DVM Admissions

Early Acceptance Program

This program gives exceptionally well qualified applicants the opportunity to obtain admission to our DVM degree program after the completion of the sophomore year. The junior year can then be dedicated to completing any outstanding prerequisite courses as well as participate in an experience in an area of personal interest.

Admission to this program is competitive and there are specific criteria to be met before applying. For details about the program visit the [Early Acceptance Program](#). The application will be available after March 1st.

Transfer Students

Students who attend an AVMA accredited veterinary college may apply for admission into the second year based on a seat available. This is a competitive process that includes all the Pre-Veterinary requirements for first-year as well as submission of the veterinary transcripts and a letter of good standing from the associate dean. Details about the program, deadlines and contact information can be found on our web site at [Transfer Student Information](#).

Expanding Horizons

offers Cornell veterinary students a unique opportunity to experience veterinary medicine in a developing country.

“brucellosis poses a substantial economic and health burden on Nepal’s herders”

Student Profile

Daniel Jackson

DVM Class of 2014

Student’s yak research may reduce infection in Nepal

By Stephanie Specchio

Simple changes in food handling, preparation and animal husbandry could have a significant impact on the incidence of zoonotic disease (infections that spread from animals to humans) like brucellosis in people and animals in such countries as Nepal, reports Daniel Jackson, a DVM candidate in Cornell’s Class of 2014, in the January issue of the journal Preventive Veterinary Medicine.

Brucellosis, which is transmitted to people by drinking unpasteurized milk or through close contact with

aborted reproductive fluids and tissues, is the most common bacterial zoonotic infection in the world and is endemic to Nepal.

Symptoms in people include high undulating fevers and joint and muscle pain that can persist for years. As a result, brucellosis poses a substantial economic and health burden on Nepal’s herders who seasonally move long distances with their animals, said Jackson.

Despite years of research, neither the distribution nor the economic and public health impact of the disease in Nepal’s mountainous regions had been well characterized, Jackson noted.

Daniel Jackson,
DVM candidate
in Cornell’s Class
of 2014

Thus, Jackson assessed the burden, prevalence and distribution of brucellosis in domestic yak and their herders in the mountain region of Nepal's Shey Phoksumdo National Park. With funding from Cornell's College of Veterinary Medicine's Expanding Horizons program, which supported field research in Nepal, among other sources, Jackson visited Nepal's Yak Breeding Station in Syangboche and toured veterinary facilities and colleges in Kathmandu with Nepalese veterinarians and veterinary students. His research provides information that may help to improve the lives of animals and people in the region.

"I am fortunate to be supported by the intellectual and financial resources of Cornell," said Jackson, who spent a year in Mongolia on a Fulbright fellowship after earning his bachelor's degree from Oberlin College in 2006. "To make this happen, I tapped into expertise from around the university and dug up old personal connections in Asia. Veterinary services in the northern Himalaya are severely limited, as are sources of funding to support an endeavor like this."

Jackson's project involved eight weeks in remote regions of Nepal that required large animal clinical skills, psychological and physical stamina, and a great measure of patience, Jackson said. He walked for approximately 45 days employing a donkey team and a small research team including a guide and translator. His group was self-sufficient, carrying and purchasing supplies as needed while on the move.

"To access herds and herders for my research, we walked about 13 miles per day for seven weeks, mostly above 10,000 feet in elevation," said Jackson.

As Jackson traveled between villages and encountered yak caravans and grazing herds, he collected blood samples (with the herders' consent) from nearly 300 yak along the way; conducted physical exams of these animals; and characterized livestock management practices, human/livestock interaction and the prevalence of clinical signs

"To access herds and herders for my research, we walked about 13 miles per day for seven weeks, mostly above 10,000 feet in elevation," said Jackson.

interested in meeting with the Director of Admissions via **Skype™** please send us an [email](#).

This is a wonderful opportunity for club members to learn about the admissions process and ask questions during one of your regular meetings!

suggestive of human brucellosis in households, all documented quantitatively with a questionnaire.

“In the United States, we are fortunate to have systems in place that reduce the risk of disease transmission,” said Jackson. “In rural Nepal, knowledge about basic food safety and disease transmission is lacking. Small, simple changes based on the identification of risk stand to make a large impact. I am taken by integrative approaches to conservation medicine in Asia that address the role of efficient and safe food animal production systems in the mitigation of poverty, the sustainable use of rangelands, and the promotion of ecosystem health. I hope my research contributes to this body of knowledge while highlighting easy, cheap solutions that improve lives – human and animal.”

Annual Open House

Saturday, April 12, 2014 (10:00-4:00)

Admissions Presentations & Tours

March 28, 2014 (Friday)
3:00-5:00

April 12, 2014 (Saturday)
Open House (No tours)
11:00 & 1:30

May 9, 2014 (Friday)
3:00-5:00

June 13, 2014 (Friday)
2:00-4:00

Open House is a day-long event held each April that is run by students. Exhibits and information booths are set up to educate the public about animals in general, pet care, wildlife, and just about anything else that is related to veterinary medicine. Popular attractions include the painted horse and cow, large animal exercise treadmill, cow milking, baby animals, and many others. Admission Presentations with a DVM student panel will be held 2 times during the Open House.
