EASTERN PLATEAU REGION FARM BUSINESS SUMMARY 1969

This report is a summary of the 1969 farm business records of 87 dairy farms in the Eastern Plateau region of New York. These farmers are cooperators in the Extension Service farm business management program in Broome, Chemung, Chenango, Delaware, Otsego, Schuyler, Tioga, and Tompkins. There are approximately 40 counties in New York State in which such projects are operated in cooperation with the College of Agriculture at Cornell.

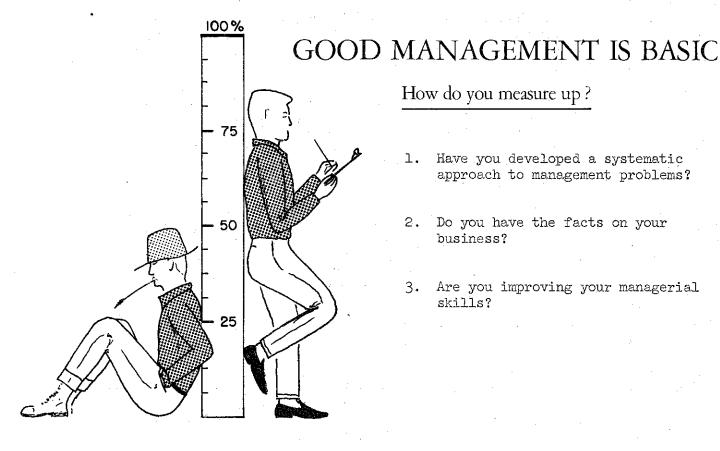

Farmers participating in the farm business management program keep financial and physical records of their farm business. Throughout the year Cooperative Extension Agents assist the farmers in keeping, closing and using their records. At the end of each year, the records are summarized by the Department of Agricultural Economics at Cornell and meetings are held to analyze the records and study the principles of farm business management.

Between 1960 and 1968 the number of dairy farmers in New York State decreased from approximately 40,000 to about 25,000. Projections based on this trend indicate that the number of dairymen in 1980 will be approximately 13,000. One of the major factors that will determine whether a dairyman of today is a dairyman in 1980 is his ability as a manager. Some dairymen will expand, others stay at about the same size and still others will quit farming. It is a challenge to each dairyman to decide upon the best course of action for himself and his family. A study of your business records and budgeting of some possible changes for the future will help you to make this decision.

The primary objective of these business management projects is to help cooperators do a better job of keeping and using records, and thus improve their skill as farm managers. This report has been prepared in workbook form for use in a systematic study of individual farm business operations. The 1968 data from 568 New York dairy farms and the 1969 data from the 87 Eastern Plateau Region dairymen can be used for comparison.

The summary and analysis presented in this booklet should also be useful to farmers in this area who are not enrolled in the business management projects. Others connected with the agriculture of the area, such as teachers of agriculture and farm credit representatives, should also find it useful in teaching farm management and analyzing farm businesses.

This summary was prepared by G. J. Conneman, Department of Agricultural Economics, New York State College of Agriculture, Cornell University, in cooperation with the following Cooperative Extension Agents: William H. Gengenbach, Jr., Clarence H. Padgham, Elwyn G. Voss, Van C. Travis, Jr. and Richard E. Eschler.

How do you measure up?

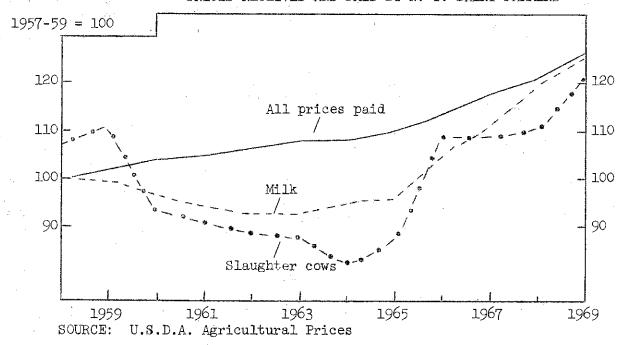

- Have you developed a systematic approach to management problems?
- 2. Do you have the facts on your business?
- Are you improving your managerial skills?

Steps in making a management decision:

- Locate the trouble spot (problem) 1.
- 2. What is your objective? (goal)
- Size up what you have to work with (resources) 3.
- Look for various ways to solve the problem (alternatives)
- Consider probable results of each way (consequences) 5.
- 6. Compare the expected results (evaluate)
- Select way best suited to your situation (decision) 7.
- Put the decision into operation (action)

This workbook can help you!

Prices are one of the important factors affecting farm incomes. The relationship of prices received and prices paid determines the general level of farm incomes. The blended New York farm price for 3.5% milk in 1969 averaged \$5.67 per hundredweight. This was 24 cents higher than the average for 1968 and \$1.40 more than 1965. Cull dairy cow prices also were good in 1969. The overall index of prices paid by New York dairy farmers continued to rise in 1969.

In recent years, prices of some farm inputs have risen while others have declined. From 1965 to 1969, farm wages rose 35 percent, dairy cows rose 41 percent, while feed declined 3 percent, and fertilizer prices declined slightly. These differences give rise to management questions concerning substitutions.

AVERAGE YEARLY PRICES RECEIVED AND PAID BY N. Y. FARMERS, 1960-69

Year	Milk (cwt.)	Slaughter cows (cwt.)	Dairy cows (head)	Dairy ration (ton)	Wages per month with house	Prices paid by New York dairymen
1960 1961 1962 1963 1964 1965 1966 1967 1968	\$4.31 4.21 4.14 4.10 4.21 4.79 5.07 5.43 5.67	\$15.00 14.60 14.26 14.01 13.17 13.91 17.35 17.33 17.58 19.42	\$278 260 245 234 237 238 269 303 319 336	\$71 72 74 76 74 76 80 80 74 74	\$210 213 218 221 227 235 258 291 306 316	104 105 106 108 108 110 113 118 121

^{*} Preliminary

PART I SUMMARY OF THE FARM BUSINESS

The first part of this booklet is designed to enable you to summarize your business in a systematic, orderly manner. It provides an opportunity to study your physical resources, capital investment, receipts, expenses and business income in depth.

MANAGEMENT AND OTHER RESOURCES

We judge the manager of a business on the basis of how much net income he can make the business produce. But the resources a manager has or does not have may severely restrict his ability to produce. A farm manager with small amounts or low quality of land, livestock, equipment, labor, and capital cannot produce well when judged against a manager who has these resources in large amounts and high quality. Therefore, knowledge of what resources are available and how they are combined is fundamental to judging management performance. Below are listed some facts about the physical resources of this group of farms.

FARM ORGANIZATION

Item	My farm 1969	87 Eastern Plateau Region farms, 1969 Average	Average of 568 New York farms, 1968
Labor:			
Man equivalent Livestock: (number)		2.1	2.1
Cows		59	58
Heifers		41	7+O
Crops: (Acres grown)			
Hay		84 .	86 (557)*
Hay crop silage		2	27 (84)
Corn for silage		38	41 (515)
Corn for grain		.9	30 (149)
Oats for grain		8	25 (275)
Other crops	<u> </u>	3	
Total crop acres	****	1 /4/4	155

^{*} Number of farmers that reported each crop.

Capital investment gives an indication of the capital resources available to the business manager. His ability to borrow is another part of his capital resource.

Management of the capital resource of a farm business is becoming increasingly important. To measure the complete financial progress of a dairy farm, year to year changes in the capital structure must be considered.

In this report borrowed as well as owned capital is included and the end of year farm inventory is used as the measure of capital investment.

FARM INVENTORY VALUES, END OF YEAR

		87 Eastern Plateau Region farms, 1969		Average of
Item	My farm 1969	Average per farm	Percent of total	568 New York farms, 1969
Machinery and equipment	\$	\$ 25,197	21	\$ 25,247
Cattle		29,454	25	27,317
Poultry and other livestock	-	180		ter ser
Feed and supplies Land and buildings Total Investment	\$	7,677 <u>55,762</u> \$118,270	7 <u>1+7</u> 100	7,638 51,733 \$111,935

In many farm businesses, poor capital efficiency is a major cause of low profits. The following measures of capital efficiency will help you evaluate your overall capital management.

INVESTMENT ANALYSIS

		Average per farm			
Item	My farm 1969	87 Eastern Pla Region farms,			
Machinery and equipment per	cow:\$	\$ 427	\$ 435		
land and buildings per cow	\$	\$ 945	\$ 890		
otal investment per cow	\$	\$ 2,005	\$ 1,930		
otal investment per man	\$	\$56,319	\$53,300

Capital turnover*	yı	rs. 2.4 year	rs 2.5 year		

^{*} Calculated by dividing the total year end investment by the total cash receipts for the year.

and the second substitution of the second second

A successful farm business requires a level of gross earnings great enough to pay all costs, both operating and overhead, and leave a margin for the operator's labor. Here we examine the sources of and total receipts for this group of dairy farms.

FARM RECEIPTS

Item	My farm 1969	Region fa Average	n Plateau rms, 1969 Percent of total	Average of 568 New York farms, 1968
Milk sales	\$	\$43,268	88	\$39,477
Livestock sold		4,442	9	3,915
Egg sales		19	MB SA	₩ #
Crop sales		404	1.	393
Miscellaneous*		1,032	2	1,301
TOTAL CASH RECEIPTS	\$	\$49,165	100	\$45,086
Increase in inventory		9,226		8,161
TOTAL FARM RECEIPTS	\$	\$58,391		\$53,247

^{*} Includes work off farm, conservation payments, refunds, etc.

Total cash receipts amounted to \$49,165 per farm. The sale of milk, cull dairy cows and bob calves accounted for 97 out of every 100 dollars of cash receipts in this group of specialized dairy farms.

Increases in inventory resulting from more cows, more machinery and equipment, additions to buildings or a better feed situation are a normal occurence in most "going" farm businesses and are considered as farm receipts. These items could have been sold and turned into cash receipts, but instead the operator decided to invest this additional capital in his business. The cost of producing or acquiring these items is included in the farm expenses. For this group of farms, the net increase in inventory amounted to \$9,226 per farm.

SELECTED INCOME FACTORS

		Average per farm		
Factor	My farm 1969	87 Eastern Plateau Region farms, 1969	568 New York farms, 1968	
			on of the second	
Average price per cwt. of milk sold	\$	\$ 5 . 75	\$ 5.52	
Milk sales per cow	\$	\$ 733	681	
Total cash receipts per man	\$	\$23,412	\$21,470	

WHERE THE MONEY WENT

Some farmers may be able to increase profits by reducing costs. This requires a complete knowledge of what the business expenses are. With the large amount of cash flowing through a farm business today it is important that the farm operator study his expenses closely. Here is an opportunity for you to see how you are doing.

FARM EXPENSES

Item	My farm 1969	87 Eastern Plateau Region farms, 1969 Average per farm	Average of 568 New York farms, 1968
Hired labor	\$	\$ 3 , 458	\$ 3,006

Decrease in inventory			
TOTAL FARM EXPENSES	\$	\$41,531	\$37,717

FINANCIAL SUMMARY OF THE YEAR'S BUSINESS

The pay-off in management is in net income. There are several ways of measuring net income or profit for any business, including a farm. Large corporate businesses often express profit as net income before taxes, as net income after taxes, or as net income per dollar of sales. One of the best measures of profit for a farm business is labor income.

FARM INCOME AND LABOR INCOME

		Average per farm		
Item	My farm 1969	87 Eastern Platea Region farms, 196		
Average capital investment \$	\$	113,657 \$1	07,855	
TOTAL FARM RECEIPTS	\$	\$58,391	\$53,247	
· TOTAL FARM EXPENSES		41,531	37,717	
FARM INCOME	\$	16 , 860	15,530	
Interest on capital at 7 %		7,956	<u>7,550</u>	
LABOR INCOME per farm	\$	\$ 8,904	\$ 7,980	
Number of operators on farms		105	610	
IABOR INCOME per operator	\$	\$ 7, 377	\$ 7,431	

Changes in inventories during the year are included in figureing farm income and labor income. Increases in inventories due to expanding the business are considered as farm receipts and decreases in inventories are included as farm expenses. Interest payments and payments on debts are not included in the farm expenses.

"Farm Income" is the difference between total receipts, including inventory increases, and total expenses, including inventory decreases, but not interest paid. Farm income is really the amount provided by the business to pay for the use of all capital and the labor and management of the operator.

"Labor Income" is a measure used to determine the return the farm operator receives for his labor and management. It is the amount left after paying all farm expenses, and deducting a charge for unpaid family labor and for interest on the capital invested. To make all farms comparable, a seven percent interest charge on the average capital investment (average of beginning and end inventories) is deducted to get labor income. Labor income is the measure used most commonly when studying or comparing farm businesses.

Even in a very efficient and profitable dairy farm business, labor income can fluctuate markedly from year to year. Therefore, labor income over at least a three-year period should be studied before definite conclusions are drawn.

		Average per farm		
Item	My farm 1969	87 Eastern Plateau Region farms, 1969	568 New York farms, 1968	
Total cash farm receipts	\$	\$49,165	\$45,086	
Total cash operating expenses		28,813	25,597	
FARM CASH OPERATING INCOME	\$	\$20,352	\$19,489	
Less: Family living expense		6,517*	6,275*	
Income available for debt repay and purchase of capital items	yment s \$	\$13,835	\$13,214	

^{*} Estimated at \$5,400 per operator per year. Some farms had more than one operator.

Farm Cash Operating Income indicates the cash available from the year's operation of the farm business for family living, interest and debt payments, and new capital purchases or investments. The Income available for debt repayment and purchase of capital items is the amount provided by the business for purchase of new machinery, livestock, real estate and interest and debt payments.

Both of these measures help provide a picture of the "cash flow" of the farm business. They are not good measures of farm "profit" because changes in inventory are not included.

RETURN ON INVESTMENT

		Average per farm		
Item	My farm 1969	87 Eastern Plateau Region farms, 1969	568 New York farms, 1968	
Farm income	\$	\$ 16,860	\$ 15,530	
Value of operator's labor*		6,517	6,275	
Return on Investment	\$	\$ 10,343	\$ 9,255	
Average capital investment	\$	\$113,657	\$107¸85 ¹ 4	
Rate of return on capital	<u></u>	9.1%	8.6%	

^{* \$5,400} per operator. Some farms had more than one operator. Value of operator's labor excludes privileges.

Return on Investment is the average return to all capital invested in the farm business after a charge has been made for the value of the operator's labor. In the above calculation the operator's labor has been valued at \$5,400. Each farmer should use the value which, when added to the value of the use of his house and other privileges, equals what he could earn at another job.

PART II ANALYSIS OF THE FARM BUSINESS

The key to success in farming is the overall management ability of the farm operator. This requires that he understand clearly, and more important apply the basic principles of farm management in making management decisions.

This section of the report presents guidelines for using these principles to help you analyze the profitability of your farm business. The "averages" presented provide useful standards for comparison whereby the relative strong and weak points and major problem areas of your business can be uncovered. Also presented are figures from the summary and analysis of New York dairy farms in 1968 and tables showing the basic relationship of various management factors to farm profits.

SIZE OF BUSINESS

There are some basic principles of farm management which a farm manager should recognize and use in making business decisions and in studying his business.

In general, large farms pay better than small farms. Larger farms make it possible to use equipment and other resources more efficiently. Further, if each hundredweight of milk is produced at a given profit, the more milk produced, the more profit. However, some 50 cow farms make larger incomes than others with 100 cows. This can happen when costs or other business factors are not in balance with the size of the farm business.

MEASURES OF SIZE OF BUSINESS

	Average per farm		
My farm 1969	87 Eastern Plateau Region farms, 1969	568 New York farms, 1968	
	59	58	
	753,000	715,000	
	2.1	2.1	
	684	692	
		My farm 87 Eastern Plateau 1969 Region farms, 1969 59 753,000 2.1	

In the following table, the 568 New York dairy farms have been sorted into various size groups. For each size group the average labor income per operator is shown. Sorting the farms in this manner shows the relationship between size of business and farm profits.

COWS PER FARM AND LABOR INCOME 568 New York Dairy Farms, 1968

Number of cows	Number	Percent	Labor income
	of farms	of farms	per operator
Less than 25 25 - 39 40 - 54 55 - 69 70 - 84 85 - 99 100 - 114 115 - 129 130 and over	13 126 193 98 52 34 24 16	3 22 34 17 9 6 4	\$ 3,080 6,080 7,230 9,920 10,400 11,800 14,850 20,410 19,270

RATES OF PRODUCTION

High rates of production of both animals and crops are very important to the success of a farm business. However, when high crop and animal yields are achieved without regard to costs, net income is reduced. In general, it pays to increase yields up to the point where the last unit of input (such as feed or fertilizer) is just paid for by the increase in output due to this last unit of input. Relatively few farmers have reached the point where the cost of an added input into milk or crop production is equal in value to the additional output.

MEASURES OF RATES OF PRODUCTION

		Average per	farm
Measure	My farm 1969	87 Eastern Plateau Region farms, 1969	568 New York farms, 1968
Pounds of milk sold per cow		12,800	12,300
Tons of hay per acre		2.6	2.8
Tons of corn silage per acre		15	14
Bushels of oats per acre		59	61

DISTRIBUTION OF PRODUCTION PER COW 87 Eastern Plateau Region Farms, 1969

Pounds of milk sold per cow		Number	of farms
Under 10,000	*		11
10,000 - 10,999			9
11,000 - 11,999			14
12,000 - 12,999			17
13,000 - 13,999	•		21
14,000 and over			22

The relationship of production per cow to labor income on three sizes of farms is shown in the following table for the 568 New York dairy farms in 1968.

MILK SOLD PER COW AND LABOR INCOME 568 New York Dairy Farms, 1968

Pounds of milk sold per cow	Number of farms	Number of cows	Feed bought per cow	Labor income
Under 10,000	58	55	\$124	\$ 4,250
10,000 - 10,999	66	56	130	6,990
11,000 - 11,999	112	56	150	7,880
12,000 - 12,999	133	- 60	169	9,670
13,000 - 13,999	112	62	173	10,240
14,000 and over	87	58	198	11,560

LABOR EFFICIENCY

Labor efficiency has a strong influence on the profits of any business and is becoming increasingly important on dairy farms. This is in part due to a steady increase in the substitution of machinery for labor and also increased adoption of new technology. Here we will examine several measures of labor efficiency, the most important one to dairy farmers being milk sold per man.

MEASURES OF LABOR EFFICIENCY

		Average per	r farm
Measure	My farm 1969	87 Eastern Plateau Region farms, 1969	568 New York ferms, 1968
Number of cows per man		28	28
Pounds of milk sold per man		359,000	341,000
Work units per man	•	326	330

DISTRIBUTION OF MILK SOLD PER MAN 87 Eastern Plateau Region Farms, 1969

Pounds of milk sold per man	Number of	farms
Under 250,000	17	
250,000 - 299,999	4	
300,000 - 349,999	28	
350,000 - 399,999	4	
400,000 - 499,999	23	
500,000 and over	11	

The relationship between milk sold per man and labor income is illustrated in the table below. Clearly the effect of labor efficiency on labor income is strong.

MILK SOLD PER MAN AND LABOR INCOME 568 New York Dairy Farms, 1968

Pounds of milk sold per man	Number of farms	Number of cows	Lbs. milk per cow	Labor income per operator
Under 200,000	29	47	9,800	\$ 2,504
200,000 - 299,999	172	49	11,600	5,731
300,000 - 399,999 400,000 - 499,999	196 119	57 65	12,400 12,900	8,893 11 , 462
500,000 and over	52	87	13,400	16,627

COST ANALYSIS

Keeping costs in line is one of the most important factors affecting farm profits today. This does not mean cutting costs to the point of reducing efficiency, but keeping on the lookout for unnecessary or unwise expenditures. Since feed, machinery and labor account for the lion's share of farm expenses, these cost items should be studied in detail.

FEED COSTS

Feed bought is the largest single expense item on most dairy farms. The success of a dairy farm manager depends to a large degree on his ability to provide a good feeding program for his herd at reasonable cost. Because the feeding program includes both purchased and homegrown feed, and both roughage and concentrates, it is not easy to locate the weak spots in efforts to control feed costs. The items on this page all have a bearing on feed costs, and may be helpful in planning a more efficient feeding program.

SELECTED FACTORS RELATED TO FEED COSTS

		Average per	farm
Item	My farm 1969	87 Eastern Plateau Region farms, 1969	
Purchased Feed			
Dairy feed bought	\$	\$11,449	\$9,459
Feed bought per cow	\$	\$ 194	\$ 163
Feed bought as % of milk receipts	<u>"</u>	26%	24%
Feed bought per cwt. of milk sold	\$	\$ 1.52	\$ 1.32
Roughage Harvested (hay equivalent)		·	
Hay (tons)		217 tons	234 tons
Hay crop silage (tons : 3)		5 tons	12 tons
Corn silage (tons + 3)		210 tons	174 tons
Total tons hay equivalent		432 tons	420 tons
Tons hay equivalent per cow		7.3 tons	7.2 tons
Other Considerations	, ————		
Total acres in crops per cow		2.4 acres	217 acres
Lime & fertilizer expense/cow	\$	\$ 30	\$ 30
Lime & fertilizer expense/crop acre	e \$	\$ 12	\$ 11
Number of heifers per 10 cows		6.9	6.9

The above measures of harvested roughage consider only the quantity. Quality is also significant and has a bearing on purchased feed and milk production. Such things as overall quality, date first cutting was completed, percent legumes in the hay, and maturity of silage should be considered in evaluating and adjusting your roughage program.

POWER AND MACHINERY COSTS

Successful farm managers have substituted power and machinery for labor to a large degree. As this process continues, it is vitally important to retain control of the costs associated with owning and operating farm equipment. For this group of farms, power and machinery costs were about 21 percent of the total farm expenses.

POWER AND MACHINERY COSTS*

		Average per farm			
Item	My farm 1969	87 Eastern Plateau Region farms, 1969	568 New York		
Beginning inventory	\$	\$22,426	\$22,575		
New machinery bought		6,172	6,178		
Total	\$	\$28,598	\$28,753		
End inventory	\$	\$25,197	\$25,247		
Machinery sold		57	168		
Total Depreciation	\$	\$25,254 \$3,344	\$25,415 \$ 3,338		
Interest at 7% av. inventory		1,667	1,674		
Gas and oil		1,196	1,136

Other machine hire		201	287		
Auto expenses (farm share)		 258	247		
Electricity (farm share)			601		
TOTAL MACHINERY COSTS	\$	\$ 9,206	\$ 9,403		
Gas tax refunds	\$	\$ 70	\$ 81		
Income from machine work		65 . 4:	106		
NET MACHINERY COST	\$	\$ 9,071	\$ 9,216		
. The state of the sea and the	 				
Net machinery cost per cow	\$	<u> </u>	\$ 159		
Net machinery cost per crop acre	\$	\$ 63	\$ 59		
Net machinery cost per man	\$	\$ 4,320	\$ 4,389		
Net machinery cost/cwt. milk sold	\$	\$ 1.20	\$ 1.27		

^{*} Does not include insurance, housing, or value of farm labor used in operation or repair.

LABOR AND MACHINERY COSTS

Most farm operators justify major machinery purchases as a way to save labor and increase productivity. How well labor and machinery are combined has an important bearing on farm profits.

LABOR AND POWER AND MACHINERY COSTS

		Average per	farm
Item	My farm 1969	87 Eastern Plateau Region farms, 1969	568 New York farms, 1968
Value of operator's labor*	\$	\$ 6,517	\$ 6,275
Hired labor		3,458	3,006
Unpaid family labor		531	818
TOTAL LABOR COSTS	\$	\$10,506	\$10,099
Net power and machinery cost		9,071	9,216
TOTAL LABOR & MACHINERY COST	\$	\$19,577	\$19,315
Total per cow	\$	\$ 332	\$ 333
Total per crop acre	\$	\$ 136	\$ 125
Total per man	\$	\$ 9,322	\$ 9,198
Total per cwt. milk sold	\$	\$ 2.60	\$ 2.70

^{*} Valued at \$5,400 per operator. Some farms had more than one operator.

The following table shows the relationship of combined labor and machinery costs to labor income.

MACHINERY COST PER COW AND LABOR INCOME 568 New York Dairy Farms, 1968

Machinery cost per cow	Number of farms	Percent of farms	Labor income per operator

Farm Business Chart

The chart on pages 16 and 17 is a tool for use in analyzing a dairy farm business. It is essentially a series of measuring sticks combined into one tool.

FARM	BUSINESS	CHART	FOR	FARM	MANAGEME	TNT	COOPERATORS
	568	New Yo	ork .	Dairy	Farms,*	196	58

^{*} These farms are considerably above the average for all farms in New York State. For example, the median number of cows for the 568 farms was 50 compared with 36 for all farms in the State.

The Farm Business Chart is a tool which can be used in analyzing a business to determine the strong and weak points. The chart shows how far the individual farm is above or below the midpoint of the 568 farms for each factor.

The figure at the top of each column is the average of the top 10 percent of the farms for that factor. For example, the figure 4.0 at the top of the column headed "Man equivalent" is the average man equivalent on the 10 percent of the farms with the most men. The other figures in each column are the average for the second 10 percent, third 10 percent, etc. The figure at the bottom of each column (1.1 for Man equivalent) is the average for the 10 percent of the farms which ranked lowest in that factor.

Each column of the chart is independent of the others. The farms which are in the top 10 percent for one factor would not necessarily be the same farms which make up the top 10 percent for any other factor.

This chart is used in analyzing a particular dairy business by drawing a line through the figure in each column which shows where the farm being analyzed stands for that factor. This helps identify the strengths and weaknesses. Summarize these and list them at the bottom of page 17.

Farm Business Chart contd.

The cost control factors are ranked from low to high. For cost control factors, the lowest cost is not necessarily the most profitable. In some cases, the "best" might be somewhere near the average. Many things affect the level of these costs, and these items must be taken into account when analyzing the factors.

FARM BUSINESS CHART FOR FARM MANAGEMENT COOPERATORS 568 New York Dairy Farms, 1968

	Cos	t Control	
Feed	% Feed is	Feed and	Machinery
bought	of milk	crop expense	cost
per cow	receipts	per cwt. milk	per cow
\$ 69	11%	\$1.01	\$ 87
103	16	1.27	106
125	20	1.14/4	117
145	22	1.55	129
160	24	1.65	140

173 185	26 28	1.7 ¹ 4 1.84	150 162
201	30	1.93	177
218	31	2.07	195
262	37	2.38	241

Based on the analyzed results shown on the business chart, list below the strong and weak points of the business. Then identify the major problems.

STRONG POINTS:	WEAK POINTS:
MAJOR PROBLEMS:	

After identifying problems, consider alternative ways of solving each problem. Each alternative should be studied in detail. A budgeting form can be used for projecting the likely results of each alternative.

III. Additional forward planning steps and pointers

- 1. List new capital items associated with the change including land, buildings, machinery and cattle. Estimate their cost.
- 2. Estimate changes in receipts and expenses (Part IV) considering all input and production items that are affected by the change under consideration. Adjust present figures if anticipated price changes are used in the budget.
- 3. When analyzing the effects of the proposed change, fulfillment of non-monetary goals may be considered.
- 4. More than one alternative change should be considered.

IV. Estimating changes in receipts and expenses

Selected Competitive Dairy Areas

A good manager aims to know how his business stands in relation to his competition both at home and in other dairy areas. The table below presents data from four states. These data were taken from reports on farm business management projects similar to the ones in New York. Some measures have been adjusted so that they are comparable for the four states.

1968 DAIRY FARM BUSINESS SUMMARY DATA

To properly analyze your farm business, more than one year's records are needed. Three or more years records will help you determine what progress you are making and what is normal for your farm. In the table below fill in the figures for your business for the last three years and study your progress.

THE DAIRY INDUSTRY IN NEW YORK STATE -- 1960 to 1980

In 1960, the Department of Agricultural Economics at Cornell University initiated a research study of the changes in milk production in the New York Milkshed.* A random sample of farms was selected. Sample farms were visited each year from 1960 to 1964 and again in 1967 to gather information on changes that had taken place. In 1965, 1966, and 1968, some information was obtained with a mail questionnaire. A return of over 90 percent was experienced by mail each year.

The sample of farms studied included a 2.5 percent sample of the dairy farms in the New York Milkshed and a 5 percent sample of the Hudson Valley area. Farms delivering to all markets in New York State, and those located in New York State but delivering to New England markets were included. The sample included 1,073 farms in 1960.

From this sample of farms an estimate can be made of the number of producing units, number of milk cows, and number of heifers in New York State for each year from 1960 to 1968.
