This is Esopus Creek on the Ulster & Delaware R.R., total length = 220 - Clear span = 213 - total width 0.75 = 17.5. This from one just made by Capt Jones of U. & D. R. R. This was built by Leighten designed probably by Hiltex.

(7) That others could be found [i.e. Casey, built - 3 spans (be spans) of 187 each]

(8) That the single track mileage on the W.R.R. system for bridges of 100 ft. cover was equal to 2 3/4 miles in round numbers [this can be put a little higher] - This latter statement was in reference to your "few score" spans.

The statements above noted are less with again made or confirmed.

I intended to say some more but a slight trouble prevented and I understand that the paper still open to discussion to latter...
