Counterface, an interactive video installation, is one component within a larger two-fold work-in-progress that also comprises Painted Devil, a linear, single channel video. Both pieces focus on women's different roles in contemporary Turkish society, with all the nuances and conflicts that have developed among the secular and non-secular, rural and urban, modern and traditional.

Counterface, the interactive rendering of the above theme, will consist of a gyroscope-like double-axis structure incorporating a large dark glass plane within a rotating metal frame. Two primary sets of scenes—a range of shots of day-to-day activities in public settings, (where the overt absence of women from the images is intended to mark their exclusion from many aspects of Turkish public and social life) vs. visual portraits of interviewed women of various classes and backgrounds—will be projected on the glass plane. The user’s rotation of the metal frame up or down on its X axis will dynamically switch the stream of images from one set (outdoors) to another (indoors). Each of the two sets of shots could itself be navigated — from one outdoor scene to another or from one interview to another— by rotating the structure's inner glass plane on its Y axis to the left or right.

The piece aims to serve as a prototype for a new type of documentary whereby navigation through a video canvas makes use of navigated physical space as both interface and metaphor for the representation of other types of spaces (e.g. conceptual). The navigation will function principally as a means to make a comment about documented social, political and cultural space, a comment the user enacts rather than expresses.
Rotation of the glass plane within the square structure (Y axis) -- indicating a direction left or right within a constrained angle -- enables scrolling through the various scenes within each of the two navigable movies. Pausing on a specific scene allows it to unfold in depth.

Rotation of the square structure up or down (X axis) causes the navigable movie to shift from the string of outdoors scenes to the canvas of interviews and back.
Installation Demonstration Tape (supplementary work #1)

The navigation of the *Counterface* is demonstrated on the attached VHS tape. The physical construction of the installation is further detailed on the attached floor plan. The material used for the video demonstration is comprised of a 3D animation of the physical construction alongside a software navigation of the video footage.

The video footage is divided into two categories - samples of digitally altered outdoor scenes (front of navigable movie) and samples of interviews (back of navigable movie). Each of the two sets of material is navigated in the software representation of the installation by moving the cursor to the left or right edges of the frame. The various scenes or interviews navigated can be visited in depth by bringing the cursor to the center of the frame. In order to switch between the two sets of scenes, one needs to hold the mouse down and drag (rotate) the image up or down.

In the actual future installation of the work the cursor/mouse activities will be replaced by direct human interaction with a physical computing construction (see attached floor plan), consisting of a double-axis structure which the user will be invited to rotate either up/down or sideways. Pausing on a scene during the left or right rotation will allow that scene to unfold in depth.

The material used for the demonstration is partial and limited (i.e. in terms of the number of scenes and interviews constituting the navigable movie) and is designed only for illustration of the general patterns of visual manipulation and navigation that will be used in the future expanded version of the piece. Moreover, the final version will incorporate a programmed tracking of the user's path, which will allow the range of scenes visited and the scope of interviews audited to be flexible and dependent upon the user's individual route of navigation.

Special Information for Screening:

A demo of the work on tape is attached. Also attached is a Web version of the piece on a CD-ROM (supplementary material #3), and a 35 min. single channel video on VHS tape (supplementary material #4), Kayam Al Hurbano (Existing on its Ruins), produced in conjunction with Occupied Territory.

Description of Work (use an additional sheet if necessary)

Occupied Territory is one in a series of interactive navigable movies (which includes CityQuilt and Rural), all produced – as is the proposed work-- as one component of two-fold projects. These projects all contain a single channel video (or group of short linear video pieces, as in the case of Blind), alongside an interactive presentation of a similar theme or locale.
Occupied Territory, made in conjunction with the single channel piece, Kayam Al Hurbano (Existing on its Ruins, supplementary material #4) displays scenes shot in Deheishe, a refugee camp near Beth-Lehem in Palestine. Like CityQuilt and Rural (two prior navigable movies) – and like Counterface, the proposed project -- Occupied Territory serves as a prototype for a new type of documentary whereby navigation through a video canvas makes use of space as interface (or metaphor) for the representation of other types of landscapes (e.g. temporal, thematic, imaginary).

Motion of the navigable movie is activated by rolling the cursor over the inside edges of the movie's frame. Movement stops when the cursor is placed over the center of the frame or is altogether outside it. There are eight possible directions of motion: left-right, top-bottom, and the four corners.

The landscape navigated seems to be desolate and unoccupied, yet various stories or transformations of scenes, both outdoors and indoors, are concealed within it.

There are two ways to access the hidden temporal axis, and to visit and watch these scenes in depth. An icon in the shape of an eye signals the first type of entry. When the eye-cursor is moved to the center of the frame, the images are momentarily re-inhabited by the people of Deheishe. A scene evolves and then dissolves. Navigation can be resumed at any point during or after the scene takes place, by moving the cursor back to the frame's edges.

A second type of entry, also from the center of the frame, is available whenever the eye-icon does not appear. This second type of entry is signaled by the navigation icon transforming over the center area into the shape of a hand. When the mouse is pressed down in the center area, during the appearance of the hand icon, one of many hidden, semi transparent, indoor portraits of the place is revealed behind the empty streets and flat walls. The scene evolves as long as the mouse is kept pressed down. When the mouse is released, the mirage evaporates, walls become opaque, and navigation can be resumed.

Special Information for Screening:
A demo of the installation on VHS tape is included, as well as a floor plan and a set of additional slides.

Description of Work (use an additional sheet if necessary)

Slip, an interactive video installation made in collaboration with Sha Xin Wei, was shot at Peachtree Pine Homeless Shelter in Atlanta, Georgia.

Individual studies of homeless people, even with the best intentions, all too often flatten their subjects into iconic figures of misfortune and pathology, ignoring—or damping, for strategic reasons—the social context in which they are defined and confined. By taking portraiture to its logical conclusion, we highlight the problems of the form.
The installation consists of a video projector mounted on a pole extending down from the ceiling, in front of a constructed wall. Within the wall’s center a wooden frame (3*4 feet) is installed, in which a large revolving glass is placed. The image is projected onto a dark background attached to the glass window, thus acquiring a three dimensionality continuous with the installation space itself. The user’s rotation of the glass, within the frame, at a constrained angle of approximately 60° in either direction, triggers changes in the images projected upon it. A rotation left rotates the image of the projected space to the left, and vice versa (this same interaction configuration, or physical computation structure, is incorporated within Counterface, the proposed project’s installation scheme, as the internal of the latter’s two rotation axes).

The projected space in Slip, an abandoned warehouse, seems vacant, except for a chair, its back to us, placed at its center. With a fast turn of the glass screen/frame/camera on its center axis, a brief glimpse at people seated on the chair, yet hidden in seams fracturing the empty space, is hinted at but ultimately frustrated. The videotaped figures projected on the glass screen are trapped in a perspective that cannot be transcended or expanded – the limited rotation of the glass confines the view, at the best of times, to the back or profile of the glimpsed-at figures. And though the scene’s resolution expands upon a slowing down of the screen’s rotation, that is, upon the focusing of the quest for signs of human presence, this latter attempt itself exposes only faint figures turned and turning away from the viewer and quickly receding into the background.

Our goal in conceiving this project was to investigate concepts such as on- and off-limits (on- and off-screen) or private/public territory, by challenging the depth of the installation space itself, as well as that of the recorded space--challenging, therefore, these spaces’ implicit promise of access to a multiplicity of points of view, to additional information, to the desired freedom of vision, movement and touch.

While keeping within a prescribed, conventional, static and uninterrupted (i.e., un-interacted with) view, the scene seems to be intact, coherent and vacant of any disturbing signs. It is the viewer’s sideways gaze (matched by the motion of screen/frame/image) that exposes and enhances distortion and pre-existing gaps in the perception of the depicted scene. Thus, it is interaction itself—the desire to see—that reveals one’s ultimate confinement to a single, blind and imprisoned perspective, in which what is off-screen is also off-limits, and what is marginalized (i.e. the homeless) remains un-grasped.
Slip - Floor plan

A projector is mounted in front of a wall from a pole, extending down from the ceiling (position marked with an x), at a height allowing passage of people below.

A 4*3 feet image is projected on a revolving dark glass set within a wooden frame installed in the wall.

The space is maintained dark.

The area behind the wall is inaccessible to viewers, and is about 6 feet in depth.

The computer, the playback video deck and the physical computing electronic box are stored and hidden behind the wall and accessed through a revolving door to the side.

Slip side view:

Installation:
A 3-4 inch wide wall is constructed parallel to an existing wall. A 3*4 feet opening is cut at the wall's center for the installation of the wooden frame. A revolving glass with a restricted angle turn of approximately 60 degrees in each direction (left or right) is mounted within the wooden frame. The glass' degree of rotation is interpreted by the computer and translated into a change in the projected image.

Equipment:
1 G3 Mac (or above) computer (Fire Wire connection to camera)
1 DV deck or camera (S cable or RCA connection to projector)
1 projector
Electronic box linking wooden frame and computer through serial port

Special Information for Screening:
A 3D animation demo of the installation, along with one cycle of the edited video footage is included on VHS tape, as well as a floor plan and a set of slides.

Description of Work (use an additional sheet if necessary)

Icarus, a dynamic video installation (i.e. with a projection apparatus in constant motion), was shot in Cartagena, Spain. The city of Cartagena, situated on the Mediterranean coast, has been the site of the rise and fall -- and of manifestations of power and disempowerment -- for an array of cultures and regimes, among them Roman, Byzantine and Islam, as well as the Episcopalian Church and the Spanish Republic. During those times the city served -- between long stretches of decay, epidemic, war, destruction and then recuperation -- as a thriving port, a strategically valuable military base and an industrial and commercial center rich in mineral, lead and silver
mines. Currently a small peripheral town, inhabited in large part by an emigrant community of Moroccan day-workers, it is bent on extending the tourist and cultural appeal of its excavations of remnants of a Roman theatre, of an Amphitheater situated beneath a bullfight ring, and of a large number of other historically pointed military, navy and cultural sites, as well as of its renowned technical university (which resides in a renovated military hospital) -- by means of a supervised series of house demolitions in sites intermittently dispersed in the town's center, to be re-occupied in the near future by luxurious apartment hotels. At the time of Icarus' production, the various signs of power and of entropy, of centrality and marginality, whether military, political, ethnic, economic, cultural or social, were eclectically displayed in the city’s layered and fractured architecture and human arena.

The edited video for Icarus consists of a 25 min. reverse pan – an impossible re-turn or “temporal wipe” -- across five circular sites shot in Cartagena, each stitched together out of patches, spatial and temporal, of the city’s urban landscape. The act of weaving in and out of scenes and of moments betrays unseen cracks into which various characters slide, in which they converge, or disappear. The landscape thus peels and unfolds, turning back but never arriving at some intact moment of aspiration and of origin. Like Occupied Territory (Sample Work #1), and Counterface (the proposed project, see supplementary tape #1), the piece is formally engaged with navigating a fragmented landscape, using the camera’s movement as a means to comment upon – or occupy and thereby interrupt -- that landscape’s social and political determinants.

The video is comprised of a circular pan of the following five sites:
1. [The site included on the current work sample tape:] An empty lot, a backdrop for signs of an organized demolition overlapping signs of entropy and neglect, through which a police parade is seen in passing alongside brief views of passing emigrants, prostitutes and children.
2. The university’s courtyard -- a neo classic renovated structure, where a glimpse of construction workers and cleaning maids is obliterated by the students’ activity.
3. A residential neighborhood bordering to the point of merging with remnants of Roman ruins.
4. A playground in which a hide and seek game is played by a group of children, a handicapped prostitute changes attire and an elderly man feeds a flock of pigeons.
5. A lonely guard watching a fenced industrial complex at night.
The Installation's structural outline:
A rotating projector at the center of a cylindrical projection screen unfolds the documented space(s) dynamically. The rotation of the projector matches the camera's motion in speed and angle, resulting in a "wipe" or an "x-ray" view of the projected space gradually erased/revealed within the changing portions of the circular screen. The spectator will be positioned at the periphery of the cylindrical screen, always confined to a limited angle on the rotating projection.

The installation will premiere in an upcoming show at the Israel Museum, Jerusalem, in December 2003. The current demonstration tape includes a 3D animation rendering of the installation structure as well as the opening segment (first pan) of the video itself.

**Artist Statement**

Both my linear and my interactive video work are engaged with particular social/political contexts and their representations, striving--largely through digital manipulation--to reconcile two simultaneous, even conflicting, urges: to document the stories of people and places, and to express my own version of such encounters. Negotiating the sometimes intense opposition between these two truths -- bringing to the fore the multiplicity and transience of point-of-view(s) -- is a primary aim and an underlying formal as well as ethical concern in my video projects (whether interactive, installation or single channel) which thus straddle the fields of video art and experimental documentary.

In an oblique, nuanced manner, relying on almost imperceptible, digitally effected disruptions of images and sound of mundane scenes, my work teases out those marks of underlying human life that might otherwise remain latent or masked but which transform, disorient and interrupt any innocent view of the everyday.

I employ digital means to investigate this separation between found and imagined, exterior and interior. My intention is to make a scene seem constructed, looked at, fabricated or remembered, and to have those features (i.e., its “looked-at-ness”) become as visibly integral to the scene as are its color or contour. I search for ways, on the one hand, to expose perspective, and on the other, to mobilize and interact with it--so that one can no longer differentiate between the point of view and the documented object itself. Thus, a formal device becomes an event that the recorded human figures undergo, and a structural code functions as an element of what it depicts.

My goal can therefore be summed up as an attempt to destabilize or fracture any discernable set of coordinates, in order to allow for a variety of shifts to occur in the identities of the places, objects and people recorded; and to have these transformations be in some way informative both of the documented material and of myself, the observer/recorder. I attempt to undermine the frame--the physical frame bounding an image, as well as the cultural, ideological frame determining a vision--as a stabilizing grid by which one can differentiate inside from out, as well as left from right, the territory of the imaginary from that of the real, the visible from the invisible or hidden, my perspective from that of another. The grids I refer to provide the premise for the settings of a scene: they can be as basic as directionality in space, or they can determine the distinction between a viewer’s position (outside the
scene) and the subject's (inside it). By grid I also mean the narrative line, the uniformity of character, what safeguards the stability of narrative hierarchies: the in/out of a story, genre divisions.

I destabilize this grid by letting the coordinates drift into the description (e.g., during the user's 360 degree navigation of a changing, patchwork landscape), thus causing them to lose their function as spatial reference; by creating more than one center in an image or story and breaking it open at various axes (e.g., by panning or zooming in on one element while the rest of the scene is constrained to a single, steady perspective); by multiplying the images of single characters within a single shot; by effecting a gradual, apparently unmotivated disappearance (or reappearance) of figures from what might otherwise seem a mundane moment; by teasing out (e.g. through the user's activity) one's incapacity to attain the certainty of a solid presence or a singular perspective. Ambient sound and recorded conversations are also digitally manipulated to distill and heighten the ordinary, creating a space where multiple, overlapping perspectives are hinted at: those of the viewers/users, of the filmmakers, and of the individuals in the scenes depicted.

With this, a new type of documentary is suggested, whereby navigation through a video plane calls into question the reality of the locale visited, and the interaction with the scene and its inhabitants becomes an integral aspect of their perceived character. The goal of the work is not to convey a coherent physical space or a linear narrative, but to make use of space as an interface (or metaphor) for the representation of other types of sequences (e.g. temporal, thematic). The presence of an author is hence clearly assumed and essential. To a large extent the activity of the user resembles exploration only in the limited sense that was used by Cocteau in one of the scenes in his trilogy, where he depicted the act of creation as an erasure of a blackboard which thereby uncovers a hidden image of a flower. The user's exploration is a creative act of rewriting a story already told by myself. The navigation, as open as it seems, occurs in a single and prescribed route, and functions principally as a means to comment about a social, political or cultural space. The comment is a statement the user enacts rather than expresses.
Project Narrative: *Counterface*

*An Interactive Video Installation, produced in collaboration with Brian Karl*

**General Description**

*Counterface*, an interactive video installation, is one component within a larger two-fold work-in-progress that also comprises *Painted Devil*, a linear, single channel video. Both pieces aim to convey distinct representations of an overlapping theme and locale. In *Counterface*, as well as in *Painted Devil*, I intend (with my co-director, Brian Karl) to investigate the issue of women's different status and roles in contemporary Turkish society, with all the complexities, nuances, and contradictions that have developed among the secular and non-secular, rural and urban, modern and traditional. Both versions of the project include portions of interviews with a variety of individuals from a wide range of backgrounds living in Turkey, integrated with digitally altered shots of ordinary scenes from everyday life in Istanbul.

The history of Turkey since the collapse of the Ottoman Empire in the early part of the 20th century has been one that has incorporated—oftentimes uneasily—a series of willful transformations of the existing social order. These transformations were initiated and enforced by government authorities in the pursuit of a perceived modernism based on the model of Western-style humanism and economic development. Such ideals, promulgated from the top down, have clashed with customs and beliefs held by members of a diverse populace. The differences between the modernizing factions of Turkish society and the continually resurfacing elements of more traditionally held beliefs, such as those represented by various Islamic practices, have produced numerous consequences for the lives of women in Turkey. Education and career possibilities, status and role in the familial as well as in the social realm, and freedom of choice for women in many details of their personal lives—from dress to conversation to reproductive issues and rights of movement—have been impacted in conflicting fashion. What might have seemed conservative or oppressive in Islamic ideology (such as the wearing of a scarf) would sometimes surprisingly become a rallying point as part of political statements, in resistance to highly regulative secular ruling bodies. On the other hand, the premises and results of these modern secular methods provided the very means for such historically unprecedented self-expression and opposition on the part of women in Turkey.

As in our earlier experimental video documentary work, we wish to produce a piece that does not attempt to represent any particular point of view. We intend to create a document incorporating resonant human signs that waver between indicating a fabricated reality and an "actual," observable one. Out of fragmented and bracketed individual stories, a prism-like composite woman character will be implied, which no single category can contain.
We focus on representations through two primary sets of scenes: first, a range of shots of day-to-day activities in public settings, where the overt absence of women from the images is intended to mark their exclusion from many aspects of Turkish public and social life. These include individuals carrying large loads of goods; an outdoor stock market in small alleyways; scenes of drinking and playing sheshbesh in teahouses; people's private domestic settings; interiors of libraries and schools; individuals waiting at train-stops, as well as gathering in corners, selling produce at markets.

Digitally rendered visual effects expose and expand what the visible everyday might mask: for instance, by panning or zooming in on one element while the overall composition remains constrained to a single, steady angle—resulting in slowly sliding ground in the courtyard of a mosque or an outdoor market; by multiplying the images of single characters within a single shot; by depicting an individual’s verbal address or gesture toward an empty space that reflects the conspicuous absence of another. Ambient sound is also digitally manipulated to distill and heighten the ordinary, creating a space where multiple, overlapping perspectives are hinted at.

The second set of depictions incorporates selections from approximately 25 interviews with women of various classes and backgrounds (see attached transcript, supplementary material #2). The interviewees’ statements focus on responses to questions regarding women’s personal histories and the impact on their lives of the changing gender positions and concepts in Turkey. The recorded mesh of voices tilts back and forth between presenting a definitive possibility of linking—and deliberately marking a gap that separates—private (e.g., projected) and public (e.g., perceived) domains and points of view. Our intention is to undermine and break any appearance of an integrated, unified community and, within it, any singular image or representation of women. The complexities and contradictions of socially constructed identities for the various individuals portrayed will be exposed through these breaks.

**The Interactive Installation (Counterface)**

*Counterface*, the interactive installation rendering of the above theme, will consist of a gyroscope-like double-axis structure holding a large dark glass plane within a rotating metal frame (see attached installation floor plan as well as a work-in-progress demo of the interactive video integrated within a 3D animated simulation of the construction, supplementary video tape #1).

Upon entering the installation space, the viewer will see a scene from the set of day-to-day outdoor images projected on the glass as a navigable movie. By moving the glass to the left or the right on its Y axis, the user will be able to navigate through the full range of outdoor scenes within what is revealed as a seemingly endless pan of the city of Istanbul. However, at any point, rotation of the metal frame containing the glass up or down on its X axis will dynamically switch the stream of images from one set (outdoors) to another (indoors),
thus allowing access to the second, concealed stream of images: the portraits of the women interviewed. This second stream too could be navigated in order to shift from one interview to another. And as with the outdoor scenes, this will be accomplished by moving the glass left or right.

When a navigated scene within the outdoor set of images will be paused upon (by rotating the glass back to the center, resting point), a sequence will unfold in depth. The content of any such in-depth scene will be digitally altered in the range of methods outlined above to evoke a multiplicity of perspectives, complicating and fracturing the immediate appearance of the everyday. This viewing of the scene could be disrupted at any point, and the surface navigation of the set of images could be resumed, by turning the glass plane again to the left or right. Similarly, during the navigation of the (backside) indoor sequence, when a portrait will be paused upon, a portion of the interview will unfold. Rotation of the glass to the sides during the interview will terminate it, allowing the user to navigate to another individual's story. Uninterrupted, the interview will unfold in full.

**Feasibility**

Initial production work on the two-fold project comprising *Painted Devil* as well as the proposed interactive installation *Counterface*, began, after several months of research, in Spring 2002, with an initial visit to Turkey, where a first limited set of interviews and outdoor shoots have been conducted. As in previous projects (e.g. *Far, Along* or *Occupied Territory/Kayam Al Hurbano*, photographed in Germany and Palestine), the initial assembled material supplied the basis for exploring and outlining the larger complete project, thus informing a second, in-depth visit in Spring 2003 to the same locale for further recording. Following the final assembly and editing of footage and of interviews for the navigable movie, the finished version of the software programming will be executed (based on the model of interactive navigable video work such as *Occupied Territory* (sample work #1)), and construction of the physical structure will be completed (based on the simpler, single axis, model of *Slip* (sample work #2)).

**Use of work**

Like previous interactive works I have produced, *Counterface* will be experienced by audiences via multiple channels of distribution: as a free-standing installation in museum, gallery and conference settings both in and outside the United States; and additionally, in a CD-ROM format version through Heure Exquise!, a European video art distributor.

**Fellowship use**

The fellowship will be used for post-production costs (editing and effects for the interactive, navigable movie) as well as for programming, material and construction costs of the software portion and the physical installation of *Counterface*.

SELECTED PROJECTS

2003

*Painted Devil / Counterface (work in progress)*--Single Channel Video and Interactive Installation
Producer, Co-Director, Co-Editor, Camera Person, Programmer
A two-fold documentary project comprising a single channel video and an interactive video installation, both investigating the variety of positions and views on and of women in Turkey.

2003

*Icarus*--Video Installation, 25 min.
Producer, Director, Camera Person, Editor
A dynamic video installation consisting of a 25 min. reverse pan across five circular sites shot in Cartagena, Spain, each stitched together of patches, spatial and temporal, of the city’s urban landscape.

2003

*This Card which is Blank*--Video Installation, 25 min.
Producer, Director, Camera Person, Editor
An installation consisting of a group of six video collages projected from above onto the dark glass lids of large wooden boxes, depicting scenes evocative of a public and private urban wasteland.

2002

*Women Only*--Single Channel Video, 56 min.
Co-Producer, Co-Director, Co-Editor, Camera Person
A documentary video investigating the multitude of experiences, views and mythologies surrounding pregnancy and giving birth.

2001

*Far, Along*--Single Channel Video, 25 min.
Co-Producer, Co-Director, Co-Editor, Camera Person
A depiction of contemporary scenes from Germany overlaid and penetrated by memories of the world war. Presented at Postmasters Gallery, NY (2001); The New York Video Festival, Lincoln Center (2002); The Sixth International Video Festival Videomedeja, Yugoslavia (2002); Pacific Film Archive, SF (2003); The Jewish Museum, New York (2003) and others. Winner of Golden Gate Awards Certificate of Merit, San Francisco International Film Festival, SF (2002). Purchased for the permanent collection of the Jewish Museum, NY. Distributed by Heure Exquise, France.

2001

*Slip*--Interactive Video Installation
Co-Producer, Co-Director, Co-Programmer, Camera Person

2000

*Occupied Territory*--CD-ROM and Web Site
Producer, Camera Person, Editor, Programmer

2000

*Flicker*--Single Channel Video, 20 min.
Co-Producer, Co-Director, Co-Editor, Camera Person

1999

*Optical Poem*--CD-ROM
Instructor/ Director
A CD-ROM dedicated to the poetry (and with the participation) of Israeli poet Maya Bjerana, produced by the Camera Obscura Media Dept., Tel Aviv. Presented at Medi@terra Festival, Athens (2000).
