Department of Pathology and Bacteriology

POULTRY DISEASES

Date: 29 - III - 49
Accession No.: 1598

From: Norman Wolff
Address: East Aurora, N.Y.
Breed: N.Y.
No. 3 (D)
Age: 7 weeks

Other Material: 600 on floor. Three found dead today; a complete lack of eggs.

Condition: All three have been picked around the vent.

Affirmative.

Death due to internal hemorrhage.

(2) One bird completely picked out, other with skin picked in from head and
dumbness picked in two at flaxure.

Third bird picked around.

Diagnosis: Cannibalism.

Reported. Date: 20 - IV - 49 By: J.W.M.

Phone to Mrs. Wolff.
Kidneys very pale swollen, apparently due to obstruction of the ureters at their orifices due to the trauma.
Date: 30 - III - 49  Accession No.: 1599

From: Lloyd from Belz  5-4 on 5-1T

Address: Chaffee, NY.

Breed: Bronze No. 3 1D Age: 9 wk

Other Material: 3500  laying or 2 every night.

Postmortem:
Liver generally pale but sprinkled with relatively large hemorrhages (all 3).
Severe hemorrhagic enteritis (all 3)
M.E. Negative
Sandusky gizzard (3)

Diagnosis: Converted type

Reported Date: 30 - III - 49 By: FRM

Phone
Date: 31-III-49  Accession No.: 1600

From: George E. F. 815 F 4

Address: Duson  R. D.  #1 31-III-49

Breed: Red Rock X (Gen.) Age: 16-26

Other Material: 800 from Fairport Hatchery

Fairport. H. J. at 45 the first couple of weeks. Noticed a cold at
3 days of age - wheezing & coughing

(Rec'd chills on Friday, Mar. 3; cold
noticed Monday; on Wednesday it
started in laying flocke with acute
respiratory symptoms and egg poor in
450. Eggs dropped from 325 to 50 in
3 week and then started back up)

Diagnosis: Infective Bronchitis

Reported. Date: 4-IV-49 By: ...
Draw blood sample

Titer (serum) - Neg 1:5

Titer (buffy coat) - Neg 1:142

Leukocytes (k/u) - 1600

One cluck above head tumor.

Pseudob getVersion (4vlu)

Vomitory air over all.

Imprint cysts in liver (6).

Culture 4vlu PL AT B - Straphylococci
Date: 1IV-49  Accession No.: 1601
From: Steve Smith
Address: Arcade, Yorkshire, NY
Breed: Rkt-Rdl X No. 6(A) Age: 3 wk
Other Material: 400 - from Hubbard Farms, Lancaster, PA. O.K. until couple of days ago. Just a few are dumpy, having suffered from weakness.

EO: Som: There is very little; one is very weak & lame; two are moderately lame; one is slightly lame.

Culture: Negative

Diagnosis: probable E. coli enteritis

Reported Date: 1IV-49 By: E. Smith
Date: 1-IV-49
Accession No.: 1602

From: Mr. C. Wolniewicz

Address: West Valley, NY

Breed: W.S.

Other Material: 1200 from Wayne Hatchery in Pennsylvania (252 includes some red chicks, live). The flock about 38. This chick was alive yesterday, down on one leg when picked up.

A few white spots on upper breast of bird. PM. Neg.

These lesions appeared to be shallow ulcerated with purulent exudate. Negatives.

Diagnosis: Negative

Reported Date: 5-IV-49

By: [Signature]

[Mr. Kaufmann]
Small round white lesion on posterior surface of heart, near tip of heart. This lesion has raised dark center.

Cultured in [illegible] 10% FBS - 1602
Department of Pathology and Bacteriology
POULTRY DISEASES

Date: 1-IV-49
From: Walter Willmeyer (Mr. Kaufmann)
Address: Springfield, Ill.
Breed: Wy. (5) & J (2)

Other Material: Owner thinks there is some
address in the Wy. & D W.R.
& Wy. (3 days older) mixed together,
also B. R. Ruffled feathers have
developed in the W.R. and is apparently
starting in the B. R. The W.R. are
doing all right.

Diagnostic: Stunted chick disease, immunized groups.

Reported Date: 2-IV-49
By: JFM
inrect. Kidneys very pale & swollen, apparently due to obstruction of the ureters at their orifices deep to the bladder, 1598.
Fibre in gizzard (including some "staylies") (2). No grit.
Department of Pathology and Bacteriology
POULTRY DISEASES

Date: 2 - IV - 49  Accession No. 1604
From: Walter Larson
Address: 
Breed: Rhode Island Red
Other Material: Broiler plant, raising on floor, starting 1,000 one month, let 8-10 weeks, they start to lay around a lot and not eat much. Some dippy came to paralysis within 2 days.

Diagnosis: Weak bones - leg bones, shaft, to break easily with little or no snap. Ribs first bend over.

Reported: Date: 2 - IV - 49  By: L. H. S.
Feeding was not feed from an 
int. to supplement it. 1604
POULTRY DISEASES

Date: 3 - IV - 49  Accession No.: 1605
From: E. Price
Address: Lancaster, R.D.2, Clinton St., N.Y.
Breed: Rock-red X  No.: 1 (A) Age: 6 months
Other Material: Flock of 60-70 capons - 6 or 8 are lame.

Leg: Lame: 3 lame, esp. on left leg. Left leg muscle atrophied.

Neurolymphomatosus - left obturator nerve.

Diagnosis: Neurolymphomatosus

Reported Date: 3 - IV - 49  By: W. W.
POULTRY DISEASES

Date: 2 - IV - 49  Accession No. 1606

From: Nicholas A. Funicello

Address: 1371 Cherry, NY

Breed: Red Rock X No. 4 (A) Age 14

Other Material: 650 - Laying about 3a

Week, Feed, water, disease, die

Prep: 1 - Swollen, spotted liver
Necrotic heart
Leny abscesses
Rotten bowel, plaques

2 - Swollen, gutted, perished

Culture: Aer. + Ser. + 5 % BBPR - Dip. pullorum

Diagnosis: Pullorum
