August 28, 1946.

Geneva, N. Y.

NO. 1

The first Finger Lakes Grape Growers tour is being held in the Hammondsport area today. The day's program includes an inspection of Doctor Braun's disease control plots in a commercial vineyard in that section, a visit to vineyards in which soil conservation and planting and cultural practices are in operation under the supervision of Mr. Carleton and Professor Wellington and his group; demonstrations of vineyard dusting and spraying, and exhibits and demonstrations of dusting, spraying and other vineyard machinery. About 300 grape growers are expected to be in attendance and the Station delegation will include the Director, Professors Wellington and Hartzell, Mr. Carleton, Doctor Glasgow, Doctor Shaulis, Mr. Tomkins, Doctor Oberle, Doctor Braun, and Doctor Reinking.

EMPLOYEE'S ASSOCIATION

A meeting of the Geneva Chapter of the State Civil Service Employee's Association will be held at 4:15 p. m. tomorrow, on the third floor of the Dairy Building.

AMONG THE VISITORS

Doctor Donald Tressler, formerly head of the Chemistry Division and now engaged in consulting work on food processing with headquarters in Westport, Conn., spent last Thursday at the Station. Doctor R. W. Dean, entomologist at the Hudson Valley Fruit Investigations Laboratory at Poughkeepsie, made one of his rare visits to the Station last week at the time of the Statewide tour of orchard insect and disease control experiments. He took time out to confer briefly on a bulletin on apple red-bug which is in process of publication under the joint authorship of himself and Doctor Chapman. Mr. Sam Gray of the American Potash Institute in Washington, D. C., was also a recent visitor when he stopped by to inspect Professor Sayre's fertilizer tests with canning crops.

FURTHEST POINT WEST

Doctor Heinicke received a "progress report" from Professor Munn from Corvallis, Oregon, for the first month of his absence from the Station. "We are about as far west as we may go," writes Professor Munn. "We have visited eight experiment stations and 23 seed testing laboratories. Up here in Oregon they surely grow fruit. Today we have been in orchards of apples, peaches, filberts, and walnuts. Tomorrow, it will be on the big seed ranch of Ed Geary at Klamath Falls, a 300-acre ranch all used for grass seed growing. The next day into California and the bean-growing regions."

IMPROVING

In a recent communication, Mrs. Lida Thatcher Barber states that, following a severe illness last spring, her mother, Mrs. R. W. Thatcher, has been better than for over a year, and that they have hopes that the chronic infection that has been troubling Mrs. Thatcher can be kept under control for some time to come. Mrs. Thatcher is now residing in Arlington, Mass., in an apartment immediately adjacent to the Barber residence.

CUPID'S DOINGS

Everywhere we called this morning--or almost everywhere--we heard about a wedding. At least the week's score for our society editor sets some kind of a record. Here it is:

Canne-Greenwood: Miss Eleanor Jean Canne and John Philip Greenwood were married in Phelps on Saturday, August 24th, and will reside in Geneva. Eleanor is employed in the Publications Division and Phil at the Shuron Optical Company.

Cook-Lerch: Miss Carolyn Cook and Neil Lerch were married in Geneva on August 24th, and will reside in Colorado Springs, Colo., where Mr. Lerch has a teaching position. Mrs. Lerch has been employed in the Bacteriology laboratory for the past several months.

Anhalt-Brown: Miss Leah Anhalt and James Brown of Geneva were married on August 22nd. Mrs. Brown was at one time employed in the Plant Pathology Division.

Wheeler-Norton: Miss Katherine Wheeler, formerly of the Chemistry Division, and Doctor L. B. Norton, also at one time a member of the Station Staff and now Assistant Professor of Insecticidal Chemistry at Cornell, were married in Ithaca on August 20th.

Our congratulations and very best wishes to one and all!
