO 6578 Planet Formation and Evolution (also EAS 5780)]

Fall. 4 credits. Next offered 2010–2011. M. Pritchard.]

[ASTRO 6579 Celestial Mechanics (also TAM 6720)]

Spring. 3 credits. Next offered 2010–2011. J. Burns.

For description, see TAM 6720.]

[ASTRO 6590 Galaxies and the Universe]

Fall. 4 credits. Next offered 2010–2011. R. Giovanelli and M. Haynes.

The universe, its large-scale structure and history; morphology, photometry, dynamics, kinematics and active nuclei of galaxies; galaxy formation and evolution; cosmological theory and observations.]

ASTRO 6599 Cosmology (also PHYS 6599)

Spring. 4 credits. Prerequisites: statistical physics, quantum mechanics, and electromagnetic theory courses. R. Bean.

Intended to provide a detailed theoretical development of current ideas in cosmology. Topics include Big Bang cosmology and universe's matter content; a cosmological chronology very early universe, symmetry breaking, inflationary scenarios, nucleosynthesis, recombination, growth of irregularities, galaxy formation and clustering, dark energy; current and future cosmological observational approaches.

ASTRO 6940 Advanced Study and Research

Fall or spring. Credit TBA.

Guided reading and seminars on topics not currently covered in regular courses.

ASTRO 7620 Seminar: Advanced Radio Astronomy

Spring. 2 credits. Prerequisites: for advanced undergraduates, by permission of instructor. Recommended: some background in astronomical spectroscopy. R. Giovanelli and M. Haynes.
