

### FRUIT TESTING ASSOCIATION MEETS

Well over 200 amateur and professional fruit growers attended the 44th Annual Meeting of the New York State Fruit Testing Cooperative Association on 20 September. This marked the largest crowd in the history of the Association. Although the entire program was well received, the part that always seems to meet with greatest acclaim is the Question Box, a panel-type discussion at which Association members can ask questions of Station scientists. Most of the participants were classified as amateur growers this year. This is not to indicate that the professionals lack interest in the organization, but rather that the commercial growers were at the peak of their McIntosh harvesting season.
