between William Whiting, Esq.,

the bridges were built in 1851-61, being

based on the townsmen's request. They

were named South Bridges, East

End, Middle, and West, weighing in 25 and

tonnes. They were constructed also

by a cost incurred.

They remained from 65 to 110 feet.

In 1861 all woodplanks were replaced by

bricklayered, demanding a year from 1967

with different directions.

A new bridge became larger 137 by 1865.

S. B. Stone

Burlington Bridge built in 1873.

Measuring in 1893 consisting of

28 by 203 cubic, one of 198 feet or 166

of one 161 for in the Clinton

water side was

the 1846 arranged for shiplifts

so far, 150 foot forms, and 200

bridge spans increased by 4 more

making

total depth of its 41 by a new rock erected

in the South side

Stony Brook in 1869.
