Cornell University has an enduring commitment to support equality of education and employment opportunity by affirming the value of diversity and by promoting an environment free from discrimination.

Association with Cornell, either as a student, faculty, or staff member, involves participation in a free community where all people are recognized and rewarded on the basis of individual performance rather than personal convictions, appearance, preferences (including sexual or affectional orientation) or happenstance of birth.

Cornell University's history of diversity and inclusion encourages all students, faculty, and staff to support a diverse and inclusive university in which to work, study, teach, research, and serve.

No person shall be denied admission to any educational program or activity or be denied employment on the basis of any legally prohibited discrimination involving, but not limited to, factors such as race, color, creed, religion, national or ethnic origin, sex, sexual orientation, gender identity or expression, age, disability, or veteran status. Cornell University is an affirmative action, equal opportunity employer.

Concerns and complaints related to equal opportunity in education and employment based on aspects of diversity protected under federal, state, and local law, including sexual harassment complaints filed by any member of the Cornell community against an academic or nonacademic staff member, as well as complaints arising under Title IX, should be directed to the Office of Workplace Policy and Labor Relations, 391 Pine Tree Road, Ithaca, NY 14850, 607-254-7232, equalopportunity@cornell.edu. Current employees in need of workplace accommodation pursuant to the Americans with Disabilities Act or New York State law should contact Workplace Policy and Labor Relations, 391 Pine Tree Road, Ithaca, NY 14850, 607-254-7232, equalopportunity@cornell.edu. Current employees in need of a workplace accommodation pursuant to the Americans with Disabilities Act or New York State law should be directed to Medical Leaves Administration, 365 Pine Tree Road, Ithaca, NY 14850, 607-255-1215, mrl@cornell.edu.

All members of the Cornell Community are encouraged to report bias activity, including hate crimes, either experienced directly or observed, to the Office of Workforce Diversity and Inclusion (wdi@cornell.edu). They may also report the matter to a bias reporting team member (http://hr.cornell.edu/diversity/reporting/bias_team.html).

Members of the Cornell University community are strongly encouraged to report immediately any criminal activity and suspicious person(s) to the Cornell University Police Department (607-255-1111). Incidents that may or may not be crimes may also be reported to “campus security authorities,” which include, in addition to the Cornell University Police, those with responsibility for controlling access to buildings or facilities and officials having significant responsibility for students or campus activities. Licensed counselors and campus clergy (pastoral counselors) are exempt from reporting requirements. Cornell University encourages counselors and clergy if and when they deem it appropriate, to inform those to whom they counsel of procedures for reporting crimes on a voluntary, confidential basis for inclusion in the Cornell University Police Statistical Crime Record.

For Cornell University directory information or general information, call 607-255-2000 or 607-254-INFO. Courses of Study is available on the web at cornell.edu/academic/courses/cfm.

To obtain a copy of this catalog, please follow these guidelines:
If you are a prospective undergraduate student and don't have web access, please contact the Undergraduate Admissions Office, Cornell University, 410 Thurston Ave., Ithaca, NY 14850-2488, 607-255-5241.
If you are a prospective graduate student, please consult the listing of the course catalog on the web (see above for address). If you are a currently enrolled student, please consult the listing of the course catalog on the web (see above for address) or contact your college registrar.
All others please contact the Office of the University Registrar, Cornell University, 807 Day Hall, Ithaca, NY 14853-2801, 607-255-4232, e-mail: ced@cornell.edu.

Mary G. Opperman, Vice President for Human Resources

Charles D. Phleger, Vice President for Alumni Affairs and Development

Paul Streeter, Interim Vice President for Planning and Budget

Academic Leadership

Antonio M. Gotto, Jr., Provost for Medical Affairs and Stephen and Suzanne Weiss Dean of the Joan and Sanford I. Weill Medical College

Glenn C. Altschuler, Dean of the School of Continuing Education and Summer Sessions

Robert L. Constable, Dean for Computing and Information Science

David P. Hajjar, Dean of the Weill Graduate School of Medical Sciences

Susan A. Henry, Ronald P. Lynch Dean of the College of Agriculture and Life Sciences

Michael D. Johnson, Dean of the School of Hotel Administration

Harry C. Katz, Kenneth F. Kahn Dean of the School of Industrial and Labor Relations

Anne R. Kenney, Carl A. Kroch University Librarian

Kent Kleinman, Gale and Ira Drukier Dean of the College of Architecture, Art, and Planning

Michael I. Kotlikoff, Austin O. Hooye Dean of the College of Veterinary Medicine

G. Peter Lepage, Harold Tanner Dean of the College of Arts and Sciences

Alan D. Mathios, Rebecca Q. and James C. Morgan Dean of the College of Human Ecology

Christopher K. Ober, Interim Dean of the College of Engineering

Barbara Knuth, Dean of the Graduate School

Stewart J. Schwab, Allan R. Tessler Dean of the Law School

L. Joseph Thomas, Anne and Elmer Lindseth Dean of the S.C. Johnson Graduate School of Management

Office of the Provost

David R. Harris, Deputy Provost and Vice Provost for Social Sciences

Robert A. Buhrman, Senior Vice Provost for Research

Doris Davis, Associate Provost for Admissions and Enrollment

Stephen F. Hamilton, Associate Provost for Outreach

Elizabeth A. Mannix, Vice Provost for Equity and Inclusion

Stephen Kresowich, Vice Provost for the Life Sciences

Laura Schaefer Brown, Vice Provost for Undergraduate Education

Alice N. Pell, Vice Provost for International Relations

Robert C. Richardson, Senior Science Advisor

Ronald Seeger, Vice Provost for Land Grant Affairs

John A. Siliciano, Vice Provost

Office of the Provost for Medical Affairs

David P. Hajjar, Ph.D., Senior Executive Vice Dean, Executive Vice Provost, and Dean of the Graduate School of Medical Sciences

Stephen M. Cohen, Executive Vice Dean for Administration and Finance and Associate Provost

Javid I. Sheikh, M.D., Interim Dean, Weill Cornell Medical College in Qatar

Steven P. Rosalie, Executive Vice Dean and Associate Provost for International Initiatives

Other Administrative Leadership

Joanne M. DeStefano, Vice President for Financial Affairs

Michael B. Dickinson, University Auditor

Steve Schuster, Interim Executive Director for Information Technologies

James H. Walsh, Chief Investment Officer

Kyu-Jung Whang, Vice President for Facilities Services

Kathy Zoner, Chief of Police

Dean of the University Faculty: William E. Fry

Robert W. and Elizabeth C. Staley Dean of Students: Kent L. Hubbard
Accreditation
Cornell University is accredited by the Middle States Commission on Higher Education.

A copy of the most recent reaffirmation of Cornell’s accreditation can be found at dpb.cornell.edu/accreditation.htm. Requests to review additional documentation supporting Cornell’s accreditation should be addressed to Marin Clarkberg, Associate Director, Institutional Research and Planning, Cornell University, 441 Day Hall, Ithaca, NY 14853-2801, mec30@cornell.edu.

Cornell University

(USPS 132–860)

Volume 102 of the series “Cornell University” consists of four catalogs, of which this is number three, dated August 1, 2010. Issued once in January, once in July, once in August, and once in November. Published by Cornell University, Publications and Marketing, East Hill Plaza, 353 Pine Tree Road, Ithaca, NY 14850–2820. Periodicals postage paid at Ithaca, New York.

Postmaster: Send address changes to Cornell University, Office of the University Registrar, B07 Day Hall, Ithaca, NY 14853–2801.

Introduction

Courses of Study (www.cornell.edu/academics/courses.cfm), a catalog of Cornell University’s many academic programs and resources, contains information about colleges and departments, interdisciplinary programs, undergraduate and graduate course offerings, and procedures. Students also should consult with their college’s advising office for specific information on their college’s academic policies and procedures, degree programs, and requirements. Not included in this publication is information concerning the Medical College and the Graduate School of Medical Sciences, located in New York City.

It is not possible to keep this single volume completely up-to-date. The most current information regarding course descriptions, schedules, sections, rooms, credits, and registration procedures may be found at www.cornell.edu/academics/courses.cfm, which also includes the Course and Time/Room Rosters. Students are also advised to consult individual college and department offices for up-to-date course information.

Cornell community members are expected to comply with all university policies, including the Code of Conduct and the Code of Academic Integrity available at www.policy.cornell.edu.

The following are offices and sources of information about admission to Cornell University.

Undergraduate Admissions Office, 410 Thurston Avenue, Ithaca, NY 14850-2488, 255-5241, admissions.cornell.edu.

Graduate School, 143 Caldwell Hall, Ithaca, NY 14853-2602, 255-5820, gradschool.cornell.edu, gradschool.cornell.edu.

College of Veterinary Medicine, Office of Student and Academic Services, Cornell University, S2009 Schurman Hall, Ithaca, NY 14853-6401, 255-3700, www.vet.cornell.edu/prospective.htm.

Graduate School of Medical Sciences of Cornell University, Office of Admissions, 445 E. 68th Street, New York, NY 10021, 212-746-6505, www.biomedsci.cornell.edu, wgnms@med.cornell.edu.

University Registration

University registration is the official recognition of a student’s relationship with the university and is the basic authorization for a student’s access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must:

• complete course enrollment according to individual college requirements;
• settle all financial accounts, including current semester tuition;
• satisfy New York State and university health requirements;
• have no holds from their college, the Office of the Judicial Administrator, Gannett Health Services, or the bursar.

Students must become registered by the end of the third week of classes or they risk being withdrawn from the university. When withdrawn, they will be dropped from classes and services such as (but not limited to) student employment, library access, housing, dining, door access, Blackboard, and bus service will be terminated.

Students who become registered after the end of the third week of the semester will be assessed a $350 late registration fee. A $500 late registration fee will be assessed to students who become registered after the sixth week of the semester.

The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises. The university does not permit retroactive registration and does not record courses or grades for unregistered persons.

LEAVES AND WITHDRAWALS

Students wishing to take a leave from their college are required to apply for a voluntary Leave of Absence (LOA) with an expected return date. Students who do not apply for and receive approval for a LOA will be automatically withdrawn from the university following the fifth week of the semester and may be required to apply for readmission.

Withdrawn students and students on a LOA may not enroll in course work with the university (e.g., extramural studies, summer/winter session). Students on a LOA are not eligible for privileges afforded to full-time registered students, including housing, dining, library, and transit privileges.

Students may withdraw from the university at their own discretion. In addition, a college may withdraw a student who fails to return at the end of a period of authorized leave.

Medical leaves are granted by the student’s college upon recommendation by Gannett Health Services.

Bursar Information

TUITION, FEES, AND EXPENSES

Tuition for Academic Year 2010–2011

Endowed Divisions

Undergraduate

Architecture, Art, and Planning

Arts and Sciences

Engineering

Hotel Administration $39,450

Graduate

Graduate School (with chair in an endowed college) $29,500

Graduate School (with chair in an endowed college) $20,800

Graduate and Professional Students

LL.M. one-year program students $53,850

Contract Divisions (tuition rates are tentative)

Undergraduate

Agriculture and Life Sciences $23,310

Human Ecology $39,450

Industrial and Labor Relations Nonresident $27,700

New York State resident* $41,700

Graduate and Professional Students

Veterinary Medicine $20,800

Graduate School (with chair in a contract college) $20,800

Graduate, Ph.D. $20,800

Student Activities Fee (Tentative)

Undergraduate students $216

Graduate and professional students $76
Summer Session (2010) $1,010 per credit

In Absentia Fees
Undergraduate $215 per semester
Graduate and professional $200 per semester
Law and management $75 per semester

The amount, time, and manner of payment of tuition, fees, or other charges may be changed at any time without notice.

*Residency status* is determined at the time of admission by the college. Change in residency status is determined by the university bursar following matriculation. The deadline for submission of requests for the Fall 2010 semester is June 1, 2010. The deadline for the Spring 2011 semester is November 1, 2010. Further information and an application can be found at www.bursar.cornell.edu.

**Regular session rate.** Special program rates may vary.

Admission application fees and forms may be found at www.cornell.edu/admissions.

**Tuition Refund Policy**

Amounts personally paid for tuition may be refunded if the student requests a leave of absence or withdrawal from the office of the dean of his or her college of enrollment. The date of this request will determine the tuition liability for the semester. All students refer to the “Proration Schedule for Withdrawals and Leaves of Absence” below.

**Repayment policy.** Students receiving financial aid from the university who withdraw during a semester will have their aid receivables possibly necessitating repayment of a portion of aid received. Repayment to aid accounts depends on the type of aid received, government regulations, and the period of time in attendance. Cornell is authorized to offset any credit balances against any debts owed by the student to the university.

For further information, students should contact the Office of the Bursar, Cornell University, 260 Day Hall (tel. 255-2336; fax 255-6442; uco-bursar@cornell.edu; www.bursar.cornell.edu). Bursar account information may be viewed in real time on Student Center.

**Student Health Insurance**

Because of the high cost of medical care, it is Cornell University policy that every full-time registered student must have health insurance coverage. The Student Health Insurance Plan (SHIP) is developed especially for Cornell students and provides extensive coverage at a reasonable cost for most on- or off-campus medical care. Complete and current details of the SHIP, its cost, and population-specific material for undergraduates, graduate students, and professional students are mailed to each student in July. Undergraduates, graduate students, and professional students each have separate deadlines and guidelines. Please be sure to check the July mailing for complete details.

The Student Health Insurance Plan provides coverage 24 hours a day, 365 days a year, anywhere in the world. Students graduating midyear may be eligible to purchase the Early Grad Plan. Those enrolled in the SHIP may enroll their eligible dependents for an additional cost (fall deadline: September 30). Graduate and professional students who prefer to pay monthly must enroll in the installment payment plan no later than September 30.

Because of policy restrictions, the plan is nonrefundable (except for dependents who no longer meet eligibility requirements and students who withdraw from Cornell within the first 30 days of the academic year).

For more information, students should contact Cornell University Office of Student Health Insurance, 409 College Avenue, Suite 211 (tel. 255-6355; sicu@cornell.edu; www.studentinsurance.cornell.edu).

**Student Record Privacy Statement: Annual Notification Under FERPA**

The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their education records. Further details may be found in Cornell Policy 4.5 Access to Student Information, available at www.policy.cornell.edu/Vol._4_5.cfm. These rights include:

1. The right to inspect and review the student's education records within 45 days of the day the university receives a request for access.

   Students should submit to the office of the university registrar, written requests that identify the record(s) they wish to inspect. The university official will make arrangements for access and notify the student of the time and place where the records may be inspected. If the records are not maintained by the university official to whom the request was submitted, that official shall advise the student of the correct official to whom the request should be addressed.

2. The right to consent to disclosures of personally identifiable information contained in the student's education records, except to the extent that FERPA authorizes disclosure without consent:

   a. Disclosure to school officials with legitimate educational interests. A school official is a person employed by the university in an administrative, supervisory, academic (including emeritus faculty), research, or support staff position (including law enforcement unit personnel and health staff); a person or company with whom the university has contracted (such as an attorney, auditor, or collection agent); a person serving on the Board of Trustees; or a student serving on an official committee, such as a disciplinary or grievance committee, or assisting another school official in performing his or her tasks.
A school official has a legitimate educational interest if the official needs to review an education record to fulfill his or her professional responsibility.

b. Upon request, to officials of another school in which a student seeks or intends to enroll.

c. To parents or legal guardians of dependent students as that term is defined in the Internal Revenue Code. In general, the university does not make education records available to the parents of a student. However, where the university believes that it is in a dependent student’s best interest, information from the student’s education records may, at the university’s discretion, be released to the parents or legal guardians of such a dependent student. Such disclosure generally will be limited to information about a student’s official status at the university, but parents or legal guardians of a dependent student may also be notified upon the authorization of the dean of the student’s college, or the vice president for student and academic services, or the dean of students, or their designees in the following cases:

- when a student has voluntarily withdrawn from the university or has been required by the university to withdraw;
- when a student has been placed on academic warning;
- when the student’s academic good standing or promotion is at issue;
- when a student engages in alcohol- or drug-related behavior that violates Cornell policies;
- when a student has been placed on disciplinary probation or restriction;
- in exceptional cases when a student otherwise engages in behavior calling into question the appropriateness of the student’s continued enrollment in the university.

Unless otherwise indicated in writing by the student at the time of registration, or thereafter, the university will presume that a full-time undergraduate student is a dependent as that term is defined in the Internal Revenue Code. Undergraduate students who are not financially dependent and do not wish to permit their parents or legal guardian access to their education records should advise the Office of the University Registrar in writing and provide evidence of financial independence. Graduate and professional students are not assumed to be financially dependent upon their parents or legal guardian for these purposes.

d. Disclosure of directory information. Cornell University has defined directory information to include the following: name, local address, local telephone listing, cell telephone, e-mail address, photograph, major field of study and college attended, dates of attendance, enrollment status, participation in officially recognized activities and sports, weight and height (of members of athletic teams), and any degrees earned and awards received. Directory information may be released unless the student updates his/her privacy settings on Student Center.

Students who wish to suppress their directory information from the printed telephone directory must perform this update within 10 days of the date of official university registration. Students may rescind their no-release request at any time by writing to the Office of the University Registrar or on Student Center.

3. The right to request the amendment of the student’s education record that the student believes is inaccurate. Students may ask the office of the university registrar to amend a record that they believe is inaccurate. They should write the university official responsible for the record, clearly identify the part of the record they want changed, and specify why it is inaccurate.

If the university decides not to amend the record as requested by the student, the university will notify the student of the decision and advise the student of his or her right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the student when notified of the right to a hearing.

4. The right to file a complaint with the U.S. Department of Education concerning alleged failures by Cornell University to comply with the requirements of FERPA. The name and address of the office that administers FERPA is:

Family Policy Compliance Office U.S. Department of Education 400 Maryland Avenue, SW Washington, DC 20202-5901

Finance Aid and Federal Loans Satisfactory Academic Progress Policy for Undergraduate Students

Federal regulations (General Provision CRF 608.13) require that Cornell University review the academic progress of students who apply for and/or receive financial assistance. This includes but is not limited to the William D. Ford Federal Direct Loan program and all Cornell grants. To be making satisfactory academic progress toward a degree, students must maintain specified grade point averages and proceed through the program at a pace leading to completion within a specified time frame. This is to each financial aid applicant, whether a previous aid recipient or not. Failure to make satisfactory academic progress may affect your eligibility for financial aid. The specific requirements for GPA and credit hours can be found by reviewing the complete policy on the Office of Financial Aid and Student Employment web site, finaid.cornell.edu.

Academic Integrity

Absolute integrity is expected of every Cornell student in all academic undertakings. Any fraudulent act by a student to advance his or her academic status merits a severe penalty and such cases are governed by the Code of Academic Integrity. A pamphlet titled The Code of Academic Integrity and Acknowledging the Work of Others is available from the office of the dean of faculty, and at www.policy.cornell.edu/Code_of_Academic_Integrity.cfm.

Protection of Human Participants in Research

The Human Research Protection Program is designed to assure the safety and well-being of individuals who participate in research projects at Cornell University. Research activities covered by the Human Research Protection Program include, but are not limited to, experiments and psychological or physical tests on humans, surveys, questionnaires, and studies of existing data, documents, or records in which there are individual identifiers. To help faculty, students, and staff members determine if an activity or project falls under the purview of Cornell’s Human Research Protection Program, the Office of Research Integrity and Assurance (ORIA) has developed a Decision Tree, available at www.iris.cornell.edu.

The Institutional Review Board for Human Participants (IRB) is the official review board for all university projects that seek to use humans as research participants, assuring compliance with university policy and federal regulations protecting human subjects in research at universities. All proposals involving human participants in any category, including those initiated by students, must be submitted to the IRB for review before research activities begin. Only after receiving an approval letter from the IRB, or an Exemption from IRB Review by ORIA, may a project be initiated. The guidelines for the use of human participants in research are available at www.irb.cornell.edu. Inquiries and communications about the guidelines should be directed to the IRB administrator (255-5138; irbhp@cornell.edu).

Use of Animals for Courses

Vertebrate animals serve as an invaluable aid in instruction. It is recognized, however, that some students have ethical objections to the use of vertebrate animals in this manner. Courses that use vertebrate animals are identified as such in the course descriptions. Students who have concerns about the use of animals in these courses should consult the course instructor for more information about the precise ways in which the animals are used. A set of university guidelines on the use of vertebrate animals in teaching for faculty and students is printed below and is available from departments in which the courses are offered. The use of live vertebrates in instruction is reviewed and approved by the Institutional Animal Care and Use Committee (www.iacuc.cornell.edu).

Cornell’s Animal Users Health and Safety Program (AUHSP) covers faculty, staff, students, visiting scholars, contractors, and volunteers who have direct or indirect exposure to Cornell-owned vertebrate research and training animals. Program requirements are based on the type and frequency of exposure to animals, animal tissues, and/or time spent in an animal care facility (e.g., working, visiting, doing...
advanced placement examinations. Students need to register for those examinations in the relevant department.

Transfer of credit. Entering first-year students who have completed college courses for which they want to receive credit toward their Cornell degree should send transcripts and course syllabi to their college or school office (see the list below).

Written inquiries. Students can address questions to departments, schools, or college offices by adding Ithaca, NY 14853 to the addresses given in the following sections.

College of Agriculture and Life Sciences 140 Roberts Hall
College of Architecture, Art, and Planning 81 West Sibley Hall
College of Arts and Sciences 55 Goldwin Smith Hall
College of Engineering 158 Olin Hall
School of Hotel Administration 180 Statler Hall
College of Human Ecology 145 Martha Van Rensselaer Hall
School of Industrial and Labor Relations 101 Ives Hall

CREDIT AND PLACEMENT

The tables on the following pages summarize how credit and placement are determined for most subjects. Supplementary information for some subjects is also provided.

International Credentials

The policies currently in effect for General Certificate of Education “A” Level Examinations and International Baccalaureate Higher Level Examinations are summarized in the table on page 11. Students may submit results of the French Baccalaureate or German Abitur for possible credit depending on the stream or specialization followed. Accepted students holding any other secondary school credentials are urged to sit for the Advanced Placement Examinations of the College Entrance Examination Board or for the departmental examinations offered during Orientation Week.

The table lists subjects and the marks for which credit will be awarded.

†Cornell Advanced Standing Examination. Contact Callean Hile, 303 Morrill Hall, for French, Italian, and Spanish. Contact Miriam Zubal, 183 Goldwin Smith Hall, for German.
International Baccalaureate (IB) Higher-Level Examinations are awarded advanced standing and credit on receipt of the examination results from the I.B. Office.

Anthropology

subject to departmental review

Biology

see www.biology.cornell.edu

Chemical and Physical Systems

6 or 7

8 credits (PHYS 1101 and 1102)

Chemistry

6 or 7

4 credits (CHEM 2070 or 2090)

Computer Science

6 or 7

4 credits (CS 1110)

Economics

6 or 7

6 credits (ECON 1110 and 1120)

3 credits (HADM 1141)

English Literature

7

3 credits and placement out of one first-year writing seminar

History

6 or 7

3 credits (excluding Arts and Sciences students)

Mathematics

6 or 7

4 credits and placement out of MATH 1106 and 1110. Students may obtain more credit by taking the Mathematics Department placement exam during orientation week. (Engineering and BEE students receive no credit.)

Music

by departmental examination

Philosophy

7

subject to departmental review

Physical Science

6 or 7

8 credits (4 credits, CHEM 2060; 4 credits, PHYS 1101)

Physics

6 or 7

4 credits (PHYS 1101, 1112, or 2207). (Students may receive credit for only one of the courses in each group: [PHYS 1101, 1112, 1116, 2207] OR [PHYS 1102, 2208, 2213, 2217].)

General Certificate of Education Advanced ("A") Level Examination are awarded advanced standing and credit. Students must present the original or a certified copy of their examination certificate to receive credit.

Chemistry

A

8 credits (CHEM 2070 or 2090 and 2080)

B

4 credits (CHEM 2070 or 2090)

Economics

A

6 credits (ECON 1110 and 1120)

3 credits (HADM 1141)

English Literature

A

3 credits and placement out of one first-year writing seminar

B

3 credits (excluding Arts and Sciences students)

Mathematics

A, B, or C

4 credits and placement out of MATH 1106 and 1110. Students may obtain more credit by taking the Mathematics Department placement exam during orientation week. Students who take the A level exam in Singapore will receive 8 credits and placement out of MATH 1106, 1110, 1120, 1220, and 1910. (Engineering and BEE students receive 4 credits.)

Physics

A or B

4 credits for PHYS 1101, 1112, or 2207.

4 additional credits for PHYS 2213 are granted for a combination of grades of A or B and a minimum of 8 advanced placement or advanced standing credits in mathematics. Students planning to major in physics are encouraged to enroll in PHYS 1116. Students taking 1116 do not receive 4 credits for 1112. Students taking 2217 do not receive credit for 2213. Students in the College of Engineering should refer to www.engineering.cornell.edu/student-services/academic-advising/ap-credit/index.cfm for credit and placement information.

SUPPLEMENTARY INFORMATION

Chemistry and Chemical Biology

The Department of Chemistry and Chemical Biology offers two 8-credit sequences that satisfy prerequisites for further work in the department: CHEM 2070–2080 (2090–2080 for engineering students) and 2150–2160. CHEM 2150–2160 is intended for students with a solid background in chemistry and strong math skills.

Freshmen may qualify for advanced placement and advanced standing credits in chemistry by satisfactory performance on the CEEB Advanced Placement Examination or an international examination, or by passing an advanced standing examination offered by the department. A score of 5 on the CEEB examination entitles a student to 4 credits. A student may earn 4 or 8 credits by suitable performance on the departmental examinations. To take the departmental examinations (exams are offered at the beginning of each semester), students must sign up beforehand in the Chemistry and Chemical Biology Office of Undergraduate Studies, 131 Baker Laboratory, or online at www.chem.cornell.edu/cref/advplreg.aspx. The specific course in which a student will register after having received a certain advanced placement standing will be decided by consultation between the student, his or her advisor, and the professors teaching the courses. Questions may also be directed to the director of undergraduate studies, in G50 Baker Laboratory. Students receiving advanced placement who are interested in a major in chemistry or a related science should consider taking CHEM 2150–2160 and should consult the CHEM 2150 instructor or department staff.

Computer Science

Students who receive a score of 4 or 5 on the AB version of the CEEB Advanced Placement Examination in computer science, a score of 5 on the A exam, or a score of 6 or 7 on the IB exam will receive 4 advanced placement credits and may take CS 2110. These credits may be used to satisfy the requirement in computer programming for students in the College of Engineering.

Freshmen may also earn 4 credits by suitable performance on a departmental examination, given during Orientation Week. To take the departmental examination, students need only show up at the time and location indicated on
the Orientation Week Schedule; advanced sign-up is not necessary.

Mathematics (Calculus)

For guidance in selecting an appropriate course, please consult First Steps in Math, published on the Mathematics Department web site (www.math.cornell.edu) under Courses.

The calculus courses MATH 1110, 1120, and 1130 cover substantially the same topics as calculus courses given in many high schools, and it is best to avoid repeating material that has already been covered at an appropriate level. Secondary-school students who have had two years of high school algebra should take the Cornell placement test again during orientation week if they plan to continue course work.

Advanced standing credit may be earned as follows:

1. Students with a score of 4 or 5 on the language Advanced Placement Examination of the CEEB earn 3 credits and are eligible to take the Cornell Advanced Standing Examination (CASE).

2. Students who achieve a minimum score of 65 on the Cornell language placement test given during orientation week are eligible to take the CASE. Outstanding performance on this examination can result in a maximum of 3 credits.

3. For formal language work done after high school at an accredited college, credit is considered by the relevant department on submission of a syllabus and transcript. Note that credit transfer and placement are the result of different processes. Students wishing to enroll in a language course at Cornell are required to take the placement examination during orientation week if they plan to take such a course. Students who feel that their grasp of the material is uncertain. Students are strongly urged to take the departmental placement examination during orientation week if they plan to take such a course. Students who feel that their grasp of the material is uncertain.

Students are strongly urged to take the departmental placement exam even if they feel that their grasp of the material is uncertain. The placement information is useful in any case, and the grade on the test does not become a part of the student’s record. No advance registration for the departmental examination is necessary. (A separate placement examination is given in the College of Engineering or the BEE program will be announced during the academic brieﬁngs.)

Students who have been awarded advanced placement credit for calculus may not also receive academic credit for similar courses taken at Cornell.

Students who are in neither the College of Engineering nor in the Biological and Environmental Engineering (BEE) program of the College of Agriculture and Life Sciences. Students who have 4 AP credits for calculus will forfeit those credits if they take MATH 1106 or 1110. Students who have 8 AP credits for calculus will forfeit 4 credits if they take MATH 1120, 1220, or 1910 and all 8 credits if they take MATH 1106 or 1110.

Students in the College of Engineering or the Biological and Environmental Engineering (BEE) program of the College of Agriculture and Life Sciences. Engineering students will take the engineering calculus sequence, which assumes students have one semester of calculus experience before entering Cornell. Because the engineering sequence is more advanced than other sequences at Cornell, engineering students may receive at most 4 AP credits, which they will forfeit if they take MATH 1910, the first course in the sequence.

Modern Foreign Languages

Students who have studied a language for two or more years and want to continue study in that language at Cornell must present the results of a placement test. See “Placement Tests and Advanced Placement Credit” under Foreign Language Requirements in the College of Arts and Sciences section of this catalog. Students whose SAT II or AP scores are two years old or more, or who have had a year of formal study or substantial informal study since they last took a placement test, should take the Cornell placement test again during orientation week if they plan to continue course work.

Advanced standing credit may be earned as follows:

1. Students with a score of 4 or 5 on the language Advanced Placement Examination of the CEEB earn 3 credits and are eligible to take the Cornell Advanced Standing Examination (CASE).

2. Students who achieve a minimum score of 65 on the Cornell language placement test given during orientation week are eligible to take the CASE. Outstanding performance on this examination can result in a maximum of 3 credits.

3. For formal language work done after high school at an accredited college, credit is considered by the relevant department on submission of a syllabus and transcript.

Music

Advanced placement and credit are awarded only in music theory, and only on the basis of an examination administered by the Department of Music; that is, credit cannot be earned on the basis of the AP, IB, or other examinations from outside Cornell, nor on the basis of course work done elsewhere. Outstanding performance on the examination administered by the Music Department will earn students 3 credits.

Physics

Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination (Physics B or Physics C), certain international examinations, or the departmental examination (offered only during orientation week, fall semester; appointment required). For information about the departmental examination, consult the director of undergraduate studies, 115 Clark Hall (physics@cornell.edu).

Physics B—Students earning a score of 5 may receive 8 credits for non–calculus-based PHYS 1101 and 1102. Those earning a score of 5 in Physics B and a score of 4 or 5 in Calculus BC may choose to accept 4 credits in calculus-based PHYS 1112 or 2207 instead of 8 credits in PHYS 1101 and 1102. Those earning a score of 4 may receive 4 credits in PHYS 1101.

Students in the College of Engineering should refer to www.engineering.cornell.edu/student-services/academic-advising/academic-information/ap-credit/index.cfm.

Physics C—Mechanics: Students earning a score of 5 or 4 may receive 4 credits for PHYS 1101 or 2207, or placement into PHYS 1116, a more analytic first-semester course, with no AP credit.

Physics C—Electricity and Magnetism: Students earning a score of 5 may receive 4 credits for PHYS 2213.

A student planning a major in physics or applied and engineering physics and who is eligible for AP credit should consult with his or her advisor or the department representative.

Advanced placement into a next-in-sequence course depends on the completion of the appropriate mathematics prerequisites before enrolling. To qualify for advanced placement credit, it is not necessary to continue the study of physics.

General information and advice may be obtained from the director of undergraduate studies, 115 Clark Hall, or the Department of Physics, 109 Clark Hall.

Statistics

Students who have been awarded advanced placement credit for statistics may not also receive academic credit for similar courses taken at Cornell. In particular, they will forfeit those credits if they take AEM 2100, HADM 2201, ILRST/STSCI 2100, MATH 1710, or PAM 2100.
COURSE ADD/DROP/CHANGE
Students may adjust their schedules during add/drop/change periods. Courses may be added, dropped, or changed online through Student Center. Permission-only courses and courses with specific add/drop procedures should be addressed by the college registrar offering the course. Professional schools, the School of Continuing Education and Summer Sessions, the Department of Physical Education and Athletics, and First-Year Writing Seminars have different course enrollment and add/drop policies. Address questions about adding or dropping a specific course to the college registrar offering the course. See the chart below for their course add/drop/change fees.

AUDITING COURSES
Graduate students and students taking classes through the School of Continuing Education and Summer Sessions may choose to audit classes. The classes and grades will appear on the students' official transcript. Undergraduate and professional school students may not audit classes.

EXPLANATION OF COURSE NUMBERING SYSTEMS AND SUBJECT CODES
1000 level—non-degree applicable
1100 level—introductory course, no prerequisites, open to all qualified students
2000 level—lower-division course, open to freshmen and sophomores, may have prerequisites
3000 level—upper-division course, open to juniors and seniors, prerequisites
4000 level—upper-division course, open to seniors and graduate students
5000 level—professional level (e.g., management, law, veterinary medicine)
6000 level—professional and graduate-level course, open to upper-division students
7000 level—graduate-level course
8000 level—master's level, thesis, research
9000 level—doctoral level, thesis, research

The list of courses that follows is arranged in two broad groups.

Group 1: Divisions that offer both undergraduate- and graduate-level courses
- Agriculture and Life Sciences
- Architecture, Art, and Planning
- Arts and Sciences
- Engineering
- Hotel Administration
- Human Ecology
- Industrial and Labor Relations
- Nutritional Sciences
- Officer Education

Group 2: Graduate professional divisions
- Law
- Management
- Veterinary Medicine

No courses are offered by the Graduate School as a unit; graduate-level courses are contained in the various departments that offer the instruction.

Within each division, courses are generally arranged in alphabetical order by department and in numerical order within the departments. All courses are briefly described for those divisions (group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (group 2) are designated by number and title only.

Subject Codes and Their Meanings

Class Attendance, Meeting Times, and Examinations

CLASS ATTENDANCE AND MEETING TIMES

Students are expected to be present throughout each semester at all meetings of courses for which they are registered. The right to excuse a student from class rests at all times with the faculty member in charge of that class.

Absences because of religious beliefs. In accordance with Section 224-a of the New York State Education Law, each student who is absent from school because of his or her religious beliefs must be given an equivalent opportunity to register for classes or make up examinations, study, or work requirements that he or she may have missed because of such absence on any particular day or days. No fees of any kind shall be charged by the university for making available to such student such equivalent opportunity.

NO EVENING CLASSES

On Mondays and Wednesdays, other than regularly scheduled courses and prelims previously approved by the office of the university faculty, are not permitted. Violation of these rules interferes with other university activities (e.g., athletic, musical, theatrical, or employment).

Any exception to the above regulations, other than those for evening preliminary examinations, will require permission of the dean or director of the college or school offering the course. Exceptions to the regulations on evening preliminary examinations require approval of the dean of the university faculty. All such exceptions must include provision of special arrangements for the students for whom conflicts are generated by such an exception.

FINAl EXAMINATIONS

Final examinations for undergraduate courses are scheduled by the Office of the University Registrar. Examinations may be one, two, or two and one-half hours in length at the discretion of the department concerned. The schedule of final examinations is available online at www.cornell.edu/academics/courses.cfm.

General Rules Governing Final Examinations

Legislation of the university faculty governing study periods and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the Office of the University Registrar without prior written permission of the dean of the faculty.

2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.

3. Permission will be given by the dean of the faculty to offer an alternate examination during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for these students who wish to take it at the time the examination was originally scheduled. The faculty member requesting such a change shall be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the university registrar’s office.

4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) during the final examination period.

5. Papers may be required of students during the study period if announced sufficiently far in advance that the student do not have to spend a significant segment of the study period completing them.

6. Faculty can require students to submit papers during the week preceding the study period.

7. Take-home examinations should be given to classes well before the end of the regular semester and should not be required to be submitted during study period but rather well into the examination period.

The university policies governing study period and final examinations are as follows:

1. Each course should require that a final examination or some equivalent exercise (e.g., a term paper, project report, final critique, oral presentation, or conference) be conducted or due during the period set aside for final examinations.

2. Although not specifically prohibited, it is university policy to discourage more than two examinations for a student in one 24-hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a make-up for other valid reasons, such as illness or death in the family.

3. Students have a right to examine their corrected exams, papers, etc., to be able to question their grading. (Note that students have no absolute right to the return thereof.) Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester, preferably till the end of the following semester, to afford students such right of review.

EVENING PRELIMINARY EXAMINATIONS

The most convenient times and places for “prelims” are the normal class times and classrooms. In cases where the only alternative is to hold evening preliminary examinations, they may be scheduled only on Tuesday and Thursday evenings and only after 7:30 p.m.

An alternative time to take the examination must be provided for those students who have academic, religious, athletic, or employment conflicts at the time scheduled.

Note that instructors holding evening examinations are strongly urged to indicate this in the course descriptions listed in Courses of Study and must notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed. For more information on the policy governing evening examinations, contact the office of the dean of the faculty, 315 Day Hall.

Grading Guidelines

The official university grading system is composed of letter grades with pluses and minuses. Passing grades range from A+ to D−; F is failing. INC denotes a grade of incomplete, and R is the grade given at the end of the first semester of a yearlong course. The grades of INC and R do not have quality-point equivalents attached. These are the quality-point equivalents:

A+ = 4.3
A| = 4.0
A− = 3.7
B+| = 3.3
B| = 3.0
B−| = 2.7
C+| = 2.3
C| = 2.0
C−| = 1.7
D+| = 1.3
D| = 1.0
D−| = 0.7
F = 0.0

This is how a semester average is computed:

<table>
<thead>
<tr>
<th>Course</th>
<th>Grade</th>
<th>Points</th>
<th>Credits</th>
<th>Product</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEM 1003</td>
<td>B+</td>
<td>3.3</td>
<td>x</td>
<td>3</td>
</tr>
<tr>
<td>ENGL 1101</td>
<td>C−</td>
<td>1.7</td>
<td>x</td>
<td>3</td>
</tr>
<tr>
<td>HORT 2204</td>
<td>B</td>
<td>3.0</td>
<td>x</td>
<td>4</td>
</tr>
<tr>
<td>PAM 2030</td>
<td>B</td>
<td>3.0</td>
<td>x</td>
<td>3</td>
</tr>
<tr>
<td>DEA 1101</td>
<td>C</td>
<td>2.0</td>
<td>x</td>
<td>3</td>
</tr>
</tbody>
</table>

Total = 16 = 42.0

To arrive at the semester average, add the products (credits x quality points) and divide by the number of credits taken. Here, 42 divided by 16 equals 2.63.
The cumulative average (an average of grades from two or more semesters) equals the sum of the products of all the grades at Cornell divided by the total number of credits taken.

S–U GRADES
On September 6, 1972, the Faculty Council of Representatives passed the following legislation: "Resolved, that:

a. the S–U system have symbol equivalents which are uniform within the university: S means C– or above; U means D+, D, D–, or failure.
b. S–U options be chosen by the student during the first three weeks of the semester.
c. the announcements and/or supplementary course registration materials describing each course include a description of the course grading options, particularly if the course is graded with an exclusive S–U. Any change in grading options must be announced by the instructor within the first two weeks of the semester.
d. course requirements (required reading, term paper, etc.) be the same for students electing S–U grades as for those electing letter grades."

The rules for the S–U option are further defined by each of the academic units. They are as follows:

Agriculture and Life Sciences. (1) Must have 100 credit hours with A, B, C, D grades (prorated for transfer students). (2) The S–U option is available only in those courses specifically designated in the course catalog after approval by the Educational Policy Committee. (3) Freshmen are limited to one optional S–U per semester.

Architecture, Art, and Planning. (1) All courses specifically required for a degree are excluded. Various departments may designate specific required courses where S–U will be permitted. (2) In a course designated as S or U, the entire class is so graded. The instructor must announce the decision within the first two weeks of the semester. (3) Where the option for S or U exists, both student and instructor must agree on the option. This agreement must be made by the end of the third week of classes on the appropriate form in the college office. Once agreed upon, this grade option will be used for the final grade.

Arts and Sciences. (1) Courses that count toward satisfaction of major requirements should not be taken for S or U grades unless the department permits. (2) Permission of the instructor. (3) A minimum of 80 of the 120 hours required for the A.B. degree must be in courses for which the student has received letter grades.

Engineering. (1) The course in question must be offered with an S–U option. (2) The student must have completed at least one full semester of study at Cornell. Freshmen may not take any courses on an S–U basis during their first semester with the exception of courses graded "S–U only" such as physical education, ROTC, supplemental courses, and writing workshops. (3) The proposed S–U course must count as either a liberal studies distribution or an approved elective in the Engineering curriculum. (4) Students may elect to enroll S–U in only one course each semester in which the choice between letter grade and S–U is an option. (Additional courses offered "S–U only" may be taken in the same semester as the "electected S–U course.") (5) After the end of the third week of classes, the grading option may not be changed nor will students be permitted to add a course in which they were previously enrolled (in the current semester) under a different grading option. Note: Courses graded S–U do not count toward eligibility on the Dean's List and may weaken a student's chances for acceptance into graduate school.

Graduate School. (1) Seminars and thesis research courses are usually graded S–U, and should be registered accordingly or a grade error results at semester's end. Other courses may be registered as S–U only if offered with an S–U option.

Hotel. (1) A maximum of 4 S–U credit hours per semester, not including those only offered S–U, which may only be in non-career track courses (M.M.H.) or nonconcentration, non-hotel elective courses (B.S.). (2) A maximum of 6 credits total may be taken S–U toward distribution electives.

Human Ecology. (1) Not part of student's major. (2) May be used in the 9 credit hours required outside the major in Human Ecology courses. (3) Not part of hours required in humanities, natural sciences, and social sciences. (4) A department may approve S–U grading in specific courses if approved by the Educational Policy Committee. (5) Total of 12 credits in S–U courses (not counting physical education) may be counted toward degree requirements during a student's college career.

Industrial and Labor Relations. (1) This option may be elected, if available in ILR electives, or in out-of-college electives but not including directed studies. (2) Degree requirements include a minimum of 105 letter grade (A+ to D–) credits. (3) Student must also be in good academic standing. (4) A U grade is considered the equivalent of an F in determining a student's academic status. (5) Limited to two courses per semester, not to exceed four hours in any one course.

Internal Transfer. (1) S–U grades permitted only when it is the only option or (2) when specifically approved by an admissions officer in the school or college to which the student plans to transfer.

Law. Each J.D. student, after the first year, may elect to take up to two upper-class courses on an S–U basis. Students must make this election in writing to the registrar's office within two weeks of the end of the add/drop period. If made, the election shall be irrevocable. Students may not make this election in courses that they use to satisfy the Law School's upper-class writing or professional responsibility requirements. Instructors may designate specific courses that they teach as not eligible for the S–U option.

Veterinary Medicine. (1) There is one foundation course in the veterinary curriculum that is offered on an S–U basis only. All required courses for foundation courses must be taken for a letter grade. (2) Elective courses for veterinary students may be offered on an S–U basis at the option of the professor. S–U optionally graded courses must be chosen within the add/drop deadline.

CHANGES IN GRADES
Changes in a grade may be made only if the instructor made an error in assigning the original grade.

OFFICIAL TRANSCRIPTS
An official transcript is one that bears the official signature of the university registrar, sent in a sealed envelope directly from the Office of the University Registrar to another institution or agency as directed by the student. Transcripts may be requested at registrar.sas.cornell.edu or through Student Center. There is no fee except for overnight and/or express mail services.

University Requirements for Graduation
The university has only two requirements for graduation that must be fulfilled: the swim test and physical education courses. A student's college determines degree requirements such as residency, number of credits, distribution of credits, and grade averages. See the individual requirements listed by each college or school or contact the college registrar's office.

STUDENT RESPONSIBILITIES
Students are responsible for meeting all requirements for the courses in which they are enrolled, as defined by the faculty members teaching the courses. It is also the student's
responsibility to be aware of the specific major, degree, distribution, college, and graduation requirements for completing his or her chosen program of studies. Students should know how far they have progressed in meeting these requirements at every stage of their academic career.

**PHYSICAL EDUCATION**

**Classes**

All undergraduate students must complete two semesters of work in physical education unless exempted from this requirement for medical or other special reasons or by virtue of advanced standing on admission. For transfer students the requirement is reduced by the number of semesters satisfactorily completed before entering Cornell. Credit in physical education may be earned by participating in courses offered by the Department of Athletics and Physical Education, participating on an intercollegiate athletic team, or performing in the marching band.

Physical education is a requirement of the first two terms at Cornell. Students must register for it in each semester, except those in which postponements are granted, until the requirement is satisfied.

Temporary postponements may be granted on the basis of physical disability, schedule conflicts, or excessive work load (employment exceeding 20 hours per week). Gannett Health Services can provide certifications based on health, and the financial aid office can provide certain extensions of employment. Students should see the director or assistant director of Physical Education to establish postponements or waiver of the requirement. Questionable or unusual cases may be resolved by petition to the Faculty Advisory Committee on Athletics and Physical Education.

**Swim Test**

The Faculty Advisory Committee on Athletics and Physical Education has established a basic swimming and water safety competency requirement for all entering freshman undergraduate students. Normally, the test is given at the Helen Newman Hall and Teagle Hall pools as part of their orientation process. The test consists of a feet-first entry into the deep end of the pool and a continuous 75-yard swim using front, back, and optional strokes. Any student who cannot pass the swim test is required to register for Beginning Swimming in his or her program of physical education before electives can be chosen. A swim test held will be placed on the student’s record until he or she has passed the swim test or fulfilled the requirement by satisfactorily completing two semesters of Beginning Swimming. Students unable to meet the swim requirement because of medical, psychological, or religious reasons must petition the Faculty Advisory Committee on Athletics and Physical Education for a waiver of the requirement. When a waiver is granted by the Faculty Committee on Physical Education, an alternate requirement is imposed. The alternate requirement substitutes a course in either Certified First Responder, Emergency Medical Technician, or Wellness and Fitness for the original swimming requirement.

**Office of Internal Transfer**

220 Day Hall
255-4586
internaltransfer.cornell.edu

Occasionally, students’ academic interest grows beyond the original Cornell school or college into which they’ve been admitted, and they may decide to transfer from one school or college to another within the university. This process is called internal transfer and the criteria for internal transfer vary by program.

It may be possible to be admitted directly into a new program. To be eligible for direct transfer, students usually have to be taking, or have successfully completed, courses in the proposed major. Students who are uncertain if they immediately qualify for direct transfer, however, should contact the Office of Internal Transfer.

Students who do not meet the criteria for direct transfer may be considered for conditional transfer or sponsorship to the target school or college. Generally students whose current curriculum differs substantially from their target school or college, or students with a below-average academic record, are considered for conditional transfer. Conditional transfer guarantees admission to the target school or college if students successfully complete the conditional transfer requirements set by the target school or college (taking an approved schedule and earning a specified GPA). During the conditional semester, students pay the tuition and fees of the target school or college. Students who are not in good academic standing within their home academic setting may be withdrawn from the university if they do not meet the conditional transfer requirements during the conditional semester.

Students who wish to transfer and have a clear idea of what they want to pursue should speak to admissions or advising staff members in the target school or college. Students who are unsure of their interests can consult with the director of internal transfer. For more information about internal transfer requirements, contact the Office of Internal Transfer, or visit: internaltransfer.cornell.edu

**Service-Learning Course Guide**

Service-learning courses at Cornell are offered from various colleges and disciplines to engage students, faculty, and community partners on issues relating to poverty, literacy, education, access, health care, immigration, hunger, affordable housing, environment, and others. Service-learning courses are academically rigorous and offer students opportunities to link theory and practice through structured public service activities in collaboration with local communities, and thus gain further understanding and appreciation of the discipline, while achieving an enhanced sense of civic responsibility.

Through Service-learning, students gain hands-on problem-solving skills, develop an aptitude for critical thinking, and become active citizens in our democratic society. The Cornell Public Service Center (PSC) serves as the hub of public service and civic engagement activities on campus.

For students and faculty members who are interested or engaged in public service, public scholarship, and civic engagement, the Public Service Center has developed a comprehensive list of Service-learning courses on campus. For more information, please visit www.psc.cornell.edu.

ANDREW D. WHITE PROFESSORS-AT-LARGE

726 University Avenue (255-0832) adwhiteprofessors.cornell.edu

The program has its origins in Cornell's early history. Andrew D. White, the first president of Cornell University, inaugurated the position of nonresident professor, to be held by eminent scholars, scientists, and intellectuals who periodically visit the university for the stated purpose of “contributing to the intellectual and cultural life of the university.” Toward this end, Andrew D. White Professors-at-Large engage in a variety of activities including public lectures, ongoing courses, and collaborative research, as well as hold office hours for undergraduate and graduate students. They serve for a six-year term and are full members of the faculty when in residence.

TERM ENDING IN 2011

Laura Restrepo, writer, journalist, and activist

EUROPEAN STUDIES MINOR

Sydney Van Morgan, coordinator

Students from any college may choose an undergraduate minor in European studies to complement any major. The purpose of the minor is to provide a coherent structure for students with an interest in interdisciplinary study in the field of European studies.

The minor has three tracks: European politics, economics, and society; modern European history; and European culture. The requirements for the minor are:

1. Competence in at least one modern European language, Romance, Germanic, or Slavic (i.e., completion of a fifth-semester course or equivalent with a grade of at least B–, or demonstration of an advanced level of competence in an oral proficiency interview test where available).

2. Completion of an interdisciplinary core course:

GOVT/SOC 3413 Modem European Society and Politics (SBA-AS)
Fall. 4 credits. S. Van Morgan. Under certain conditions, students may be permitted to substitute other courses for those listed above.

3. Completion of one course in modern (post-1789) European history.

4. Three additional courses in any of the three areas, which may include a senior seminar (4000 level).

a. Courses in European and comparative politics; anthropology; sociology, feminist, gender and sexuality (FGSS) studies; and related courses in the School of Hotel Administration, the College of Agriculture and Life Sciences, and the School of Industrial and Labor Relations.

b. Courses in modern European history (post-1789).

c. Courses in (post-1789) English and European literatures, comparative literature, semiotics, FGSS, Fine Arts, architecture, music, philosophy, and film and theatre arts.

Only two courses may be used to satisfy requirements for both the major and the minor. Courses satisfying the breadth and distribution requirements in the College of Arts and Sciences, however, may be counted toward the minor. Students interested in conducting research in Europe may apply for the Frederic Conger Wood or Susan R. Tarrow undergraduate research fellowship in their junior year. All minors are encouraged to participate in the Language House Program, the Model European Union simulation, and study abroad. Courses taken abroad may be applied to the minor if they are approved for Cornell credit. Undergraduates in the College of Arts and Sciences can major in European Studies through the independent major or the College Scholar Program.

For a complete list of relevant courses and seminars, departmental advisors, and any further information, contact Sydney Van Morgan, coordinator of the European Studies minor, at the Cornell Institute for European Studies, 120 Uris Hall, 255-7592, sydney.vanmorgan@cornell.edu, www.cinaudi.cornell.edu/Europe.
FRANK H. T. RHODES CLASS OF '56 UNIVERSITY PROFESSORSHIP

To commemorate their 40th reunion, the Class of 1956 initiated an endowment to create the Frank H. T. Rhodes Class of ’56 University Professorship in honor of Cornell’s ninth president (1977–1995). The purpose of the Rhodes Class of ’56 Professorship is to strengthen the undergraduate experience by bringing to the university individuals from every walk of life who represent excellence of achievement and to create opportunities for interaction with undergraduates. The endowment also makes it possible to create public events related to the professorship such as lectures, performances, films, art exhibits, or conferences. Rhodes Class of ’56 Professors are full members of the faculty while in residence. Appointments are awarded for a period of three years. During each year of their appointment, Rhodes Class of ’56 Professors visit the campus for a week to engage in a variety of activities including public lectures, ongoing courses, and collaborative research.

Current Appointments
Peter Eisenman, architect
Robert Parris Moses, civil rights leader and founder of the Algebra Project
Leland Pillsbury, venture capitalist, hospitality industry
R. Spencer Wells, director, the Genographic Project

CENTER FOR APPLIED MATHEMATICS
657 Frank H. T. Rhodes Hall (255-4335)

The Center for Applied Mathematics administers a broad-based interdepartmental graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. Each student develops a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student’s program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.

Graduate students in the center take courses related to their program of study that are offered by various departments. Below are listed selected courses in applied mathematics in the main areas of research interest of the center's members. Detailed descriptions of these courses can be found in the listings of the individual departments.

Information Communication and Control Theory
CHEME 4720 Feedback Control Systems (also ECE 4720, MAE 4780)
ECE 4110 Random Signals in Communications and Signal Processing
ECE 4250 Digital Signal Processing
ECE 4670 Digital Communication Receiver Design
ECE 5210 Theory of Linear Systems (also MAE 5210)
ECE 5620 Fundamental Information Theory
ECE 5640 Detection and Estimation
ECE 5670 Digital Communications
ECE 5800 Control and Optimization of Information Networks

Mathematical Biology
BIOE 4600 Theoretical Ecology
BTRY 6970 Individual Graduate Study in Biometry and Statistics

Mathematical Economics
ECON 6190 Econometrics I
ECON 6200 Econometrics II
ECON 7100 Stochastic Econometrics: Concepts and Techniques
ECON 7170 Mathematical Economics
ECON 7180 Topics in Mathematical Economics
ECON 7190-7200 Advanced Topics in Econometrics

Mechanics and Dynamics
CHEME 7310 Advanced Fluid Mechanics and Heat Transfer
CHEME 7510 Mathematical Methods of Chemical Engineering Analysis
CHEME 7530 Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation
MAE 6010 Foundations of Fluid Dynamics and Aerodynamics
MAE 7540 Analysis of Turbulent Flows
MAE 7570 Computational Fluid Mechanics and Heat Transfer
TAM 5700 Intermediate Dynamics
TAM 5780 Nonlinear Dynamics and Chaos
TAM 6170 Hamiltonian Dynamics
TAM 6720 Celestial Mechanics (also ASTRO 6579)
TAM 6730 Mechanics of the Solar System (also ASTRO 6571)
TAM 6750 Nonlinear Vibrations
TAM 7510 Continuum Mechanics and Thermodynamics
TAM 7520 Nonlinear Elasticity
TAM 7760 Applied Dynamical Systems (also MATH 7170)

Probability and Statistics
ECE 4110 Random Signals in Communications and Signal Processing
ECE 4250 Fundamental Information Theory
ECE 5660 Fundamentals of Networks
MATH 6710–6720 Probability Theory
MATH 6740 Introduction to Mathematical Statistics
MATH 7770–7780 Stochastic Processes
ORIE 5560 Queueing Systems: Theory and Applications
ORIE 5550 Applied Time-Series Analysis
ORIE 6510 Probability
ORIE 6540 Applied Stochastic Processes
ORIE 6620 Advanced Stochastic Processes
ORIE 6700 Statistical Principles
ORIE 6710 Intermediate Applied Statistics
BTRY 4080 Theory and Probability
BTRY 4090 Theory of Statistics

Robotics and Vision
CS 6670 Machine Vision
ECE 5470 Computer Vision
Theoretical/Mathematical Physics/Chemistry
CHEM 7920 Molecular Collision Theory
CHEM 7930 Quantum Mechanics I
CHEM 7940 Quantum Mechanics II
CHEM 7960 Statistical Mechanics
CHEM 7980 Bonding in Molecules
PHYS 6553–6554 General Relativity (also
ASTRO 6509–6510)
PHYS 6561 Classical Electrodynamics
PHYS 6562 Statistical Mechanics
PHYS 6572 Quantum Mechanics I
PHYS 6574 Applications of Quantum Mechanics II
PHYS 7651–7652 Relativistic Quantum Field Theory

MARIO EINAUDI CENTER FOR INTERNATIONAL STUDIES
170 Uris Hall (255-6370)
The Mario Einaudi Center for International Studies was established in 1961 to encourage and support comparative and interdisciplinary research on international subjects. Currently, it supports four U.S. Department of Education Title VI National Resource Centers (NRCs), i.e., the Cornell Institute for European Studies, East Asia Program, South Asia Program, and Southeast Asia Program, and 15 other international programs. While some programs offer study of geographic regions, others focus on such topics as international agriculture, nutrition, population, law, planning, politics, rural development economics, and world peace. More than 800 faculty members voluntarily collaborate with the center and its associated programs. Undergraduate students may choose from a variety of minors such as international relations, Latin American studies, modern European studies, French studies, East Asian studies, South Asian studies, Southeast Asian studies, global health, or international agriculture and rural development.

In its ongoing effort to anticipate and respond to changing global circumstances and perspectives, the center applies its resources to new pilot activities and initiatives that bring faculty members and students together across traditional disciplines and departmental boundaries. As part of its Foreign Policy Initiative, the center has formed a network of 38 faculty members, brought experts to campus to speak on topical themes as part of a Distinguished Speaker Series, and provided seed funding for activities in foreign policy studies. The center also organizes semi-annual seed grant and small grant competitions for faculty and programs to advance international studies at Cornell and support faculty to mobilize additional external support.

Each year the center brings an eminent world leader to campus as the Henry E. and Nancy Horton Bartels World Affairs Fellow to deliver a public lecture, meet with classes, and interact informally with faculty members and students. The center also hosts a Current Events Roundtable each June that enables Cornell alumni to join faculty members in discussions of key world events.

Graduate students' overseas field research is supported through the center's annual travel grant competition as well as the Fulbright fellowship program and the Fulbright-Hays awards, which are both administered by the center. The NRCs administer the Foreign Language and Area Studies Fellowship (FLAS) program, which provides funds for graduate and undergraduate students.

Web sites of many international programs are hosted by the center along with the university's International Gateway (www.international.cornell.edu), a web site created by the center to showcase Cornell's international dimensions.

An undergraduate course, Issues behind the News: An Interdisciplinary Analysis of International Current Events, is coordinated by the center and offered by the Department of Government of the College of Arts and Sciences. The center invites faculty from across the university to deepen students' understanding of issues on the front pages of newspapers as events unfold during the semester.

For additional information on current programs, publications, and courses, contact:

CENTER FOR THE STUDY OF INEQUALITY
363 Uris Hall 254–8674 (tel.)
www.inequality.cornell.edu

The Center for the Study of Inequality (CSI) fosters basic and applied research on social and economic inequalities as well as the processes by which such inequalities change and persist. The study of inequality lies at the heart of current debates about segregation, affirmative action, the “glass ceiling,” globalization, and any number of other contemporary policy issues. In recent years, public and scholarly interest in issues of inequality has intensified, not merely because of historic increases in income inequality in the United States and other advanced industrial countries, but also because inequalities of race, ethnicity, and gender are evolving in equally dramatic and complicated ways. The mission of CSI is to support research and teaching relevant to issues of inequality, to disseminate findings resulting from this research, and to otherwise facilitate the study of inequality in the United States and throughout the world.

Minor in Inequality Studies
The minor in inequality studies allows undergraduate students to supplement their studies for their major with a coherent program of courses oriented toward the study of inequality. The minor is organized into tracks examining such topics as globalization and inequality, social policy, the ethics of inequality, poverty and economic development, social movements, education and inequality, race and ethnicity in comparative perspective, and the family and inequality. The minor is open to students enrolled in any of the seven Cornell undergraduate colleges. When the
requirements of the minor are met, an official note is made on the student's academic record (see www.inequality.cornell.edu/academics for further information).

Symposia and Lecture Series
CSL regularly sponsors symposia, workshops, and lecture series that draw attention to the most pressing problems and controversies in the field. The current schedule of events is listed on the center's web site (www.inequality.cornell.edu).

For more information about CSL, contact us at 254-8674 or inequality@cornell.edu.

COGNITIVE SCIENCE
233 Uris Hall
255-6431
cogst@cornell.edu
www.cogsci.cornell.edu

Cognitive Science focuses on the nature and representation of knowledge. It approaches the study of perception, action, language, and thinking from several perspectives—theory, experiment, and computation—with the aim of gaining a better understanding of human cognition and the nature of intelligent systems. The comparison between human and artificial intelligence is an important theme, as is the nature of mental representations and their acquisition and use. Cognitive Science draws primarily from the disciplines of computer science, linguistics, neuroscience, philosophy, and psychology. The field of Cognitive Science is primarily represented by faculty members in the following departments: Communication, Computer Science, Design and Environmental Analysis, Economics, Education, Electrical and Computer Engineering, Human Development, Information Science, Linguistics, Mathematics, Mechanical and Aerospace Engineering, Neurobiology and Behavior, Philosophy, Psychology, and Sociology, as well as the Johnson Graduate School of Management.

Undergraduate Programs
An undergraduate minor in Cognitive Science in the College of Arts and Sciences provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline as represented in an individual department. For further information on the undergraduate program, see the Cognitive Science Program under College of Arts and Sciences and/or contact Julie Simmon-Lynch, program manager (255-6431 or cogst@cornell.edu).

Graduate Programs
Cornell offers a graduate field minor in Cognitive Science. Cornell's unique program of graduate training, which seeks to tailor an optimal program of study and research for each individual, fosters interdisciplinary committees. It is the norm for students interested in Cognitive Science to combine faculty members from such fields as philosophy, computer science, linguistics, psychology, or neurobiology and behavior on common committees. For further information on the graduate field of Cognitive Science, contact Morten Christiansen, director of graduate studies (255-3570, mhc27@cornell.edu) and/or Julie Simmons-Lynch, program manager, 233 Uris Hall, Office of Cognitive Science (255-6431 or cogst@cornell.edu).

Courses
Courses from across the university that are relevant to the Cognitive Science Program are listed in this catalog in the Graduate Program section under Arts and Sciences.

CORNELL ABROAD
300 Caldwell Hall
255-6262 (tel.)
255-8770 (fax)
cuabroad@cornell.edu
www.cuabroad.cornell.edu

Study abroad is an integral part of a Cornell education. Those aspiring to lead in this century need, more than ever before, knowledge and experience of the diverse world beyond the boundaries of their home country. To help students develop the knowledge, skills, and attitudes necessary for informed citizenship in today's world, Cornell Abroad offers a wide range of international study opportunities that reflect the fundamental educational goals and objectives of the university. Study abroad is a continuous experience with study on campus, enabling students to make regular progress toward the degree.

Qualified students study abroad through programs administered by Cornell and other institutions, and by enrolling directly in foreign universities. Among the many study abroad programs available, students select programs with thoughtful planning and apply with the approval of their colleges and faculty advisors. To earn credit for overseas study during the fall and/or spring semester(s), students must apply through Cornell Abroad, whose staff members assist in the planning and application process.

LOCATIONS ABROAD

Cornell students majoring in a broad array of fields in all seven undergraduate colleges study in more than 40 countries each year. The following list includes programs chosen frequently by students with college approval; programs preceded by an asterisk (*) are managed by or affiliated with Cornell.

AFRICA
Botswana, Cameroon, Ghana, Kenya, Madagascar, Mali, South Africa, Tanzania, Uganda: SIT Study Abroad
Ghana: University of Ghana (through CIEE); NYU
Kenya: Wildlife Management (School for Field Studies); University of Nairobi; Minnesota Studies in International Development; SIT Health and Community Development

ASIA
China: Chinese University of Hong Kong; *Cornell FALCON at Peking University; Inter-University Program for Chinese Language Studies at Tsinghua University; Beijing; Peking; Nanjing, and East China Normal Universities (CIEE); International Chinese Language Program at National Taiwan University; IES, CET, and the Alliance for Global Education in Beijing or Shanghai; Hong Kong University of Science and Technology; Syracuse or Columbia University program at Tsinghua University; "CAPS at Peking University
India: School for International Training; St. Stephen's College Delhi (through Brown or Rutgers University); CIEE at University of Hyderabad; IES Delhi; Alliance for Global Education in Pune
Indonesia: SIT Study Abroad, Bali
Japan: *Kyoto Consortium for Japanese Studies; International Christian University, and other university programs; IES Tokyo; CIEE Tokyo at Sophia University; Kyushu University
Korea: Yonsei University, Ewha University
Nepal: *Cornell-Nepal Study Program (Sameyuka Adhyayan Karikam Nepal) at Tribhuvan University
Thailand: Khon Kaen University (CIEE)

AUSTRALIA AND NEW ZEALAND
Australia: Australian National University, Canberra; University of Sydney; University of Melbourne; University of New South Wales, Sydney; University of Queensland, Brisbane; University of Western Australia, Perth; School for Field Studies Tropical Rainforest Studies; Sydney Internship (Arcadia, Boston University)
New Zealand: Otago, Auckland, Massey, Canterbury, and Lincoln Universities; EcoQuest

EUROPE
Central Europe: UPCEES (CERGE-ED) at Charles University, CIEE program in Jewish Studies, CIEE Prague
Denmark: *Danish Institute for Study Abroad (DIS)
France: *EDUCO (Cornell, Duke, and Emory in Paris) at Université de Paris VII, Paris IV, Paris I, Institut d'Études Politiques de Paris ("Sciences Po"); Critical Studies Program at the University of Paris (CIEE); Paris Internship (Boston University); IES Business and International Affairs, Paris
Germany: *Berlin Consortium for German Studies at the Free University of Berlin; Wayne State University in Munich and Freiburg; Heidelberg University
Greece: College Year in Athens; Arcadia
Hungary: Central European University; CIEE Budapest; Budapest Semester in Math
Ireland: Trinity College Dublin and the National University Colleges of Dublin, Galway, and Cork
Other Locations
Cornell students are by no means limited to the locations listed above or to the programs identified for particular countries. In recent years, they have also studied in Austria, Croatia, Dominican Republic, Finland, Mongolia, Poland, Portugal, Switzerland, Tajikistan, Turkey, Venezuela, and elsewhere.

When Students Study Abroad and for How Long
Students may study abroad during their sophomore, junior, or senior year. Junior year is the traditional choice, but second-semester sophomore year or first-semester senior year abroad is increasingly popular. To ensure a preparatory trip, it is important to begin planning for study abroad as early as freshman year. Although semester-long programs are usually available, academic-year programs are highly recommended.

Application Process
Applications for all study abroad programs—Cornell programs, as well as those administered by other institutions—are available at Cornell Abroad. Students are encouraged to consult the library of study abroad materials, talk with staff members, and attend information meetings. The Cornell Abroad web site is an excellent resource for students who wish to receive academic credit for study abroad and their undergraduate college.

The application deadline for study abroad in the fall 2011 semester and the 2011–2012 academic year is February 15, 2011, for all programs except Oxford and Cambridge, for which the deadline to study at those universities for the academic year in 2011–2012 is November 1, 2010. Many universities and programs administer on a rolling basis before and after these dates. Students planning to study abroad in the spring semester should initiate the application process during the preceding spring. Early application may improve students’ chances of admission. In all cases, it is a good idea to check with Cornell Abroad.

Registration, Credit Transfer, and Grades
Students who apply through Cornell Abroad to programs approved by their colleges, as outlined above, remain registered at Cornell during study abroad. They are eligible for financial aid and receive full academic credit for pre-approved courses of study completed with satisfactory grades. Students also enroll for a normal full load of courses abroad, according to the standards of the institution or program overseas, and usually receive 30 credits per year, or 12 to 20 credits per semester. The colleges review course work taken abroad and make the final decisions concerning credit transfer and distribution. When study abroad credit has been transferred, the Cornell transcript will indicate the names of the courses taken, the grades received, and the total credits earned for each semester. Foreign grades are not translated into the Cornell/American grading system, nor are they averaged into the Cornell grade point average.

Foreign Language Requirements
Study abroad programs in non–English–speaking countries that offer direct enrollment in universities generally require the equivalent of at least two years of college-level language study. Students should make firm plans for any requisite language coursework early in their freshman year. English-language study abroad programs are increasingly available in non–English–speaking countries—for example, Belgium, Denmark, Egypt, France, Hong Kong, Hungary, Israel, Italy, Japan, Korea, Netherlands, People’s Republic of China, and Sweden. Cornell requires students who participate in programs in a non–English–speaking country with English-language coursework to take at least one language course as part of their program of study and strongly encourages them to take more. Students should consult with their college study abroad advisors about relevant language preparation, and students in the College of Arts and Sciences should note that they are required to have studied the host country.
language, if taught at Cornell, before study abroad.

**Housing Arrangements**

Study abroad programs generally provide housing in the homes of local residents, in halls of residence for university students, or in rental apartments. Cornell Abroad will advise students of the arrangements that are available and most appropriate to their individual needs.

**Costs**

Students studying abroad in Cornell-managed programs pay a fixed Cornell Abroad tuition per semester, which covers tuition, housing during term (with some exceptions), orientation, program-sponsored trips and events, and administrative and financial aid costs, including emergency medical evacuation and repatriation coverage. It may include other items (e.g., meals, commuter passes) depending on the program. Students pay other costs (e.g., airfare and personal expenses) directly. Different fee levels for Cornell programs reflect the relative costs of operation.

Pending approval by the Board of Trustees, in 2010–2011 the Cornell Abroad tuition for students participating in the Berlin Consortium, for German Studies, the Cornell Nepal Study Program, EDU CO (Emory, Duke, Tulane, and Cornell in Paris), or the Michigan–Cornell–Penn Program in Seville is $22,925.

For the Denmark Institute for Study Abroad (DIS), the Cornell Abroad tuition is $24,210 per semester, and for the Kyoto Consortium for Japanese Studies (KCJS), the tuition is $29,325 per semester. For the Bologna Consortium Studies Program (BCSP), the tuition is $17,100 per semester for academic-year students and $19,920 for spring-only participants. For the Consortium for Advanced Studies in Barcelona (CASB) the fee is $22,925 for fall and $24,000 for spring.

Students studying in all other programs in 2010–2011 pay the tuition and other costs charged by their programs and a Cornell Abroad fee of $4,995 per semester, which covers the direct and indirect costs of study abroad to the university, including financial aid for all study abroad students. Students studying in the United Kingdom and Israel on direct enrollment programs at British and Israeli universities pay a Cornell International Program Tuition of $5,410. This higher amount covers the cost of on-site support services provided by Cornell Abroad.

**Financial Aid**

Students who are accepted for study abroad during the academic year or semester, having applied through Cornell Abroad, are eligible for two semesters of financial aid, consistent with general university aid policy; this applies to all programs, whether run directly by Cornell or not. Students who have transferred into Cornell with 60 or more credit hours are not likely to receive aid for study abroad, assuming they would thereby need more than eight semesters to earn the undergraduate degree. Some programs abroad offer need-based and merit-based scholarships; there are also external sources of aid for which Cornell Abroad students are eligible.

**Security Abroad and Related Issues**

The decision to study in a particular region of the world must be made by each student and his or her family in light of their own interpretation of current events. The director, associate director, and staff of Cornell Abroad stay in regular contact with representatives abroad and receive information regarding safety and security conditions worldwide through the U.S. Department of State Office of Citizens Emergency Services and other agencies. As long as the State Department does not restrict travel by U.S. citizens, Cornell Abroad does not normally recommend limitations on student plans for study abroad. Cornell Abroad will do everything possible to notify students immediately that they should defer plans when official travel restrictions are issued. Nothing is as important as student security and well-being.

Responsibility for a decision to withdraw from a program or return home early rests with the individual and his or her family. There can be no guarantee of credit for students who withdraw from programs sponsored by colleges and universities other than Cornell; they are advised to inquire about the policies of those institutions regarding the completion of academic work and the potential financial implications of premature departure. In the event of a disrupted semester, refunds of tuition and fees, and the number of credits to be awarded, will be reviewed by Cornell and affiliated institutions on a case-by-case basis. Most institutions sponsoring study abroad programs strive to facilitate student completion of academic programs even under unusual circumstances, and Cornell refund policies based on prorated formulas.

**Sources of Information and Advice Concerning Study Abroad**

Cornell Abroad (300 Caldwell Hall): Richard Gaulton, Ph.D., director; Kristen Grace, Ph.D., associate director; Libby Okihoro, student services coordinator; Kathy Lynch, financial services coordinator. The Cornell Abroad library contains an extensive collection of university catalogs and study abroad program brochures, files of course syllabi and evaluations, books, videotapes and CDs, and some information on travel, summer study, and work abroad. Comprehensive information is provided on the Cornell Abroad web site (www.cuabroad.cornell.edu), which incorporates links to universities, programs, and resources worldwide as well as a database of cost estimates. In the early weeks of every semester, students and faculty and staff members discuss programs in a series of information meetings announced in the Cornell Daily Sun and on the Cornell Abroad web site (www.cuabroad.cornell.edu). The director and associate director are available at Cornell Abroad for individual advising.

**College Study Abroad Advisors**

Agriculture and Life Sciences: Christine Potter, 140 Roberts Hall; Architecture, Art, and Planning: Melanie Holland, B-1 West Sibley Hall; Arts and Sciences: Dean Pat Waslin; 55 Goldwin Smith Hall; Engineering: Engineering Advising, 214 Olin Hall; Hotel Administration: Lisa Shaffer, 180 Statler Hall; Human Ecology: Paul Fisher, 172 Martha Van Rensselaer Hall; Industrial and Labor Relations: Kevin Harris, 101 Ives Hall.

**CORNELL IN WASHINGTON PROGRAM**

M101 McGraw Hall
255-4090

ciw.cornell.edu

Cornell in Washington is a unique opportunity for students in any major or with any career interest. Qualified juniors and seniors in all colleges can earn full academic credit—and grades that count in their GPAs—for a semester in Washington, D.C., taking small, seminar courses from Cornell faculty members, conducting research, getting real-life work experience, and living at Cornell’s Wolpe Center near Dupont Circle.

Washington, as the center of much of the nation’s political energy, is an ideal place to be part of American public policy and the institutions and processes through which it is formulated and implemented. At the same time, Washington’s rich collection of libraries, museums, theaters and art galleries offers an opportunity to enjoy and explore American cultural life, present and past. Washington’s vast financial, technology, and health-related sectors create endless opportunities in those arenas, as well.

In addition to working at a self-selected internship, Cornell in Washington students enroll in one of two core courses—Studies in Public Policy or Studies in the American Experience—that involve a major research project on a topic of their choice. Students also select one or two other seminars from such fields as government, history, economics, history of art, and social policy. All seminars carry appropriate credit toward fulfillment of major, distribution, and other academic requirements.

The program is housed at 2148 O Street, NW, Washington, DC 20057.

**Tuition**

Students are registered as full-time students, earn Cornell credit, pay full tuition of their home college, and remain eligible for financial aid.

**Housing**

Students are housed in furnished apartments at Cornell’s Wolpe Center. Students are discouraged from bringing automobiles. The public transportation system, consisting of both bus and subway service, is extensive and convenient to the center, and street parking is not permissible.

**Applications**

Students may apply online at ciw.cornell.edu or obtain an application from the Cornell in Washington program office at M101 McGraw Hall. Applications should be submitted the semester before participation.

**Summer in Washington**

A modified program involving courses and internships is available during the summer. Students earn 6 to 8 credits depending on their course selection.

**Information**

The Cornell in Washington program holds regular information meetings on campus in early October and March. Check the ciw.cornell.edu web site for dates and times. Additional information concerning internships, courses, housing, and other
CORNELL INSTITUTE FOR PUBLIC AFFAIRS
294 Caldwell Hall
255-8018 (tel.)
255-5240 (fax)
cipa@cornell.edu
www.cipa.cornell.edu

The Cornell Institute for Public Affairs (CIPA) offers a university-wide two-year program of graduate professional studies leading to the master of public administration (M.P.A.) degree. The interdisciplinary nature of this degree is one of its distinguishing features. CIPA Fellows (graduate students) have the flexibility to design individualized plans of study using faculty resources from across the university.

Core Foundation Courses

- Economics and Public Finance
- Administration, Politics, and Public Policy
- Quantitative Analysis

Additional opportunities for study abroad are available in Barcelona, Spain, and Budapest, through the following three programs:

- Cornell–Nepal Study Program
- Cornell in Rome
- CIPA Washington, D.C., Externship Semester

Professional Development provides assistance for permanent employment. CIPA's Office of Professional Development provides assistance to fellows in finding internships that match their interests, expertise, and professional goals. Appropriate internships are available in public policy--or public affairs-related organizations in both the public and private sector. In recent years, 98 percent of fellows actively searching for an internship found one. Organizations include the following:

- Deloitte & Touche
- Government Accountability Office
- New York City Office of Management and Budget
- The Overseas Private Investment Corporation
- United Nations
- U.S. Agency for International Development
- U.S. Congress
- U.S. Congressional Research Service
- U.S. Department of State
- World Food Program

Students choose their course of study—focus on a specific area of public policy study. Students choose their course of study—domestic or international—from the following options:

- Environmental Policy
- Finance and Fiscal Policy
- Government, Politics, and Policy Studies
- Human Rights and Social Justice
- International Development Studies
- Public and Nonprofit Management
- Science and Technology Policy
- Social Policy

CIPA fellows also have the opportunity to gain professional experience off-campus, while taking a semester of courses for credit, through the following three programs:

- CIPA Washington, D.C., Externship Semester
- Cornell in Rome
- Cornell–Nepal Study Program

Practical Experience, Internships, Off-Campus Study, and/or Public Service Exchange

Experiential learning is an integral component of CIPAs educational strategy, and a practical experience such as an internship is a requirement for obtaining the M.P.A. degree. Internships allow students to apply training in a practical environment and establish contacts for permanent employment. CIPA's Office of Professional Development provides assistance to fellows in finding internships that match their interests, expertise, and professional goals. Appropriate internships are available in public policy— or public affairs-related organizations in both the public and private sector. In recent years, 98 percent of fellows actively searching for an internship found one. Organizations include the following:

- Deloitte & Touche
- Government Accountability Office
- New York City Office of Management and Budget
- The Overseas Private Investment Corporation
- United Nations
- U.S. Agency for International Development
- U.S. Congress
- U.S. Congressional Research Service
- U.S. Department of State
- World Food Program

state, local, and urban municipal governments
nongovernmental organizations and think tanks worldwide
private-sector consulting firms

CIPA fellows also have the opportunity to gain professional experience off-campus, while taking a semester of courses for credit, through the following three programs:

- CIPA Washington, D.C., Externship Semester
- Cornell in Rome
- Cornell–Nepal Study Program

Additional opportunities for study abroad are available in Barcelona, Spain, and Budapest, Hungary.
Professional Writing Requirement
As a culmination of studies in the M.P.A. program, fellows must complete a professional writing project that demonstrates well-developed analytical and expository skills. This combination should provide fellows with:

- An opportunity to integrate/analyze knowledge and skills that have professional relevance; and
- Tangible products demonstrating professional competence to prospective employers.

In order to serve fellows’ different career needs, CIPA offers three options for completing the professional writing requirement.

Capstone Project
Each semester, the CIPA Public Service Exchange offers two capstone project courses for second-year Fellows. These provide Fellows with the opportunity to work on real-world projects intended to assist either a domestic or an international client agency or program. The capstone projects will each have a specific client focusing on a significant public service initiative or issue, with each involving detailed analysis, proposal development, budget and work-program development, public relations initiatives, evaluation strategies, with professional presentations, both written and oral. In these projects, Fellows will work in teams, but they will be expected to produce products and make presentations for which they have individual responsibility. To meet the professional development requirement for graduation, Fellows must receive at least a ‘B’ grade in the course.

Professional Report
Most fellows undertake an internship during the summer between their first and second years, and most of these will require some written report or output from the work engaged in. Some Fellows, based on their professional and career objectives, will prefer to follow up their internship experience by writing a more thorough and authoritative written report or output from the work they have engaged in. Those who follow this option should enroll for a semester of directed reading/independent study under the supervision of their thesis advisors, with this counting as one of their specialized courses. The thesis must meet the format requirements of the Graduate School.

Co-Curricular Activities
CIPA fellows gain practical skills by organizing, managing, and participating in a variety of professional development activities on campus. These provide fellows with opportunities to share work experience with other fellows and to meet practitioners and distinguished faculty members in the field of public affairs. These student-led initiatives include:

- Colloquium Committee: This student group sets the agenda for the weekly Colloquium Series and makes arrangements for the chosen guest lecturers to come to campus.
- Point of View (POV): The CIPA Public Affairs television program offers fellows the opportunity to work in all aspects of TV production and presentation, gaining invaluable experience for the media exposure they will encounter as public-policy professionals.
- The Current: CIPA fellows publish a journal of student policy research. Working on The Current offers fellows a firsthand view of the rigor of publishing academic work, and also provides a foundation in professional writing and editing—necessary skills for preparing reports and position papers, and publishing research findings.

Complementary Degrees
CIPA fellows may elect to combine their M.P.A. program with study for a complementary degree such as a J.D. from the Cornell Law School, an M.B.A. from the Graduate School of Management, or an M.R.P. in the field of City and Regional Planning. To pursue the complementary degree, one must apply to, and be accepted by, both programs. Often, by selecting courses that meet the requirements of both programs, fellows are able to complete the two degrees together in less time than would be required to complete them separately.

Accelerated Master’s Program
An accelerated program for Cornell undergraduates allows advanced students to apply to CIPA in their junior year, begin CIPA-related course work in their senior year, and complete the M.P.A. in just one year beyond their undergraduate studies.

Residence Requirement
Fellows are required to spend four semesters of study in residence to complete the M.P.A. Those who enroll in the Cornell Accelerated Master’s Program can earn the equivalent of two semesters in residence during their senior year.

Admission
The CIPA program seeks diversity in its student body, drawing from a pool of applicants who have studied across a wide range of disciplines. No specific background or undergraduate major is required, although individuals with previous work experience in policy making or implementation are strongly encouraged to apply. Admission to CIPA is selective. A faculty committee evaluates individual applications based on the following:

- overall academic record
- potential for public-policy leadership as evidenced by professional work and community, extracurricular, or other relevant experience (a copy of one’s current résumé is an application requirement)
- GRE scores
- two letters of recommendation
- an extensive written statement of purpose, as outlined on the CIPA web site: www.cipa.cornell.edu

Applicants for whom English is a second language will need to achieve the following minimum scores on the new (2005) Internet-based test version of the TOEFL: writing 20, listening 15, reading 20, speaking 22.

Although CIPA has a policy of rolling admission, applications should be submitted by the end of January to be considered for financial aid. For more information, contact the Cornell Institute for Public Affairs, 294 Caldwell Hall (tel: 255–8018; fax: 255–5240; cipa@cornell.edu; www.cipa.cornell.edu).

Financial Aid
CIPA provides some funding to more than 80 percent of its students. The institute itself, however, is unable to provide full support for any individual student. Fellows often win support from Fulbright, Truman, World Bank, and other programs. In addition, Cornell offers numerous assistantship and employment opportunities for graduate students. Applicants are encouraged to explore all available sources of external funding, including grants that may be provided by current employers. Decisions on institute funding are determined on a rolling basis following admission decisions.

CORNELL PLANTATIONS
One Plantations Road
255-2400
plantations@cornell.edu
www.cornellplantations.org

Introduction
Cornell Plantations is Cornell University’s arboretum, botanic garden, natural areas, and many on-campus gardens—places of exceptional beauty, diversity, and learning opportunities. Areas managed include over 4,000 acres of natural areas on and off campus in addition to the 150 acres in the F. R. Newman Arboretum and the 25 acres of botanical gardens in and around central campus.

Cornell Plantations provides unique outdoor laboratories and plant collections for Cornell’s academic programs and research in disciplines such as ecology and evolutionary biology, landscape architecture, ornamental horticulture, and bioengineering. While most of Cornell Plantations’ resources are on or near campus, several thousand acres in and around Tompkins County preserve quality examples of native vegetation and rare plants and animals. The lands include bogs, fens, glens, swamps, wet and dry forests, vernal ponds, and meadows.
Arrangements to use these natural areas for classes and research can be made by calling Cornell Plantations. Cornell Plantations has something for everyone. It includes the many places that non-horticultural students and faculty members visit for classes ranging from art, literature, and women’s issues, to nutrition.

**Credit Courses**

Cornell Plantations offers two for-credit courses: HORT 4800 Plantations Fall Lecture Series and HORT 4850 Public Garden Management. HORT 4800 is a 1-credit S–U lecture series offered each fall. HORT 4850 is a 3-credit course offered alternate spring semesters. Cornell Plantations also offers noncredit classes and workshops such as botanical illustration, arts and crafts, gardening techniques, and ecology walks; visit www.cornellplantations.org, or call 255-2400 for more information.

**Internships**

Since the 1990s, more than 150 university students have worked side by side with Plantations’ knowledgeable staff, learning and having fun as participants in Cornell Plantations’ internship program. Positions in horticulture, natural areas management, and education are available each year, beginning after finals in May. All positions strive to build on classroom learning through hands-on work, encouraging students’ interests in horticulture and the natural world. Visit the web site for details.

**Master’s Program**

Cornell Plantations’ master of professional studies program offers fully funded fellowships in public garden leadership. Visit the web site for program details.

**Planning a Visit**

To discover all that is Cornell Plantations, visit www.cornellplantations.org. The Cornell Plantations’ Path Guide and accompanying video are available at the Cornell Store.

**INTERNATIONAL RELATIONS MINOR**

Office: 190B Uris Hall, 255-7645, www.einaudi.cornell.edu/initiatives/itc.asp, D. R. Lee (AEM), director

**Objective**

The International Relations (IR) minor is an interdisciplinary program for undergraduate students enrolled in any of the seven undergraduate colleges at Cornell. The IR minor provides a structured yet flexible program that enables undergraduates to take advantage of the vast resources available at the university for studying the politics, economics, history, languages, and cultures of the countries and regions of the world.

Graduates of the program have gone on to pursue further education in fields such as political science and anthropology and to successful careers in international law, economics, agriculture, trade, finance, international development, and government service, among others. They have gone on to work in international and nongovernmental organizations, in cross-cultural affairs, in journalism, and in education.

The International Relations minor is not a major or a department, but rather a program offering a selection of courses reaching across colleges and departments. Students pursue the IR minor in addition to their regular degree. Students concentrating in international relations have majored in fields ranging from anthropology, city and regional planning, communications, economics, government, and history to natural resources, industrial and labor relations, and computer science. International course work and language study add a global and cross-cultural dimension to those majors. Some students even design an independent major in some aspect of international relations or comparative social or cultural studies. Spending a semester or year of study abroad can contribute to meeting the course requirements of the IR minor, including the language requirement.

**Course Requirements**

These requirements are designed to expose students to a broad range of perspectives in international relations while allowing them to tailor their course selections to specific interests. Courses throughout the university are grouped into four subject areas.

1. International Economics and Development
2. World Politics and Foreign Policy
3. Transnational Processes and Policies
4. Cultural Studies

Within these four subject areas, courses are also divided into “core” and “elective” categories. Altogether, students must complete eight courses from the four groups according to one of two options. Option A emphasizes the politics and economics of international relations. Option B puts greater stress on culture. In choosing either option, students should ensure that they acquire familiarity with more than one geographic region or country. All courses used to fulfill the minor requirements must be taken for a letter grade. Courses can count both toward a major and the International Relations minor.

Option A: One core course from each of Groups 1, 2, 3, and 4

Option B: One core course from each of Groups 1, 2, 3, and 4; one elective from either Group 1 or Group 2; one elective from either Group 3 and 4; one additional elective from either Group 3 or Group 4

Before preregistration, a course list for the following semester (as well as lists for the current and previous semesters) can be obtained from the administrative coordinator in 190B Uris Hall, as well as from the web site. Note: These lists are not necessarily complete. Other courses throughout the university qualify for the IR minor by prior arrangement.

**Language Requirement**

Students in the IR minor are expected to complete additional language study beyond the College of Arts and Sciences’ degree requirement (for those in Arts and Sciences). This study can be accomplished in one of two ways:

1. two years of one foreign language (proficiency plus one course that uses the language to explore some aspect of foreign culture);
2. two languages at proficiency.

**Study Abroad**

Students in the IR minor are encouraged to study abroad to bring a practical dimension to their expertise in international issues. Those who choose this option will find the requirements for the concentration highly compatible with courses taken abroad.

**Completion**

Transcripts will reflect successful completion of the requirements for the minor. In addition, students will receive a special certificate and a letter of confirmation signed by the director of the IR Minor and the director of the Mario Einaudi Center for International Studies.

**Enrollment**

To obtain course lists, to enroll, and for all further information, please contact the IR administrative coordinator, Mario Einaudi Center for International Studies, 190B Uris Hall, 255-7645; ric@is.cornell.edu.

**Course List for 2010–2011**

Core course options (one from each group) and selected electives are listed below; other electives are possible. Most courses are offered one semester only. Offerings may change, so see the administrative coordinator, course roster, and IR web site for updates and further details.

**Group 1: International Economics and Development**

Core:

- AEM/ECON 2300 International Trade and Finance
- AEM 4290 International Finance
- AEM 4300 International Trade Policy
- ECON 3610 International Trade Theory
- ECON 3620 International Monetary Theory and Policy

**Electives:**

- AEM 4350 Political Economy of the WTO and Globalization
- AEM 4420 Emerging Markets
- AEM/ECON 4640 Economics of Agricultural Development
- ANTHR 3684 Africa in the Global Economy
- CRP 3270 Regional Economic Impact Analysis
- CRP 4170 Economic Development: Firms, Industries, and Regions
- ECON 3710 Economic Development
- ECON 4690 China’s Economy under Mao and Deng
- GOVT 3303/ILRIC 3330 Politics of the Global North
- GOVT 3393 Political Economy of Development
- GOVT 3549 Capitalism, Competition, and Conflict

**Group 2: World Politics and Foreign Policy**

Core:

- GOVT 1817 Introduction to International Relations
Electives:
AMST/HIST 3140 History of American Foreign Policy 1912–Present
ASRC 2298/HIST 2890 The U.S.–Vietnam War
ASRC 3110 Government and Politics in Africa
ASRC 4600 Political and Social Change in Caribbean
GOVT 3513 Middle Eastern Politics
GOVT 3523 Modern European Politics
GOVT 3857 American Foreign Policy
GOVT 3867 The Causes of War
GOVT 4827 Unifying While Integrating: China and the World
HIST 2571 China Encounters the World
HIST 3710 World War II in Europe
HIST 4050 U.S.–Cuba Relations
NES 4672 Nationalisms in the Arab World

Group 3: Transnational Processes and Policies
Core:
GOVT/SOC 3937 Introduction to Peace Studies
GOVT 3957 New Forces in International Politics

Electives:
AEM 4450 Food Policy for Developing Countries
AEM/ECON 4640 Economics of Agricultural Development
CRP 3540 Introduction to Environmental Planning
CRP 3840 Green Cities
CRP 4550 Environmental Aspect of International Urban Planning
DSOC 2050/SOC 2206 International Development
DSOC 2750 Immigration and a Changing America
DSOC 3240 Environment and Society
FDSC/IARD 4020 Agriculture in the Developing Nations I
HD 4830 Early Care and Education in Global Perspective
IARD 3000 Perspectives in International Agricultural and Rural Development
IARD 4940 Special Topics in International Agriculture
ILRHR 3040 Seminar in American Labor and Social History
ILRRCB 4600 Immigration and the American Labor Force
NTRRS 3320 Ethics and the Environment

Group 4: Cultural Studies
Core:
ANTHR 1400 Introduction to Anthropology: The Comparison of Cultures
ANTHR 1420 Cultural Diversity and Contemporary Issues

Electives:
AAS 3030/ANTHR 3703 Asians in the Americas
AMST/ANTHR 3453 Anthropology of Colonialism
AMST/ANTHR/LSP 3777 The United States
AMST/ARTH 3605 U.S. Art from FDR to Reagan
AMST/HIST 1530 Introduction to American History
AMST/HIST 2110 Black Religious Traditions: Sacred and Secular
AMST/HIST 3450 Cultural and Intellectual Life of 19th-Century Americans
AMST/ILRCB 3060 Recent History of American Workers
ANTHR 2730 Cultures of Native North America
ANTHR 3421/FGSS 3210 Sex and Gender in Cross-Cultural Perspective
ANTHR 3516 Power, Society, Culture, in Southeast Asia
ANTHR 3535 Situation of China’s Minorities
ART 2350 Introduction to Art History: Islamic Art and Culture
ART 2400 Introduction to Art History: Renaissance and Baroque
ART 3202/CLASS 3740 Arts of the Roman Empire
ART 3510/ASRC 3501 Introduction of African Art
ASIAN 1191/HIST 1910 Introduction to Modern Asian History
ASIAN 2208 Introduction to Southeast Asia
ASIAN 2211 Introduction to Japan
ASIAN 2245/MUSIC 1341 Gamelan in Indonesian Culture
ASIAN 3385/HIST 3880 Vietnamese Histories
ASIAN 3397/HIST 3950 Premodern Southeast Asia
ASIAN 4494/HIST 4921 India: Nation and Narration, History, Literature
ASIAN 6601/HIST 4870 Seminar on Thailand
ASRC 2300 African Civilizations and Culture
ASRC 3300 African History: Earliest Times to 1800
ASRC 4601 Education Innovation in Africa and the Diaspora
ASRC 4606 Family and Society in Africa
CLASS 4625/HIST 4831/RELST 4625 Christianization/Roman World
COML 3620/ENGL 3250/HIST 3640 Culture of the Renaissance II
COML 3860 Literature and Film of South Asia
COML 4520 Renaissance Humanism
COML 4740 Topics in Modern European Intellectual History
COML 4960 Imagining the Mediterranean
ENGL 2740 Scottish Literature
ENGL 3330 The 18th-Century English Novel
ENGL 3490 Shakespeare and Europe
FGSS/HIST 2190 Women in South Asia
FGSS/SPAN 2460 Contemporary Narratives by Latina Writers
FILM 2790/NE 2793 Sophomore Seminar: Middle Eastern Cinema
FILM 3410/FREN 3360 French Film

LATIN AMERICAN STUDIES PROGRAM
190 Uris Hall
Debra Ann Castillo, Romance Studies; Comparative Literature, Director, Latin American Studies; Lourdes Benedita, City and Regional Planning; David Block, Library; Bruno Bosteeles, Romance Studies; Maria Lorena Cook, ILR, Collective Bargaining; Law and History; Raymond Crab, History; Martin De Santos, Development Sociology; Maria Fernandez, History of Art; Gary Fields, International Labor Relations; Economics; Gustavo Flores-Macias, Development Sociology; Maria Antonia García, Romance Studies; Maria Cristina Garcia, History; Frederic Gleach, Anthropology; William W. Goldsmith, City and Regional Planning; Angela Gonzales, Development Sociology; John S. Henderson, Anthropology; Luz Horne, Romance Studies; Eduardo Irigo-Elis, Laboratory of Ornithology; Steven Kyle,

Cornell's Latin American Studies Program (LASP), founded in 1961, has become one of the nation's premier Latin American centers. Today, as part of the Mario Einaudi Center for International Studies, LASP provides a focus for all activities on the Cornell campus oriented toward Latin America. Latin Americanists are active in most of Cornell's colleges and schools with diverse strengths including agricultural sciences, anthropology, art history, city and regional planning, government, history, labor relations, languages, literature and nutrition.

LASP's mission is to stimulate learning about Latin America by supporting Cornell's Latin American students with faculty and student research; sponsoring events on and off campus; sponsoring visiting scholars from Latin America; and establishing relationships with universities and other institutions in Latin America. LASP offers a minor in Latin American Studies for undergraduate and graduate students, fellowships, summer programs, and more.

Undergraduate Minor
The undergraduate minor in Latin American Studies is earned with a minimum of 15 credits in Latin American Studies courses and with acquired facility in Spanish or Portuguese. Language facility is demonstrated by successful completion of SPAN 2190 or PORT 2190 or the equivalent. Course selections must represent at least three fields, including one at an advanced level. The complete list of approved courses is available at http://einaudi.cornell.edu/academics. This list includes all LATA courses and others across colleges and schools with at least 50 percent Latin American content. Please refer to the College of Arts and Sciences section for course information.

Program on Ethics and Public Life
218 Goldwin Smith Hall 255-8515

The critical issues of public life are inescapably ethical issues. In the economy, we face questions of equity and justice and questions about the relation between prosperity, the environment, and the quality of individual lives. In constitutional law, we confront dilemmas about civil rights, freedom of speech, privacy, and abortion. In politics and government, we wrestle with questions about campaigning, character, and compromise. In international affairs, we encounter the complexities of war and peace, human rights, multilateral aid, and climate change.

The university-wide Program on Ethics and Public Life (EPL) is Cornell's initiative in the systematic study of the ethical dimension of specific public issues. EPL grew out of a conviction that these questions need something more than abstract philosophical discussion. In addition to the general study of values and principles that goes on in theoretical ethics, universities need to foster ways of thinking about the complex, uncertain, and urgent problems of the real world, ways of thinking that are realistic, without sacrificing their ethical character.

EPL seeks to enhance and facilitate the discussion of ethical issues by students whose central educational interests lie elsewhere, but whose work and lives will nevertheless confront them with dilemmas and responsibilities for which a university education should prepare them. EPL aims to enrich existing departments with courses that are intellectually and practically fruitful at the same time. It offers a minor in Law and Society (see separate listing under "Special Programs and Interdisciplinary Studies").

For information about the Program on Ethics and Public Life, visit the program's web site, www.arts.cornell.edu/epl.

Program in Real Estate
537 Statler Hall 255-7110
www.realestate.cornell.edu

The two-year master of professional studies in real estate (M.P.S./RE) degree program is an interdisciplinary program that combines courses from nearly every college at Cornell University. The degree is designed for aspiring real estate professionals who are in the initial or early stages of their careers. The Program in Real Estate at Cornell University is home to the graduate program in real estate as well as the Cornell Real Estate Council, which is the centerpoint of academic and industry-related real estate activities on and off campus. The real estate field faculty is composed of 25 faculty members selected from several different colleges who are directly involved in and responsible for the design, delivery, and administration of the real estate curriculum.

The professional study of real estate is concerned with the design, development, finance, law, management, marketing, transactions, deal structuring, and many other aspects of the real estate business. Real estate professionals also contribute an understanding of the long-range social, political, ethical, and environmental implications of decisions about real estate. The 62 credit hours of course work needed to earn the degree provide a comprehensive and lasting foundation for professional careers in real estate.

Students take core courses in principles of real estate, the real estate development process, real estate finance and investments, communication in real estate, managerial finance, residential development, real estate law, construction planning and operations, design in real estate development, transactions and deal structuring, and real estate marketing and management, along with a weekly industry seminar. Elective courses are taken in a chosen area of concentration and to fulfill a leadership and management distribution requirement. Many concentration options are possible and may be structured from the hundreds of related courses taught at Cornell University. Areas of concentration include development, finance, investments, real estate consulting, sustainable development, property and asset management, real estate marketing and market analysis, international real estate concentrations, and others. Students complete real-world, semester-long project workshops during their second and fourth semesters.

Admissions
Applicants to the Program in Real Estate must have completed a bachelor's degree with a good academic record. Applicants must submit a résumé plus two letters of recommendation either from faculty members familiar with the applicant's academic work or, if appropriate, professional recommendations based on work experience. Competitive scores for the GMAT are required. Extensive and relevant work experience will receive favorable consideration. International students for whom English is a second language will need to achieve a minimum TOEFL score set by the Cornell Graduate School. There is no work experience required for admission; however, it is strongly preferred that applicants have at least some industry-related work experience, with three to five years' experience typical. Applications are reviewed on a rolling basis. The financial aid priority and due date for admission is May 15, and the regular application deadline is January 15; otherwise, applications will be accepted until June 1. For more information, contact the admissions coordinator at 255-7110 or real_estate@cornell.edu.

Science of Earth Systems: An Intercollegiate Major
During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, sufficient natural resources to meet the needs of a rapidly growing world population, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. Our society is challenged to identify the best path for achieving a sustainable balance between human actions and the natural earth system. To meet this challenge and to
The core courses emphasize the interconnectedness of the earth system. These courses are founded on the most modern views of the planet as an interactive and ever-changing system, and each crosses the traditional boundaries of disciplinary science. Three courses selected from the following four core courses are required for the major:

EAS 3010 Evolution of the Earth System
EAS 3030/NTRES 3030 Introduction to Biogeochemistry
EAS 3040 Interior of the Earth
EAS 3050 Climate Dynamics

4. Concentration Courses

Four intermediate to advanced-level courses (3000 level and up) are selected that build on the core courses and have prerequisites among the "Basic Math and Sciences" courses listed above. Note that additional basic math and science courses may be required as prerequisites for courses chosen for the concentration. Three concentration courses build depth and provide the student with specific expertise in some facet of earth system science. Four concentrations are defined for the major: atmospheric sciences, biogeochemistry, geological sciences, and ocean sciences (see EAS web site for details). Other concentrations can be tailored to a student's interests in concert with the student's advisor and upon approval of the SES curriculum committee. Examples include sustainable earth and environmental systems, earth system science and policy, hydrology, planetary science, and soil science.

5. Field/observational/laboratory experience

Exposure to the basic observations of earth science, whether directly outdoors in the field, or indirectly by various techniques of remote sensing, or in the laboratory, is necessary to understand fully the chosen area of concentration in the major. A minimum of 3 credits of course work of an observational nature is required. Possibilities include:

Courses given in the Hawaii Environmental Semester program;
Courses given by the Shoals Marine Laboratory;
EAS 2500 Meteorological Observations and Instruments;
EAS 4170 Field Mapping in Argentina;
EAS 4370 Geophysical Field Methods;
EAS 4910 and/or 4920 Undergraduate Research, total 3 credits with appropriate choice of project;
Field courses taught by another college or university (3-credit minimum)

Cornell Field Program in Earth and Environmental Systems: Semester in Hawaii

Cornell University offers a spring-semester program of environmental and earth systems study on the Big Island of Hawaii. The Hawaiian Islands are an outstanding natural laboratory where students can explore a variety of ecosystems, examine their development over time, witness human influences on plant and animal communities, and experience geologic processes such as active volcanism and seismicity. Students spend most of their time in the field, gaining hands-on experience probing the interaction between earth, ocean, atmosphere, and biosphere. This is an ideal opportunity to apply fundamental concepts of geology, chemistry, and biology in a real-world setting. Students enrolled in the Environmental Semester Program will need to complete 19 credit hours of course work during the spring semester. For more information contact Professor Natalie Mahowald, Department of Earth and Atmospheric Science, nmm63@cornell.edu, and visit www.eas.cornell.edu.

SOUTH ASIA PROGRAM

The South Asia Program coordinates research, teaching, and special campus events relating to Afghanistan, Bangladesh, India, Pakistan, Nepal, and Sri Lanka. The program faculty include members from a variety of disciplines, including agricultural economics, agricultural engineering, anthropology, architecture, art, city and regional planning, comparative religion, development sociology, ecology and systematics, economics, English, geology, government, history, history of art, human ecology, industrial and labor relations, international agriculture, linguistics, and literature. Undergraduates with a special interest in the region may major in Asian Studies with a South Asia concentration, or complete a South Asia minor with any other major. Graduate students may pursue the M.A. degree in Asian Studies with a concentration in South Asia.

Languages offered are Bengali, Hindi, Nepali, Sinhala, Sanskrit, and Urdu. Foreign Language and Area Studies scholarships are available to undergraduate and graduate students who are U.S. citizens or permanent residents. Scholarships are also available for undergraduates studying intensive language in the summer. Cornell is a member of the American Institutes of Bangladesh, Indian, Pakistan, and Sri Lankan Studies. For details on the major, see the Department of Asian Studies listing in this volume. For courses available in South Asian studies, or for further information on research opportunities, direct questions to the South Asia Program Office, 170 Uris Hall, 255–8493, www.einaudi.cornell.edu/SouthAsia.
SOUTHEAST ASIA PROGRAM

Cornell's Southeast Asia Program develops and promotes knowledge about countries in the Southeast Asian region of the world, their languages, literatures, visual and performing arts, histories, societies, economies, governments, international and labor relations, religions, and ideologies, through the support of teaching, research, student degree programs, library and archival resources, specialized publications, and outreach activities. It holds a U.S. Department of Education designation as a National Resource Center (NRC) recognized by its peers as a “center of excellence in Southeast Asian language and area studies.” Its alumni teach at renowned institutions throughout the United States and around the world and serve in government and non-profit sectors in the United States and abroad.

As a program associated with the Mario Einaudi Center for International Studies, SEAP has faculty and lecturers within the Department of Asian Studies. A total of 26 core faculty members in the colleges of Arts and Sciences, Business and the Johnson Graduate School of Management, the School of Industrial and Labor Relations, and Agriculture and Life Sciences participate in an interdisciplinary program of teaching and research on the region stretching from Burma through the Philippines.

Courses are offered in such fields as anthropology, Asian studies, economics, finance, government, history, history of art, labor relations, linguistics, music, and development. Instruction is offered in six languages: Burmese, Cambodian (Khmer) Indonesian, Tagalog (Pilipino), Thai, and Vietnamese. As a member of six summer intensive language programs: live in the region and study at Asian Studies Summer Institute at the University of Wisconsin–Madison, the program assists students to acquire advanced language skills (intermediate and above) each summer. The Southeast Asia Program provides competitive funding grants for travel in the region in collaboration with the Asian Studies department and the Einaudi Center.

Undergraduates may major in Asian Studies with a focus on Southeast Asia and it languages, or they may elect to minor in Southeast Asian studies with any other major by completing 18 credits of course work. Graduate students may work toward an M.A. degree in Southeast Asian studies or pursue a Master of Professional Studies in another school with a concentration in Southeast Asian studies. Ph.D. students specializing in Southeast Asia receive a doctorate in a discipline such as history, history of art, anthropology, linguistics, music, economics, finance, labor relations or city and regional planning. As a Comprehensive NRC the Southeast Asia Program is able to offer Foreign Language and Area Studies fellowships (to US citizens or permanent residents) for academic year and summer study programs.

For detail on the major, see the department of Asian Studies listing in this volume. Additional information regarding courses focused on Southeast Asia, publications, or outreach opportunities and Program activities refer www.einaudi.cornell.edu/southeastasia. Undergraduates or others with new or unexplored interests in Southeast Asia please reference www.einaudi.cornell.edu/southeastasia/undergrad. Important for further information should be direct to the program office, 180 Uris Hall, 255-2578 or SEAP@cornell.edu.

Business and Preprofessional Study

UNDERGRADUATE BUSINESS STUDY

Cornell offers a highly ranked accredited general undergraduate business degree program as well as world-renowned business-related graduate programs at all levels. Because the choices are so broad, students are encouraged to explore the offerings carefully to identify the program that best matches their career goals. (Graduate study is available in the Johnson Graduate School of Management as well as in graduate fields associated with each of the undergraduate options.)

Applied Economics and Management

The Department of Applied Economics and Management (AEM) in the College of Agriculture and Life Sciences is home to Cornell’s only undergraduate degree that is accredited by AACSB International—the Association to Advance Collegiate Schools of Business. AEM’s undergraduate program offers a broad, flexible curriculum that reflects the department’s analytical, applied economics approach. Students choose among 10 specializations: finance, marketing, strategy, accounting, entrepreneurship, agriculture, management, food industry management, environmental and resource economics, international trade and development, and applied economics (aem.cornell.edu).

Arts and Sciences

Many of the liberal arts majors offered by the College of Arts and Sciences provide students with a background for a successful business career. In particular are majors in economics, mathematics, sociology, and psychology. Economics focuses on the production, distribution, and consumption of goods and services; monetary systems; and economic theories. Students interested in the human dimensions of business can choose sociology or psychology. Mathematics majors can choose concentrations in computer science; operations research, statistics, or economics to prepare for careers in arts such as actuarial science or finance (as.cornell.edu).

Engineering

Many of today’s business managers hold engineering degrees. Each of the College of Engineering’s 13 majors prepares students for business careers. Operations Research and Engineering, and Information Science, Systems and Technology are the most business-oriented engineering degree programs, preparing graduates for careers in areas such as investment banking and process engineering. Engineering students in any major can take a business-oriented minor in areas such as industrial systems and information technology, and operations research and management science.

A new business minor for engineering students is also offered by the Department of Applied Economics and Management (www.engineering.cornell.edu).

Hotel Administration

The School of Hotel Administration offers the world’s premier hospitality management program. Its rigorous core business curriculum includes courses in finance and accounting; real estate development; facilities management; planning and design; food and beverage management; marketing, tourism, and strategy; information systems; operations; managerial and organizational behavior; human resource management; managerial communication; and law. The school’s conference hotel gives students the opportunity to apply what they learn in a real-world business and its Practice Credit requirement further ensures a balance between classroom learning and real-world practice (www.hotelschool.cornell.edu).

Human Ecology

The College of Human Ecology offers three business-oriented majors and concentrations. The fiber science and apparel design major prepares students for careers in the fashion industry, for example, as a retail executive or merchandise buyer. Students majoring in design and environmental analysis can choose the facility planning and management option to prepare for careers as facility planners and workplace strategists in consulting and real estate firms and large corporations. The policy analysis and management major focuses on health policy, consumer policy, and family and social welfare policy, and its graduates pursue careers as policy makers, analysts, and managers in both the public and private sectors (www.human.cornell.edu).

Industrial and Labor Relations

The School of Industrial and Labor Relations (ILR) focuses on the “people” side of business. Its professional-level curriculum provides a strong social science foundation in organizational behavior, human resource management, labor relations, law, and history; labor economics; international and comparative labor; and social statistics. Most ILR graduates begin careers in management, consulting, and public policy; one-third go on to law school or other graduate programs (www.ilr.cornell.edu).

Related Areas

Entrepreneurship@Cornell

This university-wide program is open to all Cornell students interested in eventually starting their own business or working for venture capital firms. Entrepreneurship-related courses are offered by all seven of Cornell’s undergraduate colleges and schools as well as by the Johnson Graduate School of Management and the Law School (eship.cornell.edu).

International Programs

Several additional programs allow business students to focus on a particular geographic area. Majors and minors are offered in Latino Studies, Latin American Studies, French Studies, German Studies, Italian Studies, European Studies, China and Asia Pacific Studies, Asian Studies, East Asia Studies, Southeast Asia Studies, South Asia Studies, Near Eastern Studies, and Africana Studies (all in the College of Arts and Sciences). The College of Agriculture and Life Sciences offers an
interdepartmental program in international agriculture and rural development.

PRELAW STUDY

Law schools do not prescribe any particular prelaw program, nor do they require any specific undergraduate courses as do medical schools. Law touches nearly every phase of human activity, and there is practically no subject that cannot be considered of value to the lawyer. Therefore, no undergraduate course of study is totally inappropriate. Students contemplating legal careers should be guided by certain principles, however, when selecting college courses.

1. Interest encourages scholarship, and students will derive the greatest benefit from those studies that stimulate their interest.

2. Of first importance to the lawyer is the ability to express thoughts clearly and cogently in both speech and writing. First-year writing seminars, required of nearly all Cornell first-year students, are designed to develop these skills. English literature and composition, and communication courses, also serve this purpose. Logic and mathematics develop exactness of thought. Also of value are economics, history, government, and sociology, because of their close relation to law and their influence on its development and ethics, and philosophy, because of the influence of philosophic reasoning on legal reasoning and jurisprudence. Psychology and human development lead to an understanding of human nature and mental behavior. Some knowledge of the principles of accounting and of the sciences such as chemistry, physics, biology, and engineering is recommended and will prove of practical value to the lawyer in general practice in the modern world.

3. Cultural subjects, though they may have no direct bearing on law or a legal career, will expand students' interests, help cultivate a wider appreciation of literature, art, and music; and make better-educated and well-rounded persons.

4. Certain subjects are especially useful in specialized legal careers. For some, a broad scientific background—for example, in agriculture, chemistry, physics, or engineering—when coupled with training in law, may furnish qualifications necessary for specialized work with the government, for counseling certain types of businesses, or for a career as a patent lawyer. A business background may be helpful for those planning to specialize in corporate or tax practice. Students who anticipate practice involving labor law and legislation might consider undergraduate study in the School of Industrial and Labor Relations. Whatever course of study is chosen, the important goals are to acquire perspective, social awareness, and a critical cast of mind; to develop the ability to think logically and analytically; and to express thoughts clearly and forcefully. These are the crucial tools for a sound legal education and a successful career.

The presence of the Cornell Law School on campus provides the opportunity for a limited number of highly qualified undergraduates registered in the College of Arts and Sciences at the university to apply and be admitted to the Law School. At the time of entry they must have completed 105 of the 120 credits required for the bachelor of arts degree, including 92 credits of course work in the College of Arts and Sciences.

It may be possible for exceptionally well-qualified students in other Cornell undergraduate colleges to apply to enter the Law School after three years. In addition, members of the Cornell Law School faculty sometimes offer undergraduate courses such as The Nature, Functions, and Limits of Law, which are open to all undergraduates.

PREMEDICAL STUDY

Medical and dental schools, while not requiring or recommending any particular major course of study, do require that particular undergraduate courses be completed. These courses usually include general chemistry and organic chemistry, biology, and physics, and must be taken with a lab. A year of English composition (or a first-year writing seminar) is also required. In addition, many medical schools require or recommend mathematics and at least one advanced biological science course, such as biochemistry, genetics, embryology, histology, or physiology. There is no major that is the best for those considering medical or dental school, and students are therefore encouraged to pursue their own intellectual interests. Students are more likely to succeed at, and benefit from, subjects that interest and stimulate them, and there is no evidence that medical colleges give special consideration to any particular undergraduate training beyond completion of the required courses. In the past, successful Cornell applicants to medical and dental schools have come from the Colleges of Arts and Sciences, Agriculture and Life Sciences, Human Ecology, and Engineering. The appropriate choice depends to a great extent on the student's other interests.

PREVETERINARY STUDY

There is no specific preveterinary program at Cornell, and students interested in veterinary medicine as a career should select a major for study that fits their interests while at the same time meeting the entrance requirements for veterinary college as listed below. Most preveterinary students at Cornell are enrolled in the College of Agriculture and Life Sciences, which offers several applied science majors, including animal science, that can lead to related careers if the student does not go to veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests or the desire for a broad liberal arts curriculum.

The college-level prerequisite courses for admission to the College of Veterinary Medicine at Cornell are English composition, biology or zoology, physics, inorganic chemistry, organic chemistry, biochemistry, and microbiology. All science courses must include a laboratory. These requirements, necessary for admission to the College of Veterinary Medicine at Cornell, may vary at other veterinary colleges.

For information on additional preparation, including work experience and necessary examinations, students should consult the brochure, Admissions Information, obtained by writing to the Office of D.V.M. Admissions, College of Veterinary Medicine, Cornell University, S2–009 Schurman Hall, Ithaca, NY 14853–6401. Information on the Guaranteed Admissions Program is available from the same address.

Qualified students in the College of Agriculture and Life Sciences may apply for acceptance in a double-registration program arranged between Cornell University and the College of Veterinary Medicine at Cornell. This program allows registered students to save one year in pursuit of the bachelor's and D.V.M. degrees. Further information about this program is available from the Office of Multicultural and Diversity Programs, College of Agriculture and Life Sciences, 140 Roberts Hall, Ithaca, NY 14853.
INTRODUCTION

College Focus

The College of Agriculture and Life Sciences offers men and women broad-based educational programs to provide them with technical, management, and leadership skills in four primary areas of focus. These areas were developed in response to the global challenges of the 21st century. They are fluid, overlapping, and interdependent and represent agriculture and life sciences at its broadest and most dynamic meaning. These four areas are:

- Land-grant, or agricultural sciences
- Applied social sciences
- Environmental sciences
- Life sciences

Faculty members challenge students with educational programs that promote problem solving, basic and applied research, extension, and outreach. The programs are geared to the discovery and dissemination of knowledge for the purpose of advancing agriculture and food systems, health and nutrition, food security, biological sciences, education, communication, natural resources and environmental quality, and community, urban, and rural development throughout New York State, the nation, and the world.

Administration

Kathryn J. Boor, dean
Max J. Pfeffer, senior associate dean
Jan P. Nyrop, senior associate dean
Margaret H. Ferguson, associate dean for finance and administrative services
Michael P. Riley, associate dean for alumni affairs, development, and communications
Donald R. Viands, associate dean and director of academic programs
Mark W. Wysocki, associate director of academic programs
Michael P. Hoffmann, associate dean and director of the Cornell University Agricultural Experiment Station
Helene R. Dillard, associate dean and director of cooperative extension
Christopher B. Watkins, associate director of cooperative extension
Glenn J. Applebee, associate director of cooperative extension
W. Ronnie Coffman, director of international programs
James E. Haldeman, senior associate director of international programs
Terry W. Tucker, associate director of international programs
Ralph Christy, director of Cornell International Institute for Food, Agriculture, and Development

Department Chairs

Animal science: W. Ronald Butler, 149 Morrison Hall
Applied economics and management: Loren W. Tauer, 154 Warren Hall
Biological and environmental engineering: Daniel J. Aneshansley, 104 Riley-Robb Hall; Beth A. Ahner, associate chair, 202 Riley-Robb Hall
Biological statistics and computational biology: James Booth, 1178 Comstock Hall
Communication: Geri K. Gay, 349 Kennedy Hall
Crop and soil sciences: Harold van Es, 235 Emerson Hall
Development sociology: David Brown (interim chair), 155A Warren Hall
Earth and atmospheric sciences: Larry D. Brown, 2136 Snee Hall; Arthur T. DeGaetano, associate chair, 1119 Bradfield Hall
Ecology and evolutionary biology: Nelson G. Hairston Jr., E345 Corson Hall
Education: Arthur L. Wilson, 435 Kennedy Hall
Entomology: Jeffrey G. Scott, 2130 Comstock Hall
Food science: Kathryn J. Boor, 114 Stocking Hall
Landscape architecture: Peter J. Trowbridge, 445 Kennedy Hall
Microbiology: William C. Ghirose, B76C Wing Hall
Molecular biology and genetics: Kenneth J. Kemphues, 107A Biotechnology Bldg.
Natural resources: Marianne E. Krasny, 118 Fernow Hall
Neurobiology and behavior: Kraig Adler, W365A S. G. Mudd Hall
Plant biology: William L. Crepet, 412 Mann Library
Plant breeding and genetics: Mark E. Sorrells, 241 Emerson Hall
Statistical sciences: Martin T. Wells, 301 Malott Hall

Student Services

Office of Academic Programs

The College of Agriculture and Life Sciences (CALS) provides a variety of services for students, faculty, and alumni. The hub of these services is the Office of Academic Programs in Roberts Hall, including the director, associate director, the Admissions Office, the Career Development Office, the Counseling and Advising Office, the Multicultural and Diversity Office, and the Registrar’s Office. Although most of the student services are in the Office of Academic Programs, services also are located across the college in the Office of Undergraduate Biology and in various departments. Faculty members in the College of Agriculture and Life Sciences consider advising to be an important and integral part of the undergraduate program. Each student enrolled in the college is assigned to a faculty advisor in his or her major field of study for assistance and guidance in developing a program of study and to enhance the student’s academic experience.

The Counseling and Advising Office coordinates the faculty advising program, serves as the college’s central undergraduate advising office, coordinates the college international exchange programs, and offers consultation and support for personal issues. Two counselors with expertise in college policies and guidelines provide confidential consultation and support appropriate to each student’s academic circumstances. Students seek advising, consultation, and support on a variety of issues including academic problems, course problems and college procedures, graduation requirements, personal and family problems, stress management, and time management.

Academic advising is available for students who are interested in international study, need to file petitions, wish to waive college academic regulations, have disability concerns, are experiencing academic difficulties, take or return from a leave of absence, or have requests for tutoring.

The staff coordinates new student orientation, award ceremonies, commencement activities, and the activities of Ho-Nun-De-Kah, the college’s honor society.

The staff is available on a walk-in basis as well as by appointment in 140 Roberts Hall. Visit www.cals.cornell.edu/advising. Counseling and Advising staff: Lisa Ryan, Bonnie Shelley, Pamela Torelli, and Christine Potter.

The Office of Multicultural and Diversity Programs serves to monitor, support, and influence policy on behalf of all underrepresented students within the College of Agriculture and Life Sciences. This population is defined as encompassing, but not limited to, all African American, Latin American, Asian American, and Native American students. Its constituency includes students, faculty, and the general public. In the past academic year this represented approximately 20 percent of the college’s undergraduate population. Additionally, the office is charged with monitoring and programming for the Educational Opportunity Program (EOP). EOP is a state-supported program intended to assist New York State students who meet economic and academic criteria set by the college, State Programs Office, and New York State Board of Regents. For further information, please contact Catherine Thompson in 140 Roberts Hall.
Within the university, the Office of Multicultural and Diversity Programs is charged with acting as the college liaison with the central Office of Minority Education Affairs, Learning Strategies Center, and the State Programs Office. Other university connections include the University Career Center and the Office of Financial Aid regarding concerns of the underrepresented student population. The director provides support for the Office of Multicultural and Diversity Programs. The director together with peer advisors carries out the duties of the office. The staff acts as a major advocacy group as well as an information and referral center.

Given the college's policy on nonexclusionary programming, the Office of Multicultural and Diversity Programs is also responsible for some functions that serve the college's entire population. At present, that includes general college diversity activities, serving as the college prehealth advisor, and providing ongoing support at all levels for the Office of Counseling and Advising.

The CALS Registrar's Office ensures the accuracy, confidentiality, and reliability of student records and serves as an important link between the university's and college's policies and procedures and the student. The Registrar's Office maintains student records and reviews degree progress on a semester basis, maintains the Dean's List, evaluates and applies non-Cornell credit (transfer credit, study abroad credit, and advanced placement credit), provides registration and enrollment information, consults individually with students on college graduation requirements, and schedules all CALS courses. Specific information can be found at www.cals.cornell.edu/current/registrar.

Registrar's Office staff: Torrey Jacobs and Shawna Lockwood.

The Career Development Office offers a variety of helpful services to all students and alumni of the college. Career development includes self-assessment, career exploration, decision making, and transition to employment. Services are designed to assist students and alumni with those activities and to help them develop the career planning and job search skills they will find useful as their career paths progress and change.

The Career Library contains an extensive collection of current and useful material, including web sites, career information books, extensive internship files, employer directories, and job listings. Alumni Career Link is a database of more than 600 college alumni who have offered to help students and alumni with their career development in a variety of ways. Job search talks on topics such as résumé writing, cover letter writing, and interviewing are presented throughout the semester and are available on DVD for in-office viewing. An active on-campus recruiting program brings more than 50 CALS-specific employers to campus each year to recruit for full-time and summer jobs. Additionally, the office provides information on hundreds of internships.

The office, in conjunction with a network of college faculty and staff members, assists students throughout their undergraduate years and beyond. For further information, students should contact Amy Benedict-Augustine, Laurie Gillespie, Jennifer DeRosa, or Jo-Lynn Buchanan in 177 Roberts Hall.

The CALS Admissions Office is responsible for admitting and enrolling a talented and diverse class of students each year. The process and outcome reflects and supports the college mission and meets college and institutional enrollment goals. This includes freshman, transfer, and intra-university transfer student processes. The office hosts on- and off-campus information sessions for prospective students, evaluates and makes decisions for more than 5,000 applications each year, and coordinates events for admitted students. The Admissions Office staff advises and supports the CALS Ambassador program. The office is located in 177 Roberts Hall. Staff members include Ann LaFave, Jared Rivers, Jeri Nyrop, Erica Walters, Victoria Watts, and Victoria Parker.

**Students**

Undergraduate enrollment is approximately 3,200, with about 59 percent in the upper division. Each year about 850 students graduate, while 650 freshmen and 275 new transfer students enroll. College faculty members serve as chairs of the Special Committees of roughly 1,000 graduate students.

**Admission**

A significant factor taken into consideration by the CALS admissions committee is how well a student's academic interests relate to the mission of the college. Applicants for admission to the College of Agriculture and Life Sciences will choose from more than 20 major fields of study. As a part of the application process, applicants write about their academic interests and articulate how these interests blend into CALS programs, contributing to the mission of the college. Majors fall within these broad areas: life sciences, environment, social sciences, and agriculture and food. Appropriateness for the college must also align with high academic achievement. While approximately 60 percent of CALS students come from New York State, about 40 percent come from other parts of the United States or abroad. Slightly more than half of the undergraduates are women.

The CALS Admissions Office is in 177 Roberts Hall (255-2036; www.cals.cornell.edu/admissions; e-mail: als_admissions@cornell.edu).

**Transfer Students**

All accepted transfer credit must be from an accredited college or university. Transfer credit is awarded based on review of official transcripts. Additional course information may be required. A maximum of 60 non-Cornell credits may be transferred. Approximately 30 percent of CALS undergraduate students are transfers who have completed part of their collegiate work at community colleges or two- and four-year institutions. Detailed information on transfer admission is available on the CALS Admissions web site.

**Intra-University Transfer**

A Cornell student in good standing may apply for an intra-university transfer to pursue an academic program in his or her current Cornell college. Guidelines are available on the CALS Admissions web site. The procedure involves attending an information session, meeting with a faculty member in the proposed area of study, and submitting an application and essay.

Consideration is given to students who have demonstrated an interest in their proposed new field of study by taking appropriate prerequisite courses. Academic achievement is also considered. Students need to spend two semesters in their home college before applying. In certain cases, a student may be sponsored by CALS in the Internal Transfer Division (ITD) for one semester of study before entering the college. During this ITD semester, the student must achieve a predetermined grade point average and take approved courses to assure acceptance.

**Special Students**

A limited number of nondegree candidates who want to take courses in the college are admitted each year. Applicants should complete the Cornell special/visiting student application process. For more information and guidelines, students should contact the CALS Admissions Office.

**Off-Campus Students**

Programs in which students study off campus but enroll for Cornell credit include SEA semester, Semester in Environmental Science with the Marine Biology Laboratory, field study in Human Ecology or Industrial and Labor Relations, Capital Semester, Cornell in Washington, and IPM internship.

**Facilities**

The College of Agriculture and Life Sciences is located on the upper campus on land that was once part of the Ezra Cornell family farm.

Buildings around the area commonly known as the Ag Quad house classrooms, offices, and laboratories. Flanking them are the greenhouses, gardens, and research facilities. Nearby orchards, barns, field plots, forests, and streams extend as far as the Animal Science Teaching Research Center in Harford and the New York State Agricultural Experiment Station at Geneva.

Roberts Hall serves as headquarters for the administrative units, including offices of the deans and directors of academic programs, Cornell University Agricultural Experiment Station, and Cornell Cooperative Extension. Included in the Office of Academic Programs are the director and associate director, the Admissions Office, the Career Development Office, the Counseling and Advising Office, the Office of Multicultural and Diversity Programs, and the Registrar's Office.

Mann Library, with its extensive collections of materials in the agricultural and life sciences, is at the east end of the Ag Quad. Public computer facilities are available in Mann Library.

**DEGREE PROGRAMS**

The College of Agriculture and Life Sciences offers programs leading to the degrees bachelor of science, master of science, and doctor of philosophy. Professional degrees include the master of professional studies,
master of landscape architecture, and master of arts in teaching. Some registered professional licensing and certification programs are also available.

Each curriculum in the college creditable toward a degree is registered with the New York State Education Department.

**Bachelor of Science Degree**

Departments in the College of Agriculture and Life Sciences sponsor study for the B.S. degree in 24 major programs. To qualify for the degree, students must fulfill requirements established by the faculty of the college and administered through the Office of Academic Programs. Students are admitted into a single major but afterwards may pursue and graduate with two or more majors within the College of Agriculture and Life Sciences. Students need an advisor in each major.

Course requirements for double majors may overlap. The Counseling and Advising Office (140 Roberts Hall) and department representatives have a form for students to complete to officially recognize the double major. The following units offer major fields of study for undergraduates. A faculty advising coordinator is listed for each unit. Students should consult with the faculty coordinator regarding requirements and opportunities for concentrations in the major.

The college learning outcomes expected for all students to earn a B.S. degree are listed below:

- **Communicate effectively through writing**, **speaking, and visual information**
- **Articulate the views of people with diverse perspectives**
- **Demonstrate the capability to work both independently and in cooperation with others**

### Majors

- **Agricultural sciences**: Antonio DiTommaso, 302 Bradford Hall, ad97@cornell.edu
- **Agricultural science education**: Travis Park, 320 Kennedy Hall, tdp9@cornell.edu
- **Animal science**: James Giles, 411 Morrison Hall, jg9j@cornell.edu
- **Applied economics and management**: Dale Grossman, 114 Warren Hall, dag14@cornell.edu
- **Atmospheric science**: Mark Wysocki, 1114 Bradford Hall, mw9w@cornell.edu
- **Biological engineering**: Michael Walter, 1440 Snee Hall, mw12@cornell.edu
- **Biological sciences**: Bonnie Cornella, 216 Stimson Hall, bc3@cornell.edu
- **Biology and society**: Brian Chabot, 102 Little Rice, bfc1@cornell.edu
- **Biometry and statistics**: 607-255-5488, 1198 Comstock Hall, bs6b@cornell.edu
- **Communication**: Danielle Dean-Manzer, 334 Kennedy Hall, ddyd1@cornell.edu
- **Crop and soil sciences**: Antonio DiTommaso, 302 Bradford Hall, ad97@cornell.edu
- **Developmental sociology**: acting DGS, Charles Geisler, 237 Warren Hall, ccg2@cornell.edu
- **Entomology**: John Losey, 4126 Comstock Hall, jth34@cornell.edu
- **Environmental engineering**: Michael Walter, 207 Riley-Robb Hall, mw12@cornell.edu
- **Food science**: Alicia Orta-Ramirez, 107 Stocking Hall, ao98@cornell.edu
- **Information science**: Christine Stenglein, 303 Upson Hall, cms242@cornell.edu
- **Interdisciplinary studies**: Lisa Ryan, 140 Roberts Hall, lfr@cornell.edu
- **International agriculture and rural development**: Terry Tucker, 35 Warren Hall, twt2@cornell.edu
- **Landscape science**: Kathryn Gleason, 454 Kennedy Hall, klg16@cornell.edu
- **Nutritional sciences**: Charles McCormick, 223 Savage Hall, ccm9@cornell.edu
- **Plant science**: (crop science; horticulture; plant biology; plant breeding and genetics; plant pathology/protective): George Hudler, 334 Plant Sciences Bldg., gwh2@cornell.edu
- **Science of earth systems**: Natalie Mahowald, 2140 Snee Hall, nmm63@cornell.edu
- **Science of natural and environmental systems**: Tim Fahey, 12 Fenrow Hall, tf5@cornell.edu
- **Viticulture and enology**: Ian Merwin, 118 Plant Sciences Bldg., im13@cornell.edu

### Minors

Students in the College of Agriculture and Life Sciences may pursue one or more minor fields of study in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the student's major. Minor fields of study do not require an academic advisor, but each minor field has a contact person who will provide information and verify on the application to graduate that the student will successfully complete the requirements of the minor by graduation. Students may complete as many minors as they wish; the requirements of minors may overlap. Minors are described along with the majors later in this catalog. Not all majors or departments offer minors. Minors available at the university can be found on Cornell University's academics academic website (www.cornell.edu/academics/minors.cfm).

### Early Enrollment in Cornell Graduate Programs

**The College of Veterinary Medicine** may accept students who are then permitted to double-register in their seventh and/or eighth semester and complete requirements for the bachelor of science degree in the College of Agriculture and Life Sciences. Students should consult with the college registrar, 140 Roberts Hall, to file an application for dual- enrollment and to ensure that degree requirements have been fulfilled.

Students who have been offered admission to the S. C. Johnson Graduate School of Management may take management courses in their senior year if approved by their college faculty advisor as part of their undergraduate program. Students may consult with the college registrar, 140 Roberts Hall, to verify degree requirements.

**The Department of Landscape Architecture** offers a first professional degree curriculum in landscape architecture at both undergraduate (BSLA) and graduate levels (MLA D) as well as a second professional graduate degree program (MLA II). The curricula for both the undergraduate and graduate programs are accredited by the Landscape Architecture Accreditation Board. The graduate program is cosponsored by the Department of Landscape Architecture in the College of Agriculture and Life Sciences and by the College of Architecture, Art, and Planning.

### Graduate Fields of Study

Graduate study is organized by fields that generally coincide with the academic departments but may draw faculty from several disciplines in the various colleges of the university. The following graduate fields have primary affiliation in Agriculture and Life Sciences. Current directors of graduate studies are also listed. For more information on graduate programs, please refer to the Graduate Bulletin, or www.gradschool.cornell.edu. Information following this list refers to undergraduate studies.

- **Agriculture and life sciences** [M.P.S. (agr.)]: Don Viands, 151 Roberts Hall, drv3@cornell.edu
- **Agricultural economics**: David Just, 254 Warren Hall, dj254@cornell.edu
- **Animal breeding**: Patricia Johnson, 202 Morrison Hall, ppj1@cornell.edu
- **Animal science**: Patricia Johnson, 202 Morrison Hall, ppj1@cornell.edu
- **Atmospheric sciences**: Daniel Wilks, 1113 Bradford Hall, dsw5@cornell.edu
- **Biochemistry, molecular, and cell biology**: Volker Vogt, 358 Biotechnology Bldg., vmv1@cornell.edu
- **Biological and environmental engineering**: Antje Baeumner, 306 Riley-Robb Hall, abj23@cornell.edu
- **Biometry**: Robert Straderman, 1172 Comstock Hall, rls54@cornell.edu
- **Biophysics**: Gerald W. Feigenson, 201 Biotechnology Bldg., gwf5@cornell.edu
- **Communication**: Jeff Hancock, 320 Kennedy Hall, jth34@cornell.edu
- **Developmental sociology**: acting DGS, Charles Geisler, 237 Warren Hall, cg20@cornell.edu
- **Ecology and evolutionary biology**: Irby Lovette, 188 Johnson Center, ornithology, ilj2@cornell.edu
- **Education** [also M.A.T.]: Mark Constan, 413 Kennedy Hall, mac223@cornell.edu
- **Entomology**: John Losey, 4126 Comstock Hall, jrl27@cornell.edu
- **Environmental toxicology**: Andrew Yen, Stocking Hall, ay3@cornell.edu
Food science and technology: Martin Wiedmann, 412 Stocking Hall, mw16@cornell.edu
Genetics and development: Paul Soloway, 211 Weill Hall, pds28@cornell.edu
Horticulture: Nina Bassuk, 33 Plant Science Bldg., nlb2@cornell.edu
International agriculture and rural development [M.P.S. agr.]: Steven Kyle, 249 Warren Hall, skk5@cornell.edu
International development: Norman Uphoff, 35A Warren Hall, ntu1@cornell.edu
Landscape architecture [M.L.A.]: Dan Kral, 440 Kennedy Hall, dkw5@cornell.edu
M.P.S. agriculture with Peace Corps option (offered by most agriculture fields with M.P.S. programs): Terry Bucher, 35 Warren Hall, or see director of graduate studies for chosen field, twt2@cornell.edu
Microbiology: James Shapleigh, 257A Wing Hall, jps2@cornell.edu
Natural resources: Clifford Kraft, 206H Fernow Hall, cck7@cornell.edu
Neurobiology and behavior: Joseph Fetcho, W103 Mudd Hall, jrf69@cornell.edu
Nutritional sciences: Charles McCormick, 223 Savage Hall, ccm3@cornell.edu
Physiology: Robin Davison, T9-014C Vet Research Tower, rld44@cornell.edu
Plant biology: Klaas van Wijk, 332 Emerson Research Tower, kvw1@cornell.edu
Plant breeding: Walter DeJong, 309 Bradfield Hall, wsd2@cornell.edu
Plant pathology: Michael Milgroom, 357 Plant Science Bldg., mmg5@cornell.edu
Plant protection [M.P.S. agr.]: William Reissig, Barton Laboratory, Geneva Campus, whri@cornell.edu
Soil and crop sciences: Dan Buckley, 705 Bradfield Hall, dbh28@cornell.edu
Statistics: Robert Strawderman, 1172 Comstock Hall, rls54@cornell.edu
Zoology: Susan Suarez, 75002B Vet Research Tower, ssu7@cornell.edu

OPPORTUNITIES IN RESEARCH

Undergraduate Research
A multitude of opportunities to be engaged in research exists across the College of Agriculture and Life Sciences and the university.

Students may be able to work on a faculty member's research project for pay. Opportunities can be explored by contacting individual faculty members; departmental offices; the CALS Career Development Office, in 177 Roberts Hall; or Cornell Career Services, in 103 Barnes Hall. Another option is for students to receive credit through a 4990-level course within a department by conducting their own research project under a faculty mentor. More than 600 students each year conduct research for credit. Upper-class students usually have the course background to engage in research, but freshmen and sophomores also may be equipped to do some types of research. Off-campus research experiences are also available for pay or as internships.

The following web sites provide information about research and internships:

- CALS Career Development Office: www.cals.cornell.edu/cals/current/career
- CALS Undergraduate Research Opportunities: www.cals.cornell.edu/cals/current/student-research
- CALS Research Honors Program: www.cals.cornell.edu/cals/current/student-research/honors
- CALS Undergraduate and Graduate Student Grants Proposal Development: www.cals.cornell.edu/cals/current/student-research/grants
- CALS Undergraduate Minority Research: www.cals.cornell.edu/cals/current/student-research/minority
- CALS Internship Guidelines: www.cals.cornell.edu/cals/current/student-research/internship
- Undergraduate Research @ Cornell: www.research.cornell.edu/undergrad
- Cornell Undergraduate Research Board: www.research.cornell.edu/curb (student organization to promote and facilitate undergraduate research)
- Biological Sciences: www.biology.cornell.edu

Research Honors Program
The Research Honors Program provides students with a special opportunity to work with a faculty mentor to experience the research process. Successful completion requires a thesis written in the style of a master’s thesis or scholarly journal article. Original honors research may be suitable for publication in a professional journal. Students may volunteer to publish their theses in the Internet-First University Press if it does not interfere with other plans, such as patenting or publishing in another journal. During each summer the CALS Research Honors Abstracts is published on the web at www.cals.cornell.edu/cals/current/student-research/honors/abstract-booklets.cfm as a compilation of honors theses abstracts.

The bachelor of science degree with "distinction in research" is conferred upon those students who, in addition to having completed the requirements for the B.S. degree, have satisfactorily completed the honors program and have been recommended for the degree by the honors committee.

Research may be done in these program areas: animal sciences, biological sciences, biology & society, entomology, information science, landscape studies, natural resources, nutritional sciences, physical sciences, plant sciences, and social sciences. Each program area has its own requirements in addition to the college requirements. After reviewing the requirements of each program area (below), students’ questions may be directed toward the appropriate program area chair.

Consult “Undergraduate Research Opportunities” on the web (cals.cornell.edu/cals/current/student-research/undergrad) for information about identifying a research topic, conferring with a faculty member, and undergraduate funding opportunities.

Honors Program Requirements
An undergraduate wishing to enroll in the honors program must have completed at least 55 credits, at least 30 of those 55 at Cornell. In addition, the student must have attained a cumulative Cornell GPA of at least 3.0 (unless otherwise noted by a particular program) at the time of entry.

Interested students must submit a written application and thesis proposal early in the first semester of their senior year; however, they are encouraged to make arrangements with a faculty member during the second semester of their junior year. Several program areas require students to submit their application and thesis proposal to the program area honors committee chair by the end of the third week, while other program areas submit the application and proposal to the CALS Registrar's office by the end of the sixth week. It is the student’s responsibility to know the deadlines and submission procedures for the particular program area of interest. Application forms are available from the CALS Registrar in 140 Roberts Hall or from the web at www.cals.cornell.edu/cals/current/student-research/honors. Applications for biological sciences students can be picked up at 200 Stimson Hall, and for biology & society students at 306 Rockefeller Hall.

Before the completed application is submitted, signatures of approval are required in the following order: faculty research mentor, academic advisor, and research honors program area chair. After the college registrar verifies the student’s GPA, the student will be officially enrolled in the honors program. Additional requirements for application and completion of the program are described under each program area. Academic credit also may be earned by enrolling in an appropriate independent research course (required by some program areas). Research funding opportunities are described at cals.cornell.edu/cals/current/student-research/undergrad.

Unless otherwise indicated in the following program area descriptions, the research report in the form of a thesis or journal article should be submitted to the research program committee no later than four weeks before the end of classes of the semester in which the student expects to graduate. Students in the College of Agriculture and Life Sciences wishing to participate in the Research Honors Program are not eligible for distinction in research by participating in a program offered by another college or administrative unit.

The research honors committee for each program area recommends to the college registrar those students who qualify for honors. Only those who maintain a GPA of at least 3.0 will be graduated with “distinction in research.”

At or near the completion of their research, students are required to give an oral presentation or poster session during an appropriate event. Some departments have seminar series when presentations may be given. The Cornell Undergraduate Research
Board Forum is another venue for presentations.

For more information, go to www.cals.cornell.edu/cals/current/student-research/honors.

The following are the honors program areas:

**Animal Sciences**

Faculty committee: S. M. Quirk, chair; Y. R. Boisclair, J. R. Giles, J. Gavalchin, P. A. Johnson, T. R. Overton, Q. M. Ketterings

The objective of the animal sciences research honors program is to provide outstanding undergraduates with the opportunity to pursue supervised independent research and to develop an awareness of the scientific process. It is expected that the research will require significant effort and creative input by the student in its design and execution and in the reporting of the results.

Those students with majors in animal sciences who are interested in doing a research project should consult with their faculty advisors by their junior year. All students are expected to meet the college requirements in qualifying for the program and to complete the following:

- **Identify a potential research honors project sponsor** (i.e., a faculty member working in the animal sciences) and secure that faculty member’s commitment to sponsor the student in the research project. This should be accomplished by the second semester of the junior year. Students are encouraged to implement some research during the junior year and/or summer before the senior year.
- **Register for ANSC 4991 Undergraduate Research.**
- **Participate in ANSC 4020 Seminar in Animal Sciences during the spring semester and report on and discuss the project and results.**
- **Submit a written thesis to the Animal Sciences Research Honors Committee by the scheduled deadline.** Specific information regarding deadlines, format, and organization for the thesis will be provided.
- **Meet with the Animal Sciences Research Honors Committee for a short oral defense of the thesis following a review of the thesis by the student’s sponsor and the research committee.**
- **Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library.** Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.
- **In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor’s name, and abstract (in Word format).** By the end of the summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts.

**Biological Sciences**

Students interested in the Research Honors Program in the biological sciences should consult with their faculty advisors and with potential faculty research sponsors early in their junior year. See “Independent Research and Honors Program” in the Biological Sciences section of this catalog for complete details. Information on faculty research, applications, and program requirements may be obtained from the Office of Undergraduate Biology, 216 Stimson Hall, or at www.biology.cornell.edu/research/honors.html.

**Biological & Society**

Faculty committee: B. Chabot, chair

The Research Honors Program in Biology & Society is designed to provide independent research opportunities for academically talented undergraduates in Biology & Society. Students who enroll in this program are expected, with faculty guidance, to do independent study and research dealing with issues in biology and society. Students participating in the study should find the experience intellectually stimulating and rewarding whether or not they intend to pursue a research career.

Biology & Society students are considered for entry into the research honors program at the end of the second semester of the junior year. Application forms for the program are available in the Biology & Society office, 306 Rockefeller Hall. To qualify for the Biology & Society Research Honors Program, a student must have an overall Cornell cumulative GPA of at least 3.3, have formulated a research topic, and have found a project supervisor (with a Cornell academic appointment) and a Biology & Society faculty member willing to serve as his or her advisor. The director of undergraduate studies will appoint a third reader of the completed research thesis. Applications will be reviewed by a committee headed by the director of undergraduate studies, who will notify students directly of the outcome. Students will be permitted to register for the research honors program only by permission of the Biology & Society program. Students must enroll for two semesters for 4 credits each in BSOC, ALS, or HE 4991–4992, Honors Project I and II. More information on the honors program is available in the Biology & Society office, 306 Rockefeller Hall (255-6047).**

**Important Deadlines**

Note: If the following dates fall on a weekend, the deadline is the preceding Friday.

- **Last week of second semester of the junior year: Application for honors program submitted to 306 Rockefeller Hall.**
- **April 11: Thesis completed in a form satisfactory for evaluation and submitted to the three readers.**
- **April 25: Thesis defense accomplished.**
- **May 9: Two bound copies of completed and defended thesis submitted to director of undergraduate studies.**

Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.

In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor’s name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts.

**Entomology**

Faculty committee: C. Gilbert, chair

The Program. A research honors program in entomology may be pursued by any qualified student in the College of Agriculture and Life Sciences. The student need not be majoring in entomology. Insects, because of their variety, small size, and easy availability, are convenient subjects for studying a wide array of problems dealing with living systems. Short life cycles, unique physiologies and developmental patterns, and species with easily managed colony requirements and a wide range of behavioral traits provide the raw material for research honors study. Cornell’s diverse faculty interests and extensive collections and library in entomology are also major assets if a student selects entomology as the area for research honors study.

Research honors students have the option of earning academic credit by enrolling in ENTOM 4991 Honors Research in Entomology during any semester while working toward a research honors thesis. Credits and grade option for satisfying requirements of ENTOM 4991 should be discussed with the thesis advisor (following page.)

Note: Enrolling in independent study course, either ENTOM 4970, 4990, or 4991, is not a requirement for graduating with distinction in research honors in entomology.

**Sequence of Requirements.** The Entomology Research Honors Committee requires that an undergraduate who is interested in embarking on a research honors project proceed with the following steps:

1. Discuss the matter with his or her academic advisor, preferably in the junior year. This schedule makes it possible to carefully plan a research project and implement some research during the junior year and/or summer before the senior year.
2. Select an appropriate faculty member in the Department of Entomology who can serve as a supervisor to oversee the honors research. This need not be the student’s academic advisor. The academic advisor will be of assistance in determining which faculty entomologist has expertise most compatible with the interests of the student.
3. Prepare a brief, tentative plan for the project for discussion and approval of the honors project supervisor. The plan...
should include a statement of objectives or hypotheses, proposed methods for testing hypotheses, needs for laboratory space or shared equipment, and a budget outlining financial support needed for travel and supplies.

4. Submit a completed application and proposal approved by the honors project supervisor to the chair of the Entomology Research Honors Committee no later than the end of the fifth week of the first semester of the senior year. Earlier submission is encouraged. Applications are available from the CALS registrar, 140 Roberts Hall. These applications include an opportunity to request a modest amount of funding from the CALS honors program. These funds are distributed only one time per year (in late fall).

5. Submit a brief progress report, approved by the project supervisor, to the Entomology Research Honors Committee by midterm of the semester in which the student will complete his or her graduation requirements.

6. Present a formal seminar reporting the significant findings of the research to the Department of Entomology (as a Juggate seminar) in the last semester of the senior year.

7. Submit two copies of the final honors thesis (as approved by the thesis supervisor) to the chair of the Entomology Research Honors Committee no later than two weeks before the last day of classes in the semester in which the student anticipates graduation. The thesis will be reviewed by the faculty honors project supervisor and one other referee selected by the chair of the honors committee.

8. Referees will return the thesis to the student one week before the last day of classes. If reviewers indicate that changes must be made, the revised thesis should be submitted to the Entomology Research Honors Committee chair no later than the last day of classes. Referees should include a recommendation to the Entomology Research Honors Committee chair regarding acceptability of the honors thesis. The approved honors theses will be bound and housed in the Entomology Library in Comstock Hall.

9. Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.

10. In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor's name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts.

11. The complete text of this section can be found at www.entomology.cornell.edu/public/IthacaCampus/EduTraining/Undergrad/EntomHonors.html.

Information Science
Students should follow the CALS social sciences guidelines to obtain research honors in information science.

Landscape Studies
Faculty committee: P. J. Trowbridge, chair
The research honors program in landscape studies offers outstanding undergraduates in CALS the opportunity to work with a member of the landscape architecture faculty to pursue supervised independent research in design, the cultural landscape, landscape archaeology, environmental design, and community-based planning and design. The student need not be a major in the landscape architecture professional design curriculum. The subject matter and nature of the research experience may be quite varied. Students participating should find the experience intellectually stimulating and rewarding, whether or not they intend to pursue a research career. The guidance and supervision of a faculty member with substantial interest and expertise in the subject is essential to the success of the project. It is expected that the research will require significant effort and creative input by the student in its design and execution and in reporting the results.

Students who consider this option should be aware that honors research is undertaken above and beyond any of the requirements for graduation in the major of landscape architecture. It involves a number of deadlines and a considerable time commitment. Before signing on for research honors, students need to consult with their academic advisor to make sure that honors research projects will not interfere with other academic or professional objectives, such as job applications, preparation of portfolios, or application to graduate school. These may need to be deferred until the thesis is complete. Students are responsible for meeting deadlines and being prepared for presentations and other meetings.

Although honors research credits for spring semester junior year seminars senior year are designated a letter grade, individual mentors may choose the R grade for work in progress until the project has been fully completed. Grade is determined by each student's mentor. The designation of "distinction in research" on the diploma is awarded at the recommendation of the faculty advisor and other referees to the honors committee chair. An outline of activities for both years is given below.

The Landscape Studies Research Honors Committee requires that an undergraduate who is interested in embarking on a research honors project proceed with the following steps:

1. Junior year: Identify a potential research honors project sponsor and secure that faculty member's commitment to sponsor the student in the research project. This should be accomplished early in the second semester of the junior year and be finalized by the end of the spring semester. Pre-register during the spring for the research honors program (LA 4991).

2. Work with a faculty advisor to identify and formulate a research problem. If the faculty advisor is not in the Department of Landscape Architecture, select a co-advisor from the department to ensure that the research is consistent with the field.

3. Submit a completed application and proposal (approved by the honors project supervisor and the chair of the research honors committee) no later than the end of the fourth week of the first semester of the senior year. Early submission is encouraged. These will be reviewed by ad hoc committee members, and successful thesis proposals will be submitted to the college honors committee by the sixth week.

4. Carry out an independent research effort that is original and separate from the work of others who may be investigating similar subjects.

5. Submit an outline of the thesis to the chair of the committee by the end of January for a May graduation.

6. Submit a draft to the readers by April 15. Describe and summarize the work within the range of formats used in the master's thesis program or professional journals in design or research. This version will be reviewed by the faculty supervisor and two ad hoc reviewers, and the student will be able to incorporate the committee's comments and suggestions into the final version, which will be due the last day of classes. Referees prepare a recommendation to the honors committee chair regarding the acceptability of the honors thesis.

7. Give two oral presentations to the group of other honors research students and invited faculty members. Both presentations are due during the student's senior year.

8. Send two bound copies of the completed and defended thesis to the honors committee chair by May 13.

9. Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.

10. In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor's name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts.

Natural Resources
Faculty director: J. B. Yavitt, chair
The research honors program in natural resources involves original, independent research that generates novel findings in applied ecology and resource policy and
management. Students learn how to design and carry out research under the direct supervision and guidance of a faculty member or senior research associate in the department. Most students in the program begin their research before the start of the senior year, often in the summer after their junior year. Students may enroll and receive credit in independent study (NTRES 4991 Honors Research in Natural Resources) during their honors research. The research findings are presented in a written thesis that is reviewed by two experts in the field. Many theses have been published in leading journals in the disciplinary area of the research. Although the format is not prescribed, the thesis usually consists of a short introduction, relevant materials and methods, a concise presentation of the meaningful data, a discussion, and the student’s interpretation of the conclusions. Students also give an oral presentation of their research findings in a special symposium hosted by the department in early May.

Students should adhere to the following schedule:

**Junior Year**

1. File an informal application with the faculty director. The application includes a project description and advisor information.

2. Register for NTRES 4991 before the add deadline (fall and spring).

3. March 31: Thesis should be close to completion.

4. April 15: Submit two copies of the thesis to the faculty director for ad hoc reviews.

5. May 4: Pick up ad hoc reviewers’ comments from the faculty director.

6. May 15: Submit two copies of the final thesis: one for the college, one for the program director.

7. Week of May 25: Students will be notified of the deadline, and the faculty director will recommend that each approved student graduate with “Distinction in Research.”

8. Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have these available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.

9. In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor’s name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts.

**Nutritional Sciences**

Faculty committee: Chair, J. T. Brenna

The research honors program in the Division of Nutritional Sciences provides outstanding students with an opportunity to do independent research under the supervision of a faculty member in the Departments of Biological and Environmental Engineering, Food Science, Earth and Atmospheric Sciences, or Biological Statistics and Computational Biology. In addition to meeting the requirements of the college, the student is expected to:

1. Identify a thesis advisor and thesis topic before the end of the junior year.

2. Work with the thesis advisor to prepare a budget, short research proposal (2–3 pages), and application form. These materials must be received by the Physical Sciences committee chair by the end of the third week of senior year.

3. Enroll in the program for a minimum of two semesters.

4. Enroll in the appropriate departmental undergraduate research course for a total of at least 6 credits.

5. Submit an outline of the thesis to the chair of the committee by the end of January (for a May graduation).

6. Submit a draft of the thesis to the thesis advisor with sufficient lead-time for a revision to be prepared.

7. Submit three copies of the thesis and names of recommended reviewers to the chair of the honors committee by four...
weeks before the end of classes in the semester in which graduation is expected.

8. Students may volunteer to submit electronically to the honors committee a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be available online at Mann Library can be obtained from the honors committee chair.

9. In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor's name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts. There is no required format, but the thesis is usually written in the form of a research journal article or a master's thesis. Further details of the program can be obtained from the chair of the Physical Sciences Research Honors Committee.

**Plant Sciences**

Faculty committee: R. L. Ohendorf, chair; J. A. Merwin, E. B. Nelson, F. S. Rossi, A. D’Ittommanno, M. E. Smith-Einarson. Students perform independent scientific research under the guidance of faculty members in the fields of horticultural, agronomic, and soil sciences; plant biology; plant genetics and breeding; and plant pathology. For admission to the program, students must meet college requirements and submit to the Plant Sciences Research Honors Committee a project proposal (two to three pages) that includes a title; a brief description of the problem (justification and literature review); a clear statement of objective(s) and hypotheses to be tested; methodology and experimental plan, necessary space, equipment and supplies; and a project budget. The proposal must be accompanied by a letter from the faculty supervisor stating that he or she has approved the project plan and that its completion within the remainder of the student's undergraduate tenure is feasible. A brief progress report will be made to the committee usually during the third week of the spring semester. Research presentations are recommended (e.g., Cornell Undergraduate Research Board Spring Forum, department seminars, professional meetings).

Successful completion of the research honors program requires acceptance by the honors committee of two copies of a research report. The report should be written in the format of a research publication in the appropriate scientific field. The acceptable report must have been reviewed and corrected according to the recommendations of the research supervisor before the report is submitted to the honors committee. The report must be received by the honors committee at least two weeks before the last day of classes. The last day of classes in the semester in which the degree is sought and must be accompanied by a letter from the research supervisor evaluating the research and, if appropriate, recommending graduation with distinction in research.

The research honors committee will review the report within one week and may accept it or return it to the student with specific recommendations for revisions. A suitably revised version must be submitted to the committee before the second day of the examination period. When the committee accepts an honors report, the chair will recommend to the associate dean and director of academic programs and to the college registrar that the student be graduated with distinction in research. One copy of the accepted report will be returned to the student with review comments from the committee.

Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.

In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor's name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts. Additional guidelines may be found at www.css.cornell.edu/Programs/PlantSciHon.

**Social Sciences**

Social Sciences Program Area Faculty Committee: N. Chau, chair (NetID: hyc3); A. A. Gonzalez, T. D. Park, and S. R. Fussell

**Overview**

Research projects in the social sciences include applied economics and management, communication, development sociology, education, and information science. Students are accepted into the social sciences research honors program during the second semester of their junior year. The purpose of the proposal is twofold. First, it formalizes a plan of study and establishes a set of expectations between the student and the faculty advisor. Second, the honors committee reviews the proposal to determine whether it is consistent with honors thesis requirements and to make suggestions for improvement. The proposal should be 5 to 10 typed, double-spaced pages and include the following:

1. **Research Topic**: State the problem to be studied or the topic of interest. Review the basic literature and the background of the problem or topic; include a more extensive bibliography to be consulted.

2. **Research Questions/Empirical Hypotheses**: Specify the questions to be answered or hypotheses to be tested empirically via collection of data and a mode of analysis accepted in the social sciences.

3. **Research Methods**: Discuss the models to be constructed (if any), sampling procedures, data collection procedures (including measurement instruments and survey or experimental designs, if appropriate), and proposed methods of analysis.

4. **Expected Significance**: State what new knowledge or information is likely to be forthcoming as a result of the research. State any practical applications expected as a result of the research.

Students accepted into the honors program should register for credit directed by the honors thesis faculty advisor (e.g., AEM 4991, COMM 4991, DSOC 4991, EDUC 4991).

**B. Final Submission for Review and Approval Requirements**

Honors theses should be written according to the form of any standard journal within the appropriate field. Distinction in research is awarded upon approval of the research honors thesis by the committee. Both the results of the research and the methodology (or the logical argument by which the results were achieved) must be reported. Reviews of the literature, practical conclusions or applications, or broad characterizations of an area of inquiry may constitute part of the research report but are not themselves sufficient as research.

The committee recommends the submission of the thesis draft to the research advisor two months before graduation to permit sufficient time for revision.

---

**Graduation Date** | **Proposal Due Date**
---|---
December 2010 | February 15, 2010
May 2011 | September 15, 2010
December 2011 | February 15, 2011
May 2012 | September 15, 2011
December 2012 | February 15, 2012

Students are strongly encouraged to meet with faculty during their junior year in order to identify someone to serve as their honors thesis advisor. Honors thesis faculty advisors must be members of the graduate faculty. Exceptions may be granted for persons with special expertise pending petition to the committee.

Working with their honors thesis advisor, students should begin developing their thesis proposal during the second semester of their junior year. The purpose of the proposal is twofold. First, it formalizes a plan of study and establishes a set of expectations between the student and the faculty advisor. Second, the honors committee reviews the proposal to determine whether it is consistent with honors thesis requirements and to make suggestions for improvement.

The proposal should be 5 to 10 typed, double-spaced pages and include the following:

1. **Research Topic**: State the problem to be studied or the topic of interest. Review the basic literature and the background of the problem or topic; include a more extensive bibliography to be consulted.

2. **Research Questions/Empirical Hypotheses**: Specify the questions to be answered or hypotheses to be tested empirically via collection of data and a mode of analysis accepted in the social sciences.

3. **Research Methods**: Discuss the models to be constructed (if any), sampling procedures, data collection procedures (including measurement instruments and survey or experimental designs, if appropriate), and proposed methods of analysis.

4. **Expected Significance**: State what new knowledge or information is likely to be forthcoming as a result of the research. State any practical applications expected as a result of the research.

Students accepted into the honors program should register for credit directed by the honors thesis faculty advisor (e.g., AEM 4991, COMM 4991, DSOC 4991, EDUC 4991).
Completed theses are due approximately one month before graduation.

Year Date Thesis Due Date
December 2010 November 15, 2010
May 2011 April 15, 2011
December 2011 November 15, 2011
May 2012 April 15, 2012
December 2012 November 15, 2012

One electronic copy of the final thesis (in pdf or Word format) should be sent by email to the Social Sciences program area faculty chair no later than the due date. A supporting letter from the faculty member supervising the work also must be submitted either electronically or as a hard copy.

The thesis will be independently reviewed typically by two faculty committee members within about two weeks. If further revisions are required, students will be informed and a revised draft will be requested. Students will be notified of the committee’s decision by the week of May 25.

Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.

In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor’s name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts.

OFF-CAMPUS OPPORTUNITIES

Study off campus is of two types: (1) credit may be earned at another institution and transferred to Cornell, or (2) credit may be earned in Cornell courses that require off-campus activity.

Students who plan to enroll in courses at another institution should refer to the non-Cornell credit policies on p. 43. Information about enrolling at another institution outside of the United States can be found under “Study Abroad” on p. 41.

Albany Programs

Off-campus study in Albany, the New York State capital, provides a unique opportunity to combine career interests with academic and legislative concerns. Two formalized opportunities are available. The Assembly Intern Program is offered in the spring semester and has placements with the state legislature in the Albany area. Applications are due by October 26; students should contact the director of the Capital Semester Program, Dr. Richard Canfield (capitalsemester@cornell.edu) early in the fall semester. Those accepted should plan a program of study in conjunction with their faculty advisor. At least 12 credits must be carried to meet the full-time residency requirement. To receive academic credit for the Assembly Intern Program, students enroll in ALS 3920. To receive academic credit for the Senate Assistants Program, students enroll in ALS 4960. Information and applications are available in the CALS Career Development Office, 177 Roberts Hall, or in Dr. Canfield’s office in 302 MVR Hall.

Cornell in Washington

The Cornell in Washington program offers students in all majors an opportunity to earn full academic credit for a semester in Washington, D.C. Students take part in a public policy or humanities seminar, serve as interns in federal agencies, congressional offices, or nongovernmental organizations, carry out individual research projects, and take one or two electives. The required internships and all course enrollments are arranged through, and approved by, the Cornell in Washington program. Students in the College of Agriculture and Life Sciences must register for ALS 4998 and cannot receive credit for the internship experience alone. For further information, see p. 25, inquire at M101 McGraw Hall, 255-4900, or visit cw.cornell.edu.

SEASemester

SEASemester students study the ocean from the perspectives of science, history, literature, and policy. The 17-credit program is 12 weeks in length and provides students with the opportunity to gather first-hand knowledge about the ocean, as well as practical seamanship skills. Courses are directly transferable and listed in Courses of Study under BIOSM. Students spend the first six weeks studying the sea campus in the world-renowned oceanographic community of Woods Hole, Mass. The following six weeks are spent on one of SEAs’ two 134-foot sailing research vessels in either the Atlantic Ocean/Caribbean Sea or Pacific Ocean. Four unique SEASemester programs are offered—Ocean Exploration, Oceans and Climate, Documenting Change in the Caribbean, and Sustainability in Polynesian Island Cultures and Ecosystems. SEASemester: Ocean Exploration is also offered as a 12-credit, eight-week summer program. For more information, contact Sea Education Association, P.O. Box 6, Woods Hole, MA 02543 (1-800-552-3633 x 770 or admissions@sea.edu) or visit www.sea.edu. CALS students should file an off-campus form with the college registrar as early as possible to ensure proper registration and enrollment in courses.

Shoals Marine Laboratory (SML)

The Shoals Marine Laboratory, run cooperatively by Cornell University and the University of New Hampshire, is a seasonal field station located on 95-acre Appledore Island off the coast of Portsmouth, N.H., in the Gulf of Maine. SML provides unique opportunities for undergraduate students and scientists in a setting noted for its biota, geology, and history. Please refer to “Courses in Marine Science,” in the section Shoals Marine Laboratory (BIOSM), for a list of courses offered.

For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, 255-3717, or visit www.sml.cornell.edu.

Internships

Several departments in the college offer supervised internships for academic credit. Internships may be granted for pay and/or credit with a limit of up to 3 credits per internship and no more than 6 credits total allowed for internships consisting of off-campus work experiences that do not have the continued presence of a Cornell faculty member. The number of credits awarded should reflect the amount of knowledge gained per internship and/or following the CALS guidelines for assigning credits. The 6-credit allotment includes transfer credit and credit from other internships in other colleges at Cornell. The 6-credit limit does not apply to secondary, post-secondary, and Cooperative Extension teaching internships in the Department of Education. The awarding of credit will not be allowed in cases where a student brings to the college or to a professor a description of a past experience and requests credit. Note that a maximum of 15 (prorated for transfer students) of the 120 credits required for the degree may be taken in internships, independent study courses, and undergraduate teaching or research. For internships not governed by an established internship course, the student must enroll in a 4970-level course for the number of credits assigned.

To ensure a fair and manageable system to deal with internships, the College of Agriculture and Life Sciences has set forth guidelines to serve as minimum requirements for a student to receive internship credit:

1. Credit will be assigned or accepted only in cases in which a Cornell faculty member is directly involved in determining both the course content and in evaluating the student’s work.

2. The internship should be purposeful, provide opportunities for reflection, present a continual challenge to the student, and incorporate active learning, with the student an active participant in all stages of the experience from planning to evaluation.

3. Before a student begins the internship, a learning contract needs to be written between the Cornell faculty internship advisor on campus, the supervisor at the location, and the student. This contract should state the conditions of the work assignments, supervisor, learning goals, number of credits, and methods of evaluation of the work. A contract form can be obtained from the college Registrar’s Office, or departments may have their own.

4. Students should further develop the internship experience based on the college Experiential Learning Criteria, which can be found at cals.cornell.edu/cals/teaching/elr.

5. Students need to keep their faculty internship advisor updated on the progress of the internship while off campus.
Arrangements should be made with the offering department for assignment of a faculty mentor for planning the program of work and for evaluating student performance. Individual departments may add more requirements to the internship based on specific needs such as time constraints, faculty workloads, and the relationship of the internship to the goals of the department. The specific terms of the contract should be recorded, using the independent study, research, teaching, and internship form, available in 140 Roberts Hall.

**Pay and Credit for Undergraduate Research, Teaching, and Internships**

Research: students can receive pay or credit or they can partition it so that they receive pay for part of the research and credit for the other as long as the work does not overlap.

Undergraduate Teaching Assistant: students can receive either pay or credit, but they cannot partition it.

Internships: students may receive both pay and credit for the same internship experience.

**Study Abroad**

Each year nearly 200 CALS undergraduates spend a semester or year studying abroad. Students enroll directly in universities in Australia, participate in fieldwork in Africa, or explore the wonders of a foreign city while participating in an internship. CALS recognizes that students study abroad for a variety of reasons and, as a result, offers a great deal of choice for its students. Students may want to study abroad to broaden their worldview, boost employment prospects, learn a new language, gain independence, discover a new educational system, or all of the above! A variety of options is available. Students can choose from:

- a CALS international exchange program comprised of unique, one-to-one agreements with prestigious universities around the world. For a list of the programs available, visit [https://confluence.cornell.edu/x/4ic_BQ](https://confluence.cornell.edu/x/4ic_BQ);
- a study abroad program through the Cornell Abroad office;
- an international study tour as part of a CALS course, or a summer program.

CALS students participating in an exchange program pay only their Cornell tuition, with no additional administrative fees.

Study abroad opportunities offered through the Cornell Abroad office are vast, ranging from a traditional university in London to field study in Africa. For specific program advising, visit its office in 300 Caldwell Hall or go to [www.cubroad.cornell.edu](http://www.cubroad.cornell.edu).

Whether participating in a CALS exchange or a program through Cornell Abroad, all CALS students interested in studying abroad must attend a CALS Study Abroad 101 session and receive approval from their faculty advisor and the college. College policies can be viewed at [www.cals.cornell.edu/cals/current/abroad-exchange/index.cfm](http://www.cals.cornell.edu/cals/current/abroad-exchange/index.cfm).

**Ithaca College and Wells College Exchange Programs**

The Cornell University–Ithaca College Exchange Program is a reciprocal arrangement that allows matriculated full-time students, with prior approval and within stated stipulations, to cross-register at the other institution. No additional tuition is charged except in the case of undergraduate students enrolled during any one semester for a total of more than 18 credits (Cornell and Ithaca College combined). Those students are subject to additional tuition charges on a per-semester basis. This arrangement is available during the fall and spring semesters only and is contingent upon space availability. A maximum of 12 credits may be taken through this program.

Cornell University also has a reciprocal arrangement with Wells College in Aurora, NY. For further information, contact the Cornell School of Continuing Education office, B20 Day Hall, 255-4987, or on the web at [www.sce.cornell.edu/exmu](http://www.sce.cornell.edu/exmu).

**GRADUATION REQUIREMENTS FOR THE BACHELOR OF SCIENCE**

**Graduation Requirements**

1. **Credit Requirements**

   A. Minimum total credits: 120 academic credits are required for graduation.

   **Important Exceptions:**

   - Repeated courses increase the number of credits required for graduation by the number of credits in the course. These credits do not count toward the minimum 12 credits required for full-time status.
   - Review or supplemental courses (e.g., 1000- to 1099-level) increase the number of credits required for graduation by the number of credits in the course. These credits do not count toward the minimum 12 credits required for full-time status.
   - Physical education courses do not count toward 120 credits for graduation. They do not count toward the minimum 12 credits required for full-time status.

   B. Minimum credits at Cornell: 60 academic credits must be successfully completed at Cornell.

   C. Maximum non-Cornell credits: 60 non-Cornell credits (AP, CASE, IB, GCE, transfer, Cornell Abroad, and exchange credits) can be applied toward degree requirements. A first-year student is able to earn up to 30 non-Cornell credits before his or her first semester in CALS.

   D. Minimum credits from College of Agriculture and Life Sciences: 55 CALS credits are required for graduation. CALS credits include all courses from departments within CALS and courses offered in the Biological Sciences, Earth and Atmospheric Sciences, Information Science, and Nutritional Sciences Departments. Specifically, courses offered under the following subject prefixes are counted as CALS credits: AGSCI, AIS, ALS, AEM, AINS, BEE, BIOG, BIBIO, BLOM, ENTOM, FDSM, HORT, IARD, INFO, LA, NS, NTRES, PLBI, PLPA, SNES, VIEN.

   E. Minimum letter-graded credits: 100 (prorated based on non-Cornell credits).*

   F. Maximum credits earned through independent study, research, teaching assistantships, and/or internships: 15 credits of “unstructured” course work can be applied toward graduation requirements (prorated based on non-Cornell credits) (i.e., a minimum of 100 “structured” credits are required for graduation).

   *The prorated formula is available at [www.cals.cornell.edu/current/Registrar](http://www.cals.cornell.edu/current/Registrar).

2. **Physical Education Requirement**

   A. Pass two PE courses with a satisfactory grade.

   Exception: External transfer students are credited with one course of physical education for each semester previously enrolled full-time (12 or more credits) at another college before matriculation.

   B. Pass a required swim test, administered during orientation. External transfer students who are exempt from PE are exempt from the swim test.

   C. Students are expected to complete the physical education requirement in their first two semesters at Cornell.

3. **Residency Requirements**

   A. Eight semesters of full-time study are expected. Transfer students are credited with one semester in residence for each 15 credits earned at another institution.

   B. Internal transfer students must be enrolled in CALS for at least two semesters.

   C. The final semester before graduation must be completed in a Cornell program as a full-time student.

   D. Students in the ninth and final semester may apply for prorated tuition. The eligibility criteria are listed below. The student will be charged by credit hour (student’s tuition/12 academic credits = charge per credit hour).

   All of the following conditions must be met in order for a student to be considered for prorated tuition:

1. The prorated semester is the ninth and final semester of study.

2. The student is in good academic standing with the college and the major.

3. Maximum of 9 credit hours of course work are allowed under prorated tuition. Students cannot exceed the number of credits approved or full tuition will be charged, and no refund will be allowed if fewer credits than applied for are completed.

4. Approval of the student’s faculty advisor, the college registrar, and the university registrar is required for all requests. Note that approval is conditional until grades are finalized at the end of the semester immediately preceding the prorated semester. Should those grades indicate that more than the requested number of prorated tuition credits are required for graduation, prorated tuition will be adjusted accordingly.

5. Students applying to be prorated in the fall semester are encouraged to submit the application by May 1. The final deadline is June 1. Students applying to...
be prorated in the spring semester are encouraged to submit the application by December 15. The final deadline is January 15.

Please be advised that prorated tuition may impact the student’s financial aid, student loans, scholarships, non-Cornell health insurance programs, athletic eligibility, or other considerations. It is the responsibility of the student to resolve and rectify these situations prior to submitting this petition.

4. Grade-Point Average (GPA) Requirements

Minimum cumulative GPA: 2.00 or above must be maintained. The cumulative GPA includes all grades earned at Cornell.

5. Schedule Requirements

A. Students are expected to enroll in at least one S/U course each semester until 55 CALS credits have been earned.
B. Freshmen may not enroll in more than 18 credits, not including physical education.
C. Freshmen are limited to one S–U course per semester.
D. PE and supplemental course work do not count toward the 12-credit minimum required for full-time status.
E. Students wishing to enroll in more than 18 academic credits must manually add course work through an add/drop slip. The add/drop slip must have the advisor’s signature.

6. Distribution Requirements

The purpose of the distribution requirement is to provide a broad educational background and to ensure a minimum level of competency in particular skills. Through study of the physical and life sciences, students develop their understanding and appreciation of the physical sciences, enhance their quantitative reasoning skills, and gain an appreciation of the variability of living organisms. The social sciences and humanities give students perspective on the structure and values of the society in which we live, and prepare them to make decisions on ethical issues that will affect their work and role in society. Written and oral expression is designed to help students become competent and confident in the use of oral and written communication to express themselves and their ideas.

Please note: Credits received for independent study, field, teaching, research, work experience, and internships cannot be used to fulfill the distribution requirement. Courses that are review or supplemental in the discipline, such as 1000- to 1099-level courses, will not be counted in the distribution areas.

For a comprehensive search engine of the college distribution requirements, please log into DUST (https://dust.cals.cornell.edu) with your NetID and password. Click on “Find Courses for the Distribution Requirements.”

Physical and Life Sciences. 18 credits in at least three disciplines with a minimum of 6 credits in introductory biology, and a minimum of 3 credits in chemistry or physics.

Biological Sciences. The following courses can be taken to complete the minimum 6 credits of introductory life sciences/biology. Students double majoring must fulfill the requirements of both majors:

- Biological Sciences majors: All freshmen entering in fall 2010 must complete BIOG 1500 and two of the following core biology courses: BIOG/Biomg 1350, BIOG/Biomg 1440, and/or BIOE/BIOE 1610. Please note: AP Biology cannot be used to fulfill the introductory biology requirement for the Biological Sciences major.
- Life-Sciences majors (Agricultural Science Education, Agricultural Sciences, Animal Science, Atmospheric Sciences, Biology & Society, Biometry and Statistics, Entomology, Food Science, Horticulture, Interdisciplinary Studies, International Agriculture and Rural Development, Natural Resources, Nutritional Sciences, Plant Sciences, Science of Earth Systems, Viticulture and Enology): Consultation with your advisor on the best selection/sequence of courses is recommended as some courses may be more appropriately suited for your major. BIOG 1105 (or BIOG 1140–116), BIOG/Biomg 1350, BIOG 1500, and/or BIOE/BIOE 1610. HORT 1115, BION 1200, BIOSM 1110 (summer). Courses will be added throughout the year as they are approved. Please refer to the following web site for the most up-to-date courses that will meet this requirement: www.cals.cornell.edu/cals/current/Registrar/current-students/cals-graduation/lifebio.cfm.

Chemistry/Physics. Courses to complete the minimum 3 credits of chemistry/physics:

- All courses with a CHEM and/or PHYS prefix (excluding courses that are supplemental, independent study, research, TA, internship, and First-Year Writing Seminar).

Social Sciences and Humanities. Students must complete four courses of 3 or more credits each from the following seven categories of courses in the humanities and social sciences.

- At least one course must be completed from three different categories.
- No more than two courses in the same department will be counted toward the distribution requirement.
- For freshmen entering in fall 2009 or later and transfer students entering in fall 2010, one course must be in the human diversity (D) category.

A list of courses that can be applied toward the humanities and social sciences distribution can be found on https://dust.cals.cornell.edu/DUST/SearchCourses.aspx.

Categories:

- Cultural Analysis (CA)
- Human Diversity (D)
- Historical Analysis (HA)
- Knowledge, Cognition, and Moral Reasoning (KCM)
- Literature and the Arts (LA)
- Social and Behavioral Analysis (SBA)
- Foreign Language (FL)

Detailed descriptions follow.

Social Sciences and Humanities: Category Descriptions

Cultural Analysis (CA)

These courses study human life in particular cultural contexts through interpretive analysis of individual behavior, discourse, and social practice. Topics include belief systems (science, medicine, religion), expressive arts and symbolic behavior (visual arts, performance, poetry, myth, narrative, ritual),
identity (nationality, race, ethnicity, gender, sexuality), social groups and institutions (family, market, community), and power and politics (states, colonialism, inequality).

**Historical Analysis (HA)**

These courses interpret continuities and changes—political, social, economic, diplomatic, religious, intellectual, artistic, scientific—through time. The focus may be on groups of people, dominant or subordinate, a specific country or region, an event, a process, or a time period.

**Knowledge, Cognition, and Moral Reasoning (KCM)**

These courses investigate the bases of human knowledge in its broadest sense, ranging from cognitive faculties shared by humans and animals such as perception, to abstract reasoning, to the ability to form and justify moral judgments. Courses investigating the sources, structure, and limits of cognition may use the methodologies of science, cognitive studies (e.g., linguistics, or philosophy). Courses focusing on moral reasoning explore ways of reflecting on ethical questions that concern the nature of justice, the good life, or human values in general.

**Literature and the Arts (LA)**

These courses explore literature and the arts in two different but related ways. Some courses focus on the critical study of artworks and on their history, aesthetics, and theory. These courses develop skills of reading, observing, and hearing and encourage reflection on such experiences; many investigate the interplay among individual achievement, artistic tradition, and historical context. Other courses are devoted to the production and performance of artworks (in creative writing, performing arts, and media such as film and video). These courses emphasize the interaction among technical mastery, cognitive knowledge, and creative imagination.

**Social and Behavioral Analysis (SBA)**

These courses examine human life in its social context through the use of social scientific methods, often including hypothesis testing, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to interpersonal relations between individuals (e.g., in friendship, love, conflict) to larger social organizations (e.g., the family, society, religious or educational or civic institutions, the economy, government) to the relationships and conflicts among groups or individuals (e.g., discrimination, inequality, prejudice, stigmas, conflict resolution).

**Foreign Language (FL)**

These courses are taught by the following departments: Africana Studies and Research Center (ASRC—language only), Asian Studies (BENG, BURM, CHIN, HINDI, INDO, JAPAN, KHMER, KOREA, SANSK, TAG, THAI, and VIET), Classics (CLASS—language only), German Studies (GERST—language only, DUTCH, and SWED), Linguistics (LING—languages only), Near Eastern Studies (NES—languages only), Romance Studies (CATAL, FREN, ITAL, PORT, QUECH, and SPAN), and Russian Studies (RUSSA, HUNGR, POLSH, SEBCR, and UKRAIN).

**Human Diversity (D)**

These courses address several of the college’s stated goals for undergraduate education, specifically, the expectation that in the course of earning a degree, students will enhance their abilities to communicate with people of different cultural perspectives; to listen carefully and respectfully to the views of others, especially views with which they disagree; and to employ ethical reasoning in judging ideas, actions, and their implications. These courses explore the challenges of building a diverse society, and/or examine the various processes that marginalize people and produce unequal power relations in terms of race, nationality, ethnicity, sexuality, religion, gender, age, or economic status. This requirement cannot be completed with transfer credit.

**Written and Oral Expression.** 9 credits total, of which at least 6 must be in written expression. Oral expression is not required by the college (it may be for some majors); all 9 credits may be in written expression. Courses in written and oral expression may be selected from the following: Oral Expression

- COMM 2010
- ENTOM 1350
- Written Expression
- First-Year Writing Seminars
- AEM 1000
- COMM 2310, 2630, 3520, 3600
- ENGL 2800, 2810, 2880, 2890, 3820–3850, 3880, 3890
- LA 2150
- SOC 3620

**7. Quantitative Literacy Requirement**

Faculty legislation requires minimum competency in quantitative literacy to complete a degree in the College of Agriculture and Life Sciences. This requirement can be satisfied in one of three ways:

- Earning a score of 4 or 5 on the AP Calculus exam or the AP Statistics exam;
- Transferring an approved calculus or statistics course with a grade of “C” or better;
- Taking an approved math or statistics course at Cornell.

A complete listing of approved math and statistics courses is available online at www.cals.cornell.edu/current/registrar. Pre-approval forms are available in CALS Registrar’s Office.

**Non-Cornell Credit Policies**

1. Non-Cornell credit includes:
   - advanced placement credit (see p. 8 for further details);
   - credit earned at an accredited college or university;
   - credit earned through the Ithaca College and Wells College Exchange Programs;
   - credit earned through a Cornell Abroad or CALS exchange program.

2. Non-Cornell credit is accepted by CALS when:
   - the credits are earned at an accredited institution;
   - the credits do not duplicate course work already completed at Cornell;
   - the credits are earned before matriculating into CALS (30-credit maximum), or during the summer or winter session, or through Cornell Abroad, or an approved exchange program;
   - the credits have not been applied toward high school graduation requirements (except for AP exam credit, see p. 8);
   - the grade earned is “C” or better; and
   - an official transcript is sent directly to the CALS Registrar’s Office from the college/university where the credits were completed.

Please note: Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the college provides a transcript for such work. Students who have taken such courses may, however, earn credit by taking an appropriate examination as described on pp. 9–12 of this catalog. For CALS-specific policies, see College Credit Earned While in High School.

3. A student may apply a maximum of 60 non-Cornell credits toward his or her graduation requirements.
   - If more than 60 non-Cornell credits have been completed, the CALS Registrar’s Office will work with the student to determine which credits best fulfill CALS graduation requirements.
   - Advanced placement credits (this includes all non-Cornell credit earned before a student’s first semester in CALS) are limited to 30 credits.
   - Cornell Abroad (not CALS exchange) credits are limited to 15 credits per semester, 30 per academic year.

4. Non-Cornell credits are recorded on the graduation summary and can be applied toward CALS credits, distribution requirements, and major requirements.
   - Non-Cornell courses that are similar to courses offered in CALS are recorded as CALS credits on the graduation summary and count toward the minimum of 55 CALS credits required for graduation.
   - Non-Cornell courses that are equivalent to Cornell courses that fulfill distribution requirements are recorded under the appropriate distribution area on the graduation summary.
   - Non-Cornell courses that are equivalent to endowed courses can be applied toward distribution requirements or general electives; however, these credits do not count against the minimum of 55 endowed credit hours.
   - If a course has no comparable course at Cornell, staff in the CALS Registrar’s Office determine how the credit should be applied.
2. Students who have been in residence for 1. The progress of each student toward
1 year or more are considered matriculated students who have taken courses that do not
offered by the department (described on p.
meet transfer requirements may earn credit
6. Both the college form and high school
Students who have already matriculated
school years up to 30 non-Cornell credits will
transcript.
5. Students who have already matriculated
graduation summary online at https://
both Cornell and another institution only
at Cornell. (Schedule conflicts or
transcripts. It is the student's responsibility to
CALS Registrar's Office, 140 Roberts
met:
Students can be enrolled in courses at
met: Hall.
6. During the regular academic year,
if the student is taking a course not
school must be a satellite location, one of

College Credit Earned While in High
School
if a student is enrolled in a college or
university course during his or her high
school years up to 30 non-Cornell credits will
be given only if all the following criteria are
met:
1. Course cannot be used to fulfill high
school graduation requirements.
2. Course/section must be a standard course
available to all students registered in the
college.
3. If taught in a high school, the high
school must be a satellite location, one of
several options available to all students
taking the course.
4. Instructor must be a faculty member
(includes adjunct) at the offering college.
5. An official transcript must be sent to the
CALS Registrar's Office by the offering
institution. It is the student's
responsibility to request an official transcript.
6. Both the college form and high school
form must be provided to confirm that all
credit earned in high school meets these
criteria. It is the student's responsibility to
request that the college and high school
complete these forms. Forms are available in the
CALS Registrar's Office, 140 Roberts Hall.
Each condition must be met for credit to be
accepted.

Students who have taken courses that do not meet transfer requirements may earn credit
by taking an appropriate CASE examination
offered by the department (described on p.
8).

Graduation Procedures
1. The progress of each student toward
meeting the degree requirements is
recorded each semester in the CALS
Registrar's Office on a graduation
summary. Students can review their
graduation summary online at https://
dust.cals.cornell.edu under degree
progress.
2. Students who have been in residence for
eight semesters and who have met the
graduation requirements will be
graduated. Students are expected to
attend for the full eight semesters even if
they have completed the graduation
requirements in fewer semesters. A
student who wishes to either graduate
early or delay graduation must complete
an additional application with the CALS
Registrar’s Office.
3. Application to graduate. In a student's
final fall semester, he/she must complete
and file an application to graduate with
the CALS Registrar's Office.

Requirements on the Application (including
the student, listing any outstanding
requirements on the application (including
courses in which the student is currently
enrolled); and answer any student questions
regarding major requirements.

CALS Registrar's Office Responsibilities:
It is the responsibility of the CALS Registrar's
Office to update the graduation summary of
students before each student's final fall
semester. The CALS Registrar's Office staff is
available to review degree requirements
during walk-in hours and by appointment.

Commencement Information:
Commencement information will be
provided to all graduating seniors directly by
the Commencement Office. Information is also
available at www.commencement.cornell.edu.

ACADEMIC POLICIES AND
PROCEDURES

Registration
All students must register with the university
at the beginning of each semester. In order to
be considered a registered student by the
university, a student must:
• complete course enrollment according
to individual college requirements;
• settle all financial accounts, including
current semester tuition;
• clear any holds, whether these are from
the Bursar's Office, Gannett Health
Services, the judicial administrator, or the
dean of his or her college; and
• satisfy New York State health
requirements.

Students can check their registration status
using Student Center. The first screen in
Student Center will indicate whether a
student is registered and will list any holds
that need to be cleared, including the correct
office to visit to have the holds removed.
Students are expected to register by the fifth
week of the semester. Failure to register may
result in termination of Cornell services such
as, but not limited to, library access, meal
plans, door access, Blackboard, and bus
service. Students may be considered
withdrawn by the college. Only registered
students are entitled to attend classes and
have access to services.

Course Enrollment
Students will receive course enrollment
information from the university registrar.
After planning a schedule of courses in
consultation with their faculty advisor,
students will pre-enroll in Student Center
during their scheduled appointment time.
To enroll in courses that involve independent
study, teaching, internships, or research, a
student must file an independent study form,
available in the CALS Registrar's Office, 140
Roberts Hall.

Repeated Courses
Students may enroll again for a course in
which they received a grade of F in a
previous semester. Both grades will be
recorded and calculated as part of their
cumulative GPA. If the student retakes a course
in which a passing grade was earned, both
grades will be recorded and calculated as
part of their cumulative GPA. However, repeating a course increases the number of
credits required for graduation by the number
of credits in the course.

Incompletes
Students must not enroll again for a course in
which they received an incomplete. Instead,
work for that course should be completed
without further enrollment. The instructor
files a manual grade form with the college
registrar when a grade has been assigned. An
incomplete not made up by the end of two
successive semesters of residence reverts to a
failure. In the case of a graduating senior,
incompletes revert to failures at the time of
graduation.

Enrollment Changes
A student is held responsible for and receives
a grade for those courses in which he or she
enrolls unless the student officially changes
such enrollment. All changes in courses or
credit, grading options, or sections must be
made by the student using the online add/
drop through Student Center or the official
course add/drop form at the CALS Registrar's
Office, 140 Roberts Hall. Approval of the
faculty advisor may be required to change
course enrollment. Department or course
instructor approval may be required for select
courses.

Students may add courses and change
grading options or credit hours where
applicable during the first three weeks of the
Academic Integrity Policy

The College of Agriculture and Life Sciences faculty, students, and administration support and abide by the University Code of Academic Integrity. Its principle is that absolute integrity is expected of every student in all academic undertakings: students must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student’s failure to maintain academic integrity.

The maintenance of an atmosphere of academic honor and the fulfillment of the provisions of the code are the responsibility of the students and the faculty. Therefore, all students and faculty members shall refrain from any action that would violate the basic principles of this code.

1. Students assume responsibility for the content and integrity of their submitted work, such as papers, examinations, or reports.
2. Students are guilty of violating the code if they
   a. knowingly represent the work of others as their own.
   b. give fraudulent assistance to another student.
   c. fabricate data in support of laboratory or field work.
   d. forge a signature to certify completion or approval.
   e. submit the same work for two different courses without advance permission.
   f. knowingly deprive other students of library resources, laboratory equipment, computer programs, or similar aids.
   g. in any other manner violate the principle of absolute integrity.
3. Faculty members assume responsibility to make clear to students and teaching assistants specific regulations that apply to scholarly work in a discipline.
4. Faculty members fulfill their responsibility to
   a. maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor.
   b. make clear the conditions under which examinations are to be given.
   c. make clear the consequences of violating any aspects of the code.
   d. provide opportunities for students to discuss the content of courses with each other and help each other to master that content and distinguish those activities from course assignments that are meant to test what students can do independently.
   e. state explicitly the procedures for use of materials taken from published sources and the methods appropriate to a discipline by which students must cite the source of such materials.
   f. approve in advance, in consultation with other faculty members, which work submitted by a student and used by a faculty member to determine a grade in a course may be submitted by that student in a different course.
   g. monitor the work and maintain such records as will support the crucial underpinning of all guidelines: the students’ submitted work must be their own and no one else’s.

Cornell’s Code of Academic Integrity spells out how individuals who have allegedly violated Cornell standards for academic integrity are to be confronted and, if found to be in violation of those standards, sanctioned. The code provides informal resolution of most perceived violations through a primary hearing between the faculty member, the student involved, and an independent witness. If necessary, a hearing before a hearing board follows. The full code may be found at http://cunfco.cornell.edu/Academic/AIC.html.

The Academic Integrity Hearing Board for the College of Agriculture and Life Sciences consists of three elected faculty members, three elected student members, a chair appointed by the dean, and the director of counseling and advising, who serves as a nonvoting record keeper. Professor Dale Grossman is the current chair.

Individuals who observe or are aware of an alleged violation of this code should report the incident to the faculty member in charge of a course or to the chair of the hearing board. General information and details on procedures for suspected violations or hearings are available from the Counseling and Advising Office, 140 Roberts Hall.

Academic Honors

The college encourages high academic achievement and recognizes outstanding students in several ways:

1. Dean’s List. Each semester, students are recognized for academic excellence by inclusion on the Dean’s List. Eligibility for the Dean’s List in the College of Agriculture and Life Sciences is determined by the following criteria:
   a. a minimum course load for the semester of 12 letter-graded credits;
   b. completion of at least one CALS course;
   c. achievement of a semester GPA of at least 3.50; and
   d. achievement of an S grade, or a C- or better grade in each course (including physical education), with no incompletes.Dean’s List will be granted retroactively if students meet all the requirements after successful course completion to make up INC grades.
2. Bachelor of Science with Honors
   a. Students receiving a cumulative GPA of 4.00 or greater (based on the cumulative Cornell GPA) will graduate “summa cum laude.”
   b. Students receiving a cumulative GPA of greater than or equal to 3.75 and less than 4.00 (based on the cumulative Cornell GPA) will graduate “magna cum laude.”
   c. Students receiving a cumulative GPA of greater than or equal to 3.50 and less than 3.75 (based on the cumulative Cornell GPA) will graduate “cum laude.”

3. Bachelor of Science with Distinction in Research. Students will graduate with a bachelor of science degree with distinction in research when, in addition to having completed all the graduation requirements, they have satisfactorily completed the honors program in their area of interest and have been recommended for the degree by the honors committee of that area. Special requirements are given on p. 35 in the section titled Research Honors Program.

4. Ho-Nun-De-Kah, founded in 1929, is the undergraduate honors society of the College of Agriculture and Life Sciences. Members are recruited from the top 20 percent of the senior class and top 15 percent of the junior class. In keeping with the ideals of encouraging scholarship, leadership, and citizenship, members provide free tutoring and a variety of service activities to both the college and the community. Visit Ho-Nun-De-Kah’s web site at www.rso.cornell.edu/hndk.

5. Golden Key is an international honor society that recognizes and encourages scholastic achievement and excellence in all undergraduate fields of study. Juniors and seniors in the top 15 percent of their class are invited to membership. Visit Golden Key’s web site at www.rso.cornell.edu/gkhs.

Academic Standing

At the end of each semester, the Committee on Academic Achievement and Petitions reviews the records of those students who in any respect are failing to meet the academic requirements of the college or who persistently fail to attend classes. For students not making satisfactory progress, the committee takes appropriate action, including, but not limited to, issuing warnings, placing students on probation, granting students leaves of absence, advising students to withdraw, or suspending or expelling students.

Specifically, the committee considers as possible cause for action failure to attend and participate in courses on a regular basis or, at the end of any semester, failure to attain one or more of the following:

a. semester GPA of at least 2.00
b. cumulative GPA of at least 2.00
c. satisfactory completion of 12 or more credits per semester
d. reasonable progress toward completion of major and distribution requirements

In general terms, regular participation in course work with academic loads at a level sufficient to assure graduation within eight semesters and grades averaging C (2.00) or higher are prima facie evidence of satisfactory progress and good academic standing.
**Petitions Procedures**
The Committee on Academic Achievement and Petitions is a college committee of six faculty and two student members. On behalf of the faculty, the committee

- reviews, at the end of each semester and at other times as shall seem appropriate to the committee, the progress of students toward meeting graduation requirements;
- receives and acts on petitions from individual students asking for exceptions from particular academic regulations or requirements of the college, or for reconsideration of action previously taken by the committee;
- acts on readmission requests from persons whose previous enrollment was terminated by the committee;
- notifies the petitioner in writing of the action taken by the committee.

A petition for exemption from a college academic requirement or missed deadline may be filed by any student who has grounds for exemption. A petition is usually prepared with the assistance of a student’s faculty advisor, whose signature is required. The advisor’s recommendation is helpful to the committee. The committee reviews the written petition and determines whether there is evidence of mitigating and unforeseen circumstances beyond the control of the student that would warrant an exemption or other action.

Students wishing to withdraw from a course after the end of the seventh week must petition. Requests for course changes are approved only when the members of the committee are convinced that unusual circumstances are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total workload, and scheduling prior to stated deadlines. A grade of W (for “withdrawal”) is recorded on the transcript if a petition to drop a course is approved after the end of the seventh week of classes and if an approved drop results in fewer than 12 credits.

Forms are available in the Counseling and Advising Office, 140 Roberts Hall. Counselors are available to assist with the process.

**Leave of Absence**
A student taking a break from studies in a future semester or who finds it necessary to leave the university before the end of a semester should submit a written petition for a leave of absence. Such action serves as appropriate notification to university offices and corrects the student’s transcript.

An approved leave is considered a voluntary interruption in study and holds the student’s place in the college without requiring reapplication to the university. Voluntary leaves are issued in two ways: unrestricted for students in good academic standing (no restrictions placed on length of leave up to five years, or activities pursued, and simple notification by student of intent to return), and restricted (length of leave and activities pursued may be specified, and a petition to return must be approved by the Committee on Academic Achievement and Petitions). A leave exceeding five years will require additional paperwork.

Information and petition forms are available in the Counseling and Advising Office, 140 Roberts Hall.

**Withdrawal**
A student who wishes to leave the university permanently should file a petition for withdrawal. Such petitions are approved if the student is in good academic standing. Students who have withdrawn and who later decide to return must apply to the CALS Admissions Office.

**Major Fields of Study**
The college curriculum consists of 24 major program areas that reflect the departmental academic effort in the college. Faculty curriculum committees in each area identify a sequence of courses appropriate to all students studying in that field. Courses of study are designed to provide systematic development of basic skills and concepts as well as critical thinking. Opportunity for concentration in an area of particular interest is usually available.

Programs are planned with considerable flexibility, allowing students to prepare for careers, graduate work, professional opportunities, and the responsibilities of educated citizens. Course requirements in each program area are different, but all students must meet the minimum distribution requirements of the college.

**Agricultural Sciences**
Agriculture is an exciting and dynamic field involving a wide range of disciplines. The Agricultural Sciences major trains students to be broad thinkers who are scientifically skilled and knowledgeable about socio-economic issues related to agriculture and the environment. This interdisciplinary program is for students wishing to pursue a general education in agriculture to prepare for careers that require knowledge of food systems and natural resources. Such careers may include the production and marketing of plant/animal foods, agricultural education in secondary schools, organic farming, cooperative extension, and crop consultation. By providing students with focused categories of courses from which to choose, the Agricultural Sciences program is designed to allow students to work with their advisor in developing a curriculum that best fits the needs of each individual. The program allows students to focus on one or two areas of concentration while gaining a broad exposure to the agricultural courses across the college.

All students are required to take the core courses in sustainable agriculture, soil science, and integrated pest management, as well as gain practical experience by completing an internship and a “hands-on” experiential learning capstone course addressing real problems in agricultural science. Concentrations requiring at least 12 credits are available in Animal Science, Applied Economics and Management, Education and Communication, Crop Production and Management, and Sustainable Agriculture.

Students graduating with an Agricultural Sciences major will be trained to address complex global agricultural issues of today and will have a knowledge base that leads to employment in a variety of fields. The required emphasis on one or two concentration areas also allows students to become experts in the area of agriculture that is most exciting to them.

Since students in the Agricultural Sciences program come from across the college, we create a family of students who take courses, study, learn, and discuss together as a group. We do this by organizing activities that facilitate learning in an interdisciplinary setting, such as inviting guest speakers from various sectors of the agricultural industry to lead discussions, offering professional development workshops to train students for the workforce, and hosting social events for students in the major. Opportunities are also available in research and outreach experiences, and in summer employment, which serve to enrich the students’ practical experience.

**Animal Sciences**
The Animal Sciences program area offers a coordinated group of courses dealing with the principles of animal genetics, nutrition, physiology, management, and growth biology. Emphasis in subject matter is directed toward domestic animal species, dairy and beef cattle, horses, poultry, pigs, and sheep, while laboratory, companion, and exotic animal species are also included in research and teaching programs. The Department of Animal Science has extensive facilities for animal production and well-equipped laboratories and classrooms, including a teaching barn, in which students can gain practical experience in the care and management of large animals.

The program focuses on the application of science to the efficient production of animals for food, fiber, and pleasure and easily accommodates a variety of interests and goals. Beyond a core of basic courses (suggested minimum, 15 credits) students select production and advanced courses to fulfill an individualized program that has worked out in consultation with their advisor. In this way it is possible to concentrate by species as well as by subject matter (nutrition, physiology, growth biology, breeding, management). For each subject area, supporting courses in other departments are readily available and strongly encouraged.

Many science-oriented students elect a program emphasizing supportive preparation in the physical and biological sciences appropriate to graduate, veterinary, or professional study following graduation. Dairy management is a popular program among students who may be interested in managing a dairy business or enter a related career. Other students may elect a program oriented toward economics and business in preparation for a career in the poultry, dairy, meat-animal, horse, feed, or meats industry. These are examples of the flexibility within these programs that can be developed to meet a student’s career interest related to animals.

It is recommended that students obtain appropriate fieldwork or animal experience during summers. Several special training opportunities exist for highly motivated students. Juniors and seniors whose academic records warrant it may, by arrangement with
individual faculty members, engage in research (either for credit or honors) or assist
with teaching (for credit). The Dairy Management Fellows Program offers an
equally challenging but different type of experience for a select group of students.

Students declaring a minor in animal science will arrange for a faculty advisor in
animal science at least three semesters before graduating. It is expected that the minor will
be satisfied by completing at least 12 credit hours of animal science courses (at least 6 of
which must be taken at Cornell), the makeup of which will be determined in consultation
with the advisor. For example, it is recommended that students completing the
minor will assemble courses (or demonstrate having the equivalent from elsewhere)
including some basic and applied biology of animals (anatomy, physiology, nutrition,
genetics) along with a selection of intermediate or advanced offerings from the
animal science curriculum. Satisfactory completion of minor requirements will be
verified by the minor advisor’s signature on the petition to graduate.

For information, contact Deloris Bevins in 149
Morrison Hall, dbg1@cornell.edu.

**Applied Economics and Management**

The Department of Applied Economics and Management (AEM) offers programs in
general business, agribusiness, and applied economics. Its undergraduate degree is
accredited by AACSB International—The Association to Advance Collegiate Schools of
Business. Ten areas of specialization are offered in AEM: Accounting, Agribusiness
Management, Applied Economics, Entrepreneurship, Environmental and Resource
Economics, Finance, Food Industry Management, International Trade and
Development, Marketing, and Strategy.

**Minors**

Through the Department of Applied Economics and Management, CALS students may complete a minor program of study in
one of five different subject areas: Agribusiness Management, Business,
Entrepreneurship, Environmental and Resource Economics, Applied Economics, and International Trade and
Development. The minors consist of at least 18 credits of required course. Students should contact the Department of Applied Economics and Management for more
detailed information and to enroll in one of these minor programs of study. These minors
are not open to students outside CALS. For those lacking time to incorporate all the
minor requirements during the regular school year, up to three of the required courses can be taken during summer session.

**Atmospheric Science**

Atmospheric science is the study of the atmosphere and the processes that shape
weather and climate. The curriculum emphasizes the scientific study of the
behavior of weather and climate, and applications to the important practical
problems of weather forecasting and climate prediction. Students develop a fundamental understanding of atmospheric processes and acquire skill and experience in the analysis,
interpretation, and forecasting of meteorological events. All students are required to complete a minimum of four
semesters of calculus, two semesters of

Physics, and a semester each of chemistry, computer science, and statistics.

Atmospheric science courses are offered through the Department of Earth and
Atmospheric Sciences (EAS). The requirements for the B.S. in atmospheric science
through the College of Agriculture and Life Sciences are as follows:

1. **Atmospheric science:**
   - EAS 3410, 3420, 3520, 4470, 4510
   - See tracks listed below for additional required courses.

2. **Mathematics, statistics, and computer science:**
   - MATH 1110, 1120, (1920 or 2130), 2930
   - AEM 2100 or equivalent
   - EAS 2900 or equivalent

3. **Basic physical sciences:**
   - PHYS 2207, 2208, or equivalent
   - CHEM 1560

4. **Tracks**

It is recommended that students who are interested in graduate study in atmospheric
science should take additional courses in mathematics and physics.

**Biological Sciences**

Biology is a popular subject at many universities for a variety of reasons: it is a
science that is in an exciting phase of development; it prepares students for careers in
challenging and appealing fields such as human and veterinary medicine,
environmental sciences, and biotechnology; and it deals with the inherently interesting
questions that arise when we try to understand ourselves and the living world
around us. Many of the decisions we face today deal with the opportunities and
problems that biology has put before us.

The major in biological sciences is available to students enrolled in either the College of
Agriculture and Life Sciences or the College of Arts and Sciences. The Office of
Undergraduate Biology in 216 Stimson Hall provides student services that are available to
students from either college.

The biology major is designed to enable students to acquire the foundations in
physical and life sciences necessary to understand modern biology and to pursue
advanced studies in a specific area of biology. Programs of study include either a general
biology or one of the following concentrations: animal physiology, biochemistry, computational biology, ecology
and evolutionary biology, genetics and development, insect biology, molecular and cell biology, microbiology, neurobiology and
behavior, nutrition, plant biology, and systematics and biotic diversity. Students interested in the marine sciences should consult
the Shoals Marine Laboratory office, G14 Stimson Hall, 255-3717, for academic advising. For more details about the biology
curriculum see the section in this catalog on biological sciences or visit www.biology.cornell.edu. For details regarding the minor
in biological sciences, please refer to the biological sciences section of this catalog.

**Biological and Environmental Engineering**

The Department of Biological and Environmental Engineering (BEE) offers majors in biological engineering and
environmental engineering. BEE faculty and students address three great challenges facing humanity today: ensuring an adequate and
safe food supply in an era of expanding world population; protecting and remediating the world's natural resources, including water,
soil, air, biodiversity, and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of
living organisms. The undergraduate engineering majors in the Department of
Biological and Environmental Engineering have a unique focus on biological systems and the environment that is realized through
a combination of fundamental engineering sciences, biology, engineering applications and design courses, and liberal studies. The
program leads to a bachelor of science degree in biological engineering or environmental engineering, which is awarded jointly by the
Colleges of Engineering and Agriculture and Life Sciences.

Engineering students take courses in mathematics, statistics, computing, physics,
Specific course requirements and other information for the biological engineering major and the environmental engineering major are described in the College of Engineering section of this publication. Further information is also available at the undergraduate program office in BEE Student Services, 207 Riley-Robb Hall, or at www.bee.cornell.edu.

The department also offers technology concentrations in biological engineering technology and environmental engineering technology within the Interdisciplinary Studies Major in CALS. The technology concentrations emphasize technical applications of biological, environmental, physical, and life sciences. Students take courses in basic biological and physical sciences and mathematics, and choose electives in engineering and technology, agriculture, business, social sciences, and liberal studies.

Many engineering and technology students participate in undergraduate teaching and research, internships, independent study project teams, and study abroad. Students should have a strong aptitude for the physical and life sciences and mathematics and an interest in the complex social issues that surround these technologies.

Career opportunities cover the spectrum of self-employment, private industry, public agencies, educational institutions, and graduate programs in engineering and science, as well as the professional fields like medicine, business, and law.

The living world is all around us and within us. The biological revolution continues and it has given rise to a growing demand for technical people who have strong math and science skills, who can communicate effectively, who are sensitive to the needs of people, and who are interested in the challenges facing society. The Department of Biological and Environmental Engineering is preparing the next generation to meet these challenges.

Specific course distribution requirements for the concentrations in biological engineering technology and environmental engineering technology include the following:

1. Basic Subjects  
   a. Calculus 8  
   b. Chemistry 7  
   c. Physics 8  
   d. Computer applications 4  
   e. Statistics or probability 3  
   f. Introductory biological sciences* 6–8  
   g. Written and oral expression* 9  
   h. Social sciences and humanities* 12  
   *Required of CALS majors.

2. Advanced and Applied Subjects  
   a. Five courses (15 credits) in the biological, environmental, or agricultural sciences 15  
   b. Five courses (15 credits) in technology. Three courses from the list of approved technology courses.**  
      One course must be chosen from the list of approved laboratory courses.**  
   c. The lab course cannot double count toward the three required technology courses 15  
   d. Contact department for a list of approved courses.

3. Electives  
   Additional courses to complete College of Agriculture and Life Sciences requirements

4. Total (minimum) 120  

For further details on the biological and environmental technology concentrations, contact the BEE department undergraduate programs office at 207 Riley-Robb Hall, 607-255-2173, or at www.bee.cornell.edu.

Biology & Society  
The Biology & Society program area is designed for students who wish to combine the study of biology with perspectives from the social sciences and humanities. Many of the most critical social issues of our time, from the implications of genetic engineering to the impact of global climate change, have biological processes at their core. The same time these issues are inherently social, involving complex interactions among people, institutions, laws, and beliefs. The Biology & Society field of study provides the skills and perspectives necessary to confront problems with biological, social, and ethical dimensions. In consultation with a faculty member, students are expected to select their courses in the field to meet their own goals and interests. For a description of the Biology & Society requirements and courses, see “Biology & Society” under the College of Arts and Sciences in this publication or visit www.sts.cornell.edu.

Students who elect Biology & Society as their major field of study graduate from Cornell with well-developed writing and analytical skills and a knowledge base that can lead to employment in a variety of fields. Many graduates have accepted positions as health counselors, writers, or policy analysts and researchers for government organizations, medical institutions, consumer or environmental groups, or scientific research institutes. Students have found that Biology & Society is also excellent preparation for professional training in medicine, law, and health services administration and for graduate programs in such fields as genetic counseling, nutrition, clinical psychology, public health, environmental studies, anthropology, sociology, and other related fields.

Admissions  
Students in CALS may be admitted provisionally into this field of study when they apply to the college. Full admission depends on completing introductory biology and completing an application. Students transferring into this field of study will need to complete introductory biology and to submit an application during their sophomore year.

The application includes:
1. a one- to two-page statement explaining the student’s intellectual interests in Biology & Society and why it is consistent with his or her academic goals and interests.
2. a selected theme.
3. a tentative plan of courses fulfilling Biology & Society requirements, including courses taken and those planned.
4. a transcript of work taken at Cornell University and/or elsewhere, current as of the date of application.

The faculty admissions committee reviews applications twice a year, once each during the fall and spring semesters. A faculty advisor is assigned on admittance to the field. Approximately 60 faculty members from three colleges serve as advisors to Biology & Society students. The major program is coordinated for students in all colleges through the Biology & Society Office, 306 Rockefeller Hall, where students can get information, specific course requirements, and application forms. Faculty advisors are available to discuss the Biology & Society requirements.

Requirements for the program are listed below. A full description and listings of courses that satisfy the requirements can be obtained in 306 Rockefeller Hall or at www.sts.cornell.edu. See also “Biology & Society” in the College of Arts and Sciences section of this publication.

Biology & Society requirements:
* 1. Introductory biology (1101–1104, 1105–1106, or 1107–1108 or BIOSM 1110, or AP credit, or two entry-level biology courses)  
2. College calculus (one course)  
3. Ethics (one course)  
4. Two social sciences/humanities foundation courses  
5. Three biology foundation courses  
6. One biology depth course  
7. Statistics (one course)  
8. Core course  
9. Five theme courses (a coherent group of five courses relevant to the student’s special interest in Biology & Society, including a senior seminar that serves as a capstone course for the program).

Students should develop their theme and select their courses in consultation with a member of the Biology & Society faculty. A list of the faculty is available in 306 Rockefeller Hall. Further information may be obtained at www.sts.cornell.edu.

*Subject to change when new intro biology requirements are approved.
Biometry and Statistics

Quantitative prediction and interpretation are increasingly essential components of biological, physical, and social sciences. Complex patterns, structures, and interactions raise fundamental and fascinating questions that can be addressed only using mathematical, statistical, and computational methods. The wealth of data that can be acquired using modern methodologies to address these questions, in turn, requires substantive quantitative approaches to make possible appropriate analysis and interpretation. Computational power, meanwhile, continues to increase exponentially, providing the means for sophisticated analysis of complex phenomena.

The Biometry and Statistics major, in the Department of Biological Statistics and Computational Biology, focuses on the application of statistical and mathematical techniques to the sciences. Biometry applies statistics and mathematics to problems with a biological component, as seen in agricultural, environmental, biological, and medical science. Statistics is concerned with quantitative aspects of scientific investigation: design, measurement, summarization of data, and reaching conclusions based on probability statements. Students with ability in mathematics and an interest in its applications will find this a rewarding and challenging major.

The work of an applied statistician or computational biologist can encompass research, teaching, consulting, and computing in almost any combination and in a wide variety of fields of application. Opportunities for employment are abundant in academics, government, and businesses ranging from large corporations to small firms; salaries are usually excellent. Experience gained through summer employment, undergraduate research, or work as an undergraduate teaching assistant is highly recommended. For further details on the Biometry and Statistics major/minor, please contact the director of undergraduate studies in the Department of Biological Statistics and Computational Biology, or work as an undergraduate summer employment, undergraduate research, or work as an undergraduate teaching assistant is highly recommended.

Requirements for the Major (beyond the college requirements)

Nine core courses, plus either the Statistics or Algebra.

Core Courses:
- BTRY 3010 Biological Statistics I or
- BTRY 6010 Statistical Methods I
- BTRY 3020 Biological Statistics II or
- BTRY 6020 Statistical Methods II
- BTRY 4080 Theory of Probability
- BTRY 4090 Theory of Statistics
- MATH 1110 Calculus I
- MATH 1120 or 1220 or 1910 Calculus II
- MATH 2210 or 2230 or 2310 or 2940 Linear Algebra
- MATH 1920 or 2130 or 2200 or 2240 Multivariable Calculus

CS 1112 Introduction to Computer Programming or
BEE 1510 Introduction to Computing

Statistics concentration: Students must complete three advanced courses in statistics, computer science, operations research, or computational biology, including at least two from the list below (for complete list, go to www.bscb.cornell.edu/)
- BTRY/IRST 3100 Statistical Sampling
- BTRY/IRST 4110 Statistical Methods I
- BTRY 4820 Statistical Genetics
- BTRY 4830 Quantitative Genetics and Genomics
- BTRY 4840 Computational Genomics
- BTRY 4940 Special Topics (as appropriate)
- BTRY 6030/IRST 4110 Statistical Methods III: Categorical Data Analysis
- BTRY 6040/IRST 4140 Statistical Methods IV: Applied Design
- BTRY 6150 Applied Functional Data Analysis
- ILRST 6140 Structural Equations
- ILRST 6190 Hierarchical Linear Models
- NTRES 4110 Quantitative Ecology and Management of Fisheries Resources
- NTRES 4120 Wildlife Population Analysis
- NTRES 6700 Spatial Statistics
- ORIE 3510 and 4520 Stochastic Processes
- ORIE 4740 Statistical Data Mining
- ORIE 5550 Applied Time-Series Analysis

Statistical genomics concentration: Students must complete two courses from BTRY 4820 Statistical Genetics, BTRY 4830 Quantitative Genomics and Genetics, and BTRY 4840 Computational Genomics; BIOMG 2810 Genetics; and in addition, they must complete one course from the advanced courses previously listed (for complete list go to www.bscb.cornell.edu/majReq.php).

Supplementary concentration: Each biometry and statistics major is strongly encouraged to supplement the required courses with a concentration in an area of interest to the student, consisting of a cohesive set of courses chosen by the student. It is the student’s responsibility to develop this concentration, with advice from the faculty, particularly the student’s faculty advisor. It will be helpful to discuss the selection of courses with the director of undergraduate studies or undergraduate advising coordinator of a department closely linked with the chosen concentration.

The Minor

A minor in biometry and statistics is available to all undergraduate students in CALS. To complete the program, students must submit a minor program of study form, available in 1198 Comstock Hall. Each student will retain a copy of the form and will be responsible for planning the minor program of study in conjunction with the advisor in the student’s major and a BSCB faculty advisor. Students and advisors in other departments should contact the director of undergraduate studies in the Department of Biological Statistics and Computational Biology if they have general questions about Biometry and Statistics courses or the minor. A BSCB faculty member will supervise and assist each minor in course selection.

Requirements for the minor
- BTRY 3010 Biological Statistics I or BTRY 6010 Statistical Methods I
- BTRY 3020 Biological Statistics II or BTRY 6020 Statistical Methods II
- BTRY 4080 Theory of Probability
- BTRY 4090 Theory of Statistics
- MATH 1110 Calculus I
- MATH 1120 or 1220 or 1910 Calculus II
- MATH 1920 or 2130 or 2200 or 2240 Linear Algebra and Multivariable Calculus

One additional statistics elective from the advanced statistics course list given above.

A minimum of 31 credits is needed to complete the minor. Only courses for which the student receives a grade of C– or better will count toward the minor in biometry and statistics.

Communication

Communication majors at Cornell study communication in three main areas: science, media, and technology. Students gain a strong core in the theory of communication processes, including attitude, knowledge, and behavior change, public opinion, and information systems. They develop applied oral and written communication skills; they learn how communication systems work in society and in their personal and professional lives; and they apply their understanding of communication to solving problems, sustaining the environment, reaching the public with new knowledge, and managing intricate networks of technologies.

Communication majors learn how
- communication influences attitudes, opinions, and behaviors
- mass media work in our society
- to design communication technologies and understand their effects
- to apply their understanding of communication to solving problems in science, the environment, government, industry, health, and education

The communication major is a program with a strong core of contemporary communication knowledge, theory, and practice.

Required freshman courses

Fall semester
- COMM 1101 Cases in Communication

Spring semester
- COMM 1300 Visual Communication

This set of courses provides students with a basic understanding of communication and communication processes.

Required sophomore courses

- COMM 2100 Oral Communication
- COMM 2310 Writing about Communication
- COMM 2820 Research Methods in Communication Studies
Two of the four Focus Area introductory courses:

1. **Communication, environment, science, and health (CESH):** Students focusing in CESH will investigate how communications influence public understanding of science, health, environmental, and risk-related issues. While exploring conceptual and theoretical issues, students will learn specific skills for communicating science, health, environmental, and risk information to a variety of audiences. Possible career paths include public information officer, science writer, environmental educator/outreach specialist, environmental or health-risk communicator, and business, legal, and other graduate study.

2. **Communication media studies (CMS):** Students focusing in CMS will investigate the forces that shape media in contemporary society, investigating how we see and hear comes to be. They will also analyze and understand the psychological, social, and cultural processes that are in turn affected by media, from politics to entertainment to news to the very question of what we understand as real about ourselves and true about the world around us. Students may pursue careers in the media industries, in designing the laws and policies regarding media, in business, legal, or other graduate study, or in the service of making media better; most of all, they will be more informed and astute citizens in a highly mediated world.

3. **Communication and information technologies (CIT):** Students focusing in CIT will explore the social and psychological dimensions of the design, use, and evaluation of communication and information technologies, how people form and manage impressions and relate to each other in cyberspace, the uses of language in online interaction, and how people coordinate work in virtual teams, as well as people’s interface and information needs. Possible career paths include information systems designer, search analyst, user interface designer, software designer, usability specialist, technology writer, and business, legal, and other graduate study.

4. **Communication and social influence (CSI):** Students focusing in CSI will use communication principles to analyze issues and situations involving groups, organizations, and selected audiences to design, implement, and evaluate appropriate communication programs. Courses stress the positive, ethical, and effective uses of communication in human interactions; students will also analyze and understand the psychological, social, political, and legal issues, and one additional course from any component area. A list of specific courses is available through the Department of Communication.

Through the Department of Communication, CALS students may complete a minor program of study in communication or a minor program of study in information science or both.

The minor in communication consists of four required courses: COMM 1101, 1300, 2010, and either 2200, 2450, 2760, or 2850; Students also complete three elective courses totaling 9 credit hours, at least two of which must be at the 3000–4000 level, excluding the advanced writing and presentation courses and COMM 3550, 4960, and 4980. The minor in information science is a cross-disciplinary program requiring one prerequisite statistics course, two courses from the information systems component area (primarily computer science), two courses from the human-centered systems component area (human-computer interaction and cognitive science), one course from the social systems component area (social, economic, political, and legal issues), and one additional course from any component area. A list of specific courses is available through the Department of Communication.

Students should contact the Department of Communication to enroll in either of these programs of study.

**Crop and Soil Sciences**

The Department of Crop and Soil Sciences provides instruction in the subject matter areas of crop science, soil science, environmental information science, and agronomy. Agronomy integrates the first three subjects and is a part of the Agricultural Sciences major (crop production and management concentration). A specialization in crop science is possible in two majors, the Science of Natural and Environmental systems (SNESS) or the Science of Earth Systems (SES). The Agricultural Sciences major is an interdisciplinary program for students wishing to pursue a general education in agriculture to prepare for careers that require a scientific and integrative understanding of agriculture and food systems. Students may concentrate in one or more areas, including Animal Science, Agriculture Economics and Management, Education and Communication, Crop Production and Management, and Sustainable Agriculture. The SNESS major is a biophysical science-based major that addresses the interface of environmental science and human systems involved in environmental management. Within the SNESS major, students can concentrate in environmental agriculture, environmental biology, environmental economics, environmental information science, and sustainable development. The SES major places emphasis on the basic disciplines of chemistry, physics, and mathematics.

A minor in crop management is also available for students with any major at Cornell University. In summary, it requires at least two courses and at least 7 credits in each of crop science (CSS 2110 or 4050), 3170, or 4140 and plant protection (CSS 3150, 4440, ENTOM 2410, or PLPA 3010) plus at least three courses and at least 12 credits in soil science (CSS 2600, 3210, 3650, 3720, 4120, or 4660). Equivalent transferred courses can be substituted. This minor helps prepare students for the Certified Crop Advisor examination, which provides an important credential for jobs in agriculture and environmental management.

A minor in soil science requires 15 credits in soil science, but an additional 12 credits in biological, physical, and earth sciences are recommended to qualify the student for the Civil Service classification as Soil Scientist (GS-0470). In addition to 15 credits in soil science, Civil Service classification as Soil Conservationist (GS-0457) requires 12 credits in natural resources and agriculture and 3 credits in applied plant science. The soil science minor is also available to students with any major at Cornell University and transfer credit can be used to meet requirements. Students wishing to pursue either the crop management or soil science minor should contact the Department of Crop and Soil Sciences (255-5450).

**Development Sociology**

Technological, economic, demographic, and environmental changes are social processes. Each has major impacts on individuals, social groups, societies, and the international order. At Cornell, development sociology students can study these and other facets of social change in both domestic and international settings. The development sociology major provides an opportunity for in-depth study of the interactions among development processes, environmental and technological contexts, demographic structures and processes, and the institutionalized and grassroots social movements through which people seek change in these dimensions. Courses offered by the department cover topics such as the impact of changes in agricultural systems on rural development and rural labor markets; community and regional issues; the political economy of globalization; agricultural systems; political economy of globalization; agricultural and environmental sociology; technology; the political economy of globalization; women in development; and ethnic stratification and integration. Most courses provide background in both domestic and international aspects of the subject matter. Students can develop a specialization with a domestic, international, or global emphasis by choosing appropriate elective courses. All students learn the theory and methodology of sociology and how to apply both to research and policy in their subject areas.
 Majors in development sociology are required to successfully complete seven core courses: introductory sociology (DSOC 1101), international development (DSOC 2050), population dynamics (DSOC 3130 or 3140), theory (DSOC 3010), social stratification (DSOC 2700), and a course in statistics. Four additional development sociology courses are also required of all majors, at least two of which must be at the 3000 level or higher. These elective courses allow students to focus their major on particular themes such as the sociology of development; the social processes linking the environment, population, social development, and more general areas such as ethnic and class stratification, social movements, social policy, and gender and development. In each of these focus areas, students can choose to concentrate on domestic or international situations. Students are encouraged to complement courses in the department with course work in the history and economics of development, area studies, and the policy sciences.

Recognizing that students are concerned with future career opportunities, the development sociology major emphasizes acquisition of skills as well as general knowledge in preparation for jobs or post-graduate study. Accordingly, students are expected to become involved in the application of theory, methodology, and principles and concepts in the analysis of practical problems.

Development sociology offers degree programs at both undergraduate and graduate levels (B.S., M.S., and Ph.D.). The department and graduate field are recognized as top programs in the area. The department is particularly well known for providing instruction in international as well as domestic aspects of community and rural development, environmental sociology, sociology of agriculture, population studies, and the interactions among these dimensions. Development sociology faculty are committed to both quality instruction and cutting-edge research programs.

The department offers a general DSOC minor and a minor in Globalization, Ethnicity, and Development. A complete list of requirements for either minor can be found at http://education.cornell.edu. Program developments, go to education.cornell.edu.

Adult and Extension Education (AEE)

Creating a livable world requires more than just new knowledge and technology; it also requires sustained and expert practice in learning and education. The AEE program provides supports and resources to undergraduate students to investigate participatory educational and organizing practices that link learning to the challenge of facilitating global sustainability. As public universities focus their research and teaching, and extend on domestic and global environmental, political, and social problems, the AEE program focuses on creating opportunities for critical reflection on adult, extension, and educational leadership by connecting action and research. We seek to move beyond procedural questions of "how to do it" to critical institutional questions of who does and who should benefit from our adult, extension, and international educational work. The aim is to engage practitioners and graduate students in critical reflection on practice to create practical theory from and for action.

Participation in the AEE program helps scholars and practitioners prepare for adult and extension educational leadership and professional roles in domestic and international community-based, nongovernmental, and governmental organizational settings. Areas of expertise and inquiry include participatory practices in research, community development, and adult education; public scholarship, university extension/outreach, and community organizing in the United States; international adult and extension education; learning in adulthood; educational planning and program development; continuing professional education; staff development; and health issues related to the education of adults.

Learning, Teaching, and Social Policy (LTSP)

This program is designed to foster the development of educational leaders, researchers, and practitioners who approach issues and challenges in education from multiple perspectives, and seek to construct an integrated knowledge base upon which the practice of teaching, learning, and social policy is based. The impacts of implementation and practice are explored for creating new theories, approaches, and policies to improve teaching, learning, and community life.

Drawing on the dynamic nature of teaching and learning, this program challenges students to create and apply research-based, critically reflective practice to address pressing problems and issues in formal and nonformal educational contexts across a variety of national and cultural settings.

The program is philosophically grounded in the perspective that learning and teaching is a lifelong process vital to individual development, the development of democratic communities, and the implementation of democratic values in educational policy and practice. Context, gender, and social and economic diversity underlie the design and implementation of curriculum, teaching and learning theory, and social interactions and are lenses for examining educational practice, theory, and policy.

Faculty members and graduate students in research programs in LTSP engage in research that investigates factors that contribute to scientific and quantitative curriculum design and evaluation in science, mathematics, and agricultural science; effectiveness of teacher professional development; educational policy in rural schools; and sociomoral development, action, and reflective thought in schools and communities. Our mission is to contribute to an educated, global society of leaders and citizens who are prepared to respond to emerging social, technological, and scientific issues, with ethical and critically reflective judgment.

The Cornell Teacher Education (CTE) program is a unique interdisciplinary cohort-based program that certifies teachers for secondary teaching in agricultural science or science. Students in the CTE program develop a solid mastery of their content areas and an understanding of the issues in education, and interact with and learn from each other. Undergraduates accepted into the CTE program major in an agriculture or science field in any Cornell college and complete a minor in education. With a CTE minor and a bachelor’s degree, students can complete the Master of Arts in Teaching in one year. CTE
Agricultural Science Education is taught at the middle and high school levels in New York State and nationally. Building on strong academic disciplines in the agricultural sciences, and with a solid grounding in the psychological, social, empirical, and theoretical bases of educational practice, the department offers two programs that lead to professional certification in Agricultural Science Education. The undergraduate degree in Agricultural Science Education and the agriculture option in the Master of Arts in Teaching are both offered under the Cornell Teacher Education umbrella. In addition, the undergraduate degree offers a noncertification option for persons with interests in instruction in nonschool settings such as extension, 4-H, arboretums, and state and national parks. All three of these programs prepare educators for leadership and professional roles in the broad fields of agriculture and natural resources.

Minor in Education
The minor in education gives students a planned core of courses to provide them with an overview of education as a field. One option prepares students to move into the graduate segment of the CTE program. Other options provide preparation for admission into other graduate teacher certification programs or a background for professional venues such as extension, business, and industry. Any undergraduate student in the university may enroll subject to availability in courses required for the minor. Students who wish to pursue a minor in Education must complete and submit an application. Applications are available in 426 Kennedy Hall, the CALS Office of Academic Programs, or by e-mailing cu_teacher_ed@cornell.edu.

Entomology
The entomology curriculum provides students with a basic background in biological and natural sciences, with a special emphasis on the study of insects. Majors may pursue graduate studies in entomology or related sciences upon completion of the B.S. degree. Alternatively, students may immediately begin careers in various aspects of basic or applied insect biology, including integrated pest management, insect pathology, environmental assessment, medical or veterinary entomology, insect toxicology, apiculture, insect systematics, or insect ecology. Because of the diversity of career options, the major includes flexibility among the core requirements and electives that can be selected by students in consultation with their advisors.

Requirements
General Requirements for CALS (see Graduation Requirements for Bachelor of Science) Basic Science and Math Requirements
- One year of college mathematics, may substitute statistics or biometry
- One semester of physics (may need two depending on future plans)
- CHEM 2070–2080 (or CHEM 2150/2160 for students with AP credit in chemistry)
- CHEM 1570 Introduction to Organic and Biological Chemistry or CHEM 3570 and 3580 Organic Chemistry for the Life Sciences (for students planning on medical school)
- BIOG 1500 (Investigative Biology Laboratory)
- BIOMG 2810 (Genetics)
- BIOEE 2780 (Evolutionary Biology and Diversity)
- BIOG 1610 (Ecology and the Environment) or ENTM 4550 (Insect Ecology)

Two of the following three courses:
- BIOMG 3300, 3310, or 3320 (Principles of Biochemistry)
- BIOG 1350 (Principles of Cell and Developmental Biology)
- BIOG 1440 (Introduction to Comparative Physiology) or ENTM 4830 (Insect Physiology)

(Choice depends on student interest in organismal vs. cellular/molecular aspects of biology)

Entomology Requirements (15–21 credits)
- ENTM 2120 Insect Biology—4 credits
- Group A (core courses). Two of the following six courses. If ENTM 4550 or ENTM 4830 have been used to satisfy the core requirements above, they will not satisfy the Group A requirements:
  - ENTM 3310/3311 Insect Systematics—4 credits
  - ENTM 3330 Larval Insect Biology—3 credits
  - ENTM 4440 Integrated Pest Management—4 credits
  - ENTM 4550 Insect Ecology—4 credits
  - ENTM 4630 Invertebrate Pathology—4 credits
  - ENTM 4830 Insect Physiology—4 credits
- Two additional entomology courses from Groups A or B (see link to Entomology Course Spreadsheet for a complete list of entomology courses, www.entomology.cornell.edu)

Food Science
The food science program prepares students for careers in the food industry or research organizations and for graduate study in food science or related disciplines. Food scientists enjoy satisfying careers that help ensure the sustainable availability of a safe, nutritious, affordable, and high-quality food supply for people throughout New York State, the nation, and the world.

Students in the food science program can choose from one of two specialization options in the major: (1) food science; or (2) food operations and management. The first option meets the curriculum standards set by the Institute of Food Technologists (IFT), the premier professional society for food scientists, allowing students to compete for IFT scholarships and awards. Students choose an option based on their individual interests and career goals.

The first two years of the undergraduate food science program are intended to establish a solid background in the physical and biological sciences, math and statistics, and communication skills. Required courses include chemistry (introductory and organic), biology, microbiology, calculus, physics, first-year seminar, introductory food science courses, and nutrition. The last two years emphasize the application of these basic sciences and technology to the manufacturing, sensory evaluation, storage, distribution, and safety of foods and food ingredients. Examples of food science core courses include Food Engineering Principles, Physical Principles of Food Manufacturing, Food Safety Assurance, Food Chemistry, Sensory Evaluation of Foods, and Food Microbiology; many elective courses are offered as well. Students choose electives to satisfy both college distribution requirements and their individual interests within the major and beyond.

Students are also strongly encouraged to participate in undergraduate research supervised by a faculty member and/or complete an internship in a food company during their program of study. Most teaching faculty in the department also have active research programs and welcome participation by undergraduate students. Students may receive academic credit or wages for faculty-directed undergraduate research. Several food companies recruit on campus for their internship programs. These internships provide an excellent opportunity for students to gain hands-on experience in their chosen field of interest and to establish contacts for future employment. A modern food processing and development pilot plant, an operational dairy plant, and well-equipped laboratory facilities are available to support the teaching and research needs of undergraduates.

Information Science
Information Science (IS) is an interdisciplinary field that studies the design and use of information systems in a social context: the field studies the creation, representation, organization, application, and analysis or information in digital form. The focus of Information Science is on systems and their use, rather than on the computing and communication technologies that underlie and sustain them. Moreover, Information Science examines the social, cultural, economic, historical, legal, and political contexts in which information systems are employed, both to inform the design of such systems and to understand their impact on individuals, social groups, and institutions. The Information Science major organizes its courses into three area-based tracks:
- Human-Centered Systems. This area examines the relationship between humans and information, drawing from human–computer interaction and cognitive science.
- Information Systems. This area examines the computer science problems of representing, organizing, storing, manipulating, and accessing digital information.
- Social Systems: This area studies the cultural, economic, historical, legal, political, and social contexts in which digital information is a major factor.

Students must complete a set of 11 core courses: one introductory course, four courses in math and statistics, and two courses from each of the three IS areas. Students must also obtain depth in two tracks—a primary and a secondary track—that together best represent their interests. In particular, completion of the major requires four advanced courses from the selected primary track and three advanced courses from the secondary track.

Note: All INFO courses will count as in-college credit.

Requirements
Core (11 courses)
1. Introductory (one course):
   - INFO 1300 Introductory Design and Programming for the Web
2. Math and Statistics (four courses):
   - MATH 1110 Calculus I
   - one of PSYCH 2050 or 2800 can be counted toward the primary/secondary track requirements. At most, one of PSYCH 3420 may count toward the Human-Centered Systems primary/secondary track requirements.
   - either MATH 2310 Linear Algebra with Applications or MATH 2210 Linear Algebra
   - INFO 2950 Mathematical Methods for Information Science or CS 2800 Discrete Structures
3. Human-Centered Systems (two courses):
   - INFO 2140 Cognitive Psychology
   - INFO 2450 Communication and Technology
4. Information Systems (two courses):
   - CS 2110 Object-Oriented Programming and Data Structures
   - INFO 2300 Intermediate Design and Programming for the Web
5. Social Systems (two courses):
   - INFO 2040 Networks
   - one course chosen from: INFO 2921 Inventorizing an Information Society; or INFO 3561 Computing Cultures; or INFO 3200 New Media and Society

Where options in the core courses exist, the choice will depend on the student’s interests and planned advanced courses for the selected primary and secondary tracks.

Tracks
Students must complete four advanced courses in their selected primary track and three advanced courses in their selected secondary track.

Courses taken to satisfy the core-course requirements may not be used to fulfill the track requirements.

All courses used toward the major must be taken for a letter grade. Students must earn a C- or better in all courses used for the major.

Additional information on Information Science courses can be found below and in the CIS section of Courses of Study. Course information for all other courses in the major can be found in the relevant departments (e.g., AEM, CS, and STS).

1. Human-Centered Systems
   - INFO 3400 Psychology of Online Relationships
   - PSYCH 3420 Human Perception: Applications to Computer Graphics, Art, and Visual Display†
   - INFO 3450 Human-Computer Interaction Design
   - INFO 3460 Online Communities
   - PSYCH 3470 Psychology of Visual Communications
   - INFO 3650 Technology and Collaboration
   - PSYCH 3800 Social Cognition*
   - PSYCH 4160 Modeling Perception and Cognition
   - INFO 4320 Introduction to Rapid Prototyping and Physical Computing†
   - INFO 4400 Advanced Human-Computer Interaction Design
   - INFO 4450 Seminar in Computer-Mediated Communication
   - INFO 4500 Language and Technology
   - DEA 4700 Applied Ergonomic Methods
   - INFO 5300 Architecture of Large-Scale Information Systems
   - INFO 5150 Culture, Law, and Politics of Information Systems
   - INFO 5470 Introduction to Rapid Prototyping and Physical Computing†
   - LING 4474 Introduction to Natural Language Processing
   - CS 4620 Introduction to Computer Graphics
   - CS 4700 Foundations of Artificial Intelligence
   - ORIE 4740 Statistical Data Mining I
   - CS 4780 Machine Learning
   - ORIE 4800 Information Technology
   - CS 5150 Software Engineering
   - INFO 5300 Architecture of Large-Scale Information Systems
   - CS 5140 System Security
   - CS 5780 Empirical Methods in Machine Learning and Data Mining
*INFO 4320 may count toward Human-Centered Systems or Information Systems but not both.

2. Information Systems
   - INFO 3500 Data-Driven Web Applications
   - LING 4424 Computational Linguistics
   - INFO 4300 Information Retrieval
   - INFO 4302 Web Information Systems
   - INFO 4307 Learning from Web Data
   - CS 4320 Introduction to Database Systems
   - INFO 3200 New Media and Society
   - AEM 3200 Internet Strategy
   - INFO 4940 Media Technologies
   - INFO 3561 Computing Cultures
   - INFO 3660 History and Theory of Digital Art
   - ECON 3680 Game Theory†
   - STS 4111 Knowledge, Technology, and Property
   - INFO 4290 Copyright in the Digital Age
   - ORIE 4350 Introduction to Game Theory†
   - INFO 4144 Responsive Environments
   - SOC 3430 Online Social and Information Networks
   - INFO 4470 Social and Economic Data
   - COMM 4650 Mobile Communication in Public Life
   - ECON 4760 Decision Theory I
   - ECON 4770 Decision Theory II
   - HADM 4489 The Law of the Internet and E-Commerce
   - INFO 5150 Culture, Law, and Politics of the Internet
   - *Only one of ORIE 4350 and ECON 3680 may be taken for IS credit.
   - †Students who take ECON 3680 may count its prerequisite, ECON 3130, toward the Social Systems track.

The Minor
A minor in Information Science is also available to students in AAP (Architecture and Planning students only), Arts and Sciences, CALS, Engineering, Hotel, Human Ecology, and ILR. The minor has been designed to ensure that students have substantial grounding in all three of the human-centered systems, information systems, and social systems areas. Detailed information about the minor can be found in the CIS section of Courses of Study. Students should visit www.infosci.cornell.edu/ugrad for...
the most up-to-date description of the minor and its requirements.

Interdisciplinary Studies
The opportunity to develop an independent major in interdisciplinary studies is available for students interested in pursuing a general education in agriculture and life sciences. In consultation with a faculty advisor, students plan a sequence of courses suited to their individual interests, abilities, and objectives. In addition to the distribution and other college requirements, this major may include a concentration of courses in one of several academic units of the college or university. A course of study for interdisciplinary studies must be planned with and approved by a college faculty advisor. Information on the options and names of faculty advisors prepared to advise in special programs are available in the Counseling and Advising Office, 140 Roberts Hall.

International Agriculture and Rural Development
International agriculture and rural development provides students with an understanding of the special problems of applying basic knowledge to the processes of agricultural and rural development in low-income countries. The student chooses an area of concentration within the major and works with an advisor to plan an individualized program of study. Areas of concentration include (1) social development and livelihoods, (2) food systems, and (3) environment and ecosystems. The core curriculum and areas of concentration are designed to acquaint students with relevant socioeconomic factors, the physical and biological aspects of tropical crops and animal production, and issues of resource management and sustainability in low-income countries.

Requirements
In addition to the college distribution requirements, students in international agriculture and rural development must take a minimum of 50 credits toward the major. A minimum of 18 credits from a core curriculum (in addition to foreign language) are required, 8 of which should be in international agriculture and rural development (IARD). The foreign language requirement for the IARD major is identical to that of the College of Arts and Sciences (see p. 452). Other course work is drawn from a wide range of disciplines, consistent with the student’s chosen concentration. Students are expected to complete an overseas field study experience of a minimum of six weeks. The objective is to familiarize students with the many facets of agricultural and rural development in low-income countries.

International Studies Minor
Preparing for leadership in an increasingly interconnected and dynamic world, CALS undergraduates develop knowledge, skills, and attitudes that build “global competencies.” The minor for CALS students not majoring in international agriculture and rural development will recognize an international concentration of course work and experiences.

Requirements
1. Five courses with significant international content, as recommended by students’ major departments (three should be from CALS).

Highly recommended
1. Foreign language course work.
2. An approved overseas experience (exchange, study abroad program, internship, or faculty-led short course).

For more information, contact the academic programs coordinator in the CALS International Programs Office, 255-3811.

Landscape Architecture
Landscape architecture focuses on the art of landscape design as an expression of the cultural values and the natural processes of the ambient environment. The program’s unique place within the university promotes interaction among the areas of horticulture, environmental science, architecture, and city and regional planning.

The course of study prepares students for the practice of landscape architecture. The curriculum focuses on graphic communication, basic and advanced design methods, landscape history and theory, plant materials, construction and engineering technology, and professional practice. Design studios deal with the integration of cultural and natural systems requirements as applied to specific sites at varying scales. Projects may include garden design, parks design, housing design, historic preservation, environmental rehabilitation, and urban design.

Landscape architecture offers two professional degree alternatives: a four-year bachelor of science degree administered through the College of Agriculture and Life Sciences and a three-year master of landscape architecture degree administered through the Graduate School for those who have a four-year undergraduate degree in another field. Both of these degrees are accredited by the Landscape Architecture Accreditation Board of the American Society of Landscape Architects. The major in each degree is composed of core courses related to professional education in landscape architecture, a concentration in a subject related to the core courses, and free electives.

The department also offers a two-year master of landscape architecture advanced degree program administered through the Graduate School for those with accredited degrees in landscape architecture or architecture. The program entails core courses in the discipline and the development of a concentration in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

In addition, an undergraduate minor in cultural landscape studies is available for nonmajors.

Dual-Degree Options
Graduate students can earn a master of landscape architecture and a master of science (horticulture) or a master of city and regional planning simultaneously. Students need to be accepted into both fields of study to engage in a dual-degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Study Abroad
The faculty encourages study abroad and has two formally structured programs. The Denmark International Study program is available primarily to senior undergraduates and third-year graduate students in the fall semester and is administered through Cornell Abroad. The Rome Program is made available to undergraduates and graduate students through the College of Architecture, Art, and Planning.

Bachelor of Science Landscape Architecture Degree Sequence (Note: Each semester, the studio classes require payment of a supply and field trip fee; and all landscape architecture majors are required to pay an annual technology fee.)

**Master of Landscape Architecture Advanced Degree Program.** The two-year master of landscape architecture (M.L.A./A.D.) program serves to broaden and enrich undergraduate education in design by providing an expanded educational experience to those who are technically skilled.
Applicants must hold a bachelor’s degree in landscape architecture or architecture from an accredited program. The objective of the two-year (M.L.A./A.D.) program is to develop specializations for individuals who may wish to teach, practice, or conduct applied research in landscape architecture.
Students admitted to the two-year M.L.A./A.D. program are required to complete 60 credits of course work as approved by the members of their graduate committee. For landscape architects, this must include at least two advanced studios, a graduate seminar, a concentration, and a thesis. For architects, the curriculum requires three advanced studios, two courses in plants and planting design, two courses in the history of landscape, two courses in site engineering, a seminar in design theory, a course in professional practice, a concentration, and electives.

**Undergraduate Minor for Nonmajors**
Students outside the professional program may choose the undergraduate minor (five courses, 15 credits) in cultural landscape studies to complement their major. A variety of courses consider the cultural landscape as an object, something to be studied for its own sake, and as a subject, as a means to understand society’s relationship to natural systems. The study of cultural landscapes also includes perceptions of landscapes, cultural ideas and values, and visible elements. Direct inquiries to Professor A. Hammer, Department of Landscape Architecture, 440 Kennedy Hall.
Courses: choose five for a total of 15 credits
*LA 3600 Pre-Industrial Cities and Towns of North America (3 credits) offered alternate years
*LA 4810 Advanced Design Studio 5
*LA 4830 Seminar in Landscape Studies (3 credits)
+ Distribution elective

**Natural Resources**
Natural Resources is an interdisciplinary major focusing on the fundamental knowledge and analytical tools required to conserve, restore, and manage the Earth's biodiversity and ecosystem services in sustainable ways. The curriculum draws on relevant knowledge from biology, ecology, chemistry, mathematics, sociology, economics, law, and ethics. A large number of field courses provide direct experience working in forests, wetlands, streams, lakes, and policy-making arenas. Courses address pressing environmental issues such as global climate change, landscape transformation, endangered and invasive species, human alteration of biogeochemical cycles, “green” markets and other environmental strategies, environmental justice, bio-cultural and biological diversity, and international conservation. Concentrations include applied ecology, resource policy and management, and environmental studies.

**The Future for Natural Resources Majors**
Most students entering the major have a strong interest in the natural world and in contributing to greater harmony between society and the environment. An
undergraduate degree in natural resources gives students the concepts and tools needed to participate intelligently and effectively in decisions that determine the future of our environment, either as professionals within a diverse array of environmental careers, or as informed citizens in other professions. Graduates with a major in natural resources have the flexibility to pursue a number of different careers because of the interdisciplinary nature of the curriculum. The major prepares students for graduate school in natural resources, and for entry-level positions in natural resources and environmental management agencies at local, state, federal, and international levels, or for jobs in the private for-profit (e.g., environmental consulting firms) or nonprofit (e.g., conservation organizations) sectors. Many students ultimately pursue graduate studies in environmentally related fields including the biological, physical, and chemical sciences; fisheries, wetland, stream, wildlife, or fisheries management; and environmental law and public policy. Graduates often assume leadership positions in government, colleges and universities, non-governmental conservation organizations, environmental consulting firms, environmental divisions of private industry, and organizations involved in environmental education or communication.

Curriculum

Natural resources is a flexible major, and free electives can account for as many as 45 credits out of the total of 120 required for graduation. Students complete a set of courses in biology, ecology, chemistry, mathematics, economics, ethics, and written and oral expression; many of these courses also meet the college’s distribution requirements for graduation. Freshmen and sophomores complete a series of four foundation courses in the major:

Juniors and seniors may specialize in one of three areas of concentration: applied ecology, resource policy and management, or environmental studies. Through course work in these concentrations, students gain an in-depth understanding of key principles, concepts, and applications. All students also have the flexibility to gain exposure to a wide variety of environment-related courses offered by Natural Resources and other departments throughout Cornell. Many students elect to conduct a research honors thesis.

Areas of Concentration within the Major

Applied ecology is designed as a foundation for those who wish to pursue careers in advanced study in science-based conservation or management of fish and wildlife populations and their habitats, conservation biology, control of invasive and overabundant species, watershed and landscape management, quantitative population dynamics, resource inventory and information management, global ecology, or applied ecology and biogeochemistry of forests and wetlands. This concentration also may interest students seeking a biologically based approach to research or global studies. Students who select this concentration typically focus their course work in the areas of species biology and applied ecosystem ecology, including quantitative analysis of fish, wildlife, and plant populations, ecosystems, and landscapes. They complement their course work within the department with courses in other departments, such as Ecology and Evolutionary Biology, Geology, Crop and Soil Science, Atmospheric and Earth Sciences, and Plant Biology.

Resource policy and management provides a foundation for students who wish to pursue careers or advanced study in the social science or policy aspects of natural resource conservation and management, environmental sociology, international conservation, environmental law, environmental policy analysis, or environmental communications. Students who select this concentration typically focus on courses related to the development of environmental policy, management strategies for particular species or ecosystems, natural resource planning, or the design of programs in environmental communication and education. They complement their course work within the department with courses in other departments such as Government, Economics, and Political Economy. Development Sociology, Communication, Applied Economics and Management, City, and Regional Planning, and Policy Analysis and Management.

Environmental studies is intended for those who wish to pursue a broad and synthetic approach to understanding and participating in (re)structuring the interactions between society and environment. The concentration’s emphasis is on developing an ability to think critically about these interactions. Building on a foundation of courses required for the natural resources major, during years three and four, each student will design a cohesive sequence of six upper-division courses with help from their departmental advisor. These six courses will include two courses from each of three categories: (1) natural science; (2) social science and analytic skills (e.g., economics, political economy, logic, computer programming, GIS, statistics); and (3) humanities (e.g., history, philosophy, literature, arts, foreign language). This self-defined environmental theme ensures development of specific competencies linked to personal and professional ambitions of the individual student. Example themes include environmental law, environmental education, “green” business, sustainable agriculture, and environmental communication. Students are expected to take two courses at the internship, independent study, and honors thesis opportunities, as appropriate.

Research and Work Opportunities for Undergraduates

The department offers many opportunities for field-oriented studies, independent research, internships, and jobs. These include several field-based courses and access for research at the Adirondack Teaching and Research Forest near Ithaca, the Little Moose Field Station in the Adirondacks, the Cornell Biological Field Station on Oneida Lake near Syracuse, and the Hubbard Brook Experimental Forest in New Hampshire, as well as numerous natural areas near campus. Part-time jobs in the research and extension programs of many faculty members offer students opportunities for career-related work experience. A research honors program is available for qualified students.

For a comparison of the natural resources major with other environmental majors, see www.dnr.cornell.edu/teaching/ugrad/faq/cals_env.pdf.

Nutritional Sciences

Nutritional sciences draws upon chemistry, biology, and the social sciences to understand complex relationships among human health and well-being, lifestyle patterns, food and agricultural systems, and social and institutional environments. The program in nutritional sciences provides students with strong training in human nutrition in the context of an understanding and appreciation of the agricultural and life sciences. The program responds to the growing and important interrelationships among human nutrition and the agricultural and life sciences. Growing public interest in health and nutrition has placed new demands upon food producers, processors, and retailers. The problems of hunger and malnutrition in the United States and abroad require that nutritionists work with specialists in areas such as agricultural economics, food production, and development sociology. Advances in biotechnology provide researchers with new ways to understand human nutritional requirements and the regulation of human metabolism.

Nutritional sciences majors complete a core set of requirements and choose elective courses in the areas of their particular interest. The core curriculum includes introductory chemistry and biology, organic chemistry, biochemistry, physiology, and mathematics. Students complete five courses in nutritional sciences: NS 1150 Nutrition, Health, and Society; NS 2450 Social Science Perspectives on Food and Nutrition; NS 3450 Introduction to Physicochemical and Biophysical Aspects of Foods; NS 3510 Physiological and Biochemical Bases of Nutrition; and NS 3320 Methods in Nutritional Sciences. In addition, students select a minimum of three advanced courses in nutritional sciences as well as elective courses in the broad areas of food production and processing, food and agricultural policy, the life sciences, environment and natural resources, communication, and education. All majors have faculty advisors in the Division of Nutritional Sciences with whom they meet regularly. Advisors help students plan course schedules and help find opportunities for special study or experiences outside the classroom.

Many students engage in laboratory or field research with a faculty member for academic credit. The research honors program is designed for academically talented students who are interested in research. Honors students conduct independent research projects under the guidance of a faculty member and prepare an honors thesis. Many students participate in field experiences for
credit during the academic year or summer. Placements in laboratories, industries, or community agencies are possible. The major in nutritional sciences can lead to many different career paths. By supplementing the course requirements with courses in different areas, students can prepare for jobs in industry, government, or community agencies in the United States or abroad. The major is excellent preparation for graduate study in a variety of fields.

The Division of Nutritional Sciences is affiliated with both the College of Agriculture and Life Sciences and the College of Human Ecology. Most of the division faculty members work in Savage Hall, Kinnell-King Hall, Martha Van Rensselaer (MVR) Hall, and Wessel Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities.

For additional information about the nutritional sciences program, contact the Division of Nutritional Sciences Academic Affairs Office, B22 Savage Hall, 255-4140, ajacobs@cornell.edu.

The minor in nutrition and health in the College of Agriculture and Life Sciences allows students to choose from courses concerned with economic influences on human nutrition, epidemiology and public health, food quality and food service management, human health and nutrition, nutritional biochemistry, and the psychological and social influences on human nutrition. The minor consists of NS 1150 Nutrition, Health, and Society plus 9 credits of 2000-level or above didactic NS courses. Several NS courses are excluded from use toward the minor. Please check www.nutrition.cornell.edu/che/DNS/academic/minor-in-nutrition.cfm for details. Enrollment is limited in some courses.

**Plant Sciences**

Plant sciences prepares students for careers that meet the challenges of providing a safe, nutritious, and abundant food supply for a growing world population and using plants to enhance the beauty of our landscapes. It is a multidisciplinary program administered by faculty in the Departments of Crop and Soil Sciences, Horticulture, Plant Biology, Plant Breeding and Genetics, and Plant Pathology and Plant-Microbe Biology, representing one of the strongest groups of plant scientists in the world. Students in the program share a common interest in learning about topics associated with plant growth and development in the broadest sense, but beyond that common thread, individual career goals vary widely. Some have their sights set on careers in applied agriculture, others plan to contribute to advancements of our knowledge by way of teaching or research, and still others see study in plant science as a stepping-stone to specialized training in business, government, or law. In addition to the college distribution requirements, Plant Science majors must take at least one course in each of several areas, including botany, plant physiology, ecology, taxonomic/systematics, genetics, statistics, plant-pest interactions, crop production, and soil science, for a total of 40 credits. Students who begin with well-defined interests or who identify certain areas of interest after several semesters of course work may choose a specialization within one of the five cooperating departments. Each specialization has special requirements beyond the basic core courses. However, students who are uncertain about their area of interest may choose a specialization after declaring a major. Those students develop a strong background in plant science but have fewer required courses so that they can explore other areas of interest.

More than 140 courses that deal directly with some area of plant science are offered by the cooperating departments, and other courses relating to plant science are offered elsewhere in the university. There are also ample opportunities for internships, undergraduate teaching, and research experience. Qualified students, especially those expecting to go on for graduate degrees, are encouraged to avail themselves of such opportunities. Students who are planning to enter the workforce immediately after receipt of the B.S. degree are encouraged to obtain practical experience. This may involve summer employment in research or in a plant production or maintenance-related industry such as a lawn and tree care company, commercial greenhouse, nursery, orchard, vineyard or winery, botanical garden or arboretum, crop production farm, or with Cooperative Extension. Plant sciences faculty members also encourage students to avail themselves of opportunities to work and/or study abroad.

In addition to classrooms and laboratories in five buildings on the Cornell campus proper, research and teaching facilities adjacent to the campus are freely available to students for hands-on practice, technical training, independent research projects, and internships. These facilities include research orchards and vineyards, golf courses and a turf research facility, Cornell Plantations (including arboretum and natural areas), and vegetable and field crop farms. Demonstration/research facilities in Aurora (Cayuga County), Geneva (Ontario County), Highland (Ulster County), Lake Placid (Essex County), Middletown (Orange County), Odessa (Tioga County), and Riverhead (Suffolk County) are also sites administered by departments in the Plant Sciences consortium and are available for undergraduate and graduate field study. For more information about this major, see www.cals.cornell.edu/cals/hort/teaching/plant-sci-undergrad/index.cfm.

**Crop science** is a specialization that focuses on the major food and feed crops of the world, such as wheat, corn, rice, soybeans, and alfalfa. In addition to 15 credits in applied crop science, students in this program take at least 6 credits in plant protection (weed science, entomology, and plant pathology) and at least 6 credits in soil science. The crop science specialization can be focused on preparation for graduate school or be combined with a crop management minor for those planning to be certified crop advisors.

**Horticulture.** Derived from the Latin word "hortus," meaning garden, horticulture is a blend of science and culture involving knowledge of plants grown in farms and gardens, parks and landscapes, and athletic and recreational facilities; indoor plants; greenhouse and nursery plant production; and crops used for wines, herbs and spices, medicinal purposes, and environmental decorative and functional plants. The knowledge and skills essential to grow, maintain, process, and market horticultural plants are in high demand in a world increasingly concerned with environmental quality, recreation, and health.

The 40 faculty members in horticulture specialize in almost every aspect of horticultural science, with active research and outreach programs regionally, nationally, and internationally.

Students choosing a concentration in horticulture must complete a minimum of 40 credits of core courses for the plant sciences major, plus the following courses:

- HORT 1101 Horticultural Science and Systems (4 credits)
- HORT 4000 Plant Propagation (3 credits)

Two HORT courses in plant production or management at the 4000 level (6 credits)

One additional course of integrated pest management (plant pathology, entomology, or weed science) beyond the 3-credit plant sciences core requirement (3 credits)

Students transferring into Cornell from other colleges can petition to waive or adjust these requirements, in consultation with their faculty advisors.

**Plant biology** stresses a basic understanding of how plants function at the cellular, as well as a study of their genome, evolution, and relationships to humans. It provides undergraduates with a thorough preparation for graduate study in addition to exciting practical careers in plant sciences. In cooperation with an advisor, each student plans a curriculum with a concentration in basic sciences, supplemented by more advanced courses in plant biology. Students specializing in plant biology within the plant sciences major should take a minimum of four courses beyond the core of plant sciences courses. Options include plant molecular biology, plant cell biology, biochemistry, ethnomedicine, or other courses in the function, growth, genetics, systematics, ecology, and evolution of plants. Individual research under professorial guidance is encouraged. Different options within plant biology afford a flexible curriculum.

**Plant breeding and genetics** relates information about genetics/genomics of plants to the improvement of cultivated plant species. Agriculturally important genes are identified, characterized, and deployed through combinations of molecular studies and sexual crosses. This area of study integrates genetic information with plant physiology/biochemistry, plant pathology, entomology, conservation biology, international agriculture, and related areas to create crops that meet the needs of modern society. In addition to the core plant sciences courses, students should take PLBR 2010, 4030, 4040, and BIOLPB 5430. Other courses may be included after consultation with the advisor. Students are encouraged to participate in research projects and take advantage of opportunities for internships in industry.
Plant pathology and plant-microbe biology faculty study interactions of plants with pathogenic and beneficial microorganisms and with toxic elements in air and water. Some specialists in the field choose to focus their attention on the cause and management of plant diseases and others employ contemporary tools of molecular biology to answer fundamental questions about the nature of host-pathogen interactions. Working together, they advance the frontiers of science to ensure rapid deployment of new strategies for growing healthy crops with maximum yields and minimal impacts on the surrounding environment. Graduates, a concentration in Plant Pathology and Plant-Microbe Biology is preparation for graduate study in the field. However, graduates may also be employed as sales or technical representatives, marketing energy resources, inadequate water supplies, political strife over strategic minerals, and megadisasters threatened by volcanic eruptions, earthquakes, tsunami, and hurricanes; these are but a few of the headlines that appear with increasing frequency. The Department of Earth and Atmospheric Sciences at Cornell is a global leader in research directed toward understanding the fundamental processes that have shaped our planet, and is committed to providing Cornell students with the earth literacy needed to serve as informed citizens and wise stewards of the Earth. EAS faculty members and graduate students carry out frontier research on both basic and applied aspects of subjects as diverse as satellite monitoring of volcanic activity, the deep structure of the Andes and Tibetan Plateau, the nature of the Earth’s ionosphere, ocean acoustics, controls on global climate, and improved weather prediction.

Science of Earth Systems (SES) The EARTH SCIENCES have never been more critical to society than they are today. Global warming and other issues related to global warming, rising sea level, natural hazards, and decreasing biodiversity.

The program is intrinsically interdisciplinary, involving many branches of science and engineering. Examples include archaeology, astronomy, biological and environmental engineering, civil and environmental engineering, and ecology and evolutionary biology. The SES program is unique in that it incorporates the fundamentals of earth science with the emergence of a new and complete approach that encompasses all components of the earth system—air, life, rock, and water—

gain a new and more comprehensive understanding of the world as we know it.

To achieve a complete understanding of these important issues, students must have a desire to take a very hands-on approach. An abundance of opportunities exist for geological, oceanographic, and meteorological research in the field and for nationwide and international travel as well as paid research experience. Students have worked with faculty members in the Andes, the Aleutians, the Rockies, the Atacama Desert, the Caribbean, Tibet, and Hawaii, and have spent a semester at sea in the Woods Hole Ocean Studies Program. Students are also able to probe the ionosphere of Earth and the surface of Mars by utilizing techniques in remote sensing.

The SES major provides a strong preparation for graduate school in any one of the earth sciences, such as atmospheric sciences, geological sciences, geophysics, geochemistry, oceanography, hydrology, and biogeochemistry. Students seeking employment with the B.S. degree will have many options in a wide variety of careers related to energy, the environment, and critical resources in both the private sector and government. Students with strong science background provided by the SES major are also highly valued by graduate programs in environmental law, public affairs, economics, and public policy.

Requirements for the Major 1. Basic Math and Sciences

This part of the SES curriculum builds a strong and diverse knowledge of fundamental science and mathematics, providing the student with the basic tools needed in upper-level science classes.

- a. MATH 1910–1920 (or MATH 1110–1120)
- b. PHYS 2207–2208 (or PHYS 1112–2213)
- c. CHEM 2070–2080, CHEM 2070–1570, or CHEM 2090–2080
- d. BIOLOGY—three options (CALS students must choose within option 1):
  1. one year of biology, choosing from the introductory biology sequences of courses: BIOG 1101/1103–1102/1104, or BIOG 1105/1106, or BIOG 1109/1110
  2. one semester from the introductory biology sequences of courses (listed in option 1) and EAS/BIOEE 1540 or EAS 1700

3. students may substitute (with written permission of their advisor) one semester of biology with an additional semester of chemistry, math, or physics.

2. Required Introductory Course: EAS 2200 The Earth System

The core courses emphasize the interconnectedness of the Earth system and are founded on the most modern views of the planet as an interactive and ever-changing system. Each crosses the traditional boundaries of disciplinary science. Three courses selected from the following four core courses are required for the major:

- EAS 3010 Evolution of the Earth System
- EAS/NTRES 3030 Biogeochemistry
- EAS 3040 Interior of the Earth
- EAS 3050 Climate Dynamics

4. Concentration Courses

The concentration is achieved by completing four intermediate to advanced-level courses (3000 level and up) that build on the core courses and have prerequisites in the required basic sciences and mathematics courses. Note that additional basic mathematics and science courses may be required to complete the concentration courses, depending upon the student’s choice of concentration. The concentration courses build depth and provide the student with a specific expertise in some facet of Earth system science. Four concentrations are defined for the major: atmospheric sciences, biogeochemistry, geological sciences, and ocean sciences. Other concentrations can be tailored to a student's interests in concert with the student's advisor and upon approval of the SES curriculum committee. Examples include sustainable Earth and environmental systems, earth system science and policy, hydrology, planetary science, and soil science. The concentration should be chosen during the junior year or before in consultation with the student’s advisor and with approval of the director of undergraduate studies.

5. Field/Observational/Laboratory Experience

Exposure to the basic observations of earth science, whether directly in the field, or indirectly by various techniques of remote sensing, or in the laboratory, is necessary to understand fully the chosen area of concentration in the major. A minimum of 3 credits of appropriate course work is required. Possibilities include the following: Courses in the Hawaii Environmental Semester program

- Courses given by the Shoals Marine Laboratory
- EAS 2500 Meteorological Observations and Instruments
- EAS 4410 Field Mapping in Argentina
- EAS 4370 Geophysical Field Methods
- EAS 4910 and/or 4920 Undergraduate Research with appropriate choice of project

For more information, contact Professor Natalie Mahowald, Department of Earth and Atmospheric Sciences, mm663@cornell.edu, or visit www.eas.cornell.edu.
Students may minor in Science of Earth Systems as well. See the EAS web site for more information.

**Science of Natural and Environmental Systems**

Environmental stewardship and sustainability are increasingly recognized as human and planetary imperatives. This environmental science major provides students with a strong foundation in the basic sciences, and an introduction to the relationships between the biophysical and social sciences. Concentrations include environmental agriculture, environmental biology, environmental economics, environmental information science, and sustainable development.

The curriculum comprises an intensive foundation in the sciences; an environmental core with courses covering earth, biotic, social, and economic systems; and several disciplinary programs of study. This major emphasizes inter- and multidisciplinary work, independent thinking and analysis, and development of competency in writing and speaking.

The SNES major is an excellent preparation for careers in governmental or nongovernmental organizations responsible for environmental evaluation and policy; professional programs in law, business, and journalism; and graduate programs in a variety of environmental science fields (earth science, ecology, environmental engineering, marine biology, soil science).

**Foundation Courses**

The purpose of this component of the program is to provide a strong foundation in the basic sciences and an introduction to the relationships between the biophysical and social sciences. Many of these courses (listed below) will also contribute to completion of CALS distribution requirements.

- two semesters of college-level biology
- two semesters of college-level calculus
- four semesters of college-level chemistry and physics (at least one semester of each)
- one semester of college-level statistics
- DEA 1500 Introduction to Human-Environment Relationships
- NTRES 2010 Environmental Conservation

The freshman and sophomore years are designed to provide a strong scientific basis for future advanced study and to become engaged in environmental studies through DEA 1500 and NTRES 2010. Depending on student interest and available time, other courses in environmental study may be taken as electives early in the schedule. Advanced placement credit will be accommodated in the program through consultation with the student’s faculty advisor.

**Environmental Core**

The environmental core consists of seven courses. Its purpose is to provide a rigorous, integrated understanding of the environment, broadly defined. This core recognizes that knowledge of the environment encompasses physical and biological sciences, social sciences, and human behavior. SNES 1101, required in the freshman year, provides a unifying overview of the goals, depth, and breadth of the major.

Core courses are to provide integration (among areas, disciplines, methodologies, topics, and issues); systems emphasis; basic, rigorous presentation of core material; root competencies for understanding the environment; a framework for further advanced courses; and a new way of thinking that enables innovative solutions to difficult problems.

SNES Capstone Course, Environmental Stewardship in the Cornell Community: ALS 4770

Biotic Systems: BIOEE 3610 General Ecology and the Environment

Colloquium Series: SNES

- 2000 Environmental Sciences Colloquium
- Earth Systems: CSS 3650 Environmental Chemistry: Soil, Air, and Water
- Economic Systems: AEM 2500 Environmental and Resource Economics

Environmental Science: SNES 1101 Intro to the Science and Management of Environmental and Natural Resources

Social Systems: DSC 3240 (STS 3241/SOC 3240) Environment and Society

**Programs of Study**

Programs of study that focus in one or more areas of environmental science have been established to provide disciplinary expertise sufficient for entry-level professional proficiency. Each student in the major will be required to take four courses at the 3000 level or above in at least one program of study.

Programs of study do not replace or duplicate current majors. Rather, they provide the basic core of knowledge essential for an introductory understanding of the area—the concepts, basic science, methodologies, and major applications. Programs of study include:

- Environmental Agriculture
- Environmental Biology
- Environmental Economics
- Environmental Information Science
- Sustainable Development

For more information about this major or minor, see http://snes.eas.cornell.edu, visit the undergraduate program office in 12 Fernow Hall, or send e-mail to sw38@cornell.edu.

**Viticulture and Enology**

The juice and wine grape industry is expanding rapidly in New York State, creating opportunities for experts in grape-growing (viticulture), wine-making (enology), wine marketing, and other related scientific fields. In recent years there has been a shortage of qualified personnel to manage vineyards and wineries.

Cornell's new Viticulture and Enology major is creating the next generation of leaders for the wine-grape industry in New York, nationally, and internationally. Its primary focus is on cool climate grapes and wines, addressing the unique challenges of climates, soils, new and traditional grape varieties, and marketing estate-grown wines. The major offers two concentrations: (1) the Viticulture concentration is for those primarily interested in grape growing, and (2) the Enology concentration emphasizes wine production. The curriculum for both concentrations includes many courses in common, and the major provides a strong foundation in the physical and biological sciences. College distribution requirements ensure a broad educational background for all students.

The Viticulture and Enology Program maintains extensive research/teaching vineyards near the Ithaca campus, providing students with hands-on experience producing grapes for juice or fermentation in the enology courses. A new teaching winery is located at the Cornell Orchards next to the Ithaca campus, and at the New York State Agricultural Experiment Station in Geneva, enabling students to learn grape processing, wine-making, and chemical analysis of grapes and wines. The program’s vineyards include more than 30 wine and table grape varieties, including native American grapes, French-American hybrid grapes, and most of the major European vinifera-type grapes.

The major is closely linked with the New York wineries throughout the state, and student internships at these vineyards and wineries are an integral part of the curriculum. Most classes have fewer than 20 students, providing ample opportunities for student/faculty interactions and involvement of undergraduate students in faculty research and outreach programs. In addition, students have access to extension and research activities in viticulture and enology at several research stations, academic departments, and facilities at Cornell University.

Special highlights of this major include:

- Regional focus on the special challenges and opportunities of viticulture and enology in New York and cool-climate areas worldwide
- Hands-on teaching vineyards and student winery near the Ithaca campus
- Flexibility to add electives from the Department of Applied Economics and Management, the School of Hotel Administration, and other Cornell units
- The program draws on the resources of Cornell’s Geneva Campus at the New York State Agriculture Experiment Station. The station includes the USDA-ARS germplasm repository for cool-climate grapes and Cornell’s state-of-the-art vinification and brewing technology laboratory.

For more information, see www.grapesandwine.cals.cornell.edu/undergraduate.

**Foundation Courses**

The purpose of this component of the major is to provide a strong foundation in the basic sciences. Many of these courses (listed below) will also contribute to completion of CALS distribution requirements.

- Two semesters of biology with lab
- Microbiology
- Introductory botany
- Plant function and growth
- Food analysis
- General inorganic and organic chemistry with lab
- Statistics
Core Viticulture and Enology Courses
Several VIEN or Viticulture and Enology major courses including:
• VIEN 1104 Introduction to Wines and Vines
• VIEN 2204 Grapes to Wine
• VIEN 2400 Grape Composition and Analysis
• VIEN 3400 and 3800 Winemaking Technology I and II
• VIEN 3440 Viticulture and Vineyard Management
• VIEN 4400 Wine and Grape Flavor Development
• VIEN 4444 Grapevine Biology

All students are encouraged to complete internships in the wine or grape industry during the summers and to participate in undergraduate research programs on campus. In New York State alone, more than 270 wineries and 1,100 vineyards are enthusiastic about working with students and hosting interns.

The Minor
Through a minor in Viticulture and Enology, students will learn the essential natural history and biology of wine grapes, systems, and technologies of grape and wine production, as well as the basic chemistry of grape and wine analysis. Those interested in pursuing a minor in Viticulture and Enology need to complete at least 13 credits.

Required Introductory Core Courses (8 credits)
VIEN 1104 Wines and Vines (3 credits)
VIEN 1105 Wines and Vines, Lab (1 credit)
VIEN 2204 Grapes to Wine Lecture and Lab (4 credits)

A minimum of 5 credits in any other course with a “VIEN” designation must be completed. The two exceptions are VIEN 4300 and 4960. These courses can not count towards satisfaction of the minor.

Recommended courses include:
VIEN 2400 Wine and Grape Analysis and Composition (2 credits)
VIEN 3200 Grape Pest Management (3 credits)
VIEN 3400 Winemaking Theory and Practice I (3 credits)
VIEN 3410 Winemaking Theory and Practice I Lab (1 credit)
VIEN 3440 Viticulture and Vineyard Management (3 credits)
VIEN 3800 Winemaking Theory and Practice II (2 credits)
VIEN 3810 Winemaking Theory and Practice II Lab (1 credit)
VIEN 4400 Wine and Grape Flavor Development (3 credits)
VIEN 4444 Grapevine Biology (3 credits)
VIEN 4600 Wine Microbiology (3 credits)
VIEN 4910 Undergraduate V&E Research Practices (3 credits)

Any undergraduate student in the college may enroll, subject to availability, in courses required for the minor. Several courses in VIEN have suggested prerequisites, but these requirements may be waived at the discretion of the instructor. Only courses for which a grade of “C” or better is received will count toward the minor in Viticulture and Enology (courses taken with an S–U option will not count).

Descriptions of Courses
Undergraduate and graduate courses in the college are offered through the academic departments and units and also through the biological sciences undergraduate program and the Division of Nutritional Sciences. Descriptions of undergraduate and graduate courses are arranged by department, in alphabetical order.

Graduate study is organized under graduate fields, which generally coincide with the departments. Graduate degree requirements are described in the Annoucement of the Graduate School. Courses for graduate students are described in the section on the academic department that offers them.

Nondepartmental Courses
ALS 1140 Explorations in Biology Research and Health Professions (also AMST/ALS 1140)
Summer. 1 credit. Not for Biological Sciences majors. K. Gellman. Explores biology as it pertains to research, health-care professions, and the world at large. This seminar is designed for students with a strong interest in medicine and biological research. Discussions and laboratory exercises allow students to interact with faculty and guest speakers. Students learn to read and evaluate scientific publications on current biological topics. Course grade is based on several short papers.

ALS 1340/1341 N.Y.S. Emergency Medical Technician—Basic
Fall and spring. 6 credits awarded at completion of course. Full academic-year course requiring fall and spring enrollment. Recommended: basic or advanced first aid. S–U or letter grades. D. A. Grossman and R. Kniffen. Intensive 170-hour course taught throughout the fall and spring semesters. Includes training in CPR and defibrillation for the professional rescuer, oxygen administration, airway management, fracture management, bleeding control, spinal immobilization, patient assessment, emergency pharmacology, and the use of medical antishock trousers. Students qualify for the New York State E.M.T.—Basic certification process. Examinations upon successful completion of the course.

ALS 3350 Advanced N.Y.S. Emergency Medical Technician—Intermediate
ALS 3920 New York State Government Affairs (also HE 3920)
Spring. 15 credits. Prerequisite: junior or senior standing; minimum GPA of 2.3. R. Canfield. For description, see HE 3920.

ALS 4000 Community Service Learning Project
Fall and spring. 3 credits. Prerequisite: none. Letter grades only. B. Chabot. Students develop an independent community-based project that will achieve both service and learning objectives. Learning objectives include skills in research, critical thinking, and leadership. Students will gain knowledge in community needs assessment, project planning, design, implementation, and evaluation. Faculty members mentor students in developing community partnerships, research, and project planning.

ALS 4770 Environmental Stewardship in the Cornell Community
Spring. 2–4 credits; variable, may be taken more than once. J. M. Regenstein. Each student or team of students undertakes an original project to improve the environment at Cornell or in Tompkins County. Often the projects involve working with the Cornell infrastructure (generally campus life and/or facilities). Through class discussions, students learn how to be more effective at developing environmental programs in the future; both during and after college. Students present a final oral report at a public forum to which senior Cornell administrators and others are invited. The final written report is made public.

ALS 4940 Special Topics in Agriculture and Life Sciences
Fall, spring, or summer. 6 credits max. S–U or letter grades. Staff. The college teaches “trial” or temporary courses under this number. Offerings vary by semester and are advertised by the college before the beginning of the semester. The same course is not offered more than twice under this number.

ALS 4960 Internship in ALS
Fall, spring, or summer. 6 credits max. Prerequisite: permission of student’s advisor in advance of participation in internship programs. S–U grades only. Staff. Students must register using individual study form (available in 140 Roberts Hall) signed by faculty member who will supervise study and assign grade. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm. Students planning internships related to the discipline of a department are encouraged to enroll in the departmental internships course.

ALS 4991/4992 Honors Project I and II (also BSOC/STS/HE 4991/4992)
Fall and spring (yearlong). 8 credits (register for 4 credits each semester). Prerequisites: Biology & Society seniors and permission of department; overall GPA of 3.3. Apply in 306 Rockefeller Hall. Students who are admitted to the honors program are required to complete two semesters of honors project research and to write an honors thesis. The project must include substantial research and the completed work should be of wider scope and greater originality than is normal for an upper-level course.

ALS 4998 Politics and Policy: Theory, Research, and Practice (also AMST/PM/GOUT 4998)
Students in CALS must register for ALS 4998. S. Jackson and staff.
This course, taught in Washington, D.C., forms the core of the public policy option of the Cornell in Washington program. The central objective is to provide students with the instruction and guidance necessary to analyze and evaluate their own chosen issue in public policy. To that end, the course has three components: (1) weekly lectures providing background on the structures and processes of national politics and policy as well as training in research methodology; (2) student internships; and (3) individual research papers or projects. All three components interrelate to provide students with a strategy and framework for integrating classroom-based learning, field experience, and individual research. Students apply online at ciw.cornell.edu.

**ALS 5100 Leadership Development for Life Scientists**

Spring. 3 credits. Prerequisite: invitation or permission of instructor. S–U grades only. M. Pritts and P. Strausser.

Formal training and practice of skills required for leading people in an academic or business environment. Skills include coaching, feedback, managing conflict, fostering teamwork, creating vision, and developing diversity. A significant portion is devoted to understanding one's own strengths and weaknesses and how to recognize and use strengths in others.

**ALS 5780 International Teaching Assistant Development Program Course 1**

Fall or spring. 2 credits. Priority given based on immediacy of TA assignment. Prerequisite: ITA Language Assessment or permission of ITAP. K. Kenyon and S. Markel.

Designed for international teaching assistants. This course focuses on teaching techniques, cross-cultural classroom dynamics, and oral communication. Through small group seminars, conferences with instructors, audio journals, and teaching practice, international teaching assistants work to expand their communication and pedagogical skills.

**ALS 5790 International Teaching Assistant Development Program 2**

Fall or spring. 2 credits. Priority given based on immediacy of TA assignment. Prerequisite: ITA Language Assessment or permission of ITAP. K. Kenyon and S. Markel.

Designed as a follow-up to ALS 5780. This course focuses on teaching techniques, cross-cultural classroom dynamics, and oral communication. Through small group seminars, conferences with instructors, audio journals, and teaching practice, international teaching assistants work to expand their communication and pedagogical skills.

**ALS 5800 International Teaching Assistant Development Program 3**

Fall or spring. 2 credits. Priority given based on immediacy of TA assignment. Prerequisite: ALS 5790 or permission of ITAP. K. Kenyon and S. Markel. Designed as a follow-up to ALS 5790. This course focuses on teaching techniques, cross-cultural classroom dynamics, and oral communication. Through small group seminars, conferences with instructors, audio journals, and teaching practice, international teaching assistants work to expand their communication and pedagogical skills.

**ALS 5810 International Teaching Assistant Development Program 4**

Fall or spring. 2 credits. Priority given based on immediacy of TA assignment. Prerequisite: ALS 5800 or permission of ITAP. K. Kenyon and S. Markel. Designed as a follow-up to ALS 5800. This course focuses on teaching techniques, cross-cultural classroom dynamics, and oral communication. Through small group seminars, conferences with instructors, audio journals, and teaching practice, international teaching assistants work to expand their communication and pedagogical skills.

**ALS 6015 The Practice of Teaching Higher Education**

Fall or spring. 2 credits. Prerequisite: instructor permission only. S–U or letter grades. R. C. Kiley.

This highly interactive course focuses on preparing graduate students, teaching assistants, and post-doctoral fellows for teaching in higher education. Students develop a comprehensive electronic portfolio that documents learning, excellence in teaching, and professional development. Coursework focuses on teaching excellence and professional preparation for students pursuing faculty positions in higher education.

**ALS 6610–6611 Environmental Policy (also BSOIC/BIOEE 6610–6611)**

6610, fall; 6611, spring. 3 credits each semester; students must register for 6 credits each semester since "R" grade is given at end of fall semester. Limited to 12 students. Prerequisite: permission of instructor. D. Pimentel.

For description, see BIOEE 6610.

**ALS 6940 Graduate Special Topics in Agriculture and Life Sciences**

Fall or spring. 4 credits max. S–U or letter grades. Staff.

The college teaches "trial" or temporary courses under this number. Offerings vary by semester and are advertised by the college before the beginning of the semester. The course cannot be offered more than twice under this number.

**AGRICULTURAL SCIENCES**

The Agricultural Sciences major is an interdisciplinary program for students wishing to pursue a general education in agriculture and food systems. Students can concentrate in one or more areas including: Animal Science, Agriculture Economics and Management, Education and Communication, Crop Production and Management, and Sustainable Agriculture.

**AGSCI 2940 Special Topics in Agricultural Sciences**

Fall or spring. 4 credits max. A. DiTommaso.

The department teaches "trial" courses, and special topics not covered in other courses, at the undergraduate level, under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**AGSCI 2960 Internship in Agricultural Sciences**

Fall, spring, or summer. 1–3 credits variable, 6 credits maximum. Prerequisite: permission of student's advisor in advance of participation in internship programs. S–U or letter grades. Staff.

In this experiential learning opportunity, students participate in structured, on-the-job learning under supervision of qualified professionals in a cooperating external organization. Internships and learning goals are arranged by the student in conjunction with an internship advisor and the internship host. Course may be taken multiple times for up to 6 credits. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

**AGSCI 3800 Organic Food and Agriculture (also CSS/HORT 3800)**

Fall. 3 or 4 credits. Prerequisites: CSS 1900, CSS 2600, HORT 1101 recommended, or permission of instructor. Staff.

For description, see CSS 3800.

**AGSCI 4010 Seminar in Agricultural Sciences**

Fall and spring. 1 credit; may be taken four times for 1 credit per semester. Required for first-year Ag Sciences students. S–U grades only. A. DiTommaso and K. Richards.

Students in this weekly seminar series learn about current debates and hot issues in the agricultural sciences today from both the local and global perspectives of invited guest speakers. The target audience is Agricultural Sciences majors. Students are required to attend class and participate in post-seminar discussion.

**AGSCI 4940 Special Topics in Agricultural Sciences**

Fall or spring. 4 credits max. A. DiTommaso.

The department teaches "trial" courses, and special topics not covered in other courses, at the undergraduate level, under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**AGSCI 4960 Internship in Agricultural Sciences**

Fall, spring, or summer. 1–3 credits variable, 6 credits maximum. Prerequisite: permission of student's advisor in advance of participation in internship programs. S–U or letter grades. Staff.

In this experiential learning opportunity, students participate in structured, on-the-job learning under supervision of qualified professionals in a cooperating external organization. Internships and learning goals are arranged by the student in conjunction with an internship advisor and the internship host. Course may be taken multiple times for up to 6 credits. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

**AMERICAN INDIAN STUDIES**

The American Indian Program offers a minor in American Indian Studies to undergraduate students. The minor is earned upon the completion of five courses: AIS 1100 and AIS 1110, plus at least three other courses from the AIS curriculum, for a minimum total of 15 credit hours. The three additional courses must include one course from Group A (arts and humanities) and one course from Group B (social and natural sciences) as listed below. One of the courses offered toward the minor must be at the 3000 or 4000 level. Of the three additional courses, one 3-credit independent study (AIS 4970) may be counted toward the minor. Only program-listed courses for which the student has earned a letter grade of C or better will be counted toward the minor. No courses taken for S–U credit will be counted toward the minor. A number of older courses no longer offered by AIP do count toward the minor, as do courses with the same title that were
numbered using the old three-digit system. Students seeking to minor in American Indian studies or determine the eligibility of a course are encouraged to contact Professor Kurt Jordan, associate director for academic development, at kj22@cornell.edu. Application materials for the minor may also be obtained from the AIP office, 4th floor, Caldwell Hall. Students are also advised to consult www.aip.cornell.edu/academic.htm for the most up-to-date listings of course offerings.

(AIS 2360) Native Peoples of the Northeast, Pre-Contact to the Present (also HIST/AMST 22360) (CA) (D)

(AIS 2390) Seminar in Iroquois History (also HIST 2390) (CA) (D)

Fall. 4 credits. Next offered 2011–2012. J. Parmenter. For description, see HIST 2390.

(AIS 2600) Introduction to American Indian Literatures in the United States (also ENGL 2600) (LA) (CA) (D)

Spring. 4 credits. Next offered 2012–2013. E. Cheyfitz. For description, see ENGL 2600.

(AIS 2660) Introduction to Native American History (also HIST/AMST 2660) (CA) (D)

Explores ways in which processes of globalization affect indigenous peoples worldwide and the strategies indigenous peoples are using to deal with those pressures. At issue are the lands, resources, traditional knowledge, and indigenous struggles for recognition and self-determination.

[AIS 6610 Colonial American Literatures (also ENGL/AMST 6610)]
E. Cheyfitz.
For description, see ENGL 6610.

[AIS 6710 Law and Literature in the Antebellum United States (also ENGL/AMST 6710)]
E. Cheyfitz.
For description, see ENGL 6710.

[AIS 6970 Individual Study in American Indian Studies]
Fall, spring, or summer. 1–3 credits. S–U grades only.
A student may, with approval of a faculty advisor, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of interest in American Indian Studies.

APPLIED ECONOMICS AND MANAGEMENT

AEM 1010 Introduction to Applied Economics and Management
Fall. 1 credit. Required of and limited to freshmen in AEM. S–U grades only. D. A. Grossman and D. J. Persio.
The purpose of this course is to acquaint first-year students in AEM with their new department and better enable them to make academic and early-career decisions. A cross-section of faculty leads discussions that introduce most of the major academic subjects taught in AEM. In addition, there are presentations on student organizations and course planning and an assignment on the use of library resources.

AEM 1020 Personal Evaluation and Development
Spring. 1 credit. Required of and limited to first-year majors in AEM. A. M. Novakovic. Designed to help students better understand their personal and professional skills and attributes and enhance their abilities in areas such as teamwork, leadership, trust, ethics, and diversity and what this means for interpersonal relationships. The weekly meeting is either one plenary lecture or a smaller lab. Students learn by experience and from guest lecturers from the business community.

AEM 1200 Introduction to Business Management
Fall, spring, summer. 3 credits. Two evening prelims. P. D. Perez.
Provides an overview of management and business. Human resource, marketing, finance, and strategy concerns are addressed with consideration paid to current issues such as technological innovation and its impact on operations, globalization, ethics, teamwork, leadership, and entrepreneurship.

AEM 1210 Entrepreneurship Speaker Series
Fall. 1 credit. P. D. Perez.
Course consists of guest lectures by faculty members engaged in the study and practice of entrepreneurship and by prominent entrepreneurs associated with the entrepreneurship@Cornell program, with a view to inform and inspire students.

AEM 1220 Entrepreneurship in the Life Sciences
Spring. 1 credit. W. H. Lesser.
Seminars and guest lectures by faculty members and entrepreneurs engaged in the study and practice of entrepreneurship in the life sciences. Emphasis on the process of turning scientific discovery into business opportunity and success. Evaluation includes attendance and written feedback on lectures.

AEM 1230 Foundations of Entrepreneurship and Business
Fall. 2 credits. P. D. Perez.
Introductory course providing a sound base to both the understanding of entrepreneurial activity and possibilities and the study and practice of entrepreneurship at Cornell. Emphasis on the identification and elaboration of business opportunities (i.e., business ideas). Extensive use of IT-based learning and presentation tools.

AEM 2000 Contemporary Controversies in the Global Economy
Fall. 3 credits. Prerequisite: ECON 1110. Recommended: ECON 1120. Priority given to sophomores and juniors in AEM.

C. B. Barrett.
Aims to stimulate critical thinking and cogent writing and speaking about contemporary controversies that attract regular attention in the international press and among key private- and public-sector decision makers. Students read and discuss competing arguments about current issues such as patenting and pricing of pharmaceuticals worldwide, controls on commercial and humanitarian distribution of genetically modified foods, and immigration restrictions. Students write a series of short briefing papers and give regular oral briefs, which are evaluated for quality of communication and content.

AEM 2100 Introductory Statistics
Spring. 4 credits. Prerequisite: college algebra. Two evening prelims.
C. L. van Es.
Introduces statistical methods. Topics include the descriptive analysis of data, probability concepts and distributions, estimation and
AEM 2190 Introduction to Applied Portfolio Management  
Summer. 4 credits. Special program. D. Dase.  
Based in New York City’s Financial District.  
Topics include capital markets, the impact of the economy and the Federal Reserve System, recent stock market history, regulation, investment banking, and management principles of both institutional and individual portfolios. Industry guest speakers provide unique perspectives. An individualized internship is required of all students.

AEM 2210 Financial Accounting  
Fall, summer. 3 credits. Not open to freshmen. Priority given to CALS majors.  
Two evening prelims. J. E. Little.  
Comprehensive introduction to financial accounting concepts and techniques, intended to provide a basic understanding of the accounting cycle, elements of financial statements, underlying theory of GAAP, and financial statement preparation. Topics include methods of recording inventory, receivables, depreciation, bonds, and equity. Requires two evening prelims and a comprehensive final, weekly homework assignments.

AEM 2240 Principles of Finance  
Summer. 3 credits. R. T. Curtis.  
Focuses on the mathematics of finance, the economics of managerial decisions, corporate financial policy, risk management, and investments. Topics include time value, bonds, stock valuation, capital budgeting, financing alternatives, costs of capital, the capital structure decision, distribution policy, mergers and acquisitions, options, forward and futures contracts, market efficiency and market anomalies, strategies of successful investors, and personal finance.

AEM 2250 AEM Certificate in Business Management Consulting Project  
Student teams consult with local organizations in central New York and suggest solutions to problems those organizations are currently facing. Students apply business principles they have learned during their AEM Certificate in Management summer immersion program. Each team prepares a written report and gives a presentation to AEM Certificate faculty and representatives of the organization the team is working with.

AEM 2260 AEM Certificate Activities  
Summer. 1 credit. Staff.  
Students participate in special activities as part of the AEM Certificate in Business Management summer immersion program. While activities may vary from year to year, in the past these activities have included a field trip to corporate sites in New York City, Cornell Outdoor Education team building and leadership exercises, a career services resume/job search presentation, and a talk on the evolution of a local small business by its founder. Student participation in all activities is mandatory and a paper focusing on “take-aways” from each activity is required.

AEM 2270 Introduction to International Business  
Summer. 4 credits. D. T. Ng.  
Based in the global finance center of Hong Kong, students gain a fundamental understanding of how some of the most powerful multinational firms in the world make and implement financial decisions, how they manage risk and gain competitive advantage, how they interact with governments, and what the risks and returns are in conducting such international business. Students are assigned to internships to experience firsthand how such corporations function.

AEM 2300 International Trade and Finance (also ECON 2300) (SBA)  
Spring. 3 credits. Prerequisite: ECON 1110 or equivalent. Recommended: ECON 1120 or equivalent. S–U or letter grades. One evening prelim. D. R. Lee.  
One-semester introduction to international economic principles and policies. Begins by surveying key topics such as the elements of comparative advantage, tariff and nontariff barriers, and multilateral institutions. The course then examines the components of exchange rates, balance of payments, and capital markets. Discusses current issues such as the effects of trade liberalization, trade and economic growth, and instability in international capital markets. Designed as a less technical introduction to concepts developed at a more advanced level in AEM 4300 and ECON 3610–3620.

AEM 2400 Marketing  
Fall, summer, winter session distance learning with D. J. Perosio. 3 credits. S–U or letter grades. J. E. Little.  
Provides a broad introduction to the fundamentals of marketing. Explores the components of an organization’s strategic marketing program, including how to price, promote, and distribute goods and services. Industry guest lecturers and current marketing applications from various companies are presented and analyzed.

AEM 2410 Marketing Plan Development  
Fall, spring. 2 credits. Requirement for and limited to AEM majors. Prerequisite: AEM 2400. D. J. Perosio.  
Offers student teams the opportunity for an intense, hands-on application of basic marketing concepts through research and development of a marketing plan. Guided by a series of assignments, teams develop key components that are integrated into a comprehensive written plan for a local business.

AEM 2500 Environmental and Resource Economics (SBA)  
Fall, summer. 3 credits. S–U or letter grades. G. L. Pot.  
Introduces fundamental economic principles and the “economic approach” to policy issues, and demonstrates how these concepts underpin contemporary environmental and natural resource issues, including policy solutions. Subjects include valuation, benefit-cost analysis, policy design, property rights, and ecological economics. Uses these tools to explore major current policy issues such as economic incentives in environmental policy, endangered species protection, air and water pollution, depletion of renewable and nonrenewable resources, and global warming.

AEM 3020 Farm Business Management  
Fall. 4 credits. Not open to freshmen. Prerequisite for AEM 4050 and 4270. W. A. Knoblach.  
Intensive study of planning, directing, organizing, and controlling a farm business, with emphasis on the tools of managerial analysis and decision making. Topics include financial statements, business analysis, budgeting, and acquisition, organization, and management of capital, labor, land, buildings, and machinery.

AEM 3200 Business Law I (also NBA 5600)  
Fall and summer. 3 credits. Prerequisite: junior, senior, or graduate standing. One evening prelim. D. A. Grossman.  
Examines legal problems of particular interest to persons who expect to engage in business. Emphasizes the law of contracts, sales, agency, and property.

AEM 3210 Business Law II (also NBA 5610)  
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing; business law course or permission of instructor. D. A. Grossman.  
The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited-liability companies. The second portion reviews selected topics in business law, like employment discrimination, debtor/creditor relations, product liability, unfair competition, e-commerce law, and international business law.

AEM 3220 Internet Strategy  
AEM 3230 Managerial Accounting  
Spring. 3 credits. Priority given to CALS majors. Prerequisite: AEM 2210 or equivalent. One evening prelim. J. E. Little.  
Introduction to cost accounting emphasizing the application of accounting concepts to managerial control and decision making. Major topics include product costing, standard costing, cost behavior, cost allocation, budgeting, variance analysis, and accounting systems in the manufacturing environment. Requires use of electronic spreadsheets. Includes an evening prelim, a second exam, and weekly homework.

AEM 3240 Finance (also PAM 5620)  
Fall and spring. 4 credits. Priority given to CALS majors. CALS seats limited in spring semester. Prerequisites: AEM 2100, 1200, and 2210, or equivalents. Three evening prelims. R. T. Curtis.  
Focuses on the mathematics of finance, valuation, and the economics of managerial decisions, corporate financial policy, risk management, and investments. Topics include the time value of money, bond and stock valuation, capital-budgeting decisions, financing alternatives, the cost of capital and the capital-structure decision, distribution policy, mergers and acquisitions and restructuring, options, forward and futures contracts, market efficiency and market anomalies, strategies of successful investors, and personal finance.
AEM 3250  Personal Enterprise and Small Business Management
Spring. 4 credits. Prerequisites: junior or senior standing; AEM 1200 and 2210 or permission of instructor. Absolutely no adds or drops after second class meeting. Cost of term project: approx. $100 per team. D. H. Streeter.
Focuses on the activities involved in planning a start-up business, including the exploration of strategic dimensions, performance of marketing research, and planning of financial aspects related to the new company. Lectures and hands-on clinics include visits by real-world entrepreneurs, who discuss the start-up processes and the challenges of managing growth in a small business. Term project is the development of a business plan, completed in teams of no fewer than three students.

AEM 3280  Innovation and Dynamic Management (also HADM 4443)
Spring. 3 credits. Prerequisite: junior or senior standing. Staff
For description, see HADM 4443.

AEM 3290/3291  International Agribusiness Study Trip
3291, fall; 3290, spring. 2 credits. Prerequisites: AEM 1200 or 3020, and 2460. Open by application before March 1 of spring semester before course is offered. Approximately 12 students are selected with priority given to sophomores and juniors in CALS. Field study co-payment: $900. L. W. Tauer and T. M. Schmit.
Gives students interested in agribusiness management exposure to the managerial practices essential to the success of agriculture, agribusiness, and food companies competing in the global marketplace. Involves a two-week international field study trip that takes place after the final exam period of the spring semester before the course is offered. The course meets for a few sessions in advance of the field study trip. A paper analyzing an aspect of the field study is required.

AEM 3300  Managerial Economics and Decision Making
Spring. 3 credits. Prerequisite: AEM 1200 or equivalent. T. A. Streeter.

AEM 3310  Introduction to Business Regulation
Spring. 3 credits. Prerequisites: ECON 1110, 3130, and AEM 1200. S–U or letter grades. J. T. Prince.
Studies the economics and other factors (e.g., politics, lobbying) that determine regulation policy along with firm strategies in regulated or potentially regulated markets. Major topics include antitrust, economic regulation, and environmental regulation. Applications to the current business environment are emphasized.

AEM 3330  European Business Institutions
Fall, weeks 1–11. 4 credits. Prerequisite: AEM 2200 or equivalent. D. H. Streeter.
Seminar that uses lectures, guest panels, and readings to focus on issues facing women (and their partners, influencers) in their business careers. Topics include status of women in business leadership, pathways and strategies for leadership development, family/life balance issues, gender issues in the workplace, and resources for emerging leaders.

AEM 3350  International Technology Marketing of Biotechnology
Spring. 3 credits. Prerequisites: ECON 1110 and one college biology course or equivalents. S–U or letter grades. W. H. Leonard.
Explores international technology marketing from an economics perspective using biotechnology as an example. Topics include technology theories, products, risk (health and environmental) regulation, industry structure, labeling uses and regulations, public perceptions, patents, trade, and international conventions. The course is of interest to students of biotechnology, public technology policy, and international technology marketing.

AEM 3360  Intermediate Accounting I
Fall. 5 credits. Prerequisites: AEM 2210 and 3230. Priority given to students specializing in accounting. Staff.
Includes an overview of Generally Accepted Accounting Principles, balance sheet valuation, and income measurement and recognition. Other topics include accounting for pensions, earnings per share, and special financial reporting issues.

AEM 3370  Intermediate Accounting II
Spring. 3 credits. Prerequisite: AEM 3360 Intermediate Accounting I. Staff.
Continuation of the in-depth study of accounting theory, generally accepted accounting principles, and the techniques involved in measuring, recording, summarizing, and reporting financial data for business organizations. Learn the GAAP, accounting for equities, revenue, investments, accounting changes, and statement of cash flows. Understand accounting alternatives within GAAP and accounting alternatives to GAAP for the topics covered so that students are prepared to understand and use future changes in GAAP.

AEM 3380  Social Entrepreneurs, Innovators, and Problem Solvers
Fall. 4 credits. A. Wessels.
Introduces students to the social entrepreneurs and visionaries who are creating new strategies for solving society's problems. The course highlights innovative case studies of success in restoring the environment, resolving conflicts, curing diseases, overcoming poverty, and addressing other problems of social injustice. At the end of the course, each student develops an original blueprint for social innovation: a creative proposal for solving a societal problem.

AEM 3400  Consumer Behavior
Fall. 3 credits. Prerequisite: AEM 2400 or equivalent. Priority given to AEM majors. B. Wansink.
Develops a useful, conceptual understanding of the problem and strategies associated with the psychology behind consumer behavior. In doing so, the course provides frameworks that enable students to address these issues responsibly, systematically, and creatively.

AEM 3420  Integrated Marketing Communication
AEM 3440  Consumer Behavior
Fall. 3 credits. Prerequisite: AEM 2400 or equivalent. Priority given to AEM majors. B. W. Knoblauch.
Staff.

AEM 3460  Dairy Markets and Policy
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. ECON 1110 or equivalent. S–U or letter grades. A. M. Novakovic.
Survey of topics related to the structure and performance of U.S. dairy markets and federal and state policies that regulate market activities.

AEM 4010  Commercial Bank Management
1 credit. Prerequisite: ECON 1110 or 1120. Priority given to AEM juniors and seniors. J. J. Byrnes.
Survey of banking industry and its management challenges, with particular attention to the recent crisis and implications for the future. Includes history and regulation of banking, understanding bank financial statements, management and oversight of industry, importance of capital, and products and services (especially lending). Emphasis on current events.

AEM 4020/4021  Food and Brand Lab Workshop
Fall and spring. 6 credits total. Prerequisite: permission of instructor. B. Wansink.
The purpose of the Food and Brand Lab Workshop is to provide students with an opportunity to develop an advanced understanding of consumers by involving them in collaborative, theory-based research related to food. This course is focused on asking and answering the ‘why’ questions behind consumer behavior. Fall-semester students receive an “R” grade and then receive their grade for the course in the spring semester.

AEM 4030  Farm Management Study Trip
Spring. 1 credit. Prerequisite: AEM 3020. Open by application only. W. A. Knoblauch.
Special program to study production and management systems in diverse agricultural regions of the United States. Includes a trip (usually taken during spring break) to the region being studied. A different region is visited each year. The course meets in advance of the study trip and upon return from the trip. Students must write a paper that further explores an aspect of the trip.

AEM 4040  Financial Management for Agriculture and Agribusiness
Spring. 3 credits. Prerequisites: AEM 4050 or equivalent; permission of instructor. C. G. Turvey.
To expand students’ knowledge base of finance as it relates to agriculture and agricultural business. The course follows three main themes: capital budgeting and project valuation, cost of capital, and risk management.

AEM 4050  Agricultural Finance
Spring. 3 credits. Prerequisite: AEM 3020 or equivalent. Recommended: calculus and statistics. Staff.
Discusses the principles and practices used in financing agricultural businesses, from the perspectives of the business owner and the lender. Topics include sources of capital, financing entry into agriculture, financial analysis of a business, capital management, financial statements, credit instruments, loan analysis, financial risk, and leasing.
AEM 4100  Business Statistics  Fall. 3 credits. Prerequisite: AEM 2100 or equivalent. C. L. van Es.
Focuses on techniques used to analyze data from marketing research, business, and economic experiments. Introduces the experimental design and ANOVA, contingency-table analysis, quality-control methods, time-series analysis, and forecasting. Also includes brief introductions to nonparametric methods and multivariate techniques. Involves a research project designed to give experience in collecting and interpreting data.

AEM 4110  Introduction to Econometrics  Fall. 3 credits. Prerequisites: AEM 2100 and either ECON 3130 or PAM 2000 or equivalents. D. R. Just.
Introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression models are discussed as are simultaneous equation models, simulation, and forecasting techniques.

AEM 4120  Computational Methods for Management and Economics  Fall. 3 credits. Primarily for juniors, seniors, and M.S. degree candidates. Prerequisite: AEM 2100 or equivalent. C. Gomes.
Course in applied mathematical methods. Emphasizes formulation of and solution to mathematical models of problems in economics and business. Studies blending, resource allocation, capital budgeting, transportation and financial planning, and inventory management. Introduces integer and nonlinear programming.

AEM 4130  Business Strategy Research  Fall. 3 credits. Prerequisites: AEM 2100 or equivalent statistics course; permission of instructor. Next offered 2011–2012. G. Blaick.
Introduces empirical microeconomic research methods and emphasizes the role of research questions in business strategy. The course objective is to familiarize students with the potential problems of business strategy research and the methods employed to overcome those problems. Students read and discuss peer-reviewed academic journal articles in business and economics.

AEM 4140  Behavioral Economics and Managerial Decisions  Fall. 3 credits. Prerequisites: junior or senior standing, ECON 3130 or PAM 2000. Lab fee: $40. D. R. Just and W. P. Schulze.
Behavioral economics integrates psychology and economics by identifying systematic anomalies in decision making. These are now recognized as an important source of error in business decision making and provide the foundation for both behavioral marketing and finance. The course compares rational choice theory with behavior both in lecture and through a series of economics experiments in which students face situations that are likely to lead to anomalies such as the “winner’s curse,” the status quo bias, hyperbolic discounting, and bias in assessing risks. Students have the opportunity to evaluate their own decision making.

AEM 4150  Price Analysis  Fall. 3 credits. Prerequisites: AEM 2100 or equivalent, ECON 3130 or PAM 2000 or equivalent. H. M. Kaiser.
Focuses on the analysis of supply and demand and the economic consequences of pricing strategies with particular attention to agricultural products. Pays special attention to empirical analysis. Includes institutional aspects of pricing, temporal and spatial price relationships, price forecasting, and the economic consequences of pricing decisions.

AEM 4160  Strategic Pricing  Spring. 3 credits. Prerequisites: ECON 3130, AEM 2100, or equivalent. J. Liazkonyte.
This quantitative course explores various pricing strategies by taking into consideration the role of consumer behavior, economics, statistics, and management science. Topics include product tying and bundling, peak load pricing, price matching, warranty pricing, royalty pricing, and the 99-cent pricing perceptions.

AEM 4170  Decision Models for Small and Large Businesses  Fall. 3 credits. Prerequisites: junior or senior standing (priority given to AEM majors); AEM 2100 or equivalent. Nolec’s labs are held. C. L. van Es.
Focuses on economic and statistical models of decision analysis and their applications in large and small business settings. Demonstrates how use of models can improve the decision-making process by helping the decision maker. Emphasizes the importance of sensitivity analysis and the need to combine both quantitative and qualitative considerations in decision making. Draws cases from small business scenarios, the public policy arena, and corporate settings. Lab sessions focus on implementing decision models with computers.

AEM 4180  Introduction to System Dynamics Modeling  Spring. 3 credits. Prerequisite: PAM 2000 or ECON 3130. S–U or letter grades. N. H. Chau.
The art of thinking strategically puts outstanding one’s adversary at the core of the decision-making process, while anticipating that the adversary is doing exactly the same thing. Businesses make investment decisions and innovate products in anticipation of the reaction of their rivals; managers make pay contingent on peer performance, taking into account the reaction of their subordinates and superiors; national trade policies are formulated based on whether trading partners are committed to make credible concessions. This course introduces and explores the use of game theory to understand these interactions. Students are expected to work with a balanced dose of both theory and relevant case studies. The objective of the course is to facilitate students’ ability to think strategically on firm level issues (e.g., pricing, advertising, product differentiation, and entry deterrence) and strategic policy interaction in international economic relations (e.g., trade wars and the arms race).

AEM 4190  Strategic Thinking  Spring. 3 credits. Prerequisite: PAM 2000 or ECON 3130. S–U or letter grades. V. L. Bogan.
Stimulates critical thinking about contemporary topics that attract attention in the press and among key finance decision makers. This analytical course draws on the theory of modern finance to facilitate the understanding of real-world issues. Covers traditional topics in financial markets such as security trading, derivatives, fixed income, IPOs, portfolio formation, and market efficiency. Also explores newer issues such as technology and financial markets.

AEM 4200  Estate Planning (also NBA 5620)  Fall. 3 credits. Prerequisites: ECON 1110, MATH 1110 or equivalent, AEM 2100 or equivalent, AEM 3240. Letter grades. D. A. Grossman.
Focuses on the analysis of specific types of fixed-income securities, how strategic decisions should be made. Explores related financial instruments such as forwards and futures on fixed-income securities, interest rate swaps, bond options, and mortgage-backed securities. In addition to the traditional topics in financial markets such as portfolio formation, and market efficiency, this course draws on the theory of modern finance to facilitate the understanding of real-world issues. Covers traditional topics in financial markets such as security trading, derivatives, fixed income, IPOs, portfolio formation, and market efficiency. Also explores newer issues such as technology and financial markets.

AEM 4210  Derivatives and Risk Management  Spring. 3 credits. Prerequisites: AEM 2100 and 3240 or equivalents. Recommended: ECON 3130 or equivalent and a calculus course; familiarity with calculus and probability and statistics. Priority given to AEM students. S–U or letter grades. C. G. Turvey.
Covers the pricing of derivatives and how derivatives can be used for the purpose of risk management and speculation. A portion of this course involves the use of spreadsheet or other computer programs.

AEM 4220  Estate Planning (also NBA 5620)  Fall. 3 credits. Prerequisites: ECON 1110, MATH 1110 or equivalent, AEM 2100 or equivalent, AEM 3240. Letter grades. V. L. Bogan.
Stimulates critical thinking about contemporary topics that attract attention in the press and among key finance decision makers. This analytical course draws on the theory of modern finance to facilitate the understanding of real-world issues. Covers traditional topics in financial markets such as security trading, derivatives, fixed income, IPOs, portfolio formation, and market efficiency. Also explores newer issues such as technology and financial markets.

AEM 4230  Contemporary Topics in Applied Finance  Fall. 3 credits. Prerequisites: ECON 1110, MATH 1110 or equivalent, AEM 2100 or equivalent, AEM 3240. Letter grades. V. L. Bogan.
Stimulates critical thinking about contemporary topics that attract attention in the press and among key finance decision makers. This analytical course draws on the theory of modern finance to facilitate the understanding of real-world issues. Covers traditional topics in financial markets such as security trading, derivatives, fixed income, IPOs, portfolio formation, and market efficiency. Also explores newer issues such as technology and financial markets.

AEM 4240  Management Strategy  Fall. 3 credits. Prerequisite: AEM seniors. G. Blaick.
Capstone course designed to integrate what students have learned in other AEM courses with an emphasis on strategic decision making. Approaches issues from the standpoint of the board of directors, chief executive officer, and business unit managers. Focuses on what should be considered and how strategic decisions should be made.

AEM 4260  Fixed-Income Securities  Fall. 3 credits. Prerequisites: MATH 1110 or equivalent, AEM 2100 or equivalent, AEM 3240. Letter grades only. V. L. Bogan.
Focuses on fixed-income securities including corporate bonds, default-free bonds, and floating rate notes. Other topics include related financial instruments such as forwards and futures on fixed-income securities, interest rate swaps, bond options, and mortgage-backed securities. In addition to the traditional topics in financial markets such as portfolio formation, and market efficiency, there is an examination of the tools used in bond portfolio management.

AEM 4270  Agribusiness Strategy  Spring. 3 credits. Prerequisites: AEM 1200 and 3240 or equivalents. D. T. Ng.
Focuses on the analysis of financial information—particularly firms’ financial reports—for making decisions to invest in businesses. The primary focus is on equity (share) valuation, with some attention given
to credit analysis. Examines various valuation models in detail and applies them in cases and projects involving listed companies. Topics include models of shareholder value, discounted cash flow approaches to valuation, the analysis of profitability, growth, and valuation. Examines the performance of a firm, forecasting earnings and cash flows, proforma analysis for strategy and planning, analysis of risk, and the determination of price/earnings and market-to-book ratios.

AEM 4290 International Finance
Spring. 3 credits. Prerequisites: AEM 2100 and letter grades. D. T. Ng.
Teaches students about issues in international financial management and international investment. The major issues discussed include exchange rate volatility, the benefit of international diversification, and the analysis of international capital budgeting decisions. Specific topics include the determination of the cost of capital for foreign investments, the determination and management of foreign exchange risks and country risks, and the use of innovative financing for the multinational corporation.

AEM 4300 International Trade Policy
Spring. 3 credits. Prerequisites: ECON 1110–1120 or equivalents and intermediate microeconomics course. S–U or letter grades. N. H. Chau.
Examines the economic principles underlying international trade and monetary policy, and the policies, practices, and institutions that influence trade and foreign exchange markets. Also emphasizes applications to current topics in international trade policy, to trade in primary commodities, and to both developed and developing countries.

AEM 4310 Agricultural and Food Policy
Fall. 3 credits. Prerequisites: junior, senior, or graduate standing; PAM 2000, ECON 3010, 5150, or equivalent. S–U or letter grades. A. M. Novakovic.
Acquaints students with current and historically important U.S. policies related to agriculture and food, including subsidies and regulations related to markets, production, and the environment. The approach combines historical, political, and economic interpretation and analysis.

AEM 4320 Public Private Sector Economic Linkages
Spring. 3 credits. Prerequisite: intermediate microeconomics course. C. K. Ranney.
Examines the role of government tax and expenditure policies in the United States using tools from microeconomic theory. Given that the government sector is almost 40 percent of total U.S. economic activity, the course analyzes the relationship between government and private sector. Second, what are the implications of governmental economic activity on private sector decision makers? An array of tax and expenditure policies are investigated with particular focus changing from year to year based on current events and student interests.

AEM 4350 Political Economy of the WTO
Spring. 3 credits. Prerequisite: intro microeconomics. H. deGorter.
The politics of the WTO and trade policy are explored. Examines what the WTO is, how it operates, how much power it really has, why it was created, and incentives for governments to cooperate. Also explores how WTO rules affect domestic politics and foreign policy goals and how WTO rules and agreements are enforced. Students also debate the effect of trade on growth and poverty.

AEM 4360 Entrepreneurial Leadership
Participants learn about concepts and practice skills important for becoming an entrepreneurial leader in startup or small business, corporate environment, and/or the public sector.

AEM 4420 Emerging Markets
Fall. 3 credits. Prerequisites: senior or graduate standing; AEM 2400 and PAM 2000 or ECON 3130. R. D. Christy.
Provides a framework for examining the effectiveness of marketing strategies in economies in transition and identifying the challenges and opportunities for firms in low-income economies to access industrial markets. Appraises the risk of entering markets in low-income economies and assesses the political, legal, cultural, and economic forces. Analyzes and discusses case studies of companies.

AEM 4430 Food-Industry Strategy
Fall. 2 credits. Prerequisites: AEM juniors, seniors, or graduate students; AEM 4240 or 4480; or permission of instructor. W. Drake and G. Hawkins.
Examines the decisions that businesses must make, such as what to sell, where to invest, when to outsource, and how to market—all in a changing and competitive environment. While the principles are applicable to any competitive environment, the focus is on one industry, the food industry, to allow an in-depth look at how the various players (manufacturers, retailers, and others) both cooperate and compete in the process of supplying food to consumers. Students learn how such issues as globalization, industry consolidation, new technologies, and health concerns add to the challenges and opportunities.

AEM 4440 Managing for Market-Driven Growth
AEM 4450 Food Policy for Developing Nations (also NS 4450) (SBA)
Fall. 3 credits. Prerequisites: 6 credits in economics, applied economics, or sociology and 6 credits in nutrition and/or agricultural sciences. P. Pinstrup-Andersen.
Comprehensive presentation and discussion of policy options for a sustainable global food system, with focus on developing countries. Topics include economic policy related to nutrition, health, consumption, production, natural resource management, trade, markets, gender roles, armed conflict, and ethics. A social entrepreneurship approach based on case studies and active participation by students is used.

AEM 4460 Food Marketing Colloquium
Fall. 1 credit. Prerequisite: junior or senior standing; extensive course work in food industry management and marketing. D. J. Perosio.
The seminar covers advanced topics in food marketing, many of which have an important international dimension and are presented by industry members. A field trip may be taken. Students participate in research topics on various aspects of the food industry.

AEM 4470 Retail Speaker Series
Spring. 1 credit. D. J. Perosio.
Seminars and guest lectures by faculty and guest lecturers engaged in the study and practice of retailing. This course provides a unique opportunity for successful industry leaders to share their experiences with Cornell students. Students share their view about successful management styles, possible career paths, critical industry-related issues, and qualities conducive to successful business leadership. Students have an unprecedented opportunity to learn and question how retail leaders view the current and future status of retailing, the largest sector in the U.S. economy.

AEM 4480 Food Merchandising
Spring. 3 credits. Prerequisites: junior or senior standing; AEM 2400. D. J. Perosio.
Covers merchandising principles and practices as they apply to food industry situations. Examines the various elements of merchandising such as buying, pricing, advertising, promotion, display, store layout, profit planning and control, and merchandising strategy. Considers the consequences of food industry trends and initiatives for other industry members, public policy makers, and consumers.

AEM 4500 Resource Economics (also ECON 4500) (SBA)
Fall. 3 credits. Prerequisites: MATH 1110, ECON 3130, and familiarity with Excel. J. M. Conrad.
Constructs dynamic models of renewable, nonrenewable, and environmental resources to examine market allocation and optimal resource management.

AEM 4510 Environmental Economics (also ECON 4090) (SBA)
Spring. 3 credits. Prerequisites: undergraduate standing; intermediate microeconomics course and calculus. S–U or letter grades. G. Polasky.
Explores the economic foundations for public decision making about environmental commodities and natural resources, using tools from intermediate microeconomics. Emphasizes the welfare economic approach for allocating public goods, with specific emphasis on market failure, externalities, benefit-cost analysis, nonmarket valuation techniques, and cost-effective policy instruments. Also examines property rights/ institutional perspectives and ecological economic concepts.

AEM 4520 Advanced Accounting
Fall. 3 credits. Prerequisite: AEM 3360 Intermediate Accounting I. E. E. Lewis.
Detailed analytical study of special issues and situations in financial accounting. Continuous emphasis is placed on the relationship between theory and practice to reflect the latest professional pronouncements. Highly technical topics related to corporation, partnership, government, and not-for-profit organizations, with a focus on business combinations and the particular accounting challenges that they present.
AEM 4530 Auditing and Assurance
Fall. 3 credits. Prerequisite: AEM 3560 Intermediate Accounting I. J. W. Lippitt. Theory and practice of independent examination of financial statements. Discussion of relationships with clients; working papers, assurance procedures, including evaluations of internal controls, accounting principles, risk assessment, liability, and professional ethics.

AEM 4532 Advanced Auditing and Research
Spring. 3 credits. Prerequisite: AEM 4530 Risk Management, Internal Control, and Assurance. E. E. Lewis.
Case-based discussion of theory of independent examinations of financial statements. Discussion of relationships with client, working papers, audit procedures, evaluations of internal control, accountant liability, and professional ethics.

AEM 4540 China's and India's Growth Miracles (also ECON 4540)
Fall. 3 credits. Prerequisites: basic course in microeconomics, international economics, and econometrics/statistics. E. Prasad.
Advanced undergraduate course that covers topics in international finance and open economies and financial markets. The course is organized around a detailed examination of the growth experiences of China and India as a device for illustrating and delving into key analytical concepts.

AEM 4550 Economics of Advertising
Spring. 3 credits. Prerequisites: ECON 3150, AEM 2100 or equivalent. J. Liaukonyte.
This is an analytical and quantitative course focusing on advertising strategy. How does advertising affect product demand and competitive responses from rival products? Why and how do consumers respond to advertising? What is their sensitivity to advertising expenditures, if any? Can we measure that sensitivity? These are some of the questions analyzed during this course.

AEM 4620 Technology and Financial Markets
Fall. 2 credits. Prerequisites: AEM 3240 and one 4000-level AEM finance course; permission of instructor. V. L. Bogan.
Focuses on issues involving technology and financial markets. It is designed to equip future finance professionals with the knowledge of key finance systems (Bloomberg) skills and technologies. The lectures and labs teach students to apply their theoretical finance knowledge in real-world situations for the purpose of optimizing their future job performance and increase their marketability. Lectures explore topics on the effects of technology on financial markets. The lab component requires students to complete the 30-hour, self-paced Bloomberg certification process.

AEM 4640 Economics of Agricultural Development (also ECON 4640)
Fall. 3 credits. Prerequisite: ECON 1100–1120 or permission of instructor. Next offered 2012–2013. R. D. Christy.
Provides an understanding of the economics of the agricultural sector in low-income countries.

AEM 4650 BOLD LCP Challenge
Spring. 1 credit. Prerequisite: BOLD Leadership Program candidates. S–U grades only. C. L. van Es.
This 16-hour workshop, run by the Center for Global Leadership, is based on the Leaderships Challenge and involves CP1260, Firo-B, and EQI assessments, experiential learning on leadership development including social and environmental entrepreneurship to effect global change.

AEM 4940 Undergraduate Special Topics in Advanced Economics and Management
Fall or spring. 4 credits max. S–U or letter grades. Staff.
The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the beginning of the semester.

AEM 4940 Undergraduate Research
Fall or spring. Variable credit. S–U or letter grades. Students must register using independent study form (available in undergraduate program office in Warren Hall). Staff. Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty. Students cannot receive both pay and credit for the same hours of preparation and teaching.

AEM 4980 Supervised Teaching Experience
Fall or spring. 1–4 credits. Students must register using independent study form (available in undergraduate program office in Warren Hall). Staff. Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty. Students cannot receive both pay and credit for the same hours of preparation and teaching.

AEM 4990 Undergraduate Research
Fall, spring, or summer. 1–4 credits. Prerequisite: GPA of at least 2.7. Students must register using independent study form (available in undergraduate program office in Warren Hall). S–U or letter grades. Staff.
Permits outstanding undergraduates to carry out independent study of suitable problems under appropriate supervision. Students cannot receive both pay and credit for the same hours of work.

AEM 4991 Independent Honors Research in Social Science
Fall or spring. 1–6 credits. Prerequisite: requirements for honors program met (see “Honors Program” under CALS). Provides qualified students an opportunity to conduct original research under supervision. Information is available in the AEM undergraduate program office in Warren Hall.

AEM 6040 Food Systems and Poverty Reduction: Concepts and Themes (also IARD 6040)
Fall. 3 credits. Prerequisite: Ph.D. students only; permission of instructor. C. B. Barrett and R. J. Nelson.
For description, see IARD 6050.

AEM 6050 Agricultural Finance
Fall. 3 credits. Prerequisite: AEM 3240 or AEM 4050 or equivalent. Staff.
Covers advanced topics in agricultural finance, including investment analysis, capital budgeting under uncertainty, decision analysis, risk management, capital structure, and financial intermediaries.

AEM 6060 Food Systems and Poverty Reduction: Integration (also IARD 6060)
Fall. 4 credits. Next offered 2011–2012. P. Pinnerup-Andersen and A. Power. For description, see IARD 6050.

AEM 6080 Production Economics (also ECON 4080)
Fall. 3 credits. Prerequisite: ECON 3130 and MATH 1110 or equivalents. R. N. Boisvert.
Studies the theory of production economics with emphasis on applications to agriculture and natural resources. Topics include the derivation, estimation, and use of production, cost, profit, revenue, demand, and supply functions. Discusses the concepts of efficiency and productivity. Introduces production response over time and under risk.

AEM 6120 Applied Econometrics
Fall. 1 credit. Corequisite: AEM 4110. D. R. Just.
Designed for M.S. and Ph.D. students who do not meet the prerequisites for other graduate-level econometrics courses. Complements AEM 4110, providing greater depth of understanding of econometric methods and exposure to applied econometric literature. Focuses on preparing students to conduct their own applied economic research.

AEM 6180 Systems Dynamics Applications (also IARD 6180)
Spring. 4 credits. R. G. Dudley.
Introduces students to system dynamics concepts, terminology, and the modeling techniques applicable to biological, socioeconomic, and many other systems. The objective is to provide a common systems understanding and interdisciplinary framework to support subsequent research projects.

AEM 6300 Policy Analysis: Welfare Theory, Agriculture, and Trade (also ECON 4300)
Spring. 4 credits. Prerequisites: AEM 6080 or PAM 6030, ECON 3130, or equivalent intermediate micro theory course incorporating calculus. H. de Gorter.
The first half of the course surveys the theory of welfare economics as a foundation for public policy analysis. Major issues addressed include the problem of social welfare measurement, the choice of welfare criteria, and the choice of market or nonmarket allocation. Basic concepts covered include measurement of welfare change, including the compensation principle, consumer and producer surplus, willingness-to-pay measures, externalities, and the general theory of second-best optima. The second half focuses on public policy analysis as applied to domestic agricultural policy and international trade. The domestic policy component examines major U.S. farm commodity programs and related food and macroeconomic policies and analyzes their effects on producers, consumers, and other groups. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy analysis, and the principal trade policies employed by countries in international trade.
AEM 6320 Open Economy Analysis: Theory and Applications
Spring. 2 credits. Prerequisites: ECON 3130/3140 or permission of instructor. S–U or letter grades. N. H. Chau. Explores both recent theoretical and methodological advances as well as practical applications in analyzing current topics and issues in open economies. Brings together research methods pertinent to open economy macroeconomics and international trade policies to give students a basic understanding of how different aspects of contemporary debates are analyzed in practice.

AEM 6400 Analysis of Agricultural Markets (also ECON 4400)
Fall. 5 credits. Prerequisites: AEM 4110 and 4150 or equivalents. Offered even-numbered years. H. M. Kaiser. Focuses on the unique features of agricultural commodity markets. Emphasizes government and private institutions that affect these markets, as well as on models of price behavior including marketing margins and imperfect competition. Also covers empirical tools to evaluate market characteristics.

AEM 6410 Commodity Futures Markets
Spring, weeks 8–14. 2 credits. Prerequisites: AEM 4110 and 4150 or equivalents. Recommended: AEM 6400. W. G. Tomek. Focuses on markets for agricultural futures contracts. Emphasizes models of price behavior on futures markets including relationships among cash and futures prices. These principles provide a foundation for a discussion of hedging, speculation, and public policy issues.

AEM 6420 Globalization, Food Safety, and Nutrition (also NS 6420)
Fall. 2 credits. Prerequisites: permission of instructor, graduate standing, and basic understanding of economics and nutrition. Letter grades only. P. Pintstrup-Andersen. Directed readings course with a weekly 50-minute discussion session. The course is aimed at graduate students in nutrition, agricultural economics, and other relevant fields, who wish to explore how globalization may affect poverty, food security, and nutrition in developing countries and the role of national policies and international agreements and institutions may influence the outcome. The discussion sessions are based on assigned readings for each week.

AEM 6510 Environmental and Resource Economics
Spring. 4 credits. Core course for environmental management concentration/option. Prerequisite: graduate standing. Open to graduate students outside economics. G. L. Poe. Review of welfare economics, environmental externalities, and common property resources, and a survey of current environmental and natural resource policy. Covers techniques for measuring benefits and costs—including property value and welfare hedonic approaches, travel cost models, and contingent evaluation. Describes survey/data collection methods in detail. Explores innovative market mechanisms for resolving public good, common property, and externality problems. Students are required to complete a paper describing their own formal economic analysis of a natural resource or environmental problem.

AEM 6550 Electric Systems Engineering and Economics (also ECE 5510)
Fall. 2 credits. Prerequisites: basic calculus and microeconomics courses. T. D. Mount. For description, see ECE 5510.

AEM 6600 Agroecosystems, Economic Development, and the Environment
Spring. 3–4 credits. Prerequisite: graduate standing. Open to graduate students outside economics; additional sec TBA for economics majors. S–U or letter grades. D. R. Lee. Examines selected topics in agricultural and economic development, technology assessment, ecosystem management and the environment, with a focus on developing countries. Topics include production, poverty, and environmental trade-offs; sustainable technology development; trade and environment linkages; economics of conservation and development; and alternative methodologies for analyzing these interactions. Readings emphasize the economic literature, but also draw from the biophysical sciences, ecosystem management, and the broader social sciences.

AEM 6670 Topics in Economic Development (also ECO II 7770)
Spring, 3 credits. Prerequisite: second- and third-year graduate students. Prerequisite: basic first-year courses in ECON or AEM or permission of instructor. S–U or letter grades. S. M. Kambhu. Topics vary from year to year but may include poverty, inequality, intra-household allocation, structural adjustment, and debt. Examination is by term paper.

AEM 6700 Economics of Consumer Demand (also PAM 6080)
Fall. 3 credits. Prerequisites: ECON 3110 or 3130 and two semesters of calculus. S–U or letter grades. C. K. Ranney. Graduate-level introduction to theory and empirical research on household demand, consumption, and savings. Emphasizes the use of the theory in empirical research. Topics include neoclassical theory of demand, utility, complete demand systems, conditional demand, demographic scaling and translating, consumption, and savings. A timely allows, Becker and Lancaster models of demand may be introduced.

AEM 6840 Economics of Biofuels: Implications for the Nexus of Agricultural, Energy, and Environmental Policies
Fall. 2 to 3 credits. Prerequisite: knowledge of microeconomics. S–U or letter grades. H. deGorter. Topics include feedstock-biofuel-oil price linkages, profitability, tax credits versus mandates, sub-national environmental and energy policies, policy interactions, international trade models, import tariffs, “subsidy” component of biofuel policies and the WTO, life-cycle accounting and sustainability standards, developing countries and poverty, food-versus-fuel debate, and implications for technology and farm subsidies.

AEM 6940 Graduate Special Topics in Applied Economics and Management
Fall or spring. 3 credits max. S–U or letter grades. Staff. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the beginning of the semester.

AEM 6960 Perspectives in International Development (also NTRES/CSS/IARD 6960)
Fall, spring. 1 credit. S–U grades only. L. Buck, R. Christy, and P. Hobbs. For description, see IARD 6960.

AEM 6980 Supervised Graduate Teaching Experience
Fall or spring. 1–4 credits; max. 4 credits during graduate program. Prerequisites: graduate standing, permission of instructor. Undergraduates should enroll in AEM 4980. Students must register using independent study form (available in undergraduate program office in Warren Hall). S–U or letter grades. Staff. Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching lectures and laboratories, and tutoring. Students are expected to actually teach at least one hour per week for each credit awarded. Students may not receive both pay and credit for the same hours of preparation and teaching.

AEM 6990 M.P.S. Research
1–6 credits. Prerequisite: M.P.S. students. Credit granted for M.P.S. project report. Staff.

AEM 7000 Individual Study in Applied Economics and Management
Fall or spring. Prerequisite: graduate standing. S–U or letter grades. Credit, class hours, and other details TBA with faculty member. Staff. Used for special projects designed by faculty members. More than one topic may be given each semester in different sections. Student must register in section appropriate to topic being covered; section number is provided by instructor.

AEM 7010 Applied Microeconomics I
Fall. 3 credits. Required for all first-year AEM Ph.D. students. Prerequisites: Ph.D. students only; ECON 6090 and 6100, and AEM 7100 or equivalent. C. K. Ranney and R. N. Boissvert. Covers economic models and empirical applications in consumer demand and production economics.

AEM 7020 Applied Microeconomics II
Spring. 3 credits. Required for all second-year AEM Ph.D. students. Prerequisites: Ph.D. students only; ECON 6090 and 6100, and AEM 7100 or equivalent. H. DeGorter, D. R. Just, and C. K. Ranney. Covers economic models and empirical applications in welfare economics, risk analysis, and industrial organization.

AEM 7080 Advanced Production Economics
AEM 7100 Econometrics I
Spring. 3 credits. Prerequisites: matrix algebra and statistical methods courses at level of ILRST 3110 or ECON 6090. T. D. Mount. Provides (together with AEM 7110) a graduate sequence in applied econometrics that is suitable for M.S. and Ph.D. students to cover linear-regression models and the associated estimation and testing procedures.
AEM 7110 Econometrics II
Fall. 3 credits. Prerequisite: AEM 7100 or equivalent. T. D. Mount.
Coverage beyond AEM 7100 of dynamic models, including single-equation ARIMA, vector ARIMA, Kalman filtering, structural dynamic models, and regime switching. Topics include endogeneity, stability, causality, and cointegration.

AEM 7120 Quantitative Methods I
Fall. 4 credits. Prerequisite: some formal training in matrix algebra. Highly recommended: course at level of BTRY 4170. R. N. Boivin.
Comprehensive treatment of linear programming and its extensions, including postoptimality analysis. Topics include nonlinear programming, including separable, spatial equilibrium, and risk programming models. Discusses input-output models and their role in social accounting matrices and computable general equilibrium models. Makes agricultural, resource, and regional economic problems.

AEM 7130 Dynamic Optimization
Spring. 3 credits. Prerequisites: ECON 6090 and ECON 6170. Letter grades only. J. M. Conrad.
Concerned with the solution of dynamic allocation problems. Objectives are to (1) pose prototype optimization problems in discrete and continuous time, (2) introduce the common methods for solving prototype problems, (3) present a set of numerical problems, and thereby (4) equip students with basic tools of an students to perform applied research on dynamic allocation problems.

AEM 7140 Experimental Economics
Fall. 4 credits. Prerequisite: ECON 6090. Offered alternate years. W. D. Schulze.
Surveys both experimental economics methods and research as an approach to test economic theory. Students participate as subjects in a series of illustrative computerized experiments ranging from double auctions to public goods provision. Topics include experimental methods, decisions and games, markets (testing auctions), market power (monopoly, oligopoly); bargaining, compensation, and performance; public goods, externalities and voting; information and uncertainty; and economic anomalies. Students must design and write a paper describing their own experiment.

AEM 7150 Applied Microeconomic Research I
Fall. 1 credit. Required for all second-year AEM Ph.D. students. Prerequisite: AEM Ph.D. students only. D. K. Just.
Consists of an applied microeconomic research project. Students are required to select a mentor for the project.

AEM 7151 Applied Microeconomic Research II
Spring. 1 credit. Required for all second-year AEM Ph.D. students. Prerequisite: AEM Ph.D. students only. D. R. Just.
Consists of an applied microeconomic research project. Students are required to select a mentor for the project.

AEM 7170 Research Methods in Agricultural Economics
Spring. 2 credits. Prerequisite: graduate standing. R. Boivert.
Discusses the research process and scientific method as applied in agricultural economics. Topics include problem identification, hypotheses, sources of data, sampling concepts and designs, methods of collecting data, questionnaire design and testing, field organization, and analysis of data. During the semester, each student develops a research proposal that may be associated with his or her thesis.

AEM 7350 Public Finance: Resource Allocation and Fiscal Policy (also ECON 7350)
Spring. 4 credits. Prerequisite: ECON 6090. S. M. Kanbur.
For description, see ECON 7350.

AEM 7400 Empirical Analysis of Industrial Organization
Spring. 3 credits. Prerequisites: ECON 6090, ECON 6100, and AEM 7100. J. T. Prince.
Analyzes in detail leading papers in the empirical industrial organization literature. In doing so, the objective is to develop students' skills in determining appropriate theoretical and corresponding econometric models for applied research, and to improve students' proficiencies with a variety of econometric models (e.g., OLS, IVs, MLE, GMM, discrete choice).

AEM 7440 Advanced Consumer Research
Fall. 3 credits. Prerequisite: graduate standing; priority given to CALS Ph.D. students, especially those in AEM, nutritional science, or food technology. B. Wansink.
Workshop providing students with a unique opportunity to develop an advanced theory-based understanding of consumers by using innovative methods and new research techniques. Class sessions alternate theory with implementation.

AEM 7500 Resource Economics
Fall. 3 credits. Prerequisites: ECON 6090 and 6180, or AEM 7130. J. M. Conrad.
Uses optimal control and other methods of dynamic optimization to study the allocation and management of natural resources.

AEM 7510 Environmental Economics
Spring. 4 credits. Prerequisites: ECON 6090 and graduate-level equations course. S-U or letter grades. A. Bento.
The objective of this course is to provide a graduate-level survey of the two prevailing contemporary theories in environmental economics: the measurement of the demand for environmental resources as input into benefit-cost analyses, and the design of incentive-based, cost-effective policy instruments to achieve environmental goals. Core topics include market failure, conceptual foundations for valuing changes in environmental quality; empirical applications of nonmarket valuation methods, and cost-effective market mechanism design for reducing pollution. Additional topics include information asymmetries and mechanism design for nonpoint source pollution, and international/global environmental issues.

AEM 7520 Microeconomics of International Development
Spring. 3 credits. Prerequisite: completion of first-year Ph.D. course sequence in AEM or ECON or permission of instructor. S-U or letter grades. Offered odd years. B. Barrett.
Focuses on models of individual, household, firm/farm, and market behavior in low- and middle-income developing economies. Topics include agricultural land, labor, and financial institutions; technology adoption; food security and nutrition; risk management; intra-household analysis; reciprocity networks, and product/factor markets analysis.

AEM 7650 Development Microeconomics Graduate Research Seminar
Spring and fall. 1–3 credits. Prerequisite: graduate standing and permission of instructor. C. B. Barrett.
Graduate students and the instructor present draft research proposals, papers, and preliminary thesis results for group review and discussion. Students who actively participate by offering written and oral comments on others’ work receive 1 credit. Students who also present their own proposal or paper receive 2 credits. Presentations last 75 minutes and thus represent a substantial investment of time. Students who present a second proposal or paper receive 3 credits.

AEM 7670 Topics in International Finance
Fall. 3 credits. Prerequisite: ECON 7620 or equivalent. E. Prasad.
Provides a selective overview of topics at the cutting edge of academic research and policy debates about the international financial system. Main areas include the effects of financial globalization on growth, volatility, and the transmission of business cycles. The course also examines the determinants of the direction and composition of capital flows, and analyzes the implications of the rising prominence of hedge funds, sovereign wealth funds, and other institutional investors. This course is intended for advanced Ph.D. students, especially those in search of thesis topics, and requires extensive student involvement in preparing research proposals and critiques of existing literature.

AEM 7900 Graduate-Level Thesis Research
Fall or spring. 1–9 credits. Prerequisite: permission of graduate committee chair. For Ph.D. students on thesis; S–U grades only. Graduate faculty.

AEM 8900 Master’s-Level Thesis Research
Fall or spring. 1–9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty.
For students admitted specifically to a master’s program.

AEM 9900 Doctoral-Level Thesis Research
Fall or spring. 1–9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty.
For Ph.D. students only before “A” exam has been passed.

ANIMAL SCIENCE
ANSC 1100 Domestic Animal Biology I  
Fall. 4 credits. Letter grades only.  
J. E. Parks and staff.  
Covers the biology of domestic animals and its application to the care and management of important livestock and companion species. Topics include domestication and origins of animal science, anatomy and physiology, cell biology, regulatory mechanisms, and contemporary issues in animal husbandry. Laboratory exercises include animal handling, routine care and management of representative species, selected aspects of anatomy and physiology, and small group discussions. Laboratory sessions include noninvasive techniques of these animals and examination of tissues and organs.

ANSC 1105 Contemporary Perspectives on Careers in Animal Science  
Spring. 1 credit. J. Gavalchin.  
In addition to preparing students for veterinary medicine, a degree in Animal Science is excellent background for careers in agricultural production, education, marketing, communications, and policy development, in both private and public sectors. In this course, students explore these opportunities and develop skills that will aid them in career planning.

ANSC 1120 Sustainable Animal Husbandry  
Summer. 3 credits. S–U or letter grades.  
D. L. Brown.  
Students completing this course will understand the many roles of domestic animals and the importance of their interdependence with humans; appreciate the scope, diversity, and problems related to domestic animal systems; be able to design and operate simple sustainable animal systems; and know how to continue learning about sustainable animal systems. This intensive summer course includes 25 hours of lecture and 39 hours of hands-on laboratory/demonstrations at various field sites and facilities all within a three-week period. Topics include domestication, sustainability, dogs, cats, rabbits, sheep, genetics, swine, nutrition, beef cattle, grazing, dairy cattle, dairy products, poultry, aquaculture, camels, horses, draft animals, animal systems modeling. Third World limited-resource animal systems, toxicology, lab animals, toxicology, veterinary medicine, and ethics of human interactions with domestic animals.

ANSC 1160 Animal Agriculture and Society—From Food to Medicine  
Spring. 4 credits. Letter grades only.  
D. L. Brown, J. R. Giles, X. Lei, and M. E. Van Amburgh.  
Designed to integrate concepts of physiology, immunology, growth biology, lactation, and pregnancy with current production systems, cultural and societal aspects of animal food production and use, and the current economic forces driving some of the production system evolution. The course is intended for majors and nonmajors with an emphasis on integrating animal biology with our current production and food systems from an Animal Science perspective. Topics include Domestication, Pre-technology Agriculture, Production Systems and Economics, Food Systems and Safety, Environmental and Perspectives, Animal-Derived Food in Human Health, and Use of Animals in Biomedicine.

ANSC 2100 Animal Nutrition  
Fall. 4 credits. Prerequisite: CHEM 2080 or equivalent. Recommended: ANSC 1100 and 1160. D. J. R. Cherney.  
Introduction to animal nutrition, including digestive system and metabolism of domestic animals and other species, nutrient properties and requirements for different aspects of animal production and performance, and principles of feed evaluation and ration formulation. Laboratory classes include gastrointestinal tract dissections and nutritional experiments performed on laboratory or farm animal species.

ANSC 2140 Captive Raptor Management and Propagation  
Summer. 3 credits. Prerequisites: high school chemistry and biology. J. E. Parks.  
Introduction to the natural history and the care and management of raptors (birds of prey). Approaches to captive care and maintenance, breeding techniques, and captive breeding with potential for reducing pressures on wild populations of avian species are included. A major objective is to present and discuss the scientific basis and merit of avian husbandry and breeding practices in species relevant to the course. Hands-on opportunities in basic raptor handling techniques are included.

ANSC 2150 Exotic Avian Husbandry and Propagation  
Fall. 2 credits. Prerequisites: ANSC 1100, 1160, or one semester of college-level biology. J. Parks and D. Muscarella.  
Natural history, care, management, health, and breeding of exotic avian species with emphasis on psittacines (parrots and related species) and raptors (birds of prey). Includes lectures, demonstrations, and local field trips.

ANSC 2210 Principles of Animal Genetics  
Spring. 3 credits. Prerequisite: two semesters of college-level biology. J. G. Immun.  
Examination of basic genetic principles and their application to the improvement of domestic animals, with emphasis on the effects of selection on animal populations and an introduction to the application of molecular techniques to animal improvement.

ANSC 2250 Fertilization and New Life Technologies  
Summer. 3 credits. Prerequisite: high school biology. J. E. Parks.  
Course covers the biology of fertilization in mammals and birds including production of gametes (sperm and ova), the physiological events required for fertilization in vivo, early embryo development, and associated reproductive technologies (in vitro fertilization, intracytoplasmic sperm injection, cloning, cryopreservation, etc.).

ANSC 2400 Animal Reproduction and Development Lab  
Spring. 3 credits. Prerequisite: two semesters of college-level biology. J. E. Parks.  
Comparative anatomy and physiology of mammalian and avian reproduction, with emphasis on domestic and laboratory animals; fertilization through embryonic development, pregnancy, and growth to sexual maturity, emphasis on physiological mechanisms and application to fertility regulation. Separate laboratory is offered to demonstrate fundamental aspects of reproduction and reproductive technology.

ANSC 2410 Animal Reproduction and Development Lab  
Spring. 1 credit. Limited to 30 students per lab. Pre- or corequisite: ANSC 2400. J. E. Parks.  
Demonstrates fundamental principles and applied aspects of mammalian and avian reproduction. A limited number of live animals are used in some demonstrations. Dissection and examination of tissues from vertebrate animals are included in selected laboratories.

ANSC 2500 Dairy Cattle Breeding  
Fall. 3 credits. Prerequisites for ANSC 2510, 3510, 3540, and 3550. S–U or letter grades. D. M. Galton.  
Introduction to the background and scientific principles relating to dairy cattle production. Laboratories are designed to provide an understanding of dairy cattle production.

ANSC 2510 Applied Dairy Cattle Genetics  
Spring. 2 credits. Prerequisite: ANSC 2500. S–U or letter grades. D. M. Galton.  
Application of scientific principles of genetic programs in herds with different breeding programs. Emphasizes economical traits to be used to improve genetic progress and herd performance.

ANSC 2650 Equine Biology and Management  
Fall. 2 credits. S–U or letter grades. Staff.  
Animal welfare issues are discussed, mainly for farm animals, but companion animals are also considered. Both animal specific and general areas of animal welfare are discussed.

ANSC 3100 Introduction to Animal Welfare  
Fall. 2 credits. S–U or letter grades. Staff.  
Animal welfare issues are discussed, mainly for farm animals, but companion animals are also considered. Both animal specific and general areas of animal welfare are discussed.

ANSC 3200 Comparative Animal Nutrition and Toxicology: Horses, Dogs, Cats, and More  
At the end of this course, students will (1) be able to match feed resources to the physiological needs of horses, dogs, cats, rabbits, deer, reindeer, birds, reptiles, and a variety of other animals found at home, in zoos, rehabilitation centers, on ranches and farms; (2) understand the intellectual processes by which a successful, science-based feeding strategy should be developed for animals without a history of domestication; and (3) understand the evolutionary and physiological basis for some of the diversity in nutritional strategies and toxicological vulnerabilities found among animals.
ANSC 3410 Biology of Lactation
Spring. 2 credits. Prerequisites: ANSC 1100–1160 or animal physiology course.
Y. R. Boisclair.
Comprehensive survey of the biology of the mammary gland. It covers (1) basic aspects such as anatomy and development of the mammary gland, biochemistry and hormone regulation of milk synthesis, and regulation of gene expression in the mammary cells; and (2) practical aspects such as the impact of lactation on nutrition, reproduction, and diseases. Information used comes from a variety of species, including the mouse for developmental aspects, the dairy cow for production aspects, and the human for health issues.

ANSC 3510 Dairy Herd Management
Spring. 4 credits. Prerequisite: ANSC 2500 or permission of instructor. Recommended: AEM 3020. D. M. Galton.
Application of scientific principles to practical herd management with components of reproduction, milking, housing, records, and production economics. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

ANSC 3511 Junior Dairy Fellows
Spring. 2 credits. Prerequisite: permission of instructor. S–U grades only.
D. M. Galton.
Designed for undergraduates who have a sincere interest in dairy farm management and the dairy industry. Objective is to gain further understanding of the integration and application of dairy farm management principles and programs with respect to progressive dairying and related industries. The course emphasizes a wide range of dairy and agriculture related businesses and personnel that work in and with the dairy industry.

ANSC 3540 Dairy Cattle Herd Health
Fall. 3 credits. Prerequisite: ANSC 2500 or permission of instructor. S–U or letter grades. P. A. Ospina.
Application of scientific principles to practical herd management with emphasis on herd health and animal-well being. Laboratory emphasizes practical applications of herd health management.

ANSC 3550 Dairy Cattle Nutrition
Spring. 3 credits. Prerequisite: ANSC 2500 or permission of instructor. Letter grades only. T. R. Overton and L. E. Chase.
Application of scientific principles to practical herd nutrition relating to herd production and feeding management. Laboratory emphasizes practical applications and field trips.

[ANSC 3600 Beef Cattle
Spring. 3 credits. Offered even-numbered years; next offered 2011–2012. M. L. Thonney.
Management of nutrition, selection, health, and reproduction of beef cattle. Lectures and laboratories give students practical knowledge of beef production and the scientific background for improving management practices. Students spend several days feeding and caring for cows and newborn calves.]

ANSC 3700 Immunology in Animal Health and Disease
Spring. 3 credits. Prerequisite: two semesters of majors-level biology.
J. Gavalchin.
Covers selected concepts in immunology, with a focus on those that are important to domestic animal health and disease prevention. Students learn how to apply their knowledge of immunological principles to understand current literature, research, and practices. Course format includes lectures, literature discussion, and cooperative learning activities.

ANSC 3800 Sheep
Spring. 3 credits. Offered odd-numbered years. M. L. Thonney.
Breeding, feeding, management, and selection of sheep. Lectures and laboratories are designed to give students practical knowledge of sheep production as well as the scientific background for improving management practices. Students spend several days during the semester feeding and caring for ewes and their newborn lambs.

ANSC 3920 Mechanisms of Animal Growth and Development
Spring. 2 credits. Prerequisites: ANSC 1100–1160 or equivalent introductory physiology courses. Letter grades only.
Q. Long and Y. Boisclair.
A course on the basic biology of animal growth and development. The course employs model systems (cell culture, fish, and mice) to examine cellular and molecular mechanisms of animal growth and development, and farm animals to discuss whole-animal growth patterns and applications of new technologies. Lectures cover (1) patterns of whole-animal growth during fetal and postnatal life; (2) molecular and cellular basis of formation and development of skeletal muscle, adipose tissue, and bone; (3) regulation of growth and development by hormones and growth factors; and (4) emerging molecular technologies and whole-genome approaches for improving growth and meat quality.

ANSC 3921 Mechanisms of Animal Growth and Development I
Spring. 1 credit. Prerequisites: ANSC 1100–1160 or equivalent introductory physiology courses. Letter grades only.
X. Lei.
A complementary course to ANSC 3920 (Mechanisms of Animal Growth and Development). This laboratory course provides experience in animal genotyping, generation and expression of transgenes, hormone-stimulated growth, and metabolism of cells and the whole animal. Techniques used in this course include genomic DNA isolation, PCR and electrophoresis, vectors, DNA ligation and transformation, gene expression, immunohistochemistry, and glucose and insulin tolerance tests.

ANSC 3980 Animals in Biomedical Research
Fall. 2 credits. Prerequisites: two semesters of college-level biology; ANSC 1100 or equivalent introductory physiology course. Offered alternate years. Letter grades only.
X. Lei.
Introduces features and applications of various animal models for biomedical research on human health, diseases, and nutritional deficiencies.

ANSC 4010 Dairy Production Seminar
Spring. 1 credit. Prerequisite: junior or senior standing. T. R. Overton.
Capstone course in which students, with the help of faculty members, complete a study of the research literature on topics of current interest in the dairy industry. Students then make an oral and a written report on their topic with emphasis on integrating theory and practice.

ANSC 4020 Seminar in Animal Sciences
Spring. 1 credit. Prerequisite: students engaged in undergraduate honors research projects. S–U or letter grades. S. Quirk.
Reports of undergraduate honors research projects. Students present oral reports of their work for class discussion.

ANSC 4050 Molecular and Cellular Approaches to Reproductive Physiology
Fall. 3 credits. Prerequisites: two semesters of college-level biology and introductory physiology (ANSC 1100 and ANSC 2400 or BIOAP 3110 or equivalent). S. Quirk.
Lectures on selected topics in reproductive biology of male and female mammals with a focus on how research questions are formulated, addressed, and influenced by previous discoveries. Concepts introduced apply to investigation of all areas of animal physiology. Laboratory exercises provide experience in cellular and molecular methods used to study reproductive function.

ANSC 4100 Nutritional Physiology and Metabolism
Fall. 3 credits. Prerequisites: biochemistry and physiology courses. Offered odd-numbered years; next offered 2011–2012. Staff.
Fundamental approach to nutrition focusing on the metabolic fate of nutrients and the interrelationships among nutrients, nutritional state, and metabolic processes. The overall goal is to increase understanding of metabolism and metabolic regulation through an integration of nutrition, biochemistry, and physiology.

ANSC 4110 Integrated Cattle Nutrition
Fall. 4 credits. Designed for juniors, seniors, and entering graduate students. Prerequisites: ANSC 1100 and 2120 (or equivalent). Highly recommended: ANSC 3550. M. E. Van Amburgh.
Integrates concepts of cattle nutrition and farm nutritional management to help students understand and appreciate factors influencing the performance of cattle under diverse conditions. Topics include the effect of environment on maintenance costs; the nutrient requirements for various stages of growth, lactation, and pregnancy; rumen function; feed composition and chemistry; nutrient partitioning; and the environmental impacts of cattle and how to minimize them. Computer models (Cornell Net Carbohydrate and Protein System) are used in the laboratory to actualize the information presented in lectures. Herd case studies are used in lab and there are field trips to farms to evaluate the nutritional management.

ANSC 4120 Whole-Farm Nutrient Management
Spring. 4 credits. Prerequisite: junior, senior, or graduate standing. ANSC 4110 preferred but not required. M. E. Van Amburgh and Q. M. Ketterings.
Provides students with an understanding of the concepts and practices underlying whole-farm nutrient management planning of livestock and dairy farms. Improving profitability and efficiency are key factors considered while improving air and water quality associated with dairy production. Students learn about livestock management on Confined Animal Feeding Operations and conduct their own Comprehensive Nutrient...
Management Plan on a case-study farm. This course integrates crop and manure management with nutrition and herd management to provide a broad but focused and action-oriented approach. The course utilizes two software programs developed at Cornell for crop management planning and herd nutritional management, the Cornell Nutrient Management Planning System and the Cornell Net Carbohydrate and Protein System. Current topics are also discussed, such as greenhouse gas emissions and impacts of dairy and livestock production and local versus global food production and environmental impacts.

**ANSC 4140 Ethics and Animal Science**  
Spring, 2 credits. Prerequisite: junior or senior standing. D. J. R. Cherney. 
Explores the place of humans in the biological world, origins of ethics and morality, specieism, the use of animals for research and agricultural purposes, and transgenic animals. A book review, participation in discussion in class and online, and a project of the student's choice are used to evaluate the performance of each student.

*ANSC 4250 Gamete Physiology and Fertilization (also BIOAP 4250)*  
Fall, 2 credits. Prerequisite: ANSC 2400 or equivalent. Offered alternate years; next offered 2011–2012. J. E. Parks. 
Study of the formation, growth, differentiation, and maturation of mammalian sperm and oocytes; gamete transport and interaction with male and female reproductive tracts; and cytological, physiological, and molecular changes required for fertilization.

**ANSC 4270 Fundamentals of Endocrinology (also BIOAP 4270)**  
Fall, 5 credits. Prerequisite: animal or human physiology course or permission of instructor. P. A. Johnson. 
Physiology and regulation of endocrine secretions. Emphasizes neuroendocrine, reproductive, growth, and metabolic aspects of endocrine functions; examples are selected from many animals, including humans.

**ANSC 4510 Dairy Herd Business Management**  
Fall, 3 credits. Corequisite: ANSC 4560. J. Karszes and D. M. Galton. 
Emphasizes dairy herd business management with application to herd management analysis. Laboratory includes farm tours and analysis.

**ANSC 4511 Quantitative Decision Making on Dairy Farms**  
Fall, 3 credits. Prerequisite: ANSC 2500. S–U or letter grades. P. A. Ospina and M. E. Van Amburgh. 
Course objective is to enhance critical thinking skills in dairy management using a problem-based approach and to further develop the tools necessary to analyze situations and issues. Data acquisition and analyses (using programs such as Dairy Comp 305) are used along with spreadsheet development for partial budgets. There are in-class questions along with take-home assignments.

**ANSC 4560 Dairy Management Fellowship**  
Spring, 2 credits. Prerequisites: senior standing, ANSC 3510; permission of instructor. S–U grades only. D. M. Galton. 
Designed for undergraduates who have a sincere interest in dairy farm management. Objective is to gain further understanding of the integration and application of dairy farm management principles and programs with respect to progressive dairying and related industries.

**ANSC 4570 Introductory Spanish for Dairy Producers**  
Spring, 3 credits. Prerequisite: ANSC 2500 or permission of instructor. S–U or letter grades. P. A. Ospina. 
Students with a focus on dairy management learn to communicate with the increasingly Spanish-speaking workforce to assure that the knowledge of cutting-edge dairy management and observations from the field are exchanged accurately. This is the first of a sequence of two courses developed to meet these goals.

**ANSC 4580 Advanced Spanish for Dairy Producers**  
Fall, 3 credits. Prerequisite: ANSC 4570 or permission of instructor. S–U or letter grades. P. A. Ospina. 
Students with a focus on dairy management need to be able to communicate with the Spanish-speaking workforce, and upward mobility of that workforce depends on knowledge of cutting-edge dairy management. This is the second course of a two-sequence program that further develops students' skills to be able to communicate in Spanish higher-level dairy production tasks and principles to Spanish-speaking dairy workers.

**ANSC 4700 Merchandising Beef Cattle**  
Fall, 2 credits. Limited to 35 students. S–U or letter grades. M. J. Baker. 
Introduction to the merchandising of replacement beef heifers. Topics include budgeting, advertising, animal preparation, cataloging, clerking, and reporting. Students gain practical knowledge through lecture as well as hands-on experience by planning, organizing, and conducting a sale of bred beef heifers under the Empire Heifer Development Program.

**ANSC 4940 Special Topics in Animal Science**  
Fall or spring, 4 credits max. Prerequisite: undergraduate standing. S–U or letter grades. Staff. 
The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**ANSC 4960 Internship in Animal Science**  
Fall or spring, 2–12 credits, variable; may be repeated for credit. Intended for students in animal sciences. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S–U or letter grades. Staff. 
May include individual tutorial study or a lecture topic selected by a professor. Because topics may change, the course may be repeated for credit.

**ANSC 4970 Individual Study in Animal Science**  
Fall or spring, 1–3 credits, variable; limited to two experiences during undergraduate career. Prerequisite: GPA of at least 2.7; permission of Animal Science faculty member before enrollment. Students must register using independent study form (available in 140 Roberts Hall). 
Designed to consolidate the student’s knowledge. A participating student assists in teaching a course allied with his or her education and experience. The student is expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

**ANSC 4990 Undergraduate Research in Animal Science**  
Fall or spring, 6 credits max. during undergraduate career. Prerequisites: junior or senior standing; GPA of at least 2.7; permission of Animal Science faculty member before enrollment. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Students must register using independent study form (available in 140 Roberts Hall). 
Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

**ANSC 4991 Undergraduate Honors Research in Animal Science**  
Fall and spring, 1–6 credits, max. 6. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Intended for qualified students pursuing the research honors program in animal science.

**ANSC 6100 Animal Science Seminar**  
Fall and spring, 1 credit. Prerequisite: graduate standing. S–U grades only. Staff. 
Weekly seminar on topics related to animal science. The requirement for an S grade is regular attendance at seminars during the semester.

**ANSC 6190 Field of Nutrition Seminar (also NS 6190)**  
Fall and spring, 0 credits. No grades given. For description, see NS 6190.
ANSC 6210 Reproductive Physiology/Endocrinology Seminar
Fall and spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S–U grades only. W. R. Butler and staff.
Current research in reproductive physiology is presented by faculty and staff members, graduate students, and invited speakers.

ANSC 6220 Seminar in Animal Metabolism
Fall and spring. 1 credit. Prerequisite: permission of instructor. S–U grades only. Y. R. Bosciair and D. E. Bauman.
Current issues in metabolism are discussed as they relate to productivity, well-being, and diseases of animals. Students present research proposals for new initiatives, progress reports on ongoing projects, and recent peer-reviewed publications of high significance.

ANSC 6940 Special Topics in Animal Science
Fall or spring. 4 credits max. Prerequisite: graduate standing. S–U or letter grades.
The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

[ANSC 7570 Current Concepts in Reproductive Biology (also BIOAP 7570)]
Fall. 3 credits. Offered alternate years; next offered 2011–2012.
For description, see BIOAP 7570.

ANSC 7900 Graduate-Level Thesis Research
Fall or spring. Credit TBA, max. 12 per semester. Prerequisite: permission of advisor. S–U grades only. Graduate faculty.
For students admitted specifically to a master's program.

ANSC 8900 Master's-Level Thesis Research
Fall or spring. Credit TBA, max. 12 per semester. Prerequisite: permission of advisor. S–U grades only. Graduate faculty.
For students admitted specifically to a master's program.

ANSC 9900 Doctoral-Level Thesis Research
Fall or spring. Credit TBA, max. 12 per semester. Prerequisite: permission of advisor. S–U grades only. Graduate faculty.
For students admitted to candidacy after “A” exam has been passed.

BIOLOGICAL AND ENVIRONMENTAL ENGINEERING

BEE 1200 The BEE Experience
Spring. 1 credit. Requirement for CALS BEE freshmen. Not required for students who have completed ENGRG 1050.
Prerequisite: BEE majors or permission of instructor. Letter grades only. M. F. Walter.
Forum covering the career opportunities for engineering students and the activities and curricula that lead to these opportunities. A series of seminars and tours by practicing engineers, Cornell faculty members, alumni, staff from Cornell career services offices, and students. Students develop their undergraduate course plans, complete a web search assignment to locate jobs and internships, and select future courses to meet their academic objectives and career goals.

BEE 1510 Introduction to Computer Programming
Fall. 4 credits. Limited to 18 students per lab and rec. No previous programming experience assumed. Pre- or corequisite MATH 1910 or equivalent. Letter grades only. C. L. Anderson.
Introduction to computer programming and concepts of problem analysis, algorithm development, and data structure in an engineering context. The structured programming language MATLAB is used, implemented on interactive personal computers and applied to problems of interest in biological and environmental engineering.

BEE 2210 Bioengineering Thermodynamics and Kinetics
Spring. 3 credits. Prerequisites: MATH 1920, PHYS 2213, and chemistry course completed or concurrent. Letter grades only. J. B. Hunter.
Living systems rely on chemical and phase equilibria, precise coordination of biochemical pathways, and the release of chemical energy as heat, all of which are governed by the laws of thermodynamics and the rates of chemical reactions. The course covers concepts and laws of thermodynamics as applied to phase transformations, work, heat, and chemical reactions; and reaction kinetics applied to industrial processes and living systems, all with a focus on biological examples.

BEE 2510 Engineering for a Sustainable Society (also ENGRD 2510)
Fall. 3 credits. Pre- or corequisite: MATH 2930. Letter grades only. B. A. Ahner.
Case studies of contemporary environmental issues including pollutant distribution in natural systems, air quality, hazardous waste management, and sustainable development. Emphasis is on the application of math, physics, and engineering sciences to solve energy and mass balances in environmental sciences. Introduces students to the basic chemistry, ecology, biology, ethics, and environmental legislation relevant to the particular environmental problem. BEE students must complete either BEE 2510 or BEE 2600 according to their academic plan. BEE students who complete both BEE 2510 and BEE 2600 receive engineering credit for only one of these courses.

BEE 2600 Principles of Biological Engineering (also ENGRD 2600)
Fall. 3 credits. Pre- or corequisite: MATH 2930, two semesters of core biology major classes and the investigative lab or BIOG 1105/1106. Letter grades only.
A. J. Baeummer.
Focuses on the integration of biological principles with engineering, math, and physical principles. Students learn how to formulate equations for biological systems in class and practice in homework sets. Topics range from molecular principles of reaction kinetics and molecular binding events to macroscopic applications such as energy and mass balances of bioprocessing and engineering design of immobilized sensors. BEE students must complete either BEE 2510 or BEE 2600 according to their academic plan. BEE students who complete both BEE 2510 and BEE 2600 receive engineering credit for only one of these courses.

BEE 3299 Sustainable Development
Spring, summer. 3 credits. Prerequisite: at least sophomore standing. S–U or letter grades. M. F. Walter and N. R. Scott.
Sustainable development is the dominant economic, environmental, and social issue of the 21st century. This course develops the concepts of sustainable development as an evolutionary process, demanding the integration of the physical sciences and engineering with the biological and social sciences for design of systems. Topics include the nature of ecosystems, global processes, sustainable communities, and industrial ecology, renewable energy, and life cycle analysis. Course is web-based.

BEE 3310 Bio-Fluid Mechanics
Fall, summer. 4 credits. Prerequisites: ENGRD 2020 and engineering math sequence. Letter grades only. K. G. Gebremedhin.
Properties of Newtonian and non-Newtonian fluids; hydrostatic and dynamic forces; principles of continuity, conservations of mass, energy and momentum and their applications; laminar and turbulent flows and boundary layer, introduction to Navier Stokes; dimensional analysis and similarity; blood flow in the cardiovascular system; gas exchange in the pulmonary system; blood flow and sodium transport in the kidney. The major concepts are covered by case studies.

BEE 3500 Biological and Environmental Transport Processes
Spring, summer (offered spring 2011 only; taught again in fall 2011 and every fall thereafter). 3 credits. Pre- or corequisites: MATH 2930 and fluid mechanics course. Letter grades only. A. K. Datta.
Focuses on understanding the principles of heat and mass transfer in different aspects of ecological (biomedical/bioprocessing/bioenvironmental) systems. Emphasizes physical understanding of transport processes and simple reaction rates with application examples from plant, animal, and human biology in the bioenvironment (soil/water/air), and industrial processing of food and biomaterials.
BEE 3600 Molecular and Cellular Biotechnology (also BME 3600)  
Spring, 3 credits. Prerequisites: BEE 2600, biochemistry, linear algebra, ordinary differential equations, or permission of the instructor (no grades only). J. C. March. Biotechnology viewed at the cellular and molecular level. Advances in biotechnology are broken down to their functional parts using the tools of biological engineering (thermodynamics, transport, kinetics, etc.) to understand how and why they work with an emphasis on design. Particular attention paid to gene therapy, synthetic biology, protein engineering, and nucleic acid engineering. Case studies in biotechnological, biosensors, and bioenvironmental engineering.

BEE 3650 Properties of Biological Materials  
Spring, 3 credits. Satisfies BE laboratory experience requirement. Prereq. or coreq.: ENGRD 2020. Letter grades only. M. T. Walter. Mechanics and structural properties of biological materials; mechanical testing of animal, plant, and food products. Laboratory exercises involve static and dynamic testing of materials and interpretation of test results. Uses experimental techniques to determine engineering properties of these materials.

[BEE 3680 Biotechnology Applications: Animal Bioreactors  
Fall, 3 credits. Prerequisite: biochemistry course or permission of instructor. Letter grades only. Offered alternate years; next offered 2011–2012. J. F. Hunter. Applications of animal organs, tissues, and cells as bioreactors for production of enzymes, nutrients, and pharmaceuticals. Includes design issues, technical constraints, societal, and ethical considerations.]

BEE 3710 Physical Hydrology for Ecosystems  
Spring, 3 credits. Prerequisite: MATH 1920 or permission of instructor. Letter grades only. Offered alternate years. J. T. Weaver. Introduction to physical hydrology with an emphasis on roles and interactions between hydrological processes and ecological, biogeochemical, and human systems. For a complete description, see http://hve.cornell.edu/faculty/walter/BEE371index.htm.

BEE 4010 Renewable Energy Systems  
Spring, 4 credits. Prerequisite: college physics. Letter grades only. L. D. Albright. Introduces energy systems with emphasis on quantifying costs and designing/optimizing renewable energy systems to convert environmental inputs into useful forms of energy. Covers solar energy, small-scale hydropower, wind, bio-conversion processes, and house energy balances. Focuses on the technologies and small-scale system design, not policy issues. Use of spreadsheets is extensive.

BEE 4270 Water Measurement and Analysis Methods  
Fall, 3 credits. Satisfies BE and EnVE laboratory experience requirement. Prerequisites: CEE 3310 or hydrology course. Letter grades only. L. D. Geohring and T. S. Steenhuis. Get wet and muddy learning how to monitor and characterize water and soil management practices in the natural environment. This is a field-based lab course that integrates science and engineering technologies, using various measurement equipment and analytical techniques to quantify water flow and quality parameters in surface and subsurface environments. Measurement accuracy, water sampling quality assurance protocols, and interpretation of watershed contaminant loads.

BEE 4350 Principles of Aquaculture  
Spring, 3 credits. Satisfies BE capstone design requirement. Prerequisite: at least junior standing. Letter grades only. No-one is allowed to add course after 2nd week of class. Two required field trips require class to return to campus at 7 p.m. M. B. Timmons. An in-depth treatment of the principles of aquaculture: fish biology, waste treatment, engineering design, fish health, nutrition, processing, etc. This course is intended to build upon the undergraduate’s previous coursework and background interests. Includes supervised “hands-on” laboratory experiences.

BEE 4500 Bioinstrumentation  
Spring, 4 credits. Satisfies both BE laboratory experience and BE capstone design requirement. Prerequisites: MATH 2940, introductory computing, two semesters of physics, statistics, or permission of instructor. Letter grades only. D. J. March. Bioinstrumentation applications are emphasized in this laboratory-based course. Electronic instruments from sensor to computer are considered. Static and dynamic characteristics of components and systems are examined theoretically and empirically. General analog and digital signal condition circuits are designed, constructed, and tested. A variety of biological applications of instrumentation are discussed.

BEE 4530 Computer-Aided Engineering: Applications to Biomedical Processes  
Fall (offered fall 2010 only; taught in spring 2012 and every spring thereafter). 3 credits. Prerequisite: BME 3600. Capstone design requirement. Satisfies BE capstone design requirement. Satisfies College of Engineering technical writing requirement. Prerequisite: heat and mass transfer (BEE 3500 or equivalent). Letter grades only. A. J. Andjelic. Introduction to simulation-based design as an alternative to prototype-based design; analysis and optimization of complex real-life processes for design and research, using industry-standard physics-based computational software. Emphasis is on problem formulation, starting from a real process and developing its computer model. Covers biomedical processes in thermal therapy and biophotofixation that involve heat transfer, mass transfer, and fluid flow. Computational topics introduce the finite-element method, pre- and post-processing, and pitfalls of using computational software. Students choose their own semester-long biomedical project, which is the major part of the course (no final exam).

BEE 4550 Biologically Inspired Microsystems Engineering  
Fall, 2–3 credits. Prerequisites: one year of biology, BEE 2220, co-registration of BEE 3500 and BEE 3510. Letter grades only. M. Wu. Covers fundamental principles that nature uses to build and control living systems at the micro- and nanometer length scales, and to use this knowledge to engineer micro-/nanoscale devices for the health industry and environment. Optional lab components are included.

BEE 4590 Biosensors and Bioanalytical Techniques  
Fall, 3 credits. Prerequisites: biochemistry course and permission of instructor. Letter grades only. A. J. Baozun. Provides students with an understanding of the scientific and engineering principles of biosensors and bioanalytical techniques. Addresses selected topics from simple biosensors to micro/nanolitography. Micro Total Analysis Systems (MicroTAS). Biosensor and MicroTAS applications in environmental analysis, food safety, and medical diagnostics are explored. Students give oral presentations in lecture, analyze biosensors published in literature, and theoretically design a biosensor based on criteria discussed in class. Undergraduate students work together in teams of two to three students concurrently with BEE 6590. BEE 6590 students work independently on individual biosensor projects.

BEE 4600 Deterministic and Stochastic Modeling in Biological Engineering  
Fall, 5 credits. Satisfies BE capstone design requirement. Prerequisite: MATH 2940, MATH 2940, BEE 3500 or equivalent. Mass and Energy Balances, or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2011–2012. J. C. March. Covers modeling biological systems from an engineering standpoint. Starting with deterministic approaches, the course functionally decomposes and mathematically models systems important to biological engineers (including bioprocessing, biomedicine, and microbial ecology). Mechanistic aspects of biology are handled using stochastic (probabilistic) approaches in the second half of the semester.

BEE 4640 Bioseparation Processes  
Fall, 5 credits. Prerequisites: introductory biochemistry, physics, MATH 1920, BEE 2600 or equivalent, or permission of instructor. S–U or letter grades. Offered alternate years. J. B. Hunter. Bioseparation is the science and engineering of fractionating, and purifying biological materials: DNA, proteins, living cells, antibiotics, biofuels, and even foods. This course covers separation methods used in the biotechnology industry, principles governing these methods, approaches to improving bioseparation performance, and the special challenges of scale-up. Key topics (centrifugation, filtration, extraction, membrane methods, ion exchange, chromatography, electrophoresis) are supplemented with student presentations. Offered alternate years. L. M. Cathles, M. T. Walter, and T. S. Steenhuis. Intermediate-level study of aqueous ground water, flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and subsurface transport.

BEE 4710 Introduction to Groundwater (also EAS 4710)  
Spring, 3 credits. Prerequisites: MATH 2930, fluid mechanics or hydrology course. S–U or letter grades. Offered alternate years. L. M. Cathles, M. T. Walter, and T. S. Steenhuis. Introduction to groundwater.
BEE 4730 Watershed Engineering
Fall. 4 credits. Satisfies BE and EnvE capstone design requirement. Satisfies College of Engineering technical writing requirement. Satisfies BE laboratory experiential education requirement. Prerequisites: CEE 3310 or hydrology course. Letter grades only. M. T. Walter.

Teaches basic design and analysis as practiced for water control and nonpoint source pollution prevention. Discusses the origins of design approaches, including their theoretical bases, but this is not a theory course. Most of the course is dedicated to practicing applied design. Assignments are generally representative of real-life engineering problems and involve as much hands-on experience as possible. Some example topics include risk analysis, water conveyance, nonpoint source pollution control, stream restoration, stormwater management, and erosion control.

BEE 4740 Water and Landscape Engineering Applications
Spring. 3 credits. Satisfies BE and EnvE capstone design requirement. Prerequisites: CEE 3510 or hydrology course or permission of instructor. Letter grades only. L. D. Geoshing and T. S. Steenhuis.

Focuses on how water moves in soil and the implications for design of drainage and irrigation systems in the landscape. The course addresses aspects of soil physics, flow in porous media, water quality, and water supply or disposal in regard to drainage and irrigation applications. Emphasis is on problem solving of actual situations, and a major site-design project is required.

BEE 4750 Environmental Systems Analysis
Fall. 3 credits. Prerequisites: computer programming and one year of calculus. Letter grades only: D. A. Haith.

Applications of mathematical modeling, simulation, and optimization to environmental-quality management. Fate and transport models for contaminants in air, water, and soil. Application of optimization methods (search techniques, linear programming) to evaluate alternatives for solid-waste management and water and air pollution control. Introduction to hydrologic simulation (runoff and streamflow). Software packages for watershed analyses of point and nonpoint source water pollution.

BEE 4760 Solid Waste Engineering
Spring. 3 credits. Prerequisites: one semester of physics and chemistry. Letter grades only: D. A. Haith.

Planning and design of processes and facilities for management of municipal solid wastes. Source characterization and reduction; collection and transport systems; waste-to-energy combustion; sanitary landfills; composting; recycling and materials recovery facilities; and hazardous waste management. Emphasizes quantitative analyses.

BEE 4800 Our Changing Atmosphere: Global Change and Atmospheric Chemistry (also EAS 4800)
Fall. 3 credits. Prerequisites: CHEM 2090, MATH 1920, PHYS 1112 or equivalent, or permission of instructor. S-U or letter grades. G. H. Gess.

This course investigates the science behind changes in our atmosphere’s composition and its relation to global change. Students examine the chemistry and physics that determines atmospheric composition on global scales including the effects of biogeochemistry and atmospheric photochemistry.

BEE 4810 LRFD-Based Engineering of Wood Structures (also CEE 4810)
Spring. 3 credits. Satisfies BE capstone design requirement when co-registered in BEE 4960. Prerequisite: ENGRD 2020. Letter grades only. K. G. Gebremedhin.

Computer-aided and manual computation procedures of Load and Resistance Factor Design (LRFD)-Based engineering of wood structures. National design codes and standards; estimation of factored design loads and load combinations; mechanical properties of wood and wood products; designs of beams, columns, trusses, frames, arches, bridges, diaphragms; connections and wood structural systems. Also discusses engineering design judgment as an integral component of the quantitative design procedure.

BEE 4840 Metabolic Engineering
Spring. 3 credits. Prerequisite: biochemistry course or permission of instructor. Letter grades only. R. M. Spanswick.

The principles of metabolic engineering as they relate to the regulation of metabolic pathways, including membrane transport, are considered in terms of enzyme kinetics and metabolic control analysis. Case studies, reflecting the interests of the instructor, include examples involving higher plants. Each student is expected to investigate one topic in depth and make a short class presentation.

BEE 4860 Industrial Ecology of Agriculturally Based Bioindustries
Spring. 3 credits. Prerequisites: one year of calculus, some knowledge of MATLAB. Letter grades only. J. W. Palmisano.

Agricultural-based biofuels and bioproducts systems are very complex and highly integrated. Each of these subsystems are composed of a number of biological, chemical, and physical processes that can be interconnected to a multitude of ways to generate the essential material and energy flows for the production of biofuels and bioproducts. For this course an input/output modeling method is developed and manipulated the structure of complex agriculturally based bio-industries and to generate the material, energy, and monetary flows. Students use linear algebra and state space tools in the MATLAB toolbox to simulate static and dynamic behavior of these complex webs of connected processes and to conduct life-cycle analysis of these complex webs.

BEE 4870 Sustainable Bioenergy Systems
Fall. 3 credits. Satisfies BE and EnvE capstone design requirement. Intended for upper-level undergraduates and graduate students. Prerequisites: BEE 2220 or equivalent thermodynamics course. Letter grades only. L. T. Angenent.

Offers a systems approach to understanding renewable bioenergy systems (biomass) and their conversion processes, from various aspects of biology, engineering, environmental impacts, economics, and sustainable development. A large part of the course deepens students’ understanding of bioprocessing with undefined mixed cultures.

BEE 4890 Entrepreneurial Management for Engineers
Fall. 4 credits. Satisfies College of Engineering technical writing requirement. Prerequisite: junior standing. Letter grades only. No one allowed to add course after second week. M. B. Timmons.

Focuses on how to start a new company centered on engineering or biological technologies. The course covers entrepreneurship principles, fund raising, negotiation, financial calculations (internal rate of return, time value of money, pro forma statements); legal structures of businesses, project management, issues related to professional ethics, and technical writing and communication. Majority of work done in teams, including a complete business plan that is presented to angel investors. Business plans must require less than $100K in startup funding and may result in actual investment by the angel investor group.

BEE 4900 Biofuels: The Economic and Environmental Interactions
Spring. 2 credits. Prerequisite: senior or graduate standing, others by permission of instructor. S-U or letter grades. P. A. Hess.

Surveys the latest research on the science and economics of biofuels. Questions addressed include the environmental and economic impacts of biofuel use and whether the use of biofuels justifies public policy intervention. The course consists of a colloquium, discussion with the colloquium speaker, and an in-class discussion section.

BEE 4930 Technical Writing for Engineers
Fall. 1 credit. Meets College of Engineering technical writing requirement. Letter grades only. Staff.

Covers communication skills necessary for oral and written technical project reports. Also considers outlines, style, audience, and general presentation mechanics.

BEE 4940 Special Topics in Biological and Environmental Engineering
Fall or spring. 1–4 credits max. S–U or letter grades. Staff.

The department teaches “trial” courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under this number will be approved by the department curriculum committee and the same course will not be offered twice under this number. Each 4940 has a unique course ID for enrollment.

BEE 4960 Capstone Design in Biological and Environmental Engineering
Spring. 1 credit. Corequisite: BEE 4810. Letter grades only. Staff.

Involves capstone design experience, including a team project incorporating analysis, design, evaluation, synthesis, and a written and oral report of the end product.

BEE 4970 Individual Study in Biological and Environmental Engineering
Fall and spring. 1–4 credits. Prerequisite: written permission of instructor and adequate ability and training for work proposed; normally reserved for seniors in upper two-fifths of their class. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall). Letter grades only. See department office for course ID specific to project advisor. Staff.

Special work in any area of biological and environmental engineering on problems
under investigation by the department or of special interest to the student, provided, in the latter case, that adequate facilities can be obtained.

**BEE 4980 Undergraduate Teaching**
Fall and spring. 1–4 credits. Prerequisite: written permission of instructor. Letter grades only. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall). See department office for course ID specific to project advisor. Staff. The student assists in teaching a biological and/or environmental engineering course appropriate to his or her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses objectives and techniques with the faculty member in charge of the course.

**BEE 4990 Undergraduate Research**
Fall and spring. 1–4 credits. Prerequisites: normally reserved for seniors in upper two-fifths of their class; adequate training for work proposed; written permission of instructor. Letter grades only. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall). See department office for course ID specific to project advisor. Staff. Research in any area of biological or environmental engineering on problems under investigation by the department or of special interest to the student, provided that adequate facilities can be obtained. The student must review pertinent literature, prepare a project outline, carry out an approved plan, and submit a formal final report.

**BEE 4991–4992 BEE Honors Research**
Fall and spring. 1–6 credits. Variable. Prerequisite: enrollment in BEE research honors program. Students must be eligible for Latin honors and complete honors program application by third week of fall semester, senior year. Letter grades only. Staff. Intended for students pursuing the research honors program in BEE.

**BEE 5010 Bioengineering Seminar (also BME 5010)**
Fall, spring. 1 credit. Prerequisite: junior, senior, or graduate standing. S–U grades only. Staff. Designed to give the engineer-in-training a broad overview of different aspects of biological and biomedical engineering including business, legal, and clinical issues. Also gives students a working knowledge of how abstracts are written and revised.

**BEE 5330 Engineering Professionalism**
Spring. 1 or 2 credits. Prerequisite: graduate student with accredited engineering degree or senior who will graduate with an accredited engineering degree. Students enrolling in FE 1-credit portion must register to take Fundamentals of Engineering Exam. **S–U** or letter grades.LEC only 1st 10 weeks of semester. M. B. Timmons, J. R. Stedinger, other Engineering Faculty. Presentations address engineering professionalism and ethics and provide preparation for the general national FE examination taught in a team-based format. This ethics 1-credit course emphasizes the engineer’s professional responsibilities for the health and welfare of the public and the

**BEE 6200 Approaches to Analytical Characterization of Biological Macromolecules**
Spring. 1 credit. Prerequisites: CHEM 1570 or 3570, BIOG 3350 or 3310 and MATH 1920. Let Edwards. Survey of modern macromolecule characterization techniques (SPR, light scattering, calorimetry, and separation methods). Emphasis on applications and their integration, along with theory, instrumental design, and quantitative analysis. Intended for practical understanding of these techniques in a research setting for seniors and graduate students without a strong background in analytical chemistry.

**BEE 6420 Veterinary Perspectives on Pathogen Control in Animal Manure (also VTMED/BIOI 6430)**
Spring, eight weeks. 2 credits. Prerequisite: third- and fourth-year veterinary students; graduate students, advanced undergraduate students interested in agricultural engineering as related to animal manure management. D. D. Bowman. In-depth looks at the management of pathogens in animal manures. Reviews the pathogens involved, the role of governing agencies, the survival of pathogens in the field, and methods of pathogen destruction. Discusses commercial methods of manure processing for the control of these pathogens for the protection of other animals and the human population. Concludes with class discussions with major stakeholders representing the dairy, beef, pork, and poultry industries and their understanding of the problem as it relates to veterinary students.

**BEE 6470 Water Transport in Plants (also BIOPL 6410)**
Fall. 2 credits. Letter grades only. Offered alternate years; next offered 2011–2012. R. M. Spanswick. Topics include water relations of plant cells and tissues using water potential terminology; permeability of plant cells to water and the role of aquaporins; transport of water through whole plants, including transpiration, stomatal physiology, and the modifications due to plant architecture and root growth in relation to water stress.

**BEE 6490 Solute Transport in Plants (also BIOPL 6490)**
Fall. 3 credits. Letter grades only. Offered alternate years. R. M. Spanswick. A fundamental treatment of the transport of ions and small organic molecules in plants.

**BEE 6570 Mixed-Culture Engineered Systems: Bioenergy and Microbial Ecology**
Spring. 3 credits. Prerequisite: graduate standing only. Letter grades only. L. Argent. During this course, students perform an in-depth analysis of the latest peer-reviewed publications that describe undefined mixed cultures in engineered systems for bioenergy production. Discussion especially focuses on different organic waste treatment options, such as anaerobic digestion, aerobic digestion, composting, bioelectrochemical systems (e.g., microbial fuel cells), and carboxylic-acid fermentation systems. The latest and most powerful molecular biology techniques (e.g., 16S rRNA gene surveys, metagenomics, proteomics, metatranscriptomics) are discussed in the context of undefined mixed culture engineered systems. Some bioinformatic and microbial ecology tools are also discussed. After completing this course, students should be able to critically read and evaluate scientific papers that show results obtained with molecular techniques from engineered systems. More specifically, they should know the limitations of the utilized techniques and be able to give other techniques that may complement or improve the knowledge gained from the study.

**BEE 6590 Biosensors and Bioanalytical Techniques**
Fall. 3 credits. Prerequisites: biochemistry course and permission of instructor. Letter grades only. A. J. Bacummer. For description, see BEE 4590.

**BEE 6720 Drainage**
Spring. 4 credits. Prerequisite: BEE 4710 or BEE 4730. Letter grades only. Offered alternate years; next offered 2011–2012. T. S. Steenhuis and L. D. Geohring. Discusses the theory of water and solute flow in aquifers, hill slopes, and the vadose zone as it relates to aricultural drainage.

**BEE 6740 Ecohydrology**
Spring. 3 credits. Prerequisite: ecology or hydrology course. Offered alternate years; next offered 2011–2012. Letter grades only. M. T. Walter.
Investigates interactions between physical hydrological and ecosystem processes. Students identify basic principles and become familiar with quantitative tools and approaches for answering ecohydrological questions.

**BEE 6870 The Science and Engineering Challenges of the Development of Sustainable Bio-Based Industries**
Fall. 1 credit. Prerequisite: graduate standing. S–U grades only. L. P. Walker. Environmentally sustainable alternatives for our energy and chemical needs are critical. This seminar series explores challenges facing the development of industries that use biologically derived materials to produce useful chemicals and energy for society. Topics include natural products from biological systems, conversion of biomass to fuel and other commodities, and the use of biological systems for environmental bioremediation.

**BEE 6940 Water in a Changing Climate: Interdisciplinary Discussions on Todays Human-Natural Water Systems (also NTRES 6940)**
Fall. 1 credit. S–U grades only. R. Schneider and M. T. Walter. Concerns about water quality, supply, and aquatic ecosystems are ever pressing at all scales of nature and society. These complex issues are compounded by the daunting and imminent nature of global climate change. The objective of this course is to integrate hydrology, policy, and aquatic ecology to holistically understand the interactions between climate change and water resources. The course takes the form of a reading group designed primarily for graduate students to explore the interconnections between human–natural water systems, policy approaches, and emerging management trends through weekly, guided readings, lectures, and discussions.

**BEE 6940 Graduate Special Topics in Biological and Environmental Engineering**
Fall or spring. 4 credits max. S–U or letter grades. BEE graduate faculty. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number. Each 6940 has a unique course ID number.

**BEE 6970 Graduate Individual Study in Biological and Environmental Engineering**
Fall or spring. 1–6 credits. Prerequisite: permission of instructor. S–U or letter grades. BEE graduate faculty. Topics are arranged by the staff at the beginning of the semester.

**BEE 7000 Orientation to Graduate Study**
Fall, first seven weeks. 1 credit. Prerequisite: new graduate students in BEE. S–U or letter grades. BEE graduate faculty. Introduction to BEE research policy, programs, methodology, resources, and degree candidates’ responsibilities and opportunities.

**BEE 7540 The Right to Water (also NES 7540)**
Fall. 2 credits. Prerequisite: graduate standing or permission of instructors. S–U or letter grades. T. S. Steenhuis, G. Holst-Warhaft, et al. Addresses the crisis of water in the Mediterranean region, through case studies situated in watershed basins, especially the Nile. The course focuses on attitudes, conflicts, and relationships of local people and nations toward water, expressed in culture, environmental laws, and watershed management practices.

**BEE 7600 Nucleic Acid Engineering (also BME 7600)**
Spring. 2 credits. Prerequisite: graduate standing; seniors by permission of instructor. S–U or letter grades. D. Luo. Nucleic acid engineering focuses on manipulating nucleic acid molecules in a true engineering sense as well as in the “genetic engineering” sense by treating nucleic acids (including DNA, RNA, PNA, and TNA) as both genetic and generic materials. Both biomedical and nonbiomedical applications of nucleic acid engineering, including tool kits for nucleic acid engineering and current examples of DNA-based engineering, DNA nanotechnology, and DNA-based medicine, are introduced. Efficient and effective literature reading and evaluation are emphasized.

**BEE 7710 Soil and Water Engineering Seminar**
Fall and spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S–U or letter grades. T. S. Steenhuis, M. F. Walter, and M. T. Walter. Study and discussion of research or design procedures related to selected topics in watershed management, erosion control, hydrology, colloid transport, and water quality.

**BEE 8900 Master’s-Level Thesis Research**
Fall and spring. 1–15 credits. Prerequisite: permission of advisor. S–U grades only. BEE graduate faculty. Variable credit for M.S. research.

**BEE 9900 Doctoral-Level Thesis Research**
Fall and spring. 1–15 credits. Prerequisite: permission of advisor. S–U grades only. BEE graduate faculty. Variable credit for Ph.D. research.

**BIOMETRICS**

**BTRY 3010 Biostatistics I (also NTRES 3130, STSCI 2200)**
Fall. 4 credits. Prerequisite: one semester of calculus. Develops and applies statistical methods to problems encountered in the biological and environmental sciences. Methods include data visualization, population parameter estimation, sampling, bootstrap resampling, hypothesis testing, the Normal and other probability distributions, and an introduction to modeling. Carries out applied analysis in a statistical computing environment.

**BTRY 3020 Biostatistics II (also NTRES 4130, STSCI 3200)**
Spring. 4 credits. Prerequisite: BTRY 3010 or 6010. Applies linear statistical methods to quantitative problems addressed in biological and environmental research. Methods include linear regression, inference, model assumption evaluation, the likelihood approach, matrix formulation, generalized linear models, single-factor analysis of variance (ANOVA), and a brief foray into nonlinear modeling. Carries out applied analysis in a statistical computing environment.

**BTRY 3100 Statistical Sampling (also ILRST/STSCI 3100)**
Fall. 4 credits. Prerequisites: two semesters of statistics. Applied methodology and theory of statistical sampling, with particular emphasis on sampling methods, sample design, cost, estimation of population quantities, and error estimation. Assessment of nonsampling errors. Discussion of application to social and biological sciences and business. Includes an applied project.

**BTRY 4070 Principles of Probability and Statistics (also ILRST 4070)**
Fall. 4 credits. Cannot be taken for credit after completion of BTRY 4080/4090 or MATH 4710/4720 sequence. Prerequisites: one year of calculus. Course is prerequisite for upper-division statistical genomics courses. Recommended: some knowledge of multivariate calculus and statistics. S–U or letter grades. Next offered 2011–2012. One-semester version of BTRY 4080/4090. Topics include combinatorial probability, conditional probability and independence, random variables, standard distributions, maximum likelihood and Bayesian approaches. Emphasizes computational methods using R programming language.

**BTRY 4080 Theory of Probability (also STSCI 4080)**
Fall. 4 credits. Prerequisites: MATH 1110, 1120, at least concurrent enrollment in 2130 or 2220 or equivalents. Recommended: at least one introductory course in statistical methods.
Introduction to probability theory: axiomatic foundations; combinatorics and equally likely events; conditional probability and independence; discrete and continuous random variables, their distributions and moments; generating functions; transformations; extensions to problems involving two or more random variables; and random samples. Can serve as either one-semester introduction or a foundation for a course in statistical theory.

**BTRY 4090 Theory of Statistics (also STSCI 4640)**
Spring. 4 credits. Prerequisites: BTRY 4080 or equivalent and at least one introductory statistics course.

Introduction to classical theory of parametric statistical inference that builds on the material covered in BTRY 4080. Topics include sampling distributions, principles of data reduction, likelihood, parameter estimation, hypothesis testing, interval estimation, and basic asymptotic theory.

**BTRY 4100 Multivariate Analysis (also ILRST/STSCI 6110)**
Spring. 4 credits. Prerequisites: BTRY 3010, some knowledge of matrix algebra. S–U or letter grades.

Application of classical multivariate methods to data from a variety of fields using a statistical software package. Topics include the multivariate normal distribution, multivariate regression, and MANOVA; principal components and factor analysis; canonical correlation; and discriminant analysis and clustering.

**BTRY 4820 Statistical Genomics**
Fall. 4 credits. Prerequisites: MATH 1110 and BTRY 4070. Highly recommended: at least one previous course in statistical methods and one in biology. S–U or letter grades.

Course covers both the fundamentals and advances in statistical methodology used to analyze disease and agriculturally relevant and evolutionarily important phenotypes. Topics include mapping quantitative trait loci (QTLs), application of microarray and related genomic data to gene mapping, and evolutionary quantitative genetics. Analysis techniques include association mapping, interval mapping, and analysis of pedigrees for both single and multiple QTL models. Application of classical inference and Bayesian analysis approaches is covered and there is an emphasis on computational methods. Meets concurrently with BTRY 6840.

**BTRY 4840 Computational Genomics**
Fall. 4 credits. Prerequisites: BTRY 4070 and at least one course in statistical methods and at least one in algorithms. S–U or letter grades. Next offered 2011–2012.

Computational methods for genomic data, emphasizing comparative and evolutionary genomics. Topics include sequence alignment, gene and motif finding, phylogeny reconstruction, and gene regulatory networks. Meets concurrently with BTRY 6840.

**BTRY 4940 Undergraduate Special Topics in Biometry and Statistics**
Fall or spring. 1–3 credits. S–U or letter grades.

Course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**BTRY 4970 Undergraduate Individual Study in Biometry and Statistics**
Fall and spring. 1–3 credits. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).

Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**BTRY 4980 Undergraduate Supervised Teaching**
Fall and spring. 1–3 credits. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).

Students assist in teaching a course appropriate to their previous training. Students meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

**BTRY 4990 Undergraduate Research**
Fall or spring. 1–3 credits. Prerequisites: statistics or biometry undergraduates; permission of faculty member directing research. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).

Students assist in original research and intellectual inquiries. Emphasis is on critically evaluating and improving research design and conducting statistical and computing analysis. An oral presentation is required.

**BTRY 6010 Statistical Methods I (also ILRST 6100)**
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.

Develops and uses statistical methods to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one- and two-way analysis of variance, comparisons among population means, analysis of categorical data, and correlation and regression analysis. Introduces interactive computing through statistical software. Emphasizes basic principles and criteria for selection of statistical techniques.

**BTRY 6020 Statistical Methods II**
Spring. 4 credits. Prerequisites: graduate standing or permission of instructor; BTRY 6010 or equivalent.

Continuation of BTRY 6010. Emphasizes the use of multiple regression analysis, analysis of variance, and related techniques to analyze data in a variety of situations. Topics include an introduction to data collection techniques; least squares estimation; multiple regression; model selection techniques; detection of influential points, goodness-of-fit criteria; principles of experimental design; analysis of variance for a number of designs, including multi-way factorial, nested, and split plot designs; comparing two or more regression lines; and analysis of covariance. Emphasizes appropriate design of studies before data collection, and the appropriate application and interpretation of statistical techniques.

Practical applications are implemented using a modern, widely available statistical package.

**BTRY 6030 Statistical Methods III: Categorical Data (also ILRST/STSCI 4110)**
Spring. 4 credits. Prerequisite: BTRY 6010 and 6020 or permission of instructor. Next offered 2011–2012.

Categorical data analysis, including logistic regression, log-linear models, stratified tables, matched pairs analysis, polytomous response, and ordinal data. Applications in biomedicine and social sciences.

**BTRY 6040 Statistical Methods IV: Applied Design (also ILRST 4100/STSCI 4120)**
Spring. 4 credits. Prerequisites: BTRY 6010 and 6020 or permission of instructor. Next offered 2011–2012.

Applications of experimental design including split plots, incomplete blocks, and fractional factorials. Stresses use of the computer for both design and analysis, with emphasis on solving real data problems.

**BTRY 6070 Principles of Probability and Statistics**

For description, see BTRY 4070.

**BTRY 6150 Applied Functional Data Analysis**
Fall. 3 credits. Prerequisites: BTRY 6010 and 6020 or permission of instructor. Next offered 2011–2012.

Functional data analysis studies data that may be thought of as continuously sampled smooth curves. The course focuses on extensions of standard statistical techniques to these data.

**BTRY 6520 Computationally Intensive Statistical Inference**
Fall. 4 credits. Prerequisites: ORIE 6700 and at least one course in probability, S–U or letter grades. Offered alternate years; next offered 2011–2012.

Covers topics in statistical computing including numerical optimization and finding zeros, kernel density estimation, resampling methods, and statistical simulation.

**BTRY 6790 Probabilistic Graphical Models (also CS 6782)**
Fall. 4 credits. Prerequisites: probability theory (BTRY 4080 or equivalent), programming and data structures (CS 2110 or equivalent). Recommended: course in statistical methods (BTRY 4090 or equivalent).

A thorough introduction to probabilistic graphical models, a flexible and powerful graph-based framework for probabilistic modeling. Covers directed and undirected models, exact and approximate inference, and learning in the presence of latent variables. Hidden Markov models, conditional random fields, and Kalman filtering are explored in detail.

**BTRY 6820 Statistical Genomics**
Fall. 4 credits. Prerequisites: MATH 1110 and BTRY 6070. Highly recommended: at least one previous course in statistical methods and one in biology. S–U or letter grades. Next offered 2011–2012.

For description, see BTRY 4820.
BTRY 6830  Quantitative Genomics and Genetics
Spring. 4 credits. Prerequisites: BTRY 4070 and introductory statistics course or equivalent. S–U or letter grades. For description, see BTRY 4850.

BTRY 6840  Computational Genomics
Fall. 4 credits. Prerequisites: BTRY 4670 and at least one previous course in statistical methods and at least one in algorithms. S–U or letter grades. Next offered 2011–2012.

BTRY 6890  Topics in Population Genetics and Genomics
Fall and spring. 1 credit; may be repeated for credit. Prerequisite: BTRY 6820 or permission of instructor.
Graduate seminar on current topics in population genetic data analysis. Topics this semester may include detecting signatures of natural selection, estimating demographic parameters, and recombination rate variation from whole-genome data; statistical methods for mapping and efficient methods for disease gene mapping; and use of comparative genomic data for population genetic inference. Readings are chosen primarily from current literature.

BTRY 6940  Graduate Special Topics in Biometry and Statistics
Fall or spring. 1–3 credits. S–U or letter grades.
Course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 6970  Individual Graduate Study in Biometry and Statistics
Fall, spring, or summer. 1–3 credits. S–U or letter grades.
Individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 7170  Theory of Linear Models
Fall. 3 credits. Prerequisites: BTRY 4090, 6020, or equivalents. S–U or letter grades.

BTRY 7180  Generalized Linear Models
Fall. 3 credits. Prerequisites: primarily for Ph.D. students in statistics; BTRY 6020, BTRY 4090, or equivalent. S–U or letter grades. Next offered 2011–2012.
A theoretical development of generalized linear models and related topics including generalized estimating equations, and generalized linear mixed models.

BTRY 7200  Topics in Computational Genomics
Spring. 1 credit. Prerequisite: BTRY 4840/6840 or permission of instructor.
Weekly seminar series on recent advances in computational genomics. A selection of the latest papers in the field are read and discussed. Methods are stressed, but biological results and their significance are also addressed.

BTRY 7210  Topics in Quantitative Genomics
Fall. 1 credit. Prerequisite: BTRY 4830/6830 or permission of instructor.
Weekly seminar series on recent advances in quantitative genomics. A selection of the latest papers in the field is read and discussed. Methods are stressed, but biological results and their significance are also addressed.

BTRY 7270  Advanced Survival Analysis
Spring. 3 credits. Prerequisite: at least one graduate-level course in probability, mathematical statistics, and regression modeling. S–U or letter grades. Next offered 2011–2012.
Focuses on the rigorous development of nonparametric, semiparametric, and parametric modeling and statistical inference procedures appropriate for analyzing right censored data.

BTRY 7900  Graduate-Level Dissertation Research
Fall or spring. 1–9 credits. Prerequisites: Ph.D. candidacy; permission of graduate field member concerned. S–U grades only. Research at the Ph.D. level.

BTRY 7950  Statistical Consulting
Fall and spring. 2–3 credits. Prerequisites: BTRY 6020 and 4090 and permission of instructor. S–U or letter grades.
Participation in the Cornell Statistical Consulting Unit: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions are held for joint consideration of literature and selected consultations encountered during previous weeks.

BTRY 7980  Graduate Supervised Teaching
Fall and spring. 2–4 credits. Prerequisites: permission of instructor and chair of special committee plus at least two advanced courses in statistics and biometry. S–U grades only.
Students assist in teaching a course appropriate to their previous training. Students meet with a discussion section, prepare course materials, and assist in grading. Credit hours are determined in consultation with the instructor, depending on the level of teaching and the quality of work expected.

BTRY 8900  Master’s-Level Thesis Research
Fall or spring. 1–9 credits. Prerequisite: permission of graduate field member concerned. S–U grades only. Research at the M.S. level.

BTRY 9900  Doctoral-Level Dissertation Research
Fall or spring. 1–9 credits. S–U grades only.

COMM 1101  Cases in Communication
Fall. 3 credits. T. Gillespie.
Serves as an introduction to the department and to the field of Communication, by familiarizing students with a range of questions, perspectives, and ideas that inform our research. The course has a broad reach, from understanding the intricate dynamics of face-to-face interactions to examining the most profound changes in modern society. Always, the practices, processes, and implications of communication serve as the lens for understanding human sociality. The course uses a case studies approach, drawing on real and pressing issues and controversies from the world around us, as examples and excuses for thinking through elements of Communication study and research.

COMM 1300  Visual Communication
Fall, spring, or summer. 3 credits. Limited to 30 students per class (fall and spring) or 15 students per class (summer). Priority given to communication majors, CALS seniors, and juniors. Fluency in spoken English assumed. Students absent twice during first week of class are dropped from course roster. Enrolled students must drop by end of second week to allow wait-listed students to add course. K. Berggren and staff.
Through theory and practice, students develop self-confidence and competence in researching, organizing, and presenting material to audiences. Students work through modules in information competency, audience analysis, and persuasion. Required assignments include researching, writing, and presenting speeches; short papers; and self-evaluations; quizzes and other speech-related activities.

COMM 2310  Writing about Communication
Spring and fall. 3 credits. Prerequisites: two semesters of college writing courses (one may be AP 5). COMM 1101. Students develop skill in various writing styles and genres. This course explores communication practices and theories as they are observed and studied in personal and professional contexts. Assignments polish students’ ability to gather information, analyze information, integrate ideas about communication, and express those ideas clearly and cogently. Transient priority given to communication majors.

COMM 2200  Media Communication
Fall. 3 credits. S. Byrne.
Introduction to media history, industry, content, policy, process, and effects.

COMM 2450  Communication and Technology (also INFO 2450)
Fall. 3 credits. J. Hanscock and J. Birnholtz.
Introduces students to the Communication and Information Technologies focus area of
the communication department and the Human Systems track for information science. It examines several approaches to understanding technology and its role in human behavior and society. Topics include psychological aspects of computer-mediated communication, how design plays a role in the way we interface with technology and collaborate with each other; and the ways in which communication technology is situated inside social and institutional structures and cultural formations.

COMM 2630 Organizational Writing
Fall, winter, spring, or summer. 3 credits. Limited to 25 students per sec. Prerequisite: junior, senior, or graduate standing; college-level writing course. L. Van Buskirk and staff.

Students write from the point of view of various organizations, including businesses, government agencies, and nonprofit organizations. This course emphasizes appropriate representation of the writer's organization, audience analysis, and clear and effective written presentation of detailed content. Assignments include text for web sites, reports, proposals, memoranda, letters, and e-mail.

COMM 2720 Principles of Public Relations and Advertising
Winter and summer. 3 credits. Not open to freshmen. Staff. Survey of the fields of public relations and advertising. Describes organizations, jobs, and functions in the industry. Covers the roles of public relations and advertising in society, the economic system, and organizations; psychological and sociological principles as bases for appeals; and strategies for media selection and message execution. Introduces to research and regulation.

COMM 2760 Persuasion and Social Influence (SBA)
Spring. 3 credits. Prerequisite: COMM 1101. P. McLeod. Social influence and persuasion are the most basic and important functions of communication. The course covers characteristics of persuasive messages, message sources, and targets; interpersonal influence; and influence in groups, organizations. Special emphasis is given to topics in health, science, risk, media, and technology. This course is taught with a case-study format with strong emphasis on class attendance and participation. Supplementing the cases are interactive lectures and in-class activities and demonstrations. A semester-long field research project done in groups is a major component of the course. Exams and short individual handwritten assignments are also part of the student evaluation.

COMM 2820 Research Methods in Communication Studies (SBA)
Fall. 3 credits. Prerequisite: sophomore standing. J. Niederdeppe. Covers social scientific methods to solve communication research problems, empirically. Topics include basic principles of social scientific research, random sampling, questionnaire design, experimental research design, focus group techniques, content analysis, and basic descriptive and inferential statistics. Students also learn basic data manipulation, presentation, and analysis techniques using SPSS and EXCEL.

COMM 2840 Sex, Gender, and Communication (also FGSS 2840) (SBA)
Fall. 3 credits. Not open to freshmen. Next offered 2011–2012. L. Van Buskirk. Explores the personal, social, and economic implications of male and female gender categories. Topics include theories of male and female gender construction, self-identity, social structures, personal relationships, and gender concerns in the workplace.

COMM 2850 Communication, Environment, Science, and Health (also STS 2851) (SBA)
Spring. 3 credits. B. Lewenstein and staff. Environmental problems, public health issues, scientific research—in each of these areas, communication plays a fundamental role. From the media to individual conversations, from technical journals to textbooks, from lab notes to the web, communication helps define scientifically based social issues and research findings. This course examines the institutional and intellectual contexts, processes, and practical constraints on communication in the life sciences.

COMM 3010 Speech Communication in Context
Fall and spring. 3 credits. Prerequisites: COMM 2010; second-semester sophomore, junior, or senior standing. Next offered 2011–2012. Staff. Introduces students to advanced theories of speech communication and then demonstrates uses of theories in different contexts.

COMM 3100 Communication and Decision Making in Groups (SBA)
Spring. 3 credits. Prerequisites: COMM 2760; junior or senior standing. Priority given to COMM majors. P. McLeod. Provides students with a greater understanding of information sharing, persuasion, and decision development in small work groups. Through practical exercises, class discussions, and lectures, students learn firsthand how tools such as decision structuring process can affect group performance. The course is taught in an interactive hands-on format that emphasizes application of tested theory.

COMM 3200 New Media and Society (also INFO 3200) (CA)
Spring. 3 credits. T. Gillespie and L. Humphreys-Niederdeppe. Builds on mass communication research and the study of culture and technology to investigate the social, political, and technological dynamics of contemporary media. It investigates how new media frame our experience of the world and shape our political involvement in it, and how new media intersect with our sense of identity and involvement in culture.

COMM 3300 Media and Human Development (SBA)
Spring. 3 credits. Prerequisite: COMM 2200. S. Byrne. Provides a developmental perspective on how children and adolescents interact, interpret, and respond to media content. Major areas of consideration include the effects of media violence, health and pro-social messages, educational programming, advertising, social media, and content children find frightening. Students evaluate the strategies that have been proposed to mitigate negative effects of the media on children.

COMM 3400 Psychology of Online Relationships (also INFO 3400) (SBA)
Fall. 3 credits. Prerequisite: COMM/INFO 2450. N. Bazarova. Course focuses on understanding online communication through principles of cognitive and social psychology and aspects of the Internet that defy traditional psychology understandings. Topics include impression formation, impression management, deception and trust, self-perception and identity, group dynamics, social support, and organizational impacts of new communication technology.

COMM 3450 Human–Computer Interaction Design (also INFO 3450) (SBA)
Fall. 3 credits. Pre- or corequisite: COMM/INFO 2450. D. Cosley, F. Guimbretière, and staff. Gives students insight into the design of computer interfaces and software from the user’s point of view. Students come to understand how hardware and software design influence the interaction between people and computers. Using assigned readings, demonstrations, and projects, students examine issues and trade-offs in interaction design and invent and evaluate alternative solutions.

COMM 3460 Online Communities (also INFO 3460) (SBA)
Fall. 3 credits. Prerequisite: COMM 2450. S. Fussell. Examines communication and social interaction in online communities such as social network sites and virtual worlds. The first half of the course focuses on how people join and become engaged in online communities. The second half looks in greater detail at specific types of communities.

COMM 3490 Media Technologies (also STS/INFO 3490) (CA)
Spring. 3 credits. Offered odd-numbered years. T. Gillespie. Our efforts to communicate, share culture, and drive social agendas depend on the tools we’ve developed. However, our commonplace notions of communication and media regularly overlook the role of the material technologies that are so crucial to them. This course considers the technologies of media (including printing, photography, film, telegraph, telephone, radio, television, and computer networks) as an opportunity to think about the intersection of technology, communication, and its social context.

COMM 3520 Science Writing for the Mass Media (also STS 3521)
Fall. 3 credits. Limited to 24 students. Not open to freshmen. Prerequisite: college-level writing course. B. Lewenstein. How to write about science, technology, and medicine for the media. Writing assignments focus on writing news for web sites, blogs, magazines, and other media.

COMM 3530 Science Writing Practicum
Spring. 1 credit. Prerequisite: COMM/STS 3520, ENGRG 3500, or permission of instructor. B. Lewenstein. Students cover the annual meeting of the American Association for the Advancement of Science. Students are responsible for all costs of travel, lodging, and meals.
COMM 3561 Computing Cultures (also STS 3561)  
Spring. 4 credits. R. Prentice.  
For description, see STS 3561.

[COMM 3600 Writing for New Media: Theory, Analysis, and Practice]  
Fall and spring. 3 credits. Prerequisites: sophomore standing and at least one college-level writing course. Next offered 2011–2012. F. Joseph.  
Advanced writing course emphasizing academic, analytical, and practical writing skills. Students research and write analyses of texts that appear both in new media outlets, including independent wikis and blogs, and in conventional journalistic sources.

COMM 3650 Technology and Collaboration (also INFO 3650) (SBA)  
Spring. 3 credits. Prerequisite: COMM 2450. J. Birnholtz.  
Course focuses on understanding the use of communication technologies in groups, with a particular focus on the unique and sometimes difficult issues raised by groups that are geographically distributed. Topics include theories of group and organizational behavior, interpersonal awareness, privacy, trust, technology-mediated communication, and technology evaluation and adoption.

COMM 3760 Planning Communication Campaigns (SBA)  
Spring. 3 credits. Pre- or corequisites: COMM 2820 or equivalent social research course and one semester of introductory statistics. J. Niederdeppe.  
Provides a theoretical and practical overview of the audiences, messages, and evaluation of communication campaigns. Includes principles of planning and evaluation relevant to several kinds of campaigns. Topics include discussion of campaign goals, objectives, strategies, and tactics; research design and implementation; audience segmentation; message construction; and techniques of evaluation. Includes research on new methods of data collection (e.g., focus groups, experiments, surveys) and analysis of campaign-related data sources.

COMM 3980 Issues in Teaching Communication (KCM)  
Fall and spring. 1 credit. Pre- or corequisites: junior or senior standing; present or past undergraduate teaching assistant for COMM course. K. Berggren.  
Seminar bringing together novice educators to discuss ideas, experiences, and practice. Integration of theory into actual education efforts is challenging for professional educators. Novice teachers are not aware of their common experiences, much less of a theoretical component to education. In discussions of actual teaching experiences, literature reviews, research reports, textbook chapters, curriculum, and evaluation tools, students examine new ideas and practices. The primary goal of the seminar is to enrich and deepen the novice teaching experience.

COMM 4100 Organizational Communication: Theory and Practice (CA)  
Spring. 3 credits. Prerequisites: sophomore standing; COMM 1101 or permission of instructor. C. Yuan.  
Survey course on topics that influence communication in organizations. Topics include formal organizational structure, social networks, information technology, leadership, team dynamics, and cross-culture differences.

[COMM 4200 Public Opinion and Social Process (SBA)]  
Spring. 3 credits. Prerequisite: COMM 2820. Offered even-numbered years; next offered 2011–2012. Staff.  
Provides a scientific and applied overview of the concept of “public opinion” and its implications for macrosocial processes.

COMM 4210 Communication and the Environment (SBA)  
Spring. 3 credits. Offered odd-numbered years. K. McComas.  
Students investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus is media's impact on public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content.

COMM 4220 Psychology of Entertainment Media (SBA)  
Fall. 3 credits. Prerequisites: introductory psychology or COMM 1101 or 2200. M. Shapiro.  
Every media format uses entertainment, including video games, advertising, television, movies, sports, and news. This course examines the psychology (conscious and unconscious) of entertainment, including why people like entertainment, what makes a story entertaining, how people mentally process entertainment, what makes things frightening or funny, and whether or not entertainment persuades.

COMM 4260 Communication Law  
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing or permission of instructor. D. Grossman.  
Deals with the law governing communication media. Topics include First Amendment concepts, regulations on newsgathering and dissemination, libel, invasion of privacy, copyright protection, regulation of broadcast and nondistribution electronic media, advertising law, and current legal issues unique to online communication.

COMM 4290 Copyright in the Digital Age (also INFO 4290) (CA)  
Fall. 3 credits. Offered odd-numbered years. T. Gillespie.  
Looks at recent legal and cultural battles about digital copyright, to investigate how participation in a digital world is structured: who speaks, what they can say, who hears, and with what consequences. We use these cases to look at the collision of authorship and the market, technology and law, individual and institution, culture and power.

COMM 4390 Advanced Human-Computer Interaction Design (also INFO 4400) (SBA)  
Spring. 3 credits. Prerequisite: COMM/INFO 3450 or permission of instructor. D. Cosley, G. Gay, and staff.  
Focuses on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that “serve human needs” while building feelings of competence, confidence, and satisfaction. Topics include models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

COMM 4450 Computer-Mediated Communication (also INFO 4450) (SBA)  
Spring. 3 credits. Prerequisites: COMM/INFO 2450 or permission of instructor. J. Niederdeppe.  
Focuses on reading and evaluating the theories and research methodologies used to investigate communication via computer systems. Assignments include student collaborations using electronic conferencing and other advanced communication technologies, as well as reflections on and evaluations of these collaborations in light of current theories and research findings. Topics include virtual teams, videoconferencing, and others as they emerge.

COMM 4500 Language and Technology (also INFO 4500) (SBA)  
Spring. 3 credits. J. Hancock and staff.  
Examines how new communication technologies affect the way we produce and understand language and modify interaction with one another. Focuses on the collaborative nature of language use and how Internet technologies affect the joint activities of speakers and listeners during the construction of meaning in conversation.

COMM 4550 Community Involvement in Environmental Decisions (SBA)  
Spring. 3 credits. Prerequisite: junior or senior standing or permission of instructor. Offered odd-numbered years. K. McComas.  
Community involvement is an essential part of environmental decision making, but it is also one of the most challenging aspects of the decision-making process. Through selected readings and course activities, this course examines both traditional and contemporary methods of community involvement. When evaluating the methods, students discuss how social structures work to define criteria for success.

COMM 4560 Mobile Communication in Public Life (SBA)  
Fall. 3 credits. Prerequisite: COMM/INFO 2450. L. Humphreys.  
Mobile technology is an increasingly prominent tool for modern communication. This course critically explores the role of mobile communication and its impact on public life. The course is divided into three main areas: social and political uses of mobile communication, mobility and sense of place, and mobile social software.

COMM 4660 Public Communication of Science and Technology (also STS 4661) (SBA)  
Spring. 3 credits. Prerequisite: COMM 2850, or 3520, ENGR 3500, or permission of instructor. Offered even-numbered years. B. Lewenstein.  
Explores the structure, meanings, and implications of “public communication of science and technology” (PCST). Examines the contexts in which PCST occurs, looks at motivations and constraints of those involved in producing information about science for nonprofessional audiences, and analyzes the functions of PCST. Ties existing ideas about PCST to general communication research, and leads to developing new knowledge about PCST. Format is primarily seminar/discussion.
Every day we face known and unknown risks to our own health and safety and risks to the environment. In many cases we not only misinterpret these risks, but we frequently make decisions that put us at even greater risk. Communicating the likelihood of harm based on complex, incomplete, and uncertain science is a challenge. This course uses case studies to illustrate theories of science communication, and practical in-class exercises to demonstrate how theories apply to specific situations.

**COMM 4940 Special Topics in Communication**

Fall, spring, or summer. 1–3 credits, variable. Prerequisite: permission of instructor. S–U or letter grades. Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

**COMM 4960 Communication Internship**

Fall or spring. Work component and variable: 1 credit, may be repeated once for a total of 2 credits. Prerequisite: COMM major or minor (first-, second-, third-, or fourth-year) for 1 credit (minimum 60 hours). K. Berggren. Students receive a structured, on-the-job learning experience under the supervision of communication professionals in cooperating organizations. A minimum of 60 hours of on-the-job work is required; the number of work hours beyond 60 is left to the discretion of the intern and the supervising company. A final paper linking communication theory to practical work experience is required. All internships must be approved by the internship coordinator before the work experience segment. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

**COMM 4970 Individual Study in Communication**

Fall or spring. 1–3 credits; may be repeated to 6 credits with different supervising faculty member. Prerequisite: 3.0 GPA. Students must register using independent study form (available in 140 Roberts Hall). Individual study under faculty supervision. Work should concentrate on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic. Attempts to implement this knowledge in a practical application are desirable.

**COMM 4980 Communication Teaching Experience**

Fall or spring. 1–3 credits; may be repeated to 6 credits with different supervising classroom teaching experience. Prerequisites: junior or senior standing; 3.0 GPA (2.7 if teaching assistant for skills development course); permission of faculty member who supervises work and assigns grade. Students must register using independent study form (available in 140 Roberts Hall). Periodic meetings with the instructor cover realization of course objectives, evaluation of teaching methods, and student feedback. In addition to aiding with the actual instruction, each student prepares a paper on some aspect of the course.

**COMM 4990 Independent Research**

Fall or spring. 1–3 credits; may be repeated to 6 credits. Prerequisites: senior standing; 3.0 GPA. Students must register using independent study form (available in 140 Roberts Hall). Permits outstanding students to conduct laboratory or field research in communication under appropriate faculty supervision. The research should be scientific: systematic, controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

**COMM 4991 Independent Honors Research in Social Science**

Fall or spring. 1–6 credits. Prerequisites: undergraduate standing; requirements met for honors program. Staff. Intended for students pursuing the research honors thesis in communication. Students must complete the CALS Honors program application by the third week of the fall semester of their senior year. Students should select a faculty advisor and begin proposal development during their junior year.

**COMM 5660 Workshop in Science Communication for Scientists**

Spring. 2 credits. Prerequisite: graduate standing. B. Cochrane. This weekend workshop trains researchers in the sciences (including natural sciences, engineering, experimental social sciences, etc.) to communicate effectively with nonscientists such as policy makers, political stakeholders, the media, and the general public. Training activities may include role-play, reading/discussion, writing press releases and other outreach materials, and discussion with invited speakers.

**COMM 6100 Seminar in Social Networks**

Fall. 4 credits. Prerequisite: graduate standing. Offered even-numbered years. C. Yuan. Reviews theories and research on communication and social networks in groups, organizations, and communities. Students also learn how to collect, analyze, and interpret social network data using relevant software.

**COMM 6180 Media Influence and Persuasion**

Spring. 3 credits. Prerequisite: graduate standing. Offered odd-numbered years. S. Byrne. This graduate seminar covers classic, influential, and disruptive theories of media influence and mediated persuasion. Readings include cutting-edge empirical tests of those theories across communication contexts. Students develop skills in operationalizing theoretical concepts in preparation for empirical test.

**COMM 6210 Advanced Communication and the Environment**

Spring. 3 credits. Offered odd-numbered years. K. McCauley. Students investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus is on the role of perceptions in public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content. Lectures concurrent with COMM 4210; graduate students should enroll in COMM 6210.

**COMM 6220 Advanced Psychology of Entertainment Media**

Fall. 3 credits. Prerequisites: graduate standing and permission of instructor. M. Shapiro. Graduate seminar examining the psychology (conscious and unconscious) of entertainment media (including video games, advertising, television, movies, sports, and news). Specific topics examined vary. Depending on preparation, students may be asked to attend COMM 4220 lectures and take exams.

**COMM 6400 Human–Computer Interaction Design (also INFO 6450)**

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. D. Cosley, G. Gay, and staff. Graduate-level readings and research supplementing COMM/INFO 4400. Focuses on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

**COMM 6450 Computer-Mediated Communication (also INFO 6450)**

Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. S. Fussell. Focuses on reading and evaluating the theories and research methodologies used to investigate communication via computer systems. Assignments include student collaborations using electronic conferencing and other advanced communication technologies, as well as reflections on and evaluations of these collaborations in light of current theories and research findings. Topics include virtual teams, videoconferencing, and others as they emerge.

**COMM 6500 Language and Technology (also INFO 6500)**

Spring. 3 credits. J. Hancock and staff. Graduate-level readings and research supplementing COMM/INFO 4500. Examines how new communication technologies affect the way we produce and understand language and modify interactions with one another. Focuses on the collaborative nature of language use and how Internet technologies affect the joint activities of speakers and listeners during the construction of meaning in conversation.

**COMM 6660 Public Engagement in Science (also STS 6661)**

Fall. 3 credits. Offered even-numbered years. B. Lewenstein. In recent years, the scientific community has increasingly referred to public engagement in science. This seminar explores the scholarly literature addressing that move; the links between “public engagement” and earlier concerns about science literacy, public understanding of science, and outreach; and the intersections between literature in communication and in science studies on issues involving the relationships among science(s) and public(s).

**COMM 6760 Public Health Communication**

Spring. 3 credits. Prerequisite: one graduate-level research methods course. Offered even-numbered years. J. Niederdeppe.
Provides an overview of theory and research on public communication related to health behavior and policy change. Topics include theories of behavior change and message effects; formative and evaluative research; campaigns related to cancer, AIDS, obesity, smoking, nutrition, and drug use; and heterogeneity in campaign effects between populations.

COMM 6800 Studies in Communication
Fall, 3 credits. Prerequisite: communication graduate students or permission of instructor. S. Fussell.
Reviews classical and contemporary readings in communication, including key concepts and areas of investigation. Explores the scope of the field, the interrelationships of its various branches, and examines the role of theory in the research process.

COMM 6810 Advanced Communication Theory
Spring, 3 credits. Prerequisites: COMM 6800 or graduate standing and permission of instructor. M. Shapiro.
Development of, and contemporary issues in, communication theory. Discusses the interaction between communication and society, social groupings, and mental processing.

COMM 6820 Methods of Communication Research
Fall, 3 credits. Recommended: familiarity with basic statistical concepts. J. Birnholz.
Analyzes methods of communication research based on a social science foundation. Goals are to understand processes and rationales for qualitative, textual, survey, and experimental methods and to experience each method through modest individual or group research projects. Critiques of selected contemporary communication studies.

COMM 6830 Qualitative Research Methods in Communication
Spring, 3 credits. Prerequisites: COMM 6820 and graduate standing. L. Humphreys.
Reviews qualitative methods used in communication research, including interviews, focus groups, fieldwork (ethnography), and case studies. Students practice the various methods so they can learn to apply them to their own research. Students also discuss how researchers analyze qualitative data and build theories from their observations.

COMM 6840 Theory and Research in Group Communication and Decision Making
Fall, 3 credits. Offered odd-numbered years. P. McLeod.
Graduate seminar focusing on theory and research in communication and decision-making in small groups. Emphasis is on task-oriented groups. Topics include information exchange, decision-making processes, types of tasks, social influence, group development processes, group support systems, intergroup processes, and leadership. Special attention is given to methodological challenges in group research.

COMM 6860 Risk Communication
Fall, 3 credits. K. McComas and C. Scherer.
Examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks.

COMM 6890 Advanced Communication Theory
Fall and spring, 3 credits. Prerequisite: permission of instructor. S. Fussell.
Advanced research methods course for graduate students in the social sciences with an emphasis on data analysis using structural equation modeling. The course covers both its basic principles and practical applications (e.g., multigroup models, growth curve models) using LISREL/PRELIS.

COMM 7810 Seminar in Psychology of Communication
Spring, 3 credits. Prerequisites: COMM 6800 and equivalent graduate-level theory in psychology or social psychology. Offered odd-numbered years. M. Shapiro.
Discusses and analyzes selected current issues in the psychology of communication. Students discuss and synthesize research and theory in the mental processing of communication.

COMM 7940 Seminar in Communication Issues
Fall, spring, or summer, 1–3 credits. Prerequisite: permission of instructor. Small group study of topical issue(s) in communication not otherwise provided by a department course and determined by the interest of faculty members and students.

COMM 7970 Graduate Independent Study
Fall, spring, or summer, 1–3 credits. Prerequisite: permission of instructor. Individual study concentrating on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic.

COMM 7980 Communication Teaching Laboratory
Fall and spring, 1–3 credits each semester; may be repeated once. Prerequisite: graduate standing and permission of faculty member who will supervise work and assign grade. Students must use faculty member's section number to register.) Graduate faculty.
Designated primarily for graduate students who want experience in teaching communication courses. Students work with an instructor in developing course objectives and philosophy, content, and planning.

COMM 7990 Graduate Research
Fall, spring, or summer, 1–3 credits. Prerequisite: appropriate communication graduate course work or permission of instructor. Small-group or individual research based on original, empirical, data-based designs regarding topical issues in communication not otherwise examined in a graduate field course.

COMM 8900 Master's-Level Thesis Research
Fall or spring. 1–6 credits; may be repeated for max. of 6 credits. Prerequisite: permission of committee chair.
Thesis research for M.S. (communication) students.

COMM 9900 Doctoral-Level Dissertation Research
Fall or spring. 1–9 credits; may be repeated for max. of 9 credits. Prerequisite: completion of "A" exam; permission of committee chair. Dissertation research for Ph.D. candidates.

CROP AND SOIL SCIENCES

CSS 1900 Sustainable Agriculture: Food, Farming, and the Future
Fall, 3 credits. G. W. Pick.
Designed to introduce basic food production resources in the context of the human aspects of farming. The information is of general value for nonmajors and students new to the field. Several field trips enhance appreciation for the diversity of agriculture.

CSS 2940 Introduction to Agricultural Machinery (also AGSCI/HORT 2940)
Fall. 2 credits. B. Flanagan and A. DiTommaso.
Overview of agricultural machinery used in the production of field crops. Information is presented in a lecture and field laboratory format stressing "hands-on" equipment demonstrations and use, particularly of tractors. Successful completion provides a broad understanding of agricultural machinery operation and design rationale.

CSS 3800 Organic Food and Agriculture (also AGSCI/HORT 3800)
Fall. 3 or 4 credits. Prerequisites: CSS 1900, CSS 2600, HORT 1101 recommended, or permission of instructor.
Discussion of techniques and methods of organic food production, including vegetables, orchard crops, grains, and animal systems. Critically evaluates relevant issues that affect the environment, consumers, and the industry. Optional lab includes interaction with experts, field trips to farms, and living laboratory at Dilmun Hill.
CSS 4910 Food, Farming, and Personal Belief (also IARD 4910)
Spring. 1 credit. Recommended: Sustainable Agriculture (CSS 3900) or equivalent. G. Fick. Reading and discussion course focusing on the relationship between agricultural sustainability and religious faith, especially the linkage between the motivation to adopt practices of sustainability and personal value systems of farmers and consumers. Principles of scientific agriculture are examined with the holistic view of sustainable development.

CSS 4940 Special Topics in Crop and Soil Sciences (undergraduate level)
Fall or spring. 4 credits max. The department teaches “trial” courses under this number. Offerings vary by semester, and are advertised by the department before the semester begins. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

CSS 4970 Individual Study in Crop and Soil Sciences
Fall or spring. 1–6 credits. Students must register using independent study form (available in 140 Roberts Hall). Topics in soil science, crop science, or environmental information science are arranged at the beginning of the semester for individual study or for group discussions.

CSS 4980 Teaching Experience in Crop and Soil Sciences
Fall or spring. 1–5 credits. Students must register using independent study form (available in 140 Roberts Hall). Teaching experience in soil science, crop science, or environmental information science is obtained by assisting in the instruction of a departmental course. This course should not be taken by teaching assistants.

CSS 4990 Undergraduate Research
Fall or spring. Credit TBA. Students must register using independent study form (available in 140 Roberts Hall). Independent research on current problems selected from any phase of crop science, soil science, or environmental information science.

CSS 6900 Scientific Method in Practice
Spring. 1 credit. Prerequisite: junior, senior, or graduate standing. H. G. Gauch, Jr. and G. W. Fick. Students in this course study Hugh Gauch’s book Scientific Method in Practice, which is designed to help scientists become better scientists through deeper understanding of common themes that extend across the disciplines. Topics include the history and philosophy of science, reliance on evidence, deductive and inductive logic, probability, parsimony, and hypothesis testing.

CSS 6950 Planning and Reporting Research
Summer, six-week session. 3 credits. P. F. Fick. Designed to help graduate students improve their technical writing skills for various scientific outputs. Students are guided through written output that includes review articles, scientific papers, thesis, research and funding proposals, manuscripts, and PowerPoint presentations. The goal is to increase proficiency in writing that will improve the chances of acceptance of research outputs by good-quality, refereed publications. The students also review ways to present data in tables and figures with proper statistical analysis. Professional ethics in the conduct and communication of science are also covered. Much of the course has students using their own research data in preparation of various good-quality publications and outputs. Special attention is given to M.P.S. students who need to complete a problem-solving or applied project.

CSS 6960 Perspectives in International Development (also IARD/AEM/NTRES 6960)
Fall and spring. 1 credit. S–U grades only. L. Buck, R. Christy, and P. Hobbs. Agroecological perspectives for sustainable development. For detailed description, see IARD 6960.

CSS 6970 Seminar in Crop and Soil Sciences
Fall and spring. 1 credit. S–U grades only. H. van Es. Covers current research and selected topics in the crop and soil sciences and related fields.

CSS 6980 Graduate Teaching or Extension Experience
Fall. 1–12 credits. Prerequisite: M.L. B. Prerequisite: S–U or letter grades. Staff. Planning and teaching courses or extension programs under the supervision of departmental faculty. This may include lectures, laboratories, discussion sessions, workshops, in-service training events, etc.

CSS 7930 Graduate Research in Agronomy
Fall or spring. Credit TBA. Graduate faculty. Dissertation research for Ph.D. students before A exam has been passed.

CSS 7970 Graduate Individual Study in CSS
Fall and spring. 1–6 credits.

CSS 8930 Graduate Research in Crop and Soil Sciences
Fall or spring. Credit TBA. Graduate faculty. Thesis research for master's students.

CSS 9930 Doctoral Research in Agronomy
Fall or spring. Credit TBA. Graduate faculty. Thesis research for doctoral students.

Crop Sciences

CSS 2110 Field Crop Systems
Fall. 4 credits. Prerequisite: none. Two to four field trips during lab periods (until 5 p.m. or on weekends). R. L. Obendorf. Principles of field-crop growth, development and maturation, species recognition, soil and climatic adaptations, tillage systems, liming and mineral nutrition, cropping sequences, management systems, nutrition and health, and crop improvement are considered. Grain, protein, oil, fiber, biofuel, and forage crops are emphasized. Laboratory utilizes living plants, extensive crop garden, and computer simulation. Lab report and term paper on contemporary field crop systems required. Designed for professional students or advanced undergraduates. Credit for both CSS 4050 and CSS 2110 (or CSS 3110) not permitted.

CSS 4130 Physiology and Ecology of Yield
Spring. 3 credits. Prerequisites: coursework in plant physiology or molecular biology or biochemistry, or advanced plant science. T. L. Setter. Study of processes involved in the conversion of solar energy into harvested plant products and environmental constraints on crop productivity. Topics include photosynthesis and essential processes that utilize photosynthetic energy, including nitrogen assimilation, phloem translocation and partitioning, canopy-scale influences on solar radiation use efficiency; regulation of growth processes in leaf, root, and floral/fruit/grain sinks in response to environment; seed and fruit set; water transport and stomatal regulation; root architecture and function, and behavior in water-limited situations. Examples come from the full spectrum of crops and model-plant systems. Students develop an ability to identify processes that...
could be improved through optimization of crop cultural practices or genetic change.

**CSS 4140 Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts (also IARD 4140)**

Fall. 4 credits. Prerequisite: none specific; interest in agriculture and tropical cropping systems. P. Hobbs. Characterizes and discusses traditional shifting cultivation; lowland rice-based systems; upland cereal-based systems; smallholder mixed farming including root crops and livestock; plantation fruit and oil crop systems; and agroforestry. In addition to species diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. Evaluates the impact of tropical cropping systems on the environment.

**CSS 4260 Practicum in Forest Farming as an Agroforestry System (also HORT/NTRES 4260)**

Fall. 2 credits. K. W. Mudge, L. E. Buck, and P. Hobbs.

For description, see HORT 4260.

**CSS 4440 Integrated Pest Management (also ENTOM 4440)**

Fall. 4 credits. Prerequisites: biology course or permission of instructor. J. E. Losey and A. DiTommaso. For description, see ENTOM 4440.

**[CSS 4551–4555 Mineral Nutrition of Crops and Landscape Plants (also HORT 4551–4555)]**

Spring. 5 modules, required module no credit; others 1 credit each. Next offered 2011–2012. H. C. Wien.

For description, see HORT 4551–4555.

**[CSS 4556 Mineral Nutrition of Crops and Landscape Plants Lab (also HORT 4556)]**

Spring. 1 credit. Letter grades only. Offered even-numbered years; next offered 2012–2013. C. Wien.

For description, see HORT 4556.

**[CSS 6080 Water Status in Plants and Soils] (also IARD 6080)**

Fall. 1 credit. Prerequisite: permission of instructor. S. DeGloria and S. Hoskins. For description, see IARD 6080.

**CSS 4100 The GMO Debate: Science and Society**

Spring. 3 credits. Prerequisite: one year of college biology. J. Thies and P. Hobbs. Biotechnology is causing global changes in agricultural production systems. Social movements have arisen to contest the adoption of transgenic or genetically modified organisms. Students assess the science behind this debate and examine the interplay among science, society, and politics. Introduces students to techniques for field appraisal of the status of water in plants and soil, including methods used in physiological studies.

**CSS 4110 Environmental Information Science**

Spring. 3 credits. Prerequisites: HORT 4551 or 4555; or equivalent. Next offered 2012–2013. T. L. Setter.

Introduces students to techniques for field appraisal of the status of water in plants and soil, including methods used in physiological studies.

**CSS 4200 Geographic Information Systems (also CEE 4110)**

Fall or spring. Credit TBA. S–U grades only. Graduate faculty.

**CSS 4140 Tropical Cropping Systems**

**CSS 4620 Mineral Nutrition: From Plants to Humans (also BIOPL 6420)**

**CSS 6941 Special Topics in Crop Science**

Fall or spring. 1–6 credits. Staff. Study of topics in crop science that are more specialized or different from other courses. Special topics to be offered depend on staff and student interests.

**CSS 7910 Graduate-Level Thesis Research in Crop Science**

Fall or spring. Credit TBA. S–U grades only. Graduate faculty. Thesis research for Ph.D. students before "A" exam has been passed.

**CSS 8000 Master's-Level Dissertation Research in Crop Science**

Fall or spring. Credit TBA. S–U grades only. Graduate faculty. Dissertation research for M.S. candidates.

**CSS 9910 Doctoral-Level Dissertation Research in Crop Science**

Fall or spring. Credit TBA. S–U grades only. Graduate faculty. Dissertation research for Ph.D. candidates after "A" exam has been passed.

**Environmental Information Science**

**[CSS 3970 Environmental Microbiology: Evolution, Biogeochemistry, Microbial Ecology (also BIOM 3970)]**

Spring. 3 credits. Prerequisite: BIOMI 2900. Recommended: BIOEE 1610, NTRES 3030, or permission of instructor. Next offered 2011–2012. E. L. Madsen. Discusses the biology, behavior, and function of microorganisms in natural environments in relation to past and present environmental conditions on Earth. Also considers the role of microorganisms in ecologically and environmentally significant processes through discussion of specific topics (e.g., elemental cycles, nutrient cycling, transformation of pollutant chemicals, wastewater treatment, and environmental biotechnology).
CSS 6210 Applications of Space–Time Statistics
Fall or spring. 2 credits. Prerequisite: BTRY 6010 or equivalent. S–U grades only. H. Van Es. Introduction to space-time statistics with applications in agriculture and environmental management. Topics include geostatistics, temporal statistics, sampling, experimental design, state-space analysis, data mining, and fuzzy logic.

CSS 6600 Remote Sensing Fundamentals (also CEE 6100)
Fall. 4 credits. Prerequisite: permission of instructor. W. D. Philpot. Introduction to the principles, equipment, and methods used in obtaining information about earth resources and the environment from aircraft or satellite sensors. Topics include basic interactions of electromagnetic radiation with the earth, sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design in the form of a proposal to use remote sensing for a specific application.

CSS 6740 Environmental Genomics
Spring. 2 credits. D. Buckley. Genomics opens new avenues for exploring interactions between organisms and their environment. Through lectures and discussions, current research, students learn how genomic tools can provide insight on processes occurring at individual, population, and ecosystem scales that govern the response of biological systems to environmental change. Emphasis is placed on microbial systems, but this course is also useful to those interested in the other applications of environmental genomics. The course provides students with experience in writing and reviewing grant proposals by culminating in the creation of short research proposals to be reviewed by the class in the style of an NSF panel.

CSS 6750 Modeling the Soil-Plant-Air System (also EAS 6750)
Spring. 3 credits. Prerequisite: EAS/CSS 4850 or equivalent. S. J. Riha. Introduction to the structure and use of soil-plant-atmosphere models. Topics include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability; plant-plant competition; and land surface processes as well as model data requirements, validation, and scale. Discusses use of soil-plant-atmosphere models for teaching, research, extension, and policy formation.

CSS 6943 Special Topics in Environmental Information Science
Fall or spring. 1–6 credits. Staff. Study of topics in environmental science that are more specialized or different from other courses. Special topics depend on staff and student interests.

CSS 7920 Graduate-Level Dissertation Research in Environmental Information Science
Fall or spring. TBA. S–U grades only. Graduate faculty. Dissertation research for Ph.D. students before ‘A’ exam has been passed.

CSS 8910 Master’s-Level Thesis Research in Environmental Information Science
Fall or spring. Credit TBA. S–U grades only. Graduate faculty. Thesis research for master’s students.

CSS 9920 Doctoral-Level Dissertation Research in Environmental Information Science
Fall or spring. Credit TBA. S–U grades only. Graduate faculty. Dissertation research for Ph.D. candidates after ‘A’ exam has been passed.

CSS 9921 Doctoral-Level Research in Environmental Information Science
Fall or spring. Credit TBA. S–U grades only. Graduate faculty. Dissertation research for Ph.D. candidates after ‘A’ exam has been passed.

[CSS 3620 Soil Morphology
Fall, spring. 1 credit. Prerequisite: undergraduate standing. Recommended for sophomores and juniors. One all-day field trip required. Next offered 2012–2013. J. Russell-Anelli. Principles for field identification of soil properties, profiles, and landscapes. A series of soil pits are examined, described, classified, and interpreted in the field.]

CSS 3630 Soil Genesis, Classification, and Survey
Fall. 4 credits. Prerequisite: CSS 2600. One all-day field trip required. J. Russell-Anelli. Discusses factors and processes of soil formation on which soil survey is based. Practices principles of field identification, classification, survey, and interpretation in a field setting. Provides an overview of soil databases, their content, development, and use for site evaluation and land classification.

CSS 3650 Environmental Chemistry: Soil, Air, and Water
Spring. 3 credits. Prerequisites: CHEM 2070–2080 or CHEM 1560. M. B. McBride. Overview of the chemistry of the biosphere and biogeochemical processes that control the fluxes, concentrations, and bioavailability of essential elements and pollutants in soil, air, and water. Gives special attention to soil’s function as a filter for contaminants. Describes the history of environmental contamination by xenobiotics and heavy metals, with emphasis on behavior and properties of pollutants that pose the greatest risk to human and ecological health.

CSS 4120 Whole Farming Nutrient Management (also ANSC 4120)
Spring. 4 credits. M. E. VanAmburgh and Q. Kettersing. For description, see ANSC 4120.

CSS 4660 Soil Ecoloy (also HORT 4660)
Spring. 4 credits, with lab. Prerequisites: one year of biology or ecology and CSS 2600 or permission of instructor. J. E. Thies. Discover the wonder of life underground. In this course, students examine the complex diversity of soil organisms along with their multifaceted functions in terrestrial ecosystems. The fundamental principles and features of biologically mediated processes in the soil and the functions of soil biota in both managed and unmanaged ecosystems are highlighted. Special topics include beneficial symbioses, biological control of plant pathogens, biogeochemistry of unique habitats, bioremediation and composting of organic wastes, among others. Laboratory focuses on molecular activities and traditional methods for assessing the abundance, activity, and diversity of soil organisms.

CSS 4720 Nutrient Management and Research in Agroecosystems
Spring. 4 credits. Prerequisites: CSS 2600 or permission of instructor. J. Lehmann. Familiarizes students with the basic concepts of soil fertility and biogeochemistry and how soil and environmental properties affect nutrient availability and cycling. Discussion focuses on the way organic farming and soil conservation affect the fate of nutrients in agroecosystems. Emphasizes the way nutrient management can be improved without creating environmental hazards. Gives students hands-on training in analytical
procedures and expands knowledge in discussion groups and through oral as well as poster presentations. The laboratory experiments conclude with a final paper.

[CSS 4830  Land, Water, Agriculture, and Environment (also EAS 4830)]
Fall. 3 credits. Prerequisites: CSS 2600 or equivalent, calculus. Next offered 2011–2012. H. van Es and S. J. Riha. Discusses energy and mass transfer in the soil-plant-atmosphere system, and their relevance to important environmental processes. Covers water, heat and gas flow; energy budgets, and nutrient dynamics. Discussion of management approaches to sustainable crop production, soil and water conservation, greenhouse gas mitigation, as well as research methods and instrument design for monitoring soil processes. Domestic and international perspectives are covered.

CSS 6630 Pedology
Spring. 3 credits. Prerequisite: CSS 3610 or permission of instructor. J. Russell-Anelli. Covers weathering, reactions, and processes of soil genesis; principles of soil classification and the rationale and use of soil taxonomy; development and significance of major groups of soils of the world.

CSS 6660 Applied Plant–Microbe Interactions
Fall. 3 credits. Prerequisite: CSS 4660 or equivalent or permission of instructor. Next offered 2011–2012. J. E. Thies. Study and discussion course on the nature of microbial interactions with plant roots aimed at helping students improve their professional practice within the content area.

CSS 6690 Organic Matter—Soils, Sediments, and Waters
Spring. 3 credits. Prerequisites: CSS 2600 and CHEM 3570–3580 or equivalent.

J. M. Duxbury. Discussion of current concepts on the chemical nature, dynamics, and properties of natural organics and organo-mineral associations in terrestrial and aquatic environments. Includes a modeling project of soil carbon dynamics in natural or agricultural ecosystems.

CSS 6710 Soil Chemistry
Fall. 3 credits. Prerequisite: one year of physical chemistry or permission of instructor. M. B. McBride. Detailed examination of the structure and surface chemistry of colloidal particles important to the function of soils. Emphasizes ion exchange, mineral-solution equilibria, and adsorption reactions of silicate clays, oxides, and organic matter. Describes the sorption behavior of environmental contaminants in soils, particularly metals and xenobiotics.

CSS 6720 Nutrient Cycling in Natural and Managed Ecosystems
Fall. 3 credits. Prerequisite: CSS 3720 or NTRIS 3210 or BIOE 4780, or permission of instructor. J. Lehmann. Examines the biogeochemistry and cycles of nutrients in terrestrial ecosystems, and the interface with the biosphere, atmosphere, and hydrosphere, using hands-on field experimentation and research proposals.

CSS 6840 Topics in Soil Microbial Ecology
Fall. 1 credit. Disc. S–U grades. D. Buckley. Current topics in soil microbial ecology, including community ecology and diversity, microbial biogeography, biogeochemistry, plant-microbe interections, microbial feedbacks on plant communities, gene exchange and evolution in soils, soil microbial genomics, and relationships between structure and function of microbial communities in soil systems.

CSS 6842 Special Topics in Soil Science
Fall, spring, or summer. 1–6 credits. Study of topics in soil science that are more specialized or different from other courses. Special topics depend on staff and student interests.

CSS 7900 Graduate-Level Dissertation Research
Fall or spring. Credit TBA. S–U grades only. Graduate faculty. Dissertation research for Ph.D. students before “A” exam has been passed.

CSS 8920 Master’s-Level Thesis Research in Soil Science
Fall or spring. Credit TBA. S–U grades only. Graduate faculty. Thesis research for master’s students.

CSS 9900 Doctoral-Level Dissertation Research in Soil Science
Fall or spring. Credit TBA. S–U grades only. Graduate faculty. Dissertation research for Ph.D. candidates after “A” exam has been passed.

DEVELOPMENT SOCIOLOGY

DSOC 1101 Introduction to Sociology (SBA) (KM) (D)
Fall or spring. 3 credits. Students may not take both DSOC 1101 and SOC 1101 for credit. A. Gonzales. Introduction to theory and research in sociology. Demonstrates how the insights, theories, and methods of sociological analysis can be brought to bear on major issues of social life. A primary goal is to convey a sense of the manner in which sociologists formulate theories and how the collection and analysis of data are used to evaluate those theories. Provides “hands-on” experience in analyzing sociological issues. Students undertake guided research exercises that involve using computers to analyze actual data. No prior background is presumed; necessary skills are covered in class and section meetings.

DSOC 1200 Development Sociology First-Year Writing Seminar (SBA)
Fall, spring. 3 credits. Staff. The department offers first-year writing seminars on a wide range of development sociology topics. Contact John S. Knight Writing Seminar Program brochures for instructors and descriptions.

DSOC 2010 Population Dynamics (also SOC 2202) (SBA)
Fall. 3 credits. ALS students must enroll in DSOC 2010. S–U or letter grades. L. Williams. Introduction to population studies. The primary focus is on the relationships between demographic processes (fertility, mortality, and immigration) and social and economic issues. Discussion covers special topics related to population growth and spatial distribution, including marriage and family formation, population aging, changing roles and statuses of women, labor force participation, immigrations, urban growth and urbanization, resource allocation, and the environment.

DSOC 2050 International Development (also SOC 2206) (SBA) (HA) (D)
Spring. 3 credits. P. McMichael. Examines new questions concerning development models in the post–Cold War era from a comparative and global perspective on North-South relations. While the focus is the “Third World,” the issues confronting it are often global, even when they seem most local. North-South relations are not just an environmental justice issue, but one that involves global food systems, new forms of export production, development agencies, multilateral institutions, local bureaucracies, transnational corporations, the debt crisis, and new technologies. Also examines the new global justice movements, such as environmentalism, feminism, and landless workers, peasant, and grassroots activism.

DSOC 2070 Problems of Contemporary Society (also SOC 2070) (SBA)
For description, see SOC 2070.

DSOC 2090 Social Inequality (also SOC 2208) (SBA)
For description, see SOC 2208.

DSOC 2150 Introductory Organizations (also SOC 2150) (SBA)
For description, see SOC 2150.

DSOC 2200 Sociology of Health of Ethnic Minorities (also LSP 2200) (SBA) (D)
Fall. 3 credits. S–U or letter grades. P. A. Parra. Discusses the health status of minorities in the United States. Explores intragroup diversity such as migration, economic status, and the influence of culture and the environment on health status and access to health care. Although special attention is given to Latino populations, discussion encompasses other minorities who face similar problems.

DSOC 2201 Society and Natural Resources (also NTRES 2201) (SBA)
For description, see NTRES 2201.

DSOC 2220 Controversies About Inequality
For description, see SOC 2220.

DSOC 2650 Latinos in the United States (also SOC 2650, LSP 2010) (SBA) (CA)
For description, see SOC 2650.
DSOC 2750 Immigration and a Changing America (SBA) (HA) (D)
Spring. 3 credits. S–U or letter grades. D. Gurak.
Immigration helped America become the nation that it is today. While many experts thought that immigration’s contribution to American history ended in the early 1900s, immigration surged to historic highs in the second half of the 20th century and shows no sign of diminishing in the 21st century. This course examines the economic, social, and policy forces that underlie contemporary U.S. immigration and the impacts that immigrants are having on the American economy and society today. It focuses in detail at who the new immigrants are, why they come to America, where they live, and what roles they fill in America.

DSOC 3010 Theories of Society and Development (SBA) (KCM)
Spring. 3 credits. Prerequisite: development sociology or sociology course. S–U or letter grades. F. Makki.
Introduction to the “classical” sociological theorists (Marx, Weber, Durkheim) of the late 19th and early 20th century. Also addresses the dramatic upheavals of the industrialization, capitalism, and rise of bureaucracy to which these thinkers reacted and the inspiring (and conflicting) visions for the future which they offered. Emphasizes the intellectual history, the influence of the theorists on subsequent sociology, and the potential for relevance to contemporary society.

DSOC 3050 Education, Inequality, and Development (SBA)
Spring. 3 credits. Prerequisite: introductory social science course or permission of instructor. Letter grades. P. Eloundou-Enduique.
The main goal of this course is to examine the functions of education institutions, as they affect individual welfare, inequality, and development. It begins with a review of basic definitions and measures of education, inequality, and development, and then examines the individual and societal functions performed, from theoretical perspectives drawn from sociology, economics, and demography. The insights from these various perspectives are examined critically. The course also reviews studies that have examined how investments in education appear to affect selected outcomes.

DSOC 3060 Farmworkers: Contemporary Issues and Their Implications (SBA)
Fall. 1 credit. S–U or letter grades. M. J. Dudley.
Introduction to contemporary issues of farmworkers in the United States. Examines issues related to unauthorized immigrant workers, farmworker demographics, farmworker access to health services, labor concerns, farmworker needs, and integration into new home communities. Will include guest lectures by faculty members from throughout the university currently engaged in related research.

DSOC 3130 Social Indicators and Introduction to Social Science Research (SBA)
Spring. 3 credits. P. Eloundou-Enduigue.
Introduction to social science research. The course reviews the general process through which social scientists derive credible answers to important questions about social change and social influences on individual behavior. It covers all steps in the research process, from the formulation of a research question to the final presentation of findings.

DSOC 3140 Spatial Thinking, GIS, and Related Methods (SBA) (KCM)
Fall. 4 credits. Letter grades only. J. Francis.
Everything occurs in space. Knowing where organizations are located and events occur in space provides clues to understanding social order and processes not revealed by traditional social analysis techniques. At the same time, spatial thinking and methods are becoming increasingly used in the social sciences. The purpose of this course is to introduce the undergraduate to both aspects of spatial patterns, trends, and themes and also to integrating spatial considerations into their research. The course provides a practical introduction to GIS via lab assignments.

DSOC 3240 Environment and Society (also STS 3241, SOC 3240) (SBA)
Fall. 3 credits. C. Geider.
The main objective is to develop a critical understanding of the dominant trends in modern U.S. environmental thought, such as preservationism, conservationism, deep ecology, social ecology, NIMBYism, risk assessment, ecological modernization, and environmental equity. A second objective is to familiarize students with some major contemporary substantive environmental problems and policies. These topics include air and water quality, public lands management, biodiversity, deforestation, climate change, and ozone depletion. A sociological framework is applied to evaluate interrelationships of substantive and philosophical/theoretical issues.

DSOC 3290 Latin American Politics, Economy, and Society (also GOVT 3992, LATA 3290)
Spring. 3 credits. Prerequisite: introductory sociology recommended. S–U or letter grades. G. Flores-Macias.
Designed as an introduction to political, economic, and social issues in 20th-century Latin America. In the first section the region is analyzed through a political lens, focusing on issues including state formation, populism and corporatism, the breakdown of democracy, military rule, and democratization. The course then turns to issues under the heading of economic perspectives including dependency theory, import-substitution industrialization, the debt crisis, market reform, and the period of the post-Washington Consensus. The third section presents a selection of the region’s central social issues—excluding class structures, military relations, church-state relations, social movements, and internal and international migration. Throughout the semester, the course makes reference to specific countries to illustrate each topic. Knowledge of Spanish or Portuguese is not required.

DSOC 3310 Environmental Governance

DSOC 3360 Rural Areas in Metropolitan Society (SBA)
Fall. 3 credits. Prerequisite: DSOC 1101 or permission of instructor. R. Mize.
Analyzes the changing structure and role of small towns and rural areas in developed nations. Focuses on a selected group of communities and populations to major trends, including increased societal differentiation and complexity; increased societal interdependence; and rapid social, economic, technological, and ecological change. Considers alternative policies to ameliorate rural problems and/or enhance rural contributions to national development. Students participate in group research projects in rural communities.

DSOC 3370 Comparative Social Inequalities (also SOC 3710) (SBA) (D)
Fall. 3 credits. Prerequisite: introductory social science course. T. Hirschl.
Reviews both classical and contemporary issues in the comparative study of social inequality. Employing a global perspective, the course examines various relations of inequality—in the labor market and the reorganization of work and employment and in relation to questions of difference—of race, gender, ethnicity, sexuality, and ability—as these pattern unequal access to resources, differentially provide economic and social security, and shape life chances and lived experiences. Throughout the course special attention is given to the importance of understanding patterns of change in relation to the reconfiguration of global production, consumption, and migration.

DSOC 3375 Comparative U.S. Racial and Ethnic Relations (also AMST/ LSP 3750) (SBA) (HA) (D)
Spring. 3 credits. Prerequisite: DSOC 1101 or permission of instructor. Letter grades only. R. L. Mize.
A comparative historical study of the social construction of race. Course examines structures of racism as they influence Latina/o, African American, Native American, and Asian American experiences, and performs a critical interrogation of whiteness and ethnic identities. Focuses on historical legacy, increasing institutionalized racial and contemporary relevance in terms of political economic, residential, legal, educational, cultural, health, and social-psychological inequalities.
Informal study may include a reading course, research experience, or public service experience.

**DSOC 4991 Independent Honors Research in Social Science (SBA) (KCM)**
Fall and spring. 1–6 credits; 6 credits max. may be earned in honors program. Prerequisite: requirements for honors program met. A. Gonzales.
Students should select a faculty advisor and begin proposal development during the junior year. Students must submit written proposals by the third week of the semester of their senior year to the departmental honors committee representative.

**DSOC 5600 Analytical Mapping and Spatial Modeling (also CRP 6290) (SBA) (KCM)**

**DSOC 6001 The Empirics of Development and Social Change (SBA)**
Reviews the main streams of classical sociological thought, focusing on Weber, Durkheim, Marx, and Simmel. Uses original texts and secondary literature to examine the concepts, methods, and explanation in classical sociological thought.

**DSOC 6060 Sociological Theories of Development**
Spring. 3 credits. Prerequisite: DSOC 6030 or permission of instructor. F. Makki.
Critical examination of a historical range of theories and research in the sociology of development from the postwar period through the present. Major topics include modernization theory, dependency theory, world-system theory, the developmental state, global commodity chains, and globalization. Throughout the course, the concept of development itself is questioned and critiqued both theoretically and in terms of practical challenges from environmental, indigenous, and other social movements.

**DSOC 6080 Demographic Techniques (also PAM 6060)**
Spring. 3 credits. Prerequisite: multivariate statistics or permission of instructor. S–U or letter grades. D. Gurak.
Introduction to the methods, measures, and data used in the analysis of human populations. Topics include demographic rates, life-table analysis, cohort vs. period analysis, sources and quality of demographic data, population estimation and projection, and stable population models.

**DSOC 6150 Qualitative Research Methods**
Spring. 3 credits. L. Williams.
This seminar introduces students to a number of qualitative research methods in the social sciences. Discusses field observation, archival research, in-depth individual interviews, and focus group interviews. Assesses the strengths and weaknesses of various strategies of field research and consider a range of practical matters such as choice of research site (and sample where appropriate). Considers choice of research questions and issues of feasibility in research plans. Ethical considerations are highlighted.

**DSOC 6170 Foundations in Social Research: Comparative Epistemologies**
Fall. 3 credits. Letter grades only. S. Feldman.
Seminar designed to introduce graduate students in the social sciences to the variety of epistemological approaches used by social scientists to analyze social change and development. Examines both positivist and nonpositivist approaches. Relates the relationship of quantitative and qualitative methodologies to different epistemologies.

**DSOC 6190 Quantitative Research Methods**
Fall. 4 credits. Prerequisite: statistics course. Letter grades only. J. Francis. Graduate-level course in measurement and analysis of survey, demographic, and observational data. Topics include linear regression, analysis of variance, and analysis of covariance with both continuous and categorically coded variables. Introduces logistic regression and some nonlinear models. Gives special attention to handling ordered and unordered categorical data as these are prevalent in social-demographic data sets. Analyzes data from real surveys like the American National Election Studies and the General Social Surveys using programs like SAS and SPSS. Includes labs and writing programs to analyze these data. Students familiarize themselves with data cleaning, missing data estimation, transformations, subsetting, and other data handling procedures.

**DSOC 6200 Sociology of the Community (SBA)**

**DSOC 6210 Foundations of Environmental Sociology (SBA)**

**DSOC 6250 State, Economy, and Society (SBA) (HA)**
Fall. 3 credits. P. McMichael.
Reviews major issues concerning the relations between political and economic institutions and the role of states, markets, firms, social movements, and cultural institutions in the process of social change. Theoretical perspectives are drawn from classical and modern social theory, including the application of comparative and world historical methodologies.

**DSOC 6300 Human Migration: Internal and International (also DSOC 4300)**

**DSOC 6320 Environmental Sociology (SBA)**

**DSOC 6380 Population and Development (also DSOC 4380)**

**DSOC 6400 Community and Changing Property Institutions (SBA)**

**DSOC 6630 Islam in Africa and Its Diaspora**
For description, see ASRC 4630.

**DSOC 6660 Islam in Africa and Its Diaspora**
For description, see ASRC 4630.
program writing and execution), data manipulation, and instruction in the use of GrADS and GEMPACK visual display tools.

**EAS 4960 Internship Experience**

Fall or spring. 1–2 credits. S–U grades only. Staff. See individual units for requirements.

All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

**EAS 4980 Teaching Experience in Earth and Atmospheric Sciences**

Fall, spring. 1–4 credits. S–U grades only. Students must register using independent study form. Staff. The student assists in teaching an EAS course appropriate to his or her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses course objectives and teaching techniques with the faculty member in charge of the course.

### Earth and Atmospheric Sciences

**EAS 1150 Severe Weather Phenomena**

Summer. 3 credits. S–U or letter grades. M. W. Wysocki.

A description of the structure of the Earth's atmosphere and forces that govern its motion is presented and then applied to understanding the aspects of severe weather, including snowstorms/lake effect snow, windstorms, tornadoes, thunderstorms, tropical cyclones, El Niño, floods, drought, and heat waves.

**EAS 1400 Freshman Writing Seminar**

“Writing in the Sciences: Environmental Perspectives”

Spring. 3 credits. S. Jessup.

Freshman Writing Seminar in which students examine interactions between humans and the natural environment from individual, societal, and scientific perspectives. Readings include a brief historical survey of humanity's role within the natural world and short readings about current environmental issues.

Includes a research project where each student explores a current environmental issue.

**EAS 2500 Meteorological Observations and Instruments**

Fall. 4 credits. Prerequisite: EAS 1310. M. W. Wysocki.

Covers methods and principles of meteorological measurements and observations including surface, free-air, and remote systems. Also covers instrument siting, mounting, and protection; instrument response characteristics, calibration, and standardization; and recorders and data logging systems. Laboratory exercises are in observation and data analysis.

**EAS 2680 Climate and Global Warming**

Spring. 3 credits. Prerequisite: basic college math. S–U or letter grades. A. T. DeGaetano.

Familiarizes students from a range of disciplines with such contemporary issues in climatology as global warming and El Niño.
Introduces the natural greenhouse effect, past climates, and observed and projected climate changes and impacts. Also covers natural climate variations (e.g., El Niño) and their consequences and predictability. Readings focus on recent scientific findings related to climate change.

**EAS 2960 Forecast Competition**
Fall and spring. 1 credit; students enroll for two consecutive semesters; credit awarded after second semester; may be repeated for credit. Prerequisite: undergraduate standing in atmospheric science or permission of instructor. S–U grades only. D. S. Wilks.

Two-semester course providing daily training in probabilistic weather forecasting in which students compete to forecast local weather most skillfully.

**EAS 3340 Microclimatology**
Spring. 3 credits. Prerequisite: physics course. Offered alternate years. D. S. Wilks.

The relationship of radiant energy, temperature, wind, and moisture in the atmosphere. The interplay between physical processes of the atmosphere, plant canopies, and soil is examined with emphasis on the energy balance.

**EAS 3410 Atmospheric Thermodynamics and Hydrostatics**
Fall. 3 credits. Prerequisites: one year of calculus and one semester of physics. A. T. DeGaetano.

Introduction to the thermodynamics and hydrostatics of the atmosphere and to the methods of description and quantitative analysis used in meteorology. Topics include thermodynamic processes of dry air, water vapor, and moist air, and concepts of hydrostatics and stability.

**EAS 3420 Atmospheric Dynamics**
Spring. 3 credits. Prerequisites: familiarity with multivariate calculus (e.g., MATH 2950, 2130, or 2220 or equivalent); one semester of university physics. G. Chen.

Introduction to the basic equations and techniques used to understand motion in the atmosphere, with emphasis on the space and time scales typical of storm systems (the synoptic scale). Derives the governing equations of atmospheric flow from first principles and applies them to middle latitude and tropical meteorology. Topics include balanced flow, atmospheric waves, circulation, and vorticity.

**EAS 3520 Synoptic Meteorology I**

Study of weather map analysis and forecasting techniques by applying the principles of fluid and heat flow. Strengthens previously introduced meteorological concepts that are applied to forecasting midlatitude synoptic scale weather systems, such as cyclones, anticyclones, jet streams, fronts, and waves.

**EAS 4350/5350 Statistical Methods in Meteorology and Climatology**
Fall. 3 credits. Prerequisites: one introductory course each in statistics (e.g., AEM 2410) and calculus. D. S. Wilks.

Statistical methods used in climatology, operational weather forecasting, and selected meteorological research applications. Includes statistical characteristics of meteorological data including probability distributions and correlation structures. Covers operational forecasts derived from multiple regression models, including the MOS system and forecast evaluation techniques. Additional project for students enrolled in graduate version.

**EAS 4470 Physical Meteorology**
Fall. 3 credits. Prerequisites: one year each of calculus and physics. Offered alternate years. A. T. DeGaetano.

Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include an introduction to atmospheric radiation processes, atmospheric optics and electricity, microphysical cloud processes, and principles of radar probing of the atmosphere.

**EAS 4510 Synoptic Meteorology II**
Fall. 3 credits. Prerequisites: EAS 3410 and 3420. S. J. Colucci.

Structure and dynamics of large-scale midlatitude weather systems, such as cyclones, anticyclones, and waves, with consideration of processes that contribute to temperature changes and precipitation. Lab sessions involve real-time weather forecasting and the computer application of a numerical model of the atmosphere to study selected large-scale midlatitude weather events.

**EAS 4560 Mesoscale Meteorology**
Spring. 3 credits. Prerequisites: EAS 3410 and 3420 or permission of instructor. Offered alternate years. S. J. Colucci.

Structure and dynamics of midlatitude mesoscale weather systems such as fronts, jets, squall lines, convective complexes, precipitation bands, downslope windstorms, mountain breezes, sea breeze circulations, and lake effect snowstorms. The course also considers tropical weather systems and mesoscale modeling.

**EAS 4570 Atmospheric Air Pollution**
Fall. 3 credits. Prerequisites: EAS 3410 or one course in thermodynamics, and one semester of chemistry, or permission of instructor. Offered alternate years. M. W. Wysocki.

Examines sources, effects, transport, measurement, and controls of air pollution. Discusses the basic principles in each area with an emphasis on their local, regional, and global impacts.

**EAS 4700 Advanced Weather Forecasting and Analysis**
Spring. 3 credits. Prerequisites: EAS 3520 and 4510. M. W. Wysocki.

Applied course focusing on weather forecasting and analysis techniques for various regions around the world. Lectures emphasize the application of student's knowledge of atmospheric dynamics, thermodynamics, and computer data analysis to forecast the development and movement of multiscale weather systems. Students participate in weekly forecast discussions; write daily forecasts that include a synoptic discussion, quantitative precipitation forecasts, and severe weather outlook for the forecast region; and lead class discussion on assigned readings.

**EAS 4800 Our Changing Atmosphere: Global Change and Atmospheric Chemistry (also BEE 4800)**
Fall. 3 credits. Prerequisites: CHEM 2090, MATH 1920, PHYS 1120 or equivalent, or permission of instructor. S–U or letter grades. P. G. Hess.

For description, see BEE 4800.

**EAS 4820 Atmospheric Modeling**
Spring. 3 credits Prerequisite: differential equations, introductory computer background, junior standing or above or permission of instructor. N. Mahowald.

Climate and numerical weather prediction models are important tools for policy and science. This course describes the basic principles of the numerics in these models, including dynamical cores and subgrid-parameterization. Included is a discussion of evaluation of models and effective presentation of model results.

**EAS 4830 Land, Water, Agriculture, and Environment (also CSS 4830)**
Fall. 3 credits. Offered alternate years. H. van Es and S. J. Riha.

For description, see CSS 4830.

**EAS 4840 Inverse Methods in the Natural Sciences**
Fall. 3 credits. Prerequisites: MATH 2940. D. L. Hysell.

An exploration of solution methods for inverse problems with examples taken from geophysics and related fields, with particular attention to making inferences from inaccurate, incomplete, or inconsistent physical data. Applications include medical and seismic tomography, earth's location, image processing, and radio/radar imaging. Linear algebra (including condition numbers) and probability and statistics (including error analysis, Bayes theorem, Gibbs distribution, and Markov chains) are reviewed. Methods covered include nonlinear least-squares, maximum likelihood methods, and local and global optimization methods, including simulated annealing and genetic algorithms.

**EAS 4850 Climate Information and Management**
Spring. 3 credits. Prerequisites: statistics and at least one physical science or calculus course. S. Riha and M. W. Wysocki.

People mitigate climate impacts, use climate as a resource, and prepare for climate hazards, including floods, freezes, high winds, heat waves, and droughts. Students learn how to integrate climate information with other decision support tools to adapt, mitigate, and respond to climate variability and change.

**EAS 4870 Introduction to Radar Remote Sensing (also ECE 4870)**
Spring. 3 credits. Prerequisite: PHYS 2208 or 2213 or equivalent, or permission of instructor. D. L. Hysell.

Fundamentals of radar antennas, and remote sensing. Exposes students to the principles underlying the analysis and design of antennas used for communication and for
radar-related applications. Students also encounter both a mathematical and a
practical description of how radars function, how their performance can be optimized for
different applications, and how signals acquired by them can be processed. The
objective is to familiarize students with a wide variety of radars rather than to turn
them into practicing radar engineers. Each topic is developed from basic principles so
students with a wide variety of backgrounds are able to take the course. Emphasizes radar
applications in geophysics, meteorology and atmospheric sciences, and astronomy
and space sciences. Gives special attention to radar remote sensing of the Earth from
spacecraft.

**EAS 4940 Special Topics in Atmospheric Science
(undergraduate level)**

Fall or spring. 8 credits max. S–U or letter grades. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and
are advertised by the department before the semester starts. The same course is not
offered more than twice.

**EAS 4970 Individual Study in Atmospheric Science
Fall or spring. 1–6 credits. S–U or letter grades.**

Students must register using independent study form. Staff.

Topics are arranged at the beginning of the semester for individual study or for group
discussions.

**EAS 4990 Undergraduate Research in Atmospheric Science
Fall or spring. Credit TBA. S–U grades only.**

Students must register using independent study form. Staff.

Independent research on current problems in atmospheric science.

**EAS 5050 Fluid Dynamics in the Earth Sciences
Spring. 3 credits. Prerequisites: MATH through 2940, PHYS through 2208 or
2214, or permission of instructor. Offered alternate years. L. Cathles and
M. Wysocki.**

The Earth system provides many fascinating examples of fluid dynamics phenomena that
are also of societal importance. Turbulent convection in the outer core generates the
Earth's magnetic field. The viscous mantle (outer half of the Earth) is slowly but
vigorously convecting, and consequently the Earth's surface is dynamic. Viscosity is not
important in the oceans and atmosphere, but the flow there is fast enough for the rotation of
the Earth to become a dominant control. Electromagnetic effects again dominate in the
solar wind and magnetosphere. This course investigates the Earth using fluid dynamics.

For students in the Earth sciences it provides an opportunity to learn about the Earth
remote sensing of the Earth from spacecraft. An Earth system provides many fascinating
elements of fluid dynamics phenomena that are also of societal importance. Turbulent
convection in the outer core generates the Earth's magnetic field. The viscous mantle
(outer half of the Earth) is slowly but vigorously convecting, and consequently the
Earth's surface is dynamic. Viscosity is not important in the oceans and atmosphere, but
the flow there is fast enough for the rotation of the Earth to become a dominant control.

Electromagnetic effects again dominate in the solar wind and magnetosphere. This
course investigates the Earth using fluid dynamics. Topics include geophysics and
related fields, with particular attention to making inferences from inaccurate, incomplete, or
inconsistent physical data. Applications include medical and seismic tomography, earthquake
location, image processing, and radio/radar imaging. Linear algebra (including condition numbers)
and probability and statistics (including error analysis, Bayes theorem, Gibbs distribution,
and Markov chains) are reviewed. Methods covered include nonlinear least-squares,
maximum likelihood methods, and local and global optimization methods, including
simulated annealing and genetic algorithms. Students in EAS 4554 are expected to
complete and present a substantial class project to be negotiated with the instructor.

**EAS 6480 Air Quality and Atmospheric Chemistry (also MAE 6480)
Fall. 3 credits. Prerequisites: freshman chemistry, fluid mechanics or equivalent,
thermodynamics. S–U or letter grades. K. M. Zhang.**

For description, see MAE 6480.

**EAS 6520 Advanced Atmospheric Dynamics
Spring. 3 credits. Prerequisites: EAS 3410 and 3420 or equivalents. Offered alternate years. S. J. Colucci.**

Covers quasigeostrophic theory, atmospheric waves, hydrodynamics instability, general
circulation of the atmosphere, and other topics selected from among numerical
weather prediction and tropical mesoscale, and middle atmosphere processes according to
student interest.

**EAS 6660 Applied Multivariate Statistics
Spring. 3 credits. Prerequisites: multivariable calculus, matrix algebra, two
statistics courses. Offered alternate years. D. S. Wilks.**

Statistical techniques for multivariable data. Topics include multivariate exploratory data
analysis, the multivariate normal distribution, parametric and nonparametric inference
about multivariate means, principal component analysis, canonical correlation analysis,
discriminant analysis, and cluster analysis. Emphasizes geophysical applications,
using primarily atmospheric and oceanographic data as examples, but the development
is general enough to be of broader interest.

**EAS 6750 Modeling the Soil–Plant–Atmosphere System (also CSS 6750)
Spring. 3 credits. Prerequisite: EAS/CSS 4830 or equivalent. S. J. Riha.**

Introduction to the structure and use of soil–plant-atmosphere models. Topics include
modeling plant physiology, morphology, and development; potential crop production
and crop production limited by moisture and nutrient availability; plant–plant competition;
and land surface processes, as well as model data requirements, validation, and scale.
Discusses use of soil–plant-atmosphere models for teaching, research, extension, and policy
formation.

**EAS 6920 Special Topics in Atmospheric Science
Fall or spring. 1–6 credits. S–U grades. Staff.**

Study of topics in atmospheric science that are more specialized or difficult than from other
courses. Special topics depend on staff and student interests.

**EAS 7110 Upper Atmospheric and Space Physics
Fall or spring. 1–6 credits. Seminar course. D. L. Hysell.**

**EAS 8500 Master's-Level Thesis
Research in Atmospheric Science
Fall or spring. Credit TBA. S–U grades only. Graduate faculty.**

Thesis research for atmospheric science master's students.

**EAS 9500 Graduate-Level Dissertation Research in Atmospheric Science
Fall or spring. Credit TBA. S–U or letter grades. Graduate faculty.**

Dissertation research for atmospheric science Ph.D. students only before "A" exam has been
passed.

**EAS 9510 Doctoral-Level Dissertation Research in Atmospheric Science
Fall or spring. Credit TBA. S–U or letter grades. Graduate faculty.**

Dissertation research for atmospheric science Ph.D. candidates after "A" exam has been
passed.

**Science of Earth Systems**

**Field Study in Hawaii**

Field study is a fundamental aspect of earth system science. Students wishing to increase their
field experience may fulfill some of the requirements for the SES major by off-campus study through the Cornell Earth and
Environmental Semester program (EES). The EES program is offered during the spring semester and emphasizes field-based
education and research. It is based on the island of Hawaii, an outstanding natural laboratory for earth and environmental
sciences. Courses that may be applied to the SES major include EAS 3400, 3220, and 3510. The EES program also offers opportunities for
internships with various academic, nonprofit, and government organizations. Typically
students participate in the EES program during their junior year, although exceptions are possible. For further information on the
EES program see www.geo.cornell.edu/geology/classes/hawaii/course.html.
Field course covering topics presented in EAS/BIOEE 1540, but presented in the field on Appledore Island, Maine at the Shoals Marine Laboratory. Topics/activities include Plankton Tow, CDT casts, water bottle sampling, chlorophyll analysis, nutrient chemistry analysis, use of remote sensing in the Gulf of Maine, data acquisition, data processing, data analysis, and display.

EAS 1560 Introductory Oceanography with Laboratory (also BIOEE 1560)  
Fall. 4 credits. C. H. Greene and B. C. Monger.

Intended for both science and nonscience majors. Includes combination of lecture and laboratory participation. Covers the basic workings of the ocean including its physics, chemistry, and biology. Following this basic description, the course examines threats to the health of the ocean and the important role the ocean plays in global climate change. Nonscience majors should pay particular attention to this course because it fulfills a science requirement for certain colleges. This course fulfills the Intro Bio Distribution requirement for nonlife science majors in CALS.

EAS 1700 Evolution of the Earth and Life  
Spring. 3 credits. J. L. Csine.
Covers Earth systems and their evolution: Earth history's astronomical context; plate tectonics, continental drift, and their implications for climate and life; coevolution of life and the atmosphere; precedents for ongoing global change; and dinosaurs, mass extinctions, and human ancestry. Includes laboratories on reconstructing geological history and mapping ancient geography.

EAS 2130 Marine and Coastal Geology  
Summer. 4 credits. Prerequisite: introductory geology or ecology course or permission of instructor. Staff.
Special two-week course offered at Cornell's Shoals Marine Laboratory (SML), located on Appledore Island in the Gulf of Maine. For more details, including estimated cost and an application, contact SML office, G14 Stimson Hall, or visit www.sml.cornell.edu.

EAS 2200 The Earth System  
Fall, spring. 4 credits. Prerequisites: MATH 1110/1910. Letter grades only. W. M. White and A. Moore.
An integrated introduction to the earth system stressing the geological, biological, chemical, and physical interactions among the atmosphere, ocean, and solid earth. Topics include biogeochemical cycles, climate dynamics, and the evolution of the atmosphere, biosphere, hydrosphere (ice), hydrosphere, and lithosphere (solid earth).
Hawaii, and on carbon cycling at short and long time scales. Other topics include succession of ecosystems, evolution of nutrient cycles, and impacts of invasive species. The course is structured around field projects, carried out both as groups and individually.

EAS 3400 Field Study of the Earth System
Spring. 6 credits. Prerequisites: enrollment in EES Semester in Hawaii, one semester of calculus (MATH 1910/1920 or 1110/1120), and two semesters of any of the following: PHYS 2207/2208 or 1112/2213, CHEM 2070/2080 or 2090/2080, BIOG 1101/1103–1102/1104 or 1105/1106 or 1109/1110 or equivalent course work. A. Moore.

Interdisciplinary field course covering fundamental concepts of the Earth system. Topics include global circulation patterns in the solid Earth, atmosphere and ocean; energy and mass transfer; change and variability of Earth, atmospheric, and ocean systems; the temporal record of change preserved in the geologic record; and Earth, ocean, and atmospheric controls on ecosystem processes. The course is project-based with students engaged in hands-on, active learning that takes advantage of local resources.

EAS 3400 Oceanography (also EES 3400)
Fall. 6 credits. Prerequisites: one year of calculus and one semester of oceanography (i.e., BIOME/EAS 1540) or permission of instructor. Offered alternate years; next offered 2011–2012. C. H. Greene and R. W. Howarth. Lecture course covering the interactions of physical and biological processes in marine ecosystems.

EAS 4010 Fundamentals of Energy and Mineral Resources
Fall. 3 credits. Recommended: previous course in geology. L. Cathles. The Earth’s energy and mineral resources reflect some of the most important changes and dramatic events that have punctuated earth history. Course provides an overview of resource types in the context of the Earth’s atmospheric evolution, rifting, mantle convection, and hydrologic cycle. The processes of resource accumulation are described in terms of simple chemical and physical principles and in the societal contexts of supply, demand, and sustainability.

EAS 4040 Geodynamics
Spring. 3 credits. Prerequisite: calculus and calculus-based physics courses or permission of instructor. Offered alternate years. J. Phipps-Morgan.

Quantitative study of the deformation, heat transport, and stresses that have shaped the evolution of the solid Earth. Familiar physical and chemical principles and concepts are applied to the study of plate tectonics, fluid dynamics, mantle convection, melting, and mountain building.

EAS 4050 Active Tectonics
Fall. 3 credits. Prerequisite: kinematic and mechanical background equivalent to EAS 4260/4880. Offered alternate years. M. Pritchard. Develops the ideas and methods necessary to understand how the Earth deforms—from individual earthquakes to the construction of mountain ranges. Discusses the driving forces of deformation, and how these forces interact with different geologic materials to cause deformation.

EAS 4060 Marine Geology and Geophysics
Spring. 4 credits. Prerequisite: EAS 2200 or comparable courses; completion of some EAS classes helpful but not required. Offered alternate years; next offered 2011–2012. J. Phipps-Morgan. Uses geological, geochemical, and geophysical approaches to explore the geology of the ocean floor.

EAS 4170 Field Mapping in Argentina
Summer. 4 credits. Prerequisite: introductory geology course and EAS 4260, or permission of instructor. Recommended: EAS 3040. Offered alternate years. S. Mahlbury Kay.

Field mapping course in Argentina that fulfills field requirement for majors with interests in geological sciences and provides a field geological experience for others. Course consists of lectures in Buenos Aires followed by field exercises in the Sierras Pampeanas, Precordillera, and Main Cordillera Ranges of the Argentine Andes in the provinces of San Juan and Mendoza. A variety of exercises use modern techniques in the field mapping of a broad range of variably deformed sedimentary, metamorphic, and igneous rocks. The course further provides an introduction to the tectonics and magmatic processes of the central Andes with emphasis on comparable processes in the United States. Exercises are done in combination with students and faculty of the University of Buenos Aires.

EAS 4240 The Rio Grande Rift: A Window into the Geological Evolution of North America
Spring. 2 credits. Prerequisite: permission of instructor. Field trip over spring break. Offered alternate years; next offered 2011–2012. C. Andronicos.

EAS 4250 European Discovery of Impacts and Explosive Volcanism
Spring. 2 credits. Prerequisite: junior, senior, or graduate students with background in geology and permission of instructor. Letter grades only. Meets one day per week plus field trip during spring break. Fee probably charged for required weekend field trip. Offered alternate years. J. Phipps Morgan.

EAS 4260 Structural Geology
Spring. 4 credits. Prerequisite: one semester of calculus plus introductory geology course, or permission of instructor. One weekend field trip. C. Andronicos.

The nature and origin of deformed rocks at submicroscopic to global scales. The course begins with review of elementary principles of continuum mechanics and continues with a discussion of deformation mechanisms commonly observed in earth materials. The geometry, kinematics, and mechanics of faults and folds are then addressed. The course ends with a description of the tectonic setting of structural families such as thrust belts, rift provinces, and zones of strike slip deformation. A weekend field trip to a region of spectacular folding and thrusting provides an opportunity to apply the concepts learned in lecture.

EAS 4340 Exploration Geophysics
Fall. 3 credits. Prerequisites: MATH 1920 and PHYS 2207, 2213, or equivalent. Offered alternate years. L. D. Brown. Fundamentals of subsurface imaging by geophysical methods as used in oil exploration and environmental investigations. Covers seismic reflection, refraction, gravity, magnetics, resistivity, and ground-penetrating (GPR) techniques.

EAS 4370 Geophysical Field Methods (also ARKEO 4370)
Fall. 3 credits. Prerequisites: PHYS 2208 or 2213, or permission of instructor. Offered alternate years; next offered 2011–2012. L. D. Brown. Field exercises using geophysical techniques to probe the subsurface.
EAS 4550 Geochemistry
Fall. 4 credits. Prerequisites: CHEM 2070 or 2090 and MATH 1920 or equivalent. Recommended: EAS 3040. Offered alternate years; next offered 2011–2012. W. M. White. Considers the Earth from a chemical perspective: physical chemistry applied to the Earth; trace element and isotopic geochemistry.

EAS 4580 Volcanology

EAS 4600 Late Quaternary Paleoecology
Fall. 4 credits. Offered alternate years; next offered 2011–2012. M. Goman. Explores topics in Late Quaternary paleoecology. Broadly divided into (1) lectures that cover a variety of topics and (2) field- and laboratory-based research.

EAS 4610 Paleoclimate: Since the Last Ice Age
Fall. 3 credits. Prerequisites: EAS 2200 or permission of instructor. Offered alternate years; next offered 2011–2012. M. Goman. Examines changes and variability in climate for the past 21,000 years.

EAS 4620 Marine Ecology (also BIOEE 4620)
Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE/BIOG 1610. Offered alternate years. C. D. Harvell and C. H. Greene. For description, see BIOEE 4620.

EAS 4710 Introduction to Groundwater (also EE 4710)
Spring. 3 credits. Prerequisites: MATH 2930 and fluid mechanics or hydrology course. Offered alternate years. L. M. Cathles and T. S. Steenhuis. Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

EAS 4750 Special Topics in Oceanography
Fall, spring, summer. 2–6 credits, variable. Prerequisites: one semester of oceanography and permission of instructor. Fall, spring: C. H. Greene; summer: B. C. Monger. Undergraduate instruction and participation in advanced areas of oceanographic research. Topics change from semester to semester. Contact instructor for further information.

EAS 4760 Sedimentary Geology
Spring. 3 credits. Prerequisite: EAS 3010 or permission of instructor. Offered alternate years; next offered 2011–2012. T. E. Jordan. Explores the large-scale physical characteristics of sedimentary basins, which host fossil fuels and groundwater and can potentially store CO2. Principles of the mechanics that control subsidence, tectonic causes of basins, and analysis methods are treated.

EAS 4780 Stratigraphy
Fall. 5 credits. Prerequisite: EAS 3010 or permission of instructor. Offered alternate years. T. E. Jordan. Covers approaches to the study of ages of, and genetic relations among, sedimentary rocks, including techniques and applications of sequence stratigraphy.

EAS 4790 Paleobiology (also BIOEE 4790)
Spring. 4 credits. Prerequisites: two majors-level biology courses and BIOEE 2740 or 5730 or EAS 3010, or permission of instructor. W. D. Allmon. Surveys the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of Earth and atmospheric science students concerning the nature and significance of the fossil record for their respective studies.

EAS 4840 Inverse Methods in the Natural Sciences
Fall. 3 credits. Prerequisite: MATH 2940. D. L. Hysell. An exploration of solution methods for inverse problems with examples taken from geophysics and form fields, with particular attention to making inferences from inaccurate, incomplete, or inconsistent physical data. Applications include medical and seismic tomography, earthquake location, image processing, and radio/radar imaging. Linear algebra (including condition numbers) and probability and statistics (including error analysis, Bayes theorem, Gibbs distribution, and Markov chains) are reviewed. Methods covered include nonlinear least-squares, maximum likelihood methods, and local and global optimization methods, including simulated annealing and genetic algorithms.

EAS 4870 Introduction to Radar Remote Sensing (also ECE 4870)
Spring. 3 credits. Prerequisite: PHYS 2208 or 2213, or equivalent, or permission of instructor. D. L. Hysell. Fundamentals of radar, antennas, and remote sensing. Exposes students to the principles underlying the analysis and design of antennas used for communication and for radar-related applications. Students also encounter both a mathematical and a practical description of how radars function, how their performance can be optimized for different applications, and how signals acquired by them can be processed. The objective is to familiarize students with a wide variety of radars rather than to turn them into practicing radar engineers. Each topic is developed from basic principles so students with a wide variety of backgrounds can participate in the course. Emphasizes radar applications in geophysics, meteorology and atmospheric sciences, and astronomy and space sciences. Gives special attention to radar remote sensing of the Earth from spacecraft.

EAS 4880 Global Geophysics
Fall. 3 credits. Prerequisites: MATH 1920 (or 1102) and PHYS 2080 or 2213; EAS 3040 recommended. M. Pritchard and R. Lohman. Covers global tectonics and the deep structure of the solid Earth as revealed by investigations of earthquakes, earthquake waves, the Earth's gravitational and magnetic fields, and heat flow.

EAS 4910–4920 Undergraduate Research
Fall, spring. 1 to 4 credits. Students must register using form at 2124 Snee Hall. Staff (N. Mahowald, coordinator). Introduction to the techniques and philosophy of research in the earth sciences and an opportunity for undergraduates to participate in current faculty research projects. Topics chosen in consultation with, and guided by, a faculty member. A short written report is required, and outstanding projects are prepared for publication.

EAS 4960 Internship Experience
Fall, spring. 2 credits. Prerequisites: EAS 3040, enrollment in EES semester in which course is taken, and 3–5 years of experience. M. Goman. During the last 3.5 weeks of the semester students carry out a service-learning project with a local NGO, environmental business, government agency, research lab, or educational facility. Projects are carefully designed with the student, sponsoring agency, and faculty member. A final report is required.

EAS 4980 Teaching Experience in Earth and Atmospheric Sciences
Fall, spring, 1–4 credits. S–U grades only. M. Goman. Students must register using independent study form. Staff. The student assists in teaching an EAS course appropriate to his or her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses course objectives and teaching techniques with the faculty member in charge of the course.

EAS 5000 Design Project in Geohydrology
Fall, spring. 3–12 credits. Alternative to industrial project for M.Eng. students choosing geohydrology option. May continue over two or more semesters. L. M. Cathles.

EAS 5010 Fundamentals of Energy and Mineral Resources
Fall. 3 credits. Prerequisites: introductory college-level geology and basic physics and chemistry, or permission of instructor. Co-meets with EAS 4010. L. M. Cathles. Students enrolled in the graduate-level version of this course are expected to complete and present a substantial class project to be negotiated with the instructor. For full course description, see EAS 4010.
EAS 5011 Evolution of the Earth System
Fall. 4 credits. Prerequisites: EAS 2200, one calculus course (either MATH 1110 or 1191), one course in chemistry (college or high school), or permission of instructor. Two field trips, either Sat or Sun. Co-meets with EAS 5010. T. Jordan, S. Riha, and W. Allmon. Students enrolled in the graduate-level version of this course are required to complete an additional project. For full course description, see EAS 3010.

EAS 5020 Case Histories in Groundwater Analysis
Spring. 4 credits. L. M. Cathles. Groundwater flow in a specific area, such as a proposed nuclear-waste disposal site, is analyzed in depth. Geological and resource data on the area are presented early in the course. Then the material is analyzed by students working as an engineering analysis team. Each student makes a weekly progress report and presents part of a final report. Results are presented in a half-day seminar at the end of term.

EAS 5041 Geodynamics
Spring. 3 credits. Prerequisites: calculus and calculus-based physics courses or permission of instructor. Offered alternate years. Co-meets with EAS 4040. J. Phipps Morgan. Students enrolled in the graduate-level version of this course are required to complete a computational lab. For full course description, see EAS 4040.

[EAS 5050 Fluid Dynamics in the Earth Sciences]
Spring. 3 credits. Prerequisites: MATH through 2940, PHYS through 2208 or 2214, or permission of instructor. Offered alternate years; next offered 2011–2012. L. Cathles and M. Wysocki. The Earth system provides fascinating examples of fluid dynamic phenomena that are also of societal importance. Fundamentals of fluid dynamics and earth science are covered.

EAS 5110 Earth System Interactions
Fall. 1 credit (S–U grades) or 2 credits (with paper, letter grades). Prerequisite: permission of instructor. J. L. Cisne. New ways of conceptualizing, characterizing, and measuring phenomena can be as important as new instruments or empirical discoveries in opening new areas to exploration or established ones to more rigorous investigation. This seminar aims to prepare seniors and beginning graduate students for independent research on Earth systems by analyzing examples ranging from epoch-making classics to work now appearing in the literature.

[EAS 5220 Advanced Structural Geology I]
Fall. 5 credits. Prerequisites: EAS 4260 and permission of instructor. Offered alternate years; next offered 2011–2012. R. W. Allmendinger and C. Andronicos. Stress-strain theory and application. Advanced techniques of structural analysis.

[EAS 5240 Advanced Structural Geology II]
Fall. 5 credits. Prerequisites: EAS 4260 and permission of instructor. Offered alternate years; next offered 2011–2012. R. W. Allmendinger.

Geometry, kinematics, and mechanics of structural provinces.

[EAS 5500 Dynamics of Marine Ecosystems]
Fall. 3 credits. Prerequisites: one year of calculus and one semester of oceanography (i.e., BIOEE/EAS 1540) or permission of instructor. Co-meets with BIOEE/EAS 5500. Offered alternate years; next offered 2011–2012. C. H. Greene and R. W. Howarth. Students enrolled in the graduate-level version of this course are required to complete an additional project. For full course description, see EAS 3500.

[EAS 5530 Advanced Petrology]
Fall. 3 credits. Prerequisite: EAS 4540 or permission of instructor. Offered alternate years; next offered 2011–2012. R. W. Kay. Currently popular frontier topics in petrology and geochemistry (e.g., crustal delamination, subduction erosion, slab melting, and the causes of mantle heterogeneity.)

[EAS 5540 Advanced Mineralogy]
Spring. 3 credits. Prerequisites: EAS 4530 or permission of instructor. Offered alternate years; next offered 2011–2012. S. Mahlburg Kay. Advanced crystallography and crystal chemistry of minerals and methods of their study. Intended to follow EAS 4530 or equivalent. Includes an individual research project.

EAS 5620 Marine Ecology
Fall. 5 credits. Limited to 75 students. Prerequisite: BIOE/BIOG 1610. Co-meets with BIOEE/EAS 4620. Offered alternate years. C. D. Harvell and C. H. Greene. Students enrolled in the graduate-level version of this course are required to complete an additional project. For full course description, see BIOEE 4620.

EAS 5750 Planetary Atmospheres (also ASTRO 6575)
Fall. 4 credits. Prerequisites: undergraduate physics, vector calculus. Offered alternate years. P. Gierasch. For description, see ASTRO 6575.

EAS 5770 Planetary Surface Processes (also ASTRO 6577)
Spring. 3 or 4 credits. Offered alternate years. J. Bell. For description, see ASTRO 6577.

[EAS 5780 Planet Formation and Evolution (also ASTRO 6578)]
Fall. 4 credits. Prerequisites: familiarity with elementary physics and math or permission of instructor. Offered alternate years; next offered 2011–2012. M. Pritchard. For description, see ASTRO 6578.

EAS 5840 Inverse Methods in the Natural Sciences
Fall. 3 credits. Prerequisite: MATH 2940. Co-meets with EAS 4840. D. L. Hysell. Students enrolled in the graduate-level version of this course are expected to complete and present a substantial class project to be negotiated with the instructor. For full course description, see EAS 4840.

[EAS 5880 Advanced Methods in Radar (also ECE 5890)]
Fall. 3 credits. Prerequisite: EAS 4870 or permission of instructor. Next offered 2011–2012. D. L. Hysell. Addresses the theory and practice of advanced radar techniques used for remote sensing, with emphasis placed on studying the upper atmosphere and ionosphere.

EAS 6280 Geology of Orogenic Belts
Spring. 3 credits. Prerequisite: permission of instructor. S. Mahlburg Kay. Seminar course in which students study specific geologic topics of an orogenic belt selected for study during the semester.

EAS 6410 Analysis of Biogeochemical Systems
Spring. 2 credits. Prerequisite: MATH 2930 or permission of instructor. Offered alternate years. L. A. Derry. Dynamics of biogeochemical systems; kinetic treatment of biogeochemical cycles; box models, residence time, response time; analytical and numerical solutions of model systems. Transport problems, including diffusion-reaction-advection models in soils, streams, and organisms.

EAS 6560 Isotope Geochemistry
Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 4550 or permission of instructor. Offered alternate years. W. M. White. Radiogenic and stable isotope geochemistry applied to geological problems such as evolution of the crust and climate. Formation of the elements, geochronology, and cosmochronology.

EAS 6930 Special Topics in Geological Sciences
Fall or spring. 1–3 credits, variable. S–U or letter grades. Staff. Study of specialized advanced topics in the Earth sciences through readings from the scientific literature, seminars, and discussions.

EAS 7000–7990 Seminars and Special Work
Fall, spring. 1–3 credits. Prerequisite: permission of instructor. Staff. Advanced work on original investigations in earth and atmospheric sciences. Topics change from semester to semester. Contact appropriate professor for more information.

EAS 7220 Advanced Topics in Structural Geology
R. W. Allmendinger.

EAS 7310 Advanced Topics in Geodetic Monitoring and Modeling
M. Pritchard.

EAS 7330 Advanced Topics in Geodynamics
Spring. J. Phipps Morgan.

EAS 7500 Satellite Remote Sensing in Biological Oceanography
Summer. 3 credits. B. C. Monger.

EAS 7510 Petrology and Geochemistry
R. W. Kay.

EAS 7550 Advanced Topics in Tectonics and Geochronology
J. Phipps Morgan.

EAS 7570 Current Research in Petrology and Geochemistry
S. Mahlburg Kay.
In this service-learning course, students partner with Cornell service staff to accomplish a variety of learning goals selected by the employees. Students are introduced to the field of adult basic education and the principles of the Community Learning and Service Partnership (CLASP). Seminars to examine the issues of learning through service and reflection, adult teaching philosophy and practice, and empowerment through education. Students must commit to continuing their service by taking EDUC 2210 the following spring semester.

**EDUC 2210 Community Learning and Service Partnership (CLASP)**
Spring only. 2–4 credits, variable. Prerequisites: EDUC 2200 and permission of instructor. S–U or letter grades.

A. Wilson.

Continues the field experience and curriculum begun in EDUC 2200. Students work with Cornell service staff to accomplish a variety of learning goals selected by the employees. Students receive in-service training and support. Seminars examine the impact of gender, race, and social class on learning and educational opportunity.

**EDUC 2400 The Art of Teaching (CA)**
Fall and spring. 3 credits. S. Peters and D. Trumbull.

This exploratory course is designed for students of all backgrounds and interests who have a desire to learn more about education and teaching. Teaching takes place in a variety of contexts from the family to the workplace, and this course endeavors to examine the elements of teaching that transcend the typical school-teaching environment. Designed to guide students in reflecting upon their experiences to help them better understand the decisions they make as teachers. Students have the opportunity to pursue their own interests through a teaching fieldwork assignment. Possible field experiences range from large group to tutorial situations, from preschool to adult education, from traditional school subject matters to recreational and occupational areas, and from school-based to nonformal situations. The course work and readings are designed to build on these experiences throughout the semester and provide concepts and skills to apply in the field.

**EDUC 2710 Social and Political Context of American Education (also SOC/AMST 2710) (D) (SBA)**
Fall. 4 credits. Disc. J. Sipple.

Examines the goals, roles, inputs, and outcomes of schooling in American society and the policy environment in which schools operate. Analyzes controversies and tensions (e.g., equity, market forces, state control) surrounding public education at local, state, and federal levels. Includes current and historical, urban, and rural issues and problems.

**EDUC 3110 Educational Psychology (also HD 3110) (KCM) (CA)**
Fall. 4 credits. Disc. J. Sipple. Prerequisite: PSYC 1101 or permission of instructor. S–U or letter grades. Additional disc sec TBA. D. Schrader.

Educational psychology is the application of psychological concepts to educational settings. This course examines the dynamic interaction between people as teachers and learners, schools as social and learning environments, and the sociocultural contexts that influence learning. The focus is on those interactions in cognitive, epistemic, social, moral, and personal domains in educational contexts.

**EDUC 3350 Youth Organizations (CA)**
Fall. 3 credits. Next offered 2011–2012. T. Park.

Participants learn how to facilitate both youth and adult volunteer leadership development. They examine factors affecting membership, purposes, design, operation, and administration of youth organizations.

**EDUC 4010 Special Methods of Instruction in Agricultural Science Education**
Fall. 1–3 credits. Letter grades only.

T. Park.

Students complete learning and skills development about special methods for teaching agricultural science education. Such learning and skill development may include metal fabrication, small engine physics, and/or special laboratory instruction related to agricultural sciences. Students reflect upon that learning and skill development and then create units of instruction employing special methods used to teach secondary and/or post-secondary students about agricultural knowledge, skills, and processes.

**EDUC 4040 Learning and Teaching I**
Spring and summer. 4 credits. Prerequisite: admission to Cornell Teacher Education program or permission of instructor. Letter grades. D. Trumbull.

Designed to foster development of knowledge, skills, and processes.

**EDUC 4050 Learning and Teaching II**
Fall. 4 credits. Prerequisite: admission to Cornell Teacher Education program or permission of instructor. Letter grades. B. Crawford.

Important part of a sequence of courses and experiences intended to lead to excellence in science, agricultural science, and mathematics teaching. Prospective teachers develop understanding and skills in effective planning, instruction, and assessment of students studying agricultural science, mathematics, and science in middle and high school. The course is intended to integrate theory and practice associated with learning and teaching in school classroom settings and includes a minimum of 40 hours of fieldwork in area classrooms.

**EDUC 4200 Field Experience**
Fall or spring. 1–4 credits. Undergraduates must attach to their course enrollment material written permission from faculty member who will supervise work and assign grade. S–U or letter grades. Staff.

Students may engage in planned, semiprofessional, or professional practice in an educational enterprise. Each student prepares a plan of action including rationale, purposes, procedures, and arrangements with a faculty member to supervise and evaluate their field experience.
EDUC 4410 Language, Literacy, and Schooling (KCM)
Spring and summer. 3 or 4 credits. Lab TBA. T. Park.
Foundation for literacy activities in secondary education. Research on current research, policy, and practice relating to the acquisition of first and second languages, the dynamics of literacy in school contexts, and the development of academic language proficiency. The fourth credit hour requires a research project based on fieldwork.

EDUC 4510 Multicultural Issues in Education (also AMST/LSP 4510) (D)
Spring. 3 credits. Letter grades only. S. Villenas.
Explores research on race, ethnicity, and language in American education. It examines historical and current patterns of minority school achievement and the cultural premises underlying educational practices in diverse communities and schools. Addresses policies and programmatic and pedagogical responses to diversity, including multicultural and bilingual education.

EDUC 4520 Multicultural Issues in Secondary Education (also LSP 4520)
Spring. 3–2 credits. Prerequisites: permission of instructor and EDUC 4510 concurrent or prior. S–U or letter grades. S. Villenas.
Provides students with field experience or research in the local community and on campus regarding diversity, multiculturalism, and equity in education.

EDUC 4590 Educational Innovations in Africa and the Diaspora (also ASRC 4601)
Fall. 3 credits; 4 in College of Arts and Sciences. N. Assié-Lumumba.
For description, see ASCC 4601.

EDUC 4630 Policies, Practices, and Critical Issues of Distance Learning in Developing Countries
Summer. 3 credits. S–U or letter grades. N. Assié-Lumumba.
Distance learning is increasingly being adopted to respond to the high demand for education in developing countries. This course critically analyzes distance education for the general population as well as specific social and professional categories. A typology of the ICTs (information and communication technologies) used and the different forms of virtual learning institutions are examined. Case studies include single-mode and dual-mode institutions in Africa, Asia, and Latin American countries and also eLearning programs designed in industrial countries for developing countries.

EDUC 4720 Philosophy of Education
Fall. 3 credits. Letter grades only. T. Richardson.
Introduces students to central questions of philosophy of education. What is the role of schooling in society? How does one become "educated? How do educators foster ethical relations? Students develop responses to these questions by looking at the writings of prominent philosophers in the 20th century who have interrogated pedagogy, equity, curriculum, and the teacher-student relation. Under each of these topics, students similarly probe how recent writings in philosophy of education take up issues of gender, diversity, and citizenship.

EDUC 4940 Special Topics in Education
Fall, spring, or summer. 4 credits max.
Prerequisite: permission of instructor. S–U or letter grades. Staff.
The department teaches “trial” courses under this number in the Fall semester and will be advertised by the department before the semester starts. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

EDUC 4970 Individual Study in Education
Fall, spring, or summer. 1–3 credits. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff.
A student may, with approval of a faculty advisor, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest.

EDUC 4980 Undergraduate Teaching
Fall or spring. 3 credits max. during undergraduate career.
Prerequisite: GPA of at least 2.7. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff.
Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

EDUC 4990 Undergraduate Research
Fall, spring, or summer. 6 credits max. during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college.
Prerequisites: junior or senior standing; GPA of at least 2.7. Students must register using independent study form (available in 140 Roberts Hall). Staff.
Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

EDUC 4991 Independent Honors Research in Social Science
Fall or spring. 1–6 credits; max. 6 credits may be earned in honors program.
Prerequisite: requirements for honors program met. S–U or letter grades. Staff.

EDUC 5020 Education and Development in Africa (also ASRC 6600)
Spring. 3 credits; 4 in College of Arts and Sciences. S–U or letter grades. N. Assié-Lumumba.
For description, see ASRC 6600.

EDUC 5030 Diversity in the Classroom
Fall. 2–4 credits. Prerequisite: enrollment in CTE program or permission of instructor. S–U or letter grades. S. Villenas and T. Richardson.
Builds on knowledge of cultural diversity gained from prior course work and field activities. With a focus on classroom teaching, topics include learning and inequality, multiple literacies across home and school, culturally relevant teaching, and English-language learners. A service learning component is optional for 3 or 4 credits.

EDUC 5320 Educational Programs in Agricultural Science (SBA)
Fall. 3 credits. T. Park.
Organization and planning processes for public school agricultural education. Local needs assessment, advisory committees, community-partnering, course development, sequencing instruction, professional development. Fieldwork required.

EDUC 5350 Youth Organizations for Agricultural Science Education (SBA)
Spring. 3 credits. Prerequisite: senior or graduate standing in Agricultural Science Education. Letter grades only. T. Park.
Provides future agriculture educators with a comprehensive overview of the components of an agriculture education program including supervised agricultural experience and FFA. Students examine factors affecting membership, purpose, design, operation, and administration of career and technical student organizations and FFA organization, structure, and functions on national, state, and local levels.

EDUC 5370 Program Planning and Youth Organizations in Agricultural Science Education
Summer. 4 credits. Letter grades only. T. Park.
Overview of the organization and planning processes necessary to operate a successful agricultural science education program in the public schools. Topics include FFA, SAE, local needs assessments, agricultural advisory boards, community-partnering strategies, program planning, course development, sequencing instruction, and professional development. Fieldwork provides experience with New York agricultural education students, teachers, and programs.

EDUC 5440 Curriculum and Instruction
Spring. 3 credits. S–U or letter grades. A. Wilson.
Focus on the concepts and principles for developing curriculum and instructional processes for delivering curriculum. Experiences are designed to assist in identifying the educational needs of clients/students, selecting curriculum content, designing curricula, and delivering the curriculum.

EDUC 5630 Using Statistics to Explore Social Policy
Fall. 3 credits. Prerequisites: minimum one and preferably two statistics courses (second course may be taken concurrently) or permission of instructor. S–U or letter grades. J. Sipple.
Builds on students' statistical knowledge to collaboratively design and carry out studies using a national dataset. Students combine their knowledge with readings and guest speakers to better understand the purposes and limitations of various methods. This course is for students who struggle to use their statistical knowledge in a practical and valuable way.

EDUC 5710 Social and Political Context of American Education (also SOC/AMST 5710) (HA) (SBA)
Fall. 4 credits. Prerequisite: admission to Cornell Teacher Education Program or permission of instructor. J. Sipple.
EDUC 5740 Policy and Politics of American School Reform
Fall. 3 credits. Prerequisite: EDUC 2710 or EDUC 5730 or AMST 2710 or SOC 3570 or ILRHR 6601 or permission of instructor.
S–U or letter grades. J. Sipple.
Investigates the role of schools in society and the interactive nature of politics and policy. Students review primary source materials, research studies, analyze empirical data, prepare policy briefs, and conduct policy analyses. While the major focus is on K–12 public education, issues of pre-K, private, and post-secondary education are investigated.

EDUC 6010 Secondary Agriculture and Science Practicum
Fall or spring. 6 credits. Prerequisite: graduate students enrolled in Cornell Teacher Education Program. S–U grades only. B. Crawford, T. Park, J. Sipple, and D. Trumbull.
Supervised student teaching in agriculture, mathematics, or science at the secondary level. Program includes teaching in a local school for 14 weeks.

EDUC 6020 Practicum Seminar
Fall or spring. 9 credits. Prerequisite: EDUC 6010 or permission of instructor. B. Crawford, T. Park, J. Sipple, and D. Trumbull.
 Begins with full-day sessions of intensive consideration of classroom practice relevant to all aspects of student teaching. Assignments and an online seminar during the semester require students to use theories to develop and evaluate teaching materials and practices. Students also complete an extensive portfolio documenting their work.

EDUC 6140 Gender, Context, and Epistemological Development (also FGSS 6140)
Fall. 3 credits. Prerequisites: EDUC/HD 3110 or senior status. S–U or letter grades. Offered alternate years; next offered 2011–2012. D. Schrader.
Explores concepts of personal epistemological development and gender how influence we know and how we think.

EDUC 6160 Moral Psychology and Education (also FGSS 6160)
Fall. 3 credits. Prerequisites: EDUC/HD 3110, graduate standing, or permission of instructor. S–U or letter grades. Offered alternate years. D. Schrader.
Examines questions of the psychological development of knowing what is right, just, good, and of value. We study moral development from cognitive-developmental, social-contextual, normative, and gendered perspectives. Topics vary by semester but include the relationship between judgment and action, moral education, social aggression, moral leadership, and integrity.

EDUC 6170 Psychology of Adolescence in Case Study (also FGSS 6180)
Spring. 3 credits. Prerequisite: any one of the following: EDUC 3110, HD 6170, or permission of instructor. S–U or letter grades. D. Schrader.
Adolescent psychological development is examined from the perspective of the individual subject and the researcher. Using a case study approach we explore classic and contemporary theories of adolescence, relying on primary source readings and first-person accounts to give us insight into adolescent issues, such as identity, values, and behaviors.

EDUC 6180 Learning in Adulthood: An Introduction
An introduction of learning in adulthood is provided with emphasis on understanding adult learning in contemporary society, reviewing key seminal and current theory and research, and exploring how this knowledge relates to practice.

EDUC 6200 Internship in Education
Fall or spring. 1–6 credits. Each student, before course enrollment, must obtain approval of faculty member who will assume responsibility for supervising work. S–U or letter grades. Staff.
Opportunity for practical experience in educational professions development.

EDUC 6330 Program Planning in Adult and Extension Education
Examines current social and economic conditions affecting agricultural, extension, and adult education. Applies principles, objectives, strategies, and sources of information to program planning.

EDUC 6470 Innovative Teaching in the Sciences
Spring. 3 credits. S–U or letter grades. B. Crawford.
This seminar on innovative ways to teach is designed for doctoral and master’s-level students in education, science, math, and possibly other disciplines, including extension and outreach. Readings include issues of gender and underrepresented populations in science, math, and engineering. Students design inquiry-based instruction in their field.

EDUC 6510 Anthropology and Education
Spring. 3 credits. Letter grades. Lec. S. Villenas.
A study of schooling and education from anthropological perspectives and ethnographic methodology. Participants examine teaching and learning in families, communities, and schools as cultural processes. Some topics include the differential school achievements of racial/ethnic minorities, school reform efforts, youth culture and identities, and literacy in adult learning spaces.

EDUC 6570 Psychology of Social Development and Organizational Change
Perspectives on the administration of educational organizations. Considers social science, legal and ethical theories, and their application to both public schools and higher education.

EDUC 6610 Evaluation Design
Spring. 3 credits. Prerequisites: survey of research methods (or other graduate-level course in research methods), statistics. S–U grades only. M. Constas.
Designed to introduce graduate students to the principles and practices of program evaluation. The course addresses practical realities and political features of a range of evaluation designs that may be used to support decision making related to educational, social, and community-based programs. Students become familiar with the technical characteristics, practical realities, and political features of a range of evaluation designs that may be used to support decision making related to educational, social, and community-based programs. Course readings, class discussions, and assignments support the development of the proposal.

EDUC 6670 Discourse Analysis in Education
Spring. 3 credits. S–U or letter grades. Offered alternate years. A. Wilson.
Course functions as an advanced study in the theory and practice of conducting discourse analysis in education. Discourse analysis is one of the preferred analytical approaches in cultural studies, but "discourse analysis" means different things to different people. Participants examine a range of those differences.

EDUC 6680 Narrative Inquiry in Social Science and Action Research
Spring. 3 credits. S–U or letter grades. S. Peters.
Provides an introduction to the theory and practice of narrative inquiry in action-oriented social science research. Combining seminar and workshop formats, the course provides students with opportunities to practice elements of narrative inquiry, and to develop designs and proposals for research projects that incorporate narrative orientation.

EDUC 6690 Policy and Politics of American School Reform
Fall. 3 credits. Letter grades only. T. Richardson.
Introduces students to some of the central questions of philosophy of education: What is the role of schooling in society? How does one become “educated”? How do educators foster ethical relations? Students develop responses to these questions by looking at the writings of prominent philosophers in the 20th century who have interrogated pedagogy, equity, curriculum, and the teacher-student relation. Under each of these topics, students similarly probe how recent writings in philosophy of education take up issues of gender, diversity, and citizenship.

EDUC 6800 Foundations of Adult and Extension Education
Fall. 3 credits. Limited to 20 students. S–U or letter grades. Offered alternate years; next offered 2011–2012. A. Wilson.
Analysis of alternative purposes, nature, and scope of extension, adult, and continuing education programs in the United States and abroad, with emphasis on the relationship of programs to historical, cultural, political, and social settings.

EDUC 6810 Democracy, Science, and Education
Spring. 3 credits. S–U or letter grades. S. Peters.
Explores the actual and potential connections between democracy, science, and education. The first half of the course examines several
different models and theories of democracy. Attention is focused on how the nature and practice of citizenship and politics are conceptualized under each of these models and the implications of these conceptualizations for the political and civic education roles and work of teachers, administrators, adult educators, community development practitioners, and community organizers. The second half of the course involves a critical examination of the roles that scientific methods, expertise, technologies, and knowledge do, might, and/or should play in addressing social problems.

EDUC 6820 Community Education and Development
Fall. 3 credits. Limited to 25 students. Letter grades only. S. Peters. Offers an opportunity for students to engage in a critical study of the purposes and practices of professional organizers and educators in community and economic development initiatives. The course places a special focus on the civic or democratic dimensions of educational practice. Civic practice in community education and development is viewed in relation to the craft of "educational organizing" as a vehicle for social learning and collective action. Key philosophies and traditions of educational organizing are studied and analyzed in their historical, cultural, social, and political context, with an eye toward implications for contemporary practice in a broad range of settings.

EDUC 6850 Training and Development: Theory and Practice (also IARD 6850)
Spring. 4 credits. Limited to 20 students. S–U or letter grades. R. Caffarelli. Provides practitioners and researchers with an understanding of the impact of context, the role of power, and ethical practice.

EDUC 6940 Special Topics in Education
Fall, spring, or summer. 1–3 credits. Prerequisite: permission of instructor. S–U or letter grades. Staff. Topics TBA.

EDUC 6970 Graduate Individual Study in Education
Fall, spring, or summer. 1–3 credits. Prerequisites: graduate standing; permission of instructor. S–U or letter grades. Staff. A graduate student may, with approval of a faculty advisor, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest.

EDUC 6980 Graduate Supervised Teaching in Education
Fall or spring. 1–2 credits. Prerequisites: graduate standing; permission of instructor. S–U or letter grades. Staff. Participating graduate students assist in teaching a course with a focus on field experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

EDUC 7000 Directed Readings
Fall, spring, or summer. 6 credits. Prerequisites: graduate standing; permission of instructor. S–U or letter grades. Staff. For study that predominantly involves library research and independent study.

EDUC 7010 Empirical Research
Fall, spring, or summer. 6 credits. Prerequisites: graduate standing; permission of instructor. S–U or letter grades. Staff. For study that predominantly involves library research and independent study.

EDUC 7020 Practicum
Fall, spring, or summer. 6 credits. Prerequisites: graduate standing; permission of instructor. S–U or letter grades. Staff. For study that predominantly involves field experience in community settings.

EDUC 7030 Teaching Assistantship
Fall, spring, or summer. 6 credits. Prerequisites: graduate standing; permission of instructor. S–U or letter grades. Staff. For students assisting faculty with instruction. Does not apply to work for which students receive financial compensation.

EDUC 7040 Research Assistantship
Fall, spring, or summer. 6 credits. Prerequisites: graduate standing; permission of instructor. S–U or letter grades. Staff. For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

EDUC 7050 Extension Assistantship
Fall, spring, or summer. 6 credits. Prerequisite: graduate standing; permission of instructor. S–U or letter grades. Staff. For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

EDUC 7620 Comparative and International Education
Summer. 3 credits. S–U or letter grades. N. Assié-Lumumba. Seminar that critically analyzes education conceived both as a universal social institution and a reflection of cultural, economic, and political dynamics of the local and global contexts. The analysis focuses on policies, organization, and the functioning of education in industrial, new/emerging economies, and developing countries. Specific case studies are drawn from different countries.

EDUC 7830 Farmer-Centered Research and Extension (also IARD 7830)
Fall. 3 credits. S–U or letter grades. T. Tucker, H. Michelsen, and L. Fisher. For description, see IARD 7830.

EDUC 8900 Master’s-Level Thesis Research
Fall or spring. Credit TBA. Each student, before course enrollment, must obtain approval of faculty member who will assume responsibility for guiding work. S–U or letter grades. Times TBA. Staff.

EDUC 9900 Doctoral-Level Thesis Research
Fall or spring. Credit TBA. Each student, before course enrollment, must obtain approval of faculty member who will assume responsibility for guiding work. S–U or letter grades. Times TBA. Staff. Doctoral or other research and development projects for Ph.D. students.

ENTOMOLOGY

Courses by Subject
Apiculture: 2600, 2640
Behavior: 2150, 3150, 3250, 6620
Ecology: 2020, 3690, 4550, 4700, 6900
Medical and veterinary entomology: 2100, 3520, 4100, 4101
Outreach: 3550, 3560, 7090
Pathology: 4630, 6700, 6900
Pest management: 2410, 3200, 4440, 6700
Physiology, development, and toxicology: 3070, 4710, 4830, 4900, 6850
Systematics: 3340, 3311, 3330, 4400, 6340

ENTOM 2010/2011 Alien Empire: Bizarre Biology of Bugs
Insects are the most abundant and diverse animals on earth. This course explores the bizarre biology of insects and their interaction with humans. It examines both the detrimental roles insects play (e.g., pests and vectors of disease) as well as their beneficial roles (e.g., pollination, edible insects, insect products such as waxes, dyes, and silk). The course also explores the symbolic representation of insects in art, literature, and religion. Students taking the course for 3 credits meet once per week (on Friday) for small group discussions, debates, demonstrations, and documentary films on the biology of insects.

ENTOM 2020 Invasions: Trading Species in a Shrinking World
Fall. 3 credits. S–U or letter grades. A. E. Hajek and J. P. Nyrop
With globalization, plants, animals, and microbes are increasingly being introduced around the world with diverse results. This course explores the history, biology, and ecology of invasions impacting natural systems, human health, agriculture, and forestry. Discusses the expanding problems caused by invasive species, how invasions are prevented and managed, and the social, economic, and ethical issues related to invasive species. Current local, national, and international examples of invaders are included among the investigations of invasive species.

[ENTOM 2100 Plagues and People (also BSOC 2101)]
Fall. 2 or 3 credits (students taking course for 3 credits participate in weekly readings and presentations/discussions (Fri.), quizzes, and comprehensive final projects.)
Preparatory to Entomology courses: introductory biology or permission of instructor. Offered alternate years; next offered 2011–2012. L. C. Harrington.

Focuses on the pathogens, parasites, and arthropods causing human plagues, emphasizing diseases that have had the greatest impact on human culture and expression.

ENTOM 2120 Insect Biology
Fall. 4 credits. Pre- or corequisites: one semester of college biology or permission of instructor. Lec., lab. Lab fee: $10. C. Gill.

Introduces the science of entomology by focusing on basic principles of systematics, morphology, physiology, behavior, and ecology of insects. The laboratory in early fall includes field trips to collect and study insects in the natural environment. Requires a collection emphasizing ecological, behavioral, and taxonomic categories.

ENTOM 2150 Spider Biology: Life on a Silken Thread
Fall. 2 credits. Prerequisite: one course in college-level biology or permission of instructor. S–U or letter grades. Lec. L. S. Rayor.

Introduction to the fascinating world of spiders and their close kin. Explores evolution, ecology, behavior, and physiology of spiders from a modern perspective. Topics include identification of major spider families, spiders' unique use of silk, risky courtship, predatory behavior, diverse life styles, social spiders, and potential use in IPM.

ENTOM 2410 Insect Pest Management for Practitioners
Spring. 3 credits. Limited to 24 students. Lec, lab/disc. W. M. Tingeys.

Introduction to insect pest management in plant or animal protection for those preparing for careers in extension, service, and production. Emphasizes pest monitoring, sight identification, diagnosis, decision making, and management tactics for the major groups of insect and arthropod pests affecting field, forage, and vegetable crops; floriculture, woody ornamentals, and turf; urban environments and public health; and veterinary, dairy, livestock, and poultry. Five off-campus laboratory field trips with demonstrations of pest management decision making, pest-monitoring tools, and pesticide-application equipment.

ENTOM 2600 Biology of the Honey Bee
Fall. 2 credits. Lec. Offered alternate years. N. W. Calderone.

Introduces students to the life history, physiology, ecology, and behavior of honey bees. Reviews classical and contemporary research on the dance language, chemical communication, behavioral genetics, division of labor, and evolution of social behavior. Also includes lectures on pollination of agricultural crops, honey on beeswax, bees in ancient and modern rituals, Africanized honey bees, and insect politics.

ENTOM 2640 Practical Beekeeping
Fall. 1 credit. Limited to 20 students. Prer- or corequisite: ENTOM 2600. Lab. Lab fee: $25. Offered alternate years. N. W. Calderone.

Practical beekeeping consists of 14 laboratory sessions that acquaint students with the craft of beekeeping and practical methods of colony management. Topics include swarm biology and chemical communication, demonstration of color vision, working a beehive, beekeeping equipment, and disease identification and control. Includes several field trips to local commercial beekeeping operations. Laboratories involve hands-on work with honey bee colonies and equipment.

ENTOM 3070 Pesticides, the Environment, and Human Health (also TOX 3070)
Fall. 2 credits. Prerequisites: sophomore standing or permission of instructor. Lec. Offered alternate years. J. G. Scott.

Survey of the different types of pesticides, their uses, properties, and effects on the environment. Discusses the risks, benefits, regulation, politics, and current controversies associated with pesticide use and genetically modified crops.

ENTOM 3150 Spider Biology
Fall. 3 credits. Prerequisite: one college-level biology course or permission of instructor. Letter grades only. Lec. L. S. Rayor.

In-depth introduction to the fascinating world of spiders and their relatives. Meets concurrently with ENTOM 2150 (2 credits). Students in ENTOM 3150 meet for another hour with additional coverage of current topics in arachnology and developing spider identification skills. Major and biology majors in the Insect Biology program of study should take ENTOM 3150 rather than 2150. Students may not take both ENTOM 2150 and 3150 for credit.

ENTOM 3200 Grape Pest Management (also PLPA/VIEN 3200)

ENTOM 3250 Insect Behavior (also BIOM 3250)
Spring. 3 credits. Prerequisites: introductory biology and either ENTOM 2120 or BIOM 2210. Lec. Offered alternate years; next offered 2011–2012. L. S. Rayor.

Explores insect behavior, ranging from individual sensory and physiological mechanisms to the behavioral dynamics of foraging, courtship, parental care, and social behavior.

ENTOM 3310 Insect Phylogeny and Evolution
Fall. 3 credits. Prerequisite: ENTOM 2120. Corequisite: ENTOM 3311. Offered alternate years; next offered 2011–2012. B. N. Danforth.

Provides a broad overview of insect diversity, morphology, phylogeny, evolution, and fossil history. Grades are based on six quizzes, a final exam, and in-class student presentations.

ENTOM 3311 Insect Phylogeny and Evolution Laboratory

Explores insect diversity through field trips to natural areas and laboratories focused on developing advanced skills in insect identification.

ENTOM 3330 Maggots, Grubs, and Cutworms: Larval Insect Biology
Spring. 3 credits. Prerequisites: ENTOM 2120 or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2011–2012. J. K. Liebherr.

Introduces students to the biology, anatomy, and natural history of holometabolic insect larvae. Lab includes field sampling, curation of field-collected specimens, and identification of unknowns.

ENTOM 3350 Naturalist Outreach Practicum
Fall. 3 credits. Prerequisite: one college-level biology course; no freshmen. S–U or letter grades. L. S. Rayor.

Students learn the skills to perform effective scientific outreach. This interdisciplinary course combines lectures on topics relevant to teaching about natural history, with more pedagogic lectures on developing and presenting scientific inquiry-based presentations. The course emphasizes developing different approaches to effectively communicate science at different scales from classroom settings, through museum programs, to large outreach events. Students participate in the Naturalist Speakers Bureau to provide lively hands-on presentations in classrooms throughout the region. With feedback from peers and instructors, students develop their own biological presentations, display materials, and teacher resource guides.

ENTOM 3360 Natural Outreach in Biology
Fall. 1–2 credits, variable. Prerequisites: ENTOM 3350 and permission of instructor. S–U or letter grades. L. S. Rayor.

For students who have already taken Naturalist Outreach Practicum (ENTOM 3350) who wish to continue doing scientific outreach through the Naturalist Outreach Speakers Bureau. This course can be taken twice.

ENTOM 3440 Insect Conservation Biology
Spring. 3 credits. Prerequisite: entomology or conservation biology course or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2011–2012. J. E. Losey.

In-depth look at the concepts and issues surrounding the conservation of insects and other invertebrates.

ENTOM 3520 Medical and Veterinary Entomology
Fall. 3 credits. Prerequisites: biology course or permission of instructor. S–U or letter grades. Offered alternate years. L. C. Harrington.

Explores the impact of vector-borne disease and provides a comprehensive overview of the fields of medical and veterinary entomology.

ENTOM 3521 Lab in Medical and Veterinary Entomology
Fall. 1 credit. Prerequisite: ENTOM 3520 concurrently or have taken another medical/veterinary entomology course. S–U or letter grades. L. C. Harrington.

The laboratory compliments the lecture course ENTOM 3520. Includes field trips, collection and identification and arthropods of medical/veterinary importance, and hands-on experience with modern laboratory research methods.

ENTOM 3690 Chemical Ecology (also BIOEE/BIONB 3690)
Spring. 3 credits. Prerequisites: one majors-level biology course and one semester of introductory chemistry for majors or nonmajors or equivalents, or permission of instructor. S–U or letter grades. Lec. A. Agrawal, G. Jander, A. Kessler, and J. Thaler.

For description, see BIOEE 3690.
ENTOM 4100–4101  Malaria Interventions in Ghana
Spring, fall. 2 credits each semester. S–U grades only. R grade given at end of fall semester and final grade at end of spring semester. L. C. Harrington. This service-learning course educates students about malaria, Ghanaian culture, and general public health intervention strategies. During the fall semester, students hear from a variety of speakers and read and discuss key papers. Students travel to Ghana over winter break and create a malaria needs indicator to evaluate intervention strategies in partnership with the Ghana Health and Education Initiative. After returning from the service trip, students evaluate their survey and intervention plan.

ENTOM 4400  Phylogenetic Systematics (also BIOL 4400)

ENTOM 4440  Integrated Pest Management (also CSS 4440)
Fall. 4 credits. Prerequisite: introductory biology or permission of instructor. S–U or letter grades. Rec, lab, F. J. Losey and A. DiTommaso. Lectures integrate the principles of pest control, ecology, and economics in the management of pests across multiple systems. Labs consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

ENTOM 4550  Insect Ecology (also BIOEE 4550)
Fall. 4 credits. Recommended: ENTOM 2120 or BIOEE 1610 or permission of instructor. S–U or letter grades. Rec, lab. Offered alternate years. J. S. Thaler. Focuses on individual and population aspects of insect ecology as well as some topics in community and ecosystem ecology. Stresses the importance of interactions with the biotic and abiotic environment. Laboratory includes indoor and outdoor field trips illustrating the major concepts in insect ecology as well as experimental techniques.

ENTOM 4630  Invertebrate Pathology
Spring. 4 credits. Prerequisites: one year introductory biology. S–U or letter grades. Rec, lab, offered alternate years; next offered 2011–2012. A. E. Hajek. Covers fundamental principles of pathology and epidemiology and infectious diseases of invertebrates caused by diverse microbe groups.

ENTOM 4700  Ecological Genetics (also BIOEE 4800)
Spring. 4 credits. Prerequisite: BIOEE 1780. Recommended: introductory course in genetics and/or statistics. S–U or letter grades. Rec, disc, offered alternate years. B. P. Lazzaro. Focuses on the application of population genetic concepts in ecological or applied contexts. Emphasizes measurement adaptation in natural populations, detecting the effects of population demography, and determining the genetic basis of quantitative traits. Draws examples from primary research on annelids and plants to illustrate experimental techniques and methods of data analysis on single-gene, multi-locus and genome-wide scale.

ENTOM 4710  Insect Development (also BIOMG 4710)
Fall. 3 credits. Offered alternate years. D. C. Knipple. Provides an in-depth treatment of the morphogenetic and genetic aspects of insect development and the genetic programs controlling them. Much of the course focuses on the development of the fruit fly, Drosophila melanogaster, with particular emphasis on the establishment of the basic insect body plan, organogenesis, and metamorphosis.

ENTOM 4830  Insect Physiology
Spring. 4 credits. Prerequisite: ENTOM 2120 or permission of instructor. Rec, lab, offered alternate years. C. Gilbert and A. Douglass. Introduction to the often unique ways in which insects have met their basic needs. Examines each organ system with emphasis on basic principles and specific examples. Also introduces students to some common methods used in physiological research and to the critical reading of scientific literature.

ENTOM 4900  Toxicology of Insecticides (also TOX 4900)

ENTOM 4940  Special Topics in Entomology
Fall or spring. 4 credits max. S–U or letter grades. Staff. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

ENTOM 4970  Individual Study in Entomology
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Staff.

ENTOM 4980  Undergraduate Teaching
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Staff. Undergraduate teaching assistance in an entomology course by agreement with the instructor. Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

ENTOM 4990  Undergraduate Research
Fall and spring. Credit TBA. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall).

ENTOM 4991  Undergraduate Honors Research
Fall and spring. Credit TBA. For students who enroll under this number, but do not complete an Honors Thesis, course credit reverts to ENTOM 4990 Undergraduate Research. Students must register using an independent study form (available in 140 Roberts Hall). Staff. Intended for students doing independent research that will lead to Honors with Distinction in Research.

ENTOM 6340  Special Topics in Systematic Entomology
Fall or spring; on demand. 2–4 credits. Prerequisite: permission of instructor. Staff. Lectures on the classification, evolution, and biornomics of selected taxa, with accompanying laboratory studies on identification and comparative morphology. Collections sometimes required.

ENTOM 6620  Insect Behavior Seminar
Spring. 2 credits. Prerequisite: permission of instructor or ENTOM 2120 and BIONB 2210 or equivalents. S–U or letter grades. Offered alternate years; next offered 2011–2012. C. Gilbert.

ENTOM 6700  Seminar on Biological Control
Fall. 1 credit. Prerequisite: ENTOM 4400 or 4630 or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2011–2012. A. E. Hajek. Seminar series covering topics in biological control chosen by participating students and faculty.

ENTOM 6850  Seminar in Insect Physiology
Spring. 1 credit. Prerequisite: permission of instructor. S–U or letter grades. Offered alternate years; next offered 2011–2012. C. Gilbert.

ENTOM 6900  Seminar in Ecology and Evolution of Infectious Diseases (also BIOEE 6900)
Fall and spring. 1 credit. B. Lazzaro, A. Hajek, D. Harvell, and other Cornell faculty. Graduate-level discussion of the ecology, epidemiology, genetics, and evolution of infectious diseases in animal and plant systems. Weekly discussion of research papers published in the primary scientific literature. Participation in discussion and presentation of at least one paper required for course credit.

ENTOM 7070  Individual Study for Graduate Students
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Not for thesis research. Staff.

ENTOM 7090  Teaching Entomology
Credit TBA. Staff. Teaching entomology or for extension training.

ENTOM 7670  Current Topics in Entomology
Fall and spring. 1 or 2 credits. Requirement for first- and second-year entomology graduate students. S–U grades only. Staff. Provides first- and second-year graduate students with an overview of the field of entomology. The course format changes from year to year but generally involves attendance...
at the weekly entomology seminar as well as a one-hour meeting TBA with faculty from the department or with visiting speakers. Additional readings may be required. Graduate students in entomology are required to attend the class for a total of two semesters (ideally in the first year of their graduate program). The 2-credit option (fall) is for students attending the Jugatae seminar and a one-hour meeting. The 1-credit option (spring) is for attendance at the seminar only.

**ENTOM 8900 Master's-Level Thesis Research**
Fall and spring. 15 credits per semester if taking no classes; students taking other courses should use ENTO 8900 to bring themselves up to a total of 15 credits. Prerequisite: permission of instructor. S–U or letter grades. Staff. Research at the master's level.

**ENTOM 9900 Doctoral-Level Thesis Research**
Fall and spring. 15 credits per semester if taking no classes; students taking other courses should use ENTO 9900 to bring themselves up to a total of 15 credits. Prerequisite: permission of instructor. S–U or letter grades. Staff. Research at the doctoral level.

**Jugatae Seminar**
Fall and spring. Seminar conducted by Jugatae, the entomology club of Cornell University, to discuss topics of interest to its members and guests. All interested undergraduate and graduate students are encouraged to attend.

**ENVIRONMENTAL TOXICOLOGY**

There is both breadth and depth in many facets of environmental toxicology and related disciplines. The program offers a combination of research and didactic training that is designed to prepare students for solving the problems of modern toxicology. The graduate student may choose from three degree options: M.S., M.S./Ph.D., or Ph.D. Concentrations include cellular and molecular toxicology; nutritional and food toxicology; ecotoxicology and environmental chemistry; and risk assessment, management, and public policy. Research by the faculty associated with the program focuses on the interactions of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) as well as the ecosystems with which these organisms are associated. General information is available through the Environmental Toxicology office in 114 Stocking Hall, or at toxology.cornell.edu.

**TOX 3070 Pesticides and the Environment**
Fall. 2 credits. Prerequisites: sophomore standing or permission of instructor. Offered alternate years. J. G. Scott. For description, see ENTO 3070.

**TOX 4370 Eukaryotic Cell Proliferation**
Spring. Variable credit; students may take 2 credits, orlec and disc for 3 credits. Limited to 20 students per disc; priority given to graduate students. Prerequisites: two majors-level biology courses and BIOMG 3430, or 3330, or 3550, or 3310/3320. Recommended: BIOMG 2810 and BIOMG 4320. S. Lee. For description, see BIOMG 4370.

**TOX 4900 Toxicology and Insecticides**
Fall. 3 credits. Prerequisite: general chemistry course. Offered alternate years; next offered 2011–2012. J. G. Scott. For description, see ENTO 4900.

**TOX 5970 Risk Analysis and Management**
Spring. 3 credits. Prerequisites: introduction to probability and statistics course (e.g., CEE 3040, ENGRD 2700, IRLST 2100, BTRY 2100 or AEM 2100); two semesters of calculus. Prerequisite: senior or graduate standing or permission of instructor. J. R. Stedinger. For description, see CEE 5970.

**TOX 6100 Introduction to Chemical and Environmental Toxicology (also BIOMG 6100)**
Fall. 3 credits. Prerequisite: graduate standing in field or permission of instructor. Offered alternate years. A. G. Hay.

**TOX 6110 Molecular Toxicology**
Spring. 3 credits. Prerequisites: TOX 6100 or permission of instructor. Offered alternate years. A. G. Hay, J. R. Stedinger, D. Muscaraella, and Brupper. For description, see NS 6110.

**TOX 6990 Environmental Toxicology Journal Club**
(Fall). Spring. 3 credits. Prerequisite: TOX 6100 or graduate standing or permission of instructor. A. Nikitin.

**FDSC 1101 Science and Technology of Foods**
Fall. 1 credit. S–U grades only. Staff. Explores the application of science and technology to foods. Lectures elucidate the role of engineering, biotechnology, chemistry, biochemistry, nutrition, toxicology, and microbiology in supplying the world with safe and nutritious food. An overview of food science as a discipline and career choice is given. A laboratory exercise in food development is undertaken.

**FDSC 1102 Leadership and Career Skills in Food Science**
Spring. 2 credits. Prerequisite: FDSC 1101; limited to freshman Food Science majors. Letter grades only. R. Gravani. Provides students with opportunities to learn more about their personality type and strengths while applying this information to leadership and team building skills, diversity and ethics issues, as well as career skills in the field of food science. Topics and concepts are reinforced through presentations, interactive exercises and activities, simulations, case studies, and networking with food science alumni. Students are required to participate in a project using the Food Science Alumni Career Link network.

**FDSC 1104 Introduction to Wines and Vines (also HORT/VIEN 1104)**
Spring. 3 credits. Lec (VIEN 1104) and lab (VIEN 1105) required for Viticulture and Enology majors. Letter grades only. Preregistered students must attend, or notify instructors of their absence before, first class. Students must purchase four approved wine glasses and pay $50 tasting fee by second class session. No auditors. K. Arminik and J. Merwin. Broad introduction to grape cultivation and wine fermentations. Topics include history of winemaking, viticultural regions, vineyard and winery practices, wine chemistry and microbiology, and wine flavor perception.
FDSC 2200 Chef's Chemistry
Spring. 1 credit. Prerequisite: permission of instructor; freshmen and sophomores in Food Science, Nutrition, and possibly Hotel. S–U or letter grades.
J. M. Regenstein.
Learn the science behind some favorite and new foods. Working with chefs from Cornell Dining, the underlying principles of the foods prepared in class are explained. The final exam is the preparation of a class dinner.

FDSC 2400 Wines and Grapes: Composition Analysis (also VIEN 2400)
Fall. 2 credits. Prerequisite: one semester of chemistry. Priority given to Enology and Viticulture and Food Science majors. Letter grades only. G. Sacks.
Investigates the composition of grapes and wine, and the most common analytical tools used in their evaluation. Both the theoretical and practical aspects of grape and wine analyses are considered.

FDSC 2500 Kosher and Halal Food and Regulations (also JWST 2501) (D)
Spring. 3 credits. Prerequisite: at least sophomore standing. S–U or letter grades.
J. M. Regenstein.
An introduction to the kosher and halal food laws and their application to the American food industry. The distance-learning component examines these laws and how modern religious food supervision functions. Discussion sessions with multiple discussion leaders cover readings in a variety of related diversity topics.

FDSC 3120 Sustainability and Organic Grape and Wine Production I (also HORT/VIEN 3120)
Spring. 2 credits. Prerequisite: FDSC/HORT/VIEN 2204. Letter grades only. J. E. Vanden Heuvel and K. J. Arnink.
For description, see HORT 3120.

FDSC 3121 Food Engineering Principles
Fall. 3 credits. Prerequisites: FDSC 2000 and introductory physics. Letter grades only. S. S. H. Rizvi.
Introduces the engineering principles underlying food processing and equipment. Topics include thermodynamics, mass and energy balance, fluid mechanics, heat and mass transport, refrigeration, and psychrometrics.

FDSC 3400 Winemaking Theory and Practice I (also VIEN 3400)
Fall. 3 credits. Limited to 30 students. Prerequisite: introductory microbiology or permission of instructor. Priority given to Enology or Viticulture majors for whom lab is required. Letter grades only. R. Mira de Orduña.
Provides a systematic overview of the microbiological technical and organizational fundamentals of winemaking considering differences among winemaking regions.

FDSC 3510 Milk Quality
Fall. 1 credit. Prerequisite: ANSC 2500 or equivalent or permission of instructor. Letter grades only. M. Wiedmann.
Focuses on the effects of on-farm and animal husbandry practices on milk and dairy food quality and safety. Significant parts of the course focus on discussion and critical analysis of the assigned reading materials, questions, and hot topics.

FDSC 3800 Winemaking Theory and Practice II (also VIEN 3800)
Spring. 2 credits. Prerequisite: FDSC/VIEN 3400. Letter grades only. R. Mira de Orduña.
Part II of the Winemaking Theory and Practice courses that introduce winemaking from harvest to bottling, as well as related quality-control procedures for juice and wine. Part II concentrates on post-alcoholic and malolactic fermentation processing including enzymes, fining, stabilizations, filtration, and winery sustainability including winery waste water treatment, as well as wine laws and regulatory aspects.

FDSC 3810 Winemaking Theory and Practice II Laboratory (also VIEN 3810)
Spring. 1 credit. Limited to 20 students; priority given to Viticulture/Enology, Food Science, and Plant Science majors. Prerequisite: FDSC/VIEN 3460 and 3410. Letter grades only. R. Mira de Orduña.
In the laboratory of part II of the Winemaking Theory and Practice courses, students continue working with wines produced in the preceding fall term, considering aging options and enzyme treatments, as well as fining and stabilizations. The laboratory also provides advanced training in chemical and sensorial wine analysis.

FDSC 3940 Applied and Food Microbiology (also BIOMI 3940)
Fall. 3 credits. Prerequisites: BIOMI 2900–2910. C. A. Batt.
Microorganisms play a central role in a variety of food, agricultural, and environmental processes. This course presents a comprehensive survey of the roles that microorganisms play in industrial/biotechnological processes as well as their importance in the safety and production of foods. A focus on the impact of genomics and the emerging understanding of the microbiome provides an underlying foundation for the course. A 2-credit core section on food microbiology is complemented by a 1-credit section on industrial/biotechnological applications.

FDSC 3950 Food Microbiology Laboratory
Fall. 3 credits. Prerequisite: BIOMI 2910 or equivalent. Letter grades only. A. Orta-Ramirez.
Work includes study of the physiological characteristics of representative food microorganisms, practice in using general and rapid methods for microbiological testing and control of food products, and practice in the application of a systematic approach to controlling the safety of foods, or addressing a food safety issue.
FDSC 3960 Food Safety Assurance
Spring. 2 credits. Prerequisite: BIOMI 2900 or permission of instructor. S–U or letter grades. Offered alternate years. R. B. Gravani.
Provides instruction on procedures to control biological, chemical, and physical hazards and assure the safety of foods. Topics include discussions on the hazards in foods, good manufacturing practices, and prerequisite programs. The Hazard Analysis Critical Control Point concept and the application of current technologies in reducing the risk of foodborne illnesses. Case studies and class projects are used to demonstrate and apply the key principles discussed.

FDSC 4000 Current Topics in Food Science and Technology
Spring. 1 credit. S–U grades only. S. J. Mulvany and staff.
Discussion of current topics in food science. Topics vary and are chosen from scientific literature and popular press.

FDSC 4010 Concepts of Product Development
Spring. 2 credits. Prerequisite: FDSC 2000 or equivalent. Letter grades only. Offered alternate years. Staff.
Discussion of the sequence of events in developing and marketing new food products. Topics include food formulation, packaging and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.

FDSC 4020 Agriculture in Developing Nations I (also IARD 4020)
Fall. 2 credits. K. V. Raman and W. R. Coffman.
For description, see IARD 4020.

[FDSC 4060 Dairy and Food Fermentations
Covers basic principles of fermentation, microbiology of food fermentations, starter cultures and their preparations and applications, as well as specific examples of food fermentations.]

FDSC 4100 Sensory Evaluation of Food
Fall. 2–3 credits. 1 lab credit.LEC and lab required for undergraduate food science majors. Prerequisite: statistics course. Letter grades only. H. T. Lawless.
Topics include the sensory evaluation methods used to test the flavor, appearance, and texture of foods by quantitative description and simple difference testing; consumer testing for product acceptability; sensory tests in quality control; strategic product research; and product development. Presents the psychological principles in sensory testing and statistical methods for sensory data analysis. The lab provides first-hand experience in organizing and conducting sensory tests and an introduction to online data collection and analysis.

[FDSC 4120 Sustainability and Organic Grape and Wine Production II (also HORT/VIEN 4120)
Practical course in enology focuses on organic and sustainable winemaking. Students experience all winemaking steps, from optimal harvest determination to completion of fermentation and stabilization. Various production procedures are practiced during winemaking including techniques to optimize organic wine production from Cornell's organically grown grapes.]

FDSC 4150 Principles of Food Packaging
Spring. 3 credits. Letter grades only. Offered alternate years; next offered 2011–2012.
Discusses the chemical and physical properties and manufacture of the basic materials used to construct packaging. Presents the influence of packaging on shelf life. Emphasizes newer packaging technologies and materials. Briefly presents economics, design, and regulation of food packaging.

FDSC 4170 Food Chemistry I
Spring. 3 credits. Prerequisites: CHEM 1570 or BIOMG 3300 or 3310. S–U or letter grades. J. W. Bradley.
Covers the chemistry of foods and food ingredients. Discusses the chemical and physical properties of water, proteins, lipids, carbohydrates, and other food components and additives in the context of their interactions and functional roles in foods.

FDSC 4180 Food Chemistry II
Fall. 3 credits. Prerequisite: FDSC 4170. S–U or letter grades. C. Y. Lee, C. I. Moraru, and J. M. Regenstein.
Discusses the chemical composition of several food groups (meats, fruits, vegetables, and dairy) and describes the chemical reactions and changes that take place during processing and storage, as well as their effects on the quality and nutritional characteristics of these foods.

FDSC 4190 Food Chemistry Laboratory
Fall. 2 credits. BIOMG 3500 or 3310 or CHEM 1570 or equivalent. Corequisite: FDSC 4170. D. D. Miller and A. Orta-Ramirez.
Deals with the chemical properties of food components and the processes they undergo in processing and storage. Stresses relationships between the chemical composition of foods and functional, nutritional, and sensory properties. Introduces lab techniques commonly used in food research. Requires a lab research project that involves writing a research proposal for the project, conducting laboratory research to test hypotheses described in the proposal, analyzing the data, and writing a paper following the format used by the Journal of Food Science.

FDSC 4220 Functional Foods and Nutraceuticals
Spring. 2 credits. Prerequisite: basic biochemistry course or permission of instructor. Letter grades only. Offered alternate years. R. H. Liu.
Covers functional foods and nutraceuticals, bioactive compounds, antioxidants and dietary supplements, micronutrient fortification, botanicals, and herbs in disease prevention and health promotion. Emphasizes the mechanisms of action and scientific evidence of efficacy. Biomarkers, safety and efficacy testing, and regulations for functional foods and nutraceuticals are discussed.

FDSC 4230 Physical Principles of Food Preservation and Manufacturing
Fall. 3 credits. Prerequisite: FDSC 3210. Letter grades only. Lec, disc. S. J. Mulvany.
Emphasizes the fundamental principles that underlie much of food preservation and manufacturing. Uses a systems analysis approach to make connections between the chemical and physical changes that occur in food processing and their impact on food quality. Topics include materials properties of foods, heat processing, freezing, concentration, and drying. Selected products serve as case studies for more complex manufactured foods.

FDSC 4250 Unit Operations and Dairy Foods Processing
Spring. 3 credits. Prerequisites: FDSC 3210, 4180, and 4230 or permission of instructor. Letter grades only. Lec, lab. E. A. Willcox.
Combined lecture-laboratory course focusing on principles and practices fundamental to modern dairy foods processing. Structured in two parts. The first part deals with the main unit operations used in dairy processing (i.e., pasteurization, sterilization, centrifugal separation, homogenization, membrane separation, concentration, and drying) and the second part focuses on the science and technology that underpin the manufacture of main classes of dairy products (i.e., fluid milk, milk powder, ice cream, butter, and cheese). Laboratories are conducted in a food processing pilot plant facility, which allows students to gain hands-on experience in operating pilot plant equipment and the manufacture of safe, high-quality dairy products. One field trip to operating dairy plants in the area is scheduled during the semester.

FDSC 4300 Understanding Wine and Beer (also VIEN 4300)
Spring. 3 credits. Prerequisites: basic science; four approved wine glasses, and $50 tasting fee due by second day of class. S–U or letter grades. T. E. Acree, K. J. Siebert, G. L. Sacks, and R. Mira de Orduña.
Senior-level science course for both science and nonscience majors. As an introduction to wine and beer appreciation it uses the study of fermentation biology, wine and beer composition, and sensory perception to explore the role of science and technology in the production and enjoyment of food. Samples of beers and wines are used to illustrate the sensory properties, microbiological processes, and chemical components that determine wine and beer quality. Students learn to recognize the major features of beer and wine that determine sensory quality and know the processes that produced them. Topics include the psychology and chemistry of bouquet, taste and aroma—the microbiology of fermentation and spoilage—and the sensory properties of wines and beers from different raw materials (produced in various climates with different agricultural practices) and with different wine and beer production techniques.
FDSC 4400 Wine and Grape Flavor Development (also VIEN 4400)  
Spring. 3 credits. Limited to 30 students; priority given to students in the enology or viticulture program. Prerequisites: at least one semester of general chemistry and one semester of organic chemistry required. Recommended: prior course work in or knowledge of viticulture and enology. FDSC 1101 and CHEM 2570. Letter grades only. G. Sacks. Uses a (bio)-chemical perspective to investigate viticulture and enological factors that impact flavor and other quality attributes (mouthfeel, color, stability) of wine and wine grapes.

FDSC 4560 Advanced Concepts in Sensory Evaluation  
Spring. 2 credits. Prerequisite: FDSC 4100. S–U or letter grades. Offered alternate years. H. T. Lawless. Readings and discussions of primary source materials in sensory evaluation, including recent advances in sensory methods, historical perspectives, psychophysics, perceptual biases, and multivariate statistical approaches to sensory data. Students conduct a research project or term paper on a current issue in sensory evaluation.

FDSC 4600 Wine Microbiology (also VIEN 4600)  
Spring. 3 credits. Limited to 20 students. Priority given to Viticulture and Enology majors. Prerequisite: BIOMI 2900. Recommended: FDSC/HORT/VIEN 1104. Letter grades only. K. J. Arnink. Study of the microbial ecology of grapes and wine. Topics include microorganisms that live in wine and interactions between them, nutritional requirements, inoculation procedures, managing microbial growth and spoilage, and microbiology techniques important to enology.

FDSC 4666 U.S. Food Industry and Food Science Research  
Summer. 1 credit. Prerequisite: enrollment in Food Science summer scholars program or M.P.S. in Food Science and Technology. S–U grades only. M. Wiedmann. Introduces students to the U.S. food industry and food science research. Students participate in weekly meetings to cover topics such as food science research methods, ethics in food science and research; field trips to food processing plants and R&D facilities, and panel discussions on food science careers in the United States. Students are required to keep journals with weekly entries that reflect critical thinking on the challenges and opportunities in the discipline of food science.

FDSC 4800 Global Seminar: Building Sustaining Environments and Secure Food Systems for a Modern World (also NTRES/IARD 4800)  
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. J. Lassoie and D. Miller. For description, see NTRES 4800.

FDSC 4910 Viticulture and Enology Research Practices (also VIEN 4910)  
Fall. 3 credits. Prerequisite: VIEN/FDSC/HORT 1105 or permission of instructor. Letter grades only. K. Arnink. Collaborative wine research project for students in the Viticulture and Enology major. Original research experience, including critical evaluation of literature, experimental protocols and analytical procedures, data collection and evaluation, and scientific research writing. Emphasis on practical winemaking and laboratory methods, with sufficient lecture and discussion time to support student learning of relevant scientific concepts.

FDSC 4940 Special Topics in Food Science  
Fall or spring. 4 credits max. S–U or letter grades. Staff. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

FDSC 4960 Undergraduate Internship in Food Science  
Fall or spring. 1–6 credits. Prerequisite: permission of instructor. Students must submit a CALS independent study, research, teaching, or internship form signed by faculty member who will supervise study and assign credits and grade. S–U grades only. Staff. On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and students, stating the conditions of the work assignment, supervision, and reporting. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

FDSC 4970 Individual Study in Food Science  
Fall or spring. 3 credits max. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S–U or letter grades. Staff. May include individual tutorial study; a special topic selected by a professor or a group of students, or selected lectures of a course already offered. Since topics vary, the course may be repeated for credit.

FDSC 4980 Undergraduate Teaching Experience  
Fall or spring. 3 credits max. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S–U grades only. Staff. Students assist in teaching a course appropriate to their previous training and experience. Students meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

FDSC 4990 Undergraduate Research in Food Science  
Fall or spring. 4 credits max; may be repeated for credit. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff. Students conduct original research directed by a food science faculty member.

FDSC 4991 Food Science Honors Research  
Fall. 1 to 4 credits, variable. Prerequisite: enrollment in Food Science research honors program. Students must be eligible for Latin honors and complete honors program application by third week of fall semester, senior year. S–U or letter grades. Staff. Intended for students pursuing the research honors program in Food Science.

FDSC 4992 Food Science Honors Research  
Spring. 1 to 4 credits, variable. Prerequisite: enrollment in Food Science research honors program. Students must be eligible for Latin honors and complete honors program application by third week of fall semester, senior year. S–U or letter grades. Staff. Intended for students pursuing the research honors program in Food Science.

FDSC 5000 Master of Professional Studies (Agriculture) Project  
Fall, spring, summer. 1–6 credits. Requirement for M.P.S. students in graduate field of Food Science and Technology. S–U or letter grades. Staff. Problem-solving project involving analysis and/or active research in the field of Food Science and Technology.

FDSC 5200 Advanced Food Processing and Engineering  
Summer. 2 credits. Prerequisites: M.P.S. standing or permission of instructor. Letter grades only. S. Rizvi and S. Mulvaney. Intended primarily for M.P.S. students in the field of Food Science and Technology enrolled in the dual Cornell-TNAU M.P.S. degree program. An intensive overview of the principles of food polymer science and rheology and analysis of current and emerging processes for food manufacturing.

FDSC 5990 Research for Lausanne Exchange Students  
Fall/spring. 10 credits max. Prerequisite: permission of instructor. S–U or letter grades. Staff. Undergraduate senior thesis research for Lausanne exchange students only. Students conduct original research directed by a food science faculty member, then write and present a final report to the faculties of both Cornell University and the University of Lausanne.

FDSC 6000 Seminar in Food Science  
Fall and spring. 1 credit. Requirement for all graduate students in field of food science and technology; highly recommended for graduate students minoring in food science and technology. S–U grades only. Staff. Weekly seminar series on contemporary topics and issues in the field of food science and technology. Representatives from academia, industry, and government provide presentations on a wide variety of topics. Graduate students in the field of food science and technology may use the forum to present their required thesis research seminar.

FDSC 6010 Principles of Food Science  
Fall. 2 credits. Required for all first-year graduate students with majors and minors in Food Science and Technology. Prerequisite: graduate standing. S–U grades only. S. Rizvi and staff.
Students are first introduced to the principles and applications in food chemistry, food microbiology, food processing and engineering, sensory science, and international food science. Then students review and discuss the research literature in these fields.

FDSC 6020 Agriculture in Developing Nations II (also IARD 6020) Spring, field trip to Asia during Jan. intersession. 3 credits. Prerequisites: IARD 4020 and (or) permission of instructors. Cost of field-study trip is to be determined (including airfare, local transportation, and lodging). Some merit and need-based financial aid may be available. K. V. Raman and W. R. Coffman. For description, see IARD 6020.

FDSC 6040 Chemistry of Dairy Products Fall. 2 credits. Limited to 16 students. Prerequisites: introductory organic and biochemistry, food chemistry, and dairy foods processing courses or permission of instructor. Letter grades only. Offered alternate years. D. M. Barban. Detailed study of milk constituents and their properties. Covers the chemical and physical changes that occur in dairy products before, during, and after processing. Emphasizes current research in dairy chemistry. [FDSC 6070 Advanced Food Microbiology Spring. 2 credits. Prerequisites: BIOMI 2900, FDSC 3940. S–U grades only. Offered alternate years; next offered 2011–2012. M. Wiedmann. Explores advanced topics in food microbiology. Focuses on critical evaluation of current literature and on microbiological concepts that affect food microbiology.]

FDSC 6080 Chemometric Methods in Food Science Fall. 2 credits. Prerequisites: basic statistics and chemometrics or permission of instructor. S–U or letter grades. Offered alternate years. K. J. Siebert. Food science applications using multivariate statistical methods (chemometrics) include extracting information from large datasets, modeling molecular and product properties, optimizing analytical methods and processing operations, discerning relationships between product composition and sensory properties, identifying cultivars or species, and detecting adulteration. The techniques covered are also applicable to many other problems in biology and chemistry. [FDSC 6160 Flavors—Analysis and Applications Spring. 2 credits. S–U or letter grades. Lect. disc. Offered alternate years; next offered 2011–2012. H. T. Lawless and T. E. Acree. Surveys taste, aroma and volatile flavors, and trigeminal stimuli from the perspectives of chemical structures, methods of analysis, and uses and interactions in food systems. Also discusses recent advances in the physiology of taste and smell.]

FDSC 6210 Food Lipids Spring. 2 credits. Prerequisite: basic biochemistry course. Letter grades only. Offered alternate years; next offered 2011–2012. R. H. Liu. Describes the physical, chemical, biochemical, and functional properties of lipids. Emphasizes lipid oxidation, lipids and human health, and functional foods associated with lipids.]

FDSC 6220 Functional Foods and Nutraceuticals Spring. 2 credits. Prerequisites: basic biochemistry course or permission of instructor. Letter grades only. Offered alternate years. R. H. Liu. Covers functional foods and nutraceuticals, bioactive compounds, antioxidants and dietary supplements, micronutrient fortification, and botanicals and herbs in disease prevention and health promotion. Emphasizes the mechanisms of action and scientific evidence of efficacy. Biomarkers, safety and efficacy testing, and regulations for functional foods and nutraceuticals are discussed. [FDSC 6640 Food Polymer Science: Principles and Applications Spring. 2 credits. Prerequisites: introductory chemistry and physics. Offered alternate years; next offered 2011–2012. S. J. M小时an. Integrates polymer science, chemistry, and materials science principles as the basis for characterization of the physical properties of biopolymer materials of interest to the food industry.]

FDSC 6650 Food and Bioprocessing Systems FDSC 6940 Special Topics in Food Science Fall or spring, 4 credits max. S–U or letter grades. Staff. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number. FDSC 6950 Current Readings in Food Science Fall and spring. 1 credit; may be taken multiple times. Graduate students in food science strongly encouraged to enroll. Prerequisite: 5000- to 4000-level course relevant to chosen topic. S–U grades only. Staff. Seminar series on current topics chosen by participating faculty members and students on a rotating basis. Format consists of weekly discussion groups with each participant presenting at least one oral report based on independent reading. Multiple sections focusing on different topics may be taught in any given semester. Topics include food microbiology and food safety, food chemistry, packaging, and food engineering. Interested students should contact the designated instructor(s) for each semester. FDSC 6960 Graduate Internship in Food Science Fall or spring. 1–6 credits. Prerequisite: permission of instructor. S–U grades only. Staff. On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and students, stating the conditions of the work assignment, supervision, and reporting. All 6960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm. FDSC 6970 Graduate Individual Study in Food Science Fall or spring. 1 to 3 credits. S–U or letter grades. Staff. FDSC 6980 Graduate Teaching Experience Fall and spring. 1 to 3 credits. S–U grades only. Staff. Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of field faculty members. The experience may include leading discussion sections, preparing and assisting in, or teaching lectures and laboratories; and tutoring. FDSC 8900 Master’s-Level Thesis Research Fall or spring. Credit TBA: max. 12. Prerequisites: master’s candidates; permission of Special Committee chair. S–U grades only. Graduate faculty. FDSC 9900 Doctoral-Level Thesis Research Fall or spring. Credit TBA. Maximum of 12 credits. Prerequisites: doctoral students who have passed “A” exam; permission of Special Committee chair. S–U grades only. Graduate faculty.

HORT 1101 Horticultural Science and Systems Fall. 4 credits. I. A. Merwin. Science and technology of horticultural plants grown for foods and beverages and ornamental, landscape, or recreational purposes. Lectures, labs, and field trips involve natural history and evolution of horticultural plants, botany and physiology, sustainable management of soil, water and plant nutrition, breeding and propagation, ecological and landscape functions, and integrated design and management of horticultural plantings and production systems. HORT 1102 Hands-On Horticulture Spring. 2 credits. Not for seniors or plant sciences majors. Nominal materials fee. M. P. Pruits. The objective is to instill in students a lifelong appreciation for how gardening can enhance individual well-being through aesthetics, culinary experiences, and mastery of techniques. Emphasizes hands-on learning and practice of key gardening skills and techniques in the greenhouse and the field, such as landscape management, garden design, propagation, pruning, grafting, pest...
This interdisciplinary and experiential course examines land stewardship by individuals and communities as we interact with home landscapes and larger individual and community-owned lands. Using principles from ecology and soil/plant sciences, and insights/practices from systems theory, organic agriculture, and permaculture, the course addresses land management from ecosystem and ethical perspectives.

HORT 2204 Grapes to Wines (also FDSC/VIEN 2204)
Fall. 4 credits. Limited to 25 students. Prerequisite: Permission from instructors. Major emphasis on viticulture and enology principles and practices, emphasizing cool climate production. Course examines environmental, physiological, and anatomical bases for vineyard management, and all aspects of winemaking, from harvest decisions through fermentation to bottling. Laboratories and field trips encourage hands-on experience in the vineyard and winery.

HORT 2350 Food, Fiber, and Fulfillment: Plants and Human Well-Being (CA) (HA)
Spring. 2–3 credits (optional service learning component for 1 credit). Offered odd-numbered years J. Mt. Pleasant and S. M. Skelly. Examines the many ways plants meet our needs from providing food, shelter, and medicine to the roles plants play in community beautification, economic development, pollution control, enhancing education, and mental health support. The course begins with a historical perspective and moves through to contemporary uses and theories of plants and human well-being.

HORT 2430 Taxonomy of Cultivated Plants (also BIOPL 2430)
Fall. 4 credits. Prerequisites: two majors-level biology courses or written permission of instructor. May not be taken for credit after BIOPL 2480. Offered even-numbered years M. A. Luckow. For description, see BIOPL 2430.

HORT 2940 Introduction to Agricultural Machinery (also CSS/AGSCI 2940)
Fall. 2 credits. B. Flannigan and A. D‘Tommaso. For description, see CSS 2940.

HORT 3000 Annual and Perennial Plant Identification and Use
Fall. 3 credits. Cost of field trip $100. W. B. Miller. Focuses primarily on the identification, cultural requirements, and uses of common annual and perennial plants in the landscape. Practical hands-on gardening experience at selected campus locations. In addition, a three-day required field trip to regional gardens, nurseries, and other industry relevant locations provides students with a great opportunity to gain exposure to the horticulture industry.

HORT 3100 Production and Marketing of Greenhouse Crops
Fall. 4 credits. Prerequisites: HORT 1101 and any other horticulture course; junior standing preferred. Letter grades only. Cost of required three-day field trip: approx. $100. Offered odd-numbered years. W. B. Miller. Covers basics of establishing a greenhouse operation, growing crops in optimized environments, and serving niche or mass market. Discusses technology basics including structures and equipment, systems for heating and cooling, lighting, irrigating and fertilizing, material handling, environmental stewardship, integrated pest management, and production management. Also covers world centers of greenhouse crop production; culture of cut, pot, bedding, vegetable, and fruit crops in greenhouses, emphasizing predictive harvesting through environmental, physical, and chemical management of growth and development. Each student grows one or more crops.

HORT 3120 Sustainability and Organic Grape and Wine Production I (also FDSC/VIEN 3120)
Spring. 2 credits. Prerequisite: VIEN 2204. Letter grades only. J. E. Vanden Heuvel and K. J. Arnink. Hands-on introduction to philosophies and practices involved in producing organic grapes and wines, with a particular emphasis on challenges faced in cool climates. The course includes readings and group discussions of organic and sustainable practices in the wine industry, but it focuses on experimentation and practice with organic methods for growing grapes. Students develop a management plan for the organic vineyard at Cornell Orchards.

HORT 3200 Experiential Garden-Based Learning in Belize (also IARD 3200)
Spring. 3 credits. Letter grades only. Offered odd-numbered years. M. Eames-Shawly. Establish new school gardens, work in existing gardens, lead garden activities in schools with community food-based program in Belize. Trip experience over spring break is a course requirement; assistance in raising funds for travel and study likely necessary. Course is rigorous and physically challenging. Application required.

HORT 3300 Golf and Sports Turf Management I
Spring. 3 credits. Prerequisite: CSS 2600 or permission of instructor. Letter grades only. Offered odd-numbered years. F. S. Rossi and A. M. Petrovic. Proposal, siting, specification, installation, establishment, and management of turfgrass areas. Emphasizes commercial locations including lawns, sports fields, and golf courses. Case study projects are a major aspect of the course.

HORT 3440 Viticulture and Vineyard Management (also VIEN 3440)
Spring. 3 credits. Prerequisite: HORT 2204. Letter grades only. J. E. Vanden Heuvel. Second-semester course in commercial grape production with an emphasis on the problems of production in cold climates. Students examine the genetics of the vine and learn principles of vineyard establishment, propagation, pruning and training, and conservation. Laboratory exercises and field trips offer hands-on experience.
HORT 3500 Principles of Vegetable Production
Fall. 3 credits. Prerequisite: HORT 1101, CSS 2600, or equivalent. Letter grades only. Two Sat. field trips; students responsible for cost of their meals. Offered even-numbered years. R. R. Bellinder and S. Reiners.

Commercial vegetable production from variety selection to postharvest. Topics include crop physiology and culture, soil and pest management, stand establishment, marketing, and history of production. Term project required. Field trips to large-scale conventional, small, diversified, and organic farms are planned early in the semester.

HORT 3820 Organic Food and Agriculture (also CSS/AGSCI 3800)
Fall. 3–4 credits. Prerequisite: CSS 1900, CSS 2600, HORT 1101, or permission of instructor. Staff.

For description, see CSS 3800.

HORT 3910 Woody Plant Identification and Use I
Fall. 2 credits. Limited enrollment. Letter grades only. N. L. Bassuk.

Module of HORT/LA 4910 covering the identification of approximately 200 woody trees, shrubs, and vines in leaf and their use in the landscape. Students desiring a more comprehensive course that covers site assessment, soil modification, design, plant specifications, and landscape establishment principles and techniques should take HORT/LA 4910 or the 4910–4920 sequence.

HORT 3920 Woody Plant Identification and Use II
Spring. 2 credits. Limited enrollment. Prerequisite: passing grade in HORT 3910. Letter grades only. N. L. Bassuk.

Module of HORT/LA 4920 covering the identification of approximately 160 evergreen trees and shrubs and deciduous plants using winter identification. HORT 3910 (fall module) need not be taken before taking HORT 3920 (spring module). Students also assist in the establishment of a new landscape on campus.

HORT 4000 Principles of Plant Propagation
Spring. 3 credits. Prerequisites: BIOP 2420 and 2421 or another plant physiology course or permission of instructor. K. W. Mudge.

Asexual (vegetative) propagation including cuttage, graftage, tissue culture, layering, and specialized vegetative reproductive structures and sexual (seed) propagation. Stresses physiological, environmental, and anatomical principles and industry applications in lecture, and hands-on skills in laboratories. Examples include both temperate and tropical horticultural, agronomic, and forestry crops.

HORT 4030 Plant Cell and Tissue Culture (also PLBR 4010)
Fall. 3 credits. Letter grades only. E. D. Earle.

For description, see PLBR 4010.

HORT 4120 Sustainability and Organic Grape and Wine Production II (also FDSC/VIEN 4120)
Fall. 2 credits. Limited to 20 students. Prerequisite: VIEN/HORT/FDSC 3120. Letter grades only. J. E. Vanden Heuvel and K. J. Arnink.

For description, see FDSC 4120.

HORT 4200 Nursery-Crop Production
Fall. 3 credits. Prerequisite: HORT 4000 or permission of instructor. Cost of field trips: $75. Offered odd-numbered years; next offered 2011–2012. K. W. Mudge.

Principles and practices of commercial nursery crop production. Term project required. Includes field trips to commercial nurseries.

HORT 4250 Postharvest Biology of Horticultural Crops
Fall. 2 credits. Offered odd-numbered years; next offered 2011–2012. S. G. S. Gregg.

Study of the biological processes controlling physical and chemical changes in harvested yet living horticultural crops or their parts.

HORT 4251 Postharvest Biology of Horticultural Crops Lab
Fall. 1 credit. Pre- or corequisite: HORT 4250. Offered odd-numbered years. S. Gan.

Labs, taught by scientists who are experts in their respective subject areas, are intended to supplement/complement HORT 4250 lectures.

HORT 4260 Practicum in Forest Farming as an Agroforestry System (also NTRES/CSS 4260)
Fall. 2 credits. Prerequisite: junior, senior, or graduate standing or permission of instructor. K. W. Mudge, P. Hobbs, and J. E. Buck.

Students actively take part in the restoration of a 70-year-old nut grove. The MacDaniel's Nut Grove is being developed as a multipurpose forest-farming teaching, research, and extension site. Hands-on activities include evaluation and planning, temperate-nut harvest and variety evaluation, mushroom culture, small-fruit and fruit-tree culture, and medicinal-herb culture. Outdoor activities are integrated with selected readings via an online discussion board.

HORT 4360 Environmental Landscape Management
Fall. 2 credits. Letter grades only. Offered even-numbered years. T. L. Bauerle.

Students in this course gain an understanding of current methods for maintenance of plants in the landscape and greenwoods, including soil, water, nutrients, weed management, and techniques in arboriculture. Focus is on understanding and troubleshooting biotic and abiotic landscape problems and how they affect plant growth.

HORT 4400 Restoration Ecology
Fall. 5 credits. Prerequisites: upper-division or graduate standing and permission of instructor. Letter grades only. Lec, lab, plus several weekends. T. H. Whitlow.

Draws concepts from ecology, hydrology, soil science, and conservation biology and applies these in both principle and practice to the rapidly evolving field of restoration ecology. Through lectures, reading, and discussion, site visits to active restoration sites, and a real-world class project, students learn and practice skills needed to develop restoration plans for a variety of situations.

HORT 4420 Berry Crops: Culture and Management
Fall. 3 credits. Offered even-numbered years. M. J. Duxbury.

Study of the evolution, breeding history, and physiology of strawberries, raspberries, blackberries, blueberries, and other minor small fruit crops and of cultural practices that influence productivity, fruit quality, and pest damage. Also considers marketing and economics and discusses alternate production practices for both commercial and home gardeners. Frequent field trips enhance classroom activities.

HORT 4444 Grapevine Biology (also VIEN 4444)
Spring. 3 credits. Prerequisites: introductory botany; BIOP 2420 or equivalent. Letter grades only. Offered odd-numbered years. A. N. Lakso, B. I. Reich, P. S. Cousins, and C. L. Owens.

Focuses on the whole-plant biology of the grapevine that underpins grape-growing. Major topics include vine structure and its organization, vegetative and reproductive development, biomass and carbon balance, water and mineral nutrition, grapevine species and taxonomy, grape scion varieties, rootstocks, breeding and genetic improvement, and genomics.

HORT 4450 Ecological Orchard Management
Spring. 3 credits. Prerequisites: two college-level biology courses. Recommended: previous horticulture/plant science courses. S–U or letter grades. Offered even-numbered years; next offered 2011–2012. I. A. Merwin.

The ecology and technology of deciduous tree-fruit production. Emphasizes the agroecology of perennial crop systems, with labs providing hands-on experience in orchard management.

HORT 4460 Advanced Viticultural Topics (also VIEN 4460)
Spring. 2 credits. Prerequisite: HORT 3440 or equivalent. S–U or letter grades. Offered even-numbered years; next offered 2011–2012. A. N. Lakso.

In-depth lecture/discussion of complex topics including crop load effects, canopy management, water relations, vineyard efficiency, and vineyard variability/precision viticulture.

HORT 4551–4555 Mineral Nutrition of Crops and Landscape Plants (also CSS 4551–4555)
Spring. 5 modules; required module, no credit; others, 1 credit each. Prerequisites: CSS 2600 and BIOP 2420. Offered even-numbered years; next offered 2011–2012. Coordinator: H. C. Wien.

Students learn the principles of mineral nutrient function in crop plants, are able to diagnose deficiencies by symptoms and tissue tests, and can devise organic and conventional nutrient management schemes that maximize productivity and mineral nutrient quality.

HORT 4551 Crop Nutrition Principles (also CSS 4551)
Spring, weeks 1–3. 0 credits. Prerequisites: CSS 2600 and BIOP 2420, or equivalent. Offered even-numbered years; next offered 2011–2012. H. C. Wien.

Required module to be taken in addition to at least two, or up to four, other modules.

HORT 4552 Agronomic Crop Nutrition (also CSS 4552)
Spring, weeks 4–6. 1 credit. Prerequisites: CSS 2600 and BIOP 2420, or equivalent. Offered even-numbered years; next offered 2011–2012. J. M. Duxbury.
HORT 4553 Vegetable Crop Nutrition (also CSS 4553)
Spring, weeks 7–9. 1 credit. Prerequisites: CSS 2600 and BI OPL 2420, or equivalent. Offered even-numbered years; next offered 2011–2012. S. Reiners. Must be taken with the required Crop Nutrition Principles module—HORT 4551—and at least one other module.

HORT 4554 Landscape Plant Nutrition (also CSS 4554)
Spring, weeks 10–12. 1 credit. Prerequisites: CSS 2600 and BI OPL 2420, or equivalent. Offered even-numbered years; next offered 2011–2012. N. S. Mattson. Must be taken with the required Crop Nutrition Principles module—HORT 4551—and at least one other module.

HORT 4555 Fruit Crop Nutrition (also CSS 4555)
Spring, weeks 13–14. 1 credit. Prerequisites: CSS 2600 and BI OPL 2420, or equivalent. Offered even-numbered years; next offered 2011–2012. L. Cheng. Must be taken with the required Crop Nutrition Principles module—HORT 4551—and at least one other module.

HORT 4556 Mineral Nutrition of Crops and Landscape Plants Lab (also CSS 4556)
Spring. 1 credit. Letter grades only. Offered even-numbered years; next offered 2011–2012. H. C. Wien. Lab component of the HORT 4551—4555 module series; not to be taken as a stand-alone course. Students must enroll in the required module, HORT 4551, plus an additional two or up to four other modules, when taking this lab.

HORT 4600 Cropping Systems Ecology
Spring. 3 credits. Prerequisite: any crop production or plant ecology course or permission of instructor. Offered even-numbered years; next offered 2011–2012. D. W. Wolfe. Course utilizes the basic principles of plant population biology, environmental physiology, and ecology to evaluate the management, productivity, and environmental impact of various cropping systems.

HORT 4620 Physiology of Vegetables and Flowers
Spring. 4 credits. Prerequisite: BI OPL 2420 or equivalent. Offered odd-numbered years. H. C. Wien. Study of the physiological principles that govern growth, development, and production of reproductive structures of vegetable crops and herbaceous ornamental plants. Emphasizes processes of flower induction, fruit and seed set, and the balance of vegetative and reproductive growth, especially in perennials. Practical hands-on greenhouse experiments and small group discussion illustrate the lecture material.

HORT 4660 Soil Ecology (also CSS 4660)
Spring. 4 credits, with lab. Prerequisites: two college-level biology courses or ecology and CSS 2600 or permission of instructor. J. E. Thies. For description, see CSS 4660.

HORT 4730 Ecological Agricultural Systems (also BI OEE 4730)
Fall. 3 credits. Prerequisite: BI OEE 1610 or permission of instructor. S–U or letter grades. During first six weeks, R meetings may run later due to field trips. Offered even-numbered years. L. E. Drinkwater and A. G. Power. For description, see BI OEE 4730.

HORT 4800 Plantations Lecture Series
Fall, 12 weeks, 6 lec. 1 credit. S–U grades only. Meets alternate W evenings. D. A. Rakow. Covers a range of subjects related to the plant and natural sciences, and human-cultural themes. On nonlecture Wednesdays, the class meets to discuss content from the previous week. Students are required to write a reaction paper for each lecture.

HORT 4850 Public Garden Management
Spring. 3 credits. Prerequisites: HORT 3000; HORT 4910 or 4920. Cost of two-and-a-half-day field trip to botanical gardens and arboreta: approx. $100. Offered odd-numbered years. D. A. Rakow. Explores the history of public gardens, types of contemporary public gardens, and the operation of public gardens including botanical gardens and arboreta. Includes separate units on administration and business management of gardens, collections curatorship, collections design, educational programs, research, and management of landscapes and natural areas.

HORT 4910 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 4910)
Fall. 4 credits. Limited to 48 students. Prerequisite: horticulture or landscape architecture majors. Preregistration required. N. L. Bassuk and P. J. Trowbridge. Focuses on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, students can critically assess potential planting sites, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details is produced to implement these practices. A project where students implement what they have learned by creating a new landscape serves to integrate theory, principles, and practices. No prior design experience necessary.

HORT 4920 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 4920)
Spring. 4 credits. Limited to 48 students. Prerequisites: passing grade in HORT/LA 4910; horticulture or landscape architecture majors. Preregistration required. N. L. Bassuk and P. J. Trowbridge. Second half of course focusing on the winter identification, uses, and establishment of woody plants in urban and garden settings. Issues of site assessment and soil remediation are emphasized in addition to soil volume calculations, drainage and surface detailing, and planting techniques. Students critically assess potential planting sites and select appropriate trees, shrubs, vines, and ground covers for a given site. Design for specific sites followed by written specifications and graphic details are produced to implement these proposals. Students implement, in a hands-on manner, site remediation and planting techniques they have learned by creating new landscapes that serve to integrate theory, principles, and practices. Together, HORT/LA 4910 and 4920 constitute an integrated course.

HORT 4940 Special Topics in Horticulture
Fall or spring. 4 credits max. S–U or letter grades. Staff. The department teaches “trial” courses under this number. Offerings may vary by semester and will be advertised before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

HORT 4950 Undergraduate Seminar—Current Topics in Horticulture
Fall and spring. 1 credit; may be taken four times for 1 credit per semester. Graduate students should enroll in HORT 6000. S–U grades only. N. S. Mattson. Undergraduate participation in weekly departmental seminar series.

HORT 4960 Internship in Horticulture
Fall or spring. Variable credit. Prerequisite: permission of student’s advisor in advance of participation in internship programs. S–U or letter grades. Students must register using individual study form (available in 140 Roberts Hall) signed by faculty member who will supervise study and assign grade. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm. Staff.

HORT 4970 Individual Study in Horticulture
Fall or spring. Variable credit. Prerequisite: permission of instructor(s). S–U or letter grades. Students must register using individual study form (available in 140 Roberts Hall). Staff. Undergraduate individual study in horticultural sciences under the direction of one or more faculty members.

HORT 4980 Undergraduate Teaching Experience
Fall or spring. Variable credit. Prerequisites: previous enrollment in course to be taught or equivalent, and written permission of instructor. S–U or letter grades. Students must register using individual study form (available in 140 Roberts Hall). Staff. Designed to give qualified undergraduate students teaching experience through actual involvement in planning and teaching horticultural sciences courses under the supervision of departmental faculty members. May include leading discussion sections; preparing, assisting in, or teaching laboratories; and tutoring.
HORT 4990 Undergraduate Research
Fall or spring. Variable credit. Prerequisite: permission of instructor. S–U or letter grades. Students must register using individual study form (available in 140 Roberts Hall). Staff. Undergraduate research projects in horticultural sciences.

HORT 5900 Master of Professional Studies (Agriculture) Project
Fall or spring. 1–6 credits; 6 credits max. toward M.P.S. (agriculture) degree. Required for students M.P.S. (agriculture) candidates in respective graduate fields of horticulture. S–U or letter grades. Staff. Comprehensive project emphasizing the application of principles and practices to professional horticultural teaching, extension, and research programs and situations.

HORT 6000 Seminar in Horticulture
Fall and spring. 1 credit. Requirement for graduate students majoring or minoring in horticulture. Undergraduate students enroll in HORT 4950. S–U grades only. N. S. Masterson. Weekly seminars consisting of graduate student research project reports, faculty research topics, as well as guest speakers from other universities and/or industry.

HORT 6100 Extension Volunteer Development in Garden-Based Learning
Fall. 2 credits. Prerequisite: course work in horticulture and related fields. Undergraduate plant science students by permission of instructor. Offered even-numbered years. L. J. Bushway. An extension/outreach training course for graduate entomology, pathology, and horticulture students. Learn skills to effectively develop knowledge of adult volunteers in garden-based learning programs. With guidance, develop and pilot a volunteer training session on an introductory horticultural science topic appropriate to your interest and experience.

HORT 6110 Field Experience in Extension Volunteer Development in Garden-Based Learning
Spring. 1 credit. Prerequisite: HORT 6000. Offered odd-numbered years. L. J. Bushway. Lead introductory horticultural science training sessions for Master Gardener Volunteers and/or other volunteer groups associated with garden-based learning outreach. Performance reflection discussions with peers and instructor follow each volunteer training session to facilitate further skill development. Travel to multiple Cornell Cooperative Extension county offices throughout the state is required.

HORT 6170 Advanced Analytical Methods for Plant Systems
Spring. 2 credits. Prerequisites: one year of general chemistry, one semester of organic chemistry, and plant physiology. Letter grades only. Offered odd-numbered years. L. Cheng. Principles and practical applications of selected laboratory methods in the plant and environmental sciences. Emphasizes enhancement of laboratory technique and problem-solving skills. Discusses suitability of various procedures for measuring important plant and soil components. Analytical techniques are chosen from elemental analysis by combustion or flow analysis, gas chromatography, HPLC, electrophoresis, electrochemical assays, enzyme assays, bioassays, and mass spectrometry.

HORT 6180 Breeding for Pest Resistance (also PLBR 6180)
Fall. 2 credits. Prerequisites: BIOMG 2810 and PLBR 4030 or equivalents. Highly recommended: introductory plant pathology and/or entomology course. Letter grades only. Offered even-numbered years. P. D. Griffiths. For description, see PLBR 6180.

HORT 6190 Root and Rhizosphere Ecology
Spring. 1 credit. Prerequisite: plant physiology. S–U grades only. Offered even-numbered years; next offered 2011–2012. T. L. Bauerle. Explores current topics in the study of root growth, development, function, and survivorship through a mixture of lectures, discussions, and research presentation.

HORT 6251 Advanced Postharvest Biology: Postharvest Physiology
Fall. 1 credit. (12 lec). Offered even-numbered years. S. Gan. Emphasizes the physiological and biochemical aspects of growth and maturation, ripening, and senescence of harvested horticulture plant parts.

HORT 6252 Advanced Postharvest Biology: Plant Senescence (also BIOL 4836)
Fall. 1 credit. (12 lec). Offered even-numbered years. C. B. Watkins. Emphasizes advanced existing and emerging technology and practice for handling, monitoring, and storage of horticultural crops after harvest.

HORT 6350 Tools for Thought
Fall. 1 credit. Prerequisite: graduate standing. S–U grades only. T. H. Whitlow. Discusses reading of Kuhn, Waddington, Wilson, Lewontin, and others emphasizing application of the philosophy of science to the real-world practices of scientists.

HORT 6460 Advanced Viticultural Topics (also VIEN 6460)
Spring. 2 credits. Prerequisite: HORT 3440 or equivalent. S–U or letter grades. Offered even numbered years; next offered 2011–2012. A. N. Lasko. In-depth lecture/discussion of complex topics, including crop load effects, canopy management, water relations, vineyard efficiency, and vineyard variability/precision viticulture.

HORT 6940 Special Topics in Horticulture
Fall or spring. 4 credits max. S–U or letter grades. Staff. The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committees, and the same course is not offered more than twice under this number.

HORT 6970 Graduate Individual Study in Horticulture
Fall or spring. Variable credit. Prerequisite: permission of instructor(s). S–U or letter grades. Staff. Graduate individual study in horticultural sciences under the direction of one or more faculty members.

HORT 7000 Graduate Teaching Experience
Fall or spring. Variable credit. Prerequisites: permission of instructor; graduate standing. Undergraduates should enroll in HORT 4980. S–U or letter grades. Staff. Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. May include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring.

HORT 8900 Thesis Research, Master of Science
Fall or spring. Variable credit. S–U grades only.

HORT 9900 Thesis Research, Doctor of Philosophy
Fall or spring. Variable credit. S–U grades only.

INFORMATION SCIENCE
INFO 1300 Introductory Design and Programming for the Web (also CS 1300)
Fall. 3 credits. For description, see INFO 1300 in CIS section.

INFO 2040 Networks (also CS 2050, ECON 2040, SOC 2090) (SBA)
Fall. 4 credits. For description, see ECON 2040.

INFO 2140 Cognitive Psychology (also COGST/PSYCH 2140) (KCM)
Spring. 4 credits. Limited to 175 students. Prerequisite: sophomore standing. Graduate students: see INFO 6140. For description, see PSYCH 2140.

INFO 2300 Intermediate Design and Programming for the Web (also CS 2300)
Spring. 3 credits. Prerequisite: INFO 1300 strongly recommended. Must be taken before INFO 3300. For description, see INFO 2300 in CIS section.

INFO 2310 Topics in Web Programming and Design
INFO 2450 Communication and Technology (also COMM 2450) (SBA)
Fall, summer. 3 credits. For description, see COMM 2450.

INFO 2921 Inventing an Information Society (also AMST/ECE/ENGRC 2980, HIST 2920, STS 2921)
Spring. 3 credits. For description, see ENGRG 2980.

INFO 2950 Mathematical Methods for Information Science
Spring. 4 credits. Corequisite: MATH 2310 or equivalent. For description, see INFO 2950 in CIS section.
INFO 3200  New Media and Society (also COMM 3200) (CA)  
Spring. 3 credits.  
For description, see COMM 3200.  
[INFO 3300  Data-Driven Web Applications (also CS 3300)  
Spring. 3 credits.  Prerequisites: CS 2110 and INFO 2800 or permission of instructor.  
For description, see INFO 3300 in CIS section.]

INFO 3400  Psychology of Online Relationships (also COMM 3400)  
Fall. 3 credits.  Prerequisite: COMM/INFO 2450.  
For description, see COMM 3400.  
INFO 3450  Human–Computer Interaction Design (also COMM 3450) (SBA)  
Fall. 3 credits.  Prerequisite: INFO 2450 or permission of instructor.  
May be taken simultaneously with INFO 2450.  
For description, see COMM 3450.  
INFO 3460  Online Communities (also COMM 3460) (SBA)  
Fall. 3 credits.  Prerequisite: COMM 2450.  
For description, see COMM 3460.  
INFO 3490  Media Technologies (also COMM 3490,STS 3491) (CA)  
Spring. 3 credits.  Offered odd-numbered years.  
For description, see COMM 3490.  
INFO 3561  Computing Cultures (also STS 3561) (CA)  
Spring. 4 credits.  No technical knowledge of computer use presumed or required.  
For description, see STS 3561.  
INFO 3650  Technology and Collaboration (also COMM 3650) (SBA)  
Spring. 3 credits.  Prerequisite: INFO 2450.  
For description, see COMM 3650.  
[INFO 3660  History and Theory of Digital Art (also ARTH 3660) (CA)  
Fall. 4 credits.  Next offered 2011–2012.  
For description, see ARTH 3650.]  
INFO 4144  Responsive Environments  
Spring. 4 credits.  
For description, see ARTH 4144.  
INFO 4290  Copyright in the Digital Age (also COMM 4290) (CA)  
Fall. 5 credits.  Offered odd-numbered years.  
For description, see COMM 4290.  
INFO 4300  Information Retrieval (also CS 4300)  
Fall. 3 credits.  Prerequisite: CS 2110 or equivalent.  
For description, see INFO 4300 in CIS section.  
INFO 4302  Web Information Systems (also CS 4302)  
Spring. 3 credits.  Prerequisites: CS 2110 and some familiarity with web site technology.  
For description, see INFO 4302 in CIS section.  
INFO 4307  Learning from Web Data  
Fall. 3 credits.  Prerequisites: CS 2110 and INFO 2950, or graduate standing.  
For description, see INFO 4307 in CIS section.  
INFO 4320  Introduction to Rapid Prototyping and Physical Computing  
Spring. 3 credits.  Prerequisite: INFO 1300 or equivalent or permission of instructor.  
Materials fee: $250.  
For description, see INFO 4320 in CIS section.  
INFO 4400  Advanced Human–Computer Interaction Design (also COMM 4400) (SBA)  
Spring. 3 credits.  Prerequisite: INFO 3450.  
For description, see COMM 4400.  
INFO 4440  Computer-Mediated Communication (also COMM 4440) (SBA)  
Spring. 3 credits.  Prerequisite: INFO 2450.  
For description, see COMM 4440.  
INFO 4470  Social and Economic Data (also IRLLE 4470)  
Spring. 4 credits.  Prerequisites: one semester of calculus, an introductory statistics requirement, at least one upper-level social science course, or permission of instructor.  
For description, see INFO 4470 in CIS section.  
INFO 4500  Language and Technology (also COMM 4500) (SBA)  
Spring. 3 credits.  Prerequisite: INFO 2450 or permission of instructor.  
For description, see COMM 4500.  
INFO 4900  Independent Reading and Research  
Fall, spring. 1–4 credits.  
Independent reading and research for undergraduates.  
INFO 4910  Teaching in Information Science, Systems, and Technology  
Fall, spring. 3 credits.  
Involves working as a TA in a course in the information science, systems, and technology major.  
[INFO 5150  Culture, Law, and Politics of the Internet (SBA)]  
INFO 5300  The Architecture of Large-Scale Information Systems (also CS 5300)  
Spring. 4 credits.  Prerequisite: INFO 3300 or CS 4320.  
For description, see INFO 5300 in CIS section.  
INFO 5610  Cognitive Psychology (also COGST/PSYCH 6140)  
Spring. 4 credits.  
For description, see PSYCH 6140.  
INFO 6300  Advanced Language Technologies (also CS 6740)  
Fall. 3 credits.  Prerequisite: permission of instructor.  
Neither INFO 4300 nor CS 4740 are prerequisites.  
For description, see CS 6740 in CIS section.  
[INFO 6341  Information Technology in Sociocultural Context (also STS 6341)]  
INFO 6400  Human–Computer Interaction Design (also COMM 6400)  
Spring. 3 credits.  Prerequisite: graduate standing or permission of instructor.  
For description, see COMM 6400.

Spring. 3 credits.  Prerequisite: graduate standing or permission of instructor.  
For description, see COMM 6450.  
[INFO 6648  Speech Synthesis by Rule (also LING 6648)  
Spring. 4 credits.  Prerequisite: LING 4401, 4419, or permission of instructor.  
For description, see LING 6648.]  
INFO 6850  The Structure of Information Networks (also CS 6850)  
Spring. 4 credits.  Prerequisite: CS 4820.  
For description, see INFO 6850 in CIS section.  
INFO 7090  IS Colloquium  
Fall, spring. 1 credit.  
For staff, visitors, and graduate students interested in information science.  
INFO 7900  Independent Research  
Fall, spring.  Variable credit.  Prerequisite: permission of an information science faculty member.  
Independent research for M.Eng. students and pre-A exam Ph.D. students.  
INFO 9900  Thesis Research  
Fall, spring.  Variable credit.  Prerequisite: permission of an information science faculty member.  
Thesis research for post-A exam Ph.D. students.  

INTERNATIONAL AGRICULTURE AND RURAL DEVELOPMENT  
IARD 2020  Perspectives in International Agriculture and Rural Development  
Fall. 3 credits.  R. Nelson and R. Herdt.  
Designed to enable students to gain an understanding of major issues in international agricultural development. The course provides an overview of world poverty and hunger and of varying perspectives on approaches being taken to address these and related problems. Students characterize the state of agriculture and rural livelihoods in selected developing countries, and analyze how innovations in agriculture in these countries can contribute to rural development.  
IARD 3200  Experiential Garden-Based Learning in Belize (also HORT 3200)  
Spring. 3 credits.  Letter grades only.  
M. Eames-Shayevich.  
For description, see HORT 3200.  
IARD 4010  Experience Latin America: Rural and Urban Realities I (also LATA 4010)  
Fall. 2 credits.  T. Tucker and D. Castillo.  
Acquaints students with fundamental cultural, historical, sociopolitical, literary, anthropological, health, agricultural, and development issues in southern Mexico. The lectures/discussions establish the global and regional contexts for better transcultural understanding. This course may be taken as a stand-alone survey course in international agriculture and rural development or in Latin American studies. However, it is primarily a preparatory course for participants selected to participate in the spring-semester course Experience Latin America II: Chiapas Edition (IARD or LATA 6010), which includes a field-
study trip to southern Mexico (Chiapas during the January intersession).

IARD 4020 Agriculture in Developing Nations I (also FDSC 4020) Fall. 2 credits. K. V. Raman and W. R. Coffman. Acquaint students with the major issues and problems in international agriculture and rural development and demonstrate how problems in development are being addressed in India and Thailand. The lectures/discussions establish the global and regional contexts for sustainable agricultural development and focus on development challenges in Asia through cases in India and Thailand. This course may be taken as a stand-alone survey course in international agriculture and rural development. However, it is primarily a preparatory course for participants selected to participate in the spring-semester course Agriculture in the Developing Nations II (IARD 6020), which includes a field trip to Asia during the January intersession.

IARD 4030 Traditional Agriculture in Developing Countries (also CSS 4030) Fall. 1 credit. S–U grades only. P. Hobbs. For description, see CSS 4030.

[IARD 4040 Crop Evolution, Domestication, and Diversity (also PLBR/BIOI 4040) Fall. 2 credits. Prerequisite: BIOMG 2810 or PLBR 2250 or permission of instructor. S–U or letter grades. S. Kresovich. For description, see PLBR 4040.]

IARD 4050 Patents, Plants, and Profits: Intellectual Property Management for Scientists and Entrepreneurs (also PLBR 4050) Spring. 2 credits. Prerequisite: senior or graduate standing. S–U or letter grades. A. F. Krattiger and S. Kowalski. For description, see PLBR 4050.

IARD 4140 Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts (also CSS 4140) Fall. 4 credits. Prerequisite: none specific; interest in agriculture and tropical cropping systems. J. J. Holmes. For description, see CSS 4140.

IARD 4500 Global Seminar: Building Sustainable Environments and Secure Food Systems for a Modern World (also FDSC/NTRES 4800) Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. J. Lassnie and D. Miller. For description, see NTRES 4800.

IARD 4910 Food, Farming, and Personal Belief (also CSS 4910) Spring. 1 credit. Prerequisites: Sustainable Agriculture (CSS 3900) or equivalent recommended. S–U grades only. G. Fick. For description, see CSS 4910.

IARD 4940 Special Topics in International Agriculture and Rural Development (also LATA 4940) Fall, spring, summer. 1–3 credits. S–U or letter grades. Staff. The department teaches “trial” courses, and special topics not covered in other courses, at the undergraduate level, under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

IARD 4960 International Internship (also LATA 4960) Fall, spring. 1–6 credits. Prerequisite: submission of approved internship form (see CALS internship policy guidelines). S–U or letter grades. Staff. International internship supervised by a faculty member who is directly involved in determining both the course content and in evaluating a student’s work. The student researches and initiates an appropriate international internship and negotiates a learning contract with the faculty supervisor, stating the conditions of the work assignment, supervision, and reporting. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

IARD 4970 Independent Study in IARD Fall and spring. 1–3 credits. Prerequisite: permission of instructor. S–U or letter grades. Staff. Allows students the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the direction of a faculty member.

IARD 5970 Independent Study in IARD (for M.P.S. Students) Fall, spring. 1–3 credits S–U or letter grades. Staff. Allows M.P.S. students the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the direction of a faculty member.

IARD 5980 International Development M.P.S. Project Paper Fall and spring. 1–6 credits; max. 6 credits may be applied toward M.P.S. degree. Prerequisite: M.P.S. candidates in field of international development (ID). S–U grades only. N. Uphoff. Problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international development.

IARD 5990 International Agriculture and Rural Development M.P.S. Project Paper Fall and spring. 1–6 credits; maximum of 6 credits may be applied toward M.P.S. degree requirements. Prerequisite: M.P.S. candidates in field of international agriculture and rural development (IARD). S–U grades only. S. Kyle. Problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international agriculture and rural development.

IARD 6010 Experience Latin America II (Chiapas Edition) (also LATA 6010) Spring. 3 credits. Prerequisite: IARD or LATA 4010. T. Tucker, D. Castillo. Designed to provide students with an opportunity to observe the rich living cultures, environments, ecologies, rural and urban communities, and development issues in tropical southern Mexico. Also designed to promote interdisciplinary exchange among faculty, students, and their Mexican hosts and counterparts. A two-week field-study trip in January is followed by discussions, written projects, and oral presentations dealing with a range of topics pertinent to the target cultures of Chiapas. Optional 1-credit discussion in Spanish can be taken concurrently (SPAN 3020).

IARD 6020 Agriculture in Developing Nations II (also FDSC 6020) Spring, field study trip to Asia during Jan. intersession. 3 credits. Prerequisites: IARD 4020 and (or) permission of instructors. Cost of field-study trip to be determined (including airfare, local transportation, and lodging). Some merit and need-based financial aid may be available. K. V. Raman and W. R. Coffman. Designed to provide students with an opportunity to observe agricultural development in Asia and to promote interdisciplinary exchange among faculty, staff, students, and their Indian counterparts. A three-week field-study trip in January is followed by discussions, written projects, and oral presentations dealing with problems in food, agriculture, and livestock production in the context of social and economic conditions of India.

IARD 6030 Planning and Management of Agriculture and Rural Development (also GOVT 6927) Spring. 4 credits. N. T. Uphoff and T. W. Tucker. Reviews experience and approaches in agricultural and rural development in a range of developing countries, with particular attention to contemporary issues of participation, decentralization, local institutions, capacity-building, civil society, social capital, and empowerment. Case studies from Asia, Africa, and Latin America.

IARD 6040 Food Systems and Poverty Reduction: Concepts and Themes (also AEM 6040) Fall. 3 credits. Prerequisite: Ph.D. students; permission of instructor. C. B. Barrett and R. Nelson. Introduces food systems concepts, theories, and empirical evidence. Provides students with a common base knowledge about the whole food system, drawing on multiple disciplines.

[IARD 6060 Food Systems and Poverty Reduction: Integration (also AEM 6060) Fall. 4 credits. Next offered 2011–2012. P. Pintstrup-Andersen and A. Power. Focuses on cross-cutting topics and case studies that integrate multiple disciplines. Students produce group-authored draft journal articles that marshal secondary evidence and post novel conceptualizations around problems related to food systems and poverty reduction.]

IARD 6180 Systems Dynamics Applications (also AEM 6180) Spring. 4 credits. R. G. Dudley. For description, see AEM 6180.

IARD 6850 Training and Development: Theory and Practice (also EDUC 6850) Spring. 4 credits. S–U or letter grades. R. Caffarella. For description, see EDUC 6850.
IARD 6940 Graduate Special Topics in IARD
Fall or spring. 1–4 credits. S–U or letter grades. Staff. The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

IARD 6960 Perspectives in International Development (also NTRES/CSS/AEM 6960)
Fall, spring. 1 credit. S–U grades only. R. Christly, L. Buck, and P. Hobbs. A variety of speakers present seminars on international development topics relating to sustainable development throughout the world. Students attend each seminar and submit a five-page essay at the end of the semester reflecting on the speakers' presentations and analyzing connections between topics.

IARD 6970–6980 International Development M.P.S. Seminar
Fall, spring. 1 credit. S–U grades only. N. Uphoff. For M.P.S. students to discuss important issues in international development and to prepare themselves to write their project papers. Specific content varies.

IARD 6990 International Agriculture and Rural Development M.P.S. Project Seminar
Fall, spring. 1 credit. Prerequisite: required for, and limited to, M.P.S. IARD students or permission of instructor. S–U grades only. S. C. Kyle. Provides students with the opportunity to develop and present their special projects. Also serves as a forum for discussion of current issues in low-income agricultural and rural development, with particular attention to interdisciplinary complexities.

IARD 7830 Farmer-Centered Research and Extension Education (also EDUC 7830)
Fall. 3 credits. S–U or letter grades. T. Tucker, H. Michelsen, and L. Fisher. Introduction to participatory traditions in farming systems research, extension, evaluation of rural development, technology generation, gender analysis, participatory rural appraisal, and documentation of local and indigenous knowledge of community-based development. Case studies of farmer-centered research and extension provide a focus for analysis. Appropriate roles of researchers and extensionists as partners with farmers are examined. A major contribution of farmer-centered research and extension is its potential to legitimize people's knowledge by enhancing their capacity to critically analyze their own problems, conduct their own research, and empower them to take direct action to solve those problems.

LA 1410 Grounding in Landscape Architecture
Fall. 4 credits. Limited to 15 students. Letter grades only. Fee for required package of drafting equipment plus materials for projects approx. $300. Introduction to the representation and design of landscapes and to working in a studio setting. Uses freehand drawing, measured drawing, and model making to understand design principles of the landscape within a cultural and ecological paradigm.

LA 1420 Grounding in Landscape Architecture
Spring. 4 credits. Limited to approx. 20 students. Prerequisite: foundational landscape architecture majors or permission of instructor. Required drafting equipment plus project supplies: approx. $250. Applies fundamentals of landscape design to small-scale site-planning projects. Work in the studio introduces students to the design process, design principles, construction materials, planting design, and graphics.

LA 2010 Medium of the Landscape
Fall. 5 credits. Prerequisite: landscape architecture majors. Required drafting equipment, supplies, and fees: approx. $200; field trip: approx. $250. Studio course exploring the design process and principles involved in organizing and giving form to outdoor space through the use of structures, vehicular and pedestrian circulation systems, earthforms, water, and vegetation.

LA 2020 Medium of the Landscape
Spring. 5 credits. Prerequisite: LA 2010 with grade of C- or better. Supplies and fees: approx. $250; field trip: approx. $250. Focuses on the role of materials in design, design theory, and design vocabulary associated with landscape architecture projects.

LA 2150 Writing Seminar: Engaging Places
Fall. 4 credits. Lec. Next offered 2011–2012. A. Hammer. Explores how places come to be what they are, how they shape—and are shaped by—the people who live in them, how they become coordinates for plotting both a culture's biography and the meaning of a life. While the course serves as an introduction to cultural landscape studies, or the interaction of people and place, its focus is on writing: how do we represent the complexity of a place and our relation to it?

LA 2610 Fieldwork in Urban Archaeology (also CRP/ARKEO 2610) (CA) (LA)
Fall. 4 credits. Recommended. Offered 18-hour Sat. field labs required; students choose three Sat. from seven offered. S. Baugher. Urban archaeologists study American Indian, colonial, and 19th-century sites that now lie within the boundaries of modern cities. The course explores how urban centers evolve, what lies beneath today's cities, and how various cultures have altered the urban landscape. Students participate in a local archaeological excavation.

LA 2620 Laboratory in Landscape Archaeology (also ARKEO 2620) (CA) (LA)
Spring. 3 credits. Recommended. LA 2610 or ARKEO 2610 or permission of instructor. S. Baugher.

Various American Indian civilizations and European cultures have altered the landscape to meet the needs of their cultures. Students learn how to interpret the American Indian and Euro-American landscapes of specific archaeological sites by identifying and dating artifacts, studying soil samples, and creating site maps.

LA 2820 Photography and the American Landscape (CA) (LA)
Fall. 5 credits. A. Hammer. Interdisciplinary study of the relationship between photography, the American landscape, and cultural meaning. Topics include representation and perception, photography and painting in the 19th century, expeditionary surveys and national identity, pictorialism, the American sublime, photography and tourism, modernism and postmodernism, the industrial landscape and American ruins, and contemporary practice.

LA 3010 Integrating Theory and Practice I
Fall. 5 credits. Prerequisite: LA 2020 with grade of C or better. Supplies and fees: approx. $250; field trip: approx. $250. This studio engages participants in the art and science of design as well as focusing on site-scaled projects that consider significant cultural and natural landscapes. This course explores theories of landscape design, restoration, sustainable design, and landscape representation through projects that derive form from a specific site and place.

LA 3020 Integrating Theory and Practice II
Spring. 5 credits. Supplies and fees: approx. $250; field trip: approx. $250; international studios: $500. Studio building on prior course work with an expectation that participants can creatively manipulate the program and conditions of a site, with increased emphasis on contemporary construction technology. Focuses on the expression of design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical, and historical factors and their relationship to site design and planning are critically explored through theory and practice.

LA 3160 Site Engineering
Fall. 5 credits. Lectures and studio projects dealing with earthwork estimating, storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 3180 Site Construction
Spring. 5 credits. Prerequisite: permission of instructor. P. Trowbridge. Emphasizes detail design and use of landscape materials in project implementation. It explores construction materials, including specifications, cost estimates, and methods used by landscape architects in project implementation. It includes lectures, studio problems, and development of drawings leading to construction documentation of one comprehensive project.

LA 3600 Pre-Industrial Cities and Towns of North America (also ARKEO 3600, CRP 3600/6660, LA 6660) (CA) (LA)
Spring. 3 credits. S. Baugher. Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town
and city living. The course considers how each culture has altered the landscape in its own unique way as it created its own built environments.

**LA 4010 Urban Design Studio**  
Fall. 5 credits.  
This studio focuses on the integration of theory and practice in landscape architecture at the urban scale. Urban design methods and strategies are introduced and applied to city-scale projects including community engagement. Students are engaged in contemporary urban design strategies and methodologies.

**LA 4020 Integrating Theory and Practice II**  
Spring. 5 credits. Supplies and fees: approx. $250; field trip: approx. $250.  
Studio focusing on the expression of design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical, and historic factors and their relationships to site design and planning are critically explored through theory and practice in this studio.

**LA 4030 Directed Study: The Concentration**  
Fall, spring. 1 credit. Prerequisite: landscape architecture undergraduates in final year of study.  
Working with their advisor, students create a written and visual paper that documents the concentration intent.

**LA 4100 Computer Applications in Landscape Architecture**  
Fall or spring. 3 credits. Limited to 15 students. Prerequisite: landscape architecture students. S. Curtis.  
Designed to develop a working knowledge of various computer software applications with emphasis on Autocad. Explores other applications relative to land-use planning and the profession of landscape architecture.

**LA 4120 Professional Practice**  
Fall. 1 credit.  
Presents the student with an understanding of the emerging role of the professional landscape architect. The course helps students explore various types of practice and introduces the problems and opportunities students may encounter in an office or in other professional situations. Topics include: job-seeking preparation, practice diversity, marketing professional services, office and project management, construction management, and ethics.

**LA 4180/7900 Audio Documentary (also AMST 4180) (CA) (LA)**  
Spring. 3 credits. Limited to 15 students. Letter grades only. A. Hammer.  
Offers hands-on experience in basic documentary storytelling. Students create aural portraits of New York landscapes and communities undergoing critical change. Encourages projects appropriate for podcasting, webcasting, and radio. Explores relationship between sound and the still or moving image.

**LA 4830 Seminar in Landscape Studies (CA) (LA)**  
Spring. 3 credits. Prerequisite: senior or graduate standing in any major or field.  
Topical seminar with a different subject and method each time it is offered.

**LA 4860/7910 Placemaking by Design**  
Fall. 3 credits. Limited to 20 students. Priority given to juniors, seniors, and graduate students. S–U or letter grades. P. Harrigan.  
Seminar providing an understanding of contemporary planning and landscape architecture design strategies that reaffirm and reclaim a sense of place. Readings and discussions focus on the theory and practice of placemaking as represented in the literature and in built works. Addresses the following questions: What constitutes a place-based design approach and what distinguishes it from other more conventional design approaches? Who are the key players shaping the theory and practice of placemaking?

**LA 4910 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 4910)**  
Fall. 4 credits. Limited to 48 students. Prerequisite: horticulture or landscape architecture majors or permission of instructors. Preregistration required. Supplies: approx. $50. P. Trowbridge and N. Bassuk.  
Focuses on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, students are able to critically assess potential planting sites; select appropriate trees, shrubs, vines, and ground covers for a given site; and learn about the principles and practices of site remediation and plant establishment. Design follows by written specifications and graphic details is produced to implement these practices.

**LA 4920 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 4920)**  
Spring. 4 credits. Limited to 48 students. Prerequisite: horticulture or landscape architecture majors or permission of instructors; passing grade in HORT/LA 4910. Preregistration required. Supplies: approx. $50. P. Trowbridge and N. Bassuk.  
Second half of course focusing on winter identification, uses, and establishment of woody plants in urban and garden settings. Issues of site assessment and soil remediation are emphasized in addition to soil volume calculations, drainage, surface detailing, and planting techniques. Students critically assess potential planting sites and select appropriate trees, shrubs, vines, and groundcovers for a given site. Designs for specific sites are followed by written specifications and graphic details that are produced to implement these proposals. Students are engaged in a hands-on manner in site, soil, and planting techniques they have learned by creating new landscapes that serve to integrate theory, principles, and practices. Together, HORT/LA 4910 and 4920 constitute an integrated course.

**LA 4940 Special Topics in Landscape Architecture**  
Fall or spring. 1–3 credits; may be repeated for credit. S–U or letter grades.  
Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

**LA 4950 Green Cities: The Future of Urban Ecology (also CRP 3840/5840)**  
Fall. 4 credits.  
Explores the history and future of the ecology of cities and their role in solving the present global ecological crisis. Examines the politics, design, and economics of “green cities” in terms of transportation, renewable energy, solid waste and recycling, land use, and the built environment.

**LA 4970 Individual Study in Landscape Architecture**  
Fall or spring. 1–5 credits; may be repeated for credit. Students must register using independent study form (available in 140 Roberts Hall). S–U or letter grades. Work on special topics by individuals or small groups.

**LA 4980 Undergraduate Teaching Experience**  
Fall or spring. 1–2 credits. Prerequisites: previous enrollment in course to be taught and permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty members.

**LA 4990 Undergraduate Research Experience**  
Fall or spring. 1–5 credits. Students must register using independent study form (available in 140 Roberts Hall). Permits outstanding undergraduates to carry out independent research in landscape architecture under academically appropriate faculty supervision. Research goals should include description, prediction, and explanation, and should generate new knowledge in the field of landscape architecture.

**LA 4991 Undergraduate Honors Research in Landscape Architecture**  
Fall or spring. 1–5 credits. Students must register using independent study form (available in 140 Roberts Hall). Permits outstanding students to carry out independent research in landscape architecture under appropriate faculty supervision. Research goals should include description, prediction, and explanation and should generate new knowledge in the field of landscape architecture.

**LA 5010 Composition and Theory**  
Fall. 5 credits. Prerequisite: graduate standing. Drafting supplies and fees: approx. $250; field trip: approx. $250. Basic principles of natural and cultural processes that form ‘places’ in the landscape. Projects focus on design applied to the practice of landscape architecture; particularly the relationship between measurement, process, experience, and form at multiple scales of intervention.

**LA 5020 Composition and Theory**  
Spring. 5 credits. Prerequisite: graduate standing. Drafting supplies and fees: approx. $250; field trip: approx. $250. Studio focusing on the spatial design of project-scale site development. Students develop their expertise in applying the design theory, vocabulary, and graphic expression introduced in LA 5010.
LA 5050  Landscape Representation I  
Fall. 3 credits. Corequisite: LA 5010 or permission of instructor. 
Introduces students to both conventional and unconventional modes of landscape architectural design representation. Teaches drafting, orthographic drawing, axonometric project, lettering, analysis, and concept drawing alongside more expressive modes of direct site study and representation. 

LA 5060  Graphic Communication II  
Spring. 3 credits. Prerequisite: LA 5050. 
Corequisite: LA 5202 or permission of instructor. 
Intermediate-level course focusing on modes of landscape representation from ideation to presentation. Representation modes may include freehand, process drawing, and analysis and orthographic drawing; concept modeling; composite drawings; and visual books.

LA 5240  History of European Landscape Architecture*  
Fall. 3 credits. L. Mirin. 
*Offered through College of Architecture, Art, and Planning.

LA 5250  History of American Landscape Architecture*  
Spring. 3 credits. L. Mirin. 
*Offered through College of Architecture, Art, and Planning.

LA 5450  The Parks and Fora of Imperial Rome  
Spring. 3 credits. Prerequisite: advanced standing in a design field, classics, or history of art, other disciplines, or permission of instructor. K. Gleeson. 
Advanced seminar seeking an interdisciplinary group of students in classics, art history, archaeology, landscape architecture, horticulture, and architecture to bring their knowledge of Latin, Greek, Italian, archaeology, drawing, design, or computer modeling to a collaborative study of the ancient forums and public parks of the ancient Roman world. Seminar involves students in current research and publication in this emerging area of archaeology and landscape history.

LA 5820  Photography and the American Landscape  
Fall. 3 credits. A. Hammer. 
Interdisciplinary study of the relationship between photography, the American landscape, and cultural meaning. Topics include representation and perception, photography and painting in the 19th century, expeditionary surveys and national identity, pictorialism, the American sublime, photography and tourism, modernism and postmodernity, the modern landscape and American ruins, and contemporary practice.

LA 5900  Theoretical Foundations  
Spring. 3 credits. Prerequisite: senior or graduate standing. A. Hammer. 
This seminar is intended to provide students in the Department of Landscape Architecture with an overview of the theories and discourses related to the field. Topics may include, but are not limited to, environmental perception, issues of language and representation, pertinent debate in cultural geography, developments in ecological design, sustainable development, landscape urbanism, infrastructure, etc. Weekly readings, discussion, short papers.

LA 5970  Graduate Individual Study in Landscape Architecture  
Fall or spring. 1–5 credits; may be repeated for credit. 
Work on special topics by individual or small groups.

LA 5980  Graduate Teaching  
Fall or spring. 1–3 credits. Prerequisite: permission of instructor. Staff. 
Designed to give qualified students experience through involvement in planning and teaching courses under the supervision of faculty members. The experience may include leading discussion sections, preparing, assisting in desk critiques, and presenting lectures. There are assigned readings and discussion sessions on education theory and practice throughout the semester. (Credit hours are determined by the formula: 2 hours per week = 1 credit hour.)

LA 6010  Integrating Theory and Practice I  
Fall. 5 credits. Prerequisite: graduate standing or permission of instructor. Supplies: approx. $250. 
This studio focuses upon urban, site-scaled projects that consider significant cultural and natural landscapes. Explores theories of landscape restoration, sustainable design, and landscape representation. These are explored through projects that derive form from specific site and place. The integration of site history, ecology, and site construction supports an understanding and relationship between theory and practice.

LA 6020  Integrating Theory and Practice II  
Spring. 5 credits. Prerequisite: graduate standing. Drafting supplies and fees: approx. $250; field trip: approx. $250. 
This studio builds on prior course work with an expectation that participants can creatively manipulate the program and conditions of a site, with increased emphasis on contemporary construction technology. Projects focus upon the expression of design solutions that can uniquely and explicitly articulate the sense of place and site. Social, cultural, physical, and historic factors and their relationship to site design and planning are critically explored through theory and practice.

LA 6030  Directed Study: The Concentration  
Fall, spring. 1 credit. Prerequisite: landscape architecture graduate students in final year of study. 
Working with their advisor, students create a written and visual paper that documents the concentration intent.

LA 6160  Site Engineering  
Fall. 5 credits. 
Lectures and studio projects dealing with earthwork estimating, storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 6180  Site Construction  
Spring. 5 credits. Prerequisite: permission of instructor. P. Trowbridge. 
Emphasizes design detail and use of landscape materials in project implementation. It explores materials, including specifications, cost estimates, and methods used by landscape architects in project implementation. It includes lectures, short studio problems, and the development of drawings leading to construction documentation for one comprehensive project.

LA 6660  Pre-Industrial Cities and Towns of North America (also ARKEO 3600, CRP 3600/6660) (CA) (LA)  
Spring. 3 credits. S. Baugher. 
Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. The course considers how each culture has altered the landscape in its own unique way as it created its own built environments.

LA 6900  Methods of Landscape Architectural Inquiry  
Spring. 3 credits. Prerequisite: graduate standing. S–U or letter grades. 
Builds on the theoretical foundations provided in LA 5900 with an investigation of the variety of methods used in landscape architectural and urban design research and practice. These methods may include, but are not limited to, physical analysis, mapping, site inventory, behavioral observations, cultural landscape investigations, surveys, and interviews. The format of the course combines weekly lecture and applied research.

LA 6940  Special Topics in Landscape Architecture  
Fall or spring. 1–3 credits; may be repeated for credit. S–U or letter grades. 
Topical subjects in landscape architectural design, theory, history, or technology. Includes group study of topics not considered in other courses.

LA 7010  Urban Design and Planning  
Fall. 5 credits. Prerequisite: graduate standing. Supplies and fees: approx. $250; required field trip: approx. $50. 
This studio explores the application of urban design and landscape urbanism techniques to the problems and opportunities of contemporary city making. The studio investigates the social, cultural, natural, and infrastructural systems of urban environments, and develops integrated spatial design strategies involving streets, built form, and open space networks. The course introduces three-dimensional computer modeling and digital design media as tools for urban design.

LA 7020  Advanced Design Studio  
Spring. 5 credits. 
This advanced design studio provides students in the final year of the graduate program in Landscape Architecture with the opportunity to work on complex, real-time projects. The overarching goal of this course is to test the student’s theoretical, methodological, technical, and representational competency and ability to engage with a range of scales and issues. Through intensive studio work, seminar, research, and independent study, students gain the knowledge and skills necessary to develop sound and creative solutions to environmental design problems.

LA 7900  Audio Documentary  
Spring. 3 credits. Letter grades only. A. Hammer. 
Offered hands-on experience in basic documentary storytelling. Students create aural portraits of New York landscapes and
systems within the text of modern society. Active student participation in all phases of the course is expected.

**NTRES 1102 Introduction to Environmental Studies**
Summer. 3 credits. S-U or letter grades. R. J. McNeil.
Discussion-centered course examining the interrelationships between the sciences, arts, and humanities as they relate to our environment. Students explore how we manage nature and negotiate with each other to meet our needs. Emphasis is on principles of ecology, economics, aesthetics, ethics, and law.

**NTRES 1103 Science Fiction and Environment**
Summer. 3 credits. S-U or letter grades. R. J. McNeil.
Intended primarily for Summer College students (high school rising seniors), new freshmen, Cornell staff, and other people with an interest in, but little formal background in, environmental studies. Science fiction stories and two books are used as vehicles for illustrating environmental predicaments and to enable easy discussion of environmental principles that may be helpful to us in choosing ways to live. Some extra attention to studying and learning may be helpful to new college students.

**NTRES 2010 Environmental Conservation**
Spring. 3 credits. J. Yavitt.
Our lives increasingly are touched by questions about environmental degradation at local, regional, and global scales. Business as usual is being challenged. This course stimulates students to go beyond the often simplistic portraits of the environmental dilemma offered by the mass media to gain a firmer basis for responsible citizenship and action on environmental issues.

**NTRES 2100 Introductory Field Biology**
Fall. 4 credits. Limited to 60 students. Prerequisites: two majors-level biology courses or permission of instructor. Cost of two required overnight weekend field trips: approx. $20. C. Smith.
Students will study a variety of ecological factors that may be helpful to us in choosing ways to live. Some extra attention to studying and learning may be helpful to new college students.

**NTRES 2030 Introduction to Biogeochemistry (also EAS 3030)**
Fall. 4 credits. Prerequisites: college-level chemistry and a biology and/or geology course. J. B. Yavitt and L. A. Derry.
For course description, see EAS 3030.

**NTRES 2110 Intro to the Science and Management of Natural Resources (also SNES 1101)**
Fall. 3 credits. Prerequisite: first-year students accepted to Natural Resources, Science and Natural and Environment Systems, or Environmental Undecided majors in CALS. T. Fahey and E. Madsen.
Provides an overview of the science and management of natural and environmental resources. Material highlights facts and principles from the physical, biological, social, and economic sciences. The focus is on identifying knowledge required to enhance intelligent and sustainable management of the Earth’s ecological and environmental systems. Case studies, guided readings, multi-media presentations, videos, discussions, and field and laboratory exercises are used to introduce students to the interdisciplinary basis for understanding the complexities of such environmental problems, and (4) discuss how natural resource management and environmental policy reflect these perspectives.

**NTRES 2320 Nature and Culture (HA) (CA)**
Spring or summer. 3 credits. S-U or letter grades. J. Tantillo.
Examines the history of human-environment relationships, the diversity of environmental values and ethics, cultural manifestations of nature, and the role of society in forming natural resource and environmental policy. The history of natural resource conservation and management in North America, including the history and philosophy of ecology, is introduced.

**NTRES 2670 Introduction to Conservation Biology (also BIOEE)**
Fall. 2 or 3 credits. 3 credits with disc sec, two Sat a.m. field trips, and two essays. May not be taken for credit after NTRES 4100.
For course description, see BIOEE 2670.

**NTRES 2830 DNA, Genes, and Conserving Genetic Diversity**
4 credits. Prerequisite: BIOEE 1780. Letter grades only. L. J. McNeil.
Covers genetic principles as they relate to population biology and biodiversity; recommended as a preliminary to upper-level ecology, evolution, and natural resource management courses.

**NTRES 3100 Applied Population Ecology**
Fall. 3 credits. Prerequisite: completion of calculus (MATH 1106, 1110, or equivalent). Highly recommended: background in biology or ecology. Letter grades only. E. Coch.
In-depth analysis of the ecological factors influencing the natural fluctuations and regulation of animal population numbers. Examines models of single- and multi-species population dynamics, with emphasis on understanding the relationship between ecological processes operating at the individual level and subsequent dynamics at the population level. Significant emphasis is placed on principles as applied to conservation and management. Computer exercises are used to reinforce concepts presented in lecture.

**NTRES 3110 Fish Ecology, Conservation, and Management**
Spring. 3 credits. Prerequisites: none. Recommended: NTRES 2100, general ecology, or equivalent. L. Rudstam.
Covers basic principles of fish ecology at the individual, population, and community level, particularly as they relate to interactions between fish and their environment and the implications of human activities to these relationships. Emphasizes the application of ecological principles to the conservation and management of fisheries resources and aquatic habitats. Extensive use of current literature and case studies provide context for the principles covered.
NTRES 3111 Fish Ecology Laboratory
Spring, four field trips TBA. 1 credit. Pre-
or corequisite: NTRES 3110. L. Rudstam.
Four field trips are planned to provide hands-
on-experience in fish ecology and management. They include a one-weekday Great Lakes experience aboard the USGS Kaho in Lake Ontario, a one-day Oneida Lake trip to a state-of-the-art fish hatchery during the walleye run, a one-day Oneida Lake weekend trip to the Cornell Biological Field Station experiencing fish collection techniques, and a two-hour trip to Cayuga Inlet to witness the spring run of rainbow trout and possibly lamprey eels. Activities include demonstrations of various fish sampling gears and sample analysis techniques. Each student is required to maintain a written journal describing activities and concepts learned from each field trip that is submitted at the end of the semester.

NTRES 3130 Biological Statistics I (also BTRY 3010, STS 2200)
Fall. 4 credits. Prerequisite: one semester of calculus. P. Sullivan.
In this course, students develop statistical methods and apply them to problems encountered in the biological and environmental sciences. Methods include data visualization, population parameter estimation, sampling, bootstrap resampling, hypothesis testing, the Normal and other probability distributions, and an introduction to modeling. Applied analysis is carried out in the Splus/R statistical computing environment.

NTRES 3140 Conservation of Birds
Spring, summer. 2 credits. Prerequisite: NTRES 2100 or permission of instructor. Offered alternate years. C. R. Smith.
A course for majors and nonmajors, focusing on science-based bird conservation and management at the organism, population, community, and landscape levels.

NTRES 3141 Conservation of Birds Laboratory
Spring, summer. 1 credit. Corequisite: NTRES 3140. Offered alternate years. C. R. Smith.
A field-oriented course designed to teach skills of bird observation and identification based on the integration of field marks, songs and calls, and habitat cues.

NTRES 3220 Global Ecology and Management
Fall. 3 credits. Prerequisites: college-level biology and general ecology course. J. B. Yavitt.
The subjects of biogeography, ecology, and biodiversity have patterns and processes that emerge only at the global scale. Recognizing the global importance of these patterns and processes is even more imperative in light of the tremendous increase in the human population size and the effects of humans on the Earth. This course is an introduction to the field of global ecology. Topics include comparative ecology and biogeography, community ecology, island biogeography, and ramifications of global climatic change.

NTRES 3240 Sustainable, Ecologically Based Management of Water Resources
Spring. 3 credits. R. Schneider.
In-depth analysis of those ecological and biological principles relevant to the sustainable management of global fresh and marine water resources. Lectures and discussion integrate scientific literature with current management issues, including water supply, dams, irrigation, and groundwater overdraft. Topics include linkages between hydrologic variability and communities, groundwater restoration, flow paths for dispersal, patchily distributed water resources, and water quality controls on organisms. Graduate credit option available.

NTRES 3250 Forest Management and Maple Syrup Production

NTRES 3260 Applied Conservation Ecology
Spring. 3 credits. Prerequisite: BIOEE 2610 or permission of instructor. S. Morreale.
Field and lab course designed to provide direct experience with some of the most important field methods and analytical techniques used to examine ecosystem and community function, structure, and value, especially within the context of contemporary conservation ecology and evolutionary theory. Tools include field sampling techniques, conservation mapping, spatial referencing, GIS, measures of biodiversity, and manual and automated techniques for studying soil, stream, and forest biota and related physical factors.

NTRES 3300 Natural Resources Planning and Management
Fall. 3 credits. Prerequisite: junior standing. T. B. Lauber.
Focuses on terrestrial and aquatic resources. Emphasizes the comprehensive planning process and human dimensions of resource management. Students integrate biological, social, and institutional dimensions of management through case studies. Grades are based on individual and group performance.

NTRES 3311 Environmental Governance (also STS/BSOC/DSOC 3311) (SBA)

NTRES 3320 Introduction to Ethics and Environment (KCM)
Fall. 4 credits. J. T. Tinkle.
Introduction to ethics, aesthetics, and epistemology as related to the environment. Asks the question “How should I live?” and explores the implications of different answers to that question for our treatment of nature. Also examines the various approaches to ethics theory; the relations between art, literature, religion, and morality; the objective nature of value judgments; and the subjective nature of nature.

NTRES 3330 Ways of Knowing: Indigenous and Local Ecological Knowledge (also AIS/AMST 3330) (CA, SBA) (D)
Fall. 3 credits. Prerequisites: junior, senior, or graduate standing. K-A. Kassam.
Based on indigenous and local "ways of knowing," this course (1) presents a theoretical and humanistic framework from which to understand generation of ecological knowledge; (2) examines processes by which to engage indigenous and local knowledge of natural resources, the nonhuman environment, and human-environment interactions; and (3) reflects upon the relevance of this knowledge to climatic change, resource extraction, food sovereignty, and issues of sustainability and conservation.

NTRES 4100 Advanced Conservation Biology: Concepts and Techniques
Fall. 4 credits. Limited to 30 students. Prerequisites: CALS math requirement; NTRES 3100 or equivalent or permission of instructor. E. C. Allen and M. P. Hare.
Decision making in conservation biology requires measurement and analysis of variation at the genetic, population, and landscape or system levels. Emphasis in this course is on quantitative tools for the formal analysis of variation at all three levels and principles guiding maintenance and management of biological and genetic diversity.

NTRES 4110 Quantitative Ecology and Management of Fisheries Resources
Spring. 3 credits. Prerequisites: NTRES 3130 recommended or permission of instructor. S–U or letter grades. Offered alternate years. P. J. Sullivan.
Examines the dynamics of marine and freshwater fisheries resources with a view toward observation, analysis, and decision making within a quantitative framework.

NTRES 4120 Wildlife Population Analysis: Techniques and Models
Spring. 3 credits. Prerequisites: NTRES 3100 or 4100 (or equivalent or permission of instructor), NTRES statistics requirement. Lec/lab. Offered alternate years. E. Cooch.
Explores the theory and application of a variety of statistical estimation and modeling techniques used in the study of wildlife population dynamics.

NTRES 4130 Biological Statistics II (also BTRY 3020, STS 3200)
Spring. 4 credits. Prerequisite: NTRES 3130, BTRY 3010, or STS 2200. P. Sullivan.
Applies linear statistical methods to quantitative problems addressed in biological and environmental research. Methods include linear regression, inference, model assumption evaluation, the likelihood approach, matrix formulation, generalized linear models, single-factor and multifactor analysis of variance (ANOVA), and a brief foray into nonlinear modeling. Applied analysis is carried out in the Splus/R statistical computing environment.

NTRES 4200 Forest Ecology
Fall. 3 credits. Prerequisites: two semesters of college-level biology. T. J. Fahey.
Comprehensive analysis of the distribution, structure, and dynamics of forest ecosystems. Topics include paleoecology of forests, ecophysiology of forest trees, disturbance, succession, and community analysis; and hydrology, primary productivity, and nutrient cycling.

NTRES 4201 Forest Ecology Laboratory
Field trips designed to familiarize students with the nature of regional forests and provide experience with approaches to quantifying forest composition and its relation to environmental factors. Optional weekend field trips to Adirondacks and to the White Mountains, N.H. Includes group research projects in local forests.

NTRES 4220 Wetland Ecology Lecture
Fall. 3 credits. Prerequisite: BIOEE 1610. B. L. Bedford.
Examination of the structure, function, and dynamics of wetland ecosystems with an emphasis on ecological principles required to understand how human activities affect wetlands. Topics include geomorphology, hydrology, biogeochemistry, plant and animal adaptations to wetland environments, and vegetation dynamics of freshwater and saline wetlands. Biodiversity conservation, state and federal wetland regulations, and other approaches to wetland protection are considered.

**NTRES 4221 Wetland Ecology Laboratory**

Fall. 1 credit. Optional. Corequisite: NTRES 4220. One all-day Sat field trip required. B. L. Bedford. Integrated set of field and laboratory exercises designed to expose students to the diversity of wetland ecosystems; the vegetation, soils, water chemistry, and hydrology of wetlands in the region; methods of sampling wetlands vegetation, soils, and water; and methods of wetland identification and delineation.

**NTRES 4240 Landscape Impact Analysis**

Spring. 4 credits. Prerequisites: junior, senior, or graduate standing; one or more advanced courses in ecology, natural resources, or soil ecology. Offered alternate years. B. L. Bedford. Advanced course in applied ecology focusing on environmental impact analysis within the context of watersheds, landscapes, and regions rather than individual development projects. Students examine (1) the regulatory framework for environmental impact assessment, especially cumulative impact assessment; (2) concepts and methods from conservation science, landscape ecology, ecosystem science, biogeochemistry, and urban ecology as these pertain to landscape impact analysis; and (3) examples of environmental impact statements, conservation and resource planning documents, and integrated ecological assessments. Students work in teams to apply these concepts and methods in developing an integrated ecological assessment of a specific, large geographic area (e.g., 10 to 10,000 km²) of the earth.

**NTRES 4260 Practicum in Forest Farming as an Agroforestry System**

Fall. 2 credits. Prerequisite: junior, senior, or graduate standing or permission of instructor. K. W. Mudge, L. E. Buck, and P. Hobbs. For description, see HORT 4260.

**NTRES 4280 Principles and Practices of Applied Wildlife Science**

Spring. 3 credits. Prerequisites: NTRES 5100 or equivalent and permission of instructor. S–U or letter grades. Offered alternate years. P. Curtis. Covers the theory and practice of solving wildlife-related resource issues. Differences between basic and applied wildlife science are discussed.

**NTRES 4300 Environmental and Natural Resources Policy Processes**

Spring. 3 credits. Note: Course runs from Nov. 1 through end of spring semester. Prerequisites: junior standing; special application process. Lec. Three meetings in fall semester, beginning approx. Nov. 1; approx. Jan. 5–15 in Washington, D.C.; evening sessions in spring semester. Housing and rental fee approx. $550. Completed applications due by Oct. 14. Applications available by contacting map@cornell.edu or at www.dnr.cornell.edu/teaching/urgd/courses. B. A. Knuth. Intensive field-based exploration of the environmental policy process and its conceptual framework. Focuses on defining environmental problems; aggregating interests; agenda-setting; formulating and selecting alternative solutions; implementation and evaluation stages; and roles of lobbyists, legislators, executive, judicial, and other actors. Discussion with policy makers as guest panelists. Research topic requires conducting independent interviews with Washington experts, policy analysis paper, and oral presentation.

**NTRES 4320 Human Dimensions of Natural Resource Management**

**NTRES 4330 Applied Environmental Philosophy (KCM)**

Spring. 3 credits. Recommended: NTRES 3520; J. Tantillo. Focuses on environmental philosophy and environmental ethics considered as an academic field. Major themes include anthropocentrism versus nonanthropocentrism, intrinsic value, monism versus pluralism, animal rights versus environmental ethics, and various approaches to environmental ethics, including deep ecology, ecofeminism, and pragmatism.

**NTRES 4340 International Conservation: Communities and the Management of the World’s Natural Resources**

Fall. 4 credits. Prerequisite: junior, senior, or graduate standing. Letter grades only. J. Lassoie. Builds an interdisciplinary understanding of the conservation and management of protected areas and fragile landscapes around the world. It uses lectures, readings, library assignments, and Internet materials, including a new Internet-based platform linking students to conservation practitioners, to examine the role of local communities in protecting biodiversity and ecosystem services. Stakeholder analyses of case studies from Africa, Latin America, Asia, and the United States explore conservation science and management issues from different geopolitical perspectives.

**NTRES 4350 Earth Care: Applying Knowledge to Conservation**

Spring. 2 credits. Prerequisite: senior standing or permission of instructor. M. Bain. Review and analysis of the diverse ways knowledge can be used in conservation and environmental management. Lectures present the principles and methods used in different approaches. Cases illustrate how conservation was developed and applied. Discussions evaluate the merits and limitations in theory and practice.

**NTRES 4440 Resource Management and Environmental Law**

Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. S–U or letter grades. R. Booth. For description, see CRP 4440.

**NTRES 4560 Stream Ecology (also BIOEE 4560)**

Fall. 4 credits. Prerequisite: BIOEE 1610 or permission of instructor. S–U or letter grades. One Sat field trip. Offered alternate years; next offered 2011–2012. C. Kraft and A. Flecker. Lecture examines patterns and processes in stream ecosystems. Field and laboratory exercises focus on experimental and analytical techniques used to study stream ecosystems.

**NTRES 4800 Global Seminar: Building Sustainable Environments and Secure Food Systems for a Modern World (also FDSC/IARD 4800)**

Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. J. Lassoie and D. Miller. Modernization has led to development pressures that have increasingly disrupted natural systems leading to widespread concerns about the long-term viability of important environmental and ecosystem services, including those critical to food security worldwide. This interdisciplinary course uses case studies to explore interrelationships among social, economic, and environmental factors basic to sustainable development. Cases examine contemporary issues identified by participants (i.e., population growth, genetically modified foods, biodiversity, sustainable resource management, global warming, and global responsibility). Cornell faculty members lead discussions in each of the major topic areas. In addition, students participate in discussions and debates with students from Sweden, Costa Rica, Honduras, China, and Australia through live interactive videoconferences and electronic discussion boards.

**NTRES 4940 Special Topics in Natural Resources**

Fall or spring. 4 credits max. S–U or letter grades. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**NTRES 4960 Internship in Natural Resources**

Fall or spring. Credit TBA. Prerequisite: permission of instructor (academic staff in major). S–U or letter grades. Students must register using the CALS Course Enrollment Form for Undergraduates (available in 140 Roberts Hall).

On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and the student, stating the learning objectives, conditions of the work assignment, nature of on-the-job supervision, and reporting requirements, including the formal basis on which the faculty supervisor will assign a grade. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/calscurrent/student-research/internship/index.cfm.
NTRES 4970 Individual Study in Environmental Social Science and Resource Policy

Individual study under faculty supervision. Topics in environmental social science resource policy are arranged depending on the interests of students and availability of staff.

NTRES 4971 Individual Study in Applied Ecology and Conservation Biology
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). M. Bain, E. Cooch, P. Curtis, W. Fisher, A. Fuller, M. Hare, J. R. Jackson, C. Kraft, J. Lassoie, S. Morreale, W. Fisher, A. Fuller, M. Hare, J. R. Jackson, C. Kraft, J. Lassoie, S. Morreale, J. P. Lassoie, and P. Sullivan.

Individual study under faculty supervision. Topics in applied ecology or conservation biology are arranged depending on the interests of students and availability of staff.

NTRES 4972 Individual Study in Ecosystem Science and Biogeochemistry
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). B. Bedford, B. Blossey, T. Fahey, M. Krasny, R. Schneider, R. Sherman, P. Smallidge, and J. Yavitt.

Individual study under faculty supervision. Topics in ecosystem science and biogeochemistry are arranged depending on the interests of students and availability of staff.

NTRES 4980 Undergraduate Teaching in Natural Resources
Fall and spring. 1–4 credits. Prerequisite: permission of instructor. S–U or letter grades. Designed to give students an opportunity to teach by assisting in labs, field trips for designated sections, discussions, and grading. Students gain insight into the organization, preparation, and execution of course plans through application and discussion with instructor.

NTRES 4991 Honors Research in Natural Resources
Fall or spring. 1–6 credits. Variable; may be repeated for credit. Prerequisite: enrollment in NTRES honors research program; students must register using independent study form (available in 140 Roberts Hall). NTRES staff.

Intended for qualified students pursuing the research honors program in natural resources. Students must complete the CALS Honors program application by the third week of the fall semester of their senior year. The research supervisor should be a faculty member or senior research associate within NTRES.

NTRES 5900 Professional Projects—M.P.S.
Fall and spring. Credit TBA. Prerequisite: M.P.S. graduate students working on professional master's projects. S–U grades only.

NTRES 6000 Introduction to Graduate Study in Natural Resources
Fall. 1 credit. Prerequisite: beginning graduate students whose faculty advisors are in Natural Resources. S–U grades only. C. E. Kraft.

Includes discussions of the role of science in natural resource management and conservation, with a particular focus on how scientists pursue career paths toward effective participation in this realm. Discussions focus on the practices of scientists and institutions that provide a framework for scientific endeavors.

NTRES 6010 Seminar on Selected Topics in Environmental Social Science and Resource Policy
Fall or spring. 1–4 credits. S–U grades only. Check with department for availability. Staff.

Selected readings and discussions of research and/or current issues in environmental social science and resource policy. Offering varies by semester and is subject to availability of staff.

NTRES 6040 Seminar on Selected Topics in Resource Policy and Management
Fall or spring. 1–4 credits. S–U grades only. Check with department for availability. Staff.

Special topics seminar on subjects related to resource policy and management. Offering varies by semester and is subject to availability of staff.

NTRES 6110 Quantitative Ecology and Management of Fisheries Resources
Spring. 4 credits. Prerequisite: NTRES 3130 or permission of instructor. S–U or letter grades. Offered alternate years. P. J. Sullivan.

Taught in conjunction with NTRES 4110 (see description above). Students taking the course for graduate credit are asked, in addition to the 4000-level projects and homework, to construct and document a model of population or community dynamics that reflects and extends the concepts covered in the course.

NTRES 6120 Wildlife Population Analysis: Techniques and Models
Spring. 3 credits. Prerequisites: NTRES 5100 (or equivalent or permission of instructor), college-level math and statistics course. Offered alternate years. E. Cooh.

For description, see NTRES 4120.

NTRES 6140 Seminar on Selected Topics in Applied Ecology and Conservation Biology
Fall and spring. 1–4 credits. Prerequisite: permission of instructor. S–U grades only. Check with department for availability.

Staff.

Discussion of individual research, current problems, and current literature in applied ecology and conservation biology. Offering varies by semester and is subject to availability.

NTRES 6160 Seminar on Selected Topics in Ecosystem Science and Biogeochemistry
Fall or spring. 1–4 credits. Prerequisite: upper-level undergraduate or graduate standing. S–U grades only. Check with department for availability. Staff.

Reviews current literature, student research, and selected topics of interest.

NTRES 6200 Spatial Modeling and Analysis (also CSS)
Spring. 3 credits. Prerequisites: CSS 4100, CSS 4200, or equivalent, or permission of instructor. W. L. Fisher and S. D. DeGloria.

For description, see CSS 6200.

NTRES 6280 Principles and Practices of Applied Wildlife Science (also NTRES 4280)
Spring. 3 credits. Prerequisites: NTRES 5100 or equivalent, permission of instructor. S–U or letter grades. Offered alternate years. P. Curtis.

For description, see NTRES 4280. Students taking the course for graduate credit are required to participate, read supplemental materials, and complete an additional out-of-class assignment.

NTRES 6340 International Conservation: Communities and the Management of the World's Natural Resources
Fall. 4 credits, variable. Prerequisite: graduate students; seniors by permission of instructor. Letter grades only. S–U grades by permission of instructor. J. P. Lassoie.

For description, see NTRES 4340. Students taking the course for graduate credit are required to read supplemental materials, undertake more complex assignments, and participate in a seminar discussion once a week (TBA) with the instructor and other staff members, in addition to fully participating in NTRES 4340.

NTRES 6360 Systems in the Environment
Spring. 2 credits. Prerequisite: graduate student standing. S–U grades only. M. Bain.

Ecosystems are posed as human-natural entities that can be understood, managed, and conserved. Systems theory provides principles for analyzing ecosystems and ecosystem research provides practices and methods for conservation. Both perspectives are developed to investigate ecosystems as units of management and study. Examples range from sand to society with an emphasis on plants and animals.

NTRES 6700 Spatial Statistics

Develops and applies spatial statistical concepts and techniques to ecological and natural resource issues. Topics include visualizing spatial data and analysis and modeling of geostatistical, lattice, and spatial point processes. CSS 6200 may be taken simultaneously.

NTRES 6940 Special Topics in Natural Resources
Fall or spring. 4 credits max. S–U or letter grades.

The department teaches “trial” courses under this number. Offerings vary by semester and
are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**NTRES 6960 Perspectives in Plant Breeding Development (also IARD/CS/AEM 6960)**
Fall and spring. 1 credit. S–U grades only. L. Buck, R. Christy, and P. Hobbs. For description, see IARD 6960.

**NTRES 6970 Graduate Individual Study in Natural Resources**
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S–U or letter grades. NTRES graduate faculty. Study of topics in natural resources more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

**NTRES 7283 Molecular Genetic Approaches to the Study of Ecology and Evolution**
Spring. 1 credit. Prerequisites: introductory genetics; population genetics or ecological genetics; or permission of instructor. M. Hare.
This group intensive study crosses traditional disciplinary lines to examine discoveries in natural history, ecology and evolution made through the innovative assay and analysis of molecular genetic polymorphisms. Class time is devoted to the discussion of exemplary or representative primary research articles. Specific topics/methods/markers/taxa covered depend on student interests.

**NTRES 7330 Social-Cultural and Ecological Change (also CSS 6960)**
Spring. 3 credits. Prerequisites: seniors and graduate students. K-A. Kassam and B. Blossey. Given the dramatic and coupled nature of environmental and social change as well as the current limitations on understanding the implications of these changes for adaptation and resilience, this research seminar explores the roles of and linkages between biological and cultural diversity.
The graduate seminar (1) examines the concepts of biological and cultural diversity, (2) explores empirical research that elaborates upon the relationship between biological and cultural diversity, and (3) determines the relevance of these coupled concepts to issues of sustainability and conservation.

**NTRES 7600 Environment and Social Transitions: Graduate Seminar in Environmental Sociology (also DSOQ 7600)**
Fall or spring. 3 credits. Graduate students only. C. Geisler, S. Wolf, and R. Stedman. For description, see DSOQ 7600.

**NTRES 7800 Graduate Seminar in Ornithology (also BIOEE 7800)**
Fall or spring. 1 credit. Prerequisite: for undergraduates, permission of instructor. S–U grades only. J. Dickinson, W. Koenig, I. Lovette, A. Dhondt, and D. Winkler.
Group intensive study of current research in ornithology. Topics vary from semester to semester. Course may be repeated for credit.

**NTRES 7900 Graduate-Level Thesis Research**
Fall and spring. Credit TBA. Prerequisite: Ph.D. students before “A” exam has been passed. S–U grades only.

**NTRES 8900 Master’s Thesis Research**
Fall and spring. Credit TBA. Prerequisite: graduate students working on master’s thesis research. S–U grades only.

**NTRES 9900 Doctoral-Level Thesis Research**
Fall and spring. Credit TBA. Prerequisite: Ph.D. candidates after “A” exam has been passed. S–U grades only.

**Related Courses in Other Departments**
Courses in many other departments are relevant to students majoring in natural resources. The following list includes some of the most closely related courses but is not exhaustive.

Ecology and Biology (ENTOM 4550, 4700; BIOEE 1610, 1780, 2630, 2740, 3610, 3630, 4500, 4570, 4620, 4660, 4690, 4700, 4730, 4750, 4760, 4780; BIOMI 2900–2920, 2950, 2960; BIONB 2210, 2220; BIOPOL 2410, 2470, 2480, 3420, 4480; CSS 4660, 4720; EAS 1540, 2220, 3010, 3030, 3500, 3510, 4400)
Environement and Society (DSOC 2010, 3240, 3400, 4100)

Environmental Law, Ethics, and Philosophy (STS 2061, CRP 3840, 4440, 4510, PHIL 2410, 2460, 3810)

Human Systems and Communication (COMM 2850, 3920, 4110, 4150, 4660; ENTOM 3350; CRP 3840)

Physical Sciences (BEE 1510, 2510, 3710, 4010, 4270, 4350, 4710, 4730, 4750, CSS 2600, 3650, 3720, 3970, 4110, 4200, 4830; EAS 1101, 1540, 3050; CEE 4320, 4510)

Policy and Public Politics (GOVT 2947, 3071, 3131, 4281; BSOC 4616)

Resource Economics (AEM 2500, 4310, -4500, 4510)

Spatial Data Interpretation (CSS 4110, 4200, 4650, 6200, 6600; DSOC 3140)

**PLBR 2990 Introduction to Research Methods in Plant Breeding and Genetics**
Fall, spring, or summer. 1–3 credits, variable. S–U grades only. Staff. Intended for students who are new to undergraduate research. Students may be reading scientific literature, learning research techniques, or assisting with ongoing research. Students must identify a faculty supervisor who determines the work goals and the form of the final report.

**PLBR 4010 Plant Cell and Tissue Culture (also HORT 4030)**
Fall. 3 credits. Prerequisite: plant biology or genetics course or permission of instructor. E. D. Earle. Provides broad coverage of techniques of plant tissue, cell, protoplast, embryo, and anther culture and the applications of those techniques to biological and agricultural studies. Examples include horticultural, agronomic, and endangered species. Genetic modification of plants via gene transfer and other manipulations of cultured cells is a major topic.

**PLBR 4030 Genetic Improvement of Crop Plants**
Fall. 3 credits. Prerequisites: BIOMG 2810, PLBR 2250, or other standard genetics course and course in crops or horticulture. L. Smart. Genetic enhancement of crop value to humans began with domestication and continues with farmers’ variety development and scientifically trained plant breeders’ applications of Mendelian, quantitative, and molecular genetics. This course examines crop genetic improvement methods by discussing the history and current practice of plant breeding, tools available to breeders, choices and modifications of those tools to meet specific objectives, and challenges plant breeders face in developing varieties for the future.
PLBR 4050  Patents, Plants, and Profits: Intellectual Property Management for Scientists and Entrepreneurs (also IARD 4050)
Spring, eight weeks. 2 credits. Prerequisite: senior or graduate standing. S–U or letter grades. A. F. Krattiger and S. Kowalski. Covers statutory protection (copyright, trademarks, patents, plant variety protection), contracts (from material transfer to licensing), management of IP (e.g., freedom-to-operate, valuation, genetic resources, trade, and marketing), and negotiation. Emphasizes technology transfer and international aspects. The course is particularly relevant to students interested in science management, technology transfer, international agriculture, and business.

PLBR 4060  Methods of Plant Breeding Laboratory
Fall. 2 credits. Pre- or corequisite: PLBR 4030 or equivalent. S–U or letter grades. M. E. Sorrells. Field trips to plant breeding programs involve discussion of breeding methods used, overall goals, selection and screening techniques, and variety and germplasm release. Additional labs include selection techniques for various traits, intellectual property issues, genetically modified crops, and international agriculture. For a term project, each student designs a comprehensive breeding program on a chosen crop.

PLBR 4070  Nutritional Quality Improvement of Food Crops
Spring. 1 credit. Prerequisite: one majors-level biology course or permission of instructors. S–U or letter grades. L. Li, L. Kochian, and R. Welch. Introduction to biofortification of crop plants for enhancing their nutritional quality and health-promoting properties. The course discusses strategies to increase the contents of micronutrients, vitamins, and phytochemicals, as well as the qualities of proteins and lipids with regard to improving food crops for human nutrition and health.

PLBR 4075  Evolution of Plant Breeding and Genetics
Spring. 2 credits. Prerequisite: permission of instructors. Letter grades only. O. Hoekenga and T. Brutnell. Discusses seminal research papers that advanced the fields of basic and applied plant genetics. Juxtaposes the original discovery with current/student-research/internship/index.cfm. S–U or letter grades. A. F. Krattiger and S. Kowalski. Emphasizes practical skills. Covers basic as well as state-of-the-art methods for examination of plant chromosomes.

PLBR 4826  Plant Biotechnology (also BIOL 4826)
Spring. 3 credits. Prerequisite: BIOL 4831 or permission of instructor. S–U or letter grades. 12 lec. E. D. Earle. Current and proposed use of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, or have improved nutritional or processing characteristics. Other topics are use of transgenic plants for production of valuable products and for environmental remediation. Biosafety, social, legal, and international issues relating to plant biotechnology are discussed.

PLBR 4831  Concepts and Techniques in Plant Molecular Biology (also BIOM/BIOI/PLPA 4831)
Fall. 3 credits. Prerequisites: see BIOL 4831. S–U or letter grades. Two lec and one day of disc per week. M. Hanson, T. Owens, and M. Scanlon. For description, see BIOL 4831.

PLBR 4832  Proteomics and Protein Mass Spectrometry in Biology (also BIOM/BIOI/PLPA 4832)
Fall. 1 credit. Prerequisites: BIOMG 2810, BIOMG 3580 or 3320, or equivalent. Recommended: BIOMG 3310. S–U or letter grades. Offered alternate years; next offered 2011–2012. K. van Wijk. For description, see BIOL 4832.

PLBR 4833  Plant Genome Organization (also BIOL 4833)

PLBR 4940  Special Topics in Plant Breeding
Fall or spring. 4 credits max. S–U or letter grades. The department teaches “trial” courses under this number. Offerings vary by semester and course enrollment materials a CALS curriculum committee, and the same course is not offered more than twice under this number.

PLBR 4960  Internship in Plant Breeding
Fall or spring. Variable credit; may be repeated to max. of 6; minimum 60 credits and grade. Staff. Undergraduate research projects in plant breeding.

PLBR 5990  Plant Breeding M.P.S. Project Paper
Fall, spring, or summer. 1–6 credits. Prerequisite: M.P.S. candidates in Field of Plant Breeding. S–U grades only. W. De Jong. Problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of plant breeding.

PLBR 6060  Advanced Plant Genetics
Spring. 3 credits. Prerequisites: BIOMG 2810 or equivalent and permission of instructor. S–U or letter grades. W. Pawlowski. Advanced survey of genetics in higher plants including selected topics in transmission genetics, epigenetics, and chromatin biology. Emphasizes development of critical analytical skills through reading of current literature and a class project.

PLBR 6100  Practicum in Plant Breeding
Fall. 1–3 credits. Prerequisite: PLBR 4030 and permission of instructor. S–U grades only. W. De Jong (coordinator), M. Sorrells, M. Smith, M. Mutschler, and D. Viands. In-depth, practical exposure to applied crop breeding. Students participate in the department’s maize, small grains, potato, pepper, squash, forage, tomato, and onion breeding programs to gain hands-on experience in the planning and implementation of crossing, planting, harvesting, selecting, and evaluating disease and quality traits.

PLBR 6105  Crop Biotechnology
Spring. 3 credits. Prerequisite: PLBR 4030 and permission of instructor. Special graduate course taught at Tamil Nadu Agricultural University campus in Coimbatore, India. Open to Indian M.P.S. students from TNAU and other Cornell guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

PLBR 4870  Individual Study in Plant Breeding
Fall or spring. Variable credit; may be repeated to max. of 6. Prerequisite: permission of instructor. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff.

PLBR 4980  Undergraduate Teaching
Fall or spring. Variable credit; may be repeated to max. of 6. Prerequisites: permission of instructor and previous enrollment in course to be taught or equivalent. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff. Undergraduate teaching assistance in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

PLBR 4990  Undergraduate Research
Fall or spring. Variable credit. Prerequisite: permission of instructor. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff. Undergraduate research projects in plant breeding.

PLBR 4980  Undergraduate Teaching
Fall or spring. Variable credit; may be repeated to max. of 6. Prerequisites: permission of instructor and previous enrollment in course to be taught or equivalent. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff. Undergraduate teaching assistance in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

PLBR 4990  Undergraduate Research
Fall or spring. Variable credit. Prerequisite: permission of instructor. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff. Undergraduate research projects in plant breeding.

PLBR 5990  Plant Breeding M.P.S. Project Paper
Fall, spring, or summer. 1–6 credits. Prerequisite: M.P.S. candidates in Field of Plant Breeding. S–U grades only. W. De Jong. Problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of plant breeding.

PLBR 6060  Advanced Plant Genetics
Spring. 3 credits. Prerequisites: BIOMG 2810 or equivalent and permission of instructor. S–U or letter grades. W. Pawlowski. Advanced survey of genetics in higher plants including selected topics in transmission genetics, epigenetics, and chromatin biology. Emphasizes development of critical analytical skills through reading of current literature and a class project.

PLBR 6100  Practicum in Plant Breeding
Fall. 1–3 credits. Prerequisite: PLBR 4030 and permission of instructor. S–U grades only. W. De Jong (coordinator), M. Sorrells, M. Smith, M. Mutschler, and D. Viands. In-depth, practical exposure to applied crop breeding. Students participate in the department’s maize, small grains, potato, pepper, squash, forage, tomato, and onion breeding programs to gain hands-on experience in the planning and implementation of crossing, planting, harvesting, selecting, and evaluating disease and quality traits.

PLBR 6105  Crop Biotechnology
Spring. 3 credits. Prerequisite: PLBR 4030 and permission of instructor. Special graduate course taught at Tamil Nadu Agricultural University campus in Coimbatore, India. Open to Indian M.P.S. students from TNAU and other Cornell guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

PLBR 4870  Individual Study in Plant Breeding
Fall or spring. Variable credit; may be repeated to max. of 6. Prerequisite: permission of instructor. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff.

PLBR 4980  Undergraduate Teaching
Fall or spring. Variable credit; may be repeated to max. of 6. Prerequisites: permission of instructor and previous enrollment in course to be taught or equivalent. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff. Undergraduate teaching assistance in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

PLBR 4990  Undergraduate Research
Fall or spring. Variable credit. Prerequisite: permission of instructor. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff. Undergraduate research projects in plant breeding.

PLBR 5990  Plant Breeding M.P.S. Project Paper
Fall, spring, or summer. 1–6 credits. Prerequisite: M.P.S. candidates in Field of Plant Breeding. S–U grades only. W. De Jong. Problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of plant breeding.

PLBR 6060  Advanced Plant Genetics
Spring. 3 credits. Prerequisites: BIOMG 2810 or equivalent and permission of instructor. S–U or letter grades. W. Pawlowski. Advanced survey of genetics in higher plants including selected topics in transmission genetics, epigenetics, and chromatin biology. Emphasizes development of critical analytical skills through reading of current literature and a class project.
graduate students who participated in India field trip and wish to take this course. Letter grades only. P. Gregory. Addresses the application of biotechnology to crop improvement as related to food security and sustainability. Topics include (1) the range of available biotechnological tools, (2) the enormous potential of crop bioengineering for catalyzing global development, and (3) strategies to maximize benefits and minimize risks associated with bioengineered crops.

**PLBR 6180 Breeding for Pest Resistance (also HORT 6180)** Fall. 2 credits. Recommended: BIOMG 2810 and PLBR 4030 or equivalents; introductory course in plant pathology and/or entomology. Offered alternate even-numbered years. P. Griffiths. Multidisciplinary examination of the challenge of incorporating disease and insect resistance into crop plants. Topics include: (1) the importance of host plant resistance, national and international germplasm collections, germplasm evaluation and enhancement, population development, evaluating populations, resistance mechanisms in plants, genetic control of resistance, approaches to breeding for host resistance, stability of genetic resistance mechanisms, the use of marker-assisted selection and molecular tools in breeding for host plant resistance.

**PLBR 6220 Seminar** Fall or spring; 1 credit. S–U grades only. Staff, graduate students, and visitors. The department teaches “trial” courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**PLBR 6500 Special Problems in Research and Teaching** Fall or spring; 1 or more credits. Prerequisite: permission of instructor supervising research or teaching. Staff.

**PLBR 6940 Special Topics in Plant Breeding** Fall or spring; 4 credits max. S–U or letter grades. The department teaches “trial” courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**PLBR 7160 Perspectives in Plant Breeding Strategies** Spring. 3 credits. Prerequisite: PLBR 4030. S–U or letter grades. Offered alternate odd-numbered years. M. E. Sorrells. Emphasizes critical discussion and evaluation of selected benchmark papers and current literature. Reviews and discusses conventional and molecular selection techniques and breeding objectives, methods, and strategies for both self- and cross-pollinated crops. Requires extensive outside reading. Grades are based on four papers demonstrating creative thinking and analysis of plant breeding concepts.

**PLBR 7170 Quantitative Genetics in Plant Breeding** Spring. 3 credits. Prerequisites: PLBR 4030 and BTRY 6010 or equivalent. Letter grades only. Offered even-numbered years. Next offered 2011–2012. D. R. Visscher. Discusses quantitative genetics for more effective plant breeding. Topics include population genetics, linkage, components of variance; heritability; theoretical gain from selection; and genotypic and phenotypic correlation coefficients.

**PLBR 7900 Graduate-Level Dissertation** Fall or spring; Variable credit. Prerequisites: doctoral students who have not passed “A” exam; permission of instructor. S–U grades. Graduate faculty.

**PLBR 8900 Master’s-Level Thesis Research** Fall or spring; Variable credit. Prerequisites: master’s candidates; permission of instructor. S–U grades. Graduate faculty. For students working on a master’s thesis.

**PLBR 9900 Doctoral-Level Dissertation Research** Fall or spring; Variable credit. Prerequisites: doctoral students who have passed “A” exam; permission of instructor. S–U grades. Graduate faculty. For students admitted to candidacy after “A” exam has been passed.

**PLANT PATHOLOGY AND PLANT-MICROBIOLOGY**

**PLPA 1100 Symbiotic Associations in Nature** Spring. 3 credits. Letter grades only. E. B. Nelson. Freshman Writing Seminar in which students explore symbiotic biology and the nature of science and written scientific communication through discussions of a broad range of symbiotic relationships. Students are exposed to a broad range of writing styles in scientific communication. Students gain experience writing in a number of styles common in the biological sciences. Additionally, students learn to use evidence-based and inferential reasoning, articulate their thoughts and ideas through writing, make logical and systematic arguments, learn to revise their own writing, and effectively critique others’ writing content, organization, and style.

**PLPA 1200 Evolution: Evaluating the Public Debate** Fall. 3 credits. Letter grades only. R. Loria. Though we live in a world infused with science and technology, most of the general public and a significant number of Cornell students do not believe in evolution. Evolution, the theory that organisms are connected by genealogy and change over time, is well supported and accepted as true by the scientific community. Nevertheless, there is an emotional debate outside scientific circles about the legitimacy of evolution as an explanation for the diversity of life on earth, and the existence of humans in particular. Readings include books and articles that address the evidence for evolution. Students also analyze the writings of proponents of “Intelligent Design” and study descriptions of the controversy in the popular press, both current and historical.

**PLPA 2010–2015 Magical Mushrooms, Mischievous Molds**

Spring. 2 or 3 credits. S–U or letter grades. G. W. Hudler. The Department of Plant Pathology and Plant-Microbe Biology offers several course options for students who want to learn about the kingdom FUNGI. All three courses (PLPA 2010, 2013, and 2015) have the same two-lecture-per-week core, and students wanting only the core should enroll in PLPA 2010 for 2 credits. Students interested in additional exposure to the FUNGI can enroll in PLPA 2013 or 2015 (each for 3 credits). See individual course descriptions below for more detail.

**PLPA 2010 Magical Mushrooms, Mischievous Molds**

Spring. 2 credits. S–U or letter grades. G. W. Hudler. Presentation of the fungi and their roles in nature and in shaping past and present civilizations. Emphasizes the historical and practical significance of fungi as decomposers of organic matter, as pathogens of plants and animals, as food, and as sources of mind-altering chemicals.

**PLPA 2013 Mushrooms, Molds, and More**

Spring. 3 credits. Fulfills 3 credits of introductory biology for CALS Physical/Life Sciences distribution requirement for non–life science majors. Limited to 24 students per sec. Letter grades only.

**PLPA 2015 Mushrooms, Molds, and Molecules**

Spring. 3 credits. Fulfills 3 credits of introductory biology for CALS Physical/Life Sciences distribution requirement for non–life science majors. Limited to 30 students per sec. Letter grades only.

**PLPA 8900 Graduate-Level Dissertation Research** Fall or spring; Variable credit. S–U grades. Graduate faculty. For students admitted to candidacy after “A” exam has been passed.

**PLPA 9900 Doctoral-Level Dissertation Research** Fall or spring; Variable credit. Prerequisites: doctoral students who have passed Master’s exam; permission of instructor. S–U grades. Graduate faculty. For students admitted to candidacy after Master’s exam has been passed.
distribution credits upon completion of this course but they must register for a letter grade. This course is also on the Arts and Sciences list of supplementary science courses and can be used to satisfy Physical and Biological Sciences distribution requirements in the liberal arts.

**PLPA 3010 Biology and Management of Plant Diseases**

Fall. 4 credits. Prerequisite: one year of biology. Letter grades only. W. E. Fry. Introduction to the biology of the pathogens that cause plant diseases, and the diagnosis and management of plant diseases. Topics include the biology of bacteria, fungi, oomycetes, viruses, and nematodes; disease cycles; plant disease epidemiology; and the principles and practices of plant disease management. Intended for students who want a practical knowledge of plant diseases and their control, as well as for students preparing for advanced courses in plant pathology and plant-microbe biology.

**PLPA 3090 Fungi**

Fall. 3 credits. Prerequisite: one year of biology. Recommended: concurrent enrollment in PLPA 3100. S–U or letter grades. K. T. Hodge. A thorough introduction to the astounding kingdom of fungi, including mushrooms, molds, yeasts, athlete’s foot, histoplasmosis, and the blue stuff in blue cheese. We cover fungal biodiversity, how fungi work, and their roles in the environment and in human affairs. Students work with living and preserved fungi and learn basic lab and identification skills.

**PLPA 3190 Mushrooms of Field and Forest**

Fall, weeks 1–8. 2 credits. Letter grades only. K. T. Hodge. Students learn to identify mushrooms and other macrofungi on a series of eight field trips to local forests. Mushrooms are collected during afternoon lab field trips. During the evening labs, students use keys and microscopic features to identify mushrooms they’ve collected, and brief lectures introduce fungal ecology and diversity. Students must attend both lab times.

**PLPA 3200 Grape Pest Management (also ENTOM/VIEN 3200)**

Fall. 3 credits. S–U or letter grades. W. Wilcox, G. Loeb, and A. Landers. Emphasizes general integrated pest management concepts, the biology and specific management practices pertaining to the major diseases and arthropod pests of grapes, and modern spray application technologies. Laboratories emphasize field illustrations of classroom concepts. Teams taught by a plant pathologist, entomologist, and agricultural engineer.

**PLPA 3290 Medical and Veterinary Mycology (also BIOMS 3290)**

Spring. 2 credits. Prerequisite: introductory biology. Letter grades only. K. T. Hodge. Introduction to fungi that cause human and animal disease. Lectures introduce topics including important fungi and the diseases they cause, what range from athlete’s foot to equine guttural pouch aspergillosis. We cover the ecology and epidemiology of animal pathogenic fungi, mycotoxins, mushroom poisoning, disease management, and clinical diagnosis.

**PLPA 4090 Principles of Virology (also BIOMS/BIOI 4090)**

Fall. 3 credits. Prerequisites: BIOMI 2900, 2910 or permission of instructor. Recommended: BIOMG 3500–3520, 4320. Letter grades only. S. G. Lazarowitz, N. Osterrieder, and J. S. L. Parker. For description, see BIOMS 4090.

**PLPA 4161 Microbes and Food: Contemporary Issues Affecting Humanity (also BSOC 4161)**

Spring, 4 credits. Prerequisite: senior standing preferred; juniors accepted. S–U or letter grades. S. Beer. Addresses the all-encompassing role that microbes play in contemporary life. How do microbes affect food production, processing, preservation, safety, and waste disposal? Assess the role of microbes in industrial and environmental processing. Deals with origins of agriculture, GMOs, and high-input versus sustainable food production. Intense seminars on topics.

**PLPA 4190 Agricultural Application of Plant Health Concepts**

Fall. 2 credits. Eight sessions. Prerequisites: PLPA 3010 and permission of instructor. S–U or letter grades. H. S. Aldwinckle and B. Nault. Addresses real-world problems in plant pathology and entomology through the application of research. Students tour fields of diverse fruit and vegetable field crops, a nursery, forests, and a golf course that have been impacted by diseases and arthropod pests. Strategies for managing diseases and pests based on research and the interface between Research and Extension are emphasized. This course is taught at Geneva. Free transportation available.

**PLPA 4330 Ecology of Infectious Diseases**

Fall. 3 credits. Prerequisites: at least two semesters of introductory biology or equivalent. Letter grades only. C. Nelson. Introduction to the ecology of plant, animal, and human diseases. The course examines a science-based approach for understanding the nature of disease development, the behavior of infectious agents and hosts, the ecological principles of plant disease emergence, transmission, and resurgence, and the general approaches to disease prediction, detection, and management.

**PLPA 4430 Pathology of Trees and Shrubs**

Fall. 3 credits. Limited to 30 students. S–U or letter grades. G. W. Hadler. For students preparing for careers in horticulture, urban forestry, natural resources, and pest management. Deals with identification, impact, assessment, biology, and management of insects and diseases that damage trees and shrubs. Emphasizes pests of northeastern flora but examples from other parts of the country and the world are also used. Considers forest, shade, and ornamental plants.

**PLPA 4480 Symbiotic Associations: Evolution and Ecology (also BIOMI 4480)**

Spring. 3 credits. Prerequisites: two semesters of majors-level biology, or equivalent, or permission of instructor. Letter grades only. T. Pawlowska. Symbiosis, the living together of unlike organisms, encompasses a spectrum of interactions ranging from mutually beneficial to reciprocally detrimental. The course focuses on a selection of ecologically important symbioses, including interactions of bacteria and fungi with plants, invertebrates, and vertebrates. Considers the evolutionary origins, and explore current conditions required for the establishment and maintenance of these associations. Studies of symbiosis are based on a series of research and review papers.

**PLPA 4821–4822 Molecular Plant-Pathogen Interactions I and II (also BIOIPL 4821–4822)**

Spring, weeks 1–4. 1 credit. Prerequisites: BIOMG 2810, 3300 or 3310, and BIOP 4831. A. R. Collmer and B. G. Turgeon (odd years); S. G. Lazarowitz and G. B. Martin (even years). Examines the molecular and cellular factors that control pathogen-plant interactions from the perspectives of pathogen biology and plant responses to pathogen infection. Even years focus on (1) plant perception of microbial pathogens and the interplay of plant defenses and pathogen counterstrategies that result in resistance or susceptibility to disease production, with topics including the genetic nature of dominant and recessive resistance, induction of pathogen defense genes, apoptotic responses that limit infection, and RNA interference; and odd years focus on (2) the genetic and molecular mechanisms of microbial pathogenesis, with an emphasis on fungal and bacterial virulence proteins, toxins, and their deployment systems.

**PLPA 4823 Molecular Plant-Microbe Interactions (also BIOIPL/BIOMI 4823)**

Spring. 1–4 credits. Prerequisites: BIOMG 2810, 3300, 3310 or 3330, and BIOP 4830 or equivalents. S–U or letter grades. Offered even-numbered years. Next offered 2011–2012. S. C. Winans. For description, see BIOP 4823.

**PLPA 4831 Plant Molecular Biology I—Concepts and Techniques in Plant Molecular Biology (also BIOMG/ BIOIPL/PLBR 4831)**

Fall. 3 credits. Prerequisites: BIOMG 2810, 3300, or 3310. S–U or letter grades. M. Hanson, T. Owens, and M. Scanlon. For description, see BIOP 4831.

**PLPA 4832 Proteomics and Protein Mass Spectrometry in Biology (also BIOIPL/PLBR 4832)**

Fall. 1 credit. Prerequisites: BIOMG 2810, 3300, or 3320, or equivalent. Recommended: BIOMG 3310. S–U or letter grades. Offered alternate years; next offered 2011–2012. K. van Wijk. For description, see BIOP 4832.

**PLPA 4940 Undergraduate Special Topics in Plant Pathology and Plant-Microbe Biology**

Fall or spring. 4 credits max. S–U or letter grades. Staff. The department teaches “trial” courses under this number. Offers vary by semester and are advertised by the department before the semester starts. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.
PLPA 4970 Independent Study in Plant Pathology and Plant-Microbe Biology
Fall or spring. 1–5 credits. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).

An opportunity for independent study of a special topic in mycology or plant pathology under the direction of a faculty member.

PLPA 4980 Undergraduate Teaching Experience
Fall or spring. 1–5 credits. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).

Undergraduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor.

PLPA 4990 Undergraduate Research
Fall or spring. 3–5 credits. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).

Opportunity for research experience under the direction of a faculty member.

PLPA 6010 Concepts of Plant Pathology and Plant-Microbe Biology
Spring. 3 credits. Prerequisite: PLPA 3010 or equivalent. S–U or letter grades. A. R. Collmer.

Concepts in plant-parasite relationships with an emphasis on the roles of molecules and cell structures in determining the outcome of an interaction. Evidence for the role of putative disease determinants is explored in the context of general models and representative pathosystems. The discussion sessions focus on the development of scholarly skills. Students prepare and review mock grant proposals.

PLPA 6020 Biology of Plant Pathogens
Spring. 3 credits. Prerequisite: PLPA 5010. S–U or letter grades. K. L. Perry and M. M. Milgroom.

Biology and ecology of major groups of plant pathogens: fungi, bacteria, viruses, oomycetes, and nematodes. Addresses concepts of plant disease, etiology, microbial communities, virulence, resistance, population biology, and epidemiology. Class meetings are largely discussion format with guided analyses of published research.

PLPA 6080 Genomics of Bacterium–Host Interactions (also BIOMI 6080)
Fall, weeks 2–5. 1 credit. Prerequisite: BIOMI 2900 or equivalent or permission of instructor. S–U or letter grades. Offered even-numbered years. A. Collmer, S. C. Winans, and D. Schneider.

Introduction to genomic approaches, tools, and discoveries involving the study of bacterial interactions with plant and animal hosts. Topics include tools for annotating, visualizing, and aligning whole bacterial genomes, sequence similarity searches, protein family classification, and protein and RNA structure prediction, as well as concepts such as the pan-genome, horizontal gene transfer, and bacterial genome structure.

PLPA 6380 Filamentous Fungal Genomics and Development (also BIOMG 6380)
Spring, weeks 9–12. 1 credit. Prerequisite: BIOMG 2810 or equivalent. Letter grades only. B. G. Turgeon.

Molecular genetic and genomic approaches to the study of fungal biology. Classical fungal genetics is reviewed. Structure of fungal genomes and contemporary methodology for functional analyses are covered. Case studies are used to dissect developmental processes such as fungal reproduction and plant pathogenesis (including the role of fungal effectors and secondary metabolites). Experimental data are evaluated. Examples are chosen from investigations of model fungi.

PLPA 6420 Pathogen Population Biology
Fall. Prerequisite: permission of instructor. S–U grades only. M. G. Milgroom.

Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PLPA 6440 Current Topics in Oomycete Biology
Fall. Prerequisite: permission of instructor. S–U grades only. E. B. Nelson.

Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PLPA 6450 Plant Virology
Fall. Prerequisite: permission of instructor. S–U grades only. S. M. Gray.

Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PLPA 6490 Fungal Biology

Weekly discussion of current scientific articles on the biology of fungi. Primarily directed at graduate students, but undergraduates, postdocs, staff, and guests who have an interest in molecular and organismal biology of fungi are welcome.

PLPA 6500 Diseases of Vegetable Crops
Fall. 1 credit. Prerequisite: permission of instructor. S–U grades only. J. W. Lorbeer and T. A. Zitter.

Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PLPA 6520 Field Crop Pathology
Spring. 1 credit. Prerequisite: permission of instructor. S–U grades only. W. G. C. Bergstrom.

Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PLPA 6550 Special Topics in Plant Disease Management
Spring. 1 credit. S–U grades only. C. D. Smart.

Weekly discussions of current topics in plant disease management. These include not only management practices, but also factors that influence management strategies. Students are required to read current literature and present oral reports on a topic. Offered only at the Geneva campus. Students provide their own transportation.

PLPA 6610 Diagnostic Lab Experience
Fall and spring. 1 or 2 credits. Priority given to graduate students in plant pathology and plant protection. Recommended: course work or experience in diagnostic techniques. S–U grades only. Requires 3 hours per week per credit hour. T. A. Zitter.

For graduate students and advanced undergraduates with a special interest in diagnosing plant diseases. Students work in the Diagnostic Laboratory (plant pathology department) under supervision of the diagnostician.

PLPA 6810 Plant Pathology and Plant-Microbe Biology Seminar
Fall and spring. 1 credit. Requirement for all plant pathology and plant-microbe biology majors. S–U grades only. B. G. Turgeon.

PLPA 6820 Graduate Student Research Updates
Spring and fall. 1 credit. Requirement for all plant pathology and plant-microbe biology graduate students. S–U grades only. S. Cartinhour and H. Aldwinckle.

Weekly graduate student seminar series. Guests with an interest in plant pathology research are welcome to attend. Classes meet simultaneously in Geneva and Ithaca and are linked by teleconference.

PLPA 6940 Graduate Special Topics in Plant Pathology and Plant-Microbe Biology
Fall or spring. 4 credits max. S–U or letter grades. Staff.

The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PLPA 7880 Research in Molecular Plant Pathology
Fall and spring. 2, 4, or 6 credits. Prerequisite: permission of instructor before beginning research. S–U grades only. Staff.

Guided research experiences in laboratories addressing questions concerning the interaction of pathogens (bacteria, fungi, viruses) and plants at the molecular level. Intended for beginning graduate students with a concentration in molecular plant pathology and sufficient theoretical background and practical laboratory experience. Students submit plans and reports on each research experience.

PLPA 7970 Special Topics Independent Study
Fall or spring. 1–5 credits. S–U or letter grades. Staff.

Opportunity for independent study of a special topic.

PLPA 7980 Graduate Teaching Experience
Fall or spring. 1–5 credits. S–U grades. Staff.

Graduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor. This experience may include, but is not limited to,
preparing, assisting in, and teaching laboratories, preparing and delivering lectures, leading discussion sessions, and tutoring.

**PLPA 7990 Graduate-Level Thesis Research**
Fall or spring. Credit TBA. Prerequisite: permission of advisor. S–U or letter grades. Graduate faculty. For Ph.D. students who have not passed “A” exam.

**PLPA 8900 Master’s-Level Thesis Research**
Fall or spring. Credit TBA. Prerequisite: permission of advisor. S–U or letter grades. Graduate faculty. For students working on a master’s degree.

**PLPA 9900 Doctoral-Level Thesis Research**
Fall or spring. Credit TBA. Prerequisite: permission of advisor. S–U or letter grades. Graduate faculty. For Ph.D. candidates who have passed “A” exam.

**SCIENCE OF NATURAL AND ENVIRONMENTAL SYSTEMS**

**SNES 1101 Intro to the Science and Management of Environmental and Natural Resources (also NTRES 1101)**
Fall. 3 credits. Prerequisite: first-year students in Natural Resources, Science of Natural and Environmental Systems, or other Environmental Undecided majors in CALS. T. Fafay and E. Madsen. For description, see NTRES 1101.

**SNES 2000 Environmental Sciences Colloquium**
Fall. 1 credit. S–U grades only. S. Riha and J. Lehmann. This colloquium consists of a series of lectures on an annually changing theme central to the Environmental Sciences, which poses biophysical, economic, and political challenges to modern society. Participants become familiar with contemporary issues of environmental degradation and opportunities for their mitigation. The colloquium is mandatory for SNES majors and is open to the public.

**SNES 4970 Individual Studies in Environmental Sciences**
Fall, spring, or summer. 1–6 credits, variable. S–U or letter grades. Individual studies are arranged under the supervision of one or several SNES faculty members. They provide opportunity to design a course that fills the need of an individual student and addresses pertinent issues in the environmental sciences.

**STATISTICAL SCIENCE**
The university-wide Department of Statistical Science coordinates undergraduate and graduate study in statistics and probability. A list of suitable courses can be found in the CIS section of this catalog.

**VITICULTURE AND ENOLOGY**

**VIEN 1104 Introduction to Wines and Vines (also FDSC/HORT 1104)**
Spring. 3 credits. Lec (VIEN 1104) and lab (VIEN 1105) required for Viticulture and Enology majors. Letter grades only. K. Arnink and I. Merwin. For description, see FDSC 1104.

**VIEN 1105 Introduction to Wines and Vines Laboratory (also FDSC/HORT 1105)**
Spring. 1 credit. Limited to 25 students. Priority given to Viticulture and Enology majors. Pre- or corequisite: VIEN 1104. Letter grades only. K. Arnink and I. Merwin. For description, see FDSC 1105.

**VIEN 2204 Grapes to Wines (also FDSC/HORT 2204)**
Fall. 4 credits. Limited to 25 students. Priority given to Viticulture and Enology majors. Prerequisite: Introduction to Wines and Vines (FDSC/HORT/VIEN 1104). Letter grades only. K. Arnink and J. Vanden Heuvel. For description, see FDSC 2204.

**VIEN 2400 Wine and Grapes: Composition and Analysis (also FDSC 2400)**
Fall. 2 credits. Prerequisite: one semester of chemistry. Priority given to Viticulture and Enology and Food Science majors. Letter grades only. G. Sacks. For description, see FDSC 2400.

**VIEN 3120 Sustainability and Organic Grape and Wine Production I (also HDSC/HORT 3120)**
Spring. 2 credits. Prerequisite: Grape to Wines (FDSC/HORT/VIEN 2204). Letter grades only. K. Arnink and J. Vanden Heuvel. For description, see HORT 3120.

**VIEN 3200 Grape Pest Management (also ENTOM/PLPA 3200)**
Fall. 3 credits. S–U or letter grades. W. Wilcox, G. English-Loeb, and A. Landers. For description, see PLPA 3200.

**VIEN 3400 Winemaking Theory and Practice I (also FDSC 3400)**
Fall. 3 credits. Priority given to Viticulture and Enology majors. Prerequisite: introductory microbiology or permission of instructor. Letter grades only. R. Mira de Orduña. For description, see FDSC 3400.

**VIEN 3410 Winemaking Theory and Practice I Lab (also FDSC 3410)**
Fall. 1 credit. Limited to 20 students. Priority given to Viticulture and Enology majors. Prerequisite: permission of instructor. Letter grades only. R. Mira de Orduña. For description, see FDSC 3410.

**VIEN 3440 Viticulture and Vineyard Management (also FDSC 3440)**
Spring. 3 credits. Prerequisite: Grapes to Wines (FDSC/HORT/VIEN 2204). Letter grades only. J. Vanden Heuvel. For description, see HORT 3440.

**VIEN 3800 Winemaking Theory and Practice II (also FDSC 3800)**
Spring. 2 credits. Prerequisite: Winemaking Theory and Practice I (FDSC/VIEN 3400). Letter grades only. R. Mira de Orduña. For description, see FDSC 3800.

**VIEN 3810 Winemaking Theory and Practice II Lab (also FDSC 3810)**
Spring. 1 credit. Limited to 20 students. Priority given to Viticulture and Enology majors. Prerequisite: Winemaking Theory and Practice I with Lab (FDSC/VIEN 3400, 3410). Letter grades only. R. Mira de Orduña. For description, see FDSC 3810.

**VIEN 4120 Sustainability and Organic Grape and Wine Production II (also FDSC/HORT 4120)**
Fall. 2 credits. Limited to 20 students. Prerequisite: Sustainability and Organic Grape and Wine Production I (FDSC/HORT/VIEN 3120). Letter grades only. K. Arnink and J. Vanden Heuvel. For description, see FDSC 4120.

**VIEN 4300 Understanding Wine and Beer (also FDSC 4300)**
Spring. 3 credits. Prerequisite: basic science, four approved wine glasses, and $50 tasting fee due by the second day of class. S–U or letter grades. T. Acree, R. Mira de Orduña, G. Sacks, and K. Siebert. For description, see FDSC 4300.

**VIEN 4400 Wine and Grape Flavor Development (also FDSC 4400)**
Spring. 3 credits. Limited to 30 students. Prerequisites: at least one semester of general chemistry and one semester of organic chemistry required. Recommended: prior course work in or knowledge of viticulture and enology. Letter grades only. G. Sacks. For description, see FDSC 4400.

**VIEN 4444 Grapevine Biology (also HORT 4444)**
Spring. 3 credits. Prerequisites: introductory botany, BIOPL 2420 or equivalent. Letter grades only. Offered odd-numbered years. A. Lakso, M. Goffinet, B. Reisch, P. Cousins, and C. Owens. For description, see HORT 4444.
VIEN 4460 Advanced Viticulture Topics (also HORT 4460)
Spring. 2 credits. Prerequisite: HORT/VIEN 3440 or equivalent. S-U or letter grades. Offered even-numbered years; next offered 2011–2012. A. N. Lakso.
For description, see HORT 4460.

VIEN 4600 Wine Microbiology (also FDSC 4600)
Spring. 3 credits. Limited to 20 students. Prerequisite: BIOMI 2900. Recommended: FDSC/HORT/VIEN 1104. Letter grades only. K. Arrink.
For description, see FDSC 4600.

VIEN 4910 Viticulture and Enology Research Practices (also FDSC 4910)
Fall. 3 credits. Prerequisite: FDSC/HORT/VIEN 1105 or permission of instructor. Letter grades only. K. Arrink.
For description, see FDSC 4910.

VIEN 4960 Viticulture and Enology Internship
Fall, spring, summer. Variable credit. Prerequisite: permission of instructor. S-U or letter grades. Staff.
Internships provide experiential learning opportunities in real-life winery and vineyard circumstances where classroom knowledge is applied and evaluated. Students are able to master new skills, compare pilot-scale with commercial-scale winemaking practices, solve problems, interact in workplace situations, and build networks for future career opportunities. While working with industry mentors, students apply classroom knowledge, critical thinking, and self-directed learning skills to work effectively. Learning contract and documentation required for credit. May be taken twice.

VIEN 4970 Individual Study in Viticulture and Enology
Fall, spring, or summer. Variable credit. Repeatable. Prerequisite: permission of instructor. Students must register using individual study form (available in 140 Roberts Hall). Staff.
Undergraduate individual study in viticulture and enology under the direction of one or more faculty members.

VIEN 4980 Undergraduate Teaching Experience
Fall, spring, summer. Variable credit. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S-U or letter grades. Staff.
Students assist in teaching a course appropriate to their previous training and experience. TA duties are determined by student and instructor(s) of course. Repeatable.

VIEN 4990 Undergraduate Research in Viticulture and Enology
Fall, spring, or summer. Variable credit. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Staff.
Undergraduate individual study or research in viticulture and enology under the direction of one or more faculty members. Since topics vary, the course may be repeated for credit.

[VIEN 4640 Advanced Viticultural Topics (also HORT 4640)]
Spring. 2 credits. Prerequisite: HORT/VIEN 3440 or equivalent. S-U or letter grades. Offered even-numbered years; next offered 2011–2012. A. N. Lakso.
For description, see HORT 4640.

FACULTY ROSTER
Abawi, George S., Ph.D., Cornell U. Prof., Plant Pathology and Plant-Microbe Biology (Geneva)
Acree, Terry E., Ph.D., Cornell U. Prof., Food Science and Technology (Geneva)

COLLEGE OF ARCHITECTURE, ART, AND PLANNING

ADMINISTRATION
Kent Kleinman, dean
Barry Perlus, associate dean
Peter Turner, assistant dean of administration and finance
Dagmar Richter, chair, Department of Architecture
Hilal Khurshid Dadi, interim chair, Department of Art
Kieran Donaghy, chair, Department of City and Regional Planning
Deborah Duran, director, admissions
Tremayne Waller, associate director, advising and diversity
Michael Moyer, director, alumni affairs and development
M. Susan Lewis, director, career services
Melanie Holland Bell, registrar

FACULTY ADVISORS
Architecture students are assigned faculty advisors and are also invited to share concerns with and seek advice from the most appropriate faculty member or college officer, including the registrar, the department chair, and the dean.

Students in the fine arts department are assigned a faculty advisor for the first year. After the first year, students may select their advisors. Students are required to have an advisor throughout their program in their area of concentration.

Undergraduate students in the program of Urban and Regional Studies are assigned faculty advisors. All students in the college are invited to share concerns and seek advice from the volunteer student advisors (EARS) at any time.

The college offers programs leading to the bachelor’s degree—the five-year program in architecture leads to the bachelor of architecture; four-year programs in art and architecture lead to the bachelor of fine arts. In addition, four-year programs with a concentration in either urban and regional studies or history of architecture lead to the bachelor of science.

Graduate-level programs are offered in art, architectural design and urban design, architectural science, history of architecture and urbanism, historic preservation planning, city and regional planning, regional science, and landscape architecture.

Students in most of these programs work in physical proximity to one another and thus gain a broader understanding of their own special area of interest through contact with students and faculty from other disciplines.

Early in its development, the college set a limit on the number of students it would enroll and devised a selective method of admission. There are now more than 670 students and a full-time teaching staff of over 60, supplemented by visiting professors and critics, part-time lecturers, and assistants.

Teachers and students meet freely, and much instruction and criticism is on an individual basis.

The college’s courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the university.

The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curricula, the methods of teaching, and the extracurricular life of teachers and students.

The college occupies Sibley Hall, Olive Tjaden Hall, Rand Hall, and the Foundry. Facilities for architecture and city and regional planning, as well as college administrative offices, and the Fine Arts Library, are located in Sibley Hall. The Department of Art is housed in Olive Tjaden Hall. Sculpture facilities are in the Foundry and architecture design studios and shop facilities are in Rand and Sibley. The Green Dragon Café, a student eatery and lounge, is located in the lower level of Sibley Dome.

Darkrooms in the Department of Art are available for general use by students in the college and are used primarily as laboratories for the photography courses. Each user must pay a darkroom fee. Information about darkroom rules and regulations, hours, and equipment is available at the darkroom circulation desk.

Through the generosity of the late Lillian P. Heller, the college also owns the Miller-Heller House, home of William H. Miller, the first student to enrol for the study of architecture at Cornell, and later a practicing architect in Ithaca. This building is used to house visiting teachers and guests of the college and for occasional receptions and social events.

Libraries
The Fine Arts Library in Sibley Hall serves the College of Architecture, Art, and Planning through its collections on architecture, fine arts, city and regional planning, and landscape architecture. The library, with more than 207,000 books, is capable of supporting undergraduate, graduate, and research programs. Some 1,400 serials are currently received and maintained.

The facilities of the libraries of other schools and departments on campus and the John M. Olin Library, designed primarily as a research library for graduate students, are also available.

Museums and Galleries
The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to academic programs of the university, the museum has no administrative affiliation with any department. In this way, its programs freely cross academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Cornell.

Throughout the year, works of students, faculty, and staff in the College of Architecture, Art, and Planning and of guest artists may be viewed in the John Hartell Gallery in Sibley Dome and in the Olive Tjaden Gallery in Olive Tjaden Hall. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held.

Cornell in Rome
Cornell in Rome is a semester-long study-abroad program of Cornell University’s College of Architecture, Art, and Planning. Educating students in Italy for nearly 25 years, the program has provided a transformative experience for young, developing artists, architects, urbanists, and scholars. The program is open to students in and outside Cornell in the disciplines of architecture, visual art, and urban studies, as well as related fields like art history, classics, European studies, medieval studies, and sociology.

Drawing upon the historical and cultural resources of Rome, its museums, art, and architecture, and the city’s beauty and complexity as an ancient and yet modern world capital, a semester in Rome has proven to be a pivotal semester for both intellectual and personal growth. The program provides extensive studio work, onsite classes, and a rich field trip itinerary.

Courses are offered in both fall and spring terms in architecture, architecture history, art, art history, drawing, photography, architecture theory, contemporary Italian culture, European politics, and Italian language. Courses in urban studies are offered in the spring semester only. Weekly classes use the city and its wealth of museums and galleries,
archaeological sites, villas, churches, and remarkable public spaces for onsite study, as well as Rome's many neighborhoods, for field-based learning activities.

Cornell in Rome’s resident faculty members, chosen from the best local and internationally known scholars, critics, architects, and artists, are all experts in using the city as an unparalleled resource for instruction and inspiration. Additionally, distinguished Cornell professors from the Departments of Architecture, Art, and City and Regional Planning live and teach in Rome for the entire term.

The program is based at Palazzo Lazzaroni, a handsomely restored 17th-century palazzo in the historic center of Rome. All participants are housed in large, completely furnished apartments with wireless Internet access, all within walking distance of studio and classroom space. Students enjoy daily contact with the urban life of a major, European city and its nearly 3,000 years of history and extraordinary backdrop of art and architecture.

Application is made in the academic year before participation. The deadline for both fall and spring semesters is November 1 for AAP students and January 15 for all out-of-college applicants. Accepted students must confirm their enrollment by February 15. Detailed course and program information may be found at www.rome.cornell.edu. Students are also welcome to stop by the Cornell in Rome office at 149 East Sibley Hall.

AAP NYC
The College of Architecture, Art, and Planning's rapidly expanding studio and classroom facility in New York City offers undergraduate and graduate students a unique opportunity to live and study in one of the most culturally vital urban centers in the world, while gaining valuable professional experience at design firms, studios, and innovative public, private, and nonprofit organizations throughout the city. Located on 17th Street near Union Square, in the vibrant Chelsea neighborhood of Manhattan, AAP NYC's loft provides expansive studio and seminar space for short-term and semester-long use by the entire college. The location is an ideal base for the study of urban and social policy, for museum and gallery visits, or for exposure to a wealth of art and architectural history and practice.

AAP NYC offers a full roster of courses enriched by New York City's unique artistic, historical, and cultural resources and by AAP's extensive alumni network of noted metropolitan professionals, who frequently teach and serve as guest critics and mentors. The programming expands opportunities for AAP's undergraduates, allowing them to now take advantage of study in two world capitals—New York City and Rome—while easily meeting graduation requirements.

Application is made in the academic year prior to participation. The deadline is November 1 for AAP students and January 15 for all out-of-college applicants. Detailed program information can be found at www.aap.cornell.edu/aap/nyc.

COLLEGE ACADEMIC POLICIES

Ownership of Student Work
All drawings, models, paintings, graphic art, and sculpture done in the studios and drafting rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. Certain works may be selected by the college for retention for academic purposes.

Exhibitions of Student Work
Exhibitions of student work are held each semester as part of the yearly schedule of the Olive Tjaden Galleries at the John Hartell Gallery in Sibley Dome. These galleries display work from a specific course or exhibit examples of recent work by individual faculty members, students, and visitors.

Minors
Students may pursue minors in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the student's major. Completed minors will appear on the student's transcript. Not all departments offer minors. Information on minors offered and how to pursue a minor can be found online at www.cornell.edu/academics/minors.cfm.

Scholastic Standards
Dean's Honor List
The Dean's Honor List is calculated after each semester. Students who complete a course load of at least 12 credit points with no grades of Incomplete (INC), no failing grades (F, U, or UX) (excluding PE courses), and no missing grades (NGR) and who earn a grade point average of 3.8 or better will be placed on the Dean's Honor List. This honor will be recorded on the official transcript.

Good Academic Standing
To be in good academic standing, a student must successfully complete a minimum of 12 academic credits each semester and earn a minimum semester grade point average (GPA) of 2.3. A minimum cumulative GPA of 2.0 is required for graduation.

Please note the following college policies on grades of INC and/or NGR:

1. The student is issued a Warning. This means the student's performance does not meet expectations. Unless improvement is shown in the subsequent semester, the student may be placed on Final Warning or given a Required Leave of Absence from the college.

2. The student is issued a Final Warning. This indicates the student's record is unsatisfactory. Unless considerable improvement is shown in the subsequent semester, the student may be given a Required Leave of Absence or Required Withdrawal from the college.

3. The student is placed on a Required Leave of Absence. The student is dismissed from the college and may not continue studies in the college. A student who has been placed on a required leave of absence may request to resume studies after a leave of absence of at least two semesters. This request is made by letter addressed to the college registrar, B1 W. Sibley Hall, Ithaca, NY 14853-6702. The student must submit evidence that time has been well used, and if employed, the student must submit a letter from the employer(s). Students on required leave are not allowed to register extramurally at Cornell, as the intention of the required leave is to insist upon a break from study at Cornell. If a student chooses to enroll in courses at another institution while on a required leave, credit is not granted automatically. Upon receiving permission to return, a student must petition the department and include an official transcript to request credit for courses taken.

A return to study in the college after a required leave of absence is at the discretion of the college Dean and Academic Records Committee. Requests for spring-semester return must be made by October 1 and requests for fall-semester return must be made by March 1. The ARC decision is final and cannot be appealed. Students denied readmission can reapply for the following semester. The second
required leave of absence is a de facto dismissal and the student will be permanently withdrawn from the college.

4. The student is placed on a Required Withdrawal. The student may not reregister in the College of Architecture, Art, and Planning and is dismissed from the college and is permanently prohibited from continuing studies in it. The required withdrawal action does not prevent the student from applying for admission to another division of the university.

The above actions are not necessarily sequential. A student who has received a warning may be placed on a required leave of absence at the end of the next semester if the performance during that semester is deemed to be grossly deficient.

A student who has been placed on a required leave of absence or a required withdrawal from the college has one week from the time of the decision to appeal the ARC decision electronically c/o the AAP Registrar's Office, B1 W. Sibley Hall, Ithaca, NY 14853-6702. The ARC decision on the appeal, the appeal should be submitted to the student's academic performance. Only extenuating circumstances which contributed to the student's academic performance. No new information will be considered in the appeal. To ensure timely receipt of the appeal, the appeal should be submitted to the ARC electronically c/o the AAP Registrar's Office at AAPRegistrar@cornell.edu or by fax at (607) 254-2848. The ARC decision on the appeal is final. No further appeals will be considered.

Leaves of Absence

The College of Architecture, Art, and Planning adopted the following leave of absence policy effective in the fall of 2006: Leaves of absence will be of four types:

1. **Voluntary leaves of absence for personal reasons** may be granted for a variety of reasons. The student may request a voluntary leave of absence no later than the third week of instruction in the affected term. The department may set conditions for completion of work, new and incomplete course work, community service, or internships while the student is on leave. The student may not attend classes at Cornell through the School of Continuing Education and Summer Sessions. The term limit of this type of leave is five years. Following the end of the fifth year, the student will be automatically withdrawn from the college. Students wishing to return from this type of leave within the five-year period should submit a written request to the AAP Registrar's Office, B1 W. Sibley Hall, Ithaca, NY 14853-6702. Requests for spring-semester return must be made by October 1 and requests for fall-semester return must be made by March 1. The request should clearly state how the conditions of the leave have ended and should include any required documentation. The AAP registrar will forward such requests to the academic department for review. If it is determined that the conditions of the leave have ended, the request will be denied. The student may appeal in writing within two weeks of the decision.

2. **Voluntary leaves of absence with conditions** may be granted for students desiring to take a voluntary leave for personal reasons but who are not in good academic standing or they wish to take a leave during the current term. Conditional leaves are at least two semesters in length. The department will set conditions for completion of work, new and incomplete course work, community service, or internships while the student is on leave. Students may be granted conditional leaves of absence after the 12th week of the term only in highly extenuating circumstances and with the approval of the student's department and the Academic Records Committee (ARC). The student may not attend classes at Cornell through the School of Continuing Education and Summer Sessions. The student's academic status is subject to review at the time of the leave and upon the student's return. The term limit of this type of leave is five years. Following the end of the fifth year, the student will be automatically withdrawn from the college. Students wishing to return from this type of leave within the five-year period should submit a written request to the AAP Registrar's Office, B1 W. Sibley Hall, Ithaca, NY 14853-6702. Requests for spring-semester return must be made by October 1 and requests for fall-semester return must be made by March 1. The request should clearly state how the conditions of the leave have ended, the request will be denied. The student may appeal in writing within two weeks of the decision.

3. **Voluntary leaves of absence for health reasons** may be granted by the college upon the recommendation of Counseling and Psychological Services (CAPS) or Gannett Health Services. They are usually no less than six months in duration. The department may set conditions for completion of work, new and incomplete course work, community service, or internships while the student is on leave. The college may impose additional conditions appropriate to the individual situation. The student may not attend classes at Cornell through the School of Continuing Education and Summer Sessions. The student's academic status is subject to review at the time of the leave and upon the student's return. Students wishing to return from this type of leave must notify Gannett Health Services in writing via email at healthleaves@cornell.edu by June 1 for a proposed fall-semester return and by November 1 for a proposed spring-semester return. All required documentation must be submitted to Gannett by July 1 for a proposed fall-semester return and by December 1 for a proposed spring-semester return. Students should also keep the AAP Registrar's Office informed of their intent to return. A checklist for returning from this type of leave can be found online at www.gannett.cornell.edu/services/leaveofabsence.cfm.

4. **Required leaves of absence for academic reasons.** The ARC may vote for a required leave if the student is not making satisfactory progress in the degree program defined by completion of a minimum of 12 academic credits with a minimum GPA of 2.3 each semester unless there are special circumstances. The ARC and department may set conditions for completion of work, new and incomplete course work, community service, or internships while the student is on leave. The college may impose additional conditions appropriate to the individual situation. The student may not attend classes at Cornell through the School of Continuing Education and Summer Sessions. The student's academic status is subject to review at the time of the leave and upon the student's return. A return to study in the college after a required leave of absence is at the discretion of the college's Academic Records Committee. The minimum length of a required leave of absence is two semesters, and the maximum term limit is five years. Following the end of the fifth year, the student will be automatically withdrawn from the college.

Students wishing to return from this type of leave should submit a written request to the AAP Registrar's Office, B1 W. Sibley Hall, Ithaca, NY 14853-6702. Requests for spring-semester return must be submitted by October 1 and requests for fall-semester return must be made by March 1. The request should clearly illustrate that the time away from Cornell was well spent and should include any required documentation. The AAP registrar will forward such requests to the academic department for review. The request, including the department recommendation, will then be forwarded to the ARC for its review and action. If the student's request to return is denied, the student may appeal in writing to the ARC within two weeks of the decision. The ARC decision on the appeal is final. No further appeals will be considered.

Schedule Requirements and Grading

**Standard Course and Credit Load:** Each semester students are expected to enroll in the courses stipulated in their published curriculum. AAP students are not permitted to enroll in more than 20 or fewer than 12 academic credits, except by approved petition. AAP students studying off-campus may not enroll in more than 18 academic credits per semester while away from Ithaca; additional program restrictions may apply.

**Deviating from the Standard Course and Credit Load:** Students wishing to deviate from the prescribed curriculum enroll in fewer than 12 or more than 20 credit hours, or seek a substitution for a specific graduation requirement must petition the academic department for permission. Petition forms are available in the department and college registrar's offices. Petitions must be submitted prior to the act and within the university add/drop period. Further, students wishing to take more than the standard number of credit hours should have a cumulative grade point average of 3.0 or better. Petitions should be submitted only if there are clearly extraordinary circumstances that merit special consideration. In order for a petition to be approved, circumstances must be extenuating. Once submitted and acted upon, petitions can only be reversed by subsequent petition. Students who petition and receive a denied petition by responding in writing to the department faculty within 10 days of the petition decision.

**Minimum Grades:** For design and studio courses, the minimum passing grade is “C.” For all other letter-graded courses, the minimum passing grade is “D-.” For S/U-graded courses, a grade of “S” is required for passing.
Satisfactory-Unsatisfactory Grade Option: The AAP faculty approved the following regulations regarding the grading of undergraduate students in the college on the satisfactory-unsatisfactory grading basis:

1. The satisfactory-un satisfactory grading option may be used only with free electives; all other courses must be taken for letter grade.

2. In a course designated with satisfactory-unsatisfactory grading exclusively, the entire class must be so graded. If not advertised as such, the instructor must announce this within the first week of class.

3. In a course designated as optional satisfactory-unsatisfactory grading, both student and instructor must agree on the option. Once agreed upon with the instructor, students must enroll in the appropriate grading option by the end of the third week of classes. This option may be used for the final grade unless otherwise approved by petition and approval of the instructor.

4. The instructor must announce in advance the equivalent letter grade values to be used for satisfactory or unsatisfactory. Unless otherwise stated, a grade of “S” or “SX” is equivalent to the letter-grade of “C-” or better.

No Grade Reported

If the student does not receive a grade in a course, that course will not be credited toward degree requirements until the instructor has formally submitted a grade. It is the student’s responsibility to pursue such matters until they are resolved. Any problem resulting from faculty inaction should be reported to the department chairperson.

Grade Changes

Each semester’s work is an entity and grades are assigned for work completed during the official semester period. Grade changes may be made only in the event that the instructor made an error in assigning the original grade. Grades will not be changed after the end of a semester, and students shall not have unfair advantage for doing additional work.

Incompletes

The incomplete (INC) grade status may be used when two basic conditions are met:

1. The student must have substantial equity in the course; equity must be at a passing level.

2. The reason(s) for failure to complete all course requirements must be highly extenuating conditions that are beyond the student’s control.

An incomplete may not be given merely because a student fails to complete all course requirements on time. It is not an option that may be elected at the student’s own discretion. Students should not have unfair advantage by deferring completion of some major course requirement or by obtaining additional time to do the work.

It is the responsibility of the student to see that all incompletes are made up by the deadline and that the grade change has been properly recorded with the college registrar. When a grade is submitted, an asterisk appears on the student transcript next to the grade to indicate the initial incomplete grade. An incomplete may be of two kinds, regular or restricted. A regular incomplete allows a student one calendar year or two semesters for completion of course work. A restricted incomplete is one in which the instructor sets a time limit of less than two semesters. If incomplete work is not made up and if a final grade is not submitted by the instructor by the incomplete expiration date or the date of graduation, the incomplete will automatically be converted to a failing grade. This means the option to make up the work shall be lost.

The grade of Incomplete in a sequence course prevents a student from registering in the next course of the sequence unless the student petitions the appropriate department faculty to be allowed to continue in the sequence.

Course Enrollment

Undergraduates at Cornell select their courses for the next term approximately halfway through the current term. Students can view their pre-enrollment appointment in Student Center (studentcenter.cornell.edu). Step-by-step pre-enrollment instructions are available online at http://registrar.sas.cornell.edu/Student/enroll.html.

Pre-enrollment is an enrollment request; it is not a guarantee of enrollment. Prior to the beginning of each semester, changes can be made to a student’s pre-enrollment request without the student being notified. At the beginning of the add/drop period, it is the student’s responsibility to confirm their schedule in Student Center.

During the first three weeks of the semester, students can add courses and change the credit hours and/or grading basis of a course without petition. To enroll in courses that involve independent study, a student must file an independent study form with the department. Students have seven weeks to drop most courses (exceptions may apply to PE, half-semester, or high-demand courses). Courses flagged as needing permission or that cause time conflicts for students may need to be added/dropped by completing a course enrollment (add and drop) form obtained in the college registrar’s office.

After the third week, no course may be added except by petition and no required sequence course may be dropped except by petition. From weeks four through seven, elective courses only may be dropped without petition. After the seventh week, a petition is required to drop any courses. If approved, a grade of “W” will appear on the transcript to indicate the course was dropped after the seventh-week drop deadline. Petitions should be submitted only if there are clearly extraordinary circumstances that merit special consideration. In order for a petition to be approved, circumstances must be extenuating.

Prorated Tuition

In exceptional circumstances, graduating seniors may be eligible for prorated tuition in their final semester of study. Students must have already completed the minimum number of semesters expected by their degree program. Specifically, students pursuing the B.S. or B.F.A. degree who have completed 8 full-time semesters (or equivalent) may be eligible for prorated tuition in the 9th and final semester; students pursuing the BArch degree who have completed 10 full-time semesters (or equivalent) may be eligible for prorated tuition in the 11th and final semester. Students may apply to pro-rate up to 9 credit hours during the final semester. Students must apply to the college registrar no later than the end of the third week of classes.

Transfer Credit

There is no maximum number of transfer credits that can be applied to any of the AAP undergraduate degrees; however, each major has a minimum number of credits which must be completed at Cornell. The general transfer credit policies below apply to all AAP students. Additional department-specific policies and procedures follow.

General Transfer Credit Policies:

• A minimum grade of “C” is required for transfer credit to be accepted.

• Transfer course work must be completed at an accredited institution.

• First-Year Writing Seminars require approval of the Knight Institute.

• Calculus requires the approval of the Math Department.

Transfer Credit Policies and Procedures: External and Internal Transfer Students

Each department sets transfer credit policies for students transferring into their department from other institutions (external transfer students) and from other programs at Cornell (internal transfer students). Each department sets transfer credit policies below in order to have transfer credit properly recorded by the AAP Registrar’s Office. Students are encouraged to meet with the AAP registrar during the first semester in the program to ensure a timely transfer of credit. If a student wishes to apply transfer credit toward a specific major requirement, it is the student's responsibility to obtain the appropriate approvals.

Architecture

Students who transfer into the B.Arch. program must complete a minimum of four semesters in residence, at least three of which must be in Ithaca, and a minimum of 70 credits at Cornell, taking 35 of the 70 credits within the Department of Architecture.

Students who transfer into the B.S. program in History of Architecture must complete ARCH 1801, ARCH 1802, and one term of design during the first year in the program. Internal transfer students (from another program at Cornell) must complete a minimum of two semesters in residence and 30 academic credits at Cornell after entering the program. External transfer students (from another institution) must complete a minimum of four semesters in residence and 60 academic credits at Cornell.

The AAP registrar prepares a transfer credit evaluation for each transfer student entering the Architecture Department. The registrar is authorized to apply credit toward out-of-college and in-out-of-college electives, including the humanities and physical science requirements. To receive credit toward any other degree requirement, course descriptions, syllabi, and portfolio may be required. The student is responsible for
providing this documentation to the Architecture faculty member who teaches the equivalent Cornell course for which credit is being sought. The faculty member determines whether or not credit should be granted toward a specific degree requirement.

Art Students who transfer into the B.F.A. program must complete a minimum of four semesters in residence and at minimum of 60 academic credits at Cornell, taking 30 of the 60 credits in the Department of Fine Arts. The AAP registrar prepares a transfer credit evaluation for each transfer student entering the B.F.A. program. The registrar is authorized to apply credit toward out-of-college and in/out-of-college electives, including the humanities, social science, and physical science requirements. To receive credit toward any other B.F.A. requirement, course descriptions, syllabi, and portfolio may be required. The student is responsible for providing this documentation to the Art Department. The Art Department determines whether or not credit should be granted toward a specific B.F.A. requirement.

Urban and Regional Studies Students who transfer into B.S. program in URS (internal and external transfer) must complete a minimum of four semesters in residence and a minimum of 60 academic credits at Cornell after entering the program. The AAP registrar prepares a transfer credit evaluation for each transfer student entering the B.S. program in URS. The registrar is authorized to apply credit toward free electives only. To receive credit toward any other B.S. requirement, course descriptions and syllabi may be required. The student is responsible for providing this documentation to the AAP registrar. All other course work is reviewed by the URS director of undergraduate studies (DUS). The DUS determines whether or not credit should be granted toward a specific B.S. requirement.

Transfer Credit Policies and Procedures: Current Cornell Students

Architecture The AAP registrar evaluates transfer credit to be applied toward out-of-college and in/out-of-college electives, including the humanities and physical science requirements. Students are encouraged to seek pre-approval by submitting a course description from the offering institution. All other course work is reviewed by the department and approved through the petition process.

Art The AAP registrar evaluates transfer credit to be applied toward out-of-college and in/out-of-college electives, including the humanities, social science, and physical science requirements. Students are encouraged to seek pre-approval by submitting a course description from the offering institution. All other course work is reviewed by the department and approved through the petition process.

Urban and Regional Studies The AAP registrar evaluates transfer credit to be applied toward free electives. Students are encouraged to seek pre-approval by submitting a course description from the offering institution. All other course work is reviewed by the department and approved through the petition process.

Transfer Credit for Courses Taken While in High School Cornell University DOES NOT ACCEPT credit for courses sponsored by colleges or universities but taught in the high school to high school students, even if the college provides a transcript of such work. Course work completed while in high school may be considered for credit if there is sufficient evidence that:

1. The course was a standard course available to all students registered at the college/university.
2. The course syllabus, text(s), examinations, and evaluation processes are the same for all enrolled students at all teaching sites.
3. The course instructor is a faculty member (includes adjunct) at the offering college; and
4. The course was not used to fulfill high school requirements.

Advanced Placement Credit Advanced placement credit is generally applied as free elective credit only. Please refer to each department for major-specific advanced placement policies.

Department of Architecture Program Mission

If one could identify a singular philosophy for the architecture program at Cornell, it would be that architecture is a conceptual problem-solving discipline. The goal of the program is to produce conceptual thinkers, versed in the skills, history, theory, and science of their field. In part, the success of the program can be attributed to the quality of students and faculty members combined with their dedication and enthusiasm. Cooperative undergraduate and graduate programs in the fine arts and in city and regional planning have also greatly contributed to the department’s strength. The influence of these programs has created a philosophy that is unique to Cornell: that the individual work of architecture is thought of as part of a greater whole and exists in a determinate physical context. Furthermore, the students and their work are also placed in a historical context, creating a sense of the continuity of architectural thought.

The intention has always been to instruct architecture students in issues of basic and more sophisticated formal principles, developing an aptitude for functional and programmatic accommodation, structural and technological integration, energy-conscious design, and materials and methods of construction. Virtually every architecture school does this. Cornell, however, differs from most schools in the way it teaches students about architecture: we do not teach architecture; instead we try to teach students how to learn about architecture (witness, for example, the inordinate number of Cornell alumni teaching in architecture programs). Rather than train architects who think of buildings as autonomous objects frozen in an assigned ideology, our goal is to produce architects who are capable of making independent judgments rooted in an ever-changing context of architectural thought.

To affect these goals, design at Cornell is taught as an intellectual discipline steeped in societal and cultural values. Architecture is taught as the integration of thought, form, and structure. Design problems frequently are located within real physical contexts and are evaluated in relation to those motivations that shaped the environment over time. Architecture, it is assumed, resides in the integration of idea and fact and history and the future.

The development of form and space is critical to architectural design. Equally significant is the responsible resolution of functional requirements integrated with actual and perceived structure. The excellence of architectural art, however, derives from the exploration and refinement of ideas, upon which form, purpose, and structure are dependent. Deemed essential at Cornell is that the student grapple not only with form and structure, but with the substance of fact. Consequently, the investigation of architectural content is pursued in protracted and continuous study. Architecture studios extend into the classroom and the library; they embrace the humanities and sciences, tradition and innovative effort.

Professional Degree Programs

Note on Professional Accreditation

In the United States, most state registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit U.S. professional degree programs in architecture, recognizes three types of degrees: the Bachelor of Architecture (B.Arch.), the Master of Architecture (M.Arch.), and the Doctor of Architecture (Ph.D.). A program may be granted a six-year, three-year, or two-year term of accreditation, depending on the extent of its conformance with established educational standards.

Doctor of Architecture and Master of Architecture degree programs may consist of a pre-professional undergraduate degree and a professional graduate degree that, when earned sequentially, constitute an accredited professional education. However, the pre-
Cornell's graduate professional degree program (in NAAB candidacy status) is a seven-semester course of study dedicated to preparing individuals from diverse disciplines and backgrounds for careers in architecture. Building upon the maturity and unique experience of the graduate student, the program seeks to empower a sense of inquiry, responsibility, and creativity as it prepares young architects for the challenges of the 21st century. The program is committed to the view that architectural practice must be continually investigated and reassessed in today's globally expansive and technologically driven context, and that the program places the question of appropriate and intensive practice at the core of its pedagogy.

Teaching in the program complements basic skills and knowledge essential to the profession with engagement in emerging social, technical, and environmental concerns that characterize architecture's expanded field. The curriculum comprises a rich offering of courses in visual representation, the history and theory of architecture, technology, and professional practice complemented by six semesters of design studios. The intensive course of study encourages the development of research trajectories and culminates in a one-semester design thesis.

Making full use of Cornell University's renowned and excellent resources across all disciplines, the professional Master of Architecture situates itself internationally, drawing upon distinguished national and international visitors. Cornell University's New York City studio, and traveling studio locations worldwide. The professional Master of Architecture is open to applicants possessing a four-year bachelor's degree in any area.

Cornell in Rome
Cornell in Rome has been an integral part of architectural study at Cornell University for nearly 25 years. Architecture students traditionally look forward to this semester abroad for first-hand experience of buildings and urban spaces previously studied only in classes and lectures. Rome, with its unparalleled complexity of historical layers, presents the student of architecture with the challenge of visualizing architecture in a city where the intensity of history pervades.

The city teaches students to understand how history can become a critical foundation for understanding architectural design as an integral component of the urban context. Complete immersion in this distinctive and complex milieu presents students with new and different problems and decisions; through analysis and understanding of historic examples, experience and insight are gained for future design challenges.

Design studios, complemented by visits to important buildings, museums, and monuments both in Rome and throughout Italy, emphasize onsite observation, measuring, drawing, and projection, while history courses and theory seminars encourage students to engage in analytical thinking, direct study, and cultural interpretation.

Italian and European architects and educators complement faculty members from Cornell in teaching the 6-credit studio and assist in formulating and contributing to a rich variety of seminars, lectures, and field trip programs.

Architecture Requirements
Fourth- and fifth-year architecture students in good academic standing who have completed the core requirements of the first three years of the five-year B.Arch. curriculum are eligible for participation in Cornell in Rome.

AAP in NYC
AAP NYC provides the opportunity for architecture students to study, work, and live in one of the world's most dynamic urban contexts. With its pivotal location, the architecture program at AAP NYC attracts international visitors, Cornell Architecture's "school to the profession—one that allows students to consider their own future trajectories and the possible paths toward achieving them.

B. Arch. Curriculum
Please refer to the AAP Student Handbook at www.aap.cornell.edu/aap/student-services/ for the most up-to-date B. Arch. curriculum information.

### Spring Semester
- 2102 Design IV 6
- 2604 Structural Elements 3
- 2302 Architectural Analysis II 2
- 2601 Environmental Systems—Site Planning 3
- Free elective 3

#### Credits
- 17

### Third Year
- **Fall Semester**
  - 3101 Design V 6
  - 3601 Environmental Systems II—Thermal Environmental Systems 3
  - Departmental elective (History) 3
  - Departmental elective (Theory) 3
  - 3402 Architecture as a Cultural System or free elective 3
- **Credits**
- 18

#### Electives
- **Departmental Required Electives**
  - 1  architectural theory or 6000-level design-related course 3
  - 2  history of architecture: 3000 level 6

- **In-College Free Electives**
  - 1  quantitative reasoning 3

- **Out-of-College Required Electives**
  - 1  humanities 3
  - 1  mathematics, or physical or biological sciences 3

- **Out-of-College Free Electives**
  - 1  first-year writing seminar 3

- **Total credits**
- 106

### Spring Semester
- 4101 Design VII 6
- Departmental elective (History) 3
- Out-of-college elective (Physical or Biological Science) 3
- Free elective 3
- Free elective 3

#### Credits
- 18

### Fourth Year
- **Fall Semester**
  - 4102 Design VIII 6
  - 5201 Professional Practice 3
  - College elective (Art) 3
  - Free elective 3
  - Free elective 3
- **Credits**
- 18

#### Electives
- **In-Department Free Electives**
  - 2  art: any studio courses (ART 2104 will fulfill) 6

- **Out-of-Department Free Electives**
  - 1  quantitative reasoning 3

- **Total credits**
- 176

### Fifth Year
- **Fall Semester**
  - 5101 Design IX 6
  - ARCH 5110 Thesis Proseminar 3
  - Out-of-college elective (Humanities) 3
  - Free elective 3
  - Free elective 3
- **Credits**
- 18

#### Electives
- **In-Department Free Electives**
  - 2–5  15

- **Total credits**
- 17

### Thesis Requirement
#### Thesis Book
As a part of the thesis requirement, each student must submit at the final review one copy of an adequately documented print of the final thesis book complete with representations of the final project.

One final hardbound copy of the thesis book that was presented at the final review must be submitted to the Architecture Department Office, 139 E. Sibley Hall, no later than the day before the last day of grade submission. This is a graduation requirement. The final bound thesis book should meet the specifications outlined underneath. In addition, there shall be a CD or DVD attached to the back cover that contains the contents of the bound thesis book in PDF form. The final thesis grade will not be recorded until the final bound thesis book has been received by the department. If the final bound thesis book is not submitted by the day before the last day of grade submission, the student will NOT graduate that semester.

The thesis book must meet the following specifications:
- The thesis book cover shall not exceed the maximum height of 11 inches and maximum width of 17 inches;
- there shall be a title page that lists: the student’s full name; the title of the thesis project; the degree (i.e., B.Arch.); and the month (i.e., May, August, or January) and year of degree conferral; and
- all pages shall be numbered.

The final thesis grade will be based on the work presented at the final review. The final grade will NOT be changed even if additional work is included in the final hardbound thesis book.

#### Grades of Incomplete
An Incomplete may not be given merely because a student fails to complete all course requirements on time. Such a practice would be open to abuse; by deferring completion of a major course requirement, a student could gain advantage over his or her classmates by obtaining additional time to do a superior job. This is not an option that may be elected at the student’s own discretion.

An Incomplete may not be given merely because a student fails to complete all course requirements on time. Such a practice would be open to abuse; by deferring completion of some major course requirement, a student could gain advantage over his or her classmates by obtaining additional time to do a superior job. This is not an option that may be elected at the student’s own discretion.

While critical evaluation is the primary focus of a final thesis review, the actual grading of a thesis project shall be the responsibility of the student’s thesis committee. Additional examining faculty in attendance at the review will submit grades to be used by the thesis committee members in determining the final grade.

As with all design courses, a grade of C is the minimum passing grade for thesis. Students receiving less than C for ARCH 5902 must register for ARCH 5104, taking a fourth-year studio to complete their design sequence. Students may also need to petition to graduate under credits: ARCH 5104 is 6 credits. Please consult the college registrar to determine whether a petition is needed.

#### Grade of Incomplete
The thesis advisory committee may authorize a grade of Incomplete only when the two university conditions necessary for an Incomplete have been met: (1) The student has substantial equity at a passing level in the course with respect to work completed; and (2) the student has been prevented by circumstances beyond his/her control, such as illness or family emergency, from completing all of the course requirements on time.

An Incomplete may not be given merely because a student fails to complete all course requirements on time. Such a practice would be open to abuse; by deferring completion of some major course requirement, a student could gain advantage over his or her classmates by obtaining additional time to do a superior job. This is not an option that may be elected at the student’s own discretion.

An Incomplete must not be given merely because a student fails to complete all course requirements on time. Such a practice would be open to abuse; by deferring completion of some major course requirement, a student could gain advantage over his or her classmates by obtaining additional time to do a superior job. This is not an option that may be elected at the student’s own discretion.

The thesis advisory committee may authorize a grade of Incomplete only when the two university conditions necessary for an Incomplete have been met: (1) The student has substantial equity at a passing level in the course with respect to work completed; and (2) the student has been prevented by circumstances beyond his/her control, such as illness or family emergency, from completing all of the course requirements on time.

An Incomplete may not be given merely because a student fails to complete all course requirements on time. Such a practice would be open to abuse; by deferring completion of some major course requirement, a student could gain advantage over his or her classmates by obtaining additional time to do a superior job. This is not an option that may be elected at the student’s own discretion.
the College Registrar's Office indicating the reason for the Incomplete and the deadline for completion. When a student receives a grade of Incomplete in a course and has completed all other degree requirements, the student shall be placed on a voluntary leave of absence for up to one academic year in order to complete the thesis requirement. While on a voluntary leave of absence, the student is not registered with the university. Please note that Cornell University does not allow persons who are not registered with the university to attend classes, reside in university-owned residences, or use any other university services. This means that the student will not have access to any university, college, or department facilities to make up the Incomplete, unless the student officially registers with the university. In the case of the Incomplete, all work must be submitted to the Department by the deadline stated on the Incomplete Form. The thesis committee shall be responsible for assigning the final grade and in case the committee members are not available due to absence, the Department Chair shall be responsible for assigning the final thesis grade. Failure to complete all course work within the time permitted will result in the conversion of the Incomplete symbol to a grade of F. At that time, the option to make up the work is lost. It is the responsibility of the student to see that the Incomplete is made-up within the deadline and that the grade change has been properly recorded with the college registrar. The symbol Incomplete becomes a permanent part of the student's transcript, even when a grade is later submitted.

**Architecture Concentrations for Majors**

It is often advantageous for undergraduates to concentrate in specific subdisciplines of architecture, especially if they anticipate application to specialized graduate programs; therefore, the following concentrations in architecture are offered within the department for B.Arch. and B.F.A. in architecture candidates only:

- Architecture, Culture, and Society 3402 (or equivalent) plus 9 credits in this area.
- Architectural Science and Technology 2601, 2602, 2603, 2604, 3601, 3602, 3603, distribution requirement (3 credits), plus 6 credits in this area.
- History of Architecture 1801, 1802, distribution requirements (9 credits), plus 7 credits (including a 4-credit seminar course) in this area.
- Theory of Architecture 2301, 2302, distribution requirements (6 credits), plus 6 credits in this area.
- Visual Representation in Architecture 1501, 1502, 2503, plus 9 credits in this area.
- Students wishing to receive recognition for a concentration must submit a completed verification of concentration form to the Architecture Department office. For a course to count toward a concentration, the student must receive a grade of C or better.

**Transfer Students**

Although the program leading to the bachelor of architecture is directed specifically to those who are strongly motivated to begin professional study when entering college, it is sufficiently flexible to allow transfers for students who have not made this decision until after they have been in another program for one or two years. Individuals who have already completed a nonprofessional undergraduate program may apply to the professional M.Arch. 1 program. Transfer students are responsible for completing that portion of the curriculum which has not been covered by equivalent work. Applicants who have had no previous work in architectural design must complete the 10-semester design sequence.

Admission is offered to a limited number of transfer applicants who have completed a portion of their architecture studies in other schools. Each applicant's case is considered individually. Transfer students must complete a minimum of 70 credits and four semesters in residence, taking 35 of the 70 credits (including four semesters of design) in the Department of Architecture. Placement in the design sequence is based on a review of a representative portfolio of previous work. For those who would benefit from an opportunity to explore the field of architecture before deciding on a commitment to professional education, the department offers an introductory summer program that includes an introductory studio in architectural design, lectures, and other experiences designed to acquaint participants with opportunities, issues, and methods in the field of architecture.

**Alternative Programs**

**Bachelor of Fine Arts**

After completing the first four years of B.Arch. requirements, the student may choose to receive the degree of bachelor of fine arts (B.F.A.) in architecture, which is not a professional degree. A student wishing to receive this degree must submit a petition to the Petition Committee, verified by the college registrar, that the first eight semesters of required B.Arch. courses can be satisfactorily completed and that the following minimum distribution requirements will be met:

1. Art studio course (3 credits)
2. Mathematics and Quantitative Reasoning course (3-4 credits)
3. First-Year Writing Seminar (3 credits)
4. Mathematics or physical or biological sciences course (3 credits)
5. Humanities course (3 credits)

Students are admitted to this degree program only via the B.Arch. degree track. Students who are awarded a B.F.A. in Architecture degree may not reregister in the B.Arch. program.

**Bachelor of Science in History of Architecture**

The history of architecture major leads to a bachelor of science degree conferred by the College of Architecture, Art, and Planning. The major is intended for transfer students from other programs at Cornell and from colleges and universities outside Cornell. Students in the Department of Architecture and the College of Arts and Sciences may take the major as part of a dual-degree program. The course of study in this major, available to students from a variety of academic backgrounds, offers the opportunity for a vigorous exploration of architecture and its history.

**Admission Requirements**

Two years of undergraduate study, ARCH 1801 and 1802 or the equivalent. Students transferring from a B.Arch. program must be in good standing in their design sequence.

**Procedure**

Students from Cornell may transfer to the program at the beginning of the fall semester of their third or fourth year of study. They submit a short application as prospective internal transfer students. Before applying, all prospective internal transfer students meet with a history of architecture faculty member to discuss scheduling for the program.

All students who wish to enter the program, either from Cornell or other institutions, must apply by November 15 for spring admission or by March 1 for fall admission. Applications for both internal and external transfer students are available from the Admissions Office, College of Architecture, Art, and Planning, Cornell University, B-1 West Shirley Hall, Ithaca, NY 14853-7602. Completed applications must be submitted to the Admissions Office.

**Curriculum**

A student entering the program is assigned an advisor from the history of architecture faculty in the Department of Architecture. Advisor and student together prepare an appropriate two-year course of study according to the following guidelines:

1. 24 credits of 3000-level courses in architectural history: ARCH 3800 through 3819
2. 12 credits in 6000-level architectural history seminars: ARCH 6800 through 6819; or 8 credits in a 6000-level seminar plus ARCH 4901, offered for honors candidates only
3. One 3000-, 4000-, or 6000-level course in architectural theory
4. 24 credits in electives selected in consultation with the student's advisor
5. Language requirement, to be met in the manner specified in the College of Arts and Sciences

**History of Architecture Honors Program**

Students pursuing the history of architecture major graduate with honors if, during their two years of study in the program, they have a cumulative grant point average of 3.0 or better in all courses, have no grade lower than A- in all history of architecture courses taken at the 3000 level, and have completed an honors thesis (ARCH 4901) deemed to be of distinguished quality by the history of architecture faculty.

**Dual-Degree Options**

AAP students can earn both the B.S. in History of Architecture and B.Arch. degrees either simultaneously or sequentially. Students who have transferred into the B.Arch. program at Cornell may find this to be a special opportunity for an enlarged and enriched program of study. In this option, students complete a minimum of 206 academic credits, which includes 30 credits beyond the 176 credits required for the B.Arch. degree.
Students currently enrolled in the College of Arts and Sciences at Cornell can earn a B.A. in an arts and science college major and a B.S. in the history of architecture in five years. In this option, students complete a minimum of 150 credits, which includes the B.S. prerequisites and curriculum requirements and 100 credits of the usual distribution and major requirements in the College of Arts and Sciences. Further information about this option is available at the Admissions Office, B1 West Sibley Hall, and at the Academic Advising Center of the College of Arts and Sciences, 172 Goldwin Smith Hall.

Students may also elect to continue toward a master of arts degree in the history of architecture. The M.A. ordinarily requires a minimum of two years of graduate work beyond the bachelor's degree; with this special sequential degree arrangement that time is shortened to one year.

**Summer Term in Architecture**

The summer term offers students the opportunity of a concentrated period of design work; the term is six to eight weeks in duration.

Undergraduate studio courses, excluding 1101 and 5902, are offered in Ithaca. Normally there is also a design program abroad for third-, fourth-, and fifth-year students.

Students from schools of architecture other than Cornell are welcome to enroll in any summer program.

Other department courses may be offered as elective courses, contingent upon student interest, faculty availability, and departmental approval.

The department offers a Career Explorations summer program.

**Minor in Architecture for Nonmajors**

A special minor has been formulated specifically for those students not enrolled in the Department of Architecture but who are interested in complementing their current academic program with an introduction to various facets of architectural studies. Some students may wish to use the Minor in Architecture for Nonmajors as a means of investigating possible graduate studies in architecture. Some may wish to develop architectural specialities within other disciplines. Students meeting the requirements for this minor should complete a minor form, which is available in the architecture department office. This form, when validated by the architecture department, serves as evidence of completion of the minor requirements.

The curriculum for students in the Minor in Architecture Program totals 14 credit hours minimum, including 8 credits of required courses and 6 credits of elective courses. Grades earned must be C or better in all courses.

**Required courses.** A minimum of 8 credits, including one design studio, one visual studies course (e.g., drawing), and one history of architecture course. For example,

<table>

</tbody>
</table>

**Professional Master of Architecture (M.Arch. 1)**

**Mission Statement**

Consistent with the broader mission of the Department of Architecture, the Master of Architecture program (in NAAB candidacy status) is dedicated to preparing graduate students from diverse disciplines and backgrounds for careers in architecture. The program is committed to the view that the nature of contemporary practice must be continually investigated and reassessed in today's globally expansive and technologically dynamic context. The program places the question of practice at the center of the learning process. It posits alternative models and methods of research and seeks to empower the student's sense of inquiry, responsibility, and creativity as she or he formulates her or his unique professional trajectory. The program aims in particular to engage the unique strengths and needs of the graduate student: her or his maturity, commitment to architecture, and the wealth and variety of academic and life experiences she or he brings to the discipline. The pedagogy sets skills and knowledge essential to the profession in a context of emergent cultural, technical, and environmental concerns that characterize the expanded field of architecture in the 21st century.

**Post-Professional Master of Architecture (M.Arch.2)**

Cornell's post-professional Master of Architecture is an intensive advanced design research (ADR) program. Open to individuals holding a B.Arch. or first-professional M.Arch. degree, the three-semester program offers a critical framework for investigating pertinent design concerns, practices, and technologies in 21st-century architecture and urbanism. A structure of core and elective studios and courses allows students to pursue trajectories of inquiry within one of three interrelated territories of investigation (TI):

- **A/U:** Architecture and Urbanism
- **A/T/E:** Architecture and Technology and Ecology
- **A/D/M:** Architecture and Discourse and Media
Interdisciplinary in intent and content, the advanced design research (ADR) program engages the wealth of academic resources in the College of Architecture, Art, and Planning, across Cornell University, and at the College's New York City facility.

**Course Information**

Courses in brackets are not offered this year.

A $350 fee is charged to all registered architecture students (undergraduates, graduate students, and New York City Program and Rome Program participants) and is used to generate funds for the upkeep of computer and fabrication facilities.

**Architectural Design**

**Sequence Courses**

**ARCH 1101 Design I**

Fall, spring. 6 credits. Prerequisite: department students. Staff. Introduction to design as a conceptual discipline directed at the analysis, interpretation, synthesis, and transformation of the physical environment. Exercises are aimed at developing an understanding of the issues, elements, and processes of environmental design.

**ARCH 1102 Design II**

Spring. 6 credits. Prerequisite: department students; ARCH 1101 and 1501. Staff. Continuation of ARCH 1101. Covers human, social, technical, and aesthetic factors related to space and form. Design problems range from those of the immediate environment of the individual to that of small social groups.

**ARCH 2101–2102 Design III and IV**

Fall and spring. 6 credits each semester. Prerequisites: department students; ARCH 1501–1502; for ARCH 2101, ARCH 1102 and 1502; for 2102, ARCH 2101. Corequisite: ARCH 2301–2302. Staff.

**ARCH 3101 Design V**

Fall and spring. 6 credits. Prerequisites: department students; ARCH 2102. Staff.

**ARCH 3102 Design VI**

Fall and spring. 6 credits. Prerequisites: department students; ARCH 3101. Staff. One of the key design experiences during this semester will be the dialogic interaction of architectural conceptions and building subsystems as simulated in the design studio. The requirements of building subsystems are seen to both support and inform architectural concepts and form. Questions of passive architectural responses versus active technical responses, as well as issues of thermal comfort, energy efficiency, sustainability, structure, and life safety will be addressed.

**ARCH 4101–4102 Design VII and VIII**

Fall and spring. 6 credits each semester. Prerequisite: department students; ARCH 4101, ARCH 3102 and 3602; for 4102, ARCH 4101. Staff. Programs in architectural design, urban design, or architectural technology and environmental science and topical studies.

**ARCH 5101 Design IX**

Fall or spring. 6 credits. Prerequisite: department students; ARCH 4102. Staff. Programs in architectural design, building typology investigations, and research leading to complete development of the student’s thesis program. General instruction in the definition, programming, and development of a thesis.

**ARCH 5902 Design X—Thesis**

Fall or spring. 8 credits. Requirement for B.Arch. candidates who must satisfactorily complete a thesis. Prerequisite: ARCH 5101. Staff.

**Graduate Courses**

**ARCH 5111 Core Design Studio I**

Fall. 6 credits. Introduction to fundamental concepts of architectural design and representation, including preliminary notions of site, program, and context. Emphasis on interpretive, analytical, and generative uses of drawing, physical modeling, and digital media in the design process.

**ARCH 5112 Core Design Studio II**

Spring. 6 credits. Prerequisite: ARCH 5111. Continuation of subjects developed in the first term. Focus on program and architectonics in the design of a building type in context; introduction to site planning.

**ARCH 5113 Core Design Studio**

Fall. 6 credits. Prerequisite: ARCH 5112. Focus on issues of program and architectonics in the design of a complex building type. Emphasis on interpretive, analytical, and generative uses of digital media.

**ARCH 5114 Core Design Studio**

Spring. 6 credits. Prerequisite: ARCH 5113. Focus on architecture’s expanded sites: social, cultural, material, and/or environmental considerations of building in a complex urban landscape.

**ARCH 5115 Design Studio V**

Fall. 6 credits. (New York City). Prerequisites: ARCH 5114, 5602, 5604, 6601, 6602, 6603. Focus on the development of architectural ideas in constructed, material form. The studio explores emergent topics and constructive methods in contemporary architectural practice. Design study includes the creation of a comprehensive set of representations that describes an architectural project in detail. Students work in collaborative groups and in consultation with advisors drawn from professional practice to develop a project that engages a complex range of topical areas, including: structural and environmental systems, building envelope systems, materiality and construction, life-safety planning, and sustainability.

**ARCH 5116 Vertical Design Studio**

Spring. 6 credits. Prerequisite: ARCH 5115. Open to professional and post-professional M.Arch. students. The vertical studios are topical in nature and engage contemporary issues in architectural practice and research.

**ARCH 7111 Design A**

Fall. 6 credits. Staff. Exploration of themes, methods, and technologies in contemporary design.

**ARCH 7912 Design B: Topics Studio**

Spring. 6 credits. Staff. Graduate vertical research studio.

**ARCH 8901 Thesis or Research in Architectural Design**

Fall or spring. 9 credits. Prerequisite: ARCH 7111–7912. Staff. Second-year design course for M.Arch. 2 students whose major concentration is architectural design.

**ARCH 8902 Thesis or Research in Urban Design**

Fall or spring. 9 credits. Prerequisite: ARCH 7111–7912. Staff. Second-year design course for M.Arch. 2 students whose major concentration is urban design.

**ARCH 8911 Proseminar in Design Research**

Spring. 3 credits. Prerequisites: ARCH 5301 and 5302. ARCH 8911 offers a synthesis of design and research methods for the development of an independent thesis proposal. Course work includes exposure to different theories and practices of design inquiry, explorations of critical positions for individual development, and preparation of a document encapsulating research leading to a thesis proposition. Successful completion of the course, which includes approval of the thesis document, is a prerequisite for advancement into ARCH 8912 Independent Design Thesis.

**ARCH 8912 Independent Design Thesis**

Fall. 9 credits. Prerequisites: ARCH 8911, 5116. An independent design project on a topic selected and developed by the student and researched in ARCH 8911. Marking the transition between academic and professional practices, the thesis project is an opportunity for each student to define an individual position with regard to the discipline of architecture.

**ARCH 8913 Design C: ADR Project**

Summer. 9 credits. Staff. Development of a design project in the student’s territory of investigation.

**Elective Design Courses**

**ARCH 1103–1104 Elective Design Studio**

1103, fall; 1104, spring. 6 credits each semester. Prerequisite: nonarchitecture students; for ARCH 1103, permission of instructor; for ARCH 1104, ARCH 1103 and permission of instructor. Staff.

**ARCH 2100, 3100, 4100, 5100 Elective Design Studio**

Fall, spring, or summer. 6 credits. For transfer students and students who are not architecture majors at Cornell. Prerequisite: permission of instructor. Each student is assigned to a class of appropriate level. Staff. Nonsequence design used as temporary placement of transfer students, non-Cornell architecture students, off-campus foreign programs for third-year students (summer and Rome), and for incompletes in design sequence. In some cases student must petition to convert elective design into sequence design.

**ARCH 5103 Design IXA**

Fall, spring, or summer. 6 credits. Limited to department students. Prerequisites: ARCH 4102 and passing, but nonadvancing, grade in ARCH 5101. Structured studio for those needing to retake ARCH 5101. The course operates within the fourth-year design studios.
ARCH 5104 Design Xa
Fall, spring, or summer. 6 credits. Limited to department students. Prerequisite: ARCH 5103 and passing, but nonadvancing, grade in ARCH 5902. A structured course for those needing to take an alternative to design thesis. This course operates within the fourth-year design studio.

Related Courses and Seminars
ARCH 1110 Introduction to Architecture: Design Studio
Summer. Open to non-architecture majors in college, high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. S–U or letter grades. Not offered every year. Staff. Designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graded and sequenced program culminating in a major semester project, students explore the architectural concepts of space, form, function, and technology. Instruction is via highly personalized critiques of individual student work by assigned department faculty members, as well as periodic reviews of the group by invited faculty and guest critics. The grade is based on the overall performance in the studio with special emphasis on the quality of a major studio project.

ARCH 3103 Special Problems in Architectural Design
Fall or spring. Variable credit; max. 3. Does not count for design sequence credit. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 3106 Praxis: Community Design Workshop (also ARCH 6106)
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Workshop-based, hands-on course directed to underserved local and global communities that seek to improve the quality of life for all citizens. Incorporates studio for the primary, service-learning course that challenges the usual definition and separation of practice and theoretical research. Services are provided collaboratively to not-for-profit agencies, civic and governmental groups, as well as community-action groups to support sustainable design solutions. The course teaches professional work proficiency, and emphasizes teamwork as well as written, verbal, and graphic communication skills to negotiate the public realm.

ARCH 3113 Furniture Design (also ARCH 4513, ARCH 4613)
Fall or spring. 3 credits. Limited enrollment. Students who wish to earn architectural representation credit must enroll in ARCH 4513; arch theory credit, ARCH 4613; and in-college elective credit, ARCH 3113. Prerequisite: permission of instructor. Not offered every year. G. Hascup. Explores the history, design, and materiality of furniture. Analyses of materials and joinery-connective systems are developed in parallel with ergonomic restraints. Design transformation occurs through cycles of conceptual alternatives (models and drawings), increasing in scale as the idea evolves. Full-scale prototypes and detailed tectonic drawings are required on three pieces. Multiple enrollment under different course offering numbers is not allowed.

ARCH 3117 Contemporary Italian Culture
Fall or spring. Variable credit; max. 3. Prerequisite: Rome Program participants. Staff. Provides a broad view of the culture and social structure of Italy, drawing from Italian literature, history, and current events.

ARCH 5110 Thesis Proseminar
Fall and spring. 2 credits. Prerequisite: ARCH 4101. ARCH 5110 is a prerequisite for ARCH 5902 Design X Thesis. Failure to earn grade of C in ARCH 5110 requires automatic registration in ARCH 5104 Design Xa—an option studio. Staff. Lectures, seminars, and independent research leading to the production of the student's thesis proposal. General instruction in the conceiving, programming, and development of a thesis.

ARCH 5201 Professional Practice
Fall or spring. 5 credits. Staff. Examination of organizational and management theories and practices for delivering professional design services. Includes a historic overview of the profession and a review of the architect’s responsibilities from the pre-contract phase through cost estimating and specifications to construction. Application of computer technology in preparing specifications.

ARCH 5202 Professional Seminar
Fall or spring. 3 credits. Prerequisite: ARCH 5201. Staff. Visits to public and private agencies and architectural firms. Discussions relative to the various aspects of each firm’s practice and the identification of agency roles.

ARCH 5203 Curricular Practical Training
Fall or spring. 1 credit. Open to B.Arch. and M.Arch. students only. Approved independent study form required. S–U grades only. Independent study promotes an understanding of cultural differences within architectural practice. Course project involves writing a 10-page paper relating the experience of the internship to one or more texts approved by the instructor. Course may be taken more than once, but a maximum of 1 credit may be used to fulfill the in-college “free elective” distribution requirement. Students with summer internships enroll in the course during the spring semester prior to the internship and after obtaining an internship offer. Students with part-time fall or spring internships enroll in the course immediately after obtaining an internship offer.

ARCH 6105 Special Problems in Design
Fall and spring. Variable credit; max. 3. Does not count toward design sequence credit. Prerequisite: permission of instructor. Staff. Independent study.

ARCH 6106 Praxis: Community Design Workshop (also ARCH 3106)
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. For description, see ARCH 3106.

ARCH 6110 Graduate Design Seminar
Fall. 3 credits. Intended for, but not limited to, graduate students in Architectural Design and Urban Design Program. Not offered every year. Staff. A companion seminar developing themes explored in ARCH 7111.

ARCH 6111–6112 Urban Housing Developments
6111, fall; 6112, spring. 3 credits each semester. Prerequisite: fourth- and fifth-year students in architecture and graduate students; permission of instructor. Not offered every year. Staff.

ARCH 6113 Transportation
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff. The effect of various transportation forms on the environment is considered from the perspectives of architects, engineers, planners, and human ecologists. Readings and discussions of past, current, and future transportation modes focus on aesthetic and physical aspects.

ARCH 6114 Low-Cost Housing
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff. Aspects of low-cost housing involving engineering technology, architecture, physical planning, economics, and sociology.

Architectural Theory
ARCH 1300 An Introduction to Architecture: Lectures
Summer. 3 credits. Open to non-architecture majors in college, high school students in 11th and 12th grades, and anyone with minimum of a high school diploma interested in exploring the field of architecture. S–U or letter grades. Not offered every year. Staff. Survey course that covers the many facets of architecture: history, design principles, preservation, landscape architecture, building technology, and cultural factors. Course format comprises lectures, demonstrations, films, and field trips. Evaluation is based on quizzes and a final exam.

ARCH 1301 An Introduction to Architecture
Fall. 3 credits. Open to out-of-department students only. ARCH 1301 is not a prerequisite for ARCH 1302. Staff. Intended to familiarize non-architecture students with the art and science of architecture. The fundamentals of plan, section, and elevation, the primary elements that comprise an architectural form; basic organizational principles, the ways in which we perceive architectural space; and the various concepts of function in relation to form will be included among the topics to be covered, using examples from numerous times and cultures as well as from contemporary Cornell campus.

ARCH 2301 Architectural Analysis I
Fall. 2 credits. Corequisite: for architecture students, ARCH 2101. Staff. Introduction to analysis of the object of study in the interest of broadening one’s understandings of the ways in which architecture can connote and denote meanings.
ARCH 2302 Architectural Analysis II
Spring. 2 credits. Corequisite: for architecture students, ARCH 2102. Staff.
Advanced analytical studies focusing on complex architectural spaces, objects, images, and representations.

ARCH 3304 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 6304)
Fall or spring. 3 credits. Prerequisite: third-year students and above. J. Wells.
Field and figure relationships (interrelation of parts dominated by the general character of the whole) are the general themes for studying numerous issues relevant to the design of elevations and facades. The first part of the semester is a lecture/seminar format. Students are required to research and present a paper for discussion. In the latter part of the semester, students do exercises to demonstrate their understanding of the issues addressed.

ARCH 3307 Special Investigations in the Theory of Architecture I
Fall or spring. Variable credit. Prerequisite: ARCH 2301–2302 or permission of instructor. Not offered every year. Staff. Topic TBA.

ARCH 3308 Special Topics in the Theory of Architecture II
Fall or spring. 3 credits. Prerequisite: ARCH 2301–2302 or permission of instructor. Not offered every year. Staff. Topic TBA.

ARCH 3309 Elements, Principles, and Theories in Japanese Architecture
Spring. 3 credits. Not offered every year. L. Mirin.
Examination of Japanese architecture (buildings and gardens) and their contexts: landscapes, settlements, and cities. The course is addressed to those interested in Japanese architecture as a manifestation of Japanese culture and as a subject for analysis. Emphasis is on underlying concepts, ordering principles, formal typologies, space and its representation, perceptual phenomena, and symbolic content. Readings focus on theoretical treatments of these aspects by Japanese and western writers.

ARCH 4302 Theory of Architecture
Fall or spring. 3 credits. Prerequisite: upper-level students. Not offered every year. Staff.
Development of urban form, urban intervention, contextualism, ideal cities, historic new towns, streets, piazzas, fortifications, public buildings and social housing types, site planning, and transportation.

ARCH 4305 Architecture and Representation
Fall or spring. 3 credits. Prerequisite: degree candidates in architecture; successful completion of ARCH 2301–2302. Not offered every year. Staff.
Study of architecture as it functions as a representational art, referring to its past while inferring its present.

ARCH 5301 Theories and Analyses of Architecture I
Fall. 3 credits. Prerequisite: ARCH 5302. Inference of its present.

ARCH 5302 Theories and Analyses of Architecture II
Spring. 3 credits. Prerequisite: ARCH 5301.
Continuation of ARCH 5301 focusing on themes in architectural discourse, design, and inquiry from the 1960s to the present, and their creative/critical implications.

ARCH 6301 Design Research
Fall. 3 credits. Staff.
Introduction to themes of inquiry in contemporary architecture, including critical motives in research, topical “problems,” and materials and tactics of investigation.

ARCH 6304 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 3304)
Fall or spring. 3 credits. Prerequisite: third-year students and above. J. Wells.
For description, see ARCH 3304.

ARCH 6305 Theory and Criticism in Architecture
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff.
Inquiry into the fundamental principles of architectural criticism in theory and practice, with emphasis on the structures of criticism in the 20th century.

ARCH 6307 Special Investigations in the Theory of Architecture II
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6308 Special Topics in the Theory of Architecture II
Fall or spring. Variable credit. Prerequisite: ARCH 5301–5302, permission of instructor. Not offered every year. Staff.

ARCH 3402 Architecture as a Cultural System (also ARCH 5402)
Fall or spring. 3 credits. Can substitute ARCH 4405 or 4407 by permission of instructor. B. MacDougall.
What have been the major issues in the theory and practice of architectural design through time and across cultures, and how is aesthetic judgment related to more general systems of order within a particular society or group? This course draws on concepts, methods, and findings from the broad field of cultural anthropology to address these questions. Case studies and examples are drawn from a wide range of architectural traditions around the world for which there is significant ethnographic literature, with special emphasis on sub-Saharan Africa, India, and the United States. Topics include the idealional and formal relationships between folk and monumental traditions in complex societies; the structure of the ideal social order and its refraction in the material world; cosmological models and architectural form; geometries of non-Western traditions; and the relationship between indigenization and culture change.

ARCH 6401–6402 Architecture in Its Cultural Context I and II
Fall of spring. Variable credit. Prerequisite: ARCH 3402 or permission of instructor. Not offered every year. Staff.

ARCH 6409 Undergraduate Investigations in Architecture, Culture, and Society
Fall or spring. Variable credit. Staff.
Independent study.

ARCH 4405 Architecture and the Mythic Imagination
Fall. 3 credits. Prerequisite: ARCH 3402 or permission of instructor. Not offered every year. B. MacDougall.

ARCH 4407 Architectural Design and the Utopian Tradition
Fall. 3 credits. Prerequisite: ARCH 3402 or permission of instructor. Not offered every year. Staff.

ARCH 4408–4418 Special Topics in Architecture, Culture, and Society
Fall and spring. 3 credits each semester. Prerequisite: permission of instructor. B. MacDougall.
Topic TBA.

ARCH 5402 Architecture, Culture, and Society
Spring. 3 credits.
What have been the major issues in the theory and practice of architectural design through time and across cultures, and how is aesthetic judgment related to more general systems of order within a particular society or group? This course draws on concepts, methods, and findings from the broad field of cultural anthropology to address these questions. Case studies and examples are drawn from a wide range of architectural traditions around the world for which there is significant ethnographic literature, with special emphasis on sub-Saharan Africa, India, and the United States. Topics include the idealional and formal relationships between folk and monumental traditions in complex societies; the structure of the ideal social order and its refraction in the material world; cosmological models and architectural form; geometries of non-Western traditions; and the relationship between indigenization and culture change.

ARCH 5404 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 6304)

ARCH 6401 Architecture in Historical Context I

ARCH 6402 Architecture in Historical Context II

Visual Representation

ARCH 1501 Drawing I: Freehand Drawing
Fall. 2 credits. Prerequisite: department student or permission of instructor. Staff.
Freehand drawing with emphasis on line as a means of visualizing form and space in architecture.

ARCH 1502 Drawing II: Drawing Systems
Spring. 2 credits. Prerequisite: ARCH 1501 or permission of instructor. Staff.
Concepts and methods of visualization and representational drawing systems used in architecture. Orthogonal projection, line weight, paraline projection, shade and shadow, and perspective.

**ARCH 2503 Drawing III: Digital Media in Architecture**
Fall or spring. 2 credits. Prerequisite: ARCH 1502 or permission of instructor. Letter grades only. Introduction to two- and three-dimensional digital media in architecture and its potential for visualization, representation, and analysis.

**ARCH 4500 Architectural Publications**
Fall or spring. Variable credit; max. 3. May be repeated for credit. Not offered every year. Staff. Colloquium and practicum on issues related to the production of an architectural journal, as well as other theoretical and practical production issues related to the exchange of architectural ideas. Exercises cover both theoretical as well as hands-on aspects of architectural publication.

**ARCH 4508 Special Investigations in Visual Representation**
Fall or spring. Variable credit; max. 3. Prerequisites: permission of instructor and approved independent study form. Staff. Independent study.

**ARCH 4509 Special Topics in Visual Representation I**
Fall or spring. 3 credits. Prerequisite: ARCH 1501, 1502, and 2503, or permission of instructor. Staff. Topics TBA.

**ARCH 5511 Constructed Drawing I**
Fall. 3 credits. Focuses on hand drawing and sketching as vehicles for design thinking and perception. Observational, analytical, and transformational exercises develop creative proficiency in freechand drawing and orthographic projection.

**ARCH 5512 Constructed Drawing II**
Spring. 3 credits. Prerequisite: ARCH 5511 or equivalent approval. Develops understanding of, and proficiency in, projective drawing, including paraline and perspective representation in both analog and digital forms. Students are also introduced to a variety of digital representation applications, including modeling, rendering, and animation.

**ARCH 6508 Special Investigations in Visual Representation II**
Fall or spring. Variable credit; max. 4. Prerequisites: permission of instructor and approved independent study form. Staff. Independent study.

**ARCH 6509 Special Topics in Visual Representation I**
Fall or spring. 3 credits. Prerequisite: ARCH 5511–5512 or permission of instructor. Staff. Topics TBA.

**Architectural Science and Technology**

**Structures**

**ARCH 2603 Structural Concepts**
Fall. 4 credits. Prerequisite: MATH 1110 or approved equivalent. M. Cruvellier.

Fundamental concepts of structural behavior. Statics and strength of materials. Introduction to and analysis of simple structural systems.

**ARCH 2604 Structural Elements**
Spring. 3 credits. Prerequisite: ARCH 2603. J. Ochshorn or staff. Concepts and procedures for the design of individual structural components (e.g., columns, beams) in steel, concrete, and timber construction.

**ARCH 3602 Structural Systems**
Fall or spring. 3 credits. Prerequisite: ARCH 2604. M. Cruvellier. Concepts and procedures for the design of overall structural framing systems in steel, concrete, and timber construction.

**ARCH 3604 Vertigo Structures (also ARCH 6604)**
Fall or spring. 3 credits. Prerequisite: ARCH 3603 or equivalent. Limited enrollment. Not offered every year. M. Cruvellier.

**ARCH 3605 Bridge Design (also ARCH 6605)**
Fall or spring. 3 credits. Limited enrollment. Prerequisites: ARCH 3603 or equivalent. Not offered every year. M. Cruvellier. The major visual impact of bridges on the built environment cannot be denied. And yet, during the past century, architects have virtually abandoned their historical role in the design of these structures. Engineers, on the other hand, have claimed bridge design as their responsibility and have hailed it as evidence of structural art. Are the basic principles of bridge design such that this situation makes sense for our society? Or is a rethinking of the manner in which bridges are designed called for? Students examine and experiment with the design of bridge structural forms, not only in terms of what is technically feasible but also, with equal emphasis, in the context of aesthetic, historical, and social considerations. Weekly meetings include lectures, discussion seminars, and studio-type design reviews.

**ARCH 4603 Special Topics in Structures**
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 2603, 2604, and 3603 or permission of instructor. Not offered every year. Staff. Topics TBA.

**ARCH 4609 Special Investigations in Structures**
Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

**ARCH 5603 Structural Concepts**
Fall or spring. 3 credits. Prerequisite: M. Arch. 1 students or permission of instructor. M. Cruvellier. For description, see ARCH 2603.

**ARCH 5604 Structural Elements**
Fall or spring. 3 credits. Prerequisite: M. Arch. 1 students or permission of instructor. J. Ochshorn. For description, see ARCH 2604.

**ARCH 6603 Structural Systems**
Fall or spring. 3 credits. Prerequisite: M. Arch. 1 students or permission of instructor. M. Cruvellier. For description, see ARCH 3603.

**ARCH 6604 Vertigo Structures (also ARCH 3604)**
Fall or spring. 3 credits. Prerequisite: ARCH 5603 or equivalent. Limited enrollment. Not offered every year. M. Cruvellier. For description, see ARCH 3604.

**ARCH 6605 Bridge Design (also ARCH 3605)**
Fall or spring. 3 credits. Limited enrollment. Prerequisite: ARCH 3603 or equivalent. Not offered every year. Staff. For description, see ARCH 3605.

**Construction**

**ARCH 2602 Building Technology, Materials, and Methods (also ARCH 5602)**
Fall. 3 credits. J. Ochshorn. Building construction is examined from the following standpoints: life safety (construction types, occupancy, assemblies, egress); accessibility (ramps, doors, etc.); sustainability; conveying systems (stairs, elevators, escalators); structural materials (properties, manufacturing strategies, typical applications, and connections); envelope theory (insulation, condensation, vapor and air barriers, pressure-equalization, movement, tolerances); cladding systems (masonry, precast, metal, glass); interior systems (walls, floors, and ceilings); and technical documentation (detail drawings).

**ARCH 3607 Working Drawings (also ARCH 6607)**
Fall or spring. 3 credits. Prerequisite: ARCH 2602 or equivalent. Limited enrollment. Not offered every year. J. Ochshorn.

**ARCH 4604 Special Investigations in Construction**
Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

**ARCH 4605 Special Topics in Construction**
Fall or spring. 3 credits. Limited to 30 students. Prerequisite: ARCH 2602 or permission of instructor. Not offered every year. Staff. Topics TBA.

**ARCH 5602 Building Technology, Materials, and Methods (also ARCH 2602)**
Fall. 3 credits. Prerequisite: M. Arch. 1 students or permission of instructor. J. Ochshorn. For description, see ARCH 2602.

**ARCH 6607 Working Drawings (also ARCH 3607)**
Fall or spring. 3 credits. Prerequisite: ARCH 2602 or equivalent. Limited enrollment. Not offered every year. J. Ochshorn.

**Environmental Systems and Conservation**

**ARCH 2601 Environmental Systems I—Site Planning**
Spring. 3 credits. Staff. Basic principles involved in design in the outdoor environment. A brief historical perspective. A development of inventory including grading and drainage. Foundations, surfacing, and construction.
ARCH 3601 Environmental Systems II—Thermal Environmental Systems  
Spring. 3 credits. Prerequisites: ARCH 2602, 2603, 3101 and 3601. Corequisite: ARCH 3102. Letter grades only. Staff. 
The second semester of this yearlong course addresses the design of the indoor thermal environment, including the appropriate application of building envelope materials and assemblies, and an introduction to the principles of sustainability. Beginning with the basics of human thermal comfort, followed by the concept and practice of solar heating, passive cooling, indoor air quality, and human health, students will learn to shape the form of a building to respond to climate and the needs of an occupant. In the second half of the semester, students address the design of mechanical, electrical, and plumbing systems, including heating, ventilation and air-conditioning (HVAC) equipment, vertical transportation, communication, security, and fire protection systems.

ARCH 3602 Environmental Systems III—Building Systems Integration  
Fall or spring. 3 credits. For undergraduate non–computer scientists. Not offered every year. D. Greenberg. 
Historical technological advances that created major paradigm shifts for communications as well as advances in computer technology are presented. Technical fundamentals of computer graphics capabilities are emphasized. The latter half of the course covers the effect of these scientific advances on many discipline-specific areas including architecture, art and animation, photography and the film industry, medicine, engineering design, the corporate structure, and education. The course is heavily supplemented with pictorial content consisting of slides, movies, and live interactive demonstrations.

ARCH 4601 Ecological Literacy and Design (also DEA 4220)  
Spring. 3 credits. Letter grades only. Prerequisites: ARCH 2601, 2602, 3101 and 3601. Corequisite: ARCH 3101. Letter grades only. Staff. 
The first semester of this yearlong course addresses the design of the indoor thermal environment, including the appropriate application of building envelope materials and assemblies, and an introduction to the principles of sustainability. Beginning with the basics of human thermal comfort, followed by the concept and practice of solar heating, passive cooling, indoor air quality, and human health, students will learn to shape the form of a building to respond to climate and the needs of an occupant. In the second half of the semester, students address the design of mechanical, electrical, and plumbing systems, including heating, ventilation and air-conditioning (HVAC) equipment, vertical transportation, communication, security, and fire protection systems.

ARCH 4619 Special Topics in Environmental Systems and Conservation  
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 2601, 2602, 3101 and 3602. Letter grades only. Staff. 
For description, see ARCH 3601. 

ARCH 4660 Special Topics in Computer Applications  
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 3704 or permission of instructor. Not offered every year. Staff. 
For description, see ARCH 3602.

Computer Applications

ARCH 3702 Imaging and the Electronic Age  
Fall or spring. 3 credits. Prerequisite: ARCH 3704 or permission of instructor. Not offered every year. Staff. 
Universal aural and visual experiences are covered, including basic concepts and applications of computer hardware and software, and the social and cultural changes that have occurred in the built environment due to technological advances. The latter half of the course covers the effect of these scientific advances on many discipline-specific areas including architecture, art and animation, photography and the film industry, medicine, engineering design, the corporate structure, and education. The course is heavily supplemented with pictorial content consisting of slides, movies, and live interactive demonstrations.

ARCH 3704 Computer Graphics I (also CS 4620)  
Fall. 4 credits. Prerequisite: CS/ENGRD 2110. Staff.

ARCH 4706 Special Topics in Computer Applications  
Spring. 3 credits. Limited to 30 students. Prerequisite: ARCH 3704 or permission of instructor. Not offered every year. Staff. 
For description, see CS 4620.

ARCH 4707–4708 Special Projects in Computer Graphics  
Not offered every year. 

ARCH 4709 Advanced Computer Graphics: Virtual Reality (also ARCH 6709)  
Fall. 3 credits. Prerequisites: introductory computer graphics or computer science course, or permission of instructor; upper-level undergraduate or graduate standing. Not offered every year. Staff. 
For description, see ARCH 3602.

Graduate Courses

ARCH 6709 Advanced Computer Graphics: Virtual Reality (also ARCH 4701)  
Fall. 3 credits. Prerequisite: introductory computer graphics or computer science course or permission of instructor; upper-level undergraduate or graduate standing. H. Richardson. 
For description, see ARCH 4709.

ARCH 7701–7702 Architectural Science Laboratory  
Fall or spring. 3 credits each semester. Prerequisite: architectural science graduate students. D. Greenberg. 
For description, see ARCH 7701 or 7702.

ARCH 7903–7904 Thesis or Research in Architectural Science  
Fall or spring. 3 credits each semester. Prerequisite: architectural science graduate students. Staff. 
For description, see ARCH 7903 or 7904.

Architectural History

The history of the built domain is an integral part of all aspects of the architecture curriculum, from design and theory to science and technology. Incoming students take ARCH 1801–1802 in the first year, and three additional courses from the 3800–3819 series, preferably in the third and fourth years. Seminars are intended for advanced undergraduate and graduate students and do not satisfy undergraduate history requirements. Courses with the same number may be taken only once to satisfy history of architecture or in-college requirements.

Sequence Courses

ARCH 1801 History of Architecture I  
Fall. 3 credits. Requirement for first-year architecture students; open to all students in other colleges interested in the history of the built domain. Staff. 
The history of the built environment as social and cultural expression from the earliest to the present.

ARCH 1802 History of Architecture II  
Spring. 3 credits. Requirement for first-year architecture students; open to all students in other colleges interested in the history of the built domain. Staff. 
The history of the built environment as social and cultural expression from the earliest to the present.
ARCH 3800 History of Theory
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. Staff. This course, in which classroom discussion and debate play a central role, explores the importance of different theoretical issues involving art and architecture. The readings, which span from the Greeks to today, focus on more than just questions of aesthetics and include theories of ethics, origins, imagination, permission, and pedagogy.

ARCH 3801 From Utopia to the Ghetto: Renaissance Urban Form
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Lasansky. Significant developments in European urban design from 1300 to 1600. Particular attention is given to Italy and Spain. Focuses on a series of case studies: entire towns, specific urban spaces, and individual building types. Weekly discussion of the city within a larger cultural framework. This course considers how civic, economic, social, political, legislative, technical, and material concerns have had a significant impact on the form, function, and particularization of these places, spaces, and structures. The relevance of Renaissance theory to contemporary practice is also emphasized through the discussion of several 20th-century urban plans and built projects.

ARCH 3802 The Cinematic City
Fall. 3 credits. Prerequisite: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Lasansky. Examines the relationship between cinematic forms of mass media and architecture. Explores the representation, perception, and understanding of architecture as it has been mediated by various cinematic genres including film, television, and documentaries. Considers how cinema has been deployed as a tool of architectural production, how it has influenced the experience and design of space, the extent to which it has been used as a vehicle for critical commentary on the urban condition, and the way it is imbedded in the historical development of architecture and urbanism.

ARCH 3803 The Construction of Modern Life: The Politics of Memory and the Commodification of Architecture
Fall or spring. 3 credits. Prerequisite: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Lasansky. Examines the complex relationship between the built environment, the construction and definition of cultural heritage, collective memory and civic identity, and the commodification or commercial celebration of specific buildings, sites, and urban events. Focuses on late 18th-, 19th-, and 20th-century Europe. Particular attention is awarded to the discourse surrounding the restoration of buildings (and figures such as Ruskin, Viollet-le-Duc, and Giovannioli); political agendas guiding restoration and urban renewal projects; newly defined venues of modern urban spectacle (e.g., the World’s Fair, department stores, morgues, and panoramas); and the role played by tourism in the commodification of local and foreign sites.

ARCH 3804 The Urban Landscape of Renaissance Rome: 1450 to 1600
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Lasansky. Exploitation into the urban morphology, architecture, and civic life of Renaissance Rome. The city was a thriving center for architectural practice. It drew practitioners from throughout the peninsula and served as an important theoretical model for architects elsewhere. The course surveys the important issues, individuals, and building projects of the city between 1450 and 1600 with particular emphasis on the intellectual and physical rediscovery and re-appropriation of Antiquity, the role of the Vatican with its large population of pilgrims, tourists, resident church officials, foreign bankers, and dignitaries that made specific demands of the built environment, and the unique topography and natural resources of the city’s location. The last portion of the course addresses the legacy of the Renaissance during the periods of Italian unification and the Fascist regime.

ARCH 3805 Magnificent Utility—Architecture and the Arts of Persuasion
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. C. Otto. Architects put revolutionary attitudes about form, space, light, and the arts into practice during the course of the 17th century. Focusing on the urban centers of Rome and Paris and the cultural landscapes of Spain, England, and Central Europe, this course explores how architecture, urban design, and the arts were employed to promote state and church.

ARCH 3806 The Architecture of India and Its Interpretation
Spring. 3 credits. Not offered every year. B. MacDougall. Surveys the architectural record of ancient and medieval India with an emphasis on stupa and temple traditions. Devotes attention to European efforts to produce a Western-style architectural history for India and to the British fascination with explaining Indian ethnology and history over two centuries. Attempts to evaluate the claim made by the historian James Fergusson that architecture provided the basis for reconstructing an imperfectly known Indian history. Also examines the notion that scholarly enterprises were closely entwined with strategies for domination. To this end, students read 19th-century firsthand reports on architecture in antiquarian English-language journals alongside more modern accounts. They are compared with indigenous architecture writings that were often unacknowledged by Europeans.

ARCH 3807 19th Century: Tales of the City
Fall or spring. 3 credits. Prerequisite: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Woods. Focuses on 19th-century cities as settings for modernisms and modernities, new visions and experiences of modern life. The relationship between urbanism and creativity that emerges during the 19th century engages students in Berlin, Havana, Miami, London, Bombay, Paris, Harlem, and other cities.

Graduate Seminars in the History of Architecture and Urbanism

All topics for ARCH 6802 to 6819 TBA before the start of the semester.

ARCH 6800 State of the Discipline

Fall or spring. 4 credits. Staff. This seminar will provide a survey of architectural historiography paying particular attention to the paradigm shifts of recent decades. Through the critical readings of important texts we will discuss the current state of the field while simultaneously reconsidering our position in it. The course will address how we apply theory to practice, develop research strategies that maximize methodological alliances, imbue the study of the past with contemporary relevance, and contribute as much to other disciplines as we borrow from them.

ARCH 6801 Foundations of the Discipline

Fall or spring. 4 credits. Staff. Explorations of seminal positions that established the disciplinary praxis of the history of architecture and urbanism, based on case studies.

ARCH 6802 Seminar in Urban History

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6803 Seminar in History of Theory

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6804 Seminar in Italian Renaissance: Architecture, Politics, and Urbanism

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. M. Lasansky.

ARCH 6805 Practicum

Fall or spring. 4 credits. Staff. This course exercises history of architecture and urbanism’s capabilities for affecting contemporary events through critical associations with the past. The workshop culminates in an exhibition, publication, symposium, curricular initiative, or other public occasion. Enrollment of qualified graduate students from associated fields is encouraged.

ARCH 6806 Seminar in 17th- and 18th-Century Architecture and Urbanism

ARCH 6808 Seminar in 20th-Century Architecture and Urbanism

ARCH 6809 Seminar in History of Cities

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6810 Seminar in American Architecture, Building, and Urbanism

ARCH 6812 Seminar in 19th-Century Architecture, Building, and Urbanism

ARCH 6816 Seminar in Special Topics in the History of Architecture and Urbanism

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.
ARCH 6817 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6818 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6819 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 2809 Undergraduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit; max. 3. May not be taken by students in design to satisfy undergraduate history requirements. Prerequisite: permission of instructor. Staff. Independent study for undergraduate students.

ARCH 4901 Undergraduate Thesis in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: B.S. honors candidates in history. Staff.

ARCH 7809 Graduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit; max. 12. Prerequisite: permission of instructor. Staff. Independent study for graduate students only.

ARCH 8920 M.A. Essay Research
Fall. 4 credits. Prerequisite: permission of instructor and approved independent study form. Staff. Independent research for the M.A. essay.

ARCH 8921 M.A. Essay in the History of Architecture and Urbanism
Fall or spring. 6 credits. Staff. Independent preparation of the M.A. essay.

ARCH 9901 Ph.D. Dissertation in the History of Architecture and Urbanism
Fall or spring. Variable credit; max. 12. Staff. Independent study for the doctoral degree.

ART
1. Dadi, interim chair (224 Taden Hall, 255-3558); M. Ashkin, director of graduate studies; R. Bertoia, J. Lacey, T. McGrain; E. Meyer, G. Page, M. Park, B. Perlos, J. Rickard, W. S. Taft, and visiting artists and critics.

Undergraduate Program
The curriculum in art is a program of study within the College of Architecture, Art and Planning, as well as other colleges at Cornell. The undergraduate curriculum in art is an excellent background for a career in the visual arts. Past graduates have found it also to be preparation for careers in applied art, although no specific technical courses are offered in such areas as interior design, fashion, or commercial art.

The undergraduate curriculum in art, leading to the degree of bachelor of fine arts, provides an opportunity for the student to combine a general liberal education with the studio practice required for a professional degree. During the first four semesters, all students follow a common course of study designed to provide a broad introduction to the arts and a basis for the intensive studio experience of the last two years. Beginning with the third year, students continue in drawing, digital media, painting, photography, print media, sculpture, and/or combined media.

Studio courses occupy approximately one-half of the student's time during the four years at Cornell; the remaining time is devoted to a diversified program of academic subjects with a generous provision for electives. All members of the faculty in the Department of Art are practicing, exhibiting artists, whose work represents a broad range of expression.

Dual Degree Option
A candidate for the B.F.A. degree may also earn a bachelor of arts degree from the College of Arts and Sciences or the College of Human Ecology, or a bachelor of science degree from the College of Engineering, in a five-year dual degree program. This decision should be made early in the candidate's career (no later than the third semester) so that he or she can apply to be registered in both colleges simultaneously. Each student is assigned an advisor in both colleges of their dual-degree program to provide needed guidance. Candidates for two degrees must satisfy all requirements for both degrees and a minimum of 160 academic credits. At least 63 of the total credits must come from courses offered in the Department of Art. In addition, all Department of Art requirements for first-year writing seminars, art history, and distribution must be met.

It is expected that a dual-degree candidate will complete the pre-thesis and thesis requirements for the B.F.A. degree during the fourth and fifth year.

Bachelor of Fine Arts Degree Requirements
Credits and Distribution
The B.F.A. degree requires 130 academic credits. A minimum of 63 are taken in the Department of Art.

Curriculum
Students are expected to take an average course load of 16 credits per semester during their four years. Students wishing to take more than three studio courses in any one semester must file a petition. All students must take at least one studio course a semester unless there are exceptional circumstances expressed in the form of a petition. Any deviation from the standard curriculum must be petitioned to the department before the act. No student in the first year of the B.F.A. program will be permitted to deviate from the required curriculum.

Specific Course Requirements
By the end of the second year, students must have completed an introductory course in each of the areas of painting, sculpture, print media, photography, digital media, and four drawing courses. By the end of the third year, all students must have completed an additional 20 credits beyond the introductory level.

Studio Practices
Students must plan their programs to complete 26–27 credits in one of the studio areas of electronic imaging, painting, photography, printmaking, or sculpture. Declaration of the area of concentration must be made by the second semester of the sophomore year. Concentrations must be declared when applying to AAP NYC or Cornell in Rome. Students concentrating in combined media must also submit an approved projected course plan. B.F.A. students complete a senior thesis in one area of concentration and are required to participate in the Senior Exhibition in the semester the Thesis II is taken.

The required courses for each concentration are as follows:
Digital Media: ART 1701; 2304/2702 (1 of 2); 2703; 3703/3704 (1 of 2); 4001, 4002 (senior thesis)
Photography: ART 1201, 2201, 3201, 3202, 4001, 4002 (senior thesis)
Painting: ART 1601, 2601, 2603, 2604, 2605, 3601 (1 of 3); 4001, 4002 (senior thesis)
Print Media: ART 1301, 2301/2302/2303/2304 (1 of 4); 3301, 4001, 4002 (senior thesis)
Sculpture: ART 1401, 2401, 3401, 3402, 4001, 4002 (senior thesis)

Dual Concentration
Students interested in studying in more than one area may choose to do a dual concentration. The dual concentration requires a first area, in which the thesis is conducted, and a nonthesis second area. Thesis I and Thesis II must be taken in the first area of concentration. Students take 23 credits in the first area of concentration (22 for printmaking) and 15 credits in the second area of concentration (14 for printmaking). Drawing is available only as a second area of concentration.

The required courses for the dual concentration are:
First Area of Studio Practices Total Credits
Digital Media: ART 1701, 2304/2702 (1 of 2); 2703; 3703/3704 (1 of 3); 4001/4002 23
Photography: ART 1601, 2601, 2603/2604/3601 (1 of 4); 4001, 4002 23
Painting: ART 1201, 2201, 3201/3202/2301/2304 (1 of 4); 3301/3302 (1 of 2); 4001, 4002 23
Print Media: ART 1301, 2301/2302/2303/2304 (1 of 4); 3301, 4001, 4002 23
Sculpture: ART 1401, 2401, 3401, 4001, 4002 23
Second Area of Concentration  Total Credits

Drawing: ART 1501, 1502, 2501, 2502, independent study 15
Electronic Imaging: ART 1701, 2304/2702 (1 of 2), 2703, 3703/3704 (1 of 2) 15
Painting: ART 1201, 2201, 3201, 3202 15
Photography: ART 1601, 2601, 2603/2604/2605/3601 (2 of 4) 15
Printmaking: ART 1301, 2301/2302/2303 (1 of 3), 3301 14
Sculpture: ART 1401, 2401, 3401, 3402 15

Note: The total number of out-of-college electives offered will be adjusted to allow for the additional credits required of the dual concentration.

Combined Media Studio Practice

The combined media concentration enables students to fulfill concentration requirements by combining several studio disciplines, including out-of-department studio courses such as those offered in the departments of music and theatre, film, and dance.

Students must file an approved “area of concentration” form. In addition to the courses required of all B.F.A. majors during their first and second year (see B.F.A. curriculum), students must take two studios at the 2000 or 3000 level, a minimum of two “out of college” studio electives (OCE studio) of 3–4 credits each, ART 4001 Thesis I and ART 4002 Thesis II.

Note: The total number of in- and out-of-college elective credits required will be adjusted to allow for additional credits required of the combined media concentration.

Cornell in Rome

The studio art component of the Cornell in Rome program draws upon the historical and cultural resources of Rome, its museums, art, and architecture, and its beauty and complexity. It provides an experience unparalleled for artistic, intellectual, and personal growth.

The program provides individual instruction and studios that are structured but flexible enough to accommodate personal interests. Students are given the freedom to generate their own ideas and may work in any medium that compels them to investigate their personal relationship to Rome. Student projects include paintings, photo essays, collages, performance installation, sculptures, drawings, and books.

Artists resident in Rome visit and lecture. Day trips to the studios of Rome-based artists and artisans provide further inspiration. Workshops on papermaking, fresco, mosaics, egg tempera, and watercolor are frequently available. Visitors from the various academies in Rome give student artists contact with their contemporaries and with those representing international art movements. An extensive and varied field-trip program balances great historic collections with modern and contemporary art, and the best of Italy’s notable cities, towns, and landscapes.

The Rome Studio (ART 4000) may be taken for course credit in all Department of Art concentrations, and additional studio courses expose students to a wide variety of art-making modes. Each Cornell art student receives the equivalent of one semester’s advanced study in his or her concentration.

The inspiration of travel and cultural encounter fuels the studio experience, and many students keep sketchbooks and journals, which they will refer to in the art they make after their return from Rome.

Art Requirements

Students in good academic standing who have completed the requirements of the first two years of a fine arts program are eligible for participation in Cornell in Rome. Students are admitted to the program by application and review of their record. Students must register for a full semester of credits.

Students may enroll in the first or second semester of their junior year or for the full academic year by petition only. Under special circumstances, first-semester seniors also may attend Cornell in Rome. Serious studio art students from outside Cornell also are encouraged to apply. A portfolio is required.

**ART 3102** Modern Art in Italy 3

**ART 3702** Special Topics in Art: The Rome Palimpsest 3

**ART 3107** History of Art in Rome: From Constantine to Cavallini 4

**ART 3108** History of Art in Rome: Baroque Rome 4

**ART 3702** Special Topics: Intermediate and Advanced Drawing 3

ITALA 1110/1120 Italian Language 4

[ARCH 3107 Contemporary Italian Film 1**]

**Students may add by approved petition to take 19 credits in Rome.**

17–18 Total

Other electives available to B.F.A. students include courses in architectural history, visual studies, and urban studies.

Students may petition to take more than 16 credits per semester in the Rome Program. Students may study in Rome for one or two academic semesters.

*Fulfills 3000-level theory and criticism requirement.

AAP NYC

AAP NYC is a dynamic site from which to explore contemporary art and visual culture and to create art that is responsive to urban issues and life. The Department of Art offers distinctive programs for B.F.A. students from Cornell and other colleges and universities during a spring semester. Check with the department regarding January Winter Session.

New York is a vast and diverse laboratory with extraordinary museums and galleries, countless studios of artists and designers, dynamic public art, and cultural sites and organizations that offer exceptional opportunities for students to learn first-hand about the production and presentation of art. Scheduled annually, the spring semester is a collaboratively developed and conceptually linked plan of study with studio and theory courses, independent studies, and internships that all use the remarkable resources and opportunities of the city. Faculty members include practicing artists, theorists, critics, and curators.

The spring semester is planned for art majors in their sophomore year, but students at other levels may participate. All undergraduate art majors are encouraged to participate in at least one of these unique off-campus opportunities.

Sample AAP NYC Curriculum

The focus of these courses may vary from year to year.

- **ART 2000 New York City Studio**
- **ART 2001 New York City Seminar**
- **ART 2003 Art/Architecture History in NYC**
- **ART 2004 Drawing Projects (Studio)**
- **ART 2019 Independent Study/Studio in NYC**

Out-of-College Requirements

A minimum of 61 elective credits must be taken outside of the college. In the first year, students must take two first-year writing seminars. Students are required to take courses from among three groups, which include physical and biological sciences (minimum of two courses, of at least 3 credits each); social sciences (minimum of three courses, of at least 5 credits each); and humanities and expressive arts (minimum of three courses, of at least 3 credits each). All B.F.A. students are required to take 20 credits in the history of art. One course must be taken in each of the following areas:

- **Modern**
  - B.F.A. students can satisfy the modern art history requirement with any of these courses without petition.
  - ARTH 2600 Intro to Art History: The Modern Era
  - ARTH 2700 Mapping America
  - ARTH 3170 Visual Culture
  - ARTH 3550 Modern and Contemporary Latin American Art
  - ARTH 3600 Intro to Art History: Contemporary Art: 1960 to Present
  - ARTH 3605 U.S. Art from FDR to Reagan
  - ARTH 3650 History and Theory of Digital Art
  - ARTH 3660 Conceptual Art
  - ARTH 3740 Painting 19th-Century America
  - ARTH 3760 Impressionism in Society
  - ARTH 4047 Aesthetic Theory: The End of Art
  - ARTH 4505 Contemporary African Diaspora Art
Students who transfer into the undergraduate degree program in art must complete a minimum of four semesters in residence at Cornell and a minimum of 60 credits at the university, of which 30 credits must be taken in the Department of Art, including four semesters of studio work.

**For those students matriculating in fall of 2010 and later:**

During the first semester of study, students are required to enroll in ART 1103 Introductory Art Seminar; ART 1501 Introduction to Drawing; one of the following: ART 1201 Introduction to Painting, ART 1301 Introduction to Print Media, ART 1401 Introduction to Sculpture, ART 1601 Introduction to Photography, and ART 1701 Introduction to Digital Media; one Art History elective, and a First-Year Writing Seminar. During the second semester of study, students are required to enroll in two of the following: ART 1201 Introduction to Painting, ART 1301 Introduction to Print Media, ART 1401 Introduction to Sculpture, ART 1601 Introduction to Photography, and ART 1701 Introduction to Digital Media; ART 1700 Visual Imaging in the Electronic Age; ART 3101 Issues in Contemporary Art; ART 3102 Modern Art in Italy (Rome Program only); ART 3170 Visual Culture and Social Theory; ART 3500 African American Art; ART 3660 Conceptual Art; ART 4322 The Late Medieval Devotional Image in Iberia; ART 4600 Studies in Modern Art; ART 4610 Women Artists; ART 4663 Studies in Modern Art (IV); ARTH 5571 African Aesthetics; ARTH 5993–5994: Supervised Reading.

The M.F.A. Program
The master of fine arts program requires four semesters of full-time study, equal to a minimum of 60 credits. Graduate work done elsewhere or in the summer session is not applicable to the M.F.A. degree. The curriculum leading to the master's degree is flexible to accommodate the needs of the individual student and to enable the student to partake of the greater Cornell community. The ratio of graduate faculty to students allows an exceptional opportunity for individual mentoring. Graduate students are provided individual studios and have 24-hour access to studios and labs.

Graduate students in art may enroll in introductory or advanced courses in any field of study offered at the university. Fifteen credits are required in each semester; of these, 9 credits are in studio work, and 3 credits are in graduate seminar. Students are required to take at least 12 credits of academic work outside the Department of Art during their four semesters in residence. Candidates for the master of fine arts degree must have completed 18 credits in the history of art in the course of their graduate and/or undergraduate study. Prior undergraduate art history coursework may apply toward this requirement and will be evaluated by the director of graduate studies. Any remaining credit toward this requirement must be taken at Cornell. Every M.F.A. candidate must prepare a written statement, offer a thesis exhibition of studio work completed during residency, and give an oral defense of the written statement and visual thesis. Gallery space is provided for a one-week solo thesis exhibition during the final spring semester.

Course Information
Most courses in the Department of Art are open to students in any college of the university who have fulfilled the prerequisites or have permission of the instructor. Priority is given to B.F.A. majors and AAP students. Fees are charged for all studio courses. See the specific course description for course fees.

To take advantage of the special opportunities afforded by summer study, several courses are offered during summer session.

Guidelines for Independent Study
A student who wishes to undertake an independent study must be a junior or senior and in good academic standing. Fine arts students must have completed two years of the curriculum, including all first- and second-year studios and four semesters of drawing. Students must have prior approval to have an independent study count as a drawing requirement. All students must have taken a minimum of one Cornell art department course in the area of the proposed independent study. It is recommended that the student take the independent study with a professor with whom they have previously studied. Out-of-department students may be exempt from the studio sequence requirement at the discretion of the supervising professor. Independent studies must be petitioned to count toward required studio courses. Credit hours are variable up to a maximum of 4.

Courses in Theory and Criticism

ART 1103 Introductory Art Seminar
Fall. 3 credits. Prerequisite: B.F.A. students. Letter grades only. This course links theory and practice through a study of issues of contemporary art with a first-semester drawing course. The course is an opportunity for new B.F.A. students to explore issues and questions of contemporary art and culture that have particular relevance for students and artists in the early 21st century. The objectives of the course are to help B.F.A. students develop a keener understanding of issues in contemporary art; create an open forum and exploratory studio environment; and introduce first semester/first year art majors to the intellectual community and aesthetic environment of a university art department and Cornell at large. Through a series of coordinated activities, readings, projects, and discussions, first-year/first-semester B.F.A. students jointly and dynamically explore ideas of vision, visuality, perception, representation, and contemporary visual culture. The course is a studio-based, drawing projects, readings in art history and contemporary art, and criticism and theory, and close examination of selected artists' practices. Taught by faculty members, the course seeks to make meaningful connections between practice and theory in students' thinking and creative work and serves as a cohesive first-year experience shared by all new Art majors.

ART 1700 Visual Imaging in the Electronic Age
Fall or spring. 3 credits. D. Greenberg. Interdisciplinary survey course designed to introduce students to the creative arts, science, and engineering to the concepts of digital pictorial representation and display. It is a concept and theory course that concentrates on "why" rather than "how." Topics include perspective representations, display technology, how television works, bandwidth concepts, digital photography, computer graphics modeling and rendering, matting and compositing, color perception, data acquisition, volumetric imaging, and historical precedents, primarily from the art world. Also included are other modes of imaging.

ART 2001 New York City Seminar
Spring. 4–5 credits, variable. Staff. This seminar involves readings, discussion, writing, trips to museums and galleries, artists, studios, other field trips, and presentations by leading critics and scholars who present and examine issues of contemporary art in one of the world-class art centers. The seminar is developed to conceptually connect to the studio and art/architecture history course in which students are enrolled. This course can be taken as either a seminar (4 credits) or a combination of seminar and internship (5 credits). The internship will be supervised by Cornell faculty. The proposed venue, professor, and student will agree on goals and objectives on a completed internship form, which must be submitted to the Art Department Office for enrollment. The seminar component will count toward a 4-credit theory and criticism requirement. The 1-credit internship component will count as in-college elective credit.

ART 2104 Art and Globalization
Fall. 3 credits. Staff. This course investigates selected topics related to art within a global context. Students question the nature of the visual arts as a discipline and explore the diverse cultural groups. This seminar satisfies the 3-credit theory and criticism requirement for art majors.

ART 3101 Issues in Contemporary Art
Fall or spring. Lab fee: $35. Staff. Students will be exposed to the ideas, issues, and methods of contemporary visual art by combining studio practice with discussions of critical and theoretical concerns in visual culture. The course includes lectures, readings, discussions, project work, and critiques. Students will make art by using a variety of mediums, with projects structured in relation to issues and artists covered in the lecture component. Discussions of historical movements and artists since the 1980s will be stressed. Studio assignments are designed to familiarize students with a number of ways of making art and in encouraging the understanding of the connections between the conceptual and the technical in art making.

ART 3102 Modern Art in Italy
Fall or spring. 3 credits. Prerequisite: Rome Program participants. Staff. Introduces students to contemporary art in Rome through studio visits, gallery exhibitions, and museum collections. Lectures by artists, critics, and others. Traces art from idea to realization and explores the gallery and its relationships to artists and to promotion of art, the role of the art critic and museum, and art collecting. This seminar satisfies the 3000-level theory and criticism requirement for art majors.

Related Courses

ART 2003 Art/Arch History in NYC
Spring. 3 credits. Staff. This course uses New York as a site to study developments in modern and contemporary art, architecture, and design. With students in architecture and other fields, art students study in a seminar format the historical connections of art and architectural innovations in the city to the thought of one of the world's most complex and vibrant urban environments. The course includes reading,
lectures, and presentations, as well as field trips and walking tours. This course fulfills a 3000-level art history elective requirement for B.F.A. majors.

**ART 4109 Independent Study/Supervised Readings in Art**

Fall, spring, or summer. 4 credits, variable. Prerequisite: juniors in good academic standing and written permission of instructor. Staff.

Independent reading and research allows a student the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the supervision of a faculty member.

**Graduate Studio and Theory Courses**

**ART 6101 Professional Skills for the Visual Artist**

Spring. 3 credits. Prerequisite: M.F.A. students. Staff.

This seminar helps fine arts graduate students build professional skills that will assist them in their careers as practicing artists and in their work at art-related employment. Students complete a resource notebook that will be useful to them in the years after they graduate. Topics include funding resources, exhibition opportunities, employment options, documentation of work, health, safety, and legal issues.

**ART 6102 Recent Practice in the Visual Arts**

Fall. 3 credits. Prerequisite: M.F.A. students. Staff.

This seminar is designed to provide graduate students with an overview of recent visual artwork. Students study work from a wide range of artists who have received significant recognition within the visual arts community. Reviews of major exhibitions such as “Documenta,” “La Biennale di Venezia,” and the “Whitney Biennial” are discussed. Students are encouraged to travel to nearby cities to look at contemporary work.

**ART 6103 Online Publication for the Visual Artist**

Fall. 3 credits. Prerequisite: M.F.A. students. Staff.

Seminar designed to introduce graduate students to the basic principles of electronic imaging. As a major project, each student interviews a contemporary visual artist. These interviews are illustrated with digital images of each artist’s work and combined in an online magazine. Additionally, each student learns to create a home page on the web.

**ART 6104 Contemporary Theory in the Visual Arts**

Spring. 3 credits. Prerequisite: M.F.A. students. Staff.

Seminar exploring selected writings on the current issues represented within the visual arts. Designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary visual practice. Topics vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

**ART 6203 Contemporary Theory and Visual Culture**

Fall. 3 credits. Prerequisite: M.F.A. students. Staff.

Seminar exploring selected writings on current issues in the visual arts. Designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary visual practice. Topics vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

**ART 6204 Current Criticism in the Visual Arts**

Spring. 3 credits. Prerequisite: M.F.A. students. Staff.

Seminar designed to introduce graduate students to critical writing in the visual arts, both in print and in digital format. As a major project, each student interviews a contemporary visual artist. These interviews are illustrated with digital images of each artist’s work and combined in an online magazine. Additionally, each student learns to create a home page on the web.

**Graduate Studio Courses**

**ART 7001-7002 Graduate Studio I and II**

7001, fall; 7002 spring. 9 credits. Prerequisite: first-year M.F.A. students. Staff.

Required for all M.F.A. students. Course instructor is the chair of student’s Special Committee. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they work. All members of the faculty are available for individual consultation.

**ART 8001-8002 Graduate Studio III and IV**

8001, fall; 8002, spring. 9 credits. Second-year M.F.A. students. Staff.

Required for all MFA students. Course instructor is the chair of student’s Special Committee. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they work. All members of the faculty are available for individual consultation.

**Undergraduate Studio Courses in Drawing**

**ART 1500 Summer Drawing I**

Summer, three-week session. 3 credits. Course does not fulfill studio credit for ART 1501. Course fee: $25. Staff.

General course in drawing that emphasizes the analytical study of the figure. Students have the opportunity to explore various media such as charcoal, chalk, pencil, pen, ink, and wash. This course explores the capacity of drawing to visualize complex representations, experience, and informational systems using a wide range of materials and formats. Students pursue both experimental and more developed individual, serial, and collaborative drawing projects that challenge and question the conventional boundaries of drawing.

**ART 1502 Drawing I**

Fall. 3 credits. Prerequisite: ART 1501. Preference given to B.F.A. students. Course fee: $25. Staff.

This course explores the capacity of drawing to visualize complex representations, experience, and informational systems using a wide range of materials and formats. Students pursue both experimental and more developed individual, serial, and collaborative drawing projects that challenge and question the conventional boundaries of drawing.

**ART 1503 Summer Drawing II**

Summer, three-week session. Course does not fulfill studio credit for ART 1502. Drawing II requirement. Course fee: $25. Staff.

General course in drawing that emphasizes figure study and life drawing. Builds on the foundation of ART 1500 and concentrates on the analytical study of the figure. Students explore a variety of materials, traditional and contemporary.

**ART 1507 Observation and Conception: Drawing**

Summer, six-week session. 3 credits. Course fee: $25. Staff.

Emphasizes drawing from the imagination. Stresses the generation of ideas and their development in sketches. The intent is not to produce finished art but rather to experience a series of problems that require image and design concepts different from those of the artist working directly from nature.

**ART 1508 Conceptual Drawing**

Summer, six-week session. 3 credits. Course fee: $25. Staff.

Students complete a resource notebook that will be useful to them in the years after they graduate. Topics include funding resources, exhibition opportunities, employment options, documentation of work, health, safety, and legal issues.

**ART 1509 Life and Still-Life Drawing**

Summer, six-week session. 3 credits. Course fee: $25. Staff.

Studies the human figure and still life both as isolated phenomena and in relation to their environment. Focuses are on helping the student observe and discover.

**ART 2004 Drawing Projects (Studio)**

Spring. 3 credits. Prerequisite: ART 1502, Drawing II. This course fulfills ART 2501 Drawing III for B.F.A. majors. Course fee: $25. Staff.

In this course, drawing is explored in its multiple forms and capacities to explore experience, and represent ideas of the city—its physical forms and diverse neighborhoods and inhabitants. Drawing is developed as a connectional tool, navigational device, and research strategy that considers the dynamic conditions of the urban context through the independent vision of artists. Students pursue both experimental and more developed individual, serial, and collaborative drawing projects using a generous range of materials and formats. The boundaries and conventions of drawing are challenged and questioned.
ART 2501 Drawing Pictorial Languages
Fall. 3 credits. Prerequisite: ART 1902.
Preference given to B.F.A. students.
Course fee: $25. Staff.
This course explores the capacity of drawing to visualize complex representations, experience and informational systems using a wide range of materials and formats. Students pursue both experimental and more developed individual, serial, and collaborative drawing projects that challenge and question the conventional boundaries of drawing.

ART 4502 Studio Research Workshop
Fall or spring. 3 credits. Prerequisite: ART 2501. Corequisite: B.F.A. Thesis I studio.
Course fee: $25. Staff.
This advanced studio workshop focuses on the use of drawing for the development and refinement of complex visual expression. Using both traditional and nontraditional drawing approaches, students work to clarify their conceptual concerns and develop a personalized visual language. This course begins with assignments structured to identify the conceptual and formal considerations central to each student's individual artistic intentions. Once identified, these artistic intentions become the basis for a rigorous investigation. The resulting body of work informs and supports advanced thesis work across the visual art and design disciplines. This course includes faculty and student presentations on historical and contemporary art, as well as regular critiques focusing on peer evaluation.

ART 4509 Independent Studio in Drawing
Fall, spring, or summer. 4 credits, variable.
Prerequisites: juniors in good academic standing and written permission of instructor. Course fee: $25. Staff.
Independent studio in drawing that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

Undergraduate Studio Courses in Digital Media

ART 1701 Introduction to Digital Media
Fall or spring. 3 credits. Preference given to B.F.A. students. Course fee: $250. Staff.
This course explores the use of digital technology in contemporary art making. Students approach software programs by researching historical and contemporary art issues, with emphasis on how to differentiate between analog and digital forms. Through the investigation of the history of digital technology students will gain an understanding of digital culture and its correlation to social, aesthetic and theoretical issues. Topics explored include time-based art, optimize basis for a rigorous investigation, computational techniques, virtuality, and interactivity.

ART 2304 Large-Format Print Media
Fall and spring. 4 credits. Prerequisite: ART 1301 or permission of instructor. Preference given to B.F.A. students.
Course fee: $105. Staff.
This course integrates large format digital printing and traditional forms of printmaking to examine their unique qualities, scale and varied applications, enhancing and informing the production and approach to contemporary printmaking. Students will explore this through experimentation with combinations of approaches of constructing images utilizing Adobe Photoshop, experimental and traditional materials and printmaking mediums. Students will further explore these approaches through projects involving scale, resolution, and surface.

ART 2702 Digital Video and Sound
Fall or spring. 4 credits. Prerequisite: ART 1701. Preference given to B.F.A. students. Not offered every year. Course fee: $105. Staff.
This studio course introduces students to digital video … as a critical and cultural form. The course provides both an in-depth introduction to the techniques, software, structure of video and sound, and a historical overview of its use by artists. The course includes current artistic practices that use video on the web, as social media, in the gallery and in public space. Skills learned include how to manipulate and create stop motion animation, record sound/video/edit, and prepare media for installation. This course concentrates on the experimental use of video as installation combining the use of video/sound, tangible materials, and physical space.

ART 2703 Computer Animation (also CIS/CS 5640)
Fall. 4 credits. Preference given to B.F.A. students. Staff.
Focuses on techniques of computer animations. Combines critical readings with studio projects that employ a variety of animation software. Topics include modeling, storyboarding, 2-D and 3-D key frame animation, motion and cinematics, lighting effect and shading, texturing and material properties, physical simulation, and cinematography.

ART 3703 Advanced Projects in Time-Based Art
Fall. 4 credits. Prerequisites: ART 1701 and one of the following: ART 2304, 2702, 2703, or permission of instructor. Preference given to B.F.A. students. Letter grades only. Course fee: $250. Staff.
This course teaches advanced techniques for creating nonlinear moving images with digital sound. Projects include integrating key-frame based animation, layering animated text, still, and video images made with 3D software applications, field recording, and sound mixing. Emphasis will be placed on ways of integrating and manipulating time-based images and sound to make multimedia art projects and installations for public architectural environments.

ART 3704 Interactive Digital Media
Spring. 4 credits. Prerequisites: ART 1701 or INFO 1300, or permission of instructor. Letter grades only. Course fee: $250. Staff.
This intermediate studio course is designed to encourage students to integrate computer-aided, time-based media into interactive forms and experiences. The course will challenge students to develop a theoretical understanding of the relationship between traditional ideas of authorship and contemporary ideas of authorship that are distributed, collaborative, and ephemeral. Art will be considered in a social and public context. Students will use digital technologies in order to create interactive projects in the form of web art, sensor/micro-controller aided video/sound installations, network performance, and art for public space. The course encourages creative research in the context of studio production.

ART 3705 Art in the Age of Networks
Spring. 4 credits. Prerequisites: ART 1701 and one of the following: ART 2702/2703/2304 or permission of instructor. Course fee: $250. Staff.
This project-centered studio course is designed to introduce the web as a medium for critical, aesthetic, and public art practice. Recent digital practices such as net art, generative art, telematic art, interactive environments, and new media performance have led artists to see the web and related technologies as a new space for understanding art and re-thinking the role of the artist in society. By becoming familiar with these practices, and through independent research and project production, this course will ask students to challenge the notion of object-based art and approach art as an interventionist activity that creates sites of critical overlap between art, technology, and society.

ART 3706 Mobile Media and the City
Spring. 4 credits. Prerequisites: ART 1701 and one of the following: ART 2702/2703/2304 or permission of instructor. Course fee: $250. Staff.
This project-centered studio course uses mobile technologies like cell phones, iPhones, PDAs, and other portable devices to make art. The course looks at the impact of mobile technologies and globalization on the notion of authorship and shows how artists are using the world as an interface for distributed acts of creativity. The course will introduce current software and hands-on techniques for developing simple projects for mobile media in the context of locative media, interactive narration, and ubiquitous computing theories and tactics.

ART 4001 Thesis I
Fall and spring. 6 credits. Prerequisites: ART 1701 or one of the following; ART 2304, 2702, 2703 or 2704. Staff.
This course prepares students for the final semester of thesis when they fully develop and complete a final exhibition/project of a new distinctive body of work. During Thesis I, students begin to research, develop, clarify, and sharpen and develop their proposal through dialogues, critiques, reading, and other activities with members of a Core Thesis Faculty. Thesis I encourages independent, critical thinking and requires students to reflect on their work to date—and their work in the future—with an understanding of historical, theoretical, and conceptual contexts.

ART 4002 Thesis II
Fall and spring. 6 credits. Prerequisite: ART 4001. Staff.
This course is the final semester when B.F.A. students continue to develop, refine, and produce their final capstone work, which may take the form of an exhibition or some other project. Thesis II involves the creation of new work in consultation with Core Thesis Faculty members and other faculty.

ART 4709 Independent Studio in Digital Media
Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Course fee: $250. Staff.
Independent studio in electronic imaging that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

**Undergraduate Studio Courses in Painting**

**ART 1201 Introduction to Painting**
- Fall, spring, or summer. 3 credits.
- Preference given to B.F.A. students. Course fee: $40. Staff.
- Studies the language of painting through color, form, materials, and techniques. Aspects of traditional and modern pictorial composition are studied including proportion, space, and color theory through the representation of a variety of subjects.

**ART 2201 Painting: The Poetics of Material Immanence, Pictorial Legacies**
- Fall or spring. 4 credits. Prerequisite: ART 1201 or permission of instructor. Preference given to B.F.A. students. Course fee: $40. Staff.
- This course is designed to introduce students to a selected historical legacy of pictorial constructions of space with an emphasis on the relationships between innovations in schematic and material presences and their consequent poetic and rhetorical affect. Class activities include a series of directed painting exercises involving research into specific modalities of visual language and their integration with the individual students’ creative expression. Course work includes group discussion, critique, written responses to assigned texts, Museum and library research as well as exhibition.

**ART 3201 Special Transpositions in Painting**
- Fall or spring. 4 credits. Prerequisite: ART 3201 or permission of instructor. Preference given to B.F.A. students. Course fee: $40. Staff.
- This topical painting course uses traditional and experimental strategies to address contemporary issues in the mediation of spatiality. Specialized topics include: theoretical and information spaces, virtual and cyberspaces, surveillance and control spaces, filmic and narrative spaces, and image and game spaces. The emphasis of this course will be on articulating critical approaches to these contemporary spaces through their transposition and delivery in the medium of painting.

**ART 3202 Painting Intent and Context**
- Fall or spring. 4 credits. Prerequisite: ART 3201 or permission of instructor. Preference given to B.F.A. students. Course fee: $40. Staff.
- Advanced course centered on issues of artistic expression. A variety of painting media are used to address conceptual issues through representation an as an act of abstraction.

**ART 4001 Thesis I**
- Fall or spring. 6 credits. Prerequisite: ART 3202. Course fee: $40. Staff.
- This course prepares students for the final semester of thesis when they fully develop and complete a final exhibition/project of a new distinctive body of work. During Thesis I, students begin to research, develop, clarify, and sharpen and deepen their thesis proposal through dialogues, critiques, reading, and other activities with members of a Core Thesis Faculty. Thesis I encourages independent, critical thinking and requires students to reflect on their work to date—and their work in the future—with an understanding of historical, theoretical, and conceptual contexts.

**ART 4002 Thesis II**
- Fall or spring. 6 credits. Prerequisite: ART 4001. Course fee: $40. Staff.
- This course is the final semester when B.F.A. students continue to develop, refine, and produce their final capstone work, which may take the form of an exhibition or some other project. Thesis II centers the creation of new work in consultation with Core Thesis Faculty members and other faculty advisors.

**ART 4209 Independent Studio in Painting**
- Fall, spring, or summer. 4 credits. Prerequisite: ART 4208 or permission of instructor. Preference given to B.F.A. students. Course fee: $215. Staff.
- This course will be on articulating critical approaches to these contemporary spaces through their transposition and delivery in the medium of painting. Students begin to research, develop, clarify, and complete a final exhibition/project of a new distinctive body of work. During Thesis I, students begin to research, develop, clarify, and sharpen and deepen their thesis proposal through dialogues, critiques, reading, and other activities with members of a Core Thesis Faculty. Thesis I encourages independent, critical thinking and requires students to reflect on their work to date—and their work in the future—with an understanding of historical, theoretical, and conceptual contexts.

**ART 2603 Color Photography: The Expressive Use of Color**
- Fall or spring. 4 credits. Prerequisite: ART 1601 or ARCH 2501, or permission of instructor. Preference given to B.F.A. students. Course fee: $215. Staff.
- This course explores the expressive use of color in photographic practices from both aesthetic and technical perspectives. It provides a background in the history of color processes, theory of additive and subtractive color, and a wide range of film-based and digital methods. Guided assignments and individual projects encourage students to acquire an understanding of color and the ability to use color expressively in a variety of photographic approaches.

**ART 2604 Alternative Photographic Processes: The Composite Image**
- Fall, spring, or summer. 4 credits. Prerequisite: ART 1601 or ARCH 2501, or permission of instructor. Preference given to B.F.A. students. Staff.
- This course explores the composite image generated through various lens-based practices and equipment such as still and video camera, scanner, internet, etc. It is an intensive experimental studio integrating digital strategies of negative production to create images produced with traditional light-sensitive materials. Alternative photographic methods are approached as a printmaking process. Students are encouraged to work outside the camera and beyond the negative edge.

**ART 2605 Studio Photography**
- Fall or spring. 4 credits. Prerequisite: ART 1601 or ARCH 2501, and ART 2601 or 2603, or permission of instructor. Preference given to B.F.A. students. Staff.
- Course in the use of medium- and large-format cameras that explores technique, lighting, and the use of larger-format cameras for personal expression both in the studio and outdoors.

**ART 4001 Thesis I**
- Fall or spring. 6 credits. Prerequisite: ART 2601, 2603. Course fee will depend on what process the student is using. Staff.
- This course prepares students for the final semester of thesis when they fully develop and complete a final exhibition/project of a new distinctive body of work. During Thesis I, students begin to research, develop, clarify, and sharpen and deepen their thesis proposal through dialogues, critiques, reading, and other activities with members of a Core Thesis Faculty. Thesis I encourages independent, critical thinking and requires students to reflect on their work to date—and their work in the future—with an understanding of historical, theoretical, and conceptual contexts.
students to reflect on their work to date—and their work in the future—with an understanding of historical, theoretical, and conceptual contexts.

**ART 4002 Thesis II**
Fall or spring. 6 credits. Prerequisite: ART 4001. Course fee will depend on what process the student is using. Staff. This course is the final semester when B.F.A. students continue to develop, refine, and produce their final capstone work, which may take the form of an exhibition or some other project. Thesis II involves the creation of new work in consultation with Core Thesis Faculty members and other faculty advisors.

**ART 4609 Independent Studio in Photography**
Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Course fee will depend on what process the student is using. Staff. Independent studio in photography that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans and executes projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

**Undergraduate Studio Courses in Print Media**

**ART 1300 Introduction to Print Media**
Fall and spring. 3 credits. Preference given to B.F.A. students. Course fee: $125. Staff. This is an inclusive course that offers an expanded study of traditional printmaking processes through experimental print media. Print media is a critical practice grounded in the history of all printed matter and the printed form as a social medium. Students will participate in a comprehensive range of technical and aesthetic approaches centered in a range of strategies including the art work as multiple, digital and cultural production. These issues and others will be discussed within the course. This course involves traditional and digital printmaking, experimental and traditional materials and processes, and making books. This course requires a philosophical interpretation of the camera's lens towards a contemporary social practice. Assignments will assume that photographic interpretation is material, that the image can take many forms, and that these forms have conditions of use that can signify or subvert. Students may visualize their projects from a foundation of ideas and processes relative to past experiences in the darkroom, printmaking, or video.

**ART 3302 Expanded Print Media**
Fall and spring. 4 credits. Prerequisites: ART 1301, 2301, or 2304, or permission of instructor. Course fee: $95. Staff. This is a comprehensive studio course that will allow students to explore printmaking processes and experiment with new technologies. This course fulfills a 2000-level print media course. Course fee: $95. Staff. This course explores the expanding genre of artists' book multiples. Assignments guide students through experimentation with the book page, design, type, and images. Projects involve a variety of structures, paper-making, and binding techniques. This course offers an opportunity for artists, designers, and writers to collaborate. Beyond Cornell, this course offers field trips to the Wells College Book Arts Center, Editions/Artist Book Fair, IPCNY Print Fair, and professional print shops. Readings will be assigned as a supplement to course projects. Students will have the opportunity to work with visiting critics throughout the semester. This course satisfies a 3000-level print media course.

**ART 4001 Thesis I**
Fall or spring. 6 credits. Prerequisite: ART 3302. Course fee: $95. Staff. This course prepares students for the final semester of thesis work. Students will develop and complete a final exhibition/project of a new distinctive body of work. During Thesis I, students begin to research, develop, clarify, and sharpen and deepen their thesis proposal through dialogues, critiques, readings, and other activities with members of a Core Thesis Faculty. Thesis I encourages independent, critical thinking and requires students to reflect on their work to date—and their work in the future—with an understanding of historical, theoretical, and conceptual contexts.

**ART 4002 Thesis II**
Fall or spring. 6 credits. Prerequisite: ART 4001. Course fee: $95. Staff. This course is the final semester when B.F.A. students continue to develop, refine, and produce their final capstone work, which may take the form of an exhibition or some other project. Thesis II involves the creation of new work in consultation with Core Thesis Faculty members and other faculty advisors.

**ART 4308 Independent Studio in Print Media**
Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Course fee: $95. Staff. Independent studio in printmaking that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans and executes projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

**Undergraduate Studio Courses in Sculpture**

**ART 1401 Introduction to Sculpture**
Fall, spring, or summer. 3 credits. Preference given to B.F.A. students. Course fee: $50. Staff. This course introduces students to artistic practice in three dimensions using a variety of materials and approaches. Problems require the student to address materials in terms of cultural and historical context. Assumes no prior knowledge of sculpture.

**ART 2401 Sculpture: Installation**
Fall, spring, or summer. 4 credits. Prerequisite: ART 1401, or architecture design studio, or permission of instructor. Preference given to B.F.A. students. Course fee: $75. Staff. Site-specific installations will be mediated through a variety of materials and individual and collaborative research. This course expands an awareness of traditional (welding, metal casting) and non-traditional materials (papermaking, rubber, fabric) through figurative modeling, abstract carving, and three-dimensional form and design.
ART 3402 Sculpture IV
Fall or spring. 4 credits. Prerequisite: ART 3401 or permission of instructor. Course fee: $75. Staff.
Continued study of the principles of sculpture and concepts of materials and media. Each student explores the selection and expressive use of materials, media, scale, and content. Group discussions and individual criticism. Experimentation is encouraged.

ART 3403 Sculpture V
Fall or spring. 4 credits. Prerequisite: ART 3402 or permission of instructor. Course fee: $75. Staff.
Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 4001 Thesis I
Fall or spring 6 credits. Prerequisite: ART 4002. Course fee: $75. Staff.
This course prepares students for the final semester of thesis when they fully develop and complete a final exhibition/project of a new distinctive body of work. During Thesis I, students begin to research, develop, clarify, and sharpen and deepen their thesis proposal through dialogues, critiques, reading, and other activities with members of a Core Thesis Faculty. Thesis I encourages independent, critical thinking and requires students to reflect on their work to date—and their work in the future—with an understanding of historical, theoretical, and conceptual contexts.

ART 4002 Thesis II
Fall or spring 6 credits. Prerequisite: ART 4001. Course fee: $75. Staff.
This course is the final semester when B.F.A. students continue to develop, refine, and produce their final capstone, work which may take the form of an exhibition or some other project. Thesis II involves the creation of new work in consultation with Core Thesis Faculty members and other faculty advisors.

ART 4409 Independent Studio in Sculpture
Fall, spring, or summer. 4 credits variable. Prerequisites: juniors in good academic standing and written permission of instructor. Course fee: $75. Staff.
Independent studio in sculpture that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

Special Courses

ART 1109 Internship Practicum
Fall, spring, and summer. Variable credit. S–U grades only.
Students serving as interns with art-related businesses may receive 1 academic credit upon receipt of a letter from the internship sponsor confirming successful performance of internship responsibilities. Students may earn up to 3 hours of nongraded credit for internships and these credits may not be used to fulfill or waive department of art academic and studio requirements. If taken in the summer, students must enroll through Cornell's Summer Session.

ART 1505 Drawing Rome
Summer. 3 credits. Letter grades only. Staff.
The course introduces students to methods of representing space and form through a study and application of perspective and the effects of light and shade. Uses of line, tone, and color will be investigated. The subject is the city of Rome, its streets, squares, churches, museums, archaeological zones, the residents and visitors who occupy it. A variety of materials are used including pencil, ink, charcoal, pastel and collage. With the exception of one or two in-studio sessions, all work will be done onsite in Rome. Course meets four weeks, five times per week.

ART 2000 New York City Studio
Spring. 4 credits. This course fulfills a 2000-level studio for B.F.A. majors. Staff.
This interdisciplinary course is thematically and topically organized. Through a series of research-based assignments and independent and collaborative arts projects, students actively engage the city as a site of open investigation and critical engagement. The thematically based studio encourages and allows students to work with a range of media. Students are encouraged to participate not as painters, printmakers, or sculptors, but as artists who pursue and use a range of materials and methodologies as part of a creative process. Students work in the AAP NYC space, as well as other sites in New York City.

ART 2019 Independent Study/Studio in NYC
Spring. 2–4 credits, variable. Staff.
In consultation with a faculty member, students may pursue a thoughtfully developed and rigorous independent study that utilizes the context and content of New York to create an innovative research project, performance, intervention, installation, or other body of work. Student must complete an ART Independent Study/Studio form.

ART 3107 History of Art in Rome: From Constantine to Cavallini: Art, Architecture, and Transformations of the City, 312–1300
4 credits. Rome Program. Fall or spring. Staff.
This course examines the metamorphoses and continuities that characterize Roman artistic culture and its urban and architectural settings during the thousand-year “Age in the Middle” between pagan Roman antiquity and the early Renaissance. Class meetings take place on location in the city, permitting first-hand study of extant works in situ. These range chronologically from the grand Constantinian projects of the fourth century to the illusionistic experiments of Pietro Cavallini and Jacopo Torriti, which immediately preceded and inspired those of Giotto. Monumental painting, mosaic, architecture, and stone sculpture constitute major foci of the course, as do other arts high in the medieval hierarchy of media such as manuscript illumination, ivory and wood carving, metalwork, textiles and embroidery, and the multimedia events—liturgies, processions, coronations, pilgrimages—in whose service much medieval Roman art and architecture were created.

ART 3108 History of Art in Rome: Baroque Rome
4 credits. Rome Program. Fall or spring. Staff.
This course analyzes the masterpieces of Roman Baroque art and architecture from the end of the 17th century to the beginning of the 18th century. While analyzing urbanism, architecture, sculpture, and painting by many of the major artists of the period (Caravaggio, Bernini, Borromini, Cortona), the course considers the artistic trends that characterize the patterns of patronage in Counter-Reformation and Baroque Rome. Special attention will be given not only to the literary sources that shaped art theory, practice, and criticism but also to important issues such as propaganda, the viewer’s emotional engagement, and the artist’s social status. The unity of the visual arts, rhetorical effects, artistic rivalry, scenic urbanism, the relation between art and poetry, the use of classical and “bizarre” vocabulary, the concept of pastoral, the representation of ecstasy, and the idealization of death will be some of the themes explored in this course. Each art work, building, or urban plan will be studied as a document to understand broader concepts related to politics, religion, music, science, theatre, and philosophy.

ART 3702 Special Topics in Art Studio
Fall, spring, or summer. 4 credits, variable. Staff.
Exploration of a particular theme or project. For example, Special Topics in Art History, offered spring 2009 for Rome Program participants.

ART 3709 Independent Studio in Rome
Fall and spring. 4 credits, variable. Prerequisites: Rome Program participants; juniors in good academic standing and written permission of instructor. Staff.
Independent studio in Rome that allows non-art majors the opportunity to pursue special interests in fine arts not treated in regularly scheduled courses. The student plans a course of study or projects that meet the approval of the faculty member selected to guide his or her progress and evaluate the results.

ART 3809 Independent Study/Cornell in NYC
Fall, winter, spring, or summer. 4 credits variable. Prerequisite: student in good academic standing and written permission of instructor on an approved independent study form. Staff.
Independent study or studio allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

ART 4000 Rome Studio
Fall or spring. 4 credits. Fulfills 4 credits of concentration requirement. Prerequisites: Rome Program participants; permission of instructor. Content for Rome studio determined by participant. Lab fee: $60; additional fees for photography and printmaking. Staff.
Emphasis is divided between work accomplished in the studio and work executed outdoors in the environs of Rome.
The URS program encompasses an interdisciplinary liberal arts course of study focused on the forces that shape the social, economic, and political character and physical form of urban/suburban areas and their surrounding regions. Students pursue knowledge in a range of disciplines, acquire significant writing skills, quantitative and non-quantitative analytical skills, and develop the capacity to think broadly and deeply regarding the past, present, and future of urbanized communities and their inhabitants.

Like many high-quality liberal arts programs, the URS major requires students to develop a broad academic base in the physical and biological sciences, quantitative methods and mathematics, social sciences and history, humanities and the arts, and writing. The major requires students to complete a series of four introductory courses and encourages them through additional requirements to develop expertise in looking at cities, suburbs, and metropolitan regions through a series of lenses. Students use theory to examine social dynamics, politics, economics, history, design and land use patterns, and environmental problems.

Graduates pursue a wide variety of advanced studies and careers in city and regional planning, historic preservation, real estate, architecture, landscape architecture, public administration and law, and positions in the public sector: teaching, not-for-profit institutions, and consulting firms.

**Advanced Placement Credit**

Students in the graduating class of 2010 (not including transfer students who enrolled in the URS Program from the fall 2007 semester forward) may generally not apply advanced placement credit to general education requirements in: (1) sciences; (2) mathematics/quantitative reasoning; (3) cultural analysis; (4) historical analysis; (5) knowledge, cognition, and moral reasoning; (6) literature and the arts; and (7) social and behavioral analysis.

**Basic Degree Requirements for Students in the Graduating Classes of 2011 and Subsequent Years**

URS requirements for graduation include (a) eight semesters of residence; (b) 120 credits; (c) General Education Requirements consisting of writing seminars, qualification in one foreign language, and a series of distribution requirements; (d) required courses for the major; (e) area requirements for the major; (f) free electives; (g) a minimum of 34 courses; and (h) completion of the university physical education requirement. Note: Physical education credit does not count toward graduation or toward the 12-credit minimum required for good academic standing each semester. No course may satisfy more than one requirement.

More specifically these requirements include:

### 1. General Education

a. **First-year writing seminars**: two courses. Students earning a score of 5 on one English literature and English language exam will place out of one first-year writing seminar. Students earning a score of 5 on both English literature and English language exams will receive 3 credits (in out-of-college electives) and place out of one first-year writing seminar.

b. **Foreign language**: qualification in one foreign language can be demonstrated by completing three courses in one foreign language in high school, or by taking the Cornell Advanced Standing Examination (CASE), or by successfully completing two to three college-level foreign language courses.

c. **Distribution Requirements**: nine courses. Students must successfully complete nine courses for the distribution requirement. A total of four courses must be completed in the categories of Physical and Biological Sciences (PBS-AS) and Mathematics and Quantitative Reasoning (MQR-AS). Of those four courses, at least two must be classified as PBS and at least one course must be classified as MQR course. The fourth course can be classified either as PBS or MQR. The remaining five courses must be courses identified by the College of Arts and Sciences in the categories of Cultural Analysis (CA-AS), Historical Analysis (HA-AS), Knowledge, Cognition, and Moral Reasoning (KCM-AS), Literature and the Arts (LA-AS), and Social and Behavioral Analysis (SBA-AS). These five courses must be selected from at least four of these five categories (i.e., CA-AS, HA-AS, KCM-AS, LA-AS, and SBA-AS). No more than three of these five courses can be taken in any one department. URS students may petition to substitute equivalent courses from the Colleges of Agriculture and Life Sciences, Engineering, Human Ecology, Industrial and Labor Relations, and Architecture, Art, and Planning. Grades of S–U cannot be applied toward the distribution requirement.

URS students may not apply college credit earned before entering Cornell as a freshman to satisfy any distribution course requirement. However, they may petition to have that credit counted toward the 120 total credits required for graduation.

### 2. Required Courses for the Major: seven courses

- CRP 1100 The American City (fall, 3 credits)
- CRP 1101 The Global City: People, Production, and Planning in the Third World (spring, 3 credits)
- CRP 1106 URS First-Year Seminar (fall, 1 credit)
- CRP 2000 The Promise and Pitfalls of Contemporary Planning (fall, 3 credits)
- CRP 2010 People, Planning and Politics in the City (spring, 3 credits)
- Microeconomics: one course from a list of microeconomics courses (fall or spring, 3 or 4 credits) (ECON 1110, ECON 3010, CRP 4040, AEM 2500)
- Statistics: one course from a list of statistics courses (fall or spring, 3 or 4 credits) (MATH 1710, AEM 2100, ILRST 2100, PAM 2100, STSCI 2100, ECON 3200, AEM 4100)

### 3. Area Requirements: six CRP courses

The program requires that students take courses in six areas: a. Design (one course from designated list of courses)
Students understand the development of cities/suburbs, and regions in terms of aesthetic perspectives (both historically and in the present) and other parameters of physical design.

b. Urban History, Society, and Politics (one course from designated list of courses)

Students examine the growth, development, and character of today’s cities/suburbs and metropolitan areas and their resident populations, in light of a complicated and constantly evolving interplay of historical forces, social and economic concerns, and political consequences, ideas, and choices.

c. Land Use and Environment (one course from designated list of courses)

Students become aware of the patterns of human use of land that have shaped and continue to shape the physical, social, ecological, and economic character of cities/suburbs and regions and of the parameters that influence the natural environment (including both living and nonliving elements) as modified by humans, in shaping (and in many instances substantially limiting) the growth and development of these areas.

d. Regional Development and Globalization (one course from designated list of courses)

Students learn to recognize how the economic health and general well-being of particular cities/suburbs and regions, and their inhabitants, is dramatically influenced by far-flung social and economic forces whose impacts are felt throughout whole regions, nations, and even the world at large.

e. Methods for Planning and Urban Studies: Qualitative Field Methods (one course in qualitative/field methods from designated list of courses)

Students gain knowledge and skills regarding use of interview, survey, participant observation, and other nonquantitative methods in analyzing attitudes, behaviors, trends, and other information pertinent to the growth and development of cities/suburbs and regions, and the well-being of their inhabitants.

f. Methods for Planning and Urban Studies: Quantitative Field Methods (one course in quantitative methods from designated lists of courses)

Students understand, develop, and apply tools used in analyzing economic, sociological, and other quantiative data relevant to the development, implementation, and assessment of public and private actions that influence the growth and development of cities/suburbs and regions, and the well-being of their inhabitants.

Basic Degree Requirements for Students in the Graduating Class of 2010

Students in the class of 2010 should refer to the distribution requirements specified in Courses of Study for the year in which they matriculated.

Honors Program

URS offers qualified students the opportunity to write an honors thesis. To qualify for honors, students must at least have completed the junior year, completed four semesters registered in URS, have a minimum cumulative GPA of 3.5, have a minimum GPA of 3.5 in the major (including the microeconomics and statistics requirements), and have completed at least 7 of the 13 major courses. In exceptional cases, the faculty will consider a petition to waive a requirement. Once admitted, an honors student selects a faculty advisor and develops and writes a thesis with close guidance. These must be 75 or fewer pages.

Urban Studies Minor (non-URS majors)

The Urban and Regional Studies minor has been formulated specifically for those students not enrolled in the Program of Urban and Regional Studies who are interested in complementing their current academic program with an introduction to various facets of urban studies (domestic, environmental, international, professional, urban affairs).

To complete the Urban and Regional Studies (URS) minor, students must take at least six courses (minimum total of 18 credits) in the Department of City and Regional Planning (CRP). Courses must be completed with letter grade of C or above, as follows:

1. Nine (9) credits of required core courses:
   - CRP 1100 The American City (3 credits)
   - CRP 1101 The Global City: People, Production, and Planning in the Third World (3 credits)
   - CRP 2000 The Promise and Pitfalls of Contemporary Planning (3 credits)

2. Nine (9) credits of elective department courses at the 3000 level or higher.

Off-Campus Opportunities

Cornell in Rome. The urban studies component of Cornell in Rome is offered during the spring semester for students interested in the economic, political, cultural, and social life of contemporary European cities and regions. It is open to urban studies majors and related disciplines.

By living and studying in the center of one of the world’s most historic, beautiful, and dynamic cities, students gain a deeper understanding of the powerful local, regional, and global forces that are reshaping urban communities abroad and at home.

In addition to taking classes with architecture and art students, participants engage in field research and assist civic leaders and municipal officials in developing workable solutions to challenging problems confronting contemporary Roman neighborhoods.

Students meet with professional planners, government officials, community activists, leading architects, researchers, and others responsible for urban planning in the areas of economic development, neighborhood stabilization, urban design, regional planning, city management, agricultural development, tourism, historic preservation, and immigration.

Students complement their classes and coursework with travel to Italy’s most important artistic, economic, and political centers.

The program’s cultural immersion and community-based research experience significantly strengthen application for graduate or professional school, and also enhance the effectiveness of young professionals employed in increasingly global workplaces.

Graduate planning and international studies students gain invaluable work experience as full-time interns with one of the United Nations agencies headquartered in Rome (such as the Food and Agriculture Organization or the International Commission on Objects and Monuments), in an Italian city planning agency (fluent Italian required), or in a nongovernmental agency. Rome faculty members help graduate students individually to arrange intern positions. An updated résumé and internship questionnaire must be submitted with the program application.

AAP NYC. AAP NYC provides an exciting off-campus semester with courses and professors that engages students with New York City’s economics and politics, housing and transportation, and art and design. Participants study the use of streets and public spaces, and faculty and guest lecturers guide students through the dazzling variety of the world’s premier city.

Studying and living in New York City complements classroom-based course work in Ithaca with the chance to learn onsite. The New York program is envisioned to fit well with both Ithaca and Rome allowing students to apply ideas first encountered in Ithaca to both the public and private sectors, to provide high-quality site visits, guidance in professional internships, and special events.

Students have the opportunity to see Italy and its European neighbors work together to form a more powerful regional economy and political alliance through the increasingly influential European Union.

The program’s cultural immersion and community-based research experience significantly strengthen application for graduate or professional school, and also enhance the effectiveness of young professionals employed in increasingly global workplaces.

Graduate planning and international studies students gain invaluable work experience as full-time interns with one of the United Nation agencies headquartered in Rome (such as the Food and Agriculture Organization or the International Commission on Objects and Monuments), in an Italian city planning agency (fluent Italian required), or in a nongovernmental agency. Rome faculty members help graduate students individually to arrange intern positions. An updated résumé and internship questionnaire must be submitted with the program application.

AAP NYC. AAP NYC provides an exciting off-campus semester with courses and professors that engages students with New York City’s economics and politics, housing and transportation, and art and design. Participants study the use of streets and public spaces, and faculty and guest lecturers guide students through the dazzling variety of the world’s premier city.

Studying and living in New York City complements classroom-based course work in Ithaca with the chance to learn onsite. The New York program is envisioned to fit well with both Ithaca and Rome allowing students to apply ideas first encountered in Ithaca to both the public and private sectors, to provide high-quality site visits, guidance in professional internships, and special events.

During a semester in New York City, Urban and Regional Studies (URS) juniors and seniors can learn how such a complex system functions, how its elements interact, how new businesses set up and prosper while others fail, and how City Hall, the Port Authority, and various other state and local agencies try to manage things.

The internship course combines work experience two days each week with formal Friday lunchtime discussions. Every other Friday experienced professionals from across the metropolitan region join students to discuss their current work in planning, design, and development. On alternate Fridays students report on their work, meeting with faculty and fellow interns.
Admissions Requirements and Procedures

Among the most important criteria for admission to the Urban and Regional Studies Program are intellectual potential and commitment—a combination of ability, achievement, motivation, diligence, and use of educational and social opportunities. Nonacademic qualifications are important as well. The department encourages students with outstanding personal qualities, initiative, and leadership ability. Above all, the department seeks students with a high level of enthusiasm and depth of interest in the study of urban and regional issues. Applicants must complete a university admission application. Although an interview is not required, applicants are urged to visit the campus if that is possible. Applicants who want further information regarding the Urban and Regional Studies Program may contact Professor Richard Booth, program director, Urban and Regional Studies, Cornell University, 106 West Sibley Hall, Ithaca, NY 14853-6701, 607-255-4025.

Transfer Students

In most cases, transfer applicants should not linger to be affiliated with a high school and should have completed no fewer than 12 credits of college or university work at the time of application. High school students who have completed graduation requirements at midyear and are taking college courses for the rest of the academic year should apply as freshmen. Prospective candidates who believe that their circumstances are exceptional should consult with the director of admissions in the Cornell division of interest to them before filing an application.

Forms for transfer application and financial aid are available from the Cornell University Office of Admissions, 410 Thurston Avenue, Ithaca, NY 14850-2488. Official transcripts of all high school and college work must be submitted along with SAT or ACT scores and letters of recommendation.

Prospective transfer students should have taken at least 6 credits in English. In addition, students should have taken basic college-level courses distributed across the natural and social sciences, humanities, and mathematics. Applicants whose previous course work closely parallels the "General Education" requirements of the Urban and Regional Studies curriculum will have relative ease in transferring. Nevertheless, students with other academic backgrounds, such as engineering, architecture, fine arts, management, and agriculture, are eligible to apply.

Although an interview is not required, applicants are urged to visit the campus if that is possible. Applicants who want further information regarding the Urban and Regional Studies Program may contact Professor Richard Booth, program director, Urban and Regional Studies, Cornell University, 106 West Sibley Hall, Ithaca, NY 14853-6701, 607-255-4025.
Undergraduate Program in Urban and Regional Studies

CRP 1100 The American City
Fall. 3 credits. S–U or letter grades for out-of-department students only. K. Balassiano.
Introductory course on the evolution of urban problems and opportunities facing the majority of this country’s population as we enter the first decade of the 21st century. Readings, discussions, and brief papers explore topics ranging from suburban development to central city poverty, from environmental threats to downtown revitalization, and from municipal finance to the new position of women in the urban economy.

CRP 1101 The Global City
Spring. 3 credits. S–U or letter grades for out-of-department students only. Staff.
Critical look at the physical and social development of giant cities in the Third World. Their origins, roles, contributions, and shortcomings are examined. Their place in world political economy is evaluated. Policy prescriptions for their principal problems are discussed.

CRP 1106 URS First-Year Seminar
Fall. 1 credit. S–U grades only. R. Booth.
Introduces students to substantive issues of the diverse disciplines that make up the planning profession through weekly interaction with CRP and other faculty members in the department. Students have the opportunity to engage in open discussions.

CRP 2000 The Promise and Pitfalls of Contemporary Planning
Fall. 3 credits. Prerequisite: CRP 1100. A. Sanchez.
Introduction to the historical origins and evolution of the city planning profession in the United States. The theoretical foundation, core values, primary methods, and key challenges facing contemporary planners are examined through a combination of readings, lectures, films, guest speakers, and field trips. Students acquire a deeper understanding of professional practice by working with local officials and urban design professionals in community development projects for several Ithaca neighborhoods.

CRP 2010 People, Planning, and Politics in the City
Spring. 3 credits. Prerequisites: CRP 1100 and 1101. Staff.
Seminar examining various bases of political and professional power. What do professionals who want to serve the public need to know about power and decision-making processes in the institutional settings in which they operate? How and why can professionals make a difference when facing problems characterized by great complexity and severe inequalities among affected groups? The course addresses these and others questions.

CRP 3010 Public Administration (also CRP 6010)
Fall. 3 credits. Not offered every year. R. Schwarting.
This course prepares students to work within government departments and agencies, state and local authorities, and nonprofit public benefit corporate bodies: and with private firms working in the public interest at the interface with governments and public benefit corporations. While the emphasis is on local and mid-size organizations, some material will address international and domestic national level organizations. As a first-year graduate program course, it prepares students to conduct research on public organizations leadership and management and to be effective in public careers. It also prepares students for graduate level positions for internships and entry into public-sector careers.

CRP 3011 Ethics, Development, and Globalization (also CRP 6011)
Fall or spring. 4 credits. K. Donaghy.
This seminar surveys some of the most important recent writings in the literatures of development ethics and global ethics and examines their power to illuminate such issues as the nature of development, poverty and human rights, globalization and local autonomy, environmentalism and consumerism, and humanitarian intervention and just wars.

CRP 3072 Land Use, Environmental Planning, and Urban Design Workshop (also CRP 5072)
Fall or spring. 3 credits. A. Forsyth.
Land Use and Environmental Planning workshop courses focus on the forces and actions that directly affect the physical character, transformation, rehabilitation, and preservation of urban landscapes, cities, and regions. Topics of study include, among others, development of land use and natural conservation plans, design and implementation of “smart growth” policies, evaluation of infrastructure requirements, strategies for making cities more environmentally sustainable, design and analysis of public spaces, and strategies for increasing housing opportunities.

CRP 3090 Community Development Seminar (also CRP 5090)
Spring. 3 credits. Staff.
Introduction to the theory, method, and practice of contemporary community development. Topics include the role of community-based organizations in promoting sustainable development in distressed communities; the contribution of community planners to enhancing the organizational capacity of community-based organizations; and the interplay between neighborhood-based community development activities and regional economic development policy-making.

CRP 3101 Race, Space, Place (also AAS/AMST 3950/6950, CRP 6101)
Fall or spring. 3 credits. C. Lai.
This seminar examines critical theories of race and space and investigates key sites where racial formation and spatial production intersect. These multispatial sites include the neoliberal city, the prison industrial complex, and the Mississippi Delta. We analyze not only the focal components of difference: power, and space, but also the spatial politics of resistance and refusal.

CRP 3102 Asian American Politics and Public Policy (also AAS 3900, AMST 3102/6102, CRP 6103)
Fall or spring. 3 credits. C. Lai.
United States policies have shaped Asian American immigration, community formation, and political expression. They have also influenced legal rights and racial formation processes. This course examines public policy and political issues that affect Asian Pacific Americans, including electoral politics, social justice/grassroots movements, affirmative action, and multiracial/interracial coalitions. We investigate both the interaction between state institutions and political movements and how this dialectic frames political issues and accommodates political coalitions. Particular attention will be paid to different means of political organization and different strategies toward political empowerment. The course will be situated within the broader context of post civil-rights racial politics and postwar political economic restructuring.

CRP 3105 Urban Political Economy Seminar: Property and Expropriation (also CRP 6105)
Fall or spring. 3 credits. C. Lai.
This course deals with current topics in urban political economy and examines past and present-day seizure of land, resources, and ways of life as well as resistance against such seizures. We begin with an examination of colonial conquest and the expropriation of the English commons in the 17th and 18th centuries and conclude with contemporary anti-globalization struggles against privatization. Our reading will come from social history, political geography, and ethnic studies.

CRP 3111 Immigrant Entrepreneurship Markets and the U.S. City: The Latino(a) Case (also CRP 6111, LSP 3111/6111)
Spring. 3 credits. A. Sanchez.
The rise in urban entrepreneurship among certain immigrant groups, and the variable forms of neo-liberal economic and spatial restructuring in U.S. cities, require that we view immigrant businesses from a critical and transdisciplinary perspective. This course will foreground how distinct ethnic entrepreneurial patterns and socially constructed immigrant labor markets are framed by both difference and policy regimes.

CRP 3180 Politics of Community Development (also CRP 5180, LSP 3180/5180)
Spring. 3 credits. Letter grades. Staff.
Seminar on city economic development and community institutions. Attention to issues of local politics, planning, housing, and economics. Term papers on field investigations are encouraged. Topics vary from year to year.

CRP 3201 Qualitative Research and Design Methods (also CRP 6201)
Fall or spring. 3 credits. Offered alternate years. J. Forester.
This course focuses on theoretical and practical dimensions of qualitative research design and methods. The course covers qualitative designs, ethics including Cornell University’s Committee on Human Subjects (UCHS), data-gathering methods including interviews, focus groups, surveys, field observation, and archival research, sampling rationales, data analysis procedures, quality criteria, representation, and reporting.

CRP 3202 Visual Methods in Planning (also CRP 6202)
Spring. 3 credits. Staff.
Visual representation and urban design analysis methods in planning. Topics include design thinking, visualization, spatial ideas, visual analysis, and graphic techniques in public participation.
CRP 3210 Introduction to Quantitative Methods for the Analysis of Public Policy
Spring. 3 credits. K. Donaghy.
This course provides an introduction to several major policies and situations that require a policy response. The methods considered—systems modeling, queuing modeling, benefit-cost analysis, decision analysis, multi-criteria analysis, urban and regional analysis—are widely used by planning practitioners and policy analysts (e.g., economists, budget analysts, public administrators, and civil engineers) and embody modalities of thought that often structure the ways that issues are framed for public discussions and policy decisions. Students who complete this course satisfactorily will obtain working knowledge of the methods considered, and become educated consumers of studies in which these methods are employed. CRP 3210 is a “second course” in quantitative reasoning, meaning that students should have a good command of high school algebra and have successfully completed courses in introductory statistics and principles of economic analysis.

CRP 3301 Urban Mentorship Initiative
Fall and spring. 3 credits. Staff.
A service-learning initiative between Cornell and middle/high school students. The course focuses on history, urban education, and social justice in order to prepare students for mentoring of middle/high school students at the school via web-based dialogue and field trips.

CRP 3308 New York City Professional Internships
Fall. 6 credits. Offered in New York City. Staff.
Students will work with program faculty in devising a detailed learning plan that identifies the new knowledge, skills, and capacities they seek to gain through their New York City–based professional internship experience. Students will be placed in public, private, and nonprofit organizations where they will engage in challenging professional activities designed to assist them in acquiring these new competencies. Students will participate in a weekly reflective seminar where they will systematically reflect upon their field-based learning experiences to prepare them to complete a detailed learning portfolio and capstone project through which they can demonstrate their mastery of the theoretical, conceptual, methodological, and policy content identified in their individualized learning plans. Students will be introduced to key concepts and methods in adult learning, experiential education, field-based research methods, and organizational behavior to empower them to function as both self-directed and reciprocal learners.

CRP 3430 Affordable Housing Policy and Programs (also CRP 6430)
Fall. 3 credits. S–U or letter grades. R. Pendall.
Overview of federal, state, and local policies and programs to deliver affordable housing to low-income people; public housing, vouchers, inclusionary zoning, rent control, and much more. Lectures, debates, short papers, and term paper.

CRP 3502 Suburbia (also CRP 6502)
Fall or spring. 3 credits. A. Forsyth.
Cultural commentators love to hate suburbia but the suburban parts of metropolitan areas are expanding around the globe. Readings, films, and lectures cover topics including: suburban history, design planning, ecology, social organization, politics, and culture. Students will use photography, mapping, discussions, and brief papers to develop their own views of suburbia.

CRP 3504 Comparative Urban Development (also CRP 6504)
Fall or spring. 3 credits. S. Schmidt.
This course examines the changing structural and institutional landscape urban planning and development as practiced in cities and regions in specific areas outside the United States, with a particular focus placed on how these institutional arrangements and conditions compare with the United States.

CRP 3506 Environmental Planning Seminar: Wilderness and Wildlands (also CRP 6506)
Fall of odd-year 2–3 credits. variable. E. Thorndike.
This course deals with current topics in environmental planning. Wilderness and wildland resources have been under assault by the Congress, the “Wise Use” movement, property-rights activists, pollutants, and the actual users. This seminar considers historical and philosophical foundations and political factors that affect decisions about environmental policies, planning, acquisition, protection, and management. The roles of government, professional planners and managers, organized special interests, the legal system, citizens, and user groups are examined.

CRP 3501 Museum and the Public (also CRP 6601)
Spring. 3 credits. J. Chusid.
Evaluates different types of museums (art, science, history, arboretum, etc.), and their constantly evolving missions in contemporary societies. The material is addressed through site visits, lectures by faculty and guests, readings, case studies and a team semester-long project. Issues covered include the nature of collections; the nature of the audience; the purpose and role of museums; political and cultural questions about collecting, history and interpretation; governance and management; and the core ethical and intellectual values and positions implied or expressed by the institutions. Students will also undertake a comprehensive planning project for a local museum, to be presented to the client at the end of the semester.

CRP 3602 American Planning History (also CRP 6602)
Fall. 3 credits. Staff.
This lecture and discussion course covers the 20th-century growth of city and regional planning. Related institutions and individual planners are put in the context of social movements and legislative innovation. Students will also have the opportunity to work with practicing planners, other scholars, and Cornell University Library’s Division of Rare and Manuscript Collections.

CRP 3610 Seminar in American Urban History (also CRP 6610)
Fall or spring. 3 credits. Prerequisite: permission of instructor. M. Tomlan.
Seminar in the historical evolution of the American city. Emphasizes factors in urban growth, the process of urbanization, the urban reform movement, and intellectual and social responses to the city.

CRP 3650 Gender and Globalization (also FGSS 3600)
Fall. 3 credits. L. Beneria.
For description, see FGSS 3600.

CRP 3720 20th-Century Italy: Politics and Society
Spring. 3 credits. Cornell in Rome participants only. S–U or letter grades for out-of-department students only. Staff.
Comprehensive survey of Italian society today, starting with Italy’s geography and the historical forces that shaped the nation. Discussion includes north-south tensions and such broad features of Italian social life as community structure, urban development, and family forms. The course also reviews selected institutional issues, such as gender, the system of education, problems of criminality and justice, economic reform, social class, religion, and politics.

CRP 3760 Latino/a Latin American Cities (also CRP 6760, LATA 3760, LSP 3760/6760)
Fall. 3 credits. A. Sanchez.
This course offers students an opportunity to understand urban dynamics in a rapidly changing region of the world. We ask how colonial powers, the nation-state, and global economic forces have shaped Latin American urban landscapes and the patterns of daily life in the city. The first part of this course explores the social, political, and spatial transformations; violence and repression, coping strategies, social movement, and transmigration.

CRP 3801 Asian American Urban Experience (also AAS/AMST 3801/6801, CRP 6801)
Fall or spring. 3 credits. C. Lai.
This seminar uses the case of Asian Americans in the United States to examine the intersection of race, space, and power from a social geographical and ethnic studies framework. The course includes both an introduction to spatial theoretical and racial theory and history of Asian immigrant communities in the 19th and 20th centuries.

CRP 3810 Principles of Spatial Design and Aesthetics (also CRP 5810)
Fall. 3 credits. Limited to 15 students. J. Foster.
A lecture projects course that introduces the spatial and visual design vocabularies of cities. Aesthetic principles and theories of design are investigated for different types of urban spaces drawn from a variety of international examples, historic and modern. Included in the course are design methods and applications in the contemporary urban context of Europe and North America.

CRP 3840 Green Cities (also LA 4950)
Fall. 4 credits. S–U or letter grades. Not offered every year. S. Schmidt.
For the first time in history, a majority of human beings live in cities. As a result, any realistic solution to the global ecological crisis will need to include strategies for urban life that are ecologically sound. This course examines the history and future of urban ecology and the technology and politics that shape it. Alternative transportation, renewable energy, urban design, recycling and resource management, and sustainable economics are explored by reviewing examples, such as the Ensanche of Barcelona, the Ring and public housing in Vienna, the Green Belt in London, the Defence in Paris, the reunification of Berlin, and the decay of post-socialist cities. The course will provide the local benchmark for assessing the progress towards a European culture of planning (for instance, the "garden city" movement and the Garbatella neighborhood, the social housing of early modernism, the Cour business district, etc.). Throughout the course, attention is paid to the "United in diversity" motto of the European Union (EU) and the problematic assertion of EU policy in a process of unification necessarily based on multiple differences of history, geography, and politics.

CRP 3860 Planning for Sustainable Transportation (also CRP 6860)
Spring. 3 credits. S–U or letter grades. Not offered every year. Staff. Explores issues related to sustainable transportation policy and practice. The course (1) provides an overview of current transportation trends and their impacts; (2) reviews themes such as planning history and politics, the interaction with auto-dominated systems, and key challenges to development of sustainable transport systems; and (3) looks at regulatory, design, and market-based approaches to reducing automobile-dependency, introducing creative sustainable solutions from around the world.

CRP 3900 Professional Planning Colloquium I (also CRP 7850)
Fall. 1 credit. Staff. Visiting lecturers address problems and opportunities in the practice of planning. The course is to be announced. The only formal requirements for the course are attendance and a three- to five-page paper about the lecture series.

CRP 3910 Seminar on International Planning
Spring. 1 credit. S–U grades only. W. Goldsmith. The international planning lecture series sponsors lectures by visiting scholars or professionals in the field of international development and planning. The only formal requirement for the course is a brief evaluation of the series at the end of the semester.

CRP 4080 Introduction to Geographic Information Systems (GIS) (also CRP 5080)
Fall. 4 credits. S. Schmidt. Geographic Information Systems (GIS) have revolutionized planning thinking, analyze, and present spatial information. This course focuses on GIS in the social sciences. Many of the exercises and examples are based on planning issues. GIS concepts can be applied to many other disciplines such as government, economics, natural resources, and sociology. Some of the issues covered include fundamentals of spatial analysis; overview of GIS technology and applications; designing a GIS project; gathering and analyzing data; and creating thematic maps.

CRP 4120 Devolution, Privatization, and the New Public Management (also CRP 6120, AEM 4330/6330, FGSS 4110/6110)
Fall. 4 credits. Prerequisite: ECON 1110 or equivalent. S–U or letter grades. Offered every other year. M. Warner. Addresses devolution and decentralization of government services in a national and international context and then focuses on the local public-sector response in the United States. Privatization, intermunicipal cooperation, and internal restructuring are reviewed, including changing roles for the private sector, nonprofit sector, and unions. Implications for policy, program design, public advocacy, and citizen involvement are addressed. A special topic may include welfare reform. Graduate students are expected to write a major research paper in addition to short papers throughout the semester.

CRP 4160 Rome Workshop
Spring. 6 credits. variable. Enrollment may be limited by instructor. Prerequisite: junior or senior standing. Cornell in Rome participants only. Letter grades. Staff. Workshop-based examination of the spatial, social, economic, and political life of the European city, especially Rome.

CRP 4170 Economic Development: Firms, Industries, and Regions (also CRP 5170)
Fall. 4 credits. Not offered every year. S. Christopherson. Economic development policy in the United States has focused historically on the provision of subsidies to individual firms. As the limitations of this strategy have become more apparent, alternative approaches including multiform and workforce development are being implemented. This comparative course draws on cases from a variety of industries and national contexts. Particular attention is paid to economic development issues and policies in New York State.

CRP 4440 Resource Management and Environmental Law (also CRP 5440, NTRES 4440)
Spring. 4 credits. Prerequisite: junior, senior, or graduate standing and permission of instructor. R. Booth. Introduces the application of legal concepts and processes to the management of natural resources and natural-resource areas. Explores the role of the common law, statutory law, administrative regulations, and judicial decisions in managing these resources. Particular focus is given to the management of wildlife, wetlands, and critical resources on public lands, and the conflicts inherent in government attempts to regulate important natural resources on private lands.

CRP 4590 Legal Aspects of Land Use Planning (also CRP 5590)
Spring. 4 credits. R. Booth. Survey of leading cases and legal concepts in land-use planning, with particular attention to zoning, subdivision control, condemnation, and growth-control issues.

CRP 4770 Issues in African Development (also CRP 6770)
Fall and spring. 1 credit. S–U grades only. M. Ndulo. Examines a broad range of critical concerns in contemporary Africa including food production, human resource development, migration, urbanization, environmental resource management, economic growth, and policy guidance. The weekly presentations are made by invited specialists. Students are required to write a term paper.

CRP 4900 Student-Faculty Research
Fall or spring. 4 credits. variable. Prerequisite: undergraduates in Urban and Regional Studies Program. S–U grades only. Staff. Research, reading, and/or writing project in which a student and faculty member choose a topic related to urban and regional studies.

CRP 4920 Honors Thesis Research
Fall or spring. 4 credits. Prerequisite: Urban and Regional Studies Program majors who have been selected as honor students by department faculty. Staff. Each selected student works with his or her thesis advisor.

CRP 4930 Honors Thesis Writing
Fall or spring. 4 credits. Prerequisite: CRP 4920. Staff. Each selected student works with his or her thesis advisor.

CRP 4970 Independent Study
Fall or spring. 4 credits. variable. Prerequisite: junior or senior standing; permission of instructor. Staff.

Special Topics Courses
Fall or spring. Variable credit. Staff. Typical topics are:
CRP 3850 Special Topics in Planning
CRP 3851 Special Topics in Design
CRP 3852 Special Topics in Urban History, Society and Politics
CRP 3853 Special Topics in Land Use and Environment
CRP 3854 Special Topics in Regional Development and Globalization
CRP 3855 Special Topics in Quantitative Methods
CRP 3856 Special Topics in Quantitative Methods

Graduate Courses and Seminars
Courses numbered from 5000 to 5990 and 6000 to 6990 are generally considered introductory or first-year courses; those numbered from 7000 to 7990 and 8000 to 8990 are generally considered more advanced. Upper-level undergraduate courses are numbered from 3000 to 4990. (Undergraduate students with the necessary prerequisites and permission of the instructor may enroll in courses numbered 5000 and above.)
CRP 5071 City and Regional Planning Workshop
Fall or spring. 4 credits. Staff.
City and Regional Planning workshop courses focus on planning issues and problems that concern several of the topics undertaken in the various workshop categories. Topics may include public policy issues regarding land use, transportation, public space, municipal services, environmental impact, housing and economic development, and public participation.

CRP 5072 Land Use, Environmental Planning, and Urban Design Workshop
Fall or spring. 4 credits. Staff.
For description, see CRP 3072.

CRP 5073 Historic Preservation Planning Workshop
Fall or spring. 4 credits. Staff.
Historic Preservation Planning workshop courses take students into the field to engage in a range of problems, from conducting a historic resource survey working in a city, town, or village in the region, to developing a scheme for revitalization of an entire neighborhood, to a site-specific economic analysis for the renovation of a surplus school.

CRP 5074 Economic and Community Development Workshop
Fall or spring. 4 credits. Staff.
Economic and Community Development workshop courses focus on the economics of neighborhoods, cities, and regions with the intent of producing more informed and effective economic development policy. Topics of study include, among others, the application of analytical tools needed to produce first-rate economic development plans, the special needs of excluded, poor and segregated communities, use of quantitative and qualitative methods to address social inequalities, the politics of planning, relationships between economic development and community development.

CRP 5075 Real Estate Workshop
Fall or spring. 4 credits. Staff.
Student are asked to undertake the preparation of reports analyzing various aspects of real estate activity. Individual and team working relationships are required. A range of topics and problems that may be encountered in the real estate field are addressed, including project feasibility, marketing, planning and design, legal constraints and concerns, and others. Projects focus on real-world case studies and require professional-level reports suitable for oral and written presentations.

CRP 5076 International Planning and Development Workshop
Fall or spring. 4 credits. Staff.
International Planning and Development courses focus on urban, regional, and international development processes and their implications for people's lives and livelihoods in diverse international contexts. Particular attention is paid to critical assessment of programs that reflect a commitment to environmental sustainability, economic vitality, and social justice.

CRP 5080 Introduction to Geographic Information Systems (GIS) (also CRP 4080)
Spring. 4 credits. S. Schmidt.
For description, see CRP 4080.

CRP 5090 Community Development Seminar (also CRP 3090)
Spring. 3 credits. Staff.
For description, see CRP 3090.

CRP 5120 Public and Spatial Economics for Planners
Spring. 3 credits. No prior knowledge of economics necessary. N. Brooks.
Covers basic microeconomic theory and some topics in macroeconomics. What distinguishes it from foundation courses in economics is that the context of every topic is both spatial and public. The concept of space is central to city and regional planning. The perspective of the public and nonprofit sectors is the same as that of city and regional planning. Both space and the public–nonprofit sectors are peripheral to (or absent from) the usual graduate foundations courses in economics. The course also covers the economic theory necessary to understand the many applications of economics presented in subsequent courses in city and regional planning.

CRP 5130 Introduction to Planning Practice and History
Fall. 4 credits. J. Forester.
Introductory graduate seminar on the theory and history of planning, administration, and related public intervention in urban affairs. Topics are arranged to provide the perspective of the political economy of the growth and development of cities. Students improve their understanding of the planning process and of the urban application of the social sciences, get practice in writing, and explore one research topic in depth.

CRP 5170 Economic Development: Firms, Industries, and Regions (also CRP 4170)
Fall. 4 credits. S. Christopherson.
For description, see CRP 4170.

CRP 5180 Politics of Community Development (also CRP 3180)
Spring. 3 credits. A. Sanchez.
For description, see CRP 3180.

CRP 5190 Urban Theory and Spatial Development
Spring. 3 credits. W. Goldsmith.
Surveys theories on the existence, size, location, and functioning of cities and their metropolitan areas. The problems and poor regions of the world. Considers orthodox/conservative treatments as well as critical/left-wing perspectives of planners, geographers, economists, sociologists, and political economists. These theories are indispensable for understanding the origins of cities, the persistence of urban and regional spatial patterns, and the distinctive nature of urban problems.

CRP 5230 Analytical Mapping and Spatial Modeling (also DSOC 5600)
Fall. 4 credits. prerequisite: one course in statistics. J. Francis.
For description, see DSOC 5600.

CRP 5250 Introductory Methods of Planning Analysis
Spring. 4 credits. K. Donaghy.
Quantitative and qualitative analysis of neighborhoods, cities, and regions. Focus is on data from various regions of the United States, but tools are applicable throughout the world. They include descriptive and inferential statistics, mapping, and observation. Required lab exposes students to essential microcomputer applications and builds skills in writing and analysis.

CRP 5320 Real Estate Development Process
Fall. 3 credits. Letter grades. Fee for case studies packet. B. Olson.
Examination of various forms of development as well as the role of major participants in the processes. Reviews issues in residential, retail, industrial, office, and low-income housing projects. Guest speakers and case studies included.

CRP 5330 Real Estate Marketing and Management
Fall. 3 credits. Staff.
Focuses on the tenant or user as the basic source of the value of real estate. Students explore the characteristics and needs of tenants, and how the ownership and management of buildings respond to these needs. Multifamily residential and office buildings are the principal focus of the course. Topics include marketing research, examination of tenant types, building services and operations, negotiation of lease agreements, marketing campaigns, and governmental regulations. Guest speakers and case studies included.

CRP 5370 Real Estate Seminar Series
Fall and spring. 0.5 credit each semester. Prerequisite: M.P.S./R.E. students. S–U grades only. D. Furey.
Designed to bring students weekly into direct contact with real-estate professionals mainly through the use of videoconferences originating from locations around the world.

CRP 5440 Resource Management and Environmental Law (also CRP/ NTRES 4440)
Spring. 4 credits. R. Booth.
For description, see CRP 4440.

CRP 5450 Inferential Statistics for Planning and Public Policy
Fall or spring. 3 credits. N. Brooks.
This course is an introduction to the inferential statistical methods and econometric regression analysis needed to understand empirical public policy and planning research and to do basic applied public policy analysis. The statistical concepts are illustrated using data and examples primarily from the fields of public policy and planning.

CRP 5460 Introduction to Community and Environmental Dispute Resolution
Fall or spring. 3 credits. J. Forester.
Explores the theories and techniques of dispute resolution as they apply to community, environmental, and related public-policy disputes. Analysis complements skill-building. Issues of power, participation, and strategy are central to our examinations of negotiation and mediation practice.

CRP 5530 Land-Use Regulations
Fall. 3 credits. R. Pendall.
This seminar covers the essentials of "smart growth," zoning, and subdivision and the main tools for implementing a land-use plan. Also covers agriculture and open-space preservation, infrastructure-timing controls, redevelopment, and planned-unit development.

CRP 5540 Introduction to Environmental Planning
Fall. 3 credits. S. Schmidt.
Introduction to problems facing planners and decision-makers as they attempt to manage and preserve environmental quality in urban and rural settings. Case studies are used to...
discuss issues related to sustainability, quality of life, environmental hazards, and environmental justice. Students are also introduced to the basic regulatory and institutional aspects of environmental planning and tools and techniques for environmental impact assessment, inventories, and risk analysis.

**CRP 5560 Design in Real Estate Development**  
Spring. 3 credits. S–U or letter grades. H. Richardson. Provides a basic understanding of the importance of design in real estate development. The role of the architect and other design professionals is considered from the initial needs assessment through project implementation. Fundamentals involved in defining, stimulating, and recognizing quality in design are addressed. The analysis of case study presentations by guest speakers examine the methods and procedures employed by other design professionals and how this can create added value to development.

**CRP 5590 Legal Aspects of Land Use Planning** (also CRP 4590)  
Spring. 4 credits. R. Booth. For description, see CRP 4590.

**CRP 5600 Documentation for Preservation**  
Fall. 3 credits. M. Tomlan. Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

**CRP 5610 Historic Preservation Planning Workshop: Surveys and Analyses**  
Fall. 4 credits. J. Chusid. Covers techniques for the preparation of surveys of historic structures and districts; identification of American architectural styles, focusing on upstate New York; and explorations of local historical resources, funding sources, and organizational structures. Lectures and training sessions. Emphasizes fieldwork with individuals and community organizations.

**CRP 5620 Perspectives on Preservation**  
Fall. 3 credits. J. Chusid. Introductory course for preservationists. A survey of the historical development of preservation activity in Europe and America leading to a contemporary comparative overview. Field trips to notable sites and districts.

**CRP 5630 Problems in Contemporary Preservation Practice**  
Spring. Variable credit. J. Chusid. Review and critique of ongoing preservation projects and an investigation of areas of expertise currently being developed. Presented by staff and guest lecturers.

**CRP 5640 Building Materials Conservation**  
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. J. Chusid. Survey of the development of building materials in the United States, chiefly during the 19th and early 20th centuries, and a review of the measures that might be taken to conserve them.

**CRP 5650 Fieldwork or Workshop in History and Preservation**  
Fall or spring. Variable credit. Staff.

Work on applied problems in history and preservation planning in a field or laboratory setting or both.

**CRP 5660 Planning and Preservation Practice**  
Fall. 1 credit. Prerequisite: graduate standing in CRP programs or M.P.S./R.E. or permission of instructors. S–U grades only. R. Pendall and M. Tomlan. Students participate in field study of city planning, historic preservation, economic and community development, and real estate issues in large eastern U.S. cities.

**CRP 5670 Measured Drawing**  
Spring. 3 credits. Prerequisite: undergraduate architecture students and graduate students in history and preservation. J. Chusid. Combines study of architectural drawing as historical documents with exercises in preparing measured drawings of small buildings. Presents the basic techniques of studying, sketching, and measuring a building and the preparation of a finished drawing for publication.

**CRP 5810 Principles of Spatial Design and Aesthetics** (also CRP 3810)  
Spring. 3 credits. J. Foster. For description, see CRP 3810.

**CRP 6010 Public Administration** (also CRP 3010)  
Fall. 3 credits. Not offered every year. R. Schwarting. For description, see CRP 3010.

**CRP 6011 Ethics, Development, and Globalization** (also CRP 3011)  
Fall or spring. 4 credits. Offered alternate years; next offered Spring 2012. K. Donaghy. For description, see CRP 3011.

**CRP 6012 Legal Aspects of Public Agency Decision-Making**  
Fall. 4 credits. R. Booth. This course introduces the application of legal concepts to decision-making processes conducted by governmental agencies, particularly at the federal level. It explores the nature, purpose, and efficacy of government agencies in making decisions. Attention is given, for example, to roles of agencies in American government, differences between rule-making proceedings and adjudications, rights of parties to obtain judicial review of agency decisions, how judges review factual and legal determinations by agency officials, and the rights of parties appearing before agencies.

**CRP 6050 Urban Public Finance**  
Fall. 4 credits. Prerequisite: exposure to microeconomics. Not offered every year. J. Foster. Overview of neoclassical public-economics theory, particularly those aspects of the theory that are central to urban public finance. The unusual three-tiered fiscal system of the United States is described along with the evolving fiscal and economic role of large municipal governments. Also presented is the public-finance theory of taxation. Major taxes and other revenue sources used by large municipalities are described and analyzed. The heart of the matter is the measurement and analysis of the fiscal condition of cities.

**CRP 6101 Race, Space, and Place** (also CRP 3101)  
Fall or spring. 3 credits. C. Lai. For description, see CRP 3101.

**CRP 6102 Economics of Financial Crises** (also NBA 5950)  
Spring. 3 credits. I. Azis. Understanding the causes, nature, and consequences of financial crises is of interest to both the public and private sector. The purpose of this course is to help students with such understanding, and to familiarize them with the relevant tools for analyzing the phenomena of financial crises. While crisis is often multidimensional, the focus of this course is on economics.

**CRP 6103 Asian American Politics and Public Policy** (also AAS 3900, CRP 3102)  
Fall or spring. 3 credits. C. Lai. For description, see CRP 3102.

**CRP 6105 Urban Political Economy Seminar** (also CRP 3105)  
Fall or spring. 3 credits. C. Lai. For description, see CRP 3105.

**CRP 6111 Immigrant Entrepreneurship Markets and the U.S. City: The Latino(a) Case** (also CRP 3111)  
Spring. 3 credits. A. Sanchez. For description, see CRP 3111.

**CRP 6120 Devolution, Privatization, and the New Public Management** (also CRP 4120, AEM 4330/6330, FGSS 4110/6110)  
Fall. 4 credits. Prerequisite: ECON 1110 or equivalent. S–U or letter grades. Offered every other year. M. Warner. For description, see CRP 4120.

**CRP 6201 Qualitative Research and Design Methods** (also CRP 3201)  
Fall or spring. 3 credits. Offered alternate years. J. Foster. For description, see CRP 3201.

**CRP 6202 Visual Methods in Planning** (also CRP 3202)  
Spring. 3 credits. Staff. For description, see CRP 3202.

**CRP 6210 Quantitative Techniques for Policy Analysis and Program Management**  
Spring. 4 credits. D. Lewis. Examines selected analytical techniques used in the planning and evaluation of public policy and public investments. Topics include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

**CRP 6220 Planning Policy and Analysis**  
Spring. 5 credits. I. Azis. The course is designed to familiarize students with the essence of planning models and equip them with analytical tools to undertake a practical quantitative policy and planning analysis. Two categories of models to be discussed are: (1) economy-wide models that capture complete interactions between economic and social indicators such as income distribution and poverty; and (2) non-Bayesian decision-making models that combine intangibles and subjective judgments with statistical data and other tangible actors, and that can also capture feedback influences.
CRP 6311 Consulting for Nonprofit and Government Organizations
Fall and spring. 4 credits. L. Miller.
This class teaches practical skills that will enable students to work with clients in the local community. Learn about organizational structure and culture, and gain real-world experience as they complete a public-service project. Students receive instructor on topics such as organizational development, program evaluation, project management, professional communication, and strategic planning. A significant portion of the course will focus on project management.

CRP 6320 Methods of Regional Science and Planning I
Spring. 4 credits, variable. K. Donaghy.
Introduction to some of the major methods and models used in regional science and planning. Topics related to the structure and assumptions of the models, model development, and their applications in regional science and planning are discussed. Where appropriate, computer implementation emphasizing statistical, econometric models is considered.

CRP 6430 Affordable Housing Policy and Programs (also CRP 3430)
Fall. 3 credits. S–U or letter grades. R. Pendall.
For description, see CRP 3430.

CRP 6502 Suburbia (also CRP 3502)
Fall or spring. 3 credits. Staff.
For description, see CRP 3502.

CRP 6503 Comparative Land Use Policy
Fall or spring. 3 credits. Staff.
Graduate seminar in which students conduct guided, often collaborative, research on contemporary land-use planning and policy issues in comparative international perspective. Topics may include sustainable development, conservation, revitalization of urban cores, and land use-transportation connections, among others.

CRP 6504 Comparative Urban Development (also CRP 3504)
Fall or spring. 3 credits. S. Schmidt.
For description, see CRP 3504.

CRP 6506 Environmental Planning Seminar: Wilderness and Wildlands (also CRP 3506)
Fall or spring. 2–3 credits. variable. E. Thorndike.
For description, see CRP 3506.

CRP 6508 Real Estate Transactions and Deal Structuring (also LAW 6792)
Spring. 3 credits. S–U or letter grades. D. Funk.
Real estate transactions and deal structuring examine real estate deals through a practitioner perspective within a case study and transactional approach. The course looks at the transactional components and structuring of real estate deals and related parties at each step in creating value from real estate, including acquisition and assembly; due diligence; sourcing and financing; structuring the venture/parties; operation; disposition; and tax consequences. Additional issues in real estate deal structuring that may be included are negotiation, managing risk including litigation and environmental issues, analysis of financing techniques, and consequences when deals go bad, including work out and bankruptcy. The case study format will address deals from the perspectives of investment fund manager, banker/lender, developer, REIT, joint venture partner/investor, and owner.

CRP 6570 Real Estate Law
Spring. 3 credits. Letter grades. A. Klausner.
Examination of major legal concepts pertaining to acquisition, use, management, and transfer of real estate. Particular focus is on important legal considerations pertaining to property rights, contracts, and public controls on the use of land. Consideration of important case law, statutory law, and rules and regulations. Current legal issues affecting the real estate industry are discussed.

CRP 6580 Residential Development
Spring. 4 credits. Letter grades. Fee for mandatory field trip. H. Oliver.
Explores the residential-development process from site acquisition through delivery of the finished product. Topics include market feasibility, land planning and acquisition, product selection and design considerations, project financing and feasibility, schedule and budgetary controls, contracting and construction issues, marketing, and sales activities. Current issues in providing competitive housing products in today's markets are also explored. Composition of the residential-development project team is discussed. Classes are supplemented by presentations from visiting professionals. The course includes a semester-long project based on an actual property and market opportunity.

CRP 6601 Museum and the Public (also CRP 3601)
Spring. 3 credits. J. Chusid.
For description, see CRP 3601.

CRP 6602 American Planning History (also CRP 3602)
Fall. 3 credits. Staff.
For description, see CRP 3602.

CRP 6610 Seminar in American Urban History (also CRP 3610)
Fall or spring. 3 credits. Prerequisite: permission of instructor; M. Tomlan.
For description, see CRP 3610.

CRP 6620 Historic Preservation Law
Spring. 3 credits. Offered every other year. Staff.
Covers law of historic district and landmark designation; tools for preservation (e.g., police power, taxation, eminent domain); and recent developments in state and federal historic preservation.

CRP 6650 Preservation Planning and Urban Change
Fall. 3 credits. M. Tomlan.
Examination of fundamental planning concepts and issues as they relate to historic preservation. Neighborhood revitalization, federal housing programs, the role of public and private institutions, displacement, and other social issues are among the primary topics.

CRP 6700 Regional Planning and Development in Developing Nations
Fall or spring. 3 credits. Prerequisite: second-year graduate standing. M. Gonzalez.
Extensive case studies of development planning are analyzed. Focus is on the political economy of the process of regional development through urbanization and in particular on the concepts of equity and efficiency, external economies, export linkages, and internal self-sufficiency and integration. Resource development, national integration, human development, and migration problems are discussed.

CRP 6710 Seminar in International Planning
Spring. 1 credit. S–U grades only. W. Goldsmith.
For description, see CRP 3901.

CRP 6720 International Institutions
Fall. 3 credits. L. Beneria and M. Gonzales.
Focuses on the growth and transformation of international institutions since World War II. The first part includes a discussion of the Bretton Woods institutions and of the U.N. system up to the early 1970s, and how these function and have evolved over time. The second part examines some of the crises and tensions within the international system since the 1980s and how these have affected institutional change and current debates on reform and global governance.

CRP 6760 Latin American Cities (also CRP 3760, LATA 3760, LSP 3760/6760)
Fall. 3 credits. A. Sanchez.
For description, see CRP 3760.

CRP 6770 Issues in African Development (also CRP 4770)
Fall or spring. 1 credit. S–U grades only. M. Ndulo.
For description, see CRP 4770.

CRP 6801 Asian American Urban Experience (also CRP 3603)
Fall or spring. 3 credits. C. Lai.
For description, see CRP 3801.

CRP 6860 Planning for Sustainable Transportation (also CRP 3860)
Spring. 3 credits. S–U or letter grades. Not offered every year. Staff.
For description, see CRP 3860.

CRP 6901 Real Estate Review
Fall and spring. Variable 1–2 credits. D. Funk.
Real Estate Review is for students undertaking a research project culminating in an article worthy of publication in the Cornell Real Estate Review.

CRP 7770 Theories of Development and Underdevelopment
Fall. 4 credits. P. Olupadawa.
Various theories attempting to analyze and explain the phenomena of underdevelopment are examined. Although a range of thought and approaches are considered, the accent is on aspects of political economy revolving around concepts of class and exploitation. Topics include the transition of capitalism; dependent and uneven development; various issues of growth and fluctuation under contemporary capitalism, including crisis; rural and industrial development in less developed countries, and planning for development.

CRP 7850 Professional Planning Colloquium I (also CRP 3900)
Fall. 1 credit. Staff.
For description, see CRP 3900.

CRP 7940 Planning Internships
Fall, spring, or summer. 12 credits, variable. Staff.
Combines a professional planning internship in a metropolitan area with academic study to provide experience and understanding of the planner's role in formulating and implementing plans and policies. Salaried internships in federal or state agencies, legislative offices, and comparable settings include development of research, analysis, and other technical skills. Weekly seminars draw on student field experiences, assigned readings, and guest speakers to examine current issues of federal, urban, and regional policy from the perspective of planning practice.

**CRP 7970 Graduate Independent Study**
Fall or spring. 4 credits, variable. Prerequisites: graduate student standing, permission of instructor. Staff. For description, see department coordinator, 106 West Sibley Hall.

**CRP 8000 Advanced Seminar in Urban and Regional Theory I**
Fall. 3 credits. S. Christopherson. Introduction to key conceptual and empirical literature in urban theory. Focuses on the relationship between political and economic processes and their joint influence on urban spatial form.

**CRP 8010 Advanced Seminar in Urban and Regional Theory II**
Fall or spring. 3 credits. K. Donaghy. This course will survey traditional and more recent explanations of the location, aggregation, and fragmentation of economic activities in space under different assumptions about the mobility of factors, transportation (or more generally, transaction) costs, economies of scale, and the competitiveness of markets. The relationship between theories of trade and location will be considered, as will the effects on spatial economies of policy interventions.

**CRP 8100 Advanced Planning Theory**
Fall. 3 credits. Staff. A survey of the works of scholars who have contributed to current thinking about planning theory. Alternative assumptions concerning models of man and theoretical concepts concerning the nature of planning today are considered.

**CRP 8300 Seminar in Regional Science, Planning, and Policy Analysis**
Fall or spring. 4 credits, variable: S–U grades only. K. Donaghy. CRP 8300 is a weekly seminar at which faculty, students, and visitors present their research on topics of current interest. Presentations will involve formal or quantitative analyses of developments in regional economies and policy or planning implications.

**CRP 8900 Planning Research Seminar I**
Fall or spring. 2 credits. Staff. Intended for doctoral candidates in city and regional planning; other students welcome. Presentation and discussion of current problem areas and research by advanced doctoral students, faculty members, and visitors.

**CRP 8910 Master's Thesis in Regional Science**
Fall or spring. 12 credits, variable: S–U or letter grades. Hours TBA. Regional Science faculty. Staff.

**CRP 8920 Master's Thesis, Project, or Research Paper**
Fall or spring. 10 credits, variable: S–U or letter grades. Staff.

**CRP 8950 Master's Thesis in Preservation Planning**
Fall or spring. 6 credits, variable. Staff.

**CRP 9920 Doctoral Dissertation**
Fall or spring. 12 credits, variable. Staff.

**Special Topic Courses**
Fall or spring. Variable credit. Staff. Typical topics are:

**CRP 6090 Urban and Regional Theory**
Spring. 1–5 credits; may be repeated for credit. S–U or letter grades. L. J. Mirin. Work on special topics by individuals or small groups.

**CRP 6190 Planning Theory and Politics**
Spring. 1–5 credits; may be repeated for credit. S–U or letter grades. L. J. Mirin. Work on special topics by individuals or small groups.

**LANAR 4970 Individual Study in Landscape Architecture**
Fall or spring. 1–9 credits. Staff.

**LANAR 5240 History of European Landscape Architecture**
Fall. 3 credits. L. Mirin. Survey from classical times to the present, emphasizing design principles and techniques that have established the landscape architecture tradition in Europe. Particular reference is made to the manner in which gardens, streets, plazas, parks, and new towns reflect in their built form, a range of responses to demands of culture, economics, technology, security, the law, and ecology.

**LANAR 5250 History of American Landscape Architecture**
Spring. 3 credits. L. Mirin. Landscape architecture in the United States from Jefferson to the present is examined as a unique expression of the American experience. Influences exerted by the physical landscape, the frontier and utopian spirit, and the cultural assumptions of democracy and capitalism are traced as they affect the forms of urban parks, private and corporate estates, public housing, transportation planning, national parks, and other open-space designs.

Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects.

**Dual-Degree Options**
Graduate students can earn a master of landscape architecture and a master of science (horticulture) or a master of city and regional planning simultaneously. Students need to be accepted into both fields of study to engage in a dual-degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

**Course Information**
Note: Landscape Architecture courses are offered through the College of Agriculture and Life Sciences except LANAR 4970, 5240, and 5250. For complete course offerings, see Landscape Architecture course listings on pages 115–118 of this catalog.

**LANAR 6490 Regional Science**
Spring. 3 credits. S. Christopherson. Staff.

**LANAR 6590 Urban Development Planning**
Spring. 3 credits. L. Mirin. Staff.

**LANAR 6690 History and Preservation**
Spring. 3 credits. L. Mirin. Staff.

**LANDSCAPE ARCHITECTURE**
Landscape Architecture at Cornell is jointly sponsored by the College of Agriculture and Life Sciences and the College of Architecture, Art, and Planning.

**The Program**
Program faculty: P. J. Trowbridge, chair (443 Kennedy Hall, 255–2738); S. Baugher, K. L. Gleeson, A. Hammer, P. Horrigan, D. W. Krall, L. J. Mirin, A. Okisbo, D. Ruggeri. Landscape Architecture offers a three-year master of landscape architecture license qualifying degree, administered through the Graduate School, for those who have a four-year undergraduate degree in another field. The major is composed of several parts: core courses related to professional education in landscape architecture; a concentration in a subject related to the core courses; and free electives. Requirements of the three-year M.L.A. curriculum include 90 credits, six resident units, satisfactory completion of the core curriculum courses, and a thesis or a capstone studio.

The department also offers a two-year master of landscape architecture advanced degree program, administered through the Graduate School, for those with accredited degrees in landscape architecture or architecture. The two-year program entails core courses in the discipline and the development of concentrations in subject-matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

**FACULTY ROSTER**
Brooks, Nancy, Ph.D., U. of Pennsylvania. Visiting Assoc. Prof., City and Regional Planning
Chi, Lily H., Ph.D., McGill U. (Canada). Assoc. Prof., Architecture
Christopherson, Susan M., Ph.D., U. of California, Berkeley. Prof., City and Regional Planning
Christisnii, Jeffrey, M. Arch., U. of California, Berkeley. Assoc. Prof., City and Regional Planning
Clavel, Pierre, Ph.D., Cornell U. Prof. Emeritus, Architecture
Emeritus, City and Regional Planning
Colby, Victor E., M.F.A., Cornell U. Prof. Emeritus, Art
Crump, Ralph W., B.Arch., Cornell U. Prof. Emeritus, Architecture
Curry, Milton S. F., M.Arch., Harvard U. Assoc. Prof., Architecture
Czamanski, Stan, Ph.D., U. of Pennsylvania. Prof., Emeritus, City and Regional Planning
Donaghy, Kiernan, Ph.D., Cornell U. Prof., City and Regional Planning
Drennan, Matthew P., Ph.D., New York U. Prof., Emeritus, City and Regional Planning
Forester, John, Ph.D., U. of California, Berkeley. Prof., City and Regional Planning
Forsyth, Ann, Ph.D., Cornell U. Prof., City and Regional Planning
Goehner, Werner H., M.Arch., Cornell U. Prof., Architecture
Goldsmith, William W., Ph.D., Cornell U. Prof., City and Regional Planning
González, Marcela, Ph.D., U. of North Carolina, Chapel Hill. Postdoctoral Fellow, City and Regional Planning
Greenberg, Donald P., Ph.D., Cornell U. Prof., Architecture
Hammer, Andrea G., Ph.D., M.F.A., U. of California, Davis. Sr. Lec., Landscape Architecture
Hascup, George E., B.Arch., U. of California, Berkeley. Prof., Architecture
Hubbell, Kent L., M.F.A., Yale U. Prof., Architecture
Isard, Walter, Ph.D., Harvard U. Prof. Emeritus, City and Regional Planning
Karriem, Abdulraza K., Ph.D., Cornell U. Visiting Asst. Prof., City and Regional Planning
Kiely, Richard, Ph.D., Cornell U. Visiting Asst. Prof., City and Regional Planning
Kord, Victor, M.F.A., Yale U. Prof. Emeritus, Art
Kudva, Neema, Ph.D., U. of California, Berkeley. Asst. Prof., City and Regional Planning
Lai, Clement, Ph.D., U. of California, Berkeley. Asst. Prof., City and Regional Planning
Lasansky, D. Medina, Ph.D., Brown U. Assoc. Prof., Architecture
Lewis, David B., Ph.D., Cornell U. Prof., City and Regional Planning
Locey, Jean N., M.F.A., Ohio U. Prof., Art
MacDougall, Bonnie G., Ph.D., Cornell U. Assoc. Prof., Architecture
Mikus, Eleanor, M.A., U. of Denver. Prof. Emeritus, Art
Miller, John C., M.Arch., Cornell U. Prof. Emeritus, Architecture
Olpavala, Porus, Ph.D., Cornell U. Prof., City and Regional Planning
Ort, Christian F., Ph.D., Columbia U. Prof., Architecture
Ovaska, Arthur, M.Arch., Cornell U. Assoc. Prof., Art
Pearman, Charles W., B.Arch., U. of Michigan. Prof Emeritus, Architecture
Pendall, Rolf, Ph.D., U. of California, Berkeley. Assoc. Prof., City and Regional Planning
Perlus, Barry A., M.F.A., Ohio U. Assoc. Prof., Art
Phillips, Patricia G., ABT, U. of Wisconsin, Madison. Prof., Art
Poleskie, Stephen F., B.S., Wilkes Coll. Prof. Emeritus, Art
Pratt, Kevin B., M.A.S., Archit. Assoc., School of Arch., London (UK). Asst. Prof., Architecture

DEPARTMENT OF ATHLETICS AND PHYSICAL EDUCATION

ADMINISTRATION
Andrea Jane Dutcher, director of physical education.

COURSES
The courses and fees described in this catalog are subject to change or cancellation at any time by official action of Cornell University. For current fee information on physical education courses, call 255-4286; for outdoor education courses, call 255-6185 or visit www.coe.cornell.edu.

Enrollment in any course is limited by the space available. Other restrictions are included in the course description. Most courses are coeducational. The specific time and place of class meetings, as well as information about fees, are available at the physical education course registration or may be found on “Bear Access,” a package of software for accessing a variety of network services at Cornell. Course fees are billed through the Office of the Bursar.

Additional course offerings may be listed at registration, as the curriculum is frequently reviewed and changed. Drop deadlines for outdoor education courses are earlier than university deadlines, and often earlier than physical education deadlines. Cornell Outdoor Education (COE) courses may be added any time by calling 255-6185, or registering at www.coe.cornell.edu.

Aquatic Courses
**PE 1100 Swimming, Beginning**
Fall, spring, and summer (six weeks). Instruction and practice in skills leading to passing the basic swimming proficiency test.

**PE 1101 Swimming, Advanced Beginning**
Spring.
Ideal for all who have taken one semester of Beginning Swimming, regardless of whether the test was successfully completed. Areas of special emphasis are the crawl stroke and rotary breathing, back crawl, elementary backstroke, diving, treading water, and underwater swimming. The primary objective is to strengthen the student's confidence and competence.

**PE 1102 Swimming, Intermediate**
Fall and spring.
Practice of basic skills and five basic strokes: front crawl, back crawl, elementary backstroke, breaststroke, sidestroke.

**PE 1103 Swimming, Advanced**
Fall and spring.
Practice of nine strokes: front crawl, back crawl, elementary backstroke, breaststroke, inverted breaststroke, sidestroke, overarm sidestroke, treading, and butterfly.

**PE 1104 Swimming Conditioning**
Fall and spring. Prerequisite: reasonable swimming ability.

Introduction to, and practice of, different training methods. Final objective: to swim 2,500 yards during class period. Primarily a conditioning and not an instructional course.

**PE 1105 Springboard Diving**
Fall and spring.
Introduction on the safe and effective use of a diving board and practice of the five basic dives: forward dive, back dive, inward dive, reverse dive, and 1/2 twist dive.

**PE 1110 Lifeguard Training**
Fall and spring. Fee charged. Prerequisite: swimming test consisting of 500 yards, demonstrating three strokes, treading water without the use of hands, and retrieving a brick from 7 feet of water. Three classes per week.
American Red Cross certification course. Practice and execution of lifeguarding first aid and CPR skills and techniques. Certification is awarded in lifeguarding, first aid, O2, AED, and CPR upon satisfactory completion of the course.

**PE 1111 Lifeguard Training Instructor**
Spring. Fee charged. Prerequisites: current Red Cross ICT or instructor card, written and skill tests in lifeguarding, first aid, and CPR techniques. Students must not miss first class. 2 classes a week.
American Red Cross lifeguarding instructor and CPR-FPR certifications are awarded upon successful completion.

**PE 1120 Water Safety Instructor**
Spring. Fee charged. Prerequisite: passing of written and skill water tests given on first day. American Red Cross water safety instructor certification is awarded upon satisfactory completion of the course. This is not a course for a casual participant. Approximately 45 hours of work is required.

**PE 1130 Scuba, Open-Water**
Fall, spring, and summer (six weeks). Fee charged.
Program includes classroom work, skill training in a pool, and open-water training in Cayuga Lake. PADI open-water certification awarded upon successful completion.

**PE 1131 Scuba, Advanced Open-Water**
Fall and spring. For those who have completed open-water course. Fee charged.
Advanced-level open-water training in Cayuga Lake.

**PE 1132 Rescue Diver**
Fall and spring. For those who have completed Advanced Open-Water Scuba certification. Fee charged.
Advanced course for scuba divers interested in learning rescue and safety techniques.

**PE 1133 Dive Master**
Fall and spring. Open only to those who have completed Rescue Diver course. Fee charged.
Advanced-level scuba course. Note: This is a long, time-consuming course, which requires the student to be in good physical and swimming shape.

**PE 1134 Scuba Diving Trips**
Spring, offered during spring intersession period. Fee charged. Scuba trips to various destinations such as the Bahamas. Locations change from year to year. See the information sheet at the registration table.

**PE 1135 Specialty Scuba Diving**
Fall and spring. Fee charged. Courses offered in the following specialty diving areas: navigation, search and recovery, night diving, deep diving, underwater photography, wreck, multi-level, boat, tropical fish identification and buoyancy control, and underwater naturalist.

Bowling Courses
**PE 1300 Bowling**
Fall and spring. Fee includes shoe rental.
For the beginning and intermediate bowler.

**PE 1301 Intermediate Bowling**
Fall and spring. Fee charged.
For players with previous bowling experience (e.g., bowling classes, YABA, tournament).
Skills emphasized are timing, balance, and release.

Dance Courses
Develop flexibility, coordination, and the ability to perceive and reproduce phrases of dance movement with rhythmic accuracy, clarity of body design, and fullness of feeling. Auditions are required for admission to all advanced courses, since they require the mental and physical ability to perform more complex phrases in various styles.

**PE 1150 Ballroom Dancing**
Fall, spring, and summer. Fee charged.
Includes instruction in the waltz, swing, cha cha, calypso, tango, and others.

**PE 1151 Intensive Ballroom Dance**
Fall and spring. Fee charged.
Ballroom Intensive class examines three social dance styles in depth each semester. The course is geared to students who enjoy a challenge, and who are seeking more depth and breadth than offered in a survey course. No dance experience is necessary to enroll; the basics are covered each semester.

**PE 1155 Belly Dancing I**
Fall and spring. Fee charged.
Belly dancing is an exciting Middle Eastern folk art that can help in the development of flexibility, body awareness, and overall body tone. The class begins with warm-ups and continues with basic movements and rhythms, then puts them together in a dance to music of the Middle East.
PE 1156 Belly Dancing II
Spring. Fee charged.
Advanced belly dance movements and combina-
tions that include putting basic and advanced
movements to the Beledi, Mamouedi, and Kasalma
dance rhythms of the Middle East. A drum solo, taqsim (fluid,
graceful movements of the arms and hands),
floor work (level changes with the dance),
and techniques in placing finger cymbals are
also a part of this class.

PE 1160 Latin Dance
Fall and spring. Fee charged.
Partner sign-up required. This is an
introductory course that teaches salsa, mambo,
Latin, and merengue. Emphasis on listening,
feeling, and expressing Latin rhythms with
precise detail and technique.

PE 1161 Latin-Israeli Dance
Fall and spring.
Covers some of the hundreds of dances that
make up Latin-Israeli dancing and the
thousands of dances that make up Israeli
dancing, with a clear emphasis on the dances
of the past 10 years.

PE 1162 Salsa Partner Work
Fall and spring. Prerequisite: Latin Dance
or permission of instructor.
The first half of the course will concentrate on
more complex open step patterns and
partnered and non-partnered combinations.
The second will transition into a “Dancing Wheel.”

PE 1165 International Ethnic Dance
Fall and spring.
This class covers the popular traditional
dances from around the world, including line,
circle, partner and individual forms. Now is
your chance to move to the exotic beats from the
Balkans and Near East, waltz to
Scandinavian tunes, sway with sultry Latin
American sounds, swing to historic and
contemporary American folk rhythms, and
much more. No experience or partner
necessary.

PE 1166 Spanish Folk Dance
Fall and spring.
The Sevillana is danced in pairs—man
and woman or two women. It is a popular dance
mainly at fairs and festivals and it is the dance
usually taught first when learning the
Flamenco.

PE 1167 Introduction to Tango
Fall and spring.
Introduction to the fundamentals of Tango
dancing and its origins. Focus is on movement
on the dance floor and how to be connected
to your partner. Other aspects include learning to
differentiate between the genres of Tango
music (Tango, Milonga, Candombe, and Valx).

PE 1170 Introduction to Swing Dance
Fall and spring. Fee charged.
No partners are needed. Beginners can expect
to develop significant capacity for enjoyment of
two forms of swing dance: jitterbug and street boogie. Partners are rotated throughout
the course. Effort are made at registration to
equalize male and female ratios.

PE 1171 Swing Dance II
Fall and spring. Fee charged.
For those who have taken the introductory
course.

PE 1172 Swing Dance III
Spring. Fee charged.
A solid Lindy Hop 1 & 2 sequence in the
tradition of Frankie Manning and Steven
Mitchell (includes Intermediate Charleston,
Jazz, and Fast Lindy). Dancing more deeply
into the music, styling for leaders and
followers, improvisation skills. Partner
recommended, but not necessary.

PE 1180 Dance Technique I (also THETR 1240)
Fall and spring.

PE 1181 Exploration in Movement and Performance (also DANCE 2410)
Fall and spring.

PE 1182 Dance Technique II (Classical) (also DANCE 2210)
Fall and spring.

PE 1183 Dance Technique II (Modern) (also DANCE 2220)
Fall and spring.

PE 1184 Dance Technique III (Classical) (also DANCE 2310)
Fall and spring.

PE 1185 Dance Technique III (Modern) (also DANCE 2320)
Fall and spring.

PE 1186 Dance Technique IV (Classical) (also DANCE 2410)
Fall and spring.

PE 1187 Dance Technique IV (Modern) (also DANCE 2420)
Fall and spring.

PE 1188 Dance Technique Workshop (also DANCE 2240)
Fall and spring.

PE 1189 Hip Hop Hollywood (also DANCE 2430)
Fall and spring.

PE 1190 Indian Dance (also DANCE 1320)
Fall and spring.

First Aid/CPR Courses

PE 1202 Certified First Responder
Fall. Fee charged.
CPR is an intensive 52-hour course that
requires studying and examinations. Course
includes training in basic patient assessment,
CPR for the Professional Rescuer, and
automatic external defibrillation, oxygen
administration, basic airway management,
bleeding control, and spinal immobilization.
Students will qualify for the New York State
CPR Certification Exam upon successful
completion of the course.

PE 1203 NYS EMT Refresher
Spring. Fee charged.
EMT-B refresher is an intensive course that
will renew your certification upon successful
completion of all NYS DOH requirements.
Students will have the opportunity to
challenge the NYS Practical Skills Examination
and the course written examination at the
beginning of the class. All students must pass
a CPR for the Professional Rescuer course
within the class. To complete the class and
renew certification, students must also pass
the NYS Practical Skills Examination and the
NYS written examination.

PE 1210 NYS Emergency Medical Technician—Basic
Two-semester course. Fee charged.
Intensive 130-hour course taught throughout
both the fall and spring semesters. Includes
training in CPR for the Professional Rescuer,
oxxygen administration, airway management,
fracture management, bleeding control,
expanded patient assessment, spinal
immobilization, medical anti-shock trousers,
and defibrillation. Students qualify for the NYS
EMT Certification Exam upon successful
completion of this course. Rigid attendance
and participation requirements are strictly
enforced.

PE 1211 NYS Emergency Medical Technician—Critical Care
Two-semester course. Prerequisite: current
certification as NYS EMT. Fee charged.
Intensive 160-hour course taught throughout
both fall and spring semesters. Includes
training in CPR for the Professional Rescuer,
oxxygen administration, airway management,
fracture management, bleeding control,
expanded patient assessment, spinal
immobilization, medical anti-shock trousers,
manual defibrillation, EKG interpretation,
pharmacology, and IV administration. Clinical
rotations, in the field and hospital, are also
required. Students qualify for the New York
State AEMT-CRITICAL CARE certification exam
upon successful completion of the course.
Attendance and participation requirements are
strictly enforced.

Fishing Courses

PE 1311 Fly Fishing and Basic Fly-Tying Techniques
Fall and spring. Fee charged.
Learn the art of tying several of your own
artificial flies while you learn the art of fly
casting. Students must have a valid NYS
fishing license and their own wader boots. All
other materials provided.

Fitness Courses

PE 1230 Cardio Combo
Fall, spring, and summer (six weeks). Fee
charged.
Dance program designed to keep the
cardiovascular system in top shape by making
the body demand increased amounts of
oxygen.

PE 1231 Aerobic Instructor
Fall. Fee charged.
Helps prepare the student to teach aerobics
and prepares them for the FAAA Primary
Aerobic Instructor Certification. Topics
include the theory behind all basic
components of a good class, applications, and
practical uses in the class settings.

PE 1232 Aerobic Instructor Apprentice
Spring. Fee charged. Prerequisite: Aerobic
Instructor course.
This class is a necessary component to finishing the Aerobic Instructor certification.

**PE 1233 Bootcamp**
Fall and spring. Fee charged.
Designed as a modern military-style workout program with an emphasis on both aerobic and anaerobic fitness.

**PE 1235 8 O’Clock Rock**
Fall and spring. Fee charged.
Combines the best of the principles of weight training and cardio training.

**PE 1240 Pilates Mat Work**
Fall and spring. Fee charged.
Conditioning program designed to increase body awareness, improve alignment and breathing, and build endurance, flexibility, coordination, and strength through a highly focused flow of movement.

**PE 1245 Spinning**
Fall and spring. Fee charged.
Indoor stationary cycling class that combines basic cycling movements with motivational coaching, breathing awareness, and heart rate training.

**PE 1260 Cardio Kickboxing**
Fall and spring. Fee charged.
Cardio kickboxing is a series of movements that consists of kicks, punches, and blocks done to music. It is similar to a typical aerobics class except the moves consist of martial arts techniques.

**PE 1261 Fitness and Conditioning**
Fall and spring.
Physical fitness program that embodies features of stretching exercises, weight lifting, and jogging. Students work on their individual training needs.

**PE 1262 Fitness for Women**
Fall and spring.
Includes both lecture and physical activity. Students are presented with a variety of topics and information that involves physical fitness and health. Each student will learn to design a fitness program that is geared toward her own interests and abilities. Topics include: nutrition, time management, relaxation techniques, and stress management. Activities will include aerobic dance, walking, jogging, weight training, flexibility exercises, relaxation and stress management routines, and yoga techniques.

**PE 1265 Wellness and Fitness**
Fall and spring. Fee charged.
“Here’s to a Healthier You”—a wellness experience for the busy student. This course assesses the student’s physical fitness status, blood-cholesterol levels, and overall lifestyle health habits. Each student receives an individual exercise prescription and has access to the Wellness Program fitness room in Helen Newman Hall. Lectures on nutrition and stress management are also presented. This course has been made possible through the generosity of the Bateman family in memory of Ms. Dorothy Bateman, Cornell’s first director of women’s sports and physical education (1920 to 1962).

**PE 1270 Jogging**
Fall and spring.
Covers running and stretching techniques. It comprises a conditioning program with the objective to develop the capacity to run 3 miles after 12 weeks of training.

**PE 1271 Jogging Tours—Distance Running**
Fall.
Designed for the intermediate runner who can run an average of 3 miles in 30 minutes. Most tours are 3–4 miles long and go through campus and nearby countryside.

**PE 1272 Walking Tours**
Fall and spring.
A series of walking tours around the Cornell campus and beyond.

**PE 1273 Walking Meditation**
Fall and spring.
This course combines walking and meditation, two life enhancing activities that can help students create balance in their hectic lives. Walking is the optimum exercise for optimum health and meditation one the chance to calm an active and busy mind.

**PE 1275 Triathlon**
Fall and spring.
Designed to acquaint students with the components of, and conditioning for, triathlon (running, swimming, and bicycling).

**Equitation Courses**

**PE 1305-1309 Basic, Intermediate, Advanced**
Fall, spring, and summer (six weeks). Fee charged.
All riding classes are held at the Cornell Equestrian Center located on Pine Tree Road near East Hill Plaza. Detailed information will be offered by the equitation staff at the registration sign-up table. Basic—never ridden; Intermediate I—completed with knowledge of walk/trot/canter; Intermediate II—walk/trot/canter with control over two-foot-high jumping course; Advanced—strong jumping/dressage skills with experience hunting/showing/eventing. Students must fill out a release form to participate in any riding class.

**Golf Courses**

**PE 1320 Golf, Instructional**
Fall and spring. Fee charged. Equipment furnished.
PGA program of instruction geared to all levels of experience and ability. The objective is to give beginners enough skill to play, and to give more advanced players direction in their thinking, practice, and play, through a thorough understanding of fundamentals.

**PE 1321 Golf, Recreational**
Fall and spring. Prerequisite: experienced golfers. Fee covers a semester’s membership. Students must provide clubs. Students must play a minimum of 10 rounds of nine holes to receive credit.

**Gymnastics Courses**

**PE 1290 Introduction to Gymnastics**
Fall and spring. Open to both male and female participants.
Deals with a majority of the Olympic events. Focuses on beginner-level skills.

**Ice Skating Courses**

**PE 1540 Introduction to Skating**
Fall and spring. For beginning to intermediate skaters. Fee charged; students provide skates or rent them at Lynah Rink. Covers forward and backward skating, turns, and stops.

**PE 1545-1547 Figure Skating, Beginning, Intermediate, and Advanced Levels**
Fall and spring. Fee charged; students provide skates or rent them at Lynah Rink.
Instruction and practice in basic figure-skating techniques: forward, backward, crossovers, turns, and spirals.

**Martial Arts—Self-Defense Courses**

**PE 1345-1346 Boxing, Introduction to Intermediate**
Fall and spring. Fee charged.
Covers the basic skills of footwork, defensive, and offensive techniques. Skipping rope, shadow boxing, and heavy bag work are taught as methods for individual aerobic conditioning.

**PE 1350 Chi Gong**
Fall and spring.
Chi Gong, or “the art of breathing,” is an ancient Taoist exercise system from China. Like Tai Chi, Chi Gong is an internal martial art that links movement, breathing, and visualization to enhance physical strength and mental clarity. In ancient times, this gentle system was used by warriors preparing for battle. They believed it would make their bodies impervious to weapons of the day. The movements used in Chi Gong are generally less complex than those of Tai Chi and can be learned more quickly. Meditation is an important element of the practice.

**PE 1355 Judo, Introduction to**
Fall and spring. Fee charged.
Conditions and increases suppleness. Continues to develop skills in the two parts of judo: standing techniques (throws and trips) and mat techniques.

**PE 1360 Jeet Kune Do/MMA**
Fall and spring. Fee charged.
Blended system of martial arts. Developed by the late Bruce Lee and taught to his personal apprentice at the time, Dan Inosanto, Jun Fan Gung Fu is the foundation from which Jeet Kune Do eventually evolved. The system emphasizes footwork and agility, economy of motion, counter ability, and strong practical self-defense. This realistic, modern training approach cultivates strong physical, mental, and emotional development in the student.

**PE 1365 Karate, Introduction to**
Fall and spring. Fee charged.
Beginning course taught by professional black-belt instructors. Involves mastery of basic blocks, kicks, and punches.

**PE 1366 Karate, Advanced**
Fall and spring. Fee charged.
Open to those who have taken basic karate or the equivalent.

**PE 1375 Tae Kwon Do, Introduction to**
Fall and spring. Fee charged.
Korean martial art distinguished by emphasis on high and powerful kicks. Basic kicking, punching, and blocking emphasized.

**PE 1376 Tae Kwon Do, Intermediate**
Fall and spring. Fee charged.
Korean martial art distinguished by its emphasis on powerful and high kicks.
Climbing Courses

PE 1640 Basic Rock Climbing
Fall, spring, and summer. Fee charged. Six or 10 indoor climbing sessions at the Lindseth Climbing Wall.

PE 1642 Women's Basic Rock Climbing
Fall, spring. Fee charged. Six indoor climbing sessions at the Lindseth Climbing Wall taught by and for women.

PE 1643 High Adventure
Fall, spring. Fee charged. Six sessions combining rappelling, rope traverses, tree climbing, and a 400-foot zipline.

PE 1644 Basic Outdoor Rock Climbing
Fall. Fee charged. Includes fall break trip. Two indoor classes and a four-day climbing trip to the Shawangunks introduce basic safety, techniques, equipment, and methods for outdoor rock climbing.

PE 1645 Southwest Climbing Expedition
Spring. Fee charged. Includes spring break trip. The Southwest has it all: warm and sunny weather, long traditional climbing routes, awesome sport climbing, abundant bouldering, and spectacular scenery. We'll spend eight days camping and climbing in this land of canyons and giants. With one instructor for every two students we have the flexibility to do anything: from anchor building to long multi-pitch routes. The course fee includes instruction, camping, food, and transportation to and from the airport.

PE 1646 Wellness Rock Climbing
Fall, spring. Fee charged. Noncredit course. Nine one-hour climbing sessions at the Lindseth Climbing Wall for Wellness Program members only.

PE 1650 Performance Rock Climbing
Fall, spring. Fee charged. Six indoor sessions at the Lindseth Climbing Wall that introduce and practice more advanced climbing techniques.

Introduction to Outdoor Rock Climbing
Fall, spring. Fee charged. Two classes and a weekend trip to the Shawangunks will introduce you to outdoor climbing and top rope anchor building.

Outdoor Rock Climbing—Fall Break
Fall. Fee charged. Learn the skills and systems to safely rock climb outdoors. In addition to rock climbing in a beautiful outdoor venue, this course covers site selection, gear placement, anchor building, and climbing etiquette.

Shawangunks Rock Climbing
Fall, spring. Fee charged. Includes fall-break or senior-week trip. Two indoor classes and a weekend trip to the Shawangunks introduce advanced climbing techniques and systems for setting up outdoor top rope rock climbing.

Ice Climbing
Spring. Fee charged. Basic top-roping ice climbing instruction. Both local ice climbing and Adirondack trips are available.

Tree Climbing
Fall, spring. Fee charged. All equipment is included in course fee. No experience necessary.

Whether you are a rainforest canopy researcher, an arborist, or just a kid at heart, everyone loves to climb trees. Recall the excitement and your sense of adventure when you first crawled into the branches to look inside a bird's nest. Then you swung from limb to limb without a thought of ropes and harnesses. But what about that big tree down the street you always wanted to climb, but couldn't reach the first branch? Cornell Outdoor Education’s Tree Climbing course will teach you how to get up into the canopy of any tree, to move around, even to climb from one tree to another without touching the ground.

Backpacking Courses

PE 1610 Backpacking in the Finger Lakes—Fall Break
Fall. Fee charged. Includes fall break trip. Travel to the heart of the Finger Lakes to learn and practice the skills of outdoor leadership and education. This is an introductory leadership course focusing on wilderness skills, minimum impact travel, communication, judgement, and decision-making.

PE 1611 Backpacking in the Finger Lakes—Fall
Fall, spring. Fee with 100 percent attendance, otherwise fee charged. Escape from campus on day outings and weekend trips to explore the gorges, forests, waterfalls, vistas, and trails in the local area. This fantastic introduction to backpacking skills covers basic outdoor living skills, including hiking, navigation, camping, equipment selection and use, back-country cooking, and safety. No experience necessary. Fee charged for personal rental equipment.

PE 1612 Southwest Backpacking
Spring. Fee charged. Includes spring break trip. Travel to the heart of the Southwest to learn and practice the skills of outdoor leadership and education. This is an introductory leadership course focusing on wilderness skills, minimum impact travel, communication, judgement, and decision-making.

PE 1613 Wilderness Survival Skills
Fall. Fee charged. Hands-on course covers principles of survival, shelter building, navigation, fire starting, and water procurement as well as nature observation skills and local natural history. Evening and weekend outings.

PE 1616 Introduction to Winter Camping
Spring. Fee charged. Prerequisite: some backpacking experience: permission of instructor.
Learn the fundamentals of winter travel and camping. Course covers trip planning, equipment selection, snowshoe travel, snow shelter construction, and winter safety.

**PE 1617 Surfing in Baja Mexico**
Spring. Fee charged. Whether students are catching a wave or spotting dolphins, this class is sure to excite! Study in the tropics will spend their nights overlooking the ocean from their cliffside campsite and their days catching a wave. Participants will learn the basics of how to surf, ocean safety, and basic outdoor living skills.

**PE 1644 Mountain Biking**
Fall, spring. Fee charged. Participants provide own mountain bike. Explore local bike trails and develop off-road riding skills. Course covers essential cycling skills for riding single track, managing steep terrain, and negotiating obstacles, as well as bike repair, riding etiquette, navigation, and outdoor safety.

**Canoeing Courses**

**PE 1670 Adirondack Canoe Camping**
Fall. Fee charged. Includes fall-break trip. Learn basic canoeing and wilderness camping skills. Experience the blazing Adirondack autumn foliage as this fall-break trip explores lakes and rivers of upstate New York.

**PE 1671 Recreational Canoeing**
Fall. Fee charged. Spend afternoons on Beebe Lake learning the art of canoeing. Class culminates in a trip exploring Dryden Lake applying your newfound skills. Course covers equipment, basic camping techniques, deep water rescues, and considerations for day trips.

**PE 1672 River Canoeing**
Spring. No prerequisites. Fee charged. Explore local rivers by canoe. Learn skills to safely navigate quick-moving currents and class I to easy class II water. Course covers strokes, braces, eddy turns, peels outs, ferrying, river dynamics, self-rescue, and river safety. Culminates with a weekend river trip.

**Hiking Courses**

**PE 1602 Outdoor Yoga**
Fall, spring. Fee charged. Interested in yoga? Enjoy the outdoors? How about combining both? This course, an introduction to yoga, will take place at various outdoor locations so that participants can benefit from yoga instruction and the enjoyment of being outside.

**PE 1603 Snowshoeing and Winter Travel**
Spring. Fee charged. Outings in the local state forests build skills and confidence in the winter. Learn winter safety; snowshoe history; equipment selection, care, and use; navigation; and natural history—all while enjoying a great workout.

**PE 1604 Outdoor Adventure**
Fall, spring. Fee charged. From the gorges of Ithaca, to the lakes of Cornell, this course will give you a taste of it all. This multi-activity course is aimed at the beginner who would like a taste of many different outdoor pursuits. The course will provide an introduction to day hiking, indoor rock climbing, canoeing, and camping.

**PE 1605 Day Hiking**
Fall, spring. Fee charged. Hike and explore Ithaca’s spectacular gorges, state forests, and extensive trail system. Course covers planning and packing for a hike, stressing for the outdoors, map reading, outdoor safety, navigation, and natural history of the area.

**PE 1606 Outdoor Birding Basics**
Spring. Fee charged (fee waived upon successful completion of course and if needed for PE credit requirement). Learn to identify and understand the behaviors of the birds in our area. This course is offered as a collaboration of COE and the Lab of Ornithology. Sibley’s guide to Eastern Birds is included in the course fee, and optics will be available to use during each outing.

**PE 1607 Backcountry Photography**
Fall, spring. Fee charged. Includes fall break trip. Must have own camera. Take your photography skills way beyond snapshots in “auto” mode! This fun introduction to camping and outdoor photography includes two pre-trip classes on the basics of photography. Spend Fall Break in the Adirondack wilderness, taking in the beautiful autumn colors. Plan to bring home images as awesome as the trip itself.

**PE 1608 Trail Running**
Fall, spring. Fee charged. Covers stretching, basic trail-running techniques, navigation, injury prevention, training tips, and a scenic tour of local trails. Develop a training routine, learn to stay found, set running goals. Prerequisite: ability to jog two consecutive miles easily.

**Kayaking Courses**

**PE 1674 Sea Kayak Touring**
Fall, spring. Fee charged. Learn basic sea kayaking skills and enjoy a weekend trip to the Adirondacks. Course covers equipment, safety, paddling techniques, rescues, trip planning, navigation, considerations for overnight trips, and camping and travel skills.

**PE 1680 Pool Paddling**
Fall, spring. Fee charged. Learn the ropes! Join with others to gain skills for PE credit requirement. Participate in basic paddling techniques, and learn to navigate in the warm comfort and calm waters of the pool. Course introduces whitewater kayaking, canoeing, and sea kayaking, while covering strokes, braces, effective boat-handling skills, kayak, Eskimo rolls, and rescues. Pool games, slalom gate courses, and video taping are used to hone an understanding of skills and refine techniques.

**PE 1681 Whitewater Kayaking**
Fall, spring. Prerequisite: ability to swim with comfort in deep water without a flotation aid. Fee charged. Basic kayaking techniques and equipment use, culminating in a full weekend of whitewater paddling. Pool sessions and local outings develop skills to read water, scout, ferry, brace, power stroke, and execute eddy turns, peels outs, and Eskimo rolls.

**PE 1683 1,000 Islands Sea Kayaking**
Fall. Fee charged. Includes fall break trip. International travel documentation to Canada required. Learn fundamental sea kayak touring skills in the Thousand Islands region of the St. Lawrence River. Course covers equipment, safety, paddling techniques, rescues, trip planning, navigation, considerations for overnight trips, camping, cooking, and travel skills.

**PE 1685 Kayak Rolling Seminar**
Fall, spring. Noncredit course. Fee charged. Learn kayak rolling techniques in two evening sessions. Classes take place at the Helen Newman pool.

**PE 1686 Introduction to Sea Kayaking Seminar**
Fall, spring. Fee charged. Noncredit course. Class covers equipment, basic paddling techniques, deep water rescues, and considerations for day trips.

**Outdoor Leadership**

**PE 1619 Introduction to Outdoor Leadership**
Fall. Fee charged. Take advantage of fall break in the Finger Lakes region to learn and practice the skills of outdoor leadership and education. This is an introductory leadership course, focusing on wilderness skills, minimum impact travel, judgement, and teaching. ideal for those who aspire to be Outdoor Odyssey Guides, COE instructors, as well as anyone interested in being better prepared to lead friends in the outdoors.

**PE 1618 Outdoor Leadership**
Spring. Prerequisite: backpacking and camping experience; approval of program coordinator. Fee charged. Includes spring break trip. Learn and practice the skills of outdoor leadership and education. Focus is on refining wilderness skills, outdoor judgment, group facilitation, decision making, and teaching skills. Course culminates in spring-break trip where participants plan and lead portions of the trip.

**PE 1620 Conversations on Leadership**
Fall. Fee charged. This seminar is designed to assist students in learning about and experimenting with different styles and theories of leadership. The course will utilize informal lectures, guest speakers, and the elements of the Hoffman challenge Course.

**PE 1660 Ropes Course Facilitation and Leadership**
Fall, spring. Fee charged. Learn the ropes! Join with others to gain skills in leadership and facilitation while challenging yourself on COE’s ropes course. Although this course is based at the amazing Hoffman Challenge Course, the skills you learn will help you move and lead any group toward a shared goal.

**Emergency Care Courses**

**PE 1625 Wilderness First Aid**
Fall, spring. Fee charged. Full weekend of wilderness first aid. Includes CPR certification.
**PE 1626 Wilderness First Responder**  
Fall, spring. Offered over winter break and late May/early June. Fee charged.  
Eight days of instruction and practical application of backcountry first aid. Participate in nationally recognized CPR and Wilderness First Responder certifications. Taught by Wilderness Medical Associates.

**PE 1627 WFR Recertification**  
Spring. Fee charged.  
This three-day (24 hour) course is a recertification course open to graduates of ALL wilderness medical training courses of 64 hours or longer with a current certification. Upon successful completion of this course you will receive Wilderness Medical Associates WFR, Anaphylaxis and BLS-level CPR certifications.

**PE 1628 CPR for the Professional Rescue**  
Fall. Fee not for credit.  
This American Red Cross class teaches students to respond to breathing and cardiac emergencies in adults, children, and infants; use an AED on an adult or child victim of cardiac arrest; and use personal protective equipment to stop blood-borne pathogens and other diseases from spreading. It is the required level of CPR to keep WFR certification current. Includes ARC certification.

**PE 1629 CPR Recertification**  
Spring. Not for credit.  
The CPR Challenge Class is set up to re-certify at the Professional Rescue level. Prerequisite is recent CPR training. There is no formal review at the beginning of the class; however, the instructor will answer questions for at least the first half hour before beginning testing. The assumption is that students come prepared to take the challenge, so it is crucial to have taken a recent CPR class, to check out the textbook from COE, and to review it carefully before class. This class fulfills requirements to keep WFR certification current. Includes American Red Cross certification.

**Skating Courses**  
**PE 1690 Cross-Country Skiing**  
Spring. Fee charged.  
Four sessions learning basic cross-country skiing skills and exploring local forests in winter.

**PE 1693 Basic Telemark Skiing**  
Spring. Fee charged.  
Four classes at Greek Peak ski area.

**Personal Growth Courses**  
**PE 1400 Body-Mind**  
Fall and spring.  
Activities are drawn from ancient Eastern practices as well as modern Western psychology, and are designed to give the student a first-hand experience of the interaction between their own bodies and minds.

**PE 1401 Well-Being in the Modern World**  
Fall and spring. Fee charged.  
Teaches students to use the wisdom of the body, movement, and voice. Each class provides an opportunity to increase mindfulness of the present moment. By cultivating openness and respect, students provide the necessary foundation for working with others. Students practice processing and exploring spontaneous experiences of their own and others with precision, gentleness, and curiosity.

**PE 1402 Moving into the Moment**  
Fall and spring. Meets twice a week.  
We will focus on getting in touch with the power of our own life force. Each class will begin with movement and stretching and end with a meditation exercise designed to reinforce the power of one's own presence.

**PE 1403 Art of Living—Youth Empowerment Seminar**  
Fall. Fee charged.  
An innovative and dynamic life-skills program that empowers you with tools to eliminate stress, increase energy, handle negative emotions, increase mental focus, heighten awareness, and develop strong social and leadership skills.

**PE 1405 Living Routines**  
Fall and spring.  
Provides the opportunity to explore a variety of ancient and modern methods designed to bring one to the state of meditation.

**PE 1410 Introduction to Massage**  
Fall, spring and summer. Fee charged.  
Provides an experiential introduction to several types of massage. Included are Swedish, shiatsu, polarity, and sports massage. Class members participate in group exercises and practice their level of massage during class time. All exercises and techniques can be done while wearing street clothing.

**PE 1411 Shiatsu Massage**  
Fall and spring. Fee charged.  
Gain an experimental understanding of your body and learn certain shiatsu massage techniques.

**PE 1412 Swedish Massage**  
Fall, spring, and summer. Fee charged.  
Learn to give a relaxing, stress-reducing Swedish massage. Students master the basic strokes of Swedish massage and learn about their application to the different parts of the body. Students use oils and lotions as a part of their Swedish massage.

**PE 1413 Swedish Massage II**  
Fall and spring. Fee charged.  
Students build on skills learned in Swedish massage as they participate in instruction practice sessions every week. Additional massage techniques and applications are added to basic skills. Some techniques from other types of massage are also introduced.

**PE 1414 Thai Massage**  
Fall and spring. Fee charged.  
Thai massage is a holistic, intuitive style of healing from the East. It encourages the flow of energy through the receiver's body that promotes good health. The person giving Thai massage uses his or her hands and feet supported by body weight to apply pressure along the energy channels that run through the receiver's body.

**PE 1415 Weekend Massage Workshop**  
Fall and spring. Fee charged.  
This introductory course in massage is taught in an intensive workshops format. It includes sessions on Friday evening and Saturday and Sunday during the day. Students are introduced to massage skills and techniques and then practice on each other in a structured and supervised format. Basics of touch awareness, palpation skills, and techniques from Swedish and oriental (shiatsu) massage are taught. Students learn to massage the back, shoulders, neck, legs, feet, arms, and hands to reduce stress. Professional massage tables are used.

**PE 1420 Introduction to Meditation**  
Fall and spring. Fee charged.  
Provides the opportunity to explore a variety of ancient and modern methods designed to bring one to the state of meditation. The methods serve to evoke the deep relaxation from which heightened awareness and creativity arise.

**PE 1421 Relaxation and Stress Management**  
Fall and spring.  
Introduction to basic relaxation techniques for the reduction of everyday stress. Teaches techniques that can be used in normal everyday living situations.

**PE 1422 Meditation and Relaxation**  
Fall and spring. Fee charged.  
Designed to assist students in learning to meditate, or to deepen an existing practice. As students learn to practice meditation and relaxation exercises, they find that as little as 15 minutes a day can benefit physical, mental, emotional, and spiritual health.

**PE 1425 The Winning Mindset**  
Fall and spring. Fee charged.  
Contains a wealth of knowledge and experience to guide athletes of all levels and abilities to achieve optimum levels of performance. Students learn the principles to help them achieve success, whether it be tapping inner strength or overcoming the obstacles that limit performance.

**PE 1430 Yoga, Introduction to**  
Fall, spring, and summer (six weeks). Fee charged.  
Provides the opportunity to explore a variety of ancient and modern methods designed to bring one to the state of meditation.

**PE 1431 Intermediate Yoga**  
Fall and spring. Fee charged.  
The course covers more of the fundamentals of Hatha Yoga, including basic postures, breathing techniques, and deep relaxation. Introduces chanting.

**PE 1432 Extreme Yoga**  
Fall and spring. Fee charged.  
The course covers more of the fundamentals of Hatha Yoga, including basic postures, breathing techniques, and deep relaxation and chanting techniques.

**Racquet Sports Courses**  
**PE 1440 Badminton, Introduction to**  
Fall and spring. Helen Newman Hall. Fundamental shots, scoring, and general play.

**PE 1441 Badminton, Intermediate**  
Fall and spring. Helen Newman Hall. Review of fundamental shots, scoring, and general play.

**PE 1445 Tennis, Introduction to**  
Fall, spring, and summer. Fee charged.  
Basic skills taught include forehand, backhand, serve, and volley. Scoring methods taught.

**PE 1446 Tennis, Intermediate**  
Fall and spring. Fee charged.  
Review basic strokes plus topspin and underspin. Doubles strategy emphasized.
PE 1447 Tennis, Advanced
Fall, spring. Fee charged.
Advanced strokes and doubles play emphasized. Recommended for tournament players or those with previous team experience.

PE 1453 Tennis, Indoor-Recreational
Fall and spring. Fee charged. Prerequisite: high school or college tournament experience or a rating of 3.5 or higher from USTA. NO BLACK-SOLED SHOES ALLOWED ON COURTS!
Play is conducted at the new Reis Tennis Center. Matches are played in both doubles and singles. Equipment furnished.

PE 1460 Racquetball, Introduction to
Fall, spring, and summer. Fee charged; equipment furnished. Protective eyewear required.
Instruction for beginners.

PE 1465–1466 Squash, Introduction to, Intermediate
Fall, spring, and summer. Fee charged. Equipment furnished. Protective eyewear required.
Classes for appropriate level of play.

Sailing Courses
PE 1335 Water Skiing
Fall and summer. Fee charged.
Introductory course for beginning water skiers. Classes are conducted from East Shore Marina.

PE 1480 Small-Boat Sailing, Introduction to
Fall, spring, and summer (six weeks). Fee charged.
Learn basic skills necessary to sail small sailboats and basic keelboats safely.

PE 1481 Small-Boat Sailing, Competitive
Fall and spring. Fee includes one-year membership in university sailing team program.
Vanguard 420 sailboat used for the course. USYRU Rules Book used as a text for the course.

PE 1482 Introduction to Large-Boat Sailing
Fall. Fee charged.
Students learn how to sail on 24- and 26-foot sailboats. Skills learned include sailing terminology, safety and etiquette, boat handling, sail trimming, use of spinnakers, and heavy wind selection and ship systems.

PE 1483 Recreational Sailing
Fall. Fee charged.
A course for those who already know how to sail. Students may go to the sailing facility during the listed times and days and take boats out to sail when they are not being used for instructional sailing. Students must pass knowledge test before they are allowed to take boats out.

PE 1484 Large-Boat Competitive Sailing
Fall. Fee charged. Prerequisite: sailing experience.
This course teaches the basic skills necessary to sail and crew large boats safely and competitively. Twenty-three- to twenty-six-foot sailboats will be used to teach this course. The USYRU rules book will be the text for the course.

Skiing and Snow Boarding
PE 1330, 1331 Downhill Skiing and Snowboarding
Spring. Fee charged.
Transportation, instruction, ski-lift fees, and skiing time are offered in a package deal. Greek Peak and Song Mountain personnel are present at registration to explain the program and accept fees. Bus transportation to Greek Peak is provided six afternoons a week for six weeks.

Cross-Country Skiing—See Outdoor Program.

Target Shooting Courses
PE 1503 Trap and Skeet
Fall, spring, and summer (six weeks). Fee charged. Guns and shells furnished. Includes lectures and shooting at the Tompkins County Rod and Gun Club range.

PE 1510 Riffery
Fall and spring. Fee charged.
Instruction and practice in the techniques of target riflery from various shooting positions.

PE 1515 Handgun Safety, Introduction to
Fall, spring, and summer (six weeks). Fee charged. Instruction in use of pistol in the three modes of 50-foot competitive target shooting—slow fire, timed fire, and rapid fire. Emphasis on safety and responsibility while firing.

PE 1520 Archery, Introduction to
Fall and spring. Fee charged. Two classes a week. Instruction in the care of equipment; seven basic steps for shooting; scoring; practice shooting at 20, 30, and 40 yards.

Team Sports Courses
PE 1550 Ice Hockey, Introduction to
Fall and spring. Prerequisite: basic skating ability. Fee charged. Students provide own skates and sticks; all other equipment furnished.
Stick handling, passing, and shooting are stressed. Some scrimmaging.

PE 1551 Ice Hockey, Intermediate
Fall and spring. Fee charged. Prerequisite: beginning hockey or previous participation in organized hockey.
This course is designed for the intermediate hockey player. Advanced techniques taught include positioning, power play, penalty killing, and offensive and defensive attack. Each session emphasizes game situations and scrimmaging. Skates and hockey sticks must be supplied by the participants.

PE 1560 Basketball
Fall and spring.
Fundamental drills in passing, shooting, and dribbling. Scrimmages each class session.

PE 1565 Soccer
Fall and spring.
Introduction to the game. Includes basic individual skills (passing, trapping, shooting) and team play and strategy.

PE 1570 Volleyball, Beginning/Intermediate
Fall and spring.
Fundamentals of ball handling, serves, defensive blocks, and position play are stressed. Classes scrimmaging.

PE 1571 Volleyball, Advanced
Fall and spring.
Offensive and defensive team strategy is emphasized in class scrimmages.

PE 1575 Introduction to Competitive Rowing
Fall.
This is an introduction to Division I rowing. Students with no prior rowing experience are accepted and encouraged. The class will involve significant physical activity and students are expected to be in good physical condition. Instruction on the basics of the rowing stroke, use of indoor tanks, ergometers, weight training, stretching, calisthenics and on-the-water work will be part of this class.

Weight Training Courses
PE 1580 Principles of Weight Training
Fall and spring. Fee charged.
Introduces the proper use of Olympic weights for improving physical condition and muscular strength. Instruction with focus on the relation between high-rep light weight lifting, low-rep heavy lifting, and the development of bulk, strength, and endurance.

PE 1581 Weight Training for Women
Fall and spring. Fee charged.
This class will focus on the basics of weight lifting. Topics will include toning vs. building, theory of program design, training with dumbbells, selectorized equipment, free weight exercises for all muscle groups, flexibility, and proper nutrition for weight training.

Independent Study
PE 1999 Independent Study
Fall and spring.
Designed for those who have difficulty fitting any of the regularly scheduled courses into their academic program. Class activities are based on personal fitness programs. A term paper is required. Permission to enter this program must be granted by the program director.
The biological sciences major provides a unified curriculum for undergraduates enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are foundational and integral to many other disciplines and serve as basic requirements in several programs, departments, and colleges at Cornell.

Graduate study in the biological sciences is administered by 30 specialized fields within the Graduate School, as described in the Fields of Study catalog at www.gradschool.cornell.edu/index.php?p=m-38.

ORGANIZATION

Many different departments across several undergraduate colleges at Cornell participate in the biological sciences major.

Student services are provided by the Office of Undergraduate Biology (OUB), www.biology.cornell.edu. Located in Stimson Hall, the professional and student advisors provide academic and career advising, as well as help undergraduates find research opportunities on campus. Advisors in the OUB also follow the progress of biology majors and work closely with faculty advisors. Additional services and resources of the Biology Center include tutoring, examination files, and extensive information on summer research opportunities and graduate programs. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its main administrative office in Stimson Hall provides academic advising for students interested in the marine sciences.

USE OF ANIMALS IN THE BIOLOGICAL SCIENCES CURRICULUM: CORNELL UNIVERSITY

Students wishing to enroll in biology ("BIO") courses should know and understand the following criteria relative to the use of animals in the teaching program, as passed by the faculty of the Division of Biological Sciences in 1988 and reaffirmed in 1997:

1. "Live animals will be used for teaching in certain courses in the biological sciences. Some animals will require humane euthanization after they have been used for teaching."

2. Courses bearing the "BIO" description conform to the rules for the care of such animals as outlined in Guiding Principles in the Care and Use of Animals (as approved by the Council of the American Physiological Society), the Guide for the Care and Use of Laboratory Animals (DHEW publication 86–23, revised 1996; see p. 7, Courses of Study), the Animal Welfare Act, and the New York State Public Health Law. Within these regulations, and in keeping with the principle of Academic Freedom of the Faculty, the use of animals to aid in teaching any biological sciences discipline is at the discretion of the professor in charge.

3. Each course, as well as research projects, in which animals are used receives a formal review annually by the Cornell University Institutional Animal Care and Use Committee (IACUC).

4. Any concerns regarding the use of live animals in teaching should be addressed first to the faculty member responsible for the course. He or she is required to be in compliance with all applicable regulations and guidelines. Alternatively, students may choose to address their concerns to the director of the Cornell Center for Research Animal Resources, Dr. Michele Bailey, at 253–3523. The director may initiate discussion with the faculty member responsible for a particular course without involving the student if he or she would prefer to remain anonymous.

5. Enrollees in those courses in the biological sciences in which animal use is a component may, at the professor's discretion, be asked to sign copies of this statement (USE OF ANIMALS . . .) at the first meeting of the course.

ADVANCED PLACEMENT

Advanced placement biology credits are not accepted for substitution or placement out of any requirement for the biological sciences major for students matriculating fall 2010 and afterward. For information on credit for advanced placement in biological sciences, see www.biology.cornell.edu/advising/ap.html.

THE MAJOR

The biological sciences major is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The program's curriculum, academic advising, and undergraduate research components are coordinated for students in both colleges by the Office of Undergraduate Biology.

Starting in fall 2010, a new curriculum will be implemented. Students majoring in biological sciences will no longer take a one-year introductory biology course sequence. Instead, students will take a set of six foundation courses in the core areas of biology. In the first three semesters biology majors will be expected to take Evolution and Diversity, Investigative Biology Laboratory, and two courses from three core "choice" areas of biology: Comparative Physiology, Cell and Developmental Biology, and Ecology and the Environment. Two additional core courses, Genetics and Genomics and Biochemistry and Molecular Biology, are required of all biological sciences majors and are typically taken in the sophomore or junior years. The Investigative Biology Laboratory is a one-semester course, which will provide both basic laboratory skills and an introduction to the methodology of scientific research, including experimental design, Internet-based biology resource searches, statistics, and scientific writing. Additionally, majors will select one of 13 programs of study within the biological sciences major.

Whenever possible, students should include Evolution and Diversity, Investigative Biology Laboratory, one core choice course, general chemistry, and mathematics sequences in their freshman schedule. Genetics and Genomics should not be taken in the senior year. Students should work closely with their faculty advisor and staff advisors in the Office of Undergraduate Biology to design a suitable academic course plan. Sample course schedules can be found at www.biology.cornell.edu.

By completion of the sophomore year, all students who intend to major in biological sciences must declare the major and a program of study through the Office of Undergraduate Biology, 216 Stimson Hall.

As an alternative pathway into the biology major, students may take BIOG 1105–1106 Introductory Biology: Individualized Instruction. This course sequence takes the place of Comparative Physiology and the Investigative Biology Laboratory. Students who take this route will still need to complete one additional core course (Cell and Developmental Biology or Ecology and the Environment) as well as Evolution and Diversity, Genetics and Genomics, Biochemistry and Molecular Biology, and a program of study.

Biology majors should regularly monitor their progress in the major and should assess as realistically as possible the likelihood of achieving at a level that is consistent with their academic and personal goals. Weak academic performance in core courses, particularly after the freshman year, may indicate a need to reevaluate aptitude and general interest in the major. Students with concerns about their ability to complete the major are encouraged to consult their biology advisor and to take advantage of the professional academic advising service available in the Office of Undergraduate Biology, as well as those offered by the student's college.

The requirements for the biological sciences major are listed below. Requirements 1–10 must be taken for a letter grade. Once matriculated, students are required to complete all major core requirements at Cornell or during an approved Study Abroad semester (numbers 1, 2, 7–9 below). Students must take all courses for the program of study for a letter grade unless the course is offered.
for S-U grades only or if the student's advisor grants permission.

1. Two of three core "choice" courses: BIOG 1440 (Comparative Physiology), BIOMG/ BIOG 1550 (Cell and Developmental Biology), BIOEE/BIOG 1610 (Ecology and the Environment)
2. Investigative Laboratory: BIOG 1500
3. General chemistry: CHEM 2070–2080 or 2150. Students who, via advanced placement, take only CHEM 2080 or only 2150 should be aware that some professional and graduate schools require 8 credits of general chemistry. These students may wish to take both CHEM 2150 and 2090 or 2150 and 2160. Students may wish to consult with their faculty advisor or advisors in the Office of Undergraduate Biology for further clarification.
4. College mathematics (one year); one semester of calculus (MATH 1106, 1110, or their equivalent) plus one semester selected from the following:
   a. a second semester of calculus (MATH 1120, 1910, or equivalent).
   b. a course in finite mathematics (MATH 1105).
   c. a course in statistics (BTRY 3010, MATH 1710, AEM 2100, ILRST 2100, PSY 3500, PAM 2100, ECON 3190, ECON 3210, SOC 3010).
5. Organic chemistry (CHEM 1570 and 2510, or 3570–3580 and 2510, or 3570–3580 and 3010, or 3590–3600 and 2510, or 3590–3600 and 3010).
6. Physics: PHYS 1101–1102, 2207–2208, or 1112–2213. Those who take PHYS 1112–2213 are advised to complete PHYS 2214 as well.
7. Evolutionary Biology and Diversity: BIOE/BIOG 1780.
9. Biochemistry and Molecular Biology: BIOMG/BIOG 3500, 3530, 3550, or BIOMG 3510–3520. Note: BIOMG/BIOG 3550 is not recommended for those students concentrating in Biochemistry or Molecular and Cell Biology.
10. A program of study selected from the listing below.

Notes:
* Advanced placement biology credits are not accepted for substitution or placement out of any requirement for the biological sciences major.
* Because of extensive overlap in content, students may not earn credit for both BIOG 1105 and BIOG 1440.
* Although not required for the biological sciences major, a course in statistics is recommended for all biology students. Students should consult their faculty advisors when choosing appropriate courses in statistics.
* Core courses noted in numbers 1–9 above cannot count toward the program of study requirements.
* Transfer students who have taken a full year of introductory biology with laboratory at another institution are required to complete one of three core choice courses listed in number 1 above.
* Transfer students who have taken advanced courses in biology in addition to a full year of introductory biology with a laboratory can elect to apply their advanced course toward the core choice course requirement (number 1 above) or apply it toward a program of study course requirement. Please see the advisors in Office of Undergraduate Biology for guidance.

Pre-medical/veterinary students not majoring in biological sciences:

1. Students may fulfill the pre-medical/veterinary introductory biology requirements by completing BIOG 1105–1106 or by taking two of the three core choice courses and the Introduction to Investigative Biology Laboratory, listed above in number 1 and number 2. An additional biology laboratory course is recommended.
2. Advanced placement biology credits may still be used toward fulfilling pre-medical/pre-veterinary prerequisite courses, but students should consult their major advisor for course selection advice regarding freshmen-level biology courses that may be required of their particular major.

Programs of Study and Requirements

As noted in the list of requirements above, students accepted into the biological sciences major must choose a program of study (POS). Whereas the core requirements of the biology curriculum provide the common foundation deemed essential for all biology majors, the role of the program of study is to provide either a concentration in a particular area of biology or, in the case of the general biology program of study, a survey of biology that is broad but not superficial. The program of study requirement can be met by taking 13 to 15 credit hours of courses chosen by the student in consultation with his or her biology advisor. Programs of study for particular subject areas are designed by faculty members specializing in the subject. Typically, the program of study consists of one or more courses that provide foundation in the subject and a list of optional courses from that area or related areas, many of which are at an advanced level (3000 or higher). Because biology is an experimental science, most programs of study require one or more laboratory courses. The laboratory requirement in some programs of study can be met by participation in the independent research course (BIOG 4990). The possible programs of study and their requirements are as follows.

1. Animal Physiology: BIOAP 3110 Introductory Animal Physiology, BIOAP 3160 Cellular Physiology, plus a minimum of 7 credit hours selected from the following lecture and laboratory courses, of which at least 4 credit hours must be a laboratory course.
   a. Lecture courses: ANSC 2400 Animal Reproduction and Development; ANSC 4100 Nutritional Physiology and Metabolism; ANSC 4270 Fundamentals of Endocrinology; BIOMS 3150 Basic Immunology; BIOAP 2140 Biological Basis of Sex Differences; BIOAP 4560 Mammalian Physiology; BIOAP 4750 Mechanisms Underlying Mammalian Developmental Defects; BIOAP 4890 Mammalian Embryology; BIOMG 4370 Regulation of Cell Proliferation, Senescence, and Death; BIOMG 3850 Developmental Biology; BIOMG 4000 A Genomics Approach to Studying Life; BIOMG 4010 Genomic Analysis; BIOMG 3220 Hormones and Behavior; BIOMG 3920 Drugs and the Brain; BIOMG 4920 Sensory Function, NS 3310 Physiological and Biochemical Bases of Human Nutrition.
   b. Laboratory courses: BIOAP 4130 Histology: The Biology of the Tissues; BIOAP 3170 Animal Physiology Laboratory; BIOAP 4160 Cellular Physiology and Genomics Laboratory; BIOMG 4400 Laboratory in Biochemistry and Molecular Biology.

2. Biochemistry: Students electing this program of study should be sure to complete CHEM 2070–2080 or CHEM 3150–3160 during their freshman year. 6 credits of organic chemistry (CHEM 3570–3580 or CHEM 3590–3600); 5 credits of Biochemistry (either BIOMG 3510 and 3520, or BIOMG 3580 and 3540); BIOMG 4320 Survey of Cell Biology; BIOMG 4400 Laboratory in Biochemistry and Molecular Biology; physical chemistry (CHEM 2870–2880 or 3890–3900 or 3890–2880); and at least one other course with a biochemical or biophysical orientation selected from the following list: BIOMG 4380 RNA World; BIOMG 6510 Protein Structure, Dynamics, and Function; BIOMG 7500 Protein NMR Spectroscopy; CHEM 3000 Quantitative Chemistry; CHEM 4510 Structural Chemical Biology.

Notes:
* It is recommended that when selecting freshman-level core biology choice courses that one of them be BIOMG 1350 Principles of Cell and Developmental Biology.
* Students interested in graduate work in biochemistry should take PHYS 2207–2208 and should consider taking CHEM 3890–3900 and its prerequisites.
* Biology majors in the College of Agriculture and Life Sciences who select the biochemistry program of study are allowed to take up to 61 credit hours in the endowed colleges because of the high number of endowed courses required for this program.

3. Computational Biology: Computation has become essential to biological research. Genomic databases, protein databases, MRI images of the human brain, and remote sensing data on landscapes contain unprecedented amounts of detailed information that is transforming almost all of biology. Problems investigated by computational biologists include topics as diverse as the genetics of disease susceptibility; comparing entire genomes to reveal the evolutionary history of life; predicting the
structure, motions, and interactions of proteins; designing new therapeutic drugs; modeling the complex signaling mechanisms within cells; predicting how ecosystems will respond to climate change; and designing recovery plans for endangered species. The computational biologist must have skills in mathematics, statistics, and the physical sciences as well as in biology. A key goal in training is to develop the ability to relate biological processes to computational models. Cornell faculty work primarily in four subareas of computational biology: biomolecular structure, bioinformatics and data management, ecology and evolutionary biology, and statistical and computational methods for modeling biological systems.

Beyond core skills in mathematics, physical sciences, and biology, the computational biology program of study requires additional course work in mathematics and computer programming. A "bridging" course aimed at connecting biology to computation, and an advanced course where the theoretical/computational component of one aspect of biology is studied. Students should enroll in the more rigorous courses in the physical and mathematical sciences and may wish to take additional courses in these areas.

Computational biology has applications as broad as biology itself. The problems of interest and the tools available to study them are constantly evolving, so students are encouraged to gain fundamental skills that will serve them throughout their careers. There is, however, a demand for research scientists and technical personnel who can bring mathematical and computational skills to the study of biological problems. The program is also an excellent preparation for graduate study in any area of biology or computational biology.

**Required Courses for Program of Study in Computational Biology**

a. One course in computer programming (CS 1110, CS 1112, CS 1113, CS 1114) Introduction to Computer Programming, or EEE 1510 Introduction to Computer Programming.

b. One additional course in mathematics (MATH 2210 Linear Algebra; or MATH 2510 Linear Algebra with Applications; or MATH 2940 Linear Algebra for Engineers; or MATH 4200 Differential Equations and Dynamical Systems; or BTRY 4070 Principles of Probability and Statistics; or BTRY 4080 Theory of Probability; or BTRY 4210 Matrix Computation).

c. One of the following bridging courses, i.e., a course in mathematical modeling applied to biology:
   - BIOEE 3520 Dynamic Models in Biology
   - BIOEE 4600 Theoretical Ecology
   - BIONB 3500 Introduction to Computational Neuroscience
   - BTRY 4820 Statistical Genomics
   - BTRY 4830 Quantitative Genomics
   - BTRY 4840 Computational Genomics
   - NTRES 3100 Applied Population Ecology

**NTRES 4110 Quantitative Ecology and Management of Fisheries Resources**

d. One course from the following list of advanced courses, or an additional "bridging" course numbered 4000 or above:
   - BIOMG 6310 Protein Structure and Function
   - BIOMG 4810 Population Genetics
   - BIOMG 4840 Molecular Evolution
   - BIOMG 4870 Human Genomics
   - BIONB 4220 Modeling Behavioral Evolution
   - BTRY 4400 Phylogenetic Systematics
   - BTRY 4070 Principles of Probability and Statistics
   - BTRY 4080 Theory of Probability
   - BTRY 4090 Theory of Statistics
   - BTRY 4790 Probabilistic Graphical Models (also CS 4782)
   - BTRY 6520 Computationally Intensive Statistical Inference
   - CS 2110 Object-Oriented Programming and Data Structures
   - CS 4210 Numerical Analysis and Differential Equations
   - CS 4220 Numerical Analysis: Linear and Non-Linear Problems
   - MATH 4200 Differential Equations and Dynamical Systems
   - NTRES 4120 Wildlife Population Analysis: Techniques and Models
   - NTRES 4700 Spatial Statistics
   - ORIE 3500 Engineering Probability and Statistics
   - ORIE 3510 Introductory Engineering Stochastic Processes

**Notes:**

1. Many of the "bridging" and "advanced" courses listed above (items 3 and 4) are offered only in alternate years or irregularly, and many have prerequisites that are not required for the biology major or this POS. Students therefore need to plan well in advance how they will satisfy these requirements, and verify when course offerings will occur.

2. It is strongly recommended that students in this POS use PHYS 2207/2208 to satisfy the core physics requirement.

3. It is strongly recommended that students complete the core organic chemistry requirement using the CHEM 1570/2510 option, and that the time saved be used to take either CS 2110 or a second mathematics course from the list above.

4. MATH 2210 Linear Algebra, MATH 2310 Linear Algebra with Applications, or MATH 4200 Differential Equations and Dynamical Systems is recommended for bridging course BIOEE 4600.

5. One course may not be used to satisfy two different requirements simultaneously. For example, BTRY 4080 can be used to satisfy either requirement (2) or requirement (4), but not both.

6. Students who use BTRY 4080 to fulfill the additional mathematics requirement should not use ORIE 5000 Engineering Probability and Statistics II to fulfill the requirement for an advanced course.

7. Biology majors in the College of Agriculture and Life Sciences who select this program of study are allowed to take up to 61 credit hours in the endowed colleges due to the high number of required endowed courses for this program of study.

**Ecology and Evolutionary Biology**

- **BIOEE/BIOC 1610 Ecology and the Environment:** Students must complete 10 credits from the following lists: (a) Principles; (b) Organisms; and (c) Ecological and Evolutionary Processes. One course must be chosen from list (a) and a second either from list (b) or (c). The remaining credits can be satisfied with courses from any of the three lists. Students are encouraged to take at least one course from each list.

   b. Organisms: BIOEE 2740 The Vertebrates: Structure, Function, and Evolution; BIOMG 3730 Biodiversity and Biology of the Marine Mammals; BIOMG 4750 Marine Invertebrate Zoology; BIOEE 4500 and 4510 Mammalogy, lec and lab; BIOEE 4700 and 4701 Herpetology lec and lab; BIOEE 4750 Ornithology; BIOEE 4760 Biology of Fishes; ENTOM 2120 Insect Biology; BIOP 2140 Introductory Botany; BIOP 4480 Plant Evolution and the Fossil Record; PLPA 5090 Fungi; BIOSM 4490 Marine Botany.

6. Genetics and Development: A minimum of 15 credits, usually chosen from the following courses: BIOAP 4750 Mechanisms Underlying Mammalian Developmental Defects; BIOEE 4530 Speciation; BIOMG 3850 Developmental Biology; BIOMG 4000 Genomics; BIOMG 4010 Genomic Analysis; BIOMG 4340 Applications of Molecular Biology to Medicine; Agriculture, and Industry; BIOMG 4370 Regulation of Cell Proliferation, Senescence, and Death (also TOX 4370); BIOMG 4380 The RNA World; BIOMG 4450 Stem Cell Biology: Basic Science and Clinical Applications; BIOMG 4610 Development and Evolution (not offered 2010–2011); BIOMG 4810 Population Genetics; BIOMG 4825 Molecular Biology of Plant Organelles (also BIOL 4825) (not offered 2010–2011); BIOMG 4834 Concepts and Techniques in Plant Molecular Biology (also BIOL/PLPA/PLBR 4834); BIOMG 4854 Molecular Aspects of Plant Development I (also BIOL 4854) (not offered 2010–2011); BIOMG 4856 Molecular Evolution; BIOMG 4870 Bacterial Genetics (also BIOL 4870); BIOMG 4880 Eukaryotic Genetics; BIOMG 4870 Human Genomics; BIOMG 4890 Mammalian Embryology (also BIOP/APO/BIOM 4890); BIOMG 4900 Manipulating the Mouse Genome (also NS 4900); BIOMG 6080 Epigenetics (also NS 6080); BIOMG 6110 Genomes as Chromosomes; BIOMG 6110 Genome Maintenance Mechanisms; BIOMG 6120 Overview of Model Genetic Organisms; BIOMG 6200 Evolutionary Genomics of Bacteria; BIOMG 6380 Biosynthesis of Macromolecules; BIOMG 6380 Filamentous Fungal Genomics and Development (also PLPA 6380); BIOMG 6390 The Nucleus; BIOMG 6410 Laboratory in Analytical Molecular Biology (also BIOL 6410); BIOMG 6680 Developmental Genetics; BIOMI 4200 Microbial Genomics; BIOMI 4310 Genes and Behavior; BIONB 4970 Developmental Neurobiology; BIONB 4950 Molecular and Genetic Approaches to Neuroscience; BIOP 3430 Molecular Biology and Genetic Engineering of Plants; BIOP 4824 Plant Gene Evolution and Phylogeny; BIOP 4826 Plant Biotechnology; BIOP 4835 Plant Genome Organization and Function; BIOP 4835 Molecular Breeding; PLBR 4050 Genetic Improvement of Crop Plants; PLBR 4060 Advanced Plant Genetics. Up to 3 credits for this program of study may be chosen from other biological sciences courses, including BIOP 4990 Independent Undergraduate Research in Biology, with approval from the faculty advisor.

7. Insect Biology: ENTOM 2120 Insect Biology plus a minimum of three additional courses totaling at least 9 credits selected from the following two groups. At least one of the three additional courses must be selected from group a.

Group a: ENTOM 3510 Insect Phylogeny and Evolution; ENTOM 3550 Larval Insect Biology; ENTOM 3520–3521 Medical and Veterinary Entomology plus lab; ENTOM 4440 Integrated Pest Management; ENTOM 4550 Insect Ecology; ENTOM 4580 Invertebrate Pathology; ENTOM 4830 Insect Physiology

Group b: ENTOM 3150 Spider Biology; ENTOM 3250 Insect Behavior; ENTOM 3440 Insect Conservation Biology; ENTOM 3690 Chemical Ecology; ENTOM 3070 Pesticides, Environment, and Human Health; ENTOM 4530 Principles and Practice of Historical Biogeography; ENTOM 4700 Ecological Genetics; ENTOM 4770 Biological Control; ENTOM 4900 Insect Toxology

Note: Students in the Insect Biology program of study may not double major in entomology.

8. Microbiology: The program of study in microbiology requires a minimum of 13 credit hours in addition to the biology requirements. The introductory lecture and lab course, BIOMI 2900 General Microbiology Lecture and BIOMI 2911 General Microbiology Lab, ARE REQUIRED.

BIOMI 2900 General Microbiology Lecture
BIOMI 2911 General Microbiology Laboratory

In addition, one of the Group A courses is ALSO REQUIRED. If desired, a student may take more than one of the Group A courses to fulfill the credit hour requirement.

Group A:
BIOMI 3910 Advanced Microbiology Laboratory
BIOMI 3970 Environmental Microbiology: Evolution, Biogeochemistry, Microbial Ecology

BIOMI 4140 Prokaryotic Diversity
BIOMI 4160 Bacterial Physiology
BIOMI 4200 Microbial Genomics
BIOMI 4850 Bacterial Genetics

Group B classes can be used to fulfill the credit-hour requirement but cannot be used to fulfill the Introductory or Group A course requirements.

Group B:
BIOMI 3210 The Normal Microbes of the Human Body in Health and Disease
BIOMI 3940 Applied and Food Microbiology
BIOMI 4040 Pathogenic Bacteriology and Mycology
BIOMI 4090 Principles of Virology
BIOMI 4310 Medical Parasitology
BIOMI 4480 Symbiotic Associations: Evolution and Ecology
VETMI 5290 Medical and Veterinary Mycology (also PLPA 3290)

9. Molecular and Cell Biology: Students electing this program of study should be sure to complete CHEM 2070–2080 or CHEM 2150–2160 during their freshman year. CHEM 3570–3580 or 3590–3600; 5 credits of biochemistry (either BIOMG 3310 and 3320, or BIOMG 3300 and 3340); BIOMG 4350 Survey of Cell Biology; BIOMG 4400 Laboratory in Biochemistry and Molecular Biology, or BIOMG 4300 Experimental Molecular Neurobiology; and at least 7 additional credits of courses that have a cell biological or molecular biological orientation. The 7 additional hours should include at least two 2-credit or above courses from the following list: any BIOMG course at the 3000 level or
above (Note: graduate-level BIOMG courses are acceptable with permission of your advisor); BIOMS 3150 Basic Immunology; BIOM 4900 Principles of Virology; BIOM 4200 Microbial Genomics; BIOM 4150 Bacterial Genetics; BION 4250 Molecular Neurobiology; BION 4950 Molecular and Genetic Approaches to the Neosciences; BIOPL 3420 Plant Physiology; BIOPL 3430 Molecular Biology and Genetic Engineering of Plants; BIOPL 4220 Plant Development; BIOPL 4400 Plant Cell Biology; BIOPL 4940 Green Signals and Triggers-The Plant Hormones; BIOPL 4620 Plant Biochemistry.

Note:

* It is recommended that when selecting freshman-level core biology choice courses that one of them be BIOMG 1350 Principles of Cell and Developmental Biology.

10. Neurobiology and Behavior: The two-semester introductory course sequence Neurobiology and Behavior I and II (BION 2210 and 2220) with discussion section of 1 credit (4 credits per semester), and 7 additional credits. The 7 additional credits must include at least one advanced BION course of 3 or more credits from the following courses: (BION 4200s and 7200s), independent study (BIOG 4990), and PSYCH 4250. Students who declare the program of study in Neurobiology and Behavior (NBB) after taking BION 2210 or 2220 for only 3 credits must still take the 1-credit discussion section in BION 2210 and 2220. To arrange this, the student should consult the professors in charge of the two courses.

Recommendations: The faculty of NBB strongly encourages students in NBB to: (1) gain laboratory or field experience in neurobiology or behavior by taking at least one laboratory course or field biology course given at a marine or field station, x 4 credits during an independent research course for credit (BIOG 4990); (2) take at least one special topics (BION 4200) discussion course on a subject of interest as a capstone experience.

Some example lab/field courses are listed below:

Animal behavior and ecology: BION 3230 Methods in Animal Behavior, BION 4461 Plant Behavior Lab (also BIOEE 4461), BIOEE 2630 Field Ecology, BIOEE 3650 Field Methods in Ornithological Research, BIOEE 4701 Herpetology Laboratory, ENTRM 3310 Insect Phylogeny and Evolution Lab, NTRES 2100 Introductory Field Biology, NTRES 3111 Fish Ecology, NTRES 3141 Conservation of Birds Laboratory, BIOEE 2650 Tropical Field Ecology and Behavior, ENTRM 3150 Spider Biology.

Neurobiology and animal physiology: BION 3240 Biopsychology Laboratory (also PSYCH 3240), BION 4300 Experimental Psychobiology, BION 4440 Neural Computation (also PSYCH 4440), BION 4910 Principles of Neurophysiology (also BME 4910), BIOAP 4160 Cell Physiology and Genomics, BIOAP 4400 Laboratory in Biochemistry and Molecular Biology; BION 3190 Animal Physiology Experimentation, ENTOM 4830 Insect Physiology.

11. Nutrition: NS 3510 Physiological and Biochemical Bases of Human Nutrition (4 credits) and at least 9 credits of additional course work in the biological aspects of nutrition, such as NS 1220 Nutrition and the Life Cycles; NS 3220 Maternal and Child Nutrition; NS 3320 Methods in Nutritional Sciences; NS 3410 Human Anatomy and Physiology; NS 3470 Human Genetics; NS 4310 Nutritional Genomics—Evolution and Environment; NS 4410 Nutrition and Disease; NS 4900 Manipulating the Mouse Genome; NS 6090 Epigenetics; NS 6100 Proteins and Amino Acids in Nutritional Regulation; NS 6110 Molecular Toxicology; NS 6140 Topics in Maternal and Child Nutrition; NS 6310 Micronutrients: Function, Homeostasis, and Assessment; and NS 6520 Altered Metabolism. Check www.biology.cornell.edu/academics/nutrition.html for a complete list.

Note: Students in the College of Agriculture and Life Sciences, credits in NS courses count toward the required 55 CALS credits for students in the College of Arts and Sciences, NS credits count toward the 100 hours required in A&S if those credits fulfill major requirements.

12. Plant Biology: Students choose one area of study from the following two options: Option (a) Botanists are required to take BIOPL 2410 Introductory Botany. Students should then choose, with the aid of their faculty advisor, a minimum of three of the following courses, for a total of at least 10 additional credits, to round out their botanical training: BIOPL 4600 and 4661 Physiological Plant Ecology, Lec and Lab; BIOPL 2420 and 2421 Plant Function and Growth, Lec and Lab; BIOPL 2430 Cultivated Plants; BIOPL 2450 Plant Biology; BIOPL 2470 Plants and People; BIOPL 2480 Vascular Plant Systematics; BIOPL 3420 and 3421 Plant Physiology, Lec and Lab; BIOPL 3430 and 3431 Molecular Biology and Genetic Engineering of Plants, Lec and Lab; BIOPL 3450 Plant Anatomy; BIOPL 4840 The Healing Forest; BIOPL 3590 Biology of Grasses; BIOPL 3800 Strategies and Methods in Drug Discovery; BIOPL 4040 Crop Evolution, Domestication, and Diversity; BIOPL 4220 Plant Development; BIOPL 4940 Phylogenetic Systematics; BIOPL 4420 Current Topics in Ethnobiology; BIOPL 4440 Plant Cell Biology; BIOPL 4470 Molecular Systematics; BIOPL 4480 Plant Evolution and the Fossil Record; BIOPL 4490 Green Signals and Triggers—The Plant Hormones; BIOPL 4520/4521 Systematics of Tropical Plants and Field Lab; BIOPL 4530 Principles and Practice of Historical Biogeography; BIOPL 4620 Plant Biochemistry.

Option (b) Plant Biotechnology: Students are required to take BIOPL 3430 and 3431 Molecular Biology and Genetic Engineering of Plants, Lec and Lab. Students choose, in consultation with their faculty advisor, a minimum of 10 additional credits from the following list: BIOEE 4600 Plant Behavior—Induced Plant Responses to Biotic Stresses; BIOEE 4651 Plant-Induced Plant Responses to Biotic Stresses; Lab; BIOPL 2410 Introductory Botany; BIOPL 2420 and 2421 Plant Function and Growth, Lec and Lab; BIOPL 3420 and 4221 Plant Physiology, Lec and Lab. Students may fulfill up to 4 credits in group (a) and 3 from group b and at least 3 from group (c) and can count as one laboratory course if it has a laboratory component of 2 or more credits.

a. *BIOEE 2640 Tropical Field Ornithology; *BIOEE 2740 The Vertebrates: Structure, Function, and Evolution; BIOEE 3710 Human Paleontology; *BIOEE 3730 Biology of the Marine Vertebrates; BIOEE 4500 Mammalogy, Lec; *BIOEE 4501 Mammalogy, Laboratory; BIOEE 4700 Herpetology, Lec; *BIOEE 4701 Marine Ecology; BIOPL 3430 Molecular and Genetic Approaches to the Neosciences; BIOPL 3420 Plant Physiology; BIOPL 3430 Molecular Biology and Genetic Engineering of Plants; Lec and Lab. Students choose, in consultation with their faculty advisor, a minimum of 10 additional credits from the following list: BIOEE 4600 Plant Behavior—Induced Plant Responses to Biotic Stresses; BIOEE 4651 Plant-Induced Plant Responses to Biotic Stresses; Lab; BIOPL 2410 Introductory Botany; BIOPL 2420 and 2421 Plant Function and Growth, Lec and Lab; BIOPL 3420 and 4221 Plant Physiology, Lec and Lab. Students may fulfill up to 4 credits in group (a) and 3 from group b and at least 3 from group (c) and can count as one laboratory course if it has a laboratory component of 2 or more credits.
Biology majors are encouraged to consider participating in individual research under the direction of a Cornell faculty member. Students interested in beginning research should contact faculty members who have compatible research interests. Information about faculty research interests and undergraduate research opportunities is available in the Office of Undergraduate Biology, 216 Stimson Hall, and at www.biology.cornell.edu/research.

Faculty members may consider the student’s previous academic accomplishments, interests and career goals, and the availability of space and equipment when agreeing to supervise a student in their laboratory. Students conducting research for the first time must enroll in BIOG 2990, an 8–U course designed to introduce students to research. After the first semester, students enroll in BIOG 4990. Registration for both of these classes is done at the Office of Undergraduate Biology in 216 Stimson Hall. Students may work with faculty in any department on campus as long as the research topic is biological. Students may not earn credit for research done off campus unless supervised by a Cornell faculty member. Up to 3 credits of research may be used to complete the programs of study in general biology, genetics and development, as well as 4 credits in neurobiology and behavior and systematic and biotic diversity.

The honors program in biological sciences is designed to offer advanced training in life science research through the performance of an original research project under the direct guidance of a member of the Cornell faculty. Biology majors planning on graduating with honors must apply to the Biology Honors Program in the spring of their junior year. Applications and information are available in the Office of Undergraduate Biology, 216 Stimson Hall, or at www.biology.cornell.edu/research/honors.html. To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 30 credits at Cornell, and have a cumulative Cornell grade point average (GPA) of at least 3.0. In addition, students must have at least a 3.0 cumulative Cornell GPA in all biology, chemistry, mathematics, and physics courses. Grades earned in courses in other departments that are used to fulfill biology major requirements are included in this computation.) In addition, candidates must find a Cornell faculty member to supervise their research. An honors candidate usually enrolls for credit in BIOG 4990 Undergraduate Research in Biology under the direction of the faculty member acting as honors supervisor, although the honors program does not require enrollment for credit. Students accepted into the honors program are required to participate in honors research seminars during their senior year; submit an acceptable honors thesis; complete all major requirements; and maintain a 3.0 Cornell cumulative and science GPA through graduation. Recommendation to the faculty that a candidate graduate with honors and at what level of honors is the responsibility of the Honors Program Committee. The student’s final GPA and quality of his or her thesis are factors in determining the level of honors recommended.

Students interested in the honors program are strongly encouraged to begin their research projects in their junior year and to consider spending the following summer at Cornell engaged in full-time research on their honors project.

Biology majors who are considering study abroad and graduating with honors are encouraged to meet with their academic and research advisor during their sophomore year to carefully plan their academic schedule to meet the requirements of the honors program.

Application forms, requirements, deadline dates for the honors program and the Hughes Scholars Program, and information pertaining to faculty research may be obtained at the Office of Undergraduate Biology, 216 Stimson Hall, and at www.biology.cornell.edu.

CURRICULUM COMMITTEE

Many decisions pertaining to the curriculum and to the programs of study are made by the Biology Curriculum Committee. The committee consists of faculty members and welcomes advice and suggestions from all interested parties. The committee can be reached through the Office of Undergraduate Biology, 216 Stimson Hall.

ADVISING

Students in need of academic advice are encouraged to consult their advisors or see an academic advisor in the Office of Undergraduate Biology, 216 Stimson Hall. Students interested in marine biology should visit the Shoals Marine Laboratory Office, G14 Stimson Hall. Students interested in the Biology and Society Scholars Program, and information pertaining to the program may be obtained at the Office of Undergraduate Biology, 216 Stimson Hall.

STUDENT ADVICE

Students interested in the Biology and Society Scholars Program should see pages 507–510 in the College of Arts and Sciences section of this catalog.

TRANSFER CREDIT

Biology majors are required to complete all three biology core courses (biochemistry, evolution, and genetics) at Cornell. External transfer students are limited to transferring one core biology course and one course of up to 3 credits toward their program of study. See the Office of Undergraduate Biology for approval procedures.

Students who matriculated to Cornell as freshmen and Study Abroad students may transfer program of study courses at the discretion of their advisor. Study Abroad students must obtain approval from the Office of Undergraduate Biology, Director of Advising, to transfer biology core courses.

Online course credit is not acceptable to transfer for any biology course.
GENERAL COURSES (BIOG)

BIOG 1105–1106 Introductory Biology, Individualized Instruction
1105, fall and spring; 4 credits each semester; 2 credits by permission of instructor. Taking 1105–1106 in sequence preferred but not required. No admittance after first week of classes. Because of extensive overlap in content, students may not receive credit for both BIOG 1105 and BIOG 1440. First lec of fall semester R Aug. 26, 9:05; additional study and lab. D. Campbell.

Designed primarily for pre-medical/veterinary life sciences majors and other students who desire a challenging, broad introduction to fundamental concepts of biology. Cell biology, physiology, anatomy, and biochemistry are strongly emphasized in BIOG 1105. BIOG 1106 covers genetics, development, ecology, evolution, behavior, and the diversity of organisms. Because some testing involves the use of pretested specimens, students who object to dissecting should take the relevant biology core choice courses and investigative lab. The course is based on individualized instruction and offers considerable flexibility in scheduling. Completion of the course requires mastery of a group of core units. Testing on these units is primarily by oral examination. Students who elect to take the course must be able to meet deadlines. Four formal laboratory sessions are offered each semester; additional laboratory work is included in the core units. Evaluation is based on written reports on experimental work, practical exams, and a comprehensive final exam. Web site: www.bilog1105-1106.org.

BIOG 1140 Foundations of Biology
Fall. 4 credits. Prerequisite: none. S-U or letter grades. E. R. Turgeman and M. Scanlon.

The course offers an introduction to biology in the cellular and molecular levels of biology that cover the chemical and cellular basis of life, including functional aspects of physiology, development, and genetics. The emphasis will be on key concepts that underlie living systems, rather than a myriad of unrelated facts. This is a lecture course that will have an integrated discussion section in which active-learning and student engagement activities further emphasize the key concepts with compelling examples from living systems. Designed to meet the biology requirements of science students who need to fulfill the distribution requirement in CAS and Human Ecology. It does not meet the requirement for the premedical or prevet program nor the major in biological science. It, along with courses in the core major program, may be used to fulfill the Arts and Sciences distribution requirement. There is no laboratory for this course. Students that require a biology laboratory experience as part of their requirements should enroll in BIOG 1500 Investigative Biology Laboratory.

BIOG 1200 Biology Scholars Program Freshman Seminar
Spring. 1 credit. Prerequisite: membership in Biology Scholars Program. S–U grades only. J. McCaffrey and J. J. Doyle.

This course is designed to help freshman biology majors make the transition to Cornell's science courses, give exposure to career options in research and medicine, provide opportunities for teamwork and network with faculty, and to facilitate students' pursuit of research on campus.

BIOG 1250 Biology Seminar
Fall and spring. 1–2 credits. Prerequisite: none. Staff.

A first-year seminar designed for students with a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

BIOG 1350 Principles of Cell and Developmental Biology (also BIOMG 1350)
Fall, spring, summer. 3 credits. Prerequisite: none. S-U or letter grades. Lec, disc. A. Bretsch, M. Garcia-Garcia, T. Huffaker, and K. Kemphues.

For description, see BIOMG 1350.

BIOG 1440 Introduction to Comparative Physiology
Fall, spring, summer. 3 credits. Prerequisite: none. S-U or letter grades; biological sciences majors must take course for a letter grade. Because of extensive overlap in content, students may not receive credit for both BIOG 1440 and BIOG 1105. Fall: E. Loew and T. Owens; spring: R. Booker and T. Seeley.

An introductory physiology course intended for freshman and sophomore biology majors. The course integrates physiology from the cell to the organism with comparisons among animals, plants and microbes. Emphasis is on understanding of basic physiological concepts, stressing structure-function relationships and underlying physio-chemical mechanisms.

BIOG 1500 Investigative Biology Laboratory
Fall, spring, summer. 2 credits. Prerequisite: none. S-U or letter grades; biological sciences majors must take course for a letter grade. D. Deitche, K.-C. Chen, and L. Hester.

Designed for biology majors to provide lab experience with emphasis on processes of scientific investigations and to promote collaboration, communication, and literacy in science. Students will use a variety of methods, including instrumentation used by biologists to construct new knowledge. Lab topics include physiology, genetics, evolution, ecology, biochemistry, and molecular biology.

BIOG 1610 Ecology and the Environment (also BIOEE 1610)
Fall, spring, summer. 3 or 4 credits. Prerequisite: none. S-U or letter grades; biological sciences majors must take course for a letter grade. A. Flecker and C. Goodale; spring: R. Howarth and A. Kessler.

For description, see BIOEE 1610.

BIOG 1780 Evolutionary Biology and Diversity (also BIOEE 1780)
Fall, spring, summer. 4 or 5 credits. Prerequisite: none. S-U or letter grades. R. Harrison, K. Zamudio, and I. Lovette.

For description, see BIOEE 1780.

BIOG 2000 Special Studies in Biology
Fall, spring, or summer. 1–3 credits. Prerequisite: written permission from Office of Undergraduate Biology. Students must register in 216 Stimson Hall. S-U or letter grades by permission of instructor.

Staff. Registration device for students who want to take only a portion of a regular biological sciences course—for example, only the lectures or only the laboratory in a course that includes both. Only students who have already had training equivalent to the portion of the regular course that is to be omitted may register in this manner. This course may not be substituted for 1000-level courses and may not be used to fulfill college distribution requirements except by permission from the Office of Undergraduate Biology.

BIOG 2200 Biology Scholars Program Sophomore Seminar
Fall. 1 credit. Prerequisite: membership in Biology Scholars Program. S–U grades only. J. McCaffrey and J. J. Doyle.

The first half of the semester will focus on interpreting and evaluating scientific literature. Students will do group presentations on a primary research or review paper. The second half will cover careers in science, personal and professional development, on-campus research, and summer opportunities.

BIOG 2810 Genetics and Genomics (also BIOG 2810)
Fall, spring, summer (eight-week sessions). 5 credits. Prerequisite: BIOG 1500 recommended. S–U or letter grades.

Evening prelims. T. Fox, M. Goldberg, D. N. Neto.

For description, see BIOMG 2810.

BIOG 2990 Introduction to Research Methods in Biology
Fall, spring, or summer. Variable credit; max. 3 suggested. S–U grades only. Students must register for credit in Office of Undergraduate Biology, 216 Stimson Hall.

Applications available in OUB and at www.bio.cornell.edu. Add deadline is three days before the university deadline. Any Cornell faculty member whose research field is biological in nature may serve as a supervisor for this course. Non-Cornell supervisors not acceptable.

Intended for students who are new to undergraduate research. Students enrolled in BIOG 2990 may be reading scientific literature, learning research techniques, or assisting with ongoing research. The faculty supervisor determines the work goals and the form of the final report.

BIOG 3010–3020 Seminar in Research Skills for Biologists: I and II
Fall, spring. 1 credit per semester. Prerequisites: permission of instructor. Priority given to Biology Research Fellows. M. Shulman.

Designed for juniors, these courses develop skills used in all fields of biological research. Fall semester (I) researching the primary literature; critiquing scientific papers; facility with spreadsheet and bibliographic software. Spring semester (II): experimental design; data management and analysis; writing research proposals. Courses may be taken out of sequence.

BIOG 3300 Principles of Biochemistry, Individualized Instruction (also BIOMG 3300)
Fall or spring. 4 credits. Prerequisites: one majors-level biology course and one year general chemistry and CHEM 1570 or 3570–3580 (CHEM 3580 may be taken concurrently) or equivalent, or permission of instructor. S-U or letter grades. D. Deitcher, L. Hester.

Recommended: concurrent registration in BIOMG 3340. May not be taken for credit after BIOMG 3310, 3320, 3330, or 3350. S–U or letter grades. Evening prelims: fall, Sept. 30 and Nov. 2; spring, Feb. 24 and April 5. J. Blankenship, P. Hinkle, Y. Yao, and staff.

For description, see BIOMG 3300.
BIOLGY 3330 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology (also BIOMG 3330)

Summer, six-week session, 4 credits.
Prerequisite: one majors-level biology course, one year general chemistry, and CHEM 1570, or 3570–3580, or equivalents, or permission of instructor. S–U or letter grades. May not be taken for credit after BIOMG 3300, 3310, 3320, or 3350. S. Ely and H. Nivison. For description, see BIOMG 3330.

BIOLGY 3350 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology (also BIOMG 3350)

Spring, 4 credits. Prerequisite: one majors-level biology course, one year general chemistry, and CHEM 1570, or 3570–3580, or equivalents, or permission of instructor. CHEM 3580 may be taken concurrently. S–U or letter grades. May not be taken for credit after BIOMG 3300, 3310, 3320, or 3350. Lect and disc. B. Tye and C. Fromme. For description, see BIOMG 3350.

BIOLGY 4000 Undergraduate Seminar in Biology

Fall or spring. Variable credit; 1–3 assigned for individual seminar offerings; participation in Weill Cornell Medical College in Qatar required. S–U or letter grades. Staff.
Specialized seminars on topics of interest to undergraduates studying at Weill Cornell Medical College in Qatar.

BIOLGY 4040 Planning for Graduate Study in Biology

Fall or spring. Variable credit. S–U grades only. L. Southard. For students who plan to pursue a graduate degree leading to a research career. Selected topics include information on academic and industrial research careers, selecting appropriate graduate programs, and options for funding. Features faculty, graduate student, and outside speakers. Students write and receive feedback on personal statements.

BIOLGY 4080 Presentation Skills for Biologists

Spring, 1 credit. Prerequisite: research experience. Priority given to students accepted into Biology Honors Program. S–U grades only. L. Southard. Covers oral and written communication skills used in presenting research to other scientists. Topics include organization and writing of scientific papers, presentation tips for research seminars, and preparation of visual aids using Microsoft PowerPoint. All students present a 10-minute seminar on their research and evaluate other presentations.

BIOLGY 4100 Teaching High School Biology

Fall, 3 credits. Prerequisite: one year introductory biology; permission of instructor. S–U or letter grades. Offered alternate years. L. Southard.
Gives students the opportunity to experience teaching high school science. Students select an important biological concept, then develop inquiry-based teaching plans appropriate for high school students. The first part of the course consists of readings, discussion, and laboratory experiments, which familiarize the students with the scientific content. Students then work in teams with high school teachers to develop their curriculum. The final part of the course includes practice presentations and teaching at regional high schools.

BIOLGY 4940 Special Topics in Biological Sciences

Fall or spring. 1–4 credits, variable. S–U or letter grades.
Biological Sciences offers “trial” courses or seminars under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under this number will be approved by the Biological Sciences Curriculum Committee, and the same course is not to be offered more than twice under this number.

BIOLGY 4980 Teaching Experience

Fall or spring. 1–4 credits. Limited enrollment. Prerequisite: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean’s List eligibility but not eligibility for graduating with distinction. S–U or letter grades by permission of instructor. Staff. Designed to give qualified undergraduate students teaching experience through actual involvement in teaching and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

BIOLGY 4990 Independent Undergraduate Research in Biology

Fall or spring, or summer. Variable credit. S–U or letter grades. Note: Arts students may not register for more than 6 credits per semester with one supervisor or 8 credits per semester with more than one supervisor. Students in CALS may use up to 15 credits of independent study (BIOL 4990, 4980) toward graduation. Up to 3 credits of research may be used to complete programs of study in General Biology, Genetics and Development, and Systematics and Biotic Diversity, and 4 credits of research in Neurobiology and Behavior. Prerequisite: one semester BIOL 2990 or equivalent or permission of instructor and Office of Undergraduate Biology.
For students with previous undergraduate experience conducting biological research at Cornell. Students enrolled for this credit should be doing independent work on their own project. Registration forms are available in OUB and on the web at www.bio.cornell.edu. Add deadline is three days before university deadline. Each student must submit proposed research project description during course registration. Any Cornell faculty member whose research field is biological in nature may serve as supervisor for this course. Non-Cornell supervisors not acceptable.

BIOLGY 6000 Graduate Seminar in Biology

Fall or spring. Variable credit (1–3 credits assigned for individual seminar offerings); may be repeated for credit. S–U or letter grades.
Staff.
Specialized seminars on topics of interest to graduate students presented by biology faculty including visiting faculty.

Other Introductory Biology Courses for Non-Biological Sciences Majors

The courses listed below are intended primarily for non-biological sciences majors. Please see the full course description for more details. A complete list of all life sciences courses for non-life sciences students can be found under “quick links” at www.cals.cornell.edu/cals/current/register/current-students/cals-graduation/nonlifebiology.cfm.
BIOL 1120 Issues in Social Biology: From Diet to Disease; DNA to Deforestation
BIOL 2400 Green World/Blue Planet
BIOL 2410 Introductory Botany
BIOL 2470 Plants and People
BIOL 2490 Hollywood Biology: Science in Cinema
BIOL 1140 Foundations of Biology
CSS/BIOMI 1120 Microbes, the Earth, and Everything

ANIMAL PHYSIOLOGY (BIOP)

BIOP 1250 Biology Seminar
Fall and spring, 1–2 credits. Prerequisite: none. S–U grades only.
A first-year seminar designed for students with a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

BIOP 2140 The Biological Basis of Sex Differences (also BSOC 2141, BIOMS/FGSS 2140)
Fall, 3 credits. Prerequisite: one college-level biology course or permission of instructor. S–U or letter grades. Offered alternate years. J. E. Fortune.
Examines the structural and functional differences between the sexes. Emphasizes mechanisms of mammalian reproduction—where possible, special attention is given to studies of humans. Current evidence on the effects of gender on nonreproductive aspects of life (behavior, mental and physical capabilities) is discussed. The course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.

BIOP 3110 Introductory Animal Physiology (also BIOMS 3110, VTBMS 3460)
Fall, 6 credits. Prerequisites: BIOP 1500 Investigative Biology Laboratory and BIOP 1440 Comparative Physiology or one year of college biology; one year chemistry and mathematics or equivalent AP credit. Recommended: previous or concurrent physics course. S–U or letter grades by permission of instructor. Evening prelims. E. R. Loew.
General course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems from the cellular to the organismal level. Structure/function relationships are stressed along with underlying physico-chemical mechanisms.

BIOP 3160 Cellular Physiology (also BIOMS 3160)
Spring, 3 credits. Pre- or corequisite: BIOMG 1350 Principles of Cell and Developmental Biology or BIOMG 3300 or 3310 and 3320 or 3330. Letter grades only. Evening prelims. A. Quanta.
A comprehensive course covering the general characteristics of eukaryotic cells; the structure,
composition, and function of subcellular organelles; and the major signal transduction pathways regulating a variety of physiological cell activities. Among the main subjects covered are absorption and transport processes, mechanism of action of signaling molecules (hormones), the cell cycle and regulation of cell proliferation, cell-cell communication, extracellular matrix, stem cells, apoptosis, and carcinogenesis.

**BIOAP 3190 Animal Physiology Experimentation (also BIOMS 3190)**

Fall. 4 credits. Pre- or corequisite: BIOAP 3110. For pre-med, pre-vet juniors and seniors and graduate students interested in biomedical science. Letter grades only. E. R. Loew, N. A. Lorr, and staff. Student-conducted in vitro and in vivo experiments designed to illustrate basic physiological processes, physiological research techniques, instrumentation, experimental design, and interpretation of results. Techniques include anesthetia, surgical procedures, dissection, and real-time computer recording and analysis. Experiments with isolated living tissues or live anesthetized animals examine properties of membranes and epithelia, blood, nerves, skeletal and smooth muscle, cardiovascular, respiratory, renal, and reproductive function and their regulation by the nervous and endocrine systems.

**BIOAP 4130 Histology: The Biology of the Tissues (also BIOMS 4130)**

Spring. 4 credits. Pre-requisite: BIOMG 1350 Principles of Cell and Developmental Biology. Recommended: BIOMG 3300 or 3310, or equivalent. S–U or letter grades. S. Suarez and L. Mizer. Provides students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates (primarily mammals), as well as methods of analytic morphology at the cell and tissue levels. Emphasizes basic spatial interrelations of structure, composition, and function in cells and tissues.

**BIOAP 4160 Cell Physiology and Genomics Laboratory (also BIOMS 4160)**

Spring. 4 credits. Limited to 24 students. Pre- or corequisite: BIOAP 3160 or BIOMG 4520 or permission of instructor OR BIOMG 4520 or permission of instructor OR BIOAP 4160 or permission of instructor. S–U or letter grades. S. Suarez and L. Mizer. Provides students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates (primarily mammals), as well as methods of analytic morphology at the cell and tissue levels. Emphasizes basic spatial interrelations of structure, composition, and function in cells and tissues.

**BIOAP 4250 Gamete Physiology and Fertilization (also ANSC 4250)**

Fall. 2 credits. Prerequisite: ANSC 2400 or equivalent. Letter grades only. Offered alternate years; next offered 2011–2012. Lec. J. E. Fortune, P. A. Johnson, and staff. For description, see ANSC 4250.

**BIOAP 4270 Fundamentals of Endocrinology (also ANSC 4270)**

Fall. 3 credits. Prerequisite: animal or human physiology course or permission of instructor. Letter grades only. Lec. P. A. Johnson. For description, see ANSC 4270.

**BIOAP 4580 Mammalian Physiology (also BIOMS 4580)**

Spring. 3 credits. Auditors allowed. Prerequisite: BIOAP 3110 or BLOG 1440 Comparative Physiology with permission of instructor. Recommended for biological sciences majors, pre-med and pre-vet students, and beginning graduate students in physiology, nutrition, and animal science. Letter grades only. Evening prelims. K. W. Meyers, Ph.D. This course offers a treatment of selected topics in human physiology that emphasizes concepts and a working knowledge of physiology. The first course half surveys biological design and the functional strategies of multicellular animals. Topics include mammalian fluid compartments, homeostasis, and membrane and epithelial transport. The second half examines the mechanism and the regulation of cardiovascular, gastrointestinal, and renal systems. Course-concluding lectures aim to illustrate the integration of systems in the regulation of acid/base balance. Clinical examples of dysfunction will underscore the role of normal function, and some diseases will be traced to the deepest roots of their molecular etiology. Weekly take-home problem sets count 50 percent of the final grade.

**BIOAP 4750 Mechanisms Underlying Mammalian Developmental Defects (also BIOMS/NS 4750)**

Spring. 3 credits. Prerequisites: BIOMG 3300, 3310/3320, or 3330 (may be taken concurrently). S–U or letter grades. Offered alternate years; next offered 2011–2012. D. Noden, Ph.D. Focuses on the causes of developmental defects and how genetic changes or teratogenic insults disrupt developmental regulatory and metabolic pathways.

**BIOAP 4890 Mammalian Embryology (also BIOM/S/BIOG 4890)**

**BIOAP 4980 Teaching Experience**

Fall or spring. 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean’s List eligibility but not eligibility for graduating with distinction. S–U or letter grades by permission of instructor. Staff.
ECOLOGY AND EVOLUTIONARY BIOLOGY (BIOEE)

**BIOEE 1250 Biology Seminar**  
Fall or spring. 1–2 credits. Prerequisite: none. S–U grades only. Staff.  
A first-year seminar designed for students with a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

**BIOEE 1540 Introductory Oceanography** (also EAS 1540)  
Fall or summer. 3 credits. S–U or letter grades. B. C. Monger and C. H. Greene. For description, see EAS 1540.

**BIOEE 1560 Introductory Oceanography with Laboratory** (also EAS 1560)  
Fall. 4 credits. S–U or letter grades. B. C. Monger and C. H. Greene. For description, see EAS 1560.

**BIOEE 1610 Ecology and the Environment** (also BIOG 1610)  
Fall, spring, or summer. 3 or 4 credits; 4-credit option involves writing component and two disc sect per week. S–U or letter grades; biological sciences majors must take one course for a letter grade. A. S. Flecker and C. L. Goodale.  
This course provides an introduction to ecology, covering interactions between organisms and the environment at scales of populations, communities, and ecosystems. Ecological principles are used to explore the theory and applications of major issues facing humanity in the 21st century, including population dynamics, disease ecology, biodiversity and invasive species, global change, and other topics of environmental sustainability.

**BIOEE 1780 Evolutionary Biology and Diversity** (also BIOG 1780)  
Fall or spring. 4 or 5 credits; 4 credits with 3 lec and 1 disc sec per week; 5 credits with 3 lec per week and a Writing in the Majors disc sec that meets twice per week. 5-credit option limited to 15 students per sec each semester. Students taking 5-credit option read additional materials from primary literature and write essays in place of regular exams. (Students may not preregister for 5-credit option; interested students complete application form on first day of class.) Limited to 300 students. S–U or letter grades; biological sciences majors must take course for a letter grade. One field trip. Evening prelims: spring, Mar. 3 and Apr. 5. Fall, K. R. Zamudio; spring, staff.  
Considers explanations for pattern of diversity and the apparent good fit of organisms to the environment. Topics include the diversity of life, the genetics and developmental basis of evolutionary change, processes at the population level, evolution by natural selection, modes of speciation, long-term trends in evolution, origin of humans.

**BIOEE 2070 Evolution** (also HIST 2870, STS 2871)  
Fall or summer (six-week session). 3 credits. Intended for students with no background in college biology. May not be taken for credit after BIOEE/BIOG 1780. Does not meet evolutionary biology requirement for biological sciences major. S–U or letter grades, W. B. Provine.  
Evolution is the central concept in biology. This course examines evolution in historical and cultural contexts. This course aims to understand the major issues in the history and current status of evolutionary biology and explore the implications of evolution for culture. Issues range from controversies over mechanisms of evolution in natural populations to the conflict between creationists and evolutionists.

**BIOEE 2630 Field Ecology**  
Fall. 3 credits. Prereq: corequisite: BIOEE/BIOG 1610. Letter grades only. One weekend field trip. A. Agrawal.  
Field exercises designed to give students direct experience with fieldwork, with emphasis on developing observational skills, journal keeping, and a landscape perspective. Topics include population biology, niche relationships of insects, influence of herbivores and competition on plant performance, decomposition of soil litter, foraging behavior, census methods, and use of scientific collections.

**BIOEE 2640 Tropical Field Ornithology**  
Winter; two-week, full-time course. 3 credits. Limited to 14 students; minimum of 7. Prerequisite: permission of instructor. Intended for students with limited or no bird knowledge. S–U or letter grades. Daily fieldwork, disc, reading, and individual project. A. A. Dhondt.  
Provides students with the opportunity to study birds intensively in a neotropical environment. Students learn observational and field techniques, participate in group research projects and in daily seminars. The group is housed in the Biodiversity Center at Punta Cana. One or two field trips are taken to national parks in the Dominican Republic.

**BIOEE 2650 Tropical Field Ecology and Behavior**  
Winter; field course based in Kenya, Africa. 4 credits. Limited to 15 students. Prerequisite: permission of instructor. Letter grades only. I. J. Lovette.  
Gives students a broad hands-on understanding of tropical biology, ecology, and behavioral ecology. Students gain experience with experimental design and data collection, field methods, basic statistics, interpretation and evaluation of primary scientific literature, and scientific paper writing. Students pay separately for their international airfare and there may also be a small supplementary laboratory fee.

**BIOEE 2670 Introduction to Conservation Biology** (also NTRES 2670)  
Fall. 2 or 3 credits; 3 credits with disc sec, two Sat a.m. field trips, and two essays. Intended for both science and nonscience majors. May not be taken for credit after NTRES 4100. Completion of BIOEE 2670 not required for NTRES 4100. S–U or letter grades. J. W. Fitzpatrick.  
Broad exploration of biological concepts and practices related to conserving the earth’s biodiversity; integrates ecological, evolutionary, behavioral, and genetic principles important for understanding conservation issues of the 21st century. Topics include species and ecosystem diversity, values of biodiversity, causes of extinction, risks facing small populations, simulation modeling, design of nature reserves, the Endangered Species Act, conservation priority-setting, species recovery, ecosystem restoration and management, implications of climate change, and our ecological footprint.

**BIOEE 2740 The Vertebrates: Structure, Function, and Evolution**  
Spring. 4 credits. Prerequisite: two majors-level biology courses. S–U or letter grades. Fee: $25. B. A. McGuire.  
Introductory course in vertebrate organismal biology that explores the structure and function of vertebrates with an emphasis on trends in vertebrate evolution. Lectures cover topics such as the origin and evolution of various vertebrate groups, organ systems, thermoregulation, life history, locomotion, and behavior. Laboratories include discussions of preserved vertebrate animals and noninvasive live animal demonstrations.

**BIOEE 3500 Dynamics of Marine Ecosystems** (also EAS 3500)  
Fall. 3 credits. Limited to 25 students. Prerequisites: one-year calculus and semester oceanography (i.e., BIOEE/EAS 1540), or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2011–2012. C. H. Greene and R. W. Howarth.  
For description, see EAS 3500.

**BIOEE 3510 Conservation Oceanography** (also EAS 3510)  
Spring, full-time; three-week course. 4 credits. Limited to 25 students. Prerequisites: enrollment in Cornell Abroad Earth and Environmental Sciences Semester in Hawaii; one semester calculus and two majors-level biology courses or permission of instructor. Letter grades only. C. H. Greene, C. D. Harvell, and B. C. Monger.  
For description, see EAS 3510.

**BIOEE 3620 Dynamic Models in Biology** (also MATH 3620)  
Spring. 4 credits. Prerequisites: two majors-level biology courses and completion of mathematics requirements for Biological Sciences major or equivalent. S–U or letter grades. Offered alternate years. S. P. Ellner and J. M. Guckenheimer.  
Introductory survey of the development, computer implementation, and applications of dynamic models in biology and ecology. Case-study format covering a broad range of current application areas such as regulatory networks, neurobiology, cardiology, infectious disease management, and conservation of endangered species. Students also learn how to construct and study biological systems models on the computer using a scripting and graphics environment.

**BIOEE 3630 Field Methods in Ornithological Research**  
Summer (eight-week session). 5 credits. Limited to 15 students. Prerequisites: two majors-level biology courses, interest and ability to spend all day in the field under variable weather conditions, including intense sun and periods of rain, and permission of instructor. S–U or letter grades. Next offered 2013–2014. D. W. Winkler and staff.)
speciation, the biological basis of intrinsic barriers to gene exchange, current models for the origin of such barriers, genetic architecture of speciation, and rates of speciation. Emphasis is on developing a rigorous conceptual framework for discussing speciation and on detailed analysis of a series of case histories.

**BIOEE 4550 Insect Ecology (also ENTM 4550)**
Fall. 4 credits. Recommended: ENTM 2120 or BIOEE/BIOG 1610 or permission of instructor. S–U or letter grades. Offered alternate years. For description, see ENTM 4550.

**BIOEE 4560 Stream Ecology (also NTRES 4560)**
Fall. 4 credits. S–U or letter grades. Field project with lab papers. One Sat. field trip. Offered alternate years, next offered 2011–2012. A. S. Fedler and C. E. Kraft. For description, see NTRES 4560.

**BIOEE 4570 Limnology: Ecology of Lakes, Lectures**
Spring. 3 credits. Prerequisite: BIOEE/BIOG 1610 or written permission of instructor. Recommended: introductory chemistry. S–U or letter grades by permission of instructor only. Offered alternate years; next offered 2011–2012. N. G. Hairston, Jr. and staff.

**BIOEE 4571 Limnology: Ecology of Lakes, Laboratory**
Spring. 2 credits. Pre- or corequisite: BIOEE 4570. Letter grades; S–U grades by permission of instructor only. One weekend field trip. Fee for food on field trip. $15. Offered alternate years; next offered 2011–2012. N. G. Hairston, Jr. and staff.

**BIOEE 4640 Plant Behavior—Induced Plant Responses to Biotic Stresses, Lectures (also BIONB 4460)**

**BIOEE 4646 Plant Behavior—Induced Plant Responses to Biotic Stresses, Laboratory (also BIONB 4461)**

**BIOEE 4500 Mammalogy, Lectures**
Spring. 3 credits. Recommended: BIOEE 2740. Letter grades; S–U grades by permission of instructor. Offered alternate years; next offered 2011–2012. B. A. McGuire.

**BIOEE 4501 Mammalogy, Laboratory**
Spring. 1 credit. Limited to 16 students. Pre- or corequisite: BIOEE 4500. Letter grades; S–U grades by permission of instructor. Offered alternate years; next offered 2011–2012. B. A. McGuire.

**BIOEE 4530 Speciation**
Spring. 4 credits. Limited to 40 students. A prerequisite: BIOEE/BIOG 1780 and BIOMG 2810 or equivalents, or permission of instructor. S–U or letter grades. Offered alternate years. R. G. Harrison. Advanced course in evolutionary biology focusing on the patterns and process of speciation and the nature and origin of intrinsic barriers to gene exchange. Lecture topics include species concepts and definitions, the history of ideas about
[BIOEE 4701 Herpetology, Laboratory
Spring. 2 credits. Limited to 35 students. Pre- or corequisite: BIOEE 4700. Letter grades; S–U grades by permission of instructor only. Fee: $30. Occasional field trips and special projects. Offered alternate years; next offered 2012–2013. H. W. Greene.]

BIOEE 4730 Ecology of Agricultural Systems (also HORT 4730)
Fall. 3 credits. Limited to 45 students. Prerequisite: BIOEE/BIOG 1610 or permission of instructor. S–U or letter grades. During first six weeks of class, Thurs. meetings may run later because of field trips. L. E. Drinkwater. Analysis of the ecological processes operating in agricultural systems, with an emphasis on understanding relationships between agroecosystem structure and function and interactions among organisms. Examines agroecological theory and research through readings and discussions. The first part of this course emphasizes understanding biogeochemical processes, population and community ecology with emphasis on plant-herbivore and plant-microbial interactions, and evolutionary principles in agroecosystems. The latter part focuses on the application of ecological knowledge to the design and management of multifunctional agroecosystems. Field trips to local farms and case studies from both the tropics and the temperate zone are used to illustrate important concepts.

[BIOEE 4750 Ornithology
Spring. 4 credits. Limited to 35 students. Prerequisite: permission of instructor by preregistering in E141 Conron Hall. Recommended: BIOEE 2740. Letter grades; S–U grades by permission of instructor only. Carpooling to Lab of Ornithology necessary. Fee: $15. Occasional field trips and special projects. Offered alternate years; next offered 2011–2012. D. W. Winkler.]

BIOEE 4760 Biology of Fishes
Fall. 4 credits. Limited to 24 students. Recommended: BIOEE 2740 or equivalent experience in vertebrate zoology. Letter grades; S–U grades by permission of instructor only. Small lab fee may be required. Two field trips. Offered alternate years. A. R. McCune. Introduction to the study of fishes: their structure, physiology and functional morphology, behavior, ecology, diversity, evolution, classification, and identification. Emphasizes marine fishes from different habitats (temperate, tropical coral reef, intertidal, and deep sea); local freshwater species; and interesting freshwater fishes from around the world, especially South America and Africa. Two field trips, including one full-day weekend trip required. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics and dissection laboratories use preserved specimens.

[BIOEE 4770 Marine Invertebrates Seminar
Fall. 1 credit. Prerequisite: BIOEE 3780 or permission of instructor. S–U or letter grades only. Offered alternate years; next offered 2011–2012. C. D. Harvell.]

BIOEE 4780 Ecosystem Biology
Spring. 4 credits. Prerequisite: BIOEE/BIOG 1610 or equivalent. S–U or letter grades. Offered alternate years. C. L. Goodale and R. W. Howarth. Analyzes ecological energy flow and nutrient cycles, emphasizing both experimental approaches and comparative aspects of terrestrial, freshwater, and marine ecosystems. Considers anthropogenic effects on ecosystems such as acid precipitation, fossil fuel combustion, and nitrogen pollution. Also analyzes climate change and regional environmental change from an ecosystem perspective.

BIOEE 4790 Paleobiology (also EAS 4790)
Spring. 4 credits. Prerequisites: two majors-level biology courses and either BIOEE 2740, 3730, EAS 3010, or permission of instructor. S–U or letter grades. W. D. Allmon. For description, see EAS 4790.

BIOEE 4800 Ecological Genetics (also ENTOM 4700)
Spring. 4 credits. Prerequisite: BIOEE/BIOG 1780. Recommended: introductory course in genetics and/or statistics. S–U or letter grades. Offered alternate years. B. P. Lazzaro. For description, see ENTOM 4700.

BIOEE 4900 Topics in Marine Biology
Spring. 2 credits, may be repeated for credit. Limited to 15 students. Prerequisite: permission of instructor. Primarily for undergraduates. S–U or letter grades. Offered alternate years. J. G. Morin. Seminar courses on selected topics in marine biology; may include laboratory or field trips. Topics and time of organizational meeting are shown in departmental course offerings listed on the web site.

BIOEE 4940 Special Topics in Ecology and Evolutionary Biology
Fall or spring. 1–4 credits. S–U or letter grades. Staff. The department offers “trial” courses or seminars under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under this number will be approved by the Biological Sciences Curriculum Committee, and the same course is not to be offered more than twice under this number.

BIOEE 4980 Teaching Experience
Fall or spring. 1–4 credits. S–U or letter grades. Staff. The department offers “trial” courses or seminars under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under this number will be approved by the Biological Sciences Curriculum Committee, and the same course is not to be offered more than twice under this number.

BIOEE 6600 Field Studies in Ecology and Evolutionary Biology
Fall or spring. Variable credit. Prerequisites: BIOEE/BIOG 1610, taxon-oriented course, and permission of instructor. Letter grades; S–U grades by permission of instructor only. Fee and field trips TBA. Estimated costs: TBA. Staff. Provides students with opportunities to learn field techniques and new biota by participating in an intensive series of field exercises. Extended field trips may be scheduled during fall break, intersession, or spring break. The regions visited, trip objectives, and other details are announced by the various instructors at an organizational meeting held at the beginning of the semester. Meetings on campus are devoted to orientation and reports on completed projects.

BIOEE 6601 Tropical Field Ecology
Spring. 2 credits. Prerequisite: for undergraduates, experience or course work with terrestrial, marine, or freshwater organisms. Extended field trip over winter break. Letter grades only. Fee to cover transportation and housing. TBA. Offered alternate years. C. D. Harrell, J. P. Sparks, and N. G. Hairston, Jr. Field trip to the big island of Hawaii, the Yucatan Coast of Mexico, or similar environment; check with instructors for planned location. Students employ experimental approaches to study ecological and evolutionary questions across a range of tropical biomes. Optional vertebrate dissection (fish) during a portion of the course field trip.

[BIOEE 6602 Graduate Field Course in Ecology
Spring. 3 credits. Prerequisite: graduate standing. Letter grades only. Fee charged to help cover food and lodging for trip to Florida. Offered alternate years; next offered 2011–2012. J. P. Sparks and H. W. Greene.]

BIOEE 6610–6611 Environmental Policy (also ALS/BSOC 6610–6611)
6610. Fall; 6611. Spring. 3 credits each semester; students must register for 6 credits each semester since R grade given at end of fall semester. Limited to 12 students. Prerequisite: permission of instructor. Letter grades only. D. Pimentel. Focuses on complex environmental issues. Ten to 12 students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in Science or BioScience. Thus far, every study has been published.

[BIOEE 6680 Principles of Biogeochemistry
Fall. 4 credits. Limited to 20 students. Prerequisite: solid background in ecology, environmental chemistry, or related environmental science; for undergraduates, permission of instructor. S–U or letter grades. Offered alternate years; next offered 2011–2012. R. W. Howarth and C. L. Goodale.]

[BIOEE 6750 Current Topics in Plant Molecular Ecology
Fall. 1 credit; may be repeated for credit. Limited to 20 students. Prerequisite: graduate standing or permission of instructor. S–U or letter grade. Next offered 2011–2012. A. Kessler.]
BIOEE 6900 Seminar in Ecology and Evolution of Infection and Disease (also ENTOM 6900)
Fall or spring. 1 credit; may be repeated for credit. S–U grades only. B. Lazzaro, A. Hajek, C. D. Harvell, and staff. For description, see ENTOM 6900.

BIOEE 7600 Special Topics in Evolution and Ecology
Fall or spring. 1–3 credits; may be repeated for credit. Limited enrollment. Letter grades; S–U grades by permission of instructor only. Staff.
Independent or group-intensive study of special topics of current interest. Content varies each semester.

BIOEE 7610 Microsatellite DNA: Techniques
Fall. 1 credit; may be repeated for credit. Limited to 12 students. Prerequisite: permission of instructor. Primarily for graduate students; undergraduates admitted only under exceptional circumstances. E-mail S. M. Bogdanowicz (smb31) by early Aug. if interested. S–U grades only. Fee: TBA. R. G. Harrison and S. M. Bogdanowicz.
Construct and screen genomic DNA libraries for microsatellite loci using next-generation sequencing technologies. Lectures and group discussions regarding microsatellite isolation, characterization, and evolution. Informal presentations of student research projects.

BIOEE 7640 Plant-Insect Interactions Seminar
Fall or spring. 1 credit; may be repeated for credit. Prerequisite: for undergraduates, permission of instructor. S–U grades only. A. Agrawal, J. S. Thaler, and A. Kessler.
Group intensive study of current research in plant-insect interactions. Topics vary from semester to semester but include chemical defense, coevolution, insect community structure, population regulation, biocontrol, tritrophic interactions, and mutualism.

BIOEE 7670 Current Topics in Ecology and Evolutionary Biology
Fall. 3 credits. Prerequisite: for undergraduates, permission of instructor. S–U grades only. M. A. Geber.
Critical evaluation and discussion of theory and research in ecology and evolutionary biology. Lectures by faculty and student-led discussions of topics in areas of current importance.

BIOEE 7700 Workshop in Biogeochemistry
Fall or spring. 1–3 credits; may be repeated for credit. Limited to 15 students. Prerequisite: BIOEE 6690. S–U grades only. Staff.
Workshop forum in which graduate students interact with invited world leaders in biogeochemistry. Workshop topics change each semester. A one-week workshop is preceded by seven one-hour preparatory discussions of readings.

BIOEE 7800 Graduate Seminar in Ornithology (also NTRES 7800)
Fall or spring. 1 credit; may be repeated for credit. Prerequisite: for undergraduates, permission of instructor. S–U grades only. J. J. Lovette, A. A. Dhondt, D. W. Winkler.
Group intensive study of current research in ornithology. Topics vary from semester to semester.

BIOEE 8990 M.S. Thesis Research
Fall or spring. 1–15 credits. Prerequisite: admission to field of ecology and evolutionary biology. S–U grades only. E&EB field faculty.
Thesis research conducted by an M.S. student in the field of ecology and evolutionary biology with advice and consultation of a major professor who is a member of the field.

BIOEE 9990 Ph.D. Dissertation Research
Fall or spring. 1–15 credits. Prerequisite: admission to field of ecology and evolutionary biology as Ph.D. student. S–U grades only. E&EB field faculty.
Dissertation research conducted by a Ph.D. student in the field of ecology and evolutionary biology with advice and consultation of a major professor who is a member of the field.

MOLECULAR BIOLOGY AND GENETICS (BIOMG)

BIOMG 1250 Biology Seminar
Fall and spring. 1–2 credits. Prerequisite: none. S–U grades only. Staff.
A first-year seminar designed for students with a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

BIOMG 1320 Orientation Lectures in Molecular Biology and Genetics
Spring, weeks 1–3. 0 credits. Primarily for freshmen, sophomores, and transfer students. S–U grades only. J. Blankenship.
Six professors discuss their research and promising new areas for research in the future.

BIOMG 1350 Principles of Cell and Developmental Biology (also BIOL 1350)
Fall, spring, summer. 3 credits. Prerequisite: none. S–U or letter grades; biological sciences majors must take course for a letter grade. Lect. disc. A. Bretschler, M. Garcia-Garcia, T. Huffaker, and K. Kemphues.
The course introduces molecular mechanisms by which cells behave, divide, and grow as individuals; how they organize during embryonic development to form functional tissues and organs in multicellular organisms; and how their misbehavior contributes to disease.
BIOMG 2800 Lectures in Genetics and Genomics
Fall, spring, or summer (eight-week session). 3 credits. Lec component of BIOMG 2810. Not open to students majoring in biological sciences; may not be used to fulfill requirements for biological sciences majors. Not open to freshmen fall semester. Highly recommended: problem-solving sessions. T. D. Fox, M. L. Goldberg, and D. Nero.
For description, see BIOMG 2810.

BIOMG 2810 Genetics and Genomics (also BIOL 2810)
General introduction to the fundamental principles of genetics in eukaryotes and prokaryotes. Topics include gene transmission, linkage, recombination, mutation, and manipulation, as well as analysis of genomes in individuals and populations.

BIOMG 3300–3350 Principles of Biochemistry
Introductory biochemistry is offered in four formats: individualized instruction (one-semester course, fall and spring), BIOMG 3300; lecture (one-semester course, spring only), BIOMG 3350; lecture (two-semester sequence; BIOMG 3310 [fall] and BIOMG 3320 [spring]); and lecture (BIOMG 3320 [summer]). The Biochemistry and Molecular Cell Biology programs of study require 5 credits of biochemistry (either BIOMG 3310 and 3320, or BIOMG 3300 and 3340).

BIOMG 3300 Principles of Biochemistry, Individualized Instruction (also BIOL 3300)
Fall or spring. 4 credits. Prerequisites: one majors-level biology course and one year general chemistry and CHEM 1570 or 3570–3580 (CHEM 3580 may be taken concurrently, or permission of instructor. Recommended: concurrent registration in BIOMG 3340). May not be taken for credit after BIOMG 3310, 3320, 3330, or 3350. S–U or letter grades. Biological sciences majors must take course for a letter grade. Evening prelims: fall, Sept. 30 and Nov. 2; spring, Feb. 24 and April 5. J. E. Blankenship, P. C. Hinkle, Y. Mao, and staff.
Fourteen units that cover protein structure and function, enzymes, basic metabolic pathways, DNA, RNA, protein synthesis, and an introduction to gene cloning. No formal lectures, autotutorial format.

BIOMG 3310 Principles of Biochemistry: Proteins and Metabolism
Fall or spring. 4 credits. Prerequisites: one majors-level biology course and one year general chemistry, and CHEM 1570 or 3570–3580 (CHEM 3570 or 3580 should not be taken concurrently) or equivalent, or permission of instructor. May not be taken for credit after BIOMG 3300, 3330, or 3350. S–U grades by permission of instructor. Lec; evening prelim Oct. 21. W. F. Feijenerson.
(An optional discussion section is held on most Fridays from 2:30 to 3:20 p.m.

BIOMG 3320 Principles of Biochemistry: Molecular Biology
Spring. 2 credits. Prerequisites: one majors-level biology course and previous or concurrent registration in organic chemistry, or permission of instructor. May not be taken for credit after BIOMG 3300 or 3330 or 3350. S–U or letter grades by permission of instructor. Lec. M. B. Smolka and A. W. Grimson.
Comprehensive course in molecular biology that covers the structure and properties of DNA, RNA replication and repair, synthesis and processing of RNA, and the enzymes that catalyze these reactions. Prerequisites: BIOMG 3320, or permission of instructor. Students may enroll either for letter grade or S–U. Evening prelims Mar. 8 and Apr. 21. V. M. Vogt.
Survey of a wide array of topics focusing on the general properties of eukaryotic cells. Topics include methods used for studying cells, the structure and function of the major cellular organelles, and analyses of cellular processes such as mitosis, endocytosis, cell motility, secretion, cell-to-cell communication, gene expression, and oncogenesis. Some of the material is covered in greater depth in BIOMG 4370, BIOMG 4830, BIOMG 6360, and 6390.

BIOMG 3330 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology (also BIOL 3330)
Summer, six-week session. 4 credits. Prerequisites: one majors-level biology course and one year general chemistry, and CHEM 1570, or 3570–3580, or equivalents, or permission of instructor. S–U or letter grades; graduate students may enroll for credit after BIOMG 3330, 3310, 3320, or 3350. J. E. Blankenship, P. C. Hinkle, Y. Mao, and staff.

Visualizations of complex biomolecules using computer graphics techniques. Group presentations on current topics in molecular biology.

BIOMG 3350 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology (also BIOL 3350)
Spring, 4 credits. Prerequisites: one majors-level biology course and one year general chemistry, and CHEM 1570, or 3570–3580, or equivalents, or permission of instructor. CHEM 3580 may be taken concurrently, or Corequisite: BIOMG 3300.
J. E. Blankenship, P. C. Hinkle, Y. Mao, and staff.
Comprehensive introduction to biologically important molecules and polymers. Topics include protein structure and function, enzyme catalysis, metabolic regulatory pathways, DNA and RNA structure, DNA replication and repair, gene expression, protein synthesis, and modern DNA technologies. This is a summer session taught in a lecture format.

BIOMG 3340 Computer Graphics and Molecular Seminars
Fall or spring. 1 credit. Prerequisite: BIOMG 3330, 3350, 3310/3320 (BIOMG 3530 may be taken concurrently), or Corequisite: BIOMG 3300.
J. E. Blankenship, P. C. Hinkle, Y. Mao, and staff.

Visualization of complex biomolecules using computer graphics techniques. Group presentations on current topics in molecular biology.

BIOMG 3370 Developmental Biology
Fall. 3 credits. Prerequisite: BIOMG 2810. Lec. K. Liu.
Introduction to the morphogenetic, molecular, and cellular, and genetic aspects of the developmental biology of animals.

BIOMG 4000 A Genomics Approach to Studying Life
Fall. 3 credits. Prerequisites: two majors-level biology courses and BIOMG 2810 or 3300, or 3330 or 3350 or 3310/3320 or permission of instructor. S–U or letter grades. Lec. J. C. Schimenti.
Introduction to principles underlying the organization of genomes and the methods of studying them, emphasizing genome-wide approaches to research. Covers the application of genomics methodologies for addressing issues including gene regulation, evolution, complex systems, genetics, and gene–phenotype relationships. Landmark and timely genomics papers and other research developments will be discussed. Basic bioinformatics tools will be incorporated.

BIOMG 3380 Computation in the Life Sciences
Spring. 1 credit. Prerequisites: BIOMG 2810 or BIOMG 3200. Lec. Undergraduate students must enroll in this course for a letter grade; graduate students may enroll either for letter grade or S–U. Evening prelims Mar. 8 and Apr. 21. V. M. Vogt.

BIOMG 4340 Applications of Molecular Biology to Medicine, Agriculture, and Industry
Fall. 3 credits. Prerequisites: BIOMG 3300 or 3330 or 3350 or 3310 or 3320 or permission of instructor. BIOMG 4520. Letter grades. Lec. S. Ely.
Locate topics emphasize transgenic animal and plant systems that constitute marketed or near-market applications such as production of pharmaceuticals in milk, edible and nucleic acid vaccines, gene therapy, and high-tech agricultural products. Additional topics may include cancer treatments and relevant aspects of the human genome projects. An overview of human immunology and its relationship to drug development will be provided. Students will also explore relevant scientific literature.
BIOMG 4350 Undergraduate Biochemistry Seminar
Fall or spring. 1 credit; may be repeated. Prerequisites: upper-class standing; BIOMG 3500, or 3330, or 3350 or 3510/3520, or written permission of instructor. S–U grades only. D. Wilson.
Selected papers from the literature on a given topic are evaluated critically during 12 one-hour meetings.

BIOMG 4370 Regulation of Cell Proliferation, Senescence, and Death
(Fall and Spring) Fall. Variable credit; students may take for 2 credits or lec and disc for 3 credits. Limited to about 20 students per disc; priority given to graduate students. Prerequisite: two majors-level biology courses and BIOMG 3300, or 3330, or 3350, or 3310/3320. Recommended: BIOMG 2810 and BIOMG 4320. S–U or letter grades: S-L. Coverage of a wide spectrum of issues related to cell proliferation in eukaryotes. Lectures include various aspects of the regulation of cell division cycle and signal transduction pathways, with additional topics on oncogenesis, cell aging, and cell death. A discussion section covers primary literature in related areas.

BIOMG 4380 The RNA World
Spring. 3 credits. Prerequisites: BIOMG 3300, or 3330, or 3350, or 3310/3320 or permission of instructor. A. Ke.
Part of the excitement about "the RNA world" stems from the recognition that RNA is ancient and that the evolution of life as we know it depended upon RNA evolving both informational and catalytic capabilities. This course explores these ideas but more generally provides a comprehensive introduction to RNA biology. Many of the most interesting topics in the RNA biology, such as the mechanism of the RNA interference and its widespread applications, will be covered in detail. Other topics require consideration of essential RNA-protein complexes such as ribosomes, spliceosomes, telomerase, and signal recognition particles. Classical experiments as well as up-to-date research are covered in this course. A portion of each class is devoted to discussion and questions.

BIOMG 4400 Laboratory in Biochemistry and Molecular Biology
Fall, spring, or summer (six-week session). 4 credits. Limited enrollment. Priority given to undergraduate biology majors in Biochemistry or Molecular and Cell Biology programs of study and to graduate students with minor in field of biochemistry. Prerequisites: BIOMG 3300, or 3330, or 3350, or 3310/3320 (at least one of 3310/3320 completed but one may be taken concurrently). S. Ely and H. Nivison. Experiments related to molecular biology (includes PCR, DNA cloning, hybridization analysis, restriction mapping, and DNA sequence analysis), protein purification and analysis (salt fractionation, ion exchange chromatography, affinity chromatography, SDS-PAGE, and immunoblotting), and determination of enzyme kinetic parameters.

BIOMG 4430 Experimental Molecular Neurobiology (also BIOMB 4300)
For description, see BIONB 4500.

BIOMG 4450 Stem Cell Biology: Basic Science and Clinical Applications
Spring. 3 credits. Limited to 40 students. Prerequisites: BIOMG 4320 or BIOMG 3850 or permission of instructor. S–U grades by permission of instructor. Lec, disc. T. Tumbar. This course will cover basic aspects of tissue morphogenesis and homeostasis with emphasis on the biological role of embryonic and adult stem cells in development, and their possible clinical applications. The focus will be placed on mouse and human stem cells. The discussion will be structured around relevant research papers that allow more in-depth analysis of the material taught during lectures.

BIOMG 4500 Principles of Chemical Biology (also CHEM 4500)
Fall. 3 credits. Prerequisites: CHEM 3570–3580 or 3590–3600 or equivalent. Staff. For description, see CHEM 4500.

BIOMG 4510 Structural Chemical Biology (also CHEM 4510)
Spring. 3 credits. Prerequisites: CHEM 2880 and 3580 or equivalent. S. Ealick. For description, see CHEM 4510.

BIOMG 4610 Development and Evolution
Spring. 3 credits. Prerequisites: BIOEE 1780, BIOMG 2810, BIOMG 3300, or 3330, or 3320, or 3350. Recommended: BIOMG 3850. Lec. Offered alternate years. M. F. Wolfner. This course explores the molecular and genetic pathways and mechanisms that regulate animal development, and how they are modified through evolution to result in the dazzling array of forms and functions seen in the animal kingdom.

BIOMG 4710 Insect Development (also ENTOM 4710)
Fall. 3 credits. Prerequisites: BIOMG 1350 or ENTOM 2120 or permission of instructor. D. Knipple. For description, see ENTOM 4710.

BIOMG 4810 Population Genetics
Fall. 4 credits. Prerequisite: BIOMG 2810, BIOEE 1780, or equivalents. Lec, disc. C. F. Aquadro. Population genetics is the study of the transmission of genetic variation through time and space. This course explores how to quantify this variation, what the distribution of variation tells us about the structure of natural populations, and about the processes that lead to evolution. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and fitness, genetic drift, migration and population structure, mutation, multilocus models, the genetics of speciation, quantitative traits, and the maintenance of molecular variation. Emphasis is placed on DNA sequence variation and the interplay between theory and the data from experiments and natural populations. Specific case studies include the population genetic issues involved in DNA fingerprinting, personalized medicine, the genetic structure and evolution of natural and domesticated populations, and the study of adaptation at the molecular level. Examples are drawn from studies of animals, plants, and microbes.

BIOMG 4825 Molecular Biology of Plant Organelles (also BIOPL 4825)
Spring. 1 credit. Prerequisites: BIOP 4831 or BIOMG 2810 and permission of instructor. S–U or letter grades. Offered alternate years. M. R. Hanson and D. B. Stern. For description, see BIOP 4825.

BIOMG 4831 Concepts and Techniques in Plant Molecular Biology (also BIOP/PLPA/LBRR 4831)
Fall. 3 credits. Prerequisites: BIOMG 2810 and BIOMG 3300, or 3350, or 3320. Recommended: BIOMG 3310. Lec. Letter grades: S–U by permission of instructor. M. Scanlon, M. Hanson, and T. Owens. For description, see BIOP 4831.

BIOMG 4834 Molecular Aspects of Plant Development Networks and Signaling (also BIOPL 4834)
Fall. 1 credit. 12 lec. Offered alternate years. J. B. Nasrallah. For description, see BIOP 4834.

BIOMG 4840 Molecular Evolution
Spring. 3 credits. Prerequisite: BIOMG 2810. Lec. D. A. Barbash. Explores the various processes by which DNA and protein sequences evolve over time, and how this evolution at the molecular level relates to changes in the morphology, behavior, and physiology of organisms that have occurred over time scales ranging from thousands to billions of years. After developing basic principles the course discusses the evolution and organization of genomes from microbes to higher eukaryotes, including humans, and the relationship between molecular evolution at the sequence level and the evolution of developmental pathways and systems.

BIOMG 4850 Bacterial Genetics (also BIOGI 4850)
Fall. 2 or 3 credits; optional 1 credit for registered students with permission of instructor to review literature. Prerequisite: BIOMG 2810. Recommended: BIOMG 2900 and BIOMG 3500, or 3330 or 3350 or 3310/3320. J. E. Petersen. For description, see BIOM 4850.

BIOMG 4870 Eukaryotic Genetics
Spring. 4 credits. Enrollment may be limited to 50 students. Prerequisites: BIOMG 2810, BIOMG 3300 or 3330 or 3350 or 3310/3320. S–U or letter grades. E. Alani. Develops fundamental skills in eukaryotic genetic analysis through lectures and by reading, analyzing, and presenting research articles. Concepts are presented within the context of a well-studied field, such as chromosome segregation. The basic tools that have been developed to study this field are used to analyze other topics such as vegetative and meiotic cell cycle control, embryonic development, pathogen resistance in plants, and human genetics.

BIOMG 4870 Human Genomics
Fall. 5 credits. Prerequisite: BIOMG 2810. Lec. A. G. Clark. Applies fundamental concepts of transmission, population, and molecular genetics to the problem of determining the degree to which familial clustering of diseases in humans has a genetic basis. Emphasizes the role of full genome knowledge in expediting this process of gene discovery. Stresses the role of statistical inference in interpreting genomic
information. Population genetics, and the central role of understanding variation in the human genome in mediating variation in disease risk, are explored in depth. Methods such as human genetics, linkage disequilibrium mapping, and admixture mapping are examined. The format is a series of lectures with classroom discussion. Assignments include a series of problem sets and a term paper.

[Biologic 4890 Mammalian Embryology (also Bioap/Bioms 4890)]
Spring. 3 credits. Prerequisite: introductory biology. Offered alternate years. D. M. Noden.
Examines the early formation of the mammalian body and placenta, emphasizing comparative aspects, and morphogenesis and histogenesis of each organ system.

Biologic 4900 Manipulating the Mouse Genome (also NS 4900)
Fall. 1 credit. Course meets during first half of semester and provides background information for VTMBS 7010/TOX 7010 Mouse Pathology and Transgenesis, which meets during second half. Students interested in both courses must register for them separately. Prerequisites: Biologic 2810 and 3300, or 3320, or 3350, or NS 3280. Letter grades only. P. D. Soloway.
Functional genomic analysis has benefited enormously from experimental manipulation of the genomes of many organisms. The mouse has been the model of choice for such studies in mammals. This course explores the tools available for experimental manipulation of the mouse genome, including transgenesis, gene targeting, gene trapping, chemical mutagenesis, and cloning by nuclear transplant. Also discussed are uses of recombinant inbred mice for complex trait analysis. Readings from the scientific literature focus on seminal applications of these methods.

Biologic 4980 Teaching Experience
Fall or spring. 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility but not eligibility for graduating with distinction. S–U or letter grades. S–U or letter grades. Lec. W. J. Brown.
Recommended: Biologic 2810 or 3300 or 3320 or 3350 or 3310/3320 or equivalent. Offered alternate years; next offered 2011–2012. P. E. Cohen.

Biologic 6100 Genomes as Chromosomes
Fall. 3 credits. Limited to 15 students. Prerequisites: Biologic 2810 and 3300 or 3350 or 3310/3320 or equivalent by permission of instructor. Letter grades only. Offered alternate years; next offered 2011–2012. P. E. Cohen.

Biologic 6120 Overview of Model Genetic Organisms
Spring, 2nd 6 weeks of semester. 1 credit. Limited to 20 students. Prerequisites: Biologic 2810 or 4000 or permission of instructor. S–U or letter grades. Offered alternate years. J. Schimenti and staff.
Provides an overview of the evolutionary history of organisms used in genetics. Emphasis is on current methods and techniques used in the study of genetics. The course is primarily applicable to teaching, but may also provide a foundation for research training.

Biologic 6200 Evolutionary Genomics of Bacteria
Spring. 1 credit. M. Stanhope.
Comparative genomics of bacteria is a valuable approach to deriving information on pathogenesis, antibiotic resistance, host adaptation, and genome evolution. This course provides an evolutionary perspective on comparative bacterial genomics, focusing in particular on pathogens of human and agricultural importance. The course will include lectures, discussion of relevant scientific literature, and a bioinformatics session.

Biologic 6310 Protein Structure, Dynamics, and Function
Fall. 3 credits. Prerequisites: Biologic 3300, or 3350, or 3310/3320 and organic chemistry. Recommended: physical chemistry course. S–U or letter grades. Lec. L. Nicholson.
Presentations on the basic principles of protein structure, dynamics, and function. Specific topics include protein stability, dynamics, evolution, molecular recognition, basic enzyme kinetics, and spectroscopic tools for studying proteins.

Biologic 6330 Biosynthesis of Macromolecules
Fall. 2 credits. Prerequisites: Biologic 3300, or 3350, or 3310/3320. Recommended: Biologic 2810. Lec. J. W. Roberts and D. B. Wilson.
Synthesis of DNA, RNA, and proteins, and regulation of gene expression.

Biologic 6360 Functional Organization of Eukaryotic Cells
Spring. 3 credits. Prerequisites: Biologic 3300, or 3350, or 3310/3320, and 4320, or equivalents. Lec. W. J. Brown.
Aims to provide an integrated view of eukaryotic cell organization as elucidated using biochemical, molecular, genetic, and cell biological approaches. Major topics include the cytoskeleton, membrane traffic, and cell polarity. Together with Biologic 4370 and 6390, this course provides broad coverage of the cell biology subject area.
BIOMG 7800 Current Topics in Genetics and Development
Fall and spring. 1 credit; may be repeated for credit. Limited to 20 students. Primarily for graduate students; priority given to majors in field of genetics. Prerequisite: for undergraduates, written permission of instructor. No auditors. S–U grades only. Staff.

BIOMG 7810 Problems in Genetics and Development
Fall. 2 credits. Prerequisite: first-year graduate students in field of genetics and development. Disc TBA. Staff. Introduction to the research literature in selected areas through weekly problem sets and discussions.

BIOMG 7860 Research Seminar in Genetics and Development
Fall and spring. 1 credit. Requirement for, and limited to second-year and beyond graduate students in genetics and development. S–U grades only. Staff. Each graduate student presents one seminar per year based on his or her thesis research. The student then meets with the thesis committee members for an evaluation of the presentation.

BIOMG 7870 Seminar in Genetics and Development
Fall and spring. 1 credit. Prerequisite: graduate students in Genetics and Development. S–U grades only. Sem, TBA. Staff. Seminars in current research in genetics and developmental biology conducted by distinguished visitors and staff.

BIOMG 7940 Current Topics in Biochemistry (BIOMG 7940)
Fall or spring. 0.5 or 1 credit for each topic; may be repeated for credit. Prerequisite: BIOMG 3300, or 3330, or 3350, or 3310/3320 or equivalent. S–U grades only. Lectures and seminars on topics of current interest. Topics for fall and spring to be announced in the course and time roster published at the beginning of each semester or the department mini-courses website, www.mbg.cornell.edu/cals/mbg/about/courses/mini-courses.cfm.

BIOMG 8300 Biochemistry Seminar
Fall or spring. 0 credits. Prerequisite: graduate students majoring in field of biochemistry, molecular and cell Biology. Lect open to everyone. V. Vogt. Lectures on current research in biochemistry, presented by distinguished visitors and staff members.

BIOMG 8310 Advanced Biochemical Methods I
Fall. 6 credits. Requirement for, and limited to, first-year graduate students in field of biochemistry, molecular and cell biology. S–U grades only. Lab and disc. Organizational meeting first F of semester 10:10. A. W. Grimson and J. A. Pleiss. The first half of this course comprises an intensive laboratory covering fundamental aspects of modern molecular biology and cell biology. The second half comprises research in the laboratory of a professor chosen by the student (see BIOMG 8320). Students must enroll separately for each half.

BIOMG 8320 Advanced Biochemical Methods II
Spring. 6 credits. Requirement for, and limited to, first-year graduate students in field of biochemistry, molecular and cell biology. S–U grades only. Lab. V. M. Vogt and staff. Research in the laboratories of two different professors chosen by the student. Arrangements are made jointly between the director of graduate studies and the research advisor.

BIOMG 8330 Research Seminar in Biochemistry
Fall or spring. 1 credit each semester; may be repeated for credit. Requirement for, and limited to, second-, third-, and fourth-year graduate students majoring in field of biochemistry, molecular and cell biology. S–U grades only. V. M. Vogt. Each student presents one seminar per year on his or her thesis research and then meets with instructors and thesis committee members for evaluation.

BIOMG 8340 Quantitative Biology for Molecular Biology and Genetics
Spring. 2 credits. Prerequisite: first-year Ph.D. students in the graduate fields of biochemistry, molecular and cell biology, or genetics and development, all others with permission of instructor. Letter grades only. Lec. J. A. Pleiss and D. I. Shaloway. Focuses on mathematical and statistical tools needed to analyze experimental data in molecular biology and genetics using examples from the literature. Provides a foundation for individual study of the quantitative techniques needed in individual research programs.

BIOMG 8370 Problems in Biochemistry, Molecular, and Cell Biology
Fall. 2 credits. Prerequisite: first-semester Ph.D. students in graduate field of biochemistry, molecular and cell biology. Letter grades. M. B. Smolka. Introduction to the research literature in selected areas through weekly problem sets and discussion.

BIOMG 8380 Scientific Communication and Quantitation in Biochemistry, Molecular and Cell Biology (BMCB)
Spring. 1 credit. Prerequisite: second-year graduate students majoring in field of biochemistry, molecular and cell biology; all others with permission of instructor. S–U grades only. D. I. Shaloway. An interactive seminar to develop scientific writing (grant proposals and papers) and speaking (research talks) skills needed to support a career in scientific research. Students will begin the preparation of a mock postdoctoral research grant proposal.

BIOMI 1120 Microbes, the Earth, and Everything (also CSS 1120)
Fall. 3 credits. D. Buckley and E. Angert. For description, see CSS 1120.

BIOMI 1250 Biology Seminar
Fall and spring. 1–2 credits. Prerequisite: none. S–U grades only. Staff. A first-year seminar designed for students with a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

BIOMI 1720 Bioscientific Terminology (also CLASS 1692)
Summer and winter. 3 credits. Letter grades only. For description, see CLASS 1692.
BIOMI 2500 Microbial Oceanography
Spring. 3 credits. Prerequisites: one of the following: BIOEE/BIOG 1610, 1780 or EAS 1540. Letter grades only. I. Hewson. Provides sophomore- and junior-level students exposure to the role of marine microorganisms in ocean function. Students will gain an appreciation for the diversity of marine microorganisms, their broad physiology, and how it relates to ecosystem function. Will also cover diseases of marine organisms and human pathogenic microorganisms in the ocean.

BIOMI 2900 General Microbiology
Lectures
Fall, spring, or summer (six-week session). 3 credits. Prerequisites: two semesters majors-level biology and two semesters college-level chemistry, or equivalent. Highly recommended: concurrent registration in BIOMI 2910. W. C. Ghirose. Comprehensive overview of the biology of microorganisms, with emphasis on bacteria. Topics include microbial cell structure and function, physiology, metabolism, genetics, diversity, and ecology. Also covers applied aspects of microbiology such as biotechnology, the role of microorganisms in environmental processes, and medical microbiology. 4-credit option involves one discussion per week led by faculty in the Department of Microbiology and will involve readings and a writing assignment. Students may not pre-register for 4-credit option: Interested students complete an application form on first day of class (enrollment will be limited to 20 students).

BIOMI 2910 General Microbiology
Laboratory
Summer (six-week session). 2 credits. Pre- or corequisite: BIOMI 2900. S. M. Merkel. Study of the basic principles and techniques of laboratory practice in microbiology, and fundamentals necessary for further work in the subject.

BIOMI 2911 General Microbiology
Laboratory
Fall or spring. 2 credits. Pre- or corequisite: BIOMI 2900. S. M. Merkel. Study of the basic principles and techniques of laboratory practice in microbiology, and fundamentals necessary for further work in the subject.

BIOMI 2920 General Microbiology
Discussion
Spring. 1 credit. Pre- or corequisite: BIOMI 2900. S–U grades only. Staff. Series of discussion groups in specialized areas of microbiology to complement BIOMI 2900.

BIOMI 3080 Field Microbial Ecology (also BIOSM 3080)
Summer. 4 credits. For description, see BIOSM 3080.

BIOMI 3210 The Normal Microbes of the Human Body in Health and Disease
Spring. 3 credits. Prerequisites: BIOMI 2900 or permission of instructor. Letter grades only. R. Levy. The human body is coated with microbes outnumbering “our own” cells 10 to 1, providing us with capacities we have not had to endure to the crucial role of this course will introduce the microbes of the human body, discuss their origins, adaptations to the body, molecular interactions, and associations with health and disease.

BIOMI 3310 General Parasitology (also BIOMS 3310)
Spring. 2 credits. Prerequisites: zoology or biology course; any of the following: BIOE 1610, 1780, 2640, 2670, 2740; NS 2750; BIOMG 1300, 1500, BIOI 1100, 1610, 1780 or one semester college-level biology or majors-level biology, or equivalent courses. Letter grades only. D. B. Bowman. For description, see BIOMS 3310.

BIOMI 3500 Marine Microbiology
Spring. 3 credits. Prerequisites: BIOEE/BIOG 1610, 1780, or EAS 1540. Letter grades only. I. Hewson. BIOMI 3500 will provide marine microbiological background to students interested in pursuing graduate-degree levels in the ocean sciences. Students enrolled in BIOMI 3500 will take the lecture component of BIOMI 2500 (Microbial Oceanography) but will complete additional assignments at the advanced level (NSF proposal, literature review paper, and in-class seminar).

BIOMI 3910 Advanced Microbiology Laboratory
Fall. 3 credits. Prerequisites: BIOMI 2900, 2910, or 2911 and BIOMG 3300, 3310, 3330, or 3350. Priority given to biological sciences students in microbiology program of study. E. R. Angert, J. P. Shapleigh, and S. H. Zinder. An introduction to advanced experimental methods in microbiology. Students will gain experience with a variety of cutting-edge technologies used to characterize genetic, physiological, and structural aspects of microbes. These skills will be utilized during the isolation and characterization of bacteria isolated from diverse habitats as well as during isolation of mutants of an environmental isolate.

BIOMI 3940 Applied and Food Microbiology (also FDSC 3940)
Fall. 3 credits. Prerequisites: BIOMI 2900–2910. C. A. Batt. For description, see FDSC 3940.

[BIOMI 3970 Environmental Microbiology: Evolutionary Microbiology, Microbial Ecology (also CSS 3970)]
Spring. 3 credits. Prerequisites: BIOM 2900. Recommended: BIOEE/BIOG 1610, NTR 3630, or permission of instructor. Offered alternate even-numbered years; next offered 2011–2012. E. L. Maden. Discusses the functional role and evolution of microorganisms in ecologically and environmentally significant processes in relation to past and present environmental conditions on Earth.

[BIOMI 4040 Pathogenic Bacteriology (also BIOMS 4040)]
Spring. 2 or 3 credits; 3 credits with lec and sem. Letter grades only. D. Debbie. The normal microbes of the human body in health and disease. Spring. 3 credits. Prerequisites: two semesters majors-level biology or equivalent or permission of instructor. Letter grades only. R. Levy. The human body is coated with microbes outnumbering “our own” cells 10 to 1, providing us with capacities we have not had to endure to the crucial role of this course will introduce the microbes of the human body, discuss their origins, adaptations to the body, molecular interactions, and associations with health and disease.

BIOMI 4090 Principles of Virology (also BIOMS/PLPA 4090)
Fall. 3 credits. Prerequisites: BIOM 2900, 2910, or 2911 or permission of instructor. Recommended: BIOMG 3300–3320, or BIOMG 3330, 3530, or 3550. Offered alternate odd-numbered years. S. H. Zinder. Consideration of the evolutionary biology, physiology, ecology, genetics, and practical potential of important groups of prokaryotes. Topics include prokaryotic phylogeny, the evolution of diverse mechanisms of energy conservation, fixation of carbon and nitrogen, and adaptation to extreme environments.

BIOMI 4140 Prokaryotic Diversity
Spring. 3 credits. Prerequisites: BIOM 2900 and 2910 or 2911 and BIOMG 3300, 3310, 3330, or 3350 or equivalents. Offered alternate even-numbered years; next offered 2011–2012. J. P. Shapleigh. Course will cover the basic structures and metabolic processes common to most bacteria. Emphasis will be on structural organization of bacteria and understanding physiological adaptations to different growth conditions.

BIOMI 4200 Microbial Genomics
Spring. 2 credits. Prerequisites: BIOMI 2900, BIOMG 2810, BIOMG 3300, 3310, 3330, or 3350 or equivalents. Offered alternate odd-numbered years. J. Peters and J. D. Helmann. Genomic information is revolutionizing biology. This course discusses the impact of genomic information on the study of microbial physiology, evolution, and biotechnology. Topics include both techniques (automated DNA sequencing, assembly, annotation, DNA chips) and applications (genome-wide analysis of transcription, functional genomics).

BIOMI 4310 Medical Parasitology (also BIOMS 4310)
Fall. 2 credits. Prerequisites: zoology or biology course; any of the following: BIOE 1610, 1780, 2070, 2630, 2640, 2670, 2740; NS 2750; BIOMI 2900, 3970; EAS 1700; BIOG 1105, 1106, 1680, 1780, or one semester college-level biology or majors-level biology or equivalent course. Letter grades only. D. B. Bowman. For description, see BIOMS 4310.

BIOMI 4480 Symbiotic Associations: Evolution and Ecology (also PLPA 4480)
Spring. 3 credits. Prerequisites: two semesters majors-level biology or equivalent or permission of instructor. Letter grades only. T. E. Pawlowska. For description, see PLPA 4480.

[BIOMI 4823 Molecular Plant-Microbe Interactions (also BIOI/PLPA 4823)]
Spring. 1 credit. Prerequisites: BIOMI 2810, BIOMG 3300, 3310, 3330, or 3350, and BIOP 4830 or equivalents. S–U or letter grades. Offered alternate even years; next offered 2011–2012. S. C. Winans. For description, see BIOP 4823.

<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIOMI 4850</td>
<td>Bacterial Genetics (also BIOMG 4850)</td>
<td>Fall. 2 or 3 credits; optional 1 credit for registered students with permission of instructor.</td>
</tr>
<tr>
<td>BIOMI 4980</td>
<td>Teaching Experience</td>
<td>Fall or spring. 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course.</td>
</tr>
<tr>
<td>BIOMI 5901</td>
<td>Prokaryotic Biology: Microbial Structure and Function</td>
<td>Fall, 4 weeks/8 lec. 1 credit. J. P. Shapleigh. Discusses those macromolecules and assemblages of macromolecules that together define the structure of the prokaryotic cell. This includes external structures, such as cell wall, flagella, pili, and peptidoglycan and internal structures such as specialized vesicles and other large complexes.</td>
</tr>
<tr>
<td>BIOMI 6080</td>
<td>Genomics of Bacterium-Host Interactions (also PLPA 6080)</td>
<td>Fall, second half of semester. 1 credit. Prerequisites: BIOMI 2000 or equivalent or permission of instructor. S–U or letter grades. Offered alternate even years. A. Collmer and S. Winans. For description, see PLPA 6080.</td>
</tr>
<tr>
<td>BIOMI 6100</td>
<td>Introduction to Chemical and Environmental Toxicology (also TOX 6100)</td>
<td>Fall. 3 credits. Prerequisite: graduate standing in field or permission of instructor. Letter grades. Offered alternate even years. A. Hay. Introduction to the general principles of toxicology including the sources, mechanisms, and targets of toxic agents. Gives special attention to the interaction between toxic agents and biological systems at both the organismal and ecological level. The effects of both anthropogenic and natural toxins are examined with respect to genetic and developmental toxicity as well as carcinogenesis and specific organ toxicity.</td>
</tr>
<tr>
<td>BIOMI 6430</td>
<td>Veterinary Perspectives on Pathogen Control in Animal Manure (also VTMED/BEE 6430)</td>
<td>Spring, eight weeks. 2 credits. Prerequisite: third- and fourth-year veterinary students. Letter grades only. D. D. Bowman. For description, see VTMED 6430.</td>
</tr>
<tr>
<td>BIOMI 6901</td>
<td>Prokaryotic Biology: Microbial Structure and Function</td>
<td>Fall, 4 weeks/8 lec. 1 credit. J. P. Shapleigh. Discusses those macromolecules and assemblages of macromolecules that together define the structure of the prokaryotic cell. This includes external structures, such as cell wall, flagella, pili, and peptidoglycan and internal structures such as specialized vesicles and other large complexes.</td>
</tr>
<tr>
<td>BIOMI 6903</td>
<td>Prokaryotic Biology: Microbial Physiology/Diversity</td>
<td>Fall, 4 weeks/8 lec. 1 credit. S. H. Zinder. Reviews the major energy-conserving modes of metabolism and their phylogenetic distributions among both bacteria and archaea. Topics include phylogenetic analysis, fermentation, respiration, photosynthesis, pathways of carbon and nitrogen fixation, and evolution of the three domains of life.</td>
</tr>
<tr>
<td>BIOMI 6904</td>
<td>Prokaryotic Biology: Microbial Pathogenesis</td>
<td>Spring, 4 weeks/8 lec. 1 credit. J. D. Helmann. Reviews the fundamental concepts of microbial genetics including mutations and their analysis, plasmids, conjugation, transformation, transduction, transposition, recombination, repair, and mutagenesis.</td>
</tr>
<tr>
<td>BIOMI 6905</td>
<td>Prokaryotic Biology: Microbial Pathogenesis</td>
<td>Spring, 4 weeks/8 lec. 1 credit. S. C. Winans. Introduction to the fundamental concepts of bacterial pathogenesis including the normal flora, pathogen entry and colonization, the production and regulation of toxins, horizontal transfer of pathogenesis determinants, and the roles of both specific and nonspecific host defenses. Examples include bacterial pathogens of both animals and plants.</td>
</tr>
<tr>
<td>BIOMI 6906</td>
<td>Prokaryotic Biology: Viral Diversity and Ecology</td>
<td>Spring, 4 weeks/8 lec. 1 credit. I. Hewson. This course is intended to give graduate students an introduction to virology in an environmental setting. It will provide an overview of viral biology and lifestyles, infection kinetics, and then provide an appreciation for different types of viruses including uncultivated viruses recovered through metagenomics.</td>
</tr>
<tr>
<td>BIOMI 6990</td>
<td>Toxicology Journal Club Section 601—Environmental Toxicology (TOX 6990)</td>
<td>Spring. 1 credit. Required for toxicology students until post A exam. A. G. Hay.</td>
</tr>
<tr>
<td>BIOMI 7250</td>
<td>Mechanisms of Microbial Pathogenesis (also VETMI 7250)</td>
<td>Spring. 3 credits. Prerequisites: for undergraduates, written permission of instructor; BIOMI 4040, 4090, or equivalent. Highly recommended: completion of two of the three courses. D. Debbie, M. Hesse, H. Marquis, J. Parker, M. Scidmore, and G. Whittaker. For description, see VETMI 7250.</td>
</tr>
<tr>
<td>BIOMI 7910</td>
<td>Advanced Topics in Microbiology</td>
<td>Fall or spring. 1 credit. May be repeated for credit. Prerequisite: graduate standing in microbiology. S–U grades only. E. R. Appert. Reading and presentation by graduate students of current literature in selected areas of modern microbiology.</td>
</tr>
<tr>
<td>BIOMI 7960</td>
<td>Current Topics in Microbiology</td>
<td>Fall and spring. 0.5 or 1 credit for each topic. May be repeated for credit. Primarily for graduate students in microbiology. Prerequisite: upper-level courses in microbiology. S–U grades only. Lec. Staff. Lectures and seminars on special topics in microbiology.</td>
</tr>
<tr>
<td>BIOMI 7970</td>
<td>Scientific Communication Skills</td>
<td>Fall and spring. 1 credit each semester. Requirement for graduate students in graduate field of microbiology for first two semesters; third semester optional. S–U grades only. Staff. The ability to communicate effectively is essential for success as a scientist. The primary goal of this course is to provide students with an opportunity to develop self-confidence and refine their formal oral presentation skills. Students are asked to present topical seminars that are critically evaluated by the instructor. Feedback for improving the presentation and peer evaluations are emphasized.</td>
</tr>
<tr>
<td>BIOMI 7980</td>
<td>Graduate Research Seminar in Microbiology</td>
<td>Fall and spring. 1 credit each semester. Requirement for graduate students in graduate field of microbiology. S–U grades only. Staff. All graduate students in the field of microbiology are required to attend and present a seminar concerning their research at least once each year.</td>
</tr>
<tr>
<td>BIOMI 7990</td>
<td>Microbiology Seminar</td>
<td>Fall and spring. Requirement for all graduate students in graduate field of microbiology. Open to all who are interested. Staff.</td>
</tr>

**Limnology:** Ecology of Lakes, Lectures (BIOEE 4570)

**Magical Mushrooms, Mischievous Molds** (FLPA 210)

**Microbiology for Environmental Engineering** (CEE 4510)

**Plant Virology** (FLPA 6450)

**Principles of Biochemistry** (BIOEE 6680)

**MEDICAL SCIENCE (BIOMS)**

**BIOMS 2140 The Biological Basis of Sex Differences** (also BSOC 2141, BIOAP/FGSS 2140)
Fall. 3 credits. Prerequisite: one college-level biology course or permission of instructor. S–U or letter grades. Offered alternate years. J. E. Fortune.
For description, see BIOAP 2140.

**BIOMS 3110 Introductory Animal Physiology** (also BIOAP 3110, VTBMS 3460)
Fall. 3 credits. Prerequisites: BIOM 1500 Investigative Biology Laboratory and BIOG 1440 Comparative Physiology; or one year of college biology; one year chemistry and mathematics or equivalent AP credit. Recommended: previous or concurrent physics course. S–U or letter grades by permission of instructor. Evening prelims. E. R. Loew.
For description, see BIOAP 3110.

**BIOMS 3150 Basic Immunology**
Fall. 3 credits. Prerequisites: BIOM 1350 Principles of Cell and Developmental Biology or BIOM 3300 or 3510 and 3520 or 3550. Letter grades only. D. D. Bowman.
Survey of immunology, with emphasis on the cellular and molecular bases of the immune response.

**BIOMS 3160 Cellular Physiology** (also BIOAP 3160)
Spring. 3 credits. Pre- or corequisite: BIOMG 1350 Principles of Cell and Developmental Biology or BIOM 3300 or 3510 and 3520 or 3550. Letter grades only. E. R. Loew, N. A. Lorr, and staff.
For description, see BIOAP 3160.

**BIOMS 3190 Animal Physiology Experimentation** (also BIOAP 3190)
Fall. 4 credits. Pre- or corequisite: BIOMG 3110. Spring. 2 credits. Pre- or corequisite: BIOMG 3110. For pre-med, pre-vet juniors and seniors, and graduate students interested in biomedical science. Letter grades only.
E. R. Loew, N. A. Lorr, and staff.
For description, see BIOAP 3190.

**BIOMS 3310 General Parasitology** (also BIOM 3310)
Spring. 2 credits. Prerequisites: zoology or biology course; any of the following: BIOE 1610, 1780, 2640, 2670, 2740; NS 2750; EAS 1700; BIOM 2900, BIOG 1106, or one semester college-level biology or majors-level biology, or equivalent courses. Letter grades only. D. D. Bowman.
This course is an introduction to the basic animal parasites, stressing systematics, taxonomy, general biology, ecological interactions, and behavior of non-medically important groups. Introduces the major animal parasite groups: protozoan, nematode, platyhelminth, acanthocephalan, annelid, and arthropod.

**BIOMS 3350 Wildlife Parasitology**
Summer. 2 credits. Prerequisites: one semester college-level biology or majors-level biology, or equivalent. Letter grades only. D. D. Bowman and A. Lucia-Foster.
Parasites of wildlife, mainly of more studied hosts. Emphasis on morphology, biology, diversity, and effects on host and environment. Examples of parasites of invertebrates, fish, amphibia, reptiles, birds, and mammals. Objective is an appreciation of the diversity of parasites and to introduce the impact that these parasites have on biology.

**BIOMS 4040 Pathogenic Bacteriology** (also BIOMI 4040)
Spring. 2 or 3 credits; 3 credits with lec and sem. Seminar required for graduate students. Maximum enrollment for seminar portion 11. Prerequisites: BIOM 2900 and 2910. Letter grades only. D. P. Debiec.
Course in medical microbiology, presenting the major groups of bacterial pathogens important to human and veterinary medicine. Emphasizes infection and disease pathogenesis. Topics include disease causality; interactions of host, pathogen, and environment, including immunity to bacteria; and principles of antimicrobial therapy and drug resistance. A companion seminar addresses the current and classic literature related to microbial pathophysiology on the cellular and molecular levels.

**BIOMS 4090 Principles of Virology** (also BIOMI/PLPA 4090)
Fall. 3 credits. Prerequisites: BIOM 2900 and 2910 or permission of instructor. Recommended: BIOM 3300–3320, 3420, L. Lazarowitz, N. Osterrieder, and J. Parker.
Covers the principles of virology, focusing mainly on animal viruses but also including plant viruses and bacteriophage. Topics include the classification of viruses, virus entry, genome replication and assembly, and virus pathogenesis. Particular emphasis is placed on virus-host cell interactions and common features between different viral families.

**BIOMS 4130 Histology: The Biology of the Tissues** (also BIOAP 4130)
Spring. 4 credits. Prerequisite: BIOMG 1350 Principles of Cell and Developmental Biology. Recommended: BIOM 3300 or 3510, or equivalent AP credit. S. Suarez and L. Mizer.
For description, see BIOAP 4130.

**BIOMS 4160 Cell Physiology and Genomics Laboratory** (also BIOAP 4160)
Spring. 4 credits. Limited to 24 students. Pre- or corequisite: BIOAP 3160 or BIOM 4320 or permission of instructor or BIOMG 1350. Letter grades only. H.–H. Chuang, N. A. Lorr, and staff.
For description, see BIOAP 4160.

**BIOMS 4310 Medical Parasitology** (also BIOMI 4310)
Fall. 2 credits. Prerequisites: zoology or biology course; any of the following: BIOE 1610, 1780, 2640, 2670, 2740, 2750, EAS 1700; BIOM 2900, BIOG 1106, or one semester college-level biology or majors-level biology, or equivalent course. Letter grades only. D. D. Bowman.
Syllabus includes protozoan, helminth parasites of public health importance, with emphasis on epidemiologic, clinical, and zoonotic aspects of these parasites.

**BIOMS 4550 Mammalian Physiology** (also BIOAP 4580)
Spring. 3 credits. Auditors allowed. Prerequisite: BIOAP 3110 or BIOG 1440 Comparative Physiology, with permission of instructor. Recommended for biological sciences majors, pre-med and pre-vet students, and beginning graduate students in physiology, nutrition, and animal science. Letter grades only. Evening prelims. K. W. Beyenbach.
For description, see BIOAP 4580.

**BIOMS 4750 Mechanisms Underlying Mammalian Developmental Defects** (also BIOAP/NS 4750)
Spring. 3 credits. Prerequisites: BIOG 3500, 3510 or 3520, or 3550 (may be taken concurrently). S–U or letter grades. Offered alternate years; next offered 2011–2012. D. Noden and P. Stover.
For description, see BIOAP 4750.

**BIOMS 4890 Mammalian Embryology** (also BIOAP/BIOMG 4890)
For description, see BIOAP 4890.

**BIOMS 6110 Genome Maintenance Mechanisms**
Fall. 1 credit. Prerequisite: BIOM 2810, as well as BIOM 3500, or 3510, or 3530, or 3550, or 3410 or letter grades R. Weiss.
This course focuses on the molecular mechanisms for preserving genomic integrity in eukaryotes. Topics discussed include sources of mutation, DNA repair, and cell cycle checkpoints. Also addressed is how genome maintenance impacts genome plasticity and evolution, as well as the relationship between genomic instability and disease, including cancer.

**BIOMS 7050 Advanced Immunology** (also VETMI 7050)
Spring. 3 credits. Prerequisite: basic immunology course or permission of instructor. Letter grades only. Offered even-numbered years; next offered 2011–2012. C. Leifer and staff.
For description, see VETMI 7050.

**BIOMS 7190 Immunology of Infectious Diseases** (also VETMI 7190)
Spring. 2 credits. Prerequisite: basic immunology course or permission of instructor. S–U or letter grades. Offered odd-numbered years. M. Bynoe and staff.
For description, see VETMI 7190.

**NEUROBIOLOGY AND BEHAVIOR (BIONB)**

**BIONB 1110 Brain Mind and Behavior** (also PSYCH/COGST 1110)
Spring. 3 credits. Prerequisite: none.
Intended for freshmen and sophomores in humanities and social sciences; not open to juniors and seniors. Not recommended for psychology majors; biology majors may not use for credit toward major. Letter grades only. Planned M W F 9:05.
E. Adkins-Regan and R. R. Hoy.
For description, see COGST 1110.
General introduction to the field of cellular and integrative neurobiology. Topics include neural systems, neuroanatomy, developmental neurobiology, electrical properties of nerve cells, synaptic mechanisms, neurochemistry, motor systems, sensory systems, learning, and memory. Some discussion sections include dissections of preserved brains.

[BIONB 3220 Hormones and Behavior (also PSYCH 3220/7220)]
Fall. 3 credits. Limited to 60 students. Prerequisites: junior or senior standing; any one of the following: PSYCH 2220 or BIONB 2210 or 2220 or two majors-level biology courses plus psychology course. Two lec plus sec in which students read and discuss original papers in the field, give oral presentation, and write term paper. Letter grades only. Graduate students, see PSYCH 7220. Planned M W F 11:15. E. Adkins-Regan.
For description, see PSYCH 3220.

[BIONB 3230 Methods in Animal Behavior]
Hands-on lab/field course in methods for studying animal behavior. Topics include sound recording, videography radio-tracking, mapping, capture/marking methods, and behavioral statistics.

[BIONB 3240 Biopsychology Laboratory (also PSYCH 3240)]
Fall. 4 credits. Limited to 20 students. Prerequisites: junior or senior standing; PSYCH 2220 or BIONB 2210 or 2220, and permission of instructor. Planned T R 1:25–4:25. Letter grades only. T. J. DeVooogd.
For description, see PSYCH 3240.

[BIONB 3250 Insect Behavior (also ENTOM 3250)]
For description, see ENTOM 3250.

[BIONB 3260 Biopsychology of Learning and Memory (also PSYCH 3320/6320)]
Spring. 3 credits. Limited to 65 students. Prerequisites: two majors-level biology courses and either a biopsychology course or BIONB 2210. S–U or letter grades. Graduate students, see PSYCH 6320. Planned M W F 11:15. T. J. DeVooogd.
For description, see PSYCH 3320.

[BIONB 3290 Ecology of Animal Behavior (also BIOSM 3290)]
Summer. 4 credits. Limited to 18 students. Prerequisite: two semesters of college-level biology or equivalent. Previous experience in psychology, animal behavior, or ecology also recommended but not essential. S–U or letter grades. Special two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. For more details and an application, contact SML office, 1407 Harriets Hall. Daily 12:30, lab, and fieldwork for two weeks. Next offered summer 2010. Staff and faculty, oh. For description, see BIOSM 3290.

[BIONB 3300 Introduction to Computational Neuroscience (also PSYCH/COGST/BME 3300)]
Fall. 3 or 4 credits; 4 credits includes lab providing additional computer simulation exercises. Prerequisites: programming experience and permission of instructor. S–U or letter grades. Offered alternate years. Planned M W 2:55–4:10, lab TBA. C. Linster.
Covers the basic ideas and techniques involved in computational neuroscience. Surveys diverse topics, including neural dynamics of small networks of cells, neural coding, learning in neural networks and in brain structures, memory models of the hippocampus, sensory coding, and others.

[BIONB 3400 Animal Orientation and Navigation]
Spring. 2 credits. Pre- or corequisite: BIONB 2210 and BIONB 2220 or permission of instructor. S–U or letter grades. Planned: T R 9:05. Offered alternate years; next offered 2011–2012. K. Adler.
In-depth coverage of the topic, including sensory cues and receptors, physiological basis, ecological context, and evolutionary aspects, with emphasis on current research.

[BIONB 3690 Chemical Ecology (also BIOEE/ENTOM 3690)]
Spring. 3 credits. Prerequisites: one majors-level biology course and one semester introductory chemistry for majors or nonmajors or equivalents, or permission of instructor. S–U or letter grades. Planned M W F 11:15. J. Thaler, A. Kessler, A. Agrawal, and R. Ruguso.
For description, see BIOEE 3690.

[BIONB 3920 Drugs and the Brain]
Fall. 4 credits. Limited to 90 students. Prerequisites: BIONB 2220 or equivalent course in neurobiology by permission of instructor. S–U or letter grades. Planned T R 10:10–11:25; disc TBA. Offered alternate years; next offered 2011–2012. R. M. Harris-Warrick.
Introduces to neuropharmacology, emphasis on neural mechanisms of psychoactive drugs, including cocaine, heroin, psychedelics, marijuana, alcohol, and drugs for psychiatric treatment.

[BIONB 3960 Introduction to Sensory Systems (also PSYCH 3960/6960)]
Spring. 4 credits. Limited to 25 students. Prerequisites: two majors-level biology courses or biopsychology, plus second course in behavior, biopsychology, cognitive science, neuroscience, or perception; knowledge of elementary physics, chemistry, and behavior. S–U or letter grades. Planned T R 10:10–11:25. Offered alternate years; next offered 2011–2012. B. P. Halpern.
For description, see PSYCH 3960.

[BIONB 4130 Molecules of Social Behavior and Emotion]
The broad topic is molecular, neural, and endocrine mechanisms underlying emotions and motivations, behavioral choices and predispositions, and social drives.

BIONB 4200 Topics in Neurobiology and Behavior
Fall and spring. Variable credit; may be repeated for credit. Primarily for undergraduates. S–U or letter grades. Staff. Prerequisite: selected topics in neurobiology and behavior; can include lecture and seminar courses. See department office (W363 Mudd Hall) for offerings.

BIONB 4210 Effects of Aging on Sensory and Perceptual Systems (also PSYCH 4310/6310)
Fall. 3 or 4 credits; 4-credit option involves term paper or creation of relevant web site. Limited to 35 students. Prerequisites: one majors-level biology course or psychology; second course in perception, neuroscience, cognitive science, or biopsychology. S–U or letter grades. Planned T R 10:10–11:25. B. P. Halpern.

For description, see PSYCH 4310.

BIONB 4220 Modeling Behavioral Evolution
Fall. 4 credits. Limited to 25 students. Prerequisites: BIONB 2210, one year calculus, course in probability or statistics, and permission of instructor; advanced undergraduates and graduate students. S–U or letter grades. Planned T R 2:45–4:10, computer lab TBA. Offered alternate years; next offered 2011–2012. H. K. Reeve.

BIONB 4230 Cognitive Neuroscience
(also PSYCH 4250/6250)
Fall. 4 credits. Limited to 20 students. Prerequisites: two majors-level biology courses or biopsychology or neurobiology (e.g., PSYCH 2230 or BIONB 2210); and introductory course in perception, cognition, or language (PSYCH 1200, 2090, 2140, or 2160, or equivalent). S–U or letter grades. Graduate students, see PSYCH 6250. Planned M W 10:05–11:15, 11:30–12:45. Lab TBA. Offered alternate years; next offered 2011–2012. K. Shaw.

BIONB 4240 Neuroethology (also PSYCH 4240)
Fall. 4 credits. Limited to 25 students. Prerequisites: BIONB 2220 or equivalent with permission of instructor. S–U or letter grades. Offered alternate years; next offered 2011–2012. D. G. Hopkins.

A comparative approach to the study of neural circuits involved in animal behavior: echolocation, sound localization, communication and signal recognition, bird song, central pattern generators, command neurons, and other topics.

BIONB 4250 Molecular Neurophysiology
Fall. 3 credits. Prerequisite: BIONB 2220 or permission of instructor. S–U or letter grades. Planned T R 2:55–4:10. Offered alternate years; next offered 2011–2012. D. P. McCabe.

Structure/function of ion channels responsible for electrical signals, in e.g., learning/memory, sensing heat and classmates, epilepsy, and directional plant growth.

BIONB 4260 Animal Communication
Spring. 4 credits. Limited to 50 students. Prerequisite: BIONB 2210. Letter grades only. Planned T R 2:55–4:10, disc TBA. Offered alternate years; next offered 2011–2012. Staff.

How and why do animals communicate (topics include signal evolution, environmental effects on communication, cooperation vs conflict signals, signal honesty, interspecific communication.)

BIONB 4270 Darwinian Medicine
Fall. 4 credits. Limited to 50 students. Prerequisites: BIONB 2210 and BIOEE 2610 or 2780, and permission of instructor. Letter grades only. Planned T R 2:30–4:25. Offered alternate years. P. W. Sherman.

Writing-intensive advanced course for upper-division students interested in Darwinian Medicine. Lectures, discussions, and student presentations examine topics including adaptation, intra-genomic conflict, evolution of infectious diseases, virulence, sexuality, neuroendocrinology, stress, diet and disease, allergy, fever, morning sickness, lactose intolerance, depression and other mental illnesses, cancer, menopause, and senescence.

BIONB 4280 Clinical Neurobiology
Fall. 3 credits. Limited to 20 students. Prerequisites: BIONB courses from BIONB 2220, BIOMG 3500 or 3510; co-registration in one of the two is acceptable by permission of instructor. Open to advanced undergraduates. S–U or letter grades. Planned M W 2:40–4:25. Offered alternate years. R. Booker.

The goal of this course is to provide students with an appreciation of the current challenges facing researchers studying neurodiseases. The focus is on the etiology, epidemiology, cellular and molecular basis, and strategies for treating of a number of neurodiseases, including but not limited to Alzheimer's disease, Parkinson's disease, neural ischemia, depression, ADHD, eating disorders, and AIDS-related dementia. The course provides a health context that enriches the student's learning experience in other advanced courses in the biological sciences. Guest speakers include faculty from across the Ithaca campus and the Weill College of Medicine, Departments of Neurology and Neuroscience.

BIONB 4290 Offaction and Taste: Structure and Function (also PSYCH 4290)
Spring. 3 or 4 credits; 4-credit option requires term paper. Priority given to junior and senior psychology and biology majors and graduate students. Graduate students, see PSYCH 6290. Prerequisite: one 3000-level course in biopsychology or equivalent. S–U or letter grades. Planned T R 10:10–11:25. Offered alternate years; next offered 2011–2012. B. P. Halpern.

For description, see PSYCH 4290.

BIONB 4300 Experimental Molecular Neurobiology
Spring. 4 credits. Limited to 12 students. Prerequisites: BIOMG 3500 or 3510. Recommended: BIOMG 2810. Letter grades only. Lab T (for times see www.nbb.cornell.edu/bionb430.shtml). Offered alternate years.

Experiments include PCR, cloning of DNA fragments, RNA purification, restriction digest, bacterial transformation, DNA sequencing, and protein interactions. Experiments emphasize how molecular techniques can be applied to studying neurobiological problems.

BIONB 4310 Genes and Behavior

Genes influence how we behave. Explores current understanding of how genes influence the behavior of a variety of animals, including humans.

BIONB 4320 Genetics and Evolution of Behavior

K. Shaw.

The astounding diversity of animal behaviors provides an endless source of fascination. This multidisciplinary course examines our current understanding of the evolution of such behaviors, focusing on how and why behaviors evolve.

BIONB 4330 Consciousness and Free Will (also COGST 4310, PSYCH 4310)

For description, see COGST 4310.

BIONB 4340 Advanced Behavioral Ecology
Spring. 8 weeks. 3 credits. Limited to 20 students. Prerequisites: BIONB 2210, BIOEE 1610 or 1780, permission of instructor. S–U or letter grades. Planned M W F 12:20–2:15. Offered alternate years; next offered 2012–2013. T. D. Seeley.

An intensive course for upper-division students interested in behavioral ecology and sociobiology. Lectures, discussions, and student presentations examine topics including adaptation, communication, mating systems, sexual selection, sex ratios, inbreeding and outbreeding, altruism, kin recognition, and conflict and cooperation in animal societies.

BIONB 4350 Mechanisms of Animal Behavior

Examination of the mechanisms underlying the adaptive behaviors of animals as revealed by whole-organism studies.

BIONB 4440 Neural Computation (also PSYCH 4440)
Spring. 3 credits. Limited to 10 students. Prerequisites: PSYCH 2280 or BIONB 2220 required or permission of instructor. Recommended: BIOMG 3800 or equivalent experience. S–U or letter grades. Planned T R 2:30–4:20, lab R 3:35–4:25. Offered alternate years; next offered 2011–2012. T. A. Cleland.

For description, see PSYCH 4440.

BIONB 4460 Plant Behavior—Induced Plant Responses to Biotic and Abiotic Stresses, Lectures (also BIOEE 4460)

For description, see BIOEE 4460.
[BIONB 4461 Plant Behavior—Induced Plant Responses to Biotic Stresses, Laboratory (also BIOEE 4461)
Spring. 1 credit. Limited to 12 students.
For description, see BIOEE 4461.]

[BIONB 4700 Biophysical Methods (also AEP/VETMM 4700)
For description, see AEP 4700.]

[BIONB 4910 Principles of Neurophysiology (also BME 4910)
Spring. 4 credits. Limited to 20 students.
Prerequisite: BIONB 2220 or written permission of instructor. S–U or letter grades for students outside Neurobiology and Behavior concentration and graduate students, by permission of instructor.
Planned M W 10:10; lab planned M or T 12:20–4:25. B. R. Johnson.
Laboratory-oriented course designed to teach the theory and techniques of cellular neurophysiology including computer acquisition and analysis of laboratory results. Extracellular and intracellular recording and voltage clamp techniques explore motor neuron and sensory receptor firing properties, and examine the cellular basis for resting and action potentials and synaptic transmission. Lecture time is used to introduce laboratory exercises and discuss results, to supplement laboratory topics, and to discuss primary research papers. Invertebrate preparations are used as model systems. See http://courses.cit.cornell.edu/bionb691/index.html.

[BIONB 4920 Sensory Function (also PSYCH 4920/6920)
Spring. 4 credits. Limited to 25 students.
Prerequisite: 3000-level course in biopsychology, or BIONB 2220, or BIOAP 3110, or equivalent; knowledge of elementary physics, chemistry, and behavior. S–U or letter grades. Graduate students, see PSYCH 6920. Planned M W F 10:10. Offered alternate years; next offered 2012–2013. B. P. Halpern.
For description, see PSYCH 4920.]

[BIONB 4930 Developmental Neurobiology
Fall. 3 credits. Limited to 20 students.
Prerequisite: BIONB 2220 or permission of instructor. S–U or letter grades by permission of instructor. Planned M W 2:55–4:10. Offered alternate years; next offered 2011–2012. R. Booker.
Focuses on both the morphological and molecular basis of neurodevelopment. Assigned readings are taken from original journal and review articles.]

[BIONB 4950 Molecular and Genetic Approaches to Neurosciences
Fall. 3 credits. Limited to 25 students.
Prerequisites: junior, senior, or graduate standing; BIONB 2220 and BIOMG 3300 or 3520. Letter grades only. Planned T R 2:55–4:10. Offered alternate years; next offered 2011–2012. D. L. Detrich.
Focuses on how molecular and genetic approaches have led to major advances in neuroscience. Lectures, student presentations, and discussions examine research articles.]

[BIONB 4960 Bioacoustic Signals in Animals and Man
Fall. 3 credits. Limited to 12 students.
Prerequisites: junior, senior, or graduate standing; two majors-level biology courses, PHYS 1101–1102 or 2207–2208, and permission of instructor. S–U or letter grades. Planned M W 9:05; lab R 3–5. Offered alternate years; next offered 2011–2012. C. W. Clark and R. R. Hoy.
Teaches students about animal acoustic signaling by introducing them to various animal acoustic systems.]

[BIONB 4970 The Brain—Its Evolution and Development
Fall. 3 credits. Limited to 50 students.
Intended for juniors, seniors, and graduate students. Prerequisite: BIONB 2220 or equivalent. S–U or letter grades. Offered alternate years. Next offered 2012–2013. A. H. Bass.
How does the brain evolve? One of the fastest-growing areas of study in neuroscience is the evolution of development mechanisms and the diversity of brain organization in vertebrates. This lecture course will consider the evolutionary and developmental origins (“evo-devo”) of vertebrate brains from phylogenetic, molecular, anatomical, physiological, and behavioral perspectives. Topics include the evo-devo of brain regions such as the cerebral hemispheres and brainstem; sensory systems ranging from olfaction to vision and hearing; motor systems for posture, locomotion and speech; and mechanisms of social and plasticity.]

[BIONB 4980 Teaching Experience
Fall and spring. 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean’s List eligibility but not eligibility for graduating with distinction. S–U or letter grades by permission of instructor. Staff.
Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

[BIONB 6702 Special Topics in Behavioral Ecology (also NTRES 6702)
Fall. 1–3 credits (number of credits assigned is based on number of contact hours and reading required to address the topic and material selected each year. All students in a given semester receive same number of credits). Limited to 16 students.
Prerequisite: BIONB 2220 or equivalent. Graduate students welcome; undergraduates admitted with special permission of instructors. S–U grades. Day/time: TBA. J. L. Dickinson and W. D. Koenig.
An advanced graduate seminar designed to examine selected topics in behavioral ecology in depth. Topics change each year and address a critical sub-field or cross-disciplinary area of investigation. Examples of topics include: Evolution of behavioral syndromes (2008), Evolution of empathy and intersubjectivity (2009), and Evolution of social networks in animal societies (2010). Students are responsible for creating a presentation based on an extensive reading list related to the main topic, and for leading subsequent discussion by the entire group that week. In weeks they are not presenting, students are responsible for a limited subset of the readings and active participation in discussion.

[BIONB 7000 Introduction to Programming in Neurobiology and Behavior
Spring. 4 credits. Limited to 10 students.
Prerequisite: permission of instructor. S–U grades only. Planned M,T,W,R,F 9 a.m.–1 p.m. Offered alternate years. C. Linster.
Lab course offering an introduction to programming in Matlab with a focus on neurobiology and behavior. Modeling, data acquisition, signal processing and data analysis.

[BIONB 7200 Advanced Topics in Neurobiology and Behavior
Fall and spring. Variable credit; may be repeated for credit. Prerequisite: graduate standing or permission of instructor. S–U or letter grades. Staff.
Designed to provide several study groups each semester on specialized topics. A group may meet for whatever period is judged adequate to enable coverage of the selected topics. Ordinarily, topics are selected and circulated during the preceding semester. Discussion of current literature is encouraged. See department office (W363 Mudd Hall) for offerings.

[BIONB 7201 Research Design in the Study of Animal Social Behavior
Fall and spring. 1 credit; may be repeated for credit. Graduate students only. S–U grades only. Staff.
A weekly journal club–style discussion. Graduate students may be expected to present a summary of their research or a summary of research in the literature related to their thesis once per year.

[BIONB 7202 Current Topics in Neuroethology
Fall and spring. 1 credit; may be repeated for credit. Graduate students only. S–U grades only. Staff.
A weekly journal club–style discussion. Graduate students may be expected to present a summary of their research or a summary of research in the literature related to their thesis once per year.

[BIONB 7203 Research Design in Cellular and Molecular Neurobiology
Fall and spring. 1 credit; may be repeated for credit. Graduate students only. S–U grades only. Staff.
A weekly journal club–style discussion. Graduate students may be expected to present a summary of their research or a summary of research in the literature related to their thesis once per year.

[BIONB 7210 Introductory Graduate Survey in Neurobiology and Behavior
Fall and spring. 2 credits. Requirement for graduate students majoring in neurobiology and behavior. Concurrent registration in BIONB 2210 and 2220.

For description, see BIONB 7210.

For course offerings, see http://courses.cit.cornell.edu/bionb/index.html.

For current course offerings and schedules, see the department office (W363 Mudd Hall) or http://courses.cit.cornell.edu/bionb/index.html.
required. S–U grades only. Planned W 4:30–6:00. J. R. Fetcho and staff. A yearlong, grade-level seminar with presentations from lecturers in BIONB 2210 and 2220. Discussions of current research in the area of neurobiology or behavior that have been recently presented in the lecture class. A lab project and/or a writing component each week could be assigned to ensure engagement with the material.

Shoals Marine Laboratory Program
Spider Biology: Life on a Silken Thread (ENTOM 2150)

PLANT BIOLOGY (BIOPL)

BIOPL 1120 Issues in Social Biology: from Diet to Diseases, DNA to Deforestation
Spring or summer, 3-week session. 3 credits. S–U or letter grades. P. J. Davies. An analysis of current issues of biological relevance and the biological science behind these issues. Topics will include issues such as food and nutrition, antioxidants, organic produce, disease prevention, athletic enhancers, genetic testing, cancer, stem cells and animal cloning, genetically modified crops, bacteria and antibiotics, viruses, risk, statistics and epidemiology, photosynthesis and global warming, extinction and overpopulation, invasive species, resource over-utilization. The topics will vary according to current issues.

BIOPL 1250 Biology Seminar
Fall and spring. 1–2 credits. Prerequisite: none. S–U grades only. Staff. A first-year seminar designed for students with a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

BIOPL 2210 Natural Remedies in Ethnohealth
Fall. 2 credits. Prerequisites: course work in biology and sociology and health or related area, or permission of instructor. E. Rodriguez.

This course is an introduction to two aspects of ethnomedicine/ethnohealth: (1) the study of biology of health disparities like diabetes, cancer, and infectious diseases in Latinos/as, African Americans and American Indians in the United States, (2) and the botany, culture, and medical antecedent history of plants and other natural remedies used by ancient cultures in the Americas and also currently used throughout the United States and the Americas.

BIOPL 2300 Global Plant Biodiversity and Vegetations
Fall. 3 credits without field trip, 5 credits with field trip. K. Nixon. Plants are distributed across the globe in distinctive vegetation types. Intended for students with minimal or no plant science background. Discusses factors determining vegetation structure, plant diversity, biodiversity hotspots, plant adaptations, human-plant interactions and climate change. An optional field trip to Latin America provides hands-on study of vegetation.

BIOPL 2400 Green World/Blue Planet (CA)
Fall or summer, 6-week session. 3 credits. S–U or letter grades. Lec. and disc. T. Silva. Focuses on helping individuals understand how scientific information relates to the issues they face as citizens, in management decision making, and in public policy. To what extent should genetic engineering of crop plants be permitted? Should we place limits on fossil fuel consumption as a means of limiting global warming and global climate change? Must human endeavors be restricted in certain areas to maintain diversity? The format of this course is interactive, with lectures and discussions about how we as a society deal with controversial issues.

BIOPL 2410 Introductory Botany and Evolution
Fall. 3 credits. Lec. lab. K. J. Niklas. Introduction to plant diversity, ecology, structure, reproduction, and evolution, with an emphasis on the flowering plants and the history of life on earth. Laboratory and lectures are integrated to provide hands-on skills and concepts. First and second weeks of laboratory are field trips, starting with the first full week of classes.

BIOPL 2420 Plant Function and Growth Lectures
Spring. 3 credits. Primarily for undergraduates in agricultural sciences but also for any biological sciences students wanting to know about plant function; suitable as second-level course for nonmajors to satisfy biology distribution requirement. Prerequisites: two majors-level biology courses and/or BIOPL 2410. Corequisite for plant science undergraduates (and highly recommended for other science majors): BIOPL 2421. Recommended: one year introductory chemistry. May not be taken for credit after BIOPL 3420 except by written permission of instructor. S–U or letter grades. Lec. T. Silva. How plants function and grow. Examples deal with crop plants or other plants where possible, though not exclusively. Topics include cell structure and function; plant metabolism, including photosynthesis; light relations in crops; plant-water relations; water uptake; transport, and transpiration; irrigation of crops; sugar transport; mineral nutrition; growth and development—hormones, responses to light, flowering, fruiting, dormancy, and abscission; stress; tissue culture; and genetic engineering of plants.

BIOPL 2421 Plant Function and Growth, Laboratory
Spring. 2 credits. Limited to 14 students per sec. Corequisite: BIOPL 2420. May not be taken for credit after BIOPL 3420. Disc and lab. Students must take lab and disc on same day. T. Silva. Experiments exemplify concepts covered in BIOPL 2420 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level.

BIOPL 2430 Taxonomy of Cultivated Plants (also NURT 2430)
Fall. 4 credits. Prerequisite: two majors-level biology courses. May not be taken for credit after BIOPL 2480. Lec. lab. Offered alternate years. M. A. Luckow. Study of crops and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

BIOPL 2450 Plant Biology
Summer, six-week session. 5 credits. Limited to 24 students. Lec. lab. T. Silva. Introductory botany, including plant identification. Emphasizes structure, reproduction, and classification of flowering plants. Much of the laboratory work is conducted outdoors taking advantage of several outstanding natural areas available for study. Those who lack college-level biology are expected to work closely with the instructor on supplemental instructional materials.

BIOPL 2470 Plants and People

BIOPL 2480 Vascular Plant Systematics
Spring. 4 credits. P. J. Davies. Preparatory course in biology or botany or permission of instructor. May not be taken for credit after BIOPL 2480. S–U or letter grades. Lec. lab. Offered alternate years; next offered 2011–2012. P. J. Davies. Introduction to the classification of vascular plants, with attention to the goals of taxonomy; the processes of plant evolution, and the means of analyzing evolutionary relationships among plants. The laboratory presents an overview of vascular plant diversity, with particular attention to the flowering plants.

BIOPL 2490 Hollywood Biology: Science in Cinema
Spring. 3 credits. Lec. Letter grades. M. Scantlon. Biological subjects presented in Hollywood films. Lecture topics include the scientific method, Darwinism, development, paleobiology, animal cloning, genome sequencing, forensic DNA, artificial intelligence, eugenics, and epidemiology as background to discussions of their presentation in selected films. Themes: Genetics/Genomics; Evolution; Development; Epidemiology; Physical Anthropology; and Genetic Engineering. Does not fulfill any requirement of the biology major.
BIOL 3420 Plant Physiology, Lectures
Spring. 3 credits. Prerequisites: two majors-level biology courses. Corequisites: BIOL 3421 or written permission of instructor. May not be taken for credit after BIOL 2440. Similar to BIOL 2440 but at more advanced level. Lab, rec. T. Silva. Experiments exemplify concepts covered in BIOL 3420 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level, with emphasis on experimental design.

BIOL 3421 Plant Physiology, Laboratory
Spring. 2 credits. Corequisites: BIOL 3420. May not be taken for credit after BIOL 2440. Similar to BIOL 2440 but at more advanced level. Lab, disc. T. Silva. Experiments exemplify concepts covered in BIOL 3420 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level, with emphasis on experimental design.

BIOL 3430 Molecular Biology and Geening of Plants
Spring. 2 credits. Prerequisite: one year general biology or permission of instructor. S–U or letter grades. Lec. M. E. Nasrallah. Introduction to current studies involving recombinant DNA technology and its application to the improvement of plants. Emphasizes genetic transformation methodology, gene expression systems, and strategies for increasing productivity. The course is directed toward undergraduates who wish to become familiar with the theory and practice of plant biotechnology.

BIOL 3431 Laboratory in Molecular Biology and Genetic Engineering of Plants
Spring. 2 credits. Limited to 24 students. Prerequisite: BIOL 3430 or permission of instructor. Recommended: concurrent enrollment in BIOL 3430. S–U or letter grades. Lab. M. E. Nasrallah. Companion to BIOL 3430 with laboratory activities that focus on the practice of plant biotechnology. Students transfer genes to plants by a variety of methods and analyze their expression in the host genome by use of reporter gene assays and by the preparation and analysis of nucleic acids.

BIOL 3450 Plant Anatomy
Fall. 4 credits. Limited to 15 students. Prerequisite: introductory course in biology or botany or permission of instructor. May not be taken for credit after BIOL 3470. Lec. Lab. Offered alternate years. A. Gandolfo. Descriptive course with equal emphasis on development and mature structure. Lecture, laboratory, and reading are integrated in a study guide. The laboratory offers the opportunity to develop the practical skills required to make anatomical diagnoses and to write anatomical descriptions.

BIOL 3470 Anatomy of Plant Model Organisms
Fall. 3 credits. Prerequisite: introductory course in biology or botany, or permission of instructor. May not be taken for credit after BIOL 3450. Lec. Lab. Offered alternate years; next offered 2011–2012. A. Gandolfo. The anatomy of plant model organisms is examined. Three main subjects are covered: general plant anatomy, plant structure in phylogenetic framework, and the structure and anatomy of selected plant model organisms (including C3 and C4 grasses and key dicots, including Arabidopsis and Solanum). Additional taxa will be discussed.

BIOL 3530 The Healing Forest
Spring. 2 credits. Prerequisite: one majors-level biology course or plant biology or permission of instructor. Lec/disc. Offered alternate years. Staff.

BIOL 3590 Biology of Grasses
Spring 2 credits. Prerequisite: two majors-level biology courses or course in plant systematics or permission of instructor. S–U or letter grades. Lec. Lab. Offered alternate years. J. J. Davis. Systematics and related aspects of the biology of the graminoid plant families (grasses, sedges, and rushes), with the principal emphasis on grasses. Major topics include phylogenetics, taxonomy, physiology, reproductive biology, speciation, and biogeography. The roles of graminoid plants in natural and human-disturbed environments are discussed, as are the origins of cultivated species.

BIOL 3800 Strategies and Methods in Drug Discovery
Spring. 2 credits. Prerequisite: two majors-level biology courses or organic chemistry course or permission of instructor. S–U or letter grades. M. A. Arellun. Covers strategies and methodologies in chemotaxonomy, chemical ecology, and ethnobotany. May be used in chemical prospecting for new pharmaceuticals. Discusses the biosynthesis and distribution of plant secondary metabolites, the use of techniques in isolation and structure elucidation of natural products, and biological assays in the discovery of chemicals with pharmacological activity.

BIOL 4010 Introduction to Scanning Electron Microscopy

BIOL 4030 Transmission Electron Microscopy for Biologists

BIOL 4220 Plant Development
Fall. 2 credits. Lec. Prerequisites: course work in molecular biology (e.g., BIOMG 3500, 3510/3520, or 3530), and genetics (e.g., BIOMG 2810), or permission of instructor. S–U or letter grades. J. Hua. Introduction to plant development, studying the mechanisms of morphogenesis and cell fate determination at the organismal, cellular, and molecular levels.

BIOL 4400 Phylogenetic Systematics
Fall. 3 credits. Limited to 24 students. Prerequisite: one majors-level biology course or permission of instructor. Lec, lab. Offered alternate years. K. C. Nixon. Basic and advanced theory and methods of phylogenetic analysis. Introduces students to cladistic analysis using parsimony and gain experience with computer-aided analysis of taxonomic data, including both morphological and molecular data sources. Topics include applications of phylogenetic methods to biogeography and evolutionary studies.

BIOL 4420 Current Topics in Ethnobiology
Fall. 2 credits. Limited to 12 students. Prerequisite: permission of instructor. S–U or letter grades. Lec/disc. Offered alternate years. Staff.

BIOL 4430 Topics and Research Methods in Systematics
Fall or spring. 1–2 credits, 1 credit per sec. Prerequisite: written permission of instructor. S–U or letter grades. K. C. Nixon. Series of 1-credit modules on specialized topics in systematics. Topics and instructors vary each semester. May not be taken every semester. Topics and instructors are listed in the division’s catalog supplement issued at the beginning of the semester.

BIOL 4440 Plant Cell Biology
Fall. 4 credits. Limited to 24 students. Prerequisites: two majors-level biology courses or permission of instructor. Lec, lab. R. O. Wayne. Uses evidence from microscopy, physiology, biochemistry, and molecular biology to try to unravel the mystery of the living cell. Studies the dynamics of protoplasts, membranes, and the various organelles. The mechanisms of cell growth and division, the relationship of the cytoskeleton to cell shape and motility, the interaction of the cell with its environment, and the processes that give rise to multicellular differentiated plants are investigated.

BIOL 4450 History of Systematic Botany
Fall. 3 credits. S–U or letter grades. Lec. Offered alternate years; next offered 2011–2012. J. Reveal. An historical overview from early man to the present day of systematic botany concentrating on nomenclature and classification with an emphasis of botanical explorations and their impact on plant taxonomy.

BIOL 4470 Molecular Systematics
Fall. 3 credits. Prerequisites: BIOL 1780 or BIOMG 2810 or BIOMG 3500, or BIOMG 3320, or written permission of instructor. Lec. Offered alternate years; next offered 2011–2012. J. J. Doyle. Theory and practice of using molecular evidence, particularly DNA sequence data, for addressing diverse systematic and evolutionary questions. Emphasis is on phylogeny reconstruction, particularly in eukaryotic systems. The organization and evolution of nuclear and organelar genomes is described from the standpoint of their suitability for systematic and evolutionary studies.

BIOL 4480 Plant Evolution and the Fossil Record
Spring. 3 credits. Prerequisite: BIOL 2410 or equivalent, or permission of instructor. Lec. Lab. Offered alternate years. K. J. Niklas and W. L. Crepet. Introduction to evolution, surveying major changes in plants from the origin of life to the present. Emphasizes plant form and function, adaptations to particular habitats and niches, and evolutionary theory as it relates to plants.
BIOL 4500 Light and Video Microscopy for Biologists
Fall. 3 credits. Limited to 12 students. Prerequisites: two majors-level biology courses and permission of instructor. Lab. O. W. White.

Students learn the relationship between reality and the image using philosophy, mathematics, and physical theory. Next they apply these tools theoretically and in practice to understand and become expert at image formation and analysis using brightfield, darkfield, phase-contract, fluorescence, polarization, interference, differential interference, and modulation contrast microscopes. They build upon our knowledge and experience to understand how analog image processors and digital image processors can influence, enhance, and analyze the images gathered by the microscope. Last they learn about many other kinds of microscopes, including confocal, near field, x-ray, acoustic, nuclear magnetic resonance, infrared, centrifuge, atomic force, and scanning tunneling microscopes.

BIOL 4520 Systematics of Tropical Plants
Fall. 3 credits. Prerequisites: BIOL 2430 or 2480. Letter grades only; Lab. Offered every three years. K. C. Nixon.
The families of plants encountered solely or chiefly in tropical regions are considered in a phylogenetic context. In lectures, discussions, and laboratory, with the aim of providing basic points of recognition for, and an understanding of, diversity and relationships in these families.

BIOL 4521 Systematics of Tropical Plants: Field Laboratory
Spring. 1 credit. Limited to 15 students. Prerequisite: BIOL 4520 or permission of instructor. Letter grades only. For more details and application, contact L. H. Bailey Hortorium, 412 Mann Library. Offered every three years. K. C. Nixon.

Intensive orientation to families of tropical flowering plants represented in forests of the American Tropics. Emphasis is on field identification combined with laboratory analysis of available materials in a “whole-ecosystem” context. Two-week field trip over winter break.

BIOL 4520 Plant Biochemistry
Spring. 3 credits. Prerequisites: BIOL 2420 or 3420 or equivalent and BIOMG 3300 or 3310 or equivalent or permission of instructor. Letter grades only. Lect. J. Rose and K. Van Wijk.

Focuses on biochemistry of plant specific processes, with the aim to obtain an integrative overview of plant biochemistry. Examples include processes such as cell wall biochemistry, photosynthesis and degradation, secondary metabolism, senescence, defense mechanisms, amino acid biosynthesis, and small molecule transport. Genomics-based experimental tools such as proteomics and metabolomics are discussed.

BIOL 4821–4822 Molecular Plant Pathogen Interactions I and II (also PLPA 4821–4822)
Spring, 12 lecs. 1 credit. Prerequisites: BIOMG 2810 and BIOMG 3300 or 3310, and BIOL 4800 or A. R. Gollmer and B. G. Turgeon (odd years); S. G. Lazarowitz and G. B. Martin (even years).

Examines the molecular and cellular factors that control pathogen-plant interactions from the perspectives of pathogen biology and plant responses to pathogen infection. Alternate years will focus on (1) plant perception of microbial pathogens and the interplay of plant defenses and pathogen counterstrategies that result in resistance or susceptibility to disease production, with topics including extracellular RNA interference, dominant and recessive resistance, induction of pathogen defense genes, apoptotic responses that limit infection and RNA interference, genetic and molecular mechanisms of microbial pathogenesis, with an emphasis on fungal and bacterial virulence proteins, toxin and their deployment systems.

BIOL 4823 Molecular Plant-Microbe Interactions (also BIOMG/PLPA 4823)
Spring. 1 credit. Prerequisites: BIOMG 2810 and BIOMG 3300 or 3320, or equivalents. Recommended: BIOMG 3310. S–U or letter grades. 12 lecs. Offered alternate years; next offered 2011–2012. T. Brutnell.

In addition to providing plants with energy for photosynthesis, light plays an essential role in the development of higher plants. Light quality and intensity is carefully monitored by the plant to avoid neighboring vegetation, set the circadian clock, and adjust photosynthesis rates. This course focuses on recent studies that have illuminated the basis of light signal transduction networks in higher plants. Readings are assigned from current literature with an emphasis on those that use genomics tools such as microarray analysis to address fundamental questions. Recommended: BIOMG 3310. Lec. S–U or letter grades. M. R. Hanson and D. B. Stern.

BIOL 4824 Plant Gene Evolution and Phylogenetics
Spring. 1 credit. 12 lecs. Prerequisites: BIOMG 2810 and BIOMG 3300 or 3320, or equivalents. Recommended: BIOMG 3310. Offered alternate years. J. J. Doyle.

Practical applications of molecular systematics/evolution for plant molecular biologists and other non-systematists. The course focuses on two basic issues: methods and principles for inferring relationships among genes and the use of data to hypothesize relationships among plants. Evolutionary patterns and processes of genes and gene families are discussed, as well as rates of sequence evolution, paralogy and orthology, the effects of recombination and concerted evolution of gene phylogenies, and the implications of using gene or allele phylogenies to infer organizational evolutionary patterns.

BIOL 4825 Molecular Biology of Plant Organelles (also BIOMG 4825)
Spring. 1 credit. 12 lecs. Prerequisites: BIOL 4831 or BIOMG 2810 and permission of instructor. Recommended: BIOMG 3310 or equivalent. Letter grades or S–U grades with permission of instructor. Offered alternate years. M. R. Hanson and D. B. Stern.

Plants contain three different genomes—in the nucleus, chloroplasts, and mitochondria. This course examines the organization, expression, and evolution of plant organelle genomes. Special topics include RNA editing and stability, effects of organelle mutations on plant reproduction and photosynthesis, and chloroplast transformation for expression of useful foreign proteins.

BIOL 4826 Plant Biotechnology (also PLBR 4826)
Spring. 1 credit. 12 lecs. Prerequisites: BIOL 4831 or permission of instructor. S–U or letter grades. E. D. Earle.

Deals with production and uses of transgenic plants for agricultural and industrial purposes.

Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues related to plant biotechnology are discussed.

BIOL 4829 Light Signal Transduction in Plants
Spring. 1 credit. 12 lecs. Prerequisites: BIOMG 2810 and BIOMG 3300 or 3320, or equivalents. Recommended: BIOMG 3310. S–U or letter grades. Offered alternate years; next offered 2011–2012. T. Brutnell.

Introductory module that provides a broad overview of molecular biology concepts relevant to the plant sciences. Serves as a prerequisite to other modules in the BIOL 485X (fall) and BIOL 484X (spring) classes. Course covers genetic concepts relevant to molecular markers, map-based cloning, insertional mutagenesis, forward and reverse mutant screens, analysis of transcriptomes, organelle and nuclear genome structure, and transformation. Techniques include nucleic acid manipulation, blot and in situ hybridization, chromatin immunoprecipitation, high-throughput sequencing, PCR, microscopy, laser microdissection, microarrays, metabolomic profiling, proteomics, protein-protein interactions, electrophoresis, and immunological methods.

BIOL 4832 Proteomics and Protein Mass Spectrometry in Biology (also PLPA/BIOMG/PLBR 4832)
Fall. 1 credit. 12 lecs. Prerequisites: BIOMG 2810 and BIOMG 3300 or 3320, or equivalents. Recommended: BIOMG 3310. S–U or letter grades. Offered alternate years; next offered 2011–2012. K. van Wijk.

Introduction to proteomics and mass spectrometry and its application in plant biology. Includes discussion of protein separation, protein tagging and visualization techniques; principles of biological mass spectrometry and interpretation of spectra; bioinformatics tools in proteomics; comparative proteomics; phosphorylation mapping. Discusses limitations and possibilities of proteomics on plants for which little sequence information is available and experimental papers involving plant proteomics.
### BIOPL 4834 Molecular Aspects of Plant Development I (also BIOMG 4834)

Fall 1 credit. 12 lec. Prerequisites: BIOMG 2810 and BIOMG 3300 or 3320, or equivalents. Recommended: BIOMG 3310. Offered alternate years. J. B. Nasrallah. Focuses on the molecular genetics of plant development with an emphasis on plant reproductive biology. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral cells and organs are discussed. Topics include cell-cell signalling in the establishment of pattern and functional differentiation of specialized cell types, and the control of developmental pathways by endogenous and external cues. It is a companion to BIOPL 4823 (Molecular Plant-Microbe Interactions).

### BIOPL 4836 Plant Senescence (also HORT 6525)

Fall 1 credit. 12 lec. Prerequisites: BIOMG 2810 and BIOMG 3300 or 3320, or equivalents. Recommended: BIOMG 3310. S–U or letter grades. (12 lec). Offered alternate years. S. Gan. Introduces molecular genetics, and genomics approaches in plant senescence and postharvest research. Topics include gene expression, regulation, and function associated with physiological and biochemical changes in senescing, maturing, and/or ripening plants or parts. Genetic manipulation of senescence/ripening processes are also discussed.

### BIOPL 4980 Teaching Experience

Fall or spring. 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility but not eligibility for graduating with distinction. S–U or letter grades by permission of the instructor. Staff. Designed to give qualified undergraduate students teaching experience through actual involvement in and assistance in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

### BIOPL 6410 Laboratory in Plant Molecular Biology (also BIOMG 6410)

Fall. 4 credits. Prerequisites: BIOMG 2810 or equivalent. BIOMG 3300 or 3310 or equivalent, and permission of instructor. S–U grades by permission of instructor. Lab. J. Nasrallah, M. B. Hanson, H. Wang, T. Brutnell, G. Jander, S. Popescu, J.-Y. Lee, M. Scanlon, and K. van Wijk. Includes selected experiments on gene expression, biolistic transformation, confocal microscopy, laser capture microdissection, microarray analysis, genetic mapping and mutant analysis, transposon tagging, proteomics, and metabolite analysis.

### BIOPL 6420 Mineral Nutrition: From Plants to Humans (also CSS 6420)

Spring. 3 credits. Prerequisite: BIOL 3420 or equivalent. Lec. Offered alternate years. O. K. Vatamaniuk, L. V. Kochian, and R. M. Welch. For description, see CSS 6420.

### BIOPL 6470 Systematic Biology Journal Club

Fall or spring. 1 credit; may be repeated for credit. Intended for graduate students and advanced undergraduates in systematic biology. S–U grades only. Disc TBA. Bailey Hortorium staff. Discussions led by staff, visitors, and students on topics of current importance to systematic biology.

### BIOPL 6490 Solute Transport in Plants (also BEE 6490)

Fall. 3 credits. Letter grades only. Lec. Offered alternate years. R. M. Spanwick. For description, see BEE 6490.

### BIOPL 6510 Water Transport in Plants (also BEE 6470)

Fall. 2 credits. Letter grades only. Lec. Offered alternate years; next offered 2011–2012. R. M. Spanwick. For description, see BEE 6470.

### BIOPL 6540 Botanical Nomenclature

Fall. 3 credits. Prerequisite: written permission of instructor. S–U or letter grades. Lec. and disc. Offered alternate years. J. Reveal. Analysis of the International Code of Botanical Nomenclature and its application to various plant groups.

### BIOPL 6560 Topics in Plant Evolution

Spring. 1 credit. Prerequisite: BIOL 4480 or equivalent background in evolution, or written permission of instructor. Lab and disc. Offered alternate years. K. J. Niklas. Series of selected topics to provide a background in plant evolution, paleobotanical literature, and evolutionary theory. Among the topics discussed are the origin of a terrestrial flora, the evolution of the seed plants, and the origin and adaptive radiation of the angiosperms.

### BIOPL 7400 Plant Biology Seminar

Fall and spring. 0 credits. Requirement for graduate students doing work in plant biology. W. L. Crepet. Lectures on current research in plant biology, presented by visitors and staff.

### BIOPL 7410 Problems in Plant Cell and Molecular Biology

Spring. 2 credits. Prerequisite: first- and second-year graduate students in Plant Cell and Molecular Biology Program. Disc. Introduction to the research literature in plant molecular and cellular biology through weekly problem sets and discussions.

### BIOPL 7420 Current Papers in Plant Biology

Fall or spring. 1 credit. Limited enrollment. Primarily for graduate students, with priority given to majors or minors in plant molecular biology. Prerequisite: for undergraduates, written permission of instructor. S–U grades only. Sem. Staff.

### BIOPL 7430 Faculty Research in Plant Cell and Molecular Biology

Fall. 1 credit. Prerequisite: graduate standing or written permission from member of Plant Cell and Molecular Biology Program or from coordinator for undergraduates. Disc TBA. Staff. Introduction for graduate students to the research being conducted by Cornell faculty in the Plant Cell and Molecular Biology Program.

### BIOPL 7440 Graduate Research in Plant Biology

Fall or spring. 1 credit. Requirement for, and limited to, all graduate students in the Field of Plant Biology. Sem. Staff. After the first year, each student presents one seminar per year on his or her thesis research and then meets with the thesis committee members for evaluation. First-year students only attend the seminar series, they do not present. Second-year students give a 25-min. seminar, while students in their third and higher years present a 50-min. seminar.

### BIOPL 7450 Seminar in Systematic Botany

Fall. 1 credit. Prerequisite: graduate standing or permission of instructor. S–U grades only. Sem. Bailey Hortorium staff. Seminar with student presentations of current topics in systematics.

### BIOPL 7460 Seminar in Systematic Botany: Student Research

Spring. 1 credit. Prerequisite: graduate standing or permission of instructor. Letter grades only. Sem. Bailey Hortorium staff. Student-led seminar presentation based on his or her thesis research or a related topic.

### BIOPL 7490 Graduate Research in Botany

Fall or spring. Variable credit; may be repeated for credit. S–U or letter grades. Staff. Similar to BIOG 4990 but intended for graduate students who are working with faculty members on an individual basis.

### Related Courses in Other Departments

- Current Topics in Plant Molecular Ecology (BIOEE 6750)
- Fungal Biology (PLPA 6490)
- Fungi (PLPA 3090)
- Marine Botany (BIOSM 4490)
- Physiological Plant Ecology, Lectures and Laboratory (BIOEE 4660/4661)
- Plant Behavior-Induced Plant Responses to Biotic Stresses (BIOEE 4460)
- Plant Cytogenetics Laboratory (PLBR 4460)
- Undergraduate Research in Biology (BIOG 4990)

### COURSES IN MARINE SCIENCE

Cornell offers many undergraduate courses in marine science. Undergraduates are encouraged to consider: (1) undergraduate specialization in Marine Biology (through Ecology and Evolutionary Biology); (2) undergraduate specialization in Ocean Sciences (through the Science of Earth Systems Program); and (3) other summer courses offered by the Shoals Marine Laboratory (SML), Cornell's field station on Appledore Island, Maine. For the most current information on all of these options, visit SML online at: www.sml.cornell.edu.

1. Undergraduate Specialization in Marine Biology (through Ecology and Evolutionary Biology)
Biological Sciences majors in the ecology and evolutionary biology program of study can specialize in marine biology; this allows a focus on the biology of marine organisms. In addition to fulfilling major requirements and requirements for the ecology and evolutionary biology program of study, students specializing in marine biology should enroll in one or more of the following courses:

**BIOE Courses:**
- BIOE 2740 The Vertebrates: Structure, Function, and Evolution
- BIOE 4750 Ornithology
- BIOE 4760 Biology of Fishes
- BIOE 3500 Dynamics of Marine Ecosystems (also EAS 3500)
- BIOE 3510 Conservation Oceanography (also EAS 3510)
- BIOE 3730 Biodiversity and Biology of the Marine Invertebrates
- BIOE 4620 Marine Ecology (also EAS 4620)

**BIOSM Courses:** See BIOSM courses that are 3000 or 4000 level. Contact SML with questions: 607 255-3717 or shoals-lab@cornell.edu

1. Undergraduate Specialization in Ocean Sciences (through the Science of Earth Systems Program)

Science of Earth Systems majors can specialize in ocean sciences to study interactions of biological, chemical, geological, and physical processes in the ocean. Students specializing in ocean sciences are required to take four courses from the following list:

**BIOSM and SEA Courses:**
- BIOSM 3080 Field Microbial Ecology
- BIOSM 3090 Coastal Ecology and Bioclimates
- BIOSM 3640 Field Marine Science (FMS)
- BIOSM 3050 Underwater Research
- SEA 3660 SEA Introduction to Oceanography
- SEA 3670 SEA Introduction to Maritime Studies
- SEA 3680 SEA Introduction to Nautical Science
- SEA 3690 SEA Practical Oceanography I
- SEA 3700 SEA Practical Oceanography II
- SEA 3720 SEA Practical Oceanography III
- BIOSM 3750 Field Marine Biology and Ecology
- SEA 3780 SEA Oceans and Climate: Oceans in the Global Carbon Cycle
- SEA 3790 SEA Ocean Science and Public Policy
- SEA 3800 SEA Oceanographic Field Methods
- SEA 3810 SEA Independent Research in Oceans and Climate

**SEA courses must be taken concurrently.** This program is run by SEA Education Association (SEA) in Woods Hole, Mass. Contact SEA at 800-552-3633 and see www.sea.edu.

Can use one of the following organizational courses:
- BIOSM 3760 Biology of the Marine Invertebrates
- BIOSM 3770 Diversity of Fishes
- BIOSM 4490 Marine Botany
- BIOSM 4770 Marine Vertebrates

**EAS Courses:**
- EAS 3220 Biogeochemistry of the Hawaiian Islands
- EAS 3400 Field Study of the Earth System
- EAS 3420 Atmospheric Dynamics
- EAS 3500 Dynamics of Marine Ecosystems (also BIOEE 3500)
- EAS 3510 Conservation Oceanography
- EAS 3530 Physical Oceanography
- EAS 4060 Marine Geology and Geophysics
- EAS 4620 Marine Ecology (also BIOEE 4620)
- EAS 5050 Fluid Dynamics in the Earth Sciences
- EAS 7500 Satellite Remote Sensing in Biological Oceanography

**BIOEE Courses:**
- BIOEE 3730 Biodiversity and Biology of the Marine Invertebrates
- BIOEE 4570 Limnology: Ecology of Lakes, Lectures
- BIOEE 4571 Limnology: Ecology of Lakes, Laboratory
- BIOEE 4780 Ecosystem Biology
- BIOEE 6680 Principles of Biogeochemistry

**SHOALS MARINE LABORATORY (BIOSM)**

G14 Stimson Hall, 255–3717

Shoals Marine Laboratory (SML) provides a unique opportunity to explore marine sciences on Appledore Island, Maine, an island noted for its biota, geology, and history. SML has established a national reputation for excellence and is North America’s largest marine field station focusing on undergraduate education. The summer population of Appledore Island is limited to one hundred people at any one time. Students and faculty literally and figuratively immerse themselves in their explorations, free from distractions common to most academic institutions. Because SML is a residential facility, a sense of community develops that makes instruction more intensive and personal. SML outstanding educational and intellectual experiences. Participants learn from and exchange ideas with a wide range of specialists whose primary interests are in marine sciences but whose perspectives often differ, providing fertile ground for lively discussions.

Credit courses at Shoals Marine Laboratory are full-time, intensive learning experiences. Courses may be taken sequentially, but not concurrently. A typical day combines lecture, laboratory and field work, field trips to nearby islands or the mainland, and collecting and research excursions abroad the laboratory's 47-foot research vessel, John M. Kingsbury, or the 36-foot research vessel, John B. Heiser. Field experience is integral to all courses, using Appledore's extensive intertidal and subtidal zones and seabird colonies. Faculty, drawn from Cornell University, the University of New Hampshire, and other leading academic institutions, are selected based not only on their academic excellence but also on their ability to teach in the field. Many guest lecturers including engineers, coastal planners, and specialists from private industry, government, as well as the academic community visit Appledore during the season. The SML main administrative office is located at Cornell's Ithaca campus, G14 Stimson Hall. The office serves as an advising center for students interested in the marine sciences and maintains updated information on graduate study and career opportunities as well as on marine programs at other institutions.

The following marine sciences courses are currently administered by the Shoals Marine Lab. (Not all of these courses are offered each semester; consult the SML web site for current offerings: www.sml.cornell.edu.)

**BIOSM 1110 A Marine Approach to Introductory Biology**

Summer. 8 credits. Prerequisite: permission of instructor. Letter grades only. A four-week course for pre-freshmen at Shoals Marine Lab (SML) on Appledore Island in the Gulf of Maine. W. E. Bemis, J. B. Heiser, and D. Taylor. Course includes daily fieldwork, boat trips, outdoor adventure, and practices for sustainable living. Intensive lectures, laboratory, and fieldwork occur in a learning environment emphasizing individual skill building, project design and execution, and collaboration with faculty and peers. We explore four major themes—ecology, behavior, development, and genomics—and connect them using examples from evolution. Social issues discussed range from global environmental change to sustainable fisheries, emerging infectious diseases, and stem cell research.

**BIOSM 1220 Ocean Sciences**

**BIOSM 1551 Introduction to Oceanography (also EAS 1551)**

Summer. 1 credit. Prerequisite: college-level science course, EAS 1540, marine science course, or permission of instructor (any of these). S–U or letter grades. B. Monger and C. Greene.

For description, see EAS 1551.

**BIOSM 1600 The Oceanography of the Gulf of Maine**

Summer. 2 credits. Limited to 24 students. Prerequisite: high school juniors and seniors who have successfully completed two high school science courses. S–U or letter grades. A two-week course offered aboard a SEA vessel and at Shoals Marine Laboratory (SML) on Appledore Island in the Gulf of Maine. For more details or an application, contact SML office, G14 Stimson Hall or website (www.sml.cornell.edu) or Sea Education Association office, P.O. Box 6, Woods Hole, MA 02543, 800-552-3633 X 770 or web site: www.sea.edu. Daily lec, lab, and fieldwork for two weeks. S. Rensselaer, and SEA and SML staff.

Exciting opportunity to explore the offshore and near-coastal environments of the Gulf of Maine for advanced high school students. Students spend 10 days aboard the Sea Education Association’s sailing vessels round trip between Woods Hole, Mass., and the Isles of Shoals via Georges Bank and the Gulf of Maine. Besides operating the ship, students study the many characteristics of this unique ocean environment. Following the sea component, students spend seven days at the Shoals Marine Laboratory collecting data characteristic of the Isles of Shoals coastal environment.
[BIOSM 1610] Introduction to Marine Science

[BIOSM 1620] Marine Environmental Science
Summer. 4 credits. Prerequisite: open to high school rising junior and senior students who have successfully completed two high school science courses. S–U or letter grades. A two-week course offered at Shools Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for 14 days. M. Johnson.

Environmental studies have become an integral component of high school programs all around the country; however, opportunities to apply this coursework to the marine environment are limited. Marine Environmental Science focuses on coastal marine habitats, with an emphasis on issues as they relate to global habitats and concerns. Laboratory exercises and fieldwork include explorations along Appledore Island’s rocky intertidal zone and excursions to neighboring islands to observe harbor seal and seabird colonies. Offshore cruises include oceanographic sampling exercises and field trips to seabird and whale foraging grounds. Lectures and discussions expose MES students to topics ranging from fishes to fisheries, seaweeds to lobsters, and plankton to whales. Fundamental scientific research methods and equipment are introduced, and each student has the opportunity to be involved in group research projects.

[BIOSM 2040] Biological Illustration
Summer. 2 credits. Prerequisite: none. S–U or letter grades. A one-week course offered at Shools Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. B. Ober, C. Garrison, and J. Gibson.

General discussion of scientific publishing, illustration labeling, color techniques, and printing processes. Provides the scientist or science student a chance to experience several illustration techniques with the goal of obtaining an overview of scientific and wildlife illustrations. The student may choose a single technique to explore in depth. Course size is limited so that individual attention can be emphasized.

[BIOSM 2100] Boats for Biologists
Summer. 2 credits. Prerequisite: open to all undergraduate and graduate students. S–U or letter grades. A one-week course offered at Shools Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. W. E. Bemis.

Marine and freshwater biologists rely on boats—small and large—for transportation, environmental sampling, data collection, and other tasks. This course offers biologists at all stages of their careers a chance to learn basic boat handling, piloting, navigation, and common sampling techniques to enhance their opportunities for research and education. This course meets all certification requirements for basic small boat handling by state-specific agencies and National Association of Boating Law Administrators.

[BIOSM 2250] Sustainability in the 21st Century
Summer. 4 credits. Prerequisite: open to all undergraduate and graduate students. Letter grades only. A two-week course offered at Shools Marine Laboratory (SML) on Appledore Island in the Gulf of Maine. Next offered 2011–2012. Cornell, UNH, SML faculty and staff.

[BIOSM 2760] Seabird Ecology and Conservation

[BIOSM 2770] Introduction to Marine Conservation Biology
Summer. 4 credits. Prerequisite: two semesters college-level biology or equivalent. S–U or letter grades. A two-week course offered at Shools Marine Laboratory (SML) on Appledore Island in the Gulf of Maine. H. Weeks and K. Flessa.

Students will study introduction to the examination and analysis of marine biological resource conservation and management issues. Class will address principles and problems through readings, laboratory modeling exercises and lectures, including guests from the New England region, and explore potential pathways to success through readings and field trip.

[BIOSM 3060] Evolution of Ancient and Modern Vertebrates (EAS 3060)
Summer. 6 credits (students will have the opportunity to continue their studies during the fall semester on campus at Cornell for another 2 credits of independent study). Prerequisite: one semester oceanography and/or marine biology or permission of instructor. Letter grades only. W. Allmon.

For description, see EAS 3060.

[BIOSM 3080] Field Microbial Ecology (also BIOMI 3080)
Summer. 4 credits. Prerequisite: two semesters college-level biology or equivalent. S–U or letter grades. A two-week course offered at Shools Marine Laboratory (SML) on Appledore Island in the Gulf of Maine. E. Zettler and L. A. Zettler.

The microbial world dominates the biosphere in terms of biomass, diversity, and metabolic flexibility. This course will introduce students to collecting, observing, and identifying live representatives of these fascinating microbial organisms including bacteria, protists, fungi, and microscopic animals. Taxonomy and ecology of the microbial world will be covered while students learn to collect in the field for observation, experimentation and isolation.

[BIOSM 3090] Coastal Ecology and Bioclimates

[BIOSM 3100] Marine Symbiosis
Summer. 4 credits. Prerequisite: two semesters college-level biology or equivalent. Recommended: background in microbiology or cell biology. S–U or letter grades. A two-week course offered at Shools Marine Laboratory (SML) on Appledore Island in the Gulf of Maine. Daily lec and fieldwork for two weeks. Next offered 2011–2012. SML faculty.

[BIOSM 3110] Science Writing
Summer. 2 credits. Prerequisite: introductory-level science course. One-week course offers students an introduction to science writing at Shools Marine Laboratory (SML) on Appledore Island in the Gulf of Maine. S–U or letter grades. C. Zimmerman.

Students will learn about the business of science writing (including career opportunities in newspapers, television, and the Internet). They will also have the opportunity to become familiar with methods of making complex scientific research understandable and exciting for the general public. Students should be prepared to complete several short- and deadline writing exercises.

[BIOSM 3120] Biology of the Lobster
Summer. 2 credits. Prerequisite: two semesters college-level biology or equivalent. S–U or letter grades. A one-week course offered at Shools Marine Laboratory (SML) on Appledore Island in the Gulf of Maine. J. Factor.

An introduction to the biology of the American lobster, Homarus americanus. The course will include an overview of this ecologically and economically important species, as well as cover several major topics in depth, each taught by a lobster biologist expert in that field. Topics may include life history, larval development and metamorphosis, anatomy, physiological adaptation, fisheries and fishing methods, feeding mechanisms, ecology, and behavior. Course will include lecture, laboratory, discussion, and the natural field environment of Appledore Island.

[BIOSM 3200] Functional Morphology of Marine Organisms
Summer. 4 credits. Prerequisite: two semesters college-level biology or equivalent. S–U or letter grades. A two-week course offered at Shools Marine Laboratory (SML) on Appledore Island in the Gulf of Maine. W. E. Bemis, EEB faculty, and F. Fish.

Course includes introductions to vertebrate systematics, paleontology and evolution, vertebrate development, and functional morphology. Students will do a comparative study of the anatomy of marine vertebrates, including: hagfishes; lampreys; sharks, skates, rays and chimaeras; ray finned fishes; lobe-finned fishes; marine reptiles, birds, and mammals. All 10 organ systems of vertebrates will be detailed in lecture and laboratory exercises. Dissection is required. Grades will be based on quizzes, essay exams, practical exams, class participation, and research projects.
The ecological significance of behaviors of coastal organisms, with emphasis on field and laboratory research methods. Lectures and readings address the major subareas of behavior (communication, orientation, social behavior, foraging, predator avoidance, and sensory mechanisms). Each student engages in short-term behavioral observation and preparers a research proposal for studying a problem within the course subject area.

**BIOSM 3640 Field Marine Science (FMS)**

Summer. 8 credits. Prerequisite: two semesters college-level biology or equivalent. S–U or letter grades. A four-week course offered twice each summer at Shoals Marine Laboratory (SML) on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for four weeks. Three core faculty mentors assisted by up to 15 visiting lecturers, including representatives of governmental agencies. J. Factor, R. Zechman, S. Morris, W. E. Benis, and E. Zettler.

Design for the student who desires an initial overview of the marine sciences, this course emphasizes living material in natural habitats. Most of the course work is concerned with the biology of intertidal plants and animals, biological oceanography, ichthyology, and fisheries. Attention is also given to introductory physical and chemical oceanography and marine ecology. Marine ecology and the effects of human activity on the marine environment are included. Students apply this knowledge by conducting a transect study toward the end of the course. FMS places emphasis on ichthyology, fisheries biology, general oceanography (biological, physical, and chemical), and marine geology. FMBE (BIOSM 3750) places an additional emphasis on ecology, especially in the intertidal zone; ecological, evolutionary and physiological adaptations of marine organisms; and field experiments.

**BIOSM 3650 Underwater Research**

Summer. 4 credits. Prerequisite: two semesters college-level biology or equivalent, recognized SCUBA certification, and medical exam. S–U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec and fieldwork for two weeks. J. Geyer, J. Grabowski, and E. Calvert.

Covers the philosophy of research, hypothesis testing and experimental design, sampling methods, various underwater techniques, diving physics and physiology, and use of dive tables. Emphasizes subtidal ecological research. Requirements include critical evaluation of several journal articles and production of a research proposal.

**BIOSM 3760 Marine Invertebrate Zoology**

Summer. 6 credits. Prerequisite: two semesters college-level biology or equivalent and permission of instructors. Students may not take BIOSM 3760 after taking BIOEE 3730. S–U or letter grades. A three-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for three weeks. Offered alternate years; next offered 2011–2012. J. Morin.

**BIOSM 3770 Diversity of Fishes**

Summer. 6 credits. Prerequisite: two semesters college-level biology or equivalent. Recommended: background in vertebrate biology. S–U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec and fieldwork for two weeks. B. Collett.

Intensive lecture, laboratory, and field course. Lectures cover the basic anatomy and physiology of fishes with examples drawn from a wide variety of fishes from throughout the world. The course examines the diversity of fishes in two aspects, diversity of evolutionary solutions to problems faced by fishes and the great diversity of different types of fishes that inhabit the world. Laboratory exercises cover the anatomy and osteology of teleost fishes and identification of local species. Each student selects a different local species of teleost fish to study and dissect and prepares a comprehensive paper on its morphology, soft anatomy, and osteology.

**BIOSM 3820 Comparative Embryology and Life History Strategies**

**BIOSM 4100 Animal Social Behavior**

**BIOSM 4130 Research in Marine Biology**

**BIOSM 4450 Forensic Science for Wildlife Biologists (also VTMED 6435)**

Forensic science represents the unique merging of scientific insight and the law. Forensic Science for Marine Biologists provides a field-oriented introduction to the forensic science domain and the utilization of marine biology within the justice system. Students receive comprehensive instruction concerning the recognition, documentation, collection, and preservation of physical evidence. Additionally, students develop practical incident response, scene management, and forensic teamwork skills.

**BIOSM 4490 Marine Botany**  

**BIOSM 4650 Sharks: The Biology, Evolution, and Conservation of Sharks and Their Allies**  
Summer. 3 credits. Prerequisite: vertebrates or comparative anatomy and ichthyology or permission of SML director. S–U or letter grades. A one-and-a-half-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. D. Dagit and W. E. Bemis. The last 30 years have produced an explosion of new information on the biology of the approximately 1,000 living species of sharks, skates, rays, and chimaeras, which collectively make up the group Chondrichthyes. This course will cover advanced topics in the evolution, diversity, anatomy, functional morphology, neurobiology, sensory systems, behavior, reproduction, development, and conservation of cartilaginous fishes.

**BIOSM 4720 Genetics of Marine Diversity**  
Summer. 4 credits. Prerequisite: two semesters college-level biology or equivalent. Recommended: genetics and/or cell biology with laboratory components. Helpful: evolution, cellular biology, ecology, vertebrate/invertebrate zoology. Letter grades only. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. A. Shedlock. An introduction to basic concepts in systematic biology, evolutionary genetics, molecular ecology, and conservation biology emphasizing the natural history of marine organisms. Students integrate field sampling techniques, taxonomy, and curation of specimens from Appledore Island and surrounding waters with molecular diagnostics completed in the laboratory. Standard methods for DNA purification, amplification, sequencing, and genotyping are used to address questions about population structure, kinship, and species phylogeny.

**BIOSM 4770 Marine Vertebrates**  
Summer. 6 credits. Prerequisites: vertebrate biology course or equivalent course at level from which applicant can demonstrate knowledge of basic vertebrate anatomy, physiology, and systematics, or permission of instructor. S–U or letter grades. A three-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for three weeks. Next offered 2011–2012. J. Heiser.

**BIOSM 4950 Research Methods in Marine Biology**  
Summer. 1 credit. Corequisite: BIOSM 4990 or permission of instructor. Primarily for undergraduates. An eight-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Weekly seminar for eight weeks. Next offered 2011–2012. SML faculty.

**BIOSM 4990 Research in Biology**  
Summer. Variable credit, 2 credits per seven days on site. A three-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. SML faculty.

**Section A: Independent Biological Research**  
Independent study with a member of the Shoals Marine Laboratory core faculty, based on student faculty interest and available facilities. A short proposal of research must be sent with application materials.

**BIOSM 6500 Field Marine Ecology and Environmental Science for Teachers**  
Summer. 2 credits. Prerequisites: two semesters college-level biology or equivalent. Recommended: teaching experience. A one-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec and fieldwork for one week. Next offered 2011–2012. SML faculty.

**BIOSM 6590 Research in Biology for Teachers**  
Summer. 2 credits per week. Prerequisite: BIOSM 6500. One-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Next offered 2011–2012.

**SEA SEMESTER**

Sea Education Association (SEA) offers three semester-length sequences of courses designed to provide college undergraduates with a thorough academic, scientific, and practical understanding of the sea. These sequences are repeated approximately once every two months throughout the year. Students spend the first half of SEA Semester (a six-week shore component) in Woods Hole, Mass., receiving instruction in oceanography, nautical science, and maritime studies. The second half of SEA Semester (a six-week sea component) is spent at sea aboard the SSV Robert C. Seamans or the SSV Corwith Cramer. Enrollment is open to both men and women judged capable of benefiting from SEA Semester. No prior sailing experience is necessary. Cornell students enrolled in the SEA Semester must take the entire sequence.

For more information, contact Sea Education Association, www.sea.edu, P. O. Box 6, Woods Hole, MA 02543 or call 800–552–3633 ext. 770. Program costs are to be paid in place of regular Cornell tuition and fees.

Instructors for the SEA Semester include faculty of the Sea Education Association and the Woods Hole Oceanographic Institution and others.

**SEA 3660 Introduction to Oceanography I**  
3 credits. Prerequisites: BIOSM 3680 and 3690. Survey of the characteristics and processes of the global ocean. Introduces oceanographic concepts and develops them from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent cruise. Guest lecturers from the Woods Hole research community interpret current research and activities in this rapidly evolving field. Students develop individual projects to be carried out at sea.

**SEA 3670 Introduction to Maritime Studies**  
3 credits. Corequisites: BIOSM 3660 and 3680. Interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

**SEA 3680 Introduction to Nautical Science**  
3 credits. Corequisites: BIOSM 3660 and 3670. An introduction to the technologies of operation at sea. The concepts of navigation (piloting, celestial and electronic), naval architecture, ship construction, marine engineering systems, and the physics of sail are taught from their bases in astronomy, mathematics, and physics. Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.

**SEA 3690 Practical Oceanography I**  
4 credits. Prerequisites: BIOSM 3660. Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment; in the methodologies involved in the collection, reduction, and analysis of oceanographic data; and in the attendant responsibilities of a sailing oceanographic research vessel.

**SEA 3700 Practical Oceanography II**  
4 credits. Prerequisites: BIOSM 3680 and 3690. Building on the experience of Practical Oceanography I, students assume increasing responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student is ultimately responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operations of the vessel. Each student undertakes an individual research project designed during the shore component.

**SEA 3720 Practical Oceanography III**  
Summer. 3 credits. Prerequisites: BIOSM 3660, 3670, and 3680. Theories and problems raised in class are tested in the practice of oceanography at sea. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment, in the methodologies involved in the collection,
analysis, and reduction of oceanographic data, and in the attendant operations of sailing an oceanographic research vessel. Group research projects are completed.

**SEA: Oceans and Climate**

**SEA 3680 Introduction to Nautical Science**

**SEA 3780 Oceans and Climate: Oceans in the Global Carbon Cycle**

**SEA 3790 Ocean Science and Public Policy (HA)**

**SEA 3800 Oceanographic Field Methods**

**SEA 3810 Independent Research in Oceans and Climate**

**SEA 3620 Maritime History and Culture (CA) (HA)**

**SEA 3660 Practical Oceanography I**

**SEA 3680 Introduction to Nautical Science**

**SEA 3700 Practical Oceanography II**

**SEA 3710 Marine Environmental History (CA) (LA)**

This course is designed to explore the interaction of ecological factors in ocean, coastal and island environments; the impact of human actions on those environments; and the need for local, regional and international responses and strategies to mitigate and manage that impact.

**FACULTY ROSTER**

**New York State College of Agriculture and Life Sciences**

Adler, Kraig K., Ph.D., U. of Michigan. Prof., Neurobiology and Behavior

Jessica Traynor, director of development

INTRODUCTION
Computing and Information Science (CIS) offers courses and programs campuswide in various academic disciplines in which computing is integral. It is home to the Department of Computer Science, the Department of Statistical Science, the program in Information Science, and interdisciplinary programs in computational biology, computational science and engineering, game design, and computing in the arts.

ACADEMIC PROGRAMS
Computing and Information Science offers the following academic programs through its corresponding colleges.

Computational Biology
See program listing.

Computational Science and Engineering
The CIS program in Computational Science and Engineering (CSE) spans several dozen departments and research areas. The field is applications driven and involves a mix of applied mathematics, numerical analysis, and computer science. Numerous courses are taught throughout the university. Go to www.cis.cornell.edu/cse for a list of courses and associated faculty members.

Computer Science
The Department of Computer Science offers an undergraduate major to students in the College of Arts and Sciences and the College of Engineering, a master of engineering degree, and a Ph.D. See the departmental listings for details.

Computing in the Arts
See the program listing of details about the undergraduate minor.

Game Design
The undeniable popularity of games draws the attention of academia, industry, and even the government on areas of design, development, and social impact. The game industry, like the film industry, is an unmistakable force in entertainment. Like filmmaking, game design can thrive and evolve only with the support of a strong academic foundation. The Game Design minor is offered by the Department of Computer Science for students who anticipate that game design will have a prominent role to play in their academic and professional career. Visit www.cs.cornell.edu/degreeprogs/ugrad/CSMinor/GameDesign

Minor/index.htm for minor requirements. To learn about the Game Design Initiative at Cornell (GDIAC), visit gdiac.cis.cornell.edu. Students across colleges are eligible to pursue the Game Design minor.

Information Science
The Department of Information Science offers an undergraduate major to students in the College of Agriculture and Life Sciences, the College of Arts and Sciences, and the College of Engineering, as well as a Ph.D.

Statistical Science
The Department of Statistical Science offers an undergraduate major to students in the College of Arts and Sciences, a master of professional studies, and an M.S./Ph.D.

THE INFORMATION SCIENCE MINOR
A minor in information science is available to students in the Colleges of Agriculture and Life Sciences; Architecture, Art, and Planning (available to Architecture and Planning students only); Arts and Sciences; Engineering; Human Ecology; and the Schools of Hotel Administration and Industrial and Labor Relations. Because of small differences in regulations between the colleges, the requirements may vary slightly, depending on a student’s college and, in a few cases, a student’s major. Students interested in pursuing the information science minor must initiate the process by sending an e-mail message with their name, college, year of study (e.g., second-semester sophomore), expected graduation date, and (intended) major to minor@infosci.cornell.edu. See www.infosci.cornell.edu/ugrad.html for the most up-to-date description of the minor and its requirements.

Information science is an interdisciplinary field covering all aspects of digital information. The program has three main areas: human-centered systems, social systems, and information systems. Human-centered systems studies the relationship between humans and information, drawing from human-computer interaction and cognitive science. Social systems examines information in its economic, legal, political, cultural, and social contexts. Information systems examines information in its technical aspects.

Elective: one additional course from any component area. Hotel students must take three courses in this category, from the following: HADM 3374, HADM 4474, or AEM 3220. (Engineering students and all computer science majors must select a course from human-centered systems or social systems. Communication majors must select a course outside Communication. Students in other majors should check with their advisors to make sure there are no special departmental restrictions or requirements.)

Statistics
An introductory course that provides a working knowledge of basic probability and statistics and their application to analyzing data occurring in the real world.

All other students can meet this requirement with any one of the following:

• ENGRD 2700 Basic Engineering Probability and Statistics
• CEE 3040 Uncertainty Analysis in Engineering

Hotel students must take:
• HADM 2201 Hospitality Quantitative Analysis

Other students may count these courses toward the IS minor. Engineering students must use ENGRD 2700 or CEE 3040. Hotel students must use HADM 2201.

• Statistics: one course.
• Human-centered systems (human-computer interaction and cognitive science): two courses (for all colleges except Engineering and Hotel); one course (Engineering and Hotel).
• Social systems (social, economic, political, cultural, and legal issues): one course.
• Information systems (primarily computer science): two courses for all colleges except Hotel. Hotel students need to take one course in this area. Engineering students may not use INFO 1300. CS 2110 may not be used by students who are required to take it for their major.

Elective: one additional course from any component area. Hotel students must take three courses in this category, from the following: HADM 3374, HADM 4474, or AEM 3220. (Engineering students and all computer science majors must select a course from human-centered systems or social systems. Communication majors must select a course outside Communication. Students in other majors should check with their advisors to make sure there are no special departmental restrictions or requirements.)

*The following exceptions apply:
- INFO 1500: Engineering students and Computer Science majors may not use this course for the minor.
- INFO 2300: Computer Science majors may not use this course for the minor.
- CS 2110: Students for whom this is a required major course may not use it for the minor, e.g., Computer Science or Operations Research and Information Engineering majors.

INFO 4320 may count toward the minor as Information Systems or Human-Centered Systems but not both.

Computing and Information Science (CIS) Courses

CIS 1121 Introduction to MATLAB
Fall, spring. 2 credits. Corequisite: MATH 1110, 1910, or equivalent. No programming experience assumed. Introduction to elementary computer programming concepts using MATLAB. Topics include problem analysis, development of algorithms, selection, iteration, functions, and arrays. Examples and assignments are chosen to build an appreciation for computational science. The goal is for each student to develop a facility with MATLAB that will be useful in other courses whenever there is a need for computer problem solving or visualization.

CIS 1610 Computing in the Arts (also CS/ENGRI 1610, DANCE 1540, FILM 1750, MUSIC 1465, PSYCH 1650)
Fall. 3 credits. For description, see CS 1610.

CIS 1620 Visual Imaging in the Electronic Age (also ARCH 3702, ART 1700, CS/ENGRI 1620)
Fall or spring. 3 credits. For description, see ART 1700.

CIS 3000 Introduction to Computer Game Design
Spring. 4 credits. Prerequisites: at least one of the following, according to student’s area of interest (art, music, or programming): Art: ART 2501 or equivalent; Music: CS 111x or INFO 1301-1302, MUSIC 1421 or equivalent; Programming: CS/ENGRI 2110 or equivalent. Investigates the theory and practice of developing computer games from a blend of technical, aesthetic, and cultural perspectives. Technical aspects of game architecture include software engineering, artificial intelligence, game physics, computer graphics, and networking. Aesthetic and cultural aspects of design include art and modeling, sound and music, history of games, genre analysis, role of violence, gender issues in games, game balance, and careers in the industry. Programmers, artists, and musicians collaborate to produce an original computer game.

CIS 4002 Advanced Projects in Computer Game Design
Fall. 3 credits. Prerequisite: CIS 3000 or permission of instructor. Project-based follow-up course to CIS 3000. Students work in a multidisciplinary team to develop an original computer game or an application that explores innovative game technology. Students have the goal of submitting their work to a contest or conference. Grading is based on completion of project plans and documentation, teamwork, presentations and demonstrations, class participation, and quality of final projects. Instructional meetings are arranged based on student and instructor schedules.
**CIS 4999 Independent Reading and Research**
Fall, spring. 1–4 credits. Independent reading and research for undergraduates.

**CIS 5040 Applied Systems Engineering (also CEE 5040, SYSEN 5100, ECE/ORIE 5120, MAE 5910)**
Fall. 3 credits. Prerequisites: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor.
For description, see SYSEN 5100.

**CIS 5050 Systems Analysis Architecture, Behavior, and Optimization (also CEE 5050, ECE/ORIE 5130, MAE 5920, SYSEN 5200)**
Spring. 3 credits. Prerequisite: Applied Systems Engineering (CEE 5240, ECE 5120, MAE 5910, ORIE 5120, or SYSEN 5100).
For description, see SYSEN 5200.

**CS 6229 Computational Methods for Nonlinear Systems (also PHYS 7682)**
Fall. 4 credits. Enrollment may be limited. Next offered 2011–2012.
For description, see PHYS 7682.

**CIS 7999 Independent Research**
Fall, spring. Variable credit. Prerequisite: permission of CIS faculty member.
Independent research or master of engineering project.

**COMPUTER SCIENCE**

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science. The department is also part of CIS. Its courses are an integral part of CIS's several educational programs.

**CS 1109 Fundamental Programming Concepts**
Summer. 2 credits. Prerequisite: pre-enrollment standing or permission of instructor. Credit may not be applied toward engineering degree. S–U grades only.

Designed for students who intend to take CS 111x but are not adequately prepared for it. Basic programming concepts and problem analysis are studied. An appropriate high-level programming language is used. Students with previous programming experience and students who do not intend to take CS 111x should not take this course.

**CS 1110 Introduction to Computing Using Java**
Fall, spring, summer. 4 credits. Assumes basic high school mathematics (no calculus) but no programming experience. Programming and problem solving using Java. Emphasizes principles of software development, style, and testing. Topics include object-oriented concepts, procedures and functions, iteration, arrays, strings, algorithms, exceptions, GUIs (graphical user interfaces). Weekly labs provide guided practice on the computer, with staff present to help. Assignments use graphics and GUIs to help develop fluency and understanding.

**CS 1112 Introduction to Computing Using MATLAB**
Fall, spring. 4 credits. Corequisite: MATH 1110, 1910, or equivalent. Assumes student is comfortable with mathematics (at level of one semester of calculus) but has no prior programming experience. Programming and problem solving using MATLAB. Emphasizes the systematic development of algorithms and programs. Topics include iteration, functions, arrays, and MATLAB graphics. Assignments are designed to build an appreciation for complexity, dimension, fuzzy data, inexact arithmetic, randomness, simulation, and the role of approximation.

**CS 1114 Introduction to Computing Using MATLAB and Robotics**
Spring. 4 credits. Prerequisite: some programming experience.
Honors-level introduction to computer science using camera-controlled robots using MATLAB. Emphasis is on modular design of programs and on fundamental algorithms. Extensive laboratory experiments with cameras and robots, including Sony Aibo. Example projects include controlling a robot by pointing a light stick and making a robot recognize simple colored objects.

**CS 1130 Transition to Object-Oriented Programming**
Fall, spring. 1 credit. Prerequisite: one course in programming. S–U grades only.
Introduction to object-oriented concepts using Java. Assumes programming knowledge in a language like MATLAB, C, C++, or Fortran. Students who have learned Java but were not exposed heavily to OO are welcome.

**CS 1132 Transition to MATLAB**
Fall, spring. 1 credit. Prerequisite: one course in programming. S–U grades only.
Introduction to MATLAB and scientific computing. Covers the MATLAB environment, assignment, conditionals, iteration, scripts, functions, arrays, scientific graphics, and vectorized computation. Assumes programming knowledge in a language like Java, C, C++, or Fortran.

**CS 1300 Introductory Design and Programming for the Web (also INFO 1300)**
Fall. 4 credits.
For description, see INFO 1300.

**CS 1305 Computation and Culture in a Digital Age (also INFO 1305)**
Summer. 3 credits. Prerequisite: none at university level; must be high school junior or rising senior. Offered alternate years; offered summer 2011. Explores ideas and technologies of computing and information science as well as their role in society from legal, historical, and cultural perspectives.

**CS 1610 Computing in the Arts (also CIS/ENGRI 1610, DANCE 1540, FILM 1750, MUSIC 1456, PSYCH 1650)**
Fall. 3 credits. Recommended: good comfort level with computers and some of the arts.
Over the centuries, artists in a wide variety of media have employed many approaches to the creative process, ranging from the philosophical to the mechanical to the virtual. This course unravels some of the mysteries going on inside software used for art and music. It looks at ways of breaking things apart and sampling and ways of putting things together and reassembling, and explores ideas for creation. This course does not teach software packages for creating art and music. The course complements ART 1701+ and MUSIC 1421+.

**CS 1620 Visual Imaging in the Electronic Age (also ARCH 3702, ART 1700, CIS/ENGRI 1620)**
Fall. 3 credits.
For description, see ART 1700.

**CS 1710 Introduction to Cognitive Science (also COGST 1101,LING 1170, PHIL 1910, PSYCH 1102)**
Fall, summer. 3 credits.
For description, see COGST 1101.

**CS 2022 Introduction to C**
Spring, usually weeks 1–4. 1 credit.
Prerequisite: one programming course or equivalent programming experience.
Credit granted for both CS 2022 and 2024 only if 2022 taken first. S–U grades only.
Brief introduction to the C programming language and standard libraries. Unix accounts are made available for students wishing to use that system for projects, but familiarity with Unix is not required. Projects may be done using any common implementation of C. CS 2024 (C++ Programming) includes much of the material covered in 2022. Students planning to take CS 2024 normally do not need to take 2022.

**CS 2024 C++ Programming**
Fall. 2 credits. Prerequisite: one programming course or equivalent programming experience. Students who plan to take CS 2022 and 2024 must take 2022 first. S–U grades only.
An intermediate introduction to the C++ programming language and the C/C++ standard libraries. Topics include basic statements, declarations, and types; stream I/O; user-defined classes and types; derived classes, inheritance, and object-oriented programming, exceptions and templates. Recommended for students who plan to take advanced courses in computer science that require familiarity with C++ or C. Students planning to take CS 2024 normally do not need to take CS 2022; 2024 includes most of the material taught in 2022.

**CS 2042 Unix Tools**
Fall, usually weeks 1–4. 1 credit.
Prerequisite: one programming course or equivalent programming experience. S–U grades only.
Introduction to Unix, emphasizing tools for file management, communication, process control, managing the Unix environment, and rudimentary shell scripts. Projects assume no previous knowledge of Unix or expertise in any particular language.

**CS 2044 Advanced UNIX Programming and Tools**
Spring, usually weeks 5–8. 1 credit.
Prerequisite: CS 2042 or equivalent. S–U grades only.
Focuses on Unix as a programming environment for people with a basic knowledge of Unix and experience programming in at least one language. Projects cover advanced shell scripts (sh, ksh, csh), Makefiles, programming and debugging tools for C and other languages, and more modern scripting languages such as Perl and Python. Students with little or no experience with Unix should take CS 2042 first.
CS 2110 Object-Oriented Programming and Data Structures (also ENGRD 2110)
Fall, spring, summer. 3 credits.
Prerequisite: CS 1110 or CS 1130 or equivalent. Pre- or corequisite: CS 2800.
Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, object-oriented programming (classes, objects, types, sub-typing), graphical user interfaces, algorithm analysis (asymptotic complexity, big “O” notation), recursion, data structures (lists, trees, stacks, queues, heaps, search, tries, hash tables, graphs), simple graph algorithms. Java is the principal programming language.

CS 2300 Intermediate Design and Programming for the Web (also INFO 2300)
Spring. 3 credits. Prerequisite: CS 1300 strongly recommended. Must be taken before CS 3500.
For description, see INFO 2300.

CS 2800 Discrete Structures
Fall, spring. 3 credits. Pre- or corequisite: one programming course or permission of instructor.
Covers the mathematics that underlies most of computer science. Topics include mathematical induction; logical proof; propositional and predicate calculus; combinatorics and discrete mathematics; some basic elements of basic probability theory; basic number theory; sets, functions, and relations; graphs; and finite-state machines. These topics are discussed in the context of applications to many areas of computer science, such as the RSA cryptosystem and web searching.

CS 2850 Networks (also ECON/INFO 2040, SOC 2090)
Fall. 4 credits. Prerequisites: none. For description, see ECON 2040.

CS 3110 Data Structures and Functional Programming
Fall, spring. 4 credits. Prerequisite: CS 2110 and 2111 or equivalent programming experience. Pre- or corequisite: CS 2800. Should not be taken concurrently with CS 3410 or 3420.
Advanced programming course that emphasizes functional programming techniques and data structures. Programming topics include recursive and higher-order procedures, models of programming language evaluation and compilation, type systems, and polymorphism. Data structures and algorithms covered include graph algorithms, balanced trees, memory heaps, and garbage collection. Also covers techniques for analyzing program performance and correctness.

CS 3220 Introduction to Scientific Computation (also ENGRD 3220)
Spring. 3 credits. Prerequisites: CS 1112 or 1132 and MATH 2220, 2230, or 2940.
Introduction to elementary numerical analysis and scientific computation. Topics include interpolation, collocation, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The MATLAB computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Includes special lectures on computational statistics.

CS 3300 Data-Driven Web Applications (also INFO 3300)
Spring. 3 credits. Prerequisite: CS/ENGRD 2110 and (CS 2300 or permission of instructor). CS majors may use only one of the following toward their degree: CS INFO 3500 or CS 4321. Next offered 2011–2012.
For description, see INFO 3500.

CS 3410 Computer System Organization and Programming
Spring. 4 credits. Prerequisite: CS 2110 or equivalent programming experience. Should not be taken concurrently with CS 3110.
Introduction to computer organization, systems programming and the hardware/software interface. Topics include instruction sets, computer arithmetic, datapath design, data formats, addressing modes, memory hierarchies including caches and virtual memory, I/O devices, bus-based I/O systems, and multicore architectures. Students learn assembly language programming and design a pipelined RISC processor.

CS 3420 Computer Organization (also ECE 3140)
Spring. 4 credits. Prerequisite: CS 2110 or ENGRD 2300. Should not be taken concurrently with CS 3110.
For description, see ECE 3140.

CS 3740 Computational Linguistics (also COGST 4240, LING 4424)
Fall. 4 credits. Recommended: CS 2042. For description, see LING 4424.

CS 3758 Autonomous Mobile Robots (also MAE 4180)
Spring. 4 credits. Prerequisite: MAE 3260 or permission of instructor. For description, see MAE 4180.

CS 3810 Introduction to Theory of Computing
Fall. 3 credits. Prerequisite: CS 2800 or permission of instructor.
Introduction to the modern theory of computing: automata theory, formal languages, and effective computability.

CS 4110 Programming Languages and Logics
Fall. 4 credits. Prerequisite: CS 3110 or permission of instructor.
An introduction to the theory, design, and implementation of programming languages. Topics include operational semantics, type systems, higher-order functions, scope, lambda calculus, laziness, exceptions, side effects, continuations, objects, and modules. Also discussed are logic programming, concurrency, and distributed programming.

CS 4120 Introduction to Compilers
Fall or spring. 3 credits. Prerequisites: CS 3110 or permission of instructor and CS 3410 or 3420. Corequisite: CS 4121. Next offered 2011–2012.

CS 4121 Practicum in Compilers

CS 4210 Numerical Analysis and Differential Equations (also MATH 4250)
Fall. 4 credits. Prerequisites: MATH 2210 or 2940 or equivalent, one additional mathematics course numbered 3000 or above, and knowledge of programming. For description, see MATH 4250.

CS 4220 Numerical Analysis: Linear and Nonlinear Problems (also MATH 4260)
Spring. 4 credits. Prerequisites: MATH 2210 or 2940/4 or equivalent, one additional mathematics course numbered 3000 or above, and knowledge of programming.
Introduction to the fundamentals of numerical linear algebra: direct and iterative methods for linear systems, eigenvalue problems, singular value decomposition. In the second half of the course, the above are used to build iterative methods for nonlinear systems and for multivariable optimization. Strong emphasis is placed on understanding the advantages, disadvantages, and limits of applicability for all the covered techniques. Computer programming is required to test the theoretical concepts throughout the course.

CS 4300 Information Retrieval (also INFO 4300)
Fall. 3 credits. Prerequisite: CS 2110 or equivalent.
For description, see INFO 4300.

CS 4302 Web Information Systems (also INFO 4302)
Spring. 3 credits. Prerequisite: CS 2110 and some familiarity with web site technology.
For description, see INFO 4302.

CS 4320 Introduction to Database Systems
Fall. 3 credits. Prerequisite: CS 3110 (or CS 2110, 2111, and permission of instructor).
Introduction to modern database systems. Concepts covered include storage structures, access methods, query languages, query processing and optimization, transaction management, recovery, database design, XML, and XQuery. The course focuses on the design and internals of modern database systems.

CS 4321 Practicum in Database Systems
Fall. 2 credits. Pre- or corequisite: CS 4520. CS majors may use only one of the following toward their degree: CS/INFO 3300 or CS 4321. Students build part of a real database system in C++.

CS 4410 Operating Systems
Fall. 3 credits. Prerequisite: CS 3410 or 3420.
Introduction to the logical design of systems programs, with emphasis on multiprogrammed operating systems. Topics include process synchronization, deadlock, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.

CS 4411 Practicum in Operating Systems
Fall. 2 credits. Corequisite: CS 4410. Studies the practical aspects of operating systems through the design and implementation of an operating system kernel that supports multiprogramming, virtual memory, and various input-output devices. All the programming for the project is in a high-level language.
CS 4200 Computer Architecture (also ECE 4750)
Fall. 4 credits. Prerequisites: ENGRD 2300 and CS 3420/ECE 3140.
For description, see ECE 4750.

CS 4620 Introduction to Computer Graphics (also ARCH 3704)
Fall. 5 credits. Prerequisite: CS/ENGRD 2110.
Introduction to the principles of computer graphics in two and three dimensions. Topics include digital images, filtering and antialiasing, 2-D and 3-D viewing, the graphics pipeline, curves and surfaces, and human visual perception. Homework assignments require some Java programming. May be taken with or without concurrent enrollment in CS 4621.

CS 4621 Computer Graphics Practicum
Fall. 2 credits. Pre- or corequisite: CS 4620.
Provides CS 4620 students with hands-on experience in computer graphics programming on modern graphics hardware. A semester-long project involves building a substantial interactive 3D system. The course uses Java and OpenGL for code development.

CS 4670 Introduction to Computer Vision
Fall or spring. 4 credits. Prerequisites: CS 2110, CS 2800. Offered fall 2010. An in-depth introduction to computer vision. The goal of computer vision is to compute properties of our world—the 3D shape of an environment, the motion of objects, the names of people or things—through analysis of digital images or videos. The course covers a range of topics, including 3D reconstruction, image segmentation, object recognition, and vision algorithms for the Internet, as well as key algorithmic and optimization techniques, such as graph cuts and non-linear least squares. This course emphasizes hands-on experience with computer vision, with several large programming projects.

CS 4700 Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: CS/ENGRD 2110 and CS 2800 (or equivalent).
Challenging introduction to the major subareas and current research directions in artificial intelligence. Topics include knowledge representation, heuristic search, problem solving, natural-language processing, game-playing, logic and deduction, planning, and machine learning.

CS 4701 Practicum in Artificial Intelligence
Fall. 2 credits. Pre- or corequisite: CS 4700. Project portion of CS 4700. Topics include knowledge representation systems, search procedures, game-playing, automated reasoning, concept learning, reinforcement learning, neural nets, genetics algorithms, planning, and truth maintenance.

CS 4740 Introduction to Natural Language Processing (also COGST 4740, LING 4474)
Spring. 4 credits. Prerequisite: CS 2110. Computationally oriented introduction to natural language processing, the goal of which is to enable computers to use human languages as input, output, or both. Possible topics include parsing, grammar induction, information retrieval, and machine translation.

CS 4758 Robot Learning (also ECE/MAE 4758)
Spring. 4 credits. Prerequisites: knowledge of basic computer science principles and skills at a level sufficient to write a reasonably nontrivial computer program (e.g., CS 1114 or CS 2110 or CS 3110 or equivalent); any one of the following courses in probability/statistics or signal processing: CS 2800 or ECE 2200 or ECE 3100 or ENGRD 2700 (or equivalent). Studies the problem of how an agent can learn to perceive its world well enough to act in it, to make reliable plans, and to learn from its own experience. The focus is on algorithms and machine learning techniques for autonomous operation of robots. Topics include filtering and state estimation (Kalman filters, particle filters); Markov decision process planning (informed and supervised learning); planning and control; perception (vision, sensing). The course has a term project involving physical robots; no final exam.

CS 4780 Machine Learning
Spring. 4 credits. Prerequisites: CS 2100, CS 2800, or basic probability theory and basic knowledge of linear algebra. Next offered 2011–2012. Introduces the fundamental set of techniques and algorithms that constitute machine learning as of today.

CS 4812 Quantum Information Processing (also PHYS 4481/7681)
Spring. 3 credits. Prerequisite: familiarity with theory of vector spaces over complex numbers. For description, see PHYS 4481.

CS 4820 Introduction to Analysis of Algorithms
Spring, summer. 4 credits. Prerequisites: CS 2800 and 3110. Develops techniques used in the design and analysis of algorithms, with an emphasis on problems arising in computing applications. Example applications are drawn from systems and networks, artificial intelligence, computer vision, data mining, and computational biology. This course covers four major algorithm design techniques (greedy algorithms, divide-and-conquer, dynamic programming, and network flow), computability theory focusing on undecidability, computational complexity focusing on NP-completeness, and algorithmic techniques for intractable problems (including identification of structured special cases, approximation algorithms, and local search heuristics).

CS 4830 Introduction to Cryptography
Fall. 4 credits. Prerequisite: CS 2800 (or equivalent), mathematical maturity, or permission of instructor. Introductory course in cryptography. Topics include one-way functions, encryption, digital signatures, pseudo-random number generation, zero-knowledge and basic protocols. Emphasizes fundamental notions and constructions with proofs or security based on precise definitions and assumptions.

CS 4850 Mathematical Foundations for the Information Age
Spring. 4 credits. Prerequisite: mathematical maturity. Next offered 2011–2012. Covers the mathematical foundation underlying modeling and searching of the web and other complex networks, discovering trends, data mining, and making recommendations based on user behavior.

CS 4860 Applied Logic (also MATH 4860)
Fall. 4 credits. Prerequisites: MATH 2220 or 2940, CS 2800 or equivalent (e.g., MATH 3320, 4320, 4340, 4810), and some additional course in mathematics or theoretical computer science. Propositional and predicate logic, compactness and completeness by tableaux, natural deduction, and resolution. Equational logic. Herbrand Universes and unification. Rewrite rules and equational logic. Knuth-Bendix method, and the congruence-closure algorithm and lambda-calculus reduction strategies. Topics in Prolog, LISP, ML, or Nuprl. Applications to expert systems and program verification.

CS 4999 Independent Reading and Research
Fall, spring. 1–4 credits. Independent reading and research for undergraduates.

CS 5150 Software Engineering
Fall. 4 credits. Prerequisite: CS 2110 or equivalent experience programming in Java or C++. Introduction to the practical problems of specifying, designing, and building large, reliable software systems. Students work in teams on projects for real clients. This work includes a feasibility study, requirements analysis, object-oriented design, implementation, testing, and delivery to the client. Additional topics covered in lectures include professionalism, project management, and the legal framework for software development.

CS 5220 Applications of Parallel Computers
Fall or spring. 4 credits. Prerequisite: course in numerical methods at level of CS 3220 or higher. Next offered 2011–2012. Models for parallel programming and survey of parallel machines. Existing parallel programming languages, vectorizing compilers, and parallel libraries and toolboxes.

CS 5300 The Architecture of Large-Scale Information Systems (also INFO 5300)
Spring. 4 credits. Prerequisite: CS/INFO 3300 or CS 4320. For description, see INFO 5300.

CS 5412 Cloud Computing
Fall or spring. 4 credits. Prerequisite: CS 4410 or permission of instructor. Next offered 2011–2012. Focuses on cloud computing, large-scale Internet applications, and other practical issues in designing and implementing trustworthy, scalable distributed software.
CS 5414  Distributed Computing Principles
Fall. 4 credits. Prerequisite: CS 4410 or permission of instructor.
Studies the abstractions and algorithms that constitute the foundations for implementing concurrent and distributed computing, with emphasis on supporting fault-tolerance. Topics vary to reflect advances in the field but typically include global state snapshots, causality and clocks (logical and physical), agreement and consensus, primary-backup and state-machine replication, quorums, and gossip. Students undertake a substantial software project to put these ideas into practice. Many students obtain additional project credit by co-registering in CS 4999 or 7999.

CS 5420  Parallel Computer Architecture (also ECE 5720)
Fall. 4 credits. Prerequisite: ECE 4750. For description, see ECE 5720.

CS 5430  System Security
Fall or spring. 4 credits. Prerequisites: CS 4410 or 4450 and familiarity with JAVA, C, or C# programming languages. Offered spring 2011. Discusses security and survivability for computers and communications networks. Includes discussions of policy issues (e.g., the national debates on cryptography policy) as well as discussions of the technical alternatives for implementing the properties that comprise “trustworthiness” in a computing system. Covers mechanisms for authentication and authorization as well as cryptographic protocols.

CS 5540  Computational Techniques for Analyzing Clinical Data
Fall or spring. 3 credits. Prerequisites: some programming experience, exposure to introductory statistics and algorithms, or permission of instructor. Next offered 2011–2012. An overview of the construction and analysis of digital information generated in clinical medicine.

CS 5620  Interactive Computer Graphics
Fall or spring. 4 credits. Prerequisite: CS 4620. Next offered 2011–2012. Methods for interactive computer graphics, targeting applications including games, visualization, design, and immersive environments.

CS 5643  Physically Based Animation for Computer Graphics
Fall or spring. 4 credits. Prerequisites: CS/ENGRD 3220 and/or CS 4620 or permission of instructor. Next offered 2011–2012. Introduces students to common physically based modeling techniques for animation of virtual characters, fluids and gases, rigid and deformable solids, and other systems.

CS 5722  Heuristic Methods for Optimization (also CEE 5290, ORIE 5543)
Fall. 3 or 4 credits. Prerequisites: CS/ENGRD 2110 or 3220 or CEE/ENGRD 3200, or graduate standing, or permission of instructor. For description, see CEE 5290.

CS 5846  Decision Theory I (also ECON 4750/6768)
Fall. 4 credits. For description, see ECON 4750.

CS 6110  Advanced Programming Languages
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Study of programming paradigms: functional, imperative, concurrent, and logic programming. Models of programming languages, including the lambda calculus. Type systems, polymorphism, modules, and other object-oriented constructs. Program transformations, programming logic, and applications to programming methodology.

CS 6210  Matrix Computations
Fall. 4 credits. Prerequisites: MATH 4110 and 4310 or permission of instructor. Offered alternate years. Stable and efficient algorithms for linear equations, least squares, and eigenvalue problems. Direct and iterative methods are considered. The MATLAB system is used extensively.

CS 6320  Database Management Systems
Spring. 4 credits. Prerequisite: CS 4320 or permission of instructor. Next offered 2011–2012. Covers a variety of advanced issues ranging from transaction management to query processing to data mining. Involves extensive paper reading and discussion.

CS 6410  Advanced Systems
Fall or spring. 4 credits. Prerequisite: CS 4410 or permission of instructor. Offered fall 2010. Advanced course in systems, emphasizing contemporary research in distributed systems. Topics may include communication protocols, consistency in distributed systems, fault-tolerance, knowledge and knowledge-based protocols, performance, scheduling, concurrency control, and authentication and security issues.

CS 6460  Peer-to-Peer Systems
Spring. 4 credits. Recommended: CS 6140. Peer-to-peer (P2P) systems, in which clients not only consume resources but also provide their own resources for the use of other clients, have emerged as a new architectural paradigm in distributed computing. This course examines peer-to-peer systems and discusses existing and new applications. Students are expected to perform extensive reading on P2P and build a peer-to-peer system as part of this course.

CS 6620  Advanced Interactive Graphics
Fall or spring. 4 credits. Prerequisites: CS 4620 and 4621 or 5621 or permission of instructor. Next offered 2011–2012. State-of-the-art techniques for high-quality rendering techniques used in simulation, games, and movies. Focus is on practical rendering algorithms for graphics applications.

CS 6630  Realistic Image Synthesis
Fall or spring. 4 credits. Prerequisites: CS 4620 or equivalent and undergraduate-level understanding of algorithms, probability, vector calculus, and programming. Next offered 2011–2012. Advanced course in realistic image synthesis, focusing on the computation of physically accurate images.

CS 6650  Computational Motion
Fall. 4 credits. Prerequisites: undergraduate-level understanding of algorithms, and some scientific computing. Offered alternate years; offered spring 2011. Covers computational aspects of motion, broadly construed. Topics include the computer representation, modeling, analysis, and simulation of motion. Students implement several of the algorithms covered in the course and complete a final project.

CS 6670  Computer Vision
Fall or spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATH 2210 or equivalent. Offered spring 2011. Introduction to computer vision, with an emphasis on discrete optimization algorithms and on applications in medical imaging. Topics include edge detection, image segmentation, stereopsis, motion and optical flow, active contours, and image contour distance. Students are required to implement several of the algorithms covered in the course and complete a final project.

CS 6700  Advanced Artificial Intelligence
Spring. 4 credits. Prerequisite: CS 4700 or permission of instructor. Next offered 2011–2012. Covers a variety of areas in AI, including knowledge representation, automated reasoning, learning, game-playing, and planning, with an emphasis on computational issues.

CS 6740  Advanced Language Technologies (also INFO 6300)
Fall or spring. 3 credits. Prerequisite: permission of instructor. Neither CS 4300 nor CS 4740 are prerequisites. Offered fall 2010. Graduate-level introduction to technologies for the computational treatment of information in human-language form, covering modern natural-language processing (NLP) and/or information retrieval (IR). Possible topics include latent semantic analysis (LSI), clickthrough data for web search, language modeling, text categorization and clustering, information extraction, computational syntactic and semantic formalisms, grammar induction, and machine translation.

CS 6742  Natural Language Processing and Social Interaction
Spring. 3 credits. Prerequisites: CS 2110 or equivalent programming experience; course in artificial intelligence or any relevant subfield (e.g., NLP, information retrieval, machine learning); graduate standing, or permission of instructor. More and more of life is now manifested online, and much of the digital traces that are left by people, groups, and large entities is increasingly recorded in natural-language format. This course examines the opportunities for natural language processing to contribute to the analysis and construction of socially embedded processes. Possible topics include sentiment analysis, learning social-network structure, analysis of text in political or legal domains, review aggregation systems, analysis of online conversations, and text categorization with respect to psychological categories.
CS 6758 Robot Learning
Spring. 4 credits. Prerequisites: knowledge of basic computer science principles and skills at a level sufficient to write a reasonably nontrivial computer program (e.g., CS 1110 for CS 2110 or CS 3110 or equivalent); any one of the following courses in probability/statistics or signal processing: CS 2800 or ECE 2200 or ECE 3100 or ENGRD 2700 (or equivalent). Studies the problem of how an agent can learn to perceive its world well enough to act in it, to make reliable plans, and to learn from its own experience. The focus is on algorithms and machine learning techniques for autonomous operation of robots. Topics include filtering and state estimation (Kalman filters, particle filters); Markov decision process; learning (reinforcement and supervised learning); planning and control; perception (vision, sensing). The course has a term project involving physical robots; no final exam.

CS 6780 Machine Learning and Pattern Recognition
Fall. 4 credits. Prerequisites: programming skills (e.g., CS 2110 or CS 3110) and basic knowledge of linear algebra and probability theory (e.g. CS 2800). Gives a graduate-level introduction to machine learning and statistical pattern recognition and in-depth coverage of new and advanced methods in machine learning. Emphasizes approaches with practical relevance and discusses a number of recent applications of machine learning, such as robotics, data mining, computer vision, text and web data processing. An open research project is a major part of the course. Topics include supervised learning (generative/discriminative learning, boosting/boosting); unsupervised learning (kNN, clustering, dimensionality reduction); online learning; robot learning (reinforcement learning, Kalman filters); introduction to graphical models. Masters students are encouraged to take the course.

CS 6782 Probabilistic Graphical Models
(also BTRY 7930) Fall. 4 credits. Prerequisites: probability theory (BTRY 4080 or equivalent), programming and data structures (CS 2110 or equivalent); a course in statistical methods is recommended but not required (BTRY 4090 or equivalent). For description, see BTRY 6790.

CS 6784 Advanced Topics in Machine Learning
Fall. 4 credits. Prerequisites: CS 4780 or CS 6780 or equivalent or machine learning course. Next offered 2011–2012. Extends and complements CS 4780 and 5780, giving in-depth coverage of new and advanced methods in machine learning.

CS 6810 Theory of Computing
Fall or spring. 4 credits. Prerequisites: CS 3510 and CS 4820 or 6820 or permission of instructor. Next offered 2011–2012. Advanced treatment of theory of computation, computational-complexity theory, and other topics in computing theory.

CS 6820 Analysis of Algorithms
Fall. 4 credits. Prerequisite: CS 4820 or graduate standing. Methodology for developing and analyzing efficient algorithms. Understanding the inherent complexity of natural problems via polynomial-time algorithms, advanced data structures, randomized algorithms, approximation algorithms, and NP-completeness. Additional topics may include algebraic and number theoretic algorithms, circuit lower bounds, online algorithms, and algebraic game theory.

CS 6825 The Science Base for the Information Age
Fall or spring. 4 credits. Prerequisites: none. Next offered 2011–2012. Covers the evolving science base that supports the flow of ideas in scientific literature, the evolution of social groups in networks, and the extraction of information from the World Wide Web and other unstructured and noisy datasets.

CS 6830 Cryptography
Fall or spring. 4 credits. Prerequisites: general ease with algorithms and elementary probability theory, maturity with mathematical proofs (ability to read and write mathematical proofs). Next offered 2011–2012. Graduate introduction to cryptography. Topics include encryption, digital signatures, pseudo-random number generation, zero-knowledge, and basic protocols. Emphasizes fundamental concepts and proof techniques.

CS 6840 Algorithmic Game Theory
Fall or spring. 4 credits. Prerequisite: background in algorithms and graphs at a level of CS 4820. No prior knowledge of game theory or economics assumed. Next offered 2011–2012. Focuses on problems arising from, and motivated by, the Internet and other decentralized computer networks.

CS 6850 The Structure of Information Networks
(also INFO 6850) Spring. 4 credits. Prerequisite: CS 4820.

CS 6860 Logics of Programs
Fall. 4 credits. Prerequisites: CS 4810, 4810, and (MATH 4810 or MATH 4860). Topics in logics of programs and program verification. Possible topics include: Floyd/Hoare logic, modal logic, dynamic logic, temporal logic, process logic, automata on infinite objects and their relation to program logics, the Rabin theorem, the modal mu-calculus, games and alternating automata, applications to type inference, set constraints, Kleene algebra.

CS 6862 Automated Reasoning and Formal Methods
Spring. 4 credits. Prerequisites: CS 6110 and graduate standing or permission of instructor. Covers advanced logic applied to reasoning about programs and software systems to show that they meet their formal specifications as well as the basics of automated reasoning systems for formally proving theorems about software.

CS 7090 Computer Science Colloquium
Fall, spring. 1 credit. For staff, visitors, and graduate students interested in computer science. S–U grades only. Weekly meeting for the discussion and study of important topics in the field.

CS 7190 Seminar in Programming Languages
Fall, spring. 1 credit. Prerequisite: CS 6110 or permission of instructor. S–U grades only. Next offered 2011–2012.

CS 7192 Seminar in Programming Refinement Logics
Fall, spring. 4 credits. Prerequisite: permission of instructor. Topics in programming logics, possibly including type theory, constructive logic, decision procedures, heuristic methods, extraction of code from proofs, and the design of proof-development and problem-solving systems.

CS 7290 Seminar on Scientific Computing and Numerics
(also MATH 7290) Fall, spring. 1 credit. Prerequisites: none. Talks on various methods in scientific computing, the analysis of their convergence properties and computational efficiency, and their adaptation to specific applications.

CS 7390 Database Seminar
Fall, spring. 1 credit. Prerequisite: permission of instructor. S–U grades only.

CS 7412 Scalable Distributed Consistency: Models and Applications
Spring. 4 credits. Prerequisite: Ph.D. student or permission of instructor. The emergence of massive cloud computing systems and large enterprise computing solutions provides a serious challenge: the most popular ways of scaling a system abandon consistency guarantees. Yet many applications (e.g., medical, financial) make sense only if we can prove that they do exactly what they should do. Students in this research-oriented course read papers on consistency mechanisms with a goal of understanding what forms of consistency matter and what options make sense in large-scale systems. Students present papers, must participate in discussions, and submit weekly written summaries of the papers and their key findings.

CS 7490 Systems Research Seminar
Fall, spring. 1 credit. S–U grades only.

CS 7594 Seminar on Computational Issues in Medicine
Fall. 1 credit. Prerequisites: none. An overview of computational issues that arise in the clinical practice of medicine. Topics include the role of IT in clinical practice; medical imaging problems in CT and MR; data mining; clinical decision support; workflow optimization; electronic medical records and health care IT standards. Lectures are given primarily by attending physicians from the Department of Radiology at Weill Cornell Medical College. Open to students at all levels.

CS 7670 Computer Vision Seminar
Fall, spring. 1 credit. Prerequisites: none. Informal weekly seminars in which current topics in computer vision are discussed.

CS 7690 Computer Graphics Seminar
Fall, spring. 3 credits.

CS 7790 Seminar in Artificial Intelligence
Fall, spring. 4 credits. Prerequisite: permission of instructor. S–U grades only.
CS 7784 Seminar in Natural Language Understanding
Fall, spring. 2 credits.
Informal weekly seminar in which current topics in natural language understanding and computational linguistics are discussed.

CS 7890 Seminar in Theory of Algorithms and Computing
Fall, spring. 4 credits. Prerequisite: permission of instructor. S–U grades only.

CS 7893 Cryptography Seminar
Fall, spring. 1 credit.
Seminar for discussing recent or classical papers in cryptography.

CS 7999 Independent Research
Fall, spring. Prerequisite: permission of a computer science advisor. Independent research or master of engineering project.

CS 9999 Thesis Research
Fall, spring. Prerequisite: permission of a computer science advisor. S–U grades only.
Doctoral research.

INFORMATION SCIENCE (INFO)

INFO 1300 Introductory Design and Programming for the Web (also CS 1300)
Fall. 3 credits.
The World Wide Web is both a technology and a pervasive and powerful resource in our society and culture. To build functional and effective web sites, students need technical and design skills as well as analytical skills for understanding who is using the web, in what ways they are using it, and for what purposes. In this course, students develop skills in all three of these areas through the use of technologies such as XHTML, Cascading StyleSheets, and PHP. Students study how web sites are deployed and used, usability issues on the web, user-centered design, and methods for visual layout and information architecture. Through the web, this course provides an introduction to the interdisciplinary field of information science.

INFO 1305 Computation and Culture in a Digital Age (also CS 1305)
Summer. 3 credits. Prerequisite: none at university level; must be high school junior or rising senior. Offered alternate years; next offered 2011.

INFO 2040 Networks (also ECON 2040, SOC 2090)
Fall. 4 credits.
For description, see ECON 2040.

INFO 2140 Cognitive Psychology (also COGST/PSYCH 2140)
Spring. 4 credits. Limited to 175 students. Prerequisite: sophomore standing. Graduate students, see INFO 6140. For description, see PSYCH 2140.

INFO 2300 Intermediate Design and Programming for the Web (also CS 2300)
Spring. 3 credits. Prerequisite: INFO 1300 strongly recommended. Must be taken before INFO 3850.
Web programming requires the cooperation of two machines: the one in front of the viewer (client) and the one delivering the content (server). INFO 1300 concentrates almost exclusively on the client side. The main emphasis in INFO 2300 is learning about server-side processing. Students begin with a short overview of the PHP server-side scripting language, then look at interactions with databases, learning about querying via the database language SQL. Through a succession of projects, students learn how to apply this understanding to the creation of an interactive, data-driven site via PHP and the MySQL database. Also considered are technologies such as Javascript and Ajax and techniques to enhance security and privacy. Design and usability issues are emphasized. A major component of the course is the creation of a substantial web site.

INFO 2310 Topics in Web Programming and Design
INFO 2450 Communication and Technology (also COMM 2450)
Fall. 3 credits.
Teaches basic mathematical methods for information science. Topics include graph theory, discrete probability, Bayesian methods, finite automata, Markov models, and hidden Markov models. Uses examples and applications from various areas of information science such as the structure of the web, genomics, natural language processing, and signal processing.
INFO 2490 Mathematical Methods for Information Science
Spring. 4 credits. Corequisite: MATH 2310 or equivalent.

INFO 2921 Inventing an Information Society (also AMST/ECE/ENGRC 2980, HIST 2920, STS 2921)
Spring. 3 credits.
For description, see ENGRG 2980.

INFO 2950 Mathematical Methods for Information Science
INFO 2950, or graduate standing.

INFO 2980 Information Retrieval (also CS 4300)
Fall. 3 credits. Offered odd-numbered years; next offered 2011–2012. For description, see COMM 4290.

INFO 3200 New Media and Society (also COMM 3200)
Spring. 3 credits.
For description, see COMM 3200.

INFO 3300 Data-Driven Web Applications (also CS 3300)
Spring. 3 credits. Prerequisite: CS 2110 and INFO 2300 or permission of instructor.
Next offered 2012. Introduces students to modern database systems and three-tier application development with a focus on building web-based applications using database systems.

INFO 3400 Psychology of Online Relationships (also COMM 3400)
Fall. 3 credits.
For description, see COMM 3400.

INFO 3450 Human-Computer Interaction Design (also COMM 3450)
Fall. 3 credits. Prerequisite: INFO 2450. May be taken concurrently with INFO 2450.
For description, see COMM 3450.

INFO 3460 Online Communities (also COMM 3460)
Fall. 3 credits.
For description, see COMM 3460.

INFO 3490 Media Technologies (also COMM 3490, STS 3491)
Spring. 3 credits. Offered odd-numbered years.
For description, see COMM 3490.

INFO 3561 Computing Cultures (also STS 3561)
Spring. 3 credits. No technical knowledge of computer use presumed or required.
For description, see STS 3561.

INFO 3650 Technology and Collaboration (also COMM 3650)
Spring. 3 credits. Prerequisite: INFO 2450. For description, see COMM 3650.

INFO 3660 History and Theory of Digital Art (also ARTH 3650)
Fall. 4 credits. Next offered 2011–2012. For description, see ARTH 3650.

INFO 4144 Responsive Environments
Spring. 4 credits.
For description, see ARTH 4144.

INFO 4290 Copyright in the Digital Age (also COMM 4290)
Fall. 3 credits. For description, see COMM 4290.

INFO 4300 Information Retrieval (also CS 4300)
Fall. 3 credits. Prerequisite: CS/ENGRD 2110 or equivalent.
Studies the methods used to search for and discover information in large-scale information systems. The emphasis is on information retrieval applied to textual materials, but there is some discussion of other formats. The course includes techniques for searching, browsing, and filtering information and the use of classification systems and thesauruses. The techniques are illustrated with examples from web searching and digital libraries.

INFO 4302 Web Information Systems (also CS 4302)
Spring. 5 credits. Prerequisites: CS 2110 and some familiarity with web site technology.
Examines the architecture of web information systems such as distributed digital libraries and electronic publishing systems. Many of the topics presented are the subject of current research and development at Cornell, other universities, and in standards organizations such as the World Wide Web Consortium. Course content mixes exploration of current tools for building web information systems such as XML, XSLT, and RDF with broader concepts such as techniques for knowledge representation and description, object models for content representation, and legal and economic impacts of web information. A theme that runs throughout the course is the relationship between traditional information environments, exemplified by libraries, and the distributed information environment of the web.

INFO 4307 Learning From Web Data
Fall. 3 credits. Prerequisites: CS 2110 and INFO 2950, or graduate standing.
Teaches students methods for working with data generated by web applications and services, including web server logs, syndication feeds, and other public APIs. Topics include text processing and scripting, data visualization, working with APIs, machine learning and data mining algorithms, and learning tools and libraries useful for the above. The graduate version includes supplemental readings and an emphasis on choosing projects that could lead to publication.
INFO 4320 Introduction to Rapid Prototyping and Physical Computing
Spring. 3 credits. Prerequisites: INFO 1300 or equivalent or permission of instructor.
Materials fee: $250.
This class provides an introduction to modern rapid prototyping techniques such as laser cutting, 3D printing and microcontroller programming (such as the Arduino system). Using these tools, small multidisciplinary groups conduct the hardware project of their choice exploring topics as varied as: Universal Access, tangible interfaces, toys, personal or medical assistants and new musical instruments.

INFO 4400 Advanced Human-Computer Interaction Design (also COMM 6400)
Spring. 3 credits. Prerequisite: INFO 2450.
For description, see COMM 4400.

INFO 4440 Seminar in Computer-Mediated Communication (also COMM 4450)
Spring. 3 credits. Prerequisite: INFO 2450.
For description, see COMM 4450.

INFO 4470 Social and Economic Data (also LLIS 4470)
Spring. 4 credits. Prerequisites: calculus, IS statistics requirement, and one upper-level social science course, or permission of instructor.
Social and economic data drive decisions in public and private organizations, and quality decisions require quality data. This course focuses on data quality—conceptual fit, sampling and nonsampling error, timeliness, geographic detail, and dissemination—as well as legal and ethical issues in the data manufacturing process. Major emphasis is placed on public use microdata files of the U.S. Census Bureau and their role in the allocation of federal funds. These files include the Census of Population and Housing, Current Population Survey, American Housing Survey, Consumer Expenditure Survey, and American Community Survey. The course is appropriate for upper-level undergraduate, professional master’s, and doctoral students who will be users of data products, from the public and private sectors; and/or producers of data products for their organizations, working with existing data products from public and proprietary sources, as well as administrative or survey data collected by their organization.

INFO 4500 Language and Technology (also COMM 4500)
Spring. 3 credits. Prerequisite: INFO 2450 or permission of instructor.
For description, see COMM 4500.

INFO 4900 Independent Reading and Research
Fall, spring. 1–4 credits. Independent reading and research for undergraduates.

INFO 4910 Teaching in Information Science, Systems, and Technology
Fall, spring. Variable credit.
Involves working as a T.A. in a course in the information science, systems, and technology major.

INFO 5150 Culture, Law, and Politics of the Internet

INFO 5300 The Architecture of Large-Scale Information Systems (also CS 5300)
Spring. 4 credits. Prerequisite: INFO/CS 3500 or CS 4320.
Deals with the architecture of large-scale information systems, with special emphasis on Internet-based systems. Topics include three-tier architectures, edge caches, distributed transaction management, web services, workflows, performance scalability, and high-availability architectures. The course includes a substantial project in the context of three-tier architectures, involving web servers, application servers, and database systems. Students study and use technologies such as Web Services, .Net, J2EE, ASPs, Servlets, XML, and SOAP.

INFO 6140 Cognitive Psychology (also COGST/PSYCH 6140)
Spring. 4 credits. For description, see PSYCH 6140.

INFO 6300 Advanced Language Technologies (also CS 6740)
Fall. 5 credits. Prerequisite: permission of instructor. Neither INFO/CS 4300 nor CS 4740 are prerequisites.
For description, see CS 6740 in CIS section.

INFO 6302 Web Information Systems
Spring. 3 credits. Prerequisites: CS 2110 and some familiarity with website technology.
For description, see INFO 4302.

INFO 6307 Learning from Web Data
Fall. 3 credits. Prerequisites: CS 2110 and INFO 2950, or graduate standing.
For description, see INFO 4307.

INFO 6341 Information Technology in Sociocultural Context (also STS 6341)

INFO 6400 Human-Computer Interaction Design (also COMM 6400)
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 6400.

INFO 6450 Computer-Mediated Communication (also COMM 6450)
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 6450.

INFO 6648 Speech Synthesis by Rule (also LING 6648)
Spring. 4 credits. Prerequisite: LING 4401, 4419, or permission of instructor. Next offered 2011–2012.
For description, see LING 6648.

INFO 6500 Language and Technology (also COMM 6500)
Spring. 3 credits.
For description, see COMM 6500.

INFO 6850 The Structure of Information Networks (also CS 6850)
Spring. 4 credits. Prerequisite: CS 4820.

INFO 7050 Graduate Seminar
Fall, spring. 2 credits.
Graduate seminar on new research in the field of Information Science.

INFO 7090 IS Colloquium
Fall, spring. 1 credit.
For staff, visitors, and graduate students interested in information science.

INFO 7900 Independent Research
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.
Independent research for M.Eng. students and pre-A exam Ph.D. students.

INFO 9900 Thesis Research
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.
Thesis research for post-A exam Ph.D. students.

DEPARTMENT OF STATISTICAL SCIENCE
301 Malott Hall
255-8066

STSCI 2100 Introductory Statistics
Fall or spring. 4 credits. Introduction to the basic concepts of probability, statistics and data analysis. Descriptive methods, normal theory models, and inferential procedures are considered. Topics include basic statistical designs, an introduction to probability, estimation, confidence intervals, tests of significance for a single population mean and proportion, the difference in two population means and proportions, ANOVA, multiple linear regression, and contingency tables.

STSCI 2110 Statistical Methods for the Social Sciences II (also ILRST 2100)
Fall and spring. 4 credits. Prerequisite: ILRST/STSCI 2100 or equivalent introductory statistics course.
For description, see ILRST 2100.

STSCI 2200 Biological Statistics I (also BTRY 3010, NTRES 3130)
Fall. 4 credits. Prerequisite: one semester of calculus.
For description, see BTRY 3010.

STSCI 3100 Statistical Sampling (also ILRST/BTRY 3100)
Fall. 4 credits. Prerequisites: two semesters of statistics.
For description, see ILRST 3100.

STSCI 3200 Biological Statistics II (also BTRY 3020, NTRES 4130)
Spring. 4 credits. Prerequisite: BTRY 3010 or 6010.
For description, see BTRY 3020.

STSCI 4080 Theory of Probability (also BTRY 4080)
Fall. 4 credits. Prerequisites: MATH 1110, 1120, at least concurrent enrollment in 2150 or 2220 or equivalents. Recommended: at least one introductory course in statistical methods.
For description, see BTRY 4080.
STSCI 4090 Theory of Statistics (also BTRY 4090)
Spring. 4 credits. Prerequisites: BTRY 4080 or equivalent and at least one introductory statistics course.
For description, see BTRY 4090.

STSCI 4100 Multivariate Analysis (also ILRST 4100)
Spring. 4 credits. Prerequisites: BTRY 3010, some knowledge of matrix algebra. S–U or letter grades.
For description, see ILRST 4100.

STSCI 4110 Statistical Methods III: Categorical Data (also BTRY 6030, ILRST 4110)
Spring. 4 credits. Prerequisite: BTRY 6010 and 6020 or permission of instructor.
Offered alternate years.
For description, see ILRST 4110.

STSCI 4120 Statistical Methods IV: Applied Design (also BTRY 6040, ILRST 4120)
Spring. 4 credits. Prerequisites: BTRY 6010 and 6020 or permission of instructor.
For description, see BTRY 6040.

STSCI 4500 Databases and Statistical Computing
Spring. 4 credits. Exposure to multiple linear regression and logistic regression strongly recommended.
The intent of the course is to provide the statistician with the computational tools for statistical research and applications. Topics including random number generation and Monte Carlo methods, regression computations and application to statistical methods of optimization, and sorting.

STSCI 4740 Statistical Data Mining I (also ORIE 4740)
Fall. 4 credits. Prerequisites: ORIE 3500 and MATH 2940 or equivalent, programming experience. Exposure to multiple linear regression and logistic regression strongly recommended.
For description, see ORIE 4740.

STSCI 5010–5020 Applied Statistical Analysis
Two-semester core course for students in master of professional studies (M.P.S.) degree program in applied statistics in Department of Statistical Science.
Prerequisite: enrollment in M.P.S. program.
Consists of a series of modules on various topics in applied statistics. Some modules include guest lectures from practitioners. Parallel with the course, students complete a yearlong, in-depth data analysis project.
5010, fall. 4 credits. Letter grades only. Topics include but are not limited to statistical computing systems, statistical software packages, data management, statistical graphics, and simulation methods and algorithms.
5020, spring. 4 credits. Letter grades only. Topics include but are not limited to sample surveys and questionnaire design, data sources, experimental design, and data mining.

STSCI 6090 Statistics Seminar
Fall and spring. 1 credit. Pre- or corequisite: BTRY 4090 or permission of instructor. S–U grades only.

The School of Continuing Education and Summer Sessions (SCE) provides outstanding educational opportunities throughout the year for people of all ages and interests. We present programs in a wide variety of formats on campus, online, and around the world.

Join us to prepare for your future, enhance your studies, improve your job skills, have fun learning something new, or introduce someone else to the wonders of Cornell.

For information about the following programs, visit www.sce.cornell.edu, e-mail cusce@cornell.edu, call 607 255-4987, or write to B20 Day Hall, Ithaca, NY 14853-2801.

SCHOOL ADMINISTRATION
Glenn C. Altschuler, dean
Charles W. Jermy, Jr., associate dean, and director, Cornell University Summer Session
Diane E. Sheridan, director, finance and administration
Ruby D. Brown, assistant director, finance and administration

School Program Directors and Managers
Mary E. Adie, director, Special Programs and Executive Education
Robert Hutchens, director, Cornell in Washington Program
Abby H. Eller, director, Summer College Programs for High School Students
Catherine Penner, director, Cornell’s Adult University and Cornell CyberTower

School Support Services
Graham Dobson, manager, information technologies
Ann L. Morse, manager, media services
Cathy M. Pace, registrar, and coordinator, continuing education information service

CORNELL’S ADULT UNIVERSITY
Believing that learning shouldn’t end once you’ve earned your degree, Cornell’s Adult University (CAU) offers weekend seminars and longer domestic programs as well as international study tours. Developed and led by distinguished members of the Cornell faculty, all programs are inspired by the conviction that one of the roles of a great university is to provide a bridge between traditional formal education and informal, noncredit study. For information, visit www.cau.cornell.edu, e-mail cauinfo@cornell.edu, call 607 255-6260, or write to Cornell’s

Adult University, B20 Day Hall, Ithaca, NY 14853-2801.

CONTINUING EDUCATION INFORMATION SERVICE
If you know someone who has been out of school for several years and who wants to resume his or her education, you may want to mention Cornell’s Continuing Education Information Service, which provides counseling, referral, and news about short courses, workshops, professional updates, and executive programs offered by the university. For information, e-mail cusce@cornell.edu, call 607 255-4987, or write to Continuing Education, B20 Day Hall, Ithaca, NY 14853-2801.

CORNELL CYBERTOWER: FREE FACULTY LECTURES AND INTERVIEWS ONLINE
Meet Cornell faculty members and explore fascinating topics for free at Cornell CyberTower, which features:

• Study Rooms, video-streamed lectures that link to specially selected websites and reading lists;
• Forums, informal video-streamed conversations with leading faculty members;
• Tower Topics, short videos highlighting research being conducted at Cornell; and
• CyberTower Classic, an archive of more than 100 interviews, lectures, and commentaries videotaped between 2001 and 2009.

To explore CyberTower, simply log on to www.cybertower.cornell.edu. It’s a great way to see some of what Cornell has to offer! In fact, why not share it with your family and friends?

CORNELL IN WASHINGTON PROGRAM
If you want to combine the strengths of Cornell with all of the best parts of living and learning in Washington, D.C., consider the Cornell in Washington program. Students take courses in the fall, spring, or summer for credit, work as externs, and complete substantial research projects while enjoying the rich opportunities available in the nation’s capital. For information, visit www.ciw.cornell.edu, e-mail cwas@cornell.edu, call 607 255-4900, or write to Cornell in Washington, M101 McGraw Hall, Ithaca, NY 14853-4601.

DISTANCE LEARNING
Need a flexible schedule? Planning to travel or work during winter break or during the summer? Don’t let that stop you from taking a class, earning credits, or learning something new. Wherever you are, whatever your schedule, Cornell distance learning courses are just a keyboard away. Distance learning courses feature web-based components and/or related materials. You’ll interact with the instructor and other students by phone or e-mail. Most assignments and examinations are completed within a scheduled time frame, just as in on-campus courses, but you’ll have the option of getting a head start on readings and lectures. For information, visit www.sce.cornell.edu/dl, e-mail cusce@cornell.edu, call 607 255-4987, or write to Distance Learning, B20 Day Hall, Ithaca, NY 14853-2801.

If you are a faculty member interested in developing credit or noncredit distance learning courses, the school offers a broad range of services, including determining technological needs, resolving copyright issues, creating a marketing plan, and fulfilling administrative duties related to your course. Visit www.sce.cornell.edu/dl to see what’s possible.

EXECUTIVE AND PROFESSIONAL PROGRAMS
Once you’re out in the work world (or if you know folks who already are), you may be interested in the short, high-level executive education programs that the school presents on campus, online, and in locations worldwide. These courses are taught by Cornell faculty and senior research staff members in many fields. Programs also can be designed to respond to the specific needs and interests of corporations, professional societies, and other groups. For information, visit www.sce.cornell.edu/exec, e-mail cusp@cornell.edu, call 607 255-7259, or write to Executive Education, B20 Day Hall, Ithaca, NY 14853-2801.

EXTRAMURAL/PART-TIME STUDY
If you find your studies interrupted for any reason, you may find it useful to take classes on a part-time basis. The school is dedicated to offering part-time study to staff and faculty members, area residents, and anyone else interested in taking courses at the university, improving their job skills, continuing their education, or simply having fun learning something new.

Thanks to the school’s Extramural Study program, anyone may (with few exceptions) enroll in any course in the university during the fall and spring semesters if space is available. Part-time study at Cornell is a great opportunity to take fascinating courses and study with world-renowned faculty members. If you’d like to take advantage of Cornell’s extensive course offerings but don’t need college credit, you may
 register through the Visitors Program and receive a 90 percent discount on tuition. For information, visit www.sce.cornell.edu/ws, e-mail cusce@cornell.edu, or write to Extramural Study, B20 Day Hall, Ithaca, NY 14853-2801.

SPECIAL PROGRAMS
If you want to immerse yourself in a particular subject, consider enrolling in a special program. Programs are offered on and off campus, may include an internship, and may be combined with other courses. For information, visit www.sce.cornell.edu/sp, e-mail cuspe@cornell.edu, call 607 255-7259, or write to Special Programs, B20 Day Hall, Ithaca, NY 14853-2801.

On-Campus Special Programs Roster
AEM Certificate in Business Management Program
Architecture
Art in the Modern World
Asian Language Programs: Chinese, Japanese, Nepali, Sinhala, Tibetan
Astronomy for Teachers
Biological Sciences Undergraduate Research Program
CCMR Institute for Chemistry Teachers (CICT)
CNS Institute for Physics Teachers (CIPT)
Cornell Institute for Biology Teachers (CIBT)
Ecological Design in Paris and London
Education
Engineering Cooperative Education Program
English for International Students and Scholars
Field Course in Iroquois Archaeology
Freshman Summer Start
Frontiers of American History
Industrial and Labor Relations: Strategic Corporate Research
Intensive Arabic Program
Landscape Architecture: Site Grading
Leadership Program for Veterinary Students
Nanobiotechnology Institute for Teachers
Post-baccalaureate Certificate Program in Health Studies
Prefreshman Summer Program
Satellite Remote Sensing Applications in Biological Oceanography
Teaching Writing

Off-Campus Special Programs Roster
Art Studio and Creative Writing Workshop in Rome, Italy
Theatre, Film, and Dance in Europe: Dublin/Paris/Rome
Human Ecology: Urban Semester Program—Fieldwork in Diversity, Professional Practice, and Service: The Culture of Medicine/Community and Public Service/Business and Finance
International Business Experience
Investment Management Program
Labor and Employment Arbitration Advocacy
Latin American Studies: Quechua
Marine Science: Shools Marine Laboratory, Maine
Prelaw Program in New York City
Summer in Washington

Campus to Careers
The job market's tough. The economy's tight. You've been thinking it's time to get serious about your future. . . .

The School of Continuing Education and Summer Sessions invites you to join us for one of our highly regarded programs linking classrooms and careers. No matter what your major is, you can:
- Expand your career opportunities
- Strengthen your résumé and skills
- Develop professional contacts
- Take focused, intensive classes
- Learn from distinguished professors, alumni, practitioners, and executives
- Study in Washington, D.C., New York City, or on the Cornell campus in Ithaca
- Enrich your personal, academic, and professional life

For more information, visit www.sce.cornell.edu/sp.

Campus-to-Careers Programs Roster
AEM Certificate in Business Management Program
Investment Management Program
Prelaw Program in New York City
Summer in Washington

SUMMER COLLEGE PROGRAMS FOR HIGH SCHOOL STUDENTS
If you know any high school students, be sure to tell them about Summer College. This award-winning program offers three- and six-week courses for talented sophomores, juniors, and seniors from around the world.

Participants live on our beautiful campus, take college classes with leading Cornell faculty members, earn an average of 6 credits, and explore careers and academic majors.

The program is a wonderful opportunity for high school students to experience college life and make some great friends. At the end of the program, students often say it's been the best summer of their life.

For information, visit www.summercollege.cornell.edu, e-mail summer_college@cornell.edu, call 607-255-6205, or write to Summer College, B20 Day Hall, Ithaca, NY 14853-2801.

WINTER SESSION
You can earn up to 4 credits between the fall and spring semesters by enrolling in the winter session. During this quiet time on campus, you'll enjoy generally smaller classes and be able to concentrate on intensive study with a faculty member. Our winter session roster appears below. If a course is also offered through distance learning, the course title will be followed by DL.
Summer Session features open admissions and outstanding instructors, nearly all of whom are regular Cornell faculty members. Courses are offered on and off campus and via distance learning.

During our three-, six-, or eight-week sessions, you can actually get to know your professors and are sure to be surrounded by intriguing people of all ages from all over the world. And you'll still have time left over for travel or a summer job!

During Summer Session you can fulfill requirements, accelerate your degree, gain personal satisfaction, grow professionally, and/or ease your fall/spring course load. It's also the perfect time to take advantage of the area's stunningly beautiful gorges, waterfalls, lakes, and parks. Hike, swim, sail, picnic, or enjoy a sunset concert on the Arts Quad. However you look at it, spending a summer at Cornell is a great way to enjoy the best of the university and the best of summer!

For information, visit www.summer.cornell.edu, e-mail cusce@cornell.edu, call 607 255-4987, or write to Summer Session, B20 Day Hall, Ithaca, NY 14853-4987.

Summer Session Course Roster

The Cornell University Summer Session offers a wide variety of courses. The list that follows includes those courses that are usually offered every summer. The list is not exhaustive; many new courses or courses offered only occasionally are not listed. For complete information, contact the Summer Session office. Courses are posted on the web (www.summer.cornell.edu) in the fall as the roster is developed. If a course also is offered through distance learning, the course title will be followed by **DL**.

### Africana Studies
- ASRC 1100–1101 Elementary Swahili
- ASRC 1104–1105 Elementary Arabic
- ASRC 1106–2101 Intermediate Arabic
- ASRC 1900 Research Strategies
- ASRC 2300 African Cultures and Civilizations
- ASRC 4505 Black Arts Movement **DL**
- ASRC 4606 The Family and Society in Africa

### American Indian Studies
- AIS 2220 Field Course in Iroquois Archaeology

### American Studies
- AMST 1240 Democracy and Its Discontents: Political Traditions in the United States
- AMST 2020 Popular Culture in the United States, 1950 to Present **DL**
- AMST 2525 Islam in America
- AMST 3128 America's Changing Faces
- AMST 3140 History of American Foreign Policy, 1912 to the Present
- AMST 3141 Prisons **DL**
- AMST 4509 Black Arts Movement **DL**

### Animal Science
- ANSC 1120 Sustainable Animal Husbandry
- ANSC 2140 Captive Raptor Management and Propagation
- ANSC 2250 Fertilization and New Life Technologies

### Anthropology
- ANTHR 1300 Human Evolution: Genes, Behavior, and the Fossil Record **DL**
- ANTHR 2220 Field Course in Iroquois Archaeology
- ANTHR 3305 Anthropology of Parenting **DL**
- ANTHR 3415 Art in the Modern World
- ANTHR 3440 Taboo and Pollution

### Applied Economics and Management
- AEM 1200 Introduction to Business Management
- AEM 2190 Introduction to Applied Portfolio Management
- AEM 2210 Financial Accounting
- AEM 2240 Principles of Finance
- AEM 2260 AEM Certificate in Business Management Special Activities
- AEM 2400 Marketing **DL**
- AEM 2500 Environmental and Resource Economics
- AEM 3200 Business Law I
- AEM 3230 Managerial Accounting
- AEM 4532 Advanced Auditing and Research

### Archaeology
- ARKEO 2220 Field Course in Iroquois Archaeology
- ARKEO 2660 Jerusalem Through the Ages
- ARKEO 3002 Archaeology Underwater
- ARKEO 3003 Island Archaeology

Other field study opportunities are usually available through this department.

### Architecture
- ARCH 1102 Design II
- ARCH 1110 Introduction to Architecture: Design Studio
- ARCH 1300 An Introduction to Architecture: Lectures
- ARCH 2100 Elective Design Studio
- ARCH 2101 Design III
- ARCH 2102 Design IV
- ARCH 2603 Structural Concepts

### Art
- ART 1100 Art as Experience
- ART 1201 Introductory Painting
- ART 1500–1503 Summer Drawing
- ART 1505 Drawing in Rome
- ART 1601 Photography I
- ART 1609, 2603 Color Photography
- ART 1701 Electronic Imaging in Art
- ART 2201 Painting II
- ART 2601 Photography II
- ART 3601 Photography III
- ART 3702 Special Topics in Art Studio
- ART 4509 Independent Studies in Drawing

### Asian Studies
- ASIAN 2225 Literature, Politics, and Genocide in Cambodia **DL**
- ASIAN 2279 Chinese Mythology

### Chinese
- CHIN 1159 Summer Intensive Mandarin
- CHIN 1160 Introductory Intensive Mandarin
- CHIN 2201–2202 Intermediate Mandarin
### Japanese
- JAPAN 1159 Summer Intensive Japanese (FALCON)
- JAPAN 1160 Introductory Intensive Japanese (FALCON)

### Nepali
- NEPAL 1159 Summer Intensive Nepali
- NEPAL 1160 Intensive Nepali
- NEPAL 2260 Intermediate Intensive Nepali
- NEPAL 3360 Advanced Intensive Nepali

### Astronomy
- ASTRO 1105–1107 An Introduction to the Universe
- ASTRO 1106 Essential Ideas in Relativity and Cosmology
- ASTRO 6501 Astro Education for Teachers

### Biological Sciences
#### General Courses
- BIOG 1007–1008 Support for Upper-Class Seminar Scholarship Program
- BIOG 1009 Biology
- BIOG 1107–1108 General Biology
- BIOG 2000 Special Studies in Biology
- BIOG 6020 CIBT: Molecular Biology for Teachers

#### Ecology and Evolutionary Biology
- BIOEE 2070 Evolution
- BIOEE 2610 Ecology and the Environment
- BIOEE 4670 Seminar in the History of Biology

#### Microbiology
- BIOMI 1720 Bioscientific Terminology
- BIOMI 2900–2910 General Microbiology
- BIOMI 3080 Field Microbial Ecology

#### Molecular Biology and Genetics
- BIOMG 2800 Lectures in Genetics
- BIOMG 2810 Genetics
- BIOMG 3330 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology
- BIOMG 4320 Survey of Cell Biology
- BIOMG 4400 Laboratory in Biochemistry and Molecular Biology

#### Neurobiology and Behavior
- BIONB 2213 Neurobiology and Behavior I: Introduction to Behavior
- BIONB 3290 Ecology of Animal Behavior

#### Plant Biology
- BIOP 2400 Green World/Blue Planet
- BIOP 2450 Plant Biology

### Shoals Marine Laboratory
- BIOSM 1110 A Marine Approach to Introductory Biology
- BIOSM 1551 Introduction to Oceanography Lab at Shoals
- BIOSM 1600 The Oceanography of the Gulf of Maine
- BIOSM 1620 Marine Environmental Science
- BIOSM 2040 Biological Illustration
- BIOSM 2100 Boats for Biologists
- BIOSM 2760 Seabird Ecology and Conservation
- BIOSM 2770 Introduction to Marine Conservation Biology
- BIOSM 3060 Evolution of Ancient and Modern Oceans
- BIOSM 3080 Field Microbial Ecology
- BIOSM 3110 Science Writing
- BIOSM 3120 Biology of the Lobster
- BIOSM 3210 Anatomy and Function of Marine Vertebrates
- BIOSM 3220 Ecology of Biological Invasion
- BIOSM 3290 Ecology of Animal Behavior
- BIOSM 3640 Field Marine Science
- BIOSM 3650 Underwater Research
- BIOSM 3740 Field Ornithology
- BIOSM 3750 Field Marine Biology and Ecology
- BIOSM 3770 Diversity of Fishes
- BIOSM 4130 Research in Marine Biology
- BIOSM 4450 Forensic Science for Marine Biologists
- BIOSM 4650 The Biology, Evolution, and Conservation of Sharks and Their Allies
- BIOSM 4720 Marine Phylogenomics
- BIOSM 4990 Research in Biology

#### Biology and Society
- BSOC 4471 Seminar in the History of Biology

### Chemistry and Chemical Biology
- CHEM 1001 Chemical Concepts
- CHEM 1560 Introduction to General Chemistry
- CHEM 1570 Introduction to Organic and Biological Chemistry
- CHEM 2070–2080 General Chemistry
- CHEM 2510 Introduction to Experimental Organic Chemistry
- CHEM 3570–3580 Organic Chemistry for the Life Sciences
- CHEM 5010 Contemporary Chemistry for Teachers

### Classics
- CLASS 1692 Anatomy of Bioscientific Terminology
- CLASS 2604 Greek Mythology
- CLASS 2681–2682 History of Rome

### Cognitive Studies
- COGST 1101 Introduction to Cognitive Science

### Communication
- COMM 2010 Oral Communication
- COMM 2030 Argumentation and Debate
- COMM 2450 Psychology of Social Computing
- COMM 2630 Organizational Writing
- COMM 2720 Principles of Public Relations and Advertising

### Computer Science
- CS 1109 Fundamental Programming Concepts
- CS 1110 Introduction to Computing Using Java
- CS 1112 Introduction to Computing Using MATLAB
- CS 1710 Introduction to Cognitive Science
- CS 2110 Object-Oriented Programming and Data Structures
- CS 3110 Data Structures and Functional Programming
- CS 3220 Introduction to Scientific Computation
- CS 3810 Introduction to Theory of Computing
- CS 4410 Operating Systems
- CS 4820 Introduction to Analysis of Algorithms

### Design and Environmental Analysis
- DEA 4000 Directed Readings
- DEA 4010 Empirical Research
- DEA 4020 Supervised Fieldwork

### Earth and Atmospheric Sciences
- EAS 1108 Earth in the News
- EAS 1150 Severe Weather Phenomena
- EAS 1540 The Sea: An Introduction to Oceanography, Lectures
- EAS 3060 Evolution of Ancient and Modern Oceans
- EAS 4170 Field Mapping in Argentina
- EAS 4750 Special Topics in Oceanography
- EAS 7500 Satellite Remote Sensing in Biological Oceanography
Economics
ECON 1011  PSP Economics
ECON 1110  Introductory Microeconomics  DL
ECON 1120  Introductory Macroeconomics
ECON 3130  Intermediate Microeconomic Theory (calculus)
ECON 3140  Intermediate Macroeconomic Theory (calculus)
ECON 3210  Applied Econometrics
ECON 4340  Financial Economics, Derivatives, and Risk Management

Engineering
Communication Courses

**INDEPENDENT STUDY**

Have a special interest you’d like to pursue? Want to do research and get credit for it? Need a particular course to graduate on time? Consider independent study. Independent study encompasses courses of your own design, special topics courses, undergraduate research, or any regular course from the fall and spring semesters not being offered. If you can find a professor willing to supervise your study, all you need to do is pick up the application for independent study (available on the web at www.summer.cornell.edu or from the Summer Session office) and register in B20 Day Hall at least two weeks prior to beginning the independent study course. Also, please let the Summer Session office know if there are courses you would like to see offered next summer (e-mail cusce@cornell.edu or call 607 255-4987).
ADMINISTRATION
Lance Collins, interim dean
David Gries, associate dean for undergraduate programs
Rajit Manohar, interim associate dean for research and graduate studies
Richard Allmendinger, associate dean for diversity
Betsy East, assistant dean for student services
Cathy Dove, associate dean for administration
Kathi Warren, assistant dean for alumni affairs and development

FACILITIES AND SPECIAL PROGRAMS
Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr. Engineering Quadrangle. The School of Applied and Engineering Physics is located in Clark Hall on the College of Arts and Sciences campus, the Department of Biological and Environmental Engineering is in Riley-Robb Hall on the campus of the New York State College of Agriculture and Life Sciences, and the Department of Biomedical Engineering is in Weill Hall.

Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers, institutes, and programs contribute to opportunities for study and research.

Cornell programs and centers of interest in engineering include the following:
- Center for Advanced Computing. CAC is a supercomputer facility used for advanced research in engineering and the physical and biological sciences.
- Center for Applied Mathematics. This cross-disciplinary center administers a graduate program.
- Center on the Microenvironment and Metastasis. This NIH center is organized to use experimental and theoretical approaches to de-convolve cancer’s complexity and to understand the interaction of mechanical forces and chemical cues in cancer metastasis.
- Center for Nanoscale Systems. The mission of this National Science Foundation Nanoscience and Technology Center is to develop innovative nanoscale systems to revolutionize information technology and to further nanoscience technology. The facilities for this center are distributed between Clark Hall and the Engineering Quadrangle, and especially in Duffield Hall.
- Center for Radiophysics and Space Research. This interdisciplinary unit facilitates research in astronomy and the space sciences.
- Cornell Center for Materials Research. CCMR is an interdisciplinary center that performs state-of-the-art materials research and provides sophisticated scientific measurement and characterization equipment.
- Cornell Center for a Sustainable Future. This center promotes and advances collaborations across Cornell and with selected external partners, leveraging Cornell’s resources to help build a sustainable future for the world.
- Cornell Fuel Cell Institute. CFCI is an interdisciplinary research center focused on developing novel materials to enable advanced fuel cell technologies.
- Cornell High Energy Synchrotron Source. CHESS is a high-energy synchrotron radiation laboratory operated in conjunction with the university’s high-energy storage ring. Current research programs at CHESS are in areas of structural biology, chemistry, materials science, and physics.
- Cornell Nanoscale Science and Technology Facility. (part of the National Science Foundation-funded National Nanofabrication Users Network). This center provides equipment and services for research in the science, engineering, and technology of nanometer-scale structures for electronic, chemical, physical, and biological applications.
- CU-ADVANCE. The NSF ADVANCE program’s goals are to increase the recruitment, retention, and advancement into leadership positions of women in engineering and the sciences, and to institutionalize best practices, policies, and programs across colleges as they pertain to women faculty.
- Institute for Biotechnology and Life Sciences Technologies. This institute was established to promote the new discipline of modern biotechnology and the education and training of biologists, engineers, agricultural personnel, and medical scientists.
- Institute for the Study of the Continents. This interdisciplinary organization promotes research in deep seismic exploration of the continents and geologic evolution of the continents.
- Intelligent Information Systems Institute. IISI seeks to stimulate research in computer- and data-intensive methods for intelligent decision-making systems, to foster collaboration, and to play a leadership role in the research and dissemination results in its core areas.
- KAUST–Cornell Center for Energy and Sustainability. This center investigates organic–inorganic hybrid nanomaterials for applications in water desalination, carbon capture and sequestration, oil and gas production, and solar energy.
- Kavli Institute at Cornell for Nanoscale Science. KIC addresses challenges and opportunities for the science of very small structures and fosters collaborative multidisciplinary research in this area.
- Laboratory of Atomic and Solid State Physics. This is a major center for research in the area of condensed matter physics and other related areas.
- Laboratory of Plasma Studies. LPS is a center for research in plasma physics.
- MCEER. This facility was established by the National Science Foundation and a group of universities to study the response and design of structures in earthquake environments.
- Nanobiotechnology Center. The mission of this National Science Foundation Science and Technology Center is to develop nanoscale technologies and science applied to the life sciences. The facilities of this center are distributed between Clark Hall and Duffield Hall.
- National Astronomy and Ionosphere Center. NAIC is the world’s largest radio-telescope facility, operated by Cornell in Arecibo, Puerto Rico, focusing on radio and radar astronomical studies and investigations of the Earth’s ionosphere.
- National Institutes of Health/National Science Foundation Developmental Resource in Biophysical Imaging and Optoelectronics. This resource develops novel measurement and optical instrumentation for solving biophysical problems.
- National Nanotechnology Infrastructure Network. NINN, a partnership of 13 university-based labs, provides access to infrastructure to enable the national science and engineering community to pursue research, education, and technology development dealing with nanotechnology.
- National Science Digital Library. The NSDL project at Cornell, part of the NSF’s national effort in developing resources and tools for digital libraries, hosts the production services for NSF’s NSDL and designs and implements technical infrastructure.
- Network for Earthquake Engineering Simulation (NEES). A system of nationwide experimental facilities linked by high-performance Internet for laboratory and computational simulation of structures under earthquake loads.
- Northeast Regional Climate Center. This center monitors and reports on current climate conditions in the region.
- Northeast Sun Grant Institute of Excellence. Partners in this initiative are involved in addressing energy needs and revitalizing rural communities with land-grant university research, education, and extension programs.
- Power Systems Engineering Research Center. A National Science Foundation cooperative center between university and industry centered on addressing the challenges faced by the evolving electric power industry.
- Program of Computer Graphics. This interdisciplinary research center operates one of the most advanced computer-graphics laboratories in the United States.
- Program on Science, Technology, and Society. This cross-disciplinary unit sponsors courses and promotes research on the interaction of science, technology, and society.
TRANSPORTATION INFRASTRUCTURE RESEARCH CONSORTIUM. Cornell is the lead institution in this consortium of 12 institutions in New York State. It brings together the research expertise in a cross-disciplinary fashion to solve problems in cooperation with the staff of the New York State Department of Transportation, its principal sponsor.

The programs listed above are sponsored by College of Engineering units, and several are industry affiliated.

DEGREE PROGRAMS

Cornell programs in engineering and applied science lead to the degrees of bachelor of science (B.S.), master of engineering (M.Eng.), master of science (M.S.), and doctor of philosophy (Ph.D.).

General academic information concerning the B.S. degree is given below under "Undergraduate Study." The student pursues the degree in one of 13 majors. The majors are described under "Engineering Majors."

Many students stay a fifth year in the College of Engineering to pursue a professional degree, the master of engineering (M.Eng.) degree. Joint enrollment in the B.S. and M.Eng. degrees is possible for students in their last semester who lack only 1 to 8 credits for the B.S. M.Eng. degrees are awarded in most of the major areas. In addition, the following M.Eng. degrees are awarded: aerospace engineering, biomedical engineering, electrical engineering, engineering mechanics, nuclear engineering, operations research and industrial engineering, and systems engineering. For full details on M.Eng. degrees, see "Master of Engineering Degree Programs."

Programs leading to the M.S. and Ph.D. degrees are administered by the Graduate School. They are described in the Announcement of the Graduate School and the special announcement Graduate Study in Engineering and Applied Science.

UNDERGRADUATE STUDY

Students in the College of Engineering spend most of their first two years of undergraduate studies in the Common Curriculum, which is administered by the College Curriculum Governing Board (CCGB) through the associate dean for undergraduate programs and Engineering Advising. At the end of their third semester, they affiliate with one of these majors:

- biological engineering (BE)
- chemical engineering (ChemE)
- civil engineering (CE)
- computer science (CS)
- electrical and computer engineering (ECE)
- engineering physics (EP)
- environmental engineering (EnvE)
- independent major (IM)
- information science, systems, and technology (ISTS)—with options in information science and management science
- materials science and engineering (MSE)

Operations research and engineering (ORE)

Science of earth systems (SES)

Criteria for affiliation with the majors are described under "Affiliation with a Major." The majors are described under "Undergraduate Engineering Majors."

Most of the majors have a corresponding minor, in which the student can pursue a secondary interest. In addition, there are minors in applied mathematics, biomedical engineering, civil infrastructure, engineering management, engineering statistics, game design, industrial systems and information technology, information science, and business. See the main section, "Engineering Minors."

The majors biological engineering, chemical engineering, civil engineering, electrical and computer engineering, environmental engineering, materials science and engineering, and mechanical engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

Students may major in biological engineering through the College of Engineering or the College of Agriculture and Life Sciences (CALS). Students who do so through the College of Agriculture and Life Sciences are jointly enrolled with the College of Engineering for their last two years.

There is no undergraduate major in nuclear science and engineering. Students who intend to enter graduate programs in this area are encouraged to begin specialization at the undergraduate level. This may be done by choice of electives within the major (e.g., engineering physics, materials science and engineering, civil engineering, chemical engineering, and the independent major).

Contact a faculty member in the graduate field of nuclear science and engineering who is most directly concerned with the curriculum, including K. B. Cady, D. A. Hammer, R. W. Kay, and V. O. Kostroum.

Graduation Requirements

To receive the bachelor of science degree, students must meet the requirements of the common curriculum (outlined below) as set forth by the College of Engineering, including the requirements of their chosen major, as established by the school or department that administers the major. (Further explanation of the revised common curriculum and major flow charts are provided in the 2010–2011 edition of the Engineering Undergraduate Handbook.)

Course Category Credits
1. Mathematics (major-specific) 15–16
2. Physics (major-specific) 8–12
3. Chemistry (major-specific) 4–8
4. First-year writing seminar 6
5. Technical writing* 3
6. Computing 5
7. Introduction to engineering (ENGRI) 3
8. Two engineering distributions (ENGRI) 6–8
9. Liberal studies distribution (6 courses min.) ≥ 18
10. Advisor-approved electives 6
11. Major program
a. Major-required courses ≥ 30
b. Major-approved electives 9
c. Courses outside the major 9
12. Two semesters of physical education in the freshman year and demonstration of proficiency in swimming (university requirement)

From 124 to 134 credits are required for graduation, depending on the major (see "Engineering Majors.")

Technical-writing courses may simultaneously fulfill another requirement.

Mathematics

The normal program in mathematics includes MATH 1910, 1920, 2950 or 2940 (depending on the major), and a major-specific math course. At least C– must be attained in these courses; if not, the course must be repeated immediately before the next course in the sequence is taken. Failure to achieve at least C– the second time will result in withdrawal from the College of Engineering. Courses that are taken a second time do not yield additional credit toward a degree.

Physics

The normal program in physics includes PHYS 1112, 2213, and 2214 or the corresponding honors courses (PHYS 1116, 2217, and 2218). Engineering students must attain at least C– in each math prerequisite of a physics course before taking the physics course (e.g., C– in MATH 1910 before taking PHYS 1112 and C– in MATH 1920 before taking PHYS 2213). Substitutions for PHYS 2214 are possible in certain majors. Please consult the Engineering Undergraduate Handbook for details.

Chemistry

CHEM 2090 is required. The content is the same as that of CHEM 2070, but Engineering students are expected to take 2090.

Typically, CHEM 2090 is taken during the freshman year, but students who wish to complete the physics program (PHYS 1112, 2213, and 2214) first may postpone CHEM 2090 until the sophomore year.

Students considering chemical engineering or a health-related career such as medicine must take CHEM 2090 in the fall of their freshman year and CHEM 2080 in the spring semester.

Computing

Students learn about computing using two programming languages by taking one of two sequences: (1) CS 1110 and CS 1132 or (2) CS 1112 and CS 1130. The first course is taken in the first year. The second course, a 1-credit S–U course, is taken as soon as possible thereafter but no later than the fourth semester.

First-Year Writing Seminars

Each semester of their freshman year, students choose a first-year writing seminar from over 100 courses offered by over 30 different departments in the humanities, social sciences, and expressive arts. These courses offer the student practice in writing English prose. They also ensure beginning students the benefits of critical thinking, research, and writing in the context of a juxtaposed discipline.
Technical Writing
Students can fulfill the upper-level technical-writing requirement using one of the six alternatives below. See www.engineering.cornell.edu/ECP for more information.

1. ENGRC 3500 or 3350
2. The Writing-Intensive Co-op—an opportunity to combine work and academics. Some co-op students do a significant amount of writing on the job; under certain circumstances, this writing will satisfy the technical-writing requirement.
3. An officially designated Writing-Intensive (W-I) engineering course:
   - ENGRD/AEP 2640
   - CHEM 4320
   - MSE 4030 and 4040 (both)
   - MSE 4050 and 4060 (both)
   - MIE 4272
   - BEE 4730 with co-registration in BEE 4950
   - BEE 4890
4. ENGRD 3020, a 1-credit attachment to an engineering course that is not one of the officially designated W-I courses (see #3 above). An instructor may wish to extend the writing in their course for a given semester so that it will fulfill the technical-writing requirement. With the approval of the CCGB’s Subcommittee on Technical Writing, the instructor may have students co-register in ENGRD 3020, which may be taken more than once with different courses by permission of the engineering instructor.
5. COMM 2600 or 3520, taught by the Department of Communication (in the College of Agriculture and Life Sciences).
6. Petition. Occasionally, a student will be doing a significant amount and variety of technical writing elsewhere in the College of Engineering. It may be appropriate to petition the CCGB’s Subcommittee on Technical Writing for permission to use this forthcoming writing (not past writing) to meet the technical-writing requirement.

Introduction-to-Engineering Course
An introduction-to-engineering course (designated ENGRD) must be taken during the freshman year. This course introduces students to the engineering process and provides a substantive experience in an open-ended problem-solving context. See the Introduction-to-Engineering course listing for current course offerings.

Engineering Distribution
Two engineering distribution (ENGRD) courses (6–8 credits) must be selected from two different categories listed below. A student may use any one of the possible substitutions described.
1. Scientific computing
   - ENGRD 2110 Object-Oriented Programming and Data Structures
   - ENGRD 3200 Engineering Computation
   - ENGRD 3220 Introduction to Scientific Computation
2. Materials science
   - ENGRD 2610 Introduction to Mechanical Properties of Materials: From Nanodevices to Superstructures
   - ENGRD 2620 Electronic Materials for the Information Age
3. Mechanics
   - ENGRD 2020 Mechanics of Solids
   - ENGRD 2030 Dynamics
   - Majors in Engineering Physics may substitute AEP 3330 for ENGRD 2030.
4. Probability and statistics
   - ENGRD 2700 Basic Engineering Probability and Statistics
   - Majors in Electrical and Computer Engineering may substitute ECE 4100 for ENGRD 2700.
   - Majors in Engineering Physics may substitute ECE 3100 or MATH 4710 for ENGRD 2700.
   - Majors in Civil Engineering, Biological Engineering, and Environmental Engineering may substitute CEE 3640 for ENGRD 2700.
5. Electrical sciences
   - ENGRD 2100 Introduction to Circuits for Electrical and Computer Engineers
   - ENGRD 2300 Introduction to Digital Logic Design
   - ENGRD 2640 Computer-Instrumentation Design
6. Thermodynamics and energy balances
   - ENGRD 2190 Mass and Energy Balances
   - ENGRD 2210 Thermodynamics
7. Earth and life sciences
   - ENGRD 2100 Introduction to the Physics and Chemistry of the Earth
   - ENGRD 2510 Engineering for a Sustainable Society
   - ENGRD 2600 Principles of Biological Engineering
8. Biology and chemistry
   - ENGRD 2520/AEP 2520 The Physics of Life
   - BIOG 1105 Introductory Biology
   - BIOG 1107 General Biology (summer only)
   - CHEM 3890 Physical Chemistry I
   - Some majors require a specific engineering distribution course as a prerequisite for the upper-class course sequence. These requirements are as follows:
     - Biological Engineering: ENGRD 2020
     - Chemical Engineering: ENGRD 2190
     - Civil Engineering: ENGRD 2020
     - Computer Science: ENGRD 2110
     - Electrical and Computer Engineering: ENGRD 2500
     - Environmental Engineering: ENGRD 2020
     - Geological Sciences: ENGRD 2010
     - Information Science: Systems, and Technology: ENGRD 2700
     - Materials Science and Engineering: ENGRD 2610 or ENGRD 2620
     - Mechanical Engineering: ENGRD 2020
     - Operations Research and Engineering: ENGRD 2700

Some majors require additional distribution courses after affiliation.

Liberal Studies Distribution
Global and diverse societies require that engineers have an awareness of historical patterns, an appreciation for different cultures, professional ethics, the ability to work in multifaceted groups, and superior communications skills. Cornell has a rich curriculum in the humanities, arts, and social sciences, enabling every engineering student to obtain a truly liberal education. At least six courses (totaling at least 18 credits) are required, and they should be chosen with as much care and foresight as courses from technical areas.

- The six courses must be chosen from at least three of the following seven groups.
- One course may be chosen from Group 7 (CE).
- At least two of the six courses must be at the 2000 level or higher.

Utilize the current Courses of Study as the master list of approved Liberal Studies courses. Additional approved courses and unacceptable courses can be viewed at www.engineering.cornell.edu/programs/undergraduate-education/degree-requirements/liberal-studies.cfm.

Group 1. Cultural Analysis (CA)
Courses in this area study human life in particular cultural contexts through interpretive analysis of individual behavior, discourse, and social practice. Topics include belief systems (science, medicine, religion), expressive arts and symbolic behavior (visual arts, performance, poetry, myth, narrative, ritual), identity (nationality, race, ethnicity, gender, sexuality), social groups and institutions (family, market, community), and power and politics (states, colonialism, inequality).

Group 2. Historical Analysis (HA)
Courses in this group interpret continuities and changes—political, social, economic, diplomatic, religious, intellectual, artistic, and scientific—through time. The focus may be on groups of people, dominant or otherwise, a specific country or region, an event, a process, or a time period.

Group 3. Literature and the Arts (LA)
Offerings in this area explore literature and the arts in two different but related ways. Some courses focus on the critical study of artworks and on their history, aesthetics, and theory. These courses develop skills of reading, observing, and hearing and encourage reflection on such experiences; many investigate the interplay among individual achievement, artistic tradition, and historical context. Other courses are devoted to the production and performance of artworks (in creative writing, performing arts, and media such as film and video). These courses emphasize the interaction among technical mastery, cognitive knowledge, and creative imagination.

Offerings in this area investigate the bases of human knowledge in its broadest sense, ranging from cognitive faculties shared by humans and animals such as perception, to abstract reasoning, to the ability to form and justify moral judgments. Courses investigating the sources, structure, and limits of cognition may use the methodologies of science,
cognitive psychology, linguistics, or philosophy. Courses focusing on moral reasoning explore ways of reflecting on ethical questions that concern the nature of justice, the good life, or human values in general. **Group 5. Social and Behavioral Analysis (SBA)** Courses in this area examine human life in its social context through the use of social-scientific methods, often including hypothesis testing, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to interpersonal relations between individuals (e.g., in friendship, love, conflict) to larger social organizations (e.g., the family, society, religious or educational or civic institutions, the economy, government) to the relationships and conflicts among groups or individuals (e.g., discrimination, inequality, prejudice, stigmas, conflict resolution).

**Group 6. Foreign Languages (not literature courses) (FL)** Courses in this area teach language skills, inclusive of reading, writing, listening, and spoken non-English languages, at beginning to advanced levels.

**Group 7. Communications in Engineering (CE)** Courses in this area explore communication as a way of acting in the world. The primary aim is to provide students with the opportunity to practice performing a range of engineering-related communication skills within specific genres (e.g., proposals, reports, journal articles, oral presentations). Each of these genres potentially engages a wide variety of audiences and, depending on the particulars of context, each may have multiple purposes. The secondary aim is to enable students to be aware of the choices they make as communicators and to be able to articulate a rationale for those choices. (Only one course will be allowed to be counted in this category.)

### Electives

- **Advisor-approved electives:** 6 credits required (approved by the academic advisor). Because these courses should help develop and broaden the skills of the engineer, advisors generally accept the following as approved electives:

  1. One introduction-to-engineering course (ENGRD)
  2. Engineering distribution courses
  3. Courses stressing written or oral communication
  4. Upper-level engineering courses
  5. Advanced courses in mathematics
  6. Rigorous courses in the biological and physical sciences
  7. Courses in business, economics, or language (when they serve the student’s educational and academic objectives)
  8. Courses that expand the major or another part of the curriculum.

- **Major-approved electives:** 9 credits (approved by the major and faculty advisors in the major). Refer to the major curricula for descriptions of courses in this category.

### Outside-the-major electives

9 credits of courses outside the major to ensure breadth of engineering studies

**Social Issues of Technology**

It is important for engineers to realize the social and ethical implications of their work. Consequently, in selecting their liberal studies distribution courses and approved electives, students are urged to consider courses listed in the “Science and Technology Studies” undergraduate area of concentration (see “Interdisciplinary Centers and Programs”). These courses may provide students with important perspectives on their studies and their future careers.

**Engineering Advising**

Entering first-year students are assigned a faculty advisor (who may or may not be in their intended major), who remains their advisor until affiliation with a major (normally during the fourth semester). The students are also under the administration of Engineering Advising in 167 Olin Hall, which implements the academic policies of the College Curriculum Governing Board. Engineering Advising serves as the primary resource center for undergraduate students in the college, offering general and academic advising. Other student services offices located in Olin Hall are Engineering Learning Initiatives and Diversity Programs in Engineering (DPE), which are primary resources for academic advising, support, tutoring, and networking opportunities.

**First-Year Requirements**

During the first year, engineering students are expected to complete (or receive credit for) the following core requirements:

- **MATH 1910 and 1920**
- Two of: CHEM 2090, 2080, PHYS 1112, 2213, 2214* (or the Honors equivalent)
- One of: CS 111X
- Two-year writing seminars
- One introduction to engineering (ENGRD) course
- Two physical education courses

Students interested in chemical engineering, pre-med, or other health-related careers should enroll in the CHEM 2090–2080 sequence during their first year.

**Affiliation with a Major**

Students must apply for affiliation with a major during the first semester of their sophomore year, although earlier affiliation may be granted at the discretion of the major. This is done by visiting the undergraduate major office and completing the application for major affiliation form. To affiliate, students must (1) make good progress toward completing required courses in the common curriculum, (2) have a GPA ≥ 2.0, and (3) have satisfied the major’s course and grade requirements as specified below:

(Majors may impose alternative affiliation requirements for students applying for affiliation later than the first semester of the sophomore year.)
Major Courses and Minimum Grade Requirements

Materials Science and Engineering
A cumulative GPA ≥ 2.0 in the required Math, Physics, and Chemistry courses and at least C in ENGRD 2610 or 2620. Alternatively, at least B– in MATH 2950, PHYS 2213, CHEM 2090, and ENGRD 2610 or 2620.

Mechanical Engineering
At least C– in ENGRD 2020, ENGRD 2210*, and all completed required math, science, and computer science courses. GPA ≥ 2.5 in MATH 2930, PHYS 2213, ENGRD 2020, and ENGRD 2210.

Operations Research and Engineering
At least C in each of ENGRD 2700 and MATH 2940. GPA ≥ 2.2 in math, science, and engineering courses (both overall and in the term immediately before affiliation). At least C– in all ORIE courses completed thus far. Good academic standing in the College of Engineering.

Science of Earth Systems
GPA > 2.0 in all engineering, math, and science courses. Good academic standing in the College of Engineering.

Students must be affiliated or conditionally affiliated with a major by the end of their fourth semester or they will be withdrawn from the College of Engineering, unless allowed to participate in a terminal semester.

Independent Major
Students whose educational objectives cannot be met by one of the regular majors may affiliate with the independent major. Often, the desired curriculum is in an interdisciplinary area.

This major consists of a primary area (≥ 32 credits), which may be any subject area offered by a school or department of the college, and an educationally related secondary area (≥ 16 credits), which may be in a second engineering subject area or in a logically connected nonengineering area. The combination must form an engineering education in scope and substance and should include engineering design and synthesis as well as engineering sciences. See the discussion of this major in "Undergraduate Engineering Majors."

Engineering Minors
Students may pursue minors in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the students’ major. Completed minors will appear on the student’s transcript. Not all departments offer minors. Consult the appropriate section in Courses of Study or contact the appropriate department for information on minors offered and how to pursue a minor.

Most engineering majors have a corresponding minor, requiring six courses (18 credits), in which the student can pursue a secondary interest. In addition, students may pursue minors in applied mathematics, biomedical engineering, civil infrastructure, engineering management, engineering statistics, game design, industrial systems, and information technology, information science, and business. See "Engineering Minors."

Engineering Communications Program
424 Hollister Hall, 255-8558; www.engineering.cornell.edu/ECPP

The Engineering Communications Program (ECP) provides instruction in technical writing, oral presentation, and the use of graphics in both. The ECP is a recipient of the Engineering Dean’s Prize in Excellence and Innovation in Teaching.

ECP courses give students experience with the difficult task of explaining technical information to audiences that have various levels of technical expertise. Students improve their writing style, become more comfortable with and effective at oral presentation, use standard forms and formats for presenting technical information, perform library and Internet research on engineering topics, and study real engineering situations in which ethics may have been breached.

Enrollment in ECP courses is typically 20 students per section; like writing seminars elsewhere at Cornell, those taught by the ECP are discussion classes. Students work receives abundant written comments, and conferences are frequent.

ECP members are available to consult with the faculty teaching writing-intensive technical courses and anyone else interested in including writing in their courses. They oversee the communications component of the Writing-Intensive Co-op and occasionally give talks to alumni and student groups.

Diversity Programs in Engineering
146 Olin Hall, 255-6403; www.engineering.cornell.edu/dpe

The Diversity Programs in Engineering (DPE) office operates programs at the high school, undergraduate, graduate, and faculty levels to facilitate the outreach, recruitment, retention, and overall success of underrepresented minorities and women in engineering. The DPE office is responsible for fostering a vision of diversity appreciation reflective of the College of Engineering’s strategic plan, which enables students from all backgrounds and cultures to thrive and succeed at Cornell. The DPE office provides an institutionalized approach for meeting the needs of students by providing mentorship, professional, and personal development opportunities that support overall student success. Additionally, the DPE office collaborates with university partners to administer graduate fellowships, undergraduate research opportunities, high school outreach programs, as well as several mentoring initiatives. The DPE office also supports and advises four award-winning engineering student organizations: the American Indian Science and Engineering Society, the National Society of Black Engineers, the Society of Hispanic Professional Engineers, and the Society of Women Engineers.

Engineering Learning Initiatives
167 Olin Hall, 255-9622; www.engineering.cornell.edu/learning

The office of Engineering Learning Initiatives offers programs designed to enhance the undergraduate academic experience through peer education, co-curricular learning, research opportunities, and leadership development.

Academic Excellence Workshops (AEWs), offered through Engineering Learning Initiatives, are taken in conjunction with core engineering courses in math, computer science, and chemistry. The 1-credit AEWs are weekly two-hour collaborative learning sessions. Designed to enhance student understanding, they feature peer-facilitated group work on problems at or above the level of course material.

Undergraduate Research Grants, offered through Engineering Learning Initiatives, provide opportunities for students to obtain hands-on research experience with a faculty mentor. Students and faculty may apply for funding to cover student stipends and expense costs for the fall, spring, and summer terms.

Tutors-on-Call, through Engineering Learning Initiatives, offers one-on-one peer tutoring free of charge for engineering students in many first- and second-year core courses, including math, chemistry, physics, computer science, and distribution courses.

LeaderShips, offered through Engineering Learning Initiatives, provides opportunities for our students to engage in the dynamic process of personal discovery and leadership development at a weekend retreat held in May of each year.
Engineering Cooperative Education and Career Services

201 Carpenter Hall, 255-5006, www.engineering.cornell.edu/careerservices

This office assists engineering students (freshmen through Ph.D.) on issues related to career development and the job search through individual advising and group seminars. It also administers the Engineering Cooperative Education Program. Each year, more than 200 national employers visit the office to recruit technical interns and graduates; additional job opportunities are posted on Cornell’s electronic job posting service. Both undergraduate and graduate students can use these resources to pursue permanent, summer, or co-op employment; however, students seeking co-op opportunities must meet specific requirements.

The Engineering Cooperative Education Program (Co-op) provides an opportunity for undergraduates to gain practical experience in engineering-related organizations before they graduate. By supplementing course work with carefully monitored, paid positions, Co-op students can explore their own interests and acquire a better understanding of engineering as a profession—and still graduate in four years.

To be eligible, a student must have been enrolled in the College of Engineering an equivalent of five semesters before starting the first work term. (Exceptions may be made for transfer students and others pursuing an accelerated curriculum.) Students majoring in computer science or biological engineering, but not registered in the College of Engineering, are also eligible. In most cases, a GPA ≥ 2.7 is required. Applicants interview with participating employers in February of the sophomore year. Those who receive offers and join the program usually complete their fifth-semester course work on campus during the summer after sophomore year and begin the first Co-op work term the following fall. They complete the sixth semester on campus with their classmates and then return to their Co-op employer (but not necessarily to the same department or location) the following summer to complete a second work term. Students then spend the senior year on campus, graduating on schedule with their class. Students who have flexible course curriculums may prefer to complete one 28-week spring/summer or summer/fall Co-op work term during the junior year.

International Programs

An international perspective, sensitivity to other cultures, and the ability to read and speak a second language are increasingly important for today’s engineers. The College of Engineering encourages students to study or work abroad during their undergraduate years. Currently, the college has study abroad agreements with École Centrale Paris, France; Cantabria, Spain; and the Hong Kong University of Science and Technology, and is also working with IIT Kanpur, India, and the National University of Singapore. The college is working to facilitate study abroad in Dresden, Germany; and Guadalajara, Mexico. Students who plan to study abroad apply through Cornell Abroad; see the Cornell Abroad program description in the introductory section of Courses of Study. Visit www.engineering.cornell.edu/studyabroad and Engineering Advising, 167 Olin Hall, for the latest information. In addition, the college is working on developing international Co-op and internship work experiences. For information, visit the Engineering Cooperative Education and Career Services Office, 201 Carpenter Hall.

Cooperative Program with the Johnson Graduate School of Management

Undergraduates may be interested in a cooperative program at Cornell that leads to both master of engineering and master of business administration (M.B.A.) degrees. See ‘Master of Engineering Degrees’ for details.

Lester Knight Scholarship Program

The Lester Knight Scholarship Program is designed to assist and encourage Cornell Engineering students and alumni interested in combining their engineering education with a business degree. See www.engineering.cornell.edu/student-services/rgs/financial-aid/knightscholarship.cfm.

ACADEMIC PROCEDURES AND POLICIES

Advanced Placement Credit

The College of Engineering awards a significant amount of advanced placement (AP) credit to entering first-year students who demonstrate proficiency in the subject areas of introductory courses. Students can earn AP credit by receiving qualifying scores on any of the following:

1. Advanced placement examinations given and scored by the College Entrance Examination Board (CEEB);
2. General Certificate of Education (GCE) Advanced (“A”) Level Examinations;
3. International Baccalaureate (IB) Higher Level Examinations; or
4. Cornell Advanced Standing Examinations (CASE), given during orientation week before the beginning of fall-semester classes.

Advanced placement credit is intended to permit students to develop more challenging and stimulating programs of study. Students who receive AP credit for an introductory course may use it in three different ways. They may:

1. enroll in a more advanced course in the same subject right away.
2. substitute an elective course from another area.
3. enroll in fewer courses, using the AP credit to fulfill basic requirements.

Acceptable Subjects and Scores for CEEB or CASE AP Exams

The most common subjects for which AP credit is awarded in the College of Engineering, and the scores needed on qualifying tests, are listed below. AP credit is awarded only for courses that meet engineering curriculum requirements.

Mathematics: MATH 1910, 1920 are required.

First-semester math (MATH 1910). AP credit may be earned by:

• a score of 4 or 5 on the CEEB BC exam, or
• a passing score on the CASE exam for first-semester math.

First-year math (through MATH 1920). AP credit may be earned by:

• a passing score on the CASE exam for first-year math.

Physics: PHYS 1112 and 2213 are required.

PHYS 1112. AP credit may be earned by:

• a score of 4 or 5 on the mechanics portion of the CEEB C exam, or
• a score of 5 on the CEEB B exam with successful completion of a high school-level calculus course, or
• a passing score on the CASE exam for PHYS 1112.

Note: MATH 2930 is a prerequisite for PHYS 2214.

PHYS 2213. AP credit may be earned by a score of 5 on the Electricity and Magnetism portion of the AP C exam.

PHYS 1116, 2217, and 2218 (honors sequence). This sequence is designed for students with strong experience in physics and calculus, e.g., a 5 on both Physics C AP tests and the equivalent of at least one semester of university calculus. Students interested in PHYS 2217 or 2218 are strongly advised to start with PHYS 1116. Even for a student with a 5 on both Physics C AP tests, PHYS 1116 will not be boring. Students may not simultaneously receive credit for PHYS 1116 and AP credit for PHYS 1112, or credit for PHYS 2217 and AP credit for PHYS 2213. For advice or more information, contact the departmental representative at 255-6016.

Chemistry: CHEM 2090 is required.

CHEM 2090. AP credits may be earned by:

• a score of 5 on the CEEB AP exam, or
• a passing score on the CASE exam for chemistry

Note: Students who obtain AP credit for CHEM 2090 and who are considering a major in chemical engineering or materials science and engineering should consider enrolling in CHEM 2150. Those who are offered AP credit for CHEM 2090 and then elect to take CHEM 2150 will also receive academic credit for CHEM 2000. Students may want to discuss this option with their faculty advisor.

Computing: CS 1110 or CS 1113 or CS 1112 or CS 1114; together with CS 1132 or CS 1130, are required. AP credit may be earned for CS 1110 by:

• a score of 5 on the CEEB A or a score of 4 or 5 on the AB exam, or
• a passing score on the CASE exam for CS 1110.

Biology: Biology is not required as part of the core curriculum, although it is a popular elective, especially for students who intend to pursue health-related careers. AP credit may be earned as follows:

• 8 credits will be offered to students who receive a 5 on the CEEB AP exam;
• 4 credits will be offered to students who receive a 4 on the CEEB AP.
Those who want to study more biology should contact the Office of Undergraduate Biology, 200 Stimson Hall, to discuss proper placement.

**First-year writing seminar:** Two first-year writing seminars are required.

- AP credit for one first-year writing seminar may be earned by a score of 5 on either of the CEEB AP English exams.

Students who earn a score of 4 or 5 on the AP English Literature and Composition exam or the AP English Language and Composition exam will be offered 3 credits, which may be applied toward the Literature and Arts (LA) category of the Liberal Studies distribution requirement.

**Liberal studies distribution:** Six courses beyond two first-year writing seminars are required. Students may earn AP credit toward the liberal studies distribution by taking CEEB AP tests. AP credit earned in the liberal studies distribution cannot be used to fulfill the “upper-level” liberal studies requirements.

**Languages:** Students may earn AP credit for competence in a foreign language by taking the CEEB AP test or by taking the CASE. Those who score 4 or 5 on the CEEB AP test in French, German, Italian, and Spanish are entitled to 3 credits. To qualify for the CASE exam (in any language), the student must score at least 65 on a college placement test (taken either in high school or at Cornell during Orientation Week). A passing score on the CASE entitles the student to 3 credits. Language credit, earned via AP or CASE, may be used to satisfy part of the foreign language category of the liberal studies distribution or may meet an approved elective requirement, contingent on discussions with the faculty advisor.

**Advanced Placement and Credit for International Credentials**

Students who have successfully completed either a General Certificate of Education (GCE) Advanced (“A”) Level Examination or an International Baccalaureate (IB) Higher Level Examination may be eligible for advanced placement credit in the College of Engineering as follows:

**General Certificate of Education Advanced Level Examination (GCE “A”)**

Hong Kong Advanced Level examinations and the joint examination for the Higher School Certificate and Advanced Level Certificate of Education in Malaysia and Singapore—principal passes only—are considered equivalent in standard to GCE “A” Levels.

**Subject** | **Marks** | **Credit**
--- | --- | ---
Biological Science | A or B | 8 credits
Chemistry | A | 8 credits (CHEM 2090 and 2080)
 | B | 4 credits (CHEM 2090)
Mathematics or Pure Mathematics | A, B, or C | 4 credits (MATH 1910)

**Physics**

A or B | 4 credits for PHYS 1112; 4 additional credits for PHYS 2213 are granted to a combination of grades of A or B and a minimum of 4 AP (or advanced standing) credits in mathematics.

**International Baccalaureate (IB) Higher Level Examination**

**Subject** | **Marks** | **Credit**
--- | --- | ---
Biology | 7 | 8 credits
 | 6 | 6 credits
Chemistry | 6 or 7 | 4 credits (CHEM 2090)
Computer | 6 or 7 | 4 credits (CS 1110)
Computer Science | 6 or 7 | 4 credits (PHYS 1112)

**Mathematics:** No credit is given for the IB exam; students are encouraged to take the Engineering Mathematics Advanced Standing exam during orientation.

**Note:** Advanced placement credit based on GCE or IB results may also be awarded for courses that satisfy the liberal studies requirement in the College of Engineering. In such cases, the College of Engineering follows the AP guidelines found earlier in this publication under “General Information.”

**General Policies for Advanced Placement**

The general policies in the College of Engineering governing awards of AP credit are as follows:

1. AP credit will not be offered in any subject area without a documented examination.
2. All AP examinations are normally taken and scored before fall-semester classes begin. Students who take CEEB AP tests in high school should have an official report of their scores sent directly to Cornell as soon as possible. Students who have completed either GCE “A” Level or IB Higher Level Examinations must present the original or a certified copy of their examination certificate to Engineering Advising, 167 Olin Hall. Those who wish to take CASE examinations should do so during Orientation Week.

A more detailed description of the college’s policies concerning advanced placement credit and its use in developing undergraduate programs is available online at www.engineering.cornell.edu/student-services/academic-advising/academic-information/ap-credit/index.cfm.

**General Policies for Transfer Credit**

Undergraduate students who have completed courses at recognized and accredited colleges may, under certain conditions, have credits for such courses transferred to Cornell. Such courses must represent academic work in excess of that required for the secondary school diploma and must be documented as such in writing by the secondary institution. Courses deemed acceptable for transfer credit must be equivalent in scope and rigor to courses at Cornell. Transfer credit will not be awarded for courses taken during a semester in which the student is enrolled at Cornell.

- To apply for transfer credit, submit a transfer credit form (one form for each request), accompanied by a course description. Forms are available from Engineering Advising or the Registrar’s office and should be submitted before enrollment in the course to be transferred. An official transcript from the offering institution (bearing the institutional seal and Registrar’s signature) must be sent to the Engineering Registrar’s office before official transfer credit will be awarded.
- Applications for transfer credit to satisfy requirements in math, science, engineering courses, or first-year writing seminars require approval from the department offering an equivalent course at Cornell. The department may require course materials, textbooks used, etc., in addition to the course description before approving the course.
- Departmental approval is not required for transfer credit that satisfies liberal studies distribution requirements. The course will be reviewed for approval by a representative of the Committee on Academic Standards, Petitions, and Credit (ASPC) in Engineering Advising.
- Cornell does not award credit for courses in which a student has earned a grade less than C; schools and departments may stipulate a higher minimum grade.
- College courses completed under the auspices of cooperative college and high school programs will be considered for advanced placement credit only if students demonstrate academic proficiency by taking the appropriate AP or Cornell departmental placement examination (CASE), as described in the “Advanced Credit” section.
- Following matriculation, students may apply up to 18 credits of transfer and/or Cornell extramural credit toward B.S. degree requirements.
- At most 72 total transfer credits (taken both before and after matriculation) may be used to meet graduation requirements.
- Summer session courses taken at Cornell are not considered transfer credit.

A more detailed description of the college’s regulations governing transfer credit is available online at www.engineering.cornell.edu/student-services/academic-advising/index.cfm.

**Transfer Credit for Transfer Students**

Transfer students may transfer up to 36 credits for each year spent in full-time study at another institution, provided that the courses are acceptable for meeting graduation requirements. Transfer credit awards are determined by the majors/departments. Students may complete the transfer credit award process by the end of their first semester at Cornell, or their registration will be blocked for the next semester until the process is completed.
Academic Standing

Full-time students are expected to remain in good academic standing. The criteria for good standing change somewhat as a student progresses through the four years of the engineering curriculum. At all times, the student must be making adequate progress toward a degree, but what this means depends on the major.

Engineering students not yet affiliated with a major must meet the following standards at the end of each semester to be considered in good academic standing. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPA), and the actions of warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. At least 12 credits passed, including at least two courses from math, science, and/or engineering (phys. ed. courses and courses below the 1100 level—except ENGRG 1050 and Academic Excellence Workshops—do not count)
2. At least C– in the math course
3. Semester GPA ≥ 2.0
4. No F, U, or INC grades

Academic Progress

The total number of credits required for graduation range from 124 to 134, depending on the major. Therefore, an average semester credit load ranges from 15 to 17 credits.

Because math is pivotal to the study and practice of engineering, students must earn at least C– in their four required math courses. If at least C– is not attained, the course must be repeated immediately. Failure to achieve at least C– the second time will generally result in withdrawal from the College of Engineering. Physics and advanced math courses often have math prerequisites, and having to repeat the prerequisite course may delay progress in the physics and math curricula. Students are expected to continue the core engineering math courses each semester until completed.

Dean’s List

Dean’s List citations are presented each semester to engineering students who have exemplary academic records. The dean of the college determines the criteria for this honor. For 2010–2011, the requirement is a semester GPA ≥ 3.5 (without rounding); no failing, unsatisfactory, missing, or incomplete grades (even in physical education); and at least 12 letter-grade credits (not S–U). Students may earn Dean’s List status retroactively if they meet these criteria after making up incomplete grades. Students who earn Dean’s List status receive certificates from the Engineering Registrar’s office, and the honor is noted on the transcript.

Graduating with Distinction and Honors

Graduating with Distinction

Meritorious students graduating with a B.S. degree from the College of Engineering may also be designated cum laude, magna cum laude, or summa cum laude.

- Cum laude will be awarded to engineering students with a GPA ≥ 3.5. Cum laude will also be awarded to engineering students who received a semester GPA ≥ 3.5 in each of the last four semesters at Cornell, in each of these semesters, at least 12 letter-graded credits must be taken with no failing, unsatisfactory, missing, or incomplete grades. If the student is an engineering co-op student, then the engineering co-op summer term will count as one of the last four. Students who were approved for prorated tuition in their final semester will be awarded cum laude if they received a semester GPA ≥ 3.5 in their last semester and meet the conditions above in the prior four semesters.
- Magna cum laude will be awarded to engineering students with a GPA ≥ 3.75 (based on all credits taken at Cornell).
- Summa cum laude will be awarded to engineering students with a GPA ≥ 4.0 (based on all credits taken at Cornell).

Note: All GPA calculations are minimums and are not rounded.

Major Honors Program

To be eligible to enter a major honors program, a student must be on track to graduate with distinction. A student must be in the program for at least two semesters before graduation. If the student’s major has an approved honors program and the requirements for (1) distinction, (2) Bachelor of Science degree, and (3) major honors programs are fulfilled, the faculty of the major may recommend that the student graduate with the additional diploma and transcript notation of “With Honors.”

S–U Grades

Many courses may be taken either for a letter grade or for an S–U (satisfactory or unsatisfactory) grade designation. Under the S–U option, students earning the letter grade equivalent of at least C– in a course will receive a grade of S; those earning less than C– receive U. A course in which a U grade is received does not count toward graduation requirements.

Engineering students may choose to receive an S–U grade option under the following conditions:
- The course in question must be offered with an S–U option.
- The student must previously have completed at least one full semester of study at Cornell.
- The proposed S–U course must count as either a liberal study distribution or an advisor-approved elective in the engineering curriculum.
- Students may enroll S–U in only one course each semester in which the choice between letter grade and S–U is an option. (Additional courses offered “S–U grades only” may be taken in the same semester as the elected S–U course.)

The choice of grading option for any course is made initially during the pre-enrollment period and may be changed until the end of the third week of classes. After this deadline, the grading option may not be changed, nor will a student be permitted to add a course in which he or she was previously enrolled (in the current semester) under a different grade option. (Grading options may be changed online for most courses. A properly completed add/drop form must be used to change a grade option for a permission-only course.)

Residence Requirements

Candidates for an undergraduate degree in engineering must spend at least four semesters or an equivalent period of instruction as full-time students at Cornell, including at least three semesters affiliated with an engineering major.

Students on a voluntary leave of absence may register for courses extramurally only with the approval of their major (or the college, for unaffiliated students). No more than 18 credits earned through extramural study or acquired as transfer credit (or a combination thereof) after matriculation may be used to satisfy the requirements for the B.S. degree in engineering. Students may not complete their last semester extramurally.

Degree candidates may spend periods of time studying away from the Cornell campus with appropriate authorization. Information on programs sponsored by other universities and on procedures for direct enrollment in foreign universities is available at the Cornell Abroad office, 474 Uris Hall. Programs should be planned in consultation with the staff of Engineering Advising, who can provide information on credit-evaluation policies and assist in the petitioning process.

Transferring within Cornell

It is not uncommon for students to change their academic or career goals after matriculation in one college and decide that their needs would be better met in another college at Cornell. While transfer between colleges is not guaranteed, efforts are made to assist students in this situation.

The Internal Transfer Division office is responsible for assisting students with the transfer process. Students who wish to transfer out of the College of Engineering to another college at Cornell should consult initially with Engineering Advising.

Students who wish to transfer into the College of Engineering can apply at Engineering Advising, 167 Olin Hall. It is preferred that students apply in the semester in which they are completing affiliation criteria for the desired major. Transfer students who would enter the college must be accepted by a major as part of the admission process.

Students who wish to transfer into engineering should take courses in math, chemistry, computer science, physics, and engineering that conform to the requirements of the Common Curriculum. Students should discuss their eligibility with an advisor in Engineering Advising, 167 Olin Hall.

Leave of Absence

A leave of absence may be voluntary, health-related, or required. A description of each follows:

Voluntary leave: Students sometimes find it necessary to suspend their studies. To do this, they must petition for a leave of absence for a specified period of time and receive written approval.
Affiliated students request leave through their majors. Unaffiliated students request leave through Engineering Advising; the first step is an interview to establish conditions for the leave and subsequent return. Those who take a leave before affiliating with a major and while in good standing may be given a "conditional leave." This requires them to meet specific conditions, established at the time the leave is granted, before they will be reinstalled.

A leave of absence is granted for at least six months and not more than two years. A leave of absence granted during a semester goes into effect on the day it is requested. If a leave is requested after the 12th week of a semester, the courses in which the student was registered at the time of the request are treated as having been dropped (i.e., a "W" will appear on the transcript for each course). Students who owe money to the university are ineligible for a leave of absence. Courses taken during a leave to satisfy Cornell degree requirements must be approved in advance through a formal transfer petition. (See previous section, "Transfer Credit," for details.) Students who intend to take a leave of absence should check with the Office of Financial Aid and Student Employment to discuss financial implications; this is especially true for those with educational loans. Medical insurance eligibility may also be affected.

To return after a leave of absence, the conditions established when the leave was granted must be satisfied, and the college must be notified in writing at least six weeks before the beginning of the semester in which the student plans to return.

Health leave: Health leaves are granted by the college only upon recommendation by a physician or therapist from Gannett Health Center. Although circumstances may vary, such leaves are generally granted for at least one full academic year with the understanding that the student may return at the beginning of any semester after the medical condition in question has been corrected. Students must satisfy the Gannett Health Center that the condition has been corrected before they may return. The student's academic standing will also be subject to review both at the time the leave is granted and upon the student's return.

Required leave: A required leave of absence is imposed in cases in which the academic progress of a student is so poor that continuing into the next semester does not appear prudent. An example of this might be failure in key engineering courses in a semester. Unless the student is ahead in the curriculum, returning later to repeat the semester makes better academic sense than continuing without the necessary background. In many cases, the leave is dictated by courses that are offered only in the fall or spring semester. Leaves are given when the probability of success is increased substantially by deferring the student's return by one semester (or, in unusual circumstances, one year). Required leaves take precedence over voluntary leaves.

Rejoining the College

Students wishing to rejoin the college who have not yet affiliated with a major should request permission to rejoin in a letter to Engineering Advising; affiliated students should contact their major office. This must be done at least six weeks before the beginning of the semester in which the student wishes to return. The letter should describe the student's activities while away from Cornell, detail any academic work completed during this time, and specify the courses the student intends to take upon return.

Withdrawal from the College

A withdrawal from the College of Engineering may be voluntary or required. Following is a description of each:

Voluntary withdrawal: Students who voluntarily withdraw from the college sever all connection with the college. Unaffiliated students who wish to withdrawal should do so through Engineering Advising. Affiliated students should contact their major office. If a withdrawal is requested during the semester, courses in which the student is enrolled must be dropped in accordance with applicable regulations.

A student who fails to register in the first three weeks of the semester, without benefit of a leave of absence or permission for study in absentia, will be deemed to have withdrawn.

Students who withdraw from the College of Engineering are eligible to apply for admission to one of the other six colleges at Cornell. The intrauniversity transfer process should be followed.

A student who has withdrawn and subsequently wishes to return must make a formal application for readmission. This is rarely granted. It is subject to a review of the student's academic background and depends on available space in the college and in the student's major.

Required withdrawal: Students are required to withdraw from the college only when their overall record indicates that they are either incapable of completing the program or not sufficiently motivated to do so. This action withdraws them only from the College of Engineering and does not, in and of itself, adversely affect their ability to transfer and complete a degree in one of the other colleges in the university. Required withdrawals take precedence over voluntary withdrawals.

ENGINEERING MAJORS

This section describes the majors in the College of Engineering: the programs in which an undergraduate can study to obtain a B.S. degree.

A basic requirement of any major is a GPA ≥ 2.0. Most majors have a higher GPA requirement and may have other requirements.

Honors Program within Majors

Many of the engineering majors supplement the major with an honors program.

Eligibility

The B.S. degree with honors is granted to engineering students who, in addition to having completed the requirements for a B.S. degree in a major, satisfactorily complete the honors program in the major and are recommended for the degree by the honors committee of that major. To enter an honors program, the student must be on track to graduate with distinction, and a student who does not stay on track to graduate with distinction is dropped from the honors program.

Courses taken to satisfy the honors requirement may not be used to satisfy B.S. degree requirements. At least 9 extra credit hours are required, and a student must be in the program for at least two semesters before graduation.

No research, independent study, or teaching for which the student is paid may be counted toward the honors program.

Procedures

An applicant to the honors program in a major must have an honors advisor; a faculty member from that major who will supervise the honors program and direct the research or project. The honors advisor need not be the student's advisor in the major.

The application for the honors program should be a letter from the student that describes the proposed honors program in detail and includes the explicit approval of the honors advisor.

Students must complete a written application no later than the beginning of the first semester of their senior year, but they are encouraged to make arrangements with the honors advisor during the second semester of their junior year. Each major may place further constraints on timing.

Major-Specific Information

Each major defines the content of the honors program and may also place other requirements on the program, in terms of timing, content, and procedures. Information is given within the description of the individual majors.

BIOLICAL ENGINEERING

Offered by the Department of Biological and Environmental Engineering

Contact: 207 Riley-Robb Hall, 255-2173, www.bee.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET). Biological and environmental engineering (BEE) programs address three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world's natural resources, including water, soil, air, biodiversity, and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The biological engineering (BE) major has a unique focus on biological systems, including the environment, which is realized through a combination of fundamental engineering sciences, biology, engineering applications and design courses, and liberal studies.

Students interested in the BE major should have a strong aptitude for the sciences and math and an interest in the complex social issues that surround technology.

Students take courses in math, engineering, statistics, computing, physics, chemistry, basic and advanced biology, fundamental

BEE 1200 The BEE Experience or ENGRG 1050 (counted as an advisor-approved elective)  1

ENGRD 2020 Mechanics of Solids  4

BEE 2600 Biological Engineering Analysis or BEE 2510 Environmental Engineering Analysis  3

BEE 3500 Biological and Environmental Transport Processes  3

BEE 2220 or ENGRD 2210 Thermodynamics  3

ENGRD 2700 or CEE 3040 Engineering Statistics and Probability  3–4

BEE 3310 or CEE 3310 Fluid Mechanics  4

Concentration courses (three courses, minimum of 9 credits, chosen from one of the following BE concentrations): Biomedical Engineering, Bioprocess Engineering, or Bio-Environmental Engineering***

Major-approved Engineering Electives***

(Engineering courses at or above 2000 level to bring the number of credits to 46.) One course must be a BEE Capstone course and one must be a BEE lab experience course.

Liberal studies (two first-year writing seminars and six liberal studies electives)  24

Advisor-approved electives  6

Total (minimum)  127

*Basic accredited curriculum. See also the section on minors. Information on preprofessional study for medicine, dentistry, and veterinary medicine is available at www.career.cornell.edu.

** Students must have a competency in calculus equivalent to MATH 1110 before they attempt MATH 1110.

*** See department web page for a current list of approved courses.

Students must satisfy the College of Engineering Technical Writing requirement by including one of the approved courses in their program of study.

Biological Engineering Honors Program

The B.S. degree with honors is granted to biological engineering majors who graduate with distinction from the College of Engineering and satisfy the Honors requirements given at the beginning of the section “Engineering Majors.”

The Honors program requires completion of 9 credits beyond the B.S. degree requirements drawn from the following, with at least 6 credits in the first category:

1. A significant research experience or honors project under the supervision of a BE faculty member using BEE 4991–4992 BE Honors Research completed in their senior year. A written senior honors thesis must be submitted as part of this component.

2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the department under BEE 4980 Undergraduate Teaching.

3. Advanced or graduate courses. These additional courses must be technical in nature, i.e., in engineering, math, biology, chemistry, and physics at the 4000+ and graduate level.

CHEMICAL ENGINEERING

Offered by the School of Chemical and Biomolecular Engineering

Contact: 120 Olin Hall, 255-8656, www.cheme.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

The undergraduate major in chemical engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year. Students who plan to enter the major take CHEM 2080 during the freshman year. The program for the last three years is as follows:

Semester 3  Credits

MATH 2930 Engineering Mathematics  4

PHYS 2213 Physics II, Heat/ Electromagnetism  4

CHEM 3900 Physical Chemistry I (engineering distribution)  4

ENGRD 2190 Mass and Energy Balances (engineering distribution)  3

Liberal Studies Distribution  3

Semester 4

MATH 2940 Linear Algebra for Engineers  4

CHEM 3230 Fluid Mechanics  3

CHEM 3900 Honors Physical Chemistry II (major)  3

CHEM 2900 Introductory Physical Chemistry Laboratory (major)  6

Biology elective*  3

Liberal Studies Distribution  3

Semester 5

CS 1130 Transition to Object-Oriented Programming or CS 1132 Transition to MATLAB  1

CHEM 3570 Organic Chemistry for the Life Sciences  3

CHEM 2510 Introduction to Experimental Organic Chemistry  2

CHEME 3130 Chemical Engineering Thermodynamics  3

CHEME 3240 Heat and Mass Transfer  3

Liberal Studies Distribution  3

Semester 6

Electives***  5

CHEME 3010 Career Perspectives  1

CHEME 3320 Analysis of Separation Processes  3

CHEME 3720 Introduction to Process Dynamics and Control  2

CHEME 3900 Chemical Kinetics and Reactor Design  3

Liberal Studies Distribution  3

Semester 7

CHEME 4320 Chemical Engineering Laboratory  4
**Electives*** 9
**Liberal Studies Distribution** 3

**Semester 8**

CHEME 4620 Chemical Process Design 4

**Liberal Studies Distribution** 3

**Electives*** 3

Approved elective 3

*Every student must complete one of the five following options for the biology elective: (1) CHEME 2880 Biomedical Engineering Fundamentals and Applications. (2) advanced placement: a score of 5 on the CEEB AP exam or a score of 7 on the IB Higher Level exam. (3) 8 credits of a pre-med biology sequence: BIOG 1500 Investigative Laboratory (academic year, 2 credits) and BIOG/BIOEE 1350 Principles of Cell Developmental Biology (academic year, 3 credits) and BIOG/BIOEE 1440 Introduction to Comparative Physiology (academic year, 3 credits), or BIOG/BIOEE 1610 Ecology and the Environment (academic year, 3 credits), BIOG 1105 Introductory Biology (fall, 4 credits), BIOG 1106 Introductory Biology (spring, 4 credits), BIOG 1107 General Biology (summer, first half of eight-week session, 4 credits) or BIOG 1108 General Biology (summer, second half of eight-week session, 4 credits). (4) 3 credits of microbiology: BIOM 2000 General Microbiology (fall, spring, or summer six-week session, 3 credits). (5) 4 credits of biochemistry: BIOM 3300 Principles of Biochemistry, Individual Instruction (fall or spring, 4 credits) or BIOG 3330 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology (summer six-week session, 4 credits). (6) 5 credits of biochemistry: BIOG 3310 Properties of Materials, for students interested in structural engineering and geotechnical engineering. BIOG 2210 Thermodynamics, for students interested in fluid mechanics and hydraulics/hydrology. ENGRD 2110 Object Oriented Programming and Data Structures, for students interested in transportation. ENGRD 2510 Engineering for a Sustainable Society, for students interested in environmental engineering.

**Major Program**

Students may substitute CHEM 2080 or CHEM 1570 for PHYS 2214. The following nine courses are required in addition to those required for the Common Curriculum.

**Core Courses**

<table>
<thead>
<tr>
<th>Course Code</th>

</tbody>
</table>

Additional requirements include a set of two major-approved electives and three design electives from a list of approved courses that is available in the school office. In addition, students must complete one technical communications course from among the courses designated ENGRIC or approved communications courses. If the technical communications course also fulfills another requirement (liberal studies major-approved elective, etc.), then an additional advisor-approved elective must be taken.

**Civil Engineering Honors Program**

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section “Engineering Majors” as well as the following requirements.

The 9 credits beyond the B.S. degree requirements shall be drawn from the following components (with no fewer than 2 credits in any selected component):

1. A significant research experience or honors project under the direct supervision of a CEE faculty member using CEE 4000 Senior Honors Thesis (1–2 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component. Letter grades only.

2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the College of Engineering, i.e., CEE 4010 Undergraduate Teaching in CEE (1–2 credits per semester).

3. Advanced or graduate courses at the 5000 level or above.

**Procedures**

Application to the program shall be a registration form for CEE 4000 and a letter from the student describing the specific proposed honors program and including the explicit approval of the major advisor and the honors advisor. Each program must be approved by the CEE Curriculum Committee, although the committee may delegate approval authority to the associate director for all but unusual proposals.

**Civil Engineering Honors Program**

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section “Engineering Majors” as well as the following requirements.

The 9 credits beyond the B.S. degree requirements shall be drawn from the following components (with no fewer than 2 credits in any selected component):

1. A significant research experience or honors project under the direct supervision of a CEE faculty member using CEE 4000 Senior Honors Thesis (1–2 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component. Letter grades only.

2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the College of Engineering, i.e., CEE 4010 Undergraduate Teaching in CEE (1–2 credits per semester).

3. Advanced or graduate courses at the 5000 level or above.

**Procedures**

Application to the program shall be a registration form for CEE 4000 and a letter from the student describing the specific proposed honors program and including the explicit approval of the major advisor and the honors advisor. Each program must be approved by the CEE Curriculum Committee, although the committee may delegate approval authority to the associate director for all but unusual proposals.

**COMPUTER SCIENCE**

Offered by the Department of Computer Science

Contact: 303 Upson Hall, 255-0982, www.cs.cornell.edu/ugrad

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science.

Computer science majors take courses covering algorithms, data structures, logic, programming languages, systems, and theory. Electives include artificial intelligence, computer graphics, computer vision, cryptography, databases, networks, and scientific computing. Requirements include

- **MATH 1910, 1920, and 2940**
- three courses in introductory computing; either CS 1110, CS 1132, CS 2110 or CS 1112, CS 1130, CS 2110. CS 1114 is an honors-level substitute for CS 1112.
- a five-course computer science core (CS 2800, 3110, 3410 or 3420, 4110, and 4820)
- three 4000-level or above computer science electives (CS 4999 not allowed; CS 3220 and CS 3810 allowed). If CS 2800 was taken prior to spring 2009, CS 3810 or CS 4810 must be either one of these electives or one of the technical electives (see below).
• a computer science project course (CS 4121, 4321, 4411, 4450, 4621, 4701, 5150, 5412, 5414, or 6670)
• three 300+ level courses (only one of ENGRD 2700 or MATH 2930 accepted) that are technical in nature, as determined by the major.
• a three-course “external specialization” in a topic area other than computer science, all numbered at the 3000+ level
• one of BTRY 4080, ECE 3100, ECON 3190, ENGRD 2700, MATH 4710. CS majors in the College of Engineering can use ECE 3100 as a substitute for ENGRD 2700 to satisfy the engineering distribution requirements.
• an elective requirement consisting of a single 3+ credit course or a combination of courses coming to 3+ credits total. Roughly speaking, all academic courses (inside or outside of CS) count. No PE courses, courses numbered 10xx, or ROTC courses below the 3000 level are allowed.

All the major electives described above must be courses of at least 3 credits, with the exception of the CS project course, which is at least 2 credits, or as otherwise specified.

Additionally, students’ course selections must satisfy the requirements of at least one “vector” or CS-centric specialization, defined by the department. The set of vectors includes artificial intelligence, computational science and engineering, data-intensive computing, graphics, human-language technologies, network science, programming languages, security and trustworthy systems, software engineering/code warrior, systems, theory, and a broad “Renaissance” vector. See www.cs.cornell.edu/ugrad for the requirements of each vector and updates.

The program is broad and rigorous, but it is structured in a way that supports in-depth study of outside areas. Intelligent course selection can set the stage for graduate school or employment in any technical area or any professional area such as business, law, or medicine. With the advisor, the computer science major is expected to put together a coherent program of study that supports career objectives and is true to the aims of a liberal education.

Computer Science Honors Program
The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section “Engineering Majors” with a set of coherent courses and research activities that satisfy the following requirements.

The program consists of at least 9 credits beyond the minimum required for graduation as follows:

1. at least one CS course (at least 3 credit hours) at or above the 5000 level with a grade of A– or better (no seminars)
2. at least two 3-credit semesters of CS 4999 (independent research), with grades of A– or better each semester

Honors determinations are made during the senior year. Students wanting to be considered for the honors program should notify the undergraduate office in the Department of Computer Science at ugrad@cs.cornell.edu. The subject line for this message should read “HONORS TRACK.” Address related questions to the same e-mail address, call or stop by 303 Upson Hall, 255-0982, or visit www.cs.cornell.edu/ugrad for more information on eligibility.

ELECTRICAL AND COMPUTER ENGINEERING
Offered by the School of Electrical and Computer Engineering
Contact: Student Services Office, 222 Phillips Hall, 255-4309, www.ece.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

The Electrical and Computer Engineering major (ECE), leading to a B.S. degree, provides a foundation that reflects the broad scope of this engineering discipline. Concentrations include computer architecture and organization, digital systems and computer vision, power systems control, communications, networks, information theory and coding, signal processing and optimization; electronic circuits, VLSI, solid state physics and devices, MEMs, nanotechnology, lasers and optoelectronics, electromagnetics, radiophysics, space sciences, and plasmas.

ECE majors must take ECE/ENGRD 2300 as an engineering distribution course and are encouraged, but not required, to take ENGRD 2110 as the other engineering distribution course. The major normally begins in the spring of the sophomore year. Of the courses listed below, only ENGRD/ECE 2100 and ECE/ENGRD 2300 are currently taught in both the fall and spring semesters.

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Major-required courses</td>
<td></td>
</tr>
</tbody>
</table>

ECE majors who entered Cornell as first-year students before Fall 2009 (nominally members of the classes of 2012 or earlier)

1. must complete the major required courses ECE/ENGRD 2100, ECE 2200, ECE 3030, ECE 3100, ECE 4540, and ECE 5150.
2. must complete a minimum of two culminating design experience (CDE) courses. A list of courses that meet the CDE requirement appears in the online ECE Undergraduate Handbook and is posted on the bulletin board outside 222 Phillips Hall.
3. must complete at least four additional advanced ECE electives. These are ECE lecture courses at the 3000 level or above.

ECE foundation courses are: ECE 3030, ECE 3100, ECE 3140, and ECE 3150.

c. must complete a minimum of one culminating design experience (CDE) course. A list of courses that meet the CDE requirement appears in the online ECE Undergraduate Handbook and is posted on the bulletin board outside 222 Phillips Hall.
d. must complete three breadth and depth electives. These are ECE lecture courses at the 4000 level or above that list at least one ECE foundation course as a prerequisite. The list of all prerequisites of the three breadth and depth electives must include at least three ECE foundation courses.
e. must complete at least three additional advanced ECE electives. These are ECE lecture courses at the 3000 level or above.

f. must complete 9 credits’ worth of outside-ECE technical electives. See the online ECE Undergraduate Handbook for rules governing these courses.
g. must complete a minimum of 54 credits in satisfying items 1 through 5.

For additional details, see the online ECE Undergraduate Handbook at www.ece.cornell.edu/ugradhndbk.

Academic Standards
Majors in Electrical and Computer Engineering are expected to meet the following academic standards:

1. GPA ≥ 2.3 every semester.
2. At least C– in all courses used to satisfy degree requirements in the major or that serve as a prerequisite for a subsequent Electrical and Computer Engineering course.
3. Satisfactory completion of MATH 2940, PHYS 2214, and at least two of ENGRD/ECE 2100, ECE 2200, ECE 2400, and ENGRD/ECE 2300 by the end of the sophomore year and adequate progress toward the degree in subsequent semesters.

ENGINEERING PHYSICS
Offered by the School of Applied and Engineering Physics
Contact: 212 Clark Hall, 255-5108, www.aep.cornell.edu

The engineering physics (EP) major is designed for students who want to pursue careers of research or development in applied science or advanced technology and engineering. Its distinguishing feature is a focus on the physics and math fundamentals, both experimental and theoretical, that are at the base of modern engineering and research and have a broad applicability in these areas. By choosing areas of concentration within this major, students may combine this physics base with a good background in a conventional area of engineering or applied science.

The industrial demand for EP B.S. graduates is high, and many students go directly to industrial positions where they work in a variety of engineering or development areas that either combine, or are in the realm of, various more conventional areas of...
engineering. Recent examples include bioengineering, computer technology, electronic-circuit and instrumentation design, energy conversion, environmental engineering, geological analysis, laser and optical technology, microwave technology, nuclear technology, software engineering, solid-state-device development, technical management, and financial consulting. A number of EP graduates go on for advanced study in all areas of plasma physics, applied physics as well as in a diverse range of areas in advanced science and engineering. Examples include applied physics, astrophysics, atmospheric sciences, biophysics, cell biology, computer science and engineering, electrical engineering, environmental science, fluid mechanics, geotechnology, laser optics, materials science and engineering, mathematics, mechanical engineering, medical physics, medicine, nuclear engineering, plasma physics, oceanoigraphy, and physics. The major can also serve as an excellent preparation for medical school, business school, or specialization in patent law. The EP major fosters this breadth of opportunity because it both stresses the fundamentals of science and engineering and gives the student direct exposure to the application of these fundamentals. Laboratory experimentation is emphasized, and ample opportunity for innovative design is provided. Examples are ENGR/Physics 1110 Lasers and Photonics, ENGR/Physics 1200 Introduction to Nanoscience and Nanoengineering; ENGRD/Physics 2640 Computer-Instrumentation Design (a recommended sophomore engineering distribution course); AEP 3330 Modern Experimental Optics (a junior/senior course); AEP 3630 Electronic Circuits (a sophomore/junior course); PHYS 4410 Advanced Experimental Physics; and AEP 4380 Computational Engineering Physics (a senior computer laboratory).

Students who plan to affiliate with the EP major are advised to arrange their common curriculum with their developing career goals in mind. They are encouraged to take PHYS 1110 or 1111 during their first semester (if AP credits permit); we do not recommend accepting AP credit for PHYS 2213 and instead encourage qualified students to enroll in PHYS 2217. We encourage students to satisfy the technical writing requirement to satisfy the technical writing requirement with the engineering distribution course ENGRD 2640. EP students need to take only one engineering distribution course; since AEP 3330, taken in the junior year, counts as the second one, EP students are advised to take AEP 3630 (taking ECE 2100 and 2300, 4 credits each, can satisfy AEP 3630. Count ECE 2100 as an approved elective and ECE 2300 as AEP 3630) in the spring semester of the sophomore year. Students with one semester of advanced placement in math and who have received at least A– in MATH 1920 may wish to explore accelerating their requirements so as to enroll in AEP 4210 and 4220 in the sophomore year. For advice on this option, consult with the AEP associate director.

In addition to the requirements of the Engineering Common Curriculum,* the major requirements are as follows:

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>AEP 3330 Mechanics of Particles and Solid</td>
<td>4</td>
</tr>
<tr>
<td>Bodies</td>

<tr>
<td>AEP 4220 Mathematical Physics II</td>
<td>4</td>
</tr>
</tbody>
</table>

Six major-approved electives (18–23 credits), of which five must be technical upper-level courses (3000 or above).

Total major credits=58 credit hours minimum

*The Engineering Common Curriculum suggests that freshmen take only four courses each semester. This course load is fully consistent with the requirements of the EP major, but freshmen with strong preparation are encouraged to consider taking an additional course during one or both semesters so that they may have additional flexibility in developing a strong, individualized educational program in their later years and for allowing options such as a semester or year abroad or early graduation.

Two of the 4 credits of PHYS 4410 required for the B.S. degree in EP can be satisfied by completing AEP/PHYS 3300 or ASTRO 4410. The remaining 2 credits of PHYS 4410 can then be satisfied by taking PHYS 4400 for 2 credits, provided that the experiments completed in PHYS 4400 do not overlap with those in AEP/PHYS 3300 or ASTRO 4410. (A list of experiments that are not appropriate will be prepared by AEP faculty and made available in the AEP office.) If a student chooses this option, AEP/PHYS 3300 or ASTRO 4410 may also count as a technical elective, provided that the remaining three technical electives are 4 credits each.

Choosing elective courses. The EP major provides the students with a strong opportunity to develop individualized programs of study to meet their particular educational and career goals. These can include the pursuit of a dual major or the development of a broad expertise in a number of advanced technical and scientific areas. With at least seven electives in the sophomore, junior, and senior years, EP majors are encouraged to work closely with their advisor to develop a coherent academic program that is consistent with those goals. For students who look toward an industrial position after graduation, the electives should be chosen to widen their background in a specific area of practical engineering. A different set of electives can be selected as preparation for medical, law, or business school. For students who plan on graduate study, the electives provide an excellent opportunity to explore upper-level and graduate courses and to prepare for graduate study in any one of a number of fields. Various programs are described in a special brochure available from the School of AEP, Clark Hall. Students are advised to consult with their EP advisor, a professor active in their area of interest, or the associate director of the school.

Electives need not be all formal course work; qualified students are encouraged to undertake independent study under the direction of a member of the faculty (AEP 4900). This may include research or design projects in areas in which faculty members are active. Up to three “4900” courses may be used as a major approved electives. These courses must be taken during the student’s last four semesters as an undergraduate. Any additional “4900” credits may be used as “advisor-approved electives.”

The variety of course offerings and many electives provide flexibility in scheduling. If scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses.

Academic Standing

Students are expected to pass every course in which they are registered, to earn at least C– in specifically required courses, and to attain a semester GPA ≥ 2.3 each semester. Students are required to take a minimum of 12 credit hours per semester.

Engineering Physics Honors Program Requirements

Eligibility

The Bachelor of Science degree with honors will be conferred upon those students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in the School of Engineering Physics and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA ≥ 3.5 or must be eligible for one of the cum laude distinctions at the time of graduation.

Content

The student must complete the following two requirements, resulting in at least 9 credits of work beyond the minimum required for graduation in EP: courses counting toward honors cannot be approved in the B.S. degree.

1. Enroll in AEP 4900 or an equivalent course over two semesters for the purpose of completing an independent research project or senior thesis under the supervision of a Cornell engineering or science faculty member. For a 4900 project to satisfy the research component of an honors project, it must have substantial physical science content. The minimum enrollment is to be 2 credits in the first semester and 4 credits in the second. The level of work required for a successful completion of this project or thesis is to be consistent with the amount of academic credit granted.

2. Complete an additional technical course at the 4000 level or above, for at least 3 credits.

Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to broach arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation. Most often,
these 4900 courses are taken during the student’s senior year, after completion of the EP junior-year curriculum. Students may apply for honors after early completion of AEP 4210 and AEP 4220. However, for the project to be considered for honors, the proposal must be approved within three weeks of the start of the semester.

**Procedures**

Before enrolling in AEP 4900, or the equivalent, the honors candidate must submit a brief proposal outlining the topic and scope of the proposed project or thesis and a faculty supervisor’s written concurrence to the associate director for undergraduate studies. This proposal will be reviewed by the AEP Honors Committee and either approved or returned to the candidate to correct deficiencies in the proposal. The proposed research project or senior thesis is to consist of a research, development, or design project and must go beyond a literature search. This proposal must clearly describe a self-contained, independent project that can be completed within two semesters. The final steps in completing the honors project are a written and oral report. The written report is to be in the form of a technical paper with, for example, an abstract, introduction, methods section, results section, conclusions section, references, and figures. This report will be evaluated by the faculty supervisor and the chair of the AEP Honors Committee and at least one other departmental faculty member, along with the other honors candidates. The final research project course grade will be assigned by the faculty supervisor, following the oral presentation and after consultation with the chair of the honors committee. A minimum grade of A– is required for successful completion of the honors requirements.

**Environmental Engineering**

Offered jointly by the Department of Biological and Environmental Engineering and the School of Civil and Environmental Engineering.

Environmental Engineering is the study and practice of analyzing, designing, and managing natural and engineered systems in ways consistent with the maintenance or enhancement of environmental amenities and sustainability. It requires the ability to predict interactions and impacts among natural and engineering-system components at various spatial and temporal scales in response to alternative projects and design and management policies. It requires a thorough understanding of interactions among the natural environment, the constructed environment, and human activities.

Students matriculating in the College of Engineering (GoE) may affiliate with this major in their second year. Students matriculating in the College of Agriculture and Life Sciences (CALS) may enroll in this major in their first semester. Students planning to graduate with this major will be taking the following courses:

### Mathematics-science core requirements

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 1910, 1920, 2930, 2940</td>

### Engineering Economics

- CEE 3230 Engineering Economics and Management
- BEE 4890 Entrepreneurial Management for Engineers

### Electives

- Technical communications course (ENGRC 3350 or 3500 in liberal studies category; COMM 2600, 2630, or 3520; or BEE 4730, or BEE 4890)

Three environmental design electives: at least one from list of capstone design courses and the remainder from list of design courses or 3-credit minimumi

- Two major-approved engineering electives to complete total credit requirementi | 6 |
- First-year writing seminar | 6 |
- Two approved electives | 6 |
- Liberal studies | 18 |

Total credits (minimum) 126

- a. BEE 1510 and 1200 together (5 credits) satisfy the ENGRD requirement for CALS–matriculated first-year students. Students using BEE 1200 and BEE 1510 to satisfy the ENGRD requirement must make up the 2-credit difference with engineering course work.
- b. COE matriculated students must complete one ENGRD XXX course their first year. CALS matriculated students may complete BEE 1510 and BEE 1200 to meet the requirement.
- c. Students must complete two ENGRD courses.
- d. Students using this course as a second engineering distribution must take an additional major-approved elective. Note: Some Intro to Biology courses do not count as an engineering distribution course.
- e. ENGRD 2700 (f,s,3) may be accepted (by petition) to substitute for CEE 3040 if taken prior to affiliation with the Environmental Engineering major or if necessary because of scheduling conflicts caused by co-op or study abroad.
- f. Students may take BIOMI 2900 Introduction to Microbiology in place of CEE 4510.
- g. If the course fulfilling the technical writing requirement also fulfills another requirement (e.g., liberal studies, major-approved elective), then it may be used to satisfy both requirements.
- h. To be chosen from a list of design courses. Students are encouraged to take CEE 4520, CEE 4540, or BEE 4750.
- i. The list of suggested courses covers the areas of environmental engineering, hydraulics/hydrology, environmental systems engineering, geotechnical engineering, remote sensing, air pollution, and renewable energy systems. The respective lists are available at the departmental offices.
Environmental Engineering Honors Program

Students interested in pursuing an honors program should contact the undergraduate program director of Biological and Environmental Engineering or the associate director of Civil and Environmental Engineering for information on the program requirements.

INDEPENDENT MAJOR

Offered by the Independent Major Committee
Contact: Associate Dean for Undergraduate Programs, 167 Olin Hall, 255-8240

The independent major is designed for students whose educational objectives cannot be met by one of the regular majors. This major consists of an engineering primary area (32 credits) and an educationally related secondary area (16 credits). The primary area may be in any subject area offered by schools or departments of the college; the secondary area may be in a second engineering subject area or in a logically connected non-engineering area. The combination must form an engineering education in scope and substance and should include engineering design and synthesis as well as engineering sciences. Each program includes the normally required common-curriculum requirements and approved electives.

Students should apply to the independent major during the sophomore year. A student should seek assistance in developing a coherent program from professors in the proposed primary and secondary areas (an advisor in each area is required). The program must also be approved by the Independent Major Committee. If approved, the program is the curricular contract to which the student must adhere.

Because no single standardized curriculum exists, the independent major is not accredited by ABET. Independent major students who intend to seek legal licensing as a Professional Engineer should be aware that this nonaccredited degree program will require additional education, work, and/or experience to qualify for eligibility to take the Fundamentals of Engineering examination and may affect acceptance into engineering graduate programs.

INFORMATION SCIENCE, SYSTEMS, AND TECHNOLOGY

Offered jointly by the Department of Computer Science and the School of Operations Research and Information Engineering

Digital information technologies have become pervasive in science, engineering, manufacturing, business, finance, culture, law, and government, dramatically changing the way people work and live. The proliferation and significance of these new technologies demands a new focus in engineering education—one that remains rigorous and technically oriented but is simultaneously devoted to integrating engineering design, theory, and practice within the social and organizational contexts in which these complex digital information systems are employed.

The information science, systems, and technology (ISSST) major studies the design and management of complex information systems. Just as structural engineers and nanofabricators use physics at radically different scales, so also there is a scale difference between the focus of the ISSST major and the more traditional, look-under-the-hood majors in computer science and operations research and industrial engineering. Rather than focusing on the computing and communication technologies that underlie digital information systems, the ISSST major emphasizes information systems engineering in broad application contexts, where issues at the confluence of information science, technology, and management are the primary concerns.

The ISSST major has two options. The management science option educates students in methods for quantitative decision making and their application to information technology as well as the broader role that information technology plays in making these methods effective. Students in the information science option will obtain advanced training in methods for the creation, representation, organization, access, and analysis of information in digital form.

Note: Students may not double major in both CS and ISSST or ORIE and ISSST.

Engineering distribution courses

Majors are required to take ENGRD 2700 Basic Engineering Probability and Statistics as an engineering distribution course. ENGRD 2110 Object-Oriented Programming and Data Structures is required for the major and is recommended as the second engineering distribution course.

Students who take ECON 3680 may also count its prerequisite, ECON 3130, toward Area VI.

**Information Science, Systems, and Technology Honors Program**

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section “Engineering Majors” as well as the following requirements.

1. 3 credit hours of ISST course work at or above the 5000 level (no S-U courses; no seminars or 2-credit courses)

2. 6 credit hours of INFO 4900 independent study and research with an ISST faculty member, spread over at least two semesters, with at least A– each semester or 3 credit hours of INFO 4900 independent study and research with an ISST faculty member and 3 credit hours of INFO 4910 teaching experience, both with grades of at least A–.

The ISST research is expected to result in a programming project or a written report (or both).

The 9 credits required for honors are in addition to the minimum requirements for the major.

**Procedures**

Each program must be approved by the appropriate co-director of the ISST major, and any changes to the student’s program must also be approved.

**MATERIALS SCIENCE AND ENGINEERING**

Offered by the Department of Materials Science and Engineering

Contact: 214 Bard Hall, 255-9159, www.mse.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

Prospective majors are required to take ENGRD 2610 or 2620 before affiliating with the major. It is highly recommended that the course be taken as an engineering distribution during the sophomore year.

The major program develops a comprehensive understanding of the physics and chemistry underlying the unique properties of modern engineering materials and processes. Students complete a series of electives to develop knowledge of materials, such as biomaterials, metals, ceramics, polymers, and semiconductors. Application-related courses are grouped into the areas of biotechnology and life science, energy and environment, materials for information science, nanotechnology, and technology management and ethics. These requirements are satisfied through a series of technical electives taken mainly in the senior year, which are selected from various engineering and science departments. Optional research involvement courses provide undergraduates with the opportunity to work with faculty members and their research groups on current projects.

The major requirements for a B.S. degree in materials science and engineering are:

1. ENGRD 2610 Mechanical Properties of Materials: From Nanodevices to Superstructures or ENGRD 2620 Electronic Materials for the Information Age

2. 13 required major courses:
   - MSE 2060 Atomic and Molecular Structure of Matter
   - MSE 2610 or MSE 2620 (whichever was not taken as a distribution course)
   - MSE 3010 Materials Chemistry
   - MSE 3030 Thermodynamics of Condensed Systems
   - MSE 3040 Kinetics, Diffusion, and Phase Transformations
   - MSE 3050 Electronic, Magnetic, and Dielectric Properties of Materials
   - MSE 3070 Materials Design Concepts I
   - MSE 3110 Junior Lab I
   - MSE 3120 Junior Lab II
   - MSE 4020 Mechanical Properties of Materials, Processing, and Design
   - MSE 4050/4050 Senior Materials Lab I or Senior Thesis I
   - MSE 4040/4060 Senior Materials Lab II or Senior Thesis II
   - MSE 4070 Materials Design Concepts II

3. Two materials-related electives covering two groups of different materials
4. Three application-related electives in at least two different types of applications
5. Two of the application-related electives must be taken from outside MSE
6. One additional technical elective outside MSE

**Materials Science and Engineering Honors Program**

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section “Engineering Majors” as well as the following requirements.

1. The 9 credits (giving a total of 141) of additional courses must be technical in nature, i.e., in engineering, math, chemistry, and physics at the 4000 and graduate level, with selected courses at the 5000 level. The courses must be approved by the major advisor.

2. Senior honors thesis (MSE 4050/4060) with a grade of at least A.

**MECHANICAL ENGINEERING**

Offered by the Sibley School of Mechanical and Aerospace Engineering

Contact: 108 Upson Hall, 255-3573, www.mae.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).
This major is designed to provide a broad background in the fundamentals of the discipline as well as to offer an introduction to the many professional and technical areas in which mechanical engineers work. The program covers both major streams of mechanical engineering.

1. **Mechanical systems, design, and materials processing** is concerned with the design, analysis, testing, and manufacture of machinery, vehicles, devices, and systems. Other topics covered are computer-aided design, vibrations, control systems, and dynamics. Particular areas of concentration are mechanical systems and design, vehicle engineering, biomechanics, and engineering materials.

2. **Engineering of fluids, energy, and heat-transfer systems** is concerned with the efficient conversion of energy, aerospace and surface transportation, the environmental impact of engineering activity (including pollutants and noise), aeronautics, and the experimental and theoretical aspects of fluid flow, heat transfer, thermodynamics, and combustion. Specific areas of concentration include aerospace engineering, energy, and the environment, and thermo-fluids engineering.

During the fall semester, sophomores who plan to affiliate with the mechanical engineering major take ENGRD 2020 (also TAM 2020) as an engineering distribution course. ENGRD 2210 (also MAE 2210) is required for the major. The Sibley School supports students who have unusual requirements, but delays or substitutions must be discussed with and receive approval from their major advisor.

The major requires 13 courses (beyond ENGRD 2020 already mentioned) plus four major program electives, which include two major-approved electives, one math elective, and one technical elective.

**Required courses**

- MAE 2120 Mechanical Properties and Selection of Engineering Materials
- ENGRD 2210 Thermodynamics
- MAE 2250 Mechanical Synthesis
- ENGRD 2030 Dynamics
- MAE 3780 Mechatronics or ENGRD 2100 Introduction to Electrical Circuits, Electrical and Computer Engineering, or PHYS 3360 Electronic Circuits
- MAE 3240 Introductory Fluid Mechanics
- MAE 3240 Heat Transfer
- MAE 3250 Analysis of Mechanical and Aerospace Structures
- MAE 5260 System Dynamics
- MAE 5272 Mechanical Property and Performance Laboratory
- MAE 4272 Fluids/Heat Transfer Laboratory
- MAE 4300 Professional Practice in Mechanical Engineering
- MAE 4291 Supervised Senior Design Experience

**Design requirement**

Each student must complete a senior design elective involving MAE 4291 “Supervised Senior Design Experience.” One way to satisfy this requirement is to take a 3+ credit section of MAE 4291, directed by a faculty member as a individual or team exercise. The other option is to take a senior design elective course (MAE 4000, 4020, 4040, 4140, 4230, 4250, 4700, or 4860) along with the corresponding 1-credit section of MAE 4291.

**Electives**

Students should use the flexibility provided by the major electives, advisor-approved electives, and liberal studies distribution electives to develop a program to meet their specific goals.

**M.E. major program electives**

M.E. students must complete any two upper-level major-approved electives totaling at least 6 credits. The major-approved electives must be chosen from any of the seven areas listed below. Students may choose to focus on one topic, but it is not necessary to select both courses from one topic.

- **Aerospace engineering**
  - MAE 3050, 3060, 4150, 4230, 5000, 5070

- **Biomechanics**
  - MAE 4640, 4660, 5680, 5690

- **Energy and the Environment**
  - MAE 4020, 4230, 4490, 4580, 4590, 5010, 5430

- **Engineering Materials**
  - MAE 3120, 3130, 4040, 4140, 4550, 4640, 4700, 5130

- **Mechanical Systems and Design**
  - MAE 3780*, 4000, 4150, 4170, 4180, 4320, 4700, 4770, 4780, 5200, 5910

- **Thermo-fluids Engineering**
  - MAE 4230, 4490, 4530, 5010, 5430

- **Vehicle Engineering**
  - MAE 3050, 3060, 4140, 4250, 4490, 4860, 5000, 5070

*Students who took MAE 3780 as a required course (see above) may not use it again as a major-approved elective.

**Math elective**

Each student must complete an approved upper-level math course taken after MATH 2940. The course must include some statistics. Currently, the approved courses are TAM 3100, ENGRD 2700, CEE 3040, or ENGRD 3200.

**Technical elective**

The technical elective may be any course at an appropriate level, chosen from engineering, math, or science (physics, chemistry, or biological sciences). Appropriate level is interpreted as being at a level beyond the required courses of the college curriculum. Courses in economics, business, and organizational behavior are not accepted; advisors may approve such courses as advisor-approved electives.

MAE 4980 may not be used as an M.E. major program elective.

**Advisor-approved electives**

To maximize flexibility (i.e., the option for study abroad, Co-op, internships, pre-med, and flexibility during the upper-class years), the Sibley School faculty recommends that students delay use of advisor-approved (AA) electives until after the third semester. Students must seek advisor approval before taking an AA elective. Advanced placement credit may not count as an AA elective. Up to 6 credits of Reserve Officer Training Corps (ROTC) courses numbered 3000 or above or co-listed in an academic department are allowed as AA electives.

Students must document AA electives approved before MAE affiliation within a month of affiliation as an M.E. student. Because these courses should help develop and broaden the skills of the engineer, advisors will generally accept the following as approved electives: One introduction to engineering course, engineering distribution courses, courses stressing oral or written communication, upper-level engineering courses, advanced courses in mathematics, and rigorous courses in the biological and physical sciences. Advisors are likely to approve courses in business, economics, and language that serve the student's educational and academic objectives. In other cases, a student's interests might be better served by approved electives that expand the major, or other parts of the curriculum, including the liberal studies requirements.

**Other considerations**

It is recommended that the liberal studies distribution electives include studies in history of technology, societal impacts of technology, history, foreign languages, ethics, communications, political science, aesthetics, economics, and/or architecture.

The Sibley School facilitates its students to spend a semester or year abroad at foreign universities with which the college has an exchange agreement, such as the Ecole Centrale de Paris.

The technical-writing requirement of the common curriculum is satisfied by MAE 4272. A limited set of second- and third-year courses is offered each summer under the auspices of the School of Continuing Education and Summer Sessions and the Engineering Cooperative Education Program.

**Preparation in Aerospace Engineering**

There is no separate undergraduate major in aerospace engineering, but students may prepare for a career or graduate program in this area by majoring in mechanical engineering and taking courses from the aerospace engineering minor, for example, spacecraft engineering, introduction to aeronautics, and aerospace propulsion systems. It is also possible to prepare for a career or graduate program in aerospace engineering through appropriate course selection in other majors, for example: electrical and computer engineering, engineering physics, or the physical sciences. Subjects recommended as preparation for aerospace engineering endeavors include thermodynamics, fluid mechanics, structures, vibrations, feedback controls, applied mathematics, chemistry, and physics.

**Operations Research and Engineering**

Offered by the School of Operations Research and Information Engineering

Contact: 203 Rhodes Hall, 255-5088, www.orie.cornell.edu

This major provides a broad education in the techniques and modeling concepts needed to design, analyze, and operate complex systems. The major prepares students for a wide range of careers including operations research, information engineering, entrepreneurship,
operations management, consulting, financial engineering, financial services, and engineering management.

The foundation of the major is the development of basic skills in statistics, probability, mathematical optimization, and computer science. Required courses in manufacturing systems, cost accounting, and simulation build on these skills and provide engineering design experiences. In the senior year the curriculum is quite flexible. Students take ORIE electives to broaden and deepen their expertise in applied probability and statistics, industrial systems, optimization, information technology, financial engineering, and their applications.

Because of the wide range of career goals among ORE students, and the large number of electives, students should consult with their major advisors to select electives that best meet their future goals.

Exceptional students interested in pursuing graduate studies are encouraged to speak with their faculty advisors concerning an accelerated program of study.

A student who intends to affiliate with the major in operations research and engineering should take ENGRD 2700 Basic Engineering Probability and Statistics after completing MATH 1920; MATH 2940 should be completed before or concurrently with ENGRD 2700. ORE affiliates are required to complete MATH 1910, 1920, and 2940 (or their subject matter equivalents). Either MATH 2930, CS 2800, or MATH 3040 may be used to satisfy the fourth-semester mathematics requirement. Students should discuss with their advisors which of these three courses is most appropriate to their future program of study in ORE. The following should be considered:

1. MATH 2930 (differential equations) is essential for advanced study in financial engineering. Also, MATH 2950 is a prerequisite for PHYS 2214, thus students who do not take MATH 2930 must plan to take CHEM 2080.
2. CS 2800 provides an introduction to discrete structures and algorithms of broad applicability in the field of operations research, particularly for fundamental models in the areas of optimization, production scheduling, inventory management, and information technology; it is also a prerequisite for certain upper-class Computer Science courses in the areas of information technology and algorithmic analysis.
3. MATH 3040 covers fundamentals of formal proof techniques. Early consultation with a faculty member or the associate director for undergraduate studies may be helpful in making appropriate choices. Students considering Ph.D.-level study in operations research are encouraged to see the Associate Director for advice regarding the fourth MATH course.

The required courses for the ORE major and the typical terms in which they are taken are as follows:

<table>
<thead>
<tr>
<th>Semester 2 or 3</th>

*The behavioral science requirement can be satisfied by any of several courses, including the Johnson Graduate School of Management (JGSM) course NCC 5540 (offered only in the fall), which is recommended for those considering a graduate business degree.
†The behavioral science requirement can be satisfied by any of several courses, including the Johnson Graduate School of Management (JGSM) course NCC 5540 (offered only in the fall), which is recommended for those considering a graduate business degree.
**ORIE 3150 may be taken in semester 4, 5, or 6.

Operations Research and Engineering Honors Program

The B.S. degree with honors is granted to students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements.

The 9 additional credits of course work shall be from one or more of the following, with at least 4 credits in the first category:

1. Advanced courses in ORIE at the 5000 level or above.
2. A significant research experience or honors project under the direct supervision of an ORIE faculty member using ORIE 4999 ORIE Project. A significant written report must be submitted as part of this component.
3. A significant teaching experience under the direct supervision of a faculty member in ORIE using ORIE 4990 Teaching in ORIE.

Program Procedures

Each program must be approved by the associate director of undergraduate studies, and any changes to a program must be approved by the associate director.

SCIENCE OF EARTH SYSTEMS (SES)

Offered by the Department of Earth and Atmospheric Sciences

Contact: 2124 Snee Hall, 255-5466, www.eas.cornell.edu

The Earth Sciences have never been more critical to society than they are today. Global warming, dwindling energy resources, inadequate water supplies, political strife over strategic minerals, and megadisasters threatened by volcanic eruptions, earthquakes, tsunamis, and hurricanes: these are but a few of the headlines that appear with increasing frequency. The Department of Earth and Atmospheric Sciences at Cornell is a global leader in research directed toward understanding the fundamental processes that have shaped our planet, and is committed to providing Cornell students with the earth literacy needed to serve as informed citizens and wise stewards of the Earth. EAS faculty members and graduate students carry out frontier research on both basic and applied aspects of subjects as diverse as satellite monitoring of volcanic activity, the deep structure of the Andes Mountains and Tibetan Plateau, the nature of the earth's ionosphere, ocean acoustics, controls on global climate, and improved weather prediction.

The Science of Earth Systems (SES) major is the undergraduate program offered by EAS to Cornell students in Engineering, Arts and Sciences and the College of Agriculture and Life Sciences. Students in this program can pursue education and research that prepares them to compete for careers or graduate study.
at leading institutions in this country and abroad. Students may choose to focus on one of a number of disciplinary specialties, such as geophysics or tectonics, or develop the broad expertise needed to understand the interactions between the diverse elements of Earth and life in the past, present, and future. By analyzing the complex relations among the ocean, solid earth, atmosphere, and biosphere, students can help meet society’s growing demand for sustainable energy, water, and clean air as well as contribute to mitigating the negative impacts related to global warming, rising sea level, natural hazards, and decreasing biodiversity.

The SES program is intrinsically interdisciplinary, involving many branches of science and engineering. Examples of the latter include civil and environmental engineering, biological and environmental engineering, mechanical and aerospace engineering, and electrical and computer engineering. The SES program is unique in that it incorporates the fundamentals of Earth Science with the emergence of a new and more complete approach that encompasses all components of the Earth system—air, life, rock, and water—to gain a new and more comprehensive understanding of the world as we know it.

To achieve a complete understanding of these important issues, students must have a desire to take a very hands-on approach. An abundance of opportunities exists for geological, oceanographic, and meteorological research in the field and for nationwide and international travel as well as paid research experience. Students have worked with faculty members in the Andes, the Alotauans, the Rocky Mountains, the Atacama Desert, the Caribbean, Tibet, and Hawaii, and have spent a semester at sea in the Woods Hole Ocean Studies Program. Students are also able to probe the ionosphere of Earth and the surface of Mars by utilizing techniques in remote sensing.

The SES major provides a strong preparation for graduate school in any one of the Earth sciences, such as atmospheric sciences, geological sciences, geophysics, geochemistry, oceanography, and biogeochemistry. Students seeking employment with the B.S. degree will have many options in a wide variety of careers related to energy, the environment, and critical resources in both the private sector and government. Students with the strong science background provided by the SES major are also highly valued by graduate programs in environmental law, public affairs, economics, and public policy.

**Requirements for the Major**

1. **Basic Math and Sciences**
   - MATH 1910–1920 (or MATH 2930–2940)
   - PHYS 1112–2213
   - CHEM 2090–2080 or CHEM 2090–1570
   - BIO—three options:
     - one year of biology, choosing from the introductory biology sequences of courses: BIOC 1101/1103–1102/1104, or BIOC 1105/1106, or BIOC 1109/1110
     - one semester from the introductory biology sequences of courses (listed in option 1) and EAS/BIOE 1540 or EAS 1700
     - students may substitute (with written permission of their advisor) one semester of biology with an additional semester of chemistry, math, or physics.

2. **Required Introductory Course: EAS 2200 The Earth System**

3. **SES Core Courses**
   - The core courses emphasize the interconnectedness of the Earth system and are founded on the most modern views of the planet as an interactive and ever-changing system. Each crosses the traditional boundaries of disciplinary science. Three courses selected from the following four core courses are required for the major.
   - EAS 3010 Evolution of the Earth System
   - EAS 3030 Biogeochemistry
   - EAS 3040 Interior of the Earth
   - EAS 3050 Climate Dynamics

4. **Concentration Courses**
   - The concentration is achieved by completion of four intermediate to advanced-level courses (3000 level and up) that build on the core courses and have prerequisites in the required basic sciences and mathematics courses. Note that additional basic math and science courses may be required to complete the concentration depending upon the student’s choice of concentration. The concentration courses build depth and provide the student with a specific expertise in some facet of Earth system science. Four concentrations are defined in the major: geological sciences, biogeochemistry, atmospheric sciences, and ocean sciences. Other concentrations can be tailored to a student’s interests in concert with the student’s advisor and the SES curriculum committee. Examples include sustainable Earth and environmental systems, earth system science and policy, hydrology, planetary science, and soil science. The concentration should be chosen during the junior year or before in consultation with the student’s advisor and with approval of the director of undergraduate studies.

5. **Field/Observational/Laboratory Experience**
   - Expose to the basic observations of Earth science, whether directly in the field, or indirectly by various techniques of remote sensing or in the laboratory, is necessary to understand fully the chosen area of concentration in the major. A minimum of 3 credits of appropriate course work is required. Possibilities include the following:
     - Courses in the Hawaii Environmental Semester Program
     - Courses given by the Shoal’s Marine Laboratory
     - EAS 2500 Meteorological Observations and Instruments
     - EAS 4170 Field Mapping in Argentina
     - EAS 4570 Geophysical Field Methods

**Science of Earth Systems Honors Program**

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section “Engineering Majors” as well as the requirements of an honors thesis involving research (EAS 4910–4920 or 4990, 2 or more credits each) of breadth, depth, and quality. A written proposal of the honors project must be accepted by the student’s advisor and the director of undergraduate studies early in the first semester of the student’s senior year.

**Field Study in Hawaii**

Field study is a fundamental aspect of Earth system science. Students wishing to increase their field experience may fulfill some of the requirements for the Science of Earth Systems major by off-campus study through the Cornell Earth and Environmental Semester program (EES). The EES program, offered during the spring semester, emphasizes field-based education and research. It is based on the island of Hawaii, an outstanding natural laboratory for earth and environmental sciences. Courses that may be applied to the Science of Earth Systems major include EAS 3400, 3220, and 3510. The EES program also offers opportunities for internships with various academic, nonprofit, and government organizations. Typically, students participate in the EES program during their junior year, although exceptions are possible. For further information, see www.geo.cornell.edu/geology/classes/hawaii/course.html.

**Engineering Minors**

Students may pursue minors in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the students’ major. Completed minors will appear on the student’s transcript. Not all departments offer minors. Consult the appropriate section in Courses of Study or contact the appropriate department for information on minors offered and how to pursue a minor.

An engineering minor recognizes formal study of a particular subject area in engineering normally outside the major. Students undertaking a minor are expected to complete the requirements during the time of their continuous undergraduate enrollment at Cornell. Completing the requirements for an engineering minor (along with a major) may require more than the traditional eight semesters at Cornell. However, courses that fulfill minor requirements may also satisfy

other degree requirements (e.g., distribution courses, advisor-approved, or major-approved electives), and completion within eight semesters is possible.

An engineering minor requires:
- successful completion of all requirements for an undergraduate degree.
- enrollment in a major that approves participation in the minor.
- satisfactory completion of six courses (at least 18 credits) in a college-approved minor.

Students may apply for certification of a minor at any time after the required course work has been completed in accordance with published standards. An official notation of certification of a minor appears on the Cornell transcript following graduation.

The College of Engineering offers minors in the following areas (offering units are indicated in parentheses):

- Aerospace Engineering (MAE)
- Applied Mathematics (TAM)
- Biological Engineering (BEE)
- Biomedical Engineering (BME)
- Civil Infrastructure (CEE)
- Computer Science (CS)
- Electrical and Computer Engineering (ECE)
- Engineering Management (CEE)
- Engineering Statistics (ORIE)
- Environmental Engineering (BEE/CEE)
- Science of Earth Systems (EAS)
- Game Design (CS)
- Industrial Systems and Information Technology (ORIE)
- Information Science (INFO)
- Materials Science and Engineering (MSE)
- Mechanical Engineering (MAE)
- Operations Research and Management Science (ORIE)

Additional information on specific minors can be found below, in the Engineering Undergraduate Handbook, in the undergraduate major office of the department or school offering the minor, and in Engineering Advising.

MINOR: AEROSPACE ENGINEERING

Offered by: Sibley School of Mechanical and Aerospace Engineering Contact: 108 Upson Hall, 255-3573, www.mae.cornell.edu

Students intending to earn this minor should seek advice and pre-approval of their minor academic program from the associate director for undergraduate affairs in Mechanical Engineering before taking courses toward the minor.

The aerospace engineering minor develops the engineering analysis and design skills necessary for creating and understanding aerospace vehicles and their subsystems. The minor includes diverse topics relevant to applications both in the earth’s atmosphere (e.g., aerodynamics) and in space (e.g., spacecraft thermal systems or orbital mechanics). Students in this minor will take at least four core aerospace courses, along with up to two supporting courses in engineering fundamentals or courses with applicability to aeronautics and spacecraft.

**Academic Standards:** A grade of at least C– in each course. If a course is offered only S–U, a grade of S is acceptable.

**Requirements:**

Six courses from the lists below, each worth at least 3 credits, must be completed. No substitutions will be accepted from other departments at Cornell or elsewhere.

**Rules for selecting courses:**

1. **Rules for ME majors:**
   - a. Select at least four courses from group A, of which you must choose MAE 3050 or MAE 3060 (or both).
   - b. Select at most two courses from group B. No courses from group C may be used.
   - c. Use at most four courses to satisfy both the Aerospace Minor requirements and the BSME degree requirements. The major-approved electives I and II may not be among these overlapped courses.

2. **Rules for other majors:**
   - a. Select at least four courses from group A, of which you must choose MAE 3050 or MAE 3060 (or both).
   - b. Select at most two courses from group B. No courses from group C may be used.
   - c. Do not use any courses to satisfy requirements of both the Mechanical Engineering Minor and the Aerospace Engineering Minor.

**Group A: Core Aerospace Engineering**

- MAE 3050 Intro to Aeronautics
- MAE 3060 Spacecraft Engineering
- MAE/ECE 4150 GPS: Theory and Design
- **MAE 4291 Supervised Senior Design Project, with Aerospace Focus or MAE 4900 Individual and Group Projects in Mechanical Engineering, with Aerospace Focus**
- MAE 4230/5230 Intermediate Fluid Dynamics
- MAE 5060 Aerospace Propulsion Systems
- MAE 5070 Dynamics of Flight Vehicles
- **MAE 4291 and 4900 require a form signed by the student’s advisor.**

Requirement:

- a. At most one course from any one of the groups 1, 2, 3, or 4.

**Group B: Courses Applicable to Aerospace Engineering**

- MAE 4170/5170 Introduction to Robotics: Dynamics, Control, Design
- MAE 4650/CHE 5550/TAM 4550 Introduction to Composite Materials
- MAE 4700/5700 Finite Element Analysis for Mechanical and Aerospace Design or CEE 4720 Introduction to the Finite Element Method
- MAE 4770/5770 Engineering Vibrations
- MAE 4780/5780/CHEM 4720/EC 4720 Feedback Control Systems
- MAE 5430 Combustion Processes
- MAE 5710 Applied Dynamics or TAM 5700 Intermediate Dynamics

MINOR: APPLIED MATHEMATICS

Offered jointly by the Sibley School of Mechanical and Aerospace Engineering and Department of Mathematics

Contact: Richard Rand, 207 Kimball Hall, 255-7145, rhr2@cornell.edu, www.mae.cornell.edu/index.cfm/page/undergrad/aam.htm

All Engineering undergraduates affiliated with an Engineering major are eligible to participate in the Applied Mathematics minor.

**Academic standards:** At least C in each course in the minor.

**Requirements**

At least six (6) courses beyond MATH 2940, to be chosen as follows:

- a. At most one course from any one of the groups 1, 2, 3, or 4.

- b. At least three courses must be chosen from groups 5 and 6.

- c. At most one 2000-level course may be chosen.

- d. At most one course may be chosen that is offered by the student’s major department.

1. **Analysis**

   - AEP 3210 Mathematical Physics I
   - MATH 3230 Introduction to Differential Equations
   - MATH 4200 Differential Equations and Dynamical Systems
   - TAM 3100 Introduction to Applied Mathematics I

2. **Computational Methods**

   - CS 4210 Numerical Analysis and Differential Equations
   - ENGRD 3200 Introduction to Scientific Computation
   - ORIE 3500 Optimization I

3. **Probability and Statistics**

   - CEE 3040 Uncertainty Analysis in Engineering
   - ECE 3100 Introduction to Probability and Inference for Random Signals and Systems
   - ENGRD 2700 Basic Engineering Probability and Statistics
   - MATH 4710 Basic Probability
   - ORIE 3500 Engineering Probability and Statistics II

4. **Applications**

   - AEP 3330 Mechanics of Particles and Solid Bodies
   - CEE 3310 Fluid Mechanics
MINOR: BIOLOGICAL ENGINEERING
Offered by the Department of Biological and Environmental Engineering

Contact: 207 Riley-Robb Hall, 255-2173, www.bee.cornell.edu

Biological engineering is the application of engineering to living systems. Examples of engineering efforts in this field include the development of new biosensor technologies, study and control of biologically based matter transformation systems, and development of engineered devices to study and regulate fundamental biological processes. The biological engineering minor is an opportunity for students to further their understanding of living systems and to increase their knowledge of the basic transport processes that occur within these systems. Courses in the minor provide opportunities to analyze and manipulate living systems at the molecular, cellular, and system levels.

Academic standards: At least C– in each course in the minor and a GPA ≥ 2.0 in all courses in the minor.

Requirements:
At least six courses (≥ 18 credits), with at least three courses and 9 credits taught in BEE as follows:

I. Biology Foundation
(least one but no more than two courses)
- BIOMG 3300 or 3310–3320 Biochemistry
- BIOMI 2900 Microbiology
- BION 2220 Neurobiology

II. Biological Engineering Core
(least one but no more than two courses)
- BEE 2600 Principles of Biological Engineering
- BEE 3500 Biological and Environmental Transport Processes
- BEE 3600 Molecular and Cellular Bioengineering
- BEE 3310 Bio-fluid Mechanics

III. Biological Engineering Concentration Electives
(minimum of 3 courses)
Choose any three courses from the concentration lists below. Courses appearing in more than one concentration do not double count. BEE 3600 may be taken as either a concentration elective or a core course.

Biomedical Engineering Concentration
- AEP 4700 Biophysical Methods (also BION 4700)
- BEE 3600 Molecular and Cellular Bioengineering (also BME 3600)
- BEE 3650 Properties of Biological Materials
- BEE 4500 Bioinstrumentation
- BEE 4530 Computer-Aided Engineering: Applications to Biomedical Processes

MINOR: BIOMEDICAL ENGINEERING
Offered by the Department of Biomedical Engineering (BME)

Contact: Carol Casler, 120 Olin Hall, 255-1489, www.bme.cornell.edu/academics/
undergraduate/biomedminor.cfm

All undergraduates are eligible to participate in this minor, but they may participate in only one of the biological engineering and the biomedical engineering minors.

Educational Objectives: Biomedical engineering is the application of engineering
principles and methods to a wide array of problems associated with human health. The discipline includes the design of biocompatible materials, prostheses, surgical implants, artificial organs, controlled drug-delivery systems, and wound closure devices. Diagnosing diseases and determining their biological origins depend upon increasingly sophisticated instrumentation and the use of mathematical models. This minor allows students to gain exposure to the breadth and depth of biomedical engineering offerings at Cornell, to prepare for advanced studies in biomedical engineering, and to obtain transcript recognition for their interest and capability in this rapidly growing area.

Students are asked to join the bmeundergrads-L@cornell.edu list serve to receive biomedical information updates. Consult the web site listed above for instructions.

**Academic standards:** At least C– in each course in the minor. A cumulative GPA ≥ 2.0 for all courses in the minor.

**Requirements**

The 1-credit bioengineering seminar as well as at least six courses (≥ 18 credits) from the five categories listed below; two course groups need to be in categories 1. Introductory biology and/or 2. Advanced biology with no more than one course from category 1. Four courses must come from the following categories: 3. Molecular and cellular biological engineering. 4. Biomedical engineering analysis of physiological systems, and 5. Biomedical engineering applications with courses from at least two of these categories. At least four of the six courses must not be specifically required major degree courses or cross-listings.

**Required course:** BEE/BME 5010 Bioengineering Seminar (1 credit, 1 semester)

**Category 1. Introductory biology (maximum of 4 credits; 5–8 credits count as one course toward this category of the BME minor)**

A score of 5 on (CEEB) Advanced Placement Biology
ENGRI 1310 Introduction to Biomedical Engineering
BIOG/BIOMG 1350 Principles of Cell and Developmental Biology
BIOG/BIOMG 1440 Introduction to Comparative Physiology
BIOG 1105 and 1106 Introductory Biology
BIOG 1107 and 1108 General Biology
BIOG 1140 Foundations of Biology
Pre-med introductory biology requirements as outlined by the Health Careers Program Advisory Board of Cornell University

**Category 2. Advanced biology**

BIOAP 3110/VTBMS 3460 Introductory Animal Physiology Lectures
BIOG/BIOMG 3300 Principles of Biochemistry, Individualized Instruction
BIOMG 3310 Principles of Biochemistry, Proteins and Metabolism
BIOMG 3520 Principles of Biochemistry, Molecular Biology
BIOMG 5530 Principles of Biochemistry, Proteins, Metabolism, and Molecular Biology

**Category 3. Molecular and cellular biomedical engineering**
AEP 2520/ENGRD 2520 The Physics of Life
BEE 3600/BME 3600 Molecular and Cellular Bioengineering
BME 3010/CHEME 4010* Molecular Principles of Biomedical Engineering
BME 3020/CHEME 4020* Cellular Principles of Biomedical Engineering

**Category 4. BME analysis of physiological systems**

BIONB 3300/BME 3300/COGST 3300/PSYCH 3300 Introduction to Computational Neuroscience
BIONB 4190/BME 4910 Principles of Neurophysiology
BME 4010/MAE 4600* Biomedical Engineering of Metabolic and Structural Systems
BME 4020* Electrical and Chemical Physiology
CHEME 4810/BME 4810 Biomedical Engineering
MAE 4640/BME 4640 Orthopaedic Tissue Mechanics

**Category 5. Biomedical engineering applications**

AEP 4700/BIONB 4700/BME 5700 Biophysical Methods
BEE 3650 Properties of Biological Materials
BEE 4500 Bioinstrumentation
BEE 4530/MAE 4530 Computer-Aided Engineering: Applications to Biomedical Processes
BEE 5400 Biomedical Computation
BEE 4590 Biosensors and Bioanalytical Techniques
BEE 5830 Cell-Biomaterials Interactions
BME 4110 Science and Technology Approaches to Problems in Human Health
BME 5600 Biotransport and Drug Delivery
BME 5810/MAE 5680 Soft Tissue Biomechanics
CS 3510/BIOMG 3510/ENGRD 3510 Numerical Methods in Computational Molecular Biology
DEA 4520/BME 4520 Inside-Out Ergonomics II
ECE 4980/BME 4980 Special Topic: Introduction to Systems and Synthetic Biology
ECE 5020/BME 5020 Biomedical System Design
ECE 5780/BME 5780 Computer Analysis of Biomedical Images
MSE 4610 Biological Materials and Their Applications
MSE 5620/BME 5620 Biomineralization: The Formation and Properties of Inorganic Biomaterials
FSAD 4390/BME 5390 Biomedical Materials and Devices for Human Body Repair

*Students interested in professional practice as biomedical engineers should consider an M.Eng. degree in BME. The recommended sequence for admission is as follows: two courses from categories 1 and 2, BME 3010, 3020, 4010, and 4020. The program requires students to have a knowledge of molecular and cellular biomedical engineering, and of biomedical engineering analysis of physiological systems.

**MINOR: CIVIL INFRASTRUCTURE**

Offered by the School of Civil and Environmental Engineering

**Contact:** 221 Hollister Hall, 255-3412, www.cee.cornell.edu

Students affiliated with all majors except civil engineering may participate in this minor. The minor in civil infrastructure is intended to introduce undergraduates to the engineering methodologies of mechanics, materials, analysis, design, and construction and to show how these are used in solving problems in the development, maintenance, and operation of the built environment that is vital for any modern economy.

**Academic standards:** At least C in each course in the minor

**Requirements**

At least six courses (≥ 18 credits), chosen as follows:
1. Required course: ENGRD 2020 Mechanics of Solids
2. Additional courses: choose any five (groupings are for information only)*

**Geotechnical engineering**

CEE 3410 Introduction to Geotechnical Engineering
CEE 4400 Foundation Engineering
CEE 4410 Retaining Structures and Slopes
CEE 4440 Environmental Site and Remediation Engineering

**Structural engineering**

CEE 3710 Structural Modeling and Behavior
CEE 3720 Intermediate Solid Mechanics
CEE 4710 Fundamentals of Structural Mechanics
CEE 4720 Introduction to the Finite Element Method
CEE 4730 Design of Concrete Structures
CEE 4740 Introduction to the Behavior of Metal Structures
CEE 4780 Structural Dynamics and Earthquake Engineering

**Other related courses**

CEE 5950 Construction Planning and Operations

*Other CEE courses may be approved by petition in advance
MINOR: COMPUTER SCIENCE
Offered by the Department of Computer Science
Contact: 303 Upson Hall, 255-0982, www.cs.cornell.edu/ugrad
Students affiliated with all majors except
Computer Science are eligible to participate in
this minor. This minor is for students who
anticipate that computer science will play a
prominent role in their academic and
professional career.
Academic standards: At least C in each
course in the minor.
Requirements
At least six courses (18 credits) chosen as
follows:
1. Required courses:
   CS/ENGRD 2110 Computers and
   Programming
   One of the following:
   CS 3410 Computer System Organization
   and Programming, or
   CS 3420/ECE 3410 Computer Organization
2. Additional courses:
   Four CS courses numbered 3000 or higher
   with the following exceptions:
   CS 4999 and seminars are excluded
   CS 2800 is allowed
Cross-listed courses cannot be applied to the
minor unless taken under the CS rubric, with
the sole exception of ECE 3140 and CS
courses also listed as ENGRD. All qualifying
courses must be taken at Cornell for a letter
grade. No substitutions allowed.

MINOR: ELECTRICAL AND COMPUTER
ENGINEERING
Offered by the School of Electrical and
Computer Engineering
cornell.edu
Students affiliated with all majors except
Electrical and Computer Engineering are
eligible to participate in this minor.
This minor offers the opportunity to study
analog and digital circuits, signals and
systems, and electromagnetics and to
concentrate at higher levels in one of several
different areas such as circuit design,
electronic devices, communications, computer
engineering, networks, and space engineering.
Academic standards: At least C– in each
course in the minor. GPA ≥ 2.3 for all courses
in the minor.
Requirements
At least six courses (18 credits), chosen as
follows:
1. Two of the following:
   ECE 2100 Introduction to Circuits for
   Electrical and Computer Engineers
   ECE 2200 Signals and Information
   ECE/ENGRD 2300 Introduction to Digital
   Logic Design
2. Two of the following:
   ECE 3050 Electromagnetic Fields and
   Waves
   ECE/ENGRD 3100 Introduction to
   Probability and Random Signals
   ECE 3410/CS 3420 Computer Organization
   or CS 3410 Systems Programming
   ECE 3150 Introduction to Microelectronics
3. One other non-project ECE course at the
   3000 level or above (3-credit minimum)
4. One other non-project ECE course at the
   4000 level or above (3-credit minimum)

MINOR: ENGINEERING MANAGEMENT
Offered by the School of Civil and
Environmental Engineering
cee.cornell.edu
Students affiliated with all majors except
CEE students may not use courses simultaneously to satisfy a
requirement for the minor and as a major;
approved elective or design elective. CEE
students have some specific restrictions and
requirements as noted below. Students
pursuing the Independent Major should obtain
approval from CEE for their proposed minor
courses, as they relate to approved primary-
and secondary-area programs.
This minor focuses on giving students a basic
understanding of engineering economics,
accounting, statistics, project management
methods, and analysis tools necessary to
manage technical operations and projects
effectively. The minor provides an important
set of collateral skills for students in any
engineering discipline.
Academic standards: At least C in each
course in the minor.
Requirements
At least six courses (18 credits), chosen as
follows:
1. Required courses (3):
   CEE 3250 Engineering Economics and
   Management
   or ORIE 4150 Economic Analysis of
   Engineering Systems
   ORIE 3510 Financial and Managerial
   Accounting¹
   CEE 3040 Uncertainty Analysis in
   Engineering²
   or ENGRD 2700 Basic Engineering
   Probability and Statistics
   or ECE 3100 Introduction to Probability
   and Random Signals
2. Additional courses—choose any three³
   CEE 4060 Civil Infrastructure Systems
   CEE 4920 Engineers for a Sustainable
   World: Engineering in International
   Development
   CEE 5930 Engineering Management
   Methods¹
   CEE 5950 Construction Planning and
   Operations
   CEE 5970 Risk Analysis and Management

MINOR: ENGINEERING STATISTICS
Offered by the School of Operations Research
and Information Engineering
cornell.edu
Students affiliated with all majors except
Operations Research and Engineering are
eligible to participate in this minor.
The goal of the minor is to provide the
student with a firm understanding of statistical
principles and engineering applications and
the ability to apply this knowledge in real-
world situations.
Academic standards: At least C in each
course in the minor. GPA ≥ 2.0 for all courses
in the minor.
Requirements
At least six courses (18 credits), chosen as
follows:
1. Required courses:
   ENGRD 2700 Basic Engineering
   Probability and Statistics
   ORIE 3500 Basic Engineering Probability
   and Statistics II or ECE 3100 Introduction
   to Probability and Random Signals
2. Four of these (≥ 11 credits)*:
   ORIE 3510 Introductory Engineering
   Stochastic Processes I or ECE 4110
   Random Signals in Communications/Signal
   Processing
   ORIE 4980 Simulation Modeling and
   Analysis
   ORIE 4710 Applied Linear Statistical
   Models
   ORIE 4711 Experimental Design
   ORIE 4712 Regression
   ORIE 5530 Applied Time Series Analysis
   ORIE 5770 Quality Control
   MATH 4720 Basic Probability or BTRY
   4090 Theory of Statistics
   BTRY 6020 Statistical Methods II
   BTRY 6030 Statistical Methods III or ILRST
   4110 Statistical Analysis of Qualitative
   Data
   ILRST 3100 Statistical Sampling
   ILRST 4100 Techniques of Multivariate
   Analysis
*Other course options approved by petition in
advance. Some of these courses require others
as prerequisites. All these courses are cross-
listed under the Department of Statistical
Science.
MINOR: ENVIRONMENTAL ENGINEERING

Offered jointly by the Department of Biological and Environmental Engineering and the School of Civil and Environmental Engineering.

Students affiliated with all majors except environmental engineering are eligible to participate in this minor. Civil engineering majors may not use courses simultaneously to satisfy a requirement for the minor and as a major-approved elective or design elective.

A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be trustees and managers of our nation’s resources, the air in our cities, and water in our aquifers, streams, estuaries, and coastal areas. This minor encourages engineering students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues.

**Academic standards:** At least C– in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

**Requirements**

At least six courses (≥ 18 credits), chosen from the following groups, with at least one course from each group.

**Group A. Environmental engineering processes:**

- BEE/ENGRD 2510 Engineering for a Sustainable Society
- CEE 3510 Environmental Quality Engineering
- CEE 4510 Microbiology for Environmental Engineering
- CEE 4520 Water Supply Engineering
- CEE 4530 Laboratory Research in Environmental Engineering
- CEE 4540 Sustainable Municipal Drinking Water Treatment
- CEE 4550 AguaClara: Sustainable Water Supply Project
- BEE 4760 Solid Waste Engineering
- CEE 4440 Environmental Site and Remediation Engineering
- BEE/EAS 4800 Our Changing Atmosphere: Global Change and Atmospheric Chemistry
- CEE 4920 Engineers for a Sustainable World
- CEE 6530 Water Chemistry for Environmental Engineering
- CEE 6560 Physical/Chemical Process
- CEE 6570 Biological Processes
- CEE 6580 Biodegradation and Biocatalysis

**Group B. Environmental systems**

- ENGR/CEE 1130* Sustainable Design for Appledore Island (*may count only if taken before the junior year)

**ENGRI/CEE 1131* Water Treatment Design**

(*may count only if taken before the junior year)

- BEE 4750 Environmental Systems Analysis
- CEE 5970 Risk Analysis and Management
- CEE 6230 Environmental Quality Systems Engineering
- CEE 4650/6650 Transportation Energy and Environmental Systems for Sustainable Development

**Group C. Hydraulics, hydrology, and environmental fluid mechanics**

- CEE 3310 Fluid Mechanics (CHEM 3230 or MAE 3230 may be substituted for CEE 3510)
- CEE 3320 Hydraulic Engineering
- BEE 3710 Physical Hydrology for Ecosystems
- BEE/EAS 4710 Introduction to Groundwater
- CEE 4320 Hydrology
- CEE 4360 Case Studies in Environmental Fluid Mechanics
- CEE 4370 Experimental Methods in Fluid Dynamics
- BEE 4730 Watershed Engineering
- BEE 4740 Water and Landscape Engineering Applications
- CEE 6310 Computational Simulation of Transport in the Environment
- CEE 6330 Flow in Porous Media and Groundwater
- CEE 6550 Transport, Mixing, and Transformation in the Environment
- BEE 6720 Drainage

**MINOR: GAME DESIGN**

Offered by the Department of Computer Science

See: gdiac.cis.cornell.edu/courses.php

**Requirements:**

At least six (6) courses (18-credit minimum) chosen as follows:

Required courses: Complete the following two courses:

- CIS 3000 Introduction to Computer Game Design
- CIS 4002 Advanced Projects in Computer Game Design

Additional Courses: Choose four of the following 12 courses:

- CS-focused courses:
  - CS/ENGRD 2110 Object-Oriented Programming and Data Structures
  - CS 4450 Computer Networks
  - ARCH 3704/CS 4620 Introduction to Computer Graphics
  - CS 4700 Foundations of Artificial Intelligence
  - CS 5620 Interactive Computer Graphics
  - CS 5643 Physically Based Animation for Computer Graphics

Other courses:

- COMM 4220 Psychology of Entertainment Media
- ECE 4760 Designing with Microcontrollers
- COMM/INFO 3450 Human-Computer Interaction
- COMM/INFO 4400 Advanced Human-Computer Interaction Design

**Academic standards:** At least a letter grade of C is required for each course in the minor.

Note: CS majors cannot take courses from the CS-focused list for the Game Design minor.

**MINOR: INDUSTRIAL SYSTEMS AND INFORMATION TECHNOLOGY**

Offered by the School of Operations Research and Information Engineering

Contact: 203 Rhodes Hall, 255-5088, www.orie.cornell.edu

Students affiliated with all majors except Operations Research and Engineering Information Science, Systems, and Technology are eligible to participate in this minor.

The aim of this minor is to provide an in-depth education in issues central to the design and analysis of operational systems, and the tools from information technology that have become an integral part of the manufacturing, finance, service, and public health industries. Students will become familiar with the problems, perspectives, and methods found in these fields and be prepared to work with professionals in designing and managing them. That is, rather than providing a comprehensive view of the range of methodological foundations of operations research, this minor is designed to give the student a focused education in application areas closely associated with these techniques.

**Academic standards:** At least C– in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

**Requirements**

At least six courses (≥ 18 credits), chosen as follows:

1. Required courses:
   - ENGRD 2700 Basic Engineering Probability and Statistics
   - ORIE 3120 Industrial Data and Systems Analysis
   - ORIE 4800 Information Technology

2. The remaining courses chosen from:
   - ORIE 3150 Financial and Managerial Accounting
   - ORIE 3300 Optimization I
   - ORIE 4150 Economic Analysis of Engineering Systems
   - ORIE 4580 Simulation Modeling and Analysis
   - ORIE 4810 Delivering OR Solutions with Information Technology
MINOR: INFORMATION SCIENCE

Offered by the Department of Computer Science

Contact: Undergraduate Programs Office, 303 Upson Hall, 255-9837, www.infosci.cornell.edu

Students affiliated with any major except Information Science, Systems, and Technology are eligible to participate in this minor.

The interdisciplinary field of information science covers all aspects of digital information. The program has three main areas: information systems, human-centered systems, and social systems. Information systems studies the computer science problems of representing, storing, manipulating, and using digital information. Human-centered systems studies the relationship between humans and information, drawing from human-computer interaction and cognitive science. Social systems examines information in its economic, legal, political, cultural, and social contexts.

The minor has been designed to ensure that students have substantial grounding in all three areas in addition to having a working knowledge of basic probability and statistics necessary for analyzing real-world data.

Academic standards: At least C in all courses for the minor; S–U courses are not allowed. All courses must be taken at Cornell.

Requirements

Note: These requirements apply to students in the College of Engineering. Students who are not in the College of Engineering should refer to the IS minor requirements listed in the CIS section of this publication.

At least six courses (18 credits) chosen as follows:

- Statistics: one course (must be ENGRD 2700 or CE 3040)
- Information Systems: two courses
- Human-Centered Systems: one course
- Social Systems: one course
- Elective: one additional course from either Human-Centered Systems or Social Systems

Statistics

An introductory course that provides a working knowledge of basic probability and statistics and their application to analyzing real-world data.

- ENGRD 2700 Basic Engineering Probability and Statistics
- CEE 3040 Uncertainty Analysis in Engineering

Information Systems

- CS 2110 Object-Oriented Programming and Data Structures*
- INFO 2300 Intermediate Design and Programming for the Web*
- CIS 3000 Introduction to Computer Game Design
- INFO 3500 Data-Driven Web Applications
- LING 4424 Computational Linguistics
- INFO 4500 Information Retrieval
- INFO 4502 Web Information Systems
- INFO 4507 Learning from Web Data
- CS 4320 Introduction to Database Systems
- INFO 4520 Introduction to Rapid Prototyping and Physical Computing†
- CS 4620 Introduction to Computer Graphics
- CS 4700 Foundations of Artificial Intelligence
- LING 4474 Introduction to Natural Language Processing
- ORIE 4740 Statistical Data Mining I
- CS 4780 Machine Learning
- ORIE 4800 Information Technology
- ORIE 4810 Delivering OR Solutions with Information Technology
- ORIE 4850 Applications of Operations Research and Game Theory to Information Technology
- CS 5150 Software Engineering
- CS 5430 System Security
- INFO 5300 Architecture of Large-Scale Information Systems
- ECE 5620 Fundamental Information Systems
- CS 5780 Empirical Methods in Machine Learning and Data Mining

*Computer Science majors may not use INFO 2300, CS 2110 cannot be used by majors for which it is a required course: e.g., Computer Science (CS) and Operations Research and Information Engineering (ORIE).
†INFO 4320 may count toward the minor as Information Systems or Human-Centered Systems but not both.

Human-centered systems

- COGST 1101 Introduction to Cognitive Science
- PSYCH 2050 Perception
- INFO 2140 Cognitive Psychology
- INFO 2450 Communication and Technology
- PSYCH 2800 Introduction to Social Psychology
- INFO 3400 Psychology of Online Relationships
- PSYCH 3420 Human Perception: Applications to Computer Graphics, Art, and Visual Display
- INFO 3450 Human–Computer Interaction Design
- INFO 3460 Online Communities
- PSYCH 3470 Psychology of Visual Communications
- INFO 3650 Technology and Collaboration
- PSYCH 3800 Social Cognition
- PSYCH 4160 Modeling Perception and Cognition
- INFO 4320 Introduction to Rapid Prototyping and Physical Computing*
- INFO 4400 Advanced Human-Computer Interaction Design
- INFO 4450 Computer-Mediated Communication
- INFO 4500 Language and Technology
- DEA 4700 Applied Ergonomic Methods

*INFO 4320 may count toward the minor as Information Systems or Human-Centered Systems but not both.

Social systems

- INFO 2040 Networks
- STS 2501 Technology in Society
- INFO 2921 Inventing an Information Society
- ECON 3010 Microeconomics
- SOC 3040 Social Networks and Social Processes
- ECON 3130 Intermediate Microeconomic Theory*
- INFO 3200 New Media and Society
- AEM 3220 Internet Strategy
- INFO 3490 Media Technologies
- INFO 3561 Computing Cultures
- INFO 3660 History and Theory of Digital Art
- ECON 3680 Game Theory*
- STS 4111 Knowledge, Technology, and Property
- COMM 4280 Communication Law
- INFO 4290 Copyright in the Digital Age
- ORIE 4350 Introduction to Game Theory*
- INFO 4144 Responsive Environments
- SOC 4340 Online Social and Information Networks
- INFO 4470 Social and Economic Data
- COMM 4650 Mobile Communication in Public Life
- ECON 4760 Decision Theory I
- ECON 4770 Decision Theory II
- HADM 4489 The Law of the Internet and E-Commerce
- INFO 5150 Culture, Law, and Politics of the Internet

Only one of ECON 3010 and 3130 may be taken for IS credit. Only one of ORIE 4350 and ECON 2680 may be taken for IS credit.
Materials properties are the foundation of many engineering disciplines including mechanical, civil, chemical, and electrical engineering. This minor provides students with a fundamental understanding of mechanisms that determine the ultimate performance, properties, and processing characteristics of modern materials.

**Academic standards:** At least C– in each course in the minor.

**Requirements**

At least six courses (≥ 18 credits), chosen as follows:

1. ENGRD 2610 Mechanical Properties of Materials: From Nanodevices to Superstructures, or ENGRD 2620 Electronic Materials for the Information Age
2. Two of:
   - MSE 2060 Atomic and Molecular Structure of Matter
   - MSE 3010 Materials Chemistry
   - MSE 3030 Thermodynamics of Condensed Systems
   - MSE 3040 Kinetics, Diffusion, and Phase Transformations
   - MSE 3050 Electronic, Magnetic, and Dielectric Properties of Materials
   - MSE 4020 Mechanical Properties of Materials, Processing, and Design
3. Three electives chosen from:
   - Any MSE course at the 3000 level or above OR selected courses in materials properties and processing (at the 3000 level or above) from AEP CHEME CEE ECE MAE PHYS, and CHEM, as approved by the MSE undergraduate major coordinator.

**MINOR: MECHANICAL ENGINEERING**

Offered by the Sibley School of Mechanical and Aerospace Engineering

Contact: 108 Upson Hall, 255-3573, www.mae.cornell.edu

Students affiliated with all majors except MAE are eligible to participate in this minor. Students intending to earn this minor should seek advice and pre-approval of their minor academic program from the associate director for undergraduate affairs in mechanical engineering before taking courses toward the minor.

**Academic standards:** At least C– in each course in the minor.

**Requirements**

At least six courses (≥ 18 credits) from among the following: MAE courses at the 2000 level or above; ENGRD 2020 or ENGRD 2030. No substitutions will be accepted from other departments at Cornell or elsewhere. Transfer credit may not be used to satisfy the MAE minor. MAE 1110 Naval Ship Systems, or MAE 4980 Teaching Experience in Mechanical Engineering, may not be used toward satisfying the M.E. minor.

**MINOR: OPERATIONS RESEARCH AND MANAGEMENT SCIENCE**

Offered by the School of Operations Research and Information Engineering

Contact: 203 Rhodes Hall, 255-5088, www.orie.cornell.edu

Students affiliated with all majors except Operations Research and Engineering and Information Science, Systems, and Technology are eligible to participate in this minor.

Operations research and management science supports decision making through modeling and analysis of complex systems. This understanding is used to predict system behavior and improve system performance. This minor gives the student the opportunity to obtain a wide exposure to the core methodological tools of operations research and management science, including mathematical programming, stochastic and statistical models, and simulation. The intent of this minor is to provide a broad knowledge of the fundamentals, rather than to train the student in a particular application domain. With this preparation, students can adjust their advanced courses and pursue either methodological or application-oriented areas most relevant to their educational goals.

**Academic standards:** At least C– in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

**Requirements**

At least six courses (≥ 18 credits), chosen as follows:

1. At least three of these courses:
   - ENGRD 2700 Basic Engineering Probability and Statistics
   - ORIE 3300 Optimization I
   - ORIE 3310 Optimization II
   - ORIE 3500 Engineering Probability and Statistics II
   - ORIE 3510 Introduction to Engineering Stochastic Processes I
   - ORIE 4580 Simulation Modeling and Analysis
2. Any ORIE courses at the 3000 level or above OR selected courses in materials properties and processing (at the 3000 level or above) from AEP CHEME CEE ECE MAE PHYS, and CHEM, as approved by the MSE undergraduate major coordinator.

**MINOR: SCIENCE OF EARTH SYSTEMS**

Offered by the Department of Earth and Atmospheric Sciences

Contact: 2124 Snee Hall, 255-5466, www.eas.cornell.edu

Students affiliated with all majors except science of earth systems are eligible to participate. Some of the major problems facing mankind in this century involve earth science, especially the generation of new energy sources for a growing world population, and engineers will be challenged to solve these problems. This minor will prepare engineering students to understand the natural operating systems of Earth and the tools and techniques used by earth scientists to understand and monitor these solid and fluid systems.

**Academic standards:** At least C– in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

**Requirements**

Two options:

1. At least six courses (≥ 18 credits), chosen as follows:
   - a. EAS 2200 The Earth System
   - b. At least two of these courses:
     - EAS 3010 Evolution of the Earth System
     - EAS 3030 Introduction to Biogeochemistry
     - EAS 3040 Interior of the Earth
     - EAS 3050 Climate Dynamics
   - c. Additional EAS courses at the 3000 level or higher to make up the balance of 18 credits. These may include, e.g., additional courses from the above lists, undergraduate research courses, and outdoor field courses.

2. EAS 2200 The Earth System, participation in the EES Semester in Hawaii, and one additional EAS course at the 3000 level or higher.

**MINOR: SUSTAINABLE ENERGY SYSTEMS**

Offered collaboratively by Biological and Environmental Engineering, Chemical and Biomolecular Engineering, Earth and Atmospheric Sciences, and Mechanical and Aerospace Engineering

Contacts: Curricular topics: Jeff Tester, director, Cornell Energy Institute, 200 Rice Hall, 254-7211; Administrative or registrar topics: Carol Casler, undergraduate programs office of the School of Chemical and Biomolecular Engineering, 255-8656.

Individual faculty members in most units in the College of Engineering are involved in research and education intended to move society toward more sustainable solutions to our energy needs and are sources of guidance to students interested in the Energy minor. Many of these faculty members are noted in the directory of energy studies in the College of Engineering: www.geo.cornell.edu/eas/energy. The minor is open to all undergraduate students.
Providing affordable energy to meet the demands of both developed and developing nations without further damaging the natural environment and the Earth’s climate system is a grand challenge for the 21st century. Our quality of life and the stability of nations ultimately depend on having accessible energy resources and an equitable and sustainable energy supply and distribution system. Achievement of these goals requires the participation, ingenuity, and hard work of people with a range of specialized backgrounds, working collaboratively. The minor is intended to emphasize the importance of viewing the challenge of meeting the world’s energy needs as a system of interacting themes. The requirements of the minor are designed to provide breadth across a range of energy resource types and conversion, transmission and storage technologies along with coverage of the environmental, economic, political, and social consequences of various options.

Academic standards: At least C– in each course or, for S–U only courses, S.

Requirements
• Six courses and a minimum of 18 credits; at least 3 credits in each category
• At least one course from each of four breadth categories
• At least two courses in category 2: Energy Sources and Technologies for a Transition to Sustainability
• At most two courses may be specific (named) requirements in the student’s major

Four Breadth Categories:
1. Energy Systems Analysis
2. Energy Sources and Technologies for a Transition to Sustainability
3. Natural Systems Impacted by Energy Production and Use

Courses satisfying each of the breadth categories
1. Energy systems analysis
   BEE 4010 Renewable Energy Systems
   BEE 4870 Sustainable Bioenergy Systems
   CHEM 6660 Analysis of Sustainable Energy Systems
   MAE 5010 Future Energy Systems

2. Energy sources and technologies for a transition to sustainability
   Fossil and nuclear energy
   EAS 4010 Fundamentals of Earth and Minerals Resources
   CHEM 5204/5207 Turbomachinery Applications/Hydrocarbon Resources and Petroleum Refining (series of three 1–2-credit hour courses)
   TAM 4130 Intro to Nuclear Science and Engineering (also AEP/CHEM/ECE/MAE/NSE 4130)
   MAE 4590 Nuclear Fusion (also NSE 4840)
   ECE 4840 Intro to Controlled Fusion
   EAS 4570 Geophysical Field Methods
   EAS 4540 Exploration Geophysics

   Renewable energy
   BEE 4900 Biofuels: The Economic and Environmental Interactions
   CEE 6200 Water-Resources Systems Engineering
   MAE 4020 Wind Power

   Energy conversion, distribution, and storage
   ORIE 5142 Systems Analysis Architecture, Behavior, and Optimization
   MAE 5430 Combustion Processes
   MAE 4490 Combustion Engines and Fuel Cells
   ORIE 5140 Applied Systems Engineering
   MSE 4330 Materials for Energy Production, Storage and Conversion
   ECE 4510 Electric Power Systems I
   ECE 4520 Electric Power Systems II

3. Natural systems impacted by energy production and use
   BEE 3710 Physical Hydrology for Ecosystems
   BEE/EAS 4880 Our Changing Atmosphere: Global Change and Atmospheric Chemistry
   BEE 6740 Hydrology
   BIOE/EAS 3500 Dynamics of Marine Ecosystems
   BIOE/NRES 4560 Stream Ecology
   CEE 4520 Hydrology
   CHEM 6610 Air Pollution Control
   EAS/NRES 4300 Introduction to Biogeochemistry
   EAS 4400 Seminar: Climate Science, Impacts, and Mitigation
   EAS 3050 Climate Dynamics
   EAS 3530 Physical Oceanography
   EAS 4570 Atmospheric Air Pollution
   MAE/EAS 6480 Air Quality and Atmospheric Chemistry
   NRES 4201 and 4220 Forest Ecology (lecture and lab separately numbered)

4. Policy/economics/business/history/ethics/risk analysis
   AEM 4510 Environmental Economics
   BSOE 2061 Ethics and the Environment
   BSOE 3181 Living in an Uncertain World: Science, Technology, and Risk
   CEE 5970 Risk Analysis and Management
   CHEM 6640 Energy Economics
   DSOE 3240 Environment and Society
   ENGRG 2500 Technology in Society
   ENGRG 3600 Ethical Issues in Engineering Practice
   MAE 4000 Components and Systems: Engineering in a Social Context
   NRES 3320 Introduction to Ethics and the Environment
   ORIE 4150 Economic Analysis of Engineering Systems

Consult the web site of the Cornell Energy Institute, www.cornell.edu/energyinstitute, for updates regarding requirements and acceptable courses.

MASTER OF ENGINEERING DEGREES

The following one-year (30-credit) professional master of engineering (M.Eng.) degrees are offered (giving also the administering unit)

M.Eng. (Aerospace Engineering):
mechanical and aerospace engineering

M.Eng. (Biological and Environmental Engineering):
biological and environmental engineering

M.Eng. (Biomedical Engineering):
biochemical engineering

M.Eng. (Chemical Engineering):
chemical and biomolecular engineering

M.Eng. (Civil and Environmental Engineering):
civil and environmental engineering

M.Eng. (Computer Science):
computer science

M.Eng. (Electrical and Computer Engineering):
electrical and computer engineering

M.Eng. (Engineering Management):
civil and environmental engineering

M.Eng. (Engineering Mechanics):
thoretical and applied mechanics

M.Eng. (Engineering Physics):
applied and engineering physics

M.Eng. (Geological Sciences):
earth and atmospheric sciences

M.Eng. (Materials Science and Engineering):
mater science and engineering

M.Eng. (Mechanical Engineering):
mechanical and aerospace engineering

M.Eng. (Operations Research and Information Engineering):
operations research and information engineering

M.Eng. (Systems Engineering):
systems engineering

Many Cornell baccalaureate engineering graduates spend a fifth year at Cornell, earning an M.Eng. degree, although the program is also open to qualified graduates of other schools.

Requirements for admission vary by program. In general, the standard M.Eng. application requirements include
• Statement of purpose
• Complete transcripts from each college or university attended
• At least two letters of recommendation
• Graduate Record Examination (GRE) scores—may not be required by all M.Eng. programs

Update requirements and updates regarding requirements and acceptable courses.
Many M.Eng. programs waive the GRE requirement and one of the letters of recommendation for students with Cornell Engineering B.S. degrees. Check with the appropriate office for specific program requirements. A list of links and general admission information is posted on http://meng.engineering.cornell.edu.

Superior Cornell students who will have between 1 and 8 credits remaining in their last undergraduate semester may petition for early admission to the M.Eng. program. They spend the last semester finishing up their B.S. degree and taking courses that count toward their M.Eng. degree.

**Master of Engineering Minors and Concentrations**

The following M.Eng. minors and concentrations are offered:

**Minors**
- bioengineering
- engineering management
- manufacturing
- systems engineering

**Concentrations**
- applied operations research
- astronautics
- bioinstrumentation/diagnostics
- biomedical materials and mechanics
- complex system development
- data mining and analytical marketing
- drug delivery and cellular/tissue engineering
- dynamics, controls and robotics
- energy and sustainable development
- energy economics and engineering
- engineering mathematics and modeling
- environmental and water resources systems engineering
- environmental fluid mechanics and hydrology
- environmental geophysics
- environmental processes
- financial engineering
- geohydrology
- geotechnical engineering
- information technology
- mechanics of materials
- micro and nanoscale engineering
- nanosystems
- semester in strategic operations
- structural engineering
- technology management for ECE
- thermal-fluidic sciences
- transportation systems engineering

For further information: http://meng.engineering.cornell.edu.

**Cooperative Program with the Johnson Graduate School of Management**

Undergraduates may be interested in a cooperative program at Cornell that leads to both master of engineering and master of business administration (M.B.A.) degrees. With appropriate curriculum planning, such a combined B.S./M.Eng./M.B.A. program can be completed in six years at Cornell, with time out for work experience. For undergraduates from other schools, it may be feasible to complete the M.Eng./M.B.A. program in two years, possibly with an intervening summer or time out for work experience if they do not already have it on coming to Cornell. This accelerated program often incorporates the 12-month M.B.A. program of the Johnson Graduate School of Management (JGSM). Because 95 percent of the students in the JGSM have work experience, there will typically be a gap for work experience between the M.Eng. and M.B.A. portions of the program for students who do not already have it when beginning the M.Eng. portion. For further details, visit Engineering Advising (167 Olin Hall), the RGS office (222 Carpenter Hall), the JGSM office in Sage Hall, or the office of your intended undergraduate major.

**Lester B. Knight Scholarship Program**

The Lester B. Knight Scholarship Program is designed to assist and encourage top students to pursue graduate studies in engineering and business at Cornell. Knight scholarships may provide as much as $40,000 of tuition support toward M.Eng. and M.B.A. degrees.

Participation in the program requires admission by each respective academic program (M.Eng. or M.B.A.) as well as an application to participate in the Knight Scholarship Program.

Refer to the Knight Scholarship Program web site (www.engineering.cornell.edu/student-services/igs/financial-aid/knightscholarship.cfm) for program specifics.

**MASTER OF ENGINEERING (AEROSPACE ENGINEERING)**

Offered by the Sibley School of Mechanical and Aerospace Engineering.

Contact: 107 Upson Hall, 255-5250, www.mae.cornell.edu

The M.Eng. (Aerospace Engineering) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include aerodynamics, turbulent flows, nonequilibrium flows, combustion, dynamics and control, computational fluid dynamics, and spacecraft.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty advisor. This program and any subsequent changes must also be approved by the Director of the Master of Engineering program. An individual student's curriculum includes a 4- to 8-credit design/research course, a minimum of 12 credits in aerospace engineering or a closely related field with some technical focus, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

Design projects must have an aerospace engineering design or research focus and have the close supervision of a faculty member. The projects may arise from individual faculty and student interests or from collaboration with industry.

All courses must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the approval of the director of the Master of Engineering program.

Students enrolled in the M.Eng. (Aerospace Engineering) degree program may take courses that also satisfy the requirements of the bioengineering, engineering management, or systems engineering minors.

**Master of Engineering (Biological and Environmental Engineering)**

Offered by the Department of Biological and Environmental Engineering.

Contact: 207 Riley-Robb Hall, 255-2173, www.bee.cornell.edu

**Educational Goals**

The master of engineering degree builds on the foundation of the engineering B.S. degree to prepare candidates for a professional career. The program integrates technical engineering with the biological and life sciences, enabling graduates to solve technical problems on a scale ranging from molecular to whole organism to ecosystem depending on their interests. Graduates assume positions in production companies, consulting firms, government and agencies, and in the public service sector. The degree may also be used as a pathway to advanced study in science and engineering or professional study in business, law, and medicine.

The program is flexible, allowing candidates to select their courses and project area to meet their individual goals. In addition to advanced courses in the Department of Biological and Environmental Engineering, students have access to courses in all fields and programs in the College of Engineering. The M.Eng. program is designed to foster a close student–faculty mentoring relationship. While many students view the M.Eng. as a “fifth and final year” of formal engineering study, it is definitely appropriate and feasible to pursue advanced graduate study following the M.Eng. program if this is desired.

**Curriculum Requirements**

A total of 30 credits* is required for the master of engineering degree, and the program is usually completed in two semesters. Cornell Engineering undergraduates may apply early and be accepted into the program in their last undergraduate semester if they have 8 or fewer credits remaining in their bachelor's program. All M.Eng. students must complete the following:
• BEE 5951–5952 Master of Engineering Design Project, 3 to 9 credits
• Biological and Environmental Engineering focus courses, 9 credits minimum
• A total of 30 credits* approved by their M.Eng. faculty advisor
Students choose their design project and complete appropriate courses in one of the following areas:
• Bioenergetics and Stress Factors
• Biomechanics
• Controlled-Environment Agriculture
• Energy Systems Engineering
• Engineering to Solve Global Challenges
• Food Process Engineering
• Metabolic Engineering
• Microbial Fuel cells
• Micro-bioreactors
• Molecular Bioengineering
• Nucleic Acid Engineering
• Physiological Engineering
• Soil and Water Engineering
*Detailed requirements are shown on the department web site.
Applicants to the program need to apply directly to the Cornell Grad School at www.gradschool.cornell.edu.

MASTER OF ENGINEERING (BIOMEDICAL ENGINEERING)
Offered by the Department of Biomedical Engineering
Contact: 109 Weill Hall, 255-2573, www.bme.cornell.edu
Our mechanistic understanding of biology has increased rapidly over the past 20 years, and many expect biology to drive engineering and technology in the next 50 years much like the same way that physics drove them in the 20th century. As biology has become more mechanistic, the opportunities to apply engineering approaches have increased enormously. Simultaneously, humanitarian needs and economic opportunities for the application of engineering to improve health care have increased significantly. Engineers who understand biology and can apply their knowledge and skills to improve human health are increasingly in demand. A professional degree in biomedical engineering will prepare students to fill this increasing critical need.

The breadth and depth of knowledge needed in biomedical engineering makes a four-year B.S. degree program impractical. By combining the M.Eng. (Biomedical Engineering) with a strong B.S. program, a student can obtain the knowledge and skills necessary to be an effective professional biomedical engineer.

Students will acquire an in-depth knowledge of an essential area of biomedical engineering as well as a broad perspective of the biomedical engineering discipline that complements their undergraduate education in engineering or science. Graduates will be equipped to design biomedical devices and develop therapeutic strategies within the bounds of health care economics, the needs of patients and physicians, the regulatory environment for medical devices and pharmaceuticals, and stringent ethical standards.

Students will acquire depth by extending undergraduate concentrations, by selecting one of three areas for concentrated study, and by completing a design project in their area of concentration. The areas are biomedical mechanics and materials, bioinstrumentation/diagnostics, and drug delivery and cellular/tissue engineering. Design projects will be carried out in teams to take advantage of the diversity of student backgrounds and, when possible, projects will be done in collaboration with industrial or clinical partners.

Students from a wide variety of backgrounds in engineering and science are encouraged to apply. They are expected to have completed two semesters of calculus-based physics, at least three semesters of math, starting with calculus, and introductory computer science.

A knowledge of molecular- and cellular-base biomedical engineering and engineering analysis of physiological systems at the level of BME 3010, 3020, 4010, and 4020 is highly recommended. This knowledge can be demonstrated through appropriate undergraduate course work (at least C in each class). Students lacking the appropriate background may need to complete additional courses (beyond the normal 30 credits) to demonstrate appropriate knowledge in these two subject areas.

MASTER OF ENGINEERING (CHEMICAL ENGINEERING)
Offered by the School of Chemical and Biomolecular Engineering
Contact: 358 Olin Hall, 255-4550, www.cheme.cornell.edu
The Master of Engineering (Chemical) is a 30-credit, typically one year, professional program designed to provide the flexibility to increase depth of knowledge in a specialty area, or to broaden students' breadth of knowledge, or to enhance their competitiveness for graduate programs. New "umbrella" program concentrations in "energy and economics engineering" and in "molecular biotechnology" provide a unique opportunity for a focused interdisciplinary approach in these important career choices. The program includes the option to acquire supervisory training and practice.

Specific requirements include
1. 12 credits in CHEME courses distributed among chemical and biomolecular engineering fundamentals. One required from among CHEME 7110, 7310, and 7510 and the remainder in chemical and biomolecular engineering applications (partial list: CHEME 4810, 4810, 4840, 5200, 5209, 5430, 5720, 6310, 6400, 6610, 6640, and 6650).
2. A minimum of 3 credits of an individual or group project, CHEME 5650.
3. At least 3 credits to demonstrate a knowledge of business practices and techniques for pollution abatement and control. If this knowledge has already been acquired by students as undergraduates, they are exempt from this requirement. If not, a CHEME course (e.g., CHEME 6610) or another non–CHEME course covering these topics is required.

MASTER OF ENGINEERING (CIVIL AND ENVIRONMENTAL ENGINEERING)
Offered by the School of Civil and Environmental Engineering
Contact: 219 Hollister Hall, 255-7560, www.cee.cornell.edu
The Master of Engineering degree is a coursework and project-oriented program. It is normally completed in two semesters of intensive study. Thirty credit hours are required, consisting of course work in a major concentration and a supporting area, as well as a design project.

Students may focus their studies in one of six major subject areas: environmental and water resource systems engineering, environmental fluid mechanics and hydrology, environmental processes, geotechnical engineering, structural engineering, and transportation systems engineering. Courses in supporting areas come from many disciplines, including architecture, computer science, economics, engineering management, historic preservation, materials science, microbiology and operations research to name just a few.

MASTER OF ENGINEERING (COMPUTER SCIENCE)
Offered by the Department of Computer Science
Contact: 322 Upson Hall, 255-8720, www.cs.cornell.edu/grad/meng
The M.Eng. program in computer science can be started in either the fall or spring semester. This program is designed to develop expertise in system design and implementation in many areas of computer science, including computer networks, Internet architecture, fault-tolerant and secure systems, distributed and parallel computing, high-performance computer architecture, databases and data mining, multimedia systems, computer vision, computational tools for finance, computational biology (including genomics), software engineering, programming environments, and artificial intelligence.

A typical program includes several upper-division and graduate courses and a faculty-supervised project. The flexible requirements allow students to build up a program that closely matches their interests. Project work, which may be done individually or in a small group, is often associated with ongoing research in the Department of Computer Science in one of the areas listed above, but it can also be done in collaboration with many fields throughout the university.

Students enrolled in the M.Eng. program can also pursue our new track in Computer Science and Medicine, offered in collaboration with Weill Cornell Medical College in Manhattan. This track allows students to earn their CS M.Eng. degree over three semesters,
where the middle semester is spent in New York City working on research projects with clinical faculty in Weill’s Department of Radiology.

Cornell seniors may use the early admission option, which allows them to take courses toward their M.Eng. degree while completing their undergraduate degree. The Early Admission option can be started in either the fall or spring semester. It applies only to students who have 1 to 8 credits remaining to complete their undergraduate program. All remaining undergraduate degree requirements must be satisfied by the end of the first semester the student is enrolled in the M.Eng. “early admit” program.

For students with a non-CS background, there is an “extended” program option of four semesters where students use the first two semesters to complete prerequisite courses needed for the more advanced master’s-level courses.

**MASTER OF ENGINEERING**

**ELECTRICAL AND COMPUTER ENGINEERING**

Offered by the School of Electrical and Computer Engineering

Contact: Student Services Office, 223 Phillips Hall, 255-6804, www.ece.cornell.edu/meng

The M.Eng. (Electrical) degree program prepares students either for professional work in Electrical and Computer Engineering and closely related areas or for further graduate study in a doctoral program. The M.Eng. degree differs from the master of science degree mainly in its emphasis on professional skills, engineering design, and analysis skills rather than basic research.

The program requires 30 credits of advanced technical course work beyond that expected in a typical undergraduate program, including at least four graduate-level courses in Electrical and Computer Engineering. The required Electrical and Computer Engineering design project may account for 3 to 8 credits of the M.Eng. program. Although admission to the M.Eng. (Electrical and Computer Engineering) program is highly competitive, all well-qualified students are urged to apply. Further information is available at the web site listed above.

**MASTER OF ENGINEERING**

**ENGINEERING MECHANICS**

Offered by the Sibley School of Mechanical and Aerospace Engineering

Contact: Marcia Sawyer, 107 Upson Hall, 255-5250, www.tam.cornell.edu

This 30-credit-hour professional degree program stresses applications of Engineering Mechanics and Applied Mathematics and Modeling. The centerpiece of the program is a project, either single or team-based, on important real-world problems.

**Engineering Mechanics:** Students in this program will deepen and broaden their knowledge of mechanics as applied to different material systems. The course work centers on additional study of solid mechanics, fracture mechanics, materials and computational methods widely used in industries (e.g., the finite element method). Potential employers are companies interested in computer modeling of mechanical systems and failure and reliability analysis.

**Applied Mathematics and Modeling:** Students in this program do course work in mathematical modeling and computational methods. They will have great flexibility in their choice of studies. Students who graduate from this program are in a good position to pursue higher degrees or work for financial or informational organizations.

**MASTER OF ENGINEERING**

**ENGINEERING PHYSICS**

Offered by the School of Applied and Engineering Physics

Contact: 212 Clark Hall, 255-5198, www.aep.cornell.edu

The M.Eng. (Engineering Physics) degree may lead directly to employment in engineering design and development or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser and optical technology, nanostructure science and technology, device physics, materials characterization, or software engineering. Wide latitude is allowed in the choice of the required design project.

Students plan their program in consultation with the program chair. The objective is to provide a combination of a good general background in physics and introductory study in a specific field of applied physics. Candidates may enter with an undergraduate preparation in physics, engineering physics, or engineering. Those who have majored in physics usually seek advanced work with an emphasis on engineering; those who have majored in an engineering field generally seek to strengthen their physics base. Candidates coming from industry usually want instruction in both areas. Students granted the degree will have demonstrated competence in an appropriate core of basic physics. If this has not been accomplished before entering the M.Eng. program, undergraduate classes in electricity and magnetism, classical mechanics, and quantum mechanics may be required in addition to the classes taken to satisfy the M.Eng. requirements.

The degree requires 30 credits of graduate-level courses or their equivalent, with at least C- in each course, and distributed as follows:

1. a design project in applied science or engineering with a written final report (6 to 12 credits)
2. an integrated program of graduate-level courses, as discussed below (17 to 23 credits)
3. a required special-topics seminar course (1 credit)

The design project, which is proposed by the student and approved by the program chair, is carried out on an individual basis under the guidance of a member of the university faculty. It may be experimental or theoretical in nature; if it is not experimental, a laboratory physics course is required. The individual program of study consists of a compatible sequence of courses focused on a specific area of applied physics or engineering. Its purpose is to provide an appropriate combination of physics and physics-related courses (applied math, statistical mechanics, applied quantum mechanics) and engineering electives (e.g., courses in biophysics, chemical engineering, electrical engineering, materials science, computer science, mechanical engineering, or nuclear engineering). Additional science and engineering electives may be included. Some courses at the senior level (4000) are acceptable for credit toward the degree; other undergraduate courses may be required as prerequisites but may not be credited toward the degree.

**MASTER OF ENGINEERING**

**GEOLOGICAL SCIENCES**

Offered by the Department of Earth and Atmospheric Sciences

Contact: 2124 Snee Hall, 255-5466, www.eas.cornell.edu

The one-year M.Eng. (Geological Sciences) degree program provides future professional geologists or engineers with the geological and engineering background they will need to analyze and solve engineering problems that involve geological variables and concepts.
Individual programs are developed within two established options: geohydrology and environmental geophysics.

Incoming students are expected to have a strong background in mathematics, the physical sciences, and chemistry and have a strong interest and substantial background in the geological sciences. The 30-hour M.Eng. program is intended to extend and broaden this background to develop competence in four subject categories. Typical categories for the geohydrology option are porous media flow, groundwater contamination, and numerical modeling. Typical categories for the environmental geophysics option are geophysics, geology, porous media fluid flow, and computer methods. The courses a student selects in a category will vary depending on the student’s background. No courses may be required in some categories, and the categories can be adjusted to the student’s interest and needs. Alternatives to numerical modeling in the geohydrology option could be economics or biochemistry, for example. To count toward the 30-credit degree requirement, courses must be at a graduate or advanced undergraduate level.

At least 10 of the 30 hours in the program must involve engineering design. Much of this requirement is normally met through a design project, which can account for over one-third of the program (12 of 30 credits) and must constitute at least 5 credits. The design project must involve a significant geological component and lead to concrete conclusions or recommendations of an engineering nature. The project topic can be drawn from a student's nonacademic work experience but can also be developed with advice from a Cornell faculty member with expertise in the project area selected by the student. A design project in environmental geophysics might involve implementation of a field survey using seismological, geoelectrical, or ground-penetrating radar methods to map subsurface stratigraphic or structural features that control groundwater flow or contamination at a site. Projects are presented both in written form and orally in a design seminar at the end of the year.

MASTER OF ENGINEERING (MATERIALS SCIENCE AND ENGINEERING)

Offered by the Department of Materials Science and Engineering
Contact: 214 Bard Hall, 255-9159, www.mse.cornell.edu

The M.Eng. (Materials Science and Engineering) program is primarily designed to prepare students for professional work in materials science, but graduates have continued with further studies in a doctoral program. The 30-credit program includes courses to develop a master's design project and is generally completed in two semesters. The project, which requires individual effort and initiative, is carried out under the supervision of a faculty member. Six to 12 credits are devoted to the project, which is normally experimental in nature, although computational or theoretical projects are also possible.

The program serves two groups of students: those who have completed an undergraduate degree in materials science or materials engineering and who wish to extend their knowledge, and well qualified graduates of other fields of engineering or other physical sciences who wish to complement that background with knowledge of materials. These other fields have included chemistry, physics, chemical engineering, and mechanical engineering. Because of this, the courses that make up the remaining 18 to 24 credits may vary widely depending on the background of the student and their interests. One uniform requirement of the program is a 3-credit elective concerned with management or a related topic.

MASTER OF ENGINEERING (MECHANICAL ENGINEERING)

Offered by the Sibley School of Mechanical and Aerospace Engineering
Contact: 107 Upson Hall, 255-5250, www.mae.cornell.edu

The M.Eng. (Mechanical Engineering) degree program provides a one-year course of study for those who wish to develop a level of competence in engineering science, current technology, and engineering design. Candidates may concentrate on any of a variety of specialty areas, including biomechanical engineering, energy systems, combustion, propulsion and power systems, fluid mechanics, heat transfer, materials and manufacturing engineering, and mechanical systems and design.

A coordinated program of courses for the academic year is agreed upon by the student and the faculty advisor. This program and any subsequent changes must also be approved by the Director of the Master of Engineering program. An individual student’s curriculum includes a 4- to 8-credit design/research course, a minimum of 12 credits in mechanical engineering or a closely related field with some technical focus, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have a mechanical engineering design/research focus and have the close supervision of a faculty member.

All courses must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have special approval of the Director of the Master of Engineering program.

The technical electives may be courses of appropriate level in engineering, math, physics, chemistry, or biology; a maximum of two courses may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives.

Students enrolled in the M.Eng. (Mechanical Engineering) degree program may take courses that also satisfy the requirements of the bioengineering, engineering management, systems engineering, or manufacturing minors.

MASTER OF ENGINEERING (OPERATIONS RESEARCH AND INFORMATION ENGINEERING)

Offered by the School of Operations Research and Information Engineering
Contact: 201 Rhodes Hall, 255-9128, www.orie.cornell.edu/orie/academics/meng

This professional degree program stresses applications of operations research. The centerpiece of the program is a team-based project on a significant real-world problem. The course work centers on additional study of analytical techniques, with particular emphasis on the design or improvement of systems and processes in manufacturing, information, finance, and service organizations.

General admission and degree requirements are described in the introductory "Degree Programs" section. The ORIE M.Eng. program is designed to serve two groups of students: graduates of the undergraduate major in ORIE who wish to deepen their technical background, and engineers who wish to deepen their background in operations research and information engineering. For admission, the entering student should have completed an introductory course in probability and statistics, an intermediate-level course in computer science, as well as four semesters of mathematics, including differential equations, linear algebra, and multivariate calculus. For the financial engineering concentration, the entering student must also have completed an intermediate-level probability course and a basic finance course. In addition, a working knowledge of C++ is strongly recommended.

Program requirements include a core of ORIE courses plus technical electives chosen from a broad array of offerings. There are several concentrations, each requiring a particular set of electives plus a specific project course. The concentrations include Operations Research, Financial Engineering, Information Technology, Strategic Operations (which incorporates the Strategic Operations Immersion at the Johnson Graduate School of Management), Data Analytics, and Manufacturing and Industrial Engineering. Students may also minor in Systems Engineering. Several of these options are offered jointly with other Cornell departments and schools and provide the opportunity to interact with students and specialists in business and other engineering fields. For information about the manufacturing and industrial engineering concentration, contact the Center for Manufacturing Enterprise, 291 Grumman Hall, 255-5545; about the Strategic Operations Immersion, 304 Sage Hall, 255-4691; about Systems Engineering, 202 Rhodes Hall, 254-8998; and for all others, 201 Rhodes Hall, 255-9128.

The applied operations research concentration is designed to be completed in two semesters. For scheduling reasons, and depending on the student’s preparation, the other concentrations may entail an additional summer or semester.
In particular, the financial engineering concentration is highly specialized and typically requires three semesters to complete. This permits an industry internship in the summer between semesters as well as a third semester of study in New York City.

The manner in which the M.Eng. project requirement is met depends on the chosen concentration. Common elements in all project experiences include working as part of a team of three to five students on an engineering design problem, meeting with a faculty advisor on a regular basis, and presenting the final results to the project sponsor. Most projects have industrial client sponsors and address relevant, practical problems.

Additional program requirements are described in the Master of Engineering Handbook and on the web. For further details, see the contact information at the beginning of this section.

### ENGINEERING COURSES

Courses offered in the College of Engineering are listed under the various departments and schools.

Courses are identified with a standard abbreviation followed by a four-digit number.

- **Engineering Communications** (ENGRC)
- **Engineering Distribution** (ENGRD)
- **Engineering General Interest** (ENGRI)
- **Engineering Introductions** (ENGRI)
- **Applied and Engineering Physics** (AEP)
- **Biological and Environmental Engineering** (BEE)
- **Chemical and Biomolecular Engineering** (CHEME)
- **Civil and Environmental Engineering** (CEE)
- **Computer Science** (CS)
- **Computing and Information Science** (CIS)
- **Earth and Atmospheric Sciences** (EAS)
- **Electrical and Computer Engineering** (ECE)
- **Information Science** (INFO)
- **Materials Science and Engineering** (MSE)
- **Mechanical and Aerospace Engineering** (MAE)
- **Nuclear Science and Engineering** (NSE)
- **Operations Research and Information Engineering** (ORIE)
- **Systems Engineering** (SYSE)
- **Theoretical and Applied Mechanics** (TAM)

### ENGINEERING COMMON COURSES

#### Engineering Communications Courses

Courses in this category, offered by the Engineering Communications Program (ECP), develop writing and oral-presentation skills needed by engineers.

**ENGRC 3020 Writing-Intensive Opportunity: Practicum in Technical Writing**

Fall, spring, 1 credit. One-credit attachment to an existing engineering course that is not one of the officially designated W-I courses. It may be taken more than once, with different courses by permission of a particular engineering faculty member.

**ENGRC 3340 Independent Study in Engineering Communications**

1–3 credits, variable. Letter grades. TBA with instructor. Members of the ECP occasionally give independent (also called “directed”) studies in engineering communications, typically with students who are ready for advanced work in technical writing. A student doing a directed study works one-on-one with an ECP instructor to pursue an aspect of professional communications in more depth than is possible in the ECP’s regular courses. Various topics of projects are possible, e.g., studying forms of technical documentation, creating user manuals, analyzing and producing technical graphics, reading and writing about problems in engineering practice, and writing about technical topics for the public.

**ENGRC 3350 Communications for Engineering Managers (LA)**

Fall, spring, 3 credits. Prerequisite: ENGRC 3340. Some basic knowledge of technical writing is necessary. May be used as free or approved elective in expressive arts. Intended for juniors and seniors. Limited to 20 students per sec. Prerequisite: two first-year writing seminars and major affiliation.

This seminar focuses on communications in organizational contexts common to engineering graduates. Topics may include internal and external communications (balancing visual and verbal elements in documents and oral presentations; teamwork and leadership; running and attending meetings; management strategies; and communicating with colleagues, superiors, subordinates, and clients). Students develop writing and management strategies that they apply in individual and team assignments. They learn how to organize technical and managerial information, articulate and support ideas, and communicate with technical and nontechnical audiences.

**ENGRC 3500 Engineering Communications (LA)**

Fall and spring, 3 credits. Designed for juniors and seniors. Fulfills college technical-writing requirement. May be used as free or approved elective in expressive arts. Limited to 20 students per sec. Prerequisite: one semester of technical writing. Students learn how to communicate specialized information to different audiences (e.g., technical and nontechnical people, colleagues and clients, peers and supervisors, in-house departments, and government agencies). Work in teams, and address organizational and ethical issues. The course material is drawn from professional contexts, principally engineering, and it generates lively discussion. The class size ensures close attention to each student’s work. (Note: Absences are limited to three, after which sharp penalties occur.)

#### Engineering Distribution Courses

Courses in this category are sophomore-level courses cross-listed with a department. These courses are intended to introduce students to more advanced concepts of engineering and may require pre- or corequisites.

**ENGRD 2020 Mechanics of Solids (also TAM 2020)**

Fall, spring. 4 credits. Prerequisite: PHYS 1112, co-registration in MATH 2930, or permission of instructor. All students must take a lab section. Staff. Covers principles of statics, force systems, and equilibrium; frames; mechanics of deformable solids, stress, strain, statically indeterminate problems; mechanical properties of engineering materials; axiomatic definition of force, bending moment, thermal stress, stretching; bending and torsion of bars. Laboratory experiments demonstrate basic principles of solid mechanics.

**ENGRD 2030 Dynamics (also TAM 2030)**

Fall, spring. 3 credits. Prerequisite: ENGRD/TAM 2020, co-registration in MATH 2930, or permission of instructor. All students must take a lab and a section. Staff. Newtonian dynamics of a particle, systems of particles and of a rigid body. Force, torque, impulse, momentum, angular momentum, energy, and vibrations. Two-dimensional rigid-body kinematics including motion relative to a moving frame. Three dimensional rigid-body dynamics are briefly introduced at the instructor’s option. Laboratory experiments demonstrate some basic principles.

**ENGRD 2100 Introduction to Circuits for Electrical and Computer Engineers (also ECE 2100)**

Fall, spring. 4 credits. Corequisites: MATH 2930 and PHYS 2213. All students must take a lab and a section. Staff. First course in electrical circuits and electronics. Establishes the fundamental properties of circuits with application to modern electronics. Topics include circuit analysis methods, operational amplifiers, basic filter circuits, and elementary transistor principles. The laboratory experiments are coupled closely with the lectures.

**ENGRD 2110 Object-Oriented Programming and Data Structures (also CS 2110)**

Fall, spring. 3 credits. Prerequisite: CS 1110 or CS 1130 or equivalent course in Java or C++. Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, object-oriented programming (classes, objects, types, sub-typing), graphical user interfaces, algorithm analysis (asymptotic complexity, big “O” notation), recursion, data structures (lists, trees, stacks, queues, heaps, search trees, hash tables, graphs), simple
graph algorithms. Java is the principal programming language.

**ENGRD 2190** Materials and Energy Balances (also CHEM 2190)  
Fall. 3 credits. Corequisite: physical chemistry course or permission of instructor. S. Daniel.  
Engineering problems involving material and energy balances. Batch and continuous reactive systems in the steady and unsteady states. Introduction to phase equilibria for multicomponent systems. Examples drawn from a variety of chemical and biomolecular processes.

**ENGRD 2210** Thermodynamics (also MAE 2210)  
Fall, spring, may be offered summer. 3 credits. Prerequisites: MATH 1920 Calculus for Engineers, and PHYS 1112 Physics I, Mechanics.  
Presents the definitions, concepts, and laws of thermodynamics. Topics include the first and second laws, thermodynamic property relationships, and applications to vapor and gas power systems, refrigeration, and heat pump systems.

**ENGRD 2300** Introduction to Digital Logic Design (also ECE 2300)  
Fall, spring. 4 credits. Prerequisite: CS 1110 or CS 1112  
Introduction to the design and implementation of practical digital circuits. Topics include transistor network design, Boolean algebra, combinational circuits, sequential circuits, finite state machine design, and analog and digital converters.

**ENGRD 2510** Engineering for a Sustainable Society (also BEE 2510)  
Fall. 3 credits. Prerequisites: BEE 2510 or permission of instructor. S. P. Baker.  
Case studies of contemporary environmental issues including pollutant distribution in natural systems, air quality; hazardous waste management, and sustainable development. Emphasis is on the application of mathematics, physics, and engineering sciences to solve energy and mass balances in environmental sciences. Students are introduced to the basic chemistry, ecology, biology, ethics, and environmental legislation relevant to the particular environmental problem. BEE students must complete either BEE 2510 or BEE 2600 in accordance to their academic plan. BEE students who complete both BEE 2510 and BEE 2600 receive engineering credit for only one of these courses.

**ENGRD 2520** The Physics of Life (also AEP 2520/5520)  
Spring, 3 credits. Prerequisites: MATH 1920, CHEM 2190 or 2990, and co-registration in or completion of PHYS 2213, L. Pollack.  
Introduces the physics of biological macromolecules (e.g., proteins, DNA, RNA) to students of the physical sciences or engineering who have little or no background in biology. The macromolecules are studied from three perspectives. First, the biological role or function of each class of macromolecules is considered. Second, a quantitative description of the physical interactions that determine the behavior of these systems is provided. Finally, techniques that are commonly used to probe these systems, with an emphasis on current research, are discussed.

**ENGRD 2600** Principles of Biological Engineering (also BEE 2600)  
Fall. 3 credits. Pre- or corequisite: MATH 2930, two semesters of core biology major classes, and BIOS 1105/1106. A. J. Baumber.  
Focuses on the integration of biological systems with engineering, math, and physical principles. Students learn how to formulate equations for biological systems and to practice it in homework sets. Topics range from molecular principles of reaction kinetics and molecular binding events to macroscopic applications, such as energy and mass balances of bioprocessing and engineering design of implantable sensors.

**ENGRD 2610** Mechanical Properties of Materials: From Nanodevices to Superstructures (also MSE 2610)  
Fall. 3 credits. Prerequisite: MATH 1910. Corequisite: PHYS 1112 or permission of instructor. S. P. Baker.  
Examines the mechanical properties of materials (e.g., strength, stiffness, toughness, ductility) and their physical origins. Topics include the relationship of elastic, plastic, and fracture behavior to microscopic structure in metals, ceramics, polymers, and composite materials. Effects of time and temperature on materials properties, and consideration for design and optimal performance of materials in engineered objects and biological tissues.

**ENGRD 2620** Electronic Materials for the Information Age (also MSE 2620)  
Spring, 3 credits. Prerequisite: MATH 1920. Corequisite: PHYS 2213 or permission of instructor. M. Thompson.  
Examines the electrical and optical properties of materials. Topics include the mechanism of electrical conduction in metals, semiconductors and insulators; tuning of electrical properties in semiconductors, charge transport across a metal conductor and semiconductor/semiconductor junctions, and the interaction of materials with light; semiconductor electronic devices; and the materials science of device fabrication.

**ENGRD 2640** Computer-Instrumentation Design (also AEP 2640)  
Fall, spring, 3 credits. Corequisite: CS 1112, permission of instructor for seniors. 1 lec, 1 lab. T. Cool.  
Covers the use of a small computer in an engineering or scientific research lab. The experiments and devices investigated include analog to digital converters (ADC), digital to analog converters (DAC), digital input/output (I/O), counter/timers, serial port communications, digital temperature control, error analysis, nonlinear least squares fitting of experimental data, viscosity of fluids, a robot arm, and thermal diffusion. C++ programming and graphical programming with LabVIEW™ are used for computer interfacing to hardware. Students develop effective written communication skills in the context of science and engineering. They prepare progress reports, technical reports, and formal articles based on the experiments.

**ENGRD 2700** Basic Engineering Probability and Statistics  
Fall, spring, summer. 3 credits. Prerequisites: MATH 1910 and 1920. MATH 2940 should be completed before or concurrently with ENGRD 2700. Gives students a working knowledge of basic probability and statistics and their application to engineering. Includes computer analysis of data and simulation. Topics include random variables, probability distributions, expectation, estimation, testing, experimental design, quality control, and regression.

**ENGRD 3100** Introduction to Probability and Inference for Random Signals and Systems (also ECE 3100)  
Fall, summer. 4 credits. Prerequisites: MATH 2940, PHYS 2213, or equivalents. For description, see ECE 3100.

**ENGRD 3200** Engineering Computation  
Spring, 3 credits. Prerequisites: CS 1112 and MATH 2940. Corequisite: MATH 2940. Recommended: completion of MATH 2940. P. J. Diamessis.  
Introduction to numerical methods, computational mathematics, and probability and statistics. Development of programming and graphics proficiency with MATLAB and spreadsheets. Topics include Taylor-series approximations, numerical errors, condition numbers, operation counts, convergence, and stability, probability distributions, hypothesis testing. Included are numerical methods for solving engineering problems that entail roots of functions, simultaneous linear equations, statistics, regression, interpolation, numerical differentiation and integration, and solution of ordinary and partial differential equations, including an introduction to finite difference methods. Applications are drawn from different areas of engineering. A group project uses these methods on a realistic engineering problem.

**ENGRD 3220** Introduction to Scientific Computation (also CS 3220)  
Spring, 3 credits. Prerequisites: CS 1112 or 1132 and MATH 2220, 2230, or 2940. An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. Uses the MATLAB computing environment. Stresses vectorization, efficiency, reliability, and stability. Special lectures cover computational statistics.

Courses of General Interest  
Courses in this category are of general interest and cover technical, historical, and social issues relevant to the engineering profession. These courses may also include seminar or tutorial type courses.

**ENGRG 1009** Cooperative Workshop for CHEM 2090  
Fall. 1 credit. Corequisite: CHEM 2090. 5-13 grades only.  
Academic Excellence Workshop for CHEM 2090. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in CHEM 2090.
ENGRG 1091 Cooperative Workshop for MATH 1910
Fall, spring. 1 credit. Corequisite: MATH 1910. S–U grades only.
Academic Excellence Workshop for MATH 1910. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 1910.

ENGRG 1092 Cooperative Workshop for MATH 1920
Fall, spring. 1 credit. Corequisite: MATH 1920. S–U grades only.
Academic Excellence Workshop for MATH 1920. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 1920.

ENGRG 1093 Cooperative Workshop for MATH 2930
Fall, spring. 1 credit. Corequisite: MATH 2930. S–U grades only.
Academic Excellence Workshop for MATH 2930. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 2930.

ENGRG 1094 Cooperative Workshop for MATH 2940
Fall, spring. 1 credit. Corequisite: MATH 2940. S–U grades only.
Academic Excellence Workshop for MATH 2940. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 2940.

ENGRG 1010 Cooperative Workshop for CS 1110
Fall, spring. 1 credit. Corequisite: CS 1110. S–U grades only.
Academic Excellence Workshop for CS 1110. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in CS 1110.

ENGRG 1012 Cooperative Workshop for CS 1112
Fall, spring. 1 credit. Corequisite: CS 1112. S–U grades only.
Academic Excellence Workshop for CS 1112. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in CS 1112.

ENGRG 2500 Technology in Society (also ECE/HIST 2500, STS 2501)
Fall. 3 credits. Approved for humanities distribution.
Investigates the history of technology in Europe and the United States from ancient times to the present. Topics include the economic and social aspects of industrialization; the myths of heroic inventors such as Edison and Ford; the government’s regulation of technology; the origins of mass production; and the spread of the automobile and microelectronics cultures in the United States.

ENGRG 2980 Inventing an Information Society (also ECE/AMST 2980, HIST 2920, STS/INFO 2921)
Spring. 3 credits. Approved for humanities distribution.
Explores the history of information technology from the 1830s to the present by considering the technical and social history of telecommunications, the electric-power industry, radio, television, computers, and the Internet. Emphasis is on the changing relationship between society and technology, the economic aspects of innovation, gender and technology, and other social relations of this technology.

ENGRG 2920 Engineering Economics and Management (also CEE 3230)
Spring. 3 credits. Approved for humanities distribution.
Introduces the students to the economic and social aspects of engineering and management. Students learn about the economic impact of engineering decisions, including the economic and social implications of engineering decisions, the impact of engineering decisions on society, the economics of innovation, and the role of government in regulating engineering.

ENGRG 3230 Engineering Economics and Management (also CEE 3230)
Spring. 3 credits. Approved for humanities distribution.
Introduces the students to the economic and social aspects of engineering and management. Students learn about the economic impact of engineering decisions, including the economic and social implications of engineering decisions, the impact of engineering decisions on society, the economics of innovation, and the role of government in regulating engineering.

ENGRG 3600 Ethical Issues in Engineering Practice (also ECE 3600, STS 3601) (ICOM)
Spring. 3 credits. Open to sophomores. Studies major ethical and social issues involved in engineering practice. The issues include responsibility for designing products that do not harm public health, safety, and welfare; rights of engineers in large corporations; risk analysis and the principle of informed consent; conflict of interest; whistle-blowing, trade secrets, and broader concerns such as environmental degradation, cost of health care, computer ethics, and working in multinational corporations. Codes of ethics of the professional engineering societies, ethical theory, and the history of ethics are introduced to analyze these issues.

ENGRG 4610 Entrepreneurship for Engineers (also MAE 4610, ORIE 4152)
Fall. 3 credits. Prerequisite: upper-level engineers or permission of instructor. For description, see MAE 4610.

ENGRG 6780 Teaching Seminar
Fall, spring. 1 credit. S–U grades only. Staff. Independent study promoting reflection on teaching styles and experiences for teaching assistants in the College of Engineering. Participants must be concurrently enrolled in a TA assignment. Requirements include participation in the College of Engineering’s TA Development Program, consisting of an initial one and a half day training session, followed by one two-day teaching session early in the semester; participation in the TA midterm evaluation process, followed by a formal feedback session with program staff; and completion of a reflective journal on teaching experiences. Designed to provide TAs with the opportunity to practice their understanding of teaching and learning through the formulation of questions, concepts, and theories related to their experiences.

Introduction to Engineering Courses
Courses in this category are first-year level courses intended to introduce students to various aspects of engineering. They have no prerequisites and are cross-listed with a department.

ENGRG 1100 Lasers and Photonics (also AEP 1100)
Fall. 3 credits.
Lasers have had an enormous impact on communications, medicine, remote sensing, and material processing. This course reviews the properties of light that are essential to understanding the underlying principles of lasers and these photonic technologies. There are a strong, hands-on laboratory component in which the students build and operate a nitrogen laser and participate in several demonstration experiments such as holography, laser processing of materials, optical tweezers, and fiber optics.

ENGRG 1101 Engineering Applications of Operations Research
Fall, spring. 3 credits. Not open to ORIE upper-level majors.
Introduction to the problems and methods of operations research and information engineering focusing on problem areas (including inventory, network design, and resource allocation). The situations in which these problems arise, and several standard solution techniques. In the computational laboratory, students encounter problem simulations and use some standard commercial software packages.
ENGR 1110 Nanotechnology (also MSE 1110)  
Fall. 3 credits. C. Umbach.  
Nanotechnology has been enabling the Information Revolution with the development of far more powerful devices for manipulation, storing, and transmitting information. In this hands-on course students learn how to design and manipulate materials to build devices and structures in applications ranging from computers to telecommunications to biotechnology.

ENGR 1120 Introduction to Chemical Engineering (also CHEM 1120)  
Fall. 3 credits. Prerequisite: first-year standing. T. M. Duncan.  
Design and analysis of processes involving chemical change. Students learn strategies for design, such as creative thinking, conceptual blockbusting, and (re)definition of the design goal, in the context of contemporary chemical and biomolecular engineering. Includes methods for analyzing designs, such as mathematical modeling, empirical analysis by graphics, and dynamic scaling through dimensional analysis, to assess product quality, economics, safety, and environmental issues.

ENGR 1130 Sustainable Design for Appledore Island (also CEE 1130)  
Utilizes a unique environment, Appledore island, as an example of how sustainability is addressed in the design of basic components of the built environment; energy, water supply, and waste treatment.

ENGR 1131 Water Treatment Design (also CEE 1131)  
Spring. 3 credits. M. L. Weber-Shirk.  
Students learn how to design: reservoirs to provide water during droughts, aqueducts to transport water, and water treatment plants to prevent waterborne diseases. The course includes field trips, building a computer-controlled miniature water treatment plant, and exploring new technologies for making safe drinking water.

ENGR 1140 Materials: The Future of Energy (also MSE 1140)  
Spring. 3 credits. R. B. van Dover.  
New technologies are urgently needed to fulfill projected global energy requirements. Materials properties typically limit the performance that can be achieved in generation, transport, and utilization of energy. This experiential learning course explores how new materials can increase our energy supply and decrease consumption. Materials issues in photosynthetic fuel cell, battery, wind, transportation, lighting, and building technologies are studied. Through integrated lab-based activities students develop a broad understanding of materials issues in order to successfully design and build an energy generation system.

ENGR 1160 Modern Structures (also CEE 1160)  
Fall. 3 credits. A. Ingraffea.  
Introduction to structural engineering in the 21st century—the challenges structural engineers face and the innovative approaches they are using to address them. Using case studies of famous structures, students learn to identify different structural forms and understand how various forms carry load—using principles of statics, mechanics, and material behavior. The historical, economic, social, and political context for each structure is discussed. Case studies of failures are used to explain how structures fail in earthquakes and other extreme events, and students are introduced to analytical and experimental approaches (finite element and wind tunnel testing) to quantifying loads on structures subjected to extreme events. Types of structures considered include skyscrapers, bridges, aircraft, and underground structures.

ENGR 1170 Introduction to Mechanical Engineering (also MAE 1170)  
Fall. 5 credits.  
Introduction to fundamentals of mechanical and aerospace engineering. Students learn and understand materials characteristics, the behavior of materials, and material selection for performing engineering function. They also learn fundamentals of fluid mechanics, heat transfer, automotive engineering, engineering design and product development, patents and intellectual property, and engineering ethics. In the final project, students use the information learned to design and manufacture a product.

ENGR 1190 Biomaterials for the Skeletal System (also MSE 1190)  
Fall. 3 credits. D. Gourdon.  
Biomaterials are at the intersection of biology and engineering. This course explores natural structural materials in the human body, their properties and microstructure, and their synthetic and semi-synthetic replacements. Bones, joints, teeth, tendons, and ligaments are used as examples, with their metal, plastic, and ceramic replacements. Topics include strength, corrosion, toxicity, wear, and biocompatibility. Case studies of design lead to consideration of regulatory approval requirements and legal liability issues.

ENGR 1200 Introduction to Nanoscience and Nanoengineering (also AEP 1200)  
Spring. 3 credits.  
Lecture/laboratory course designed to introduce first-year students to some of the ideas and concepts of nanoscience and nanotechnology. Topics include nanoscale/macroscopic phenomena; and nanotechnology and nanoscience—what they are and why they are of interest; atoms and molecules; the solid state; surfaces; behavior of light and material properties confined to nanoscale dimensions; scanning tunneling microscopy (STM), atomic force microscopy (AFM), microelectromechanical systems (MEMS) design; basic micromachining and chemical synthesis methods, i.e., “top-down” and “bottom-up” approaches to nanofabrication; how to manipulate structures on the nanoscale; physical laws and limits they place on the nanoworld; some far-out ideas. In the laboratory, students use an AFM to record atomic resolution images, use a MEMS computer-aided design software package to model the entire manufacturing sequence of a simple MEMS device, examine the simulated behavior of the device and compare it with real behavior, construct a simple STM and learn through hands on experience the basic workings of the device.

ENGR 1220 Earthquakes! (also EAS 1220)  
Spring. 3 credits. L. Brown.  
Explores the science of natural hazards, their societal impacts and means of mitigation. The focus is on earthquakes, volcanoes, and tsunami, but hurricanes, severe weather, climate change, landslides, wildfires, and the threat of extinction from a future impact by an extraterrestrial body are also considered.

ENGR 1260 Introduction to Signals and Telecommunications (also ECE 1260)  
Spring. 3 credits.  
Introduces the concepts that underlie wired and wireless communication systems. Students achieve a rudimentary understanding of basic ideas such as coding and data compression; frequency content, bandwidth, and filtering; sampling and reconstruction; and time- and frequency-division multiplexing. Discussions of practical applications focus on areas such as the public switched telephone network, ISDN, ATM, and TCP/IP. Students also develop an appreciation for the historical development of the field. The course includes both lectures and laboratory demonstrations.

ENGR 1270 Introduction to Entrepreneurship and Enterprise Engineering (also MAE 1270)  
Spring. 3 credits. Open to all Cornell students regardless of major. Prerequisite: none.  
A solid introduction to the entrepreneurial process to students in engineering. The main objective is to identify and to begin to develop skills in the engineering work that occurs in high-growth, high-tech ventures. Basic engineering management issues, including the entrepreneurial perspective, opportunity recognition and evaluation, and gathering and managing resources are covered. Technical topics such as the engineering design process, product realization, and technology forecasting are discussed.

ENGR 1310 Introduction to Biomedical Engineering (also BME 1310)  
Spring. 3 credits. Prerequisite: freshman or sophomore standing. D. A. Putnam and S. D. Archer.  
Modern biology and medicine are undergoing a revolution as quantitative principles of measurement, analysis, and design are introduced to help solve a variety of scientific and medical problems. This course provides an introduction to the concepts of nanoscale systems with a quantitative perspective from the molecular to the cellular to the organism scale, as well as to the design of practical devices for studying biological systems and treating diseases. Conducted in a studio format, this course is a key element in all aspects of the course; from the lectures and labs, to the assignments and term project.

ENGR 1610 Computing in the Arts (also CIS/CS 1610, DANCE 1540, FILM 1750, MUSIC 1465, PSYCH 1650)  
Fall. 3 credits. Complements ART 1700+ and MUSIC 1421+. S–U or letter grades. For description, see CS 1610 in the CIS section.

ENGR 1620 Visual Imaging in the Electronic Age (also ART 1700, CIS/CS 1620)  
Fall. 3 credits. S–U or letter grades. Staff. For description, see ART 1700.
APPLIED AND ENGINEERING PHYSICS

**AEP 1100** Lasers and Photonics (also ENGR 1100)
Spring, 3 credits.
Introduction to Laser Science and Technology. For description, see ENGR 1100.

**AEP 1200** Introduction to Nanoscience and Nanoeengineering (also ENGR 1200)
Fall, 3 credits.
Course in Introduction to Engineering series. For description, see ENGR 1200.

**AEP 2170** Electromagnetics (also PHYS 2217)
Fall, spring, 4 credits.
Prerequisites: permission of advisor and instructor; co-registration in PHYS 2216 or knowledge of special relativity at level of PHYS 1116; MATH 2930 or equivalent and co-registration in MATH 2930 or equivalent. Staff.
Intended for students who have done well in PHYS 1112 or 1116 or equivalent) and mathematics and who desire more analytic treatment than that of PHYS 2213. At the level of Electricity and Magnetism by Purcell. Recommended for prospective engineering physics majors. Placement quiz may be given early in semester permitting students who find material too abstract or analytic to transfer into PHYS 2213 without difficulty.

**AEP 2520** The Physics of Life (also AEP 5520, ENGRD 2520)
Spring.
Prerequisites: MATH 1920, CHEM 2070 or 2090, and co-registration in or completion of PHYS 2213. L. Pollack.
For description, see ENGRD 2520.

**AEP 2640** Computer-Instrumentation Design (also ENGRD 2640)
Fall, spring, 3 credits.
Prerequisites: seniors by permission of instructor; CS 1112. 1 lec, 1 lab.
For description, see ENGRD 2640.

**AEP 3240** Maple Supplement to Mathematical Physics 321 and 322
Spring, 1 credit.
B. E. Lovelace.
A broad introduction to Maple in applications to problems of mathematical physics similar to those covered in AEP 4210 and 4220. Uses Maple to solve differential equations—both linear and nonlinear. Makes extensive use of plotting capabilities of Maple. Also covers matrices, complex functions, Laplace and Fourier transforms (and FFTs), and group theory. Gives an introduction to LaTeX.

**AEP 3300** Modern Experimental Optics (also PHYS 3300)
Fall, 4 credits.
Limited enrollment.
Prerequisite: PHYS 2214 or equivalent. E. Bodenschutz.

**AEP 3310** Modern Experimental Optics (also PHYS 3310)
Fall, spring, 4 credits.
Prerequisites: PHYS 2214 or equivalent.

**AEP 3320** Mechanics of Particles and Solid Bodies
Fall, summer, 4 credits.
Prerequisites: PHYS 1112 or 1116 and co-registration in AEP 4210 or equivalent or permission of instructor.
Staff.
Covers Newton’s mechanics, constants of the motion; many-body systems; linear oscillations; variational calculus; Lagrangian and Hamiltonian formalism for generalized coordinates; non-inertial reference systems; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; and basic introduction to relativistic mechanics. Emphasis is on mathematical treatments, physical concepts, and applications. (At the level of Classical Dynamics by Marion and Thornton.)

**AEP 3330** Mechanics of Particles and Solid Bodies
Fall, summer, 4 credits.
Prerequisites: PHYS 1112 or 1116 and co-registration in AEP 4210 or equivalent or permission of instructor.
Staff.
Covers Newton’s mechanics, constants of the motion; many-body systems; linear oscillations; variational calculus; Lagrangian and Hamiltonian formalism for generalized coordinates; non-inertial reference systems; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; and basic introduction to relativistic mechanics. Emphasis is on mathematical treatments, physical concepts, and applications. (At the level of Classical Dynamics by Marion and Thornton.)

**AEP 3550** Intermediate Electromagnetism
Fall, beginning third week of Oct.; summer, second half of semester. 2 credits.
Prerequisite: PHYS 2213 or 2217 and co-registration with AEP 4210, or permission of instructor.
Intermediate-level course on electromagnetic theory with a focus on statics. Vector calculus, electrostatics, conductors, dielectric materials, boundary conditions, solutions to Laplace’s equation, and magnetostatics. Emphasis is on developing proficiency with analytical techniques and intuitive understanding of fundamental electromagnetism.

**AEP 3560** Intermediate Electrodynamics
Spring, 4 credits.
Prerequisite: AEP 3550 and co-registration with AEP 4220, or permission of instructor.
Second course in theory of electromagnetism. Topics include waves, Schrödinger’s equation including perturbation theory with a focus on statics. Vector calculus, electrostatics, conductors, dielectric materials, boundary conditions, solutions to Laplace’s equation, and magnetostatics. Emphasis is on developing proficiency with analytical techniques and intuitive understanding of fundamental electromagnetism.

**AEP 3560** Intermediate Electrodynamics
Spring, 4 credits.
Prerequisite: AEP 3550 and co-registration with AEP 4220, or permission of instructor.
Second course in theory of electromagnetism. Topics include waves, Schrödinger’s equation including perturbation theory with a focus on statics. Vector calculus, electrostatics, conductors, dielectric materials, boundary conditions, solutions to Laplace’s equation, and magnetostatics. Emphasis is on developing proficiency with analytical techniques and intuitive understanding of fundamental electromagnetism.

**AEP 3560** Intermediate Electrodynamics
Spring, 4 credits.
Prerequisite: AEP 3550 and co-registration with AEP 4220, or permission of instructor.
Second course in theory of electromagnetism. Topics include waves, Schrödinger’s equation including perturbation theory with a focus on statics. Vector calculus, electrostatics, conductors, dielectric materials, boundary conditions, solutions to Laplace’s equation, and magnetostatics. Emphasis is on developing proficiency with analytical techniques and intuitive understanding of fundamental electromagnetism.

**AEP 3630** Electronic Circuits (also PHYS 3360)
Fall, spring, 4 credits.
Prerequisites: PHYS 2208 or 2213 or permission of instructor.
No previous experience with electronics assumed; however, concepts quickly introduced through introductory topics such as basic DC circuits. Fall semester usually less crowded. 1 lec, 2 labs. Fall, E. Kirkland; spring, S. Heinekamp.
Students analyze, design, build, and experimentally test circuits used in scientific and engineering instrumentation (with discrete components and integrated circuits). Analog circuits: capacitors, operational amplifiers (linear amplifiers with feedback, oscillators, comparators), filters, diodes, and transistors. Digital circuits: combinatorial (gates) and sequential (flip-flops, counters, shift registers) logic. Computer interfacing and digital to analog (DAC) and analog to digital conversion (ADC) and signal averaging.

**AEP 4210** Mathematical Physics I
Fall, summer, 4 credits.
Prerequisite: MATH 2930. Intended for upper-level undergraduates in physical sciences. Strongly recommended: prior completion of common course curriculum mathematics and physics courses. B. Kusse.
Review of vector analysis; complex variable theory, Cauchy-Riemann conditions, complex Taylor and Laurent series, Cauchy integral formula and residue techniques, conformal mapping; Fourier Series; Fourier and Laplace transforms; ordinary differential equations; separation of variables. Texts: *Mathematical Methods for Physicists* by Arfken and *Mathematical Physics* by Butkov.

**AEP 4220** Mathematical Physics II
Spring, 4 credits.
Prerequisite: AEP 4210.
Second of two-course sequence in mathematical physics intended for upper-level undergraduates in physical sciences. B. Kusse.
Topics include partial differential equations, Bessel functions, spherical harmonics, separation of variables, wave and diffusion equations, Laplace, Helmholtz, and Poisson’s Equations, transform techniques, Green’s functions; integral equations, Fredholm equations, kernels; complex variables, theory, branch points and cuts, Riemann sheets, method of steepest descent, tensors, contravariant, and covariant representations, group theory, matrix representations, class and character. Texts: *Mathematical Methods for Physicists* by Arfken and *Mathematical Physics* by Butkov.

**AEP 4230** Statistical Thermodynamics
Fall, 4 credits.
Prerequisite: introductory three-semester physics sequence, familiarity with quantum mechanics (AEP 3620), and one year junior-level mathematics. Staff.

Introduction to systems of interacting particles. At the level of *Introductory Statistical Mechanics* by Bowley and Sanchez.
AEP 4340 Continuum Physics
Spring. 4 credits. Prerequisites: AEP 3330 and 3560 or equivalent. Staff. Topics: Elasticity and Fluid Mechanics: basic phenomena of elasticity, simple beams, stress and strain tensors, equations of motion, general beam equations, waves; fluids: basic phenomena, Navier Stokes equation, scaling laws, Reynolds and Froude numbers, Poiseuille flows, Stokes drag on spheres, inviscid and incompressible flows, potential flow, conservation laws, Bernoulli equation, vorticity and circulation, life of wings, jets, instabilities, introduction to turbulence. Projects in combination with AEP 4580 possible. At the level of Continuum Mechanics by Lai, Rubin, and Kremp and Introduction to Fluid Mechanics by Tronin.

AEP 4380 Computational Engineering Physics
Spring. 3 credits. Prerequisites: CS 1100 or 1112, AEP 4210, 3390, 3550, 3610, or equivalent, or permission of instructor; co-registration in 3620 permitted. Staff. Numerical computation (e.g., derivatives, integrals, differential equations, matrices, boundary-value problems, relaxation, Monte Carlo methods) is introduced and applied to engineering physics problems that cannot be solved analytically (e.g., three-body problem, electrostatic fields, quantum energy levels). Computer programming required (in C or optionally C++, FORTRAN, or Pascal). Some prior exposure to programming assumed but no previous experience with C assumed.

AEP 4400 Quantum and Nonlinear Optics
Spring. 4 credits. Prerequisites: AEP 3560, 3620, or equivalent. Staff. Introduction to the fundamentals of the interaction of laser light with matter and to optical devices based on these processes. Topics include the propagation of laser beams in bulk media and guided-wave structures, the origins of optical nonlinearities, harmonic generation, parametric amplification, self-focusing, optical switching, propagation of ultrashort pulses, solitons, four-wave mixing, optical phase conjugation, optical resonance and two-level atoms, atom cooling and trapping, multiphoton processes, spontaneous and stimulated scattering, and ultra-intense laser-matter interactions.

AEP 4500 Introductory Solid State Physics (also PHYS 4454)
Fall. 4 credits. Highly recommended: some exposure to quantum mechanics at level of PHYS 4413, AEP 3620, or CHEM 7930. Staff. Introduction to the physics of crystalline solids. Covers crystal structures, electronic states, lattice vibrations, metals, semiconductors, and superconductors. Computer simulations of the dynamics of electrons and ions in solids. Covers optical properties, magnetism, and superconductivity as time allows. The majority of the course addresses the foundations of the subject, but time is devoted to modern and/or technologically important topics such as quantum size effects. At the level of Introduction to Solid State Physics by Kittel or Solid State Physics by Ashcroft and Mermin.

AEP 4700 Biophysical Methods (also BIOLB 4700)
Fall. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through sophomore level. Recommended: some knowledge of cellular biology. Letter grades only. Next offered 2011–2012. Overview of the diversity of modern biophysical experimental techniques used in the study of biological systems at the cellular and molecular level.

AEP 4840 Introduction to Controlled Fusion: Principles and Technology (also ECE/NSE 4840, MAE 4590)
Spring. 3 credits. On demand. Prerequisites: PHYS 1112, 2212, and 2214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students. For description, see NSE 4840.

AEP 4900–4910 Independent Study in Engineering Physics
Fall, spring. Credit by TBA Laboratory or theoretical work in any branch of engineering physics under the direction of a member of the faculty. The study can take a number of forms; for example, design of laboratory apparatus, performance of laboratory measurements, computer simulation or software developments, theoretical design and analysis. Details TBA with respective faculty member.

AEP 5500 Applied Solid State Physics
Spring. 3 credits. Prerequisites: AEP 3560, 3620, 4220, 4550 or equivalent. Directed at students who have had an introductory course in solid state physics at the level of Kittel. Concentrates on the application of the quantum mechanical theory of solid state physics to semiconductor materials, solid state electronic devices, solid state detectors and generators of electromagnetic radiation, superconducting devices and materials, the nonlinear optical properties of solids, ferromagnetic materials, nanoscale devices, and atom and microscopic quantum mechanical effects. The course stresses the basic, fundamental physics underlying the applications rather than the applications themselves. At the level of Introduction to Applied Solid State Physics by Dalven.

AEP 5520 Physics of Life
Spring. 3 credits. Introduces the physics of biological macromolecules (e.g., proteins, DNA, RNA) to students of the physical sciences or engineering who have little or no background in biology. The macromolecules are studied from three perspectives. First, the biological role or function of each class of macromolecules is considered. Second, a quantitative description of the physical interactions that determine the behavior of these systems is provided. Finally, techniques that are commonly used to probe these systems, with an emphasis on current research are discussed. Additional requirements for AEP M.Eng. students: Research current topic provided by the instructor and give an oral presentation in class.

AEP 5570 Applied Electrodynamics
Fall. 4 credits. At the level of Jackson’s Classical Electrodynamics. Topics include wave propagation in dielectrics, conductors, and plasmas; pulse propagation in dispersive media; reflection and transmission at interfaces; diffraction from apertures and periodic media; radiation from charged particles, dipoles, and antennae; scattering of radiation; waveguides and transmission lines; cavities and resonators.

AEP 5710 Biophysical Methods Advanced Laboratory
Spring, first three weeks of Jan. or TBA during spring semester. 3 credits. Prerequisite: AEP 4700. Recommended but qualified students who have not taken AEP 4700 also accepted. Letter or S–U grades. M. Lindau. Offered to students in the engineering, physics, chemistry, and other disciplines who are interested in research at the interface between physical sciences/engineering and life sciences. In groups of two, participants perform five experiments in research laboratories on state-of-the-art equipment. Lab training sessions are arranged individually in January and throughout the spring semester. Typically each experiment is two days in the lab plus one day for analysis and report writing. The course is intended for students who seek hands-on introduction to modern biophysical experimental methods.

AEP 6070 Advanced Plasma Physics (also ECE 5820)
Spring. On demand. 4 credits. Prerequisites: ECE 4410 and AEP 6060. For description, see ECE 5820.

AEP 6330 Nuclear Reactor Engineering (also NSE 6330)
Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand. K. B. Cady. For description, see NSE 6330.

AEP 6610 Nanocharacterization
3 credits. Prerequisites: Fourier transforms, basic electromagnetism, and undergraduate quantum mechanics or chemistry. Undergraduates should consult with instructor before enrolling. Next offered 2011–2012. Graduate-level introduction to the tools used to image and probe optical, electronic, chemical, and mechanical properties at the nanoscale and below.

AEP 6620 Micro/Nano-fabrication and Processing
Spring. 3 credits. Introduction to the fundamentals of micro- and nano-fabricating and patterning thin-film materials and surfaces, with emphasis on electronic and optical materials, micro-mechanics, and other applications. Vacuum and plasma thin-film deposition processes. Photon, electron, X-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is on understanding the physics and materials science that define and limit the various processes. At the level of Brodie and Muray.

AEP 6630 Nanobiotechnology (also BIOLB 6630, MSE 5630)
Fall. 3 credits. Letter grades only. Upper-level undergraduate and graduate-level course that covers the basics of biology and the principles and practice of nanofabrication techniques. The course focuses on applications in biomedical and biological research. A team design project that stresses interdisciplinary communication and problem solving is one of the course requirements. The course meets twice weekly with 75-minute classes. All lectures are teleconferenced to NBTC associate institutes.
AEP 7110  Principles of Diffraction (also MSE 6710)  
Fall. 3 credits. Letter grades only.  
J. D. Brock.  
Graduate-level introduction to diffraction/ 
scattering phenomena in the context of solid-
state and soft condensed-matter systems. The 
primary topic is using the scattering and 
absorption of neutron, electron, and X-ray 
beams to study physical systems. Particular 
emphasis is placed on issues related to 
synchrotron X-ray sources. Specific topics 
include elastic and inelastic scattering, 
diffraction from two- and three-dimensional 
periodic lattices, the Fourier representation 
of scattering centers and the effects of thermal 
vibrations and disorder; diffraction, reflectivity, 
or scattering from surface layers; diffraction or 
scattering from gases and amorphous 
materials; small angle scattering; X-ray 
absorption spectroscopy; resonant (e.g., 
magnetic) scattering; novel techniques using 
coherent X-ray beams; and a survey of 
dynamical diffraction from perfect and 
imperfect lattices.

AEP 7510  M.Eng. Project  
Fall, spring. 6-12 credits TBA. Requirement 
for M.Eng. (engineering physics) students. 
Independent study under the direction of 
a member of the university faculty. Students 
participate in an independent research project 
through work on a special problem related to 
their field of interest. A formal and complete 
research report is required.

AEP 7530  Special Topics Seminar in 
Applied Physics  
Fall, spring. 1 credit. Requirement for 
M.Eng. and M.S. Recommended for first-
year Ph.D. (engineering physics) students; 
recommended for seniors in engineering 
physics. Prerequisite: undergraduate 
physics. Special topics in applied science, with focus 
on areas of applied physics and engineering 
that are of current interest. Subjects chosen 
are researched in the library and presented in 
a seminar format by the students. Effort is 
made to integrate the subjects within selected 
subject areas such as atomic, biological, 
computational, optical, plasma, and solid-state 
physics, or microfabrication technology, as 
suggested by the students and coordinated by 
the instructor.

[AEP 7810  Advanced Plasma Physics I: 
Cosmic Plasma Physics]  
AEP 7820  Advanced Plasma Physics 
(also ECE 6820)  
Spring. 3 credits. Prerequisite: ECE 5810.  
C. E. Seyler.  
For description, see ECE 6820.

BIOLOGICAL AND ENVIRONMENTAL 
ENGINEERING  
D. J. Aneshansley, chair; B. A. Ahner, assoc. 
chair; L. D. Albright, L. T. Angenent, 
A. J. Baejunner, J. A. Bartsch, A. K. Datta, 
K. G. Gebremedhin, D. A. Haith, P. G. Hess, 
J. J. Hunter, L. H. Irwin, D. Luo, J. C. March, 
J.-Y. Parlange, G. E. Rehkugler, N. R. Scott, 
R. M. Spanswick, T. S. Steenhuis, 
M. B. Timmons, L. P. Walker, M. F. Walter, 
M. T. Walker. Lecturers: C. L. Anderson, 
L. D. Geochring, M. Wu  
For complete course descriptions, see 
“Biological and Environmental Engineering” 
under “College of Agriculture and Life 
Sciences” or visit the department web site, 
www.bee.cornell.edu.

BEE 1200  The BEE Experience  
Spring. 1 credit. Requirement for CALS BEE 
freshmen. Not required for students who 
have completed ENGRG 1050. Prerequisite: 
BEE majors or permission of instructor.

BEE 1510  Introduction to Computer 
Programming  
Fall. 4 credits. Limited to 18 students per 
lab and rec. Pre- or corequisite: MATH 
1910 or equivalent. No previous 
programming experience assumed.

BEE 2220  Bioengineering 
Thermodynamics and Kinetics  
Spring. 3 credits. Prerequisites: MATH 1920, 
PHYS 2213, and chemistry course complet-
ed or concurrent.

BEE 2510  Engineering for a Sustainable 
Society (also ENGRD 2510)  
Fall. 5 credits. Pre- or corequisite: MATH 
2930.

BEE 2600  Principles of Biological 
Engineering (also ENGRD 2600)  
Fall. 3 credits. Pre- or corequisite: MATH 
2930, two semesters of core biology major 
classes and the investigative lab or BLOG 
1105–1106.

BEE 3299  Sustainable Development  
Spring, summer. 3 credits. Prerequisite: at 
least sophomore standing; S–U or letter 
grades.

BEE 3310  Bio-Fluid Mechanics  
Fall, summer. 4 credits. Prerequisites: ENGRD 
2020 and engineering math 
sequence.

BEE 3500  Biological and Environmental 
Transport Processes  
Spring, summer (offered spring 2011 only; 
taught again in fall 2011 and every fall 
thereafter). 3 credits. Pre- 
or corequisite: MATH 
2930 and fluid mechanics course.

BEE 3600  Molecular and Cellular 
Bioengineering (also BME 3600)  
Spring. 3 credits. Prerequisites: BEE 2600, 
biochemistry, linear algebra, ordinary 
differential equations, or permission of 
instructor.

BEE 3650  Properties of Biological 
Materials  
Spring. 3 credits. Satisfies BE laboratory 
experience requirement. Pre- or corequi-
site: ENGRD 2020.

[BEE 3680  Biotechnology Applications: 
Animal Bioreactors  
Fall. 3 credits. Prerequisite: biochemistry 
course or permission of instructor. Offered 
alternate years; next offered 2011–2012.]

BEE 3710  Physical Hydrology for 
Ecosystems  
Spring. 3 credits. Prerequisite: MATH 1920 
or permission of instructor. Offered 
alternate years.

BEE 4010  Renewable Energy Systems  
Spring. 4 credits. Prerequisites: college 
physics.

BEE 4270  Water Measurement and 
Analysis Methods  
Fall. 3 credits. Satisfies BE and EnvE labo-
ratory experience requirement. 
Prerequisites: CEE 3510 or hydrology 
course.

BEE 4350  Principles of Aquaculture  
Spring. 3 credits. Satisfies BE capstone 
design requirement. Prerequisite: at least 
junior standing.

BEE 4500  Bioinstrumentation  
Spring. 4 credits. Satisfies both BE labora-
tory experience and capstone design 
requirement. Prerequisites: MATH 2940, 
t introductory computing, two semesters of 
physics, statistics, or permission of instruc-
tor.

BEE 4530  Computer-Aided Engineering: 
Applications to Biomedical 
Processes  
Fall. 3 credits (offered fall 2010 only; 
offered in spring 2012 and every spring 
thereafter). Satisfies College of Engineering 
technical writing requirement. Prerequisite: 
heat and mass transfer course (BEE 3500 
or equivalent).

BEE 4550  Biologically Inspired 
Microsystems Engineering  
Fall. 2–3 credits. Prerequisites: one year of 
biology, BEE 2220, co-registration in BEE 
3500 and BEE 3310.

BEE 4590  Biosensors and Bioanalytical 
Techniques  
Fall. 3 credits. Prerequisite: biochemistry 
course or permission of instructor.

BEE 4600  Deterministic and Stochastic 
Modeling in Biological Engineering  
Fall. 3 credits. Satisfies BE capstone design 
requirement. Prerequisites: MATH 2940, 
MATH 2940, BEE 3500 or equivalent, Mass 
and Energy Balances, or permission of 
instructor. S–U or letter grades.

BEE 4640  Bioseparation Processes  
Fall. 3 credits. Prerequisites: introductory 
biochemistry and physics, MATH 1920, 
BEE 2600 or equivalent, or permission of 
instructor. S–U or letter grades. Offered 
alternate years.

BEE 4710  Introduction to Groundwater 
(also EAS 4710)  
Spring. 3 credits. Prerequisites: MATH 
2930, fluid mechanics or hydrology course. 
S–U or letter grades. Offered alternate years.

BEE 4730  Watershed Engineering  
Fall. 4 credits. Satisfies BE and EnvE cap-
stone design requirement. Satisfies College 
of Engineering technical writing require-
ment. Prerequisite: CEE 3310 or hydrology 
course.
BEE 4740 Water and Landscape Engineering Applications
Spring. 3 credits. Satisfies BE and EnvE capstone design requirement. Prerequisite: CHE 3510 or hydrology course or permission of instructor.

BEE 4750 Environmental Systems Analysis
Fall. 3 credits. Prerequisites: computer programming course and one year of calculus.

BEE 4760 Solid Waste Engineering
Spring. 3 credits. Prerequisites: one semester of physics and chemistry.

BEE 4800 Our Changing Atmosphere: Global Change and Atmospheric Chemistry (also EAS 4800)
Fall. 3 credits. Prerequisites: CHEM 2090, MATH 1920, PHYS 1112 or equivalent, or permission of instructor. S–U or letter grades.

BEE 4810 LRFD-Based Engineering of Wood Structures (also CEE 4810)
Spring. 3 credits. Satisfies BE capstone design requirement when co-registered in BEE 4960. Prerequisite: ENGRD 2020.

BEE 4840 Metabolic Engineering
Spring. 3 credits. Prerequisite: biochemistry course or permission of instructor.

BEE 4860 Industrial Ecology of Agriculturally Based Biindustries
Spring. 3 credits. Prerequisites: one year calculus, some knowledge of MATLAB.

BEE 4870 Sustainable Bioenergy Systems
Fall. 3 credits. Satisfies BE and EnvE capstone design requirement. Prerequisites: BEE 2220 or equivalent thermodynamics course. Intended for upper-level undergraduates or graduate students.

BEE 4890 Entrepreneurial Management for Engineers
Fall. 4 credits. Prerequisite: junior standing.

BEE 4900 Biofuels: The Economic and Environmental Interactions
Spring. 2 credits. Prerequisites: senior or graduate standing, others by permission of instructor. S–U or letter grades.

BEE 4930 Technical Writing for Engineers
Spring. 1 credit. Corequisite: BEE 4810.

BEE 4960 Capstone Design in Biological and Environmental Engineering
Spring. 1 credit. Corequisite: BEE 4810.

BEE 4970 Individual Study in Biological and Environmental Engineering
Fall, spring. 1–4 credits. Prerequisites: written permission of instructor and adequate ability and training for work proposed. Normally reserved for seniors in upper two-fifths of their class. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall).

BEE 4990 Undergraduate Research
Fall, spring. 1–4 credits. Prerequisites: written permission of instructor; adequate training for work proposed. Normally reserved for seniors in upper two-fifths of their class. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall).

BEE 4991–4992 Honors Research
Fall, spring. 1–6 credits. Prerequisite: enrollment in BEE Honors Research Program.

BEE 5010 Bioengineering Seminar (also BME 5010)
Fall, spring. 1 credit. Prerequisite: junior, senior, or graduate standing. S–U grades only.

BEE 5330 Engineering Professionalism
Spring. 1–2 credits. Prerequisite: graduate student with accredited engineering degree or senior who will graduate with an accredited engineering degree. Students enrolling in 1-credit option must register to take Fundamentals of Engineering Exam. Lec only for first 10 weeks of semester. S–U or letter grades.

BEE 5901–5902 M.P.S. Project
Fall, spring. 1–6 credits. Requirement for all M.P.S. candidates in field.

BEE 5951–5952 Master of Engineering Design Project
Fall, spring. 3–6 credits. Prerequisite: admission to M.Eng. degree program.

BEE 6200 Approaches to Analytical Characterization of Biological Macromolecules
Spring. 1 credit. Prerequisites: CHEM 1570 or 3570, BIOMG 3550 or 3510 and MATH 1920.

BEE 6430 Veterinary Perspectives on Pathogen Control in Animal Manure (also VTMED/BIOIM 6430)
Spring. 8 weeks. 2 credits. Prerequisites: limited to third- and fourth-year veterinary students, graduate students, and advanced undergraduate students interested in agricultural engineering as related to animal manure management.

BEE 6470 Water Transport in Plants (also BIOL 6510)
Fall. 2 credits. Offered alternate years; next offered 2011–2012.

BEE 6490 Solute Transport in Plants (also BIOL 6490)
Fall. 3 credits. Offered alternate years.

BEE 6570 Mixed-Culture Engineered Systems: Bioenergy and Microbial Ecology
Spring. 3 credits. Prerequisite: graduate standing only. Letter grades only.

BEE 6590 Biosensors and Bioanalytical Techniques
Fall. 3 credits. Prerequisites: biochemistry course and permission of instructor.

BEE 6720 Drainage
Spring. 4 credits. Prerequisite: BEE 4710 or 4730. Offered alternate years; next offered 2011–2012.

BEE 6740 Ecohydrology
Spring. 3 credits. Prerequisite: ecohydrology or hydrology course. Offered alternate years; next offered 2011–2012.

BEE 6870 The Science and Engineering Challenges to the Development of Sustainable Bio-Based Industries
Fall. 1 credit. Prerequisite: graduate standing. S–U grades only.

BEE 6940 Water in a Changing Climate: Interdisciplinary Discussions on Today’s Human-Natural Water Systems (also NTRES 6940)
Fall. 1 credit. S–U grades only.

BEE 6970 Graduate Individual Study in Biological and Environmental Engineering
Fall. 1 credit. Prerequisite: permission of instructor. S–U or letter grades.

BEE 7000 Orientation to Graduate Study
Fall. 1 credit. Prerequisite: newly joining graduate students in BEE. S–U grades only.

BEE 7540 The Right to Water (also NES 7540)
Fall. 2 credits. Prerequisite: graduate standing or permission of instructor. S–U or letter grades.

BEE 7600 Nucleic Acid Engineering (also BME 7600)
Spring. 2 credits. Prerequisite: graduate standing; seniors by permission of instructor. S–U or letter grades.

BEE 7710 Soil and Water Engineering Seminar
Fall, spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S–U or letter grades.

BEE 8900 Master’s-Level Thesis Research
Fall, spring. 1–15 credits. Prerequisite: permission of advisor. S–U grades only.

BEE 9900 Doctoral-Level Thesis Research
Fall, spring. 1–15 credits. Prerequisite: permission of advisor. S–U grades only.

BIOMEDICAL ENGINEERING

BME 1310 Introduction to Biomedical Engineering (also ENGR 1310)
Spring. 3 credits. Prerequisite: freshman or sophomore standing. D. A. Putnam and S. D. Archer. For description, see ENGR 1310.

BME 3010 Molecular Principles of Biomedical Engineering (also CHEM 4010)
Fall. 3 credits. Prerequisite: basic biology such as BIOL 1110, BIOM 3300, or BIOM 2900. Lec and lab. M. Jin and S. D. Archer.

Introduction to genomics, proteomics, bioinformatics, and computational biology with an emphasis on the engineering challenges for these areas. Covers cytoskeletal and motor proteins and their relationship to nano- and micro-machines and nanobiotechnology. Existing and emerging
technologies and instrumentation critical to molecular-level analysis in biomedical engineering.

**BME 3020 Cellular Principles of Biomedical Engineering (also CHEM 4020)**

Spring. 3 credits. Prerequisite: BME 3010 or course work in basic biology such as BIOG 1110, BIOMG 3300, or BIOMI 2900 plus mathematics through differential equations (e.g., MATH 2210 or 2940), or permission of instructor. Lec and lab. C. Fischbach-Teschl, W. Zipfel, and S. D. Archer.

Integration of mammalian cell biology with engineering modeling principles, put into the context of medical pathology and disease states. Consists of three modules: (1) cell culture techniques/receptor ligand interactions, (2) cellular trafficking, and (3) signal transduction.

**BME 3300 Introduction to Computational Neuroscience (also BIONB/PSYCH/COGST 3300)**

Fall. 3 or 4 credits. 4 credits includes lab providing additional computer simulation exercises. Limited to 25 students. Prerequisite: BION 2220 or permission of instructor. S-U or letter grades. Offered alternate years. C. Linster.

For description, see BION 3300.

**BME 3600 Molecular and Cellular Bioengineering (also BEE 3600)**

Spring. 3 credits. Prerequisite: BEE 2600, biochemistry course, linear algebra, ordinary differential equations, or permission of instructor.

For description, see BEE 3600.

**BME 4010 Biomedical Engineering Analysis of Metabolic and Structural Systems (also MAE 4660)**

Fall. 3 credits. Prerequisite: basic biology course work. Highly recommended: solid mechanics and fluid mechanics courses. Lec and lab. J. L. Bonnassar and S. D. Archer.

Presents the quantitative biology of the renal, respiratory, cardiovascular, and musculoskeletal systems. Includes mathematical modeling of physiological processes involving mechanics and transport in solid and fluid organs.

**BME 4020 Electrical and Chemical Physiology**

Spring. 3 credits. Prerequisite: BME 3010, 3020, or 4010 or biology background or permission of instructor. Lec and lab. C. Reinhart-King and S. D. Archer.

Focuses on understanding how circulating agents and bioelectric activity comprises interorgan and central nervous system communication, and control of the human body. Additional emphasis includes examining medical devices involved in the treatment of human disease.

**BME 4110 Science and Technology Approaches to Problems in Human Health**

Fall. 3 credits. Prerequisites: junior, senior, or graduate standing; sophomores by permission of instructor. C. B. Schaffer and M. G. Kaplon.

Provides an in-depth look at diseases that impact human health along with current scientific research and engineering that is aimed at addressing these problems. Faculty from the Weill Cornell Medical College discuss health problems they are unable to treat as well as they would like, then Cornell University and Weill faculty discuss current research aimed at better understanding disease process, developing new treatment strategies, and improving patient outcomes. The course is particularly appropriate for students considering medical school or careers in biomedical science and engineering.

**BME 4520 Inside-Out Ergonomics II (also DEA 4520)**

Fall. 3 credits. D. Feathers.

For description, see DEA 4520.

**BME 4640 Orthopaedic Tissue Mechanics (also MAE 4640)**

Spring. 3 credits. Prerequisites: ENGRD 2020 and MAE 3250 or permission of instructor. Offered alternate years. For description, see MAE 4640.

**BME 4810 Biomedical Engineering (also CHEME 4810)**

Spring. 3 credits. Prerequisite: CHEM 3240 or equivalent or permission of instructor. W. L. Olbricht.

For description, see CHEME 4810.

**BME 4900 Independent Undergraduate Project in Biomedical Engineering**

Fall, spring. Variable credit. Staff.

Research or projects by an individual or a small group of undergraduates.

**BME 4910 Principles of Neurophysiology (also BIONB 4910)**

Spring. 4 credits. Limited to 20 students. Prerequisite: BION 2220 or written permission of instructor. S-U or letter grades for graduate students by permission of instructor. B. R. Johnson.

For description, see BIONB 4910.

**BME 4980 Special Topic: Introduction to Systems and Synthetic Biology**

Spring. 4 credits. X. Shen.

For description, see ECE 4980.

**BME 5010 Bioengineering Seminar (also BEE 5010)**

Fall, spring. 1 credit. Prerequisite: junior, senior, or graduate standing. Staff.

Students attend seminars in the field of engineering. Eligible seminars include the Biomedical Engineering Seminar, listings in the "Biophysics Colloquia" or those with engineering perspectives of design and development, enabling those undertaking projects (BME 5910) to have timely exposure to key enabling concepts.

**BME 5020 Biomedical System Design (also ECE 5020)**

Spring, 1–4 credits. Prec- or corequisites: at least one of ECE 4250, 4760, 4530. J. C. Belina.

For description, see ECE 5020.

**BME 5030 Electronic Bioinstrumentation (also ECE 5030)**

Fall. 4 credits. Prerequisites: introductory biology, analog design, signal processing, at the level of BIOL 1010, ECE 3150, and ECE 4250, respectively; M.Eng. students only; permission of instructor. B. R. Lind.

For description, see ECE 5030.

**BME 5390 Biomedical Materials and Devices for Human Body Repair (also FSAD 4390)**

Spring, 2–3 credits. Prerequisites: junior or senior standing; college natural science requirement (chemistry or biology). C. C. Chu.

For description, see FSAD 4390.

**BME 5400 Biomedical Computation**

Fall. 3 credits. Prerequisites: MATH 2930 and 2940 (or equivalent), and introductory computer programming course. M. R. King.

The application of numerical and statistical methods to model biological systems and interpret biological data, using the MATLAB programming language.

**BME 5500 Product Engineering and Design in Biomedical Engineering**

Fall. 3 credits. Prerequisite: graduate standing; requirement for M.Eng. students majoring in BME. D. Lipson and R. W. Newman.

A beginning to a cornerstone understanding of engineering, regulatory business, and individual issues for new medical product development. Student background and interests may be highly varied. To accommodate these varied perspectives, the initial focus of the class is on the engineering perspectives of design and development, enabling those undertaking projects (BME 5910) to have timely exposure to key enabling concepts.

**BME 5600 Biotransport and Drug Delivery**

Spring. 3 credits. Prerequisites: CHEME 3240 and MATH 2930, or equivalent. M. R. King.

Focuses on engineering analysis of drug delivery applications and basic transport processes in physiological systems. Specific topics include targeted drug delivery, controlled drug release, bioreheology, capillary mass transport, and pharmacokinetic compartmental models.

**BME 5620 Biorheology (also MSE 5620)**

Spring. 3 credits. L. Estroff.

For description, see MSE 5620.

**BME 5690 Clinical Biomechanics of Musculoskeletal Tissues (also MAE 5690)**

Fall. 3 credits. Offered alternate years. Y. Gao.

For description, see MAE 5690.

**BME 5700 Biophysical Methods (also BIONB/AEP 4700)**

Fall. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through sophomore level. Recommended: some knowledge of cellular biology. Letter grades only. M. Lindau.

For description, see AEP 4700.

**BME 5710 Analytical Techniques for Material Science (also MSE 5710)**

Spring. 3 credits. D. Grubbs.

For description, see MSE 5710.

**BME 5780 Computer Analysis of Biomed Images (also ECE 5780)**

Spring. 4 credits. Prerequisite: permission of instructor. A. P. Reeves.

For description, see ECE 5780.

**BME 5810 Soft Tissue Biomechanics (also MAE 5680)**

Fall. 3 credits. Prerequisites: graduate standing; seniors by permission of instructor. J. T. Butcher.

Introduces concepts of biomechanics applied to understanding the material behavior of soft tissues. Topics include finite strain, nonlinearities, constitutive frameworks, and experimental methodologies. Tissues to be modeled include tendons, blood vessels, heart valves, cartilage, and engineered tissues.
BME 5830 Cell-Biomaterials Interactions
Spring. 3 credits. Corequisites: BME 3010, concurrent with 3020, or permission of instructor. C. Reinhart-King.
Biological principles underlying biomaterial design and cell adhesive behavior, incorporating biomechanical analysis across the molecular, cellular, and tissue length scales.

[BME 5850 Current Practice in Tissue Engineering
Fall. 5 credits. Corequisites: BME 3010 or 4010 (or BME 5020 as corequisite). Next offered 2011–2012. C. Fischbach-Teschl.
Covers fundamental biological principles and engineering concepts underlying the field of tissue engineering and describes specific strategies to engineer tissues for clinical use along with examples.]

BME 5910 Design Project
Fall, spring. Variable credit. Prerequisite: graduate standing. D. Lipson and staff.
Describes and evaluates a biomedical engineering device or therapeutic strategy. Team projects are encouraged.

BME 5930 Independent Design Project
Fall and spring. Variable credit. Prerequisite: graduate standing. D. Lipson and staff.
Graduate-level nonthesis research or studies on special projects in biomedical engineering.

BME 6100 Principles of Medical Imaging (also VTB 5810)
Fall. 1–3 credits. Prerequisites: 3-credit enrollment requires functional knowledge and skills of linear algebra, calculus, Fourier transformation, and calculus-based physics. Y. Wang and N. Dykes.
One-credit version requires attendance the first five weeks of lectures on nonmathematical description of imaging principles and field trips to Cornell University Hospital for Animals (CUHA) to see imaging in clinical practice. Three-credit version requires attendance for the entire semester. The later part of the lectures focus on mathematical description of imaging principles. The formulations of spatial encoding and physical processes for the modalities are presented for all major imaging modalities: x-ray, CT, MR, SPECT/PET, US. The inverse problem between detected signal and image source is discussed and the concepts of image resolution, SNR, and scan time is illustrated analytically and quantitatively for all modalities.

BME 6260 Biomedical Optics, Imaging, and Spectroscopy
Spring. 3 credits. Prerequisites: introductory physics, calculus, and biology. W. R. Zipfel.
Fundamentals of optical systems design, application, and analysis of concepts used in biological imaging and biomedical optics. The course covers the theory and application of light sources, lenses, mirrors, dispersion elements, optical fibers, detectors, and tissue optics; optical systems analysis concepts such as resolution, optical transfer functions, deconvolution and interference, all in relation to biomedical microscopy, spectroscopy, and bioanalytical techniques.

BME 6310 Engineering Principles for Drug Delivery (also CHEM 6310)
Fall. 3 credits. Prerequisites: graduate standing and background in organic and polymer chemistry or permission of instructor: D. A. Putnam.
Application of engineering design principles to problems in drug formulation and delivery. Specific topics include traditional drug formulation, mechanisms and kinetics of pharmacological stability. Stimuli-sensitive systems, controlled-release devices, prodrugs, targeted drug delivery, biomaterials, gene therapy, and governmental regulatory issues.

BME 6410 Biomedical Engineering Analysis of Proteins for Medicine
Spring. 3 credits. Prerequisites: graduate standing and background in biology and chemistry. M. Jin.
Protein engineering principles applied to developing molecules for biotherapeutics and biophysical studies. Course topics include general overview on biochemistry, molecular understanding of proteins in cell signaling, physiology, and pathophysiology, and reviews on modern instrumentations for biophysical studies of proteins. Includes hands-on experience with computers and algorithms for structure inspection and rational design of proteins for medicine.

BME 6501 Natural Engineering: Developmental Biology Paradigms for Regenerative Medicine
Spring. 1–2 credits. Prerequisite: graduate standing. J. T. Butcher.
This course is in two modules. The first module (1 credit) covers the embryonic development and fetal maturation of several major organ systems, including lungs, heart, vascular, and bone from an engineer's perspective (evolutionary conservation, major signaling pathways involved, etc). The second module (2 credits) builds upon the first module by highlighting engineering approaches to study developmental biology (e.g., systems biology, mechanical testing, micro-environmental control, genetic manipulation, tissue engineering). The module also identifies relationships between developmental biology and postnatal disease, as well as explore developmental biology–based approaches for regenerative medicine (directed stem cell differentiation, mechanical conditioning, matrix-based differentiation, etc.). Material is drawn largely from primary literature. Students have regular manuscript reviews, two midterms, and a final project analyzing the natural engineering of a different organ system.

[BME 6640 Mechanics of Bone (also MAE 6640)]
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years; next offered 2011–2012.
For description, see MAE 6640.

BME 6650 Principles of Tissue Engineering (also MAE/MSE 6650)
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years. L. Bonassar.
Covers introductory concepts in tissue engineering, including polymeric biomaterials used for scaffolds, mechanisms of cell-biomaterial interaction, biocompatibility and foreign body response, cell engineering, and tissue biomechanics. This knowledge is applied to engineering of several body systems, including the musculoskeletal system, cardiovascular tissues, the nervous system, and artificial organs. These topics are discussed in the context of scale-up, manufacturing, and regulatory issues.

BME 6670 Nanobiotechnology (also AEP/BIOG 6630, MSE 6630)
Fall. 3 credits. Letter grades only. C. Reinhart-King.
Upper-level undergraduate and graduate-level course that covers the basics of biology and the principles and practice of microfabrication techniques. Course lectures are largely from guest faculty with expertise in the presented topic areas. The course focuses on applications in biomedical and biological research. A team design project that stresses interdisciplinary collaboration and problem solving is one of the course requirements. The course meets twice weekly with 75-minute classes. All lectures may be teleconferenced to Weill Cornell Medical College and other cooperating institutions.

BME 7100 Fundamentals of Biomedical Engineering Research I
Fall. 3 credits. Prerequisite: BME M.S./Ph.D. graduate students. W. R. Zipfel and staff.
First part of a two-semester sequence that introduces students to a variety of subjects in biomedical engineering including nanobiotechnology, biomechanics, systems and computational biology, biomaterials, tissue engineering, statistics, and experimental design. The course also covers associated subjects including professional development, ethics, writing a scientific paper, authorship issues, patents, technology transfer, conflicts of interest, and preparing a research proposal. The course is a combination of lectures and discussions, with students taking an active role in the instruction.

BME 7130 Core Concepts in Disease
Spring. 3 credits. Prerequisites: introductory biology; Ph.D. students, for all others, permission of instructor. C. B. Schaffer.
Most diseases emerge due to a relative small number of biological effects, including mechanisms like infection, inflammation, neoplasia, genetic mutation, protein misfolding, and metabolic deregulation. Students learn about disease-state biology by focusing on these broad disease pathways. The course consists of several modules, each focused on one broad class of disease mechanism, and includes both a discussion of the underlying biology of the disease pathway as well as examples of specific diseases that involve those mechanisms. This course complements the training in fundamental normal-state biology students are already receiving by providing a mechanism-centered view of disease development.

BME 7160 Immersion Experience in Medical Research and Clinical Practice
Fall. 6 credits. Prerequisite: Ph.D. students in BME. L. J. Bonassar and Y. Wang.
An introduction to modern biology including aspects of biochemistry and molecular and cellular biology intended for students with no significant background in this area. An emphasis on practical applications of this knowledge in a variety of settings including the production of industrial enzymes, pharmaceuticals, and biologics.

CHEM 3130 Chemical Engineering Thermodynamics
Fall. 3 credits. Prerequisite: physical chemistry II. T. Hanrath. Studies the first and second laws and their consequences for chemical systems. Covers thermodynamic properties of pure fluids, solids, and mixtures; phase and chemical reaction equilibrium; heat effects in batch and flow processes; and power cycles and refrigeration.

CHEM 3230 Fluid Mechanics
Spring. 3 credits. Prerequisites: CHEM 2190 and MATH 2930. L. A. Archer. Fundamentals of fluid mechanics. Macroscopic and microscopic balances. Applications to problems involving viscous flow.

CHEM 3240 Heat and Mass Transfer
Fall. 3 credits. Prerequisite: CHEM 3230. Staff. Fundamentals of heat and mass transfer. Macroscopic and microscopic balances. Applications to problems involving conduction, convection, and diffusion.

CHEM 3250 Analysis of Separation Processes
Spring. 3 credits. Prerequisites: CHEM 3130 and 3240. A. B. Anton. Covers the analysis of separation processes involving phase equilibrium and mass transfer. Topics include phase equilibrium; equilibrium-based separations; rate-based separation processes (membrane separations, sorption operations); introduction to bioseparations and process simulators; choosing a separation option; and the design and synthesis of separation processes.

CHEM 3270 Introduction to Process Dynamics and Control
Spring. 3 credits. Prerequisites: CHEM 3130 and 3240. J. R. Engstrom. Modeling and analysis of the dynamics of chemical processes. Laplace transforms, block diagrams, feedback control systems, and stability analysis.

CHEM 3900 Chemical Kinetics and Reactor Design
Spring. 3 credits. Prerequisites: CHEM 3130 and 3240. T. M. Duncan. Study of chemical reaction kinetics and principles of reactor design for chemical processes.

CHEM 4010 Molecular Principles of Biomedical Engineering (also BME 3010)
Fall. 3 credits. Prerequisite: BIOC 1110 or BIOMG 2300. J. D. Varner. For description, see BME 3010.

CHME 4020 Cellular Principles of Biomedical Engineering (also BME 3020)
Spring. 3 credits. Staff. For description, see BME 3020.

CHME 4130 Introduction to Nuclear Science and Engineering (also AEP/ECE/MAE/NSE/TAM 4130)
Fall. 3 credits. B. Cady. For description, see TAM 4130

CHME 4320 Chemical Engineering Laboratory
Fall. 4 credits. Prerequisites: CHEM 3250, 3240, 3230, and 3900. A. B. Anton and Staff. Laboratory experiments in fluid dynamics, heat and mass transfer, separations, other operations. Correlation and interpretation of data. Technical report writing.

CHME 4620 Chemical Process Design
Spring. 4 credits. Prerequisite: CHEM 4320. A. M. Center and Staff. Students prepare a full-scale feasibility study of a chemical process including product supply and demand forecasts, process design including reactor system design, separations scheme development, heat integration via application of pinch technology, and economic analysis of the process. Students develop presentation and teamwork skills through weekly presentations.

CHME 4700 Process Control Strategies
Spring. 3 credits. A. M. Center. Introduction to how control concepts are represented, control valve sizing and selection, process control strategies, dynamic response of process systems as it relates to control loop tuning, statistical process control, advanced process control methods both for chemical and biological processes and programmable logic controllers and distributed control systems.

CHME 4720 Feedback Control Systems (also ECE 4720, MAE 4780)
Fall. 4 credits. Prerequisites: CHEM 3720, ECE 2200, MAE 3260, or permission of instructor. M. Campbell. For description, see MAE 4780.

[CHME 4800 Chemical Processing of Electronic Materials]

CHME 4810 Biomedical Engineering (also BME 4810)
Spring. 3 credits. Prerequisite: CHEM 3240 or equivalent or permission of instructor. W. L. Olbricht. Special topics in biomedical engineering, including cell separations, blood flow, design of artificial devices and artificial organs, biomaterials, image analysis, biological transport phenomena, pharmacokinetics and drug delivery, tissue engineering, and analysis of physiological processes such as adhesion, mobility, secretion, signaling, and growth.

CHME 4840 Microchemical and Microfluidic Systems
Fall. 3 credits. Prerequisite: CHEM 3900 or permission of instructor. J. R. Engstrom. Principles of chemical kinetics, thermodynamics, and transport phenomena applied to microchemical and microfluidic systems. Applications in distributed chemical production, portable power, micromixing, separations, and chemical and biological sensing and analysis. Fabrication approaches (contrasted with microelectronics), transport
phenomena at small dimensions, modeling challenges, system integration, case studies.

**CHEM 4900 Undergraduate Projects in Chemical Engineering**
Fall, spring. Variable credit. Research or studies on special problems in chemical engineering.

**CHEM 4980 Design and Testing of the Chemical Engineering Car**
Fall, spring. 3–9 variable credits; 3 credits for team members or 4 for officers. Prerequisites: ENGRD 2190 and CHEM 2090. J. D. Varner. Research, design, and construct a small chemical-powered model car. Participate in team-oriented hands-on construction of a car powered with a chemical energy source that will carry a specified load a given distance and stop. The ASCE Student Chapter enters it in the ASCE Regional Conference to qualify and compete in the organization’s national conference competition.

**CHEM 4990 Senior Seminar**
Fall, spring. 1 credit. Prerequisite: CHEM seniors. Staff. Students attend seminars of their selection and write one-page summaries. Eligible seminars include all listings at “Colloquia and Seminars in Physics and Related Fields,” which includes the weekly seminars in, for example, Chemical and Biomolecular Engineering, Chemistry and Chemical Biology, Earth and Atmospheric Sciences, History and Ethics of Engineering, and Materials Science and Engineering.

**CHEM 5201 Introduction to Biomedical Engineering (module)**
Spring, first third of semester. 1 credit. W. L. Olbricht. Co-meets with CHEM 4810.

**CHEM 5202 Introduction to Electronic Materials Processing (module)**

**CHEM 5203 Introduction to Polymer Processing (module)**
Spring, second third of semester. 1 credit. L. A. Archer. Overview and simple quantitative analyses of several plastic processes with an emphasis on the role of rheology in polymer processing.

**CHEM 5204 Turbomachinery Applications (module)**
Fall, last third of semester. 1 credit. A. M. Center. Introduction to pumps, compressors, steam turbines and gas turbines. How they are specified and selected for services in the chemical process industries.

**CHEM 5205 Applications of Fluid Dynamics (module)**
Fall, first third of semester. 1 credit. A. M. Center.

**CHEM 5207 Hydrocarbon Resources and Petroleum Refining (module)**
Spring, second third of semester. 2 credits. A. M. Center. Covers the petroleum refining industry including crude oil evaluation, fuel quality, refining processes, refinery configurations, and refinery economics.

**CHEM 5208 Renewable Resources from Agriculture—Sugarcane as a Feedstock (module)**
Spring, last third of semester. 1 credit. Maximizing the value of a renewable resource by control of inputs and final product use.

**CHEM 5209 Applied Heat Transfer**
Fall, last third of semester. 1 credit. A. M. Center.

**CHEM 5430 Biomolecular Engineering of Bioprocesses**
Fall. 3 credits. Prerequisite: CHEM 3900 or permission of instructor. No prior background in biological sciences required. Next offered 2011–2012. M. P. DeLisa. Discusses principles involved in using biomolecules (e.g., antibodies, enzymes, DNA) and living organisms (e.g., bacteria, yeast, tissue cultures) for engineering biological processes.

**CHEM 5440 Systems Biology in Biotechnology and Medicine**
Spring. 3 credits. J. D. Varner. Principles and application of experimental and computational systems biology tools to problems in human health, biopharmaceutical production, and bioenergy systems. Primary emphasis is understanding the structure and properties of signal transduction and metabolic networks in these applications. Also presents basic tools and strategies used in the emerging field of synthetic biology.

**CHEM 5640 Design of Chemical Reactors**
Spring. 3 credits. Prerequisite: CHEM 3900 or equivalent. D. L. Koch. Design, scale-up, and optimization of chemical reactors with allowance for heat and mass transfer and non-ideal flow patterns. Homework problems feature analysis of published data for gas-solid, gas-liquid, and three-phase reaction systems.

**CHEM 5650 Design Project**
Fall, spring. 3 or 6 credits. Requirement for Chemical Engineering M.Eng. students. Staff. Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

**CHEM 5720 Managing New Business Development**
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. Staff. Case study approach introducing the typical fundamental factors driving a business venture, examines how to develop implementation strategies for the venture, and teaches the project management skills necessary to successfully implement the venture.

**CHEM 5870 Energy Seminar I**
(also MAE 5450, ECE 5870)
Fall. 1 credit. D. Hammer and A. J. Hunter. For description, see ECE 5870.

**CHEM 5880 Energy Seminar II**
(also MAE 5460, ECE 5880)
Fall. 1 credit. D. Hammer and A. J. Hunter. For description, see ECE 5880.

**CHEM 5990 Medical and Industrial Biotechnology Seminar**
Fall, spring. 1 credit. Prerequisite: medical and industrial biotechnology trainees. M. DeLisa. Students attend seminars of their selection and write one-page summaries. Eligible seminars include all listings that are related to medical and industrial biotechnology.

**CHEM 5999 Special Projects in Chemical Engineering**
Fall, spring. Variable credit. Prerequisite: graduate standing. Staff. Nonthesis research or studies on special problems in chemical engineering.

**CHEM 6240 Physics of Micro- and Nanoscale Fluid Mechanics and Heat Transfer**
Fall. 3 credits. Prerequisite: undergraduate fluid or continuum mechanics (e.g., MAE 3230, CHEM 5290, AEP 4340) or permission of instructor. B. L. Kirby. For description, see MAE 5240.

**CHEM 6310 Engineering Principles for Drug Delivery (also BME 6310)**
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. D. A. Putnam. For description, see BME 6310.

**CHEM 6400 Polymeric Materials**
Fall. 3 credits. G. C. Walton. Covers chemistry and physics of the formation and characterization of polymers; principles of fabrication.

**CHEM 6440 Aerosols and Colloids**
Fall. 3 credits. D. L. Koch. Dynamics of micro- and nano-particles, which contain many molecules but are small enough that molecular effects are important. Topics include the formation and growth of particles; their transport, rheological and phase behaviors; and their role in technologies including paints, foods, health-care products, drug delivery, composite materials and air pollution control.

**CHEM 6610 Air Pollution Control**

**CHEM 6640 Energy Economics**
Fall. 3 credits. A. J. Hunter. Supply and demand for energy by sectors and regions. Operating systems and costs. Economic drivers used in simulating energy systems and consumption factors. Supply/demand projections. Interplay between energy, environment, politics, economics, and sustainability.

**CHEM 6650 Energy Engineering**
Spring. 3 credits. A. J. Hunter. Applying thermodynamic concepts to large energy systems. Future energy scenarios. Project teams tasked with simulating complex energy systems and cost-benefit analysis.

**CHEM 7110 Advanced Chemical Engineering Thermodynamics**
Fall. 3 credits. Prerequisite: CHEM 3890–3900 and CHEM 3130 or equivalent. F. A. Escobedo. Molecular thermodynamics of gases, lattices, and liquids, including special applications to problems in chemical engineering.
CHEM 7130  Chemical Kinetics and Transport  
Spring. 5 credits. Prerequisite: CHEM 3900 or equivalent. S. Daniel and staff.  
Topics include microscopic and macroscopic viewpoints; connections between phenomenological chemical kinetics and molecular reaction dynamics; reaction cross sections, potential energy surfaces, and dynamics of biomolecular collisions; molecular beam scattering; transition state theory. Unimolecular reaction dynamics; complex chemically reacting systems; reactor stability, multiple steady states, oscillations, and bifurcation; reactions in heterogeneous media; and free-radical mechanisms in combustion and pyrolysis.

CHEM 7310  Advanced Fluid Mechanics and Heat Transfer  
Fall. 3 credits. Prerequisites: CHEM 3230–3240 or equivalent. D. L. Koch.  
Topics include derivation of conservation equations; conductive heat transfer; low Reynolds number fluid dynamics; lubrication theory; inviscid fluid dynamics; boundary layer theory; forced convection; and introduction to non-Newtonian fluid mechanics (polymeric liquids and suspensions), microfluidics, stability analysis, and turbulent flow.

CHEM 7410  Selected Topics in Biochemical Engineering  
Fall. Spring. 1 credit. May be repeated for credit. Prerequisite: permission of instructor. D. A. Putnam and M. P. DeLissa.  
Discussion of current topics and research in biochemical engineering for graduate students.

CHEM 7450  Physical Polymer Science I  
Fall. 3 credits. Corequisite: CHEM 7110 or equivalent. Offered alternate years. L. A. Archer.  
Thermodynamic properties of solutions from both classical and scaling approaches. Characterization techniques of dilute solutions. Rubber elasticity; mechanical and thermodynamic properties of gels; polymer melts.

CHEM 7510  Mathematical Methods of Chemical Engineering Analysis  
Fall. 4 credits. Y. L. Joo.  
Application of advanced mathematical techniques to chemical engineering analysis. Mathematical modeling, scaling, regular and singular perturbations, multiple scales, asymptotic analysis, linear and nonlinear ordinary and partial differential equations, statistics, data analysis, and curve fitting.

CHEM 7530  Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation  
Fall. 3 credits. Prerequisite: CHEM 7510 or equivalent. Offered alternate years. P. H. Steen.  
Topics include elements of stability and bifurcation theory; branch-following techniques; stability of discrete and continuous systems; and application to elasticity, reaction-diffusion, and hydrodynamic systems using software for continuation problems (AUTO).

CHEM 7900  Seminar  
Fall, spring. 1 credit each semester. Requirement for all graduate students in field of chemical and biomolecular engineering. L. A. Archer.  
General chemical engineering seminar.

CxEE 8600 Thesis—Transportation Engineering (f, s, var.)

[CxEE 1130 Sustainable Design for Applecore Island (also ENGR 1130)] Spring. 3 credits. Students must register under ENGR 1130. Next offered 2011–2012. Staff.
Course in Introduction to Engineering series. For description, see ENGR 1130.

[CxEE 1131 Water Treatment Design (also ENGR 1131)] Spring. 3 credits. Students must register under ENGR 1131. M. L. Weber-Shirk
For description, see ENGR 1131.

CxEE 1160 Modern Structures (also ENGR 1160) Fall. 3 credits. Students must register under ENGR 1160. A. Ingraffea.
Course in Introduction to Engineering series. For description, see ENGR 1160.

CxEE 2550 AguaClara: Sustainable Water Supply Project Fall, spring. 1–5 credits. Meets with CxEE 4550. M. L. Weber-Shirk.
Student teams conduct research, build working models, design full-scale prototypes, create design algorithms, and create educational materials for technology transfer to improve drinking water quality in the Global South. Students in CxEE 2550 learn in an apprenticeship role on teams led by students in CxEE 4550 or CxEE 5051/5052. For more information, see aguacleara.cee.cornell.edu.

CxEE 3040 Uncertainty Analysis in Engineering Fall. 4 credits. Prerequisite: first-year calculus. F. Vaneck.
Introduction to probability theory and statistical techniques, with examples from civil, environmental, materials, and related disciplines. Covers data presentation, commonly used probability distributions describing natural phenomena and material properties, parameter estimation, confidence intervals, hypothesis testing, simple linear regression, and nonparametric statistics. Examples include structural reliability, wind, speed/flood distributions, pollutant concentrations, and models of vehicle arrivals.

CxEE 3080 Introduction to CADD Fall, spring. 1 credit. Prerequisites: pre-enrollment limited to Engineering students. Priority given to CxEE and BEE students; other students by permission of instructor and only after first meeting of the sec. Students must attend first meeting of one of the sections. Course begins first M of each semester. Staff.
Students learn to employ computer-aided design and drafting (CADD) to construct 2D drawings and 3D models using a variety of AutoCAD techniques. VIZ, an alternative software tool for 3D modeling and 3D visualization, is also introduced. Course meets in ACCEL (second floor of the Engineering Library in Carpenter Hall) so that each student can participate on an individual computer. Grades are based on attendance, weekly exercises completed in class, and a semester project due the last week of classes.

CxEE 3090 Special Topics in Civil and Environmental Engineering Fall, spring. 1–6 credits. Staff.
Supervised study by individuals or groups of upper-division students on an undergraduate research project or on specialized topics not covered in regular courses.

CxEE 3200 Engineering Computation (also ENGRG 3200) Spring. 3 credits. Students must register under ENGRD 3200. P. Diamentis.
For description, see ENGRD 3200.

CxEE 3230 Engineering Economics and Management (also ENGRG 3230) Spring; usually offered in summer for Engineering Co-op Program. 3 credits.
Primarily for juniors and seniors. D. P. Loucks.
Introduction to engineering and business economics investment alternatives and to project management. Intended to give students a working knowledge of money management and how to make economic comparisons of alternatives involving future benefits and cost. The impact of inflation, taxation, depreciation, financial planning, economic optimization, project scheduling, and legal and regulatory issues are introduced and applied to economic investment and planning and project-management problems.

CxEE 3310 Fluid Mechanics Fall; usually offered in summer for Engineering Co-op Program. 4 credits. Pre- or corequisite: ENGRD 2020. E. A. Cowen.
Covers hydrostatics, the basic equations of incompressible fluid flow, potential flow and dynamic pressure forces, viscous flow and shear forces, steady pipe flow, turbulence, dimensional analysis, laminar and turbulence boundary layers, flows around obstacles, and open-channel flow. Includes small-group laboratory assignments.

Application of fluid-mechanical principles to problems of engineering practice and design: hydraulic machinery, open-channels, and river engineering. Lectures supplemented by laboratory work and a design project.]

CxEE 3410 Introduction to Geotechnical Engineering Fall. 4 credits. Prerequisites: ENGRD 2020 or permission of instructor. Letter grades only. H. E. Stewart.
Fundamentals of geotechnical engineering. Topics include origins and descriptions of soil and rock as engineering materials, subsurface exploration methods, principles of effective stresses, stress distribution and ground settlements from surface loads, steady-state and time-dependent subsurface fluid flow, soil strength and failure criteria, geoenvironmental applications, and introduction to hazardous waste containment systems.

CxEE 3510 Environmental Quality Engineering Spring. 3 credits. Prerequisite: MATH 2950.
L. W. Lion.
Introduction to engineering aspects of environmental quality control. Quality parameters, criteria, and standards for water and wastewater. Elementary analysis pertaining to the modeling of pollutant reactions in natural systems, and introduction to design of unit processes for wastewater treatment.

CxEE 3610 Introduction to Transportation Engineering Spring; usually offered in summer for Engineering Co-op Program. 3 credits. M. A. Turnquist.
Introduces technological, economic, and social aspects of transportation. Emphasizes design and functioning of transportation systems and their components. Covers supply-demand interactions; system planning, design, and management; traffic flow, intersection control and network analysis; institutional and energy issues; and environmental impacts.

CxEE 3710 Structural Modeling and Behavior Fall. 4 credits. Prerequisite: ENGRD 2020. Corequisite: MATH 2940.
P. Koutsourelakis.
Introduction to the structural engineering enterprise including aspects of design, loads, behavior, form, modeling, mechanics, materials, analysis, and construction/manufacturing. Case studies involve different scales and various materials. Topics include analytical and finite-element computational modeling of structural systems including beams, cables, arches, trusses, beams, frames, and 2-D continua; deflections, strains, and stresses of structural members, systems, and 2-D continua by analytical and work/energy methods, with a focus on linear elastic behavior; the foundations of matrix structural analysis; and the application of finite-element software.

CxEE 3720 Intermediate Solid Mechanics Fall. 4 credits. Prerequisites: MATH 2940, CxEE 3710. D. Warner.
Present concepts related to inelastic and nonlinear behavior of engineering materials and structures, the concept of continuum, limit and plastic analysis, and fracture. The course is a survey of mathematical modeling, computer simulations, and physical experimentation.

CxEE 4000 Senior Honors Thesis Fall, spring. 1–6 credits. For students admitted to CxEE Honors Program. D. Warner.
Supervised research, study, and/or project work resulting in a written report or honors thesis.

CxEE 4010 Undergraduate Engineering Teaching in CxEE Fall. 1–4 credits. Prerequisite: permission of instructor. Staff.
Methods of instruction developed through discussions with faculty and by assisting with the instruction of undergraduates under the supervision of faculty.

**CEE 4060 Civil Infrastructure Systems**  
Spring. 3 credits. Prerequisites: probability and statistics (CEE 3040 or equivalent) or permission of instructor. Recommended: engineering economics (CEE 3280 or equivalent) course, S–U or letter grades. Staff. Introduction to the framing and solution of civil infrastructure problems using a systems engineering approach. Systems tools, such as optimization, life-cycle cost analysis, decision analysis, simulation, and risk analysis are examined through case studies related to civil infrastructure.

**CEE 4110 Environmental Information Science (also CSS 4110)**  
Spring. 3 credits. Prerequisite: permission of instructor. S. D. DeGloria and S. B. Hoskins. For description, see CSS 4110.

**CEE 4320 Hydrology**  
Spring. 3 credits. Prerequisite: CEE 3310. Intended for undergraduates. Lecturer T. F. O'Rourke. W. H. Brutsaert. Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers. See description for CEE 6320.

**CEE 4350 Coastal Engineering**  
Spring. 4 credits. Prerequisite: CEE 3310. Taught based on demand; contact professor if interested in course. Next offered 2011–2012. P. L-F. Liu. Covers the following topics: review of hydrodynamics; small-amplitude wave theory; wave statistics; wave-structure interactions; coastal processes.

**CEE 4360 Case Studies in Environmental Fluid Mechanics**  

**CEE 4370 Experimental Methods in Fluid Dynamics**  
Spring. 3 credits. Pre- or corequisites: CEE 3310 or equivalent and CEE 3420 or equivalent. E. A. Cowen. Same as CEE 6370 but no project required. For description, see CEE 6370.

**CEE 4400 Foundation Engineering**  
Fall. 3 credits. Prerequisite: CEE 3410. T. D. O’Rourke. Covers soil exploration, sampling, and in-situ testing techniques; bearing capacity, stress distribution, and settlement; design of shallow and deep foundations; compaction and site preparation; and seepage and dewatering of foundation excavations.

**CEE 4410 Retaining Structures and Slopes**  
Spring. 3 credits. Prerequisite: CEE 3410. Staff. Covers earth pressure theories; design of rigid, flexible, braced, tied-back, slurry wall, soil nailing, and reinforced soil structures; stability of excavation, cut, and natural slopes; and design problems stressing application of course material under field conditions of engineering practice.

**CEE 4440 Environmental Site and Remediation Engineering**  

**CEE 4510 Microbiology for Environmental Engineering**  
Fall. 3 credits. Prerequisites: two semesters of college chemistry, organic chemistry or permission of instructor. E. R. Richardson. Introduction to the fundamental aspects of microbiology and biochemistry that are pertinent to environmental engineering and science. Provides an overview of the characteristics of Bacteria, Archaea, unicellular Eukaryotes (protozoa, algae, fungi), and viruses. Includes discussions of cell structure, bioenergetics and metabolism, and microbial genetics. Focus is then applied to topics pertinent to environmental engineering: pathogens; disease and immunity; environmental influences on microorganisms; roles of microbes in the carbon, nitrogen, and sulfur cycles; energy; bioremediation, bio-energy, molecular microbiology; and microbial ecology. This is an introductory course and is inappropriate for those who have taken BIOMI 2900 or equivalent.

**CEE 4530 Laboratory Research in Environmental Engineering**  
Spring. 3 credits. Prerequisite: CEE 3510 or permission of instructor. Offered alternate years; next offered 2011–2012. R. E. Richardson. Laboratory investigations of reactor flow characteristics; acid rain/lake chemistry; contaminated soil-site assessment and remediation; and wastewater treatment.

**CEE 4540 Sustainable Municipal Drinking Water Treatment**  
Fall. 3 credits. Pre- or corequisite CEE 3310. M. L. Weber-Shirk. Covers the theory and design of municipal drinking water treatment processes used for removing turbidity and pathogens with a focus on the resilient technologies used by AguaClara. The course explores the technical, economic, and social constraints that determine the set of viable technologies that could be adopted to improve the availability and quality of water. Students work in teams to design water supply and treatment systems.

**CEE 4550 AguaClara: Sustainable Water Supply Project**  
Fall, spring, and summer. Pre- or corequisite: CEE 4540 or CEE 3310 or permission of instructor. Meets with CEE 2550. M. L. Weber-Shirk. Student teams conduct research, build working models, design full-scale prototypes, create design algorithms, and create educational materials for technology transfer to improve drinking water quality in the Global South. For more information see aguaclarae.cce.cornell.edu.

**CEE 4610 Urban Transportation Planning and Modeling**  
Spring. 3 credits. P. Vanek.

Improving the use of existing facilities transportation infrastructure has become an important objective in transportation engineering and planning. Examines the role of information technologies for effective infrastructure utilization and planning. Focuses specific attention on analytical design tools to evaluate the benefits of information technologies in transportation systems.

**CEE 4640 Transportation Systems Design**  
Fall. 3 credits. Prerequisites: CEE 3610 and CEE 4660 or permission of instructor. Staff. Analysis of capacity and design of transportation systems, including analytical modeling techniques underlying design criteria. Evaluation of alternative designs. Management and operating policies, including congestion pricing, Facility location decisions, networks, and investment strategies.

**CEE 4650 Transportation, Energy, and Environment Systems for Sustainable Development**  
Spring. 3 credits. Prerequisite: CEE 3610 or permission of instructor. H. O. Gao. For description, see CEE 6650.

**CEE 4710 Fundamentals of Structural Mechanics**  
Fall. 3 credits. Prerequisites: ENGRD 2020, MATH 2940, M. D. Grigoriou. Topics include beam bending; beams on elastic foundations; stability analysis for columns and beam-columns; linear elasticity; numerical solutions for linear elasticity problems; and applications including stress concentration, torsion, and plates.

**CEE 4720 Introduction to the Finite Element Method**  
Fall. 3 credits. Prerequisites: CEE 3710, 3720, and 4710. P. Koutsourelakis. Covers the formulation of the finite element method in 2-D and 3-D continuum, basic 2-D and 3-D continuum isoparametric elements, modeling and programming aspects of the finite element method, and static and transient problems. A large part of the course is devoted to understanding element formulations, testing elements (patch test), and addressing problems such as shear and volumetric locking, among others. Emphasis is placed on understanding fundamental aspects of the method for making intelligent use of commercial software and obtaining a strong background for moving to further study and research.

**CEE 4730 Design of Concrete Structures**  
Fall. 4 credits. Prerequisite: CEE 3710 or permission of instructor. K. C. Hover. Centered on the design of a multi-story building that is initially planned with masonry bearing walls and prestressed concrete floors. The masonry walls are then replaced with steel beams and columns. In the next phase the precast concrete is replaced with cast-in-place reinforced concrete. Finally, the structural steel elements are replaced with a reinforced concrete framing system. The course explores gravity loads, wind loads, and earthquake loads, and the behavior of individual members and the structure as a whole.

**CEE 4740 Introduction to the Behavior of Metal Structures**  
Spring. 4 credits. Prerequisite: ENGRD 2020 or permission of instructor. C. Earls. Introductory course focused on the use of solid and structural mechanics to quantify
elementary behavior of metal structures in order to enable design. The course is project focused; with the students preparing a complete and detailed design deliverable. The course considers applications from civil structures, naval architecture, and aerospace engineering.

CEE 4750 Concrete Materials and Construction
Spring. 3 credits. K. C. Hover.
Covers the materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Topics include cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

CEE 4770 Introduction to Composite Materials (also MAE/TAM 4550, MSE 5550)
Fall. 3 credits. Prerequisite: ENGRD 2020 or equivalent. P. Petrina.
For description, see TAM 4550.

CEE 4780 Structural Dynamics and Earthquake Engineering
Spring. 3 credits. Prerequisite: junior or senior standing. M. D. Grigorou.
Covers modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

CEE 4810 LRFD-Based Engineering of Wood Structures (also BEE 4810)
Spring. 3 credits. Prerequisite: ENGRD 2020. K. Gelwesmedhin.
For description, see BEE 4810 under "College of Agriculture and Life Sciences."

CEE 4920 Engineer for a Sustainable World: Engineering in International Development
Fall. 3 credits. Prerequisite: senior or graduate standing; juniors need permission of instructor. R. E. Richardson and P. Doing.
Engineering-based group service projects offer real-life engineering research and design experience, from problem formulation through implementation. They may be international or local and may relate to any kind of engineering. Students work on interdisciplinary teams with a project supervisor and a partner community organization. Course readings and a writing assignment cover the relationship between engineering and international development, the philosophy and politics of technology, and ethics in engineering practice.

CEE 5001–5002 Design Project
Fall, spring. 3 credits each semester. Requirement for students in M.Eng. (civil and environmental) program. Staff.
CEE design projects present students with an exemplary design experience that reflects those carried out in the course of professional practice. Projects are typically performed by student design groups, and the topics reflect the diverse specialty areas of the civil and environmental engineering field as described below.

CEE 5021–5022 Project in Environmental and Water Resources Systems
CEE 5031–5032 Project in Environmental Fluid Mechanics and Hydrology

CEE 5041–5042 Project in Geotechnical Engineering
Staff.
Design of major geotechnical engineering project. Planning and preliminary design during fall semester; final design completed in January intersession.

CEE 5051–5052 AguaClara: Sustainable Water Supply Project
Fall. 3 credits. Pre- or corequisite of CEE 4540. Meets with CEE 2550/4550. M. L. Weber-Shirk.
Student teams conduct research, build working models, design full-scale prototypes, create design algorithms, and create educational materials for technology transfer to improve drinking water quality in the Global South. Satisfies the Master of Engineering project requirement. For more information, see aguaclaraccee.cornell.edu.

CEE 5061–5062 Project in Transportation Engineering
Systems analysis of a substantial transportation service.

CEE 5071–5072 Project in Structural Engineering
C. Earls.
A project-centered course focusing on the design of a major engineering structure. Planning and a preliminary design are completed during the fall semester; the comprehensive final design is completed in the January intersession.

CEE 5073–5074 Project in Civil Engineering Materials
Staff.
Analysis of a problem in civil infrastructure.

CEE 5240 Applied Systems Engineering (also CIS 5040, ECE/ORIE 5120, MAE 5910, SYSEN 5100)
Fall. 3 credits. Prerequisite: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor. A. R. George and B. Heceny.
For description, see SYSEN 5100.

CEE 5252 System Architecture, Behavior, and Optimization (also CIS 5050, ECE 5130, ORIE 5142, MAE 5920, SYSEN 5100)
Spring. 3 credits. Prerequisite: CEE 5240/CS 5040, ECE/ORIE 5120, MAE 5910, or SYSEN 5200. P. Jackson.
For description, see SYSEN 5200.

CEE 5290 Heuristic Methods for Optimization (also CS 5722, ORIE 5340)
Fall. 3 or 4 credits. Prerequisites: graduate standing or CS, ENGRD 2110 or 3510; ENGRD 3200 or permission of instructor. C. A. Shoemaker.
Teaches heuristic search methods including simulated annealing, tabu search, genetic algorithms, derandomized evolution strategy, and random walk developed for optimization of combinatorial- and continuous-variable problems. Application project options include wireless networks, protein folding, job shop scheduling, partial differential equations, satisfiability, or independent projects. Statistical methods are presented for comparing algorithm results. Advantages and disadvantages of heuristic search methods for both serial and parallel computation are discussed in comparison with other optimization algorithms.

CEE 5900 Project Management
Fall, spring. 4 credits. Prerequisite: permission of instructor. F. J. Wayno.
Core graduate course in project management for people who will manage technical or engineering projects. Focusses both on the "technical" tools of project management (e.g., methods for planning, scheduling, and control) and the "human" side (e.g., forming a project team, managing performance, resolving conflicts), with somewhat greater emphasis on the latter.

CEE 5910 Engineering Management Project
Fall. 4 credits. Prerequisite: permission of instructor. Staff.
Intensive evaluation of the management aspects of a major engineering project or system. Most students work on a large group project in the area of project management, but students may also work singly or in small groups on an engineering management topic of special interest to them.

CEE 5920 Engineering Management Project
Spring. 4 credits. Prerequisite: permission of instructor. Staff.
Continuation of CEE 5910.

CEE 5930 Engineering Management Methods
Fall. 4 credits. Prerequisites: CEE 3240 and 3640 or equivalent. M. A. Tornquist.
Methods for managing data and transforming data into information. Modeling as a means to synthesize information into knowledge that can form the basis for decisions and actions. Application of statistical methods in optimization to managerial problems in operations, forecasting, and resource allocation.

[CEE 5940 Economic Methods for Engineering and Management (also ECON 4940)]

CEE 5950 Construction Planning and Operations
Fall. 3 credits. P. G. Carr.
Prepares students for responsibilities in overseeing the engineering and management of construction; on time—on budget. Emphasis is placed on the management processes for organizing, planning, and controlling the activities of complex development and construction programs. Students study the contracts for engineering, architecture, and construction; focusing on cost estimation and schedule control, responsibilities and risks, and the relationships among owners, designers, contractors, and suppliers. The potential for project disruption is discussed with special emphasis on dispute resolution methods.
Graduate students and faculty members give CEE 6021 Seminar—Environmental and professor in this subject area.

CEE 6015 Special Topics—Remote of non-linear equations, interpolation in one approximation of lab/simulation data, solution parallel implementation, least squares implementation using resources at the Theory and beyond). Student projects include parallel implementation of such special courses as Shell Theory and covered in regular courses. Occasional offering of such special courses as Shell Theory and Design, and Advanced Topics in Finite Element Analysis.

CEE 6000 Numerical Methods for Engineers Fall. 3 credits. P. J. Diamessis. The primary focus is algorithm implementation within the context of engineering applications (spanning fluid and solid/fracture mechanics and structural analysis). Student projects include parallel implementation using resources at the Theory Center. Topics include sources of error and error propagation, eigenvalue/eigenvector computation, solution of linear systems via direct or iterative methods and issues of parallel implementation, least squares approximation of lab/simulation data, solution of non-linear equations, interpolation in one and two dimensions, fast Fourier transforms (serial vs. parallel) and wavelets.

CEE 6005 Special Topics—Remote Sensing On demand. 1–6 credits. W. D. Philpot. Students may elect to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

CEE 6020 Environmental Seminar Fall. 1 credit. Staff. Presents topics of current interest.

CEE 6021 Seminar—Environmental and Water Resources Systems Analysis Spring. 1 credit. Prerequisite: permission of instructor. C. A. Shoemaker and J. R. Stedinger. Graduate students and faculty members give informal lectures on various topics related to ongoing research in environmental or water resources systems planning and analysis.

CEE 6025 Special Topics in Environmental and Water Resources Systems Analysis Offered on demand. 1–6 credits. Staff. Supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.

CEE 6030 Seminar—Environmental Fluid Mechanics/Hydraulics Spring. 1 credit. Requirement for graduate students majoring in hydraulics or hydraulic engineering. Open to undergraduates and graduates. P. J. Diamessis. Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

CEE 6035 Special Topics in Hydraulics On demand. 1–6 credits. Staff. Special topics in fluid mechanics, hydraulic engineering, or hydrology.

CEE 6045 Special Topics in Geotechnical Engineering On demand. 1–6 credits. Staff. Supervised study of special topics not covered in the formal courses.

CEE 6051 Seminar—Environmental Quality Engineering Spring. 1 credit. Prerequisite: graduate students in environmental engineering. J. M. Gossett. Presentation and discussion of current research in environmental engineering.

CEE 6055 Special Topics in Environmental Engineering On demand. 1–6 credits. Staff. Supervised study in special topics not covered in formal courses.

CEE 6060 Seminar—Transportation System Engineering Fall, spring. 1 credit. Staff. Presents topics of current interest.

CEE 6065 Special Topics in Transportation On demand. 1–6 credits. Staff. Advanced subject matter not covered in depth in other regular courses.

CEE 6070 Seminar—Civil Infrastructure Fall, spring. 1 credit. Requirement for first-year graduate students. P. Koutsourelakis. Presents topics of current interest.

CEE 6075 Special Topics in Structural Engineering On demand. 1–6 credits. Staff. Individually supervised study or independent design or research in specialized topics not covered in regular courses. Occasional offering of such special courses as Shell Theory and Design, and Advanced Topics in Finite Element Analysis.

CEE 6090 Seminar—Engineering Systems and Management Fall, spring. 1 credit. Staff. Presents topics of current interest.

CEE 6095 Special Topics in Engineering Management On demand. 1–6 credits. Staff. Individually supervised study of one or more specialized topics not covered in regular courses.

CEE 6100 Remote Sensing Fundamentals (also CSS 6100) Fall. 3 credits. W. D. Philpot. Introduction to the principles, equipment, and methods used in obtaining information about earth resources and the environment from aircraft or satellite sensors. Topics include basic interactions of electromagnetic radiation with the earth, sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design in the form of a proposal to use remote sensing for a specific application.

CEE 6150 Digital Image Processing Spring. 3 credits. W. D. Philpot. An introduction to digital image-processing concepts and techniques, with emphasis on remote-sensing applications. Topics include image acquisition, enhancement procedures, spatial and spectral feature extraction, and classification, with an introduction to hyperspectral data analysis. Assignments require the use of image-processing software and graphics.

CEE 6200 Water-Resources Systems Engineering Spring. 3 credits. Prerequisites: CEE 3240 and 5930 or BEE 4750. D. P. Loucks. Development and application of deterministic and stochastic optimization and simulation models for aiding in water-resources planning and management. Covers river-basin modeling, including water allocation to multiple purposes, reservoir design and operation, irrigation planning and operation, hydropower-capacity development, flow augmentation, flood control and protection, ecological habitat restoration, and water-quality prediction and control.

CEE 6210 Stochastic Hydrology Spring. 3 credits. Prerequisite: CEE 3040 or permission of instructor. Offered on demand. J. R. Stedinger. Course examines statistical, time series, and stochastic optimization methods used to address water resources planning and management problems involving uncertainty objectives and hydrologic inputs. Statistical issues include maximum likelihood and moments estimators; censored data sets and historical information; probability plotting; Bayesian inference; regionalization methods; ARMA models; multivariate stochastic streamflow models; stochastic simulation; and stochastic reservoir-operation optimization models.

CEE 6230 Environmental Quality Systems Engineering Fall. 3 credits. Prerequisites: MATH 2940, optimization, and graduate standing or permission of instructor. Next offered 2012–2013. C. A. Shoemaker. Applications of optimization, simulation methods, and uncertainty analysis to the prevention and remediation of pollution.

CEE 6310 Computational Simulation of Flow and Transport in the Environment Spring. 3 credits. Prerequisites: MATH 2940 or equivalent, ENGRD 5200 or experience in numerical methods and programming, and elementary fluid mechanics. P. L-F. Liu. Covers fundamental equations of saturated and unsaturated flow in porous media; flow in
fractured media; numerical modeling of transport in porous media; diffusion and advective diffusion in one, two, and three dimensions; anisotropy; and additional terms for reactive substances. Teaches various numerical methods including finite difference, finite element, and boundary elements.

CEE 6320 Hydrology
Spring. 3 credits. Prerequisite: CEE 3310. W. H. Brutsaert.
Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers and scientists. Covers physical and statistical prediction methods for design related to hydrologic processes; hydrometeorology and evaporation; infiltration and base flow; surface runoff and channel routing; linear and nonlinear hydraulic systems; and storage routing and unit hydrograph methods.

CEE 6330 Flow in Porous Media and Groundwater
Fall. 3 credits. Prerequisite: CEE 3310. Offered on demand, please contact professor if interested. W. H. Brutsaert.
Fluid mechanics and equations of single-phase and multiphase flow; methods of solution. Applications involve aquifer hydraulics, pumping wells, drought flows, infiltration, groundwater recharge, land subsidence; seawater intrusion, miscible displacement; and transient seepage in unsaturated materials.

CEE 6340 Boundary Layer Meteorology
Fall. 3 credits. Prerequisite: CEE 3310 or permission of instructor. Offered on demand; please contact professor if interested. W. H. Brutsaert.
Physical processes in the lower atmospheric environment: turbulent transport in the atmospheric boundary layer, surface-air interaction, disturbed boundary layers, radiation. Applications include sensible and latent heat transfer from lakes, plant canopy flow and evapotranspiration, turbulent diffusion from chimneys and cooling towers, and related design issues.

CEE 6350 Small and Finite Amplitude Water Waves
Spring. 3 credits. Offered on demand; please contact professor if interested. P. L.-F. Liu.
Reviews linear and nonlinear theories of ocean waves. Discusses the applicability of different wave theories to engineering problems.

CEE 6360 Environmental Fluid Mechanics
Spring. 3 credits. Offered on demand; please contact professor if interested. E. A. Cowen.
Covers analytic and modeling perspectives of environmental flows; mechanics of layered and continuously stratified fluids: internal waves, density currents, baroclinic motions, and turbulence; jets and plumes and their behavior in the environment; turbulent diffusion, shear flow dispersion, and wave-induced mixing processes; and applications to mixing processes in rivers, lakes, estuaries, and the coastal ocean.

CEE 6370 Experimental Methods in Fluid Dynamics (also MAE 6270)
Spring. 4 credits. Prerequisites: CEE 3310 or equivalent and CEE 3040 or equivalent. E. A. Cowen.
Introduction to experimental data collection and analysis, in particular as they pertain to fluid flows. Covers computer-based experimental control, analog and digital data acquisition, discrete sampling theory, digital signal processing, uncertainty analysis. Also covers analog transducers, acoustic and laser Doppler velocimetry, full-field (2-D) quantitative imaging techniques. Includes laboratory experiments and a project.

CEE 6400 Foundation Engineering
Spring. 3 credits. Prerequisite: CEE 3410. Staff.
Covers soil exploration, sampling, and in-situ testing techniques; bearing capacity, stress distribution, and settlement; design of shallow and deep foundations; compaction and site preparation; and seepage and dewatering of foundation excavations.

CEE 6410 Retaining Structures and Slopes
Fall. 3 credits. Prerequisite: CEE 3410. T. D. O’Rourke.
Covers Earth pressure theories; design of rigid, flexible, braced, tied-back, slurry wall, soil nail, and reinforced soil structures; stability of excavation, cut, and natural slopes; and design problems stressing application of course material under field conditions of engineering practice.

CEE 6440 Environmental Site and Remediation Engineering
Spring. 3 credits. Prerequisite: CEE 3410 or equivalent or permission of instructor. Next offered 2011–2012. T. D. O’Rourke.
Covers principles of hydrogeology, contaminant migration, and remediation technologies. Boundary value and environmental engineering.

CEE 6530 Water Chemistry for Environmental Engineering
Fall. 3 credits. Prerequisite: one semester of college chemistry or permission of instructor. L. W. Lion.
Covers principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical thermodynamics, reaction kinetics, acid-base equilibria, mineral precipitation/dissolution, and electrochemistry. Focuses on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these problems.

CEE 6540 Aquatic Chemistry
Applies concepts of chemical equilibria to natural aquatic systems. Topics include acid-base reactions, buffer systems, mineral precipitation, coordination and redox reactions, Eh-pH diagrams adsorption phenomena, humic acid chemistry, and chemical-equilibria computational techniques.

CEE 6550 Transport, Mixing, and Transformation in the Environment
Spring. 3 credits. Prerequisite: CEE 6530 or CHEME 3900 or equivalent. L. K. Nozick.
Application of fluid mechanics to problems of transport, mixing, and transformation in the water environment. Introduction to advective, diffusive, and dispersive processes in the environment; key interactions: air-water and sediment-water processes. Introduction to chemical and biochemical transformation processes. Applications to transport, mixing, and transformation in rivers, lakes, and coastal waters.

CEE 6560 Physical/Chemical Process
Fall. 3 credits. Prerequisite: CEE 6530 or permission of instructor. J. J. Bisogni.
Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Bioenergetics analysis, stoichiometry, biokinetic, and design of biological treatment processes.

CEE 6570 Biological Processes
Spring. 3 credits. Prerequisites: introductory microbiology and CEE 6560, or permission of instructor. J. M. Gossett.
Theoretical and engineering aspects of biological phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Bioenergetics analysis, stoichiometry, biokinetic, and design of biological treatment processes.

CEE 6580 Biodegradation and Biocatalysis
Spring. 3 credits. Prerequisites: CEE 4510 or BIOMI 2900 or equivalent; CEE 3510 or CHEM 3900 or permission of instructor. R. E. Richardson.
Students explore the use of microbes in biodegradation and biocatalysis as well as the molecular techniques (i.e., analysis of DNA, RNA, and proteins) commonly used in these applications. Lectures cover enzyme classes and kinetics, selective isolation of organisms with desired bioconversion capabilities, effects of environmental parameters and cell-to-cell communication on gene expression, methods in microbial molecular biology, and contemporary case studies in biodegradation and biocatalysis. Laboratory sessions give students hands-on experience in molecular and analytical methods. Student teams design and then construct a bioreactor employing their own environmental isolates that degrade a selected contaminant or produce a desired compound.

CEE 6610 Urban Transportation Planning and Modeling
Fall. 3 credits. Prerequisite: CEE 5610 or permission of instructor. L. K. Nozick.
Covers the development and use of mathematical models for the design and analysis of urban transportation networks, including formulations and solution procedures for deterministic user equilibrium and stochastic user equilibrium. Students apply these tools to a substantive real-world case study and estimation of origin-destination tables.

CEE 6620 Urban Transportation Network Design and Analysis
Fall. 3 credits. Prerequisite: CEE 6610 or permission of instructor. L. K. Nozick.
Algorithms for network flow problems encountered in transportation system modeling, including shortest path, multi-objective shortest path, minimum cost flows, multi-commodity flows, and generalized flows. Applications to vehicle routing, dynamic vehicle allocation, and network design.
CEE 6650 Transportation, Energy, and Environment Systems for Sustainable Development
Spring. 3 credits. Prerequisite: CEE 3610 or permission of instructor. H. O. Gao. Focuses on the societal aspects of transportation and environment, energy, and climate-change concerns. It is interdisciplinary, drawing upon transportation, environment, urban planning, statistics, economics, and policy. The course covers both the theoretical and practical aspects of relevant topics including mobile emissions inventory estimation, renewable fuels, air quality impact and life cycle benefit assessment of alternative fuels/vehicles. Intelligent Transportation Systems (ITS) and urban sprawl, and congestion mitigation and air quality (CMAQ). Students apply course materials to real-world cases and projects.

CEE 6710 Fundamentals of Structural Mechanics
Fall. 3 credits. Prerequisites: ENGRD 2200, MATH 2940. M. D. Grigoriu. Topics include beam bending; beams on elastic foundations; stability analysis for columns and beam-columns; linear elasticity; numerical solution for linear elasticity problems; and applications including stress concentration, torsion, and plates.

CEE 6720 Introduction to the Finite Element Method
Fall. 3 credits. Prerequisites: CEE 3710, 3720, and 4710. P. Koutsourelakis. Covers the formulation of the finite element method in 2-D and 3-D continuum, basic 2-D and 3-D continuum isoparametric elements, modeling and programming aspects of the finite element method, and static and transient problems. A large part of the course is devoted to understanding element formulations, testing elements (patch test), and addressing problems such as shear and volumetric locking, among others. Emphasis is placed on understanding fundamental aspects of the method for making intelligent use of commercial software and obtaining a strong background for moving to further study and research.

CEE 6730 Design of Concrete Structures
Fall. 4 credits. Prerequisite: CEE 3710 or permission of instructor. K. C. Hover. Centered on the design of a multi-story building that is heavily planned with masonry bearing walls and precast prestressed concrete floors. The masonry walls are then replaced with cast-in-place reinforced concrete. Finally, the structural steel elements are replaced with a reinforced concrete framing system. The course explores gravity loads, wind loads, and earthquake loads, and the behavior of individual members and the structure as a whole.

CEE 6750 Concrete Materials and Construction
Spring. 3 credits. K. C. Hover. Covers the materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Topics include cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

CEE 6760 Advanced Composite Materials (also TAM 6550, MAE/MSE 6550)
Spring. 4 credits. CEE 4770/MAE 4550/MSE 5550/TAM 4550 not a prerequisite but excellent background. S. L. Phoenix. For description, see TAM 6550.

CEE 6770 Engineering Analysis

CEE 6780 Structural Dynamics and Earthquake Engineering
Spring. 3 credits. M. D. Grigoriu. Covers modal analysis, numerical methods, and frequency-domain analysis. Introduces earthquake-resistant design.

CEE 6790 Evaluation of Failure of Structures

CEE 6860 Civil Infrastructure Systems
Spring. 3 credits. Prerequisites: probability and statistics course (CEE 3040 or equivalent), or permission of instructor. Recommended: engineering economics course (CEE 3230 or equivalent). S-U or letter grades. T. D. O’Rourke. Introduction to the framing and solution of civil infrastructure problems using a systems engineering approach. Systems tools, such as optimization, life-cycle cost analysis, decision analysis, simulation, Markov modeling, and risk analysis, are examined through case studies related to civil infrastructure.

CEE 6900 Creativity, Innovation, and Leadership
Spring. 3 credits. Pre- or corequisite: CEE 5800 or permission of instructor. F. J. Wayno. Graduate course designed to help aspiring engineering managers to better understand individual creativity and organizational innovation and to develop the required skills to play a productive role in fostering both. Not incidentally, the course also helps students to become more creative themselves. The course is highly participative and has a flow that moves from the individual—to the group—to the organization, with theory, research results, and practical skills-development woven seamlessly together.

CEE 6910 Principles of Project Leadership (also SYSEN 6910)
Spring. 3 credits. Prerequisite: permission of instructor. F. J. Wayno. Core graduate course in project management for people who will manage technical or engineering projects. Focuses both on the “technical” tools of project management (e.g., methods for planning, scheduling, and control) and the “human” side (e.g., forming a project team, managing performance, resolving conflicts), with somewhat greater emphasis on the latter. Offered as a distance learning course only.

CEE 6930 Public Systems Modeling
Fall. 4 credits. D. P. Loucks. An introduction to the art of model building and use, especially related to public sector planning and management issues. The course focuses on the quantitative systems approach for identifying and evaluating alternative possible decisions and their physical, economic, environmental, and social impacts. Modeling methods include various deterministic and probabilistic optimization and simulation models, decision analysis, evolutionary search algorithms, and statistical models applied to a variety of public sector issues. The aim of all of this “modeling technology” is to help us generate and communicate information that can assist and better inform public decision-making.

CEE 6940 Research in Engineering Management
On demand. 1-6 credits. Staff. The student may select an area of investigation in engineering management. Results should be submitted to the instructor in charge in the form of a research report.

CEE 7010 Research—Remote Sensing
On demand. 1-6 credits. W. D. Philpot. For students who want to study one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

CEE 7020 Environmental and Water Resources Systems Analysis Research
On demand. 1-6 credits. Prerequisite: permission of instructor. Preparation must be suitable to investigation to be undertaken. Studies of particular environmental or water resources systems problems.

CEE 7030 Research in Environmental Fluid Mechanics and Hydrology
On demand. 1-6 credits. Staff. The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge in the form of a research report.

CEE 7040 Research in Geotechnical Engineering
On demand. 1-6 credits. Staff. For students who want to pursue a particular geotechnical topic in considerable depth.

CEE 7050 Research in Environmental Engineering
On demand. 1-6 credits. Staff. For students who want to study a particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design and analysis procedures.

CEE 7070 Research in Structural Engineering
On demand. 1-6 credits. Staff. Pursues a branch of structural engineering beyond what is covered in the core courses. Theoretical or experimental investigation of suitable problems.

CEE 7073 Civil and Environmental Engineering Materials Project
On demand. 1-3 credits. Staff. Individual projects or reading and study assignments involving engineering materials.

CEE 7360 Turbulence and Turbulent Mixing in Environmental Stratified Flows
Spring. 3 credits. Prerequisite: CEE 6550 or second course in fluid mechanics or with instructor’s permission. Offered on demand; please contact professor if interested. P. J. Diamessis. Fundamentals of stably stratified flows, stratified homogeneous turbulence (spectra, length scales, and timescales), kinematics of diapycnal mixing, basic turbulent flow processes in homogeneous and stratified fluids (shear layers, wakes, boundary layers, etc.), energy budget analysis, and parameterizations of geophysical turbulence. Additional topics may include fossil turbulence theory and vortex-internal wave decomposition in strongly stratified turbulence.
CEE 7400 Engineering Behavior of Soils
Fall. 3 credits. Prerequisite: CEE 3410.
H. E. Stewart.

CEE 7410 Rock Engineering
Fall. 3 credits. Prerequisite: CEE 3410 or permission of instructor. Recommended: introductory geology. T. D. O’Rourke.
Geological and engineering classifications of intact rock, discontinuities, and rock masses. Includes laboratory and field evaluation of properties. Covers stress states and stress analysis; design of foundations on, and openings in, rock masses; analysis of the stability of rock slopes; and rock blasting.

CEE 7440 Advanced Foundation Engineering

CEE 7450 Soil Dynamics
Spring. 3 credits. Prerequisite: permission of instructor. H. E. Stewart.
Study of soil behavior under dynamic loading conditions. Foundation design for vibratory loadings. Introductory earthquake engineering including field and laboratory techniques for determining dynamic soil properties and liquefaction potential. Covers design of embankments and retaining structures under dynamic loading conditions.

CEE 7460 Embankment Dam Engineering

CEE 7620 Practicum in Modeling Transportation Systems
Fall. 3 credits. Prerequisites: CEE 6610, 6620, and 6630. L. K. Nozick.
Computational and physical modeling of crack growth processes. Finite and boundary element-based simulation of brittle fracture initiation and propagation, fatigue crack growth, and elastoplastic and cohesive approaches to fracture process crack growth. Element formulation, meshing and remeshing, interactive steering. Case studies across scales from geomechanics to micromechanics, and including metals, ceramics, and polymers. Laboratory techniques for fracture toughness, crack growth rate, and trajectory testing.

CEE 7710 Stochastic Mechanics in Science and Engineering
Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2011–2012.
M. D. Grigoriu.
Review of probability theory, stochastic processes, and its formulation with the guidance of Monte Carlo Simulation.

CEE 7770 Advanced Concepts in Finite Element Mechanics
Spring. 3 credits. Prerequisite: CEE 6720 or equivalent and TAM 7530, or permission of instructor. A. Ingraffea.
Computational and physical modeling of crack growth processes. Finite and boundary element-based simulation of brittle fracture initiation and propagation, fatigue crack growth, and elastoplastic and cohesive approaches to fracture process crack growth. Element formulation, meshing and remeshing, interactive steering. Case studies across scales from geomechanics to micromechanics, and including metals, ceramics, and polymers. Laboratory techniques for fracture toughness, crack growth rate, and trajectory testing.

CEE 7771 Stochastic Simulation Methods in Engineering and Bayesian Computation
Spring. 3 credits. Prerequisites: undergraduate-level course in probability and statistics and multivariate calculus. Computer programming skills (in any language) also required for homework and term project. P. Koutsoftarakis.
Discusses Monte Carlo methods used for the stochastic simulation of complex physical systems and machine learning problems. The course examines a small subset of the possible applications such as uncertainty quantification, optimization, dimensionality-reduction, atomistic simulation, static and dynamic data assimilation. A central component of the course is the use of Monte Carlo techniques in the context of Bayesian models. The ultimate goal is to acquaint students with a set of powerful tools and theories that can be directly transitioned to their research independently of their field.

CEE 77720 Random Vibration
Fall. 3 credits. Prerequisites: MAE 3260 and ENGRD 2700, or equivalent, and permission of instructor. Next offered 2011–2012. M. D. Grigoriu.
Reviews random-process theory, simulation, and first-passage time.

CEE 77730 Structural Reliability

CEE 77740 Advanced Structural Concrete
Fall. 3 credits. Next offered 2012–2013.
K. C. Hover.
Covers the fundamental aspects of the behavioral mechanics of concrete subjected to axial and multiaxial states of stress, rate effects, time-dependent deformations, and multiscale modeling.

CEE 77750 Nonlinear Finite Element Analysis
Spring. 3 credits. W. Aquino.
Covers fundamental aspects of nonlinear finite element analysis including geometric and material nonlinearity. Also covers total and updated Lagrangian formulations, implementation of constitutive models, numerical solutions of global nonlinear systems of equilibrium equations, and regularization techniques for softening materials.

CEE 77760 Advanced Topics in Stability
Spring. 3 credits. Prerequisite: CEE 3740 or equivalent. Next offered 2011–2012. C. Earls.

CEE 77770 Advanced Concepts in Finite Element Methods
Spring. 3 credits. W. Aquino.
The main objective of this course is to introduce the student to modern techniques used for solving partial differential equations using finite element methods. In addition, half of the course is devoted to advanced programming techniques to produce fast and robust finite element computer codes. The course covers formal mathematical formulations of the finite element method using function space, extensions of the finite element method, optimization of continuous systems, object-oriented implementations, and an introduction to multilevel techniques such as multigrid and domain decomposition.

CEE 77800 Continuum Mechanics and Thermodynamics (also TAM 7510)
Spring. 3 credits. Prerequisites: TAM 6100 and 6310, and 6630 and 6640 or equivalents. J. Jenkins.
Topics include kinematics; conservation laws; the entropy inequality; constitutive relations: frame indifference, material symmetry; and finite elasticity, rate-dependent materials, and materials with internal state variables.

CEE 77900 Nonlinear Finite Element Analysis II
Fall. 4 credits. Prerequisite: CEE 6720 (or equivalent). C. Earls.
An advanced course in finite element analysis emphasizing the nonlinear solution of problems involving solids and structures (with a special emphasis on the latter). The formulation of nonlinear structural elements, the development of efficient and robust means for treating material nonlinearity, and the nonlinear solution of finite element systems are fundamentals topics treated in this course. Topics from structural stability, problems involving coupled physics, and those involving transient dynamical response, are also treated. The primary out-of-class effort centers on a significant project, and all students are required to write their own nonlinear finite element code in support of this. As a result, some experience with programming is required.

CEE 8100 Thesis—Remote Sensing
Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. W. D. Philiput.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 8200 Thesis—Environmental and Water Resource Systems
Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 8300 Thesis—Environmental Fluid Mechanics and Hydrology
Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 8400 Thesis—Geotechnical Engineering
Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 8500 Thesis—Environmental Engineering
Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 8600 Thesis—Transportation Systems Engineering
Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.
**COMPUTER SCIENCE**

**CS 1109 Fundamental Programming Concepts**

- Summer. 2 credits. Prerequisite: pre-freshman standing or permission of instructor. Credit may not be applied toward engineering degree. S–U grades only.

**CS 1110 Introduction to Computing Using Java**

- Fall, spring, summer. 4 credits. Assumes basic high school mathematics (no calculus), but no programming experience.

**CS 1112 Introduction to Computing Using MATLAB**

- Fall, spring. 4 credits. Corequisite: MATH 1110, 1910, or equivalent. Assumes student is comfortable with mathematics (at the level of one semester of calculus) but has no prior programming experience.

**CS 1114 Introduction to Computing Using MATLAB and Robotics**

- Spring. 4 credits. Prerequisite: some programming experience.

**CS 1130 Transition to Object-Oriented Programming**

- Fall, spring. 1 credit. Prerequisite: one course in programming. S–U grades only.

**CS 1132 Transition to MATLAB**

- Fall, spring. 1 credit. Prerequisite: one course in programming. S–U grades only.

**CS 1300 Introductory Design and Programming for the Web (also INFO 1300)**

- Fall. 4 credits. For description, see INFO 1300 in CIS section.

**CS 1305 Computation and Culture (also INFO 1305)**

- Summer. 3 credits. Prerequisites: none at university level; must be high school junior or rising senior. Offered alternate years; next offered 2011.

**CS 1610 Computing in the Arts (also CIS/ENGR 1610, DANCE 1540, FILM 1750, MUSC 1465, PSYCH 1650)**

- Fall. 3 credits. Recommended: good comfort level with computers and some of the arts.

**CS 1620 Visual Imaging in the Electronic Age (also ARCH 3700, ART 1700, CIS 1620, ENGR 1620)**

- Fall. 5 credits. For description, see ART 1700.

**CS 1710 Introduction to Cognitive Science (also COGST 1101, LING 1170, PHIL 1910, PSYCH 1102)**

- Fall, summer. 3 credits. For description, see COGST 1101.

**CS 2022 Introduction to C**

- Spring, usually weeks 1–4. 1 credit. Prerequisite: one programming course or equivalent programming experience. Credit granted for both CS 2022 and 2024 only if 2022 is taken first. S–U grades only.

**CS 2024 C++ Programming**

- Fall. 2 credits. Prerequisite: one programming course or equivalent programming experience. Students who plan to take CS 2022 and 2024 must take 2022 first. S–U grades only.

**CS 2042 Unix Tools**

- Fall, usually weeks 1–4. 1 credit. Prerequisite: one programming course or equivalent programming experience. S–U grades only.

**CS 2044 Advanced UNIX Programming and Tools**

- Spring, usually weeks 5–8. 1 credit. Prerequisite: CS 2042 or equivalent. S–U grades only.

**CS 2110 Object-Oriented Programming and Data Structures (also ENGRD 2110)**

- Fall, spring, summer. 3 credits. Prerequisite: CS 1110, or CS 1130 or equivalent course in Java or C++.

**CS 2300 Intermediate Design and Programming for the Web (also INFO 2300)**

- Spring. 3 credits. Prerequisite: CS 1300 strongly recommended. Must be taken before CS 3300. For description, see INFO 2300 in CIS section.

**CS 2800 Discrete Structures**

- Fall, spring. 3 credits. Pre- or corequisite: one course in programming or permission of instructor.

**CS 2850 Networks (also ECON/INFO 2040, SOC 2909)**

- Fall. 4 credits. Prerequisite: none. For description, see ECON 2040.

**CS 3110 Data Structures and Functional Programming**

- Fall, spring. 4 credits. Prerequisite: CS 2110 and 2111 or equivalent programming experience. Pre- or corequisite: CS 2600. Should not be taken concurrently with CS 3410 or 3420.

**CS 3220 Introduction to Scientific Computation (also ENGRD 3220)**

- Spring. 3 credits. Prerequisites: CS 1112 or 1132 and MATH 2220, 2230, or 2940.

**CS 3300 Data-Driven Web Applications (also INFO 3300)**

- Fall. 3 credits. Prerequisites: CS/ENGRD 2110 and (CS 2300 or permission of instructor). CS majors may use only one of the following toward their degree: CS/INFO 3300 or CS 4321. Next offered 2011–2012. For description, see INFO 3300 in CIS section.

**CS 3410 Computer System Organization and Programming**

- Spring. 4 credits. Prerequisites: CS 2110 or equivalent programming experience. Should not be taken concurrently with CS 3110.

**CS 3420 Computer Organization (also ECE 3140)**

- Spring. 4 credits. Prerequisites: CS 2110 or ENGRD 2300. Should not be taken concurrently with CS 3110. For description, see ECE 3140.

**CS 3740 Computational Linguistics (also COGST 4240, LING 4424)**

- Fall. 4 credits. Recommended: CS 2042. For description, see LING 4424.

**CS 3758 Autonomous Mobile Robots (also MAE 4180)**

- Spring. 4 credits. Prerequisites: MAE 3200 or permission of instructor. For description, see MAE 4180.

**CS 3810 Introduction to Theory of Computing**

- Fall. 3 credits. Prerequisite: CS 2800 or permission of instructor.

**CS 4110 Programming Languages and Logics**

- Fall. 4 credits. Prerequisite: CS 3110 or permission of instructor.

**CS 4120 Introduction to Compilers**

- Fall or spring. 3 credits. Prerequisites: CS 3110 or permission of instructor and CS 3420 or 3410. Corequisite: CS 4121. Next offered 2011–2012.

**CS 4121 Practicum in Compilers**

**CS 4210 Numerical Analysis and Differential Equations (also MATH 4250)**

- Fall. 4 credits. Prerequisites: MATH 2210 or 2940 or equivalent, one additional mathematics course numbered 3000 or above, and knowledge of programming. For description, see MATH 4250.

**CS 4220 Numerical Analysis: Linear and Nonlinear Equations (also MATH 4260)**

- Spring. 4 credits. Prerequisites: MATH 2210 or 2940 or equivalent, one additional mathematics course numbered 3000 or above, and knowledge of programming.

**CS 4300 Information Retrieval (also INFO 4300)**

- Fall. 3 credits. Prerequisite: CS 2110 or equivalent. For description, see INFO 4300 in CIS section.

</tbody>
</table>
CS 6780 Machine Learning and Pattern Recognition
Fall. 4 credits. Prerequisites: programming skills (e.g., CS 2110 or CS 3110) and basic knowledge of linear algebra and probability theory (e.g. CS 2900).

CS 6782 Probabilistic Graphical Models (also BTRY 6790)
Fall. 4 credits. Prerequisites: probability theory (BTRY 4080 or equivalent), programming and data structures (CS 2110 or equivalent); a course in statistical methods is recommended but not required (BTRY 4090 or equivalent).
For description, see BTRY 6790.

CS 6784 Advanced Topics in Machine Learning
Fall or spring. 4 credits. Prerequisites: CS 7680 or CS 6780 or equivalent machine learning course. Next offered 2011–2012.

CS 6810 Theory of Computing
Fall or spring. 4 credits. Prerequisite: CS 3810 and CS 4820 or 6820 or permission of instructor. Next offered 2011–2012.

CS 6820 Analysis of Algorithms
Fall. 4 credits. Prerequisite: CS 4820 or graduate standing.

CS 6825 The Science Base for the Information Age
Fall or spring. 4 credits. Prerequisite: none. Next offered 2011–2012.

CS 6830 Cryptography
Fall or spring. 4 credits. Prerequisites: general case with algorithms and elementary probability theory; maturity with mathematical proofs (ability to read and write mathematical proofs). Next offered 2011–2012.

CS 6840 Algorithmic Game Theory
Fall or spring. 4 credits. Prerequisite: background in algorithms and graphs at level of CS 4820. No prior knowledge of game theory or economics assumed. Next offered 2011–2012.

CS 6850 The Structure of Information Networks (also INFO 6850)
Spring. 4 credits. Prerequisite: CS 4820.

CS 6860 Logics of Programs
Fall. 4 credits. Prerequisites: CS 4810, 6810, and (CS/MATH 4860 or MATH 4810).

CS 6862 Automated Reasoning and Formal Methods
Spring. 4 credits. Prerequisites: CS 6110 and graduate standing or permission of instructor.

CS 7090 Computer Science Colloquium
Fall, spring. 1 credit. For staff, visitors, and graduate students interested in computer science. S–U grades only.

CS 7190 Seminar in Programming Languages
Fall, spring. 1 credit. Prerequisite: CS 6110 or permission of instructor. S–U grades only. Next offered 2011–2012.

CS 7192 Seminar in Programming Refinement Logics
Fall, spring. 4 credits. Prerequisite: permission of instructor.

CS 7290 Seminar on Scientific Computing and Numerics (also MATH 7290)
Fall, spring. 1 credit. Prerequisites: none.

CS 7390 Database Seminar
Fall, spring. 1 credit. Prerequisite: permission of instructor. S–U grades only.

CS 7412 Scalable Distributed Consistency: Models and Applications
Spring. 4 credits. Prerequisites: none.

CS 7490 Systems Research Seminar
Fall, spring. 1 credit. S–U grades only.

CS 7594 Seminar on Computational Issues in Medicine
Fall. 1 credit. Prerequisites: none.

CS 7670 Computer Vision Seminar
Fall, spring. 1 credit. Prerequisites: none.

CS 7690 Computer Graphics Seminar
Fall, spring. 3 credits.

CS 7790 Seminar in Artificial Intelligence
Fall, spring. 4 credits. Prerequisite: permission of instructor. S–U grades only.

CS 7794 Seminar in Natural Language Understanding
Fall, spring. 2 credits.

CS 7890 Seminar in Theory of Algorithms and Computing
Fall, spring. 4 credits. Prerequisite: permission of instructor. S–U grades only.

CS 7893 Cryptography Seminar
Fall, spring. 1 credit.

CS 7999 Independent Research
Fall, spring. Prerequisite: permission of computer science advisor. Independent research or master of engineering project.

CS 9999 Thesis Research
Fall, spring. 1 credit. Prerequisite: permission of computer science advisor. S–U grades only. Doctoral research.

EARTH AND ATMOSPHERIC SCIENCES

EAS 1340 Introductory Weather Analysis and Forecasting
Spring. 1 credit. Prerequisites: EAS 1310 and EAS 1330. S–U grades only. M. W. Wysocki and staff.

EAS 1400 Freshman Writing Seminar “Writing in the Sciences: Environmental Perspectives”
Spring. 3 credits. S. Jessup.

EAS 1420 Freshman Writing Seminar “Sustainable Earth, Energy, and Environmental Systems”
Fall. 3 credits. L. McGarry and A. Baker.

EAS 1540 Introductory Oceanography (also BIOEE 1540)
Fall, summer. 3 credits. Fall: C. H. Greene and B. C. Monger; summer: B. C. Monger.

EAS 1551 Introduction to Oceanography Lab (also BIOSM 1551)
Summer. 1 credit. Prerequisites: college-level science course, or EAS 1540, or marine science course or permission of instructor. B. C. Monger and C. H. Greene.

EAS 1560 Introductory Oceanography with Laboratory (also BIOEE 1560)
Fall. 4 credits. C. H. Greene and B. C. Monger.

EAS 1700 Evolution of the Earth and Life
Spring. 3 credits. J. L. Cisne.

EAS 2130 Marine and Coastal Geology
Summer. 4 credits. Prerequisite: introductory geology or ecology or permission of instructor. Staff.

EAS 2200 The Earth System
Fall, spring. 4 credits. Prerequisites: MATH 1110/1910. Letter grades only. A. W. Moore and W. M. White.

EAS 2220 Seminar—Hawaii’s Environment
Fall. 1 credit. S–U grades only. A. Moore.

EAS 2500 Meteorological Observations and Instruments
Fall. 4 credits. Prerequisite: EAS 1310. M. W. Wysocki.

EAS 2680 Climate and Global Warming
Spring. 3 credits. Prerequisite: basic college math. S–U or letter grades. A. T. DeGaetano.

EAS 2900 Computer Programming and Meteorology Software
Spring. 3 credits. Prerequisites: EAS 1310; MATH 1110 or equivalent. N. Mahowald and B. Belcher.

EAS 2960 Forecast Competition
Fall and spring. 1 credit; students enroll for two consecutive semesters; credit awarded for second semester; may be repeated for credit. Prerequisite: undergraduate standing in atmospheric science or permission of instructor. S–U grades only. D. S. Wilks.

</table>
[EAS 4760] Sedimentary Basins
Spring. 3 credits. Prerequisite: EAS 3010 or permission of instructor. Offered alternate years; next offered 2011–2012. T. E. Jordan.

[EAS 4780] Stratigraphy
Fall. 3 credits. Prerequisite: EAS 3010 or permission of instructor. Offered alternate years. T. E. Jordan.

[EAS 4790] Paleobiology (also BIOEE 4790)
Spring. 4 credits. Prerequisites: two majors-level biology courses and BIOEE 2740 or 3730 or EAS 3010, or permission of instructor. W. D. Allmone.

[EAS 4800] Our Changing Atmosphere: Global Change and Atmospheric Chemistry (also BEE 4800)
Fall. 8 credits max. S–U or letter grades. Staff.

[EAS 4830] Land, Water, Agriculture, and Environment (also CSS 4830)
Fall. 3 credits. Offered alternate years; next offered 2011–2012. H. van Es and S. J. Riha.

[EAS 4840] Inverse Methods in the Natural Sciences
Fall. 3 credits. Prerequisite: MATH 2940. D. L. Hysell.

[EAS 4850] Climate Information and Management
Spring. 3 credits. Prerequisites: statistics and at least one physical science or calculus course. S. Riha and M. W. Wysocnik.

[EAS 4870] Introduction to Radar and Remote Sensing (also ECE 4870)
Spring. 3 credits. Prerequisites: PHYS 2208 or 2213 or equivalent, or permission of instructor. D. L. Hysell.

[EAS 4880] Global Geophysics
Fall. 3 credits. Prerequisites: MATH 1920 or 1120 and PHYS 2208 or 2213, or EAS 3040 recommended. M. Pritchard and R. Lohnan.

[EAS 4910–4920] Undergraduate Research
Fall, spring. 1–4 credits. Students must complete form at 2124 Snee Hall. Staff (N. Mahowald, coordinator).

[EAS 4940] Special Topics in Atmospheric Science (undergraduate level)
Fall or spring. 3 credits max. S–U or letter grades. Staff.

[EAS 4960] Internship Experience
Fall, spring. I–2 credits. Prerequisite: enrollment in EES semester in Hawaii and EAS 3400. S–U grades only. See department for more information. A. Moore.

[EAS 4970] Individual Study in Atmospheric Science
Fall or spring. 1–6 credits. Students must register using independent study form. S–U grades only. Staff.

[EAS 4980] Teaching Experience in Earth and Atmospheric Sciences
Fall or spring. 1–4 credits. S–U grades only. Staff.

[EAS 4990] Undergraduate Research in Atmospheric Science
Fall, spring. Credit TBA. Students must register using independent study form. S–U grades only. Staff.

[EAS 5000] Design Project in Geohydrology
Fall, spring. 3–12 credits. Alternative to industrial project for M.Eng. students choosing geohydrology option. May continue over two or more semesters. L. M. Cathles.

Fall. 3 credits. Prerequisites: introductory college-level geology and basic physics and chemistry, or permission of instructor. Co-meets with EAS 4010. L. Cathles. Students enrolled in the graduate-level section of this course are required to complete a substantial class project to be negotiated with the instructor.

[EAS 5011] Evolution of the Earth System
Fall. 4 credits. Prerequisites: EAS 2200, one calculus course (either MATH 1110 or 1910), one course in chemistry (college or high school), or permission of instructor. Two field trips, either Sat or Sun. Co-meets with EAS 3010. T. Jordan, S. Riha, and W. Allmon. Students enrolled in the graduate-level version of this course are required to complete an additional project.

[EAS 5020] Case Histories in Groundwater Analysis
Spring. 4 credits. L. M. Cathles.

[EAS 5041] Geodynamics
Spring. 3 credits. Prerequisites: calculus and calculus-based physics courses or permission of instructor. Co-meets with EAS 4040. Offered alternate years. J. Phipps Morgan. Students enrolled in the graduate-level version of this course are required to complete a computational lab.

[EAS 5050] Fluid Dynamics in the Earth Sciences
Spring. 3 credits. Prerequisites: MATH through 2940, PHYS through 2208 or 2214, or permission of instructor. Offered alternate years; next offered 2011–2012. L. Cathles and M. Wysocnik.

[EAS 5051] Climate Dynamics
Fall. 3 credits. Prerequisites: two semesters of calculus and one semester of physics. Co-meets with EAS 3050. N. Mahowald. Students enrolled in the graduate-level version of this course are required to complete an additional project.

[EAS 5110] Earth System Interactions
Fall. 1 credit (S–U) or 2 credits (with paper, letter grades). Prerequisite: permission of instructor. J. L. Cisne.

[EAS 5220] Advanced Structural Geology I
Fall. 3 credits. Prerequisites: EAS 4260 and permission of instructor. Offered alternate years; next offered 2011–2012. R. W. Allmendinger and C. Andronicos.

[EAS 5240] Advanced Structural Geology II
Fall. 3 credits. Prerequisites: EAS 4260 and permission of instructor. Offered alternate years; next offered 2011–2012. R. W. Allmendinger.

[EAS 5250] Advanced Methods in Radar Remote Sensing (also ECE 5250)
Spring. 3 credits. Prerequisite: EAS 4530 or permission of instructor. Offered alternate years; next offered 2011–2012. R. W. Kay.

[EAS 5540] Advanced Mineralogy
Spring. 3 credits. Prerequisite: EAS 4530 or permission of instructor. Offered alternate years; next offered 2011–2012. S. Mahlburg Kay.

[EAS 5620] Marine Ecology
Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE/BIGB 1610. Co-meets with BIOEE/EAS 4620. Offered alternate years. C. D. Harvell and C. H. Greene. Students enrolled in the graduate-level version of this course are required to complete an additional project.

[EAS 5750] Planetary Atmospheres (also ASTRO 6575)
Fall. 4 credits. Prerequisites: undergraduate physics, vector calculus. Offered alternate years. P. Gierasch.

[EAS 5770] Planetary Surface Processes (also ASTRO 6577)
Spring. 3 or 4 credits. Offered alternate years. J. Bell.

[EAS 5780] Planet Formation and Evolution (also ASTRO 6578)
Fall. 4 credits. Prerequisites: familiarity with elementary physics and math or permission of instructor. Offered alternate years; next offered 2011–2012. M. Pritchard.

[EAS 5840] Inverse Methods in the Natural Sciences
Fall. 3 credits. Prerequisite: MATH 2940. Co-meets with EAS 4840. D. L. Hysell.

[EAS 5860] Advanced Methods in Radar (also ECE 5860)
Fall. 3 credits. Prerequisite: EAS 4870 or permission of instructor. Next offered 2011–2012. L. Hysell.

[EAS 6280] Geology of Orogenic Belts
Spring. 3 credits. Prerequisite: permission of instructor. S. Mahlburg Kay.

[EAS 6410] Analysis of Biogeochemical Systems
Spring. 2 credits. Prerequisite: MATH 2930 or permission of instructor. Offered alternate years. L. A. Derry.
EAS 6840  Air Quality and Atmospheric Chemistry (also MAE 6480)  
Fall. 3 credits. Prerequisites: freshman chemistry, fluid mechanics or equivalent, and thermodynamics. S–U or letter grades.  
K. M. Zhang.

EAS 6520  Advanced Atmospheric Dynamics  
Spring. 3 credits. Prerequisites: EAS 3410 and 3420 or equivalent. Offered alternate years.  
S. J. Colucci.

EAS 6560  Isotope Geochemistry  
Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 4550 or permission of instructor. Offered alternate years.  
W. M. White.

EAS 6660  Applied Multivariate Statistics  
Spring. 3 credits. Prerequisites: multivariate calculus, matrix algebra, and two statistics courses. Offered alternate years.  
D. S. Wilks.

EAS 6750  Modeling the Soil-Plant-Atmosphere System (also CSS 6750)  
Spring. 3 credits. Prerequisite: EAS/CSS 4850 or equivalent. S. J. Riha.

EAS 6920  Special Topics in Atmospheric Sciences  
Fall, spring. 1–6 credits. S–U or letter grades. Staff.

EAS 6930  Special Topics in Geological Sciences  
Fall or spring. 1–3 credits, variable. S–U or letter grades. Staff.

EAS 7000–7990  Seminars and Special Work  
Fall, spring. 1–3 credits. Prerequisite: permission of instructor. Staff.

EAS 7010–7200  Thesis Research  
7010, fall; 7020, spring. 1–15 credits, variable. S–U or letter grades. Staff.

EAS 7110  Upper Atmospheric and Space Physics  
Fall or spring. 1–6 credits. Seminar course. D. L. Hysell.

EAS 7220  Advanced Topics in Structural Geology  
R. W. Allmendinger.

EAS 7310  Advanced Topics in Geoetic Monitoring and Modeling  
M. Pritchard.

EAS 7330  Advanced Topics in Geodynamics  
Spring. J. Phipps Morgan.

EAS 7500  Satellite Remote Sensing in Biological Oceanography  
Summer. 3 credits. B. C. Monger.

EAS 7510  Petrology and Geochemistry  
R. W. Kay.

EAS 7550  Advanced Topics in Tectonics and Geochemistry  
Fall. 3 credits. J. Phipps Morgan.

EAS 7750  Advanced Topics in Oceanography  
C. H. Greene.

EAS 7760  Paleobiology  
J. L. Cisne.

EAS 7770  Advanced Topics in Sedimentology and Stratigraphy  
T. E. Jordan.

EAS 7900  Soil, Water, and Geology Seminar  
Spring. L. M. Cathles and T. S. Steenhuys.

EAS 8500  Master's-Level Thesis Research in Atmospheric Science  
Fall, spring. Credit TBA. S–U grades only. Graduate faculty. Thesis research for atmospheric science master's students.

EAS 9500  Graduate-Level Dissertation Research in Atmospheric Science  
Fall, spring. Credit TBA. S–U or letter grades. Graduate faculty. Dissertation research for atmospheric science Ph.D. students only after “A” exam has been passed.

EAS 9510  Doctoral-Level Dissertation Research in Atmospheric Science  
Fall, spring. Credit TBA. S–U or letter grades. Graduate faculty. Dissertation research for atmospheric science Ph.D. candidates after “A” exam has been passed.

ELETRICAL AND COMPUTER ENGINEERING  

ECE 1260  Introduction to Signals and Telecommunications (also ENGR 1260)  
Spring. 3 credits. For description, see ENGR 1260.

ECE 2100  Introduction to Circuits for Electrical and Computer Engineers (also ENGRD 2100)  
Fall, spring. 4 credits. Corequisites: MATH 2930 and PHYS 2213. All students must enroll in a lab and a sec. For description, see ENGRD 2100.

ECE 2200  Signals and Systems  
Fall, spring. 4 credits. Prerequisites: MATH 2930 and CS 1110 or 1132. Corequisite: MATH 2940. Introduction to signal processing. Topics include frequency-based representations, Fourier analysis and synthesis; discrete-time linear systems: input/output relationships, filtering, spectral response; analog-to-digital and digital-to-analog conversion, continuous time signals and linear time invariant systems: frequency response and continuous-time Fourier transform.

ECE 2300  Introduction to Digital Logic Design (also ENGRD 2300)  
Fall, spring. 4 credits. Prerequisite: CS 1110 or 1112. For description, see ENGRD 2300.

ECE 2400  Electrical and Computer Engineering Practice and Design  
Spring. 4 credits. Prerequisite: PHYS 2213. A brief history of electrical and computer engineering, the core subjects that define the field today, the ethical standards of its practice, and instruction in the elements of the process of designing electrical devices and systems. Students engage in experiential-learning design projects in which they will use the design process strategies to function well on a team and to design a system that meets customer needs and electrical engineering constraints.

ECE 2500  Technology in Society (also ENGRG/HIST 2500, STS 2501)  
Fall. 3 credits. Humanities elective for engineering students. For description, see ENGRG 2500.

ECE 2910–2920  Sophomore Electrical and Computer Engineering Independent Project  
2910, fall; 2920, spring. 1–4 credits. Individual study or directed reading in connection with a special engineering problem chosen by the student, after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor and submit an Independent Project Form to the Student Services Office, 223 Phillips Hall.

ECE 2930–2939; 2940–2949  Sophomore Electrical and Computer Engineering Group Projects  
2930–2939, fall; 2940–2949, spring. 1–4 credits. Group study, analysis, and, usually, experimental tests in connection with a special engineering project chosen by the students after consultation with the faculty member directing the project. New projects are added upon faculty request. Written progress reports are required. Students must submit a Group Project Form to the Student Services Office, 223 Phillips Hall.

ECE 2980  Inventing an Information Society (also AMST/ENGR 2980, HIST 2920, INFO/STS 2921)  
Spring. 3 credits. Approved for humanities distribution. For description, see AMST/ENGR 2980.
ECE 3030 Electromagnetic Fields and Waves
Fall, summer. 4 credits. Prerequisites: grade of C or better in PHYS 2213, PHYS 2214, MATH 2930, MATH 2940, and ECE/ENGRD 2100.
Covers static, quasi-static, and dynamic electromagnetic fields and waves. Topics include Maxwell's equations (integral and differential forms), fields of charge and current distributions, boundary conditions, fields near conductors, method of images, material polarization and dielectrics; energy, work, and power in electromagnetic systems; wave propagation and polarization, waves in media (dielectrics, conductors, and anisotropic materials); reflection, transmission, and refraction at media interfaces; guided waves in transmission lines, Smith charts, transients, metallic and dielectric waveguides; radiation and antennas, antenna arrays, electric circuits for transmission and reception, aperture antennas and diffraction.

ECE 3100 Introduction to Probability and Inference for Random Signals and Systems (also ENGRD 3100)
Fall, spring. 4 credits. Prerequisites: MATH 2940, PHYS 2213, or equivalents.
Introduction to probabilistic techniques for modeling random phenomena and making estimates, inferences, predictions, and engineering decisions in the presence of chance and uncertainty. Probability measures, classical probability and combinatorics, countable and uncountable sample spaces, random variables, probability mass functions, probability density functions, cumulative distribution functions, important discrete and continuous distributions, functions of random variables including moments, independence and correlation, conditional probability, Total Probability and Bayes' rule with application to random system response to random signals, characteristic functions and sums of random variables, the multivariate Normal distribution, maximum likelihood and maximum a posteriori estimation, Neyman-Pearson and Bayesian statistical hypothesis testing, Monte Carlo simulation. Applications in communications, networking, circuit design, device modeling, and computer engineering.

ECE 3140 Computer Organization (also CS 3420)
Spring. 4 credits. Prerequisite: CS/ENGRD 2110 or ENGRD 2300.
Topics include performance metrics, data formats, instruction sets, addressing modes, computer arithmetic, microcoded and pipelined datapath design, memory hierarchies including caches and virtual memory, I/O devices, bus-based I/O systems. Students learn assembly language programming and design a simple pipelined processor.

ECE 3150 Introduction to Microelectronics
Spring. 4 credits. Prerequisite: ECE/ENGRD 2100.
Introduces the basic devices and circuits in modern microelectronics. Students learn not only basic structures and operations of semiconductor devices through simple models (diodes, MOS, BJTs) but also how to analyze and design basic transistor modules in digital and analog circuits including biasing, amplifiers, filters, logic gates, and memory. The course introduces intuitive design methods to map circuit specifications to transistor topology, as well as first-order time-constant estimation. SPICE and measurement labs accompany the progress in lectures for hands-on experiences.

ECE 3200 Networks and Systems
Spring. 4 credits. Prerequisites: ECE 2200 and MATH 2940.
Students develop a working understanding of the analytical and computational tools used in the design and representation of complex networks and systems. Topics include state-space techniques, finite state machines, graph-theoretic approaches to network design and analysis, complexity, phase transitions in complex systems, and scalability.

ECE 3250 Mathematics of Signal and System Analysis
Fall. 5 credits. Prerequisites: MATH 2930, MATH 2940, and ECE 2200 or permission of instructor.
Course aims to deepen students' working knowledge of mathematical tools relevant to ECE applications. While the course emphasizes fundamentals, it also provides an ECE context for the topics it covers, which include foundational material about sets and functions, linear algebra, vector products and orthogonal representations, basic ideas from multivariable calculus, and elementary convex analysis.

ECE 3600 Ethical Issues in Engineering Practice (also ENGRG 3600, STS 3600)
Spring. 3 credits. Open to sophomores. For description, see ENGRG 3600.

ECE 3910-3920 Junior Electrical and Computer Engineering Independent Project
3910, fall; 3920, spring. 1–4 credits. For description, see ECE 3910–2920.

ECE 3930-3939; 3940–3949 Junior Electrical and Computer Engineering Group Project
3930–3939; fall; 3940–3949, spring. 1–4 credits. For description, see ECE 3930–3939; 3940–3949.

ECE 4060 Introduction to Quantum and Statistical Physics
Fall. 4 credits. Prerequisites: PHYS 2214, MATH 2940, and ECE 3150 or co-registration.
Introductory quantum, statistical, and solid-state physics concepts necessary for understanding modern solid-state electronic and optical devices. Topics include the formalism and methods of quantum mechanics, structures of atoms, molecules, and solids and their interactions with electromagnetic waves, statistical physics, and the basic physics of semiconductor.

ECE 4070 Physics of Semiconductors and Nanostructures
Spring. 4 credits. Prerequisites: ECE 3600 or AEP 3610 and AEP 4230.
Covers basic solid state and semiconductor physics relevant for understanding electronic and optical devices. Topics include crystalline structures, bonding in atoms and solids, energy bands in solids, electron statistics and dynamics in energy bands, effective mass equation, carrier transport in solids, Boltzmann transport equation, semiconductor homo- and hetero-junctions, optical processes in semiconductors, electronic and optical properties of semiconductor nanostructures, semiconductor quantum wells, wires, and dots, electron transport in reduced dimensions, semiconductor lasers and optoelectronics, high-frequency response of electrons in solids and plasmons.

ECE 4110 Random Signals in Communications and Signal Processing
Fall. 4 credits. Prerequisite: ECE 2200 and ECE 3100 or equivalent.
Introduction to models for random signals in discrete and continuous time; Markov chains, Poisson process, queuing processes, power spectral densities, Gaussian random process. Response of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

ECE 4130 Introduction to Nuclear Science and Engineering (also MAE 4580, TAM 4130)
Fall. 3 credits. Prerequisites: PHYS 2214 and MATH 2940. For description, see TAM 4130.

ECE 4150 GPS: Theory and Design (also MAE 4150)
Fall. 4 credits. Culminating design experience (CDE) course. Prerequisites: 3000-level engineering course with advanced math content (e.g., ECE 3030 or MAE 3260). Analysis of GPS operating principles and engineering practice with a culminating design exercise. Navigational algorithms, receiver analysis, error investigation, dilution of precision, antennas, differential GPS.

ECE 4210 Signal Processing Algorithms in Support of Painting Analysis
Fall. 3 credits. Prerequisites: ECE 2200 and MATH 2940. Recommended. ECE 3250. The analysis of fine art paintings by art historians and conservation specialists involves the close examination of various images (e.g., visible light, x-ray) of the painting. This course focuses on the paintings of Vincent Van Gogh and highlight case studies of recent technical examinations. The signal processing tasks encountered are extracted and rudimentary solutions proposed based on fundamental signal processing techniques. Students assess and improve these "starter" schemes, performing (a) periodicity extraction (e.g., for canvas thread counting), (b) set membership discrimination (e.g., for artist identification), and (c) multiple image alignment (e.g., for x-ray stitching). In this emerging application for signal processing, several of these tasks have no widely adopted computer-assisted schemes. MATLAB is used for implementation of the algorithms on high-resolution image data provided by the Van Gogh Museum (Amsterdam, the Netherlands).

ECE 4250 Digital Signal Processing
Spring. 4 credits. Prerequisites: ECE 2200 and 3250. ECE 3100 recommended.
