

LUNCHEON AT LUCKETTS

Roast beef with all of the trimmings was the special of the house on Tuesday when the Lucketts played host to the Jordan Hall gang for the traditional welcome-to-spring feast. The dinner and the accoutrement were handled to perfection and the "gang" is grateful.

FS&T SEMINAR

"The Determination of Maturity in Peas" will be the topic given by Dr. Frank Lee at the FS&T Seminar in Jordan Hall tomorrow night at 8:00.

BRIDGE WINNERS

At last Friday's evening of bridge, Mr. and Mrs. Frank Boyle took top North-South honors and Mr. and Mrs. Harry King captured the East-West high score. The next session will be held on Friday, May 22nd to avoid conflicts with the Memorial Day weekend.

SMALL TALK

It couldn't have happened to a more honest man. We're referring to an incident out in Seneca Lake last Sunday. Our own Don Barton was out after the big ones and landed one--the biggest bass he's ever caught. It weighed ten pounds and measured 23 inches. Don was so disgusted that he threw the fish back in the drink--the season for bass isn't open yet.....Out on the Station pond, about 25 other aquatic creatures have been finding a haven. Mr. Carleton reports that a small flock of wild geese are using the place as a migrat camp....The Gainey's continue to show improvement and expect to move back into their own home this week. They're grateful for the many cards received from their friends at the Station....Mr. and Mrs. Max Patterson and Celeste spent part of last week in their native territory around Bourbon, Indiana....Mr. T. E. O'Neill of the Redwing Company in Fredonia met here last Friday with Doctors Moyer, Hand and Pederson, in a discussion of mold reduction in tomato products.....Leo they-can't-make-me-stay-in-bed Klein is still arguing with his insides, and he's still incapacitated at his home.....Some Cub Scouts from St. Stephen's will visit the Station this afternoon.....Last Friday, a group of kindergarteners from the North Street School toured the greenhouses on an "inspection" trip.

V. A. GRATEFUL

A letter received by the Station from the Veterans Administration Hospital in Lexington, Kentucky, reads thusly:

"Your shipment of dwarf apple trees and Malling rootstocks arrived here in excellent condition. They are certainly healthy and vigorous. This dwarf fruit project, which you have done so much to help, promises to be an excellent treatment project for our patients. A great deal of interest among both patients and employees concerned is centered upon these trees. They are now planted in our new orchard site and it is a fine looking project. Our Manual Arts Horticulture Therapists are very interested in the success of this project and will give it their closest attention. We wish to extend the most sincere thanks of our many patients and of the personnel for your splendid contribution toward improved patient treatment."--F. M. Cook, M. D.

NARROWING THE FIELD

Henry D. Smyth, a member of the Atomic Energy Commission, provides this week's quotable quotes: "In the past ten or fifteen years the word 'research' has become very popular in this country. A schoolboy looking up the meaning of a word in the dictionary is now said to be doing research. I am afraid the popularity of the word is greater than the understanding of the idea. The object of research is new knowledge. That little word 'new' eliminates the schoolboy with his dictionary as a qualified research worker...."

The population of a certain island was made up of people who were either un-failing truth-tellers or consistent liars, so a professor decided to observe them and make a census. As he landed his boat on the shores, he was met by three natives. Said the professor to native No. 1, "Are you a liar or a truth-teller?". The answer was unintelligible. So the prof turned to native No. 2, "What did he say?", begged the prof. Native No. 2 answered, "He said he's a truth-teller!". whereupon native No. 3 protested, "He did not, he said he's a liar!". The befuddled professor quickly retired to the quiet shade of a cocoonut tree in order to reflect and, being a PhD, he eventually determined the true political affiliations of each man. We'll give the answer next week if we get it figured out by then.

If you pick up a starving dog and make him prosperous, he will not bite you. This is the principal difference between a dog and a man.--Mark Twain
